a. Creation of AMIS Account: In cases where a Federal Government administrative or technological error directly resulted in precluding an Applicant from creating an AMIS account by the required deadline, the Applicant must submit a written request for approval to create its AMIS account after the deadline, and include documentation of the error, no later than two business days after the AMIS account creation deadline. The CDFI Fund will not respond to requests for creating an AMIS account after that time. Applicants must submit such request via an AMIS Service Request to the CDFI Program or an email to *cdfihelp@cdfi.treas.gov* with a subject line of ''AMIS Account Creation Deadline Extension Request.''

b. SF–424 Late Submission: In cases where a Federal Government administrative or technological error directly resulted in precluding an Applicant from submitting the SF–424 by the required deadline, the Applicant must submit a written request for acceptance of the late SF–424 submission and include documentation of the error no later than two business days after the SF–424 deadline. The CDFI Fund will not respond to requests for acceptance of late SF–424 submissions after that time period. Applicants must submit late SF–424 submission requests to the CDFI Fund via an AMIS Service Request to the CDFI Program with a subject line of ''Late SF–424 Submission Request.''

c. Title VI Compliance Worksheet Late Submission: In cases where a Federal Government administrative or technological error directly precluded an Applicant from submitting the Title VI Compliance Worksheet by the required deadline, the Applicant must submit a written request for approval to submit the Worksheet after the deadline, and include documentation of the error, no later than two business days after the Title VI Compliance Worksheet submission deadline. The CDFI Fund will not respond to requests for submitting a Title VI Compliance Worksheet after that time. Applicants must submit such request via an AMIS Service Request to the CDFI Program with a subject line of ''CDFI Program—Title VI Compliance Worksheet Deadline Extension Request.''

d. AMIS Application Late Submission, including Late Excel HP–FA Application Submission: In cases where a Federal Government administrative or technological error directly resulted in precluding an Applicant from submitting the Application in AMIS by the required deadline, the Applicant must submit a written request for acceptance of the late Application submission and include documentation of the error no later than two business days after the Application deadline. The CDFI Fund will not respond to requests for acceptance of late Application submissions after that time period. Applicants must submit late Application submission requests to the CDFI Fund via an AMIS Service Request to the CDFI Program with a subject line of ''Late Application Submission Request.''

G. Funding Restrictions: Base-FA, PPC–FA, DF–FA, HFFI–FA, HP–FA, and TA awards are limited by the following:

1. Base-FA Awards:

a. A Recipient shall use Base-FA award funds only for the eligible activities described in Section II. (C)(1) of this NOFA and its Assistance Agreement.

b. With the exception of Depository Institution Holding Company Applicants, Base-FA awards may not be used to support the activities of, or otherwise be passed through, transferred, or co-awarded to, third-party entities, whether Affiliates, Subsidiaries, or others, unless done pursuant to a merger or acquisition or similar transaction, and with the CDFI Fund's prior written consent.

c. Base-FA award funds shall only be paid to the Recipient.

d. The CDFI Fund, in its sole discretion, may pay Base-FA award funds in amounts, or under terms and conditions, which are different from those requested by an Applicant.

e. The Recipient must comply, as applicable, with the Buy American Act of 1933, 41 U.S.C. 8301–8303 and section 2 CFR 200.216 of the Uniform Administrative Requirements, with respect to any Direct Costs.

2. PPC–FA Awards:

a. A Recipient shall use PPC–FA award funds only for the eligible activities described in Section II. (C)(5) of this NOFA and its Assistance Agreement.

b. With the exception of Depository Institution Holding Company Applicants, PPC–FA awards may not be used to support the activities of, or otherwise be passed through, transferred, or co-awarded to, third-party entities, whether Affiliates, Subsidiaries, or others, unless done pursuant to a merger or acquisition or similar transaction, and with the CDFI Fund's prior written consent.

c. PPC–FA award funds shall only be paid to the Recipient.

d. The CDFI Fund, in its sole discretion, may pay PPC–FA award funds in amounts, or under terms and conditions, which are different from those requested by an Applicant.

e. The Recipient must comply, as applicable, with the Buy American Act of 1933, 41 U.S.C. 8301–8303 and section 2 CFR 200.216 of the Uniform Administrative Requirements, with respect to any Direct Costs.

3. DF–FA Awards:

a. A Recipient shall use DF–FA award funds only for the eligible activities described in Section II. (C)(2) of this NOFA and its Assistance Agreement.

b. With the exception of Depository Institution Holding Company Applicants, DF–FA awards may not be used to support the activities of, or otherwise be passed through, transferred, or co-awarded to, third-party entities, whether Affiliates, Subsidiaries, or others, unless done pursuant to a merger or acquisition or similar transaction, and with the CDFI Fund's prior written consent.

c. DF–FA award funds shall only be paid to the Recipient.

d. The CDFI Fund, in its sole discretion, may pay DF–FA award funds in amounts, or under terms and conditions, which are different from those requested by an Applicant.

e. The Recipient must comply, as applicable, with the Buy American Act of 1933, 41 U.S.C. 8301–8303 and section 2 CFR 200.216 of the Uniform Administrative Requirements, with respect to any Direct Costs.

4. HFFI–FA Awards:

a. A Recipient shall use HFFI–FA award funds only for the eligible activities described in Section II. (C)(4) of this NOFA and its Assistance Agreement.

b. With the exception of Depository Institution Holding Company Applicants, HFFI–FA awards may not be used to support the activities of, or otherwise be passed through, transferred, or co-awarded to, third-party entities, whether Affiliates, Subsidiaries, or others, unless done pursuant to a merger or acquisition or similar transaction, and with the CDFI Fund's prior written consent.

c. HFFI–FA award funds shall only be paid to the Recipient.

d. The CDFI Fund, in its sole discretion, may pay HFFI–FA award funds in amounts, or under terms and conditions, which are different from those requested by an Applicant.

e. The Recipient must comply, as applicable, with the Buy American Act of 1933, 41 U.S.C. 8301–8303 and section 2 CFR 200.216 of the Uniform Administrative Requirements, with respect to any Direct Costs.

5. HP–FA Awards:

a. A Recipient shall use HP–FA award funds only for the eligible activities described in Section II. (C)(5) of this NOFA and its Assistance Agreement.

b. With the exception of Depository Institution Holding Company Applicants, HP–FA awards may not be used to support the activities of, or otherwise be passed through, transferred, or co-awarded to, third-party entities, whether Affiliates, Subsidiaries, or others, unless done pursuant to a merger or acquisition or similar transaction, and with the CDFI Fund's prior written consent.

c. HP–FA award funds shall only be paid to the Recipient.

d. The CDFI Fund, in its sole discretion, may pay HP–FA award funds in amounts, or under terms and conditions, which are different from those requested by an Applicant.

e. The Recipient must comply, as applicable, with the Buy American Act of 1933, 41 U.S.C. 8301–8303 and section 2 CFR 200.216 of the Uniform Administrative Requirements, with respect to any Direct Costs.

6. TA Awards:

a. A Recipient shall use TA award funds only for the eligible activities described in Section II. (C)(3) of this NOFA and its Assistance Agreement.

b. With the exception of Depository Institution Holding Company Applicants, TA awards may not be used to support the activities of, or otherwise be passed through, transferred, or co-awarded to, third-party entities, whether Affiliates, Subsidiaries, or others, unless done pursuant to a merger or acquisition or similar transaction, and with the CDFI Fund's prior written consent.

c. TA award funds shall only be paid to the Recipient.

d. The CDFI Fund, in its sole discretion, may pay TA award funds in amounts, or under terms and conditions, which are different from those requested by an Applicant.

e. The Recipient must comply, as applicable, with the Buy American Act of 1933, 41 U.S.C. 8301–8303 and section 2 CFR 200.216 of the Uniform Administrative Requirements, with respect to any Direct Costs.

V. Application Review Information

A. Criteria: If the Applicant has submitted an eligible Application, the CDFI Fund will conduct a substantive review in accordance with the criteria and procedures described in the Regulations, this NOFA, the Application guidance, and the Uniform Administrative Requirements. The CDFI Fund reserves the right to contact the Applicant by telephone, email, or mail for the purpose of clarifying or confirming Application information. If contacted, the Applicant must respond within the time period communicated by the CDFI Fund or risk that its Application will be rejected. The CDFI Fund will review the Base-FA, DF–FA, PPC–FA, HFFI–FA, HP–FA, and TA Applications in accordance with the process below. All internal and external reviewers will complete the CDFI Fund's conflict of interest process.

1. Base-FA Application Scoring, Award Selection, Review, and Selection Process: The CDFI Fund will evaluate each Application using a five-step review process illustrated in the sections below. Applicants that meet the minimum criteria will advance to the next step in the review process. Applicants applying as a Community Partnership must describe the partnership in the Application pursuant to the requirements set forth in table 8 and will be evaluated in accordance with the review process described below.

a. Step 1: Eligibility Review: The CDFI Fund will evaluate each Application to determine its eligibility status pursuant to Section III of this NOFA.

b. Step 2: Financial Analysis and Compliance Risk Evaluation:

i. Step 2: Financial Analysis: For Regulated Institutions, the CDFI Fund will consider financial safety and soundness information from the Appropriate Federal or State Banking Agency. As detailed in table 8, each Regulated Institution FA Applicant (including a Subsidiary Insured Depository Institution that will expend and carry out the activities of an award on behalf of a Depository Institution Holding Company Applicant) must have a CAMELS/CAMEL rating of at least ''3'' and/or no significant material concerns from its regulator. Each Insured Depository Institution Applicant and each Subsidiary Insured Depository Institution that will expend and carry out the activities of an award on behalf of a Depository Institution Holding Company Applicant must have a CRA assessment rating of at least ''Satisfactory.''

For non-regulated Applicants, the CDFI Fund will evaluate the financial health and viability of each non-regulated Applicant using financial information provided by the Applicant. For the financial analysis, each non-regulated Applicant will receive a Total Financial Composite Score on a scale of one (1) to five (5), with one (1) being the highest rating. The Total Financial Composite Score is based on the

analysis of twenty-three (23) financial indicators. Applications will be grouped based on the Total Financial Composite Score. Applicants must receive a Total Financial Composite Score of one (1), two (2), or three (3) to advance to Step 3. Applicants that receive an initial Total Financial Composite Score of four (4) or five (5) will be re-evaluated and re-scored by CDFI Fund staff. If the Total Financial Composite Score remains four (4) or five (5) after CDFI Fund staff review, the Applicant will not advance to Step 3.

ii. Step 2: Compliance Risk Evaluation: For the compliance analysis, the CDFI Fund will evaluate the compliance risk of each Applicant using information provided in the Application, as well as an Applicant's reporting history, reporting capacity, and performance risk with respect to meeting the PG&Ms set forth in the Assistance Agreement. Each Applicant will receive a Total Compliance Composite Score on a scale of one (1) to five (5), with one (1) being the highest rating. Applicants that receive an initial Total Compliance Composite Score of four (4) or five (5) will be re-evaluated by CDFI Fund staff. If the Applicant is deemed a high compliance risk after CDFI Fund staff review, the Applicant will not advance to Step 3.

c. Step 3: Business Plan Review: Applicants that proceed to Step 3 will be evaluated on the soundness of their comprehensive business plan. Two external non-CDFI Fund Reviewers will conduct the Step 3: Business Plan Review. Reviewers will evaluate the Application sections listed in table 12. All Applications will be reviewed in accordance with standard reviewer evaluation materials. At the conclusion of the Step 3 evaluation, Applications will be ranked based on Total Business Plan Scores, in descending order from highest Total Business Plan Score to lowest Total Business Plan Score. Each category of Applicant type (Core and SECA) will be ranked separately. An amount up to but not exceeding the highest scoring 60% of Core Applicants in the Core Applicant pool and an amount up to, but not exceeding, the highest scoring 70% of SECA Applicants in the SECA Applicant pool will progress to Step 4. Within each category of Applicant type (Core and SECA) respectively, if a tie in Total Business Plan Scores would prevent an Applicant from advancing to Step 4, all Applicants with the same score will progress to Step 4. Lastly, the CDFI Fund may consider the geographic diversity of Applicants based on primary geographic market served (Major Urban Area, Micropolitan Area, Minor Urban Area, and Rural Area) when determining the Step 4 Applicant pool.

Based on funding availability for Core and SECA Base-FA Applicant types, the CDFI Fund reserves the right to limit the number of Applicants that progress from Step 3 to Step 4 to ensure that the CDFI Program can meaningfully vary award amounts among Applicants with different Step 4 Policy Objective scores, while maintaining minimum award amounts specified in table 2. In cases where funding availability is not sufficient to progress all Applicants within the top 60% of the Core Applicant pool and within the top 70% of the SECA Applicant pool from Step 3 to Step 4, priority will be given to Applicants that score highest on the Total Business Plan Score in each Applicant type (Core and SECA).

Applicants who request only an HP–FA award (with no Base-FA award) will be evaluated in a separate pool from the Core and SECA Base-FA Applicant types, utilizing the criteria outlined in table 12. This pool will combine any HP–FA only Applications under both the CDFI Program and the NACA Program. The Step 3 review questions under these criteria will be modified to reflect the fact that Applications requesting only HP–FA without Base-FA will not have an FA Objective. This review will be completed by CDFI Fund or other Federal staff, rather than external reviewers. Upon completion of the Step 3: Business Plan Review, the Applications requesting only an HP–FA award without a Base-FA award will be ranked according to Step 3 score. The CDFI Fund will forward the same percentage of HP–FA only applications to Step 4 as the percentage of the CDFI Program Core Applicant pool requesting Base-FA forwarded to Step 4. For example, if the CDFI Fund forwards the highest scoring 60% of the CDFI Program Core Applicant pool requesting Base-FA to Step 4, and it received 8 Applications requesting only HP–FA (across both the CDFI and NACA Programs), it will multiply 8 by 60% to calculate 4.8 and forward five Applicants to Step 4, as five is the closest whole number to 4.8.

TABLE 12—STEP 3: BASE-FA BUSINESS PLAN REVIEW SCORING CRITERIA

Base-FA application sections	Possible score	Score needed to advance
Mission and Community Needs	Scored as a component of the other Base-FA Application Sections.	N/A.
Business Strategy	12	N/A.
Market and Competitive Analysis	7	N/A.
Products and Services	12	N/A.
Management and Track Record	12	N/A.
Growth and Projections	7	N/A.
Total Business Plan Score	50	Core Applicants: Up to, but not exceeding, top 60% of all Core Applicants. SECA Applicants: Up to, but not exceeding, top 70% of all SECA Applicants.

d. Step 4: Policy Objective Review: The CDFI Fund internal reviewers will evaluate each Application to determine its ability to meet policy objectives of the CDFI Fund. Each Applicant will be evaluated in each of the categories listed in table 13 and will receive a Total Policy Objective Review Score on a scale of one (1) to five (5), with one (1) being the highest score. Applicants are then grouped according to Total Policy Objective Review Scores. For Applications requesting only HP–FA (with no Base-FA request), the Step 4 policy objective review will be conducted using the same categories listed in table 13. Where appropriate, the evaluation criteria for reviewers will be modified to reflect the fact that Applications requesting only HP–FA without Base-FA will not have an FA Objective.

The CDFI Fund also conducts a due diligence review for Applicants that

includes an analysis of programmatic risk factors including, but not limited to: history of performance in managing Federal awards (including timeliness of reporting and compliance); ability to meet FA Objectives selected by Base-FA Applicants in their Applications; reports and findings from audits; and ability to effectively implement Federal requirements, each of which could impact the Total Policy Objective Review Score. For Applications requesting only HP–FA (with no Base-FA), the due diligence review will consist of all of the above components except the FA Objective due diligence review; due diligence related to the Application's HP–FA strategy will be conducted as part of the HP–FA Application review.

TABLE 13—STEP 4: BASE-FA POLICY REVIEW SCORING CRITERIA

Section	Possible scores	High score	Score needed to advance
Economic Distress	1, 2, 3, 4, or 5	1	N/A.
Economic Opportunities	1, 2, 3, 4, or 5	1	N/A.
Community Collaboration	1, 2, 3, 4, or 5	1	N/A.
Total Policy Objective Review Composite Score	1, 2, 3, 4, or 5	1	All Scores Advance.

e. Step 5: Award Amount Determination: The CDFI Fund determines an award amount for each Application based on the Step 4 Total Policy Objective Review Score, the Applicant's request amount, and on certain other factors, including, but not limited to, the Applicant's deployment track record, minimum award size, and funding availability. Applicants may have award amounts reduced from the requested award amount or not funded as a result of this analysis. Based on funding availability for Core, SECA, and/or NACA Base-FA Applicant types, the CDFI Fund reserves the right to not award all Applicants that advance to Step 5. In cases where funding availability is not sufficient to award all Applications, priority will be given to Applicants that score highest on the Step 4: Policy Objective Review in each Applicant type Category (Core and SECA). For Core FA Applicants, the award cannot exceed 30% of the Applicant's total portfolio outstanding as of the Applicant's most recent historic fiscal year end in accordance with the FA Application Guidance. For SECA FA Applicants, the award cannot exceed 75% of the Applicant's total portfolio outstanding as of the Applicant's most recent historic fiscal year end in accordance with the FA Application Guidance, or the minimum award size as noted in table 2, whichever is greater.

2. HFFI–FA Application Scoring, Award Selection, Review, and Selection Process: A CDFI Fund internal reviewer will evaluate each HFFI–FA Application associated with a Base-FA Application that progresses to Step 4 of the FA Application review process. The reviewer will evaluate the Application sections listed in table 14 and assign a Total HFFI- FA Score up to 60 points. The CDFI Fund will make awards to the highest scoring Applicants first. All Applications will be reviewed in accordance with standard reviewer evaluation materials. Applicants that fail to receive a Base-FA award will not be considered for a HFFI–FA award.

The CDFI Fund conducts additional levels of due diligence for Applications that are under consideration for an HFFI–FA award. Award amounts may be reduced from the requested award amount as a result of this analysis. The CDFI Fund may reduce awards sizes from requested amounts based on certain variables, including but not limited to, an Applicant's deployment track record, total portfolio outstanding, or compliance with prior HFFI–FA awards. Lastly, the CDFI Fund may consider the geographic diversity of Applicants when making its funding decisions.

TABLE 14—STEP 4 HFFI–FA APPLICATION SCORING CRITERIA

Sections	Possible score
Target Market Profile	10 points
Healthy Food Financial Products	10 points
Projected HFFI–FA Activities	15 points
HFFI Track Record	20 points
Management Capacity for Providing Healthy Food Financing	5 points
Total HFFI–FA Score	60 points

3. PPC–FA Application Scoring, Award Selection, Review, and Selection Process: A CDFI Fund internal reviewer will evaluate the PPC–FA request of each PPC–FA Application associated with a Base-FA Application that progresses to Step 4 of the FA Application review process. PPC–FA requests are not scored. PPC–FA award amounts will be determined based on the total number of eligible Applicants and funding availability, the Applicant's requested amount, and on certain factors, including but not limited to, an Applicant's total portfolio outstanding, historical track record of deployment in PPC, pipeline of projects in PPC, minimum award size, and funding availability. Applicants that fail to receive a Base-FA award will not be considered for a PPC–FA award.

4. DF–FA Application Scoring, Award Selection, Review, and Selection Process: A CDFI Fund internal reviewer will evaluate each DF–FA Application associated with a Base-FA Application that progresses to Step 4 of the FA Application review process. The reviewer will evaluate the Application and assign a Total DF–FA Score on a scale of one (1) to three (3), with one (1) being the highest score. Applicants are then grouped according to Total DF–FA Score. All Applications will be reviewed in accordance with standard reviewer evaluation materials. Applicants that fail to receive a Base-FA award will not be considered for a DF–FA award. Award amounts will be determined on the basis of the Total DF–FA Score, the Applicant's requested amount, and on certain factors,

including but not limited to, an Applicant's deployment track record, total portfolio outstanding, minimum award size, and funding availability. Award amounts may be reduced from the requested award amount as a result of this analysis. The CDFI Fund will make awards to the highest scoring Applicants first.

TABLE 15—STEP 3 DF–FA APPLICATION SCORING CRITERIA

Section	Possible scores	High score
DF–FA Narrative Questions	1, 2, or 3	1
Total DF–FA Score	1, 2, or 3	1

5. HP–FA Application Scoring, Award Selection, Review, and Selection Process: A CDFI Fund internal reviewer will evaluate each HP–FA Application that progresses to Step 4 of the review process. The reviewer will evaluate the Application and assign a Total HP–FA Score on a scale of one (1) to three (3), with one (1) being the highest score, based on the Applicant's projected financing activity supporting housing production, the extent it intends to target 51% or more of Homeownership and rental Housing to families with incomes at 80% AMI or below, its track record of financing housing, its projected timeline for Housing to be completed, and the effectiveness of its strategy to mitigate any risks. Applicants are then grouped according to Total HP–FA Score. All Applications will be reviewed in accordance with standard reviewer evaluation materials. Applicants that would not qualify for an award based on Step 4 Total Policy Objective Review Score and due diligence evaluation will not be considered for an HP–FA award. Applicants that request an HP–FA award as a supplement a Base-FA award must be selected to receive a Base-FA award to be considered for an HP–FA award. Award amounts will be determined based on the Total HP–FA Score, the Applicant's requested amount, and on certain factors, including but not limited to, an Applicant's deployment track record, total portfolio outstanding, minimum award size, proximity to the $5 million over three years award cap, geographies served, and funding availability. The CDFI Fund may reduce an Applicant's award amount as a result of this analysis. The CDFI Fund will make awards to the highest scoring Applicants first.

6. TA Application Scoring, Award Selection, Review, and Selection Process: The CDFI Fund will evaluate each Application to determine its eligibility pursuant to Section III of this NOFA. If the Application satisfies the eligibility criteria, the CDFI Fund will conduct the TA Business Plan Review in two parts. Emerging CDFI Applicants must receive a rating of Low Risk or Medium Risk in Part I of the TA Business Plan Review to progress to Part II of the TA Business Plan Review. Emerging CDFI Applicants that receive a rating of High Risk in Part I of the TA Business Plan Review will not be considered for an award. Part I of the TA Business Plan Review is not applicable for Certified CDFI Applicants. Emerging CDFI and Certified CDFI Applicants must receive a rating of Low Risk or Medium Risk in Part II of the TA Business Plan Review to be considered for an award. Applicants that receive a rating of High Risk in Part II of the TA Business Plan Review will not be considered for an award. An Applicant that is a Certified CDFI will be evaluated on the demonstrated need for a TA award to build the CDFI's capacity, further the Applicant's strategic goals, and achieve impact within the Applicant's Target Market. An Applicant that is an Emerging CDFI will be evaluated on the Applicant's demonstrated capability and plan to achieve CDFI Certification within three years, or if a prior Recipient, the CDFI Certification PG&M stated in its prior Assistance Agreement. An Applicant that is an Emerging CDFI will also be evaluated on its demonstrated need for a TA award to build the CDFI's capacity and further its strategic goals. The CDFI Fund will rate each part of the TA Business Plan Review as indicated in table 16.

TABLE 16—TA BUSINESS PLAN REVIEW

Business plan review component	Applicant type	Ratings
Part I:		
Primary Mission	Emerging CDFI Applicants	Low Risk, Medium Risk, or High Risk.
Financing Entity	Emerging CDFI Applicants.	
Target Market	Emerging CDFI Applicants.	
Accountability	Emerging CDFI Applicants.	
Development Services	Emerging CDFI Applicants.	
Part II:		
Target Market Needs & Strategy	Emerging and Certified CDFI Applicants.	Low Risk, Medium Risk, or High Risk.
Organizational Capacity	Emerging and Certified CDFI Applicants.	
Management Capacity	Emerging and Certified CDFI Applicants.	

Each TA Application will be evaluated by one internal CDFI Fund reviewer. The Business Plan Review of all Applications will be reviewed in accordance with CDFI Fund standard reviewer evaluation materials.

The CDFI Fund conducts additional levels of due diligence for Applications that are under consideration for an award. This due diligence includes an analysis of programmatic and financial risk factors including, but not limited to, financial stability, history of performance in managing Federal

awards (including timeliness of reporting and compliance), reports and findings from audits, and the Applicant's ability to effectively implement Federal requirements. The CDFI Fund will also evaluate the compliance risk of each Applicant using information provided in the Application, as well as an Applicant's reporting history, reporting capacity, and performance risk with respect to meeting the PG&Ms set forth in the Assistance Agreement. Each Applicant will receive a Total Compliance Composite Score on a scale of one (1) to five (5), with one (1) being the highest rating. Applicants that receive an initial Total Compliance Composite Score of four (4) or five (5) will be re-evaluated by CDFI Fund staff. If the Applicant is deemed a high compliance risk after CDFI staff review, the Applicant will not be considered for an award. The CDFI Fund will also evaluate the Applicant's ability to meet CDFI Certification criteria of being a legal entity and a non-government entity. Award amounts may be reduced as a result of the due diligence analysis in addition to consideration of the Applicant's funding request and similar factors. Lastly, the CDFI Fund may consider the geographic diversity of Applicants when making its funding decisions.

6. Regulated Institutions: The CDFI Fund will consider safety and soundness information from the Appropriate Federal or State Banking Agency. If the Applicant is a Depository Institution Holding Company, the CDFI Fund will consider information provided by the Appropriate Federal or State Banking Agencies about both the Depository Institution Holding Company and the Subsidiary Insured Depository Institution that will expend and carry out the award. If the Appropriate Federal or State Banking Agency identifies safety and soundness concerns (including any concerns for Subsidiary Insured Depository Institutions carrying out the activities of an award on behalf of a Depository Institution Holding Company), the CDFI Fund will assess whether such concerns cause or will cause the Applicant to be incapable of undertaking the activities for which funding has been requested.

7. Non-Regulated Institutions: The CDFI Fund must ensure, to the maximum extent practicable, that Recipients which are non-regulated CDFIs are financially and managerially sound and maintain appropriate internal controls (12 U.S.C. 4707(f)(1)(A) and 12 CFR 1805.800(b)). Further, the CDFI Fund must determine that an Applicant's capacity to operate as a CDFI and its continued viability will not be dependent upon assistance from the CDFI Fund (12 U.S.C. 4704(b)(2)(A)). If it is determined that the Applicant is incapable of meeting these requirements, the CDFI Fund reserves the right to deem the Applicant ineligible or terminate the award.

8. Consideration of the Three-Year Award Cap: The CDFI Fund is prohibited from obligating more than $5 million in CDFI and NACA Program awards, in the aggregate, to any one organization and its Subsidiaries and Affiliates during any three-year period from the announcement date. Base-FA, TA, PPC–FA, and HP–FA are expected to be considered in this determination, based on existing statutory authority and past appropriations bill language. DF–FA and HFFI–FA were excluded from consideration towards the three-year award cap in the enacted FY 2024 Consolidated Appropriations Act; however, the final FY 2025 appropriations are still pending. Thus, the CDFI Fund reserves the right to include FY 2025 DF–FA and HFFI–FA awards in calculating the three-year award cap if these programs are not excluded in the final FY 2025 CDFI Program appropriations. The CDFI Fund may reduce award amounts or deny certain supplemental awards if necessary to stay under the $5 million award cap for a Recipient.

B. Anticipated Award Announcement: The CDFI Fund anticipates making the CDFI Program award announcement before September 30, 2025. However, the anticipated award announcement date is subject to change without notice.

C. Application Rejection: The CDFI Fund reserves the right to reject an Application if information (including administrative errors) comes to the CDFI Fund's attention that: adversely affects an Applicant's eligibility for an award; adversely affects the Recipient's CDFI Certification (to the extent that the award is conditional upon CDFI Certification); adversely affects the CDFI Fund's evaluation or scoring of an Application; or indicates fraud or mismanagement on the Applicant's part. If the CDFI Fund determines any portion of the Application is incorrect in a material respect, the CDFI Fund reserves the right, in its sole discretion, to reject the Application. The CDFI Fund reserves the right to change its eligibility and evaluation criteria and procedures, if the CDFI Fund deems it appropriate. If the changes materially affect the CDFI Fund's award decisions, the CDFI Fund will provide information about the changes through its website. The CDFI Fund's award decisions are final, and there is no right to appeal decisions.

D. External Non-CDFI Fund Reviewers: All external non-CDFI Fund reviewers are selected based on criteria that includes a professional background in community and economic development finance, and experience reviewing the financial statements of all CDFI institution types. Reviewers must complete the CDFI Fund's conflict of interest process and be approved by the CDFI Fund.

VI. Federal Award Administration Information

A. Award Notification: Each successful Applicant will receive an email ''notice of award'' notification from the CDFI Fund stating that its Application has been approved for an award. Each Applicant not selected for an award will receive an email stating that a debriefing notice has been provided in its AMIS account.

B. Assistance Agreement: Each Applicant selected to receive an award must enter into an Assistance Agreement with the CDFI Fund in order to receive a payment(s). The Assistance Agreement will set forth the award's terms and conditions, including but not be limited to the: (i) award amount; (ii) award type; (iii) award uses; (iv) eligible use of award funds; (v) PG&Ms; and (vi) reporting requirements. FA Assistance Agreements have three-year Periods of Performance. TA Assistance Agreements have two-year Periods of Performance for Certified CDFIs and three-year Periods of Performance for Emerging CDFIs.

1. Certificate of Good Standing: All FA and TA Recipients that are not Regulated Institutions will be required to provide the CDFI Fund with a certificate of good standing from the secretary of state for the Recipient's jurisdiction of formation prior to closing. This certificate can often be acquired online on the secretary of state website for the Recipient's jurisdiction of formation and must generally be dated within 180 days prior to the Federal Award Date of the Assistance Agreement. Due to potential backlogs in state government offices, Applicants are advised to submit requests for certificates of good standing no later than 60 days after they submit their Applications.

2. Closing: Pursuant to the Assistance Agreement, there will be an initial closing at which point the Assistance Agreement and related documents will be properly executed and delivered, and an initial payment of FA or TA may be made. FA Recipients that are subject to the Matching Funds requirement will

not receive a payment until 100% of their Matching Funds are In-Hand. The first payment is the estimated amount of the award that the Recipient states in its Application that it will use for eligible FA or TA activities in the first 12 months after the award announcement. The first payment request amount entered in the Application must be greater than zero. The CDFI Fund reserves the right to increase the first payment amount on any award to ensure that any subsequent payments are at least $25,000 for FA and $5,000 for TA awards.

The CDFI Fund will minimize the time between the Recipient incurring costs for eligible activities and award payment(s) in accordance with the Uniform Administrative Requirements. Advanced payments for eligible activities will occur no more than one year in advance of the Recipient incurring costs for the eligible activities. Following the initial closing, there may be subsequent closings involving additional award payments. Any documentation in addition to the Assistance Agreement that is connected with such subsequent closings and payments shall be properly executed and timely delivered by the Recipient to the CDFI Fund.

3. Requirements Prior to Entering into an Assistance Agreement: If, prior to entering into an Assistance Agreement, information (including administrative errors) comes to the CDFI Fund's attention that: adversely affects the Recipient's eligibility for an award; adversely affects the Recipient's CDFI Certification (to the extent that the award is conditional upon CDFI Certification); adversely affects the CDFI Fund's evaluation of the Application; indicates that the Recipient is not in compliance with any requirement listed in the Uniform Administrative Requirements; indicates that the Recipient is not in compliance with a term or condition of any prior Award Agreement, Assistance Agreement, and/or Allocation Agreement from the CDFI Fund; indicates the Recipient has failed to execute and return a prior round Assistance Agreement to the CDFI Fund within the CDFI Fund's deadlines; or indicates fraud or mismanagement on the Recipient's part, the CDFI Fund may, in its discretion and without advance notice to the Recipient, terminate the award or take such other actions as it deems appropriate. The CDFI Fund reserves the right, in its sole discretion, to rescind an award if the Recipient fails to return the Assistance Agreement, signed by the Authorized Representative of the Recipient, and/or provide the CDFI Fund with any requested documentation, within the CDFI Fund's deadlines.

In addition, the CDFI Fund reserves the right, in its sole discretion, to terminate and rescind the Assistance Agreement and the award made under this NOFA pending the criteria described in table 17.

TABLE 17—REQUIREMENTS PRIOR TO EXECUTING AN ASSISTANCE AGREEMENT

Requirement	Criteria
Failure to meet reporting requirements.	• If a Recipient received a prior award or allocation under any CDFI Fund program and is not current on the reporting requirements set forth in the previously executed assistance, award, allocation, bond loan agreement(s), or agreement to guarantee, as of the date of the notice of award, the CDFI Fund reserves the right, in its sole discretion, to delay entering into an Assistance Agreement and/or to delay making a payment of award, until said prior Recipient or allocatee is current on the reporting requirements in the previously executed assistance, award, allocation, bond loan agreement(s), or agreement to guarantee. • If such a prior Recipient or allocatee is unable to meet this requirement within the timeframe set by the CDFI Fund, the CDFI Fund reserves the right, in its sole discretion, to terminate and rescind the notice of award and the award made under this NOFA. • Please note that automated systems employed by the CDFI Fund for receipt of reports submitted electronically typically acknowledge only a report's receipt; such acknowledgment does not warrant that the report received was complete, nor that it met reporting requirements.
Failure to maintain CDFI Certification.	• An FA Recipient must be a Certified CDFI. • If an FA Recipient fails to maintain CDFI Certification, the CDFI Fund will not execute the Assistance Agreement and will terminate and rescind the award made under this NOFA. • If a TA Recipient is a Certified CDFI at the time of award announcement, it must maintain CDFI Certification. • If a Certified CDFI TA Recipient fails to maintain CDFI Certification, the CDFI Fund will not execute the Assistance Agreement and will terminate and rescind the award made under this NOFA.
Pending resolution of noncompliance or default.	• The CDFI Fund will delay entering into an Assistance Agreement with a prior Recipient or allocatee (or Affiliate of the Recipient identified in AMIS) that has pending noncompliance or default issues with any of its previously executed CDFI Fund award(s), allocation(s), bond loan agreement(s), or agreement(s) to guarantee. • If said prior Recipient or allocatee is unable satisfactorily resolve the compliance issues, the CDFI Fund reserves the right, in its sole discretion, to terminate and/or rescind the notice of award and the award made under this NOFA.
Noncompliance or default status	• If, at any time prior to entering into an Assistance Agreement, the CDFI Fund determines that a Recipient (or Affiliate of the Recipient identified in AMIS) is noncompliant or found in default with any previously executed CDFI Fund award(s), allocation(s), bond loan agreement(s), or agreement(s) to guarantee, and the CDFI Fund has provided written notification that the Recipient is ineligible to apply for or receive any future awards or allocations for a time period specified by the CDFI Fund in writing, the CDFI Fund may delay entering into an Assistance Agreement until the Recipient has cured the noncompliance and/or default by taking actions the CDFI Fund has specified within such specified timeframe. Additionally, regardless of whether a sanction or remedy is imposed, the CDFI Fund will not consider an Application submitted by an Applicant if the default on a prior Allocation Agreement of the Applicant or an Affiliate occurs during the time period beginning 12 months prior to the Application deadline and execution of the FY 2025 Assistance Agreement. If the Recipient is unable to cure the noncompliance and/or default within the specified timeframe, the CDFI Fund may terminate and rescind the Assistance Agreement and the award made under this NOFA.
Compliance with Federal civil rights requirements.	• If, within the period starting three years prior to this NOFA and through the date of the Assistance Agreement, the Recipient received a final determination, in any proceeding instituted against the Recipient in, by, or before any court, governmental, or administrative body or agency, declaring that the Recipient violated any Federal civil rights laws or regulations, including: Title VI of the Civil Rights Act of 1964, as amended (42 U.S.C. 2000d et seq.); Fair Housing Act (42 U.S.C. 3601 et seq.); Equal Credit Opportunity Act (15 U.S.C. 1691 et seq.); Section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794); and the Age Discrimination Act of 1975 (42 U.S.C. 6101–6107), the CDFI Fund may terminate and rescind the Assistance Agreement and the award made under this NOFA. The CDFI Fund will delay entering into an Assistance Agreement with a Recipient that has pending Title VI noncompliance issues, if the CDFI Fund has not yet made a final compliance determination. • If the Recipient is unable to satisfactorily resolve the Title VI noncompliance issues, the CDFI Fund may terminate and rescind the Assistance Agreement and the award made under this NOFA. • The Title VI Compliance Worksheet and program award terms and conditions do not impose antidiscrimination requirements on Tribal governments beyond what would otherwise apply under Federal law.

TABLE 17—REQUIREMENTS PRIOR TO EXECUTING AN ASSISTANCE AGREEMENT—Continued

Requirement	Criteria
Do Not Pay	• The Do Not Pay Business Center was developed to support Federal agencies in their efforts to reduce the number of improper payments made through programs funded by the Federal Government. • If the Do Not Pay Business Center reports that the Recipient has a pending or delinquent debt to the Federal Government, the Recipient will be required to demonstrate that it has resolved such pending or delinquent debt. The CDFI Fund reserves the right, in its sole discretion, to rescind an award if the Recipient fails to demonstrate resolution of the pending or delinquent Federal debt.
Safety and soundness	• If it is determined the Recipient is, or will be, incapable of meeting its award obligations, the CDFI Fund will deem the Recipient to be ineligible or require it to improve its safety and soundness prior to entering into an Assistance Agreement.

C. Reporting

1. Reporting requirements: On an annual basis during the Period of Performance, the CDFI Fund may collect information from each Recipient including, but not limited to, an Annual Report with the following components (Annual Reporting Requirements):

TABLE 18—ANNUAL REPORTING REQUIREMENTS *

Financial Statement Audit Report (Non-profit Recipient including Insured Credit Unions and State-Insured Credit Unions).	A Non-profit Recipient (including Insured Credit Unions and State-Insured Credit Unions) must submit a Financial Statement Audit (FSA) Report in AMIS, along with the Recipient's statement of financial condition audited or reviewed by an independent certified public accountant, if any are prepared. Under no circumstances should this be construed as the CDFI Fund requiring the Recipient to conduct or arrange for additional audits not otherwise required under Uniform Administrative Requirements or otherwise prepared at the request of the Recipient or parties other than the CDFI Fund.
Financial Statement Audit Report (For-Profit Recipient).	For-profit Recipients must submit an FSA Report in AMIS, along with the Recipient's statement of financial condition audited or reviewed by an independent certified public accountant.
Financial Statement Audit Report (Depository Institution Holding Company and Insured Depository Institution).	If the Recipient is a Depository Institution Holding Company or an Insured Depository Institution, it must submit an FSA Report in AMIS.
Single Audit Report (Non-Profit Recipients, if applicable).	A non-profit Recipient must complete an annual Single Audit pursuant to the Uniform Administrative Requirements (see 2 CFR Subpart F-Audit Requirements) if it expends $1,000,000 or more in Federal awards in its fiscal year, or such other dollar threshold established by OMB pursuant to 2 CFR 200.501. If a Single Audit is required, it must be submitted electronically to the Federal Audit Clearinghouse (FAC) (see 2 CFR Subpart F-Audit Requirements in the Uniform Administrative Requirements) and optionally through AMIS.
Federal Financial Report/OMB Standard Form 425 (SF–425).	The Recipient must annually submit the SF–425 Federal Financial Report to the CDFI Fund through AMIS to disclose how much of the CDFI Program award funds were expended during the Federal Government's fiscal year of October 1 through September 30.
Uses of Award Report	The Recipient must submit the Uses of Award Report to the CDFI Fund in AMIS. If the Recipient is a Depository Institution Holding Company that deploys all or a portion of its Financial Assistance through its Subsidiary Insured Depository Institution, the Depository Institution Holding Company must submit all uses in a Uses of Award Report.
Shareholders Report	If the Assistance is in the form of an Equity Investment, the Recipient must submit shareholder information to the CDFI Fund showing the class, series, number of shares and valuation of capital stock held or to be held by each shareholder. The Shareholders Report must be submitted for as long as the CDFI Fund is an equity holder. The Shareholders Report is submitted through AMIS.
Performance Progress Report	The Recipient must submit the Performance Progress Report through AMIS. If the Recipient is a Depository Institution Holding Company that deploys all or a portion of its Financial Assistance through its Subsidiary Insured Depository Institution, the Depository Institution Holding Company must submit all deployed activity in a Performance Progress Report.
Transaction Level Report (TLR)	The Recipient must submit a TLR to the CDFI Fund through AMIS. If the Recipient is a Depository Institution Holding Company that deploys all or a portion of its Financial Assistance through its Subsidiary Insured Depository Institution, the Depository Institution Holding Company must create and submit the TLR for this award. The Subsidiary Insured Depository Institution does not submit and create a TLR related to this award. The full-length TLR completed by FA Recipients is not required for TA Recipients. However, TA Recipients who are Certified CDFIs must complete the abbreviated TLR through AMIS as a requirement of CDFI Certification.
Annual Certification and Data Collection Report (ACR).	TA Recipients that are Certified at the time of award announcement and all FA Recipients must submit the ACR to the CDFI Fund through AMIS per the ACR reporting schedule. If a TA Recipient is a Certified CDFI at the time of the award announcement, it must also submit the abbreviated TLR in conjunction with its ACR to the CDFI Fund through AMIS as per the ACR and abbreviated TLR reporting schedule. If a TA Recipient is an uncertified CDFI at the time of award announcement, it must submit the ACR and abbreviated TLR to the CDFI Fund through AMIS subsequent to obtaining CDFI Certification as per the ACR and abbreviated TLR reporting schedule.

* Personally Identifiable Information (PII) is information, which if lost, compromised, or disclosed without authorization, could result in substantial harm, embarrassment, inconvenience, or unfairness to an individual. Although Applicants are required to enter addresses of individual borrowers/residents of Distressed Communities in AMIS, Applicants should not include the following PII for the individuals who received the Financial Products or Financial Services in AMIS or in the supporting documentation (*i.e.,* name of the individual, Social Security Number, driver's license or state identification number, passport number, Alien Registration Number, etc.). This information should be redacted from all supporting documentation.

Each Recipient is responsible for the timely and complete submission of the Annual Reporting Requirements. The CDFI Fund reserves the right to require Recipients to take training on how to accurately complete any reporting required pursuant to the Assistance Agreement. The CDFI Fund reserves the right to contact the Recipient and additional entities or signatories to the Assistance Agreement to request additional information and/or documentation. The CDFI Fund will use such information to monitor each Recipient's compliance with the requirements of the Assistance Agreement and to assess the impact of the CDFI Program. The CDFI Fund reserves the right, in its sole discretion, to modify these reporting requirements, including increasing the scope and frequency of reporting, if it determines it to be appropriate and necessary; however, such reporting requirements

will be modified only after notice to Recipients.

2. Financial Management and Accounting: The CDFI Fund will require Recipients to maintain financial management and accounting systems that comply with Federal statutes, regulations, and the terms and conditions of the Federal award. These systems must be sufficient to permit the preparation of reports required by the CDFI Fund to ensure compliance with the terms and conditions of the CDFI Program, including the tracing of award funds to a level of expenditures adequate to establish that such award funds have been used in accordance with Federal statutes, regulations, and the terms and conditions of the Federal award.

The cost principles used by Recipients must be consistent with Federal cost principles and support the accumulation of costs as required by the principles and must provide for adequate documentation to support costs charged to the CDFI Program award. In addition, the CDFI Fund will require Recipients to: maintain effective internal controls; comply with applicable statutes, regulations, and the Assistance Agreement; evaluate and monitor compliance; take appropriate action when not in compliance; and safeguard personally identifiable information.

VII. Agency Contacts

A. The CDFI Fund will respond to questions concerning this NOFA and the Application between the hours of 9:00 a.m. and 5:00 p.m. Eastern Time, starting on the date that the NOFA is published through the date listed in table 1. The CDFI Fund strongly recommends Applicants submit questions to the CDFI Fund via an AMIS Service Request to the CDFI Program, Certification, Compliance Monitoring and Evaluation, or IT Help Desk. The CDFI Fund will post on its website responses to reoccurring questions received about the NOFA and Application. Other information regarding the CDFI Fund and its programs may be obtained from the CDFI Fund's website at *https://www.cdfifund.gov.* Table 19 lists CDFI Fund contact information:

TABLE 19—CONTACT INFORMATION

Type of question	Preferred method	Telephone number (not toll free)	Email addresses
CDFI Program	Service Request via AMIS	202–653–0421, option 1	*cdfihelp@cdfi.treas.gov.*
Compliance Monitoring and Evaluation	Service Request via AMIS	202–653–0423	*ccme@cdfi.treas.gov.*
CDFI Certification	Service Request via AMIS	202–653–0423	*OCPECert@cdfi.treas.gov.*
AMIS—IT Help Desk	Service Request via AMIS	202–653–0422	*AMIS@cdfi.treas.gov.*
Grants.gov Help Desk	N/A	(800) 518–4726	*support@grants.gov.*
SAM.gov (Federal Service Desk)	N/A	(866) 606–8220	*https://sam.gov/.*

B. Information Technology Support: For IT assistance, the preferred method of contact is to submit a Service Request within AMIS. For the Service Request, select ''Technical Issues'' from the Program dropdown menu of the Service Request. People who have visual or mobility impairments that prevent them from using the CDFI Fund's website should call (202) 653–0422 for assistance (this is not a toll-free number).

C. Communication with the CDFI Fund: The CDFI Fund will use the contact information in AMIS to communicate with Applicants and Recipients. It is imperative, therefore, that Applicants, Recipients, Subsidiaries, Affiliates, and signatories maintain accurate contact information in their accounts. This includes information such as contact names (especially for the Authorized Representative), email addresses, fax and phone numbers, and office locations.

D. Revisions to Federal Funding Accountability and Transparency Act of 2006: Each Applicant that does not have an exception related to reporting subaward and executive compensation information under 2 CFR part 170 must have the necessary processes and systems in place to comply with reporting requirements should they receive an award.

E. Civil Rights and Equal Employment Opportunity: Any person who is eligible to receive benefits or services from the CDFI Fund or Recipients under any of its programs or activities is entitled to those benefits or services without being subject to prohibited discrimination. The Department of the Treasury's Office of Civil Rights and Equal Employment Opportunity enforces various Federal statutes and regulations that prohibit discrimination in financially assisted and conducted programs and activities of the CDFI Fund. If a person believes that s/he has been subjected to discrimination and/or reprisal because of race, color, religion, national origin, age, sex, marital status, familial status, disability and/or reprisal, s/he may file a complaint with: Director, Office of Civil Rights and Equal Employment Opportunity, 1500 Pennsylvania Ave, NW, Washington, DC 20230 or (202) 622–1160 (not a toll-free number).

F. Whistleblower Protections: An employee of a Recipient or Subrecipient must not be discharged, demoted, or otherwise discriminated against as a reprisal for disclosing to a person or body described in paragraph (a)(2) of 41 U.S.C. 4712 information that the employee reasonably believes is evidence of gross mismanagement of a Federal contract or grant, a gross waste of Federal funds, an abuse of authority relating to a Federal contract or grant, a substantial and specific danger to public health or safety, or a violation of law, rule, or regulation related to a Federal contract (including the competition for or negotiation of a contract) or grant. The Recipient and Subrecipient must inform their employees in writing of employee whistleblower rights and protections under 41 U.S.C. 4712. See statutory requirements for whistleblower protections at 10 U.S.C. 4701, 41 U.S.C. 4712, 41 U.S.C. 4304, and 10 U.S.C. 4310.

G. Statutory and National Policy Requirements: The CDFI Fund will manage and administer the Federal award in a manner to ensure that Federal funding is expended and associated programs are implemented in full accordance with the U.S. Constitution, Federal law, and public policy requirements: including but not limited to, those protecting free speech, religious liberty, public welfare, the environment, and prohibiting discrimination.

VIII. Other Information

A. Paperwork Reduction Act: Under the Paperwork Reduction Act (44 U.S.C. chapter 35), an agency may not conduct or sponsor a collection of information, and an individual is not required to respond to a collection of information, unless it displays a valid OMB control number. If applicable, the CDFI Fund may inform Applicants that they do not need to provide certain Application

information otherwise required. Pursuant to the Paperwork Reduction Act, the CDFI Program, and NACA Program Applications have been assigned the following control number: 1559–0021.

B. Application Information Sessions: The CDFI Fund may conduct webinars or host information sessions for organizations that are considering applying to, or are interested in learning about, the CDFI Fund's programs. For further information, visit the CDFI Fund's website at *https://www.cdfifund.gov.*

Authority: 12 U.S.C. 4701, et seq; 12 CFR parts 1805 and 1815; 2 CFR part 200.

Pravina Raghavan,

Director, Community Development Financial Institutions Fund.

BILLING CODE 4810–05–P

DEPARTMENT OF THE TREASURY

Community Development Financial Institutions Fund

Notice of Funds Availability

Announcement Type: Announcement of funding opportunity.

Funding Opportunity Title: Notice of Funds Availability (NOFA) inviting Applications for Financial Assistance (FA) or Technical Assistance (TA) awards under the Native American CDFI Assistance (NACA Program) fiscal year (FY) 2025 Funding Round.

Funding Opportunity Number: CDFI–2025–NACA.

Catalog of Federal Domestic Assistance (CFDA) Number: 21.012.

Dates:

TABLE 1—FY 2025 NACA PROGRAM FUNDING ROUND CRITICAL DEADLINES FOR APPLICANTS

Description	Deadline	Time (eastern time—ET)	Submission method
Last day to create an AMIS Account (all Applicants)	February 18, 2025	11:59 p.m. ET	AMIS.
Last day to enter Employer Identification Number (EIN) and Unique Entity Identifier (UEI) in AMIS (all Applicants).	February 18, 2025	11:59 p.m. ET	AMIS.
Last day to submit SF–424 Mandatory Form (Application for Federal Assistance).	February 18, 2025	11:59 p.m. ET	Electronically via *Grants.gov.*
Last day to contact NACA Program staff	March 19, 2025	5:00 p.m. ET	Service Request via AMIS Or CDFI Fund Helpdesk: 202–653–0421.
Last day to contact AMIS–IT Help Desk (regarding AMIS technical problems only).	March 21, 2025	5:00 p.m. ET	Service Request via AMIS Or 202–653–0422 Or *AMIS@cdfi.treas.gov.*
Last day to submit Title VI Compliance Worksheet (all Applicants) [1].	March 21, 2025	11:59 p.m. ET	AMIS.
Last day to submit NACA Program Application for Financial Assistance (FA) or Technical Assistance (TA).	March 21, 2025	11:59 p.m. ET	AMIS.
Last day to submit Excel Housing Production FA (HP–FA) Application.	April 4, 2025	11:59 p.m. ET	Service Request via AMIS.

Executive Summary: Through the NACA Program, the Community Development Financial Institutions (CDFI) Fund provides (i) FA awards to Certified Community Development Financial Institutions (CDFIs) serving Native American, Alaska Native, or Native Hawaiian populations or Native American areas defined as federally-designated reservations, Hawaiian homelands, Alaska Native Villages and U.S. Census Bureau-designated Tribal Statistical Areas (collectively, ''Native Communities'') to build their financial capacity to lend to Eligible Markets and/or their Target Markets, and (ii) TA awards to build Certified, and Emerging CDFIs' organizational capacity to serve Eligible Markets and/or their Target Markets, and Sponsoring Entities' ability to create Certified CDFIs that serve Native Communities. All awards provided through this NOFA are subject to funding availability.

[1] This requirement also applies to Subsidiary Insured Depository Institutions that will carry out the activities on behalf of Depository Institution Holding Company Applicants.

I. Program Description

A. History: The CDFI Fund was established by the Riegle Community Development Banking and Financial Institutions Act of 1994 to promote economic revitalization and community development through investment in and assistance to CDFIs. The Native American CDFI Assistance (NACA) Program made its first awards in 2002, after the CDFI Program began making awards in 1996.

B. Priorities: Through the NACA Program's FA and TA awards, the CDFI Fund invests in and builds the capacity of for-profit and non-profit community-based lending organizations known as CDFIs. These organizations, Certified as CDFIs by the CDFI Fund, serve Native Communities.

C. Authorizing Statutes and Regulations: The CDFI Program is authorized by the Riegle Community Development Banking and Financial Institutions Act of 1994 (Pub. L. 103–325, 12 U.S.C. 4701 *et seq.*) (Authorizing Statute). The regulations governing the NACA Program are found at 12 CFR parts 1805 and 1815 (the Regulations) and are used by the CDFI Fund to govern, in general, the NACA Program, setting forth evaluation criteria and other program requirements. The CDFI Fund encourages Applicants to review the Regulations; this NOFA; the NACA Program Application for Financial Assistance or Technical Assistance (the Application); all related materials and guidance documents found on the CDFI Fund's website (Application materials); and the Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards (2 CFR part 1000), which is the Department of the Treasury's codification of the Office of Management and Budget (OMB) government-wide framework for Federal financial assistance management at 2 CFR part 200 Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards (Uniform Administrative Requirements) for a complete understanding of the NACA Program. Capitalized terms in this NOFA are defined in the Authorizing Statute, the Regulations, this NOFA, the Application, Application materials, or the Uniform

Administrative Requirements. Details regarding Application content requirements are found in the Application and Application materials.

D. Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards (2 CFR part 1000): The Uniform Administrative Requirements codify financial, administrative, procurement, and program management standards that Federal award agencies must follow. When evaluating Applications, awarding agencies must evaluate the risks posed by each Applicant, and each Applicant's merits and eligibility. These requirements are designed to ensure that Applicants for Federal assistance receive a fair and consistent review prior to an award decision. This review will assess items such as the Applicant's financial stability, quality of management systems, the soundness of its business plan, history of performance, ability to achieve measurable impacts through its products and services, and audit findings. In addition, the Uniform Administrative Requirements include guidance on audit requirements and other award compliance requirements for Recipients.

E. Funding limitations: The CDFI Fund reserves the right to fund, in whole or in part, any, all, or none of the Applications submitted in response to this NOFA. The CDFI Fund also reserves the right to reallocate funds from the amount that is anticipated to be available through this NOFA to other CDFI Fund initiatives that are designed to benefit Native Communities, particularly if the CDFI Fund determines that the number of awards made through this NOFA is fewer than projected.

II. Federal Award Information

A. Funding Availability:

1. FY 2025 Funding Round: Subject to final appropriations, the CDFI Fund expects to award, through this NOFA, approximately $28 million specifically for NACA through Base-FA, PPC–FA, and TA, as indicated in table 2. NACA Applicants may also access the supplemental funding programs of DF–FA, HFFI, and HP–FA, though NACA Applicants compete with CDFI Program Applicants for these funds. There is not a set-aside for NACA under these supplemental programs.

TABLE 2—FY 2025 FUNDING ROUND ANTICIPATED CATEGORY AMOUNTS

Funding categories (see definition in table 7 for TA or table 8 for FA)	Estimated total amount to be awarded (millions) FY 2025	Award amount		Estimated number of awards FY 2025	Estimated average amount to be awarded FY 2025
		Minimum	Maximum *		
Base-FA	$22.2	$150,000	$1,500,000	27	$822,000
Persistent Poverty Counties—Financial Assistance (PPC–FA)	2.8	100,000	400,000	10	280,000
TA	3.0	10,000	200,000	15	200,000
Total (Base-FA, PPC–FA, and TA)	28.0			52	
Disability Funds—Financial Assistance (DF–FA) **	20.0	100,000	1,000,000	20	1,000,000
Healthy Food Financing Initiative—Financial Assistance (HFFI–FA) **	24.0	500,000	5,000,000	15	1,600,000
Housing Production—Financial Assistance (HP–FA) **	100.0	1,000,000	*5,000,000	50	2,000,000

* Note that, regardless of the stated maximum award in each award category, in no case will the sum of an Applicant's Base-FA, TA, PPC–FA and HP–FA Awards in the last three years exceed $5 million.

** DF–FA, HFFI–FA, and HP–FA funding will be allocated in one competitive round between the NACA and CDFI Program NOFAs.

The CDFI Fund reserves the right to award more or less than the amounts cited above in each category, based upon available funding and other factors, as appropriate.

2. Funding Availability for the FY 2025 Funding Round: Funds for the FY 2025 Funding Round are subject to change based on passage of a final FY 2025 appropriations bill; if Congress does not appropriate funds for the NACA Program there will not be an FY 2025 Funding Round. If funds are appropriated for FY 2025, the amount of such funds may be greater or less than the amounts set forth above. The CDFI Fund reserves the right to contact Applicants to seek additional information in the event that final FY 2025 appropriations for the NACA Program necessitate change to any of the requirements of this NOFA. As of the date of this NOFA, the CDFI Fund is operating under a continuing funding resolution as enacted by the Continuing Appropriations and Extensions Act, 2025 (Pub. L. 118–83). The HP–FA awards are funded through interest and dividend payments and sale proceeds received under the Department of the Treasury's Emergency Capital Investment Program (ECIP). The amount available for HP–FA awards is estimated based on projected ECIP proceeds and may vary based on the actual proceeds received by the CDFI Fund.

3. Anticipated Start Date and Period of Performance: The Period of Performance for TA awards begins with the date of the award announcement and includes either (i) an Emerging CDFI Recipient's three full consecutive fiscal years after the date of the award announcement, or (ii) a Certified CDFI Recipient's two full consecutive fiscal years after the date of the award announcement, or (iii) a Sponsoring Entity Recipient's four full years after the date of the award announcement, during which the Recipient must meet the Performance Goals and Measures (PG&Ms) set forth in the Assistance Agreement. The Period of Performance for FA awards begins with the date of the award announcement and includes a Recipient's three full consecutive fiscal years after the date of the award announcement, during which time the Recipient must meet the PG&Ms set forth in the Assistance Agreement.

B. Types of Awards: Through the NACA Program, the CDFI Fund provides two types of awards: Financial Assistance (FA) and Technical Assistance (TA) awards. An Applicant may submit an Application for a TA award or an FA award under the NACA Program, but not both. FA awards include the Base Financial Assistance (Base-FA) award and the following awards that are provided as a supplement to the Base-FA award: Healthy Food Financing Initiative-Financial Assistance (HFFI–FA), Persistent Poverty Counties-Financial Assistance (PPC–FA), Disability Funds-Financial Assistance (DF–FA), and Housing Production-Financial Assistance (HP–FA). The HFFI–FA, PPC–FA, DF–FA, and HP–FA Applications will be evaluated independently from the Base-FA Application and will not affect the Base-FA Application evaluation or Base-FA award amount. Alternatively, an Applicant may request only HP–FA by submitting an FA Application with no Base-FA award request and submitting the Excel HP–FA Application as well. Additional information on how to

complete an FA Application under this circumstance is provided in the Application Guidance.

However, Applicants that qualify for the NACA Program may submit two Applications in certain circumstances: one Application (either for a TA award or an FA award, but not both) through the CDFI Program, and one Application (either for a TA award or an FA award, but not both) through the NACA Program. NACA qualified Applicants that choose to apply for awards through both the CDFI Program and the NACA Program must apply for the same type of award under both programs. For example, an Applicant that applies for an FA award under the NACA Program may apply for an FA award under the CDFI Program, but not for a TA award under the CDFI Program. NACA qualified FA Applicants that choose to apply for an FA award under both the NACA Program and CDFI Program and are selected for an award under both Programs will be provided the FA award under the NACA Program. NACA qualified TA Applicants that choose to apply for a TA award under both the NACA Program and CDFI Program and are selected for an award under both Programs will be provided the TA award under the NACA Program. NACA Applicants cannot receive an award under both Programs within the same funding round. Further, NACA qualified Applicants who seek to only apply for an HP–FA award with no Base-FA award can do so by submitting either a CDFI Program FA Application or a NACA Program FA Application; the FA Application should be submitted with no Base-FA award request and the additional Excel HP–FA Application. Further instructions are found in the Application Guidance. If a NACA qualified Applicant seeks to apply for HP–FA award only, they should apply through either the CDFI Program or the NACA Program, but not both. If a NACA qualified Applicant submits an eligible HP–FA only Application under one program and an eligible Application with a Base-FA award request under the other program, only the Application with the Base-FA award request will be reviewed. The HP–FA only Application will be deemed ineligible.

The Indian Community Economic Enhancement Act of 2020 (Pub. L. 116–261) permanently waived the Matching Funds [2] requirement for Native American CDFIs,[3] and as a result, Native American CDFI FA Applicants are not required to provide Matching Funds. HP–FA Applicants are not required to provide Matching Funds for HP–FA award requests, as Matching Funds are not required under the Consolidated Appropriations Act, 2021 (Pub. L. 116–260). TA Applicants are not required to provide Matching Funds.

1. Base-FA Awards: Base-FA awards are provided in the form of a grant. The CDFI Fund reserves the right, in its sole discretion, to provide a Base-FA award in an amount other than that which the Applicant requests; however, the award amount will not exceed the Applicant's award request as stated in its Application.

2. Persistent Poverty Counties—Financial Assistance (PPC–FA) Awards: PPC–FA awards will be provided as a supplement to Base-FA awards; therefore, only those Applicants that are selected to receive a Base-FA award through the NACA Program FY 2025 Funding Round will be eligible to receive a PPC–FA award. PPC–FA awards are provided in the form of a grant. The CDFI Fund reserves the right, in its sole discretion, to provide a PPC–FA award in an amount other than that which the Applicant requests; however, the award amount will not exceed the Applicant's award request as stated in its Application.

3. Disability Funds—Financial Assistance (DF–FA) Awards: DF–FA awards will be provided as a supplement to Base-FA awards; therefore, only those Applicants that have been selected to receive a Base-FA award through the NACA Program FY 2025 Funding Round will be eligible to receive a DF–FA award. DF–FA awards are provided in the form of a grant to Native American CDFIs. The CDFI Fund reserves the right, in its sole discretion, to provide a DF–FA award in an amount other than that which the Applicant requests; however, the award amount will not exceed the Applicant's award request as stated in its Application.

4. Healthy Food Financing Initiative—Financial Assistance (HFFI–FA) Awards: HFFI–FA awards will be provided as a supplement to Base-FA awards; therefore, only those Applicants that have been selected to receive a Base-FA award through the NACA Program FY 2025 Funding Round will be eligible to receive an HFFI–FA award. HFFI–FA awards are provided in the form of a grant to Native American CDFIs. The CDFI Fund reserves the right, in its sole discretion, to provide an HFFI–FA award in an amount other than that which the Applicant requests; however, the award amount will not exceed the Applicant's award request as stated in its Application.

5. Housing Production—Financial Assistance (HP–FA) Awards: Applicants may apply for an HP–FA award as a supplement to a Base-FA award or may apply only for an HP–FA award (without a Base-FA award). If an Applicant applies for an HP–FA award as a supplement to a Base-FA award, it must be selected to receive a Base-FA award through the FY 2025 NACA Program Funding Round to be eligible to receive an HP–FA award. Alternatively, an Applicant may choose to apply for only an HP–FA award (with no Base-FA award) by completing an FA Application as instructed in the Application Guidance and submitting the Excel HP–FA Application as well. If an Applicant chooses to apply only for an HP–FA Award (with no Base-FA award), it will be ineligible to receive a Base-FA, PPC–FA, DF–FA, or HFFI–FA award. HP–FA awards will be provided in the form of a grant. Because HP–FA awards are funded by proceeds received from ECIP under the Consolidated Appropriations Act, 2021, HP–FA awards are not subject to the Matching Funds requirements. The CDFI Fund reserves the right, in its sole discretion, to provide an HP–FA award in an amount other than that which the Applicant requests; however, the award amount will not exceed the Applicant's award request as stated in its Application.

6. TA Awards: TA is provided in the form of grants. The CDFI Fund reserves the right, in its sole discretion, to provide a TA award in an amount other than that which the Applicant requests; however, the TA award amount will not exceed the Applicant's request as stated in its Application.

C. Eligible Activities:

1. FA Awards: Base-FA, PPC–FA, DF–FA, HFFI–FA, and HP–FA award funds may be expended for activities serving Commercial Real Estate, Small Business, Microenterprise, Community Facilities, Consumer Financial Products, Consumer Financial Services, Commercial Financial Products, Commercial Financial Services, Affordable Housing, Intermediary Lending to Non-Profits and CDFIs, Climate-Focused Financing, and other lines of business as deemed appropriate by the CDFI Fund in the following categories: (i) Financial Products; (ii) Financial Services; (iii) Loan Loss

[2] Matching Funds shall mean funds from sources other than the Federal Government as defined in accordance with the CDFI Program Regulations at 12 CFR 1805.500.

[3] A Native American CDFI (Native CDFI) is one that Primarily Serves a Native Community. Primarily Serves is defined as 50% or more of an Applicant's activities being directed to a Native Community.

Reserves; (iv) Development Services; [4] (v) Capital Reserves; and (vi) Direct Administrative Expenses, subject to certain restrictions outlined in this section. The FA Budget is the amount of the award and must be expended in the five eligible activity categories prior to the end of the Budget Period.[5] None of the eligible activity categories will be authorized for Indirect Costs or an associated Indirect Cost Rate. All FA eligible activities must be in an Eligible Market or the Applicant's approved Target Market. Eligible Market is defined as (i) a geographic area meeting the requirements set forth in 12 CFR 1805.201(b)(3)(ii), or (ii) individuals that are Low-Income, African American, Hispanic, Native American, Native Hawaiian, Alaska Native, Other Pacific Islander, Filipino, Vietnamese, or Persons with Disabilities.

Base-FA Recipients must meet PG&Ms, which will be derived from projections and attestations provided by the Applicant in its Application, to achieve one of the following FA Objectives: (i) Increase Volume of Financial Products in an Eligible Market(s) and/or in the Applicant's approved Target Market and/or Increase Volume of Financial Services in an Eligible Market(s) and/or in the Applicant's approved Target Market; (ii) Serve Eligible Market(s) or the Applicant's approved Target Market in New Geographic Area or Areas; (iii) Provide New Financial Products in an Eligible Market(s) and/or in the Applicant's approved Target Market; and (iv) Serve New Targeted Population or Populations. At the end of each year of the Period of Performance, 50% or more of the Financial Products closed by NACA Recipients must be in Native Communities. FA awards may only be used for Direct Costs associated with an eligible activity; no indirect expenses are allowed. Up to 15% of the FA award may be used for Direct Administrative Expenses associated with an eligible FA activity. ''Direct Administrative Expenses'' shall mean Direct Costs, as described in section 2 CFR 200.413 of the Uniform Administrative Requirements, which are incurred by the Recipient to carry out the Financial Assistance. Direct Costs incurred to provide Development Services or Financial Services are not deemed to be Direct Administrative Expenses and therefore are not subject to the 15% limitation.

The Recipient must comply, as applicable, with the Buy American Act of 1933, 41 U.S.C. 8301–8303 and section 2 CFR 200.216 of the Uniform Administrative Requirements,[6] with respect to any Direct Costs. For purposes of this NOFA, the five eligible activity categories are defined in table 3.

TABLE 3—BASE–FA, PPC–FA, DF–FA, HFFI–FA, AND HP–FA ELIGIBLE ACTIVITY CATEGORIES

FA eligible activity	FA eligible activity definition	Eligible CDFI institution types
i. Financial Products	FA expended as loans, Equity Investments, loan guarantees, and similar financing activities (as determined by the CDFI Fund) including the purchase of loans originated by Certified CDFIs and the purchase of loans originated by entities that do not have the CDFI Certification but were made to members of the Applicant's Target Market. In the case of CDFI Intermediaries, Financial Products may also include loans to CDFIs and/or Emerging CDFIs, and deposits in Insured Credit Union CDFIs, Emerging Insured Credit Union CDFIs, and/or State-Insured Credit Union CDFIs. For HFFI–FA, however, financing for prepared food outlets are not eligible activities, including the purchase of loans, loan refinancing, or any other type of financing for prepared food outlets.	All.
ii. Financial Services	FA expended for providing checking, savings accounts, check cashing, money orders, certified checks, automated teller machines, deposit taking, safe deposit box services, and other similar services.	Regulated Institutions [7] only. Not applicable for HFFI–FA or HP–FA Recipients.
iii. Loan Loss Reserves	FA set aside in the form of cash reserves, or through accounting-based accrual reserves, to cover losses on loans, accounts, and notes receivable or for related purposes that the CDFI Fund deems appropriate.	All.
iv. Development Services	FA expended for activities undertaken by a CDFI, its Affiliate or contractor that (i) promote community development and (ii) prepare or assist current or potential borrowers or investees to use the CDFI's Financial Products or Financial Services. For example, such activities include financial or credit counseling; homeownership counseling; business planning; and management assistance.	All.
v. Capital Reserves	FA set aside as reserves to support the Applicant's ability to leverage other capital, for such purposes as increasing its net assets or providing financing, or for related purposes as the CDFI Fund deems appropriate.	Regulated Institutions only. Not applicable for DF–FA.

2. DF–FA Award: DF–FA award funds may only be expended for eligible FA activities (referenced in table 3) to directly or indirectly benefit individuals with disabilities. The DF–FA Recipient must close Financial Products for the primary purpose of directly or indirectly benefiting people with disabilities, where the majority of the DF–FA supported loans or investments benefit individuals with disabilities, in an amount equal to or greater than 85% of the total DF–FA provided. Eligible DF–FA financing activities may include, among other activities, loans to develop or purchase affordable, accessible, and safe housing; loans to provide or facilitate employment opportunities;

[4] Although some financial education for youth under 18 years old do not fall under the definition of Development Services and thus is not eligible to support Certification, the CDFI Fund allows FA award funds to be used to provide such financial education. Financial education for youth means education designed to prepare youth to engage with the financial system. This includes accessing Financial Products when they are legally able to and accessing Financial Services offered by the Applicant or a third party.

[5] Budget Period means the time interval from the start date of a funded portion of an award to the end date of that funded portion during which Recipients are authorized to expend the funds awarded.

[6] § 200.216 Prohibition on certain telecommunications and video surveillance services or equipment.

(a) Recipients and Subrecipients are prohibited from obligating or expending loan or grant funds to:

(1) Procure or obtain;

(2) Extend or renew a contract to procure or obtain; or

(3) Enter into a contract (or extend or renew a contract) to procure or obtain, equipment, services, or systems that uses covered telecommunications equipment or services as a substantial or essential component of any system, or as critical technology as part of any system. As described in Public Law 115–232, section 889, covered telecommunications equipment is telecommunications equipment produced by Huawei Technologies Company or ZTE Corporation (or any Subsidiary or Affiliate of such entities).

[7] Regulated Institutions include Insured Credit Unions, Insured Depository Institutions, State-Insured Credit Unions and Depository Institution Holding Companies.

and loans to purchase assistive technology.

For the purposes of DF–FA, a person with a disability is a person who has a physical or mental impairment that substantially limits one or more major life activities, a person who has a record of such an impairment, or a person who is regarded as having such an impairment, as defined by the Americans with Disabilities Act (ADA), 42 U.S.C. 12102.

3. HFFI–FA Award: HFFI–FA award funds may only be expended for eligible FA activities referenced in table 3. The HFFI–FA investments must comply with the following guidelines:

a. Recipient must close Financial Products for Healthy Food Retail Outlets and Healthy Food Non-Retail Outlets in its approved Target Market in an amount equal to or greater than 100% of the total HFFI Financial Assistance provided. Eligible financing activities to Healthy Food Retail Outlets and Healthy Food Non-Retail Outlets require that the majority of the loan or investment be devoted to offering a range of Healthy Food choices, which may include, among other activities, investments supporting an existing retail store or wholesale operation upgrade to offer an expanded range of Healthy Food choices, or supporting a nonprofit organization that expands the availability of Healthy Foods in underserved areas.

b. Recipient must demonstrate that it has closed Financial Products to Healthy Food Retail Outlets located in Low-Income and Low-Access Food Areas in the Recipient's approved Target Market in an amount equal to 75% of the total HFFI Financial Assistance provided.

Definitions:

Healthy Foods: Healthy Foods include unprepared nutrient-dense foods and beverages as set forth in the USDA Dietary Guidelines for Americans 2020–2025 including whole fruits and vegetables, whole grains, fat free or low-fat dairy foods, lean meats, and poultry (fresh, refrigerated, frozen or canned). Healthy Foods should have low or no added sugars, and be low-sodium, reduced sodium, or no-salt-added. (See USDA Dietary Guidelines: *https://www.dietaryguidelines.gov*).

Healthy Food Retail Outlets: Commercial sellers of Healthy Foods including, but not limited to, grocery stores, mobile food retailers, farmers markets, retail cooperatives, corner stores, bodegas, stores that sell other food and non-food items along with a range of Healthy Foods.

Healthy Food Non-Retail Outlets: Wholesalers of Healthy Foods including, but not limited to, wholesale food outlets, wholesale cooperatives, or other non-retail food producers that supply for sale a range of Healthy Food options; entities that produce or distribute Healthy Foods for eventual retail sale, and entities that provide consumer education regarding the consumption of Healthy Foods.

Low-Income and Low-Access Food Areas: Distressed geographic areas where either a substantial number or share of residents has low access to a supermarket or large grocery store. For the purpose of satisfying this requirement, a Low-Income and Low-Access Food Area must either: (1) be a census tract determined to be a Low-Income and Low-Access Food Area by the U.S. Department of Agriculture (USDA), in its USDA Food Access Research Atlas; (2) be a census tract adjacent to a census tract determined to be a Low-Income and Low-Access Food Area by the USDA, in its USDA Food Access Research Atlas; which has a median family income less than or equal to 120% of the applicable Area Median Family Income; or (3) be a Geographic Unit as defined in 12 CFR part 1805.201(b)(3)(ii)(B), which (i) individually meets at least one of the criteria in 12 CFR part 1805.201(b)(3)(ii)(D), and (ii) has been identified as having low access to a supermarket or grocery store through a methodology that has been adopted for use by another governmental or philanthropic healthy food initiative.

4. PPC–FA Award: PPC–FA award funds may only be expended for eligible FA activities referenced in table 3. The PPC–FA Recipient must close Financial Products in PPC: (1) in an Eligible Market or in the Applicant's approved Target Market and (2) in an amount equal to or greater than 100% of the total PPC–FA award. The specific counties that meet the criteria for ''persistent poverty'' can be found at: *https://www.cdfifund.gov/sites/cdfi/files/2024-05/PPC_2020_ACS_May_10_2024.xlsx*.

5. HP–FA Award: HP–FA award funds may only be expended for eligible FA activities authorized in table 3. Additionally, HP–FA award funds must comply with the following guidelines:

a. Recipient must close Financial Products that finance the production of rental Housing projects affordable to families making at or below 120% Area Median Income (AMI) and/or the production of Homeownership projects affordable to families making at or below 150% of AMI in an amount equal to or greater than 100% of the total HP–FA assistance provided to the Recipient. The CDFI Fund will prioritize funding Applications that focus on financing Homeownership and rental Housing affordable to families at or below 80% AMI and further income targeting restrictions will be specified in the Assistance Agreement based on the Recipient's Application strategy.

b. Recipient must increase the volume of housing units financed from the baseline period (Recipient's most recent three historic fiscal years) to the Performance Period, as specified in the Assistance Agreement.

c. For rental Housing, the Recipient must finance projects that have a financing gap and are projected to be completed and ready for occupancy by the end of the Period of Performance as evidenced by a certificate of occupancy or equivalent. For Homeownership, the Recipient must finance the development of new for-sale Housing and/or the acquisition and rehabilitation of for-sale Housing, where such Housing will be completed and ready for occupancy by the end of the Period of Performance as evidenced by a certificate of occupancy or equivalent.

Definitions:

Homeownership means ownership interest in a home in fee simple, or by condominium, cooperative, mutual housing, or ground lease title interest, as allowed under State law, in one- to four-unit Single-family housing, or ownership of a manufactured housing unit. The ownership interest is subject to the following additional requirements: (1) Ownership interest may not merely consist of a right of possession under a contract for deed, installment contract, or land contract pursuant to which the deed is not given until the final payment is made; and (2) Ownership interest is subject to the restrictions on affordability permitted under the Assistance Agreement and this part; mortgages, deeds of trust, or other liens or instruments securing debt on the property; or any other restrictions or encumbrances that do not impair the good and marketable nature of title to the ownership interest.

Housing means Single-family and Multi-family residential units including, but not limited to, manufactured housing, permanent supportive housing, single-room occupancy (SRO) housing, assisted living, and group homes that are permanent in nature and not temporary, short term, transitional, or a dormitory, as further set forth by the CDFI Fund.

Multi-family housing means residential properties consisting of five or more dwelling units, such as a condominium unit, cooperative unit, or an apartment.

Single-family housing means a one- to four-unit family residence, a condominium unit, a cooperative unit, mutual housing, a manufactured housing unit only, or the combination of a manufactured housing unit and lot.

6. TA Awards: TA award funds may be expended for the following eight eligible activity categories: (i) Compensation—Personal Services; (ii) Compensation—Fringe Benefits; (iii) Professional Service Costs; (iv) Travel Costs; (v) Training and Education Costs; (vi) Equipment; (vii) Supplies; and (viii) Incorporation Costs. Only Sponsoring Entities may use TA award funds for Incorporation Costs. The TA Budget is the amount of the award and must be expended in the eight eligible activity categories before the end of the Budget Period. None of the eligible activity categories will be authorized for Indirect Costs or an associated Indirect Cost Rate. Any expenses that are prohibited by the Uniform Administrative Requirements are unallowable and are generally found in Subpart E—Cost Principles. The Recipient must comply, as applicable, with the Buy American Act of 1933, 41 U.S.C. 8301–8303 and section 2 CFR 200.216 of the Uniform Administrative Requirements, with respect to any Direct Costs. For purposes of this NOFA, the eight eligible activity categories are defined in table 4.

TABLE 4—TA ELIGIBLE ACTIVITY CATEGORIES, SUBJECT TO THE APPLICABLE PROVISIONS OF THE UNIFORM ADMINISTRATIVE REQUIREMENTS

(i) Compensation—Personal Services.	TA paid to cover all remuneration paid currently or accrued, for services of Applicant's employees rendered during the Period of Performance under the TA award, in accordance with section 2 CFR 200.430 of the Uniform Administrative Requirements, is allowed. Any work performed directly but unrelated to the purposes of the TA award may not be paid as Compensation through a TA award. For example, the salaries for building maintenance would not carry out the purpose of a TA award and would be deemed unallowable.
(ii) Compensation—Fringe Benefits.	TA paid to cover allowances and services provided by the Applicant to its employees as Compensation in addition to regular salaries and wages, in accordance with section 2 CFR 200.431 of the Uniform Administrative Requirements, is allowed. Such expenditures are allowable, as long as they are made under formally established and consistently applied organizational policies of the Applicant.
(iii) Professional Service Costs ...	TA paid to cover professional and consultant services (*e.g.,* such as strategic and marketing plan development), rendered by persons who are members of a particular profession or possess a special skill (*e.g.,* credit analysis, portfolio management), and who are not officers or employees of the Applicant, in accordance with section 2 CFR 200.459 of the Uniform Administrative Requirements, is allowed. Payment for a consultant's services may not exceed the current maximum of the daily equivalent rate paid to an Executive Schedule Level IV Federal employee. Professional and consultant services must build the capacity of the CDFI. For example, professional services that provide direct Development Services to the customers do not build the capacity of the CDFI to provide those services and would not be eligible. The Applicant must comply, as applicable, with section 2 CFR 200.216 of the Uniform Administrative Requirements, with respect to payment of Professional Service Costs.
(iv) Travel Costs	TA paid to cover costs of transportation, lodging, subsistence, and related items incurred by the Applicant's personnel who are on travel status on business related to the TA award, in accordance with section 2 CFR 200.475 of the Uniform Administrative Requirements, is allowed. Travel Costs do not include costs incurred by the Applicant's consultants who are on travel status. Any payments for travel expenses incurred by the Applicant's personnel but unrelated to carrying out the purpose of the TA award would be deemed unallowable. As such, documentation must be maintained that justifies the travel as necessary to the TA award.
(v) Training and Education Costs	TA paid to cover the cost of training and education provided by the Applicant for employees' development, in accordance with section 2 CFR 200.473 of the Uniform Administrative Requirements, is allowed. TA can only be used to pay for training costs incurred by the Applicant's employees. Training and Education Costs may not be incurred by the Applicant's consultants.
(vi) Equipment	TA paid to cover tangible personal property, having a useful life of more than one year and a per-unit acquisition cost of at least $10,000, in accordance with section 2 CFR 200.1 of the Uniform Administrative Requirements, is allowed. For example, items such as office furnishings and information technology systems are allowable as Equipment costs. The Applicant must comply, as applicable, with the Buy American Act of 1933, 41 U.S.C. 8301–8303 and section 2 CFR 200.216 of the Uniform Administrative Requirements, with respect to the purchase of Equipment.
(vii) Supplies	TA paid to cover tangible personal property with a per unit acquisition cost of less than $10,000, in accordance with section 2 CFR 200.1 of the Uniform Administrative Requirements, is allowed. For example, a desktop computer costing $1,000 is allowable as a Supply cost. The Applicant must comply, as applicable, with the Buy American Act of 1933, 41 U.S.C. 8301–8303 and section 2 CFR 200.216 of the Uniform Administrative Requirements, with respect to the purchase of Supplies.
(viii) Incorporation Costs (*Sponsoring Entities only*).	TA paid to cover incorporation fees in connection with the establishment or reorganization of an organization as a CDFI, in accordance with section 2 CFR 200.455 of the Uniform Administrative Requirements, is allowed. Incorporation Costs are allowable for NACA Program Sponsoring Entity Applicants only.

III. Eligibility Information

A. Eligible Applicants: For the purposes of this NOFA, table 5 through table 8 set forth the eligibility criteria to receive an award from the CDFI Fund, along with certain definitions of terms. There are four categories of Applicant eligibility criteria: (1) CDFI Certification criteria (table 5); (2) requirements that apply to all Applicants (table 6); (3) requirements that apply to TA Applicants (table 7); and (4) requirements that apply to FA Applicants (table 8).

TABLE 5—CDFI CERTIFICATION CRITERIA DEFINITIONS

Certified CDFI	An entity that the CDFI Fund has officially notified that it meets all CDFI Certification requirements.
Emerging CDFI (TA Applicants) ..	• A non-Certified entity that demonstrates to the CDFI Fund in its Application that it has an acceptable plan to meet CDFI Certification requirements by the end of its Period of Performance, or another date that the CDFI Fund selects. • An Emerging CDFI that has prior award(s) must comply with CDFI Certification PG&M(s) stated in its prior Assistance Agreement(s). • An Emerging CDFI selected to receive a TA award will be required to become a Certified CDFI by a date specified in the Assistance Agreement.
Sponsoring Entity	• Sponsoring Entities include any legal organization that primarily serves a Native Community with ''primary'' meaning, at least 50% of its activities are directed toward the Native Community.

TABLE 5—CDFI CERTIFICATION CRITERIA DEFINITIONS—Continued

Definitions relating to Native Other Targeted Populations as Target Markets.	• An eligible organization that proposes to create a separate legal organization that will become a Certified CDFI serving Native Communities. • Each Sponsoring Entity selected to receive a TA award will be required to create a CDFI and ensure that this newly created CDFI becomes Certified by the dates specified in the Assistance Agreement. For Target Market assessment purposes, the CDFI Fund uses the following definitions, set forth in the Office of Management and Budget (OMB) Notice, Revisions to the Standards for the Classification of Federal Data on Race and Ethnicity (October 30, 1997), as amended and supplemented: • American Indian or Alaskan Native: A person having origins in any of the original peoples of North and South America (including Central America), and who maintains tribal affiliation or community attachment; and • Native Hawaiian: A person having origins in any of the original peoples of Hawaii.

TABLE 6—ELIGIBILITY REQUIREMENTS FOR ALL APPLICANTS

Applicant	• An Applicant must be duly organized as a legal entity (within the United States or its territories). • Only the entity that will carry out the proposed award activities may apply for an award (other than Depository Institution Holding Companies (DIHC) [8]—see below, and Sponsoring Entities). Recipients may not create a new legal entity to carry out the proposed award activities (except for Sponsoring Entities). • The information in the Application should only reflect the activities of the Applicant, including the presentation of financial and portfolio information (other than DIHCs-see below). Do not include financial or portfolio information from parent companies, Affiliates, or Subsidiaries in the Application unless it relates to the provision of Development Services. • An Applicant that applies on behalf of another organization will be rejected without further consideration, other than DIHCs (see below).
Application type and submission overview through *Grants.gov* and Awards Management Information System (AMIS).	• Applicants must submit the Required Application Documents listed in table 10. • The CDFI Fund will only accept Applications that use the official Application templates provided on the *Grants.gov* and AMIS websites. Applications submitted with alternative or altered templates will not be considered. • Applicants undergo a two-step process that requires the submission of Application documents by two separate deadlines in two different systems: (1) the SF–424 in *Grants.gov* and (2) all other Required Application Documents in AMIS. • *Grants.gov* and the SF–424: ○ *Grants.gov:* Applicants must submit the Standard Form (SF) SF–424, Application for Federal Assistance. ○ All Applicants must register in the *Grants.gov* system to successfully submit an Application. The *Grants.gov* registration process can take 30 days or more to complete. The CDFI Fund strongly encourages Applicants to register as early as possible. ○ The CDFI Fund will not extend the SF–424 application deadline for any Applicant that started the *Grants.gov* registration process on, before, or after the date of the publication of this NOFA, but did not complete it by the deadline except in the case of a Federal Government administrative or technological error that directly resulted in a late submission of the SF–424. ○ The SF–424 must be submitted in *Grants.gov* on or before the deadline listed in table 1. Applicants are strongly encouraged to submit their SF–424 as early as possible in the *Grants.gov* system. ○ The deadline for the *Grants.gov* submission is before the AMIS submission deadline. ○ The SF–424 must be submitted under the NACA Program Funding Opportunity Number for the NACA Program Application. *NACA Program Applicants should be careful to not select the CDFI Program Funding Opportunity Number when submitting their SF–424 for the NACA Program.* NACA Program Applicants that submit their SF–424 for the NACA Program Application under the CDFI Program Funding Opportunity Number will be deemed ineligible for the NACA Program Application. ○ If the SF–424 is not accepted by *Grants.gov* by the deadline, the CDFI Fund will not review any material submitted in AMIS and the Application will be deemed ineligible. • AMIS and all other Required Application Documents listed in table 10: ○ AMIS is an enterprise-wide information technology system. Applicants will use AMIS to submit and store organization and Application information with the CDFI Fund. ○ Applicants are only allowed one NACA Program Application submission in AMIS. ○ Each Application in AMIS must be signed by an Authorized Representative. ○ Applicants must ensure that the Authorized Representative is an employee or officer of the Applicant, authorized to sign legal documents on behalf of the organization. *Consultants working on behalf of the organization may not be designated as Authorized Representatives.* ○ Only the Authorized Representative or Application Point of Contact, included in the Application, may submit the Application in AMIS. ○ All Required Application Documents must be submitted in AMIS on or before the deadline specified in table 1. ○ The CDFI Fund will not extend the deadline for any Applicant except in the case of a Federal Government administrative or technological error that directly resulted in the late submission of the Application in AMIS.
Employer Identification Number (EIN).	• Applicants must have a unique EIN assigned by the Internal Revenue Service (IRS). • The CDFI Fund will reject an Application submitted with the EIN of a parent or Affiliate organization. • The EIN in the Applicant's AMIS account must match the EIN in the Applicant's System for Award Management (SAM) account. The CDFI Fund reserves the right to reject an Application if the EIN in the Applicant's AMIS account does not match the EIN in its SAM account. • Applicants must enter their EIN into their AMIS profile on or before the deadline specified in table 1.
Unique Entity Identifier (UEI)	• The transition from the Dun and Bradstreet Universal Numbering System (DUNS) to UEI is a Federal Government-wide initiative. • An Applicant must apply using its UEI in *Grants.gov*. • The CDFI Fund will reject an Application submitted with the UEI of a parent or Affiliate organization.

[8] Depository Institution Holding Company or DIHC means a Bank Holding Company or a Savings and Loan Holding Company.

TABLE 6—ELIGIBILITY REQUIREMENTS FOR ALL APPLICANTS—Continued

	• The UEI in the Applicant's AMIS account must match the UEI in the Applicant's *Grants.gov* and SAM accounts. The CDFI Fund will reject an Application if the UEI in the Applicant's AMIS account does not match the UEI in its *Grants.gov* and SAM accounts. • Applicants must enter their UEI into their AMIS profile on or before the deadline specified in table 1.
System for Award Management (SAM).	• SAM is a web-based, government-wide application that collects, validates, stores, and disseminates business information about the Federal Government's trading partners in support of the contract awards, grants, and electronic payment processes. • Applicants must register in SAM as part of the *Grants.gov* registration process. • Applicants that have an active SAM registration have been assigned a UEI. Applicants must also have an EIN in order to register in SAM. • Applicants must be registered in SAM in order to submit an SF–424 in *Grants.gov*. • The CDFI Fund reserves the right to deem an Application ineligible if the Applicant's SAM account expires during the Application evaluation period, or is set to expire before September 30, 2025, and the Applicant does not re-activate, or renew, as applicable, the account within the deadlines that the CDFI Fund communicates to affected Applicants during the Application evaluation period.
AMIS Account	• Each Applicant must register as an organization in AMIS and submit all Required Application Documents listed in table 10 through the AMIS system. • The Application of any organization that does not properly register in AMIS by the deadline set forth in table 1—FY 2025 NACA Program Funding Round Critical Deadlines for Applicants—will be rejected without further consideration. • The Authorized Representative and/or Application Point of Contact must be included as ''users'' in the Applicant's AMIS account. • An Applicant that fails to properly register and update its AMIS account may miss important communication from the CDFI Fund and/or may not be able to successfully submit an Application.
501 (c)(4) status	• Pursuant to 2 U.S.C. 1611, any 501(c)(4) organization that engages in lobbying activities is not eligible to receive a CDFI or NACA Program award.
Compliance with Nondiscrimination and Equal Opportunity Statutes, Regulations, and Executive Orders.	• An Applicant * may not be eligible to receive an award if proceedings have been instituted against it in, by, or before any court, governmental agency, or administrative body, and a final determination has been issued within the time period beginning three years prior to the publication of this NOFA until the execution of the Assistance Agreement that indicates the Applicant has violated any Federal civil rights laws or regulations, including: Title VI of the Civil Rights Act of 1964, as amended (42 U.S.C. 2000d); the Fair Housing Act (42 U.S.C. 3601 et seq.); the Equal Credit Opportunity Act (15 U.S.C. 1691 et seq.); section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794); and the Age Discrimination Act of 1975, (42 U.S.C. 6101–6107). • Applicants * will be required to submit the Title VI Compliance Worksheet (Worksheet) once annually to assist the CDFI Fund in determining whether Applicants are compliant with the Treasury regulations implementing Title VI of the Civil Rights Act (Title VI), set forth in 31 CFR part 22. These requirements are set forth in the United States Department of the Treasury regulations implementing Title VI located in 31 CFR part 22, Nondiscrimination on the Basis of Race, Color, or National Origin in Programs or Activities Receiving Federal Financial Assistance from the Department of the Treasury. • In addition, an Applicant* must be compliant with Federal civil rights requirements in order to be deemed eligible to receive an award from the CDFI Fund. The CDFI Fund will consider an Application submitted by an Applicant that has pending Title VI noncompliance issues, if the CDFI Fund has not yet made a final compliance determination. • The Title VI Compliance Worksheet and program award terms and conditions do not impose antidiscrimination requirements on Tribal governments beyond what would otherwise apply under Federal law.
Depository Institution Holding Company Applicant.	• In the case where a Depository Institution Holding Company Applicant intends to carry out the activities of an award through its Subsidiary Insured Depository Institution, the Application must be submitted by the Depository Institution Holding Company and reflect the activities and financial performance of the Subsidiary Insured Depository Institution. • If a Depository Institution Holding Company and its Subsidiary Insured Depository Institution (through which it will carry out the activities of the award) both apply for an award under this NOFA, only the Depository Institution Holding Company will receive an award, not both. In such instances, the Subsidiary Insured Depository Institution will be deemed ineligible. • Authorized Representatives of both the Depository Institution Holding Company and the Subsidiary Insured Depository Institution must certify that the information included in the Application represents that of the Subsidiary Insured Depository Institution, and that the award funds will be used to support the Subsidiary Insured Depository Institution for the eligible activities outlined in the Application.
Use of award	• All awards made through this NOFA must be used to support the Applicant's activities in at least one of the FA or TA Eligible Activity Categories (see section II. (C)). • With the exception of Depository Institution Holding Company Applicants and Sponsoring Entities, awards may not be used to support the activities of, or otherwise be passed through, transferred, or co-awarded to, third-party entities, whether Affiliates, Subsidiaries, or others, unless done pursuant to a merger or acquisition or similar transaction, and with the CDFI Fund's prior written consent. • The Recipient of any award made through this NOFA must comply, as applicable, with the Buy American Act of 1933, 41 U.S.C. 8301–8303 and section 2 CFR 200.216 of the Uniform Administrative Requirements, with respect to any Direct Costs.
Requested award amount	• An Applicant must state its requested award amount in the Application in AMIS. An Applicant that does not include this amount will not be allowed to submit an Application.
Pending resolution of noncompliance or default.	• If an Applicant (or Affiliate of an Applicant identified in AMIS) that is a prior Recipient or Allocatee under any CDFI Fund program: (i) has demonstrated it is in noncompliance with or default of a previous Assistance Agreement, Award Agreement, Allocation Agreement, Bond Loan Agreement, or Agreement to Guarantee and (ii) the CDFI Fund has yet to make a final determination as to whether the entity is in noncompliance with or default of its previous agreement, the CDFI Fund will consider the Applicant's Application under this NOFA pending full resolution, in the sole determination of the CDFI Fund, of the noncompliance or default.
Noncompliance or default status	• The CDFI Fund will not consider an Application submitted by an Applicant that is a prior CDFI Fund award recipient or allocatee under any CDFI Fund program if, as of the AMIS Application deadline in this NOFA, (i) the CDFI Fund has made a final determination in writing that such Applicant (or Affiliate of an Applicant identified in AMIS) is in noncompliance with or default of a previously executed Assistance Agreement, Award Agreement, Allocation Agreement, bond loan agreement, or agreement to guarantee, and (ii) the CDFI Fund has provided written notification that the Applicant is ineligible to apply for or receive any future CDFI Fund awards or allocations. Such entities will be ineligible to submit an Application for such time period as specified by the CDFI Fund in writing. • Additionally, regardless of whether a sanction or remedy is imposed, the CDFI Fund will not consider an Application submitted by an Applicant if the default on a prior Allocation Agreement of the Applicant or an Affiliate occurs during the time period beginning 12 months prior to the Application deadline and ending with the FY 2025 award announcement. • The CDFI Fund will not consider any Applicant that has defaulted on a loan from the CDFI Fund within five years of the Application deadline.
Debarment/Do Not Pay Verification.	• The CDFI Fund will contact the Do Not Pay Business Center to conduct a debarment check on the Applicant. The CDFI Fund will not consider any Applicant that is debarred.

TABLE 6—ELIGIBILITY REQUIREMENTS FOR ALL APPLICANTS—Continued

	• If the Do Not Pay Business Center reports that the Applicant has a pending or delinquent debt to the Federal Government, the Applicant will be required to demonstrate that it has resolved such pending or delinquent debt. Applicants that fail to demonstrate resolution of the pending or delinquent Federal debt will be found ineligible to receive an award. • In the case where a Depository Institution Holding Company Applicant intends to carry out the activities of an award through its Subsidiary Insured Depository Institution, the above debarment requirements apply both to the Depository Institution Holding Company and its Subsidiary Insured Depository Institution. • The Do Not Pay Business Center was developed to support Federal agencies in their efforts to reduce the number of improper payments made through programs funded by the Federal Government.

*This requirement also applies to Subsidiary Insured Depository Institutions that will carry out award activities on behalf of Depository Institution Holding Company Applicants.

TABLE 7—ELIGIBILITY REQUIREMENTS FOR TA APPLICANTS

CDFI Certification status	Certified CDFIs, Emerging CDFIs, or Sponsoring Entities (see definitions in table 5). If a TA Applicant is a Certified CDFI at the time of Application but loses its CDFI Certification at any point prior to the award announcement, the Application will be deemed ineligible and no longer be considered for an award by the CDFI Fund.
Matching Funds	• Matching Funds documentation is not required for TA awards.
Limitation on Awards	• An Emerging CDFI serving Native Communities may not receive a TA award if it has previously received three or more TA awards in the preceding ten fiscal years. • A Sponsoring Entity is only eligible to apply for an award if (i) it does not have an active prior award or (ii) the CDFI Certification goal in its active award's Assistance Agreement has been satisfied and it proposes to create another CDFI that will serve one or more Native Communities.
$5 Million funding cap	• The CDFI Fund is prohibited from obligating more than $5 million in CDFI and NACA Program awards, in the aggregate, to any one organization and its Subsidiaries and Affiliates during any three-year period from the announcement date. • The CDFI Fund will include CDFI and NACA Program final awards in the cap calculation that were provided to an Applicant (and/or its Subsidiaries or Affiliates) under the FY 2024 funding round, as well as the requested FY 2025 award. The $5 million funding cap includes TA, Base–FA, PPC–FA, and HP–FA awards but excludes DF–FA and HFFI–FA awards.
Proposed Activities	• Applicants must propose to directly undertake eligible activities with TA awards. For example, an uncertified CDFI Applicant must propose to become Certified as part of its Application and a Certified CDFI Applicant must propose activities that build its capacity to serve its Target Market or an Eligible Market. • With the exception of Sponsoring Entities, Applicants may not propose to use a TA award to create a separate legal entity to become a Certified CDFI or otherwise carry out the TA award activities.
Regulated Institution	• Each Regulated Institution TA Applicant must have a CAMELS/CAMEL rating (rating for Insured Depository Institutions and Credit Unions, respectively) or equivalent type of rating by its regulator (collectively referred to as ''CAMELS/CAMEL rating'') of at least ''4.'' • TA Applicants with CAMELS/CAMEL ratings of ''5'' will not be eligible for awards. • In the case of a Depository Institution Holding Company Applicant that intends to carry out the award through a Subsidiary Insured Depository Institution, the CAMELS/CAMEL rating eligibility requirements noted above apply to both the Depository Institution Holding Company Applicant as well as the Subsidiary Insured Depository Institution. • The CDFI Fund will not approve a TA award for an Insured Depository Institution Applicant that has a Community Reinvestment Act (CRA) assessment rating of below ''Satisfactory'' on its most recent examination. • In the case of a Depository Institution Holding Company Applicant that intends to carry out the award through a Subsidiary Insured Depository Institution, the CDFI Fund will not approve a TA award if the Subsidiary Insured Depository Institution has a Community Reinvestment Act (CRA) assessment rating of below ''Satisfactory'' on its most recent examination. • The CDFI Fund will also evaluate material concerns identified by the Appropriate Federal Banking Agency in determining the eligibility of Regulated Institution Applicants.
Target Market	• TA Applicants must demonstrate that the Certified CDFI, Emerging CDFI, or the CDFI to be created by the Sponsoring Entity will primarily serve one or more Native Communities as its Target Market.

TABLE 8—ELIGIBILITY REQUIREMENTS FOR FA APPLICANTS

CDFI Certification status	• Each FA Applicant must be a Certified CDFI as of the publication date of this NOFA in the **Federal Register**. • In the case of a Depository Institution Holding Company Applicant that intends to carry out the award through a Subsidiary Insured Depository Institution, both the Depository Institution Holding Company and its Subsidiary Insured Depository Institution must be Certified CDFIs as of the publication date of this NOFA in the **Federal Register**. • The CDFI Fund will consider an Application submitted by an Applicant that has pending noncompliance issues with its Annual Certification and Data Collection Report (ACR) if the CDFI Fund has not yet made a final compliance determination. • If a Certified CDFI loses its CDFI Certification at any point prior to the award announcement, the Application will be deemed ineligible and no longer be considered for an award by the CDFI Fund.
Activities in Native Communities	• For consideration under this NOFA, each FA Applicant must: ○ Demonstrate that at least 50% of its past activities were in one or more Native Communities; and ○ Describe how it will target its lending/investing activities to one or more Native Communities.
Target Market	• For consideration under this NOFA, an FA Applicant's CDFI Certification Target Market must have one or more of the following characteristics: ○ For qualifying with an *Investment Area,* the Applicant must demonstrate that the Investment Area approved for CDFI Certification is also a geographic area of federally-designated reservations, Hawaiian homelands, Alaska Native Villages and U.S. Census Bureau designated Tribal Statistical Areas; and/or ○ For qualifying with an Other Targeted Population (OTP), the Applicant's Target Market approved for CDFI Certification must be one or more of the following OTPs: of Native American, Native Alaskan, or Native Hawaiian. • Any FA Applicant whose CDFI Certification Target Market does not meet either of the conditions above will not be eligible for an FA award under this NOFA.
Community Collaboration	• All FA Applicants must demonstrate strong community collaboration with Native Communities.
Matching Funds documentation	• Native American CDFIs are not required to provide Matching Funds.
$5 Million funding cap	• The CDFI Fund is prohibited from obligating more than $5 million in CDFI and NACA Program awards, in the aggregate, to any one organization and its Subsidiaries and Affiliates during any three-year period from the announcement date.

TABLE 8—ELIGIBILITY REQUIREMENTS FOR FA APPLICANTS—Continued

FA Applicants with Community Partners.	• The CDFI Fund will include CDFI and NACA Program final awards in the cap calculation that were awarded to an Applicant (and/or its Subsidiaries or Affiliates) under the FY 2024 funding round, as well as the requested FY 2025 award. The $5 million funding cap includes TA, Base–FA, PPC–FA, and HP–FA awards but excludes DF–FA and HFFI–FA awards. • A NACA Applicant can apply for assistance jointly with a Community Partner. The NACA Applicant must complete the NACA Program Application and address the Community Partnership in its business plan and other sections of the Application as specified in the Application materials. • The NACA Applicant must be a Certified CDFI as defined in table 5. • An Application with a Community Partner must: ○ Describe how the NACA Applicant and Community Partner will each participate in the partnership and how the partnership will enhance eligible activities serving the Investment Area and/or Targeted Population. ○ Demonstrate that the Community Partnership activities are consistent with the strategic plan submitted by the NACA Applicant. • Assistance provided upon approval of an Application with a Community Partner shall only be entrusted to the NACA Applicant and shall not be used to fund any activity carried out directly by the Community Partner or an Affiliate or Subsidiary thereof. • Applicants for HP–FA only (with no Base–FA request) are not eligible to apply with a Community Partner. Only Certified CDFIs may apply for HP–FA only (with no Base–FA request).
Regulated Institution	• Each Regulated Institution FA Applicant must have a CAMELS/CAMEL rating (rating for Insured Depository Institutions and Credit Unions, respectively) or equivalent type of rating by its regulator (collectively referred to as ''CAMELS/CAMEL rating'') of at least ''3.'' • FA Applicants with CAMELS/CAMEL ratings of ''4'' or ''5'' will not be eligible for awards. • In the case of a Depository Institution Holding Company Applicant that intends to carry out the award through a Subsidiary Insured Depository Institution, the CAMELS/CAMEL rating eligibility requirements noted above apply to both the Depository Institution Holding Company Applicant as well as the Subsidiary Insured Depository Institution. The CDFI Fund will not approve an FA award for an Insured Depository Institution Applicant that has a Community Reinvestment Act (CRA) assessment rating of below ''Satisfactory'' on its most recent examination. • In the case of a Depository Institution Holding Company Applicant that intends to carry out the award through a Subsidiary Insured Depository Institution, the CDFI Fund will not approve an FA award if the Subsidiary Insured Depository Institution has a Community Reinvestment Act (CRA) assessment rating of below ''Satisfactory'' on its most recent examination. • The CDFI Fund will also evaluate material concerns identified by the Appropriate Federal Banking Agency in determining the eligibility of Regulated Institution Applicants.
PPC–FA	• All PPC–FA Applicants must: ○ Submit a CDFI or NACA Program FA Application; ○ Meet all NACA FA award eligibility requirements; ○ Submit the PPC–FA Application; and ○ Provide a PPC–FA award request amount in AMIS.
DF–FA	• All DF–FA Applicants must: ○ Submit a CDFI or NACA Program FA Application; ○ Meet all NACA FA award eligibility requirements; ○ Submit the DF–FA Application; and ○ Provide a DF–FA award request amount in AMIS.
HFFI–FA	• All HFFI–FA Applicants must: ○ Submit a CDFI or NACA Program FA Application; ○ Meet all NACA FA award eligibility requirements; ○ Submit the HFFI–FA Application; and ○ Provide a HFFI–FA award request amount in AMIS.
HP–FA	• Applicants applying for only HP–FA (with no Base–FA request) must: ○ Submit a CDFI or NACA Program FA Application; ○ Meet all NACA FA award eligibility requirements; ○ Indicate intention to apply for only HP–FA in the CDFI or NACA Program FA Application; ○ Submit the Excel HP–FA Application; ○ Have a track record of having financed Housing in each of the last 3 historic fiscal years; and ○ Provide an HP–FA award request amount. • Applicants applying for HP–FA as a supplement to Base–FA request must: ○ Submit a CDFI or NACA Program FA Application; ○ Meet all NACA FA award eligibility requirements; ○ Indicate intention to apply for both a Base–FA award and an HP–FA award in the CDFI Program or NACA Program FA Application; ○ Submit the Excel HP–FA Application; ○ Have a track record of having financed Housing in each of the last 3 historic fiscal years; and ○ Provide an HP–FA award request amount.

B. Matching Funds Requirements: Native American CDFIs are not required to provide Matching Funds.

TABLE 9—RESERVED

IV. Application and Submission Information

A. Address to Request an Application Package: Application materials can be found on the CDFI Fund's website at *https://www.cdfifund.gov/native.* Applicants may request a paper version of any Application material by contacting the CDFI Fund Help Desk at *cdfihelp@cdfi.treas.gov.* Paper versions of Application materials will only be

provided if an Applicant cannot access the CDFI Fund's website.

B. Content and Form of Application Submission: All Applications must be prepared using the English language, and calculations must be computed in U.S. dollars. The following table lists the Required Application Documents for the FY 2025 Funding Round. The CDFI Fund reserves the right to request and review other pertinent or public information that has not been specifically requested in this NOFA or the Application. Information submitted by the Applicant that the CDFI Fund has not specifically requested will not be reviewed or considered as part of the Application. Financial data, portfolio, and activity information provided in the Application should only include the Applicant's activities. Information submitted must accurately reflect the Applicant's activities (other than Depository Institution Holding Companies—see table 6).

TABLE 10—REQUIRED APPLICATION DOCUMENTS

Application documents	Applicant type	Submission format
Active AMIS Account	All Applicants	AMIS.
SF–424	All Applicants	Fillable PDF in *Grants.gov*.
Title VI Compliance Worksheet*	All Applicants	AMIS.
NACA Program Application Components: • Funding Application Detail. • Data, Charts, and Narrative sections as listed in AMIS and outlined in Application materials.	All Applicants	AMIS.
PPC–FA Application Components: • Funding Application Detail. • Narratives. • AMIS Charts.	PPC–FA Applicants	AMIS.
DF–FA Application Components: • Funding Application Detail. • Narratives. • AMIS Charts.	DF–FA Applicants	AMIS.
HFFI–FA Application Components: • Funding Application Detail. • Narratives. • AMIS charts.	HFFI–FA Applicants	AMIS.
HP–FA Application Components: The Excel HP–FA Application will not be completed as part of the AMIS Application. The Application component is anticipated to be released at a later date than the other Application components under this NOFA and will be due at a later date, as noted in table 1. Applicants will be provided at least 30 days to complete the Excel HP–FA Application which will be an Excel spreadsheet that contains two sections:. • Narratives • Tables	HP–FA Applicants	Attachment to AMIS Service Request.
Attachments to the Application:		
Key Staff Resumes	All Applicants	PDF or Word document in AMIS.
Organizational Chart	All Applicants	PDF in AMIS.
Completed, final audited financial statements for the Applicant's Three Most Recent Historic Fiscal Years.	FA Applicants and TA Applicants, if available: loan funds, Venture Capital Funds**, and other non-Regulated Institutions.	PDF in AMIS.
Unaudited financial statements for Applicant's Three Most Recent Historic Years (required if available, and only if audited financial statements are not available).	FA and TA Applicants, if available: loan funds, Venture Capital Funds, and other non-Regulated Institutions.	PDF in AMIS.
Community Partnership Agreement	FA Applicants, if applicable	PDF or Word document in AMIS.

*This requirement also applies to Subsidiary Insured Depository Institutions that will carry out award activities on behalf of Depository Institution Holding Company Applicants.

**A Venture Capital Fund is an organization that predominantly invests funds in businesses, typically in the form of either Equity Investments or subordinated debt with equity features such as revenue participation or warrants, and generally seeks to participate in the upside returns of such businesses in an effort to at least partially offset the risk of its investments.

C. Application Submission: The CDFI Fund has a multiple step process that requires the submission of Required Application Documents (listed in table 10) on separate deadlines and locations. The SF–424 must be submitted through *Grants.gov* and all other Required Application Documents through the CDFI Fund's Award Management Information System (AMIS). The CDFI Fund will not accept Applications via email, mail, facsimile, or other forms of communication, except in extremely rare circumstances that have been pre-approved in writing by the CDFI Fund. The deadlines for submitting the relevant Application materials are listed in table 1.

First, all Applicants must register in the *Grants.gov* system to successfully submit the SF–424. The *Grants.gov* registration process can take 45 days or longer to complete and the CDFI Fund strongly encourages Applicants to start the *Grants.gov* registration process as early as possible (refer to the following link: *https://www.grants.gov/register*). Since the *Grants.gov* registration process requires Applicants to have a UEI and an EIN, Applicants without these

required items should allow for additional time to complete the *Grants.gov* registration process. The CDFI Fund will not extend the Application deadline for any Applicant that started the *Grants.gov* registration process but did not complete it by the deadline. An Applicant that has previously registered with *Grants.gov* must verify that its registration is current and active. Applicants should contact *Grants.gov* directly with questions related to the registration or submission process as the CDFI Fund does not maintain the *Grants.gov* system.

Each Application must be signed by a designated Authorized Representative in AMIS before it can be submitted. The Excel HP–FA Application must be submitted via a Service Request in AMIS by an Authorized Representative of the Applicant or an Application Point of Contact. Applicants must ensure that an Authorized Representative is an employee or officer and is authorized to sign legal documents on behalf of the Applicant. Consultants working on behalf of the Applicant may not be designated as Authorized Representatives. Only a designated Authorized Representative or Application Point of Contact, included in the Application, may submit the Application in AMIS. If an AMIS Application is not submitted by an Authorized Representative or Application Point of Contact, the Application will be deemed ineligible.

D. Unique Entity Identifier (UEI): The UEI has replaced the Dun and Bradstreet Data Universal Numbering System (DUNS) number. The UEI, generated in the System for Award Management (*SAM.gov*), has become the official identifier for doing business with the Federal Government. This transition allows the Federal Government to streamline the entity identification and validation process, making it easier and less burdensome for entities to do business with the Federal Government. If an entity is registered in *SAM.gov* today, its UEI has already been assigned and is viewable in *SAM.gov*, including inactive registrations. New registrants will be assigned a UEI as part of their SAM registration.

E. System for Award Management (SAM): Any entity applying for Federal grants or other forms of Federal financial assistance through *Grants.gov* must be registered in SAM before submitting its Application. When accessing *SAM.gov*, users will be asked to create a *Login.gov* user account (if they don't already have one). Going forward, users will use their *Login.gov* username and password every time when logging into *SAM.gov*. Registration in SAM is required as part of the *Grants.gov* registration process. The SAM registration process may take one month or longer to complete. An original, signed notarized letter identifying the authorized entity administrator for the entity associated with the UEI is required. This requirement is applicable to new entities registering in SAM or an existing registration where there is no existing entity administrator. Existing entities with registered entity administrators do not need to submit an annual notarized letter. Applicants without an EIN should allow for additional time as an Applicant cannot register in SAM without an EIN. Applicants that have previously completed the SAM registration process must verify that their SAM accounts are current and active. Each Applicant must continue to maintain an active SAM registration with current information at all times during which it has an active Federal award or an Application under consideration by a Federal awarding agency. The CDFI Fund will deem ineligible any Applicant that fails to properly register or activate its SAM account and, as a result, is unable to submit the SF–424 in *Grants.gov* or Application in AMIS by the applicable Application deadlines. These restrictions also apply to organizations that have not yet received a UEI or EIN by the established deadline. Applicants must contact SAM directly with questions related to registration or SAM account changes as the CDFI Fund does not maintain this system and has no ability to make changes or correct errors of any kind. For more information about SAM, visit *https://www.sam.gov.*

TABLE 11—Grants.gov REGISTRATION TIMELINE SUMMARY

Step	Agency	Estimated minimum time to complete
Obtain an EIN	Internal Revenue Service (IRS)	Two (2) Weeks.*
Register in *SAM.gov*	System for Award Management (*SAM.gov*). This step will include obtaining a UEI.	Four (4) Weeks.*
Register in *Grants.gov*	*Grants.gov*	One (1) Week.**

* Applicants are advised that the stated durations are estimates only and represent minimum timeframes. Actual timeframes may take longer. The CDFI Fund will deem ineligible any Applicant that fails to properly register or activate its SAM account, has not yet received a UEI or EIN, and/or fails to properly register in *Grants.gov*.

** This estimate assumes an Applicant has a UEI, an EIN, and is already registered in *SAM.gov.*

F. Submission Instructions:

1. Submission Deadlines: Table 1 provides the critical deadlines for the FY 2025 Funding Round.

2. Confirmation of Application Submission in Grants.gov and AMIS: Applicants are required to submit the SF–424, Application for Federal Assistance through the *Grants.gov* system, under the NACA Program Funding Opportunity Number by the applicable deadline. All other Required Application Documents (listed in table 10) must be submitted through the AMIS website by the applicable deadline. Note, the Excel HP–FA Application will be submitted separately via a Service Request in AMIS by the date specified in table 1. Applicants must submit the SF–424 prior to submitting the Application in AMIS. If the SF–424 is not successfully accepted by *Grants.gov* by the deadline, the CDFI Fund will not review the Application submitted in AMIS, and the Application will be deemed ineligible.

a. *Grants.gov Submission Information:* Each Applicant will receive an email from *Grants.gov* immediately after submitting the SF–424 confirming that the submission has entered the *Grants.gov* system. This email will contain a tracking number for the submitted SF–424. Within 48 hours, the Applicant will receive a second email, which will indicate if the submitted SF–424 was either successfully validated or rejected with errors. However, Applicants should not rely on the email notification from *Grants.gov* to confirm that their SF–424 was validated. Applicants are strongly encouraged to use the tracking number provided in the first email to closely monitor the status of their SF–424 by contacting the

helpdesk at *Grants.gov* directly. The Application material submitted in AMIS is not officially accepted by the CDFI Fund until *Grants.gov* has validated the SF–424.

b. *AMIS Submission Information:* AMIS is a web-based system where Applicants will directly enter their Application information and add the required attachments listed in table 10. The Base-FA, PPC–FA, DF–FA, HFFI–FA, and TA Application components will all be submitted as part of a single AMIS Application. AMIS will verify that the Applicant provided the minimum information required to submit an Application. Applicants are responsible for the quality and accuracy of the information and attachments included in the Application submitted in AMIS. The Excel HP–FA Application will be a fillable Excel spreadsheet and must be separately submitted as an attachment to a Service Request in AMIS. The CDFI Fund strongly encourages Applicants to allow for sufficient time to review and complete all Required Application Documents listed in table 10 and remedy any issues prior to the Application deadline. Each Application submitted in AMIS must be signed by an Authorized Representative listed in the organization's AMIS account before it can be submitted. Applicants must ensure that the Authorized Representative is an employee or officer and is authorized to sign legal documents on behalf of the Applicant. Consultants working on behalf of the Applicant may not be designated as Authorized Representatives. Only an Authorized Representative or an Application Point of Contact may submit an Application. If an Application is not submitted by an Authorized Representative or Application Point of Contact, the Application will be deemed ineligible. Applicants may only submit one Base-FA or TA Application under the NACA Program. Upon submission, the Application will be locked and cannot be resubmitted, edited, or modified in any way. The CDFI Fund will not unlock or allow multiple Application submissions.

3. Late Submission or AMIS Account Creation: The CDFI Fund will not accept an Application if the SF–424 is not submitted and accepted by *Grants.gov* by the SF–424 deadline listed in table 1. Additionally, the CDFI Fund will not accept an Application if it is not signed by an Authorized Representative and submitted in AMIS by the Application deadline or if an Applicant did not submit the required Title VI Compliance Worksheet by the Application deadline listed in table 1. The CDFI Fund will also not accept an Application from an Applicant that failed to create an AMIS account by the deadlines specified in table 1. The CDFI Fund will not accept the Excel HP–FA Application if it is not submitted via a Service Request in AMIS by the deadline in table 1. In these cases, the CDFI Fund will not review any material submitted, and the Application will be deemed ineligible.

However, in cases where a Federal Government administrative or technological error directly resulted in precluding an Applicant from submitting the SF–424, from submitting the AMIS Application, from submitting the Excel HP–FA Application, from creating an AMIS account, or from submitting the Title VI Compliance Worksheet by the deadlines stated in this NOFA, Applicants are provided the opportunity to submit a written request for acceptance of late submissions. Be aware that unexpected delay in a Federal Government process does not in and of itself constitute a Federal Government administrative or technological error. The CDFI Fund will only approve the late submission of the SF–424, the AMIS Application, the Excel HP–FA Application, the Title VI Compliance worksheet, or the late creation of an AMIS account if the Applicant demonstrates that an unexpected delay was the direct result of a Federal Government administrative or technological error.

a. *Creation of AMIS Account:* In cases where a Federal Government administrative or technological error directly resulted in precluding an Applicant from creating an AMIS account by the required deadline, the Applicant must submit a written request for approval to create its AMIS account after the deadline, and include documentation of the error, no later than two business days after the AMIS account creation deadline. The CDFI Fund will not respond to requests for creating an AMIS account after that time. Applicants must submit such request via an AMIS Service Request to the CDFI Program or an email to *cdfihelp@cdfi.treas.gov* with a subject line of ''AMIS Account Creation Deadline Extension Request.''

b. *SF–424 Late Submission:* In cases where a Federal Government administrative or technological error directly resulted in precluding an Applicant from submitting the SF–424 by the required deadline, the Applicant must submit a written request for acceptance of the late SF–424 submission and include documentation of the error no later than two business days after the SF–424 deadline. The CDFI Fund will not respond to requests for acceptance of late SF–424 submissions after that time period. Applicants must submit late SF–424 submission requests to the CDFI Fund via an AMIS Service Request to the NACA Program with a subject line of ''Late SF–424 Submission Request.''

c. *Title VI Compliance Worksheet Late Submission:* In cases where a Federal Government administrative or technological error directly precluded an Applicant from submitting the Title VI Compliance Worksheet by the required deadline, the Applicant must submit a written request for approval to submit the Worksheet after the deadline, and include documentation of the error, no later than two business days after the Title VI Compliance Worksheet submission deadline. The CDFI Fund will not respond to requests for submitting a Title VI Compliance Worksheet after that time. Applicants must submit such request via an AMIS Service Request to the CDFI Program with a subject line of ''CDFI Program—Title VI Compliance Worksheet Deadline Extension Request.''

d. *AMIS Application Late Submission, including Late Excel HP–FA Application Submission:* In cases where a Federal Government administrative or technological error directly resulted in precluding an Applicant from submitting the Application in AMIS by the required deadline, the Applicant must submit a written request for acceptance of the late Application submission and include documentation of the error no later than two business days after the Application deadline. The CDFI Fund will not respond to requests for acceptance of late Application submissions after that time period. Applicants must submit late Application submission requests to the CDFI Fund via an AMIS Service Request to the NACA Program with a subject line of ''Late Application Submission Request.''

G. Funding Restrictions: Base–FA, PPC–FA, DF–FA, HFFI–FA, HP–FA, and TA awards are limited by the following:

1. Base–FA Awards:

a. A Recipient shall use Base–FA award funds only for the eligible activities described in section II. (C)(1) of this NOFA and its Assistance Agreement.

b. With the exception of Depository Institution Holding Company Applicants, Base–FA awards may not be used to support the activities of, or otherwise be passed through, transferred, or co-awarded to, third-party entities, whether Affiliates, Subsidiaries, or others, unless done pursuant to a merger or acquisition or

similar transaction, and with the CDFI Fund's prior written consent.

c. Base–FA award funds shall only be paid to the Recipient.

d. The CDFI Fund, in its sole discretion, may pay Base–FA award funds in amounts, or under terms and conditions, which are different from those requested by an Applicant.

e. The Recipient must comply, as applicable, with the Buy American Act of 1933, 41 U.S.C. 8301–8303 and section 2 CFR 200.216 of the Uniform Administrative Requirements, with respect to any Direct Costs.

2. PPC–FA Awards:

a. A Recipient shall use PPC–FA award funds only for the eligible activities described in section II. (C)(5) of this NOFA and its Assistance Agreement.

b. With the exception of Depository Institution Holding Company Applicants, PPC–FA awards may not be used to support the activities of, or otherwise be passed through, transferred, or co-awarded to, third-party entities, whether Affiliates, Subsidiaries, or others, unless done pursuant to a merger or acquisition or similar transaction, and with the CDFI Fund's prior written consent.

c. PPC–FA award funds shall only be paid to the Recipient.

d. The CDFI Fund, in its sole discretion, may pay PPC–FA award funds in amounts, or under terms and conditions, which are different from those requested by an Applicant.

e. The Recipient must comply, as applicable, with the Buy American Act of 1933, 41 U.S.C. 8301–8303 and section 2 CFR 200.216 of the Uniform Administrative Requirements, with respect to any Direct Costs.

3. DF–FA Awards:

a. A Recipient shall use DF–FA award funds only for the eligible activities described in section II. (C)(2) of this NOFA and its Assistance Agreement.

b. With the exception of Depository Institution Holding Company Applicants, DF–FA awards may not be used to support the activities of, or otherwise be passed through, transferred, or co-awarded to, third-party entities, whether Affiliates, Subsidiaries, or others, unless done pursuant to a merger or acquisition or similar transaction, and with the CDFI Fund's prior written consent.

c. DF–FA award funds shall only be paid to the Recipient.

d. The CDFI Fund, in its sole discretion, may pay DF–FA award funds in amounts, or under terms and conditions, which are different from those requested by an Applicant.

e. The Recipient must comply, as applicable, with the Buy American Act of 1933, 41 U.S.C. 8301–8303 and section 2 CFR 200.216 of the Uniform Administrative Requirements, with respect to any Direct Costs.

4. HFFI–FA Awards:

a. A Recipient shall use HFFI–FA award funds only for the eligible activities described in section II. (C)(4) of this NOFA and its Assistance Agreement.

b. With the exception of Depository Institution Holding Company Applicants, HFFI–FA awards may not be used to support the activities of, or otherwise be passed through, transferred, or co-awarded to, third-party entities, whether Affiliates, Subsidiaries, or others, unless done pursuant to a merger or acquisition or similar transaction, and with the CDFI Fund's prior written consent.

c. HFFI–FA award funds shall only be paid to the Recipient.

d. The CDFI Fund, in its sole discretion, may pay HFFI–FA award funds in amounts, or under terms and conditions, which are different from those requested by an Applicant.

e. The Recipient must comply, as applicable, with the Buy American Act of 1933, 41 U.S.C. 8301–8303 and section 2 CFR 200.216 of the Uniform Administrative Requirements, with respect to any Direct Costs.

5. HP–FA Awards:

a. A Recipient shall use HP–FA award funds only for the eligible activities described in section II. (C)(5) of this NOFA and its Assistance Agreement.

b. With the exception of Depository Institution Holding Company Applicants, HP–FA awards may not be used to support the activities of, or otherwise be passed through, transferred, or co-awarded to, third-party entities, whether Affiliates, Subsidiaries, or others, unless done pursuant to a merger or acquisition or similar transaction, and with the CDFI Fund's prior written consent.

c. HP–FA award funds shall only be paid to the Recipient.

d. The CDFI Fund, in its sole discretion, may pay HP–FA award funds in amounts, or under terms and conditions, which are different from those requested by an Applicant.

e. The Recipient must comply, as applicable, with the Buy American Act of 1933, 41 U.S.C. 8301–8303 and section 2 CFR 200.216 of the Uniform Administrative Requirements, with respect to any Direct Costs.

6. TA Awards:

a. A Recipient shall use TA award funds only for the eligible activities described in section II. (C) (3) of this NOFA and its Assistance Agreement.

b. A Sponsoring Entity Recipient must create the Emerging CDFI as a legal entity no later than the end of the first year of the Period of Performance. Upon creation of the Emerging CDFI, the Sponsoring Entity must request the CDFI Fund to amend the Assistance Agreement to add the Emerging CDFI as a co-Recipient. The Sponsoring Entity must add the Emerging CDFI as a co-Recipient within 90 days the end of the first year of the Period of Performance. The Sponsoring Entity must then transfer any remaining balances and/or assets derived from the TA award to the Emerging CDFI.

c. With the exception of Depository Institution Holding Company Applicants, TA awards may not be used to support the activities of, or otherwise be passed through, transferred, or co-awarded to, third-party entities, whether Affiliates, Subsidiaries, or others, unless done pursuant to a merger or acquisition or similar transaction, and with the CDFI Fund's prior written consent.

d. TA award funds shall only be paid to the Recipient.

e. The CDFI Fund, in its sole discretion, may pay TA award funds in amounts, or under terms and conditions, which are different from those requested by an Applicant.

f. The Recipient must comply, as applicable, with the Buy American Act of 1933, 41 U.S.C. 8301–8303 and section 2 CFR 200.216 of the Uniform Administrative Requirements, with respect to any Direct Costs.

V. Application Review Information

A. Criteria: If the Applicant has submitted an eligible Application, the CDFI Fund will conduct a substantive review in accordance with the criteria and procedures described in the Regulations, this NOFA, the Application guidance, and the Uniform Administrative Requirements. The CDFI Fund reserves the right to contact the Applicant by telephone, email, or mail for the purpose of clarifying or confirming Application information. If contacted, the Applicant must respond within the time period communicated by the CDFI Fund or risk that its Application will be rejected. The CDFI Fund will review the Base–FA, DF–FA, PPC–FA, HFFI–FA, HP–FA, and TA Applications in accordance with the process below. All internal and external reviewers will complete the CDFI Fund's conflict of interest process.

1. Base–FA Application Scoring, Award Selection, Review, and Selection Process: The CDFI Fund will evaluate each Application using a five-step

review process illustrated in the sections below. Applicants that meet the minimum criteria will advance to the next step in the review process. Applicants applying as a Community Partnership must describe the partnership in the Application pursuant to the requirements set forth in table 8 and will be evaluated in accordance with the review process described below.

a. *Step 1: Eligibility Review:* The CDFI Fund will evaluate each Application to determine its eligibility status pursuant to section III of this NOFA.

b. *Step 2: Financial Analysis and Compliance Risk Evaluation:*

i. *Step 2: Financial Analysis:* For Regulated Institutions, the CDFI Fund will consider financial safety and soundness information from the Appropriate Federal or State Banking Agency. As detailed in table 8, each Regulated Institution FA Applicant (including a Subsidiary Insured Depository Institution that will expend and carry out the activities of an award on behalf of a Depository Institution Holding Company Applicant) must have a CAMELS/CAMEL rating of at least ''3'' and/or no significant material concerns from its regulator. Each Insured Depository Institution Applicant and each Subsidiary Insured Depository Institution that will expend and carry out the activities of an award on behalf of a Depository Institution Holding Company Applicant must have a CRA assessment rating of at least ''Satisfactory.''

For non-regulated Applicants, the CDFI Fund will evaluate the financial health and viability of each non-regulated Applicant using financial information provided by the Applicant. For the financial analysis, each non-regulated Applicant will receive a Total Financial Composite Score on a scale of one (1) to five (5), with one (1) being the highest rating. The Total Financial Composite Score is based on the analysis of twenty-three (23) financial indicators. Applications will be grouped based on the Total Financial Composite Score. Applicants must receive a Total Financial Composite Score of one (1), two (2), or three (3) to advance to Step 3. Applicants that receive an initial Total Financial Composite Score of four (4) or five (5) will be re-evaluated and re-scored by CDFI Fund staff. If the Total Financial Composite Score remains four (4) or five (5) after CDFI Fund staff review, the Applicant will not advance to Step 3.

ii. *Step 2: Compliance Risk Evaluation:* For the compliance analysis, the CDFI Fund will evaluate the compliance risk of each Applicant using information provided in the Application as well as an Applicant's reporting history, reporting capacity, and performance risk with respect to meeting the PG&Ms set forth in the Assistance Agreement. Each Applicant will receive a Total Compliance Composite Score on a scale of one (1) to five (5), with one (1) being the highest rating. Applicants that receive an initial Total Compliance Composite Score of four (4) or five (5) will be re-evaluated by CDFI Fund staff. If the Applicant is deemed a high compliance risk after CDFI Fund staff review, the Applicant will not advance to Step 3.

c. *Step 3: Business Plan Review:* Applicants that proceed to Step 3 will be evaluated on the soundness of their comprehensive business plan. Two external non-CDFI Fund Reviewers will conduct the Step 3: Business Plan Review. Reviewers will evaluate the Application sections listed in table 12. All Applications will be reviewed in accordance with standard reviewer evaluation materials. At the conclusion of the Step 3 evaluation, Applications will be ranked based on Total Business Plan Scores, in descending order from highest Total Business Plan Score to lowest Total Business Plan Score. An amount up to but not exceeding the highest scoring 75% of NACA FA Applicants in the NACA FA Applicant pool will progress to Step 4. If a tie in Total Business Plan Scores would prevent an Applicant from advancing to Step 4, all Applicants with the same score will progress to Step 4. Lastly, the CDFI Fund may consider the geographic diversity of Applicants based on primary geographic market served (Major Urban Area, Micropolitan Area, Minor Urban Area, and Rural Area) when determining the Step 4 Applicant pool.

Based on funding availability for NACA Base–FA Applicants, the CDFI Fund reserves the right to limit the number of Applicants that progress from Step 3 to Step 4 to ensure that the CDFI Program can meaningfully vary award amounts among Applicants with different Step 4 Policy Objective scores, while maintaining minimum award amounts specified in table 2. In cases where funding availability is not sufficient to progress all Applicants within the top 75% of the NACA FA Applicant pool from Step 3 to Step 4, priority will be given to Applicants that score highest on the Total Business Plan Score.

Applicants who request only an HP–FA award (with no Base–FA award) will be evaluated in a separate pool from the Core and SECA Base–FA Applicant types, utilizing the criteria outlined in table 12. This pool will combine any HP–FA only Applications under both the CDFI Program and the NACA Program. The Step 3 review questions under these criteria will be modified to reflect the fact that Applications requesting only HP–FA without Base–FA will not have an FA Objective. This review will be completed by CDFI Fund or other Federal staff, rather than external reviewers. Upon completion of the Step 3: Business Plan Review, the Applications requesting only an HP–FA award without a Base–FA award will be ranked according to Step 3 score. The CDFI Fund will forward the same percentage of HP–FA only applications to Step 4 as the percentage of the CDFI Program Core Applicant pool requesting Base–FA forwarded to Step 4. For example, if the CDFI Fund forwards the highest scoring 60% of the CDFI Program Core Applicant pool requesting Base–FA to Step 4, and it received 8 Applications requesting only HP–FA (across both the CDFI and NACA Programs), it will multiply 8 by 60% to calculate 4.8 and forward five Applicants to Step 4, as five is the closest whole number to 4.8.

TABLE 12—STEP 3: BASE–FA BUSINESS PLAN REVIEW SCORING CRITERIA

Base–FA application sections	Possible score	Score needed to advance
Mission and Community Needs	Scored as a component of the other Base–FA Application Sections.	N/A.
Business Strategy	12	N/A.
Market and Competitive Analysis	7	N/A.
Products and Services	12	N/A.
Management and Track Record	12	N/A.
Growth and Projections	7	N/A.

TABLE 12—STEP 3: BASE–FA BUSINESS PLAN REVIEW SCORING CRITERIA—Continued

Base–FA application sections	Possible score	Score needed to advance
Total Business Plan Score	50	NACA Applicants: Up to but not exceeding top 75% of all NACA Applicants.

d. *Step 4: Policy Objective Review:* The CDFI Fund internal reviewers will evaluate each Application to determine its ability to meet policy objectives of the CDFI Fund. Each Applicant will be evaluated in each of the categories listed in table 13 and will receive a Total Policy Objective Review Score on a scale of one (1) to five (5), with one (1) being the highest score. Applicants are then grouped according to Total Policy Objective Review Scores. For Applications requesting only HP–FA (with no Base–FA request), the Step 4 policy objective review will be conducted using the same categories listed in table 13. Where appropriate, the evaluation criteria for reviewers will be modified to reflect the fact that Applications requesting only HP–FA without Base–FA will not have an FA Objective.

The CDFI Fund also conducts a due diligence review for Applicants that includes an analysis of programmatic risk factors including, but not limited to: history of performance in managing Federal awards (including timeliness of reporting and compliance); ability to meet FA Objectives selected by Base–FA Applicants in their Applications; reports and findings from audits; and ability to effectively implement Federal requirements, each of which could impact the Total Policy Objective Review Score. For Applications requesting only HP–FA (with no Base–FA), the due diligence review will consist of all of the above components except the FA Objective due diligence review; due diligence related to the Application's HP–FA strategy will be conducted as part of the HP–FA Application review.

TABLE 13—STEP 4: BASE–FA POLICY REVIEW SCORING CRITERIA

Section	Possible scores	High score	Score needed to advance
Economic Distress	1, 2, 3, 4, or 5	1	N/A.
Economic Opportunities	1, 2, 3, 4, or 5	1	N/A.
Community Collaboration	1, 2, 3, 4, or 5	1	N/A.
Total Policy Objective Review Composite Score	1, 2, 3, 4, or 5	1	All Scores Advance.

e. *Step 5: Award Amount Determination:* The CDFI Fund determines an award amount for each Application based on the Step 4 Total Policy Objective Review Score, the Applicant's request amount, and on certain other factors, including, but not limited to, the Applicant's deployment track record, minimum award size, and funding availability. Applicants may have award amounts reduced from the requested award amount or not funded as a result of this analysis. Based on funding availability for NACA Base–FA, the CDFI Fund reserves the right to not award all Applicants that advance to Step 5. In cases where funding availability is not sufficient to award all Applications, priority will be given to Applicants that score highest on the Step 4: Policy Objective Review: For NACA FA Applicants, the award cannot exceed 100% of the Applicant's total portfolio outstanding as of the Applicant's most recent historic fiscal year end in accordance with the FA Application Guidance, or the minimum award size as noted in table 2, whichever is greater.

2. HFFI–FA Application Scoring, Award Selection, Review, and Selection Process: A CDFI Fund internal reviewer will evaluate each HFFI–FA Application associated with a Base–FA Application that progresses to Step 4 of the FA Application review process. The reviewer will evaluate the Application sections listed in table 14 and assign a Total HFFI–FA Score up to 60 points. The CDFI Fund will make awards to the highest scoring Applicants first. All Applications will be reviewed in accordance with standard reviewer evaluation materials. Applicants that fail to receive a Base–FA award will not be considered for a HFFI–FA award.

The CDFI Fund conducts additional levels of due diligence for Applications that are under consideration for an HFFI–FA award. Award amounts may be reduced from the requested award amount as a result of this analysis. The CDFI Fund may reduce awards sizes from requested amounts based on certain variables, including but not limited to, an Applicant's deployment track record, total portfolio outstanding, or compliance with prior HFFI–FA awards. Lastly, the CDFI Fund may consider the geographic diversity of Applicants when making its funding decisions.

TABLE 14—STEP 4 HFFI–FA APPLICATION SCORING CRITERIA

Sections	Possible score
Target Market Profile	10 points.
Healthy Food Financial Products	10 points.
Projected HFFI–FA Activities	15 points.
HFFI Track Record	20 points.
Management Capacity for Providing Healthy Food Financing	5 points.
Total HFFI–FA Score	60 points.

3. PPC–FA Application Scoring, Award Selection, Review, and Selection Process: A CDFI Fund internal reviewer will evaluate the PPC–FA request of each PPC–FA Application associated with a Base–FA Application that

progresses to Step 4 of the FA Application review process. PPC–FA requests are not scored. PPC–FA award amounts will be determined based on the total number of eligible Applicants and funding availability, the Applicant's requested amount, and on certain factors, including but not limited to, an Applicant's total portfolio outstanding, historical track record of deployment in PPC, pipeline of projects in PPC, minimum award size, and funding availability. Applicants that fail to receive a Base–FA award will not be considered for a PPC–FA award.

4. DF–FA Application Scoring, Award Selection, Review, and Selection Process: A CDFI Fund internal reviewer will evaluate each DF–FA Application associated with a Base–FA Application that progresses to Step 4 of the FA Application review process. The reviewer will evaluate the Application and assign a Total DF–FA Score on a scale of one (1) to three (3), with one (1) being the highest score. Applicants are then grouped according to Total DF–FA Score. All Applications will be reviewed in accordance with standard reviewer evaluation materials. Applicants that fail to receive a Base–FA award will not be considered for a DF–FA award. Award amounts will be determined on the basis of the Total DF–FA Score, the Applicant's requested amount, and on certain factors, including but not limited to, an Applicant's deployment track record, total portfolio outstanding, minimum award size, and funding availability. Award amounts may be reduced from the requested award amount as a result of this analysis. The CDFI Fund will make awards to the highest scoring Applicants first.

TABLE 15—STEP 3 DF–FA APPLICATION SCORING CRITERIA

Section	Possible scores	High score
DF–FA Narrative Questions	1, 2, or 3	1
Total DF–FA Score	1, 2, or 3	1

5. HP–FA Application Scoring, Award Selection, Review, and Selection Process: A CDFI Fund internal reviewer will evaluate each HP–FA Application that progresses to Step 4 of the review process. The reviewer will evaluate the Application and assign a Total HP–FA Score on a scale of one (1) to three (3), with one (1) being the highest score, based on the Applicant's projected financing activity supporting housing production, the extent it intends to target 51% or more of Homeownership and rental Housing to families with incomes at 80% AMI or below, its track record of financing housing, its projected timeline for Housing to be completed, and the effectiveness of its strategy to mitigate any risks. Applicants are then grouped according to Total HP–FA Score. All Applications will be reviewed in accordance with standard reviewer evaluation materials. Applicants that would not qualify for an award based on Step 4 Total Policy Objective Review Score and due diligence evaluation will not be considered for an HP–FA award. Applicants that request an HP–FA award as a supplement a Base–FA award must be selected to receive a Base–FA award to be considered for an HP–FA award. Award amounts will be determined based on the Total HP–FA Score, the Applicant's requested amount, and on certain factors, including but not limited to, an Applicant's deployment track record, total portfolio outstanding, minimum award size, proximity to the $5 million over three years award cap, geographies served, and funding availability. The CDFI Fund may reduce an Applicant's award amount as a result of this analysis. The CDFI Fund will make awards to the highest scoring Applicants first.

6. TA Application Scoring, Award Selection, Review, and Selection Process: The CDFI Fund will evaluate each Application to determine its eligibility pursuant to section III of this NOFA. If the Application satisfies the eligibility criteria, the CDFI Fund will conduct the TA Business Plan Review in two parts. Sponsoring Entity or Emerging CDFI Applicants must receive a rating of Low Risk or Medium Risk in Part I of the TA Business Plan Review to progress to Part II of the TA Business Plan Review. Sponsoring Entity, or Emerging CDFI Applicants that receive a rating of High Risk in Part I of the TA Business Plan Review will not be considered for an award. Part I of the TA Business Plan Review is not applicable for Certified CDFI Applicants. Sponsoring Entity, Emerging CDFI, and Certified CDFI Applicants must receive a rating of Low Risk or Medium Risk in Part II of the TA Business Plan Review to be considered for an award. Applicants that receive a rating of High Risk in Part II of the TA Business Plan Review will not be considered for an award.

An Applicant that is a Certified CDFI will be evaluated on the demonstrated need for a TA award to build the CDFI's capacity, further the Applicant's strategic goals, and achieve impact within the Applicant's Target Market. An Applicant that is an Emerging CDFI will be evaluated on the Applicant's demonstrated capability and plan to achieve CDFI Certification within three years, or if a prior Recipient, the CDFI Certification PG&M stated in its prior Assistance Agreement. An Applicant that is an Emerging CDFI will also be evaluated on its demonstrated need for a TA award to build the CDFI's capacity and further its strategic goals. An Applicant that is a Sponsoring Entity will be rated on its demonstrated capability to create a separate legal entity within one year that will achieve CDFI Certification within four years. An Applicant that is a Sponsoring Entity will also be rated on its demonstrated need for a TA award to build the CDFI's capacity and further its strategic goals. The CDFI Fund will rate each part of the TA Business Plan Review as indicated in table 16.

TABLE 16—TA BUSINESS PLAN REVIEW

Business plan review component	Applicant type	Ratings
Part I:		
Primary Mission	Sponsoring Entity and Emerging CDFI Applicants	Low Risk, Medium Risk, or High Risk.
Financing Entity	Sponsoring Entity and Emerging CDFI Applicants.	
Target Market	Sponsoring Entity and Emerging CDFI Applicants.	

TABLE 16—TA BUSINESS PLAN REVIEW—Continued

Business plan review component	Applicant type	Ratings
Accountability	Sponsoring Entity and Emerging CDFI Applicants.	
Development Services	Sponsoring Entity and Emerging CDFI Applicants.	
Part II:		
Target Market Needs & Strategy	Sponsoring Entity, Emerging CDFI, and Certified CDFI Applicants.	Low Risk, Medium Risk, or High Risk.
Organizational Capacity	Sponsoring Entity, Emerging CDFI, and Certified CDFI Applicants.	
Management Capacity	Sponsoring Entity, Emerging CDFI, and Certified CDFI Applicants.	

Each TA Application will be evaluated by one internal CDFI Fund reviewer. The Business Plan Review of all Applications will be reviewed in accordance with CDFI Fund standard reviewer evaluation materials.

The CDFI Fund conducts additional levels of due diligence for Applications that are under consideration for an award. This due diligence includes an analysis of programmatic and financial risk factors including, but not limited to, financial stability, history of performance in managing Federal awards (including timeliness of reporting and compliance), reports and findings from audits, and the Applicant's ability to effectively implement Federal requirements. The CDFI Fund will also evaluate the compliance risk of each Applicant using information provided in the Application as well as an Applicant's reporting history, reporting capacity, and performance risk with respect to meeting the PG&Ms set forth in the Assistance Agreement. Each Applicant will receive a Total Compliance Composite Score on a scale of one (1) to five (5), with one (1) being the highest rating. Applicants that receive an initial Total Compliance Composite Score of four (4) or five (5) will be re-evaluated by CDFI Fund staff. If the Applicant is deemed a high compliance risk after CDFI staff review, the Applicant will not be considered for an award. The CDFI Fund will also evaluate the Applicant's ability to meet CDFI Certification criteria of being a legal entity and a non-government entity. Award amounts may be reduced as a result of the due diligence analysis in addition to consideration of the Applicant's funding request and similar factors. Lastly, the CDFI Fund may consider the geographic diversity of Applicants when making its funding decisions.

6. Regulated Institutions: The CDFI Fund will consider safety and soundness information from the Appropriate Federal or State Banking Agency. If the Applicant is a Depository Institution Holding Company, the CDFI Fund will consider information provided by the Appropriate Federal or State Banking Agencies about both the Depository Institution Holding Company and the Subsidiary Insured Depository Institution that will expend and carry out the award. If the Appropriate Federal or State Banking Agency identifies safety and soundness concerns (including any concerns for Subsidiary Insured Depository Institutions carrying out the activities of an award on behalf of a Depository Institution Holding Company), the CDFI Fund will assess whether such concerns cause or will cause the Applicant to be incapable of undertaking the activities for which funding has been requested.

7. Non-Regulated Institutions: The CDFI Fund must ensure, to the maximum extent practicable, that Recipients which are non-regulated CDFIs are financially and managerially sound and maintain appropriate internal controls (12 U.S.C. 4707(f)(1)(A) and 12 CFR 1805.800(b)). Further, the CDFI Fund must determine that an Applicant's capacity to operate as a CDFI and its continued viability will not be dependent upon assistance from the CDFI Fund (12 U.S.C. 4704(b)(2)(A)). If it is determined that the Applicant is incapable of meeting these requirements, the CDFI Fund reserves the right to deem the Applicant ineligible or terminate the award.

8. Consideration of the Three-Year Award Cap: The CDFI Fund is prohibited from obligating more than $5 million in CDFI and NACA Program awards, in the aggregate, to any one organization and its Subsidiaries and Affiliates during any three-year period from the announcement date. Base–FA, TA, PPC–FA, and HP–FA are expected to be considered in this determination, based on existing statutory authority and past appropriations bill language. DF–FA and HFFI–FA were excluded from consideration towards the three-year award cap in the enacted FY 2024 Consolidated Appropriations Act; however, the final FY 2025 appropriations are still pending. Thus, the CDFI Fund reserves the right to include FY 2025 DF–FA and HFFI–FA awards in calculating the three-year award cap if these programs are not excluded in the final FY 2025 CDFI Program appropriations. The CDFI Fund may reduce award amounts or deny certain supplemental awards if necessary to stay under the $5 million award cap for a Recipient.

B. Anticipated Award Announcement: The CDFI Fund anticipates making the NACA Program award announcement before September 30, 2025. However, the anticipated award announcement date is subject to change without notice.

C. Application Rejection: The CDFI Fund reserves the right to reject an Application if information (including administrative errors) comes to the CDFI Fund's attention that: adversely affects an Applicant's eligibility for an award; adversely affects the Recipient's CDFI Certification (to the extent that the award is conditional upon CDFI Certification); adversely affects the CDFI Fund's evaluation or scoring of an Application; or indicates fraud or mismanagement on the Applicant's part. If the CDFI Fund determines any portion of the Application is incorrect in a material respect, the CDFI Fund reserves the right, in its sole discretion, to reject the Application. The CDFI Fund reserves the right to change its eligibility and evaluation criteria and procedures, if the CDFI Fund deems it appropriate. If the changes materially affect the CDFI Fund's award decisions, the CDFI Fund will provide information about the changes through its website. The CDFI Fund's award decisions are final, and there is no right to appeal decisions.

D. External Non-CDFI Fund Reviewers: All external non-CDFI Fund reviewers are selected based on criteria that includes a professional background in community and economic development finance, and experience reviewing the financial statements of all CDFI institution types. Reviewers must complete the CDFI Fund's conflict of

interest process and be approved by the CDFI Fund.

VI. Federal Award Administration Information

A. Award Notification: Each successful Applicant will receive an email ''notice of award'' notification from the CDFI Fund stating that its Application has been approved for an award. Each Applicant not selected for an award will receive an email stating that a debriefing notice has been provided in its AMIS account.

B. Assistance Agreement: Each Applicant selected to receive an award must enter into an Assistance Agreement with the CDFI Fund in order to receive a payment(s). The Assistance Agreement will set forth the award's terms and conditions, including but not be limited to the: (i) award amount; (ii) award type; (iii) award uses; (iv) eligible use of award funds; (v) PG&Ms; and (vi) reporting requirements. FA Assistance Agreements have three-year Periods of Performance. TA Assistance Agreements have two-year Periods of Performance for Certified CDFIs, three-year Periods of Performance for Emerging CDFIs, and four-year Periods of Performance for Sponsoring Entity Recipients. Upon creation of the Emerging CDFI, the Sponsoring Entity must request the CDFI Fund to amend the Assistance Agreement and add the Emerging CDFI as a party thereto. The Emerging CDFI, as co-Recipient, will be subject to all of the terms and conditions of the Assistance Agreement, including all PG&Ms.

1. Certificate of Good Standing: All FA and TA Recipients that are not Regulated Institutions will be required to provide the CDFI Fund with a certificate of good standing from the secretary of state for the Recipient's jurisdiction of formation prior to closing. This certificate can often be acquired online on the secretary of state website for the Recipient's jurisdiction of formation and must generally be dated within 180 days prior to the Federal Award Date of the Assistance Agreement. Due to potential backlogs in state government offices, Applicants are advised to submit requests for certificates of good standing no later than 60 days after they submit their Applications.

2. Closing: Pursuant to the Assistance Agreement, there will be an initial closing at which point the Assistance Agreement and related documents will be properly executed and delivered, and an initial payment of FA or TA may be made. The first payment is the estimated amount of the award that the Recipient states in its Application that it will use for eligible FA or TA activities in the first 12 months after the award announcement. The first payment request amount entered in the Application must be greater than zero. The CDFI Fund reserves the right to increase the first payment amount on any award to ensure that any subsequent payments are at least $25,000 for FA and $5,000 for TA awards.

The CDFI Fund will minimize the time between the Recipient incurring costs for eligible activities and award payment(s) in accordance with the Uniform Administrative Requirements. Advanced payments for eligible activities will occur no more than one year in advance of the Recipient incurring costs for the eligible activities. Following the initial closing, there may be subsequent closings involving additional award payments. Any documentation in addition to the Assistance Agreement that is connected with such subsequent closings and payments shall be properly executed and timely delivered by the Recipient to the CDFI Fund.

3. Requirements Prior to Entering into an Assistance Agreement: If, prior to entering into an Assistance Agreement, information (including administrative errors) comes to the CDFI Fund's attention that: adversely affects the Recipient's eligibility for an award; adversely affects the Recipient's CDFI Certification (to the extent that the award is conditional upon CDFI Certification); adversely affects the CDFI Fund's evaluation of the Application; indicates that the Recipient is not in compliance with any requirement listed in the Uniform Administrative Requirements; indicates that the Recipient is not in compliance with a term or condition of any prior Award Agreement, Assistance Agreement, and/or Allocation Agreement from the CDFI Fund; indicates the Recipient has failed to execute and return a prior round Assistance Agreement to the CDFI Fund within the CDFI Fund's deadlines; or indicates fraud or mismanagement on the Recipient's part, the CDFI Fund may, in its discretion and without advance notice to the Recipient, terminate the award or take such other actions as it deems appropriate. The CDFI Fund reserves the right, in its sole discretion, to rescind an award if the Recipient fails to return the Assistance Agreement, signed by the Authorized Representative of the Recipient, and/or provide the CDFI Fund with any requested documentation, within the CDFI Fund's deadlines.

In addition, the CDFI Fund reserves the right, in its sole discretion, to terminate and rescind the Assistance Agreement and the award made under this NOFA pending the criteria described in table 17.

TABLE 17—REQUIREMENTS PRIOR TO EXECUTING AN ASSISTANCE AGREEMENT

Requirement	Criteria
Failure to meet reporting requirements.	• If a Recipient received a prior award or allocation under any CDFI Fund program and is not current on the reporting requirements set forth in the previously executed assistance, award, allocation, bond loan agreement(s), or agreement to guarantee, as of the date of the notice of award, the CDFI Fund reserves the right, in its sole discretion, to delay entering into an Assistance Agreement and/or to delay making a payment of award, until said prior Recipient or allocatee is current on the reporting requirements in the previously executed assistance, award, allocation, bond loan agreement(s), or agreement to guarantee. • If such a prior Recipient or allocatee is unable to meet this requirement within the timeframe set by the CDFI Fund, the CDFI Fund reserves the right, in its sole discretion, to terminate and rescind the notice of award and the award made under this NOFA. • Please note that automated systems employed by the CDFI Fund for receipt of reports submitted electronically typically acknowledge only a report's receipt; such acknowledgment does not warrant that the report received was complete, nor that it met reporting requirements.
Failure to maintain CDFI Certification.	• An FA Recipient must be a Certified CDFI. • If an FA Recipient fails to maintain CDFI Certification, the CDFI Fund will not execute the Assistance Agreement and will terminate and rescind the award made under this NOFA. • If a TA Recipient is a Certified CDFI at the time of award announcement, it must maintain CDFI Certification. • If a Certified CDFI TA Recipient fails to maintain CDFI Certification, the CDFI Fund will not execute the Assistance Agreement and will terminate and rescind the award made under this NOFA.
Pending resolution of noncompliance or default.	• The CDFI Fund will delay entering into an Assistance Agreement with a prior Recipient or allocatee (or Affiliate of the Recipient identified in AMIS) that has pending noncompliance or default issues with any of its previously executed CDFI Fund award(s), allocation(s), bond loan agreement(s), or agreement(s) to guarantee.

TABLE 17—REQUIREMENTS PRIOR TO EXECUTING AN ASSISTANCE AGREEMENT—Continued

Requirement	Criteria
Noncompliance or default status	• If said prior Recipient or allocatee is unable satisfactorily resolve the compliance issues, the CDFI Fund reserves the right, in its sole discretion, to terminate and/or rescind the notice of award and the award made under this NOFA. • If, at any time prior to entering into an Assistance Agreement, the CDFI Fund determines that a Recipient (or Affiliate of the Recipient identified in AMIS) is noncompliant or found in default with any previously executed CDFI Fund award(s), allocation(s), bond loan agreement(s), or agreement(s) to guarantee, and the CDFI Fund has provided written notification that the Recipient is ineligible to apply for or receive any future awards or allocations for a time period specified by the CDFI Fund in writing, the CDFI Fund may delay entering into an Assistance Agreement until the Recipient has cured the noncompliance and/or default by taking actions the CDFI Fund has specified within such specified timeframe. Additionally, regardless of whether a sanction or remedy is imposed, the CDFI Fund will not consider an Application submitted by an Applicant if the default on a prior Allocation Agreement of the Applicant or an Affiliate occurs during the time period beginning 12 months prior to the Application deadline and execution of the FY 2025 Assistance Agreement. If the Recipient is unable to cure the noncompliance and/or default within the specified timeframe, the CDFI Fund may terminate and rescind the Assistance Agreement and the award made under this NOFA.
Compliance with Federal civil rights requirements.	• If, within the period starting three years prior to this NOFA and through the date of the Assistance Agreement, the Recipient received a final determination, in any proceeding instituted against the Recipient in, by, or before any court, governmental, or administrative body or agency, declaring that the Recipient violated any Federal civil rights laws or regulations, including: Title VI of the Civil Rights Act of 1964, as amended (42 U.S.C. 2000d *et seq.*); Fair Housing Act (42 U.S.C. 3601 *et seq.*); Equal Credit Opportunity Act (15 U.S.C. 1691 *et seq.*); section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794); and the Age Discrimination Act of 1975 (42 U.S.C. 6101–6107), the CDFI Fund may terminate and rescind the Assistance Agreement and the award made under this NOFA. The CDFI Fund will delay entering into an Assistance Agreement with a Recipient that has pending Title VI noncompliance issues, if the CDFI Fund has not yet made a final compliance determination. • If the Recipient is unable to satisfactorily resolve the Title VI noncompliance issues, the CDFI Fund may terminate and rescind the Assistance Agreement and the award made under this NOFA. • The Title VI Compliance Worksheet and program award terms and conditions do not impose antidiscrimination requirements on Tribal governments beyond what would otherwise apply under Federal law.
Do Not Pay	• The Do Not Pay Business Center was developed to support Federal agencies in their efforts to reduce the number of improper payments made through programs funded by the Federal Government. • If the Do Not Pay Business Center reports that the Recipient has a pending or delinquent debt to the Federal Government, the Recipient will be required to demonstrate that it has resolved such pending or delinquent debt. The CDFI Fund reserves the right, in its sole discretion, to rescind an award if the Recipient fails to demonstrate resolution of the pending or delinquent Federal debt.
Safety and soundness	• If it is determined the Recipient is, or will be, incapable of meeting its award obligations, the CDFI Fund will deem the Recipient to be ineligible or require it to improve its safety and soundness prior to entering into an Assistance Agreement.

C. Reporting

1. Reporting requirements: On an annual basis during the Period of Performance, the CDFI Fund may collect information from each Recipient including, but not limited to, an Annual Report with the following components (Annual Reporting Requirements):

TABLE 18—ANNUAL REPORTING REQUIREMENTS *

Financial Statement Audit Report (Non-profit Recipient including Insured Credit Unions and State-Insured Credit Unions).	A Non-profit Recipient (including Insured Credit Unions and State-Insured Credit Unions) must submit a Financial Statement Audit (FSA) Report in AMIS, along with the Recipient's statement of financial condition audited or reviewed by an independent certified public accountant, if any are prepared. Under no circumstances should this be construed as the CDFI Fund requiring the Recipient to conduct or arrange for additional audits not otherwise required under Uniform Administrative Requirements or otherwise prepared at the request of the Recipient or parties other than the CDFI Fund.
Financial Statement Audit Report (For-Profit Recipient).	For-profit Recipients must submit an FSA Report in AMIS, along with the Recipient's statement of financial condition audited or reviewed by an independent certified public accountant.
Financial Statement Audit Report (Depository Institution Holding Company and Insured Depository Institution).	If the Recipient is a Depository Institution Holding Company or an Insured Depository Institution, it must submit an FSA Report in AMIS.
Financial Statement Audit Report (Sponsoring Entities).	A Sponsoring Entity must submit an FSA Report in AMIS, along with a statement of financial condition audited or reviewed by an independent certified public accountant, if any are prepared. Under no circumstances should this be construed as the CDFI Fund requiring the Sponsoring Entity to conduct or arrange for additional audits not otherwise required under Uniform Requirements or otherwise prepared at the request of the Sponsoring Entity or parties other than the CDFI Fund.
Single Audit Report (Non-Profit Recipients, if applicable).	A non-profit Recipient must complete an annual Single Audit pursuant to the Uniform Administrative Requirements (see 2 CFR Subpart F—Audit Requirements) if it expends $1,000,000 or more in Federal awards in its fiscal year, or such other dollar threshold established by OMB pursuant to 2 CFR 200.501. If a Single Audit is required, it must be submitted electronically to the Federal Audit Clearinghouse (FAC) (see 2 CFR Subpart F—Audit Requirements in the Uniform Administrative Requirements) and optionally through AMIS.
Federal Financial Report/OMB Standard Form 425 (SF 425).	The Recipient must annually submit the SF–425 Federal Financial Report to the CDFI Fund through AMIS to disclose how much of the CDFI Program award funds were expended during the Federal Government's fiscal year of October 1 through September 30.
Uses of Award Report	The Recipient must submit the Uses of Award Report to the CDFI Fund in AMIS. If the Recipient is a Depository Institution Holding Company that deploys all or a portion of its Financial Assistance through its Subsidiary Insured Depository Institution, the Depository Institution Holding Company must submit all uses in a Uses of Award Report.
Performance Progress Report	The Recipient must submit the Performance Progress Report through AMIS. If the Recipient is a Depository Institution Holding Company that deploys all or a portion of its Financial Assistance through its Subsidiary Insured Depository Institution, the Depository Institution Holding Company must submit all deployed activity in a Performance Progress Report.
Transaction Level Report (TLR)	The Recipient must submit a TLR to the CDFI Fund through AMIS. If the Recipient is a Depository Institution Holding Company that deploys all or a portion of its Financial Assistance through its Subsidiary Insured Depository Institution, the Depository Institution Holding Company must create and submit the TLR for this award. The Subsidiary Insured Depository Institution does not submit and create a TLR related to this award.

TABLE 18—ANNUAL REPORTING REQUIREMENTS *—Continued

Annual Certification and Data Collection Report (ACR).	The full-length TLR completed by FA Recipients is not required for TA Recipients. However, TA Recipients who are Certified CDFIs must complete the abbreviated TLR through AMIS as a requirement of CDFI Certification. TA Recipients that are Certified at the time of award announcement and all FA Recipients must submit the ACR to the CDFI Fund through AMIS per the ACR reporting schedule. If a TA Recipient is a Certified CDFI at the time of the award announcement, it must also submit the abbreviated TLR in conjunction with its ACR to the CDFI Fund through AMIS as per the ACR and abbreviated TLR reporting schedule. If a TA Recipient is an uncertified CDFI at the time of award announcement, it must submit the ACR and abbreviated TLR to the CDFI Fund through AMIS subsequent to obtaining CDFI Certification as per the ACR and abbreviated TLR reporting schedule.

* Personally Identifiable Information (PII) is information, which if lost, compromised, or disclosed without authorization, could result in substantial harm, embarrassment, inconvenience, or unfairness to an individual. Although Applicants are required to enter addresses of individual borrowers/residents of Distressed Communities in AMIS, Applicants should not include the following PII for the individuals who received the Financial Products or Financial Services in AMIS or in the supporting documentation (*i.e.,* name of the individual, Social Security Number, driver's license or state identification number, passport number, Alien Registration Number, etc.). This information should be redacted from all supporting documentation.

Each Recipient is responsible for the timely and complete submission of the Annual Reporting Requirements. Sponsoring Entities with co-Recipients will be informed of any changes to reporting obligations at the time the Emerging CDFI is joined to the Assistance Agreement. The CDFI Fund reserves the right to require Recipients to take training on how to accurately complete any reporting required pursuant to the Assistance Agreement. The CDFI Fund reserves the right to contact the Recipient and additional entities or signatories to the Assistance Agreement to request additional information and/or documentation. The CDFI Fund will use such information to monitor each Recipient's compliance with the requirements of the Assistance Agreement and to assess the impact of the NACA Program. The CDFI Fund reserves the right, in its sole discretion, to modify these reporting requirements, including increasing the scope and frequency of reporting, if it determines it to be appropriate and necessary; however, such reporting requirements will be modified only after notice to Recipients.

2. Financial Management and Accounting: The CDFI Fund will require Recipients to maintain financial management and accounting systems that comply with Federal statutes, regulations, and the terms and conditions of the Federal award. These systems must be sufficient to permit the preparation of reports required by the CDFI Fund to ensure compliance with the terms and conditions of the NACA Program, including the tracing of award funds to a level of expenditures adequate to establish that such award funds have been used in accordance with Federal statutes, regulations, and the terms and conditions of the Federal award.

The cost principles used by Recipients must be consistent with Federal cost principles and support the accumulation of costs as required by the principles and must provide for adequate documentation to support costs charged to the NACA Program award. In addition, the CDFI Fund will require Recipients to: maintain effective internal controls; comply with applicable statutes, regulations, and the Assistance Agreement; evaluate and monitor compliance; take appropriate action when not in compliance; and safeguard personally identifiable information.

VII. Agency Contacts

A. The CDFI Fund will respond to questions concerning this NOFA and the Application between the hours of 9:00 a.m. and 5:00 p.m. Eastern Time, starting on the date that the NOFA is published through the date listed in table 1. The CDFI Fund strongly recommends Applicants submit questions to the CDFI Fund via an AMIS Service Request to the NACA Program, Certification, Compliance Monitoring and Evaluation, or IT Help Desk. The CDFI Fund will post on its website responses to reoccurring questions received about the NOFA and Application. Other information regarding the CDFI Fund and its programs may be obtained from the CDFI Fund's website at *https://www.cdfifund.gov.* Table 19 lists CDFI Fund contact information:

TABLE 19—CONTACT INFORMATION

Type of question	Preferred method	Telephone number (not toll free)	Email addresses
NACA Program	Service Request via AMIS	202–653–0421, option 1	*cdfihelp@cdfi.treas.gov.*
Compliance Monitoring and Evaluation	Service Request via AMIS	202–653–0423	*ccme@cdfi.treas.gov.*
CDFI Certification	Service Request via AMIS	202–653–0423	*OCPECert@cdfi.treas.gov.*
AMIS—IT Help Desk	Service Request via AMIS	202–653–0422	*AMIS@cdfi.treas.gov.*
Grants.gov Help Desk	N/A	(800) 518–4726	*support@grants.gov.*
SAM.gov (Federal Service Desk)	N/A	(866) 606–8220	*https://sam.gov/.*

B. Information Technology Support: For IT assistance, the preferred method of contact is to submit a Service Request within AMIS. For the Service Request, select ''Technical Issues'' from the Program dropdown menu of the Service Request. People who have visual or mobility impairments that prevent them from using the CDFI Fund's website should call (202) 653–0422 for assistance (this is not a toll-free number).

C. Communication with the CDFI Fund: The CDFI Fund will use the contact information in AMIS to communicate with Applicants and Recipients. It is imperative, therefore, that Applicants, Recipients, Subsidiaries, Affiliates, and signatories maintain accurate contact information in their accounts. This includes information such as contact names (especially for the Authorized Representative), email addresses, fax and phone numbers, and office locations.

D. Revisions to Federal Funding Accountability and Transparency Act of 2006: Each Applicant that does not have an exception related to reporting subaward and executive compensation information under 2 CFR part 170 must have the necessary processes and systems in place to comply with reporting requirements should they receive an award.

E. Civil Rights and Equal Employment Opportunity: Any person who is eligible to receive benefits or services from the CDFI Fund or Recipients under any of its programs or activities is entitled to those benefits or services without being subject to prohibited discrimination. The Department of the Treasury's Office of Civil Rights and Equal Employment Opportunity enforces various Federal statutes and regulations that prohibit discrimination in financially assisted and conducted programs and activities of the CDFI Fund. If a person believes that s/he has been subjected to discrimination and/or reprisal because of race, color, religion, national origin, age, sex, marital status, familial status, disability and/or reprisal, s/he may file a complaint with: Director, Office of Civil Rights and Equal Employment Opportunity, 1500 Pennsylvania Ave. NW, Washington, DC 20230 or (202) 622–1160 (not a toll-free number).

F. Whistleblower Protections: An employee of a Recipient or Subrecipient must not be discharged, demoted, or otherwise discriminated against as a reprisal for disclosing to a person or body described in paragraph (a)(2) of 41 U.S.C. 4712 information that the employee reasonably believes is evidence of gross mismanagement of a Federal contract or grant, a gross waste of Federal funds, an abuse of authority relating to a Federal contract or grant, a substantial and specific danger to public health or safety, or a violation of law, rule, or regulation related to a Federal contract (including the competition for or negotiation of a contract) or grant. The Recipient and Subrecipient must inform their employees in writing of employee whistleblower rights and protections under 41 U.S.C. 4712. See statutory requirements for whistleblower protections at 10 U.S.C. 4701, 41 U.S.C. 4712, 41 U.S.C. 4304, and 10 U.S.C. 4310.

G. Statutory and National Policy Requirements: The CDFI Fund will manage and administer the Federal award in a manner to ensure that Federal funding is expended and associated programs are implemented in full accordance with the U.S. Constitution, Federal law, and public policy requirements: including but not limited to, those protecting free speech, religious liberty, public welfare, the environment, and prohibiting discrimination.

VIII. Other Information

A. Paperwork Reduction Act: Under the Paperwork Reduction Act (44 U.S.C. chapter 35), an agency may not conduct or sponsor a collection of information, and an individual is not required to respond to a collection of information, unless it displays a valid OMB control number. If applicable, the CDFI Fund may inform Applicants that they do not need to provide certain Application information otherwise required. Pursuant to the Paperwork Reduction Act, the CDFI Program and NACA Program Applications have been assigned the following control number: 1559–0021.

B. Application Information Sessions: The CDFI Fund may conduct webinars or host information sessions for organizations that are considering applying to, or are interested in learning about, the CDFI Fund's programs. For further information, visit the CDFI Fund's website at *https://www.cdfifund.gov.*

Authority: 12 U.S.C. 4701, *et seq.*; 12 CFR parts 1805 and 1815; 2 CFR part 200.

BILLING CODE 4810–AL–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Regulation Project

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Internal Revenue Service (IRS), as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on information collections, as required by the Paperwork Reduction Act of 1995. The IRS is soliciting comments concerning, Amortization of Intangible Property.

DATES: Written comments should be received on or before March 18, 2025 to be assured of consideration.

ADDRESSES: Direct all written comments to Andres Garcia, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or by email to *pra.comments@irs.gov*. Include ''OMB Number 1545–1671—Amortization of Intangible Property'' in the subject line of the message.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of this collection should be directed to Martha R. Brinson, at (202)317–5753, or at Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or through the internet at *Martha.R.Brinson@irs.gov*.

SUPPLEMENTARY INFORMATION:

Title: Amortization of Intangible Property.

OMB Number: 1545–1671.

Regulation Project Number: TD 8865 (REG–209709–94).

Abstract: These regulations apply to property acquired after January 25, 2000. Regulations to implement section 197(e)(4)(D) are applicable August 11, 1993, for property acquired after August 10, 1993 (or July 26, 1991, for property acquired after July 25, 1991, if a valid retroactive election has been made under § 1.197–1).

Current Actions: There are no changes being made to the regulation at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 500.

Estimated Time per Respondent: 3 hours.

Estimated Total Annual Burden Hours: 1,500.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number.

Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. Comments will be of public record. Comments are invited on: (a) whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information has practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: January 10, 2025.

Martha R. Brinson,

Tax Analyst.

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Revenue Procedure 99–17

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Internal Revenue Service (IRS), as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on information collections, as required by the Paperwork Reduction Act of 1995. The IRS is soliciting comments concerning, Mark to Market Election for Commodities Dealers and Securities and Commodities Traders.

DATES: Written comments should be received on or before March 18, 2025 to be assured of consideration.

ADDRESSES: Direct all written comments to Andres Garcia, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or by email to *pra.comments@irs.gov.* Include ''OMB Number 1545–1641—Mark to Market Election for Commodities Dealers and Securities and Commodities Traders'' in the subject line of the message.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of this collection should be directed to Martha R. Brinson, at (202) 317–5753, or at Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or through the internet at *Martha.R.Brinson@irs.gov.*

SUPPLEMENTARY INFORMATION:

Title: Mark to Market Election for Commodities Dealers and Securities and Commodities Traders.

OMB Number: 1545–1641.

Revenue Procedure Number: 99–17 (modified by Revenue Procedure 99–49).

Abstract: The revenue procedure prescribes the time and manner for dealers in commodities and traders in securities or commodities to elect to use the mark-to-market method of accounting under Sec. 475(e) or (f) of the Internal Revenue Code. The collections of information of this revenue procedure are required by the IRS in order to facilitate monitoring taxpayers changing accounting methods resulting from making the elections under Sec. 475(e) or (f).

Current Actions: There are no changes being made to the Rev. Proc. at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 1,000.

Estimated Time per Respondent: 30 mins.

Estimated Total Annual Burden Hours: 500.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Revenue Procedure 2003–33

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Internal Revenue Service (IRS), as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on information collections, as required by the Paperwork Reduction Act of 1995. The IRS is soliciting comments concerning, Section 9100 Relief for 338 Elections.

DATES: Written comments should be received on or before March 18, 2025 to be assured of consideration.

ADDRESSES: Direct all written comments to Andres Garcia, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or by email to *pra.comments@irs.gov.* Include ''OMB Number 1545–1820—Section 9100 Relief for 338 Elections'' in the subject line of the message.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of this collection should be directed to Martha R. SUPPLEMENTARY INFORMATION:

Title: Section 9100 Relief for 338 Elections.

OMB Number: 1545–1820.

Revenue Procedure Number: 2003–33.

Abstract: Revenue Procedure 2003–33 provides qualifying taxpayers with an extension of time pursuant to § 301.9100–3 of the Procedure and Administration Regulations to file an election described in § 338(a) or § 338(h)(10) of the Internal Revenue Code to treat the purchase of the stock of a corporation as an asset acquisition.

Current Actions: There are no changes being made to the Rev. Proc. at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations, and individuals or households.

Estimated Number of Responses: 60.

Estimated Time per Respondent: 5 hours.

Estimated Total Annual Burden Hours: 300.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. Comments will be of public record. Comments are invited on: (a) whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information has practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: January 10, 2025.

Martha R. Brinson,

Tax Analyst.

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

Agency Information Collection Activities; Submission for OMB Review; Comment

Request; Multiple Internal Revenue Service (IRS) Information Collection Requests

AGENCY: Departmental Offices, U.S. Department of the Treasury.

ACTION: Notice.

SUMMARY: The Department of the Treasury will submit the following information collection requests to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. The public is invited to submit comments on these requests.

DATES: Comments should be received on or before February 18, 2025 to be assured of consideration.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Copies of the submissions may be obtained from Melody Braswell by emailing *PRA@treasury.gov,* calling (202) 622–1035, or viewing the entire information collection request at *www.reginfo.gov.*

SUPPLEMENTARY INFORMATION:

Internal Revenue Service (IRS)

1. Title: Property Qualifying for the Energy Credit under Section 48 (Specifically, Performance & Quality for Small Wind Energy Property).

OMB Number: 1545–2259.

Abstract: Section 48(a)(3)(D) of the Internal Revenue Code allows a credit for energy property which meets, among other requirements, the performance and quality standards (if any) which have been prescribed by the Secretary by regulations (after consultation with the Secretary of Energy) and are in effect at the time of the acquisition of the property. Energy property includes small wind energy property. This notice provides the performance and quality standards that small wind energy property must meet to qualify for the energy credit under section 48.

Current Actions: There are no changes being made to the notice at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or households, business or other for-profit organizations, and not-for-profit institutions.

Estimated Number of Respondents: 160.

Estimated Time per Response: 2 hours, 30 minutes.

Estimated Total Annual Burden Hours: 400.

2. Title: Waiver of 60-Day Rollover Requirement.

OMB Number: 1545–2269.

Revenue Procedure: 2020–46.

Abstract: Revenue Procedure 2020–46 modifies and updates Rev. Proc. 2016–47, 2016–37 I.R.B. 346. Section 3.02(2) of Rev. Proc. 2016–47 provides a list of permissible reasons for self-certification of eligibility for a waiver of the 60 day rollover requirement, and, in response to requests from stakeholders, this revenue procedure modifies that list by adding a new reason: a distribution was made to a state unclaimed property fund. As under Rev. Proc. 2016–47, a self-certification relates only to the reasons for missing the 60-day deadline, not to whether a distribution is otherwise eligible to be rolled over. An appendix contains a model letter that may be used for self-certification.

Upon receipt of a self-certification, a plan administrator or IRA trustee may accept the contribution and treat it as having satisfied the requirements for a waiver of the 60-day requirement. Currently, the only way for a taxpayer to obtain a waiver of the 60 day requirement with respect to an amount distributed to a state unclaimed property fund is to apply to the Internal Revenue Service (IRS) for a favorable ruling, which is issued by the Tax Exempt and Government Entities Division (TE/GE). The user fee for a ruling is $10,000. The program outlined in this revenue procedure permits taxpayers to receive the benefits of a waiver without paying a user fee.

Current Actions: There is no change to this existing revenue procedure.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or Households.

Estimated Number of Respondents: 160.

Estimated Time per Response: 3 hours.

Estimated Total Annual Burden Hours: 480.

Authority: 44 U.S.C. 3501 *et seq.*

Melody Braswell,

Treasury PRA Clearance Officer.

BILLING CODE 4830–01–P

UNITED STATES INSTITUTE OF PEACE

Notice Regarding Board of Directors Meetings

AGENCY: United States Institute of Peace (USIP) and Endowment of the United States Institute of Peace.

ACTION: Announcement of meeting.

SUMMARY: USIP announces the next meeting of the Board of Directors.

DATES: Friday, January 24, 2025 (9 a.m.).

The next meeting of the Board of Directors will be held April 25, 2025.

ADDRESSES: 2301 Constitution Avenue NW, Washington, DC 20037.

FOR FURTHER INFORMATION CONTACT: Anna Dean, 202–429–7848, *adean@usip.org.*

SUPPLEMENTARY INFORMATION: Open Session—Portions may be closed pursuant to subsection (c) of section 552b of title 5, United States Code, as provided in subsection 1706(h)(3) of the United States Institute of Peace Act, Public Law 98–525.

Authority: 22 U.S.C. 4605(h)(3).

Dated: January 13, 2025.

Rebecca Fernandes,

Director of Accounting.

BILLING CODE 2810–03–P

DEPARTMENT OF VETERANS AFFAIRS

Advisory Committee on United States Outlying Areas and Freely Associated States, Notice of Meeting

The Department of Veterans Affairs (VA) gives notice under the Federal Advisory Committee Act, 5 U.S.C. ch. 10., that the Advisory Committee on United States Outlying Areas and Freely Associated States will hold a virtual meeting. The meeting will begin and end as follows:

Date	Time	Location	Open session
February 11, 2025	6 p.m.–7 p.m. eastern standard time.	Virtual via Microsoft Teams; see meeting link below.	Yes.

The meeting is open to the public and will be available virtually via Microsoft Teams.

The purpose of the Committee is to advise the Secretary of Veterans Affairs on covered Veterans. The term ''covered Veteran'' is defined as a Veteran residing in American Samoa, Guam, Puerto Rico, the Commonwealth of the Northern Mariana Islands, the Virgin Islands of the United States, the Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau. The Committee advises on improving VA programs and services to serve covered Veterans better.

The meeting agenda will include the Committee's review and a vote to submit its final draft report, with the Committee's recommendations, to the Secretary of Veterans Affairs. Limited time will also be allocated to receive comments from the public.

Public members wishing to provide comments or join the meeting, please use the following Microsoft Teams link: *https://teams.microsoft.com/l/meetup-join/19%3ameeting_OTdlNGUzYTAtYzI1Mi00Nzk5LWJlZDctODRmODA0NjMyZWE2%40thread.v2/0?context=%7b%22Tid%22%3a%22e95f1b23-abaf-45ee-821d-b7ab251ab3bf%22%2c%22Oid%22%3a%2258df1cb4-ec74-4431-9191-301a3dd59ff8%22%7d.*

Microsoft Teams:

Meeting ID: 214 928 356 173.

Passcode: me2Sz2Mn.

Dial in by phone:

+1 872–701–0185, 789755609# United States, Chicago.

Phone conference ID: 789 755 609#.

The Committee will accept written comments from interested parties on items outlined in the meeting agenda or other issues related to covered Veterans. Interested parties may submit written comments to Mr. Bernard Johnson, Designated Federal Officer, via email at *bernard.johnson2@va.gov* or Mr. Ferdinand Torres-Leon, Alternate Designated Federal Officer, at *Ferdinand.Torres-leon@va.gov* no later than February 4, 2025. Any member of the public seeking additional information should contact Mr. Johnson at the email address noted above.

Dated: January 13, 2025.

Jelessa M. Burney,

Federal Advisory Committee Management Officer.

[FR Doc. 2025–01088 Filed 1–16–25; 8:45 am]

BILLING CODE 8320–01–P

FEDERAL REGISTER

Vol. 90 Friday,
No. 11 January 17, 2025

Part II

Department of Commerce

National Oceanic and Atmospheric Administration

15 CFR Part 922
Regulations for the Florida Keys National Marine Sanctuary Management Review: Blueprint for Restoration; Final Rule

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

15 CFR Part 922

[Docket No. 241204–0311]

RIN 0648–BJ14

Regulations for the Florida Keys National Marine Sanctuary Management Review: Blueprint for Restoration

AGENCY: Office of National Marine Sanctuaries (ONMS), National Ocean Service (NOS), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce (DOC).

ACTION: Final rule.

SUMMARY: As part of its Restoration Blueprint initiative, the National Oceanic and Atmospheric Administration (NOAA) is issuing final regulations for the Florida Keys National Marine Sanctuary (FKNMS or sanctuary) that will expand the boundary of the sanctuary, update sanctuary-wide regulations, update the individual marine zones and their associated regulations, and revise the sanctuary's terms of designation. NOAA is also finalizing a revised management plan and final environmental impact statement (EIS) as part of this action. The final rule describes how NOAA will work to improve the condition of resources in FKNMS through a series of regulatory measures designed to reduce threats and, where appropriate, restore coral reefs, seagrasses, and other important habitats. The intended effect of this final rule is to manage and protect the living and heritage resources of FKNMS for the benefit of the public.

DATES: *Effective Date:* Pursuant to section 304(b) of the National Marine Sanctuaries Act (NMSA) (16 U.S.C. 1434(b)), the designation and regulations shall take effect and become final after the close of a review period of forty-five days of continuous session of Congress, beginning on the date on which this Federal rulemaking is published, which is January 17, 2025; however, if the Governor of the State of Florida certifies to the Secretary of Commerce during that same review period that any such regulation is unacceptable, the regulation(s) will not take effect in State waters of the sanctuary. The public can track days of the congressional session at the following website: *https://www.congress.gov/days-in-session.* NOAA will publish an announcement of the effective date of the final regulations in the **Federal Register**.

Incorporation by reference: The incorporation by reference of certain material listed in the rule is approved by the Director of the Federal Register as of after the close of a review period of forty-five days of continuous session of Congress, beginning on the date on which this Federal rulemaking is published, which is January 17, 2025. NOAA will publish an announcement of the IBR approval date in the **Federal Register**.

Delay of effective date: NOAA is delaying the effective date of §§ 922.163(a)(5)(x) and 922.164(e)(3), (f)(2), (g)(1), and (h)(1) until January 19, 2027.

ADDRESSES: Copies of the final EIS and management plan described in this rule, the Record of Decision (ROD), and additional background materials are available at *https://floridakeys.noaa.gov/blueprint/.*

FOR FURTHER INFORMATION CONTACT: Beth Dieveney, Policy Analyst, FKNMS, 33 East Quay Rd., Key West, FL 33040, 305–797–6818 phone, or by email at *beth.dieveney@noaa.gov.*

SUPPLEMENTARY INFORMATION:

I. Introduction

1. Florida Keys National Marine Sanctuary

Designated in 1990, FKNMS was the ninth national marine sanctuary in the National Marine Sanctuary System. As one of the largest marine protected areas in the United States, FKNMS encompasses approximately 3,800 square miles of coastal and ocean waters from the estuarine waters of South Florida along the Florida Keys archipelago to the Dry Tortugas, encompassing more than 1,700 islands. FKNMS provides habitats for more than 6,000 species of fishes, invertebrates, and plants, in addition to uniquely expansive and diverse seagrass and coral reef communities. Within the boundaries of the sanctuary lie spectacular, unique, and nationally significant marine resources including North America's only coral barrier reef, extensive seagrass beds, mangrove-fringed islands, and more than 6,000 species of marine life. The sanctuary also protects pieces of our Nation's history such as shipwrecks and other archeological resources. This final rule follows NOAA's publication of a 2022 proposed rule and a 2019 draft EIS, which included a range of alternatives.

The health of the marine environment around the Florida Keys and the health of the Florida Keys community in Monroe County, Florida, are inextricably linked. A declining marine environment puts the economy and jobs at risk. Relying on the existence and maintenance of a healthy marine environment, the Florida Keys support more than 82,874 residents and approximately 5.13 million visitors annually (Rockport Analytics, 2019). Tourism value to the Florida Keys economy was estimated at $2.4 billion (in 2018, the most recent year data were available), supporting 43% of jobs and employment in Monroe County and sales tax paid by visitors to Monroe County made up roughly 59% of state and local tax receipts attributed to tourism (Rockport Analytics, 2019).

2. Need for the Rulemaking

NOAA's management of FKNMS is directed by the purposes and policies of the NMSA and the Florida Keys National Marine Sanctuary and Protection Act (FKNMSPA, Public Law 101–605). The NMSA requires the Secretary of Commerce (Secretary) to evaluate the substantive progress toward implementing the management plan and goals for the sanctuary, especially the effectiveness of site-specific management techniques and strategies, and . . . revise the management plan and regulations as necessary to fulfill the purposes and policies of this chapter. (16 U.S.C. 1434(e)). Those purposes and policies include:

- Provide authority for comprehensive and coordinated conservation and management of these marine areas, and activities affecting them, in a manner which complements existing regulatory authorities (16 U.S.C. 1431(b)(2));
- Maintain the natural biological communities in the national marine sanctuaries, and to protect, and, where appropriate, restore and enhance natural habitats, populations, and ecological processes (*id.* 1431(b)(3));
- Facilitate to the extent compatible with the primary objective of resource protection, all public and private uses of the resources of these marine areas not prohibited pursuant to other authorities (*id.* (b)(6));
- Develop and implement coordinated plans for the protection and management of these areas with appropriate Federal agencies, State and local governments . . . and other public and private interests concerned with the continuing health and resilience of these marine areas (*id.* 1431(b)(7)); and
- Create models of, and incentives for, ways to conserve and manage these areas, including the application of innovative management techniques (*id.* 1431(b)(8)).

The FKNMSPA directs NOAA to protect and preserve living and other resources of the Florida Keys marine environment, provide education on and interpretation of sanctuary resources to the public, and manage human uses of the sanctuary consistent with the FKNMSPA (Sec. 3, Pub. L. 101–605, 104 Stat. 3090).

In order to ensure long-term resource viability and ecosystem function, NOAA is updating the FKNMS management framework to address current and future threats to sanctuary resources, such as diminished water quality originating from both within and outside the sanctuary, significant decrease in coral cover, and habitat degradation from vessel impacts including anchor damage, propeller-scarring, and groundings. Each of these threats has major implications for FKNMS.

In addition, NOAA is updating FKNMS management efforts to respond to the 2011 FKNMS Condition Report,[1] which concluded that resources in the Florida Keys were in fair to fair/poor condition and generally either stable or in decline. Since the release of the 2011 condition report, sanctuary resources have been further degraded by Hurricane Irma (2017), a serious and widespread coral disease outbreak, a seagrass die-off, and warming ocean temperatures as evident during the summer 2023 marine heat wave, among other threats.

Furthermore, during the comment phase on the draft documents for this action, the public emphasized the need for a more ecosystem-based management approach to better protect the region's marine resources. To that end, there was strong public support for sanctuary expansion and updated marine zones—actions that are consistent with the purposes and policies of the NMSA and the FKNMSPA. As a result, this final rule extends national marine sanctuary management actions to areas that have demonstrated biological and ecological connectivity with existing sanctuary resources and includes adaptive management strategies to better respond to changing conditions, use patterns, and emerging threats to resources.

In addition to these regulatory updates, NOAA is enhancing research, restoration, and education efforts to conserve and restore these nationally significant sanctuary resources. These efforts, which are described in the final management plan, are critical for assessing changes occurring in the environment, fostering a stewardship ethic, and developing a better understanding of the ecosystem services that sanctuary resources provide for communities throughout the Florida Keys.

In a parallel process, which involved a separate regulatory review aimed at creating consistency and streamlining national marine sanctuary regulations, on January 6, 2023, NOAA updated some of the regulations found at 15 CFR part 922 (88 FR 953 [2]). Part 922 includes general regulations applicable to all national marine sanctuaries (subparts A through E) and site-specific regulations that relate to each individual sanctuary (subparts F through T). All regulatory references to 15 CFR part 922 in this final rule conform with the 88 FR 953 final rule.

3. Incorporation by Reference

The definitions in § 922.162 for ''marine life species'' and ''tropical fish'' incorporate by reference the same definitions under State of Florida regulations for Marine Life found at Florida Administrative Code (F.A.C.) 68B–42.001 and 68B–42.002. Specifically, under these Florida regulations, the definitions of ''marine life species'' and ''tropical fish'' in 68B–42.002 incorporate lists of species designated as ''restricted species'' found at 68B–42.001. Under Florida regulations, a fishing permit is required to target any species that falls under the definition of ''marine life species'' and ''tropical fish.'' Similarly, sanctuary regulations at § 922.163(a)(12) require, among other things, that marine life species only be harvested from the sanctuary if authorized by a state permit or exemption. Sanctuary regulations at § 922.164(b)(2) also prohibit the collection of tropical fish from within two management areas of the sanctuary that were formerly the Key Largo and Looe Key national marine sanctuaries. Florida regulations are readily accessible at *https://www.flrules.org/*. These Florida regulations are currently referenced in the existing sanctuary regulations; at this time NOAA is updating the language in order to comply with Office of **Federal Register** regulations for incorporation by reference found at 1 CFR part 51.

II. The Restoration Blueprint Process

1. Notice of Intent & Scoping

On April 19, 2012, NOAA and the U.S. Department of the Interior's (DOI) U.S. Fish and Wildlife Service (USFWS) published a notice of intent in the **Federal Register**. The notice informed the public of the proposal to develop a draft environmental impact statement (draft EIS), announced five public scoping meetings, and solicited public comment. NOAA and USFWS held public scoping meetings throughout the Florida Keys, in Ft. Myers and Miami and accepted written comments from April 19, 2012, to June 29, 2012. The website provides a scoping comments summary document [3] and original comments can be found at the regulations.gov docket for this notice of intent: *NOAA–NOS–2012–0061.*

In addition, as part of formal scoping, the FKNMS Sanctuary Advisory Council played a significant role throughout this review and the alternatives development process. Informed by their 2012 Regulatory and Marine Zone Alternatives Development Work Plan [4] and input from four community working groups,[5] the Sanctuary Advisory Council provided over 200 recommendations for the sanctuary superintendent as well as the USFWS Florida Keys National Wildlife Refuges Complex manager to consider when developing alternatives related to regulations and marine zones within the sanctuary. The website *https://floridakeys.noaa.gov/review/workgroups.html* provides more information and summary documents of the Sanctuary Advisory Council and working groups.

2. Environmental Impact Statement (EIS)

Following the NOI and scoping, in accordance with the National Environmental Policy Act (NEPA, 42 U.S.C. 4321 *et seq.*) and the NMSA (16 U.S.C. 1434), NOAA prepared and released a draft EIS and updated draft management plan on (84 FR 45728, August 30, 2019). NOAA accepted public comments on the draft EIS from August 2019 to January 2020 and hosted six public hearings and two Sanctuary Advisory Council meetings to hear public comment. NOAA received comment from 1,213 distinct commenters during the public comment period and several letters and petitions with multiple signatories for a total of well over 35,000 comments.

[1] *https://sanctuaries.noaa.gov/science/condition/fknms/welcome.html.*

[2] *https://www.federalregister.gov/documents/2023/01/06/2022-28225/national-marine-sanctuary-regulations.*

[3] *https://nmsfloridakeys.blob.core.windows.net/floridakeys-prod/media/archive/review/documents/scopingcommentssummary.pdf.*

[4] *https://nmsfloridakeys.blob.core.windows.net/floridakeys-prod/media/archive/sac/othermaterials/121211draftworkplan.pdf.*

[5] These working groups included 35 additional community member participants, many of whom represented local, small Florida Keys businesses. For details see: *https://floridakeys.noaa.gov/review/workgroups.html.*

The draft EIS, also referred to as the Florida Keys National Marine Sanctuary Restoration Blueprint, evaluated the environmental consequences of four specific alternatives and provided an in-depth resource assessment. The alternatives in the draft EIS considered sanctuary boundary expansion to protect ecologically connected habitats; proposed new or modified sanctuary-wide regulations; proposed to establish new and modify existing marine zones to protect additional sensitive and threatened coral reef, seagrass, hardbottom habitats and species dependent on these habitats; and included an updated draft management plan. The draft EIS alternatives aimed to address threats and protect sanctuary resources by separating conflicting uses and managing high intensity and concentrated use activities while still allowing sustainable uses compatible with FKNMS natural resource protection goals.

A final EIS was prepared following the release of the 2022 Notice of Proposed Rulemaking (NOPR) described below. The final EIS includes the four alternatives evaluated in the draft EIS, the 2022 NOPR proposal, and a preferred alternative. The preferred alternative in the final EIS matches the regulations in this rule. The final EIS was released on December 13, 2024 and is available at *https://floridakeys.noaa.gov/blueprint/.*

All alternatives analyzed in the final EIS are consistent with NOAA's mission to conserve and manage coastal and marine ecosystems and resources, would further the FKNMS mission to ''protect the marine resources of the Florida Keys while facilitating human uses that are consistent with the primary objective of sanctuary resource protection,'' would provide for more comprehensive management and protection of important and vulnerable ecological and cultural resources in the Florida Keys, and would provide important opportunities for research and recovery of resources from observed impacts. No significant adverse impacts to the human environment were identified under any alternative considered in the final EIS.

3. The Notice of Proposed Rulemaking

The proposed rule combined individual aspects of each of the four alternatives presented in the draft EIS, was directly informed by the thousands of public and agency comments received on the draft EIS, and considered updated environmental and socioeconomic information.

On July 18, 2022, NOAA published a NOPR modifying the FKNMS boundary, sanctuary-wide regulations, and marine zones and associated regulations (87 FR 42800). NOAA hosted five public comment meetings, throughout the Florida Keys and virtually, and accepted written comments from July 18, 2022, to October 26, 2022. NOAA accepted comments in the form of letters and written comments through electronic submissions to *http://regulations.gov,* letters submitted by mail, and both in-person and virtual public hearings. NOAA received 426 unique comments during the public comment period on the NOPR. All public comments on the proposed rule are available at *https://www.regulations.gov/docket/NOAA-NOS-2019-0094.* NOAA's response to the public comments is set forth in Section V of this document.

In addition to public comment, NOAA consulted with and received technical assistance and comment from several Federal agencies, fishery management councils (FMCs), and State agencies. A brief summary of engagement follows.

a. U.S. Fish & Wildlife Service Consultation

USFWS has been engaged in the Restoration Blueprint process since NOAA and USFWS jointly published a **Federal Register** notice of intent on April 19, 2012, to notify the public of the agencies' intent to prepare a draft EIS and to initiate the scoping process. 77 FR 23425 (April 19, 2012). USFWS participated in the public scoping events and relevant community working groups and provided subject matter expertise throughout development of the draft EIS, the proposed rule and this final rule. In addition, NOAA initiated informal Endangered Species Act (ESA) consultation with USFWS Ecological Services in August 2019 and received comment on June 22, 2020. In that comment letter, USFWS Ecological Services concurred with NOAA's determination that the proposed action is unlikely to adversely affect listed species or adversely modify critical habitat and noted that coordination with the Florida Keys National Wildlife Refuges would be ongoing in the development of the proposed and final rule. NOAA provided USFWS the proposed rule on July 18, 2022 and on February 21, 2024, a description of the minor changes anticipated to that rule following public comment. NOAA concluded that these updates to the regulations since publication of the draft EIS do not change NOAA's determination, and USFWS concurred on February 23, 2024.

b. Regional Fishery Management Council Consultation

Pursuant to NMSA Section 304(a)(5), NOAA sent letters on August 22, 2019, to initiate consultation with the Gulf of Mexico Fishery Management Council (GMFMC) and the South Atlantic Fishery Management Council (SAFMC) on potential regulatory changes that affect Federal fisheries. NOAA also provided multiple updates at the respective Council meetings and various advisory and technical committees over the course of the development of the draft EIS and throughout the public comment period following its release. Both the GMFMC and SAFMC submitted comment letters on the draft EIS on February 21, 2020 and March 13, 2020 respectively.

NOAA continued to engage with and provide briefings for both FMCs and their individual advisory panels during the proposed rule public comment period. Both the GMFMC and SAFMC submitted comment letters on the proposed rule on February 15 and February 22, 2023, respectively, which are responded to below.

c. U.S. Department of Defense Coordination

The Department of the Navy provided a summary of their operational environment and activities at Naval Air Station (NAS) Key West during development of the 2019 draft EIS, in a comment letter on March 2, 2020, and during development of the proposed and final rule. This information was used to inform the updated list of military activities that are exempted from NOAA regulations under 922.163(d) (see Appendix F of the final EIS).

d. State of Florida Coordination

NOAA has worked closely with several Florida State agencies throughout the public scoping process, and development of the draft and final EISs and the proposed and final rule. Approximately 60 percent of the sanctuary is within Florida State waters, and the sanctuary is cooperatively managed with the State of Florida, with the Department of Environmental Protection (DEP) and Florida Fish and Wildlife Conservation Commission (FWC) as lead agencies. The Florida Department of State through the State Historic Preservation Office (SHPO) is also a key resource management partner for sanctuary historical resources. NOAA coordinates with other State agencies as needed on topic-specific issues. Several co-trustee agreements outline a framework for this cooperative

management relationship. Finally, NOAA has evaluated this final rule to ensure compliance with the requirements of Section 307 of the Coastal Zone Management Act specifically in relation to the enforceable policies of Florida's Coastal Zone Management Program. NOAA submitted its consistency determination to the State on May 21, 2024.

Florida Department of Environmental Protection

NOAA coordinated extensively with Florida DEP throughout the process. DEP was represented at most Sanctuary Advisory Council community working group meetings where they provided management perspective and resource status and use data and has an official seat on the Sanctuary Advisory Council. DEP submitted comment letters to NOAA on the 2019 draft EIS on May 1, 2020, and on the proposed rule on March 31, 2023.

Florida Fish and Wildlife Conservation Commission

Florida FWC staff has coordinated directly with sanctuary staff, notably with Florida Fish and Wildlife Research Institute (FWRI) experts assigned to provide scientific and technical support for each of the Sanctuary Advisory Council community working groups. Florida FWC staff also served as a co-chair to facilitate one of the working groups, and has an official seat on the Sanctuary Advisory Council. NOAA also provided multiple updates at FWC meetings over the course of the development of the 2019 draft EIS and throughout the public comment period. In addition, FWRI research findings directly informed various regulatory and zoning aspects of this final rule. FWC submitted a comment letter to NOAA on the 2019 draft EIS on April 29, 2020, and for the proposed rule on March 30, 2023.

Florida State Historic Preservation Office

The Florida SHPO and Florida Division of Historical Resources staff have coordinated with FKNMS staff to review and develop an updated draft *Programmatic Agreement under Section 106 of the National Historic Preservation Act regarding Florida Keys National Marine Sanctuary Operations, Management, and Permitting* (Programmatic Agreement), which was included in the draft EIS (Appendix C) for public comment. In addition, the SHPO submitted a comment letter to NOAA on the 2019 draft EIS on January 31, 2020, that noted the draft EIS Preferred Alternative (Alternative 3) would sufficiently address NOAA's National Historic Preservation Act Section 106 (54 U.S.C. 306108) responsibilities through implementation of the new management plan and Section 106 Programmatic Agreement. On October 13, 2022, NOAA sent a follow-up letter to the SHPO notifying the SHPO of the publication of the NOPR and an updated management plan and providing a finding of no adverse effects to historic properties. The SHPO did not offer further comment.

III. Changes From Proposed to Final Rule

1. Sanctuary Boundary

In this rule, NOAA is modifying the sanctuary boundary to expand the sanctuary's area from the existing 3,800 square miles to 4,539 square miles but is not including the proposed expansion area in Pulley Ridge. The final sanctuary boundary is expanded to include the Area To Be Avoided (ATBA) regulatory zone and the Tortugas Region, as was proposed in the 2022 NOPR. Concurrent with considering boundary expansion to include Pulley Ridge, as noted in the proposed rule, the United States proposed that the International Maritime Organization (IMO) designate a No Anchoring Area in the southern portion of Pulley Ridge, which was approved and implemented starting June 1, 2023 (IMO SN.1/Circ.342 [6]). Therefore, given the IMO action to protect these habitats from anchor damage from all vessels and the additional protections in place through GMFMC Habitat Area of Particular Concern (HAPC) regulations for fishing vessels, NOAA has determined that sanctuary expansion to include Pulley Ridge is not necessary at this time, and it is not included in this final rule.

2. Sanctuary-Wide Regulations

a. Definitions

NOAA amends the definitions for ''anchoring'' and ''no anchoring'' from the definition in the proposed rule to include an exception for allowing the use of a mooring buoy. Commenters raised concerns that the proposed definitions would prohibit use of a mooring buoy since a mooring buoy is technically anchored to the seabed. NOAA amends the definition for ''at risk of becoming derelict'' and ''deserting'' to align with the State of Florida definition, which was updated since release of the 2022 NOPR.

NOAA amends the definition for ''traditional fishing'' to set the baseline of activities considered traditional to those fishing activities customarily conducted in the sanctuary as of the effective date of this rule. The NOPR had set the baseline of traditional fishing activities as those described in the 1996 Florida Keys National Marine Sanctuary FMP/EIS (Vol. II), consistent with the existing regulation. This change is made based on comments received from the FWC, SAFMC, and GMFMC. This change is intended to define ''traditional fishing'' as those fishing activities customarily conducted in the sanctuary, as managed by the FWC in State waters and by NMFS in the EEZ, as of the effective date of this rule. Fishing regulations change, and by defining traditional fishing as those activities customarily conducted as of the effective date of this rule, NOAA does not intend to exclude fishing activities subject to routine changes to state and federal fishery management regulations. Routine changes include changes to size limits, bag limits, vessel limits, trip limits, possession limits, retention limits, quotas, harvest, catch limits, or catch targets and routine season modifications including in-season adjustments or closures. On the other hand, substantial changes to state and federal fishery management regulations for a fishing activity would make that activity no longer considered traditional fishing and the changes to that fishing activity would not be exempted from the corresponding sanctuary prohibition. Substantial changes include new or modified regulations that allow use of new gear types or methods or that modify allowable or authorized gear types or methods. Any future update to the traditional fishing definition would require a separate rulemaking in order to consider public comment and to conduct an environmental analysis under NEPA of the potential impacts of new or innovative gear types or fishing activities on sanctuary resources. NOAA would collaborate closely with, and rely on the expertise of, fishery managers for the FWC, FMCs, and NMFS when considering any updates to the definition of traditional fishing. Appendix G of the 2024 final EIS provides additional description of the fishing activities managed by the FWC in State waters and by NMFS in the EEZ that are intended to be considered traditional fishing.

Between the draft and final rule, NOAA has added a definition for ''derelict vessels'' and amends definitions of ''at-risk of becoming

[6] See also *https://www.imo.org/en/MediaCentre/MeetingSummaries/Pages/NCSR-9th-session.aspx.*

derelict'' and ''deserting'' to align more clearly with the State of Florida's program for addressing derelict vessels and vessels at-risk of becoming derelict. The timelines for 24-hour notification and removal of such vessels within 72 hours of notification have been moved from the definition of ''deserting'' to the prohibition at 922.163(a)(5)(viii) to reduce confusion and redundancy and to make it clearer that these timelines also apply to derelict vessels and vessels at risk of becoming derelict, regardless of whether the vessel is occupied.

b. Discharge and Deposit Regulation Exception

Consistent with the proposed rule, NOAA updates the existing discharge and deposit regulation to explicitly prohibit the discharge or deposit of any material or other matter from a cruise ship, except cooling water, and to simplify and clarify terminology by removing the exception for ''exhaust gas'' and ''water generated by routine vessel operations.'' In response to public comment on the proposed rule, the final rule further clarifies the exception for the discharge or deposit of deck washdown by adding the term ''runoff'' to the list of exceptions, thereby allowing weather/rain runoff to be discharged or deposited into the sanctuary from a vessel other than a cruise ship.

c. Large Vessel Mooring Buoys

As explained above in the **DATES** section of this document, NOAA is delaying the effective date for the large vessel mooring buoy requirement (§ 922.163(a)(5)(x)) for two years beyond the effective date of this final rule. The purpose of this delay is to provide NOAA with adequate time to finalize a mooring buoy plan, including numbers and locations of mooring buoys; to secure materials; and to install new mooring buoys. Until this provision is effective, large vessels may continue to use regular mooring buoys.

d. Temporary Regulation for Emergency and Adaptive Management

With regard to the issuance of temporary emergency regulations, NOAA's final rule is the same as the proposed rule with one minor technical correction to 922.165(c)(2) which provides an opportunity for public comment after publication of a temporary emergency rule. As required under section 553 of the APA, NOAA will collect public comment before issuing an emergency rule and will delay the effective date by 30 days, unless NOAA finds good cause that doing so is impracticable, unnecessary, or contrary to the public interest. 5 U.S.C. 553(b)(B), (d)(3). The proposed rule provided that the Director shall receive public comments on the necessity for, and extent of, the temporary regulation for a period of 15 days after the effective date of notification. This final rule changes the word ''shall'' to ''may.'' NOAA may choose to collect public comment for 15 days after issuing an emergency temporary rule when, in NOAA's discretion, it determines that post-decision comment would be necessary and in the public interest, such as to inform potential modifications to the emergency or temporary response action and/or its duration. While NOAA has every intention of accepting public comment after publication of a temporary emergency rule whenever NOAA is unable to collect pre-publication notice and comment, there may be cases where public comment would not inform a further agency action and post-publication public comment would serve no agency or public interest.

e. Authorizations of Sunken Military Craft Act Permits

Sunken military craft in FKNMS are administered by the respective Secretary concerned pursuant to the Sunken Military Craft Act. NOAA will develop an MOA with the appropriate agencies regarding collaboration on implementing the Sunken Military Craft Act. The ONMS Director will request approval from the respective Secretary concerned for any terms and conditions of ONMS authorizations that may involve sunken military craft in FKNMS.

3. Marine Zone Boundaries and Associated Marine Zone Regulations

a. Conservation Areas

This final rule adopts the same boundaries and associated regulations for Conservation Areas as the proposed rule. In addition, as explained above in the **DATES** section of this document, NOAA is delaying the effective date for the prohibition on anchoring in CAs for two years beyond the effective date of this final rule. The purpose of this delay is to provide NOAA with adequate time to finalize a mooring buoy plan including numbers and locations of mooring buoys, secure materials, and install new mooring buoys. All other CA regulations will become effective as described in the **DATES** section above (*i.e.,* after the close of a review period of forty-five days of continuous session of Congress).

b. Sanctuary Preservation Areas (SPAs)

In this final rule, NOAA modifies the size of two SPAs presented in the proposed rule. Turtle Rocks is modified slightly from 2.3 square miles in the proposed rule to 2.5 square miles in this final rule in order to align this SPA with the existing John Pennekamp Coral Reef State Park marine zone. Sombrero Key is modified from 0.52 square miles in the proposed rule to 0.33 square miles in this final rule. This change is made to focus SPA protection on the area with the greatest amount of coral and to exclude areas of primarily sandy bottom.

In addition, as explained above in the **DATES** section of this document, NOAA is delaying the effective date for the prohibition on anchoring on SPAs for two years beyond the effective date of this final rule. The purpose of this delay is to provide NOAA with adequate time to finalize a mooring buoy plan, including numbers and locations of mooring buoys, to secure materials, and to install new mooring buoys. All other SPA regulations will become effective as of the effectiveness date of this final rule (*i.e.,* after the close of a review period of forty-five days of continuous session of Congress), including eliminating the exception for catch and release fishing by trolling in Conch Reef, Alligator Reef, Sombrero Reef, and Sand Key SPAs, and stopping the practice of issuing permits for baitfishing in SPAs.

c. Restoration Areas

The final rule includes two Nursery Restoration Areas in addition to the nine other restoration areas that were included in the proposed rule. These two areas were established and permitted as coral nursery sites after the proposed rule was released for comment. NOAA received comments requesting that these two nursery sites be included as Nursery Restoration Areas in this final rule. Both sites are in the Upper Keys region and are in Federal waters of the sanctuary. Key Largo Nursery Restoration Area is approximately 0.07 square miles (46.8 acres) and Islamorada Nursery Restoration Area is approximately 0.07 square miles (47.2 acres).

In addition, as explained above in the **DATES** section of this document, NOAA is delaying the effective date for the prohibition on anchoring in SPAs for two years beyond the effective date of this final rule. Habitat and Nursery Restoration Areas apply the same prohibitions as SPAs, so the prohibition on anchoring in Restoration Areas will also be delayed two years.

d. Wildlife Management Areas

NOAA's final rule amends 9 WMAs from what was included in the proposed rule and eliminates two proposed new WMAs that were included in the proposed rule. Details follow.

- *Crocodile Lake:* In response to a request from USFWS, this zone is expanded slightly to include a rookery island.
- *Barnes-Card Sound:* In response to a request from FWC, the regulations applied in this zone are modified to be idle speed no wake instead of no motor.
- *Eastern Lake Surprise:* In response to a request from USFWS, the no entry area in the proposed rule is expanded to include the entire shoreline.
- *Whitmore Bight:* In response to a request from the Florida DEP and public comment, the no motor zone is expanded to include a John Pennekamp Coral Reef State Park no motor zone.
- *Dove and Rodriguez Key:* In response to public comment, the northern boundary is adjusted slightly, opening more area for general use.
- *Tavernier Key:* In response to public comment, the boundary is adjusted slightly, opening more area for general use, and this final rule does not include a no anchor regulation specific to this zone.
- *Ashbey-Horseshoe Key:* This area is within an existing Lignumvitae Key Aquatic Preserve and Lignumvitae Key Botanical State Park no motor zone; therefore this rule does not include a new sanctuary marine zone at this site at this time.
- *Channel Key Banks:* In response to public comment and input from the FWC, this zone is modified slightly to better align with the bank habitat areas, to add a no entry area around Channel Key, and to open additional channels for normal operation.
- *Red Bay Banks:* In response to public comment and input from the FWC, this zone's boundary is modified slightly to better align with existing channels.
- *East Content Keys and Upper Harbor Key Flats:* In response to a request from the Florida DEP and FWC, this zone's southern boundary is expanded slightly to include additional islands.
- *Howe Key:* In response to input from the USFWS, Florida DEP, FWC and public comment, the regulation applied in this zone is changed from no entry (NOPR) to no motor (this final rule).
- *Archer Key:* Informed by public comment and requests from Florida DEP and FWC, this rule does not include a new marine zone at this site.

IV. Summary of all Final Regulations

Based on public comments received between July and October 2023, internal deliberations, interagency consultations, meetings with constituent groups, and evaluation of this input with the USFWS and the State of Florida, with this final rule, NOAA is implementing the following measures.

These sections are organized in the same way they were presented in the 2019 draft EIS and 2024 final EIS for the FKNMS Restoration Blueprint:

1. sanctuary boundary;
2. sanctuary-wide regulations;
3. marine zone boundaries within the sanctuary; and
4. marine zone regulations.

A final management plan is included in the final EIS and is available at the address and website listed in the **ADDRESSES** section of this rule.

1. Sanctuary Boundary

As noted above, pursuant to the procedures in FKNMSPA, Sec. 5(a) Pub. L. 101–605 and section 304(a) of the NMSA, 16 U.S.C. 1434(a),[7] NOAA is modifying the sanctuary boundary to expand the sanctuary's area from 3,800 square miles to 4,539 square miles. The final sanctuary boundary is expanded to include the ATBA regulatory zone and the Tortugas Region.

First, the boundary expansion to align with the ATBA will result in a consistent regulatory boundary, which is intended to provide clarity for mariners and additional ecosystem protections. The ATBA areas within the sanctuary were established through the FKNMSPA and prohibit operating any tank vessel or vessel over 50 meters length within specified areas to protect coral reef habitat from potential vessel impacts, including groundings. Second, the expansion in the Tortugas Region aligns with the existing particularly sensitive sea area (PSSA), established by the IMO in 2002. PSSAs are used to protect areas for special ecological, socioeconomic, or scientific reasons and areas that are vulnerable to damage by international maritime activities. This expansion provides additional protections for important ecological resources and the ecological connectivity in the region, particularly between Tortugas North and South Conservation Areas and Tortugas Bank. In addition, expansion in the Tortugas Region takes into account recently collected and compiled mapping coverage data and remotely operated vehicle imagery in the southern portion of the existing Tortugas South Ecological Reserve, which show unique and sensitive habitat features in this area.

2. Sanctuary-Wide Regulations

a. Live Rock Aquaculture

The final rule is the same as the proposed rule, which maintains the current exception for live rock aquaculture from sanctuary-wide regulatory prohibitions if authorized by a Florida Sovereignty Submerged Land Live Rock Aquaculture Lease issued by the Florida Department of Agricultural and Consumer Services in conjunction with U.S. Army Corps of Engineers via the Programmatic General Permit SAJ–99, or a NMFS Aquacultured Live Rock permit, which is issued under the Magnuson-Stevens Fishery Conservation and Management Act (MSA) in conjunction with the U.S. Army Corps of Engineers via the Programmatic General Permit SAJ–71.

b. Discharge and Deposit Regulation Exception

The final rule updates the existing discharge and deposit regulation to explicitly prohibit the discharge or deposit of any material or other matter from a cruise ship, except cooling water, and to simplify and clarify terminology by removing the exception for ''exhaust gas'' and ''water generated by routine vessel operations.'' In response to public comment, the final rule provides an exception from the prohibition for the discharge or deposit of deck runoff for discharges from all vessels except cruise ships, thereby allowing weather/rain runoff to be discharged or deposited into the sanctuary. Each of these provisions are explained in more detail below.

NOAA has a long history of regulating various discharges under the NMSA to ensure that the discharges do not degrade water quality within the sanctuary. These regulations are often more stringent than regulations promulgated under other State or Federal authorities, such as the Clean Water Act (CWA), to recognize that the unique resources of the sanctuary

[7] Section 5(d) of the FKNMSPA authorized NOAA to make minor modifications to the sanctuary boundary no later than the issuance of the draft EIS, which under section 7(a) was one of the documents required to be completed within 30 months of the passage of the Act. Section 5(a) of the FKNMSPA provides that FKNMS shall be managed and regulations enforced under all applicable provisions of such title III as if the Sanctuary had been designated under such title. NOAA published the draft EIS in 1995, and, in 1997 finalized the designation process by publishing the final EIS/management plan, regulations, and terms of designation. Accordingly, 5(d) no longer applies and, pursuant to NMSA section 304(a), NOAA follows the process required in section 304 of the NMSA to modify the terms of designation and sanctuary boundaries.

deserve additional protections. When the original FKNMS regulations were promulgated in 1997, NOAA established prohibitions against discharging most material into the sanctuary, with limited and specified exceptions for bait or chum, biodegradable effluent from approved marine sanitation devices, graywater and deck washdown during routine vessel operations, and vessel cooling water and engine exhaust. In sanctuary zones, such as Sanctuary Preservation Areas and Ecological Reserves, NOAA established more stringent regulations to only allow discharge of vessel cooling water and engine exhaust. The 1997 regulations also prohibited the discharge of material or other matter from outside the sanctuary that enters and injures a sanctuary resource. In 1999, the U.S. Environmental Protection Agency (EPA) established a No Discharge Zone under the CWA for vessel sewage in Key West, Florida, within State waters, in response to a petition from the State of Florida. The No Discharge Zone prohibited the discharge of untreated or treated vessel sewage, including from marine sanitation devices. Subsequently EPA expanded the No Discharge Zone to all State waters of the sanctuary (67 FR 35735 [8]; May 21, 2002). In 2010, NOAA removed the exception for discharges from marine sanitation devices in the entire sanctuary under the NMSA, thereby making all sanctuary waters a no discharge zone under the NMSA (*75 FR 72655* [9]; Nov. 26, 2010). Comments on NOAA's rulemaking at that time also supported banning harmful vessel graywater discharges, especially from large cruise ships and cargo vessels. While NOAA did not ban graywater discharges in 2010, NOAA responded by noting that additional water quality regulations may be considered in future FKNMS management plan reviews.

Under its NMSA authorities, NOAA now further restricts discharges from cruise ships while in the sanctuary. Specifically, the rule prohibits discharges or deposits of any material or other matter from a cruise ship except cooling water. This change results in prohibiting the discharges or deposits of graywater and deck washdown from cruise ships, which are currently exempt from the prohibitions. Cruise ships are among the largest vessels traversing the sanctuary and the source of a considerable volume of graywater discharges generated by carrying passengers (*e.g.,* showers, laundry, sinks, kitchens). In addition, certain routine maintenance activities may occur while a cruise ship is in port within the sanctuary, including deck washdown, which may affect water quality. These routine maintenance activities could occur outside of the sanctuary in other less environmentally sensitive ports. Scientific literature discusses the adverse effects of various cruise ship discharges on the marine environment, including brine from desalination equipment, ballast water, and spa/pool water, among others. NOAA believes that it is feasible for cruise ships to successfully avoid discharging or depositing in sanctuary waters because cruise ship operations in sanctuary waters are limited to entering and leaving the port of Key West. In short, NOAA is prohibiting all discharges from cruise ships except for cooling water to avoid impacts to sanctuary resources and because it is feasible for cruise ships to avoid these discharges for the short period they are in the sanctuary waters. This final rule is informed by information received through coordination with the EPA, notably that agency's studies related to cruise ship discharges and vessel operations in other sensitive marine environments (classified as ''Waters Federally Protected wholly or in part for Conservation Purposes'' under the EPA Vessel General Permit). NOAA also considered information related to the successful management of cruise ship operations in certain national parks, including Glacier Bay, Alaska, where, through concession agreements, cruise ships operate with higher environmental standards when in park waters.

NOAA is also banning discharges besides cooling water from cruise ships to prevent pollution from new and emerging technologies and activities that may result in discharges into ocean waters, such as the increased use of exhaust gas cleaning systems (EGCS). While recent technology such as engine exhaust gas scrubbers may help reduce air emissions from large vessel engines that use high sulfur fuels, including cruise ships, this results in the pollution being discharged in waste water from the EGCS open loop system. While the wash water may be treated before discharge, the discharge still contains metals, polycyclic aromatic hydrocarbons, and higher pH. The long-term accumulation of metals and hydrocarbons in estuaries or harbors is greater, and of more concern to scientists, than the long-term discharge of these contaminants in the open ocean (Teuchies et al., 2020). Vessels with EGCS currently switch to low sulfur fuels in other areas where EGCS discharges are prohibited.

NOAA will continue to provide an exception to the discharge and deposit prohibition for cooling water from all vessels, including cruise ships, because it is currently technologically infeasible for ships to operate without discharging or depositing cooling water. However, this exception does not apply if cooling water is mixed with other substances. In particular, cooling water that is mixed with any other substances, such as EGCS wash water, brine, and ballast water is prohibited.

NOAA is removing the exception for exhaust gas from its discharge and deposit prohibitions for all vessels to reduce confusion that the exemption for exhaust gas was intended to exempt EGCS washwater, which it does not. NOAA does not exempt discharges of EGCS washwaters from the discharge and deposit prohibition. The original intent of this exception was to allow the discharge or deposit of boat engine wet exhaust, rather than exempting exhaust emissions or EGCS washwater. NOAA interprets the term ''cooling water'' to encompass boat engine wet exhaust, which is defined in the EPA Vessel General Permit (Section 2.2.21) as the ambient water that is injected into the exhaust for cooling and noise reduction purposes and then discharged, typical of marine outboard engine operation.

NOAA is also simplifying the exception for discharges and deposits of water generated by routine vessel operations. The current regulatory exception for discharges or deposits of ''water generated by routine vessel operations (*e.g.,* deck wash down and graywater as defined in section 312 of the CWA), excluding oily wastes from bilge pumping,'' does not clearly define what types of discharges or deposits are allowed. Specifically, the term ''water generated by routine vessel operations'' is not defined in FKNMS or other agency rules (compared with the terminology used by the Clean Water Act for ''discharges incidental to the normal operation of a vessel''), creating ambiguity as to what, if any, additional discharges or deposits are meant to be excepted from the regulatory prohibition besides deck washdown and graywater. Based on a review of the original regulations and management plan for the sanctuary, NOAA believes the intention of this exception was simply to allow discharges or deposits of cooling water (including boat engine wet exhaust), deck washdown and runoff, and graywater, and to explicitly prohibit the discharge or deposit of oily

[8] *https://www.govinfo.gov/app/details/FR-2002-05-21/02-12283.*

[9] *https://nmssanctuaries.blob.core.windows.net/sanctuaries-prod/media/archive/management/fr/75_fr_72655.pdf.*

bilge wastes. At this time, NOAA is making technical corrections to the discharge and deposit exceptions to simplify this provision to clearly explain that cooling water, deck washdown and runoff, and graywater are allowable discharges and deposits from vessels other than cruise ships, but oily wastes from bilge pumping are not. Under this rule, the terms ''cooling water,'' ''deck washdown and runoff,'' ''graywater,'' and ''oily wastes from bilge pumping'' continue to have the same meaning as these terms hold under section 312 of the CWA and any implementing regulations, but NOAA believes that citing the CWA in the regulatory text is unnecessary. Discharges or deposits of fish and fish parts when part of a traditional fishing activity are allowed under another exception to the discharge and deposit prohibitions and will not change.

Of note, on December 4, 2018, Congress passed the Vessel Incidental Discharge Act (VIDA) (Title IX of the Frank LoBiondo Coast Guard Authorization Act of 2018), CWA 312(p). VIDA requires the EPA to develop new national standards of performance for commercial vessel incidental discharges and the United States Coast Guard to develop corresponding implementing regulations. EPA published a final rule on October 9, 2024 (89 FR 82074), but at the time of publication of this final rule, implementing regulations for VIDA have not yet been promulgated by the United States Coast Guard. However, when those regulations are finalized, there will be additional discharge prohibitions placed on vessels operating in federally protected waters such as national marine sanctuaries. NOAA will review any VIDA implementing regulations to ensure they are consistent with the sanctuary's primary goal of resource protection (16 U.S.C. 1431(b)(6)) and to determine whether conforming changes to the sanctuary regulations may be necessary and appropriate.

c. Temporary Regulation for Emergency and Adaptive Management

The final rule updates the existing regulations to allow for rapid, temporary rulemaking to facilitate time-sensitive, adaptive management and to respond to emergencies. First, this rule expands the time frame during which any temporary regulation could remain in place from 60 days to six months, with the option for one additional extension of six months (rather than the currently authorized additional 60 days). This increased time frame is consistent with the emergency time frames outlined in section 305(c) of the MSA, as well as NOAA's regulations for other national marine sanctuaries. While NOAA is extending the potential time frame that a temporary regulation could be in effect, NOAA would consider the specific circumstances and craft any temporary regulation for the appropriate duration, which may be less than the maximum time allowed under this regulation. Second, this rule outlines three categories for which NOAA will issue temporary regulations (as outlined below in this section). Third, this rule sets out the procedure by which a temporary regulation would be promulgated, including the requirement that the agency provide a justification for the time sensitivity of the action to comply with the Administrative Procedure Act (5 U.S.C. 553(b)(B)). This procedure also (1) addresses notice and comment requirements, and (2) requires State approval for any temporary regulations proposed in State waters.

NOAA identified three categories for temporary regulation to protect sanctuary resources when time is of the essence. The first category will allow for temporary regulations to prevent or minimize destruction of, loss of, or injury to sanctuary resources from any human-made or natural circumstances, including a concentration of human use, change in migratory or habitat use patterns, vessel impacts, natural disaster or similar emergency, disease, or bleaching. Second, temporary regulations may be used to initiate restoration, recovery, or other activities where a delay would undermine the success of the activity. Lastly, NOAA may use temporary regulations to initiate research where an unforeseen event produces an opportunity for scientific research that may be lost if it is not initiated immediately.

Importantly, temporary regulations will only allow NOAA to shorten or bypass minimum public comment periods if NOAA makes a finding of good cause that such procedures are impracticable, unnecessary, or contrary to the public interest pursuant to the APA, 5 U.S.C. 553(b)(B). This finding must be made before promulgating a temporary regulation without following the full rulemaking procedures, including public notice and comment. While NOAA must make this required finding before promulgating a temporary regulation under this proposal, NOAA believes that all three of the temporary regulation categories will satisfy this good cause requirement because each of these categories requires NOAA to take rapid, immediate actions in order to address an important and time-sensitive environmental need. However, when any given issue arises, NOAA will review it on a case-by-case basis to determine if application of a temporary rule is consistent with the APA. Where the agency determines that time is available without jeopardizing the effectiveness of the action, NOAA will follow notice and comment procedures before taking action. Additionally, NOAA may choose to collect public comment for 15 days after issuing an emergency temporary rule when, in the agency's discretion, it determines that post-decision comment would be worthwhile, such as to inform potential modifications to the emergency or temporary response action.

While NOAA is updating these regulations to allow greater responsiveness to emerging issues and in response to public comment, since FKNMS was designated in 1990, NOAA has only issued emergency regulations four times. In 1997, the emergency regulation was used to prohibit anchoring of vessels 50 meters or greater in an area of Tortugas Bank, which was subsequently established through a full rulemaking process. In 2002, an area of approximately 0.58 acres was identified as an area to avoid for a period of 104 days at the M/V *Wellwood* grounding site. In 2003, two areas totaling 425 acres were closed for a period of 60 days to prevent additional injury to living coral in an area impacted by a rapidly spreading coral disease outbreak. Most recently, in 2023 in response to extreme ocean temperatures, a 0.07 square mile temporary special use area was established to protect endangered corals relocated to a nursery in deeper water locations with conditions more conducive to coral survival. This emergency regulation was effective September 6 through November 6, 2023, and was extended for an additional 60-days until January 5, 2024.

d. Historical Resources Permitting

The rule updates historical resource permitting by replacing the current survey/inventory, research/recovery, and deaccession/transfer permit categories with a new, single archaeological research permit category. This rule also defines the term ''archaeological research,'' explains criteria that must be met in order for NOAA to issue an archaeological research permit (including applicant qualifications), and prescribes certain conditions that will apply to these permits. This aligns sanctuary historical resource permitting with State permitting regulations for archaeological research promulgated under Chapter 1A–32, Florida Administrative Code, and optimizes compliance with the

Federal archaeology program.[10] The Federal archaeology program is a general term used to encompass archeological activities on public land, as well as archaeological activities for federally financed, permitted, or licensed activities on non-federal land. Its foundation is based upon historic preservation laws like the National Historic Preservation Act and Archaeological Resources Protection Act. Dozens of Federal agencies, including NOAA, undertake archeological activities and contribute to the Federal archeology program. The Secretary of the Interior is charged with providing general guidance and coordination for all of Federal archeology.

The single archaeological research permit category simplifies permitting research focused on historical resources in the sanctuary, including the State waters portion of the sanctuary. Research that results in adverse effects to historic properties would not qualify for a permit under this simplified permitting process. For example, adverse effects to historical resources may result from site excavation, in which case the proposed activity would need to be separately permitted by the State and sanctuary.

The current permitting system is unnecessarily complicated and confusing to applicants as it artificially bisects the archaeological research process. Division of permits into either survey/inventory or research/recovery often resulted in insufficient research plans to meet project goals. The archaeological research permit category will require that applicants commit to following an explicit statement of objectives and that project methods be chosen to gather the information required to meet the stated objectives.

This new archaeological research permit category also requires that an applicant be the project's supervising archaeologist whose qualifications meet the Secretary of the Interior's Professional Qualification Standards for archaeology. This aligns with the required credentials for investigators receiving a State archaeological research permit under Chapter 1A–32, Florida Administrative Code. Additionally, this permit category requires that the supervising archaeologist be on site for any excavation and/or artifact recovery. As a result of these changes, NOAA believes that the quality of the research, both proposed and conducted, will be improved. NOAA anticipates that the reporting of research results will also be of higher quality when directed by a professional archaeologist with the required field experience. For the above reasons, NOAA believes that this new archaeological research permit category with associated application and review criteria will increase the protection of historical resources throughout the sanctuary.

In addition to the above changes, this rule eliminates the permit category allowing for the deaccession/transfer of historical resources. Eliminating the deaccession/transfer of historical sanctuary resources is consistent with Chapter 1A–31, Florida Administrative Code, which states that the State of Florida will not issue permits for exploration and recovery of historic shipwreck sites by commercial salvors or for transferring objects recovered by commercial salvors for areas of FKNMS. Eliminating the deaccession/transfer permit category is also consistent with the Secretary of the Interior's Standards and Guidelines for Federal Agency Historic Preservation Programs and Standards for the Treatment of Historic Properties, which focus on the preservation and long-term curation of any recovered historical resources for the benefit of the public (as opposed to private ownership). Likewise, this approach is consistent with the Abandoned Shipwreck Act Guidelines, which recommend that, at a minimum, state-owned shipwrecks located within a national marine sanctuary or in other areas (like habitat areas or coralline formations) protected under Federal or State statute, order, or regulation not be available for commercial salvage, treasure hunting or personal collecting. These Federal guidelines, and the statutes that underpin them, are part of the Federal archaeology program and align with NOAA's long-standing classification and protection of historical resources as sanctuary resources under the NMSA.

To date, no deaccession/transfer permit has ever been issued and, as such, the impact of this change will be minimal. NOAA intends to continue engaging directly with current sanctuary historical resource permit holders and entities with pre-existing, valid rights of access to clarify how updated historical resource permitting regulations would or would not affect potential future activities.

e. Sunken Military Craft Act Permitting

The Sunken Military Craft Act of 2004 (SMCA; Pub. L. 108–375, Title XIV, sections 1401 to 1408; 10 U.S.C. 113 note) preserves and protects from unauthorized disturbance all sunken military craft that are owned by the United States government, as well as foreign sunken military craft that lie within United States waters, as defined in the SMCA. Thousands of U.S. sunken military craft lie in waters around the world, many accessible to looters, treasure hunters, and others who may cause damage to them. These craft, and their associated contents, represent a collection of non-renewable and significant historical resources that often also serve as maritime graves, carry unexploded ordnance, or contain oil and other hazardous materials. By protecting sunken military craft, the SMCA helps reduce the potential for irreversible harm to these nationally important historical and cultural resources.

Sunken military craft are administered under the SMCA by the respective secretaries of the various military departments and, in the case of a Coast Guard vessel, the Secretary of the Department in which the Coast Guard is operating.

Sunken military craft are administered by the respective Secretary concerned pursuant to the SMCA. The Secretary concerned is solely responsible for authorizing disturbance of sunken military craft under the SMCA, specifically for archaeological, historical, or educational purposes, and will consult with NOAA when considering permitting such activities. The Secretary concerned is also responsible for determinations of sunken military craft status and ownership, publicly disclosing the location of sunken military craft, and determining eligibility and nominating sunken military craft as historic properties to the National Register of Historic Places. Any agreements with foreign sovereigns regarding sunken military craft in U.S waters are negotiated by the Secretary of Defense, the Secretary of State, and the Secretary of the Navy, according to authorities vested in each by the SMCA. The final rule provides that the Secretary concerned or his or her designee and NOAA will ensure coordination and foster collaboration on any research, monitoring, and educational activities pertaining to sunken military craft located within the sanctuary system. The Director will request approval from the Secretary concerned for any terms and conditions of FKNMS authorizations that may involve sunken military craft.

f. Fish Feeding

The final rule includes a new sanctuary-wide regulation prohibiting the feeding or attracting of fish, including sharks, or other marine

[10] *https://www.nps.gov/archeology/sites/fedarch.htm.*

species from any vessel and/or while diving and new definitions for ''diving,'' and ''feeding.'' The terms ''attract'' and ''attracting'' are already defined in the National Marine Sanctuary System-wide regulations at 15 CFR 922.11. The regulatory text has been developed with additional input from agency staff with expertise in impacts to sharks and shark depredation, human safety concerns, and compliance and enforcement. NOAA does not provide a ''grandfather'' clause for current eco-tour/fish feeding operations (*i.e.,* an exemption for pre-existing operators), although NOAA received some comments requesting such a provision. Instead, NOAA will consider issuing general permits to pre-existing eco-tour/fish feeding operators who are able to satisfy all general permit application requirements. Any permits would contain specific terms and conditions to protect sanctuary resources.

This new fish feeding regulation does not affect the existing regulatory exception that allows the discharge or deposit of fish, fish parts, chumming materials, or bait that is used or generated incidental to and while conducting traditional fishing in the sanctuary.

As noted in the Changes from Proposed Rule to Final Rule section above, NOAA is modifying the regulatory definition for traditional fishing to set the baseline of activities considered traditional to the effective date of this rule. Any future update to the definition of ''traditional fishing'' would be done through a separate rulemaking in order to consider public comment and to conduct an environmental analysis under NEPA of the potential impacts of new or innovative gear types or fisheries activities on sanctuary resources. NOAA would collaborate closely with, and rely on the expertise of, the FWC, FMCs, and NMFS when considering any updates to the list of traditional fishing activities.

g. Grounded, Deserted, and Derelict Vessels and Harmful Matter

NOAA's final rule prohibits anchoring, mooring, operating, deserting, or occupying a derelict vessel or a vessel at risk of becoming derelict or deserting a vessel aground or adrift in the sanctuary. Deserted, aground, derelict, or at risk of becoming derelict vessels are subject to the same 24-hour notification requirements and must be removed from the sanctuary within 72 hours of such notification, unless the Director approves of an exception. This provision has been updated to align with the State of Florida's regulatory procedures for derelict vessels.

Operators or owners of a vessel that strikes the seabed or runs aground must notify the Director within 24 hours of such incident regardless of whether or not sanctuary resources are injured. Vessels will be considered unlawfully deserted unless operators or owners of a vessel notify the Director within 24 hours of leaving a vessel unoccupied that is adrift or run aground or 24 hours after the Director has taken reasonable steps to notify the operator or owner of a vessel found adrift or aground. This definition of ''deserting'' will apply in FKNMS instead of the system-wide definition of ''deserting'' found in section 922.11.

Vessels that are aground, deserted, derelict, or at risk of becoming derelict must be removed within 72 hours of the Director's notification absent extenuating circumstances like weather or safety or unless otherwise consistent with a removal plan approved by the Director. NOAA has chosen one deadline of 72 hours to be consistent with the State of Florida's requirements to remove grounded vessels under Florida's Coral Reef Protection Act, Florida Statute 403.93345. While the State of Florida has several different deadlines for removal of derelict vessels or vessels at risk of becoming derelict, NOAA adopts a 72-hour deadline for removing all such vessels for simplicity and consistency. NOAA intends to use its discretion to grant exceptions to the 72-hour deadline for safety, weather, and approved removal plans, to align with State removal deadlines, where appropriate.

The final rule also prohibits leaving harmful matter aboard a grounded, deserted, derelict, or at risk of becoming derelict vessel. The term ''harmful matter'' is already defined in the National Marine Sanctuary System-wide regulations at 15 CFR 922.11.

h. Large Vessels Use of Mooring Buoys

NOAA's final rule requires large vessels to use designated large vessel mooring buoys and all other vessels to use regular mooring buoys. An associated new definition for ''large vessel'' is also added. Mooring buoys serve as an important management tool in FKNMS, providing boaters the ability to moor their vessel safely and avoid damaging coral reefs and other important ecosystems. However, mooring buoy use by large vessels has been shown to damage the mooring buoy anchoring hardware and in some cases the substrate to which the hardware is secured. As explained above in the **DATES** section of this document, NOAA is delaying the effective date for the large vessel mooring buoy requirement for two years beyond the effective date of this final rule to provide NOAA with adequate time to finalize a mooring buoy plan, including numbers and locations of mooring buoys, to secure materials, and to install new mooring buoys. Until this provision is effective, large vessels may continue to use regular mooring buoys. Additional information about sanctuary mooring buoy management, including plans to engage user groups to help identify areas of use, numbers of users, and placement of mooring buoys, is included in the final management plan.

i. Technical Revisions to Sanctuary Regulations

NOAA's final rule includes technical revisions and updates to regulatory definitions, terms, and provisions (see the general summary included in Appendix D of the final EIS). As this is the first comprehensive review of FKNMS regulations since they were implemented in 1997, NOAA has undertaken a thorough review of all existing regulations. These technical changes can be grouped in four broad categories described below.

Definitions and Terms are updated for greater consistency with the F.A.C., National Marine Sanctuary System-wide regulations, other sanctuary-specific regulations, FKNMS regulations, and the revised management plan. For example, due to new regulations, several new terms and definitions are added including, but not limited to, ''anchoring,'' ''derelict,'' ''at risk of becoming derelict,'' ''continuous transit,'' and ''deserting.'' Several terms that are no longer needed or are being replaced with new terms are eliminated, such as ''Ecological Reserve,'' ''no access buffer,'' and ''closed.'' Terms that are now defined in National Marine Sanctuary System-wide regulations at 922.11 are removed, including ''seagrass'' and ''vessel.'' While the new National Marine Sanctuary System-wide definitions at 922.11 include a definition for ''deserting,'' this rule provides a modified version for the sanctuary to align with the State of Florida timelines and procedures for derelict vessels.

Changes Required for Consistency With the NMSA

NOAA updates one and eliminates another regulatory provision to eliminate redundancy or confusion pertaining to the authority granted to State Governors under the NMSA. Under section 304(b)(1) of the NMSA, at the time of sanctuary designation, the Governor of any State in which a national marine sanctuary is located

partially or entirely within the state's seaward boundary may certify that the designation or any of its terms is unacceptable and the designation or unacceptable term will not take effect in State waters. Under 304(a)(4), the terms of designation may be modified only by the same procedures by which the original designation is made, which includes the procedures at 304(b)(1). In this rule, NOAA is eliminating the provisions at 922.163(g) and 922.164(f) because these provisions provide that new sanctuary regulations will not take effect in Florida State waters unless approved by the Board of Trustees of the Internal Improvement Trust Fund, and, regarding fishing regulations in the sanctuary, until established by the Florida Marine Fisheries Commission. These provisions inappropriately provided additional authorities to State entities, other than the Governor, that were not delegated to the states by Congress under the NMSA.

Military Exemption

NOAA's final rule revises the existing military exemption regulation in two ways. First, NOAA updates the list of exempted military activities from the list found in the 1996 Final Environmental Impact Statement and Management Plan for the sanctuary to the 2024 final EIS for the sanctuary. Second, NOAA clarifies the process for new military activities to be exempted from sanctuary prohibitions. Each change is described below.

Current FKNMS regulations reference military activities conducted by the Department of Defense (DOD) in the sanctuary and, for certain military activities, provide an exemption from sanctuary prohibitions. The current exemptions for DOD military activities in the sanctuary reference existing classes of military activities that were conducted prior to the effective date of these regulations as identified in the Environmental Impact Statement and Management Plan for the Sanctuary. NOAA has long interpreted this exemption to refer to the description of military activities contained in the 1996 FKNMS FEIS (Volume II, pages 93–96), which was prepared prior to the effective date of the 1997 regulations. Through this rule, NOAA is updating this exemption to include military activities currently conducted within the sanctuary that NOAA has determined are appropriate for exemption because the activities are not likely to injure sanctuary resources or will be carried out in a manner that avoids to the maximum extent practical any adverse impact on sanctuary resources and qualities. An updated list is provided in Appendix F of the final EIS that reflects current DOD activities conducted in the sanctuary that NOAA considers to be exempt. The updated list includes activities that are already exempt, the effects of which were analyzed in the 1996 FKNMS FEIS, and are considered in the 2024 final EIS. In addition, the updated list includes one new activity, the effects of which were analyzed in the Navy's 2018 Atlantic Fleet Testing and Training Environmental Impact Statement and is considered in the 2024 final EIS. The updated list of exemptions does not include DOD activities that occur outside of the sanctuary or DOD activities that occur inside the sanctuary but are not prohibited by FKNMS regulations. The updated exemptions apply to activities that occur within the current sanctuary boundary and boundary expansion area.

NOAA commits to working with DOD to consider exempting new activities from the prohibitions. NOAA would use the same standard to exempt new activities as used to update the list of DOD exemptions in the 2024 final EIS. In other words, NOAA would exempt a new activity from the prohibitions if NOAA determines such activity is not likely to injure sanctuary resources or will be carried out in a manner that avoids to the maximum extent practical any adverse impact on sanctuary resources and qualities. Any changes to this list of exempted military activities would only occur after compliance with all applicable laws, such as the APA and NEPA, as necessary, and after public notice and comment, as applicable.

NOAA has removed from the military exemption regulation reference to NMSA 304(d) Interagency Cooperation. The regulation previously referenced 304(d) as the mechanism for exempting new DOD activities from the prohibitions. However, NOAA has removed the reference to the 304(d) Interagency Cooperation process because 304(d) applies to all Federal agency actions that are likely to destroy, cause the loss of, or injure sanctuary resources, including those conducted by DOD, regardless of whether the specific actions are prohibited by sanctuary regulations. Additionally, certain activities that DOD may seek to exempt from the prohibitions would not require 304(d) consultation if the activities are not likely to injure sanctuary resources (see also final EIS Appendix F).

General Editorial changes are made to clarify, remove redundancy, and reorganize and simplify regulations where possible to make them easier to understand. These changes are solely editorial, grammatical, or stylistic, and no new requirements are established by these changes.

Editorial changes to permitting regulations are made to reduce redundancy with National Marine Sanctuary System-wide permitting regulations (15 CFR part 922 subpart D), which were recently updated and consolidated (*88 FR 953;* January 6, 2023). These changes are solely editorial, and no new requirements are established by these changes.

First, since the 1997 FKNMS regulations, NOAA has published application guidelines to aid potential applicants for permits in national marine sanctuaries. The *application guidelines*[11] explain the necessary parts of an application and how to submit it. Updated National Marine Sanctuary System-wide regulations (15 CFR part 922 subpart D) codify these requirements. As such, in this final rule, NOAA removes redundant application instructions from the FKNMS-specific regulations.

Second, this rule also includes two new general permit categories that are unique to FKNMS—one for Archaeological Research and one for Restoration—which are discussed in detail in other sections of this document. A third general permit category specific to FKNMS, activities that further FKNMS purposes, is found at 15 CFR part 922 subpart D. This final rule specifies only where different or additional information or procedures are needed for general permit categories that are unique to FKNMS (such as Tortugas North Conservation Area access permits).

Lastly, this rule adds a provision for the certification of any valid lease, permit, license, or right of subsistence use or access that is in existence when the revised sanctuary terms of designation (see Section VI of this rule) become effective. Under National Marine Sanctuary System-wide regulations, NOAA currently has authority to certify such pre-existing rights of access or use (15 CFR 922.10). This rule adds procedures and criteria to clarify how NOAA would issue such certification permits for FKNMS. A certification permit would be available to persons holding such valid and pre-existing rights of access or use in the sanctuary expansion areas. Certification permits would also be available to persons holding valid and pre-existing rights of access or use to conduct activities in the sanctuary that were not

[11] *https://sanctuaries.noaa.gov/management/permits/welcome.html.*

previously regulated but now will be regulated.

3. Marine Zone Boundaries and Associated Regulations Within the Sanctuary

The final rule includes five marine zone types: Management Areas, Conservation Areas, Sanctuary Preservation Areas, Restoration Areas, and Wildlife Management Areas (WMAs). This section includes a summary of the marine zones and associated regulations in this rule. In addition to marine zone-specific regulations, sanctuary-wide regulations apply within all marine zones of the sanctuary. Global Positioning System (GPS) coordinates for all marine zones included in NOAA's final rule can be found in Appendices C through I. An interactive map and updated individual marine zone maps are available at the website listed in the **ADDRESSES** section above in this rule.

a. Management Areas

The final rule maintains the existing Key Largo and Looe Key marine zones as Management Areas. These two areas were designated as national marine sanctuaries in 1975 and 1981, respectively, which preceded designation of FKNMS and were therefore included within the FKNMS boundary and referred to as ''Existing Management Areas.'' With this rule, all marine zones established with the 1997 regulations could be considered existing; therefore this qualifier is removed from the Key Largo and Looe Key marine zones.

In the final rule, the Key West and Great White Heron National Wildlife Refuges, which are currently referred to as Existing Management Areas, are referred to by their full names. Existing sanctuary regulations in the Key West and Great White Heron National Wildlife Refuges are maintained with the exception of a minor change to the area where personal watercraft are allowed (see part III, section 4q. *Personal Watercraft* below).

b. Conservation Areas

The final rule combines the existing Ecological Reserves and Special Use Areas (SUA) into one Conservation Area zone type and maintains and applies the existing SUA regulations prohibiting fishing, requiring continuous transit without interruption, and requiring stowage of gear in such areas. ''Conservation Area'' means an area of the sanctuary that provides natural spawning, nursery, and residence areas for the replenishment and genetic protection of marine life and protects and preserves groups of habitats and species, within which activities are subject to conditions, restrictions and prohibitions to achieve these objectives. These areas consist of contiguous, diverse habitats; protect a variety of sanctuary resources; and/or facilitate scientific research that promotes sanctuary management or recovery of sanctuary resources. In addition, these areas, with the exception of Western Sambo, have similar regulations, which are intended to provide the greatest level of protection to these contiguous habitats and areas set aside to support scientific research.

The final rule includes six Conservation Areas, all of which are existing sanctuary marine zones. The final rule slightly expands the spatial area of three existing zones (Tennessee Reef, Western Sambo, and Tortugas South) and eliminates one zone (the existing Looe Key SUA). Western Sambo is also included as a Conservation Area with slightly different regulations as outlined below. With the exception of the zone name change to Conservation Area, NOAA makes no changes to the existing Conch Reef SUA, Eastern Sambo SUA, or Tortugas North Ecological Reserve. The Conservation Areas range in size from the smallest, Conch Reef, at 0.15 square miles to the largest, Tortugas North, at 109.05 square miles. The total area included in the six Conservation Areas is 213.11 square miles.

A summary of the Conservation Areas included in this final rule and changes from current FKNMS zoning and regulations follows. Note that for all of the zones below, the zone name will be changed to Conservation Area.

- *Conch Reef:* No changes to the regulations or area.
- *Tennessee Reef:* No changes to regulations. This zone is extended to the 90-foot contour line to capture additional deep reef habitats.
- *Looe Key:* This existing SUA zone is eliminated. This area will, instead, be managed as part of the larger Looe Key Management Area, as described above in section 3.a. *Management Areas.*
- *Eastern Sambo:* No changes to the regulations or area.
- *Western Sambo:* This existing zone is extended to the 90-foot contour line to capture additional deep reef habitats. In addition, no-anchor restrictions apply for the southern portion of the zone in the area of most prominent coral reef development. All other existing regulations in Western Sambo are maintained, including, but not limited to, prohibitions on discharging or depositing any matter or other material, fishing by any means, and harvesting any marine life. This is the only Conservation Area that allows access for snorkeling and diving.
- *Tortugas North:* No changes to the regulations or area. In addition, see part III, section 4. *Additional Marine Zone Regulations,* below, for information on administrative changes to Tortugas North Access Permit requirements.
- *Tortugas South:* No changes to the regulations. This zone is extended to the west by one mile along its entire length. This expansion captures additional habitat west of Riley's Hump that is known to support fish spawning aggregations and important deep reef habitats. Recently collected and compiled mapping coverage data and remotely operated vehicle (ROV) imagery show unique habitat features in this area, including rock escarpment formations and a well-defined ledge. These data also showed the presence of a diversity of fish species. Therefore, the final rule maintains the southern boundary of the Tortugas South Conservation Area as proposed despite some comments on the draft EIS.

c. Sanctuary Preservation Areas (SPAs)

The final rule includes 17 SPAs, defined as a discrete, biologically important area of the sanctuary within which activities are subject to conditions, restrictions, and prohibitions to avoid concentrations of uses that could result in significant declines in species populations or habitat, to reduce conflicts between uses, to protect areas that are critical for sustaining important marine species or habitats, or to provide opportunities for scientific research. The SPAs range in size from the smallest, Cheeca Rocks SPA, at 0.07 square miles to the largest, Carysfort Reef SPA, at 3.78 square miles. The total area included in the 17 SPAs is 12.14 square miles.

SPA regulations included in this rule eliminate the current exception allowing catch and release fishing in four existing SPAs (Conch Reef, Alligator Reef, Sombrero Key, and Sand Key). In addition, anchoring is prohibited in all SPAs. This final rule includes a new definition for ''anchoring,'' which means securing a vessel to the seabed by any means except when using a mooring buoy. All other existing SPA regulations remain, including, but not limited to, prohibitions on discharging or depositing any matter except cooling water, fishing by any means, and harvesting any marine life. Consistent regulations throughout SPAs are intended to clarify for the public what is allowed and what is restricted to promote understanding and compliance

and to facilitate enforcement and management. Finally, the management practice of issuing permits allowing baitfishing in all SPAs will be phased out over a 3-year period.

As explained above in the **DATES** section of this document, NOAA is delaying the effective date for the no anchoring regulation in all SPAs (§ 922.164(e)(3)) for two years beyond the effective date of this final rule. The purpose of this delay is to provide NOAA with adequate time to finalize a mooring buoy plan, including numbers and locations of mooring buoys, to secure materials, and to install new mooring buoys. The no anchoring prohibition will likewise be delayed for Habitat and Nursery Restoration Areas under sections 922.164(g)(1), (h)(1), which apply the SPA prohibitions. All other SPA regulations will become effective as of the effectiveness date of this final rule (*i.e.,* after the close of a review period of forty-five days of continuous session of Congress), including eliminating the exception for catch and release fishing by trolling in Conch Reef, Alligator Reef, Sombrero Reef, and Sand Key SPAs and stopping the practice of issuing permits for baitfishing in SPAs. A summary of Sanctuary Preservation Areas included in the final rule follows (listed northeast to southwest). For all of the zones listed below, the SPA regulations as outlined above and at 15 CFR 922.164(e) will apply.

- *Turtle Rocks:* This rule establishes a new SPA.
- *Carysfort Reef:* This existing SPA is expanded to the 90-foot contour to include additional deep reef habitat.
- *The Elbow:* Existing SPA; no boundary change.
- *Key Largo Dry Rocks-Grecian Rocks:* The final rule connects two existing SPAs into a single SPA.
- *Molasses Reef:* Existing SPA; no boundary change.
- *Conch Reef:* Existing SPA; no boundary change. The regulatory exception that allows catch and release fishing by trolling in the SPA is removed.
- *Davis Reef:* Existing SPA; no boundary change.
- *Hen and Chickens Reef:* Existing SPA; no boundary change.
- *Cheeca Rocks:* Existing SPA; no boundary change.
- *Alligator Reef:* This existing SPA is expanded to the 90-foot contour to include additional deep reef habitat. The regulatory exception that allows catch and release fishing by trolling in the SPA is removed.
- *Turtle Shoal:* This rule establishes a new SPA.
- *Coffins Patch:* Existing SPA; no boundary change.
- *Sombrero Key:* This existing SPA is expanded slightly to include remnant elkhorn corals, a species listed under the Endangered Species Act. The regulatory exception that allows catch and release fishing by trolling in the SPA is removed.
- *Newfound Harbor Key:* Existing SPA; no boundary change.
- *Looe Key:* Existing SPA; no boundary change.
- *Eastern Dry Rocks:* Existing SPA; no boundary change.
- *Sand Key:* Existing SPA; no boundary change. The regulatory exception that allows catch and release fishing by trolling in the SPA is removed.

d. Restoration Areas

Given the increase in important habitat restoration activities in the sanctuary over the past two decades, NOAA's final rule includes a new Restoration Area zone type to support species or habitat recovery. The zone includes two distinct designations:

- *Nursery Restoration Area* zone type encompasses existing nursery areas and are regulated similar to Conservation Areas to provide the highest level of protection to sensitive corals and other organisms while they are being propagated. These regulations prohibit, among other things, fishing, anchoring, and discharges or deposits and require that vessels remain in transit through the area.
- *Habitat Restoration Area* zone type protects sites where active transplanting and restoration activities are ongoing. These areas are managed with the same regulations that apply to SPAs to provide for access and educational opportunities while prohibiting, among other things, fishing, anchoring, and discharges or deposits.

As explained above in the **DATES** section of this document, NOAA is delaying the effective date for the no anchoring regulation for all SPAs (§ 922.164(e)(3)) for two years beyond the effective date of this final rule. This delay will apply to the no anchoring prohibition for Habitat Restoration Zones, which apply the SPA regulations.

i. Nursery Restoration Areas

Specifically, this final rule includes eleven Nursery Restoration Areas with regulations prohibiting, among other things, fishing, anchoring, and discharges or deposits, and requiring that vessels remain in transit through the area. All Nursery Restoration Areas are very small (individual zones are approximately 70 acres (0.1 square miles)) and are designed to protect the underwater nursery structures and associated corals growing on them with a 200-yard buffer. The total area of Nursery Restoration Areas is 748.8 acres (1.17 square miles).

NOAA establishes all existing, permitted coral nurseries as distinct Nursery Restoration Areas. The following existing, permitted coral nurseries are included in the final rule as distinct Nursery Restoration Areas (listed northeast to southwest):

- *Carysfort Reef*
- *Key Largo:* This area was established and permitted as a coral nursery site after the proposed rule was released for comment. NOAA received comments requesting that this site be included as a Nursery Restoration Area in this final rule. Key Largo Nursery Restoration Area, approximately 0.07 square miles (46.8 acres), is in Federal waters of the Upper Keys region of the sanctuary.
- *Pickles Reef West*
- *Islamorada:* This area was established and permitted as a coral nursery site after the proposed rule was released for comment. NOAA received comments requesting that this site be included as a Nursery Restoration Area in this final rule. Islamorada Nursery Restoration Area, approximately 0.07 square miles (47.2 acres), is in Federal waters of the Upper Keys region of the sanctuary.
- *The Elbow Reef*
- *Marathon*
- *Middle Keys*
- *Looe Key East*
- *Looe Key West*
- *Key West*
- *Sand Key*

ii. Habitat Restoration Areas

NOAA is also establishing four new Habitat Restoration Areas to protect existing, permitted active coral reef restoration sites. All Habitat Restoration Areas are small, ranging from 5 to 220 acres (<0.01 to 0.35 square miles), with an average size of 85 acres (0.13 square miles), and are designed to protect sites supporting active coral restoration with a 200-yard buffer. The total area of Habitat Restoration Areas is 339 acres (0.53 square miles). The final rule establishes the following Habitat Restoration Areas with regulations prohibiting, among other things, fishing, anchoring, and discharges or deposits:

- *Horseshoe Reef*
- *Pickles Reef East*
- *Cheeca Rocks East*
- *Cheeca Rocks South*

In this rule all Habitat Restoration Areas protect active coral reef

restoration; however, NOAA does not intend to limit application of this new zone type to coral restoration activities only. The Habitat Restoration Area zone type could be applied in the future in any area to support and facilitate restoration of other degraded habitats or species (*e.g.,* seagrass, hardbottom, etc.). In addition, a framework for establishing short-term, time-sensitive protections to support critical management including habitat restoration is described in the updated temporary regulation for emergency and adaptive management (see part IV, section 2. *Sanctuary-wide Regulations* above and the full regulatory text included in 15 CFR 922.165.) Additional information about how this zone type may be used in the future can be found in the final management plan. Future nursery and habitat restoration area site locations, sizes, and duration will be informed by site-specific habitat restoration plans, which could be prepared as part of a disease response or Restoration permit application.

Finally, to further facilitate habitat restoration and to complement this zone type, this rule includes a new category of general permit for Restoration.

e. Wildlife Management Areas (WMAs)

The final rule includes 44 WMAs, defined as an area of the sanctuary in which various access and use restrictions are applied to manage, protect, preserve, and minimize disturbance to sanctuary wildlife resources, including, but not limited to, endangered or threatened species or the habitats, special places, or conditions on which they rely. Access and use restrictions applied in WMAs address the specific protections necessary to minimize disturbances to sanctuary habitats and wildlife and are therefore tailored for the specific location and resource need. In addition, these access and use restrictions may be for a limited or seasonal time period. These WMAs aim to balance resource protection with compatible uses. This final rule generally favors sanctuary resource protection over access where biological and impact data demonstrate a need; however, the least restrictive access regulations and zone size needed to meet the resource protection goals are applied.

The final rule includes no change and/or only minor technical modifications to existing regulations for nine existing WMAs, spatial and/or regulatory modifications for 15 existing WMAs, and 20 new WMAs. In addition, the final rule eliminates three existing WMAs. The average size of WMAs (excluding the existing Tortugas Bank zone) is 0.62 square miles, ranging from 0.01 to 6.37 square miles (the newly established Pelican Shoal WMA and Marquesas Turtle WMA, respectively). The total area included in WMAs is 64.87 square miles of which 32.23 square miles is the existing Tortugas Bank no anchor zone.

Nine of the twenty-eight existing WMAs have no spatial or regulatory changes, or only minor technical changes, in this rule. The minor technical changes include (1) spatial changes that clarify exceptions to access regulations for certain channels and (2) regulatory changes in zone access terminology such that the existing ''no access buffer'' and ''closed'' regulations are changed to ''no entry'' to be consistent with the intent of the regulation and with State regulations.

NOAA is eliminating the existing no access buffer and closed zone regulations and is replacing them with a no entry regulation that has the same effect. The existing no access buffer zones are portions of the sanctuary where vessels are prohibited from entering regardless of the method of propulsion. In general practice, the no access buffer, closed, and no entry regulations have similar intent. In addition, this change in nomenclature creates consistency in application of this regulation throughout the sanctuary and aligns with State regulations. In addition to the zones discussed in this section, the no-access buffer zones at Crocodile Lake and Marquesas Keys WMAs are eliminated; however, both of these WMAs have additional minor spatial and/or regulatory changes and are more fully discussed in the section below.

The WMAs in this rule with no spatial or regulatory changes, or only minor technical changes, follow:

- *Horseshoe Key:* This is an existing 300 foot no access buffer zone with the island closed by the USFWS to decrease disturbance to nesting and roosting birds. NOAA is making a technical update to change the existing no access buffer regulation to no entry.
- *West Content Keys:* This is an existing zone with idle speed no wake in selected creeks and no access buffer in one cove to decrease disturbance to shorebirds using the area for nesting and foraging. NOAA is making a technical update to change the existing no access buffer regulation to no entry.
- *Sawyer Key:* This is an existing zone where the tidal creeks on the south side are closed to decrease disturbance to nesting birds. NOAA is making a technical update to change the existing closed regulation to no entry.
- *East Harbor Key:* This is an existing 300 foot no access buffer zone to decrease disturbance to various resting and nesting birds. NOAA is making a technical update to change the existing no access buffer regulation to no entry.
- *Cayo Agua Keys:* This is an existing zone with idle speed no wake in all navigable creeks to decrease disturbance to nesting and roosting birds, including great white heron, osprey, and the large numbers of resting shorebirds. There is no change from the status quo.
- *Big Mullet Key:* This is an existing 300 foot no motor zone around the island to decrease disturbance to nesting birds and resting shorebirds. There is no change from the status quo.
- *Little Mullet Key:* This is an existing 300 foot no access buffer zone to decrease disturbance to nesting, roosting, and foraging birds and shallow seagrass flats around the island, which exhibit prop scarring. NOAA is making a technical update to change the existing no access buffer regulation to no entry.
- *Pelican Shoal:* This is an existing no access buffer zone to decrease disturbance to nesting roseate terns and is an area that is thought to be the last active ground-breeding location for this ESA-listed species in Florida. Additionally, this is an FWC Critical Wildlife Area that was established in 1990. NOAA is making a technical update to change the existing no access buffer regulation to no entry.
- *Tortugas Bank:* This is an existing sanctuary zone prohibiting anchoring by vessels over 50 meters in length, which protects coral and hardbottom habitats on Tortugas Bank from anchor damage. NOAA is making no change in the spatial area or regulations for this zone.

As noted above, WMAs protect important habitats and species dependent on those habitats with access and use restrictions tailored for the specific location and resource need. Listed below (approximately northeast to southwest) are existing WMAs with changes to spatial boundaries, regulations, or a combination of both. Informed by public and agency comments, and additional data on resources and human uses, the final rule refines the spatial areas included in WMAs and the specific regulations that apply to most efficiently protect sanctuary resources while allowing the greatest level of use compatible with the resource protection goals.

- *Crocodile Lake:* This existing March 1 to October 1 no access buffer WMA is modified to become a year-round no entry zone except for Steamboat Creek. The final rule expands the WMA slightly to encompass an important bird

nesting site. The portion of the existing Crocodile Lake WMA on the northwestern shoreline of Eastern Lake Surprise becomes part of the Eastern Lake Surprise WMA as it is contiguous with that area.

- *Eastern Lake Surprise:* This existing WMA is modified to include a no entry area along the western shoreline that is currently part of the Crocodile Lake WMA. In the canal and basin on the southeast side of Eastern Lake Surprise, the existing regulations are changed from idle speed no wake to no entry; in addition, the no entry regulation is extended along the entire shoreline.
- *Dove and Rodriguez Keys:* These two existing WMAs are combined to create one no motor zone WMA. The existing regulation that closes two small islands near Dove Key is eliminated.
- *Tavernier Key:* This is an existing no motor zone. The final rule maintains the no motor regulation with exceptions for Tavernier Creek and the unnamed channel to the northeast leading to it.
- *Snake Creek:* This existing no motor zone is extended to the west along the shoreline up to but not including the existing Monroe County no motor zone. An exception to the no motor regulations is made for Snake Creek itself and the three channels providing access to Windley Key.
- *Cotton Key:* This existing no motor zone is extended to include an area west of Cotton Key that exhibits prop scarring.
- *East Content Keys and Upper Harbor Key Flats:* East Content Keys and Upper Harbor Key Flats are both existing marine zones. East Content Keys WMA consists of an existing small idle speed no wake zone in the largest tidal creek. This final rule applies additional idle speed no wake regulations in the remaining tidal creeks at East Content Keys. In addition, the seagrass flats to the east, north, and south of East Content Key, extending beyond Upper Harbor Key, are designated as idle speed no wake as this area exhibits scarring. Upper Harbor Keys WMA is an existing 300-foot no access zone around the entire island. NOAA is making a technical update to change the existing no access buffer regulation to no entry. This zone will be encompassed within the larger East Content Keys and Upper Harbor Key Flats idle speed no wake WMA.
- *Snipe Keys:* This existing marine zone is modified with the addition of a no entry area, which is an important roosting area for magnificent frigatebirds that are easily disturbed by motorized and non-motorized boat traffic. The existing no motor and idle speed no wake areas will not change.
- *Mud Keys:* This existing marine zone includes idle speed no wake and closed areas within the channels. This final rule updates this to idle speed no wake in all channels.
- *Lower Harbor Keys:* This existing zone includes idle speed no wake in selected tidal creeks. This final rule expands the idle speed no wake area to further protect and decrease disturbance to various nesting, roosting, and wading birds.
- *Bay Keys:* This existing marine zone is modified by expanding the current idle speed no wake area in the channel leading to the northwest island, maintaining that island as no motor, and includes an additional adjacent island to the southeast as no motor.
- *Cottrell Key:* This existing no motor zone is changed to a no entry zone to decrease disturbance to nesting and roosting birds. Cottrell Key has one of the highest annual counts of nesting great white herons in the Lower Keys, and serves as an important island for other nesting, roosting and foraging birds.
- *Woman Key:* This existing zone, which currently includes one-half of the beach and sand spit as closed, is changed to no entry and expanded to include 300-feet offshore of the beach to further decrease disturbance to nesting and roosting birds and ESA-listed sea turtles, which may be impacted during nesting by high concentrations of visitors.
- *Boca Grande Key:* This existing zone currently includes a closed area on the south half of the beach and the island is closed by the USFWS. In this final rule, the WMA is changed to no entry and expanded to include 300-feet offshore of the beach to decrease disturbance to nesting and roosting birds and ESA-listed sea turtles, which may be impacted during nesting by high concentrations of visitors.
- *Marquesas Keys:* This is an existing zone with a 300-foot no motor regulation around three keys, a 300-foot no access buffer zone around one island (all on the western side of Mooney Harbor), and idle speed no wake in a southwest tidal creek. NOAA's final rule maintains all of these areas; however, the no motor and no access buffer zones are changed to no entry, and one additional island on the south end of Mooney Harbor is added as no entry.

NOAA's final rule includes 20 new WMAs, eleven of these fall within USFWS National Wildlife Refuge boundaries, nine of which specifically serve to protect USFWS trust species (*e.g.,* species for which the Refuge was established to protect and/or Migratory Bird Treaty Act species).

- *Barnes-Card Sound:* This final rule establishes a new idle speed no wake WMA.
- *Whitmore Bight:* This final rule establishes a new no motor WMA that includes an area along the shoreline in John Pennekamp State Coral Reef Park that includes the State Park managed no motor zone.
- *Pelican Key:* This final rule establishes a new no entry WMA.
- *Pigeon Key:* This final rule establishes a new no entry WMA.
- *Channel Key Banks:* This final rule establishes a new idle speed no wake WMA. This final rule allows exceptions for normal operation in established channels and includes Channel Key as a no entry area.
- *Red Bay Bank:* This final rule establishes a new idle speed no wake WMA.
- *Marathon Oceanside Shoreline:* This final rule establishes a new idle speed no wake WMA with exceptions for established channels.
- *East Bahia Honda Key:* This final rule establishes a new no motor WMA.
- *West Bahia Honda Key:* This final rule establishes a new no motor WMA.
- *Little Pine Key Mangrove:* This final rule establishes a new no entry WMA.
- *Water Key Mangroves:* This final rule establishes a new no entry WMA.
- *Howe Key Mangrove:* This final rule establishes a new no motor WMA.
- *Torch Key Mangroves:* This final rule establishes a new no entry WMA.
- *Crane Key:* This final rule establishes a new no entry WMA.
- *Northeast Tarpon Belly Keys:* This final rule establishes a new no motor WMA.
- *Happy Jack Key:* This final rule establishes a new no entry WMA.
- *Western Dry Rocks:* This final rule establishes a new WMA that will mirror newly established *FWC regulations* [12] (February 2021) with a seasonal no fishing prohibition from April 1 to July 31 and a no anchor regulation during this same seasonal time period.
- *Barracuda Keys:* This final rule establishes a new idle speed no wake WMA.
- *Ballast and Man Keys Flats:* This final rule establishes a new idle speed no wake WMA.
- *Marquesas Turtle:* This final rule establishes a new idle speed no wake WMA.

This final rule does not include two WMAs that were included in the 2022 NOPR:

- *Archer Key:* This final rule does not include a new sanctuary marine zone at

[12] *https://www.flrules.org/gateway/ruleNo.asp?id=68B-6.004.*

this site due to comments received from the public and requests from Florida DEP and FWC.

• *Ashbey-Horseshoe Key:* This final rule does not include a new sanctuary marine zone at this site. This area is an existing no motor zone within Lignumvitae Key Aquatic Preserve and Lignumvitae Key Botanical State Park therefore this rule does not include a new sanctuary marine zone at this site at this time.

4. Additional Marine Zone Regulations

a. Motorized Personal Watercraft

NOAA's final rule includes regulatory changes to allow motorized personal watercraft (PWC) operation in a small portion of the Key West National Wildlife Refuge, west of the Key West main ship channel around marker G13, where PWC operation is otherwise prohibited.

b. Tortugas North Access Permits

The final rule streamlines the permit application process for persons wishing to enter the Tortugas North Conservation Area. The current regulation requires that access permits must be requested at least 72 hours, but no earlier than one month, before the date that access is requested. This final rule removes the current requirement to request access permits no earlier than one month before the date of entrance to the area and removes the requirement to notify FKNMS before entering and upon leaving the area. The requirement to request an access permit at least 72 hours in advance will remain.

c. Catch and Release Fishing by Trolling in Four SPAs

The final rule eliminates the exception allowing catch and release fishing by trolling in four SPAs (Conch Reef, Alligator Reef, Sombrero Key, and Sand Key). Over two decades of management experience with marine zones in the sanctuary points to providing zones with consistent and clear regulations and indicates that user compliance is greatly reduced and enforcement greatly hindered when exceptions to regulations in specific zones are provided.

d. Bait Fishing Permits

NOAA is eliminating over a three-year period the practice of issuing bait fishing permits of any kind in all SPAs. As noted above, over two decades of management experience with marine zones in the sanctuary points to providing zones with consistent and clear regulations and indicates that user compliance is greatly reduced and enforcement greatly hindered when exceptions to regulations in specific zones are provided.

5. Sanctuary Management Plan

The final EIS includes a final revised management plan. The management plan, which includes non-regulatory actions, complements and further supports this rulemaking. The management plan actions are largely focused on understanding and improving the condition of sanctuary resources by reducing threats and addressing emerging issues. Actions also include engaging with and strengthening partnerships to address issues and impacts that occur outside the sanctuary boundary and fall within the jurisdiction or authority of partner Federal or State agencies. A copy of the final management plan is available at the address and website listed in the **ADDRESSES** section of this rule.

V. Changes to the Sanctuary Terms of Designation

1. Summary of Changes to the Terms of Designation

Section 304(a)(4) of the NMSA requires that the terms of designation for national marine sanctuaries include: (1) the geographic area of the sanctuary; (2) the characteristics of the area that give it conservation, recreational, ecological, historical, research, educational, or aesthetic value; and (3) the types of activities subject to regulation by NOAA to protect those characteristics. Section 304(a)(4) also specifies that the terms of designation may be modified only by the same procedures by which the original designation was made, including public notice and comment, and preparation of an EIS. Terms of designation include the geographic area of the sanctuary, characteristics of the area that give it value, and the types of activities that will be subject to regulation. Therefore, the revised FKNMS terms of designation set forth below:

1. Modify Article I (''Designation and Effect'') to include the expanded sanctuary boundary;

2. Modify Article II (''Description of the Area'') by changing the geographic description and size of the sanctuary;

3. Modify Article III (''Characteristics of the Area That Give it Particular Value'') by updating the size of the sanctuary and the description of the special resources contained within it;

4. Modify Article IV (''Scope of Regulation'') by simplifying descriptions of the categories of activities that may be subject to regulation. As originally drafted, the Terms of Designation contain a level of detail similar to, if not the same, as the regulations. Instead, NOAA proposes to provide broad categories of activities to be more consistent with the legislative intent of section 304(a)(4) of the NMSA to merely identify the ''types of activities'' and rely on the regulations themselves to provide the specific regulatory details (see *e.g.,* 15 CFR 922.163). Otherwise, the ''Scope of Regulation'' section would be duplicative of the regulations and serve no purpose. By simplifying the activity descriptions, NOAA is not broadening in any way the scope of the regulations and is not adding any new or different activities to be subject to regulation. The regulations themselves contain the operative language and only the regulations are enforceable;

5. Modify Article V (''Effect on Leases, Permits, Licenses, and Rights'') by modifying language to be consistent with section 304(c) of the NMSA related to any valid lease, permit, license, approval, or other authorization or right in existence prior to the effective date of the revised terms of designation, and to cite the correct section of Office of National Marine Sanctuaries regulations for certifying such valid rights; and

6. Modify the ''Florida Keys National Marine Sanctuary Boundary Coordinates'' to include the expanded sanctuary boundary.

Terms of Designation for the Florida Keys National Marine Sanctuary

Article I. Designation and Effect

On November 16, 1990, the Florida Keys National Marine Sanctuary and Protection Act (FKNMSPA), Pub. L. 101–605 (16 U.S.C. 1433 note), became law. That Act designated an area of waters and submerged lands, including the living and nonliving resources within those waters, as described therein, as the Florida Keys National Marine Sanctuary (sanctuary). The FKNMSPA specifies that the sanctuary, is designated . . . under title III of the Marine Protection, Research, and Sanctuaries Act of 1972 (16 U.S.C. 1431 *et seq.*). The Sanctuary shall be managed and regulations enforced under all applicable provisions of such title III as if the Sanctuary had been designated under such title. FKNMSA Sec. 5(a). In 2001, pursuant to the procedures outlined in section 304 of the NMSA, 16 U.S.C. 1434, the boundary of the sanctuary was expanded to include important coral reefs and other resources in two areas west of the Dry Tortugas National Park, including Sherwood Forest and Riley's Hump. In 2024, the boundary of the sanctuary was further expanded to include areas: (a)

north of the existing northern extent of the sanctuary, offshore of Miami-Dade County, to align with the Area To Be Avoided, (b) seaward of the existing southern boundary of the sanctuary to align with the ATBA, (c) at the far western end of the existing sanctuary boundary, to extend by approximately one mile westward and encompass the outer boundaries of the Tortugas South Conservation Area (formerly the Tortugas South Ecological Reserve) and square off the sanctuary boundary in its northwestern corner.

Section 304 of the NMSA, 16 U.S.C. 1434, authorizes the Secretary of Commerce to issue such regulations as are necessary and reasonable to implement the designation, including managing and protecting the conservation, recreational, ecological, historical, scientific, educational, cultural, archaeological or aesthetic resources and qualities of a national marine sanctuary. Section 1 of Article IV of the Terms of Designation lists activities of the type that are presently being regulated or may have to be regulated in the future in order to protect sanctuary resources and qualities. Listing in section 1 does not mean that a type of activity will be regulated in the future; however, if a type of activity is not listed, it may not be regulated, except on an emergency basis, unless section 1 is amended, following the procedures for designation of a sanctuary set forth in paragraphs (a) and (b) of section 304 of the NMSA, to include the type of activity.

Article II. Description of the Area

The Florida Keys National Marine Sanctuary boundary encompasses a total of approximately 3,427 square nautical miles (4,539 square statute miles) of coastal, ocean, and Gulf of Mexico waters, and the submerged lands thereunder, surrounding the Florida Keys in south Florida. The northernmost point of the sanctuary lies just east of Miami and Key Biscayne. The contiguous area boundary on the Atlantic Ocean side of the Florida Keys runs south from just north of Biscayne National Park generally curving in a southwesterly direction along the Florida Keys archipelago until southwest of the Dry Tortugas and Loggerhead Key. The contiguous area boundary on the Gulf of Mexico side of the Florida Keys continues from this southwestern point to the north approximately 32 miles until it reaches a point northwest of Loggerhead Key and the Dry Tortugas. The boundary then continues east to approximately 8 miles north of Cottrell Key, and then from there it continues generally to the northeast to just north of Sprigger Bank. The boundary then generally approximates the southeastern Everglades National Park boundary until it continues along the western shore of Manatee Bay, Barnes Sound, and Card Sound. The boundary then generally approximates the southern boundary of Biscayne National Park and continues to do so north along the park's eastern boundary until it reaches the sanctuary's northeastern most point.

The landward boundary of the contiguous sanctuary area is the shoreline as defined by the mean high-water line. The Dry Tortugas National Park is not included within the sanctuary and the inner sanctuary boundary in this location is coterminous with this national park boundary. The sanctuary boundary encompasses the entire Florida coral reef tract, all of the mangrove islands of the Florida Keys, and some of the seagrass meadows of the Florida Keys. The precise boundary of the sanctuary is set forth at the end of this Designation Document.

Article III. Characteristics of the Area That Give it Particular Value

The Florida Keys extend approximately 223 miles southwest from the southern tip of the Florida peninsula. Adjacent to the Florida Keys land mass are located spectacular unique, nationally significant marine environments, including seagrass meadows, mangrove islands, and extensive living coral reefs. These marine environments support rich biological communities possessing extensive conservation, recreational, commercial, ecological, historical, research, educational, and aesthetic values which give this area special national significance. These environments are the marine equivalent of tropical rain forests in that they support high levels of biodiversity, are fragile and easily susceptible to damage from human activities, and possess high value to humans if properly conserved. These marine environments are subject to damage and loss of their ecological integrity from a variety of sources of disturbance.

The Florida Keys are a limestone island archipelago. The Keys are located at the southern edge of the Florida Plateau, a large carbonate platform made of a depth of up to 7000 meters of marine sediments, which have been accumulating for 150 million years and which have been structurally modified by subsidence and sea level fluctuation. The Keys region is generally divided into five distinct areas: the Florida reef tract, one of the world's largest coral reef tracts and the only barrier reef in the United States; Florida Bay, a large, shallow seagrass-dominated estuary and world-famous game fishing region that sits at the interface between the Florida Everglades and the Florida Reef Tract; the Southwest Continental Shelf; the Straits of Florida; and the Keys themselves.

The sanctuary contains one of North America's most diverse assemblages of terrestrial, estuarine, and marine fauna and flora. In addition to the Florida reef tract, the sanctuary includes thousands of patch reefs, various hardbottom habitats, mangrove fringed shorelines and mangrove islands, and a substantial portion of one of the world's largest seagrass communities that covers 3.6 million acres of the nearshore marine environment in south Florida. These diverse habitats provide shelter and food for thousands of species of marine plants and animals, including more than 50 species of animals identified under Federal or State law as endangered or threatened. The Keys were at one time a major seafaring center for European and American trade routes to the Caribbean, and submerged cultural and historic resources (*i.e.,* shipwrecks) abound in the surrounding waters. In addition, the sanctuary contains substantial archaeological resources of pre-European cultures.

The uniqueness of the marine environment draws multitudes of visitors to the Keys. The major industry in the Florida Keys is tourism, including activities related to the Keys' marine resources, such as dive shops, charter fishing and dive boats and marinas, as well as hotels and restaurants. The abundance of the resources also supports a large commercial fishing employment sector.

The number of visitors to the Keys grows each year, with a concomitant increase in the number of residents, homes, jobs, and businesses. As population grows and the Keys accommodate ever-increasing resource use pressures, the quality and quantity of sanctuary resources are increasingly threatened. These pressures require coordinated and comprehensive monitoring and researching of the Florida Keys' region.

Article IV. Scope of Regulations

Section 1. Activities Subject to Regulation

The following activities are subject to regulation under the NMSA, either throughout the entire sanctuary or within identified portions of it or, as indicated, in areas beyond the boundary of the sanctuary, to the extent necessary and reasonable. Such regulation may

include prohibitions to ensure the protection and management of the conservation, recreational, ecological, historical, scientific, educational, cultural, archaeological or aesthetic resources and qualities of the area (*e.g.,* 15 CFR 922.163). Because an activity is listed here does not mean that such activity is being or will be regulated. Listing an activity here means that the Secretary of Commerce can regulate the activity in accordance with all applicable laws without going through the designation procedures required by paragraphs (a) and (b) of section 304 of the NMSA, 16 U.S.C. 1434(a) and (b). Further, no regulation issued under the authority of the NMSA may take effect in Florida State waters within the sanctuary if the Governor of the State of Florida certifies to the Secretary of Commerce that such regulation is unacceptable within the forty-five day review period specified in NMSA.

Activities Subject to Regulation:

1. Mineral or hydrocarbon exploration, development, or production;

2. Destroying, causing the loss of, or injuring coral or live rock or attempting to do so;

3. Altering or placing any structure, object, or other material on the seabed, except as authorized by appropriate permits or as part of lawful fishing;

4. Discharging or depositing any material or discharging or depositing any material beyond the sanctuary that then enters the sanctuary and injures a sanctuary resource or quality;

5. Operating a vessel, including anchoring, in a manner that may destroy, cause the loss of, or injure sanctuary resources or property or in a manner that may injure or endanger the life of sanctuary users;

6. Diving in a manner that could harm sanctuary resources, sanctuary property, or other users of the sanctuary;

7. Stocking within the sanctuary or releasing within or from beyond the boundary of the sanctuary any non-native or exotic species;

8. Defacing, marking, or damaging in any way or displacing, removing, or tampering with any markers, signs, notices, placards, navigational aids, monuments, stakes, posts, mooring buoys, boundary buoys, trap buoys, or scientific equipment;

9. Moving, removing, injuring, preserving, curating, and managing historic resources;

10. Taking, removing, moving, catching, collecting, harvesting, feeding, attracting, injuring, destroying, or causing the loss of or attempting to take, remove, move, catch, collect, harvest, feed, attract, injure, destroy, or cause the loss of any sanctuary resource;

11. Conducting or attempting to conduct any manner of activities within specially designated marine areas, including removing, injuring, or disturbing any living or dead organism or bottom formation; possessing or using certain fishing gear; operating or anchoring vessels; entering areas; and diving;

12. Harvesting marine life species;

13. Possessing or using explosives, electrical charges, or toxic substances within the sanctuary, or using explosives, electrical charges, or toxic substances beyond the sanctuary that then enter the sanctuary and injure a sanctuary resource or quality;

14. Abandoning fishing gear or vessels and removing (including salvaging) fishing gear and grounded, derelict, or abandoned vessels;

15. Maintaining or deserting a derelict vessel or vessel at risk of becoming derelict and leaving harmful matter aboard a grounded or deserted vessel; and,

16. Interfering with any enforcement action.

Section 2. Emergency and/or temporary regulation.

Any and all activities are subject to immediate emergency and/or temporary regulation, including any not listed in Section 1 of this article.

Article V. Effect on Leases, Permits, Licenses, and Rights

Pursuant to paragraph (c)(1) of section 304 of the NMSA, 16 U.S.C. 1434(c)(1), a person may conduct an activity prohibited by sanctuary regulations if such activity is specifically authorized by a valid Federal, State, or local lease, permit, license, approval, or other authorization or right in existence prior to the effective date of these revised terms of designation, provided that the holder of the lease, permit, license, approval, or other authorization complies with the procedures outlined in this subpart and subpart E.

However, in no event may the Secretary of Commerce or his or her designee issue any form of approval for the: (1) exploration, leasing, development, or production of minerals or hydrocarbons; (2) disposal of dredged material within the sanctuary other than in connection with beach renourishment or sanctuary restoration projects; or (3) discharge of untreated or primary treated sewage. Any purported authorizations issued by other authorities for any of these activities within the sanctuary shall be invalid.

Article VI. Alteration of this Designation

The terms of designation, as defined in paragraph (a) of section 304 of the NMSA, 16 U.S.C. 1434(a), may be modified only by the procedures outlined in paragraphs (a) and (b) of section 304 of the NMSA, 16 U.S.C. 1434(a) and (b), including public hearings, consultation with interested Federal, State, and local government agencies, review by the appropriate congressional committees, review by the Governor of the State of Florida, and approval by the Secretary of Commerce, or his or her designee. No designation, term of designation, or implementing regulation may take effect in Florida State waters within the sanctuary if the Governor of the State of Florida certifies to the Secretary of Commerce that such designation, term of designation, or regulation is unacceptable within the forty-five day review period specified in NMSA.

Florida Keys National Marine Sanctuary Boundary Coordinates

The Florida Keys National Marine Sanctuary (sanctuary) encompasses an area of 3,427 square nautical miles (4,539 square miles) of coastal, ocean, and Gulf of Mexico waters and the submerged lands thereunder from the boundary to the shoreline as defined by the mean high water tidal datum surrounding the Florida Keys in southern Florida. The precise boundary coordinates are listed in Appendix I to this Subpart.

The sanctuary boundary begins approximately 4 miles east of the northern extent of Key Biscayne at Point 1 and continues roughly south and then southwest and west in numerical order to Point 15 approximately 27 miles SW of Loggerhead Key. From Point 15 the sanctuary boundary continues north to Point 17 which is approximately 18 miles NW of Loggerhead Key and then continues roughly east in numerical order to Point 23 just north of Sprigger Bank. From Point 23 the boundary continues in numerical order roughly SE to Point 26 just north of Old Dan Bank. From Point 26 the boundary continues NE in numerical order through Bowlegs Cut and Steamboat Channel to Point 42 near the southern entrance to Cowpens Cut west of Plantation Key.

From Point 42 the boundary continues towards Point 43 until it intersects the shoreline. From this intersection the boundary follows the shoreline roughly NNE until it intersects the line segment formed between Point 44 and Point 45.

From this intersection the boundary continues NNE to Point 45 and then roughly NE in numerical order to Point 61 just west of Hammer Point in Tavernier, FL. From Point 61 the boundary continues in numerical order roughly north and then NW to Point 64 just west of Pigeon Key. From Point 64 the boundary continues in numerical order roughly NE then NNE through Baker Cut to Point 69. From Point 69 the boundary continues in numerical order roughly NE through Buttonwood Sound to Point 73.

From Point 73 the boundary continues towards Point 74 until it intersects the shoreline near the southern entrance to Grouper Creek west of Key Largo, FL. From this intersection the boundary follows the shoreline NE along Grouper Creek until it intersects the line segment formed between Point 75 and Point 76. From this intersection the boundary continues towards Point 76 until it intersects the shoreline. From this intersection the boundary follows the shoreline roughly east until it intersects the line segment formed between Point 77 and Point 78.

From this intersection the boundary continues to Point 78 and then roughly ESE in numerical order through Tarpon Basin to Point 85. From Point 85 the boundary continues NE and then NW to Point 92.

From Point 92 the boundary continues towards Point 93 until it intersects the shoreline. From this intersection the boundary follows the shoreline roughly north along Dusenberry Creek until it intersects the line segment formed between Point 94 and Point 95.

From this intersection the boundary continues to Point 95 and then NE in numerical order through Blackwater Sound to Point 102 south of the entrance to Jewfish Creek.

From Point 102 the boundary continues towards Point 103 until it intersects the shoreline. From this intersection the boundary follows the shoreline roughly NNE and then NW until it intersects the line segment formed between Point 104 and Point 105. From this intersection the boundary continues towards Point 105 until it intersects the shoreline. From this intersection the boundary follows the shoreline roughly NNE and then roughly west along southwestern Barnes Sound and around Division Point until it intersects the line segment formed between Point 106 and Point 107 near Manatee Creek east of Long Sound. From this intersection the boundary continues towards Point 107 until it intersects the shoreline. From this intersection the boundary follows the shoreline roughly NNW until it intersects the line segment formed between Point 108 and Point 109. From this intersection the boundary continues towards Point 109 until it intersects the shoreline. From this intersection the boundary follows the shoreline roughly east until it intersects the line segment formed between Point 109 and 110. From this intersection the boundary continues towards Point 110 until it intersects the shoreline. From this intersection the boundary follows the shoreline roughly north and then NE until it intersects the line segment formed between Point 111 and Point 112. From this intersection the boundary continues towards Point 112 until it intersects the shoreline. From this intersection the boundary follows the shoreline roughly east and then north around Bay Point and then west until it intersects the line segment formed between Point 113 and Point 114. From this intersection the boundary continues towards Point 114 until it intersects the shoreline. From this intersection the boundary follows the shoreline north along the western side of Manatee Bay until it intersects the line segment formed between Point 115 and Point 116. From this intersection the boundary continues towards Point 116 until it intersects the shoreline.

From this intersection the boundary follows the shoreline around northern Manatee Bay and Barnes Sound until it intersects the line segment formed between Point 117 and Point 118. From this intersection the boundary continues towards Point 118 until it intersects the shoreline. From this intersection the boundary follows the shoreline roughly to the SE south of FL State Route 905A—Card Sound Road then NW and roughly north along western Little Card Sound and then Card Sound cutting off the mouths of canals and drainage ditches until it intersects the line segment formed between Point 119 and Point 120 south of Midnight Pass. From this intersection the boundary continues to Point 120 and then roughly SE to each successive point in numerical order approximating the southern boundary of Biscayne National Park to Point 142 approximately 3 miles ENE of Turtle Rocks. From Point 142 the boundary continues roughly N to each successive point in numerical order ending at Point 158.

The inner landward sanctuary boundary is defined by and follows the shoreline where not already specified in the description above.

Dry Tortugas National Park is not included within the FKNMS and the inner sanctuary boundary in this area is coterminous with this national park boundary and begins at Point DT1 and continues in numerical order counterclockwise around the national park ending at Point DT10.

VI. Response to Comments

NOAA collected comments on the 2019 draft EIS as well as the 2022 proposed rule. For the purposes of full transparency and responsiveness, the following section addresses all of these comments. The subject matter of each comment category is first summarized, followed by NOAA's response. Responses may refer to portions of the regulations, management plan, or EIS that NOAA modified as a result of comments it received. Comments and responses are organized primarily by applicable regulation or to a few cross-cutting categories of comments.

General

Comment 1: NOAA received comments that opposed any additional regulatory action and called for no change to the current regulations and management plan.

Response: As described in Section I.2 above, NOAA determined it was necessary to update the FKNMS management framework, including modifying regulations, in order to ensure long-term resource viability and ecosystem function and to address current and future threats to sanctuary resources such as diminished water quality originating from both within and outside the sanctuary, significant decrease in coral cover, and habitat degradation from vessel impacts including anchor damage, propeller-scarring, and groundings. Each of these threats has major implications for FKNMS. In addition, the 2011 FKNMS Condition Report [13] concluded that resources in the Florida Keys appear to be in fair to fair/poor condition and are generally either stable or in decline. Since the release of the 2011 condition report, sanctuary resources have been further degraded by Hurricane Irma (2017), a serious and widespread coral disease outbreak, a seagrass die-off, and warming ocean temperatures as evident during the summer 2023 marine heat wave, among other threats. New regulations are necessary to address these conditions.

Sanctuary Boundary

Comment 2: NOAA received comments supporting the sanctuary boundary expansion alternative to include the ATBA, the Tortugas region,

[13] *https://sanctuaries.noaa.gov/science/condition/fknms/welcome.html.*

and Pulley Ridge. Comments noted support for sanctuary-wide boundary expansion to reduce confusion and create consistency, particularly through the ATBA boundary expansion. Comments acknowledged the need for greater ecological protection in the Florida Keys that could be achieved through boundary expansion, particularly by including the entire Tortugas region and Pulley Ridge. NOAA received comments opposing the sanctuary boundary expansion alternatives, largely due to concern about loss of access for traditional fishing activities.

Response: NOAA's action to include the final preferred alternative aligns the sanctuary boundary with the ATBA boundary to create a consistent geographic and regulatory boundary. In addition, including the ATBA and the Tortugas region provides additional protections for the resources that are present in the expanded area, including those that are ecologically connected. In response to concerns about sanctuary boundary expansion resulting in loss of fishing access, the boundary expansion does not affect activities that are considered traditional fishing as defined at 15 CFR 922.162.

Comment 3: NOAA received comments supporting and opposing expanding the sanctuary boundary to include a distinct unit at Pulley Ridge. Comments in support noted its value as the deepest known photosynthesizing coral reef off the continental U.S. with physical and biological connections to the Florida Keys. Comments in opposition noted this area is already regulated as a HAPC with associated GMFMC regulations and requested that NOAA pursue other avenues to protect the area from all vessel anchoring.

Response: The final rule does not include Pulley Ridge in the sanctuary boundary. The existing HAPC with associated GMFMC regulations prohibits, among other things, anchoring by fishing vessels. NOAA's purpose for proposing a designation of a new unit in Pulley Ridge was to protect important mesophotic reef habitat from anchoring by all vessels. Concurrent with considering boundary expansion to include Pulley Ridge, as noted in the proposed rule, the United States proposed that the IMO designate a No Anchoring Area in the southern portion of Pulley Ridge, which was approved and implemented starting June 1, 2023 (IMO SN.1/Circ.342). The IMO designation has prohibited all anchoring on Pulley Ridge and, therefore, the need for additional regulation by NOAA is greatly reduced. Finally, given that this area of Pulley Ridge is managed as a HAPC with associated fishing regulations under the MSA, the final rule does not restrict fishing in this area.

Comment 4: NOAA received comments that opposed any change to the sanctuary boundary citing reasons including (1) the lack of sufficient enforcement; (2) concern of restricting use/access for the public, particularly for commercial fishing and most notably shrimp fishing; (3) budget and management limitations; and (4) socioeconomic consequences to certain industries.

Response: NOAA considered all of these concerns throughout the Restoration Blueprint process, including at the draft EIS and draft management plan phase, the notice of proposed rulemaking, the final EIS and final management plan, and in this final rule. Specifically, (1) enforcement is identified as one of six management priorities in the final management plan (see the priorities section and activities 3.3.1 and 5.3.2). NOAA/ONMS will work with partners to enhance enforcement capacity to achieve visible resource protection benefits. ONMS is also committed to enhancing public knowledge, understanding, and compliance through establishing consistent regulations, where feasible, and targeted education and interpretation of those regulations. These efforts will strengthen enforcement of the final regulations. (2) Public access, including fishing access, is not affected by expanding the sanctuary boundary. Sanctuary-wide regulations will apply, which may affect how someone operates (*e.g.,* prohibition on impact to the seabed) but do not affect access. Specific to fishing activity, exemptions from specific sanctuary-wide regulations exist for traditional fishing activities, the definition for which is updated in the final rule. (3) NOAA will address resource limitations by identifying priorities towards which resources will be directed. NOAA's final management plan includes a suite of six management priorities and Appendix I outlines a prioritization framework that initially evaluates cost and level of effort needed followed by consideration of the following five factors: importance, impact, feasibility, requirements, and connection to one of the six priority themes. In addition, NOAA will continue to work with partners that play an essential role in how the sanctuary conducts its operations and programs. Appendix II includes a list of representative partners. (4) As summarized in the 2022 Socioeconomic Report (Schwarzmann et.al., 2022), the estimated economic effects of the 2022 NOPR alternative are not considered significant under section 3(f)(1) of Executive Order 12866. Estimated losses to small businesses in the commercial fishing and recreational for-hire fishing sectors resulting from proposed boundary changes are expected to be less than 1% of average revenue with the exception of the lobster fishery, which may experience a loss of roughly 2%. In this final rule, NOAA is selecting a smaller sanctuary boundary expansion than the 2022 NOPR Alternative; therefore, socioeconomic impacts are expected to be less than what was estimated in the 2022 Socioeconomic Report.

Sanctuary-Wide Regulations

Comment 5: Commenters requested NOAA consider adding an exception to the proposed anchoring definition to include an exemption for push poles and power poles.

Response: NOAA's final rule prohibits anchoring in all SPAs, Habitat Restoration Areas, and Conservation Areas, except in the Western Sambo Conservation Area. Given that these areas prohibit take (*i.e.,* fishing) and the use of push poles and power poles is not commonplace, the final rule does not modify the anchoring definition to allow exceptions. The final rule does not regulate anchoring for nearshore WMAs, where push poles and power poles are more commonplace. See the response to comments in the WMA section.

Comment 6: NOAA received comments requesting a definition for trolling given the existing exception for catch and release fishing by trolling in 4 SPAs and the proposal to include a ''trolling only'' zone at the proposed Western Dry Rocks (Alternatives 2 and 3).

Response: The final rule does not include any provisions related to trolling, so a definition is not needed.

Comment 7: NOAA received comments opposing the proposed update to the traditional fishing definition. Commenters requested that the definition more fully capture existing fishing regulations promulgated by State and Federal authorities and allow for the future development and use of innovative gear types intended to reduce impacts on FKNMS resources. Commenters also recommended that the final rule include the complete definition of traditional fishing, instead of being included as a reference to another section or document.

Response: After further consideration and close coordination with the Florida Fish and Wildlife Conservation Commission, the GMFMC, and the

SAFMC, NOAA agrees with the recommendation to capture existing fishing practices in the definition of traditional fishing rather than limiting the definition to activities that were in existence as of 1997. NOAA has included an updated definition for ''traditional fishing'' in the final rule that includes fishing activities taking place as of the effective date of this final rule.

NOAA provides further guidance in final EIS Appendix G that includes an updated description of the current fisheries managed by the FWC in State waters and by NMFS in the EEZ. The traditional fishing activities described in Appendix G are currently occurring in this sanctuary subject to FWC/NMFS regulation and will remain subject to the sanctuary's marine zone regulations where additional protections are needed to address impacts of traditional fishing activities on sanctuary resources.

NOAA agrees that it may be appropriate to update the traditional fishing definition in the future, particularly to recognize new or innovative gear types that become widely used and are demonstrated to reduce impacts to sanctuary resources. Any update to the definition and the fishing activities that are considered traditional fishing would be done through a separate rulemaking in order to consider public comment and to conduct an environmental analysis under NEPA of the potential impacts of new or innovative gear types or fisheries activities on sanctuary resources. New or innovative gear types, along with other new or modified fishing activities, would continue to require sanctuary permits or authorization while they are being tested. NOAA would collaborate closely with, and rely on the expertise of, FWC and the FMCs when considering any updates to the definition of traditional fishing activities.

Discharge and Deposit Regulation Exception

Comment 8: NOAA received comments strongly supporting a specific regulation to limit discharges from cruise ships and asserting that cruise ship discharges are a significant cause of water quality problems in the FKNMS. Specific comments requested clarification about exceptions from the discharge prohibitions for certain discharges (*e.g.,* rainwater, ballast water) from cruise ships. Commenters also requested that NOAA continually review this provision to see if technology advances warrant additional or modified discharge regulations. Commenters also stated that discharges from cruise ships are sufficiently regulated by the U.S. EPA, including through the CWA and VIDA. Finally, commenters claimed there is no scientific support for prohibiting exhaust gas cleaning system discharges and no need to rely on the precautionary principle.

Response: NOAA has updated and clarified the cruise ship discharge and deposit prohibition in this final rule to more clearly prohibit discharging or depositing of any material or other matter from a cruise ship except cooling water. NOAA determined that other alternatives, which proposed instead to specify certain discharges that would be allowed by cruise ships (*e.g.,* ''clean wash water''), would be extremely difficult to define based on changing industry standards. The use of such terms could be interpreted differently among stakeholders, which could create compliance and enforcement challenges. EPA has recently issued a final rule setting national standards of performance for commercial vessel incidental discharges, but these standards will not be effective until the United States Coast Guard has promulgated implementing regulations. Additionally, the sanctuary was designated by Congress, in part, for the purpose of protecting water quality, and sanctuary regulations have long imposed more stringent vessel discharge standards than the CWA. For instance, the sanctuary's current discharge and deposit prohibition, which provides a limited exception for certain routine vessel discharges, was promulgated almost ten years before EPA began regulating incidental vessel discharges in 2007.

Discharges of EGCS wash water contain PAH's, higher pH water, and heavy metals. EPA's national standards for discharge of EGCS wash water is based largely on the IMO 2015 Guidelines for Exhaust Gas Cleaning Systems (Resolution MEPC.259(68)), but these standards may not be sufficiently protective for FKNMS. Although the degree of harm of these releases depends on the local environmental conditions, scientific studies indicate a cause for concern of impacts to sensitive ecosystems such as FKNMS (Teuchies et al., 2020). NOAA does not require scientific certainty to prohibit EGCS wash water discharges. While EPA's regulations do not ban EGCS wash water, a ban narrowly tailored to cruise ships in FKNMS is feasible. Cruise ships spend a short time traveling in the Sanctuary to visit Key West, and cruise ships currently switch to low sulfur fuels when entering harbors and ports where EGCS discharges are prohibited. Though low-sulfur fuel is more costly, cruise ships spend a very short time traveling through the sanctuary to visit Key West. This regulatory change meets the express purpose of the Act to facilitate uses in the sanctuary to the extent compatible with the primary objective of resource protection by, in this case, considering the low economic impact on cruise ships and the risk of harm to sanctuary resources. 16 U.S.C. 1431(b)(6).

Comment 9: NOAA received comments raising concerns about compliance with the prohibition of discharges from cruise ships and enforcement of violations. Specifically, commenters noted that this regulation lacks the appropriate enforcement mechanism and mandatory penalty consequences.

Response: Cruise ships are subject to a comprehensive system of regulation and oversight. State and Federal agencies may conduct announced and unannounced inspections and enforce compliance with State and Federal laws and regulations. A cruise ship found to be in violation of the sanctuary's discharge and deposit prohibition could be subject to civil penalties under the NMSA, 16 U.S.C. 1437(d), or, in some cases, criminal prosecution. If a discharge and deposit results in destruction, loss of, or injury to sanctuary resources, a cruise ship may also be liable for resulting response costs and damages under 16 U.S.C. 1443.

Comment 10: NOAA received public comments requesting that proposed discharge prohibition for cruise ships be extended to all commercial vessels over 79 feet.

Response: NOAA appreciates these comments and considered them carefully. Cruise ships are a unique source of a considerable volume of greywater discharges generated by carrying passengers (*i.e.,* showers, laundry, sinks, kitchens, etc.) and have the ability to refrain from discharging during their short time in the sanctuary. NOAA may consider extending this discharge prohibition to other large vessels in a future rulemaking after evaluating water quality monitoring data and assessing the types, numbers, and sizes of vessels present in FKNMS.

Comment 11: NOAA received comments recommending that a regulation be added to specifically address turbidity (*e.g.,* suspended sediments in the water column) generated from cruise ships and other large vessels.

Response: NOAA's final rule was designed to limit discharges of greywater and runoff from cruise ships

because these discharges are well studied as having potential adverse effects on water quality, and cruise ships are capable of reducing these discharges while in the sanctuary. More study is needed to weigh the costs and benefits of any regulation aimed at reducing turbidity from cruise ship transit. Ship-caused turbidity could have localized impacts to sanctuary resources in the vicinity of the transit channel. It is unclear if measures to address those impacts could be taken other than reducing the size or frequency of cruise ships entering Key West, which could have measurable economic impacts.

Additionally, the Florida DEP is responsible for reviewing, establishing and revising water quality standards, including turbidity. Pursuant to the Federal Clean Water Act, DEP conducts a comprehensive review of water quality standards every three years. The Water Quality Protection Program (WQPP) may invite additional review, discussion and recommendations about proposed or adopted revisions to water quality standards that impact waters of the Florida Keys.

Comment 12: NOAA received comments acknowledging that in some cases vessels provide affordable housing options. These commenters were concerned about the use of these vessels as homes, the use of vessels as overnight rentals, and the potential environmental impact of discharge from such vessels if they aren't regulated specifically.

Response: NOAA acknowledges the reality of vessels serving as affordable housing and that the use of vessels as short-term rentals could potentially cause harm to the environment from discharges from residential uses. However, NOAA already regulates vessel discharges, regardless of the duration of a visit. State waters of the Florida Keys have been designated as a No Discharge Zone since 2002. This designation was extended into Federal waters in 2010, and current sanctuary regulations prohibit the discharge or deposit of any material or other matter into the sanctuary, with limited exceptions. NOAA continues to work with the FKNMS Water Quality Protection Program (WQPP) (established through the FKNMSPA and administered by the U.S. EPA and the State of Florida's DEP in cooperation with NOAA), its partners, and the community to support outreach to vessel owners about sanctuary discharge regulations and options for marine sanitation device pump out. NOAA also continues to support NOAA OLE, FWC, and USCG enforcement efforts related to discharge. See also the comments and responses to Overnight Mooring Buoys.

Temporary Regulation for Emergency and Adaptive Management

Comment 13: NOAA received comments supporting an expanded time frame for the existing emergency regulation to allow increased responsiveness to emergencies and emerging issues that would benefit from immediate management action. NOAA also received comments expressing concerns that an increased time frame could subvert the public comment process required for rulemaking. Commenters also suggested that the sanctuary consider different time frames for sanctuary-wide versus marine zone-specific emergencies. Finally, NOAA received comments that ''emergency'' was not clearly defined which raised uncertainty about the drivers that would potentially allow for greater flexibility in modifying zones to address changing resource management needs.

Response: The final rule includes a new regulatory framework for temporary emergency rules that was developed in response to public comments. The final rule includes an increased time frame for the Temporary Regulation for Emergency and Adaptive Management in order to provide the greatest level of flexibility to NOAA for responding to emergency management needs in the sanctuary. While NOAA's final rule has a maximum time frame (six months with one six-month extension), NOAA will consider shorter time frames where appropriate to meet management needs. In addition, this extended time frame provides sufficient time for NOAA to go through a full rulemaking process if the situation warranted. An increased time frame also aligns with the emergency time frames outlined in section 305(c) of the MSA. This increased time frame is also consistent with other national marine sanctuaries that have emergency regulations.

In addition, the final rule addresses the comments in a number of ways. Specifically:

- To address concerns about subverting the public notice and comment process, NOAA is making clear that the existing APA requirements—to provide for prior notice and opportunity for public comment, unless NOAA can demonstrate good cause apply to these emergency rulemakings;
- To respond to questions regarding what NOAA would consider an emergency, the agency has identified categories for which temporary regulations may be promulgated. NOAA believes it is clearer and more efficient to establish well-defined categories, criteria, and processes for temporary regulations to respond to time-sensitive needs to manage sanctuary resources, rather than attempt to define ''emergency;'' and
- With respect to concerns raised about application of emergency action in State waters, the final rule explicitly acknowledges that temporary regulations shall be subject to the Governor's review pursuant to section 304(b)(1) of the NMSA.

Historical Resources Permitting

Comment 14: NOAA received comments supporting updating historical resource permits to align with the State process, noting that historic resources are nonrenewable resources and NOAA has an obligation to manage them as such. Comments specifically acknowledged that aligning NOAA's historical resource permits with Florida's archaeological research permit standards should make the permitting process more efficient for researchers working in the State waters of the sanctuary. Some commenters noted that this alignment would in turn serve to increase protection of FKNMS historical resources.

Response: NOAA agrees and is updating the historical resource permits for these reasons. The current permitting system is unnecessarily complicated and confusing to applicants as it artificially bisects the archaeological research process into either survey/inventory or research/recovery, often resulting in insufficient research plans to meet project goals. The archaeological research permit category requires that applicants commit to following an explicit statement of objectives and that project methods be chosen to gather the information required to meet the stated objectives. The quality of the research, both proposed and conducted, will be improved by these changes, and the reporting of research results will also be of higher quality when directed by a professional archaeologist with the required education and experience. Finally, the archaeological research permit category with associated application and review criteria will increase the protection of historical resources throughout the sanctuary. These changes support the agency's efforts to meet National Historic Preservation Act (NHPA) responsibilities in combination with the new management plan and the proposed NHPA Programmatic Agreement for FKNMS Operations, Management, and Permitting. NOAA concludes only minor socio-economic impacts will

result from increasing regulation of historic resource permitting.

Comment 15: NOAA received comments opposing changes to the historical resource permit categories due to the potential impact to private property rights for those involved in salvage of historic shipwrecks. NOAA also received comments that organizations holding Federal Admiralty Court rights of access should not be exempt from updated historical resource permitting regulations. More generally, NOAA received comments both supporting and opposing historic shipwreck salvage and the resulting removal of historical resources from the sanctuary for private gain. Commenters in support of the status quo indicated a belief that private sector salvage was a better way to preserve historical resources. Comments opposing historic shipwreck salvage were supportive of NOAA's proposal to remove current permitting provisions allowing for the deaccession/transfer of sanctuary artifacts.

Response: Holders of pre-existing, valid admiralty rights are not required to obtain a deaccession/transfer permit under the current sanctuary policies, and, as such, will not be affected by the elimination of this permit category in the final rule. In the 1996 FKNMS final management plan and final environmental impact statement (Vol. 2, pg. 99), NOAA recognized that admiralty rights of access to specific historic shipwrecks had been granted by Federal courts to certain organizations and individuals prior to congressional designation of the sanctuary. NOAA continues to recognize such rights of access for those organizations and individuals that have continued to maintain the underlying admiralty rights and will recognize any right to seek adjudication of title to articles of salvage in accordance with the entities' admiralty rights.

The removal of a deaccession/transfer permit category for those without Federal Admiralty rights is consistent with Federal archaeological preservation laws, collectively referred to as the Federal Archaeology Program, which promote the ''in place'' conservation of archaeological sites on public lands, rather than private salvage/recovery. Furthermore, archaeological excavation and artifact recovery from public lands should be undertaken for public benefit to answer specific research questions. The resulting artifact collections should be maintained intact for future study. NOAA's changes to FKNMS historical resource permitting categories in the final rule aligns FKNMS regulations with these national historic preservation standards.

Those holding pre-existing, valid admiralty rights are not exempt from regulation or other historic resource permitting requirements. In accordance with section 304(c) of the NMSA and ONMS regulations at 15 CFR 922.10 and 922.167, these rights of access are subject to regulation and restriction by NOAA and must be carried out in a manner consistent with other applicable laws such as the Abandoned Shipwreck Act (ASA), ASA guidelines, NHPA, NMSA, and FKNMSPA.

Comment 16: NOAA received comments specifically related to the Draft NHPA Programmatic Agreement for FKNMS Operations, Management, and Permitting, which was included in Appendix C of the 2019 draft EIS. Commenters expressed frustration that the previous NHPA Programmatic Agreement had expired prior to the development and implementation of an updated version. Commenters expressed concern that this updated draft was not fairly publicly vetted and approved with full consultation of the relevant Florida State offices. Some commenters indicated a desire to have the draft agreement made available through a separate public review process.

Response: NOAA has been working with the State of Florida and the Advisory Council on Historic Preservation (ACHP) since 2015 to develop a NHPA Programmatic Agreement for FKNMS Operations, Management, and Permitting. NHPA implementing regulations under 36 CFR 800.14(b)(2)(ii) require the agency official to arrange for public participation appropriate to the subject matter and scope of the proposed agreement. NOAA determined that the 2019 draft EIS process would be a suitable way to notify the public of the draft programmatic agreement and receive public comment. In addition to public meetings during which NOAA presented information about its management update, including the draft programmatic agreement, NOAA also held a meeting with FKNMS historical resource permittees and former permittees to make them aware of the 2019 draft EIS/draft programmatic agreement and associated public comment period. NOAA believes that the 5-month public comment period offered for the 2019 draft EIS/draft programmatic agreement was sufficient. NOAA, with FKNMS Sanctuary Advisory Council Submerged Cultural Resources members, hosted a special meeting just following release of the draft EIS in 2019 to further engage the interested public on issues related to the Programmatic Agreement. Since that time, NOAA, the State of Florida and the ACHP have been finalizing the agreement.

Fish Feeding

Comment 17: NOAA received comments that generally supported the proposal to prohibit feeding and attracting of fish, including sharks, or other marine species, from any vessel or while diving in the sanctuary, consistently in State and Federal waters. Specifically, comments opposed shark feeding for entertainment purposes, citing safety concerns of mixing feeding sharks with fishing, swimming, and snorkeling activities. Commenters also noted concern about habituating sharks to feeding and how that affects their behavior. NOAA also received comments that opposed this proposed regulation because of the potential loss of eco-tourism and educational opportunities and questioned the impacts of fish and shark feeding on the environment, human safety, and fish and shark behavior.

Response: NOAA determined the benefits of prohibiting fish feeding outweigh the potential costs to eco-tourism or educational opportunities. NOAA considered impacts to sharks and shark depredation, human safety concerns, and compliance and enforcement. In order to minimize the impacts to current eco-tourism and educational businesses that utilize fish feeding, NOAA will consider issuing general permits to pre-existing eco-tour operators. However, in order to minimize the negative impacts of fish feeding, this exception will only apply to pre-existing companies with the goal of phasing out the practice, and permit applicants must satisfy all general permit application requirements. Any permits would contain specific terms and conditions to protect sanctuary resources.

Comment 18: NOAA received comments questioning the difference between the prohibition of feeding fish for attracting and viewing purposes but allowing the use of bait in traditional fishing activities and the impact these activities have on the environment and fish behavior.

Response: This regulation was developed due to concerns about the safety of divers, swimmers, and the effects of concentrating and training predatory fish to associate humans with food. Moray eels, sharks, barracuda, groupers and a host of other species can pose an increased danger to divers as a result of hand-feeding. In addition, hand feeding generally occurs in the same locations, days, and time schedules and

creates a habitual feeding station for marine life. This is in contrast to fishing activity that is generally less regular and consistent in locations, times, and schedule. Marine species conditioned to being fed begin anticipating meals, which interrupts natural feeding cycles and can result in negative behavior and health impacts including that hand-fed fish are especially vulnerable to predators. The existing exemption for the discharge or deposit of fish, fish parts, chumming materials or bait used or generated incidental to and while conducting traditional fishing activities will be maintained. A description of activities considered traditional fishing is included in Appendix G of the final EIS.

Comment 19: NOAA received comments requesting that shore-based fish feeding be regulated, including that all business-scale feeding of tarpon and other species should be fully prohibited noting the habituation of a wild animal.

Response: NOAA has decided not to regulate shore-based activity at this time due to the large number of shore-based fish feeding venues. These venues are mostly small-scale, coin operated operations with a handful of larger-scale operations at points throughout the sanctuary, which would be difficult to control and manage to ensure compliance.

Grounded and Deserted Vessels, and Harmful Matter

Comment 20: NOAA received comments supporting the proposal providing the sanctuary greater authority to address grounded and deserted vessels. Commenters noted that NOAA should ensure that definitions and application of any proposed regulations are consistent with the State of Florida regulations and enforcement authorities. NOAA also received comments acknowledging that enforcement of a new regulation could prove challenging given the number of deserted vessels in the sanctuary and broad geographic area where they are found. NOAA received comments supporting additional coordination with the towing and salvage operators to develop best practices for vessel removal recognizing that sometimes additional damage can occur during the removal process.

Response: NOAA agrees with the need for the sanctuary to have its own specific regulations to respond to the threat of deserted vessels and harmful matter. The final rule is consistent with State regulations. NOAA will continue to work in partnership with the State of Florida, Monroe County, the U.S. Coast Guard and others due to the challenging scope of this issue. Finally, the management plan includes additional details for how NOAA will engage with towing and salvage operators to develop best management practices and a permitting process for removing grounded and deserted vessels (See Appendix A, Activity 3.3.4).

Large Vessels Mooring Buoys

Comment 21: NOAA received comments that support delineating large and small vessel mooring buoys. Commenters requested clarification about the size delineation including length, combined length of rafted vessels, and vessel tonnage. Some comments supported this regulation and the potential application to limit access to sensitive areas that have been damaged by overcrowding and intensive use. Commenters also recommended boater education courses to increase boater knowledge regarding proper use of and regulations associated with mooring buoys. Commenters raised concern about the number of large vessel mooring buoys and if that would be sufficient to meet demand.

Response: NOAA agrees with comments about delineating mooring buoys based on vessel sizes and provides further clarification in the definition for ''large vessel'' in the rule. In addition, large vessel mooring buoys include a sticker indicating the vessel length that can use such buoys. The management plan includes activities related to review and update of the sanctuary mooring buoy program including plans to engage user groups to help identify areas of use, numbers of users, and placement of mooring buoys. Finally, the sanctuary website includes information and tutorials about the proper use of mooring buoys, information is included in the Bluestar Program education materials, and the sanctuary has a voluntary boater education course and participates in and provides sanctuary specific content for boater training courses hosted by the U.S. Coast Guard Auxiliary and others.

Live Rock Aquaculture

Comment 22: NOAA received comments that supported the development of a Memorandum of Agreement with the Florida Department of Agriculture and Consumer Services (FDACS) and NMFS for better coordination of this activity. Commenters opposed the requirement of an additional sanctuary permit for live rock aquaculture operations.

Response: NOAA agrees and the final rule does not include an additional sanctuary permit for live rock aquaculture. The final management plan includes activity 3.2.3 calling for the development of a Memorandum of Agreement with the Florida FDACS and NMFS for better coordination of this activity.

Comment 23: NOAA received specific comments requesting that existing live rock aquaculture sites be considered when evaluating the final marine zone locations, regulations, and continued access for existing permitted live rock aquaculture operators.

Response: NOAA has evaluated the existing live rock aquaculture site locations in relation to the proposed new or modified marine zones. Currently, there is only one marine zone where live rock aquaculture occurs (in the vicinity of the proposed new Tavernier Nursery Restoration Area). Due to the fact that the Tavernier Nursery Restoration Area is proposed transit only, the live rock aquaculturist will need to obtain a sanctuary permit to enter and operate in this zone. In addition, for this site, and more generally, live rock aquaculture practitioners must have a valid State license or Federal permit to operate. As long as they have a copy of this documentation and a sanctuary permit on their vessel if and when operating in the sanctuary marine zone, enforcement action will not be taken with respect to lawful and authorized live rock aquaculture operations within this marine zone. NOAA and FWC will ensure that their enforcement officers are aware that valid State license or Federal permit holders may continue to conduct this activity as licensed or permitted.

Overnight Use of Mooring Buoys

Comment 24: NOAA received comments that were generally not supportive of prohibiting overnight use of mooring buoys, largely due to issues of public safety (*e.g.,* safe harbor during storms), public access, and enforcement. Some public comments, however, highlighted concern about new and increasing practice of anchored and moored vessels being used for overnight accommodation (*e.g.,* vacation rental by owner) and possible impacts from such use, including prohibited discharges. Comments also include alternative proposals including limiting visitors to a maximum 14-day stay to prevent long-term use of moorings.

Response: Mooring buoys are intended to increase boating accessibility while reducing impact to critical and sensitive sanctuary resources caused by anchoring. In the EIS, NOAA considered an alternative that would prohibit use of mooring buoys overnight in response to concerns

about impacts of longer term uses such as increased discharges and increased impacts on sanctuary resources, like harvesting of fish. In response to safety concerns, in this alternative NOAA also considered an exception to this regulation for vessels seeking safe harbor. The benefits of this alternative would be to facilitate equitable access to the mooring buoys and to ensure compliance with sanctuary rules while at mooring buoys while continuing to allow overnight use for safety. However, NOAA does not restrict overnight use in the final rule in response to public and agency comments that were generally not supportive of prohibiting overnight use of mooring buoys, largely due to issues of public safety, limiting public access, and enforcement.

Shoreline Slow Speed

Comment 25: NOAA received comments that were generally supportive of modifying the existing idle speed, no wake regulation along all residential shoreline (922.163(a)(5)(iii)(D)) to a more general shoreline slow speed regulation and applying it to all shorelines within the sanctuary. Commenters noted the benefits of such a regulation including (1) potentially decreasing the number of individual WMAs (where speed is regulated); (2) reducing the need for, or at least the number of, marker buoys and signage; and (3) providing additional protections for nearshore habitats and species. Commenters also noted concern regarding the feasibility of enforcing a shoreline slow speed regulation and the number of exceptions that may be required for channels, passes, and ability to access deeper areas nearshore.

Response: The sanctuary's existing regulations prohibit operating a vessel at a speed greater than 4 knots or in a manner which creates a wake within 100 yards of residential shorelines. In Alternative 4, NOAA considered modifying this regulation so that it applies to 100 yards of all shorelines (not just residential) and simplifying the speed restriction by prohibiting ''creating an extensive wake.'' NOAA acknowledges the value of expanding slow speed regulations for the reasons identified by the commenters, as well as the value that additional shoreline protections could provide in light of potential impacts from climate change and sea level rise. However, in the final rule, NOAA retains the existing regulatory language due to the number of exceptions that may be required for channels and passes and the potential loss of access to deeper areas nearshore. In the preferred final alternative, NOAA carefully considered all of the proposed existing, modified, and new WMAs to ensure that the WMAs will provide additional protections for nearshore habitats and species in the areas of greatest need without a slow speed restriction.

Marine Zones and Associated Regulations

Comment 26: NOAA received numerous suggestions for new or different areas to be designated marine zones.

Response: NOAA carefully assessed all suggestions for new or modified marine zones throughout the Restoration Blueprint process. NOAA's assessment was based on reviewing the resources present in the areas, the condition of those resources, risks to the resources, and the nature and extent of the public's use of those areas. NOAA carried forward new or modified marine zones for additional analysis in the final rule if NOAA identified a potential need for protection that outweighs potential negative effects on the public's use. The new marine zones include: South Islamorada Coral Gardens, Cannon Patch, Sister Creek, Hurricane Key, Don Quixote Key, Howell Key, South Picnic Island, Pine Channel Island, Upper Sugarloaf Sound, Little Saddlebunch, Coconut Key, Bill Finds Key, Veterans Key, Upper Matacumbe Key, Cheeca Rocks Flat, Lower Matacumbe Key, Ocean Reef, and Plantation Key Colony.

Comment 27: NOAA received comments expressing concern that NOAA is establishing new marine zones with access restrictions, particularly impacting fishing access, but NOAA does not subsequently re-open areas for fishing once the marine zone has either achieved its purpose or resource conditions have shifted.

Response: NOAA's final rule eliminates five existing marine zones including one Conservation Area (Looe Key SUA), two SPAs (Rock Key and French Reef) and two WMAs (Little Crane Key and Tidal Flat South of Marvin Key). These existing marine zones are eliminated due to resource condition changes and an opportunity to evaluate different management regimes. The elimination of these zones removes restrictions on fishing in these areas.

In addition, NOAA proposed 13 new marine zones in the 2019 draft EIS that are not included in the proposed or final rule. These proposed marine zones are not being finalized for a range of reasons including the need for additional scientific and user data and concerns about fishing access and other recreational uses within these areas.

Management Areas

Comment 28: NOAA received comments supporting the proposal to change the Existing Management Area zone type to Management Area.

Response: NOAA agrees and is changing the zone type from Existing Management Areas to simply Management Areas. This change is common sense given that all marine zones within FKNMS will now be considered existing. Key Largo and Looe Key areas (which predated and were encompassed in the designation of the FKNMS) are now be referred to as Management Areas with all existing regulations maintained. Great White Heron NWR and Key West NWR, which are referred to as Existing Management Areas, will now simply be referred to as national wildlife refuges. Existing sanctuary regulations in the Key West and Great White Heron NWRs will be maintained with the exception of a minor change to a particular area where personal watercraft will be allowed to operate in Key West NWR where they are otherwise prohibited.

Comment 29: NOAA received comments opposing the proposed no anchor regulations in the Key Largo Management Area and Looe Key Management Area. Specific to the Key Largo Management Area, comments noted that a no anchor regulation would impact the multi-use activities there, including fishing, and the area includes sandy bottom habitats where a no anchor regulation is not needed. Comments did, however, support the use of no anchor regulations in smaller, targeted areas with sensitive habitats that would benefit from protection from anchor damage.

Response: NOAA agrees the area includes sandy bottom habitat and a no anchor regulation is not needed, and the proposed and final rule do not include a no anchor regulation in Key Largo or Looe Key Management Areas. The final rule does, however, include a no anchor regulation in all SPAs and Restoration Areas, which is described below in those respective sections.

Comment 30: NOAA received comments opposing the proposal in the 2019 draft EIS to change the Looe Key Management Area boundary by expanding the Looe Key SPA and Looe Key SUA boundaries because this change would have reduced the extent of the areas where certain fishing activities are currently allowed.

Response: NOAA's final rule maintains the greatest amount of area in the Looe Key Management Area available for fishing. The areas of the Looe Key Management Area, Looe Key

SPA, and Looe Key SUA were modified in different configurations in each of the draft EIS alternatives for a few reasons, including to provide additional protections for habitats and species in those areas and in an attempt to simplify the zoning scheme in this area. As in the proposed rule, the final rule does not change the current Looe Key SPA boundary, and the Looe Key SUA is eliminated, thereby opening the area up for fishing that has been closed since 1997. The final rule includes two small Nursery Restoration Areas within the Looe Key Management Area where fishing is prohibited.

Exception for Motorized Personal Watercraft

Comment 31: NOAA received comments related to the operation of motorized PWC in the sanctuary that ranged from banning PWC throughout the sanctuary to opposing any restrictions on where PWC could operate, with the majority of comments supporting some level of continued use of PWCs within the sanctuary. Specific to the proposal to provide a small area open for PWC operation in the Key West NWR, comments included (1) support, (2) recommendations to allow PWC use in areas parallel to the entire length of the Key West ship channel to further public safety, (3) additional licensing requirements for PWC tour operators, and (4) the State of Florida should take the lead for regulating PWC under Chapter 327.60 Florida Statutes.

Response: The current sanctuary regulatory prohibition on the operation of PWC and airboats within the Great White Heron and Key West NWRs prevents the disruption of roosting, foraging, and nesting birds over a widespread area. At this time, NOAA has concluded that the risk of disturbance to sanctuary resources such as birds does not warrant banning PWCs throughout the sanctuary. NOAA finds that it is appropriate to maintain and refine the existing regulation for PWC operations in the areas where the resources of greatest sensitivity are found including the NWRs and the network of islands. The final rule provides a small area for PWC operation in the Key West NWR that is adjacent to the shipping channel to allow for the separation of users engaged in different and conflicting activities while continuing to meet the resource protection goals over the broader area. The Lower Keys Guides Association and the PWC Cooperative requested NOAA allow PWCs in this small area in a presentation to the FKNMS Advisory Council to address concerns about conflict between the operation of PWC and fishing activities in this area including on the eastern side of the shipping channel. NOAA and the Florida Keys NWR support this change to avoid this conflicting use in this very congested shipping channel. All vessel operators have a responsibility to observe the navigation rules and practice good seamanship while transiting this area.

Regarding additional licensing requirements for PWC tour operators, business and livery licensing for PWC tour operators falls under the purview of state, county, and municipal entities, which provide adequate training and screening. Finally, regarding comments asserting that the State of Florida should take the lead for regulating PWC, the State has not enacted regulations to protect sanctuary resources from PWC. Comments also asserted that the current prohibition on PWC does not comply with Florida Statute 327.60, but that provision applies to a county or municipality, not the Federal government. Therefore, the final rule establishes additional regulations on PWC in order to prevent the disturbance of sanctuary wildlife.

Comment 32: NOAA received comments that additional regulation and enforcement of existing regulations of the use of thrill craft (*e.g.,* PWC, airboats, parasails) in the national wildlife refuges is needed.

Response: Existing NOAA regulations prohibit the operation of PWC and airboats within the Great White Heron and Key West NWRs. The Federal Aviation Administration regulates parasail activities and the USCG regulates small passenger vessels that conduct parasail operations. Therefore, at this time, additional regulation and enforcement of existing regulations of the use of thrill craft (*e.g.,* PWC, airboats, parasails) in the national wildlife refuges is not included in the final rule.

Conservation Areas

Comment 33: NOAA received comments supportive of combining the existing Ecological Reserve zone type and existing Special Use zone type into one new Conservation Area zone type and maintaining the existing regulations (*e.g.,* continuous transit only).

Response: NOAA agrees and in an attempt to simplify zone terminology created one Conservation Area zone type that includes the zones with the most restrictive regulations.

Tortugas North Conservation Area Access Permits

Comment 34: NOAA received comments that were supportive of the proposed administrative changes to these permits.

Response: NOAA thanks the commenters for their comments.

Comment 35: NOAA received comments both supporting and opposing establishing three large, contiguous Conservation Areas in each region of the sanctuary (Carysfort Reef, Long Key Tennessee Reef, and Tortugas Corridor). Comments in support were numerous and generally noted the value of providing additional ecosystem-level management and protection. Opposing comments were also numerous and provided specific impacts related to loss of access and opportunity for recreational use in all the proposed areas, particularly related to fishing access.

Response: NOAA considered including large contiguous marine zones in the draft EIS Alternatives 2, 3, and 4 with more area and restrictive regulations in each subsequent alternative to better meet a Sanctuary Advisory Council goal for this review: Protect large, contiguous, diverse, and interconnected habitats that provide natural spawning, nursery, and permanent residence areas for the replenishment and genetic protection of marine life, and protect and preserve all habitats and species. While NOAA believes there is great value in a system of marine zones that includes large contiguous marine zones in each region of the Florida Keys, public sentiment from local Florida Keys residents, location-specific impacts to users (*e.g.,* in some cases a large portion of recreational access would be lost for specific communities), and in some cases (Tortugas Region) additional data is needed. NOAA is committed to working with the community and user groups, agency partners, and researchers to evaluate further refinement of the existing marine zones and to advance a network of marine reserves in the future.

Comment 36: NOAA received comments both supporting and opposing expanding existing marine zones to include deep reef habitat (Tennessee Reef and Western Sambo). Supporting comments noted that expansions would provide additional protections to deep reef habitats that show potential resilience to the stony coral tissue loss disease, could serve as a source for coral reef seed stock, and would provide greater ecosystem level protection. Opposing comments expressed general opposition to limiting any access for fishing activity. Some commenters specifically requested that in the deep reef expansion areas, hook and line trolling or drift fishing be

allowed, noting their desire to allow as much user access as possible while still protecting coral reef habitat from physical damage.

Response: The final rule includes the expansion of these two existing zones to include deep reef habitat. Expanding these zones will support ecological resilience in this area and potentially serve as seed stock for shallow coral reefs. Conservation areas are designed to protect interconnected habitat types to facilitate research and protect the full range of habitats and species life cycle needs. Due to the overarching purpose and intent of this zone, NOAA determined that allowing an exception for fishing in these expansion areas would not be compatible with Conservation Areas as the most protective marine zones. The expansion area is 0.97 square miles for Western Sambo and 0.53 square miles for Tennessee Reef. Additionally, NOAA determined that consistent regulations across all Conservation Areas and within specific zones would better facilitate public understanding of what is allowed versus prohibited (*e.g.,* no take) and therefore compliance with zone-specific regulations.

Comment 36: NOAA received comments both supporting and opposing expanding Tortugas South westward to include additional habitat and an area shown to support multi-fish aggregation activity. Comments also requested that, if NOAA extends this zone to the west, that NOAA also consider removing 34 square miles from the southern portion of this zone to allow for fishing opportunities in an area that has been closed to fishing since 2001. Opposing comments expressed general opposition to limiting any access for fishing activity. Specific concerns were raised about the loss of access for the commercial shrimp fishery.

Response: NOAA's final rule includes expansion of Tortugas South to provide additional protection for habitats shown to support multi-species fish spawning aggregation activity. NOAA evaluated recently collected and compiled mapping coverage data and remotely operated vehicle (ROV) imagery showing unique habitat features in this area, including rock escarpment formations and a well-defined ledge. These data also showed the presence of a diversity of fish species. NOAA determined that maintaining protection in the southern portion of Tortugas South is warranted.

Comment 37: NOAA received comments both supporting and opposing the proposal to establish two new Conservation Areas (Channel Key Banks and Red Bay Bank) to protect shallow mixed hardbottom habitat that is not currently well represented in sanctuary marine zones. Comments generally supported additional protections for these areas due to the impacts from vessel prop scarring; however, most commenters did not support applying Conservation Area regulations (*e.g.,* transit only) due to the level of reported fishing use in the area (*e.g.,* lobster). In addition, NOAA received comments requesting that Channel Key within the Channel Key Banks proposed marine zone have no-entry regulations applied given the presence of a high number of nesting and roosting birds.

Response: Alternatives in the draft EIS included a range of different options for establishing marine zones to protect shallow mixed habitat in the bayside Florida Keys. Given the amount of habitat damage in these areas, new protections through marine zoning are warranted; however, informed by public comment about the level of reported use in these areas, the final regulations require idle speed no wake rather than transit only. The final rule also includes much smaller, more targeted areas than initially proposed and allows normal operation through established channels. It includes additional protections at Channel Key due to the high number of roosting and nesting birds; some reports indicate the highest numbers congregating in the Middle Keys region. Under the final rule, these marine zones are considered WMAs rather than Conservation Areas.

Restoration Areas

Comment 38: NOAA received comments supporting establishing new marine zones to facilitate habitat restoration and protect coral reef nursery sites. Public comment also specifically requested that these new zones be considered Restoration Areas through the creation of a new general Restoration Area zone category.

Response: Informed by public comment, the final rule includes a new Restoration Area zone category, which includes two distinct designations: Habitat Restoration Areas where active restoration is taking place and Nursery Restoration Areas where nursery species are propagated. The final rule includes all existing permitted coral reef nursery sites (11 total) as Nursery Restoration Areas and existing permitted coral reef restoration sites (4 total) as Habitat Restoration Areas. NOAA takes this action to recognize the increase in important habitat restoration activities in the sanctuary over the past two decades. Finally, while the final Restoration Area zones are all coral reef sites, this zone type could be used for other habitat areas (*e.g.,* seagrass, sponge, hardbottom). New zones would need to be established in future rulemaking processes.

Comment 40: NOAA received comments requesting two additional coral nursery sites be established as Nursery Restoration Areas. These two nursery sites were installed by restoration practitioners following the release of the 2022 NOPR so were not included in the NOPR alternative.

Response: NOAA has added these two areas to the final rule because the value of including these two additional coral nursery sites is consistent with the goals of this zone type. These new zones are Key Largo Nursery Restoration Area (0.07 square miles, 46.8 acres) and Islamorada Nursery Restoration Area (0.07 square miles, 47.2 acres).

Sanctuary Preservation Areas

Comment 41: NOAA received comments opposing the application of an idle speed no wake regulation in all SPAs due to several factors, including the size of many zones and the inclusion of portions of Hawk Channel in some SPAs.

Response: NOAA agrees and determined that an idle speed no wake regulation in all SPAs is not practicable; therefore, it was not carried forward in the final rule.

Comment 42: NOAA received comments supporting the application of a no anchoring regulation in all SPAs to provide greater protections to coral and other sensitive habitats from anchor damage. Commenters also expressed the need for additional, well placed and maintained mooring buoys, particularly if additional no anchor restrictions would be applied. Commenters requested that updates to the mooring buoy program include input from user groups.

Response: The final rule includes a no anchor regulation for all SPAs in order to provide greater protections from anchor damage for areas with sensitive habitats. The management plan also includes activities related to review and update of the sanctuary mooring buoy program including plans to engage user groups to help identify areas of use, numbers of users, and placement of mooring buoys (see Management Plan comments and responses below).

Comment 43: NOAA received comments both supporting and opposing the proposal to establish two new SPAs to protect patch reef habitat (Turtle Rocks and Turtle Shoals). The majority of commenters supported establishing these new zones. Some

commenters also supported establishing these areas as Conservation Areas to provide the greatest level of protection for these sensitive habitats. Opposing commenters expressed concern regarding limiting any access for fishing activity due to the fact that SPA regulations prohibit fishing.

Response: The draft EIS alternatives included a range of options for establishing marine zones at these two sites, including designating these areas as Conservation Areas (the most protective marine zone) and SPAs (allowing access but no take). Informed by public comment, the final rule includes these two sites as new SPAs to protect important patch reef habitat. Establishing these areas as SPAs will allow access for diving and snorkeling and will prohibit fishing in these areas.

Comment 44: NOAA received comments supporting the proposal to combine two existing SPAs (Key Largo Dry Rocks and Grecian Rocks) into one larger SPA zone. Commenters in support noted the value of larger SPA zones for greater protection to habitats and species. The majority of commenters supporting combining these two zones requested that the expanded zone be more targeted on the core area of coral reef habitat. NOAA also received comments that opposed combining these two zones, most noting that the expansion includes large areas of sand bottom rather than coral reef and opposing limiting any access for fishing.

Response: Informed by public comment, NOAA modified the size of this zone for the NOPR and Final Rule to focus the zone on the high relief reef areas to balance protection with greater access in the surrounding waters (Alternatives 2, 3, and 4 include a proposed 1.2 square mile zone and the NOPR and Final Rule include a 0.5 square mile zone). Through the final rule, NOAA will more fully protect the habitats and species present at this site as data show that the larger zone size more adequately captures the area necessary for different life cycle stages of some fish species.

Comment 45: NOAA received comments both supporting and opposing expanding existing marine zones to include deep reef habitat (Carysfort Reef and Alligator Reef). Supporting comments noted that expansions would provide additional protections to deep reef habitats that show potential resilience to stony coral tissue loss disease, could serve as a source for coral reef seed stock, and would provide greater ecosystem level protection. Opposing commenters expressed concern with limiting any access for fishing activity. Some commenters specifically requested that in the deep reef expansion areas, hook and line trolling or drift fishing be allowed, noting their desire to allow as much user access as possible while still protecting coral reef habitat from physical damage.

Response: The final rule expands these two existing zones to include deep reef habitat. Including deep reef habitat in the marine zone will further support ecological resilience in this area and potentially serve as seed stock for shallow coral reefs. SPAs are established, in part, to separate conflicting uses (*e.g.,* diving/snorkeling and fishing). Therefore, allowing an exception for fishing in these expansion areas would not be compatible with the purpose and intent of SPAs to separate conflicting uses. Additionally, consistent regulations across all SPAs and within specific zones will better facilitate public understanding of what is allowed and result in greater compliance with associated regulations. The expansion area is 1.6 square miles for Carysfort Reef and 0.20 square miles for Alligator Reef.

Catch and Release Fishing by Trolling in Four Sanctuary Preservation Areas

Comment 46: NOAA received comments supporting the elimination of the exception in four SPAs for catch and release fishing by trolling. Commenters noted the benefit of consistent regulations within all SPAs and that SPAs should be fully no-take zones as the area in the sanctuary that is truly no-take is very small. NOAA received comments that opposed the elimination of this exception due to concerns about the loss of fishing access in these SPAs, noting that this exception was part of trade-off with fishermen to gain their support for the establishment of SPAs in 1997 and that this agreement should continue to be upheld and that trolling is not likely to impact the benthic habitats in these areas.

Response: NOAA's final rule eliminates catch and release trolling in SPAs in order to standardize all regulations for SPAs. NOAA acknowledges that catch and release trolling may not impact the benthic habitats in these areas, but NOAA's analysis suggests that having consistent regulations in all SPAs outweighs maintaining this exception that was instituted over 26 years ago. NOAA has attempted through this and other regulatory changes to create consistent regulations within all SPAs. Given the numbers of individuals accessing and recreating in these specific marine zones, having consistent regulations increases the likelihood that users know and understand what activities are allowed versus prohibited to facilitate increased compliance with marine zone-specific regulations. Eliminating this exception will also facilitate enforcement against unlawful fishing. Given that an overarching purpose of SPA zones is to reduce user conflict, fully separating fishing and diving/snorkeling activity more fully realizes this zone's purpose. Through this change, a total of 1.22 square miles (779 acres) that once allowed catch and release fishing by trolling will no longer allow such fishing.

Bait Fish Permits in Sanctuary Preservation Areas

Comment 47: NOAA received comments supporting the proposal to stop issuing permits for baitfishing in SPAs noting that allowing this activity in these zones creates (1) confusion for the public regarding what is and is not allowed, (2) provides an incentive to fish in no-fishing zones, and (3) creates enforcement challenges given public confusion. Commenters also supported NOAA's intent to create consistent regulations in all SPAs. NOAA also received comments opposing the elimination of baitfishing permits in SPAs. These commenters generally noted that allowing baitfishing in SPAs was part of an original trade-off with fishermen to gain their support for the establishment of SPAs and that this agreement should continue to be upheld. Commenters also more specifically stated that the gear type used does not impact the benthic habitat and that this activity is generally undertaken early in the morning thereby limiting the potential overlap of fishing activity with diving and snorkeling.

Response: Beginning on the effective date of this final rule, NOAA will begin to phase out the practice of issuing baitfishing permits for SPAs over a 3-year period to create fully no take SPAs. NOAA's elimination of the practice of issuing baitfish permits does not require a change to the regulations and will be implemented via changes to FKNMS's permitting policies. When final FKNMS regulations become effective, existing baitfishing permit holders will have the option to renew their permit annually for three years, but NOAA will not issue any baitfishing permits to any additional persons. After the third year, NOAA will no longer issue permits for this activity. This change, while not requiring a change to the regulations, contributes to creating consistent regulations in all SPAs, will aid in user understanding and compliance, and will facilitate enforcement. Consistency of

regulations and practices in SPAs outweighs issuing baitfish permits as initiated over 26 years ago. This decision is based on over 25 years of management of the network of marine zones within the sanctuary, including a review of catch log data submitted by permit holders over the past five years. These reports indicate that there is a limited number of recreational and commercial fishermen using the permits to catch baitfish, with over half of the permitted fishermen reporting annually they are not using the permit (*i.e.,* not catching baitfish within the SPAs. To see a summary of baitfishing permit usage analysis see Appendix B in the Updated Socioeconomic Supporting Documentation for the 2019 Draft Environmental Impact Statement and 2022 Proposed Rule, which is available at the website listed in the **ADDRESSES** section above in this rule). Those fishermen that do state they are harvesting baitfish within the SPAs report very low catch numbers, leading NOAA to believe that very few users will be adversely affected by this change and that most fishermen are already catching baitfish outside of the SPAs. Given that an overarching purpose of SPA zones is to reduce user conflict, fully separating fishing and diving/snorkeling activity more fully realizes this zone's purpose.

Restricted Access in Select Sanctuary Preservation Areas

Comment 48: NOAA received comments specific to the proposal to limit access in select SPAs, with the majority of comments opposing any proposal that would restrict local boater access. While not supporting this specific proposal, commenters noted concern about increasing numbers and intensity of use and expressed support for considering ways to manage the numbers of users in the sanctuary in both coral reef and the waters and islands on the Gulf side of the Florida Keys (*i.e.,* backcountry areas). Many commenters acknowledged that other resource protection entities (U.S. Forest Service, National Park Service, and international marine parks, among others) manage use, access, and overall numbers of users through various regulatory and non-regulatory mechanisms, and some commenters provided ideas and recommendations for consideration. While public comment generally supported the concept of limiting access, there was little support for the specific locations selected for closure to the public by NOAA in the draft EIS. In addition, the public did not support the proposal to limit access by only allowing certain commercial operators (*i.e.,* Blue Star Program participants), because commercial operators bring more individuals to a site than individual boaters.

Response: Draft EIS Alternatives 3 and 4 would have limited commercial access in three SPAs to Blue Star designated operators. In the final rule, NOAA does not include this regulation or any regulation that specifically restricts access by setting a limit on the number of users allowed to access specific sanctuary marine zones. Informed by public comment, NOAA determined that more information, additional public input, and evaluation of additional management tools would be needed prior to implementing a limited access regulation. Part of this evaluation would include consideration of how NOAA would manage and enforce a limited access regulation in some SPAs. Finally, in response to comments acknowledging the need to address the increasing numbers of users and visitors, the final management plan includes additional information about NOAA's intent to better assess sanctuary carrying capacity, evaluate regulatory and non-regulatory tools to manage use and number of users of the sanctuary, and consider how existing regulations and management activities can be more strategically applied to better manage use and impacts from use (*e.g.,* boater education, mooring buoys, proposed no anchor regulation in SPAs, etc.). With this additional evaluation and further public and agency engagement, NOAA may consider regulatory action to manage the number of users and impacts of this use on sanctuary resources in the future.

Wildlife Management Areas

Comment 49: NOAA received comments that supported no change to existing zones (*e.g.,* status quo) and other comments that supported creating additional WMAs and/or expanding existing WMAs. Even those comments that supported no change to the zones generally supported taking action to protect sanctuary resources while also allowing the greatest level of access and use. Most public comments included some mention of the importance and challenge of marking WMAs and educating the public (particularly the visiting, non-resident public) about the nature of navigating in the backcountry and shallow waters of the Florida Keys. NOAA received comments specific to every WMA including comments regarding the size and shape of WMAs and the regulations applied within them.

Response: WMAs are established for location-specific resource management needs and issue-specific regulations are applied (*e.g.,* idle speed no wake vs. no entry). NOAA used two criteria when developing WMAs: (1) favor resource protection goals over access when data demonstrates the need and (2) implement the least restrictive access regulations and zone size to achieve resource protection goals. Additional considerations included simplifying zones and associated regulations to enhance user understanding of the zone area and associated regulations to facilitate greater compliance. Finally, with respect to those zones focused on shallow water habitat/seagrass protection, NOAA considered the success of existing no motor zones (*e.g.,* Tavernier Key WMA) and utilized recent prop scar mapping data to determine where additional restrictions were necessary. The selection of the WMAs in the final rule reflects a careful consideration and balancing of these factors.

Contour of 300 Feet Around Islands vs. Straight Line Zones

Comment 50: NOAA received comments supporting using straight lines for WMAs for easier marking, compliance, and enforcement. NOAA received comments opposing using straight lines for WMAs noting that more area than needed for the resource protection goals would be included in the marine zone thereby affecting the area accessible by various user groups.

Response: NOAA's rule includes a 300 foot (100 yard) buffer zone around sensitive islands and creates zone boundaries that align with the habitats intended for protection within the marine zone rather than straight line boundaries. NOAA considered straight line WMA boundaries, which have an advantage because they further simplify the zone shape, improve the ability to mark, and improve enforcement. Despite these benefits, NOAA ultimately decided in this final rule to define boundaries that follow the contours around islands and other natural features (*e.g.,* seagrass beds, bank habitats) in order to provide the least restrictive access regulations and zone size to achieve resource protection goals.

Recommendation of a 50 Foot No Entry Zone Surrounded by a 300 Foot No Motor Zone

Comment 51: NOAA received comments recommending a modified regulatory scheme for several WMAs of a 50 foot no entry area closest to shore (*e.g.,* about two-boat lengths)

surrounded by an outer additional 300 foot no motor area. The intent of these recommendations is to allow the greatest user access while still maintaining protections for sensitive habitat, bird nesting and roosting sites, and turtle nesting beaches.

Response: NOAA evaluated these recommendations and for several reasons did not include them in the final rule. Primarily, NOAA's decision criteria favor resource protection over access when data demonstrates the need. These decisions were further informed by comments and data submitted by the USFWS that a minimum 100-yard distance (*i.e.,* 100-yard no entry zone) is needed to minimize disturbance to wading and migratory birds. Bird species will be disturbed and negatively impacted where no-entry zones are less than 100 yards and boater traffic of any kind (including kayaks and other paddle craft) is allowed. Aside from sea-level rise, the number one threat to the long-term persistence of these bird species in the national wildlife refuges is human disturbance. Secondarily, the proposed scheme is complicated, and an overarching goal for the marine zoning component of this rulemaking is to simplify and create consistent regulations where possible to facilitate compliance and enforcement.

Idle Speed No Wake and Channel Access

Comment 52: NOAA received comments specific to several proposed idle speed no wake zones that, while supporting the zone, requested maintaining normal operation in channels.

Response: NOAA agrees and in the final rule has clarified where channels are open for normal operation (*e.g.,* Marathon WMA) and in some cases has added additional channels based on user feedback (*e.g.,* Channel Key WMA).

No Anchor

Comment 53: NOAA received comments specific to the proposed no anchor WMAs, including that they are not necessary (*e.g.,* Archer Key) and that safe harbor anchoring and anchoring for educational purposes should be excluded (*e.g.,* Tavernier Key).

Response: The final rule does not include a new no anchor zone at Archer Key as proposed in draft EIS Alternative 2. The purpose and intent of this zone—to protect seagrass and hardbottom habitat—is sufficiently addressed through the three existing FKNMS mooring buoys installed in that area. The final rule also does not include a no anchor regulation at Tavernier WMA and Dove Key and Rodriguez Key WMA because of public use of these areas for recreation and, specific to the sailing community, the use of these areas for both safe harbor and sailing and anchoring education. Both of these high use marine zones still include the no motor regulation aimed at protecting habitat from vessel damage. For all of these WMAs, if impacts to the habitat increase, NOAA could reevaluate regulations at these locations.

Clarification of No Motor Regulation

Comment 54: NOAA received comments seeking clarification about the proposed no motor WMAs, specifically whether vessels could have motors and/or what types of motors may be allowed in these WMAs.

Response: The final rule maintains the existing ''no motor'' definition, which applies to all modified or no motor WMAs (12 WMAs) and means the use of internal combustion motors is prohibited. NOAA will provide information in outreach and educational products to help boaters understand and comply with this regulation. A vessel with an internal combustion motor on board may still access a no motor zone, but only through the use of a push pole, paddle, sail, electric motor, or similar means of operation. It is prohibited from using its internal combustion motor.

Change of No Access Buffer and Closed Regulation to No Entry

Comment 55: NOAA received comments both supporting and opposing the proposed change of the existing no access buffer and closed regulation to no entry. The majority of commenters supported the change, noting that it made sense to simplify the language and be consistent with State zone types and associated regulations. Those who opposed the change asserted that the existing regulation was sufficient for the resource protection goals.

Response: The final rule changes the no access buffer and closed regulations to no entry to be consistent with the intent of the regulation and with complimentary State regulations. The existing no access buffer zone identifies a portion of the sanctuary where vessels are prohibited from entering regardless of the method of propulsion. In general practice, the no access buffer, closed, and no entry regulations have similar intent. This change applies to nine of the existing WMAs.

No Entry and Access for Education and Eco-Tour Operators

Comment 56: NOAA received comments specific to certain proposed no entry WMAs related to continued educational and eco-tour operation (*e.g.,* Pelican Key). Comments included (1) opposition to no entry due to the loss of access and (2) support for no entry if access for educational and eco-tour operators would be allowed.

Response: The resources present at many of these locations need the greatest level of protection and, therefore, these zones are no entry in the final rule. In addition, given the educational opportunities some of these sites provide to advance understanding and stewardship ethic of these resources, NOAA will consider using its existing permit categories to permit educational and eco-tour operators. Permits will be issued on a case-by-case basis and will help inform the numbers, types, and frequency of use in these areas. NOAA will also work with partners to evaluate the potential impacts of use in these areas to determine if continued access should be allowed and permitted.

Other Zone-Specific Comments

Comment 57: NOAA received comments both supporting and opposing protections for a multi-species fish spawning aggregation site at Western Dry Rocks. Comments included support for year-round closure, seasonal closure, no action, and deferring to FWC to take action as this area is in State waters.

Response: The final rule includes a WMA at Western Dry Rocks with regulations that align with existing FWC regulations (as of February 2021) with a seasonal no fishing prohibition from April 1 to July 3 and a no anchor regulation during that same time period. NOAA includes additional anchoring restrictions because the ecological features present at this site contribute to the establishment and maintenance of a fish spawning aggregation site.

Comment 58: NOAA received comments both supporting and opposing a proposed new marine zone protecting an internationally important sea turtle foraging habitat area. Comments included (1) support for the greatest level of protection (*e.g.,* transit only) in the largest area where sea turtles are shown to be present in high numbers; (2) support for a smaller targeted area; (3) support for less restrictive regulations (*e.g.,* idle speed no wake); (4) questioning the need of such a zone given the perceived increase in turtle numbers and lack of data for turtle strikes that can be attributed to vessel traffic in this specific area; (5) opposition to this zone due to the need to transit through this area to take safe harbor in the Marquesas

Keys; and (6) opposition to this zone due to the potential loss of fishing access depending on the regulation applied.

Response: NOAA determined that protecting this internationally important sea turtle foraging habitat area is needed and will apply idle speed no wake regulations in this area to protect this habitat from vessel impacts. In developing the final rule, NOAA reviewed updated data for this site and now modifies the size of the marine zone and includes the area of greatest habitat variability and highest numbers of turtle sightings. This size modification removes the southern portion, which allows safe transit to the Marquesas Keys. In addition, by applying an idle speed no wake regulation instead of a no entry or transit only regulation, this area is still accessible for fishing activities and other uses.

Comment 59: NOAA received comments suggesting numerous additional areas to include as new WMAs (*e.g.,* Hurricane Key, Don Quixote, Bill Finds Key).

Response: NOAA used the two criteria for considering new WMA marine zones (resource protection need and public access/use) and evaluated all additional marine zones proposed by public comment under these criteria. NOAA is not including any additional WMAs beyond those included in the 2022 NOPR. Through the updated WMA zones, NOAA prioritized modifying or creating new WMAs where resources demonstrated the greatest need for additional protections while balancing user access. In response to changing resource conditions or levels, types, and intensity of use, NOAA will continue to work with sanctuary users, agency partners, and research partners to evaluate existing zones and the need to consider modified or new protections.

VII. Classification

1. National Marine Sanctuaries Act

Section 301(b) of the NMSA provides authority for comprehensive and coordinated conservation and management of national marine sanctuaries in coordination with other resource management authorities. Section 304(a)(4) of the NMSA requires that the procedures specified in Section 304 for designating a national marine sanctuary be followed for modifying any terms of designation. This action is revising the terms of designation (*e.g.,* expanding the boundary) for FKNMS. Pursuant to NMSA Section 303(b)(2), NOAA provided notice of this action at the draft EIS and proposed rule phases to the Committee on Resources of the House of Representatives; the Committee on Commerce, Science, and Transportation of the Senate; and the Secretaries of State, Defense, Transportation, and the Interior, and invited further consultation.

Section 304(a)(5) of the NMSA also requires that NOAA consult with the appropriate FMC on any action proposing to regulate fishing in Federal waters. Consultation with the SAFMC and GMFMC is discussed above in part II, *The Restoration Blueprint Process.* Pursuant to Section 304(b)(1) of the NMSA, NOAA will submit a notice of this action to Congress, and the Governor of Florida will also have the opportunity to review this final action.

2. National Environmental Policy Act

In accordance with Section 304(a)(2) of the NMSA (16 U.S.C. 1434(a)(2)), and the provisions of NEPA (42 U.S.C. 4321 et. seq.). NOAA has prepared a final EIS to evaluate the impacts of this action. For more information on the final EIS and steps leading to the action, please refer above to part II, *The Restoration Blueprint Process,* section 2. The final EIS contains a statement of the purpose and need for the project, description of alternatives, including the no action alternative, description of the affected environment, and evaluation and comparison of environmental consequences including cumulative impacts. Based on the evaluation of the alternatives, NOAA determined that no significant adverse impacts to resources and the human environment are expected if any of the alternatives are adopted, and this conclusion applies to this action.

This EIS applies CEQ's 1978 NEPA regulations because review of this proposed action began on August 20, 2019, which preceded the effective date of CEQ's which preceded the effective date of CEQ's Phase 2 NEPA regulations (July 1, 2024)

NOAA has also issued a ROD. Copies of the final EIS and ROD are available at the address and website listed in the **ADDRESSES** section of this final rule.

3. Executive Order 12866: Regulatory Planning and Review

The Office of Management and Budget (OMB) has determined this rule is significant under Executive Order 12866, ''Regulatory Planning and Review,'' 58 FR 190 (Oct 4, 1993), as supplemented and reaffirmed E.O. 14094, ''Modernizing Regulatory Review,'' 88 FR 21879 (April 11, 2023). Please see final EIS Appendix K: Cost-Benefit Analysis, which is available at the address and website listed in the **ADDRESSES** section of this final rule for more information. Based upon information provided in Cost-Benefit Analysis, the NOAA estimates annual effect of this rulemaking is less than $200 million, and the rule will not adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or Tribal governments or communities. Under the baseline for this action, NOAA would maintain the existing sanctuary boundary, sanctuary-wide regulations, marine zones and associated regulations, and management plan. The existing activities occurring in the sanctuary are described in the final EIS by resource area under the No Action Alternative subsections in Chapter 4: Affected Environment. With this action, changes to marine zones that may restrict certain commercial and recreational uses (*e.g.,* recreational boaters, fishers, divers) in those areas are spatially small compared to the area of FKNMS that will remain available for those uses, resulting in limited impacts. Some costs are expected to occur within the commercial and recreational fishing industries, while the majority of benefits will accrue to the non-consumptive users (*e.g.,* divers, snorkelers, kayakers, wildlife viewers). Some of the costs that may be experienced are loss of fishing revenue and loss of recreational fishing activity. Benefits include improvements to natural resource conditions resulting in improved visitor experience. Detailed analyses of the costs and benefits of this rulemaking are provided in the 2022 Socioeconomic Report which is available in the **ADDRESSES** section of this final rule.

4. Executive Order 13132: Federalism Assessment

NOAA has concluded this regulatory action does not have federalism implications sufficient to warrant preparation of a federalism assessment under Executive Order 13132. This rule will not have a substantial or direct effect on states or local governments. NOAA has coordinated closely with State partners throughout the development of this rule and, where applicable and practicable, aligns with and/or defers to existing State regulations for proposals within State waters of the sanctuary. NOAA has aimed for consistent regulations throughout sanctuary waters including those within State and Federal jurisdiction.

5. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

Executive Order 13175 reaffirms the Federal government's commitment to tribal sovereignty, self-determination, and self-government. Its purpose is to ensure that all Executive departments and agencies consult with Indian tribes and respect tribal sovereignty as they develop policies on issues that impact Indian communities. This action is not anticipated to have substantial direct effects on one or more Indian tribes, on the relationship between the Federal government and Indian tribes, or on the distribution of power and responsibility between the Federal government and Indian tribes. The Seminole Tribe of Florida Tribal Historic Preservation Office provided comments on the draft EIS specific to the *Programmatic Agreement under Section 106 of the National Historic Preservation Act regarding Florida Keys National Marine Sanctuary Operations, Management, and Permitting,* and consultation related to archaeological research permits.

6. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA), as amended and codified at 5 U.S.C. 601 *et seq.,* requires an agency to prepare a regulatory flexibility analysis of any rule subject to the notice and comment rulemaking requirements under the Administrative Procedure Act (5 U.S.C. 553) or any other statute, unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. Pursuant to section 605(b), the Chief Counsel for Regulation, Department of Commerce, submitted a memorandum to the Chief Counsel for Advocacy, Small Business Administration, certifying that the proposed rule would not have a significant impact on a substantial number of small entities. The rationale for that certification was set forth in the preamble of the proposed rule (87 FR 42800, July 18, 2022), and in the supporting 2022 Socioeconomic Report, which is available on the website listed in the **ADDRESSES** section above in this rule. NOAA primarily considered the years 2015–2019 for commercial fishing and 2014–2018 for recreational fishing, the latest data available at the time of this analysis. NOAA relied on commercial fishing data from FWC and recreational fishing data from NMFS' Marine Recreational Information Program. ONMS also consulted with NMFS to utilize estimates of economic impact and data from fishery management council reports to estimate changes to the commercial and recreational fishing sectors.

Small entities are defined by the Small Business Administration (SBA). The definition of the relevant small businesses are presented here and are from the most recent size standards published by the SBA in 2019 (US SBA, 2019). Size standards are based upon the average annual receipts (all revenue) or the average employment of a firm. The commercial size standards for finfish fishing (NAICS code—114111) is $22.0 million, shellfish fishing (NAICS code—114112) is $6.0 million and other marine fishing (NAICS code—114119) is $8.0 million. Scenic and sightseeing transportation, water-based businesses such as for-hire recreational fishing operations, and dive/snorkeling for-hire operations (NAICS code—487210) have size standards of $8.0 million.

NOAA found, in summary, that this action is not expected to reduce the profits of any small businesses directly regulated by this rule. This is in part due to the potential for substitution of location for activities and that the rule is informed by and responsive to comments from the potentially impacted user groups (*e.g.,* two specific marine zones included in the draft EIS are were not included in the proposed or final rule due, in part, to comments from lobster fishermen regarding their expected maximum potential loss of access and use). Costs to the fishing sector assume the maximum potential loss and that there is no replacement value (*i.e.,* moving activities to a different location). Overall losses were less than 1% of annual revenue for all fisheries except the spiny lobster fishery, where an approximate 2% annual loss was estimated. This regulatory action would not establish any new reporting or record-keeping requirements. No duplicative, overlapping, or conflicting federal rules have been identified.

Although NOAA has made minor changes to the regulations from the proposed rule to the final rule, none of the changes alter the initial determination that this rule will not have a significant impact on a substantial number of small entities. The changes between the proposed and final rule for this action are nominal; the changes clarify a few of the regulatory definitions and slightly modify several marine zone boundaries and their associated regulations (see Section III of this final rule preamble for additional details). Between the proposed and final rule, NOAA has reduced the sizes of the zones within which small entities would be affected; therefore, NOAA expects less cost to operators in FKNMS than reported in the proposed rule. NOAA also did not receive any comments on the certification or conclusions. Therefore, for the reasons stated above, the determination that this rule will not have a significant economic impact on a substantial number of small entities remains unchanged. As a result, a final regulatory flexibility analysis was not required and none was prepared.

7. Paperwork Reduction Act

The existing FKNMS regulations contain a collection-of-information requirement for persons making an application for a permit. This collection of information is subject to the Paperwork Reduction Act (PRA), approved by the Office of Management and Budget (OMB), under control number 0648–0141 (expires November 30, 2024), for collection-of-information for reporting and recordkeeping requirements under 15 CFR part 922. This rule will not increase or otherwise revise the existing paperwork burdens.

The public reporting burden for national marine sanctuary general permit applications is estimated to average 1 hour 30 minutes per application, including the time for reviewing the application instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. For special use permits, a collection-of-information requirement is necessary to determine whether the activities are consistent with the terms and conditions of special use permits prescribed by the NMSA. The public reporting burden for this collection of information is estimated to average eight (8) hours per response (application, annual report, and financial report), including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. The current OMB-approved collection-of-information requirement also includes other types of permits that may be issued by FKNMS, such as Tortugas North access permits, authorization permits, and certification permits. The estimates set forth in the OMB approval do not include additional time that may be required should the applicant be required to provide information to NOAA for the preparation of documentation that may be required under NEPA (16 U.S.C. 1431 *et seq.*).

NOAA does not expect that this rule will appreciably change the average annual number of applicants or the reporting burden for the information

requirements supporting general or special use permits, authorization permits, or certification permits because sanctuary boundaries, marine zones, and regulations are not being modified in such a way that a significant number of new permits are expected or required. Uses that require permits are anticipated to continue with similar frequencies as current operations. NOAA believes that the updated regulations do not necessitate a modification to its information collection approval by the Office of Management and Budget under the Paperwork Reduction Act. However, an increase in the number of ONMS permit requests would require a change to the reporting burden certified for OMB control number 0648–0141. While not expected, if such permit requests do increase, an update to this control number for the processing of ONMS permits would be requested.

In the most recent Information Collection Request revision and approval for national marine sanctuary permits (dated November 30, 2021), NOAA reported approximately 424 national marine sanctuary permitting actions each year, including applications for all types of ONMS permits, requests for permit amendments, and the conduct of administrative appeals. NOAA determined that this final rule does not necessitate a modification to its information collection approval by OMB under the Paperwork Reduction Act because no increase in the number of permits requested is anticipated. NOAA solicited comments on this determination in the proposed rule, and no public comments were received. NOAA is also requesting a revision and extension of its approved information collection request, outside of this rulemaking, for national marine sanctuary permits to include the additional estimated permit numbers, which will apply to FKNMS.

8. National Historic Preservation Act

The National Historic Preservation Act (NHPA; 54 U.S.C. 300101 *et seq.*) is intended to preserve historical and archaeological sites in the United States. The NHPA created the National Register of Historic Places, the list of National Historic Landmarks, and the State Historic Preservation Offices (SHPO). Section 106 of the NHPA requires Federal agencies to take into account the effects of their undertakings on historic properties and afford the Advisory Council on Historic Preservation (ACHP) a reasonable opportunity to comment. The review process mandated by Section 106 is outlined in regulations issued by the ACHP (*36 CFR part 800*[14]).

In coordinating its responsibilities under Section 106 of the NHPA with the release of the 2019 draft EIS, NOAA solicited for and identified potential consulting parties, identified historic properties in the area of potential effects, and assessed the effects of the undertaking on such properties in consultations with those identified parties. NOAA received official comment letters from the Florida SHPO, the Seminole Tribe of Florida, non-governmental organizations, associations, sanctuary historical resource permittees, and other interested members of the public. Pursuant to *36 CFR 800.16*,[15] the term ''historic property'' means any prehistoric or historic district, site, building, structure or object included in, or eligible for inclusion in, the National Register of Historic Places maintained by the Secretary of the Interior. The term includes artifacts, records, and remains that are related to and located within such properties as well as properties of traditional religious and cultural importance to an Indian tribe . . . that meet the National Register criteria.

NOAA determined that the action will have no adverse effects on the historic properties within the area of potential effects. NOAA received comment from the Florida SHPO that the draft EIS sufficiently addressed the sanctuary's NHPA Section 106 responsibilities through implementation of the new management plan and through the development of an updated Section 106 Programmatic agreement.

In addition, NOAA initiated consultation with the Seminole Tribe of Florida and the Miccosukee Tribe of Indians of Florida. NOAA received comments from the Seminole Tribe of Florida requesting that NOAA specifically include reference to its Section 106 responsibility to consult with interested federally recognized Tribes before issuing permits for archaeological research and on all undertakings with the potential to affect historic properties. NOAA has incorporated these comments into the final EIS. NOAA invited further comment on the notice of proposed rulemaking and received no additional comments from either the Florida SHPO or Tribes. For associated correspondence, see EIS Appendix J.

NOAA will continue coordination with the Florida SHPO, ACHP, and other consulting parties to finalize the draft *Programmatic Agreement under Section 106 of the National Historic Preservation Act regarding Florida Keys National Marine Sanctuary Operations, Management, and Permitting,* which is a separate effort from this rulemaking.

9. Coastal Zone Management Act

Section 307 of the Coastal Zone Management Act (CZMA; 16 U.S.C. 1456) requires Federal agencies to conduct their activities in a manner that is consistent to the maximum extent practicable with the enforceable policies of a state's coastal management program if such activities will affect any coastal uses or resources of the State. NOAA provided copies of the draft EIS to the State of Florida and requested that the State identify any enforceable policies of its coastal management program applicable to the proposed action. In compliance with the CZMA, NOAA prepared a consistency determination, and on May 21, 2024 submitted it to the State of Florida. On August 6, 2024 the State of Florida issued a letter of conditional concurrence to NOAA.

List of Subjects in 15 CFR Part 922

Administrative practice and procedure, Coastal zone, Fishing gear, Incorporation by reference, Marine resources, Natural resources, Penalties, Recreation and recreation areas, Wildlife.

Nicole R. LeBoeuf,

Assistant Administrator for Ocean Services and Coastal Zone Management, National Ocean Service, National Oceanic and Atmospheric Administration.

For the reasons set forth above, NOAA is amending 15 CFR part 922 as follows:

PART 922—NATIONAL MARINE SANCTUARY PROGRAM REGULATIONS

■ 1. The authority citation for part 922 continues to read as follows:

Authority: 16 U.S.C. 1431 *et seq.*

Subpart P also issued under Public Law 101–605.

■ 2. Revise subpart P to read as follows:

Subpart P—Florida Keys National Marine Sanctuary

Sec.

922.160 Purpose.
922.161 Boundary.
922.162 Definitions.
922.163 Prohibited activities—Sanctuary-wide.
922.164 Additional activity regulations by designated sanctuary area.

[14] *https://www.ecfr.gov/current/title-36/chapter-VIII/part-800.*

[15] *https://www.ecfr.gov/current/title-36/chapter-VIII/part-800/subpart-C/section-800.16.*

922.165 Temporary regulation for emergency and adaptive management.
922.166 National Marine Sanctuary permitting—General permits, special use permits, and authorizations.
922.167 National Marine Sanctuary permitting—Certifications.
922.168–922.178 [Reserved]
922.179 Incorporation by reference.
Appendix A to Subpart P of Part 922—Florida Keys National Marine Sanctuary Boundary Coordinates
Appendix B to Subpart P of Part 922—Areas To Be Avoided Boundary Coordinates
Appendix C to Subpart P of Part 922—Management Areas Boundary Coordinates
Appendix D to Subpart P of Part 922—National Wildlife Refuges Boundary Coordinates
Appendix E to Subpart P of Part 922—Wildlife Management Areas Boundary Coordinates and Access Restrictions
Appendix F to Subpart P of Part 922—Sanctuary Preservation Areas Boundary Coordinates
Appendix G to Subpart P of Part 922—Conservation Areas Boundary Coordinates
Appendix H to Subpart P of Part 922—Restoration Areas—Habitat Boundary Coordinates Appendix I to Subpart P of Part 922—Restoration Areas—Nursery Boundary Coordinates

§ 922.160 Purpose.

(a) The purpose of the regulations in this subpart is to implement the comprehensive management plan for the Florida Keys National Marine Sanctuary by regulating activities affecting the resources of the sanctuary or any of the qualities, values, or purposes for which the sanctuary is designated, in order to protect, preserve, and manage the conservation, ecological, recreational, research, educational, historical, and aesthetic resources and qualities of the area. In particular, the regulations in this subpart are intended to protect, restore, and enhance the living resources of the sanctuary, contribute to the maintenance of natural assemblages of living resources for future generations, provide places for species dependent on such living resources to survive and propagate, facilitate to the extent compatible with the primary objective of resource protection all public and private uses of the resources of the sanctuary not prohibited under other authorities, reduce conflicts between such compatible uses, and achieve other policies and purposes of the Florida Keys National Marine Sanctuary and Protection Act and the National Marine Sanctuaries Act.

(b) Section 304(e) of the NMSA requires the Secretary to review management plans and regulations every five years, and make necessary revisions. Upon completion of the five-year review of the sanctuary management plan and regulations, the Secretary will re-propose the regulations in their entirety with any proposed changes thereto. The Governor of the State of Florida will have the opportunity to review the re-proposed regulations before they take effect and if the Governor certifies any such regulation as unacceptable, it will not take effect in State waters of the sanctuary.

§ 922.161 Boundary.

The sanctuary consists of an area of approximately 3,427 square nautical miles (4,539 square statute miles) of coastal and ocean waters, and the submerged lands thereunder, surrounding the Florida Keys in Florida. Appendix A to this subpart sets forth the precise sanctuary boundary.

§ 922.162 Definitions.

The following definitions apply to the Florida Keys National Marine Sanctuary regulations. Other terms appearing in the regulations in this part are defined at 15 CFR 922.11, and/or in the Marine Protection, Research, and Sanctuaries Act (MRPSA), as amended, 33 U.S.C. 1401 *et seq.* and 16 U.S.C. 1431 *et seq.,* and/or the Florida Keys National Marine Sanctuary and Protection Act, Public Law 101–605. To the extent that a term appears in § 922.11 and this section, the definition in this section governs.

Acts means the Florida Keys National Marine Sanctuary and Protection Act, as amended, (FKNMSPA) (Pub. L. 101–605), and the National Marine Sanctuaries Act (NMSA), also known as Title III of the Marine Protection, Research, and Sanctuaries Act, as amended, (MPRSA) (16 U.S.C. 1431 *et seq.*).

Adverse effect means any factor, force, or action that would independently or cumulatively damage, diminish, degrade, impair, destroy, or otherwise harm any sanctuary resource, as defined in section 302(8) of the NMSA (16 U.S.C. 1432(8)) and in this section, or any of those qualities, values, or purposes for which the sanctuary is designated.

Airboat means a vessel operated by means of a motor driven propeller that pushes air for momentum.

Anchoring means securing a vessel to the seabed by any means, except when using a mooring buoy in full compliance with this Subpart.

At risk of becoming derelict means a vessel when any of the following conditions exist:

(1) The vessel is taking on or has taken on water without an effective means to dewater;

(2) Spaces on the vessel that are designed to be enclosed are incapable of being sealed off or remain open to the elements for extended periods of time;

(3) The vessel has broken loose or is in danger of breaking loose from its anchor or mooring;

(4) The vessel is listing due to water intrusion; or

(5) The vessel does not have an effective means of propulsion for safe navigation within 72 hours after the vessel owner or operator receives telephonic notice, in-person notice recorded on an agency approved body camera, or written notice, which may be provided by facsimile, electronic mail, or other electronic means, stating such from any authorized officer, and the vessel owner or operator is unable to provide a receipt, proof of purchase, or other documentation of having ordered necessary parts for vessel repair.

(6) The vessel is tied to an unlawful or unpermitted structure or mooring.

Conservation Area means an area of the sanctuary that provides natural spawning, nursery, and residence areas for the replenishment and genetic protection of marine life and that protects and preserves groups of habitats and species, within which activities are subject to conditions, restrictions and prohibitions to achieve these objectives. These areas consist of contiguous, diverse habitats; protect a variety of sanctuary resources; and/or facilitate scientific research that promotes sanctuary management or recovery of sanctuary resources. Appendix G to this subpart sets forth the geographic coordinates of these areas.

Continuous transit without interruption means a vessel must keep traveling through a designated area and fishing by any means is prohibited. However, fish, invertebrates, and marine plants may be possessed aboard a vessel if such organisms have not been harvested or removed from within the designated area. Any organisms must be stowed in a cabin, locker, or similar storage area prior to entering and during transit through a designated area, and any gear used to harvest or remove such organisms must not be available for immediate use, as defined in this section, when entering and during transit through the designated area.

Coral means, but is not limited to, the corals of the Class Hydrozoa (stinging and hydrocorals); Class Anthozoa, Subclass Hexacorallia, Order Scleractinia (stony corals); Class Anthozoa, Subclass Ceriantipatharia,

Order Antipatharia (black corals); and Class Anthozoa, Subclass Ocotocorallia, Order Gorgonacea, species *Gorgonia ventalina* and *Gorgonia flabellum* (sea fans).

Coral reefs means hardbottoms, patch reefs, mid-channel reefs, and all parts of the reef tract.

Derelict vessel means a vessel that is:

(1) In a wrecked, junked, or substantially dismantled condition upon any waters of the sanctuary.

(i) A vessel is wrecked if it is sunken or sinking; aground without the ability to extricate itself absent mechanical assistance; or remaining after a marine casualty, including, but not limited to, a boating accident, extreme weather, or a fire.

(ii) A vessel is junked if it has been substantially stripped of vessel components, if vessel components have substantially degraded or been destroyed, or if the vessel has been discarded by the owner or operator. Attaching an outboard motor to a vessel that is otherwise junked will not cause the vessel to no longer be junked if such motor is not an effective means of propulsion.

(2) A vessel is substantially dismantled if at least two of the three following vessel systems or components are missing, compromised, incomplete, inoperable, or broken:

(i) The steering system,

(ii) The propulsion system, or

(iii) The exterior hull integrity.

(3) Attaching an outboard motor to a vessel that is otherwise substantially dismantled will not cause the vessel to no longer be substantially dismantled if such motor is not an effective means of propulsion.

Deserting means leaving a vessel unoccupied that is adrift, aground, derelict, or at risk of becoming derelict unless:

(1) Within 24 hours of leaving such a vessel, the Director has been notified or it has been more than 24 hours since the Director made a reasonable attempt to notify a vessel owner/operator of an unoccupied vessel adrift, aground, derelict, or at risk of becoming derelict, and the vessel owner/operator has not responded; and

(2) Removing or causing to be removed a vessel has been removed within 72 hours in accordance with 15 CFR 922.163(a)(5)(i) or (viii).

Diving means an activity during which a person is wholly or partially submerged in the water and is equipped with a face mask, face mask and snorkel, or underwater breathing apparatus.

Exotic species means any species whose natural zoogeographic range does not include the waters of the Atlantic Ocean, Caribbean, or Gulf of Mexico without passive or active introduction to such area through anthropogenic means.

Feeding means offering, giving, or attempting to give any food or other substance to fish, including sharks, or other marine species, except for the purpose of harvesting marine species during traditional fishing as defined in this section.

Hardbottom means a submerged marine community comprised of organisms attached to solid rock substrate. Hardbottom is the substrate to which corals may attach but does not include the corals themselves.

Idle speed no wake means that a vessel must proceed at a speed no greater than that which will maintain steerageway and headway and which does not cause a visible wake. At no time is any vessel required to proceed so slowly that the operator is unable to maintain control over the vessel or any other vessel or object that it has under tow.

Large vessel means a vessel greater than 65′ length or the combined lengths of two or more vessels if, when tied together, the vessels would be greater than 65′ length.

Length means the straight line horizontal measurement of the overall length from the foremost part of the boat to the aftermost part of the boat, measured from end to end over the deck excluding sheer and measured parallel to the centerline. Bow sprits, bumpkins, rudders, outboard motor brackets, handles, and other similar fittings, attachments, and extensions are not included in the measurement.

Live rock means any living marine organism or an assemblage thereof and the hard substrate to which it is attached, including hard bottom, dead coral, rock, banks, or reefs, but not individual mollusk shells (*e.g.,* scallops, clams, oysters). Such attached living marine organisms may include, but are not limited to: sea anemones (Phylum Cnidaria: Class Anthozoa: Order Actiniaria); sponges (Phylum Porifera); tube worms (Phylum Annelida), including fan worms, feather duster worms, and Christmas tree worms; bryozoans (Phylum Bryozoa); sea squirts (Phylum Chordata); and marine algae, including Mermaid's fan and cups (*Udotea* spp.), coralline algae, green feather and green grape algae (*Caulerpa* spp.), and watercress (*Halimeda* spp.).

Marine life species means any species of fish, invertebrate, or plant designated as restricted species in subsections (2), (3), and (4) of F.A.C. 68B–42.001 (incorporated by reference, see § 922.179).

Military activity means an activity conducted by the Department of Defense, with or without participation by foreign forces, other than civil engineering and other civil works projects conducted by the U.S. Army Corps of Engineers.

No anchor means securing a vessel to the seabed by any means is prohibited, except when using a mooring buoy in full compliance with this Subpart.

No anchor by vessels >50m length means securing a vessel greater than 50 meters (164 feet) length to the seabed by any means is prohibited.

No entry means all vessels and all persons are prohibited from entering the area.

No motor means the use of internal combustion motors is prohibited. A vessel with an internal combustion motor may access a no motor zone only through the use of a push pole, paddle, sail, electric motor, or similar means of operation but is prohibited from using its internal combustion motor.

Not available for immediate use means not readily accessible for immediate use, *e.g.,* by being stowed and unbaited in a cabin, locker, rod holder, or similar storage area or by being securely covered and lashed to a deck or bulkhead.

Officially marked channel means a channel marked by Federal, State of Florida, or Monroe County officials of competent jurisdiction with navigational aids.

Personal watercraft means any jet or air-powered watercraft operated by standing, sitting, or kneeling on or behind the vessel, in contrast to a conventional boat where the operator stands or sits inside the vessel, and that uses an inboard engine to power a water jet pump for propulsion, instead of a propeller as in a conventional boat.

Prop dredging means the use of a vessel's propulsion wash to dredge or otherwise alter the seabed. Prop dredging includes, but is not limited to, the use of propulsion wash deflectors or similar means of dredging or otherwise altering the seabed. Prop dredging does not include the disturbance to bottom sediments resulting from normal vessel propulsion.

Prop scarring means the injury to seagrasses or other immobile organisms attached to the seabed caused by operation of a vessel in a manner that allows its propeller or other running gear, or any part thereof, to cause such injury (*e.g.,* cutting seagrass rhizomes).

Residential shoreline means any human-made or natural shoreline, canal mouth, basin, or cove, when any of these features are adjacent to any residential land use district under the

Monroe County land development regulations (including: improved subdivision, suburban residential or suburban residential limited, sparsely settled, urban residential, and urban residential mobile home) or residential land use district under any other municipal regulations.

Restoration Area means an area of the sanctuary that supports species or habitat recovery, including protection for restoration sites (referred to as Habitat Restoration Areas) and short- and long-term propagation nurseries (referred to as Nursery Restoration Areas), within which activities are subject to conditions, restrictions, and prohibitions to achieve these objectives. Appendices H and I to this subpart set forth the geographic coordinates of these areas.

Sanctuary means the Florida Keys National Marine Sanctuary.

Sanctuary Preservation Area means an area of the sanctuary that encompasses a discrete, biologically important area, within which activities are subject to conditions, restrictions, and prohibitions to avoid concentrations of uses that could result in significant declines in species populations or habitat, to reduce conflicts between uses, to protect areas that are critical for sustaining important marine species or habitats, or to provide opportunities for scientific research. Appendix F to this subpart sets forth the geographic coordinates of these areas.

Tank vessel means a vessel that is constructed or adapted to carry, or that carries, oil or hazardous material in bulk as cargo or cargo residue, and that—

(1) Is a vessel of the United States,

(2) Operates on the navigable waters of the United States, or

(3) Transfers oil or hazardous material in a port or place subject to the jurisdiction of the United States (46 U.S.C. 2101).

Traditional fishing means those commercial or recreational fishing activities customarily conducted within the sanctuary as of January 17, 2025.

Tropical fish means any species of fish designated as a restricted species in F.A.C. 68B–42.001(2) and defined as tropical fish under F.A.C. 68B–42.002(18) (incorporated by reference, see § 922.179).

Wildlife Management Area means an area of the sanctuary in which various access and use restrictions are applied to manage, protect, preserve, and minimize disturbance to sanctuary wildlife resources, including but not limited to endangered or threatened species or the habitats, special places, or conditions on which they rely. Appendix E to this subpart lists these areas and their access and use restrictions.

§ 922.163 Prohibited activities—Sanctuary-wide.

(a) Except as specified in paragraphs (b) and (c) of this section, the following activities are prohibited and thus are unlawful for any person to conduct or to cause to be conducted:

(1) *Mineral and hydrocarbon exploration, development and production.* Exploring for, developing, or producing minerals or hydrocarbons within the sanctuary.

(2) *Removal of, injury to, or possession of coral or live rock.* Moving, removing, harvesting, damaging, disturbing, touching, breaking, cutting, otherwise injuring, or possessing, in or from the sanctuary, any living or dead coral or coral formation, or live rock, or attempting any of these activities, except as authorized by an aquacultured live rock permit issued by the National Marine Fisheries Service or a Florida Sovereignty Submerged Land Live Rock Aquaculture Lease issued by the Florida Department of Agriculture and Consumer Services.

(3) *Alteration of, or construction on, the seabed.* Drilling into, dredging, otherwise altering the seabed of the sanctuary, or engaging in prop-dredging; or constructing, placing, or abandoning any structure, material, or other matter on or in the seabed of the sanctuary, except as an incidental result of:

(i) Anchoring vessels in a manner not otherwise prohibited by this subpart;

(ii) Traditional fishing activities not otherwise prohibited by this subpart;

(iii) Installation and maintenance of navigational aids by, or pursuant to valid authorization by, any Federal, State, or local authority of competent jurisdiction;

(iv) Dredging within Key West Harbor, its approach channels, and turning basins, only in federally dredged areas in existence as of July 1, 1997;

(v) Construction, repair, replacement, or rehabilitation of minor structures including docks, swim/observation platforms, floating vessel platforms, boat ramps, boat notches, boat lifts, mooring piles, seawalls, rip rap revetments, culverts, bulkheads, piers, or marinas with less than ten slips authorized by any valid lease, permit, license, approval, or other authorization issued by any Federal, State, or local authority of competent jurisdiction; or

(vi) Placement of approved rock material pursuant to the terms and conditions of an aquacultured live rock permit issued by the National Marine Fisheries Service or a Florida Sovereignty Submerged Land Live Rock Aquaculture Lease issued by the Florida Department of Agriculture and Consumer Services.

(4) *Discharge or deposit of materials or other matter.* (i) Within the boundary of the sanctuary, discharging or depositing any material or other matter from a cruise ship except cooling water;

(ii) Within the boundary of the sanctuary, discharging or depositing any material or other matter except:

(A) Fish, fish parts, chumming materials, or bait used or generated incidental to and while conducting traditional fishing in the sanctuary;

(B) From a vessel other than a cruise ship, cooling water, deck washdown and runoff, and graywater, discharged in compliance with 33 U.S.C. 1322 *et seq.* Vessels may not discharge oily wastes from bilge pumping.

(iii) Beyond the boundary of the sanctuary, discharging or depositing any material or other matter that subsequently enters the sanctuary and injures a sanctuary resource or quality, except:

(A) Materials or other matter listed in paragraphs (a)(4)(ii)(A) and (B) of this section;

(B) Sewage from a vessel in compliance with United States Coast Guard regulations at 33 CFR 159.7;

(C) Materials or other matter authorized under, and in compliance with, Monroe County land use permits; or

(D) Materials or other matter authorized under, and in compliance with, State of Florida permits.

(5) *Operation of vessels.* (i) Operating a vessel in such a manner as to strike or otherwise injure coral, coral reefs, hardbottom, seagrass, or any other immobile organism attached to the seabed, including, but not limited to, operating a vessel in such a manner as to cause prop-scarring.

(A) The owner and/or operator of any vessel that has been operated in a manner described in paragraph (a)(5)(i) of this section must notify the Director of such an event within 24 hours after its occurrence. If the vessel has run aground, the owner and/or operator must remove or cause the removal of the vessel within 72 hours after the initial incident unless otherwise prohibited or restricted by the United States Coast Guard, the Director agrees that extenuating circumstances such as weather or marine hazards would prevent safe removal of the vessel, or if the removal is otherwise subject to a removal plan approved by the Director. The owner and/or operator must remove or cause the removal of the vessel in a manner that avoids injury to sanctuary

resources and shall consult with the Director in accomplishing this task.

(B) [Reserved].

(ii) Anchoring a vessel on living coral.

(iii) Except in officially marked channels, operating a vessel at a speed greater than idle speed no wake within:

(A) An area designated as idle speed no wake;

(B) 300 feet (100 yards) of navigational aids indicating emergent or shallow reefs (international diamond warning symbol);

(C) 300 feet (100 yards) of residential shorelines; or

(D) 300 feet (100 yards) of a stationary vessel.

(iv) Operating a vessel at a speed greater than idle speed no wake less than 100 feet (33.3 yards) from a divers-down flag on an inlet or navigation channel; or less than 300 feet (100 yards) from a divers-down flag on all waters other than inlets and navigation channels.

(v) Operating a vessel in such a manner as to injure wading, roosting, or nesting birds, or marine mammals.

(vi) Operating or mooring a vessel in a manner that endangers life, limb, sanctuary resources, or property.

(vii) Having a marine sanitation device that is not secured in a manner that prevents discharges or deposits of treated or untreated sewage. Acceptable methods include, but are not limited to, all methods that have been approved by the United States Coast Guard.

(viii) Anchoring, mooring, deserting, operating, or occupying a derelict vessel or a vessel at risk of becoming derelict, or deserting a vessel aground or adrift in the sanctuary. Deserted vessels, derelict vessels, or vessels at risk of becoming derelict, must be removed within 72 hours of when the vessel owner or operator receives telephonic notice, in-person notice recorded on an agency approved body camera, or written notice which may be provided by facsimile, electronic mail, or other electronic means, stating removal is necessary from the Director or any authorized officer or the Director makes reasonable attempts to provide notice using any of these means, unless the Director agrees that extenuating circumstances, such as weather or marine hazards, would prevent safe removal, or if removal is consistent with a removal plan approved by the Director. The owner and/or operator must remove or cause the removal of the vessel in a manner that avoids injury to sanctuary resources and shall consult with the Director in accomplishing this task. The Director may require the preparation of and approval of a removal plan.

(ix) Leaving harmful matter aboard a grounded, deserted, derelict, or at risk of becoming derelict vessel in the sanctuary.

(x) Tying a large vessel to a mooring buoy not specifically designated for large vessels or tying a vessel other than a large vessel to a mooring buoy specifically designated for large vessels.

(6) *Conduct of diving/snorkeling without a flag.* Diving or snorkeling without displaying a divers-down flag from the highest point of the vessel or such other location from which the visibility of the divers-down flag is not obstructed in any direction.

(i) Divers must stay within 100 feet (33.3 yards) of the divers-down flag on inlets and navigation channels.

(ii) Divers must stay within 300 feet (100 yards) of the divers-down flag on all waters in the sanctuary other than rivers, inlets, and navigation channels.

(7) *Release of exotic species.* Introducing or releasing any exotic species into the sanctuary.

(8) *Damage or removal of markers.* Marking, defacing, damaging in any way, displacing, removing, tying to, or tampering with any official markers, signs, notices, or placards, whether temporary or permanent, or any navigational aids, monuments, stakes, posts, mooring buoys, boundary buoys, trap buoys, or scientific equipment.

(9) *Movement of, removal of, injury to, or possession of sanctuary historical resources.* Moving, removing, injuring, or possessing or attempting to move, remove, injure, or possess a sanctuary historical resource.

(10) *Conduct of prohibited activities under the MMPA, ESA, and MBTA.* Conducting any activity that is prohibited under the Marine Mammal Protection Act, as amended, (MMPA), 16 U.S.C. 1361 *et seq.,* the Endangered Species Act, as amended, (ESA), 16 U.S.C. 1531 *et seq.,* or the Migratory Bird Treaty Act, as amended, (MBTA) 16 U.S.C. 703 *et seq.,* except as authorized under those statutes.

(11) *Possession or use of explosives or electrical charges.* Possessing, using, or releasing explosives or electrical charges within the sanctuary, except powerheads and distress signaling devices when necessary and proper for safety.

(12) *Harvest or possession of marine life species.* Harvesting, fishing for, possessing, or landing any marine life species, or part thereof, in or from the sanctuary, except as authorized by a valid State of Florida license or exemption.

(13) *Interference with law enforcement.* Interfering with, obstructing, delaying, or preventing an investigation, a boarding, a search, a seizure, or the disposition of seized property in connection with enforcement of the NMSA or FKNMSPA or any regulation or permit issued under the Acts.

(14) *Fish feeding.* Attracting or feeding fish, including sharks, or other marine species from any vessel and/or while diving. Attracting or feeding does not include using bait or chum when conducting traditional fishing.

(b) *Exemption for military activities.* (1) The prohibitions in paragraph (a) of this section and § 922.164 do not apply to existing classes of military activities that were conducted prior to the effective date of these regulations, as identified in the 2024 FKNMS Final Environmental Impact Statement (for availability, see *http://www.floridakeys.noaa.gov*) for the sanctuary. New military activities in the sanctuary may be exempted from the prohibitions in paragraph (a) of this section and in § 922.164 by the Director after consultation between the Director and the Department of Defense.

(2) In the event of threatened or actual destruction of, loss of, or injury to a sanctuary resource or quality, including, but not limited to, spills and groundings caused by the Department of Defense, the cognizant component of the Department of Defense shall promptly coordinate with the Director for the purpose of taking appropriate actions to prevent, respond to, or mitigate the harm and, if possible, restore or replace the sanctuary resource or quality.

(c) *Exemption for law enforcement.* The following prohibitions do not apply to Federal, State, or local officers while performing enforcement duties in their official capacities or responding to emergencies that threaten life, property, or the environment:

(1) Those contained in paragraphs (a)(2), (a)(5), and (a)(8) through (a)(12) of this section;

(2) Those contained in paragraph (a)(4), except that all discharges of sewage must be in compliance with United States Coast Guard regulations at 33 CFR 159.7;

(3) Those contained in § 922.164(b)(1), (2) and (4); and

(4) Those contained in § 922.164(d) through (h).

(d) In no event may the Director issue a permit, including a certification or authorization, under § 922.10, subpart D of this part, § 922.166, or § 922.167 authorizing, or otherwise approving, the exploration for, leasing, development, or production of minerals or hydrocarbons within the sanctuary, the disposal of dredged material within the sanctuary other than in connection with beach

renourishment or sanctuary restoration projects, or the discharge of untreated or primary treated sewage, and any purported authorizations issued by other authorities for any of these activities within the sanctuary shall be invalid.

§ 922.164 Additional activity regulations by designated sanctuary area.

(a) *Areas to be avoided.* Operating a tank vessel or a vessel greater than 50 meters (164 feet) in length, or towing vessel(s), equipment, or materials such that the combined length of the tow vessel and all towed vessels, equipment, or materials is greater than 50 meters, is prohibited in all areas to be avoided, except if such vessel is a public vessel and its operation is essential for national defense, law enforcement, or responses to emergencies that threaten life, property, or the environment. Appendix B to this subpart sets forth the geographic coordinates of these areas, which are established under Florida Keys National Marine Sanctuary and Protection Act, Public Law 101–605 and International Maritime Organization advisory SN/Circ. 145.

(b) *Key Largo and Looe Key Management Areas.* The following activities are prohibited within the Key Largo and Looe Key Management Areas described in appendix C to this subpart:

(1) Removing, collecting, damaging, harming, breaking, cutting, spearing, or similarly injuring, or possessing, in or from the management area, any coral or other marine invertebrate, or any plant, soil, rock, or other material, except that commercial harvesting of spiny lobster and stone crab by trap and recreational harvesting of spiny lobster by hand or by hand gear is allowed if consistent with the regulations in this part and regulations under the Magnuson-Stevens Fishery Conservation and Management Act.

(2) Collecting or harvesting tropical fish.

(3) Fishing with wire fish traps, bottom trawls, dredges, fish sleds, or similar vessel-towed or anchored bottom fishing gear or nets.

(4) Fishing with, carrying, or possessing pole spears, air rifles, bows and arrows, slings, Hawaiian slings, rubber powered arbaletes, pneumatic and spring-loaded guns, or similar devices known as spearguns.

(c) *Great White Heron and Key West National Wildlife Refuges.* Operating a personal watercraft, operating an airboat, water skiing, and landing recreational aircraft are prohibited within the Great White Heron and Key West National Wildlife Refuges (described in appendix D to this subpart), except that operating a personal watercraft is allowed only in six areas described in appendix D.

(d) *Wildlife Management Areas.* Appendix E to this subpart sets forth the geographic coordinates of Wildlife Management Areas. The following access and use restrictions apply in individual Wildlife Management Areas. Certain exceptions from the access and use restrictions are also provided. All restrictions apply year-round unless specified.

TABLE 1 TO PARAGRAPH (d)

Wildlife management area	Access and use restriction
Barnes-Card Sound Wildlife Management Area	Idle speed no wake.
Crocodile Lake Wildlife Management Area	No entry within 300 feet (100 yards) of shorelines. Exceptions: Steamboat Creek.
Eastern Lake Surprise Wildlife Management Area	Idle speed no wake east of Highway 1. No entry within 300 feet (100 yards) of shorelines. No entry in the canal and basin on the southeast side.
Whitmore Bight Wildlife Management Area	No motor.
Pelican Key Wildlife Management Area	No entry.
Dove and Rodriguez Keys Wildlife Management Area	No motor.
Pigeon Key Wildlife Management Area	No entry.
Tavernier Key Wildlife Management Area	No motor. Exceptions: Tavernier Creek. Unnamed channel to the northeast of Tavernier Creek.
Snake Creek Wildlife Management Area	No motor. Exceptions: Snake Creek. Three channels providing access to Windley Key.
Cotton Key Wildlife Management Area	No motor.
Channel Key Banks Wildlife Management Area	Idle speed no wake. No entry around Channel Key.
Marathon Oceanside Shoreline Wildlife Management Area	Idle speed no wake. Exceptions: Ten channels providing access to Marathon.
Red Bay Bank Wildlife Management Area	Idle speed no wake.
East Bahia Honda Key Wildlife Management Area	No motor.
West Bahia Honda Key Wildlife Management Area	No motor.
Horseshoe Keys Wildlife Management Area	No entry.
Little Pine Key Mangrove Wildlife Management Area	No entry.
Water Key Mangroves Wildlife Management Area	No entry.
Howe Key Mangrove Wildlife Management Area	No motor.
East Content Keys and Upper Harbor Key Flats Wildlife Management Area.	Idle speed no wake in all tidal creeks and shallow flats. No entry around Upper Harbor Key.
West Content Keys Wildlife Management Area	Idle speed no wake in the eastern tidal creek. No entry in the western cove.
Torch Key Mangroves Wildlife Management Area	No entry.
Northeast Tarpon Belly Keys Wildlife Management Area	No motor.
Crane Key Wildlife Management Area	No entry.
Sawyer Key Wildlife Management Area	No entry.

TABLE 1 TO PARAGRAPH (d)—Continued

Wildlife management area	Access and use restriction
Happy Jack Key Wildlife Management Area	No entry.
Barracuda Keys Wildlife Management Area	Idle speed no wake.
Pelican Shoal Wildlife Management Area	No entry.
Snipe Keys Wildlife Management Area	Idle speed no wake in the main tidal creek. No motor in all other tidal creeks. No entry around the two small southern islands.
Mud Keys Wildlife Management Area	Idle speed no wake.
Lower Harbor Keys Wildlife Management Area	Idle speed no wake.
East Harbor Key Wildlife Management Area	No entry.
Cayo Agua Keys Wildlife Management Area	Idle speed no wake.
Bay Keys Wildlife Management Area	Idle speed no wake in the channel north of the western island. No motor around the eastern and western islands.
Big Mullet Key Wildlife Management Area	No motor.
Cottrell Key Wildlife Management Area	No entry.
Little Mullet Key Wildlife Management Area	No entry.
Ballast and Man Keys Flats Wildlife Management Area	Idle speed no wake. Exception: Two channels between the keys.
Western Dry Rocks Wildlife Management Area	From April 1 to July 31, continuous transit without interruption and no anchor.
Woman Key Wildlife Management Area	No entry.
Boca Grande Key Wildlife Management Area	No entry.
Marquesas Keys Wildlife Management Area	Idle speed no wake in the creek east of Gull Keys. No entry around the small island west of Gull Key. No entry around three smallest islands on the western side of Mooney Harbor.
Marquesas Keys Turtle Wildlife Management Area	Idle speed no wake.
Tortugas Bank Wildlife Management Area	No anchor by vessels >50m length.

(e) *Sanctuary Preservation Areas.* Appendix F to this subpart sets forth the geographic coordinates of Sanctuary Preservation Areas. The following activities are prohibited within the Sanctuary Preservation Areas:

(1) Discharging or depositing any material or other matter, except cooling water from vessels.

(2) Moving, fishing, harvesting, removing, collecting, damaging, disturbing, breaking, cutting, spearing, otherwise injuring, or possessing, in or from the area, any coral, marine invertebrate, fish, bottom formation, algae, seagrass or other living or dead organism, including shells, or attempting any of these activities. However, fish, invertebrates, and marine plants may be possessed aboard a vessel provided that the vessel remains in continuous transit without interruption.

(3) Anchoring a vessel.

(f) *Conservation Areas.* Appendix G to this subpart sets forth the geographic coordinates of Conservation Areas. The following activities are prohibited within the Conservation Areas:

(1) Conducting any activity prohibited at 922.164(e)(1) and 922.164(e)(2).

(2) Anchoring a vessel, except in a portion of the Western Sambo Conservation Area where anchoring is allowed landward of the line connecting the points 24.498774, −81.725441 and 24.504693, −81.693012.

(3) Entering a Conservation Area other than the Western Sambo Conservation Area, except for continuous transit without interruption.

(g) *Habitat Restoration Areas.* Appendix H to this subpart sets forth the geographic coordinates of Habitat Restoration Areas. Conducting any activity prohibited at 922.164(e) is prohibited within the Habitat Restoration Areas.

(h) *Nursery Restoration Areas.* Appendix I to this subpart sets forth the geographic coordinates of Nursery Restoration Areas. The following activities are prohibited within the Nursery Restoration Areas:

(1) Conducting any activity prohibited at 922.164(e).

(2) Entering any Nursery Restoration Area, except for continuous transit without interruption.

§ 922.165 Temporary regulation for emergency and adaptive management.

(a) Any and all activities are subject to temporary regulation, including prohibition of any activity, restriction of access or uses, or designation or modification of any areas identified in §§ 922.164(d) through (h), subject to the limitations in this section.

(b) The Director may temporarily regulate activities in the sanctuary only if the Director determines, based on the best available information, that immediate action is reasonably necessary to:

(1) Prevent or minimize destruction of, loss of, or injury to sanctuary resources, or risk of the same, from any human-made or natural circumstances. These circumstances may include, but are not limited to, a concentration of human use, change in migratory or habitat use patterns, vessel impacts, natural disaster or similar emergency, disease, or bleaching;

(2) Initiate restoration, recovery, or other activity to improve or repair living habitats and species where a delay in time would impair the ability of such activity to succeed; or

(3) Initiate research where an unforeseen event produces an opportunity for scientific research that may be lost if research is not initiated immediately.

(c) Any temporary regulation issued under this section shall be subject to the following procedure:

(1) No temporary regulation issued under this section will take effect unless the proposed rule is published in the **Federal Register** for public comment and the final rule is published not less than 30 days before its effective date, unless the Director finds for good cause that notice and comment rulemaking and a 30 day delay of the effectiveness date under the Administrative Procedure Act, 5 U.S.C. 553, is

impracticable, unnecessary, or contrary to the public interest.

(2) If the Director decides, for good cause, that a temporary rule is to be made effective immediately without affording prior notice and opportunity for public comment, the Director may decide to receive public comments on the necessity for, and extent of, the temporary regulation for a period of 15 days after the effective date of notification.

(3) Notification in the **Federal Register** of temporary regulation issued by the Director under this section will include the following information:

(i) A description of the regulation;

(ii) Reason(s) for the regulation under paragraph (b) of this section and the good cause determinations required under paragraph (c)(1) of this section; and

(iii) The effective date and termination date of such regulation.

(d) Any temporary regulation may be in effect for up to six months (180 days), with one six-month (additional 186-day) extension. NOAA will announce any extension by publishing a notice in the **Federal Register**.

(e) Temporary regulations under this section shall not take effect in Florida State waters until approved by the Governor of the State of Florida.

(f) It is unlawful for any person to violate any temporary regulation imposed under this section.

§ 922.166 National Marine Sanctuary permitting—General permits, special use permits, and authorizations

(a) *National Marine Sanctuary general permits.* (1) Except as noted at § 922.163(d), a person may conduct an activity prohibited by § 922.163 or 922.164 if such activity is specifically allowed by and conducted in accordance with the scope, purpose, and terms and conditions of a general permit issued under this section or subpart D of this part.

(2) The Director, at his or her discretion, may issue a general permit under this section subject to such terms and conditions as he or she deems appropriate if the Director finds that the activity falls within one of the general permit categories at § 922.30(b) or one of the following categories:

(i) *Archaeological research:* Activities involving the scientific study of the physical remains of human activity and its surrounding environmental context, utilizing research questions to inform society's understanding of the past;

(ii) *Restoration:* Activities that further restoration of natural resources of the sanctuary; and

(iii) *Tortugas North Conservation Area Access:* Activities that involve access to and entry into the Tortugas North Conservation Area.

(b) *Application requirements and procedures.* (1) Applications for general permits, special use permits, and authorizations under this section or subpart D of this part, other than for Tortugas North Conservation Area Access shall be addressed to the Superintendent, Florida Keys National Marine Sanctuary, 33 East Quay Road, Key West, FL 33040, or sent by electronic means as defined in the instructions for the ONMS permit application. All applications, except those for Tortugas North Conservation Area Access, shall comply with the requirements and procedures under subpart D of this part.

(2) Applications for general permits for Tortugas North Conservation Area shall be requested via telephone to FKNMS at (305) 809–4700 or by email to *TortugasNorthPermit@noaa.gov* at least 72 hours before the date the permit is desired to be effective. All applications shall include:

(i) Vessel name;

(ii) Name, address, and telephone number of owner and operator;

(iii) Name, address, and telephone number of applicant;

(iv) USCG documentation, State license, or registration number;

(v) Home port;

(vi) Length of vessel and propulsion type (*i.e.,* motor or sail);

(vii) Number of divers; and

(viii) Requested effective date (date of ingress) and date of egress. General permits for Tortugas North Conservation Area Access shall be issued for a period not exceeding two weeks.

(c) *Review procedures and evaluation.* (1) *General permits, special use permits, and authorizations.* The Director shall review and evaluate an application for a general permit, special use permit, or authorization in accordance with this section and subpart D of this part.

(2) *General permits for archaeological research.* The Director shall not issue a general permit for archaeological research unless the Director conducts the required review and evaluation required by paragraph (c)(1) of this section and further finds that:

(i) The applicant is a supervising archaeologist responsible for project planning, field operations, research analysis, and reporting and will directly supervise and be on site for any excavation and/or historical resource recovery operations. A supervising archaeologist shall have underwater archaeological experience related to the research proposed and shall meet the requirements for prehistoric or historic archaeology in the Secretary of the Interior's Standards and Guidelines for Archaeology and Historic Preservation, which are:

(A) A graduate degree in archaeology, anthropology, or closely related field;

(B) At least one year of full-time professional experience or equivalent specialized training in archaeological research, administration, or management;

(C) At least four months of supervised field and analytic experience in general North American archaeology;

(D) Demonstrated ability to carry research to completion; and

(E) A professional in prehistoric archaeology shall have at least one year of full-time professional experience at a supervisory level in the study of prehistoric period archaeological resources. A professional in historic archaeology shall have at least one year of full-time professional experience at a supervisory level in the study of historic period archaeological resources;

(ii) The applicant commits to following an explicit statement of objectives and methods that respond to needs identified in the planning process;

(iii) The methods and techniques of the proposed activity are selected to obtain the information required by the statement of objectives; and

(iv) The applicant commits to assess the results against the statement of objectives and integrate them into the planning process.

(3) *Activities in designated sanctuary areas.* The Director shall not issue a general permit, special use permit, or authorization under this section or subpart D of this part for activities within any of the areas described in § 922.164(b) through (h) unless the Director finds that such activities will further and are consistent with the purposes for which such area was established as described in §§ 922.162 and 922.164 and in the currently applicable FKNMS management plan for the sanctuary.

(d) *Terms and conditions.* (1) In addition to any terms and conditions in subpart D of this part, general permits, special use permits, and authorizations issued under this section or subpart D of this part shall be subject to the following terms and conditions:

(i) Except for Tortugas North Conservation Area Access Permits, the signed permit or a copy thereof shall be maintained in legible condition on board all vessels or aircraft used in the conduct of the permitted activity and be displayed for inspection upon the request of any authorized officer;

(ii) All permitted activities shall be conducted in a manner that does not

destroy, cause the loss of, or injure sanctuary resources or qualities, except to the extent that such may be specifically authorized;

(iii) The permittee agrees to hold the United States harmless against any claims arising out of the conduct of the permitted activities; and

(iv) All necessary Federal, State, and/or local leases, permits, licenses, approvals, or other authorizations from all agencies with jurisdiction over the proposed activities shall be secured before commencing any activities authorized pursuant to a sanctuary permit.

(2) General permits for archaeological research shall be subject to the terms and conditions in paragraph (d)(1) of this section and to the following terms and conditions:

(i) An agreement with a conservation laboratory shall be in place before historical resource recovery operations begin, where a qualified marine archaeological materials conservator shall be in charge of planning, conducting, and supervising the conservation of any historical resources and other materials recovered. To be considered a qualified marine archaeological materials conservator, the individual shall have a graduate degree in archaeology, history, anthropology, or science with experience conserving archaeological materials recovered from the marine environment documented in a Curriculum Vitae and professional references; and

(ii) A curation agreement with a museum or facility for curation, public access, periodic public display, and maintenance of the recovered historical resources shall be in place before commencing field operations involving historical resource recovery. The curation facility shall meet the requirements of 36 CFR part 79.

(3) The Director, at his or her discretion, may subject a general permit, special use permit, or authorization issued under this section of subpart D of this part to such additional terms and conditions as he or she deems appropriate. These may include but are not limited to the following:

(i) Any data, information, or results obtained pursuant to the permit shall be made available to NOAA and the public;

(ii) A NOAA official shall be allowed to observe any activity conducted pursuant to the permit;

(iii) The permittee shall submit to NOAA one or more reports on the status, progress, or results of any activity authorized by the permit, including all revenues derived from such activities during the year and/or term of the permit, as applicable; and

(iv) The permittee shall purchase and maintain general liability insurance or other acceptable security against potential claims for destruction, loss of, or injury to sanctuary resources arising out of the permitted activities. The amount of insurance or security should be commensurate with an estimated value of the sanctuary resources in the permitted area. A copy of the insurance policy or security instrument shall be submitted to the Director.

(4) Sunken military craft are administered by the respective Secretary concerned pursuant to the Sunken Military Craft Act. The Director will enter into a Memorandum of Agreement regarding collaboration with other Federal agencies charged with implementing the Sunken Military Craft Act that may address aspects of managing and protecting sunken military craft. The Director will request approval from the Secretary concerned for any terms and conditions of ONMS authorizations that may involve sunken military craft.

§ 922.167 National Marine Sanctuary permitting—Certifications.

(a) Except as noted at § 922.163(d), a person may conduct an activity prohibited by § 922.163 or 922.164 within the sanctuary if such activity is specifically authorized by a valid Federal, State, or local lease, permit, license, or right of subsistence use or of access that is in existence on the effective date of the final regulations for the designation or any revised terms of designation for the Florida Keys National Marine Sanctuary, provided that the holder of the lease, permit, license, or right of subsistence use or of access complies with § 922.10 and provided that:

(1) The holder of such authorization or right notifies the Director, in writing, within 90 days of the effective date of the revised terms of designation of the existence and location of such authorization or right and requests certification of such authorization or right; and

(2) The holder complies with any terms and conditions on the exercise of such authorization or right imposed as a condition of certification by the Director to achieve the purposes for which the sanctuary was designated.

(b) Requests for certifications shall be addressed to the Superintendent, Florida Keys National Marine Sanctuary, 33 East Quay Road, Key West, FL 33040, or sent by electronic means as defined in the instructions for the ONMS permit application. A copy of the lease, permit, license, or right of subsistence use or of access must accompany the request.

(c) A certification requester with an authorization or right described in paragraph (a) of this section authorizing an activity prohibited by § 922.163 or 922.164 may continue to conduct the activity without being in violation of applicable provisions of § 922.163 or 922.164 pending the Director's review of and decision regarding his or her certification request.

(d) The Director may request additional information from the certification requester as the Director deems reasonably necessary to condition appropriately the exercise of the certified authorization or right to achieve the purposes for which the sanctuary was designated. The Director must receive the information requested within 45 days of the date of the Director's request for information. Failure to provide the requested information within this time frame may be grounds for denial by the Director of the certification request.

(e) In considering whether to issue a certification, the Director may seek and consider the views of any other person or entity, within or outside the Federal government, and may hold a public hearing as deemed appropriate by the Director.

(f) Upon completion of review of the authorization or right and information received with respect thereto, the Director shall communicate, in writing, any decision on a certification request or any action taken with respect to any certification made under this section to both the holder of the certified lease, permit, license, approval, other authorization, or right, and the issuing agency and shall set forth the reason(s) for the decision or action taken.

(g) The Director may amend, suspend, or revoke any certification issued under this section whenever continued operation would otherwise be inconsistent with any terms or conditions of the certification. Any such action shall be forwarded in writing to both the certification holder and the agency that issued the underlying lease, permit, license, or right of subsistence use or of access, and shall set forth reason(s) for the action taken.

(h) The Director may amend any certification issued under this section whenever additional information becomes available that he or she determines justifies such an amendment.

(i) Any time limit prescribed in or established under this section may be extended by the Director for good cause.

(j) It is unlawful for any person to violate any terms and conditions in a certification issued under this section.

§§ 922.168–922.178 [Reserved]

§ 922.179 Incorporation by reference.

Certain material is incorporated by reference into this subpart with the approval of the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. All approved incorporation by reference (IBR) material is available for inspection at the National Oceanic and Atmospheric Administration (NOAA) and at the National Archives and Records Administration (NARA). Contact NOAA at: the Office of National Marine Sanctuaries (ONMS), 1305 East-West Highway, Silver Spring, MD 20910; website: *https://sanctuaries.noaa.gov/contact.html.* For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.* The material may be obtained from the following source:

(2) *F.A.C. 68B–42.002.* Florida Administrative Code chapter 68B–42, Marine Life, rule 68B–42.002, Definitions, effective November 1, 2012; IBR into § 922.162.

(b) [Reserved]

Appendix A to Subpart P of Part 922—Florida Keys National Marine Sanctuary Boundary Coordinates

The Florida Keys National Marine Sanctuary (sanctuary) encompasses an area of 3,622 square nautical miles (4,797 square miles) of coastal, ocean, and Gulf of Mexico waters and the submerged lands thereunder from the boundary to the shoreline as defined by the mean high water tidal datum surrounding the Florida Keys in southern Florida.

The sanctuary boundary begins approximately 4 miles east of the northern extent of Key Biscayne at Point 1 and continues roughly south and then southwest and west in numerical order to Point 15 approximately 27 miles SW of Loggerhead Key. From Point 15 the sanctuary boundary continues north to Point 17 which is approximately 18 miles NW of Loggerhead Key and then continues roughly east in numerical order to Point 23 just north of Sprigger Bank. From Point 23 the boundary continues in numerical order roughly SE to Point 26 just north of Old Dan Bank. From Point 26 the boundary continues NE in numerical order through Bowlegs Cut and Steamboat Channel to Point 42 near the southern entrance to Cowpens Cut west of Plantation Key.

From Point 42 the boundary continues towards Point 43 until it intersects the shoreline. From this intersection the boundary follows the shoreline roughly NNE until it intersects the line segment formed between Point 44 and Point 45.

From this intersection the boundary continues NNE to Point 45 and then roughly NE in numerical order to Point 61 just west of Hammer Point in Tavernier, FL. From Point 61 the boundary continues in numerical order roughly north and then NW to Point 64 just west of Pigeon Key. From Point 64 the boundary continues in numerical order roughly NE then NNE through Baker Cut to Point 69. From Point 69 the boundary continues in numerical order roughly NE through Buttonwood Sound to Point 73.

From Point 73 the boundary continues towards Point 74 until it intersects the shoreline near the southern entrance to Grouper Creek west of Key Largo, FL. From this intersection the boundary follows the shoreline NE along Grouper Creek until it intersects the line segment formed between Point 75 and Point 76. From this intersection the boundary continues towards Point 76 until it intersects the shoreline. From this intersection the boundary follows the shoreline roughly east until it intersects the line segment formed between Point 77 and Point 78.

From this intersection the boundary continues to Point 78 and then roughly ESE in numerical order through Tarpon Basin to Point 85. From Point 85 the boundary continues NE and then NW to Point 92.

From Point 92 the boundary continues towards Point 93 until it intersects the shoreline. From this intersection the boundary follows the shoreline roughly north along Dusenberry Creek until it intersects the line segment formed between Point 94 and Point 95.

From this intersection the boundary continues to Point 95 and then NE in numerical order through Blackwater Sound to Point 102 south of the entrance to Jewfish Creek.

From Point 102 the boundary continues towards Point 103 until it intersects the shoreline. From this intersection the boundary follows the shoreline roughly NNE and then NW until it intersects the line segment formed between Point 104 and Point 105. From this intersection the boundary continues towards Point 105 until it intersects the shoreline. From this intersection the boundary follows the shoreline roughly NNE and then roughly west along southwestern Barnes Sound and around Division Point until it intersects the line segment formed between Point 106 and Point 107 near Manatee Creek east of Long Sound. From this intersection the boundary continues towards Point 107 until it intersects the shoreline. From this intersection the boundary follows the shoreline roughly NNW until it intersects the line segment formed between Point 108 and Point 109. From this intersection the boundary continues towards Point 109 until it intersects the shoreline. From this intersection the boundary follows the shoreline roughly east until it intersects the line segment formed between Point 109 and 110. From this intersection the boundary continues towards Point 110 until it intersects the shoreline. From this intersection the boundary follows the shoreline roughly north and then NE until it intersects the line segment formed between Point 111 and Point 112. From this intersection the boundary continues towards Point 112 until it intersects the shoreline. From this intersection the boundary follows the shoreline roughly east and then north around Bay Point and then west until it intersects the line segment formed between Point 113 and Point 114. From this intersection the boundary continues towards Point 114 until it intersects the shoreline. From this intersection the boundary follows the shoreline north along the western side of Manatee Bay until it intersects the line segment formed between Point 115 and Point 116. From this intersection the boundary continues towards Point 116 until it intersects the shoreline.

From this intersection the boundary follows the shoreline around northern Manatee Bay and Barnes Sound until it intersects the line segment formed between Point 117 and Point 118. From this intersection the boundary continues towards Point 118 until it intersects the shoreline. From this intersection the boundary follows the shoreline roughly to the SE south of FL State Route 905A—Card Sound Road then NW and roughly north along western Little Card Sound and then Card Sound cutting off the mouths of canals and drainage ditches until it intersects the line segment formed between Point 119 and Point 120 south of Midnight Pass. From this intersection the boundary continues to Point 120 and then roughly SE to each successive point in numerical order approximating the southern boundary of Biscayne National Park to Point 142 approximately 3 miles ENE of Turtle Rocks. From Point 142 the boundary continues roughly N to each successive point in numerical order ending at Point 158.

The inner landward sanctuary boundary is defined by and follows the shoreline where not already specified in the description above.

Dry Tortugas National Park is not included within the FKNMS and the inner sanctuary boundary in this area is coterminous with this national park boundary and begins at Point DT1 and continues in numerical order counterclockwise around the national park ending at Point DT10.

Coordinates listed in this appendix are unprojected (Geographic) and based on the North American Datum of 1983.

Note: The coordinates in the table above marked with an asterisk (*) are not a part of the sanctuary boundary. These coordinates are landward reference points used to draw a line segment that intersects with the shoreline.

Appendix B to Subpart P of Part 922—Areas To Be Avoided Boundary Coordinates

Coordinates listed in this appendix are unprojected (Geographic) and based on the North American Datum of 1983.

The boundary for the following Area to be Avoided zones begins at Point 1 and continues to each successive point in numerical order until ending at the zone's last point as listed in its specific coordinate table.

Appendix D to Subpart P of Part 922—National Wildlife Refuges Boundary Coordinates

Coordinates listed in this appendix are unprojected (Geographic) and based on the North American Datum of 1983.

Note: The coordinates in the tables of this appendix marked with an asterisk (*) are not a part of the zone's boundary. These coordinates are landward reference points used to draw a line segment that intersects with the shoreline.

Key West National Wildlife Refuge

The seaward boundary for the Key West National Wildlife Refuge begins at Point 1 and continues to each successive point in numerical order until ending at Point 5. The inner landward boundary for Key West National Wildlife Refuge is defined by and follows the shoreline at mean high water.

Note: This boundary description only represents the marine portions of the Key West National Wildlife Refuge that fall within the sanctuary. The full Key West National Wildlife Refuge boundary was established by Executive Order 923 in 1908.

Great White Heron National Wildlife Refuge

The boundary description below only represents the marine portions of the Great White Heron National Wildlife Refuge that fall within the sanctuary. The full Great White Heron National Wildlife Refuge boundary was established by Executive Order 7993 in 1938, with additional islands acquired under the Migratory Bird Conservation Act (16 U.S.C., S. 715).

The Great White Heron National Wildlife Refuge boundary begins approximately 1.6 miles south of Cocoanut Key at Point 1 and continues west to Point 2 and then south to Point 3. From Point 3 the boundary continues west towards Point 4 until it intersects the shoreline at No Name Key. From this intersection the boundary follows the shoreline generally west until it intersects the line segment formed between Point 5 and Point 6. From this intersection the boundary continues to Point 6 and then south towards Point 7 until it intersects the shoreline at Big Pine Key. From this intersection the boundary follows the shoreline generally north and then around to the south and then east until it intersects the line segment formed between Point 8 and Point 9. From this intersection the boundary continues south to Point 9 and then west towards Point 10 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally west and then north until it intersects the line segment formed between Point 11 and Point 12. From this intersection the boundary continues north to Point 12 and then west towards Point 13 until it intersects the shoreline. From this intersection the boundary follows the shoreline NW until it intersects the line segment formed between Point 14 and Point 15. From this intersection the boundary continues north to Point 15 and then west towards Point 16 until it intersects the shoreline. From this intersection the boundary follows the shoreline north around the northern end of Big Pine Key and then generally south until it intersects the line segment formed between Point 17 and Point 18. From this intersection the boundary continues towards Point 18 until it intersects the shoreline. From this intersection the boundary follows the shoreline west and then south until it intersects the line segment formed between Point 19 and Point 20. From this intersection the boundary continues west towards Point 20 until it intersects the shoreline at Big Torch Key. From this intersection the boundary follows the shoreline NW until it intersects the line segment formed between Point 21 and Point 22. From this intersection the boundary continues north to Point 22 and then west towards Point 23 until it intersects the shoreline. From this intersection the boundary follows the shoreline north around the northern end of Big Torch Key and then generally south until it intersects the line segment formed between Point 24 and Point 25. From this intersection the boundary continues south towards Point 25 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally south until it intersects the line segment formed between Point 26 and Point 27. From this intersection the boundary continues south to Point 27 then west to Point 28 and south towards Point 29 until it intersects the shoreline. From this intersection the boundary follows the shoreline until it intersects the line segment formed between Point 30 and Point 31. From this intersection the boundary continues west to Point 31 and then south towards Point 32

until it intersects the shoreline at Cudjoe Key. From this intersection the boundary follows the shoreline west and then east until it intersects the line segment formed between Point 32 and Point 33. From this intersection the boundary continues south towards Point 33 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally west until it intersects the line segment formed between Point 34 and Point 35. From this intersection the boundary continues west to Point 35 and then south to Point 36 and west to Point 37 and north to Point 38. From Point 38 the boundary continues west towards Point 39 until it intersects the shoreline at Sugarloaf Key. From this intersection the boundary follows the shoreline around the northern end of Sugarloaf Key until it intersects the line segment formed between Point 40 and Point 41. From this intersection the boundary continues west to Point 41 and then generally SW to each successive point in numerical order to Point 45. From Point 45 the boundary continues south towards Point 46 until it intersects the shoreline at Saddlebunch Keys. From this intersection the boundary follows the shoreline generally south until it intersects the line segment formed between Point 47 and Point 48. From this intersection the boundary continues towards Point 48 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally south until it intersects the line segment formed between Point 48 and Point 49. From this intersection the boundary continues towards Point 49 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally west until it intersects the line segment formed between Point 50 and Point 51. From this intersection the boundary continues west to Point 51 and then south towards Point 52 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally west until it intersects the line segment formed between Point 53 and Point 54. From this intersection the boundary continues west to Point 54 and then south towards Point 55 until it intersects the shoreline. From this intersection the boundary follows the shoreline south until it intersects the line segment formed between Point 55 and Point 56. From this intersection the boundary continues south to Point 56 and then west to Point 57 and then south to Point 58. From Point 58 the boundary continues towards Point 59 until it intersects the shoreline at Big Coppitt Key. From this intersection the boundary follows the shoreline west until it intersects the line segment formed between Point 60 and Point 61. From this intersection the boundary continues west to Point 61 and then south towards Point 62 until it intersects the shoreline at Rockland Key. From this intersection the boundary follows the shoreline south and then west until it intersects the line segment formed between Point 63 and Point 64. From this intersection the boundary continues towards Point 64 until it intersects the shoreline. From this intersection the boundary follows the shoreline NW until it intersects the line segment formed between Point 65 and Point 66. From this intersection the boundary continues north to Point 66 and then west towards Point 67 until it intersects the shoreline. From this intersection the boundary follows the shoreline west until it intersects the line segment formed between Point 67 and Point 68. From this intersection the boundary continues west towards Point 68 until it intersects the shoreline at Channel Key. From this intersection the boundary follows the shoreline west until it intersects the line segment formed between Point 69 and Point 70. From this intersection the boundary continues west to Point 70 and then generally NE to each successive point in numerical order to Point 78. From Point 78 the boundary continues south and then west to each successive point in numerical order ending at Point 81. The inner landward boundary of this National Wildlife Refuge is defined by and follows the shoreline where not already specified.

Personal Watercraft (PWC) Exception Area 1—Key West National Wildlife Refuge

Personal watercraft are allowed within the following area inside Key West National Wildlife Refuge. The boundary for PWC Exception Area 1 begins at Point 1 and continues to each successive point in numerical order until ending at Point 4 in the following coordinate table:

Point	Latitude	Longitude
1	24.52853	−81.81654
2	24.54833	−81.81655
3	24.54298	−81.82584
4	24.52853	−81.81654

PWC Exception Area 2—Great White Heron National Wildlife Refuge

Personal watercraft are allowed within the following area inside Great White Heron National Wildlife Refuge. The area begins just north of No Name Key at Point 1 and continues west towards Point 2 until it intersects the shoreline at No Name Key. From this intersection the boundary follows the shoreline west until it intersects the line segment formed between Point 3 and Point 4. From this intersection the boundary continues west to Point 4 then south towards Point 5 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally NW then south and then east until it intersects the line segment formed between Point 6 and Point 7. From this intersection the boundary continues south to Point 7 and then west towards Point 8 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally NW until it intersects the line segment formed between Point 9 and Point 10. From this intersection the boundary continues north to Point 10 then east to Point 11 and then south to Point 12 where it ends. The inner landward boundary of this zone is defined by and follows the shoreline where not already specified.

12	24.70499	−81.33226

PWC Exception Area 3—Great White Heron National Wildlife Refuge

Personal watercraft are allowed within the following area inside the Great White Heron National Wildlife Refuge. This area begins on Howe Key at the intersection of the shoreline and the line segment formed by Point 1 and Point 2. From this intersection the boundary continues east towards Point 2 until it intersects the shoreline at Big Pine Key. From this intersection the boundary follows the shoreline generally south until it intersects the line segment formed between Point 3 and Point 4. From this intersection the boundary continues towards Point 4 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally west and south until it intersects the line segment formed between Point 5 and Point 6. From this intersection the boundary continues west to Point 6 and then north towards Point 7 until it intersects the shoreline at Howe Key. From this intersection the boundary follows the shoreline generally south and east until it intersects the line segment formed between Point 8 and Point 9 where it ends. The inner landward boundary of this zone is defined by and follows the shoreline where not already specified.

PWC Exception Area 4—Great White Heron National Wildlife Refuge

Personal watercraft are allowed within the following area inside the Great White Heron National Wildlife Refuge. This area begins just west of Big Torch Key at Point 1 and continues west to Point 2 and then north towards Point 3 until it intersects the shoreline. From this intersection the boundary follows the shoreline north until it intersects the line segment formed between Point 3 and Point 4. From this intersection the boundary continues towards Point 4 until it intersects the shoreline. From this intersection the boundary follows the shoreline north until it intersects the line segment formed between Point 4 and Point 5. From this intersection the boundary continues north to Point 5 and then east towards Point 6 until it intersects the shoreline. From this intersection the boundary follows the shoreline east until it intersects the line segment between Point 6 and Point 7. From this intersection the boundary continues towards Point 7 until it intersects the shoreline. From this intersection the boundary follows the shoreline east until it intersects the line segment formed between Point 7 and Point 8. From this intersection the boundary continues towards Point 8 until it intersects the shoreline at Big Torch Key. From this intersection the boundary follows the shoreline generally south until it intersects the line segment formed between Point 9 and Point 10. From this intersection the boundary continues south towards Point 10 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally south until it intersects the line segment formed between Point 11 and Point 12. From this intersection the boundary continues south to Point 12 where it ends. The inner landward boundary of this zone is defined by and follows the shoreline where not already specified.

PWC Exception Area 5—Great White Heron National Wildlife Refuge

Personal watercraft are allowed within the following area inside the Great White Heron National Wildlife Refuge. This area begins just NW of Halfmoon Key at Point 1 and continues south to Point 2 and then west towards Point 3 until it intersects the shoreline at Big Coppitt Key. From this intersection the boundary follows the shoreline west until it intersects the line segment formed between Point 4 and Point 5. From this intersection the boundary continues west to Point 5 and then north towards Point 6 until it intersects the shoreline at Duck Key. From this intersection the boundary follows the shoreline SW and then NW around Duck Key until it intersects the line segment formed between Point 7 and Point 8. From this intersection the boundary continues east to Point 8 where it ends. The inner landward boundary of this zone is defined by and follows the shoreline where not already specified.

PWC Exception Area 6—Great White Heron National Wildlife Refuge

Personal watercraft are allowed within the following area inside the Great White Heron National Wildlife Refuge. This area begins just north of Rockland Key at Point 1. From Point 1 the boundary continues south towards Point 2 until it intersects the shoreline at Rockland Key. From this intersection the boundary follows the shoreline generally south and west until it intersects the line segment formed between Point 3 and Point 4. From this intersection the boundary continues west towards Point 4 until it intersects the shoreline. From this intersection the boundary follows the shoreline NW until it intersects the line segment formed between Point 5 and Point 6. From this intersection the boundary continues north to Point 6 and then east to Point 7 where it ends. The inner landward boundary of this zone is defined by and follows the shoreline where not already specified.

Appendix E to Subpart P of Part 922—Wildlife Management Areas Boundary Coordinates and Access and Use Restrictions

Coordinates listed in this appendix are unprojected (Geographic) and based on the North American Datum of 1983.

The access and use restriction for each zone is listed under the zone name and set forth at 15 CFR 922.164(d).

The boundary for the following Wildlife Management Areas begins at each individual zone's Point 1 and continues to each successive point in numerical order until ending at that same zone's last point as listed in its specific coordinate table.

Channel Key Banks WMA

The wildlife management area outer seaward boundary begins just north of Channel Key at Point 1. From Point 1 the boundary continues SE to Point 2 and to each successive point in numerical order ending at Point 5. The inner boundary is defined by the Channel Key Banks Wildlife Management Area No Entry Zone around Channel Key beginning at Point 1 of that zone and continuing to each successive point in numerical order until it ends at Point 159.

The seaward boundary for the following Wildlife Management Areas begins at each individual zone's Point 1 and continues to each successive point in numerical order until ending at that same zone's last point as listed in its specific coordinate table. The inner landward boundary for each individual zone below is defined by and follows the shoreline at mean high water.

Tavernier Key WMA 1

No Motor

The wildlife management area boundary begins at Point 1 and continues generally west to each successive point in numerical order until it reaches Point 9. From Point 9 the boundary continues towards Point 10 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally east until it intersects the line segment formed between Point 11 and Point 12. From this intersection the boundary continues south to Point 12 and ends at Point 13.

Note: The coordinates in the tables below marked with an asterisk (*) are not a part of the zone's boundary. These coordinates are landward reference points used to draw a line segment that intersects with the shoreline.

Barnes-Card Sound WMA

Idle Speed No Wake

The wildlife management area boundary begins SW of Middle Key in the NW corner of Barnes Sound at the intersection of the shoreline with the line segment formed between Point 1 and Point 2. From this intersection the boundary follows the shoreline generally around to the NE until it intersects the line segment formed between Point 3 and Point 4. From this intersection the boundary continues towards Point 4 until it intersects the shoreline. From this intersection the boundary continues to follow the shoreline generally to the SW and then to the east until it intersects the line segment formed between Point 5 and Point 6. From this intersection the boundary continues SW to the intersection of the shoreline and the line segment formed between Point 7 and Point 8 on Middle Key. From this intersection the boundary follows the shoreline around the western side of Middle Key until it intersects the line segment between Point 9 and Point 10. From this intersection the boundary continues to the intersection of the shoreline with the line segment formed between Point 11 and Point 12 where it ends.

Bay Keys WMA 3

Idle Speed No Wake

The wildlife management area boundary begins at the intersection of the shoreline and the line segment formed between Point 1 and Point 2 on Bay Keys. From this intersection the boundary continues to Point 2 and then to the south and back generally to the north to each successive point in numerical order until it reaches Point 29. From Point 29 the boundary continues towards Point 30 until it intersects the shoreline. From this intersection the boundary continues around the eastern side of Bay Keys until it intersects the line segment formed between Point 31 and Point 32. From this intersection the boundary continues to Point 32 and to each successive point in numerical order until it reaches Point 38. From Point 38 the boundary continues towards Point 39 until it intersects the shoreline. From this intersection the boundary continues around the western side of Bay Keys until it intersects the line segment formed between Point 40 and Point 41 where it ends.

Boca Grande Key WMA

No Entry

The wildlife management area boundary begins just south of Boca Grande Key at Point 1. From Point 1 the boundary continues generally to the west and then north to each successive point in numerical order until it reaches Point 29. From Point 29 the boundary continues towards Point 30 until it intersects the shoreline. From this intersection the boundary follows the shoreline to the south and then east until it intersects the line segment formed between Point 31 and Point 32. From this intersection the boundary continues to Point 32 and then to each successive point in numerical order ending at Point 34.

Crocodile Lake WMA 1

No Entry Within 300 Feet (100 Yards) of Shorelines

The wildlife management area boundary begins just north of the mouth of Steamboat Creek on the Card Sound side of North Key Largo at the intersection of the shoreline and the line segment formed between Point 1 and Point 2. From this intersection the boundary continues NW to Point 2 and then Point 3. From Point 3 the boundary continues generally NE to each successive point in numerical order until it reaches Point 32. From Point 32 the boundary continues roughly SE towards Point 33 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally to the SW until it intersects the line segment formed between Point 34 and Point 35 where it ends.

Crocodile Lake WMA 2

No Entry Within 300 Feet (100 Yards) of Shorelines; Exception for Steamboat Creek

The wildlife management area boundary begins just NW of Cormorant Point on the Card Sound side North Key Largo at Point 1. From Point 1 the boundary continues generally to the east in Card Sound to each successive point in numerical order to Point 36. From Point 36 the boundary continues towards Point 37 until it intersects the shoreline on the western side of the northern mouth of Steamboat Creek. From this intersection the boundary follows the shoreline roughly west and then south until it intersects the line segment formed between Point 38 and Point 39 just north of the southern mouth of Steamboat Creek. From this intersection the boundary continues to Point 39 and then roughly west to each successive point in numerical order to Point 173 west of Barnes Point. From Point 173 the boundary continues roughly east to each successive point in numerical order to Point 253 where it ends. The inner landward boundary is defined by and follows the shoreline where not already specified.

Crocodile Lake WMA 3

No Entry Within 300 Feet (100 Yards) of Shorelines

The wildlife management area boundary begins just west of the southern mouth of Steamboat Creek on the Barnes Sound side of North Key Largo at Point 1. From Point 1 the boundary continues towards Point 2 until it intersects the shoreline. From this intersection the boundary follows the shoreline roughly to the SE until it intersects the line segment formed between Point 3 and Point 4. From this intersection the boundary continues SW into Barnes Sound to Point 4. From Point 4 the boundary continues NW to Point 5 and Point 6. From Point 6 the boundary continues NE to Point 7 and then to Point 8 where it ends.

Crocodile Lake WMA 4

No Entry Within 300 Feet (100 Yards) of Shorelines

The wildlife management area boundary begins at the intersection of the shoreline and the line segment formed between Point 1 and Point 2 near the northern mouth of Jewfish Creek on Key Largo. From this intersection the boundary continues roughly west into Barnes Sound to Point 2 and then Point 3. From Point 3 the boundary continues roughly north in Barnes Sound to Point 299. From Point 299 the boundary continues towards Point 300 until it intersects the shoreline just south of the southern mouth of Steamboat Creek on North Key Largo. From this intersection the boundary follows the shoreline roughly south until it intersects the line segment formed between Point 301 and Point 302 where it ends near the northern mouth of Jewfish Creek. The inner landward boundary is defined by and follows the shoreline where not already specified.

Eastern Lake Surprise WMA 1

Idle Speed No Wake

The wildlife management area boundary begins in Lake Surprise on North Key Largo at Point 1. From Point 1 the boundary continues NW to Point 2 and then towards Point 3 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally to the NW until it intersects the line segment formed between Point 4 and Point 5. From this intersection the boundary continues roughly NE into Eastern Lake Surprise to Point 5. From Point 5 the boundary continues to each successive point in numerical order until it reaches Point 93 where it ends. The inner landward boundary is defined by and follows the shoreline where not already specified.

Eastern Lake Surprise WMA 2

No Entry

The wildlife management area boundary begins in Eastern Lake Surprise on North Key Largo at the intersection of the shoreline and the line segment formed between Point 1 and Point 2. From this intersection the boundary continues NW into the lake to Point 2 and then roughly NE to Point 3 and then to each successive point in numerical order to Point 89. From Point 89 the boundary continues towards Point 90 until it intersects the shoreline. From this intersection the boundary continues NW along the shoreline until it intersects the line segment formed between Point 91 and Point 92. From this intersection the boundary continues towards Point 92 until it intersects the shoreline. From this intersection the boundary continues along the shoreline around Eastern Lake Surprise until it intersects the line segment formed between Point 93 and Point 94 where it ends. The inner landward boundary is defined by and follows the shoreline where not already specified.

Lower Harbor Keys WMA 1

Idle Speed No Wake

The wildlife management area boundary begins at Point 1 just north of Lower Harbor Keys. From Point 1 the boundary continues to each successive point in numerical order until it reaches Point 9. From Point 9 the boundary continues towards Point 10 until it intersects the shoreline. From this intersection the boundary follows the shoreline to the east until it intersects the line segment formed between Point 11 and Point 12. From this intersection the boundary continues towards Point 12 until it intersects the shoreline. From this intersection the boundary follows the shoreline north until it intersects the line segment formed between Point 13 and Point 14. From this intersection the boundary continues to Point 14 and then to each successive point in numerical order until it reaches Point 22. From Point 22 the boundary continues towards Point 23 until it intersects the shoreline. From this intersection the boundary follows the shoreline to the SE until it intersects the line segment formed between Point 23 and Point 24. From this intersection the boundary continues towards Point 24 until it intersects the shoreline. From this intersection the boundary follows the shoreline south until it intersects the line segment formed between Point 24 and Point 25. From this intersection the boundary continues towards Point 25 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally west and south until it intersects the line segment formed between Point 26 and Point 27. From this intersection the boundary continues to Point 27 and then to each successive point in numerical order until it ends at Point 41.

Lower Harbor Keys WMA 2

Idle Speed No Wake

The wildlife management area boundary begins at the intersection of the southern shoreline and the line segment formed by Point 1 and Point 2. From this intersection the boundary continues towards Point 2 until it intersects the northern shoreline. From this intersection the boundary follows the shoreline generally north until it intersects the line segment formed between Point 3 and Point 4. From this intersection the boundary continues to Point 4 and then to each successive point in numerical order until it reaches Point 35. From Point 35 the boundary continues towards Point 36 until it intersects the shoreline. From this intersection the boundary follows the shoreline NE until it intersects the line segment formed between Point 37 and Point 38. From this intersection the boundary continues towards Point 38 until it intersects the shoreline. From this intersection the boundary continues NE and then NW until it intersects the line segment formed between Point 39 and Point 40. From this intersection the boundary continues towards Point 40 until it intersects the shoreline. From this intersection the boundary follows the shoreline until it intersects the line segment formed between Point 41 and Point 42. From this intersection the boundary continues to Point 42 and then generally south to each successive point in numerical order until it reaches Point 58. From Point 58 the boundary continues towards Point 59 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally south until it intersects the line segment formed between Point 60 and Point 61 where it ends.

Lower Harbor Keys WMA 3

Idle Speed No Wake

The wildlife management area boundary begins at the intersection of the southeastern shoreline and the line segment formed by Point 1 and Point 2. From this intersection the boundary continues towards Point 2 until it intersects the southwestern shoreline. From this intersection the boundary follows the shoreline generally NE until it intersects the line segment formed between Point 3 and Point 4. From this intersection the boundary continues towards Point 4 until it intersects the northeastern shoreline. From this intersection the boundary follows the shoreline generally SW until it intersects the line segment formed between Point 5 and Point 6 where it ends.

Marathon Oceanside Shoreline WMA 2

Idle Speed No Wake

The wildlife management area boundary begins at Point 1 and continues towards Point 2 until it intersects the shoreline. From this intersection the boundary follows the shoreline north until it intersects the line segment formed between Point 2 and Point 3. From this intersection the boundary continues to Point 3 and then to each successive point in numerical order until it reaches Point 20. From Point 20 the boundary continues towards Point 21 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally north until it intersects the line segment formed between Point 22 and Point 23. From this intersection the boundary continues towards Point 23 until it intersects the shoreline. From this intersection the boundary follows the shoreline north until it intersects the line segment formed between Point 24 and Point 25. From this intersection the boundary continues to Point 25 where it ends.

Marathon Oceanside Shoreline WMA 4

Idle Speed No Wake

The wildlife management area boundary begins at Point 1 and continues to Point 2 and then to each successive point in numerical order until it reaches Point 4. From Point 4 the boundary continues towards Point 5 until it intersects the shoreline. From this intersection the boundary follows the shoreline south until it intersects the line segment formed between Point 6 and Point 7. From this intersection the boundary continues to Point 7 where it ends.

Marathon Oceanside Shoreline WMA 5

Idle Speed No Wake

The wildlife management area boundary begins at Point 1 and continues to Point 2 and then to Point 3.

From Point 3 the boundary continues north towards Point 4 until it intersects the shoreline. From this intersection the boundary follows the shoreline to the NE until it intersects the line segment formed between Point 5 and Point 6. From this intersection the boundary continues to the intersection of the shoreline and the line segment formed between Point 6 and Point 7. From this intersection the boundary continues to the intersection of the shoreline and the line segment formed between Point 7 and Point 8. From this intersection the boundary follows the shoreline generally to the NE until it intersects the line segment formed between Point 9 and Point 10. From this intersection the boundary continues south to Point 10 where it ends.

Whitmore Bight WMA

No Motor

The wildlife management area boundary begins at the intersection of the shoreline and the line segment formed between Point 1 and Point 2 near Upper Sound Point on Rattlesnake Key. From this intersection the boundary continues east to Point 3 and then roughly SW to Point 4. From Point 4 the boundary continues roughly west to each successive point in numerical order to Point 7. From Point 7 the boundary continues towards Point 8 until it intersects the shoreline on the eastern side of the mouth of South Sound Creek. From this intersection the boundary follows the shoreline east until it intersects the line segment formed between Point 9 and the intersection of the shoreline and the line segment formed between Point 10 and point 11. From this intersection the boundary continues across the mouth of South Creek to the intersection of the shoreline and the line segment formed between Point 10 and point 11. From this intersection the boundary follows the shoreline roughly north until it intersects the line segment formed between Point 12 and Point 13 near Sound Point. From this intersection the boundary continues to Point 13 and then to Point 14. From Point 14 the boundary continues towards Point 15 until it intersects the shoreline on Rattlesnake Key. From this intersection the boundary follows the shoreline roughly NE until it intersects the line segment formed between Point 16 and Point 17 where it ends. The inner landward boundary is defined by and follows the shoreline where not already specified.

Woman Key WMA

No Entry

The wildlife management area boundary begins at Point 1 SE of Woman Key and continues west to each successive point in numerical order until it reaches Point 24. From Point 24 the boundary continues north towards Point 25 until it intersects the shoreline. From this intersection the boundary follows the shoreline east until it intersects the line segment formed between Point 26 and Point 27. From this intersection the boundary continues east to Point 27 then south to Point 28 and Point 29 where it ends.

Barracuda Keys WMA

Idle Speed No Wake

The wildlife management area seaward boundary begins just east of Barracuda Keys at Point 1 and continues SW to Point 2. From Point 2 the seaward boundary continues towards Point 3 until it intersects the shoreline. From this intersection the boundary follows the shoreline to the NE and then generally SW until it intersects the line segment formed between Point 4 and Point 5. From this intersection the boundary continues SW to Point 5 and then to each successive point in numerical order until it reaches Point 8 where it ends. The inner landward boundary is defined by and follows the shoreline where not already specified.

Cayo Agua Keys WMA

Idle Speed No Wake

The wildlife management area seaward boundary begins in northern Cayo Agua Keys at the intersection of the shoreline with the line segment formed between Point 1 and Point 2. From this intersection the boundary follows the shoreline south until it intersects the line segment formed between Point 3 and Point 4. From this intersection the boundary continues towards Point 4 until it intersects the shoreline. From this intersection the boundary follows the shoreline SE until it intersects the line segment formed between Point 5 and Point 6. From this intersection the boundary continues towards Point 6 until it intersects the shoreline. From this intersection the boundary follows the shoreline south until it intersects the line segment formed between Point 7 and Point 8. From this intersection the boundary continues towards Point 8 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally south until it intersects the line segment formed between Point 8 and Point 9. From this intersection the boundary continues towards Point 9 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally west until it intersects the line segment formed between Point 10 and Point 11. From this intersection the boundary continues towards Point 11 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally west and then north until it intersects the line segment formed between Point 12 and Point 13. From this intersection the boundary continues towards Point 13 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally west until it intersects the line segment formed between Point 14 and Point 15. From this intersection the boundary continues towards Point 15 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally east and then north until it intersects the line segment formed between Point 16 and Point 17. From this intersection the boundary continues towards Point 17 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally NE until it intersects the line segment formed between Point 18 and Point 19. From this intersection the boundary continues to Point 19 and then to point 20 and to Point 21. From Point 21 the boundary continues towards Point 22 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally south until it intersects the line segment formed between Point 23 and Point 24. From this intersection the boundary continues towards Point 24 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally NE until it intersects the line segment formed between Point 25 and Point 26. From this intersection the boundary continues to the intersection of the shoreline with the line segment formed between Point 27 and Point 28 where it ends. The inner landward boundary is defined by and follows the shoreline where not already specified.

Cotton Key WMA

No Motor

The wildlife management area seaward boundary begins just north of Cotton Key at Point 1 and continues to each successive point in numerical order until it reaches Point 13. From Point 13 the boundary continues to the intersection of the shoreline and the line segment formed by Point 14 and Point 15. From this intersection the boundary follows the shoreline south until it intersects the line segment formed between Point 16 and Point 17. From this intersection the boundary continues south to Point 17 and then to each successive point in numerical order until it reaches Point 34 where it ends. The inner landward boundary is defined by and follows the shoreline where not already specified.

East Content Keys and Upper Harbor Key Flats WMA 2

Idle Speed No Wake

The wildlife management area seaward boundary begins just NE of Upper Harbor Key at Point 1 and continues generally SW and then NW to each successive point in numerical order until it reaches Point 9. From Point 9 the boundary continues to the intersection of the shoreline and the line segment formed between Point 10 and Point 11. From this intersection the boundary follows the shoreline north until it intersects the line segment formed between Point 12 and Point 13. From this intersection the boundary continues north to Point 14 and then Point 15. From Point 15 the boundary continues towards Point 16 until it intersects the shoreline. From this intersection the boundary follows the shoreline west until it intersects the line segment formed between Point 16 and Point 17. From this intersection the boundary continues towards Point 17 until it intersects the shoreline. From this intersection the boundary follows the shoreline SW until it intersects the line segment formed between Point 17 and Point 18. From this intersection the boundary continues towards Point 18 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally west until it intersects the line segment formed between Point 19 and Point 20. From this intersection the boundary continues towards Point 20 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally south and then west until it intersects the line segment formed between Point 21 and Point 22. From this intersection the boundary continues towards Point 22 until it intersects the shoreline. From this intersection the boundary follows the shoreline north until it intersects the line segment formed between Point 23 and Point 24. From this intersection the boundary continues to Point 24 and then to Point 25. From Point 25 the boundary continues towards Point 26 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally north and then NE until it intersects the line segment formed between Point 27 and Point 28. From this intersection the boundary continues towards Point 28 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally NE until it intersects the line segment formed between Point 29 and Point 30. From this intersection the boundary continues towards Point 30 until it intersects the shoreline. From this intersection the boundary follows the shoreline roughly north until it intersects the line segment formed between Point 30 and Point 31. From this intersection the boundary continues towards Point 31 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally east until it intersects the line segment formed between Point 31 and

Point 32. From this intersection the boundary continues towards Point 32 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally NE until it intersects the line segment formed between Point 33 and Point 34. From this intersection the boundary continues to Point 34 and then to each successive point in numerical order until it reaches Point 38 where it ends. The inner landward boundary is defined by and follows the shoreline where not already specified. In addition the inner boundary is also defined by the East Content Keys and Upper Harbor Key Flats Wildlife Management Area No Entry Zone around Upper Harbor Key that begins at Point 1 of that zone and continues to each successive point in numerical order until it ends at Point 33.

East Harbor Key WMA

No Entry

The wildlife management area seaward boundary begins just NE of East Harbor Key at Point 1 and continues to each successive point in numerical order until it reaches Point 8. From Point 8 the boundary continues towards Point 9 until it intersects the shoreline. From this intersection the boundary follows the shoreline to the north until it intersects the line segment formed between Point 10 and Point 11. From this intersection the boundary continues to Point 11 and then to each successive point in numerical order until it reaches Point 36 where it ends. The inner landward boundary is defined by and follows the shoreline where not already specified.

Mud Keys WMA

Idle Speed No Wake

The wildlife management area seaward boundary begins on the eastern side of Mud Keys at the intersection of the shoreline with the line segment formed between Point 1 and Point 2. From this intersection the boundary continues towards Point 2 until it intersects the shoreline. From this intersection the boundary follows the shoreline south until it intersects the line segment formed between Point 3 and Point 4. From this intersection the boundary continues towards Point 4 until it intersects the shoreline. From this intersection the boundary follows the shoreline south until it intersects the line segment formed between Point 5 and Point 6. From this intersection the boundary continues towards Point 6 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally west until it intersects the line segment formed between Point 7 and Point 8. From this intersection the boundary continues towards Point 8 until it intersects the shoreline. From this intersection the boundary follows the shoreline west until it intersects the line segment formed between Point 9 and Point 10. From this intersection the boundary continues towards Point 10 until it intersects the shoreline. From this intersection the boundary follows the shoreline NW until it intersects the line segment formed between Point 11 and Point 12. From this intersection the boundary continues towards Point 12 until it intersects the shoreline. From this intersection the boundary follows the shoreline west until it intersects the line segment formed between Point 13 and Point 14. From this intersection the boundary continues towards Point 14 until it intersects the shoreline. From this intersection the boundary follows the shoreline west until it intersects the line segment formed between Point 15 and Point 16. From this intersection the boundary continues towards Point 16 until it intersects the shoreline. From this intersection the boundary follows the shoreline NW until it intersects the line segment formed between Point 17 and Point 18. From this intersection the boundary continues towards Point 18 until it intersects the shoreline. From this intersection the boundary follows the shoreline NE until it intersects the line segment formed between Point 19 and Point 20. From this intersection the boundary continues towards Point 20 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally east and then north and then west until it intersects the line segment formed between Point 21 and Point 22. From this intersection the boundary continues towards Point 22 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally east and then north and then west until it intersects the line segment formed between Point 23 and Point 24. From this intersection the boundary continues towards Point 24 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally NE until it intersects the line segment formed between Point 25 and Point 26. From this intersection the boundary continues towards Point 26 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally west until it intersects the line segment formed between Point 27 and Point 28. From this intersection the boundary continues towards Point 28 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally north and then east until it intersects the line segment formed between Point 29 and Point 30. From this intersection the boundary continues towards Point 30 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally east until it intersects the line segment formed between Point 31 and Point 32. From this intersection the boundary continues towards Point 32 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally south until it intersects the line segment formed between Point 33 and Point 34. From this intersection the boundary continues towards Point 35 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally south until it intersects the line segment formed between Point 36 and Point 37 where it ends. The inner landward boundary is defined by and follows the shoreline where not already specified.

Sawyer Key WMA

No Entry

The wildlife management area seaward boundary begins at Point 1 and continues west to Point 2. From Point 2 the boundary continues west towards Point 3 until it intersects the shoreline. From this intersection the boundary follows the shoreline SW until it intersects the line segment formed between Point 4 and Point 5. From this intersection the boundary continues towards Point 5 until it intersects the shoreline. From this intersection the boundary follows the shoreline SW until it intersects the line segment formed between Point 6 and the intersection of the shoreline and the line segment formed between Point 7 and Point 8. From this intersection the boundary continues SW to the intersection of the shoreline and the line segment formed between Point 7 and Point 8. From this intersection the boundary follows the shoreline generally north until it intersects the line segment formed between Point 9 and Point 10. From this intersection the boundary continues towards Point 10 until it intersects the shoreline. From this intersection the boundary follows the shoreline NE until it intersects the line segment formed between Point 10 and Point 11. From this intersection the boundary follows the shoreline generally north and then east until it intersects the line segment formed between Point 12 and Point 13. From this intersection the boundary continues towards Point 13 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally east until it intersects the line segment formed between Point 14 and Point 15. From this intersection the boundary continues south to Point 16 where it ends. The inner landward boundary is defined by and follows the shoreline where not already specified.

Idle Speed No Wake

The wildlife management area seaward boundary begins at the intersection of the shoreline and the line segment formed between Point 1 and Point 2. From this intersection the boundary continues towards Point 3 until it intersects the shoreline. From this intersection the boundary follows the shoreline west until it intersects the line segment formed between Point 4 and Point 5. From this intersection the boundary continues towards Point 5 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally west until it intersects the line segment formed between Point 6 and Point 7. From this intersection the boundary continues towards Point 7 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally west until it intersects the line segment formed between Point 8 and Point 9. From

this intersection the boundary continues towards Point 9 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally west until it intersects the line segment formed between Point 10 and Point 11. From this intersection the boundary continues towards Point 11 until it intersects the shoreline. From this intersection the boundary follows the shoreline NW until it intersects the line segment formed between Point 12 and Point 13. From this intersection the boundary continues towards Point 13 until it intersects the shoreline. From this intersection the boundary follows the shoreline NW until it intersects the line segment formed between Point 13 and Point 14. From this intersection the boundary continues NW to Point 14 and then west to Point 15. From Point 15 the boundary continues SW towards Point 16 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally SW until it intersects the line segment formed between Point 16 and Point 17. From this intersection the boundary continues towards Point 17 until it intersects the shoreline. From this intersection the boundary follows the shoreline west until it intersects the line segment formed between Point 18 and Point 19. From this intersection the boundary continues west to Point 19 and then Point 20. From Point 20 the boundary continues towards Point 21 until it intersects the shoreline. From this intersection the boundary follows the shoreline west until it intersects the line segment formed between Point 21 and Point 22. From this intersection the boundary continues towards Point 22 until it intersects the shoreline. From this intersection the boundary follows the shoreline west until it intersects the line segment formed between Point 23 and Point 24. From this intersection the boundary continues towards Point 24 until it intersects the shoreline. From this intersection the boundary follows the shoreline west until it intersects the line segment formed between Point 25 and Point 26. From this intersection the boundary continues towards Point 26 until it intersects the shoreline. From this intersection the boundary follows the shoreline west until it intersects the line segment formed between Point 26 and Point 27. From this intersection the boundary continues NW to Point 27 and then to each successive point in numerical order until it reaches Point 34. From Point 34 the boundary continues east towards Point 35 until it intersects the shoreline. From this intersection the boundary follows the shoreline east until it intersects the line segment formed between Point 36 and Point 37. From this intersection the boundary continues towards Point 37 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally east until it intersects the line segment formed between Point 38 and Point 39. From this intersection the boundary continues east to the intersection of the shoreline with the line segment formed between Point 40 and Point 41. From this intersection the boundary follows the shoreline east until it intersects with the line segment formed between Point 42 and Point 43. From this intersection the boundary continues east towards Point 43 until it intersects the shoreline. From this intersection the boundary follows the shoreline east until it intersects the line segment formed between Point 44 and Point 45 where it ends. The inner landward boundary is defined by and follows the shoreline where not already specified.

No Motor

The wildlife management area seaward boundary begins at Point 1 at Snipe Keys and continues towards Point 2 until it intersects the shoreline. From this intersection the boundary follows the shoreline SE until it intersects the line segment formed between Point 2 and Point 3. From this intersection the boundary continues towards Point 3 until it intersects the shoreline. From this intersection the boundary follows the shoreline east until it intersects the line segment formed between Point 4 and Point 5. From this intersection the boundary continues towards Point 5 until it intersects the shoreline. From this intersection the boundary follows the shoreline east until it intersects the line segment formed between Point 6 and Point 7. From this intersection the boundary continues towards Point 7 until it intersects the shoreline. From this intersection the boundary follows the shoreline east until it intersects the line segment formed between Point 7 and Point 8. From this intersection the boundary continues east to Point 8 and then to Point 9. From Point 9 the boundary continues towards Point 10 until it intersects the shoreline. From this intersection the boundary follows the shoreline east until it intersects the line segment formed between Point 11 and Point 12. From this intersection the boundary continues towards Point 12 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally NE until it intersects the line segment formed between Point 12 and Point 13. From this intersection the boundary continues to Point 13 and then Point 14. From Point 14 the boundary continues towards Point 15 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally NE until it intersects the line segment formed between Point 15 and Point 16. From this intersection the boundary continues towards Point 16 until it intersects the shoreline. From this intersection the boundary follows the shoreline SE until it intersects the line segment formed between Point 17 and Point 18. From this intersection the boundary continues towards Point 18 until it intersects the shoreline. From this intersection the boundary follows the shoreline east until it intersects the line segment formed between Point 19 and Point 20. From this intersection the boundary follows the shoreline generally NE until it intersects the line segment formed between Point 21 and Point 22. From this intersection the boundary continues towards Point 22 until it intersects the shoreline. From this intersection the boundary follows the shoreline NE and then east until it intersects the line segment formed between Point 23 and Point 24. From this intersection the boundary continues towards Point 24 until it intersects the shoreline. From this intersection the boundary follows the shoreline east and then south until it intersects the line segment formed between Point 25 and Point 26. From this intersection the boundary continues towards Point 26 until it intersects the shoreline. From this intersection the boundary follows the shoreline south and then west until it intersects the line segment formed between Point 27 and 28. From this intersection the boundary continues towards Point 28 until it intersects the shoreline. From this intersection the boundary follows the shoreline west until it intersects the line segment formed between Point 29 and Point 30. From this intersection the boundary continues towards Point 30 until it intersects the shoreline. From this intersection the boundary follows the shoreline west until it intersects the line segment formed between Point 30 and Point 31. From this intersection the boundary continues towards Point 31 until it intersects the shoreline. From this intersection the boundary follows the shoreline north until it intersects the line segment formed between Point 31 and Point 33. From this intersection the boundary continues towards Point 33 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally west until it intersects the line segment formed between Point 34 and Point 35. From this intersection the boundary continues towards Point 35 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally NW until it intersects the line segment formed between Point 36 and the intersection of the shoreline and the line segment formed between Point 37 and Point 38. From this intersection the boundary continues to the intersection of the shoreline and the line segment formed between Point 37 and Point 38. From this intersection the boundary continues to the intersection of the shoreline and the line segment formed between Point 39 and Point 40. From this intersection the boundary continues to the intersection of the shoreline and the line segment formed between Point 41 and Point 42. From this intersection the boundary continues to the intersection of the shoreline and the line segment formed between Point 43 and Point 44. From this intersection the boundary continues to the intersection of the shoreline and the line segment formed between Point 45 and Point 46. From this intersection the boundary continues towards Point 47 until it intersects the shoreline. From this intersection the boundary follows the shoreline south until it intersects the line segment formed between Point 48 and Point 49. From this intersection the boundary continues towards Point 49 until it intersects the shoreline. From this intersection the boundary follows the shoreline south until it intersects the line segment formed between Point 50 and Point 51. From this intersection the boundary continues towards Point 51 until it intersects the shoreline. From this intersection the boundary follows the shoreline south until it intersects the line segment formed between Point 52 and Point 53. From this intersection the boundary continues towards Point 53 until it intersects the shoreline. From this intersection the boundary follows the shoreline west until it intersects the line segment formed between Point 54 and Point 55. From this intersection the boundary continues towards Point 55 until it intersects the shoreline. From this intersection the boundary follows the shoreline generally west and then north until it intersects the line segment formed between Point 56 and Point 57. From this intersection the boundary continues towards Point 57 until it intersects the shoreline. From this intersection the boundary follows the shoreline north until it intersects the line segment formed between Point 58 and the intersection of the shoreline and the line segment formed between Point 59 and Point 60. From this intersection the boundary continues to the intersection of the shoreline and the line segment formed between Point 59 and Point 60. From this intersection the boundary continues to the intersection of the shoreline and the line segment formed between Point 61 and Point 62. From this intersection the boundary follows the shoreline generally NE until it intersects the line segment formed between Point 63 and the intersection formed between the shoreline and the line segment formed between Point 64 and Point 65. From this intersection the boundary continues to the intersection of the shoreline and the line segment formed between Point 64 and Point 65. From this intersection the boundary continues to the intersection of the shoreline and the line segment formed between Point 66 and Point 67. From this intersection the boundary continues NE to Point 67. From Point 67 the boundary continues east towards Point 68 until it intersects the shoreline. From this intersection the boundary follows the shoreline until it intersects the line segment formed between Point 69 and Point 70. From this intersection the boundary continues north to Point 70 and Point 71 and then generally east to each successive point in numerical order until it reaches Point 83. From Point 83 the boundary continues towards Point 84 until it intersects the shoreline where it ends. The inner landward boundary is defined by and follows the shoreline where not already specified.

Appendix F to Subpart P of Part 922—Sanctuary Preservation Areas Boundary Coordinates

Coordinates listed in this appendix are unprojected (Geographic) and based on the North American Datum of 1983.

The boundary for the following Sanctuary Preservation Areas (SPA) begins at each individual zone's Point 1 and continues to each successive point in numerical order until ending at that same zone's last point as listed in its specific coordinate table.

Alligator Reef SPA

Point	Latitude	Longitude
1	24.85383	−80.61950

Western Sambo Conservation Area

The Western Sambo Conservation Area boundary begins approximately 6 miles south of Boca Chica Key at Point 1. From Point 1 the boundary continues to Point 2 and Point 3. From Point 3 the boundary continues towards Point 4 until it intersects the shoreline. From this intersection the boundary continues east following the shoreline until it intersects the line segment formed between Point 5 and Point 6. From this intersection the boundary continues to Point 6 and ends at Point 7.

Point	Latitude	Longitude
1	24.47295	−81.70024
2	24.46655	−81.72928

FEDERAL REGISTER

Vol. 90 Friday,

No. 11 January 17, 2025

Part III

Department of Transportation

National Highway Traffic Safety Administration

49 CFR Part 571

Federal Motor Vehicle Safety Standards; Fuel System Integrity of Hydrogen Vehicles; Compressed Hydrogen Storage System Integrity; Incorporation by Reference; Final Rule

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

49 CFR Part 571

[Docket No. NHTSA–2024–0090]

RIN 2127–AM40

Federal Motor Vehicle Safety Standards; Fuel System Integrity of Hydrogen Vehicles; Compressed Hydrogen Storage System Integrity; Incorporation by Reference

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: This final rule establishes two new Federal Motor Vehicle Safety Standards (FMVSS) specifying performance requirements for all motor vehicles that use hydrogen as a fuel source. The final rule is based on Global Technical Regulation (GTR) No. 13, Hydrogen and Fuel Cell Vehicles. FMVSS No. 307, ''Fuel system integrity of hydrogen vehicles,'' specifies requirements for the integrity of the fuel system in hydrogen vehicles during normal vehicle operations and after crashes. FMVSS No. 308, ''Compressed hydrogen storage system integrity,'' specifies requirements for the compressed hydrogen storage system to ensure the safe storage of hydrogen onboard vehicles. These two standards will reduce deaths and injuries from fires due to hydrogen fuel leakages and/or explosion of the hydrogen storage system.

DATES:

Effective date: This final rule is effective July 16, 2025.

IBR date: The incorporation by reference of certain publications listed in the rule is approved by the Director of the Federal Register as of July 16, 2025.

Compliance Dates: The compliance date is September 1, 2028.

Petitions for reconsideration: Petitions for reconsideration of this final rule must be received no later than March 3, 2025.

ADDRESSES: Petitions for reconsideration of this final rule must refer to the docket and notice number set forth above and be submitted to the Administrator, National Highway Traffic Safety Administration, 1200 New Jersey Avenue SE, West Building, Washington, DC 20590. All petitions received will be posted without change to *http://www.regulations.gov,* including any personal information provided.

Privacy Act: DOT will post any petition for reconsideration, and any other submission, without edit, to *http://www.regulations.gov,* as described in the system of records notice, DOT/ALL–14 FDMS, accessible through *https://www.transportation.gov/individuals/privacy/privacy-act-system-records-notices.* Anyone is able to search the electronic form of all submissions to any of our dockets by the name of the individual submitting the submission (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (Volume 65, Number 70; Pages 19477–78).

FOR FURTHER INFORMATION CONTACT: For technical issues, Ian MacIntire, General Engineer, Special Vehicles & Systems Division within the Division of Rulemaking, at (202) 493–0248 or *Ian.MacIntire@dot.gov.* For legal issues, Paul Connet, Attorney-Advisor, NHTSA Office of Chief Counsel, at (202) 366–5547 or *Paul.Connet@dot.gov* or Evita St. Andre, Attorney-Advisor, NHTSA Office of Chief Counsel, at (617) 494–2767 or *Evita.St.Andre@dot.gov.* The mailing address of these officials is: National Highway Traffic Safety Administration, 1200 New Jersey Avenue SE, Washington, DC 20590.

VI. Rulemaking Analyses and Notices

I. Executive Summary

Vehicle manufacturers have continued to seek out renewable and clean fuel sources as alternatives to gasoline and diesel. Compressed hydrogen has emerged as a promising potential alternative because hydrogen is an abundant element in the atmosphere and does not produce tailpipe greenhouse gas emissions when used as a motor fuel. However, hydrogen must be compressed to high pressures to be an efficient motor fuel and is also highly flammable, similar to other motor fuels. NHTSA has already set regulations ensuring the safe containment of other motor vehicle fuels such as gasoline in FMVSS No. 301, ''Fuel system integrity,'' and compressed natural gas (CNG) in FMVSS No. 304, ''Compressed natural gas fuel container integrity,'' and the fuel integrity systems of those fuels in FMVSS No. 301 and FMVSS No. 303, ''Fuel system integrity of compressed natural gas vehicles,'' respectively. No such standards currently exist in the United States covering vehicles that operate on hydrogen. Accordingly, this document establishes two new FMVSS to address safety concerns relating to the storage and use of hydrogen in motor vehicles, and to align the safety regulations of hydrogen vehicles with those of vehicles that operate using other fuel sources.

NHTSA published the Notice of Proposed Rulemaking (NPRM) on April 17, 2024, seeking comments on the proposed standards.[1] This final rule responds to and addresses the comments to the NPRM, reflecting input from stakeholders on various concerns and recommendations. The rule was developed in concert with efforts to harmonize hydrogen vehicle standards with international partners through the GTR process and harmonizes the FMVSS with GTR No. 13, Hydrogen and Fuel Cell Vehicles.[2]

The two new FMVSS established by this document are: FMVSS No. 307, ''Fuel system integrity of hydrogen vehicles,'' and FMVSS No. 308, ''Compressed hydrogen storage system integrity.'' FMVSS No. 307 regulates the integrity of the fuel system in hydrogen vehicles during normal vehicle operations and after crashes. To this end, it includes performance requirements for the hydrogen fuel system to mitigate hazards associated with hydrogen leakage and discharge from the fuel system, as well as post-crash restrictions on hydrogen leakage, concentration in enclosed spaces, container displacement, and fire. FMVSS No. 308 regulates the compressed hydrogen storage system (CHSS) itself and primarily includes performance requirements that ensure the CHSS is unlikely to leak or burst during use, as well as requirements intended to ensure that hydrogen is safely expelled from the container when it is exposed to a fire. FMVSS No. 308 also specifies performance requirements for different closure devices in the CHSS.

FMVSS No. 308 applies to all motor vehicles that use compressed hydrogen gas as a fuel source to propel the vehicle, regardless of the vehicle's gross

[2] A copy of GTR No. 13 as updated by the Phase 2 amendments is available at: *https://unece.org/sites/default/files/2023-07/ECE-TRANS-180-Add.13-Amend1e.pdf*

vehicle weight rating (GVWR), except vehicles that are only equipped with cryo-compressed hydrogen storage systems or solid-state hydrogen storage systems to propel the vehicle. Portions of FMVSS No. 307 also apply to all motor vehicles that use compressed hydrogen gas as a fuel source to propel the vehicle, regardless of the vehicle's GVWR. However, while FMVSS No. 307's fuel system integrity requirements during normal vehicle operations apply to both light vehicles (vehicles with a GVWR of 4,536 kg or less) and to heavy vehicles (vehicles with a GVWR greater than 4,536 kg), FMVSS No. 307's post-crash fuel system integrity requirements apply only to compressed hydrogen-fueled light vehicles and to all

II. Background

A. Overview of GTR No. 13

1. The GTR Process

The United States is a contracting party to the the Agreement concerning the Establishing of Global Technical Regulations for Wheeled Vehicles, Equipment and Parts which can be fitted and/or be used on Wheeled Vehicles (''1998 Agreement''). This agreement entered into force in 2000 and is administered by the United Nations Economic Commission for Europe's (UN ECE's) World Forum for the Harmonization of Vehicle Regulations (WP.29). The purpose of this agreement is to establish Global Technical Regulations (GTRs).

At its 160th session in June 2013, UN ECE WP.29 formally adopted the proposal to establish GTR No. 13. NHTSA chaired the development of GTR No. 13 and voted in favor of establishing GTR No. 13. The Phase 2 updates to GTR No. 13 were adopted at the 190th Session of WP.29 on June 21, 2023.[3]

As a Contracting Party Member to the 1998 Global Agreement that voted in favor of GTR No. 13 and the Phase 2 updates to GTR No. 13, NHTSA is obligated to initiate the process used in the U.S. to adopt Phase 2 GTR No. 13 as an agency regulation. This process was initiated by the NPRM published on April 17, 2024. NHTSA is not obligated to adopt the GTR, in whole or in part, after initiating this process. Additionally, NHTSA may adopt a modified version of the GTR to ensure that it meets relevant requirements. In deciding whether to adopt a GTR as an FMVSS, NHTSA follows the requirements for NHTSA rulemaking, including the Administrative Procedure Act, the National Traffic and Motor Vehicle Safety Act (Vehicle Safety Act), Presidential Executive Orders, and DOT and NHTSA policies, procedures, and regulations. Among other things, FMVSS issued under the Vehicle Safety Act ''shall be practicable, meet the need for motor vehicle safety, and be stated in objective terms.''

2. GTR No. 13 and Phase 2 Updates

GTR No. 13 specifies safety-related performance requirements and test procedures with the purpose of minimizing human harm that may occur as a result of fire, burst, or explosion related to the hydrogen fuel system of vehicles. The regulation consists of system performance requirements for CHSS, CHSS closure devices, and the vehicle fuel delivery system. GTR No. 13 does not specify the type of crash tests for post-crash safety evaluation and instead permits Contracting Parties to use their domestic regulated crash tests.

The Phase 2 updates of GTR No. 13 accomplished several goals, including: broadening of the scope and application of GTR No. 13 to cover heavy/commercial vehicles; harmonizing, clarifying, and expanding the requirements for thermally-activated pressure relief device (TPRD) discharge direction in case of controlled release of hydrogen; strengthening test procedures for containers with pressures below 70 MPa, including comprehensive fire exposure tests; and extending the requirements to 25 years to more accurately capture the expected useful life of vehicles.

B. April 2024 NPRM

The April 2024 NPRM[4] proposed to establish two new FMVSS for hydrogen vehicles that are based on GTR No. 13, Phase 2. The proposed FMVSS No. 307, ''Fuel System Integrity of Hydrogen Vehicles,'' is designed to set performance requirements to ensure the integrity of the hydrogen fuel system during normal vehicle operations and after crashes. These requirements aimed to mitigate safety risks associated with hydrogen fuel leakages, fires, and explosions, ensuring that hydrogen would not pose risks to vehicle occupants or those nearby. The standard addressed the hazards posed by the flammability of hydrogen and its tendency to leak under high pressure, particularly in crash scenarios.

FMVSS No. 307 prescribes a series of performance standards aimed at ensuring the safety of hydrogen vehicle fuel systems during both normal operations and post-crash scenarios. The NPRM proposed five key performance requirements for hydrogen fueling receptacles to prevent leakage, incorrect fueling, and contamination from dirt or water. These included reverse flow prevention, clear labeling, positive locking, protection against contamination, and secure placement to avoid crash-related deformations. An over-pressure protection device requirement was proposed to protect downstream components from excessive pressure. The proposal also included requirements for hydrogen discharge mechanisms, specifying that vent lines must be protected from dirt and water and that hydrogen gas discharge must be directed safely away from critical components like the wheels, doors, and emergency exits.

The NPRM also proposed requirements in FMVSS No. 307 to protect against flammable conditions. These included a visual warning system that would alert the driver if hydrogen concentrations reached dangerous levels (above 3% in enclosed or semi-enclosed spaces), and an automatic shut-off valve closure if hazardous hydrogen concentrations were detected. The proposed standard further specified that hydrogen concentrations in the exhaust system must not exceed set thresholds during normal vehicle operation.

In post-crash scenarios, the proposal set limits on fuel leakage and specified crash tests to ensure that the hydrogen containers remained intact and that any post-crash hydrogen leakage remained within manageable limits. The proposal allowed a hydrogen leak rate not to exceed 118 normal liters per minute for a duration of 60 minutes after impact.

The NPRM also proposed establishing FMVSS No. 308, ''Compressed Hydrogen Storage System Integrity,'' focused on ensuring the safety and durability of the CHSS used in hydrogen vehicles. The proposed standard outlined performance requirements for the CHSS to prevent leaks, bursts, and other failures during normal vehicle use and under extreme conditions, such as exposure to fire. The proposal included tests and performance criteria to evaluate the CHSS's resistance to various stress factors that could occur over the vehicle's lifetime. The CHSS, which includes components such as the hydrogen container, check valve, shut-off valve, and TPRD, was required to meet several durability and safety benchmarks throughout its operational lifespan.

The proposal established specific requirements for hydrogen containers,

[3] *See https://unece.org/sites/default/files/2023-07/ECE-TRANS-180-Add.13-Amend1e.pdf.*

[4] *See* 89 FR 27502 (Apr. 17, 2024), *available at https://www.federalregister.gov/documents/2024/04/17/2024-07116/federal-motor-vehicle-safety-standards-fuel-system-integrity-of-hydrogen-vehicles-compressed.*

which are the primary components of the CHSS. Testing procedures for these containers included hydraulic pressure tests to evaluate burst thresholds, pressure cycling tests to simulate long-term use in service, and tests applying a series of external stress factors such as impact, chemical exposure, high and low temperatures, high pressure hold, and over-pressure along with pressure cycling to assess the container's durability against leak or burst during its lifetime.

The proposed FMVSS No. 308 also included an on-road performance test for the entire CHSS to ensure the CHSS contains hydrogen without leak or burst. This test uses on-road operating conditions including fueling and defueling the container at different ambient conditions with hydrogen gas at low and high temperatures, a static high-pressure hold, and an overpressure, designed to replicate the stress factors the system could encounter during a vehicle's operational life.

Fire exposure testing was another critical aspect in the proposed FMVSS No. 308, evaluating whether the CHSS could prevent dangerous hydrogen release or explosion in a vehicle fire scenario. The proposed fire test includes a localized and engulfing stage, which were developed based on real vehicle fire data. The NPRM also proposed requirements for the CHSS's closure devices (check valves, shut-off valves, and TPRDs). Additionally, the NPRM proposed labeling requirements in FMVSS No. 308 for hydrogen containers.

Together, the two proposed standards, FMVSS No. 307 and FMVSS No. 308, aimed to align U.S. regulations with GTR No. 13 and address the specific safety challenges posed by hydrogen as a vehicle fuel source.

C. How the Final Rule Differs From the NPRM

The final rule largely mirrors the proposed standards, with some minor changes to the requirements and test procedures based on the public comments and feedback received. Details of the reasoning behind each of the changes is provided in relevant sections of the notice.

FMVSS No. 307, established by this final rule, differs from the proposed FMVSS No. 307 in the following ways:

- Revises the definition for enclosed or semi-enclosed spaces to be more specific and avoid ambiguity.
- Removes the requirement for an overpressure protection device.
- Removes the requirement that the fueling receptacle ''shall not be mounted to or within the impact energy-absorbing elements of the vehicle.''
- Removes the requirements for specific TPRD discharge angles.
- Eliminates the option to use an electronic leak detector in section S6.6, leaving leak detection liquid as the only applicable test method.
- Revises the regulatory text in instances where the NPRM stated that the vehicle is set to the ''on'' or ''run'' position (and preventing the vehicle from idling) to instead state that the propulsion system shall be operational.

FMVSS No. 308, established by this final rule, differs from the proposed FMVSS No. 308 in the following ways:

- Excludes cryo-compressed and solid-state hydrogen storage systems from the requirements in FMVSS No. 308.
- Requires manufacturers to provide the median initial burst pressure for a container (BP_O) within fifteen business days instead of five.
- Removes the requirement to include BP_O on the container label.
- Removes the requirement for container burst pressure variability to be within 10 percent of BP_O.
- Changes the requirement that the manufacturer specify the primary constituent of the container to specifying whether the primary constituent of the container is glass fiber composite.
- Increases the timeframe from 5 business days to 15 business days for manufacturers to submit vehicle-specific information for testing purposes.
- Revises the cycling rate for the baseline initial pressure cycle test to be no more than ten cycles per minute.
- Removes the minimum time of three minutes to sustain a visible leak before the baseline initial pressure cycle test can end successfully due to ''leak before burst.''
- Removes the proof pressure test from both the test for performance durability and the test for expected on-road performance.
- Permits the option to conduct the closure tests with an inert gas such as helium instead of hydrogen gas.

For both standards, various editorial and clerical updates were made to improve clarity and consistency throughout the document.

III. Summary of Comments

The NPRM preceding this final rule included requests for comment on several topics. From April 17, 2024, to July 17, 2024, the agency received 31 comments on the NPRM, four of which were requests to extend the NPRM comment period.[5] The comments were generally supportive of the proposed rule, particularly regarding harmonization with international regulations. Many commenters suggested modifications to the proposed requirements, including details of various test procedures. Of the 26 unique comments, the majority (21 comments) were submitted by vehicle and component manufacturers and industry associations. Comments were also submitted by standards testing laboratories (1 comment), and other stakeholders (4 comments).

The vehicle and component manufacturers that provided comments were Ballard Power Systems (''Ballard''), Daimler Truck North America (''DTNA''), Ford Motor Company (''Ford''), Glickenhaus Zero and Scuderia Cameron Glickenhaus LLC (collectively, ''Glickenhaus''), Hexagon Agility, Inc. (''Agility''), Hyundai America Technical Center, Inc. (''HATCI''), Hyundai Motor Group (''Hyundai''), Luxfer Gas Cylinders, New Flyer of America (''NFA''), Nikola Corporation (''Nikola''), Noble Gas Systems (''NGS''), Hyzon Motors Inc. (Hyzon), H2MOF, Inc. (''H2MOF''), Quantum Fuel Systems, LLC (''Quantum''), Verne, Inc. (''Verne''), Westport Fuel Systems Canada, Inc. (''WFS''), and Air Products and Chemicals, Inc. (''Air Products'').

The industry associations that provided comments were the Alliance for Automotive Innovation (''Auto Innovators''), The Vehicle Suppliers Association (''MEMA''), the Transport Project (''TTP''), and the Truck and Engine Manufacturers Association (''EMA''). Some manufacturers stated support for the comments submitted by an industry association.

The testing laboratory that provided comments was TesTneT Canada, Inc. (''TesTneT''). The other stakeholders that provided comments were Faurecia Hydrogen Solutions (''FORVIA''), Consumer Reports, Newhouse Technology, LLC (''Newhouse''), and an anonymous commenter.

IV. Response to Comments on Proposed Requirements

A. Deviation From GTR No. 13

Several commenters submitted repeated comments for many sections of the proposed FMVSS Nos. 307 and 308 asking that the agency follow GTR No.

[5] In response to the comments to extend the comment period, NHTSA extended the comment period for the NPRM by 30 days. The original comment period for the NPRM was scheduled to end on June 17, 2024. The extended comment period ended on July 17, 2024.

13 exactly, often without further explanation or justification. Several commenters also stated that the agency should completely harmonize with various industry standards.

Commenters seem to misunderstand the requirements of the 1998 Agreement and NHTSA's obligation under the Agreement. As noted earlier, under the 1998 Agreement, NHTSA must propose a GTR on which it has voted in the affirmative. NHTSA is committed to harmonizing to the extent practical, but NHTSA is not required to finalize the text of a GTR when it has justification to deviate from that text. The 1998 Agreement, by design, does not include mutual recognition [6] because the 1998 Agreement spans different regulatory regimes (*i.e.,* type approval and self-certification), and it acknowledges the domestic rulemaking and substantive legal requirements in the United States.

The FMVSS are designed to be a unique set of regulations tailored specifically for the United States' regulatory approach to vehicle safety. FMVSS must adhere strictly to principles of objectivity and verifiability, as these are foundational to the self-certification process required in the U.S. automotive market. Some other standards, like industry standards and regulations from other countries, may include some degree of subjectivity or flexibility in their criteria due to their broader focus and the differing regulatory frameworks across countries.

NHTSA aimed to harmonize FMVSS Nos. 307 and 308 with GTR No. 13 and the related industry standards to the maximum extent possible. However, it was not always feasible or appropriate to match the regulations word for word. FMVSS must remain objective, ensuring that every requirement is clear, measurable, and enforceable. FMVSS must also have clear, unambiguous test procedures with minimal discretion given to test facilities. This requirement ensures the integrity of the self-certification system and protects consumers and manufacturers alike. Ignoring these fundamental requirements for FMVSS would undermine the effectiveness of FMVSS and could potentially compromise vehicle safety in the U.S.

[6] Mutual recognition occurs when two or more countries or other institutions recognize one another's decisions or policies, for example in the field of conformity assessment, professional qualifications or in relation to criminal matters.

B. FMVSS No. 308, ''*Compressed Hydrogen Storage System Integrity*''

1. FMVSS No. 308 as a Vehicle-Level Standard

Background

Consistent with GTR No. 13, NHTSA proposed that FMVSS No. 308 be a vehicle-level standard, rather than an equipment standard. Some performance requirements and test procedures for the CHSS in FMVSS No. 308 are specific to the vehicle design and to its gross vehicle weight rating. NHTSA sought comment on whether FMVSS No. 308 should remain a vehicle standard.

Comments Received

Auto Innovators expressed concern about NHTSA's proposal to structure FMVSS No. 308 as a vehicle-level standard, arguing that the development and quality assurance of CHSS require specialized knowledge. Since many vehicle manufacturers source CHSS from independent suppliers, Auto Innovators suggested that compliance responsibility should lie with the CHSS supplier. It further stated that it is unclear how vehicle manufacturers could practically implement testing, given that CHSS design is more applicable to suppliers. It also emphasized the importance of including replacement parts in FMVSS No. 308 to maintain consistency and ensure integrity during repairs.

DTNA supported the proposal to maintain FMVSS No. 308 as a vehicle-level standard. It agreed that the performance requirements should apply only to originally equipped CHSS and stated that further research is needed before addressing replacement CHSS. It also concurred that the CHSS performance should be evaluated based on vehicle design and gross vehicle weight rating.

EMA recommended revising FMVSS No. 308 to apply as an equipment standard that would also include replacement containers. It proposed that both motor vehicles using compressed hydrogen gas and containers designed to store it should be subject to the standard.

Glickenhaus advocated for FMVSS No. 308 to focus on tank-level testing rather than vehicle-level certification, arguing that CHSS components should be certified by the component manufacturer. It pointed out that NHTSA has a precedent in other FMVSS standards for differentiating requirements based on vehicle weight and size, and suggested that FMVSS No. 308 could follow a similar approach. This approach, according to Glickenhaus, would reduce costs by allowing tanks to be certified for use across multiple vehicle platforms without re-certification for each vehicle.

H2MOF proposed that FMVSS No. 308 remain a component standard with applicability for hydrogen storage systems ranging from 10 MPa to 70 MPa.

Nikola stated that FMVSS No. 308 should remain a separate standard but questioned why replacement parts should not be required to meet the standard and suggested using separate markings to indicate which vehicle types a particular component is suitable for.

Newhouse suggested that FMVSS No. 308 should be an equipment standard focusing on the fuel container and directly integral components, such as the valve and TPRD. It recommended that FMVSS No. 307 cover system issues, including the connection of fuel containers with tubing.

FORVIA agreed with not extending FMVSS No. 308 to replacement parts, stating it would provide replacement parts equivalent to the original ones.

Luxfer Gas Cylinders referenced compliance with FMVSS No. 304, where CNG fuel containers were purchased directly from manufacturers, and questioned whether NHTSA intended to purchase hydrogen vehicles to obtain CHSS for testing. It also asked if NHTSA plans to test both containers and TPRDs from container manufacturers or vehicle providers. It stated that FMVSS No. 308 would be more appropriate as a component-level standard since it focuses on performance tests for CHSS rather than the vehicle as a whole.

Agency Response

NHTSA is maintaining FMVSS No. 308 as a vehicle-level standard, as proposed. Several requirements in FMVSS No. 308 are specific to the vehicle design and to the gross vehicle weight rating of the vehicle in which a CHSS is installed.[7] It is not possible to fully evaluate the performance of a CHSS without knowledge of the vehicle in which it is installed.

While CHSSs may be sourced from specialized equipment suppliers, vehicle manufacturers must ensure that the CHSS installed on their vehicles meet all applicable FMVSS requirements to certify that the entire vehicle is compliant. Vehicle manufacturers may consider working

[7] For example, as discussed below, the number of pressure cycles to which the container is subjected during the baseline initial pressure cycle test is dependent on the vehicle GVWR, with a different number of cycles required for light and heavy vehicles.

closely with CHSS suppliers regarding system design to ensure all requirements are met for a particular vehicle.

Following the lead of GTR No. 13, FMVSS No. 308 establishes standards intended to ensure the safety and integrity of the CHSS throughout the lifetime of a vehicle. NHTSA recognizes that some containers and parts may still need to be replaced due to damage incurred through extraordinary events or due to defects, but in general, the agency expects the demand for replacement CHSS parts to be minimal. Given the likely low demand for replacement containers by ordinary consumers, the limited current market penetration of hydrogen vehicles, and the fact that any recalls will be serviced by manufacturers, we expect the market for aftermarket products to be negligible, and that replacement parts will be supplied predominantly through OEMs, therefore obviating the safety need to set an equipment-level standard. However, NHTSA will monitor the deployment of hydrogen vehicles and how consumers are replacing parts of the fuel system and update the standard as necessary.

While NHTSA recognizes that some manufacturers would prefer that FMVSS No. 308 be an equipment standard, thus potentially shifting the burden of certification onto other entities like suppliers, NHTSA remains invested in ensuring that the end product it regulates—the vehicle—is as safe as possible. The safety of the end product is most important to protecting consumers and the public. Because a compliant CHSS is essential to certifying the safety of the end product, NHTSA maintains the vehicle-level standard. Additionally, NHTSA expects that manufacturers will maintain proper record-keeping practices, including detailed hardware bills of materials, to ensure traceability to originating suppliers.

Regarding the procurement of CHSS or subcomponents for compliance testing, NHTSA will have the option of purchasing complete vehicles or the relevant replacement parts from the vehicle or sub-component manufacturer. This flexibility will enable NHTSA to obtain the needed vehicle and components to conduct compliance testing efficiently.

Additionally, final-stage vehicle manufacturers will not necessarily be required to conduct CHSS testing themselves. Vehicle manufacturers must take reasonable care in certifying that their vehicles meet FMVSS No. 308, but they are not required to follow any set testing procedure and may, if they find it reasonable, work with CHSS suppliers to ensure compliance with FMVSS No. 308. This approach allows vehicle manufacturers to use their discretion in determining which party is best suited to conduct specific tests. This arrangement is often formalized through contractual obligations, with CHSS suppliers guaranteeing the functionality of their systems and agreeing to supply replacement parts exclusively through the vehicle manufacturer, ensuring consistency and regulatory compliance.

2. FMVSS No 307 and 308 as Separate Standards

Background

NHTSA sought comment on whether FMVSS Nos. 307 and 308 should be combined into a single standard in the final rule.

Comment Received

Luxfer Gas Cylinders commented that it would be better to keep FMVSS Nos. 307 and 308 separate. EMA also supported maintaining separate standards, recommending that FMVSS No. 308 be applicable to vehicles using hydrogen as a motor fuel, as well as to hydrogen containers designed for on-board storage, similar to FMVSS No. 304 for CNG containers. Glickenhaus agreed that FMVSS Nos. 307 and 308 should remain distinct. H2MOF similarly stated that the two standards should not be combined. Nikola argued that FMVSS No. 308 should remain its own standard, pointing out that component-specific testing is common in FMVSS regulations, citing examples such as FMVSS Nos. 106, 108, and 304. Nikola further suggested that FMVSS No. 307 should cover vehicle-level requirements, while FMVSS No. 308 should address component-specific requirements. Hyundai supported the separation of the standards, stating that it is logical to distinguish between fuel system integrity and hydrogen storage system requirements, drawing a parallel with FMVSS Nos. 303 and 304 for CNG vehicles. FORVIA, while generally neutral, expressed a preference for combining the standards, suggesting that doing so could simplify future amendments and create a more consistent alignment with GTR No. 13.

Agency Response

NHTSA is keeping FMVSS No. 307 and FMVSS No. 308 as separate standards, as proposed. This separation will make future management of the standards more efficient and is consistent with FMVSS No. 303, ''Fuel system integrity of compressed natural gas vehicles,'' and FMVSS No. 304. All commenters on this matter supported requirements in separate standards, as proposed. Regarding H2MOF's comment, NHTSA does not believe that combining FMVSS No. 307 and 308 into a single standard will improve consistency with GTR No. 13. Consistency relates to the specifics of the requirements themselves, and is not based on whether those requirements are in a single standard or in two standards.

3. Change of Design Table

Background

Some international standards include what is known as a ''change of design table.'' This type of table is used in type-approval regulatory systems to specify what qualification testing must be redone for a given change in an approved system's design. GTR No. 13 does not contain a change of design table because GTRs are neutral toward the different national certification systems used and change of design tables are only relevant in type-approval systems.

Comments Received

Quantum Fuel Systems, LLC commented that the proposed standard omits the deviation table, also known as a change of design table, that is included in Economic Commission for Europe Regulation No. 134, (UN ECE R134).[8] Quantum Fuel Systems, LLC stated that the only difference between GTR No. 13 and UN ECE 134 is that UN ECE 134 also includes a deviation table. Quantum Fuel Systems, LLC provided a copy of the change of design table in UN ECE R134. Quantum Fuel Systems, LLC stated it would like the change of design table to be added to the FMVSS Nos. 307 and 308 standards.

Agency Response

NHTSA is not including a change of design table in FMVSS Nos. 307 and 308. Change of design tables are not relevant to FMVSS because FMVSS are self-certification standards. Manufacturers themselves are responsible for determining if any design changes require re-certification of the overall design or system.

[8] *See* Economic Commission for Europe Regulation No. 134, *Uniform provisions concerning the approval of motor vehicles and their components with regard to the safety related performance of hydrogen-fuelled vehicles. https://unece.org/fileadmin/DAM/trans/main/wp29/wp29regs/2015/R134e.pdf.*

4. Compressed Hydrogen Storage System

a. Container Definition

Background

GTR No. 13 defines a container as ''the pressure-bearing component on the vehicle that stores the primary volume of hydrogen fuel in a single chamber or in multiple permanently interconnected chambers.'' NHTSA proposed a similar definition with the following modifications:

- Replace ''the vehicle'' with ''a compressed hydrogen storage system'' to clarify that the container is a subcomponent of a CHSS, and therefore a container cannot exist on its own without the other components of the CHSS.
- Remove the word ''primary'' because this word introduces ambiguity regarding secondary or tertiary volumes of stored hydrogen.
- Add the word ''continuous'' to clarify that a container does not have any valves or other obstructions that may separate its different chambers.

Thus, NHTSA proposed that ''container means pressure-bearing component of a compressed hydrogen storage system that stores a continuous volume of hydrogen fuel in a single chamber or in multiple permanently interconnected chambers.'' NHTSA sought comment on the proposed definition for the container.

Comments Received

Commenters provided a range of opinions on NHTSA's proposed definition of ''container'' in FMVSS No. 308. Auto Innovators suggested that NHTSA should harmonize with the definition in GTR No. 13, stating that it is well understood and provides sufficient clarity without necessitating a new definition. Similarly, DTNA raised concerns that removing the word ''primary'' could introduce ambiguity, particularly in relation to whether plumbing and piping systems might be considered part of the container and thus subject to the same testing requirements as the container itself. It requested clarification that such systems are not part of the container.

Glickenhaus and H2MOF expressed support for the proposed definition, with Glickenhaus backing the entire proposal and H2MOF agreeing with the characterization of a container as consisting of a single chamber or multiple interconnected chambers. However, Agility voiced concerns about the practicality of certain performance tests, specifically with live lines, and requested clarification on how multiple-chamber containers would be tested.

Several commenters, including Nikola, WFS, TesTneT, and FORVIA, advocated for retaining the definition from GTR No. 13. WFS suggested that if changes are necessary, only the modification to replace ''the vehicle'' with ''a compressed hydrogen storage system'' should be adopted, while the term ''primary'' should remain to prevent confusion between containers and the CHSS. FORVIA also opposed adding the term ''continuous,'' noting that it could mislead interpretations of interconnected chambers. It suggested that further clarification could be provided through additional notes, especially regarding the definition of ''permanently interconnected.''

HATCI supported NHTSA's proposed definitions for the container, closure devices, shut-off valves, and container attachments, stating agreement with the rationale provided.

Agency Response

NHTSA is maintaining the definition of container as proposed. It is important to indicate in the definition that a container is a component of a CHSS, rather than simply a component of a vehicle. This language makes clear that a container cannot exist outside a CHSS. In other words, there can be no ''independent'' containers that are not part of a CHSS. This clarification is important because the CHSS includes the critical safety functions of shut-off valve, check valve, and TPRD, as discussed below. A container without these functions is unsafe and is not permitted by the standard. All containers must exist as a component of a CHSS, and a vehicle may not have containers that are not part of a CHSS.

It is also important to remove the word ''primary'' from the definition of container. Including the word ''primary'' could introduce ambiguity about secondary or tertiary volumes of stored hydrogen, or secondary or tertiary containers on the vehicle. All containers onboard a vehicle that supply hydrogen to propel the vehicle need to be regulated by the standard, and including the word primary in the definition could imply that only the ''first'' or ''primary'' container is covered by the regulation, while other ''secondary'' containers and their respective CHSS are unregulated. This is not NHTSA's intent, and therefore the word ''primary'' has been removed.

Additionally, it is important to include the word ''continuous'' in the definition. This word is used to determine the specific volume that constitutes a container's single or multiple permanently interconnected chambers. The continuous volume that constitutes the container continues until it is ''interrupted'' or ''broken'' by a shut-off valve. Any continuous volume up to the shut-off valve is considered part of the container. For example, if there are lines [9] between a cylindrical chamber and the shut off valve, then those lines are considered part of the continuous volume that constitutes the container with hydrogen stored at high pressure. A conformable container design consisting of multiple small high-pressure cylinders interconnected by high-pressure piping that are all enclosed in a casing, and that collectively have one set of closure devices (*i.e.* shut-off valve, TPRD, check valve), would be considered as one container by this definition. Such conformable containers are in development for vehicle application in the near future.

Similarly, if two conventional high-pressure containers share a single shut-off valve through piping or lines, such lines present the same safety risks as the container itself, due to the large quantity of stored high-pressure hydrogen that could be uncontrollably released in the event of a failure of those lines to contain the hydrogen. Therefore, those lines would be required to undergo durability testing along with the remainder of the container. However, if the lines are attached to the cylindrical chamber with high pressure hydrogen after the shut-off valve, then they would not be considered part of the continuous volume that constitutes the container. These lines after the shut-off valve do not present the same safety risk of uncontrolled release of high-pressure hydrogen, due to the shut-off valve's ability to close and isolate the stored hydrogen.

Including the word continuous is also important to clarify that a container does not have any valves or other obstructions that may separate its different chambers, in the case of a container with multiple permanently interconnected chambers. There cannot be a shut-off valve or other obstruction between any of the chambers of a container that is composed of multiple permanently interconnected chambers (such as the example provided earlier of a conformable container). Containers composed of multiple chambers forming a continuous volume are tested as a single unit, whereas if there are valves or other obstructions that separate the chambers and ''break'' the continuous volume, the chambers are considered separate containers and are evaluated

[9] In this context, ''lines'' refers to any plumbing, piping, and/or connections where hydrogen fuel may be present.

separately. For example, in the case of three permanently interconnected chambers joined together by piping before a single shut-off valve, all three chambers and the piping together would be considered ''the container.'' Alternatively, if each of the three chambers had its own shut-off valve prior to the piping connections, then each of the three chambers would be a separate container.

Finally, NHTSA does not intend to apply the definition of container to fuel lines outside a CHSS after the shut-off valve, or to low pressure fuel system components downstream of the shut-off valve that may contain residual hydrogen. These lines are covered by other requirements such as the fuel system leakage requirement in FMVSS No. 307, discussed below, which specifies that the fuel system shall not leak, as evaluated by FMVSS No. 307 S6.6, *Test for fuel system leakage.*

b. Container Attachments Definition

Background

NHTSA proposed defining ''container attachments'' as ''non-pressure bearing parts attached to the container that provide additional support and/or protection to the container and that may be removed only with the use of tools for the specific purpose of maintenance and/or inspection.'' GTR No. 13 defined container attachments as ''non-pressure bearing parts attached to the container that provide additional support and/or protection to the container and that may be only temporarily removed for maintenance and/or inspection only with the use of tools.'' NHTSA's definition is similar to that in GTR No. 13 with some exceptions.

GTR No. 13 uses the phrase ''only temporarily removed for maintenance and/or inspection'' in the definition of container attachment. In the NPRM proposed definition, the words ''only temporarily'' and ''for maintenance and/or inspection,'' were removed because anything that can be removed temporarily can also be removed permanently. Additionally, from a regulatory perspective, it is not possible to control and monitor the purpose of removing the container attachments and so the phrase ''for maintenance and/or inspection'' was removed.

Comments Received

Several commenters, including Nikola, Auto Innovators, TesTneT, NGS, and FORVIA, suggested that the definition should remain aligned with GTR No. 13 to maintain consistency. Nikola expressed concern that changes could lead to unintended consequences, while Auto Innovators acknowledged NHTSA's rationale for removing the term ''temporary'' but stated that the amendment was unnecessary and recommended harmonization with GTR No. 13. TesTneT also noted that the proposed change was insignificant, and NGS recommended keeping the GTR No. 13 definition but adding a safety mark to parts critical to the system's function.

EMA proposed adding ''repair'' to the definition and emphasized the need for consistency between FMVSS Nos. 307 and 308. It pointed out a discrepancy in the wording of the definitions between the two standards and suggested it be addressed. FORVIA opposed permitting permanent removal of container attachments, stating that it could pose safety risks, and emphasized the need for allowing only temporary removal for repairs.

In contrast, H2MOF and HATCI supported NHTSA's proposed definition, with H2MOF agreeing directly and HATCI expressing support for the definitions of container attachments as well as other related components.

Agency Response

NHTSA is maintaining the definition of container attachments as proposed. The agency does not anticipate unintended consequences from removing the word ''temporary'' from the definition. By removing the word ''temporary,'' NHTSA is avoiding having to determine whether an attachment was designed to be removed permanently or temporarily. As stated in the NPRM, anything that can be removed temporarily can also be removed permanently, so a distinction between temporary removal and permanent removal is not meaningful.

It is also not necessary to add the word ''repair'' to the definition or keep the phrase ''for maintenance and/or inspection,'' because any attachments that can be removed for maintenance, inspection, or repair can also be removed for other reasons and FMVSS No. 308 cannot enforce the purpose of removing the attachments.

In response to the comment from EMA regarding discrepancy in the definition of container attachment in FMVSS Nos. 307 and 308, NHTSA acknowledges that the omission of ''and/'' from the definition in FMVSS No. 307 was a clerical omission and the definition has been corrected in this final rule.

c. Closure Devices Definition

Background

GTR No. 13 refers to closure devices as ''primary'' closure devices. This language creates ambiguity about potential secondary or tertiary closure devices. As a result, NHTSA proposed to define the term ''closure devices'' as ''the check valve(s), shut-off valve(s) and thermally-activated pressure relief device(s) that control the flow of hydrogen into and/or out of a CHSS'' and does not use the word ''primary.''

Comments Received

Commenters provided mixed feedback on NHTSA's proposal to remove the word ''primary'' from the definition of closure devices. HATCI supported NHTSA's proposed definitions and agreed with the rationale provided. On the other hand, Auto Innovators opposed the removal, stating that ''primary'' is necessary to distinguish between primary, secondary, and tertiary closure devices, which may be outside the regulation's scope. It recommended harmonizing with GTR No. 13, which it argued provides sufficient clarity by defining primary closure devices as those directly attached to the chamber or manifold. Glickenhaus also disagreed with the proposed change, noting that its design approach includes redundant safety measures for critical components. It questioned whether secondary shut-off valves would be considered part of the CHSS if the term ''primary'' was removed.

H2MOF commented that ''primary'' should remain, as additional devices like pressure-activated pressure relief devices may be required in some cases. It also suggested adding a clarification that CHSS test units do not need closure devices, as most tests are performed hydraulically. Nikola agreed that the definition should retain ''primary'' to differentiate between main shut-off valves and secondary valves like manual isolation valves, which are outside the document's scope.

DTNA noted its concern for removal of the word ''primary'' from the definition of ''closure devices.'' It stated that ''volumes of hydrogen that are located between other valves, often along the piping, could be considered part of the CHSS.'' WFS similarly recommended keeping the word ''primary,'' as its removal would create more ambiguity regarding the distinction between the CHSS and the broader fuel system. TesTneT and FORVIA also opposed the change, with FORVIA asserting that the differentiation between primary and

secondary closure devices is essential, as GTR No. 13 only covers primary devices. It stated that removing ''primary'' would create uncertainty about whether secondary closures are included.

Agency Response

NHTSA is keeping the proposed definition of closure devices. NHTSA's intention is to subject all TPRDs, check-valves, and shut-off valves that directly control flow of hydrogen into and/or out of the CHSS to the requirements of FMVSS No. 308 S5.1.5. Therefore, there is no need to identify closure devices as ''primary.'' Whether a closure device directly controls the flow into and/or out of the CHSS will be dispositive. Redundant, back-up, or downstream devices are not intended to be subject to the requirements of FMVSS No. 308 S.5.1.5.

There will be no confusion about ''other'' closure devices because the proposed definition specifically identifies only ''the check valve(s), shut-off valve(s) and thermally-activated pressure relief device(s) that control the flow of hydrogen into and/or out of a CHSS,'' and the CHSS is defined as ''a system that stores compressed hydrogen fuel for a hydrogen-fueled vehicle, composed of a container, container attachments (if any), and all closure devices required to isolate the stored hydrogen from the remainder of the fuel system and the environment.'' Any other device types, as well as any devices that do not directly control flow into and/or out of a CHSS, are not closure devices under this definition, or are not part of the CHSS and therefore are not subject to the requirements of FMVSS No. 308 S5.1.5. For example, a valve that is not providing the CHSS with one or all of its required functions of check valve, shut-off valve, and TPRD is not considered a closure device and would not be tested under the standard. Similarly, a valve located ''downstream'' from the CHSS shut-off valve is not considered a closure device since it would not be controlling flow into or out of the CHSS. Likewise, a ''manual isolation valve'' is not a shut-off valve because it is not automatically activated, and so would not be considered a closure device per the final rule.

d. Shut-Off Valve Definition

Background

GTR No. 13 defines a shut-off valve as ''a valve between the container and the vehicle fuel system that must default to the 'closed' position when not connected to a power source.'' NHTSA proposed adding the words ''electrically activated'' to the definition, so that a shut-off valve would be ''an electrically activated valve between the container and the vehicle fuel system that must default to the 'closed' position when not connected to a power source.''

Comments Received

Commenters expressed a strong preference for maintaining alignment with the definition of a shut-off valve as outlined in GTR No. 13. Nikola commented that the existing GTR No. 13 definition should be retained, arguing that other activation methods, such as pneumatic, are possible and that the proposed change to ''electrically activated'' would be overly prescriptive. Auto Innovators recommended harmonizing the definitions of shut-off valves in FMVSS Nos. 307 and 308 with the definition in GTR No. 13, noting that the definitions in these FMVSS standards are currently inconsistent. Similarly, DTNA requested the removal of ''electrically activated'' from the definition, suggesting that the term is not design-neutral and could limit future innovations. DTNA further proposed using the term ''automatically activated'' as a more inclusive option. EMA supported consistency with GTR No. 13 and recommended that NHTSA harmonize the definition of shut-off valves across FMVSS Nos. 307 and 308, offering an alternative definition that would omit ''electrically activated.''

Several commenters, including H2MOF and TesTneT, opposed adding ''electrically activated,'' with H2MOF stating that shut-off valves can also be pneumatically activated. WFS suggested that while leaving the definition as written in GTR No. 13 would suffice, there would be no harm in adding ''electrically activated'' if NHTSA felt it improved clarity. NGS and FORVIA also raised concerns about restricting future innovations, such as pneumatic systems, if the definition were limited to electrically activated valves. Both commenters advocated for retaining the GTR No. 13 wording to avoid stifling potential advancements in valve technology.

Agency Response

NHTSA agrees with the commenters and has removed the words ''electrically activated,'' consistent with the definition in GTR No. 13. This change avoids the possibility of being design restrictive by specifying ''electrically activated.'' NHTSA notes, however, that the definition indicates that the valve must default to the ''closed'' position when not connected to a power source, which directly implies the valve must utilize electrical actuation of some kind.

NHTSA made an editorial modification to the definition of ''shut-off valve'' by replacing the words ''when not connected to a power source'' with ''unpowered.'' This was an editorial change for conciseness. However, NHTSA omitted this update from the definition for shut-off valve in FMVSS No. 307, and only applied it in FMVSS No. 308. In the final rule, both definitions have been revised to reflect this update.

e. CHSS Definition

Background

NHTSA proposed a definition of the CHSS that matches the definition in GTR No. 13, with the exception of the removal of the word ''primary'' before ''closure devices,'' as discussed above.

Comments Received

Luxfer Gas Cylinders commented that the proposed definition of CHSS is appropriate but noted that most of the hydraulic performance tests in FMVSS No. 308 cannot be conducted with the check valve, shut-off valve, and TPRD attached to the container. NFA suggested that NHTSA should consider including Figure-3, the Typical CHSS diagram from the NPRM, in the standard to help clarify the definition.

Agency Response

NHTSA is maintaining the definition of CHSS as proposed. The regulatory text clearly specifies where the CHSS or its subcomponents, such as the container, must meet the various requirements. For example, FMVSS No. 308 S5.1.2 specifies that the test for performance durability is conducted only with the container, and in some cases, container attachments. As Luxfer Gas Cylinders points out, it is not possible to conduct hydraulic tests with the closure devices attached to the container.

NHTSA is not including a figure in the definition because the definition is already clear, and the referenced figure only shows a generic CHSS that may not be representative of all CHSS types that meet the definition.

f. Cryo-Compressed Hydrogen Systems

Background

Cryo-compressed hydrogen (CcH2) storage systems store compressed hydrogen gas at very low temperatures and high pressures. NHTSA proposed that FMVSS No. 307 and 308 would apply to ''each motor vehicle that uses compressed hydrogen gas as a fuel source.''

Comments Received

Verne, Inc. commented that many of the performance requirements in GTR No. 13 and FMVSS Nos. 307 and 308 are relevant for ensuring the safety of some aspects of cryo-compressed hydrogen storage systems. These aspects include crash safety, fire resistance, external vehicle hazards, and performance durability. However, Verne stated that these regulations do not adequately address the specific design, components, and service conditions of CcH2 systems. It further noted that CcH2 technology, which operates at a nominal working pressure (NWP) of 35 MPa and temperatures below −200 °C, is not sufficiently covered by existing global or local regulations, codes, and standards.

Verne requested clarification from NHTSA on whether CcH2 storage systems and hydrogen-powered vehicles using such systems fall under the scope of FMVSS Nos. 307 and 308 as a type of CHSS. Verne also stated that while CcH2 is not explicitly out of scope in GTR No. 13, there is a note in GTR No. 13 Part I Section C.3 that could suggest it should not be included. It emphasized that CcH2 systems meet the definition of CHSS, including key components like a container, TPRD, shut-off valve, and check valve.

Verne listed several ways in which CcH2 systems differ from conventional gaseous CHSS, such as the inclusion of additional devices like multiple pressure relief devices, insulation, and an all-metal vacuum jacket. It also highlighted that due to the pressure dynamics after fueling, the target and maximum fueling pressure should be set lower than 43.75 MPa, suggesting a target of 35 MPa and operational relief at 40 MPa. Furthermore, Verne noted that CcH2 systems are designed to operate at temperatures far below the typical range for gaseous hydrogen systems, with expected operational temperatures between −253 °C and +85 °C.

Verne requested an exemption from FMVSS No. 308 S5.1.3, *Test for expected on-road performance,* for CcH2 systems, stating that test primarily assesses the performance of non-metallic liners in Type 4 containers and non-metallic sealing interfaces. Verne stated that since CcH2 systems rely on metal-to-metal sealing designs to perform at cryogenic temperatures, they do not face the same vulnerabilities as systems using non-metallics. Verne also stated that the temperature conditions in the on-road performance test do not accurately reflect the normal or extreme operational conditions of CcH2 systems. It stated that the current requirements would make the test impossible to execute due to the lower setpoints of the PRDs in CcH2 systems. Finally, Verne stated that the test for on-road performance, as currently written, is costly and provides little safety assurance for CcH2 systems, recommending that it be revised to better suit the technology.

Agency Response

Verne, Inc. has highlighted significant differences between CcH2 and conventional CHSS,[10] including very low operational temperatures, the use of metal-to-metal sealing at cryogenic temperatures, and the presence of PRDs in the storage system. CcH2 systems operate under significantly different conditions than conventional CHSS, including lower temperatures and altered pressure dynamics. These technological distinctions would pose challenges for applying FMVSS No. 308 to CcH2 systems given that the current testing protocols do not adequately address these differences.[11]

GTR No. 13, on which FMSS No. 308 is based, was developed to consider conventional CHSS and does not yet provide sufficient guidance for CcH2 systems. GTR No. 13 acknowledges the potential inclusion of additional storage technologies, such as cryo-compressed systems, in future revisions of the GTR and as the development of these systems progresses. However, it is likely that more research and safety standard development will be required to address the technological distinctions between CcH2 systems and conventional CHSS before GTR No. 13 can be expanded to include these systems.

As such, applying the specific performance requirements of FMVSS No. 308 to vehicles utilizing CcH2 systems is not feasible. Therefore, NHTSA will not apply the requirements of FMVSS No. 308 to vehicles using CcH2 storage systems at this time. However, while CcH2 systems are unique hydrogen storage systems and distinct from conventional CHSSs, most of the vehicle fuel delivery system (piping, pressure regulators, filters, flow control valves, and heat exchangers) and the fuel cell system used to power and propel a vehicle with CcH2 storage systems are similar to those in hydrogen powered vehicles with conventional CHSSs. Additionally, the safety aspects associated with the hydrogen fuel delivery system and the fuel cell system in vehicles with CcH2 storage systems would be similar to that in vehicles with conventional CHSSs. Therefore, NHTSA will still require that vehicles utilizing CcH2, like all vehicles that use hydrogen fuel, meet the vehicle safety requirements outlined in FMVSS No. 307. These include provisions for in-use fuel system integrity and post-crash fuel system integrity, ensuring that vehicles using CcH2 technology maintain overall vehicle safety. Additionally, while NHTSA is exempting CcH2 systems from the requirements of FMVSS No. 308 at this time, NHTSA will continue to monitor developments in cryogenic storage technologies and associated safety standards to inform future regulatory actions.

g. Solid State Hydrogen Systems

Background

Solid-state hydrogen storage systems use advanced materials designed for the storage of hydrogen within solid structures. These materials are composed of porous frameworks onto which hydrogen can adsorb. These frameworks feature expansive internal surface areas that allow the capture and storage of hydrogen molecules within porous networks. These systems can store hydrogen at high densities due to their structural versatility and their ability to reversibly absorb and release hydrogen.

Comments Received

H2MOF commented that its solid-state hydrogen storage systems use adsorbent materials to store hydrogen safely and efficiently. H2MOF stated this method helps reduce costs associated with hydrogen storage, transportation, and use by avoiding the expenses of gas compression and cryogenic liquefaction. H2MOF stated its system involves hydrogen adsorption materials housed within a metallic pressure vessel, which typically operates at 5 MPa, and is enclosed in an insulated outer shell. H2MOF requested that low-pressure solid-state storage solutions operating below 10 MPa be exempted from the requirements of the NPRM, which H2MOF stated are designed for non-metallic high-pressure

[10] By ''conventional CHSS,'' we mean a CHSS that stores hydrogen in gaseous form at high pressures, typically 35 to 70 MPa

[11] There are varied CcH2 system designs under development and there are no standardized testing protocols that address safety issues unique to each of these CcH2 systems. CcH2 storage system manufacturers conduct Failure Modes Effects Analysis (FMEA) to identify potential failure modes, analyze the causes of these failures, and assess their potential effects on the system's safety and functionality, including hydrogen leaks, pressure surges, thermal issues, and component malfunctions. The manufacturers take steps to ensure their CcH2 system designs prevent occurrence of these failures and mitigate the safety effects of any failure mode.

vessels functioning at 35 MPa and 70 MPa.

Agency Response

Similar to the case of CcH2 systems discussed in the previous section, H2MOF has highlighted significant differences between its low-pressure solid-state storage systems and conventional CHSS. These distinctions include the use of adsorbent materials within metallic pressure vessels, lower operational pressures, and the avoidance of high-pressure compression fueling typically seen in traditional CHSS. As with CcH2 systems, these technological differences present challenges for applying the proposed FMVSS No. 308, which was developed for conventional high-pressure gaseous CHSS and does not consider the unique characteristics of solid-state hydrogen storage systems. As with CcH2 systems, NHTSA recognizes the need for more research and standards development to address the specific safety characteristics of solid-state hydrogen storage systems.

Therefore, NHTSA has determined that it is not feasible to apply the performance requirements of FMVSS No. 308 to vehicles using solid-state hydrogen storage systems. However, similar to vehicles with CcH2 storage systems and for the same reasoning, vehicles that use solid-state hydrogen storage technology must still comply with the overall vehicle safety requirements specified in FMVSS No. 307, including in-use fuel system integrity and post-crash fuel system integrity.[12] While NHTSA is exempting solid-state hydrogen storage systems from the requirements of FMVSS No. 308 at this time, NHTSA will continue to monitor advancements in solid-state hydrogen storage technology and consider future regulatory updates as these systems and associated safety standards further develop.

5. General Requirements for the CHSS

a. Maximum CHSS Working Pressure of 70 MPa

Background

Consistent with GTR No. 13, NHTSA proposed requiring that CHSS have a NWP of 70 MPa or less. This is because working pressures above 70 MPa for motor vehicle applications are currently considered impractical and may pose a safety risk given current known technologies. The energy density of hydrogen does not increase significantly when pressurized above 70 MPa, so there is no significant improvement in hydrogen storage efficiency at pressures above 70 MPa. Pressures above 70 MPa, however, may present a greater safety hazard. NHTSA sought comment on this requirement, and specifically asked commenters to identify any technologies that can safely store hydrogen at pressures above 70 MPa.

Comments Received

Nikola stated that CHSS are identified by NWP and maximum filling pressure, with pressures above 70 MPa offering diminishing returns. Nikola also commented that current industry does not have containers that operate above this threshold. Auto Innovators generally agreed with NHTSA's rationale but requested a plan for adapting to future technological developments. It recommended aligning with GTR No. 13, which sets 70 MPa as the highest NWP, and expressed that it would be inappropriate to specify anything higher. Luxfer Gas Cylinders commented that 70 MPa is the appropriate limit due to the absence of filling infrastructure for pressures above this level.

Glickenhaus raised concerns about unintended consequences from limiting the NWP of CHSS to 70 MPa. It pointed out that limiting pressures could hinder future research, comparing this to past limitations when 35 MPa was the industry standard. Glickenhaus commented that today's 70 MPa containers were made possible by technological advances, and a similar restriction in the past might have hindered progress. It also stated that high temperature conditions could reduce the effectiveness of refueling at a fueling station with 70 MPa containers, leading to slower refills and greater energy consumption due to the thermodynamics relating pressure, volume, temperature, and amount of gas.

H2MOF supported the proposal to limit NWP to 70 MPa and requested that FMVSS Nos. 307 and 308 apply to containers ranging from 10 MPa to 70 MPa NWP. WFS agreed with NHTSA's proposal, noting that it aligns with GTR No. 13 and the practical limit for on-board storage. While hydrogen can be safely stored above 70 MPa at fueling stations, it commented that 70 MPa is the practical upper limit for on-board storage.

TesTneT referenced the GTR No. 13 requirement that all new compressed hydrogen storage systems produced for on-road vehicle service have an NWP of 70 MPa or less. TesTneT also noted that there is no increased risk with higher storage pressures, and stated that greater container wall thickness at higher pressures provides more resistance to damage and fire effects. TesTneT noted that the safety issues at pressures higher than 70 MPa involves the ability to seal connections within valves and regulators. It mentioned that it currently use 95 MPa and 100 MPa containers for storing hydrogen at a fueling station. FORVIA agreed with the proposal and commented that introducing additional pressure levels would not benefit interoperability between vehicles and fueling stations, further supporting the 70 MPa limit.

Agency Response

NHTSA is adopting its proposal to limit the NWP of CHSS to 70 MPa or less. Most commenters agreed with the proposal, noting that NWP above 70 MPa offer diminishing returns and that current fueling infrastructure is not compatible with CHSS with NWP greater than 70 MPa. NHTSA has determined that limiting the NWP of CHSS to 70 MPa or less is critical due to safety concerns at higher pressures.

TesTneT noted that it uses 95 MPa and 100 MPa NWP containers to store hydrogen at a fueling station and that the thicker walls of these containers make them inherently safer against damage and fire. NHTSA notes that TesTneT's example of containers with NWP greater than 70 MPa are stationary storage containers. While containers with thicker walls are more resistant to damage and fire, they are significantly heavier and likely not practical for use in hydrogen vehicles.

The requirements in this final rule do not fully address the safety risks associated with storage pressures above 70 MPa. Higher pressures present a greater risk of severe leaks and/or rupture, and the consequences of such failures at increased pressures are more severe due to the larger quantity of energy that could be released. TPRD releases may also be unsafe due to the quantity of hydrogen that must be released at pressures above 70 MPa. Additionally, the test for performance durability of containers in this final rule may not be sufficient to address stress rupture risk for containers with NWP greater than 70 MPa. NHTSA is concerned that a container with NWP greater than 70 MPa may comply with the performance durability requirements and yet have a significant risk of catastrophic stress rupture. As a result, additional safety considerations are necessary for pressures exceeding 70 MPa, and the safety of such systems is not yet known.

[12] The vehicle fuel delivery system and the fuel cell system in vehicles using solid-state hydrogen storage systems are similar to hydrogen powered vehicles with conventional CHSSs.

Therefore, consistent with GTR No. 13, NHTSA is maintaining the requirement that all CHSS must have an NWP of 70 MPa or less.[13]

Glickenhaus stated that limiting the NWP of CHSS to 70 MPa could have unintended consequences by hindering technological advances in hydrogen storage. While Auto Innovators generally agreed with the proposal to limit NWP of CHSS to 70 MPa, it requested a plan for adopting future technological developments. NHTSA agrees with the commenters that technological advances are likely to continue in this space and the agency will monitor such advancement and continue research work on CHSS and hydrogen fuel system integrity. NHTSA coordinates closely with the U.S. Department of Energy (USDOE) and the Pipeline and Hazardous Materials Safety Administration (PHMSA) on research, technical advancements, and standards development for hydrogen vehicles, and plans to update the standards in the future, as needed. Additionally, for vehicles using CHSS with NWP greater than 70 MPa, NHTSA has provisions for exemptions for alternative fuel vehicles that vehicle manufacturers may use.[14]

Glickenhaus commented that fueling stations with 70 MPa tanks would take longer and more energy to refuel hydrogen powered vehicle tanks in extremely hot weather. NHTSA notes that the NPRM and final rule apply to hydrogen storage systems in vehicles used for vehicle propulsion and not the tanks used in fueling stations. Generally, the tanks in fueling stations are at about 100 MPa (similar to those noted by TesTneT). This final rule does not apply to hydrogen tanks in fueling stations.

Limiting CHSS NWP to 70 MPa does not mean 70 MPa is the maximum pressure that can occur inside a CHSS. Under hot conditions or during fueling, a fully fueled CHSS may experience pressures of 125 percent NWP (87.5 MPa for a 70 MPa CHSS). Limiting CHSS NWP to 70 MPa does not limit the maximum allowable working pressure of the container to 70 MPa, nor does it limit manufacturers' ability to design containers that can withstand severe over-pressurization events as tested in subsequent tests.

Finally, H2MOF requested that low-pressure solid-state storage systems typically operating at pressure below 10 MPa be exempted from the requirements of the NPRM, which H2MOF stated are designed for non-metallic high-pressure vessels functioning at 35 MPa and 70 MPa. NHTSA notes that it is not limiting applicability of the standard to vehicles with CHSS pressures above 10 MPa. Instead, NHTSA is excluding low-pressure sold-state hydrogen storage systems from FMVSS No. 308 requirements, as explained earlier in this notice.

b. Mounting Closure Devices On or Within Each Container

Background

GTR No. 13 provided contracting parties with the discretion to require that the closure devices be mounted directly on or within each hydrogen fuel container. The relevant safety concern is that the high-pressure lines required to connect remotely located closure devices with the container could be susceptible to damage or leak. However, as discussed above, the definition of a container is sufficiently broad that it includes lines that are part of the continuous volume of stored hydrogen (as determined by the location of the shut-off valve or any other obstruction that ''breaks'' or ''interrupts'' the container's continuous volume). Thus, any lines that form part of the container's continuous volume are themselves part of the container and will be included in the container performance testing discussed below. If a container (which includes any lines that are part of the container's continuous volume) can successfully complete the performance testing in FMVSS No. 308, then the risk of failure of the lines has been addressed. As a result, NHTSA tentatively concluded that it is not necessary to specify that closure devices be mounted directly on or within each container. NHTSA sought comment on requiring closure devices to be mounted directly on or within each container.

Comments Received

Commenters generally supported NHTSA's proposal not to require closure devices to be mounted directly on or within each container, with most agreeing that this approach provides necessary flexibility for system design. Auto Innovators noted that discussions within the GTR No. 13 Phase 2 Informal Working Group suggested mounting the closure device directly on a chamber for single-chamber systems or on one of the chambers for multi-chamber systems, but also highlighted the benefits of allowing manufacturers discretion, particularly for non-traditional designs like conformable tanks. H2MOF, HATCI, and WFS also supported leaving the location of closure devices to manufacturer discretion, stating that this flexibility enhances design options. WFS and TesTneT pointed out that allowing remote TPRDs, which have been safely used in the CNG industry, could enhance system safety in fire protection. However, Nikola disagreed with NHTSA's approach, stating that ''CNG is not the same as hydrogen'' and that allowing this could lead to unintended issues. Luxfer Gas Cylinders and NGS agreed with NHTSA's proposal, with NGS emphasizing the importance of not limiting manufacturers' ability to design systems tailored to their specific applications.

Agency Response

NHTSA will not require closure devices to be mounted on or within each container. As discussed above, the definition of ''container'' in the final rule is sufficiently broad to include any lines that may form part of the container's continuous volume of pressurized hydrogen up to the closure device.[15] Therefore, these lines must be included in the applicable performance testing as part of the container itself. If a container, including all portions of the container's continuous volume, can successfully complete the performance testing in FMVSS No. 308, then the risk of failure of the lines has been sufficiently addressed.

c. Requiring Check Valve Functionality as Part of the CHSS

Background

During fueling, hydrogen enters the CHSS after passing through a check valve. The check valve prevents back-flow of hydrogen into the fueling supply line or even out of the fueling receptacle to the atmosphere. NHTSA proposed that the CHSS be required to include the functionality of a check valve. However, NHTSA is aware of CNG vehicles that do not include check valves as part of their CNG storage system. NHTSA sought comment on whether the check valves should be required as part of the CHSS.

[13] Storing hydrogen above 70 MPa is also impractical given current technology. As pressure increases beyond 70 MPa, hydrogen becomes increasingly difficult to compress. This difficulty leads to diminishing returns in terms of hydrogen storage density, where only a small increase in stored hydrogen results from a disproportionately higher input of compression energy. Storing hydrogen at higher pressures also requires containers with thicker walls to manage the increased stress from extreme pressurization. These thicker containers add considerable weight, which is impractical for vehicle use where minimizing weight is critical.

[14] *See* Part 555—Temporary Exemption from Motor Vehicle Safety and Bumper Standards, *https://www.ecfr.gov/current/title-49/part-555.*

[15] In this context, ''lines'' refers to any pluming, piping, and/or connections where hydrogen fuel may be present.

Comments Received

Commenters expressed mixed opinions on whether check valves should be required as part of the CHSS. Some, including Nikola, EMA, HATCI, and FORVIA, supported requiring check valves, citing the higher pressure of hydrogen and the role of check valves in ensuring safety, especially for multi-container systems. FORVIA stated that not including a check valve would leave the fueling line vulnerable to hydrogen leakage.

Others, such as Agility, Glickenhaus, H2MOF, and TesTneT, opposed making check valves a mandatory component of the CHSS. Agility stated that system-level protections are appropriate and requested clarification whether a single check valve near the fuel receptacle is adequate. Glickenhaus argued that a remotely located check valve could offer advantages. H2MOF pointed to the safety record of millions of CNG vehicles without check valves in its storage systems and suggested the requirement would be too design restrictive. TesTneT noted that check valve functionality could be integrated into other components, making a separate check valve unnecessary.

WFS commented that the key issue is not having a dedicated check valve but ensuring ''check valve functionality,'' which could be incorporated into other system components, as outlined in GTR No. 13.

Agency Response

Consistent with GTR No. 13, NHTSA is requiring that the CHSS include a check valve or the function of a check-valve. A check valve means ''a valve that prevents reverse flow.'' Therefore, each CHSS must have hydrogen flow control functionality equivalent to a valve that prevents reverse flow. This requirement is not design restrictive because manufacturers have the option to design systems that provide the required functionality without the need for a traditional check valve. For example, the functions of check valve and shut-off valve may be combined into a single device, or multiple containers may share a single check valve. Additionally, it may be possible for a vehicle to use a single check valve located at the fueling receptacle to provide check valve functionality to multiple CHSS. In such a design, each CHSS onboard the vehicle would derive the function of check valve from the single check valve located at the fueling receptacle.

6. Specification of BP_O on the Container Label

Background

Several of the performance tests in FMVSS No. 308 use a manufacturer-supplied value known as BP_O. A container's BP_O is a design parameter specified by the manufacturer that represents the median burst pressure for a batch of containers. To facilitate compliance testing, NHTSA proposed that manufacturers specify the BP_O associated with each container on the container label.

Comments Received

Several commenters addressed the proposal to include the manufacturer-specified median burst pressure (BP_O) on container labels. Nikola stated that BP_O is not useful to and could confuse end users, suggesting that if BP_O is not available for compliance testing, NHTSA should assume a value of 2.25 times NWP. Luxfer Gas Cylinders argued that requiring BP_O on labels is unnecessary, as the burst pressure is a quality control measure, and the median burst pressure of a batch is irrelevant to manufacturers or end users. Auto Innovators disagreed with the assertion that BP_O varies significantly between batches, stated that BP_O is based on manufacturer testing, and recommended consistency with GTR No. 13. Auto Innovators opposed including BP_O on labels, citing potential confusion for end users and lack of safety benefits, and noted that BP_O can be provided to NHTSA during testing without needing to be on the label. EMA echoed concerns about potential customer confusion and recommended alignment with GTR No. 13, suggesting that BP_O could be provided by the manufacturer upon request.

Glickenhaus supported a labeling requirement for burst pressure but raised concerns that NHTSA's proposed definition of BP_O could restrict manufacturers' ability to maintain higher safety margins. It proposed an alternative definition of BP_O based on the minimum burst pressure from the design and manufacturing process to allow for increased safety margins. H2MOF and HATCI both stated the requirement was impractical and unnecessary, with HATCI stressing that BP_O is primarily a design parameter and market strategy issue, often considered confidential. Agility and TesTneT also opposed the requirement, with Agility calling it impracticable and TesTneT suggesting that compliance testing should focus on meeting minimum standards rather than a manufacturer-specified value.

Other commenters, including NGS and Newhouse, requested aligning with GTR No. 13, with Newhouse noting that BP_O information can be found through part numbers if needed. FORVIA expressed strong opposition to including BP_O on labels, citing concerns over confidentiality and potential misinterpretation by consumers and requested alignment with GTR No. 13. Several commenters, including Auto Innovators and Luxfer Gas Cylinders, reiterated concerns that labeling BP_O would create confusion and add unnecessary burdens without any clear safety benefit, recommending harmonization with GTR No. 13 instead.

Agency Response

After consideration of the comments, NHTSA will not require BP_O to be listed on the container label. NHTSA agrees this requirement could cause confusion for consumers regarding slight differences in BP_O that may exist between vehicles. Such differences will have no impact on safety or performance. NHTSA also acknowledges that listing BP_O on the container label could create confusion about the highest rated pressure for a given vehicle. Since BP_O will typically be a multiple of NWP, but have the same pressure units, it could be dangerous for a user to mistake BP_O for NWP.

Nevertheless, NHTSA still needs to know the value of BP_O to conduct compliance testing on a given vehicle. Instead of requiring BP_O on the container label, NHTSA will obtain BP_O directly from the vehicle manufacturer. The method for obtaining BP_O from the manufacturer will match that for obtaining the primary constituent of the container, discussed below.

Some comments appear to reflect a misunderstanding of the role of BP_O within the proposed regulation. The BP_O is a manufacturer-specified parameter that represents the median burst pressure for a batch of containers. Manufacturers are free to incorporate additional safety factors into their designs if they wish. The use of BP_O in the requirements does not restrict this ability. As discussed in the NPRM, the use of BP_O during the residual strength burst test ensures that containers at the end of their service life would still be safe even if they were to remain in service.[16] Specifically, the burst pressure after testing must be at least 80% of the container's BP_O. This

[16] *See* 89 FR 27518 (Apr. 17, 2024), *available at https://www.federalregister.gov/documents/2024/04/17/2024-07116/federal-motor-vehicle-safety-standards-fuel-system-integrity-of-hydrogen-vehicles-compressed.*

requirement controls the degradation rate of the container over time, preventing a high degradation rate that could lead to dangerous bursts if the container were to remains in use beyond its intended life. This standard is comparable to safety standards for other vehicle components like seatbelt webbing.

Additionally, the concerns raised about the ambiguity of the BP_O definition are misplaced, as the regulation does not provide a prescriptive definition but rather relies on the manufacturer's expertise in determining BP_O. There is no requirement to calculate a mean burst pressure by bursting every tank in a batch. Manufacturers may use standard industry practices based on their design, materials, manufacturing processes, and testing to determine BP_O.

7. Tests for Baseline Metrics

a. Required Number of Containers Tested

Background

GTR No. 13 requires three new containers to be tested during the baseline initial burst test and the baseline pressure cycle test. As NHTSA explained in the proposal, this requirement originates from the type-approval certification process commonly found in other nations and that NHTSA did not believe that three new containers needed to be tested under the U.S. self-certification system where NHTSA buys and tests vehicles and equipment at the point of sale. Therefore, NHTSA proposed basing the results of testing of any container for the baseline initial pressure cycle test. NHTSA sought comment on this decision.

Comments Received

FORVIA and TesTneT agreed with the proposal, stating that only one container needs to be pressure cycled to demonstrate compliance with the cycle life requirements. TesTneT likened this approach to batch testing, where only one container is required to be tested, rather than three.

DTNA expressed concern that testing only one container for baseline metrics might not provide sufficient information on the burst behavior of all containers in vehicles equipped with multiple containers. DTNA acknowledged that NHTSA purchases vehicles and equipment from the public market to monitor FMVSS compliance, but proposed that for vehicles with multiple containers, at least two should be subjected to the baseline initial pressure cycle test.

Luxfer Gas Cylinders commented that testing any one container is reasonable, noting that all cylinders must pass the minimum required cycle tests and that testing three containers does not represent a significant statistical sample.

Nikola disagreed with the proposal, suggesting that NHTSA obtain containers directly from tank manufacturers, similar to how testing is conducted under FMVSS No. 304 compliance.

H2MOF supported NHTSA's proposal to test one container for the baseline initial pressure cycle test and recommended allowing a retest if there is an assignable cause of any non-compliance.

Agency Response

NHTSA is maintaining its decision that it is not required to test three containers for the baseline initial burst test, as specified by GTR No. 13. Under the U.S. self-certification system, NHTSA purchases vehicles and equipment for testing randomly at the point of sale, and the selected container must meet all applicable safety requirements. This approach ensures that manufacturers are incentivized to ensure all vehicles consistently comply with safety standards, knowing that any one of their containers could be tested. Removing the requirement to test three containers, the test burden is potentially reduced without compromising safety, and allowing NHTSA to potentially test more containers with the same operating budget. Manufacturers must still ensure that each vehicle meets the standard.

Additionally, concerns about variability among containers are addressed through the random selection process, which provides an effective representation of real-world conditions. While some commenters raised concerns about vehicles with multiple containers, NHTSA has the flexibility to conduct repeat tests, as well as additional tests on any of the various container types if needed. This allows NHTSA to respond to specific cases where there may be a safety concern without mandating the testing of three containers in every instance, which maintains an efficient means of ensuring safety.

b. Baseline Initial Burst Pressure Test

(1) Need for the Baseline Initial Burst Test

Background

Consistent with GTR No. 13, NHTSA proposed the baseline initial burst pressure test in addition to the test for performance durability, which includes a 1000 hour high-temperature (85 °C) static pressure test designed to evaluate the container's resistance to stress rupture, in combination with other lifetime stress factors. Given that the high-temperature static pressure test evaluates stress rupture risk, and the test for performance durability represents an overall worst-case lifetime of multiple stress factors, NHTSA sought comment on whether the baseline initial burst pressure test even needs to be included in the standard's requirements.

Comments Received

Nikola commented that the baseline initial burst pressure test is necessary to ensure that the container meets its initial strength integrity requirements, which can then be compared to the final burst pressure. Agility expressed concern that the high-temperature static pressure test does not sufficiently evaluate reliability against stress rupture, stating that testing one million cylinders would be required to demonstrate the same reliability. EMA recommended that the baseline initial burst pressure test is unnecessary, proposing the removal of S5.1.1.1 from the standard. H2MOF stated that the residual burst pressure after the performance durability test is a better indicator of design fitness than an initial burst pressure test. Auto Innovators suggested aligning with GTR No. 13, which uses the initial baseline burst pressure for comparison with residual values.

TesTneT clarified that the high-temperature static pressure test, originally called the ''accelerated stress rupture test,'' was developed to assess combined effects on the container but not the individual stress rupture characteristics of fiber strands. TesTneT stated that the baseline initial burst pressure test is necessary for container design and manufacturing control. Newhouse commented that both tests should be conducted, as they assess different factors. FORVIA recommended including the baseline initial burst pressure test for harmonization with GTR No. 13, while also questioning whether NHTSA must perform all tests during field surveillance or if it has discretion in test selection. Auto Innovators reiterated its support for harmonizing with GTR No. 13.

Agency Response

NHTSA is maintaining the proposed baseline initial burst pressure test. Several commenters provided sufficient explanation of why the baseline initial pressure test is different from the test for performance durability. On the other

hand, the commenters proposing the removal of the baseline initial burst pressure test did not provide sufficient justification why the baseline initial burst pressure test is not needed. The initial burst pressure test evaluates the container's start-of-life integrity, whereas the test for performance durability examines different aspects of material performance and stresses, such as resistance to physical damage, chemical exposure, and extreme environmental temperatures, and the container's subsequent end-of-life integrity. Therefore, both testing requirements should be included in the standard, as proposed. NHTSA notes, however, that the results of the baseline initial burst pressure test are not referenced in subsequent tests as a comparison or ''baseline.'' Instead, subsequent tests reference the BP_O value discussed above. Regarding field surveillance, NHTSA may conduct any of the tests in the FMVSS as part of field surveillance.

(2) Burst Pressure Within ±10 Percent of BP_O

Background

As proposed, the baseline initial burst pressure test would have verified that the initial burst pressure is within 10 percent of the manufacturer specified BP_O. The requirement that the container tested must have a burst pressure within ±10 percent of BP_O was based on the need to control variability in container production. If a manufacturing process produces containers with highly variable initial burst pressures, there is a possibility of a container with a dangerously low burst pressure. NHTSA sought comment on the safety need for specifying a limit on burst pressure variability in a batch and whether the 10 percent limit is appropriate. Commenters were asked to provide supporting data if they believed another limit was appropriate.

Comments Received

Commenters provided mixed opinions regarding the proposal for a ±10 percent limit on burst pressure variability, with some supporting the limit and others suggesting it is unnecessary or impractical. Nikola commented that the ±10 percent limit is achievable and accepted by manufacturers. Agility stated that limiting maximum burst pressure does not necessarily improve safety and suggested that variability in carbon fiber strength would take up most of the proposed limit, making it impractical. Agility also recommended omitting the requirement, stating that the existing minimum burst requirement already addresses safety concerns. HATCI and Auto Innovators both noted that burst pressure variability could be managed through a manufacturer's quality management system, with Auto Innovators supporting alignment with GTR No. 13 and affirming the appropriateness of the ±10 percent limit. Luxfer Gas Cylinders stated that specifying a limit is unnecessary, as manufacturers already ensure no cylinder bursts below the minimum level, typically by setting burst pressures significantly higher than required. TesTneT also supported the ±10 percent limit, noting that burst testing in accordance with GTR No. 13 had not revealed any issues with the limit.

In contrast, Quantum suggested that the 10 percent requirement is unrealistic due to the influence of factors such as carbon fiber performance, recommending a more lenient limit of 20 percent. NGS and H2MOF commented that managing batch variation should be left to the manufacturer as long as the minimum burst pressure is met. Newhouse questioned the practicality of the ±10 percent limit, noting that variability is inherent in the production process and that meeting the minimum burst pressure is a more meaningful safety measure. MEMA and FORVIA both supported maintaining alignment with GTR No. 13, with FORVIA emphasizing that the 10 percent variability allowance accounts for reasonable manufacturing differences while maintaining safety margins. FORVIA also discouraged adding new batch-related requirements, suggesting that automotive production often relies on other control methods, such as sampling in continuous production.

Agency Response

NHTSA is removing the requirement that the burst pressure of the container be within 10 percent of the BP_O. FMVSS are designed to set minimum safety performance standards for vehicles, rather than control variability in manufacturing processes. This approach ensures that every vehicle meets a baseline level of safety, regardless of specific manufacturing methods or variability in production. The responsibility for managing variability and ensuring consistent quality within manufacturing processes falls to the manufacturers themselves. They must ensure that their production processes consistently produce vehicles that meet or exceed the FMVSS requirements.

When NHTSA tests a vehicle component to ensure it meets the FMVSS, the component is expected to meet or exceed the specified performance criteria every time it is tested, regardless of variability in the manufacturing process. NHTSA's approach to testing typically involves randomly selecting a single test article for evaluation. If this single component fails to meet the standard, it indicates that the entire batch, or potentially the entire production process, may be flawed.

Per the requirements of the Safety Act, manufacturers are required to ensure that every unit produced meets the FMVSS requirements. This requirement compels manufacturers to control the variability within their production processes. If a manufacturer allows too much variability, there is a risk that the vehicle may not meet the standards, which could result in non-compliance. The prospect of non-compliance drives manufacturers to maintain high levels of consistency and quality control, ensuring that every component or vehicle produced is likely to pass NHTSA's testing, no matter which one is chosen for evaluation. This method of testing essentially requires control of variability indirectly, as manufacturers must ensure that all of their products, not just a select few, comply with FMVSS requirements.

(3) BP_{min} of 200% NWP

Background

For the reasons discussed in the NPRM, NHTSA believes that the minimum burst pressure, BP_{min}, of 200 percent NWP, as set forth in GTR No. 13 Phase 2, meets the need for safety.[17] The proposed BP_{min} of 200 percent NWP facilitates hydrogen vehicle development without unnecessary overdesign of components. NHTSA sought comment on the proposed BP_{min} of 200 percent NWP instead of the 225 percent NWP specified in GTR No. 13 Phase 1.

Comments Received

Several commenters supported NHTSA's proposal to set the BP_{min} at 200 percent of NWP as aligned with GTR No. 13 Phase 2. Luxfer Gas Cylinders commented that the 200 percent of NWP for BP_{min} is ''acceptable.'' Auto Innovators expressed support for both the harmonization with GTR No. 13 and the

[17] *See* 89 FR 27511 (Apr. 17, 2024), *available at https://www.federalregister.gov/documents/2024/04/17/2024-07116/federal-motor-vehicle-safety-standards-fuel-system-integrity-of-hydrogen-vehicles-compressed*. This section's discussion applies to containers that do not contain glass fiber composite as a primary constituent. Containers with glass fiber composite as a primary constituent are discussed in the following section.

BP_{min} of 200 percent, noting that it reflects the consensus of the Informal Working Group from GTR No. 13 Phase 2. Nikola also agreed with the proposed 200 percent BP_{min}.

Agility commented that while 200 percent NWP may be adequate for high-strength carbon fiber, it may not be sufficient for other materials or thin-walled cylinders. Agility suggested requiring 225 percent for NWP values of 35 MPa or lower, as permitted by GTR No. 13. HATCI expressed support for both the proposed BP_{min} and the harmonization with GTR No. 13.

Glickenhaus disagreed with reducing the burst pressure for carbon fiber containers from 225 percent to 200 percent NWP, stating that the proposed 200 percent is too low and could create safety risks, particularly when considering variability in actual burst pressures. Glickenhaus provided an example involving a theoretical container with an NWP of 100 bar. Based on the example where a container with a baseline initial burst pressure of 200 percent NWP had an end-of-life burst pressure of only 160 percent NWP, it recommended retaining a 225 percent BP_{min}.

H2MOF supported the proposal, stating that a BP_{min} of 200 percent would avoid unnecessary overdesign. TesTneT also supported the 200 percent NWP BP_{min}, stating it is safe as proposed. NGS agreed with the 200 percent BP_{min} for carbon fiber but requested that other fibers be allowed if sufficient data proves their durability.

Newhouse commented that 200 percent NWP should be adequate for carbon fiber reinforced containers, but it suggested establishing a minimum NWP of 350 bar for this standard. For containers with lower NWP, Newhouse recommended retaining a BP_{min} of 225 percent due to concerns about reduced damage tolerance and safety. Newhouse further noted that stress rupture is not adequately addressed by specifying a burst ratio and recommended using stress ratios to ensure safety for different container types, especially Type 2 and Type 3 containers.

FORVIA expressed agreement with the 200 percent BP_{min}, stating that GTR No. 13 Phase 2 has demonstrated that this value is sufficient based on performance data.

Agency Response

NHTSA is maintaining the proposed BP_{min} of 200 percent NWP for containers that do not contain glass-fiber as the primary constituent. The counterexample given by a commenter in which a container with a BP_O of 200 percent NWP underwent the test for performance durability and finished with an end-of-life burst pressure of 160 percent NWP is not valid. The residual pressure test at the end of the test for performance durability requires a four-minute hold period at 180 percent of NWP. Therefore, a container with an end-of-life burst pressure of 160 percent would fail to meet the performance requirements of the standard and thereby be prohibited from entering service. There is no option to meet some but not all the requirements of the test for performance durability.

NHTSA is not currently considering requirements related to strain gauges to further address stress rupture, nor is it considering prohibitions on metal liners as that would likely be design restrictive. Regarding the concerns about the durability of thin-walled containers, the durability of all containers is rigorously evaluated with the test for performance durability. The baseline initial burst pressure test is not intended to address container durability throughout its lifetime.

Regarding allowing the use of other fiber types, NHTSA is not restricting designs to any particular fiber type nor excluding any particular fiber type. Manufacturers are free to design products using any material they choose. The requirements are designed to apply to containers regardless of material type. The only material-specific consideration for containers is for those containers that have glass fiber composite as a primary constituent, as discussed in the next section.

Lastly, burst ratios such as BP_{min} are a well-established safety metrics that ensure containers' structural integrity, even if differences exist between burst ratio and stress ratio for some container types. The proposed requirement for BP_{min} of at least 200 percent NWP along with the 1,000 hour high temperature pressure hold test in the sequential test for performance durability are in accordance with the requirements in GTR No. 13 Phase 2 and likely sufficient to mitigate the risks associated with stress rupture in most containers. Further research would be needed to fully understand the relationship between burst ratios, stress ratios, and risk of stress rupture. For now, this final rule adopts the proposed requirement for an initial baseline burst pressure of at least 200 percent NWP.

(4) Primary Constituent

Background

NHTSA sought comment on how NHTSA could determine if a container has glass fiber as a primary constituent and on appropriate criteria to determine the primary constituent of a container.

In the case of containers constructed of both glass and carbon fibers, NHTSA proposed to apply the requirements according to the primary constituent of the container as specified by the manufacturer. NHTSA proposed that the manufacturer shall specify upon request, in writing, and within five business days, the primary constituent of the container. NHTSA proposed that if the manufacturer fails to specify upon request, in writing, and within five business days, the primary constituent of a container, the burst pressure of the container must not be less than 350 percent of NWP.

Comments Received

Luxfer Gas Cylinders commented that a higher minimum burst pressure is typically required for containers with glass-fiber composites and suggested that NHTSA request information from manufacturers regarding the container's composite overwrap and stress analysis to assess the load share of glass fiber in hybrid designs. Nikola had no objections to the 350 percent NWP requirement and stated that NHTSA could either ask the manufacturer for details or cut a container to determine its composition. Agility expressed concern over the definition of ''primary constituent'' and suggested that other materials might also be inappropriate at 200 percent NWP burst. It recommended that manufacturers be asked to provide the load share of glass fiber, which could then be used to adjust the minimum burst pressure.

HATCI supported confirming the primary constituent with manufacturers but opposed the proposed five-day response time, recommending that NHTSA use its existing information request authority without specifying a timeline in the regulation. Luxfer Gas Cylinders added that the five-day period was too short, suggesting a revision to at least 14 business days due to potential delays in identifying the appropriate contact at the container manufacturer. EMA requested a ten-day response period and recommended that the required burst pressure be based on the material specified by the manufacturer rather than defaulting to 350 percent NWP. Glickenhaus suggested that the primary container composition be included in labeling requirements to ensure transparency throughout the container's lifecycle, eliminating the need for inquiries to manufacturers. It also proposed that container manufacturers be required to register with NHTSA, similar to other safety-critical component

manufacturers, and submit relevant data such as burst pressures and NWP ratings.

TesTneT downplayed concerns about glass-fiber-reinforced containers in hydrogen service, noting that such designs are rare and impractical for hydrogen applications. It also pointed out the lack of a test method for determining the primary constituent, suggesting that asking the manufacturer is the only feasible approach. NGS supported the requirement for manufacturers to provide primary constituent details but argued that the response time should be extended to 30 days. Newhouse highlighted the complexity of determining the primary constituent in hybrid designs, noting that analysis is required to assess load-sharing between fibers, and simply specifying a burst ratio does not ensure safety. Newhouse provided an alternative approach which provides specific guidelines for hybrid constructions based on fiber load sharing.

MEMA questioned the implementation and enforcement of the response time requirements, suggesting that the information could be provided as part of the self-certification process without the need for a specified deadline. FORVIA disagreed with changing requirements based on potential delays in mailing and proposed that NHTSA conduct field surveillance testing. If a burst test raises suspicions of glass fiber being a primary constituent, further investigation could be conducted. Auto Innovators expressed support for harmonization with GTR No. 13 and agreed with the 350 percent NWP burst pressure requirement for glass-fiber-reinforced containers. H2MOF also supported the higher burst pressure requirement, citing its success in CNG containers over the past two decades. It suggested that the test agency could verify the container's composition after conducting a burst test.

Agency Response

NHTSA is maintaining the requirement that container with glass fiber composite as a primary constituent shall have a BP_{min} of 350 percent of NWP. However, commenters did not provide a specific method for determining the primary constituent of a container. Since NHTSA has no way of determining the load sharing properties of a container's individual fibers, nor a way to determine whether that load sharing is fundamental to the strength of the container, whether or not glass fiber composite is the container's primary constituent must be determined by and specified by the manufacturer.

NHTSA will not require the primary constituent to be listed on the label. Similar to BP_O, listing the primary constituent on the container label could potentially confuse consumers. Additionally, NHTSA does not need to know the specifics of the container's primary constituent other than whether the primary constituent is glass fiber composite. Therefore, NHTSA will require that the manufacturer specify upon request, and in writing, whether the primary constituent of the container is glass fiber composite or not. Based on the comments, however, the timeline for responding to the request has been increased to 15 business days instead of five business days.[18] NHTSA is removing the option that if the manufacturer fails to respond to the request, then the container minimum burst pressure must not be less than 350 percent of NWP. This option is not appropriate for containers other than those with glass fiber composite as a primary constituent, and therefore, the only option is for the manufacturer to specify whether the container's primary constituent is glass fiber composite. FMVSS No. 308 S5.1.1.1 has been updated to reflect this change. S6.2.2.2(e), which contained a similar five business day response timeline, has also been updated to 15 business days.

Furthermore, NHTSA will not obtain a copy of the stress analysis for the container to determine the load sharing from glass fiber in a mixed fiber overwrap. The stress analysis for the container is outside the scope of the proposed regulation. NHTSA will simply obtain the primary constituent from the manufacturer, and then conduct the tests as specified depending on whether the container includes glass fiber composite as a primary constituent.

(5) Pressurization Rates Above 0.35 MPa/sec

Background

GTR No. 13 states that if the pressurization rate exceeds 0.35 MPa/s at pressures higher than 150 percent NWP, then either the container must be placed in series between the pressure source and the pressure measurement device, or the time at the pressure above a target burst pressure must exceed 5 seconds. The first option of placing the container in series between the pressure source and the pressure sensor ensures that the container will experience the pressure before the sensor, so there is no chance that the pressure sensor could read a pressure level that is not being experienced by the container. However, NHTSA did not propose the second option that the time at the pressure above the target burst pressure exceeds 5 seconds because it is unclear and difficult to enforce. It is not clear what pressure the ''target burst pressure'' is referring to since during the test, pressure will be increasing continuously.

Comments Received

Nikola stated that it do not want any changes to the procedure outlined in GTR No. 13. Luxfer Gas Cylinders commented that while the procedure is effective for cycle tests, it may not be feasible for burst testing due to the risk of damaging the pressure measurement device when placed after the container. It suggested either placing the container in series between the pressure source and the measurement device or including a five-second hold at the minimum burst pressure to ensure the container experiences the correct pressure. TesTneT agreed with NHTSA's approach of situating the container between the pressure source and the sensor but noted that this setup is not always practical or necessary. It mentioned that it has performed many burst tests with the sensor positioned before the container and have not encountered any issues, as the slow pressurization rate effectively eliminates pressure drop concerns. It also stated that holding the pressure for five seconds at the target burst pressure is clear and enforceable.

Glickenhaus supported NHTSA's decision not to adopt the second option from GTR No. 13, agreeing that the sensor should be placed in series between the pressure source and the container to maintain clear and objective testing. H2MOF recommended including the second method, noting that various industry standards specify a five-second hold at the target burst pressure. Newhouse commented that the five-second hold allows time for the pressure to equalize inside the container, ensuring accurate readings in cases where flow restrictions may be present. FORVIA stated that the ''target burst pressure'' should be understood as the minimum burst pressure. It suggested keeping the pressurization rate below 0.35 MPa/s at pressures exceeding 150 percent NWP or placing the container in series between the pressure source and the sensor, maintaining the wording of GTR No. 13.

Auto Innovators stated that is not practical for all designs to have

[18] The increase from five days to 15 days is intended to give manufacturers additional time to respond to NHTSA's request.

containers placed in series between pressure source and pressure measurement device. It requested an alternative method be provided. It also stated that the pressure pulsations are small to moderate compared to the absolute pressure level.

Agency Response

Consistent with GTR No. 13, NHTSA proposed that ''If the rate exceeds 0.35 MPa per second at pressures higher than 1.50 times NWP, then the container is placed in series between the pressure source and the pressure measurement device.'' GTR No. 13 also provides the alternative option that ''the time at the pressure above a target burst pressure exceeds five seconds.'' As discussed in the NPRM, NHTSA did not select this latter option because it is unclear.[19] A five-second hold period may be feasible for manufacturers that are ''targeting'' a particular burst pressure. In such a case, manufacturers can simply pressurize the container to the ''target'' pressure and hold for five seconds. NHTSA, however, will need to determine an unknown burst pressure for the container. Since there is no ''target'' burst pressure stated in the test procedure, the pressure inside the container is increased continuously until the container bursts. It is not possible to hold for five seconds at each and every pressure level that occurs during a burst test. The commenters did not provide any explanation regarding how, with continuously increasing pressure, any single specific pressure could be considered to have been held for five seconds. Instead, NHTSA has selected to use only the option to put the container in series between the pressure source and the measurement device. This way the container can be pressurized continuously until it bursts, and the container's burst pressure can be determined without prior knowledge of a target burst pressure.

Additionally, a configuration where the container is placed in series between the pressure source and the pressure measurement device can be achieved regardless of container design and does not necessitate alternative methods for different container designs. For example, a pressurization setup that includes a T-fitting, through which the container connects to both the pressure source and to a line leading to the pressure measurement device, in which the line leading to the pressure measurement device is equal in length to or longer than the connection from the container to the T-fitting, would meet the requirement for the container to be placed in series between the pressure source and the pressure measurement device. This configuration ensures that the container experiences all pressure increases as or before the sensor records them, accurately reflecting the container's pressurization level. Furthermore, the maximum allowable pressurization rate of 1.4 MPa/s for pressures exceeding 150 NWP provides adequate time for the pressure measurement device to capture accurate pressure readings during pressurization without premature or unrepresentative measurements.

c. Number of Cycles for the Baseline Initial Pressure Cycle Test for Containers on Light and Heavy Vehicles

Background

NHTSA proposed 7,500 as the number of cycles in the baseline initial pressure cycle test for which the container does not leak nor burst for light vehicles. To ensure the container leaks before bursting after reaching the maximum service life, the container is pressure cycled beyond the 7,500 cycles (representing maximum service life) until either a container leak occurs without burst or the container does not leak nor burst for up to a maximum of 22,000 hydraulic pressure cycles. In accordance with GTR No. 13 Phase 2, NHTSA proposed that heavy vehicle containers to neither leak nor burst for 11,000 hydraulic pressure cycles, and also to leak without burst (or neither leak nor burst) beyond the 11,000 hydraulic pressure cycles up to a maximum of 22,000 pressure cycles. As discussed in the NPRM, these number of cycles are based on a service life for light and heavy vehicles of 25 years.[20] This service life, number of hydraulic pressure cycles representing the maximum service life for which the container is required to not leak nor burst, and the number of pressure cycles beyond that representing maximum service life of the container for which the container is required to leak without burst or not leak nor burst at all are summarized in Table 1 for light and heavy vehicles.

TABLE 1—SERVICE LIFE AND NUMBER OF CYCLES IN THE BASELINE HYDRAULIC PRESSURE CYCLE TEST FOR LIGHT AND HEAVY VEHICLES

Vehicle type	Service life (years)	Number of cycles representing maximum service life for which the container does not leak nor burst	Numbe of cycles for which the container leaks without burst, or does not leak nor burst
Light	25	7,500	7,501–22,000
Heavy	25	11,000	11,001–22,000

NHTSA sought comment on the proposed number of cycles in Table 1. NHTSA also sought any additional data available related to vehicle life, lifetime miles travelled, and number of lifetime fuel cycles.

Comments Received

Several commenters provided feedback on the proposed number of pressure cycles in Table 1 of the NPRM. Nikola expressed agreement with the approach outlined, while Luxfer Gas Cylinders also stated that the cycle values were appropriate. Auto Innovators supported the approach and suggested that it would be more straightforward to define the number of cycles beyond the maximum service life as double the number of cycles for which the container does not leak nor burst. It stated that specifying 15,000 cycles for light vehicles and 22,000 cycles for heavy vehicles would be sufficient.

H2MOF, however, recommended a significantly lower cycle count, suggesting that 1,500 cycles as recommended by the USDOE would be more appropriate. It calculated that at

[19] *See* 89 FR 27511 (Apr. 17, 2024), *available at https://www.federalregister.gov/documents/2024/04/17/2024-07116/federal-motor-vehicle-safety-standards-fuel-system-integrity-of-hydrogen-vehicles-compressed.*

[20] *See* 89 FR 27513 (Apr. 17, 2024), *available at https://www.federalregister.gov/documents/2024/04/17/2024-07116/federal-motor-vehicle-safety-standards-fuel-system-integrity-of-hydrogen-vehicles-compressed.*

300 miles per fill, this would result in 450,000 miles of service. TesTneT commented that while light vehicles may experience fewer fill cycles than heavy vehicles, factors such as partial fill cycles should be considered. It stated that the industry is not particularly concerned with fatigue cracking, as no fuel cylinder in CNG or hydrogen service has experienced this issue. Additionally, it noted that there is little cost or weight savings in reducing the cycle numbers and suggested aligning with GTR No. 13 cycle numbers.

FORVIA commented that the proposed numbers were conservative but reasonable. It indicated that these cycle numbers would cover all vehicle service life expectations and that containers could handle these cycles without issue. Therefore, it supported keeping the table as it is.

Agency Response

NHTSA is maintaining the number of cycles of the baseline initial pressure cycle test as proposed in the NPRM and listed in Table-1 above. NHTSA is not lowering the number of cycles for which the light vehicle container leaks without burst, or does not leak nor burst, to 15,000. Because the potential harm from a potential burst would be catastrophic, the number 22,000 was selected to both exceed extreme on-road vehicle lifetime range and promote global harmonization with GTR No. 13, as requested by commenters, and therefore there is no need to lower this number of cycles. As discussed in the NPRM, 22,000 cycles simulate over 6 million miles of driving, which is well beyond extreme vehicle lifetimes. The use of 22,000 cycles ensures that containers leak before bursting in all extreme cases.[21]

The comment regarding a 1,500-cycle recommendation from USDOE appears to be referring to technical performance targets for CHSS published by USDOE.[22] However, performance targets are not the same as safety standards. Performance targets are goals for how a system performs under optimal conditions, whereas safety standards are designed to protect users by minimizing risks and preventing harm in hazardous or sub-optimal conditions. Therefore, NHTSA is not lowering the number of cycles for the baseline initial pressure cycle test to 1,500.

d. Details of the Baseline Initial Cycle Test for Containers on Light and Heavy Vehicles

(1) Leak Before Burst and Sustaining a Visible Leak for 3 Minutes

Background

A burst may be preceded by an instantaneous moment of leakage, especially if observed in slow motion. Therefore, NHTSA proposed a minimum time of 3 minutes to sustain a visible leak before the test can end successfully due to ''leak before burst.'' NHTSA sought comment on this additional requirement.

Comments Received

Luxfer Gas Cylinders commented that NHTSA's proposed wording regarding the number of hydraulic pressure cycles is unclear. It noted that the phrasing ''neither leak nor burst'' contradicts itself by allowing leakage after 11,000 cycles but also stating neither leakage nor bursting should occur. It suggested the wording should be revised to state: ''The cylinder shall be allowed to leak, but not burst, beyond the 11,000 cycles up to a maximum of 22,000 pressure cycles.'' Luxfer also expressed concerns about the 3-minute sustained leak requirement, stating that most pressure equipment is designed to shut off when detecting pressure loss, making it difficult to hold a leak under pressure for three minutes. It proposed alternative wording to state that containers should fail by leakage but not rupture.

H2MOF raised concerns about the proposed 3-minute hold requirement for a visible leak, stating that if the pressure vessel leaks, the pump may not be able to maintain pressure, potentially causing the test to abort.

Nikola disagreed with NHTSA's proposal, commenting that leak-before-burst is not currently a requirement and that the term implies the container should leak and never burst at the end of its life.

FORVIA also disagreed with the 3-minute sustained leak requirement and recommended keeping the test procedure harmonized with GTR No. 13. It questioned the justification for the 3-minute requirement and noted that the behavior described, where a burst is preceded by leakage, is extremely improbable. It suggested that pressure should be allowed to drop below a certain level instead of imposing a time-based requirement, as this behavior is unknown in its experience.

TesTneT commented that the 3-minute sustained leak requirement changes the test from a leak-before-burst test to a stress rupture test. Based on its 35 years of experience performing leak-before-burst testing, it stated it has never encountered an issue distinguishing between a leak and a burst. TesTneT also referred to NHTSA's mention of observing leaks in slow motion and suggested that it is unnecessary to observe the location of failure during testing. It recommended maintaining the current wording in GTR No. 13 without any changes.

Agency Response

The requirements regarding the number of cycles for which a container shall not leak nor burst, and thereafter shall not burst are clarified in the proposed FMVSS No. 308 S5.1.1.2. The proposed S5.1.1.2 clearly specifies the number of cycles for which a container shall not leak nor burst and thereafter the number of cycles for which the container shall not burst. The number of cycles specified is dependent on the GVWR of the vehicle under test.

Based on the comments, however, NHTSA is removing the statement about sustaining a visible leak for three minutes before the test can end successfully due to ''leak before burst.'' Instead, the final rule simply states that if a leak occurs while conducting the test as specified in S5.1.1.2(a)(2) or S5.1.1.2(b)(2), the test is stopped and not considered a failure. Test labs will not observe the baseline initial pressure cycling test in slow motion and therefore it will be clear to the test lab whether the test has resulted in leakage or in a burst.

NHTSA also made a clerical correction to S6.2.2.2(e) to remove the word ''container,'' such that S6.2.2.2(e) reads ''The manufacturer may specify a hydraulic cycling profile within the specifications of S6.2.2.2(c).''

(2) Effect of the Cycling Profile

Background

NHTSA proposed a maximum hydraulic pressure cycle rate of five to ten cycles/minute for the baseline initial pressure cycle test. This rate was selected to allow for efficient compliance testing. Actual fueling cycles for hydrogen vehicles occur more slowly. Therefore, the container manufacturer may specify a hydraulic pressure cycle profile that will prevent premature failure of the container due to test conditions outside of the container design envelope. NHTSA sought comment on cycling profiles and whether the pressure cycling profile

[21] *See* 89 FR 27512 (Apr. 17, 2024), *available at https://www.federalregister.gov/documents/2024/04/17/2024-07116/federal-motor-vehicle-safety-standards-fuel-system-integrity-of-hydrogen-vehicles-compressed.*

[22] *See https://www.energy.gov/eere/fuelcells/doe-technical-targets-onboard-hydrogen-storage-light-duty-vehicles.*

will significantly affect the test result. NHTSA sought comment on more specifics of what manufacturers should be allowed to specify regarding an appropriate pressure cycling profile for testing their system.

Comments Received

Luxfer Gas Cylinders stated that the maximum cycle rate of 10 cycles per minute specified in GTR No. 13 is rarely approached in testing, noting that Luxfer uses 4 cycles per minute for larger containers. Auto Innovators commented that cycle rates and profiles do affect container performance, and manufacturers should be allowed to specify these parameters, as unrealistic testing conditions could lead to failures not representative of actual service. It suggested that NHTSA consider aligning with GTR No. 13 Phase 2, which specifies a maximum of 10 cycles per minute. It also stated that the pressure cycling profile has not been seen to significantly affect test results and that manufacturers generally cycle as quickly as is safe and practical.

H2MOF agreed with NHTSA that the cycling profile can impact test results depending on materials and design margins, emphasizing the importance of the number of cycles and pressure limits. It supported allowing manufacturers to specify pressurization and depressurization rates, as well as hold times.

TesTneT, drawing on over 35 years of experience, disagreed with the idea that cycling profiles affect test results, stating that no evidence supports this concern and criticizing the Powertech report referenced by NHTSA. It also noted that GTR No. 13 allows manufacturers to specify any cycle profile as long as it stays within the 10 cycles per minute limit.

Nikola commented that the defueling or unloading phase of the pressure cycle can impact container life, supporting the idea that manufacturers should be allowed to specify an appropriate profile. HATCI recommended that NHTSA fully harmonize with the GTR No. 13 Phase 2 requirement where the container is cycled less than or equal to 10 cycles per minute.

Agency Response

NHTSA is maintaining the maximum hydraulic pressure cycle rate of 10 cycles/minute for the baseline initial pressure cycle test, consistent with GTR No. 13. However, NHTSA will remove the lower cycling limit of 5 cycles per minute. As a result, the cycling rate may be any rate up to 10 cycles per minute. This change will accommodate larger containers which may take longer to cycle.

While some commenters stated that the cycling profile is inconsequential, others stated the profile can have an effect for some container designs. NHTSA acknowledges that the cycling profile may affect the test result for some containers. As a result, NHTSA will maintain the specification that manufacturers may specify a pressure cycling profile for testing their system. The manufacturer's specifications will need to be within the above cycling rate range and the other conditions specified in FMVSS No. 308 S6.2.2.2(c). At NHTSA's option, NHTSA will cycle the container within 10 percent of the manufacturer's specified cycling profile.

8. Test for Performance Durability

Background

The test for performance durability addresses impact (drop during installation and/or road wear), static high pressure from long-term parking, over-pressurization from fueling and fueling station malfunction and environmental exposures (chemicals and temperature/humidity). These stresses are compounded in a series is because a container may experience all of these stresses during its service life, and the safety need for a hydrogen system remains an issue for the vehicle's entire service life.

Comments Received

Luxfer Gas Cylinders commented that the verification tests for performance durability, on-road performance, and service-terminating performance in fire can be expensive, with costs exceeding $500,000, and potentially reaching $1,000,000 for larger containers. It asked whether NHTSA was aware of the high cost associated with conducting the proposed test program.

Quantum stated that completing the entire hydraulic and pneumatic test sequences with the on-tank-valves (OTV) installed would significantly increase the time required for testing. It explained that the small orifice size of OTVs restricts hydrogen or hydraulic fluid flow, thus extending the duration of each test sequence. Additionally, Quantum noted that other components of the CHSS, such as the TPRD, check valve, and shut-off valve, are tested separately from the container for cycle life. Since these valves are designed for gas use rather than continuous liquid flow, Quantum recommended removing the requirement for the OTV to be installed during testing.

Agency Response

NHTSA is aware of the test burden of the proposed tests. FMVSS establish minimum safety requirements and the FMVSS test procedures establish how the agency would verify compliance. However, manufacturers are not required to conduct the exact test in the FMVSS to certify their vehicles. The Safety Act requires manufacturers to certify that their vehicles meet all applicable FMVSS, and specifies that manufacturers may not certify compliance if, in exercising reasonable care, the manufacturer has reason to know the certificate is false or misleading. Manufacturers may use different types of tests or even simulations to certify their vehicles if they exercise reasonable care in doing so. In other words, manufacturers must ensure that their vehicles will meet the requirements of FMVSS No. 308 when NHTSA tests the vehicles in accordance with the test procedures specified in the standard, but manufacturers may use different test procedures and evaluation methods to do so.

Regarding Quantum's comment regarding testing with OTVs, the NPRM clearly specifies that only the container is subject to the requirements of the test for performance durability. The ''container,'' as defined the regulation, does not include closure devices. On the other hand, the test for expected on-road performance is conducted using hydrogen gas, and with the entire CHSS. The test for expected on-road performance therefore includes closure devices as part of the CHSS.

a. Proof Pressure Test

Background

GTR No. 13 states that a container that has undergone a proof pressure test in manufacture is exempt from this test. However, NHTSA may not know whether a container has undergone the proof pressure test. As a result, NHTSA proposed that all containers will be subjected to the proof pressure test as part of the test for performance durability. In the event that a proof pressure test is conducted during manufacture and as part of the tests for performance durability, the container would experience two proof pressure tests. NHTSA sought comment on conducting the proof pressure test on all containers.

Comments Received

Nikola opposed NHTSA's proposal to add the proof pressure test, stating that all onboard vehicle containers already undergo 100 percent proof pressure tests by manufacturers. Luxfer Gas Cylinders

supported the decision to require all containers to undergo the proof pressure test as part of the test for performance durability. Auto Innovators disagreed, arguing that this would add unnecessary burden without additional safety benefits, as proof pressure testing is already required before service. It requested harmonization with GTR No. 13 Phase 2, which exempts containers that have already undergone proof testing during manufacturing.

Air Products suggested reviewing the proposed 30- to 35-second hold time, as it is significantly shorter than the 10-minute hold period specified in other industry standards. DTNA supported NHTSA's proposal for consistency, stating that all containers should undergo the proof pressure test regardless of prior testing during manufacturing. H2MOF opposed duplicating the test, stating that the additional high-stress cycle would negatively impact container performance during durability testing, as containers are already factory proof tested according to industry standards. HATCI also opposed the requirement, recommending the adoption of GTR No. 13 Phase 2, which exempts containers that have undergone proof pressure testing in manufacture.

TesTneT commented that proof pressure testing is conducted on all designs during production, not merely to confirm the container's resistance to over-pressurization, but to ensure consistency in manufacturing through measurements of elastic and permanent expansion. It suggested that if a design is damaged by a proof pressure test, it would become apparent during pressure cycle testing, thus rendering additional proof pressure testing unnecessary.

MEMA disagreed with the assumption that it is unknown whether a container has undergone proof testing during manufacturing, stating that some manufacturers conduct this test as part of the fabrication process, which is required under GTR No. 13. MEMA suggested adding language to FMVSS No. 308 allowing an exemption for containers that have already undergone proof pressure testing.

FORVIA acknowledged concerns about dual testing but suggested that NHTSA incorporate language from GTR No. 13 Phase 2, which allows for exemptions for duplicative proof tests, ensuring that all containers comply with FMVSS requirements. It further argued that if a second test is deemed not to significantly stress the container, the first test should also be considered adequate, as repeated pressurizations are unlikely to make a significant difference.

Agency Response

Based on the comments received, NHTSA is removing the proof pressure test. Commenters emphasized that 100 percent of all containers already undergo a proof pressure test during manufacturing, as part of standard production practices, and that requiring an additional proof pressure test would be redundant and burdensome without offering any additional safety benefits. Several commenters also raised concerns that subjecting a container to multiple proof pressure tests could introduce unnecessary stress and possibly affect the container's performance in subsequent tests.

After considering these comments, NHTSA agrees that a second proof pressure test would not provide additional safety benefits and could possibly impose undue stress on the container. As a result, the proof pressure test has been removed from the test for performance durability and the test for expected on-road performance, discussed below.

b. Drop Test

(1) Damage That Prevents Further Testing

Background

It is possible that the container could experience damage from the drop test that prevents continuing with the remainder of the tests for performance durability. This damage would prevent NHTSA from completing the evaluation of a container. To address this possibility, NHTSA proposed that if any damage to the container following the drop test prevents further testing of the container, the container is considered to have failed the tests for performance durability and no further testing is conducted.

Comments Received

HATCI commented that the inability to conduct subsequent tests after damage from the drop test should not automatically result in a failed test for performance durability. It suggested that additional containers should be used for further testing in such cases. As an example, it noted that deformation of an aluminum nozzle opening or valve connection after a drop test could prevent further testing, but this deformation does not necessarily indicate a lack of durability.

MEMA agreed with the single drop event specified in FMVSS No. 308 S5.1.2.2 but raised concerns about the potential for confusion regarding the damage criteria. It suggested that NHTSA clarify the wording to specify ''irrecoverable damage'' or ''damage that cannot be readily repaired'' to account for conditions where minor repairs, such as fixing damaged threads on a shut-off valve, could allow testing to continue.

Agency Response

NHTSA is maintaining the test requirements as proposed. Damage that prevents the continuation of testing under S6.2.3.4 must be considered a failure of the test for performance durability because the required test sequence cannot be completed in its entirety. NHTSA will not repair containers that are damaged during the drop test.

(2) Including Container Attachments for the Drop Test

Background

The drop test is a test in which container attachments may improve performance by protecting the container when it impacts the ground. Consistent with GTR No. 13, the drop test is conducted on the container with any associated container attachments. NHTSA sought comment on including container attachments for the drop test.

Comments Received

EMA stated that its members lack experience with dropping containers with attachments and are unsure of what qualifies as a ''container attachment'' for heavy vehicles, which often use multiple hydrogen containers. EMA commented that including attachments could make it difficult to ensure consistent impact locations during the test and recommended aligning FMVSS No. 308 with UN ECE R134, dropping the container without attachments unless the manufacturer opts to include impact-mitigating attachments. It suggested requiring the manufacturer to specify whether container attachments should be included for the test.

H2MOF supported conducting the drop test with container attachments, as it reflects real-life scenarios. Auto Innovators opposed including attachments unless they are permanently fixed to the container, arguing that removable attachments should be excluded to maintain flexibility and focus on container robustness. It noted that this approach aligns with GTR No. 13's intent to demonstrate container durability before installation.

Nikola commented that attachments should be included only if they are present during shipping; if added during vehicle assembly, they should be excluded. Luxfer Gas Cylinders opposed dropping containers with attachments,

stating that the attachments are more likely to break than the container itself, and including them would complicate the test by introducing additional variables. It also noted that conducting the test with valves and PRDs attached would be impractical. TesTneT commented that if attachments are part of the container when it leaves production, they should remain for the drop test, as the test addresses potential handling damage before installation. FORVIA supported including container attachments in the drop test, referencing that their inclusion was a key factor in the development of GTR No. 13.

Agency Response

''Container attachments'' means non-pressure bearing parts attached to the container that provide additional support and/or protection to the container and that may be removed only with the use of tools for the specific purpose of maintenance or inspection. Container attachments do not refer to the structures that physically attach the container(s) to the vehicle. NHTSA will not rely on the manufacturer to specify container attachment configurations as this adds unnecessary complexity. NHTSA will simply purchase vehicles or replacement containers at the point of sale and conduct the drop test with any included, pre-installed container attachment that meet the definition for container attachments. Given that manufacturers are required to ensure that the vehicle is compliant at the time it is delivered to a dealer or distributor, manufacturers should take reasonable care to ensure they are not damaging or installing damaged containers into vehicles. If a container is sold at the point of sale without pre-installed container attachments, it will be tested as such.

(3) Center of Gravity

Background

In the case of a non-cylindrical or asymmetric container, the horizontal and vertical axes may not be clear. The proposed rule provided that in such cases, to conduct the drop test, the container will be oriented using its center of gravity and the center of any of its shut-off valve interface locations. The two points will be aligned horizontally (*i.e.,* perpendicular to gravity), vertically (*i.e.,* parallel to gravity) or at a 45° angle relative to vertical. The center of gravity of an asymmetric container may not be easily identifiable, so NHTSA sought comment on the appropriateness of using the center of gravity as a reference point for this compliance test and how to properly determine the center of gravity for a highly asymmetric container.

Comments Received

Auto Innovators supported NHTSA's proposal to align with GTR No. 13, stating that for asymmetric containers, orientation is typically determined when mounted in a vehicle. It added that technical information on the center of gravity could be provided to NHTSA if needed, noting that identifying the center of gravity, even for asymmetric shapes, is not particularly difficult. It advocated for maintaining the same specifications as GTR No. 13 Phase 2, which it found to be adequate.

DTNA agreed that using the center of gravity as a reference for the drop test was appropriate, as it ensures reproducibility in test results. It emphasized that determining the center of gravity accurately is critical for valid test outcomes. DTNA recommended that manufacturers provide this data to NHTSA prior to testing, allowing the agency to verify the information and request clarification if necessary. It highlighted that the accuracy of this reference point is essential, especially given the NPRM's proposal that failure of the drop test would result in failing the entire performance durability testing process.

H2MOF proposed that the center of gravity for a highly asymmetric container be determined using the container's geometric CAD file. Nikola suggested maintaining the current center of gravity definition as outlined in GTR No. 13.

TesTneT supported using the center of gravity as a reference, noting that it is a physical characteristic shared by all container designs, including asymmetric ones. It added that orientation for such containers could be determined when installed on a vehicle, and the center of gravity could be established in consultation with the manufacturer.

FORVIA stated that keeping the test procedure harmonized with GTR No. 13 was appropriate. It noted that identifying the center of gravity experimentally is not overly difficult, and it believed that fully asymmetric containers are unlikely to be prevalent in the market. Instead, it anticipated new rectangular designs with centers of gravity near their geometric centers, providing a good basis for testing.

Agency Response

The center of gravity is not defined in GTR No. 13, nor is a method provided for determine the center of gravity for an asymmetric container. NHTSA will not have access to CAD files for the container. Therefore, in the case of an asymmetric container, NHTSA will obtain the center of gravity from the manufacturer, similar to how it obtains the primary constituent and BP_O. The manufacturer shall specify, in writing, and within 15 business days, the center of gravity of the container. In the drop test, t container will be oriented using its center of gravity and the center of any of its shut-off valve interface locations. These two points will be aligned horizontally (*i.e.,* perpendicular to gravity), vertically (*i.e.,* parallel to gravity) or at a 45° angle relative to vertical, as specified.

c. Surface Damage Test

Background

NHTSA proposed the surface damage test based on GTR No. 13 Phase 2. The surface damage test applies cuts and impacts to the surface of the container. The surface damage test consists of two linear cuts and five pendulum impacts.

Comments Received

MEMA commented on the surface damage test proposed by NHTSA, stating that there were differences between the proposed requirements and those in GTR No. 13. It stated that in Section 6.2.3.3(a), for non-metallic containers, NHTSA's proposal includes two longitudinal saw cuts, which is consistent with GTR No. 13. However, it stated that NHTSA proposed different lengths and depths for the cuts without explaining why the differences are necessary or how they might improve test results.

MEMA further stated that NHTSA's proposal specifies the first cut as being 0.75 millimeters to 1.25 millimeters deep and 200 millimeters to 205 millimeters long, while the second cut, only required for containers affixed to the vehicle by compressing its composite surface (*i.e.,* clamped), would be 1.25 millimeters to 1.75 millimeters deep and 25 millimeters to 28 millimeters long. MEMA stated that GTR No. 13 requires two cuts regardless of how the container is affixed, with the first cut being at least 1.25 millimeters deep and 25 millimeters long toward the valve end, and the second cut being at least 0.75 millimeters deep and 200 millimeters long toward the opposite end.

MEMA stated that its members believe that the GTR No. 13 requirements provide a better minimum threshold and requested that NHTSA harmonize FMVSS No. 308 with GTR No. 13 on this matter. It also expressed concern that additional surface damage test requirements, as part of the already lengthy pressure cycling test, would

increase the complexity, duration, and cost of the process without delivering more representative or improved results. MEMA proposed that FMVSS No. 308 S6.2.3.3. be revised to align with GTR No. 13.

Agency Response

The commenter appears to be referencing the original version of GTR No. 13. GTR No. 13 has undergone a comprehensive Phase 2 revision that was adopted at the 190th Session of WP.29 on June 21, 2023.[23] Phase 2 accomplished several goals, including strengthening test procedures for containers with pressures below 70 MPa. The U.S. voted in favor of adopting Phase 2 and the changes made to GTR No. 13 by Phase 2 are reflected in NHTSA's proposal for FMVSS Nos. 307 and 308 and in this final rule. GTR No. 13 Phase 2 states in section 6.2.3.3(a): ''Surface flaw generation: A saw cut at least 0.75 mm deep and 200 mm long is made on the surface specified above. If the container is to be affixed to the vehicle by compressing its composite surface, then a second cut at least 1.25 mm deep and 25 mm long is applied at the end of the container which is opposite to the location of the first cut.'' Regarding the difference in lengths of the proposed FMVSS No. 308 S6.2.3.3(a), these differences are simply due to tolerances added to FMVSS No. 308, as discussed below.

(1) Including Container Attachments

Background

The surface damage test is a test in which container attachments may improve performance by shielding the container from the impacts. For containers with container attachments, GTR No. 13 specifies that if the container surface is accessible, then the test is conducted on the container surface. Determining whether the container surface is accessible is subjective because ''accessible'' is not defined in the GTR and could have many potential meanings. Therefore, NHTSA did not propose a specification involving the accessibility of the container surface. Instead, NHTSA proposed that if the container attachments can be removed using a process specified by the manufacturer, they will be removed and not included for the surface damage test nor for the remaining portions of the test for performance durability. Container attachments that cannot be removed are included for the test. NHTSA sought comment on including container attachments for the surface damage test.

Comments Received

HATCI expressed agreement with NHTSA's proposal to remove container attachments, when possible, and to exclude them from the surface damage test. Auto Innovators recommended harmonizing with GTR No. 13, supporting the removal of attachments if specified by the manufacturer, and including non-removable attachments, as doing so ensures the test is conducted on the container's pressure-bearing chamber. H2MOF agreed that non-removable container attachments should be included in the test.

Luxfer Gas Cylinders commented that containers can be used in various vehicle systems with different attachments, making it impractical to test each type of attachment. It supported testing containers without attachments if they can be removed, adding that the drop test and the four-minute hold at 180 percent NWP are the primary design drivers, and it is unnecessary to include attachments in any tests. TesTneT stated that pendulum impacts do not affect the integrity of composite containers and were originally intended to test protective coatings. It recommended including attachments in the test if these attachments are designed to protect the container surface from road conditions. FORVIA requested keeping non-removable attachments in the surface damage test, noting that these attachments were introduced in GTR No. 13 due to the surface damage test.

Agency Response

NHTSA is maintaining the surface damage test as proposed. If the container attachments can be removed using a process specified by the manufacturer, they will be removed and not included for the surface damage test nor for the remaining portions of the test for performance durability. Testing the container without its container attachments is representative of a situation in which installation personnel remove the container attachments and fail to re-install them before the container enters service. Additionally, since the goal of a surface damage test is to test the surface, it makes sense to remove the container attachments that are capable of being removed. While NHTSA has chosen to keep container attachments on for other tests (*e.g.* the drop test, if the container attachment is pre-installed and meets the definition of container attachment), the surface damage test is different enough to warrant a deviation from that practice. Container attachments that cannot be removed are included for the test.

If different vehicles require different configurations of container attachments, each configuration would be subject the requirements separately. If some of the configurations have removable container attachments, those container attachments would be removed. If some configurations have non-removable container attachments, those container attachments would remain in place during the surface damage test.

(2) Exempting All-Metal Containers

Background

GTR No. 13 exempts all-metal containers from the linear cuts. NHTSA's proposal included this exemption, but NHTSA sought comment on whether another objective and practicable procedure exists for evaluating surface abrasions that could apply to all containers, such as, for example, the application of a defined cutting force to the container surface.

Comments Received

TesTneT commented that its experience with CNG cylinders has shown that steel cylinders are resistant to abrasion damage of the magnitude proposed for composite containers. It noted that developing a performance test to simulate defect dimensions as outlined in GTR No. 13 would be complicated, involving variables such as the shape, angle, and force of impact. Since surface abrasions do not cause failure in thinner-walled CNG cylinders, it suggested such abrasions would not pose a problem for hydrogen containers. Nikola and H2MOF both agreed with the exemption for all-metal containers from the linear cuts.

Auto Innovators supported the proposed exemption for metal containers and stated that requiring a test for a defined cutting force would add unnecessary regulatory burden. It emphasized that container manufacturers should provide sufficient technical information for compliance purposes. Verne, Inc. recommended extending the exemption to all-metal container attachments as well, noting that metal is resistant to scratches and cuts, and flaw cut depths may exceed the wall thickness of metal attachments.

Luxfer Gas Cylinders raised the concern that containers could experience cuts during service, such as from poorly fitted brackets. It suggested that metal containers with walls thin enough to be penetrated by cuts would be unsuitable for high-pressure vehicle

[23] A copy of GTR No. 13 as updated by the Phase 2 amendments is available at *https://unece.org/transport/documents/2023/07/standards/un-global-technical-regulation-no-13-amendment-1.*

fuel systems and recommended a more clearly defined test instead of a blanket exemption. FORVIA requested that the test procedure remain harmonized with GTR No. 13, noting that GTR No. 13 sets minimum requirements. It asked for clear justification if flaws in metallic containers are considered a concern and suggested discussing this issue in GTR No. 13 phase 3.

Agency Response

NHTSA is maintaining the exemption from the linear cuts for all-metal containers. The commenters did not provide sufficient information regarding how to conduct an alternative test with a defined cutting force applied to the metal container surface. Moreover, as stated by the commenters, metal containers are resistant to abrasions so this form of surface damage is not expected to be a significant safety concern. NHTSA is not extending the exemption to all-metal container attachments, however. Doing so would add complexity to the testing process where some container attachments would be treated differently from others. Furthermore, container attachments may be in place to protect the containers from abrasions and other surface damage, so the container attachments themselves should be able to tolerate surface damage.

The global community also considered this issue in developing GTR 13 and found that an exemption for-all metal containers was appropriate based on challenges with an adequate test procedure. Accordingly, both harmonization and practical challenges favor exempting all-metal containers from the linear cuts at this time. However, NHTSA has robust enforcement authority to address defects that pose an unreasonable risk to safety, including in all-metal containers. NHTSA will continue to monitor the state of the industry and will revise the standard in a future rulemaking as necessary.

(3) Applying Impacts on the Opposite Side vs. a Different Chamber

Background

In accordance with GTR No. 13, NHTSA specified the pendulum impacts ''on the side opposite from the saw cuts.'' For containers with multiple permanently interconnected chambers, GTR No. 13 specifies applying the pendulum impacts to a different chamber to that where the saw cuts were made. However, the agency did not propose this distinction for pendulum impact location for containers with multiple permanently interconnected chambers because NHTSA was concerned that it may be less stringent than when impacts are to the same chamber where the cuts were applied. NHTSA sought comment on whether applying the impacts to the opposite side of the same chamber that received the saw cuts may be more stringent than applying the impacts to a separate chamber, and whether including the specification as written in GTR No. 13 would reduce stringency for containers with multiple permanently interconnected chambers relative to containers with a single chamber.

Comments Received

H2MOF supported the approach in GTR No. 13, stating that the likelihood of both saw cuts and pendulum impacts affecting the same chamber is extremely low. HATCI supported NHTSA's proposal to harmonize with the GTR No. 13 surface damage test but recommended also adopting the GTR No. 13 requirement to apply the pendulum impact to a different chamber when multiple chambers are present. While acknowledging NHTSA's concerns, HATCI recommended harmonization with GTR No. 13 Phase 2 specifications.

Auto Innovators supported adopting the GTR No. 13 requirements and commented that applying impacts to the same chamber does not make the test more stringent than performing the impacts on separate chambers. TesTneT stated that pendulum impacts are designed to puncture protective coatings or resin gel coats but do not affect the structural integrity of the composite reinforcement. It argued that there is no reason to deviate from GTR No. 13 since stringency is not an issue.

MEMA members also supported the procedure outlined in GTR No. 13 and did not see the need for modifications. MEMA encouraged NHTSA to fully align with GTR No. 13 for the pendulum impact portion of the surface damage test. FORVIA echoed the recommendation to align with GTR No. 13 Phase 2, stating that different specifications based on chamber type could introduce confusion in testing. It added that there is no evidence suggesting changes in the surface cut and pendulum impact locations would impact safety and recommended following the industry standard until further research is conducted. FORVIA also commented that combining surface flaws with pendulum impacts and chemical exposure in testing is unnecessary since such damage combinations are highly improbable during service life.

Agency Response

Based on the comments received, in the case of a container with multiple permanently interconnected chambers, NHTSA will specify the impacts on the surface of a different chamber. NHTSA is convinced that applying the impacts to a different chamber is equivalently stringent to applying the impacts on the opposite side of a single chamber. NHTSA agrees that the pendulum impacts were not intended to be compounded in close proximity with the surface cuts as would occur if both types of damage were applied to a single small chamber of a multi-chamber container. FMVSS No. 308 S6.2.3.3(b) has been updated to reflect this change.

d. Chemical Exposure and Ambient Pressure Cycling Test

Background

The chemical exposure test is a test in which container attachments may improve performance by shielding the container from the chemical exposures. The proposed rule provided that container attachments will be included in the chemical exposure test unless they were removed prior to the surface damage test. NHTSA sought comment on including container attachments for the chemical exposure test.

Comments Received

Auto Innovators supported harmonizing these requirements with GTR No. 13, commenting that if attachments can be removed, they should be removed before testing, but if they cannot be removed, they should be included in the test. Auto Innovators added that if chemicals can reach the surface of removable attachments, then the surface should also be exposed to chemicals. EMA recommended modifying FMVSS No. 308, S6.2.3.4 to state that each of the five areas preconditioned by pendulum impact should be exposed to a different solution. H2MOF agreed that container attachments may be present during the chemical exposure test, as they are present during regular service. TesTneT commented that any attachments included in a vehicle installation should also be included in the chemical exposure test, as these attachments might protect the container surface from road conditions. FORVIA stated that non-removable container attachments should be allowed in the chemical exposure test, noting that the test contributed to the introduction of container attachments in GTR No. 13.

Agency Response

NHTSA is maintaining the inclusion of container attachments in the chemical exposure test unless they were removed prior to the surface damage test, as discussed above. NHTSA is not including 'EMA's proposed edit specifying that a different solution is applied to each preconditioned area. There is no need to specify that a different solution is applied to each area. This language is consistent with GTR No. 13, which specifies that each of the five areas ''is exposed to one of five solutions.''

e. High Temperature Static Pressure Test

Background

Consistent with GTR No. 13, the high temperature static pressure test involves holding the container for 1000 hours at 85 °C and 125 percent NWP.

Comments Received

Auto Innovators stated that it supports NHTSA's proposal to harmonize these requirements with GTR No. 13.

Agency Response

NHTSA is maintaining the high temperature static pressure test as proposed.

f. Extreme Temperature Pressure Cycling Test

Background

Consistent with GTR No. 13, the extreme temperature pressure cycling test involves pressure cycling at extreme temperatures and simulates operation (fueling and defueling) in extreme temperature conditions. The test for performance durability uses the same number of cycles as required by the baseline initial cycle test before leakage. This is a total of 7,500 cycles for light vehicles or 11,000 cycles for heavy vehicles. The extreme temperature pressure cycling test consists of 40 percent of these total cycles, of which half (20 percent of the total) are conducted at −40 °C and the other half are conducted at 85 °C.

Comments Received

Quantum Fuel Systems, LLC commented on an ambiguity in GTR No. 13 related to the number of cycles required for the extreme cold and hot tests. It stated that clarification is needed to determine whether the total number of cycles for the extreme temperature pressure cycling test should be 22,000 or 11,000. Quantum also proposed edits to Table 6 of GTR No. 13 to address this ambiguity. Auto Innovators expressed support for NHTSA's proposal to harmonize these requirements with GTR No. 13.

Agency Response

NHTSA is maintaining the extreme temperature pressure cycling test as proposed. The proposed requirement clearly specifies that ''the container is pressure cycled in accordance with S6.2.3.6 for 40 percent of the number of cycles specified in S5.1.1.2(a)(1) or S5.1.1.2(b)(1) as applicable.'' FMVSS No. 308 S5.1.1.2(a)(1) and S5.1.1.2(b)(1) clearly list 7,500 and 11,000 cycles, respectively. The number of cycles used for the extreme temperature pressure cycling test is not based on 22,000 cycles.

g. Residual Pressure Test

Background

Consistent with GTR No. 13, the residual pressure test requires pressurizing the container to 180 percent NWP and holding this pressure for 4 minutes.

Comments Received

Auto Innovators expressed support for NHTSA's proposal to harmonize the residual pressure test requirements with GTR No. 13. Agility commented that the residual pressure test requirement should remain at 180 percent NWP, regardless of BP_O. It added that manufacturers would still have incentives to limit performance degradation due to its effects on cost and repeatability.

Agency Response

NHTSA is maintaining the residual pressure test as proposed. The requirement of 180 percent NWP with a four-minute hold period is independent of BP_O. The residual pressure test does not address degradation rate. Degradation rate is addressed by the residual strength burst test, discussed in the next section.

h. Residual Strength Burst Test

Background

Consistent with GTR No. 13, the residual strength burst test involves subjecting the end-of-life container to a burst test identical to the baseline initial burst pressure test. The burst pressure at the end of the durability test is required to be at least 80 percent of the BP_O specified on the container label. This requirement effectively controls the burst pressure degradation rate throughout an extreme service life.

Comments Received

Auto Innovators expressed support for NHTSA's proposal to harmonize these requirements with GTR No. 13. Luxfer Gas Cylinders commented on the likelihood of a rapid rate of degradation in end-of-life burst pressure, stating that there is a ''vanishingly small likelihood that this would occur.'' It noted that no manufacturer would produce containers with a BP_O double the specified minimum requirement and questioned what mechanism would cause such degradation, suggesting that only severe damage could lead to it, in which case the container would be removed from service.

Agency Response

NHTSA is maintaining the residual strength burst test as proposed. As the commenter states, it is unlikely that a container would have such high degradation as to fail to maintain at least 80 percent of BP_O at its end-of-life burst pressure. However, the residual strength burst test is straightforward to pass for containers that do not experience severe burst strength degradation in service. Therefore, including this requirement does not significantly challenge container design or create an unnecessary burden on manufacturers. Instead, it simply prevents the possibility of a poor-performing container from posing a serious risk to safety due to severe burst strength degradation while in service.

9. Test for Expected On-Road Performance

Background

Consistent with GTR No. 13, NHTSA proposed the test for expected on-road performance. The proposed test is closely consistent with the industry standard SAE J2579_201806, ''Standard for Fuel Systems in Fuel Cell and Other Hydrogen Vehicles.'' [24]

Comments Received

Luxfer Gas Cylinders commented that the proposed test is time-consuming and expensive to conduct. It stated that for large 800 liter containers, there is only one test lab that can conduct the test. It stated that the cost of testing exceeds $500,000. It questioned if NHTSA proposing to evaluate containers using the proposed test procedures.

Agency Response

NHTSA is aware of the burden of the proposed test. FMVSS establish minimum safety requirements and the FMVSS test procedures establish how the agency would verify compliance. However, manufacturers are not

[24] SAE J2579_201806. Standard for Fuel Systems in Fuel Cell and Other Hydrogen Vehicles. *https://www.sae.org/standards/content/j2579_201806/.*

required to conduct the exact test in the FMVSS to certify their vehicles. The Safety Act requires manufacturers to certify that their vehicles meet all applicable FMVSS, and specifies that manufacturers may not certify compliance if, in exercising reasonable care, the manufacturer has reason to know the certificate is false or misleading. A manufacturer may use different types of tests or even simulations to certify its vehicles if the manufacturer exercises reasonable care in doing so. In other words, manufacturers must ensure that their vehicles will meet the requirements of FMVSS No. 308 when NHTSA tests the vehicles in accordance with the test procedures specified in the standard, but manufacturers may use different test procedures and evaluation methods to do so. Additionally, as hydrogen vehicles become more common, the number of test labs performing this test will likely increase, and the costs associated with testing will likely come down as a result.

a. Proof Pressure Test

Background

Consistent with GTR No. 13, NHTSA proposed a hydrogen-gas proof pressure test at the start of the test for expected on-road performance.

Comments Received

Auto Innovators expressed support for NHTSA's proposal to harmonize the proof pressure test with GTR No. 13. Agility questioned the purpose of performing the proof test with hydrogen instead of using a hydraulic testing method, commenting that the proposed approach seems unnecessarily high-risk and costly.

Agency Response

For the reasons discussed above for the test for performance durability, NHTSA is removing proof pressure testing from FMVSS No. 308. Since 100 percent of all containers already undergo the proof pressure test during manufacture, including this test would be redundant and unnecessary.

b. Ambient and Extreme Temperature Gas Pressure Cycling Test

Background

NHTSA proposed an ambient and extreme temperature gas pressure cycling test that is closely consistent with GTR No. 13.

Comments Received

Auto Innovators expressed support for NHTSA's proposal to harmonize the ambient and extreme temperature gas pressure cycling test with GTR No. 13, stating that tests should be conducted with temperature and pressure control devices in place, or that equivalent measures should be used to strictly adhere to the parameters. HATCI requested that NHTSA either harmonize with GTR No. 13 Phase 2 requirements or ensure strict adherence to proposed pressure and temperature ranges during testing. HATCI noted that container pressure should not exceed 100 percent state of charge (SOC) and that the minimum pressure should be 2 MPa. Based on internal testing, HATCI commented that temperatures outside the specified operational range could lead to o-ring failures, resulting in leakage. It added that during low-temperature pneumatic tests, internal temperatures can drop below −40 °C, sometimes reaching −45 °C, which does not reflect real environmental conditions and is not considered in container design. HATCI also recommended that NHTSA test CHSS within the manufacturer's design limits or within a temperature range of −40 °C to 85 °C, with manufacturers responsible for providing design temperature data upon NHTSA's request.

Agency Response

NHTSA is maintaining the ambient and extreme temperature gas pressure cycling test as proposed. The ambient and extreme temperature gas pressure cycling test does not subject the container to external temperature conditions below −30 °C. Additionally, the ambient and extreme temperature gas pressure cycling test does not consider the internal temperature of the container; only the ambient temperature surrounding the container is controlled, along with the fuel delivery temperature and the initial system equilibration temperature. Neither GTR No. 13 nor by the commenters provide a method for monitoring the internal temperature of the container during cycling. Instead, the container must be able to withstand the internal temperatures that result from the pressure cycling series as specified. As discussed in the NPRM, the pressurization rates specified in Table 5 to S6.2.4.1(c) of FMVSS No. 308 are based on real-world refueling rates, and the temperatures specified during the test are also based on real-world conditions, so this test for expected on-road performance is representative of conditions that can occur in-service.[25] The other differences noted by HATCI are related to test tolerances, which are discussed below.

c. Extreme Temperature Static Gas Pressure Leak/Permeation Test

Background

NHTSA proposed the extreme temperature static gas pressure leak/permeation test consistent with GTR No. 13, except for the removal of the localize leak requirement in the proposed standard. The localized leak limit was removed because it is not objectively enforceable due to the subjective estimation of bubble sizes. NHTSA sought comment on not including the localize leak requirement during the extreme temperature static gas pressure leak/permeation test and specifically requested that if commenters believed it should be included, that they explain (1) how they believe it could be made more objective and (2) how specifically it would add to the standard's ability to meet the safety need.

Comments Received

Commenters provided diverse feedback on the proposed removal of the localized leak requirement from the extreme temperature static gas pressure leak/permeation test.

Nikola suggested that while the bubble requirement could be removed, the single-point leak rate should not be eliminated, and a mass spectrometer could be used by testing facilities instead. It also noted that numerous hydrogen performance test facilities that can evaluate localized leaks.

Luxfer Gas Cylinders stated that permeation rate measurements are well-established, typically involving the CHSS in an airtight container with surrounding gas content measured accurately. Luxfer supported the decision to remove the localized leak requirement.

Auto Innovators agreed with the decision not to include the localized leak test. Similarly, DTNA commented that the localized leak test was unnecessary because the full system permeation test evaluates the overall system. However, if a localized leak test were necessary, DTNA suggested replacing the bubble test with a concentration-based hydrogen leak limit of 0.5 percent, derived from standards applied to CNG and propane vehicles.

TesTneT described its method of using a gas chromatograph or mass spectrometer in an enclosed, temperature-controlled chamber for accurate permeation measurement. It also use a mass spectrometer to quantify leakage after locating potential leak sites

[25] *See* 89 FR 27520 (Apr. 17, 2024), *available at https://www.federalregister.gov/documents/2024/04/17/2024-07116/federal-motor-vehicle-safety-standards-fuel-system-integrity-of-hydrogen-vehicles-compressed.*

with a soapy solution. TesTneT raised concerns about hydrogen permeation risks in enclosed spaces, pointing out that hydrogen can leak out over time, making it difficult to accumulate in dangerous amounts.

Newhouse commented that NHTSA's proposed permeation rate of 46 mL/L/h at 55 °C is unreasonably low and noted several issues, such as considering worst-case scenarios and ventilation assumptions. Newhouse suggested allowing a higher limit of 100 percent of the lower flammability limit (LFL), or 4 percent hydrogen in air, and questioned the use of 55 °C as a peak temperature, stating that a lower average would be more representative. Newhouse also recommended increasing the allowable permeation rate to 184 mL/L/h at 55 °C and noted that the probability of failure remains low, even with more conventional ventilation rates in garage spaces.

FORVIA acknowledged that different methods can accurately measure leakage and permeation and suggested that guidance on measurement could be provided outside the FMVSS text. It was open to considering localized leak requirements but noted that the submersion method, though simple, may require more accurate measurements near the limits. It indicated that omitting this test for field surveillance would be acceptable, as production containers typically exhibit far less leakage. H2MOF proposed exempting all-metal containers from the static gas leak/permeation test and suggested that procedures from industry standards be used for guidance.

Agency Response

NHTSA is maintaining the extreme temperature static gas pressure leak/permeation test as proposed, without the localized leak limit. The commenters did not provide any explanation for the safety need of the localized leak limit. Commenters did not provide any evidence that omitting the localized leakage requirement is less stringent when there is also an overall permeation limit applied to the CHSS as a whole.

Furthermore, commenters did not provide sufficient explanation of how, if included, the localized leakage limit could be made more objective. Some commenters suggested using analytical chemistry equipment such as mass spectrometers. However, these types of instruments are highly complex, and additional research would be needed by NHTSA before they could be used to objectively quantify a leak. Even if the agency determined that mass spectrometers were viable for detecting localized leaks, the agency would still need to consider the safety need being addressed by the requirement.

NHTSA is not changing the overall permeation rate of 46 mL/L/h based on the comments. This permeation limit is found in GTR No. 13 and is widely accepted by the industry as an appropriate permeation limit. Well-developed rationale for this limit is provided in GTR No. 13 and in the NPRM.[26] In particular, the conservative 25 percent LFL limit accounts for concentration non-homogeneities that may be present, and the choice of 55 °C is a worst-case temperature condition, not one that is expected to occur commonly. Permeation is higher at higher temperatures, so NHTSA considered this worst-case condition when evaluating the permeation limit. This permeation limit is also applied in the industry standard SAE J2579_201806. The commenters did not establish sufficient rationale for NHTSA to deviate from the established 46 mL/L/h.

NHTSA is not exempting CHSS with all-metal containers from the extreme temperature static gas pressure leak/permeation test. All-metal containers must demonstrate the same level of performance and safety as other containers. NHTSA is not replacing the proposed test with either of the standards recommended by H2MOF. The commenter did not establish any justification for why doing so would improve safety, nor did it provide any detailed information regarding the alternative standards.

d. Residual Pressure Test & Residual Strength Burst Test

Background

The residual pressure test and residual strength burst test are conducted in the same manner and for the same reasons discussed above for the test for performance durability.

Comments Received

Auto Innovators stated support for NHTSA's proposal to harmonize these requirements with GTR No. 13.

Agency Response

NHTSA is maintaining the residual pressure test and residual strength burst test as proposed.

10. Test for Service Terminating Performance in Fire

Background

NHTSA proposed a fire test based closely on the GTR No. 13 Phase 2 fire test. The updates to the fire test by the IWG of GTR No. 13 Phase 2 focused on improving the repeatability and reproducibility across test laboratories. Two significant improvements to the fire test are (1) the use of a pre-test checkout procedure and (2) basic burner specifications. The pre-test checkout requires conducting a preliminary fire exposure on a standardized steel container to verify that specified fire temperatures can be achieved for the localized and engulfing fire segments of the test prior to conducting the fire test on a CHSS. During this pre-test checkout, the fuel flow is adjusted to achieve fire temperatures within the specified limits as measured on the surface of the pre-test steel container. The use of a pre-test steel container instead of an actual CHSS improves the accuracy and repeatability of the test because it avoids possible container material degradation that could affect the temperature measurements.

Comments Received

Luxfer Gas Cylinders commented that the recent changes introduced in GTR No. 13 regarding the fire test are ''excessive'' and do not enhance test performance. Luxfer stated that the pre-test using a steel container is only relevant when the steel container matches the size of the composite container being tested. For larger containers, such as those used in heavy vehicles, Luxfer stated that the pre-test becomes unnecessary. Luxfer and H2MOF both suggested that NHTSA consider adopting the Bonfire test from NGV 2 2019, ''Compressed natural gas vehicle fuel containers.'' [27] Additionally, Luxfer expressed concerns about the increased costs of the new GTR No. 13 fire test. It questioned whether NHTSA intends to apply this test to containers that have been withdrawn from service.

Agility commented that the fire source and pre-test procedures in GTR No. 13 do not accurately represent vehicle fire scenarios, particularly for heavy applications. It highlighted that the fire source width is set at 500 mm regardless of the container's diameter and that the temperature requirements focus solely on the area beneath and directly on the container surface. Agility further pointed out the lack of

[26] *See* 89 FR 27522 (Apr. 17, 2024), *available at https://www.federalregister.gov/documents/2024/04/17/2024-07116/federal-motor-vehicle-safety-standards-fuel-system-integrity-of-hydrogen-vehicles-compressed.*

[27] *See https://webstore.ansi.org/standards/csa/csaansingv2019.*

requirements for measuring temperatures around the container, which is where remotely mounted PRDs are typically located.

Agency Response

NHTSA acknowledges the comments regarding the proposed fire test based on GTR No. 13 Phase 2 but does not find them persuasive enough to warrant any significant changes to the proposed test procedures. Specifically, the concern that the pre-test checkout using a steel cylinder is only relevant if it matches the size of the composite container is not valid. The pre-test checkout procedure is designed to ensure the consistency of fire temperature measurements, which can be achieved regardless of the difference in size between the pre-test container and the actual CHSS. The objective of the pre-test checkout is to verify the fire conditions produce the specified temperatures, which improves the accuracy and repeatability of the test across different laboratories.

Regarding the commenters' suggestions to adopt the fire test in NGV 2 2019, NHTSA is aware of ANSI NGV 2 2019, but the GTR No. 13 fire test remains more representative of real-world conditions. The proposed fire test procedure based on GTR No. 13 includes both localized and engulfing fire stages, which are designed based on actual vehicle fire data, as discussed in the NPRM.[28] The proposed fire test procedure is the most realistic fire test available that is representative of a range of possible real-world vehicle fires. The NGV 2 fire test does not provide the same level of comprehensiveness as the standard. The NGV 2 fire test does not include any pre-test procedures to improve repeatability and reproducibility, nor does it include a localized fire exposure. The fire test procedure, on the other hand, provides a rigorous, repeatable test that accounts for both localized and engulfing fire conditions, addressing various fire exposure scenarios. Due to the large volumes of hydrogen stored on hydrogen fueled vehicles, NHTSA maintains that the proposed fire test procedure is needed to ensure vehicles are designed with a high level of performance in fire conditions. NHTSA further notes that the pre-test checkout includes temperature specifications for the bottom, sides, and top of the pre-test container.

Regarding the concern about increased costs, vehicle manufacturers are already designing their vehicles to meet or exceed the requirements of the proposed fire test based on GTR No. 13, so NHTSA does not expect significant increased costs from implementing the proposed fire test. Regarding applying the requirements to containers that have been withdrawn from service, NHTSA purchases new vehicles at the point of sale for compliance testing. NHTSA does not conduct compliance testing on used vehicles or equipment.

a. Burner Specification

Background

To further improve test reproducibility, a burner configuration is defined with localized and engulfing fire zones. These specifications allow the fire test to be performed without a burner development program. NHTSA explained in the NPRM that it believes that the use of a standardized burner configuration is a practical way of conducting fire testing and should reduce variability in test results through commonality in hardware.[29] Flexibility is provided to adjust the length of the engulfing fire zone to match the CHSS length, up to a maximum of 1.65 m. The width of the burner, however, is fixed at 500 mm for all fire tests, regardless of the width or diameter of the CHSS container to be tested, so that each CHSS is evaluated with the same fire condition regardless of size. The length of the localized fire zone is also fixed to 250 mm for all fire tests. NHTSA sought comment on a specification for the burner rail tubing shape and size, which can affect the spacing between the nozzle tips.

Comments Received

MEMA expressed concerns that the burner specifications in FMVSS No. 308 S6.2.5.3 are more rigid than those in GTR No. 13, which specifies a larger burner assembly, allowing for the testing of larger hydrogen storage containers. MEMA suggested that the proposed limitations could create challenges for testing and qualifying hydrogen pressure vessels for the U.S. market, requesting that NHTSA to align more closely with GTR No. 13. MEMA also recommended revising the language in FMVSS No. 308 S6.2.5.2(c)(2) regarding nozzle orientation to avoid potential confusion and align with GTR No. 13, which targets the lowest elevation of the CHSS.

Auto Innovators recommended harmonizing with GTR No. 13, stating that industry standards already establish 1.65 meters as the length of the engulfing fire zone. Auto Innovators recommended maintaining the basic burner design from GTR No. 13. TesTneT commented that rails measuring 50 mm square, spaced at 100 mm, provide optimal nozzle tip spacing. It stated that the square rail is crucial for proper burner tip installation, and any deviation in rail size could reduce burner temperatures.

FORVIA emphasized the importance of maintaining equivalence with GTR No. 13, urging NHTSA to keep the burner configuration consistent with phase 2 of GTR No. 13. It cautioned that any changes to the burner specification could lead to ''serious dis-harmonization'' and result in the need for double testing for products sold across different regions.

Agency Response

In both GTR No. 13 and the proposed FMVSS No. 308, the burner width is between 450 millimeters and 550 millimeters in width. The additional length mentioned by TesTneT of 100 mm is intended to be a tolerance. Tolerances are discussed below. However, to ensure the maximum possible burner size consistent with GTR No. 13, FMVSS No. 308 S6.2.5.2(b) has been updated to allow the engulfing burner to extend up to a maximum of 1.75 meters.

NHTSA has determined there is no need to specify square burner rails. While this shape may be the most convenient shape for the burner rails, and test labs may prefer square rails, it may be possible to construct a burner using non-square rails. If such a burner were to meet all burner specifications and satisfy the prescribed temperature requirements, it would be considered an acceptable burner. Sufficient burner specifications, as well as the pre-test checkout procedure ensure the repeatability and reproducibility of the burner.

GTR No. 13 specifies that ''[t]he pre-test cylinder used for the pre-test checkout shall be mounted at a height of 100 ± 5 mm above the burner and located over the burner such that nozzles from the two centrally-located manifolds are pointing toward the bottom centre'' of the pre-test container. NHTSA similarly proposed mounting the pre-test container ''such that the nozzles from the two center rails are pointing toward the bottom center of the pre-test container.'' NHTSA is

[28] *See* 89 FR 27523 (Apr. 17, 2024), *available at https://www.federalregister.gov/documents/2024/04/17/2024-07116/federal-motor-vehicle-safety-standards-fuel-system-integrity-of-hydrogen-vehicles-compressed.*

[29] *See* 89 FR 27527 (Apr. 17, 2024), *available at https://www.federalregister.gov/documents/2024/04/17/2024-07116/federal-motor-vehicle-safety-standards-fuel-system-integrity-of-hydrogen-vehicles-compressed.*

maintaining this language in the final rule. This specification is sufficiently objective to ensure repeatability and reproducibility of the test. Furthermore, a specification regarding ''elevation'' may be ambiguous, and has not been included. For the CHSS fire test, the CHSS will be positioned for the localized fire test by orienting the CHSS such that the distance from the center of the localized fire exposure to the TPRD(s) and TPRD sense point(s) is at or near maximum. NHTSA is maintaining this orientation in the final rule.

b. Additional Pre-Test Procedurs for Irregularly Shaped Containers

Background

GTR No. 13 specifies additional pre-test checkout procedures intended for irregularly shaped CHSS which are expected to impede air flow through the burner. These procedures involve constructing a pre-test plate having similar dimensions to the CHSS to be tested. A second pre-test check out is conducted using the pre-test plate and using the burner monitor thermocouples. If the burner monitor thermocouple temperatures do not satisfy the specified minimum temperatures, then the pre-test plate is raised by 50 mm, and a third pre-test checkout is conducted. GTR No. 13 specifies that this process is repeated until burner monitor thermocouple temperatures satisfy the required minimum temperatures. NHTSA considered this additional pre-test process and determined that it is unnecessary. The goal of the pre-test checkout is a repeatable and reproducible fire exposure among different testing facilities. NHTSA has determined there is no need for design-specific modification to the fire test procedure. Furthermore, the additional pre-test procedures add considerable complexity to the test procedure, and as a result could undermine the repeatability and reproducibility of the fire test. Therefore, NHTSA did not propose these additional pre-test procedures. NHTSA sought comment on this decision.

Comments Received

Auto Innovators generally agreed with NHTSA's decision to streamline pre-test procedures but suggested that clarification is needed to ensure that a repeat test is only required if the pre-test does not meet the specified requirements. It emphasized that incorrect pre-test temperatures could result in over or under testing of the CHSS, potentially leading to a false pass or failure.

FORVIA disagreed with NHTSA's decision, advocating for the retention of the existing pre-test procedures for irregularly shaped CHSS as specified in GTR No. 13. It stated that consistency across global markets is crucial to minimize discrepancies and ensure manufacturers follow uniform guidelines. FORVIA acknowledged that the additional pre-test procedures might add time but noted that they would likely reduce the need for retesting and avoid introducing variables that could compromise repeatability. It emphasized that GTR No. 13 procedures had been validated through significant work, including round robin testing, and stated that deviating from these standards could undermine the enforceability of failed tests.

HATCI also stated that the additional pre-test procedures for irregularly shaped CHSS are necessary, stating that a lack of uniform temperature distribution could negatively affect TRPD activation. It stressed the importance of ensuring proper testing for all CHSS designs and suggested that the repeatability and reproducibility of the test could be reassessed as more irregular containers are introduced. TesTneT, on the other hand, agreed with NHTSA's decision, stating that additional pre-test procedures are unnecessary.

Agency Response

NHTSA is not including additional pretest procedures for irregularly shaped containers. NHTSA conducted fire testing of large, irregularly shaped CHSS according to the proposed test procedure. The test was highly successful, with the CHSS TPRD activating within one minute of the ignition of the localize burner. The results of this testing are summarized in the test report ''GTR No. 13 Fire and Closures Tests.'' [30] These results indicate that additional design-specific procedures are not required and irregularly shaped CHSS can successfully complete the test for service terminating performance in fire. The use of the pre-test container is simply to verify the burner and is not intended to precisely match the size of the CHSS.

c. Pre-Test Container Length Compared to CHSS

Background

NHTSA conducted CHSS fire testing to verify the feasibility of the test for service termination performance in fire as proposed. In some cases during testing, temperatures measured at the burner monitor thermocouples did not satisfy the required minimum value for the burner monitor temperature during the engulfing fire stage (T_{minENG}).[31] NHTSA's testing indicated that the airflow during the pre-test may be different from that of the CHSS if the pre-test container length is substantially different from that of the CHSS to be tested. The difference in air flow between the two tests could cause differences in fire input to the CHSS compared to the pre-test container. Therefore, NHTSA recommended that for CHSS of length between 600 mm and 1650 mm, the difference in the length of the pre-test container and the CHSS be no more than 200 mm. NHTSA sought comment on whether this recommendation should be a specification for the pre-test container.

Comments Received

Several commenters disagreed with NHTSA's recommendation to specify a length difference between the pre-test container and the CHSS being tested. Nikola stated disagreement with the proposal, explaining that the pre-test is conducted according to GTR No. 13 and that additional specifications on length differences are unnecessary. TesTneT also commented that the pre-test container should align with GTR No. 13 and argued that since the burner system is uniform, there is no need to correlate the pre-test container's length with that of the CHSS. TesTneT added that observations regarding the influence of CHSS length on pre-test results were incorrect. Auto Innovators similarly disagreed, stating that the pre-test container's role is to verify the burner and is not directly related to the CHSS size.

FORVIA expressed opposition as well, recommending that NHTSA keep the test procedure equivalent to GTR No. 13. It emphasized that adding length specifications would increase both time and costs for pre-testing, while the existing GTR No. 13 requirements are sufficient to ensure reproducible conditions. FORVIA noted that the GTR No. 13 fire test procedure had been validated through extensive testing and

[30] See the report titled ''GTR No. 13 Fire and Closures Tests'' which can be found at: *https://downloads.regulations.gov/NHTSA-2024-0006-0002/attachment_4.pdf*. This report will also be submitted to the National Transportation Library. *https://rosap.ntl.bts.gov/*.

[31] T_{minENG} is calculated by subtracting 50 °C from the minimum of the 60-second rolling average of the average burner monitor temperature in the engulfing fire zone of the pre-test checkout.

provided significant improvements over previous testing methods for CNG and hydrogen containers.

Agency Response

NHTSA is not including any requirements regarding the difference in length for the pre-test container and the CHSS. The recommendation that for CHSS of length between 600 mm and 1650 mm, the difference in the length of the pre-test container and the CHSS be no more than 200 mm, will remain a recommendation for future test labs. Following this recommendation will not be required as part of the testing, and not adhering to the recommendation will not invalidate test results.

d. Pretest Checkout Frequency

Background

The pre-test checkout is performed at least once before the commissioning of a new test site. Additionally, if the burner and test setup is modified to accommodate a test of different CHSS configurations than originally defined or serviced, then repeat of the pre-test checkout is needed prior to performing CHSS fire tests. NHTSA sought comment on the frequency of conducting this pre-test checkout for ensuring repeatability of the fire test on CHSS.

Comments Received

Several commenters responded to NHTSA's inquiry about the frequency of the pre-test checkout for CHSS fire testing, with most agreeing that additional requirements were unnecessary if no modifications were made to the burner or test setup.

Auto Innovators agreed that a repeat of the pre-test checkout is necessary if the burner or test setup is modified but recommended that the pre-test be performed at the manufacturer's discretion if no modifications have occurred. HATCI similarly commented that the pre-test checkout should be performed at the manufacturer's discretion. Nikola stated that the frequency of the pre-test should be determined by the testing agency, in accordance with ISO 17025, ''General requirements for the competence of testing and calibration laboratories,'' accreditation requirements.

TesTneT referred to GTR No. 13, noting that the pre-test only needs to be conducted once to verify the burner setup, unless modifications are made. It emphasized that multiple pre-tests are unnecessary if the test stand remains unchanged between tests. FORVIA disagreed with adding additional requirements, requesting harmonization with GTR No. 13 and stating that the pre-test checkout before commissioning and following modifications is sufficient. It suggested that any additional pre-test checkouts should be at the discretion of the test site operator, but recommended not adding further requirements to FMVSS.

Agency Response

NHTSA reiterates that the pre-test checkout will be performed at least once before the commissioning of a new test site and when the burner or test setup is modified to accommodate different CHSS configurations. NHTSA believes this approach ensures the consistency and reliability of testing procedures. No changes are being made to the proposed requirements based on the comments.

e. Thermocouple Positioning

Background

NHTSA proposed positioning the three burner monitor thermocouples 25 mm below the pre-test container. Since these thermocouples are intended to monitor the burner, an alternative would be to position these thermocouples relative to the burner itself. NHTSA sought comment on whether it is preferable to position the burner monitor thermocouples relative to the pre-test container or relative to the burner.

Comments Received

Commenters generally supported harmonizing the positioning of the burner monitor thermocouples with GTR No. 13 and opposed NHTSA's proposal to position the thermocouples relative to the burner.

HATCI commented that environmental factors, such as wind and temperature, could influence test results, recommending alignment with GTR No. 13, where thermocouples are positioned relative to the pre-test container. Auto Innovators also recommended positioning the thermocouples relative to the pre-test container to ensure that temperatures measured on the container are representative, and for aiding harmonization with GTR No. 13. It further referenced discussions during GTR No. 13 Phase 2, highlighting concerns about potential thermocouple failure due to material expansion from the test article and noted that GTR No. 13 offers solutions, including backup thermocouples.

Nikola stated that the purpose of the test is to measure the heat flux to the container and emphasized the importance of adhering to GTR No. 13, as the industry standard is to measure heat from the container being tested. TesTneT added that the thermocouples are positioned relative to both the pre-test container and the burner, placed 25 mm below the container and 75 mm above the burner tips, and stated there is no preferable alternative position. DTNA stated that the distance of the CHSS to the burner is the key factor that drives the characterization of the test. DTNA stated that it supports the effort in the NPRM to establish repeatable and objective test scenarios. FORVIA disagreed with introducing alternative measurements and stressed the importance of maintaining equivalency with GTR No. 13 to avoid unnecessary confusion. It suggested that any clearer requirements should be introduced in GTR No. 13 Phase 3.

Agency Response

NHTSA will maintain the burner monitor thermocouples 25 mm below the pre-test container, as specified in GTR No. 13. NHTSA acknowledges TesTneT's 'point that, due to the prescribed height of the pre-test container above the burner, specifying a point's distance below the pre-test container also specifies that point's distance above the burner.

f. Temperature Variation Greater Than 50 °C and the Associated Calculations

Background

The minimum value for the burner monitor temperature during the localized fire stage (T_{minLOC}) is calculated by subtracting 50 °C from the minimum of the 60-second rolling average of the burner monitor temperature in the localized fire zone of the pre-test checkout. The minimum value for the burner monitor temperature during the engulfing fire stage (T_{minENG}) is calculated by subtracting 50 °C from the minimum of the 60-second rolling average of the average burner monitor temperature in the engulfing fire zone of the pre-test checkout.

NHTSA sought comment on the possibility of allowing for a wider variation than 50 °C below the pre-test temperatures. Furthermore, as currently specified, the minimum temperatures T_{minLOC} and T_{minENG} would be time-dependent variables because they are based on a time-dependent rolling average. Having T_{minLOC} and T_{minENG} being time-dependent is complex and would make the testing difficult to monitor. NHTSA sought comment on a simpler calculation for T_{minLOC} and T_{minENG} that will result in constant values for T_{minLOC} and T_{minENG}. NHTSA proposed that T_{minLOC} be calculated by subtracting 50 °C from the minimum value of the 60-second rolling average of

the burner monitor temperature in the localized fire zone of the pre-test checkout. Similarly, NHTSA proposed that T_{minENG} be calculated by subtracting 50 °C from minimum value of the 60-second rolling average of the average of the three burner monitor temperatures during the engulfing fire stage of the pre-test checkout. NHTSA sought comment on whether these revised calculations for T_{minLOC} and T_{minENG} should be required.

Comments Received

Most commenters opposed NHTSA's proposal to allow a wider temperature variation or change the calculation method for T_{minLOC} and T_{minENG}, instead requesting harmonization with GTR No. 13.

HATCI and Auto Innovators both recommended maintaining the 50 °C variation requirement from GTR No. 13, stating that wider temperature variations could affect test results and impact CHSS design. Auto Innovators also requested that NHTSA align with GTR No. 13 in terms of calculations for T_{minLOC} and T_{minENG}, particularly with respect to their time-dependent nature.

TesTneT commented that the requirements in GTR No. 13 are clear. It stated that there is no need to modify the calculations or allow for wider temperature variations. It further stated that the revised calculations proposed by NHTSA are unnecessary, referencing section 6.2.5.4.5.4 of GTR No. 13, which establishes the minimum values for T_{minLOC} and T_{minENG}.

FORVIA also disagreed with the proposed changes, urging NHTSA to maintain the test procedure equivalent to GTR No. 13 for simplicity. It suggested discussing any potential simplifications during the development of GTR No. 13 Phase 3 rather than changing the existing method.

Agency Response

NHTSA will maintain calculations for T_{minLOC} and T_{minENG} that are aligned with those specified in GTR No. 13, and as proposed in FMVSS No. 308 S6.2.5.3(h). NHTSA will not adopt wider temperature variations or simplified calculations for T_{minLOC} and T_{minENG} relative to GTR No. 13. The calculation method in the final rule specifies a 50 °C variation from the 60-second rolling average of the burner monitor thermocouple(s) during the respective stage of the pre-test checkout. NHTSA notes that this method results in time-dependency of T_{minLOC} and T_{minENG}. Test labs should plot T_{minLOC} and T_{minENG} over time to observe the time-dependency of these variables.

g. Vehicle-Specific Shielding

Background

The test for service terminating performance in fire evaluates the CHSS. It is possible that vehicle manufacturers may add additional fire protection features as part of overall vehicle design, and GTR No. 13 includes the option of conducting CHSS fire testing with vehicle shields, panels, wraps, structural elements, and other features as specified by the manufacturer. However, adding vehicle-level protection features is not practical for testing. Furthermore, NHTSA explained in the NPRM that it believes that it is important for safety that the CHSS itself can withstand fire and safely vent in the event its shielding is compromised.[32] For example, if a crash damages the shielding, and the shielding was an integral part of the CHSS's ability to withstand fire, then the CHSS should be able to vent properly before it explodes. As a result, vehicle-level protection measures are not evaluated by the test for service terminating performance in fire. However, if a CHSS includes container attachments, these attachments are included in the fire test. NHTSA sought comment on excluding vehicle-specific shielding and on including container attachments as part of the fire test, particularly in the case of container attachments which can be removed using a process specified by the manufacturer.

Comments Received

Agility commented that there is insufficient justification to deviate from GTR No. 13 in this area, stating that damaged vehicle shielding could compromise PRDs as well. It stated that vehicle-level protection is appropriate for addressing localized fire risks and stated that vehicle-specific shielding should not be excluded as it is part of the container's fire protection. TesTneT stated concerns that a crash could also compromise a CHSS's ability to vent properly in a fire, suggesting that the test's length, duration, and intensity are somewhat arbitrary. It stated that surviving the test without attachments does not necessarily guarantee survival in a real-world vehicle fire, which could vary significantly.

MEMA commented that NHTSA already acknowledges the importance of protective attachments in other tests, such as surface damage and chemical corrosion tests. MEMA requested that NHTSA allow vehicle-specific shields where applicable.

FORVIA strongly opposed excluding vehicle-specific shielding and container attachments from CHSS fire testing. It stated that including shields in the test provides a more accurate representation of real-world vehicle fire scenarios. FORVIA stated that if shields are excluded, manufacturers may resort to more complex and costly protection methods, reducing the practicality of these systems. It requested that shields remain part of fire testing to fully assess all safety features. FORVIA requested that shields be specified by manufacturers, and also stated that it is important to include container attachments in the fire test. Nikola stated support for the provisions in GTR No. 13 and stated that allowing container attachments in the test is appropriate and both options should be permitted.

Agency Response

NHTSA has considered the comments submitted regarding the inclusion of vehicle-specific shielding and container attachments in the test for service terminating performance in fire. While several commenters advocated for allowing vehicle-specific shielding to be part of the fire test, NHTSA maintains its position to exclude vehicle-specific shielding from the CHSS fire test.

It is important that the CHSS itself can withstand fire exposure and properly vent in the event of a failure, regardless of any additional vehicle-level protection. This approach is based on the possibility that vehicle shielding or other protective elements could be compromised in real-world scenarios, such as during a crash. If the vehicle shielding is damaged or removed, the CHSS must still be able to perform its critical safety function without relying on external protection. Including vehicle-specific shielding in the test would not adequately evaluate the inherent fire resistance and safety performance of the CHSS.

In addition, vehicle-specific shielding introduces unnecessary complexity into the testing process which could affect repeatability and reproducibility of the results. Testing that focuses on the CHSS itself provides a consistent, uniform assessment that is critical to safety.

Some commenters expressed concerns that the exclusion of vehicle-level protection measures may not fully represent real-world fire scenarios. NHTSA recognizes these concerns but emphasizes that the primary goal of the fire test is to ensure the resilience of the CHSS as an independent system. In the

[32] *See* 89 FR 27524 (Apr. 17, 2024), *available at https://www.federalregister.gov/documents/2024/04/17/2024-07116/federal-motor-vehicle-safety-standards-fuel-system-integrity-of-hydrogen-vehicles-compressed.*

event of a crash or severe incident that compromises the vehicle's shielding, it is essential that the CHSS be capable of withstanding fire exposure and safely venting without the added protection of vehicle-level components.

Furthermore, the proposed fire test procedure, based on GTR No. 13, is specifically designed to replicate realistic fire scenarios that vehicles may encounter. As detailed in the NPRM, the test includes both localized and engulfing fire stages, which reflect actual vehicle fire data.[33] This data-driven approach ensures that the test conditions are neither arbitrary nor excessive, but instead provide a realistic assessment of the CHSS's performance during a fire.

Regarding container attachments, NHTSA clarifies that if the CHSS includes container attachments, they may be part of the fire test. Container attachments, as defined, are considered part of the CHSS itself.

h. Worst-Case Orientation

Background

GTR No. 13 specifies that the CHSS is rotated relative to the localized burner to minimize the ability for TPRDs to sense the fire and respond. GTR No. 13 specifies establishing a worst-case based on the specific CHSS design. However, NHTSA is concerned that establishing a worst-case based on a specific design is subjective. NHTSA instead proposed that the CHSS be positioned for the localized fire by orienting the CHSS relative to the localized burner such that the distance from the center of the localized fire exposure to the TPRD(s) and TPRD sense point(s) is at or near maximum. This positioning provides a challenging condition where the TPRD(s) may not sense the localized fire. NHTSA sought comment on the proposed orientation of the CHSS relative to the localized burner.

Comments Received

TesTneT referenced section 6.2.5.5.2 of GTR No. 13, stating that it already provides clear instructions on how to identify a worst-case condition. It commented that while NHTSA proposed some challenging orientations, these may not necessarily represent the worst-case scenario, and there is no need to deviate from the guidance in GTR No. 13. On the other hand, Nikola agreed with NHTSA's proposed orientation of the CHSS relative to the burner.

Auto Innovators agreed with NHTSA on the need to address the subjectivity in defining a ''worst-case'' orientation but stated that this issue is already addressed in GTR No. 13, which offers clear instructions for identifying such conditions. It stated that while NHTSA's proposal may represent a challenging condition, it may not always be considered the worst-case scenario.

Agency Response

NHTSA is maintaining the CHSS positioning specifications as proposed. NHTSA believes that its test procedure aligns well with the requirements of GTR No. 13 and will provide the level of safety intended by GTR No. 13's ''worst-case'' orientation. Further, NHTSA believes that the final standard will simplify determining the orientation for compliance testing.

NHTSA disagrees with the commenters that GTR No. 13 provides clear instruction on how a worst-case condition is identified. GTR No. 13 paragraph 6.2.5.5.2 states ''the CHSS test article shall be rotated relative to the localized burner to minimize the ability to [*sic*] TPRDs to sense the fire and respond. Shields, panels, wraps, structural elements and other features added to the container shall be considered when establishing the worst-case orientation relative to the localized fire as parts and features intended to protect sections of the container but can (inadvertently) leave other potions or joints/seams vulnerable to attack and/or hinder the ability of TPRDs to respond. For CHSS where the manufacturer has opted to include vehicle-specific features (as defined in paragraph 6.2.5.1.), the CHSS test article is oriented relative to the localized burner to provide the worst-case fire exposure identified for the specific vehicle.'' This specification requires the subjective judgement of the test lab and is therefore not objectively enforceable.

i. Jet Flame Measurement

Background

Jet flames occurring anywhere other than a TPRD outlet, such as the container walls or joints, cannot exceed 0.5 meters in length. NHTSA sought comment on how to accurately measure jet flames.

Comments Received

Nikola stated that because most jet fires exceed 0.5 meters, the presence of jet fire would result in a flame exceeding the length limit and be a clear test failure. However, it suggested that, if needed, the test facility can measure the jet flame length using video capture. Auto Innovators recommended using camera systems or similar imaging devices, such as infrared, to identify the length of jet flames. TesTneT commented that fire tests at its facility are monitored using several video cameras, and the flame length can be measured by comparing it to the known diameter of the container as seen in the videos. FORVIA also stated that jet flames are visible in practice, and the length can be measured by placing an object with a known length near the TPRD outlet and comparing the jet flame length to this object in video or pictures taken during the test.

Agency Response

NHTSA will maintain the jet flame requirement as proposed. Jet flames occurring anywhere other than a TPRD outlet, such as the container walls or joints, may not exceed 0.5 meters in length. This 0.5 meter limit aligns with GTR 13, as requested by many commenters, and seeks to minimize the safety risk because this is both the threshold at which a jet flame is clearly distinguishable from other flames present during testing and the point where the risk of spread to the surroundings increases significantly.

NHTSA appreciates the comments regarding the measurement of jet flames using video capture, reference objects of known length, and thermal imaging technologies to accurately measure jet flame length during testing. NHTSA agrees that these methods offer practical ways to assess flame length in a manner that is consistent with real-time observations during testing.

At this time, however, NHTSA will not prescribe a specific measurement methodology in the regulatory text. Instead, the method of measurement will be left to the discretion of the testing facility. Test laboratories are encouraged to use suitable techniques for ensuring compliance with the 0.5-meter jet flame requirement.

j. Heat Release Rate (HRR/A)

Background

In addition to temperature requirements, GTR No. 13 also specifies required heat release rates per unit area (HRR/A) during the localized and engulfing fire stages. NHTSA considered the specification for HRR/A and determined that it could result in over-specification of the test parameters, potentially making it very difficult to conduct the test. In addition, NHTSA believes that the detailed temperature specifications for the pre-test container during the pre-test checkout are

[33] *See* 89 FR 27523 (Apr. 17, 2024), *available at https://www.federalregister.gov/documents/2024/04/17/2024-07116/federal-motor-vehicle-safety-standards-fuel-system-integrity-of-hydrogen-vehicles-compressed.*

sufficient to ensure repeatability and reproducibility of the test. Therefore, NHTSA did not propose specifications for HRR/A. NHTSA sought comment on that decision.

Comments Received

Auto Innovators disagreed with NHTSA's decision, recommending that HRR/A specifications be maintained to ensure test repeatability and reproducibility. It pointed out that the HRR/A specifications in GTR No. 13 were introduced to address inconsistencies observed in round-robin testing between labs. It argued that without HRR/A specifications, the amount of heat energy delivered during testing could vary, potentially leading to inconsistent test results. HATCI also disagreed, stating that the absence of HRR/A specifications could cause variability in the energy delivered during testing, affecting the outcome. It recommended that NHTSA adopt the HRR/A specifications in GTR No. 13 to avoid this issue.

Nikola supported maintaining the GTR No. 13 specification for HRR/A, noting that the test has already been validated and used by several test labs globally. TesTneT also disagreed with NHTSA's decision, stating that HRR/A is important to the fire test because temperature measurements alone cannot always be relied upon. It explained that during testing, events like hydrogen venting or coatings dripping onto thermocouples can disturb temperature readings, and HRR/A provides a way to ensure that fire conditions remain consistent despite such disturbances. In contrast, H2MOF agreed with NHTSA's approach not to specify HRR/A.

Agency Response

NHTSA is not including specifications for HRR/A. Such a specification could result in over-specification of the test parameters, potentially making it very difficult to conduct the test. In addition, NHTSA believes that the detailed temperature specifications for the pre-test container during the pre-test checkout are sufficient to ensure repeatability and reproducibility of the test.

Failure to satisfy a temperature specification will result in an invalid test. Simply adding an additional specification related to HRR/A will not resolve a failure to meet the temperature specifications. If the specified temperatures are not met, the test will be invalid regardless of whether an HRR/A specification is present and satisfied.

k. Wind Speed and Shielding

Background

When testing is conducted outdoors, wind shielding is required to prevent wind from interfering with the flame temperatures. To ensure that wind shields do not obstruct the drafting of air to burner, which could cause variations in test results, the wind shields need to be at least 0.5 m away from the CHSS being tested. Additionally, for consistency, the wind shielding used for the pre-test checkout must be the same as that for the CHSS fire test. NHTSA sought comment on whether specifications for wind shielding should be provided in the regulatory text of the standard, and if so, what the specifications should be. As an additional approach to addressing wind interference with flame temperatures, NHTSA sought comment on limiting wind speed during testing to an average wind velocity during testing to 2.24 meters/second, as in FMVSS No. 304.[34]

Comments Received

DTNA supported including wind shielding specifications in the regulatory text, stating that wind is critical to the spread of fire and that clear wind velocity limits would ensure reproducibility of test results. Glickenhaus agreed with NHTSA's proposal to limit wind speed to 2.24 meters per second, while HATCI recommended adding language to ensure wind does not affect flame direction or temperatures. HATCI also sought clarity on where wind speed measurements should be taken, recommending they occur between the wind shield and the test specimen, with the wind speed at the measuring point being near 0 meters per second.

In contrast, Nikola commented that maintaining the correct temperature profile is sufficient and aligned with GTR No. 13, making wind speed specifications irrelevant. TesTneT argued that specifying wind speed is unnecessary, as the requirement to meet temperature specifications already accounts for wind interference. It added that wind gusts could momentarily exceed the limit, potentially invalidating the test, even if temperature conditions were maintained. TesTneT also noted that its use of a large diameter pipe for testing eliminates wind effects without needing a wind speed specification.

MEMA stated a wind speed limit would be impractical, and that the fire itself could create an updraft, complicating efforts to limit wind speed. MEMA expressed concern that this requirement would cause deviations between GTR No. 13 and FMVSS No. 308, and requested that NHTSA eliminate the wind speed limit, instead recommending that wind speed only be measured and recorded, consistent with GTR No. 13. FORVIA also opposed the wind speed limit, stating it introduces unnecessary complexities and technical challenges, such as determining where and how to measure wind speed. It noted that wind can be unpredictable and suggested that industry practices, which involve conducting tests under calm conditions and recording wind speed, are sufficient to address this issue. FORVIA stated that the pre-test checkout already addresses draft effects from both external wind and the fire itself, making wind speed limits unnecessary.

Agency Response

NHTSA is not including additional specification for wind or wind speed. FMVSS No. 308 requires that wind shielding be used for outdoor fire test sites. It also requires that the separation between the pre-test container and the walls of the wind shields be at least 0.5 meters. This standard requires test facilities to provide sufficient protection against wind to prevent an impact on test results.

NHTSA is not including a requirement that air temperature, wind speed, and/or wind direction be measured and recorded if testing conducted outdoors. If these parameters are not used to conduct the test or determine the test result, then there is no reason to require them to be recorded. Manufacturers and test labs may wish to retain this information for their own purposes, but collecting this information is not a specific requirement of the test for service terminating performance in fire. As some commenters noted, the burner monitor temperature specifications already account for wind interference. If the temperature requirements are met during testing, this result indicates that wind is not interfering with the test to such a degree that would significantly affect the results.

11. Tests for Performance Durability of Closure Devices

Background

The tests for performance durability of closure devices in GTR No. 13 are closely consistent with the industry standards CSA/ANSI HPRD 1–2021, ''Thermally activated pressure relief

[34] FMVSS No. 304, ''Compressed natural gas fuel container integrity,'' *https://www.ecfr.gov/current/title-49/subtitle-B/chapter-V/part-571/subpart-B/section-571.304.*

devices for compressed hydrogen vehicle fuel containers,'' [35] and CSA/ANSI HGV 3.1–2022, ''Fuel System Components for Compressed Hydrogen Gas Powered Vehicles.'' [36] The GTR No. 13 tests for performance durability of closure devices carry a significant test burden. To evaluate a single TPRD design, 13 TPRD units are required for a total of 29 individual tests (some units undergo multiple tests in a sequence). Similarly, to evaluate a single shut-off valve or check valve, 8 units are required for a total of 17 individual tests. While NHTSA proposed these requirements to be consistent with GTR No. 13, NHTSA sought comment on whether testing of this extent is necessary to meet the need for safety, or whether it is still possible to meet the need for safety with a less burdensome test approach or with a subset of the test for performance durability of closure devices. NHTSA requested that if commenters believe another approach or subset of tests is appropriate and meets the need for safety, that they provide specific detail on (1) the alternate approach or subset of tests and (2) how it meets the need for safety adequately.

Furthermore, FMVSS represent minimum performance requirements for safety. FMVSS does not address issues such as component reliability or best practices. These considerations are left to industry standards. NHTSA sought comment on whether a reduced subset of the tests for performance durability of closure devices could ensure safety with a lower overall test burden. In such a subset, only those tests directly linked to critical safety risks would be included.

Comments Received

Auto Innovators expressed support for maintaining consistency with GTR No. 13 for the tests for performance and durability of closure devices. Luxfer Gas Cylinders commented that obtaining 13 TPRDs for testing would not be difficult and stated that the associated costs and time were not burdensome when compared to container testing. Nikola also supported adherence to GTR No. 13.

WFS commented that the tests in GTR No. 13, Phase 2, are already aligned with industry standards such as CSA/ANSI HPRD 1 and CSA/ANSI HGV 3.1, and that these GTR No. 13 tests were chosen by the IWG of GTR No. 13 Phase 2 as the minimum required to ensure safety. WFS also suggested that FMVSS could potentially include a provision allowing closure devices compliant with relevant industry standards to be considered compliant with FMVSS requirements, except for occasional spot checks by NHTSA. FORVIA commented that while the proposed testing numbers are necessary for initial component validation and type certification due to their safety relevance, these numbers may not be needed for field surveillance testing. FORVIA suggested limiting the sample number to one per test and allowing NHTSA to focus selectively on specific tests at its discretion.

Agency Response

Based on the comments, NHTSA is maintaining the proposed test requirements. The commenters indicated the tests are not overly burdensome and the number of tests has already been minimized to cover essential safety aspects. NHTSA received no alternative proposals or specific data showing how a reduced subset of the tests would adequately meet safety needs. Since commenters did not provide any evidence for removing tests, NHTSA will maintain the original testing scope as proposed to ensure safety and maintain consistency with GTR No. 13. Additionally, there is no option to certify compliance with any FMVSS requirement by simply stating compliance with a set of industry standards. Manufacturers must certify direct compliance with the applicable FMVSS.

a. Hydrogen Impurities and Testing With Inert Gas

Background

NHTSA proposes that testing be conducted at an ambient temperature of 5°C to 35°C, unless otherwise specified. In addition, GTR No. 13 specifies that all tests be performed using either:

- Hydrogen gas compliant with SAE J2719_202003, ''Hydrogen Fuel Quality for Fuel Cell Vehicles,'' or
- Hydrogen gas with a hydrogen purity of at least 99.97 percent, less than or equal to 5 parts per million of water, and less or equal to 1 part per million particulate, or
- A non-reactive gas instead of hydrogen.

The standard J2719_202003 specifies maximum concentrations of individual contaminants such as methane and oxygen. Limiting these individual contaminants is critical for fuel cell operation; however, these contaminants are unlikely to affect the results of the tests for performance durability of closure devices.

As a result, FMVSS No. 308 will only require hydrogen with a purity of at least 99.97 percent, less than or equal to 5 parts per million of water, and less than or equal to 1 part per million particulate. NHTSA sought comment on any other impurities that could affect the results of the tests for performance durability of closure devices.

Using a non-reactive gas for testing would have the benefit of reducing the test lab safety risk related to handling pressurized hydrogen. However, it is not clear if replacing hydrogen with a non-reactive gas reduces stringency and therefore may not adequately address the safety need. As a result, this option has not been proposed in FMVSS No. 308. NHTSA sought comment on whether testing with a non-reactive gas instead of hydrogen reduces test stringency.

Comments Received

Auto Innovators stated the levels of impurities are important and that other impurities are addressed and limited in SAE J2719. Nikola agreed that no other impurities would impact the closure device tests. WFS stated that hydrogen with a purity of 99.97 percent and the specified water and particulate limits would be adequate, as additional impurity limits in SAE J2719 are relevant only to fuel cell performance.

On the subject of testing with inert gas, comments were mixed. Agility noted that test stringency could vary depending on the specific test, citing a bonfire test as an example where replacing hydrogen could be less stringent. Conversely, Agility commented that using inert gases would not affect the stringency of TPRD flow rate measurements. Auto Innovators suggested that testing with hydrogen, helium, or a non-reactive gas mixture containing detectable helium, in line with GTR No. 13, would be acceptable as long as the test conditions, such as pressure levels and cycle numbers, remained unchanged. HATCI expressed similar support, stating that using a non-reactive gas under consistent conditions should not reduce stringency.

Nikola commented that helium is an appropriate replacement for hydrogen in tests, as it does not compromise test stringency and facilitates testing procedures. WFS recommended aligning FMVSS with GTR No. 13, which lists acceptable gases such as hydrogen, helium, and non-reactive gas mixtures containing detectable helium or hydrogen. WFS noted that nitrogen would be suitable for tests involving pressure stress, while helium would be appropriate for leak tests. WFS stated

[35] *See https://webstore.ansi.org/standards/csa/csaansihprd2021.*

[36] *See https://webstore.ansi.org/standards/csa/csaansihgv2015r2019.*

that these test gas options are consistent with various industry standards.

FORVIA expressed concerns about potential material compatibility issues with impurities not specified in the proposed requirements. It recommended consulting manufacturers if there are questions about compatibility. Additionally, FORVIA commented that while hydrogen tests can help assess resistance to hydrogen embrittlement and fatigue, the use of alternative gases like dry nitrogen should be suitable.

Agency Response

NHTSA agrees with commenters that using an inert gas will not reduce the stringency of the tests for performance stability of closure devices. Therefore, in the final rule, NHTSA has added the option of using inert gas for conducting the tests for performance durability of closure devices. NHTSA notes there is no bonfire testing included in the tests for performance durability of the closure devices, nor any similar tests where the flammability of hydrogen would play a significant role in the outcome of the test.

NHTSA does not expect that impurities below 0.03 percent will have any meaningful impact on the test results. Therefore, NHTSA is maintaining the specification for hydrogen at 99.97 percent purity, less than or equal to 5 parts per million of water, and less than or equal to 1 part per million particulate. As noted in the NPRM, while fuel cells are highly susceptible to impurities, the test for performance durability of closure devices does not involve operating or testing fuel cells, and therefore, strictly controlling the specifics of the impurities below 0.03 percent is of little importance.

b. TPRD

Background

GTR No. 13 does not consider the possibility of the TPRD activating during the pressure cycling test, temperature cycling test, salt corrosion test, vehicle environment test, stress corrosion cracking test, drop and vibration test, or leak test. The temperatures applied during these tests are not characteristic of fire and therefore should not cause the TPRD to activate. TPRD activation in the absence of temperatures characteristic of a fire indicates that the TPRD is not functioning as intended and presents a safety risk due to the hazards associated with TPRD discharge. As a result, NHTSA proposed that if the TPRD activates at any point during the pressure cycling test, temperature cycling test, salt corrosion test, vehicle environment test, stress corrosion cracking test, drop and vibration test, or leak test, that TPRD will be considered to have failed the test. NHTSA sought comment on this requirement.

Comments Received

Auto Innovators stated that it agrees with the agency proposal to integrate the TPRD failure assessment as when evaluating other aspects of performance. Nikola stated that this requirement aligns with GTR No. 13, which mandates that the TPRD meet the criteria of each subsequent test. Therefore, Nikola stated, if a TPRD fails, the entire test is considered failed. Agility and Luxfer Gas Cylinders both stated that unintended activation could pose a safety risk, indicating support for the proposal.

WFS, however, recommended leaving the test requirements as they are currently written in GTR No. 13, noting that pressure cycling is a unique test that involves pressure fluctuations which could directly cause TPRD failure. WFS stated that in other tests like corrosion, it is difficult to detect TPRD activation until a subsequent leak test, which serves as the main criterion to confirm failure. FORVIA disagreed with the proposal, arguing that the concept of ''activation'' is not a clear requirement and may be difficult to measure. FORVIA suggested that all tests, except for the stress corrosion cracking test, already use a leak test as the appropriate pass/fail criterion. For the stress corrosion cracking test, FORVIA noted that a separate pass/fail criterion is necessary, as exposure to ammonia solution does not necessarily cause TPRD activation or leakage.

Agency Response

NHTSA is maintaining the requirement that the TPRD not activate during the pressure cycling test, temperature cycling test, salt corrosion test, vehicle environment test, stress corrosion cracking test, drop and vibration test, or leak test. The TPRD should not activate outside of fire-related conditions. Activation during tests that do not simulate fire indicates malfunction and poses a safety risk. While some commenters suggest relying solely on the leak test, this approach does not fully address the hazards of unintended TPRD discharge. Unintended activation is a critical failure mode that warrants a direct requirement. Thus, the requirement to treat TPRD activation as a test failure is necessary to ensure safety.

A separate test to detect TPRD activation is not necessary. A TPRD activation event will be evident to the test lab during the existing tests. TPRD activation is a significant event that will be clear through visual observation or other monitoring methods already in place during the tests.

(1) Pressure Cycling Test

Background

The NPRM proposed that one TPRD unit undergo 15,000 internal pressure cycles with hydrogen gas. While the proposed 15,000 pressure cycles for the TPRD is consistent with GTR No. 13, NHTSA noted that this number of cycles is higher than the maximum 11,000 pressure cycles applied to containers. NHTSA sought comment on the need for 15,000 pressure cycles for TPRDs.

Comments Received

Commenters generally supported NHTSA's proposal to require 15,000 pressure cycles for TPRDs, aligning with GTR No. 13. Auto Innovators recommended that NHTSA maintain consistency with GTR No. 13 and stated that the 15,000-cycle requirement is harmonized with other industry standards. Agility also supported the proposal, stating that 15,000 cycles are consistent with industry standards.

Nikola commented that GTR No. 13 and the industry have agreed on this higher standard for TPRDs as a safety measure. WFS noted that during the development of GTR No. 13 Phase 2, Task Force 3 (TF3) recognized the need for a higher cycle count for primary closure components compared to containers. WFS stated that TF3 decided to harmonize TPRD cycle requirements with industry standards, establishing 15,000 cycles to provide a slightly higher safety margin. WFS pointed out that TF3 applied the same approach to check valve pressure cycle requirements.

FORVIA expressed support for the proposed 15,000 pressure cycles, noting that the recently updated UN ECE R134 also mandates 15,000 cycles, aligning with GTR No. 13 Phase 2 and the NHTSA proposal. FORVIA suggested maintaining this standard as a safety margin and considering any revisions during Phase 3 of GTR No. 13.

Agency Response

Consistent with GTR No. 13, and based on the comments received, NHTSA is maintaining 15,000 pressure cycles for TPRDs. NHTSA emphasizes that maintaining the 15,000 pressure cycle requirement for TPRDs is consistent with both GTR No. 13 and other relevant standards such as HPRD–

1.[37] As noted by multiple commenters, TPRDs are critical safety components, and subjecting them to a slightly higher cycle count compared to containers provides an added safety margin, which is appropriate given their role in preventing catastrophic failures.

(2) Accelerated Life Test

Background

NHTSA proposed the accelerated life test consistent with GTR No. 13. This test verifies that a TPRD will activate at its intended activation temperature, but also will not activate prematurely due to a long-duration exposure to elevated temperature that is below its activation temperature.

Comments Received

Auto Innovators recommended NHTSA remain consistent with the requirements of GTR No. 13.

Agency Response

NHTSA is maintaining the accelerated life test as proposed.

(3)Temperature Cycling Test

Background

NHTSA proposed the temperature cycling test consistent with GTR No. 13. This test verifies that a TPRD can withstand extreme temperatures while in service.

Comments Received

Auto Innovators recommended NHTSA remain consistent with the requirements of GTR No. 13.

Agency Response

NHTSA is maintaining the temperature cycling test as proposed.

(4) Salt Corrosion Resistance Test

Background

NHTSA sought comment on the clarity and objectivity of the salt corrosion resistance test procedure. NHTSA asked that if commenters had suggestions on how to change the salt corrosion resistance test procedure, that they explain how their suggested changes improve the clarity and objectivity, and how they continue to meet the need for safety represented by this test.

Comments Received

Auto Innovators and Nikola both recommended maintaining alignment with GTR No. 13. WFS also advised against changes, stating that the procedure aligns with existing industry standards in North America. WFS acknowledged that the 100-day test duration is more extensive compared to previous tests, such as a 144-hour salt spray test, but noted that this longer test reflects best practices adopted by U.S. automakers and integrated into industry standards for primary closure devices.

FORVIA cautioned against adding additional criteria such as staining or pitting resistance, stating that these are cosmetic issues that are almost inevitable in aggressive salt corrosion conditions. It stated that GTR No. 13 specifies criteria like cracking, softening, and swelling, and that a requirement that TPRDs must not show signs of physical degradation would adequately addresses concerns about pitting and corrosion levels that could impact the device's function. FORVIA stated that the salt corrosion resistance test is a sufficient minimum baseline.

Agency Response

Based on the comments received, NHTSA is maintaining the salt corrosion test as proposed. In GTR No. 13 and in the proposed standard, after the salt corrosion exposure, the TPRD units are subjected to the leak test, benchtop activation test, and flow rate test. Neither GTR No. 13 nor the standard container requirements related to cracking, softening, swelling, or physical degradation. NHTSA is not including such requirements in the standard for the salt corrosion test. Subjecting the TPRD to the leak test, benchtop activation test, and flow rate test is sufficient to evaluate the performance of the TPRD after the salt corrosion test exposure.

(5) Vehicle Environment Test

Background

The vehicle environment test exposes the TPRD to the following fluids for 24 hours each: 19 percent sulfuric acid, 10 percent ethanol, and 50 percent methanol. GTR No. 13 does not specify the method of exposure to these chemical solutions. NHTSA sought comment on the exposure method. GTR No. 13 further specifies that ''cosmetic changes such as pitting or staining are not considered failures.'' NHTSA sought comment on including this specification and noted that pitting can be an aggressive form of corrosion which can ultimately lead to component failure due to cracking at the pitting site.

Comments Received

Auto Innovators and HATCI both recommended that NHTSA align with GTR No. 13's criteria, which state that cosmetic changes are not considered failures. HATCI pointed out that the TPRD undergoes further performance evaluations, such as leak and flow rate tests, after the vehicle environment test. It stated that these subsequent tests would detect any significant degradation in performance caused by corrosion, ensuring safety.

Luxfer Gas Cylinders commented that the 24-hour exposure is not aggressive enough to cause pitting and suggested removing references to cosmetic changes. Nikola added that pitting and cracking issues are associated with the use of brass, which is not commonly used for TPRDs, and stated that manufacturers already adhere to these requirements since they are harmonized with industry standards. WFS suggested that while the language in GTR No. 13 is sufficient, NHTSA could consider specifying an exposure method, as outlined in HPRD 1. WFS explained that this standard provides two methods—periodic spraying or full immersion—and recommended adopting this language if more detail is needed. However, WFS agreed that the current approach, which leaves the exposure method to the test lab, is also acceptable.

FORVIA stated that the existing language provides sufficient guidance for conducting the test. FORVIA reiterated that cosmetic changes, like minor pitting, should not result in failure unless they indicate more significant corrosion issues. FORVIA also suggested discussing any potential test modifications in the future during GTR No. 13 Phase 3 development.

Agency Response

Consistent with GTR No. 13, NHTSA will include the statement that ''cosmetic changes such as pitting or staining are not considered failures'' in S5.1.5.1(e). Cosmetic changes such as pitting or staining that do not affect the performance of the component do not present a safety concern and are therefore not considered failures. NHTSA notes that, after the vehicle environment test, TPRDs must undergo the leak test, benchtop activation test, and flow rate test, as discussed below. These subsequent tests are sufficient to ensure the vehicle environment test has not degraded the performance of the TPRD.

NHTSA agrees that either of the exposure methods described by WFS would be valid. There could also be other valid exposure methods. Therefore, NHTSA will not specify exposure by either immersion or by misting, and instead the test facility may determine an appropriate exposure method for the component.

(6) Stress Corrosion Cracking Test

Background

The stress corrosion cracking test exposes the TPRD for ten days to a moist ammonia air mixture maintained in a glass chamber. Under GTR No. 13, the moist ammonia-air mixture is achieved using an ammonia-water mixture with specific gravity of 0.94. Specific gravity is affected by temperature and, therefore, is an inconvenient metric for concentration specification because concentrations will need to be adjusted for different temperatures. NHTSA sought comment on a more direct metric for ammonia concentration specification, such as 20 weight percent ammonium hydroxide in water.

In GTR No. 13, the only requirement to pass the stress corrosion cracking test is that the components must not exhibit cracking or delaminating due to this test. NHTSA sought comment on this performance requirement and on whether there are alternative requirements for this test beyond basic visual inspection, such as subjecting the TPRD to the leak test.

Comments Received

Luxfer Gas Cylinders commented that using a more direct metric for ammonia concentration, such as 20 weight percent ammonium hydroxide in water, ''would be an improvement.'' It stated that this test is usually seen as a material test rather than a component test. Luxfer also stated that industry cylinder standards require stress corrosion testing specific to the material, which involves sectioning and microscopic visual inspection. It suggested that FMVSS No. 308 adopt the stress corrosion cracking test specified in ISO 11119, ''Gas cylinders—Refillable composite gas cylinders and tubes—Design, construction and testing—Part 2: Fully wrapped fibre reinforced composite gas cylinders and tubes up to 450 l with load-sharing metal liners,'' or ISO 11515, ''Gas cylinders—Refillable composite reinforced tubes of water capacity between 450 L and 3000 L—Design, construction and testing.'' Luxfer stated that a leak test is not an effective method to detect stress corrosion.

Auto Innovators stated that material requirements for hydrogen applications are well established in industry standards. It recommended NHTSA refer to GTR No. 13 Phase 2, which outlines material evaluation and stress corrosion cracking tests for aluminum alloys. It stated that if these standards cannot be adopted as performance requirements, alternative measures should be considered.

HATCI recommended harmonizing with GTR No. 13 Phase 2, in which the stress corrosion cracking test is confirmed through visual inspection. They cautioned that adding a leak test could lead to failures due to affected o-rings rather than actual TPRD issues. HATCI also noted that under GTR No. 13, the test only applies to TPRDs containing copper alloys and requested clarity on whether NHTSA intends to follow this approach.

WFS suggested no changes to the test procedure in GTR No. 13, emphasizing that it is already harmonized with other standards such as HPRD 1:21 and ISO 19882, ''Gaseous hydrogen—Thermally-activated pressure relief devices for compressed hydrogen vehicle fuel containers.'' They commented that third-party laboratories are capable of adjusting the moist ammonia concentration and that visual examination is the appropriate pass criteria.

Regarding the proposed concentration metric of 20 weight percent ammonium hydroxide, FORVIA disagreed with adding additional measurement criteria, noting that these tests are performed in temperature-controlled laboratories with established procedures. They recommended making any new measurement criteria optional and compatible with the specific gravity method. FORVIA also stated that a leak test may not be appropriate and supported visual inspection as sufficient for identifying cracking or delamination, advocating for consistency with GTR No. 13.

Agency Response

Regarding the performance requirement for the stress corrosion cracking test, NHTSA has decided to retain the visual inspection criterion as the only pass/fail measure. Visual inspection for cracking or delamination is the appropriate criteria for determining the results of the test. NHTSA considered the possibility of additional testing beyond visual inspection, such as leak tests, but concurs with the commenters that a leak test may not be the best test to evaluate for stress corrosion. Therefore, introducing a leak test would not effectively indicate whether stress corrosion cracking has occurred, and NHTSA has decided against requiring this additional test.

NHTSA is not adopting the stress corrosion cracking test in ISO 11119 or ISO 11515. NHTSA is implementing a stress corrosion cracking test aligned with GTR No. 13, as proposed in the NPRM.[38] This test is sufficient to address the risk of stress corrosion cracking in TPRDs used in hydrogen vehicles. NHTSA is also not including the humid gas stress corrosion cracking testing for aluminum alloys from Part I of GTR No. 13. This test is not a requirement in GTR No. 13 and was not proposed in the NPRM. Therefore, this test is outside the scope of this final rule.

Lastly, NHTSA has decided to specify an ammonia concentration between 19 weight percent and 21 weight percent ammonium hydroxide solution in water as the standard concentration for this test. This decision is based on successful testing conducted by NHTSA, which used 16.7 wt% ammonium hydroxide in water to evaluate closure devices.[39] NHTSA believes specifying between 19 weight percent and 21 weight percent ammonium hydroxide in water provides a more practical metric for ammonia concentration specification than specific gravity, while still mirroring the effect of an ammonia-water mixtures with a specific gravity of 0.94. This specification using weight percent also addresses the ambiguity regarding the variability of specific gravity due to temperature fluctuations. This concentration of between 19 and 21 weight percent falls with the range of commercially available pre-mixed ammonium hydroxide solutions.

(7) Drop and Vibration Test

Background

NHTSA proposed the drop and vibration test consistent with GTR No. 13. TPRDs are first dropped in any one of six different orientations. The units are vibrated for 30 minutes along each of the three orthogonal axes. The units are vibrated at a resonant frequency which is determined by using an acceleration of 1.5 g and sweeping through a sinusoidal frequency range of 10 to 500 Hz with a sweep time of 10 minutes. According to GTR No. 13, the resonance frequency is identified by a ''pronounced'' increase in vibration amplitude. However, if the resonance frequency is not found, the test is conducted at 40 Hz. NHTSA was concerned that specifying a pronounced

[38] *See* 89 FR 27531 (Apr. 17, 2024), *available at https://www.federalregister.gov/documents/2024/04/17/2024-07116/federal-motor-vehicle-safety-standards-fuel-system-integrity-of-hydrogen-vehicles-compressed.*

[39] See the report titled ''GTR No. 13 Fire and Closures Tests'' which can be found at: *https://downloads.regulations.gov/NHTSA-2024-0006-0002/attachment_4.pdf.* This report will also be submitted to the National Transportation Library. *https://rosap.ntl.bts.gov/.*

increase in vibration amplitude could be partially subjective. NHTSA sought comment on more objective criteria for establishing resonance, such as a frequency where the amplitude of the response of the test article is at least twice the input energy as measured by response accelerometers. Furthermore, the acceleration level was not defined in GTR No. 13 for the resonant dwells. NHTSA sought comment on an appropriate acceleration level for the resonant dwells.

Comments Received

Nikola stated that GTR No. 13 already has a defined resonance frequency and that the current test procedure is sufficient. WFS recommended maintaining the drop and vibration test as harmonized with GTR No. 13, noting that it is also consistent with HPRD 1:21 and ISO 19882. WFS explained that the phrase ''pronounced increase'' was added to GTR No. 13 for clarity and stated that a test laboratory with vibration testing capabilities should be able to detect resonance, as most shaker table software can automatically identify it. WFS stated there was no need for additional criteria to establish resonance. Regarding the acceleration level for resonant dwells or the 40 Hz default, WFS indicated that it should remain at 1.5 g, which is the same level as used in the sine sweep portion of the test.

FORVIA also supported keeping the test procedure harmonized with GTR No. 13, stating that while the measurement method is left open in the regulation, the definition of a pronounced increase is sufficiently precise. FORVIA commented that the test setup must be sensitive enough to identify the highest resonance, which is typically not an issue in practice. FORVIA expressed confusion over the justification for NHTSA's proposal to define resonance as a frequency where the amplitude response is at least twice the input energy, preferring to adhere to the existing GTR No. 13 criteria.

Agency Response

NHTSA is maintaining the proposed requirement consistent with GTR No. 13. If a resonant frequency cannot be identified, the test is conducted at 40 Hz, which is sufficiently objective. As the commenters note, test facilities will be able to detect and identify the resonant frequency, and therefore NHTSA will allow test facilities to determine the appropriate resonant frequency, or otherwise they may use 40 Hz.

(8) Leak Test

Background

NHTSA proposed the leak test consistent with GTR No. 13. The leak test evaluates the TPRD's ability to contain hydrogen at each of the following temperatures and pressures:

- Ambient temperature: 5°C to 35°C, test at 2 MPa and 125 percent NWP
- High temperature: 85°C, test at 2 MPa and 125 percent NWP
- Low temperature: −40°C, test at 2 MPa and 100 percent NWP

NHTSA sought comment on the need to perform the leak test at 2 MPa in addition to the higher pressures.

The leak evaluation involves observing the pressurized unit for hydrogen bubbles while the unit is immersed in the temperature-controlled fluid. If hydrogen bubbles are observed, the leak rate is measured by any method available to the test lab. The total leak rate must be less than 10 NmL/h, which represents an extremely low leak rate. NHTSA sought comment on the leak rate requirement of 10 NmL/hour, noting that this leak rate is much lower than the minimum hydrogen flow rate of 3.6 NmL/min necessary for initiating a flame.[40] NHTSA sought comment on objective methods for measuring the leak rate.

Comments Received

Agility commented that performing the leak test at higher pressures is sufficient and that testing at 2 MPa is unnecessary, as leak rates typically decrease with lower pressures. Nikola stated the opposite, suggesting that a container is more likely to leak at low pressure and low temperatures due to decreased rigidity. HATCI agreed with Agility, indicating that testing at the higher pressure is adequate and additional testing at 2 MPa does not add to safety assurance. However, Auto Innovators supported harmonizing with GTR No. 13, stating it is important to evaluate seal performance under both low- and high-pressure conditions as well as low temperatures.

DTNA recommended revising the proposed leak rate of 10 NmL/h, stating that it is significantly lower than the minimum hydrogen flow rate necessary to initiate a flame and suggesting a limit of 3.6 NmL/min instead. It stated that this higher limit would reduce the risk of flame initiation and account for testing variability. Agility, on the other hand, supported the 10 NmL/h leak rate, stating that it is consistent with HPRD 1 and GTR No. 13, and suggested using pressure measurements over time with trace gases as one method to determine leakage. Nikola acknowledged that although 10 NmL/h is a low rate, the impact could be amplified when considering multiple devices. It suggested using bubble tests to confirm the presence of leaks and employing mass spectrometers or gasometers to quantify the rate if bubbles are detected.

FORVIA stated disagreement that 10NmL/min is a high leak rate, given the potential for multiple leakage points. It noted that this rate would be detectable through submersion and bubble tests but recommended maintaining consistency with GTR No. 13 for both TPRDs and valves. FORVIA supported the inclusion of the low-pressure leak test, stating that poor gasket designs can leak at low pressure but may become leak-tight at higher pressures.

WFS also advocated for consistency with GTR No. 13, stating that the test accounts for both empty and full container conditions. It noted that while the high-pressure condition is typically the most severe, low pressure can be a challenging scenario in some cases. WFS supported the 10 NmL/h requirement as it aligns with HPRD 1:21 and ISO 19882 and suggested leaving the choice of measurement methods to the testing laboratories, which have various available techniques for detecting leakage at these levels.

MEMA agreed with omitting visual evaluations of bubble formation, as proposed by NHTSA, acknowledging the agency's aim to avoid subjective assessments. MEMA also supported the proposed maximum leak rate of 10 NmL/h.

Agency Response

NHTSA is maintaining the leak test as proposed. The commenters established reasons for conducting the leak test at low pressure in addition to high pressure, including gaskets leaking at low pressure levels and decreasing container rigidity at low pressures and temperatures. Regarding the leakage limit of 10 NmL/h, NHTSA notes that there may be more than one TPRD on a vehicle. Therefore, the leakage from any single TPRD must be very low and the proposed leakage rate of 10 NmL/h is a reasonable limit. Based on the comments, NHTSA will leave the leakage rate quantification method to the discretion of the test lab. As stated by the commenters, possible methods for quantification include capturing bubbles or measurement with sensitive hydrogen or helium leak detectors.

[40] SAE Technical report 2008–01–0726. Flame Quenching Limits of Hydrogen Leaks. The paper finds that the lowest possible flammable flow is about 0.005 mg/s (3.6 NmL/min).

(9) Benchtop Activation Test

Background

Three new TRPD units are tested to establish a baseline activation time, which is the average of the activation time of the three new TPRDs. TPRD units used in the pressure cycling test, accelerated life test, temperature cycling test, salt corrosion resistance test, vehicle environment test, and drop and vibration test are also tested in the benchtop activation test and these TPRDs must activate within 2 minutes of the average activation time established from the tests with the new units.

GTR No. 13 does not provide any information on how to proceed when a TPRD does not activate at all during the benchtop activation test. A TPRD that does not activate when inserted into the oven or chimney is not functioning as intended and therefore presents a safety risk. As a result, NHTSA proposed that if a TPRD does not activate within 120 minutes from the time of insertion into the oven or chimney, the TPRD is considered to have failed the test. The time limit of 120 minutes is selected based on the maximum possible duration of the CHSS fire test. NHTSA sought comment on this requirement.

Comments Received

Agility supported the proposed 120-minute time limit for TPRD activation, describing the rationale as reasonable. Auto Innovators also agreed with NHTSA's proposal regarding the failure assessment for TPRDs that do not activate within the specified period. However, Nikola expressed concern, stating that 120 minutes is too long and dangerous, and that the activation window should be limited to 2 minutes beyond the baseline established by the new units.

FORVIA agreed that a TPRD must function as intended and activate within a specified time and temperature range. It stated that a failure to activate within 120 minutes should be recognizable using sound engineering judgment. FORVIA suggested that the lack of an explicit time limit in GTR No. 13 might be intentional and recommended clear articulation of any additional failure criteria if introduced. It argued that such a long activation time is unnecessary, as a TPRD taking this long to activate under 600 °C conditions would not pass the performance-based fire test.

WFS disagreed with the 120-minute time limit, recommending that the benchtop activation test remain consistent with GTR No. 13. It noted that this test is harmonized with HPRD 1:21 and ISO 19882 and differs from the CHSS fire test. WFS argued that 120 minutes is excessively long for a chimney test, where activation usually occurs within 5 minutes, and suggested a 10-minute limit as more appropriate. It also stated that qualified test labs can determine suitable cut-off times and safely vent gas in case of TPRD failure.

Agency Response

Applying engineering judgment to determine whether a sample has passed or failed the benchtop activation test is likely to be subjective. In addition, a test lab determining an appropriate ''cut-off time'' during the benchtop activation test may also be subjective. Therefore, NHTSA is maintaining the maximum time limit of 120 minutes from insertion into the oven or chimney for the TPRD to activate. Any TPRD that does not activate within 120 minutes from insertion into the oven or chimney during the benchtop activation test, including any of the TPRDs used to establish the baseline activation time, will be considered to have failed the test.

The time limit of 120 minutes is not intended to set the activation performance timeframe. Instead, it is simply the maximum amount of time the test lab must wait without an activation before declaring the TPRD to have failed the test. This standard does not create a dangerous situation because TPRDs will likely activate much faster than 120 minutes, and the CHSS fire test evaluates the performance of the overall system in a fire scenario. The CHSS fire test also has a time limit of 120 minutes for complete CHSS venting to below 1 MPa.

(10) Flow Rate Test

Background

The flow rate test evaluates the TPRD for flow capacity of a TPRD. Flow rate through the TPRD is measured with the inlet pressurized to 2 MPa and the outlet unpressurized. The lowest measured flow rate must be no less than 90 percent of a baseline flow rate established as the measured flow rate of a new TPRD. The number of significant figures used in the measurement of flow rate can impact the test result. For example, a test flow rate of 1.7 flow units compared against a baseline flow rate of 2.0 flow units does not meet the requirement. However, in this case, if flow rate were measured using only one significant figure, the two flow rates would be identical (2 flow units). As a result, NHTSA proposed requiring that the flow rate be measured in units of kilograms per minute with a precision of at least 2 significant digits. NHTSA sought comment on this proposed requirement.

Comments Received

Auto Innovators and HATCI expressed support for NHTSA's proposal regarding the use of flow rate measurement in units of kilograms per minute with a precision of at least two significant digits. Nikola also agreed with the proposal to use two significant digits. However, Agility opposed using mass flow rate units, emphasizing that the properties of different gases must be considered in such an approach. It stated that the use of percentage difference as specified in GTR No. 13 is clear and not open to interpretation.

WFS recommended no changes to the existing procedure in GTR No. 13, noting that the test is harmonized with HPRD 1:21 and ISO 19882. It argued that specifying units as kilograms per minute is unnecessary since most flow tests for hydrogen components are conducted in grams per second. It explained that the key aspect of the test is the comparison of one TPRD flow rate to another, making the specific units less critical. WFS also cautioned that requiring two significant digits might suggest a level of precision not achievable with current equipment, due to minor flow fluctuations during testing. It added that a flow rate measured in grams per second with one significant digit can be more precise than a rate in kilograms per hour with two significant digits. FORVIA provided a neutral stance but noted that GTR No. 13, HPRD 1, and ISO 19882 also use ±2 percent.

Agency Response

NHTSA is maintaining the specification for units of kilograms per minute with at least two significant digits. NHTSA conducted testing in which these units were used successfully by the test lab to evaluate TPRD flowrates.[41] The test lab used a Coriolis meter to directly measure the mass flow rate through each TPRD in units of kg/min. NHTSA also notes that units are interchangeable, so other test labs may use units such as g/s and simply convert the results to kg/min using the appropriate conversion factors, while preserving the significant digits in the measurement.

[41] See the report titled ''GTR No. 13 Fire and Closures Tests'' which can be found at: *https://downloads.regulations.gov/NHTSA-2024-0006-0002/attachment_4.pdf.* This report will also be submitted to the National Transportation Library. *https://rosap.ntl.bts.gov/.*

(11) Atmospheric Exposure Test

Background

GTR No. 13 includes an atmospheric exposure test to ensure that non-metallic components that are exposed to the atmosphere and provide a fuel-containing seal have sufficient resistance to oxygen. This test requires that the component not crack nor show visible evidence of deterioration upon exposure to pressurized oxygen for 96 hours at 70 °C. However, NHTSA is concerned that this test is not objectively enforceable because the requirement involves a subjective determination of evidence of deterioration. Furthermore, the test would require NHTSA to determine which components are non-metallic, exposed to the atmosphere, and provide a fuel-containing seal. As a result, this test was not included in the proposed FMVSS No. 308. NHTSA sought comment on not including the atmospheric exposure test.

Comments Received

Agility stated that the atmospheric exposure test is appropriate for non-metallic materials, but noted that most hydrogen components are metallic and would not require such a test. It added that this test could be relevant for electrical components with plastic connectors. Auto Innovators and HATCI supported NHTSA's proposal to exclude the atmospheric exposure test, agreeing with the agency's reasoning. Glickenhaus also agreed with the decision, stating that the requirement for ''no visible deterioration'' is not objectively measurable and should be omitted.

WFS commented that the atmospheric exposure test is used in various industry standards and noted that in third-party laboratories, determining cracks in rubber materials during testing has been clear for those incompatible with oxygen exposure. WFS indicated that even if the test is removed from FMVSS No. 308, manufacturers may still conduct the test in line with the requirements of industry standards. FORVIA stated that while it believes the test is feasible and visual inspection could serve as a pass/fail criterion, it expressed no objections if NHTSA decides to remove the test.

Agency Response

NHTSA is not including the atmospheric exposure test in FMVSS No. 308. The test criteria are not objectively enforceable, and the commenters did not provide any alternative criteria for conducting the test with improved objectivity. The commenters also did not provide any specific methodology for NHTSA to determine which components are non-metallic and provide a fuel-containing seal within the closure device of interest.

c. Check Valves and Shut-Off Valves

(1) Hydrostatic Strength Test

Background

The hydrostatic strength test is conducted to ensure the valves can withstand extreme pressure of up to 250 percent NWP. Additionally, the test also ensures that the burst pressure of the valves exposed to various environmental conditions during prior testing is not degraded beyond 80 percent of a new unexposed valve's burst pressure.

In the event of a significant leak, it may become impossible for the test laboratory to increase pressure on the valve. This condition occurs when any increase in applied pressure is offset by leakage flow, thereby negating the pressure increase. If it occurs, it is not possible to complete testing. To address this issue, NHTSA proposed that valves shall not leak during the hydrostatic strength test, and that a leak would constitute a test failure. NHTSA sought comment on the requirement that valves not leak during the hydrostatic strength test.

Comments Received

Auto Innovators agreed with NHTSA's proposal to require that valves not leak during this test. WFS also supported NHTSA's proposal, commenting that leakage during a hydrostatic strength test would signify a rupture of the pressure-containing boundary and thus constitute a failure. It pointed out that this detail is implied in HGV 3.1–2022 and further clarified in ISO 19887, ''Gaseous Hydrogen—Fuel system components for hydrogen-fuelled vehicles,'' which states: ''The components shall be examined to verify that leakage or rupture has not occurred.'' WFS added that adopting this language could help with clarity and harmonization if NHTSA deems it necessary.

In contrast, FORVIA disagreed with the proposal, stating that leak tightness above 125 percent NWP is not required and that such a requirement would not correspond to actual service conditions. It suggested that in the event of a leak during hydrostatic testing, there should be no test result, and the test should be repeated. FORVIA also commented that the leak test should sufficiently address this potential failure mode.

Agency Response

While NHTSA proposed the requirement that the valve not leak during the hydrostatic strength test, this requirement is not intended to test specifically for leakage above 125 percent NWP. Unlike the leak test, the valve will not be submerged in a fluid and observed for bubbles from leakage during the hydrostatic strength test. Instead, this requirement is intended to avoid a situation where a test lab cannot complete testing due to significant leakage from the valve that prevents continued pressurization to the required pressures. Even if such a test were considered ''no result'' and repeated, the same leak could occur with subsequent test samples. Therefore, there needs to be a requirement that the valve not leak to an extent that prevents continued pressurization in accordance with S6.2.6.2.1(c) during the hydrostatic strength test. Accordingly, NHTSA is revising this part of the requirement to state the valve ''shall not leak to an extent that prevents continued pressurization in accordance with S6.2.6.2.1(c).''

Regarding adding the language proposed by WFS, NHTSA is revising the language as stated above. This is the most clear and concise way to state the requirement.

(2) Leak Test

Background

NHTSA proposed the leak test consistent with GTR No. 13, and similar to the leak test discussed above for TPRDs. NHTSA sought comment on objective methods for measuring the leak rate.

Comments Received

Nikola stated that the specified leak rate of 10 NmL/h, while applicable to a single point, could accumulate quickly when considering multiple leak points throughout the CHSS. WFS commented that the leak test is harmonized with industry standards and can be measured using various methods, including bubble capture or sensitive hydrogen or helium leak detectors capable of measuring levels lower than visible bubbles. It stated there is no need for NHTSA to specify a particular measurement method, as it can be determined by the testing facility based on available equipment.

FORVIA disagreed with the proposed leak rate of 10 NmL/h, stating that it is relatively high, especially if multiple leakage points in the vehicle are at this level. It suggested that the leak rate can be identified using submersion and bubble tests, but noted that more

accurate testing methods, such as global accumulation tests, are available.

Agency Response

NHTSA is maintaining the leak test as proposed. NHTSA notes that there may be more than one closure device on a vehicle. Therefore, the leakage from any single closure device must be very low and the proposed leakage rate of 10 NmL/h is a reasonable limit. Based on the comments, NHTSA will leave the leakage rate quantification method to the test lab. As stated by the commenters, possible methods for quantification include capturing bubbles or measurement with sensitive hydrogen or helium leak detectors.

(3) Extreme Temperature Pressure Cycling Test

Background

The extreme temperature pressure cycling test simulates extreme temperature conditions that may lead to gas release failures when combined with pressure cycling. The total number of operational cycles is 15,000 for the check valve, consistent with the 15,000 cycles used for the TPRD above. The total number of operational cycles is 50,000 for the shut-off valve. The higher 50,000 cycles for the shut-off valve reflects the multiple pressure pulses the shut-off valve experiences as it opens and closes repeatedly during service. In contrast, the check valve only experiences a pressure pulse during fueling. NHTSA sought comment on the number of pressure cycles for check valves and shut-off valves.

Pressure cycling is conducted at different environmental temperatures and pressures:

- Ambient: Between 5.0°C and 35.0°C, 100 percent NWP
- High: 85°C, 125 percent NWP
- Low: −40 °C, 80 percent NWP

After cycling, each valve is subjected to 24 hours of ''chatter flow'' to simulate the chatter condition described above. Chatter flow means the application of a flow rate of gas through the valve that results in chatter as described above. NHTSA was concerned, however, that the application of chatter flow could be partially subjective. NHTSA sought comment on the following aspects of the chatter flow test:

- Appropriate methodology or a procedure for inducing chatter flow.
- Appropriate instrumentation and criteria to measure and quantify chatter flow such as a decibel meter and minimum sound pressure level.
- How to proceed in cases where no chatter occurs.
- The specific safety risks that are addressed by the chatter flow test.
- The possibility of not including the chatter flow test.

In the case of shut-off valves, GTR No. 13 specifies that the chatter flow test is required only in the case of a shut-off valve which functions as a check valve during fueling and that the flow rate used to induce chatter should be within the normal operating conditions of the valve. However, NHTSA has no way of determining whether a shut-off valve is functioning as a check valve during fueling or the normal operating conditions of the valve. As a result, NHTSA proposed that the chatter flow test will apply to all shut-off valves and will not specify flow rate limitations for the chatter flow test. NHTSA sought comment on this decision.

Comments Received

Auto Innovators recommended aligning the number of pressure cycles with GTR No. 13. FORVIA expressed support for the proposed minimum values, confirming that 15,000 cycles for check valves and 50,000 cycles for shut-off valves are consistent with GTR No. 13. Similarly, Nikola commented that safety devices should adhere to higher standards, in alignment with GTR No. 13. Agility suggested using 50,000 cycles for both check valves and shut-off valves.

Regarding the chatter flow test, HATCI requested that NHTSA exclude this requirement if a CHSS component prevents chatter within the shut-off valve, suggesting that manufacturers could provide documentation to demonstrate this. WFS stated that the test is harmonized with industry standards and stated it is sufficiently defined. It commented that GTR No. 13 already describes an appropriate methodology for inducing chatter flow by specifying a gas flow rate through the valve at the level that causes the most chatter. WFS stated that additional instrumentation, such as decibel meters, is unnecessary since chatter is detectable by ear. WFS also stated that if no chatter occurs during the flow test, GTR No. 13 specifies that the 24-hour chatter test is not necessary. Regarding the specific safety risks that are addressed by the chatter flow test, WFS stated that chatter could lead to premature wear and failure of the valve's check functionality. WFS recommended keeping the procedure as written in GTR No. 13, noting that if a shut-off valve lacks check valve functionality, the test should not be required since chatter only occurs during unidirectional flow through a check valve.

Agency Response

NHTSA is maintaining the number of pressure cycles as proposed. For the reasons discussed in the NPRM, and confirmed by the commenters, 15,000 pressure cycles for check-valves and 50,000 pressure cycles for shut-off valves are the industry standard for minimum safety of these components.[42]

NHTSA is maintaining the chatter flow test as proposed. NHTSA will leave it to test labs to determine the flowrate that cases the most valve flutter. As the commenters note, this determination could be accomplished by listening for audible sound changes. In the case of valves that do not experience chatter, or vehicles with components that prevent chatter, the chatter flow test should not adversely impact the test results because these valves will not experience chatter. Therefore, a specific exemption is not required for shut-off valves that do not experience chatter or for vehicles that have components to prevent chatter flow.

As stated above, NHTSA has no way of determining whether a shut-off valve is functioning as a check valve during fueling or the normal operating conditions of the valve; therefore NHTSA is maintaining the test as proposed. This determination is not expected to adversely impact test results because, as stated by the commenters, chatter only occurs during unidirectional flow through a check valve. Therefore, if a shut-off valve is not functioning as a check valve, it will not experience unidirectional flow nor chatter.

(4) Salt Corrosion Resistance Test

Background

NHTSA proposed a salt corrosion resistance test for check valves and shut-off valves equivalent to the salt corrosion resistance test for TPRDs discussed above.

Comments Received

Auto Innovators recommended that NHTSA maintain consistency with GTR No. 13. Nikola agreed with the proposal, noting that it is harmonized with industry standards.

Agency Response

Based on the comments received, NHTSA is maintaining the salt corrosion test as proposed.

[42] *See* 89 FR 27530, 27533 (Apr. 17, 2024), *available at https://www.federalregister.gov/documents/2024/04/17/2024-07116/federal-motor-vehicle-safety-standards-fuel-system-integrity-of-hydrogen-vehicles-compressed.*

(5) Vehicle Environment Test

Background

NHTSA proposed a vehicle environment test for check valves and shut-off valves equivalent to the vehicle environment test for TPRDs discussed above.

Comments Received

Auto Innovators recommended that NHTSA remain consistent with GTR No. 13. Nikola stated that the tests from GTR No. 13 are aligned with industry standards and would be conducted by manufacturers regardless.

Agency Response

Based on the comments received, NHTSA is maintaining the vehicle environment test as proposed.

(6) Atmospheric Exposure Test

Background

For the reasons discussed above to the TPRD atmospheric exposure test, NHTSA did not propose the atmospheric test for check valves and shut-off valves.

Comments Received

Auto Innovators and HATCI both expressed support for NHTSA's proposal to not include the atmospheric exposure test for check valves and shut-off valves. WFS suggested leaving the requirement in the FMVSS, consistent with its feedback on the atmospheric exposure test for TPRDs. However, it noted that if NHTSA chooses to remove the test, manufacturers will still perform it in accordance with HGV 3.1. FORVIA commented that the test is feasible, and a visible inspection could serve as a pass/fail criterion, but indicated that it would find it acceptable if NHTSA decided to eliminate this test.

Agency Response

NHTSA is not including the atmospheric exposure test for check valves and shut-off valves for the same reasons discussed above for TPRDs.

(7) Electrical Tests

Background

The electrical tests apply to the shut-off valve only. The electrical tests evaluate the shut-off valve for:

- Leakage, unintentional valve opening, fire, and/or melting after exposure to an abnormal voltage.
- Failure of the electrical insulation between the power conductor and casing when the valve is exposed to a high voltage.

The exposure to abnormal voltage is conducted by applying twice the valve's rated voltage or 60 V, whichever is less to the valve for at least one minute. After the test, the valve is subject to the leak test and leak requirements. The test for electrical insulation is conducted by applying 1000 V between the power conductor and the component casing for at least two seconds. The isolation resistance between the valve and the casing must be 240 kΩ or more.

Some valves may have requirements specified by their manufacturers for peak and hold pulse width modulation duty cycle. NHTSA sought comment on whether and how to adjust the proposed test procedure to account for a manufacturer's specified peak and hold pulse width modulation (PWM) duty cycle requirements.

Comments Received

Commenters provided various perspectives on potential adjustments to the proposed test procedure to account for a manufacturer's specified peak and hold PWM duty cycle requirements. Auto Innovators stated that more information is needed to understand NHTSA's intent, emphasizing that ''operation of the valve has no bearing on insulation resistance'' and that the insulation resistance should be verified between a single conductor and the component casing, regardless of the modulation type. HATCI similarly stated that the PWM or peak specification is not relevant to the electrical tests, arguing that these tests are meant to check compliance under abnormal conditions, such as atypical voltages. Agility suggested that any inclusion of PWM requirements would go beyond the requirements of GTR No. 13 and would require further investigation, adding that it did not recommend including such requirements. WFS commented that the test should be consistent with GTR No. 13 and noted that peak and hold modulation is only applicable when testing to open a valve and keep it open, which is not the purpose of this insulation resistance test. WFS stated that the coil is not actually energized during this test, as it is similar to a Hipot test where one lead is attached to the coil and the other to the body to confirm insulation.

FORVIA stated that NHTSA appears to be proposing new test procedures for valves, specifically related to PWM duty cycle requirements, and acknowledged concerns about additional certification tests to address specific manufacturer-set operational requirements. It stated that these operational conditions would already be thoroughly evaluated during the manufacturer's Design Validation (DV) and Production Validation (PV) phases, where the valve's performance is tested against specified requirements. FORVIA concluded that the existing DV and PV processes adequately address concerns about PWM duty cycles and stated that additional test scenarios are unnecessary. It also recommended maintaining equivalence with GTR No. 13 and noted that the test is independent of peak/hold or modulation of the voltage, as it validates the component's ''electrical robustness.''

Agency Response

NHTSA is maintaining the electrical tests as proposed. As supported by the commenters, NHTSA has determined that procedures to account for pulse width modulation specifications are not necessary. The electrical tests expose the valve to abnormal voltages and evaluate its insulation resistance. The results of these tests will not be affected by PWM variations during testing.

(8) Vibration Test

Background

The vibration test evaluates a valve's resistance to vibration. The valve is pressurized to 100 percent NWP and exposed to vibration for 30 minutes along each of the three orthogonal axes (vertical, lateral, and longitudinal). After vibration, the valve shall comply with the leak test and the hydrostatic strength test to verify it retains its basic ability to contain hydrogen and resist burst due to over-pressurization. GTR No. 13 also contains a requirement that ''each sample shall not show visible exterior damage that indicates that the performance of the part is compromised.'' Showing signs of damage is a subjective measure and lacks the objectivity needed per the Motor Vehicle Safety Act. Therefore, this language was removed.

Comments Received

Auto Innovators expressed agreement with NHTSA's assessment, stating that the lack of an objective measure for evaluating vibrations justified the removal of the language. Nikola also indicated its agreement with this decision.

Agency Response

NHTSA is maintaining the vibration test as proposed, which does not include the requirement regarding visible exterior damage indicating that the performance of the part is compromised.

(9) Stress Corrosion Cracking Test

Background

NHTSA proposed conducting the stress corrosion cracking test in the

same manner and for the same reasons discussed above for TPRDs.

Comments Received

Auto Innovators agreed with NHTSA's proposal.

Agency Response

NHTSA will maintain an equivalent stress corrosion cracking test for check-valves and shut-off valves as the stress corrosion cracking test for TPRDs, discussed above.

12. Labeling Requirements

Background

NHTSA proposed that the container label(s) include the following information:

- Manufacturer, serial number, and date of manufacture.
- The statement ''Compressed Hydrogen Only.''
- The container's NWP in MPa and pounds per square inch (psi).
- Date when the system should be removed from service.
- BP_O in MPa and psi.

Comments Received

Nikola recommended adding a DOT/FMVSS compliance statement to the label. MEMA agreed with NHTSA's proposal to list information such as the manufacturer's name and contact details, serial number, NWP, fuel type, and the container's service removal date. However, MEMA objected to including an inspection schedule on the label. It also pointed out that such a requirement is not part of GTR No. 13 and requested NHTSA reconsider its inclusion. Glickenhaus noted a lack of sufficient information to specify a performance standard for label attachment that would prevent localized degradation or stress.

Agency Response

As discussed above, NHTSA will not require BP_O to be listed on the container label. NHTSA is maintaining the other labeling requirements as proposed. These labeling and inspection requirements are consistent with the established labeling requirements for CNG fuel containers in FMVSS No. 304.[43] Having this information on the container label will help operators properly maintain their vehicles through regular safety inspections.

Additionally, since FMVSS No. 308 is a vehicle-level standard, the DOT/FMVSS compliance statement should be located on the vehicle itself, not directly on the container. Lastly, while concerns were raised about label attachment durability, label attachment methods are expected to be developed based on best practices, and this issue does not affect the requirement to specify information on the container label.

C. FMVSS No. 307, ''Fuel System Integrity of Hydrogen Vehicles''

Background

FMVSS No. 307 sets requirements for the vehicle fuel system to mitigate hazards associated with hydrogen leakage and discharge from the fuel system, as well as requirements to ensure hydrogen leakage, hydrogen concentration in enclosed spaces of the vehicle, and hydrogen container displacement are within safe limits post-crash. The fuel system integrity requirements for normal vehicle operations would apply to all hydrogen-fueled vehicles, while the post-crash fuel system integrity requirements only apply to light vehicles and compressed hydrogen-fueled school buses regardless of GVWR. NHTSA sought comment on the application of FMVSS No. 307 to all vehicles, including heavy vehicles (vehicles with a GVWR greater than 4,536 kg (10,000 pounds). As proposed, portions of FMVSS No. 307 would apply to all hydrogen vehicles regardless of GVWR. However, not all vehicles would be subject to crash testing under FMVSS No. 307. As described below, passenger cars, multipurpose passenger vehicles, trucks and buses with a GVWR of less than or equal to 4,536 kg would be subject to barrier crash testing, as would school buses with a GVWR greater than 4,536 kg. Heavy vehicles other than school buses with a GVWR greater than 4,536 kg would not be subject to crash testing under the proposed standard.

Comments Received

Agility commented that FMVSS No. 307 should not apply to all vehicles, citing significant differences between light and heavy vehicles that warrant separate consideration. It stated that while some requirements could be the same, fuel system-specific configurations and integration into the vehicle body should be addressed separately, given the differences in vehicle accelerations and impacts based on GVWR. Luxfer Gas Cylinders supported the application of FMVSS No. 307 to all vehicles. Auto Innovators stated that while the safety and integrity of hydrogen vehicles are priorities regardless of size, it does not support the inclusion of heavy vehicles under FMVSS No. 307 at this time. Auto Innovators cited the design implications for heavy vehicles, which have not been previously subject to such requirements, and called for further research to justify this inclusion. It recommended that if NHTSA considers including heavy vehicles, a comprehensive regulatory impact analysis should be conducted, and a new rulemaking proposal issued as either a separate rulemaking notice or a supplemental notice of proposed rulemaking. Auto Innovators also stated the need for additional research to determine if alternative test procedures are required to evaluate heavy vehicle performance and understand the potential impact on vehicle design. Nikola stated ''leave it to the OEM to decide.''

Agency Response

NHTSA is maintaining the application of FMVSS No. 307 as proposed, consistent with GTR No. 13, which applies to both light and heavy vehicles.[44] While Auto Innovators cited need for more research to support application of FMVSS No. 307 to heavy vehicles, Hyundai Motor Group noted that heavy commercial vehicles and buses will be important types of hydrogen powered vehicles. Indeed, NHTSA and industry expect heavy vehicles to comprise a significant portion of the hydrogen fleet. In 2023, about 33 percent of hydrogen-powered vehicles were commercial vehicles and this percentage is expected to grow in the coming years.[45] Because hydrogen fuel poses risks regardless of a vehicle's GVWR, safety need compels that the requirements for normal vehicle operation apply to heavy vehicles just as they apply to light vehicles so long as the standard is able to be practicable and objective. The performance tests under normal vehicle operations adopted in the final rule are aligned with GTR No. 13 and have already been implemented for hydrogen powered vehicles (regardless of GVWR) in other

[43] FMVSS No. 304, ''Compressed natural gas fuel container integrity.'' *https://www.ecfr.gov/current/title-49/subtitle-B/chapter-V/part-571/subpart-B/section-571.304.*

[44] The scope of GTR No. 13 states that ''[t]his regulation applies to all hydrogen-fueled vehicles of Categories 1 and 2 with a maximum design speed exceeding 25 km/h.'' ''Category 1 vehicle'' means a power-driven vehicle with four or more wheels designed and constructed primarily for the carriage of (a) person(s). ''Category 2 vehicle'' means a power-driven vehicle with four or more wheels designed and constructed primarily for the carriage of goods. *See* TRANS–WP29–1045e, Annex 2, *https://unece.org/DAM/trans/doc/2005/wp29/TRANS-WP29-1045e.pdf.*

[45] *See* Global Market Insights: Hydrogen Vehicle Market size, *https://www.gminsights.com/industry-analysis/hydrogen-vehicle-market#:~:text=Hydrogen%20Vehicle%20Market%20size%20was,expenses%20associated%20with%20hydrogen%20vehicles.*

countries.[46] These tests are simple and can be performed similarly for light and heavy vehicles. Therefore, the same minimum safety requirements must be applied to all vehicles that use compressed hydrogen as a fuel source. Specifically, heavy vehicles must meet the same requirements as light vehicles for fueling receptacles, hydrogen discharge systems, protection against flammable conditions, fuel system leakage, and tell-tale warnings provided to the driver. This approach also harmonizes with commenters' requests for harmonization with GTR No 13.[47]

Furthermore, NHTSA will not leave it to vehicle manufacturers to decide whether to apply FMVSS No. 307 to their vehicles. Allowing manufacturers to decide whether to apply FMVSS No. 307 to their vehicles would not be consistent with the application of other FMVSS.

As discussed below, NHTSA agrees more research would be beneficial before the crash test requirements of FMVSS No. 307 are applied to all heavy vehicles. Hyundai suggested post-crash requirements similar to that proposed for heavy school buses. EMA suggested use of component level tests, while Nikola stated it is developing its own crash test requirements based on the FMVSS No. 214 side impact moving barrier crash test. This final rule only requires heavy vehicles to comply with the fuel system integrity requirements under normal vehicle operations. As discussed below, NHTSA is considering conducting research on post-crash requirements for heavy vehicles and will consider the commenters' suggestions on this matter.

1. Enclosed or Semi-Enclosed Spaces Definition

Background

GTR No. 13 defines ''enclosed or semi-enclosed spaces' as ''the special volumes within the vehicle (or the vehicle outline across openings) that are external to the hydrogen system (storage system, fuel cell system, internal combustion engine (ICE) and fuel flow management system) and its housings (if any) where hydrogen may accumulate (and thereby pose a hazard).'' NHTSA proposed a similar definition of ''enclosed or semi-enclosed spaces means the volumes external to the hydrogen fuel system such as the passenger compartment, luggage compartment, and space under the hood.'' NHTSA also proposed defining that ''hydrogen fuel system means the fueling receptacle, CHSS, fuel cell system or internal combustion engine, fuel lines, and exhaust systems.''

Comments Received

EMA raised concerns about the proposed definition of ''enclosed or semi-enclosed spaces,'' calling it ambiguous and a departure from NHTSA's intent to harmonize with GTR No. 13. It commented that NHTSA's use of ''such as'' implies a non-exhaustive list, potentially encompassing unintended areas outside the vehicle's hydrogen system. It cited various references in the NPRM where NHTSA repeatedly linked ''enclosed or semi-enclosed spaces'' to volumes that allow hydrogen accumulation. EMA highlighted specific alleged problems with the proposed definition's broadness, such as in the fueling receptacle requirements of S5.1.1, arguing the term's literal interpretation would limit receptacle mounting to components within the hydrogen system, leading to potentially unsafe situations. Similarly, in section S5.1.3.1(c) on pressure relief systems, EMA argued that directing hydrogen discharge solely towards the hydrogen system is unsafe. It noted that the proposed term appears nine times outside the definition in FMVSS No. 307, with several instances relating to hydrogen detection. EMA suggested revising the definition to align with GTR No. 13 or adding a specification that such spaces are where hydrogen can accumulate and pose a hazard.

FORVIA also expressed the need for clearer criteria, recommending NHTSA define ''semi-enclosed spaces'' by specifying volumes and enclosed sides to avoid testing ambiguities. Meanwhile, Auto Innovators opposed the inclusion of ''space under the hood'' in the definition, stating it diverged from GTR No. 13.

Agency Response

NHTSA agrees with the commenters that the proposed definition of ''enclosed or semi-enclosed spaces'' is vague and ambiguous. To avoid ambiguity, NHTSA has revised the definition of enclosed or semi-enclosed spaces to mean ''the passenger compartment, luggage compartment, and space under the hood.'' This definition no longer contains the words ''such as,'' so it no longer implies the inclusion of ambiguous additional volumes beyond those listed in the definition.

The ''space under the hood'' is included in the definition of enclosed or semi-enclosed spaces because there is a risk of hydrogen accumulation under the hood just as there is a risk of hydrogen accumulation in the passenger compartment and/or in the luggage compartment. If hydrogen were to accumulate heavily in the space under the hood, it could result in a fire if an ignition source were present. By including the ''space under the hood'' in the definition of enclosed or semi-enclosed spaces, the requirements of FMVSS No. 307 S5.1.3(b) apply, thereby preventing accumulation of hydrogen to unsafe levels under the hood.

Furthermore, NHTSA believes that including ''space under the hood'' in the enclosed and semi-enclose spaces is consistent with GTR No. 13. GTR No. 13 defines enclosed or semi-enclosed spaces as ''the special volumes within the vehicle (or the vehicle outline across openings) that are external to the hydrogen system (storage system, fuel cell system, internal combustion engine (ICE) and fuel flow management system) and its housings (if any) where hydrogen may accumulate (and thereby pose a hazard).'' Space under the hood can be considered a special volume within the vehicle, external to the hydrogen system and its housings, where hydrogen may accumulate.

2. Fuel System Integrity During Normal Vehicle Operations

a. Fueling Receptacles

Background

The first proposed requirement for the fueling receptacle was to prevent reverse flow to the atmosphere. The second proposed requirement was for a label with the statement, ''Compressed Hydrogen Only'' as well as the statement ''Service pressure _____ MPa (_____ psig).'' The label must also contain the statement, ''See instructions on fuel container(s) for inspection and service life.'' The third proposed requirement was for positive locking that prevents the disconnection of the fueling hose during fueling. The fourth proposed requirement was for protection against ingress of dirt and water to protect the fueling receptacle from contamination that could lead to degradation of the fuel system over time. The fifth proposed requirement was to prevent the receptacle from being mounted in a location that would be highly susceptible to crash deformations in order to prevent degradation in the

[46] *See* ECE R.134, ''Uniform provisions concerning the approval of motor vehicles and their components with regard to the safety-related performance of hydrogen fuelled vehicles,'' *https://unece.org/transport/documents/2024/10/standards/addendum-133-regulation-no-134-revision-1.*

[47] Hyundai and Nikola are already producing vehicles that comply with GTR No. 13 fuel system integrity requirements. As of October 2024, Nikola has sold 235 fuel cell electric Class 8 heavy-duty trucks in the United States. About 70 Hyundai Class 8 XCIENT fuel cell trucks have already been sold in the United States.

event of a crash. NHTSA also proposed that the receptacle be prevented from being mounted in the enclosed or semi-enclosed spaces of the vehicle because these areas can accumulate hydrogen.

NHTSA proposed that the assessment for all five receptacle requirements would be by visual inspection. NHTSA sought comment on the proposed requirements for the fueling receptacle and on the objectivity of assessment by visual inspection.

Comments Received

Luxfer Gas Cylinders questioned how NHTSA intends to conduct visual inspections of the fueling receptacle and inquired about the number of receptacles that would be tested annually. It also questioned how positive locking would be assessed for the variety of vehicle designs in service. Luxfer further commented on the requirement that the fueling receptacle should not be mounted in impact energy-absorbing areas, stating that since receptacles are typically mounted on a vehicle's outer surface for accessibility, any such surface is inherently vulnerable in a crash, making this requirement appear unnecessary.

Auto Innovators noted that there is no reference test provided for the requirement to prevent reverse flow to the atmosphere and recommended using the GTR No. 13 leak test for check valves and shut-off valves. It also requested clarification on the label location. Air Products recommended adding a disconnect switch to fueling receptacles for medium and heavy vehicles to prevent starting or drive-away, as used in light vehicles. It stated that GTR No. 13 Phase 2 standardizes references to fueling receptacle profiles to ensure vehicles are fueled only with appropriate pressure classes and prevent cross-fueling with other compressed gas dispensing stations. Air products cited standards ISO 17268, ''Gaseous hydrogen land vehicle refuelling connection devices,'' and SAE J2600, ''Compressed Hydrogen Surface Vehicle Fueling Connection Devices,'' in this context.

HATCI expressed concerns about the lack of space for the proposed labeling requirements and recommended omitting additional lines of text compared to GTR No. 13. It supported the requirement to prevent ingress of water and oil, agreeing that this could affect the closure device tests. Nikola and Agility both stated that visual inspection is an acceptable means of assessment. FORVIA disagreed with the proposed requirements and requested that NHTSA align them exactly with GTR No. 13.

Agency Response

Regarding the requirement for the fueling receptacle to not be mounted in locations ''highly susceptible to crash deformations,'' the proposed requirements do not use the term ''highly susceptible.'' Instead, NHTSA proposed that ''[t]he fueling receptacle shall not be mounted to or within the impact energy-absorbing elements of the vehicle.'' However, in response to concerns raised, NHTSA has reconsidered the necessity of this requirement.

The commenters correctly note that it is generally expected for the fueling receptacle to be mounted on the exterior of the vehicle to facilitate fuel filling, which inherently exposes it to potential damage in the event of a crash. NHTSA agrees that this reality limits the effectiveness and practicality of restricting the mounting location based on energy-absorbing elements of the vehicle. Given that any surface-mounted device, by its nature, could be subject to damage in a collision, maintaining the proposed restriction would not significantly enhance vehicle safety and could introduce unnecessary design constraints.

Therefore, after careful review, NHTSA has decided to remove the requirement that fueling receptacles shall not be mounted in the energy-absorbing elements of the vehicle. This decision aligns with the practical considerations raised by commenters and reflects the understanding that modern vehicle design incorporates various safety mechanisms, such as reinforced mounting systems and advanced materials, that can adequately protect external components like fueling receptacles from damage without the need for this specific regulation. NHTSA believes that removing this requirement will not compromise safety objectives while allowing for greater flexibility in vehicle design.

NHTSA is maintaining the other fueling receptacle requirements as proposed. NHTSA will conduct visual inspection by observation of the fueling receptacle, its location within the vehicle, and through basic operation of the vehicle such as attaching a fueling nozzle to the receptacle to test for positive locking. NHTSA has discretion regarding how many vehicles it inspects per year.

NHTSA notes that the referenced GTR No. 13 leak test outlines the check valve and shut-off valve leak test. While a fueling receptacle may contain a check valve, the test procedure is not written to accommodate fueling receptacles. In addition, testing of CHSS check valves is already covered under FMVSS No. 308 S5.1.5.2, and it would be redundant to apply the same test to the receptacle. As a result, NHTSA is maintaining visual inspection as the evaluation method for the requirements of FMVSS No 307 S5.1.1.

NHTSA is not requiring a disconnect switch to prevent vehicle starting and drive away on light duty vehicles. However, vehicle manufacturers are free to include this technology in their designs.

NHTSA is also not including requirements for the fueling receptacle profile or setting requirements for different ''Pressure Classes.'' Such specification would be design restrictive.

There is no exact location specified for the location of the fueling receptacle label. The presence of this label will be verified by visual inspection. Manufacturers may consider this inspection method when determining where to locate the label. The additional statement ''See instructions on fuel container(s) for inspection and service life'' is consistent with FMVSS No. 303.[48] This statement is important for the purpose of helping operators properly maintain their vehicles through regular safety inspections.

Lastly, NHTSA notes that the fueling receptacle design is not standardized by GTR No. 13. The preamble to GTR No. 13 simply references industry standards where examples of fueling receptacles can be found. This language in GTR No. 13does not constitute a requirement or a standardization of the fueling receptacle. NHTSA believes fueling receptacle designs may still be evolving. Therefore, while there may be safety benefits to standardizing fueling receptable designs, to do so at this time would be premature.

b. Over-Pressure Protection for Low-Pressure Systems

Background

NHTSA proposed GTR No. 13's requirement of over-pressure protection for low-pressure systems. Accordingly, the agency proposed requiring countermeasures to prevent failure of downstream components in the event a pressure regulator fails to properly reduce the fuel pressure from the much higher pressure in the CHSS. The activation pressure of the overpressure protection device shall be lower than or equal to the maximum allowable working pressure for the appropriate

[48] FMVSS No. 303, ''Fuel system integrity of compressed natural gas vehicles,'' *https://www.ecfr.gov/current/title-49/subtitle-B/chapter-V/part-571/subpart-B/section-571.303.*

section of the hydrogen system as determined by the manufacturer. NHTSA sought comment on the requirement for an overpressure protection device in the fuel system and how to test the performance of such a device.

Comments Received

Auto Innovators recommended that NHTSA align with GTR No. 13 and avoid requiring an additional test. It stated that the main areas of GTR No. 13 cover CHSS, high-pressure closures, PRD, fuel lines, electrical safety, and performance and other subsystem requirements in the vehicle. It commented that the proposed overpressure protection falls under the ''Hydrogen Delivery'' system of a hydrogen fuel cell vehicle, which it stated should be outside the scope of this regulation. Auto Innovators noted that while low-pressure systems are not covered by GTR No. 13, it clearly defines overpressure protection for these systems as ensuring that ''the hydrogen system downstream of a pressure regulator shall be protected against overpressure due to the possible failure of the pressure regulator,'' which each manufacturer will verify. Thus, it stated that there is no need to add this requirement to FMVSS No. 307.

HATCI supported NHTSA's proposal to harmonize with GTR No. 13 and agreed that an overpressure protection device should be included in the system. However, it stated that evaluating every overpressure protection device in a system would need to end with regulator failure and compromise the whole system. It suggested that if such evaluation is necessary, the device's operation could be verified at the component level by applying a reverse pressure. Agility found the requirement acceptable and proposed testing the component on a bench by measuring its activation pressure. It also noted the possibility of testing it on the vehicle by deliberately exposing a PRD to its activation pressure, though it cautioned that this exposure could pose risks to vehicle safety.

Nikola commented that no additional test is needed since this component falls outside the scope of the regulation. FORVIA agreed with keeping alignment to GTR No. 13 Phase 2 and recommended using visual inspection as the test procedure. It argued that conducting an actual test on the vehicle would be difficult due to vehicle-dependent factors.

Agency Response

Based on the comments received, NHTSA is removing the requirement for an overpressure protection device in the fuel system. There is no test available to evaluate the performance of the over-pressure protection device, and therefore the proposed requirement that ''the activation pressure of the over-pressure protection device be lower than or equal to the maximum allowable working pressure for the respective downstream section of the hydrogen system'' is unenforceable. Simply requiring a device to be present with no test to evaluate its performance does not improve safety, and therefore, the requirement for an over-pressure protection device has been removed.

c. Hydrogen Discharge Systems

(1) TPRD Discharge Direction

Background

Consistent with GTR No. 13, NHTSA proposed that the TPRD vent line be protected from ingress of dirt or water to prevent contamination that could degrade or compromise the TPRD. NHTSA proposed several requirements related to the TPRD vent discharge direction, requiring that the TPRD discharge must not be directed towards nor impinge upon:

1. Any enclosed or semi-enclosed spaces where hydrogen could unintentionally accumulate, such as the trunk, passenger compartment, or engine compartment.
2. The vehicle wheel housing.
3. Hydrogen containers.
4. Rechargeable electrical energy storage system (REESS).
5. Any emergency exit(s) or service door(s).

In addition to these requirements, NHTSA proposed an additional requirement to protect potential occupants attempting to exit the vehicle or first responders approaching the vehicle. This requirement stated that hydrogen vented through the TPRD(s) be directed upwards within 20° of vertical relative to the level surface or downwards within 45° of vertical relative to the level surface. NHTSA sought comment on this additional requirement for TPRD discharge direction, and on the proposed discharge angles.

Comments Received

Air Products commented that venting downward could be acceptable for light vehicles but recommended any downward TPRD vent flow should be diffused to minimize a jet fire scenario. It also proposed specific considerations for heavy vehicles, suggesting that venting should be oriented away from cargo and vertically positioned outside the CHSS enclosure and vehicle. It stated the importance of designing vent stacks to withstand back pressure, thrust forces, and vehicle accidents.

Air Products also stated that venting high-pressure hydrogen in confined areas increases the likelihood of deflagration or detonation. It described the possibility of flame impingement at the TPRD outlet potentially leading to a cascading effect and larger hydrogen releases. It proposed modifications to include ''enclosed or semi-enclosed spaces including portions of the CHSS'' as a location the discharge shall not impinge upon.

Agility stated that the proposed requirement for a discharge angle within 20 degrees of vertical does not align with existing standards. It suggested using the wording from GTR No. 13 and commented that while venting within 45 degrees of vertical from the top could be acceptable, venting from the bottom at any angle other than vertical could lead to horizontal gas/flame plumes, posing risks to passengers and first responders. Agility also noted that these requirements could become irrelevant in vehicle rollovers.

Nikola and FORVIA both expressed concerns over the prescriptiveness of specifying venting angles. Nikola stated that discussions among experts concluded that manufacturers should be given the responsibility to determine safe venting designs. It cited GTR No. 13, which only specifies prohibited venting directions rather than mandating specific angles. FORVIA similarly stated that the topic is highly vehicle-specific and should be addressed on a case-by-case basis. FORVIA noted that the phrase ''not be directed towards'' could be interpreted subjectively, leading to compliance challenges. FORVIA agreed with the requirements other than the venting direction angles, but recommended aligning the wording exactly with GTR No. 13.

Luxfer Gas Cylinders viewed the proposed requirements as an improvement but indicated uncertainty about manufacturers' ability to comply. Auto Innovators did not support the proposed requirements in S5.1.3.1(b), citing extensive discussions within GTR No. 13 Phase 2, which highlighted structural differences among vehicles, especially heavy vehicles, that complicate establishing a ''one-size-fits-all'' requirement. It stated that prescribing discharge directions could limit design flexibility without improving safety. It also recommended deleting the proposed S5.1.3.1(c)(5) and

(6), because these requirements are inconsistent with GTR No. 13 and because the intent is not clear.

Agency Response

NHTSA acknowledges commenters' stated concerns that setting specific discharge angles was extensively discussed during GTR No. 13 Phase 2, and that the Informal Working Group ultimately chose not to include such specific requirements due to the complexities involved, especially given that vehicles—especially larger vehicles—have heterogenous designs and that a specific approach that works for some vehicles may not work for other vehicles. NHTSA also acknowledges that in certain situations, such as vehicle rollovers, angle requirements could become less relevant. After reviewing the comments and considering the real-world scenarios presented, NHTSA has decided to remove the proposed discharge angle requirements until more information is available to determine whether a generalized discharge angle is reasonable and beneficial. NHTSA will, however, retain the other TPRD discharge direction requirements as proposed. NHTSA notes that the requirements specify that ''[t]he hydrogen gas discharge from TPRD(s) of the CHSS shall not impinge upon'' as opposed to ''shall not be directed towards.''

NHTSA is not adding any additional requirements based on cargo locations within the vehicle or vent stack design at this time. Similar to the above discussion, cargo-specific TPRD directional venting requirements may be overly prescriptive, and until more data is available, it could potentially be unworkable given the variety of vehicle designs and cargo configurations or be a suboptimal safety solution. Furthermore, requirements for vent stack design, such as ensuring mechanical support for thrust forces, are design considerations that NHTSA does not intend to regulate and are outside the scope of the proposed standards.

Additionally, there is no need to specify additional portions of the CHSS to avoid venting onto, because the requirements list the container, which is the main component of the CHSS. Not directing TPRD discharge towards the container will effectively avoid the CHSS as well, so an additional specification regarding the CHSS would be redundant.

Lastly, NHTSA is retaining the specifications regarding ''emergency exit(s) as identified in FMVSS No. 217'' and ''service door(s).'' As stated in the NPRM, the purpose of these requirements is to prevent safety hazards due to hydrogen discharge from the TPRD that could inhibit the ability of passengers to safely exit the vehicle.[49]

(2) Possible Test To Evaluate TPRD Discharge Direction

Background

NHTSA proposed that the discharge direction from TPRDs and other pressure relief devices be evaluated through visual inspection. NHTSA sought comment on whether there is a more appropriate test.

Comments Received

Nikola recommended relying on a visual inspection for evaluating TPRD discharge direction. In contrast, HATCI suggested that NHTSA adopt a detailed emission measurement method, which would use the end of the valve angle relative to horizontal, instead of solely depending on visual inspection.

Agency Response

NHTSA will maintain visual inspection as the evaluation for TPRD discharge direction. It will be clear from the orientation of the TPRD and/or the TPRD vent lines where the TPRD discharge is being directed. While the suggestion to use valve angle measurements to verify compliance is plausible, the commenters did not provide a specific procedure for conducting an objective valve angle measurement. If a more comprehensive and detailed testing procedure is identified in the future, the agency may consider incorporating it in the future.

d. Vehicle Exhaust Systems

Background

NHTSA proposed the vehicle exhaust requirements outlined in GTR No. 13. NHTSA proposed that the test procedure be conducted after the vehicle has been set to the ''on'' or ''run'' position for at least five minutes prior to testing. A hydrogen measuring device is placed in the center line of the exhaust within 100 mm from the external discharge point. The fuel system would undergo a shutdown, start-up, and idle operation to stimulate normal operating conditions. The measurement device used should have a response time of less than 0.3 seconds to ensure an accurate three second moving average calculation. Response times higher than 0.3 seconds could result in inaccurate data collection because the sensor may not have time to register the true concentration levels before recording each data point.

The time period of three seconds for the rolling average ensures that the space around the vehicle remains non-hazardous in the case of an idling vehicle in a closed garage. This time period is conservatively determined by assuming that a standard size vehicle purges the equivalent of a 250 kW (340 HP) fuel cell system.[50] The time is then calculated for a nominal space occupied by a standard passenger vehicle (4.6 meters $\times$ 2.6 meters $\times$ 2.6 meters) to build up to 25 percent of the LFL, or one percent by volume in air. The time limit for this rolling-average situation is determined to be three seconds.[51]

Comments Received

Luxfer Gas Cylinders questioned how NHTSA intends to ensure compliance with these requirements. Auto Innovators expressed support for harmonizing the exhaust requirements with GTR No. 13 but suggested revising the terminology from ''on'' or ''run'' position to align with the GTR standard, which specifies that ''the propulsion system of the test vehicle is started, warmed up to its normal operating temperature, and left operating for the test duration.'' Nikola stated agreement with adopting the requirements in GTR No. 13.

Agency Response

NHTSA will ensure compliance with the requirements of FMVSS No. 307 S5.1.2.2, *Vehicle exhaust system,* by testing vehicles in accordance with FMVSS No. 307 S6.5, *Test for the vehicle exhaust system.* Additionally, for the reasons discussed below in section IV.C.2.f., Protection against flammable conditions, NHTSA has revised the requirement that ''the vehicle shall be set to the 'on' or 'run' position for at least 5 minutes prior to testing, and left operating for the test duration.'' The new requirement will specify that ''the vehicle propulsion system shall be operated for at least five minutes prior to testing and shall continue to operate throughout the test.'' This change ensures the safe operation of fuel cell vehicles during testing while still meeting the intended objectives of the proposed test protocol.

e. Fuel System Leakage

Background

GTR No. 13 includes fuel system leakage requirements specifying no leakage from the fuel lines. A flammable or explosive condition can arise if hydrogen leaks from the fuel lines and accumulates. However, the safety risk of a leak applies to the entire fuel system, not only to the fuel lines. As a result, NHTSA proposed that the fuel system leakage requirement for no leakage apply to the entire hydrogen fuel system downstream of the shut-off valve, which includes the fuel lines and the fuel cell system. NHTSA further proposed to define fuel lines to include all piping, tubing, joints, and any components such as flow controllers, valves, heat exchangers, and pressure regulators. From a safety standpoint, there is no difference between a leak coming from fuel line piping, and a leak coming from a valve, pressure regulator, or the fuel cell system itself. Consistent with GTR No. 13, NHTSA proposed a strict no leakage standard. NHTSA sought comment on whether there is a safe level of hydrogen that may leak, and if so, what would be an objective leakage limit and how to accurately quantify hydrogen leakage from the fuel system.

NHTSA proposed to test this requirement using either a gas leak detector or leak detecting liquid (bubble test). NHTSA sought comment if one of these tests is preferrable. NHTSA also proposed that the test be conducted with the fuel system at NWP after having been in the ''on'' or ''run'' position for at least five minutes. NHTSA sought comment on whether alternative conditions would better simulate realistic scenarios when downstream lines are more likely to leak.

Comments Received

Luxfer Gas Cylinders commented that either a gas leak detector or a bubble test is acceptable, noting the long-standing effectiveness of the bubble test and expressing support for the proposed five-minute warm-up period. Ballard Power Systems stated that achieving a strict no leakage standard is likely impractical due to the extensive use of elastomeric seals and non-metallic materials in fuel cell vehicles. It stated that fuel cell stacks typically have a leakage rate around 200 mL/min hydrogen at the beginning of life, and that standards such as HGV 3.1 permit a maximum leak rate of 10 Ncc/h. It recommended establishing a leakage requirement that ensures flammable releases are negligible, suggesting that gas mixtures with hydrogen concentrations below the lower flammability limit do not pose combustion risks. Ballard proposed mitigation techniques like enclosing components prone to leaks and using ventilation and hydrogen detection to manage non-flammable releases.

Auto Innovators disagreed with a strict no leakage requirement, stating that leakage can be detected at very low levels well below hazardous thresholds using sensitive equipment. It advocated for aligning the allowable leakage rate with the single-point leakage definition in GTR No. 13. It also supported NHTSA's proposal for the five-minute warm-up but suggested adopting GTR No. 13's terminology and test conditions. Air Products recommended conducting the leak check at 1.25 times NWP to align with industry standards.

HATCI supported harmonizing with GTR No. 13 and advised adopting criteria that focus on leak detection at accessible fuel line sections, especially at joints, as specified in GTR No. 13 section 6.1.5. HATCI also proposed adopting a 3 percent hydrogen concentration limit as a flammability condition and suggested clarifying regulatory text regarding the vehicle's ''on'' or ''run'' position during testing. Agility noted that complete leak-free connections are impossible and referenced SAE J1267, which states that ''absolute leak tightness is an absolute impossibility.'' It recommended specifying maximum allowable leak rates consistent with existing standards, emphasizing that both bubble solutions and electronic leak detection are feasible methods.

Nikola proposed adopting GTR No. 13's leak rate requirement of 0.005 mg/s and supported the bubble test as a reliable method to check for joint leaks, suggesting that more advanced instrumentation be required only if a bubble test indicates leakage. Hyzon expressed concerns about the subjectivity of bubble testing and recommended that NHTSA use additional accurate testing methods, including detection devices that meet industry standards. NFA commented that a safe level of hydrogen leak should reference standards like SAE technical paper 2008–01–0726, ''Flame Quenching Limits of Hydrogen Leaks,'' and SAE J2579, which limit leak rates to prevent hazardous concentrations. It questioned why FMVSS No. 308 would apply a different standard to the CHSS compared with the standard that applies to the rest of the fuel system. NFA emphasized the practicality of bubble tests for detecting localized leaks and noted that metallic ferrule style tube fittings can be validated to be bubble-tight.

FORVIA suggested revising the wording of the proposal to specify ''no detectable leakage'' based on a test method or minimum measurement sensitivity. DTNA argued that a zero percent leak rate is not feasible due to hydrogen's chemical properties and current measurement technology limitations. It proposed a leak rate below 3.6 NmL/min, which it stated is the lowest flow necessary for flame initiation.

Agency Response

NHTSA has determined that a demonstratable ''no leakage'' standard as evaluated by a bubble test is consistent with GTR No. 13, which specifies that ''the hydrogen fueling line downstream of the main shut-off valve(s) shall not leak.'' GTR No. 13 does not provide any leakage limit in either section 5.2.1.5 or 6.1.5. Thus, NHTSA's application of a demonstratable no-leakage requirement as evaluated by a bubble test aligns with GTR No. 13.

NHTSA acknowledges the concerns regarding the practicality of achieving a true no-leakage standard, noting that very low levels of hydrogen leakage may occur due to the tiny size of hydrogen molecules and the materials and sealing technologies used in hydrogen fuel systems. However, NHTSA emphasizes that any detectable hydrogen leakage poses potential safety risks. Even minimal levels of hydrogen leakage present the possibility of gas accumulation in enclosed spaces, which could create hazardous conditions. Multiple individual points of leakage could produce an additive effect where the cumulative leakage rate becomes significant.

In response to suggestions that NHTSA define specific test methods for leak detection, the proposed regulation already includes objective test procedures for verifying compliance with the no-leakage requirement in FMVSS No. 307 S6.6. As such, suggestions to include additional specificity in test methods are redundant, as the regulation already addresses this concern. Furthermore, NHTSA is not including in S6.6 the statement ''primarily at joints'' that is found in GTR No. 13. This language is unnecessary, as NHTSA will be able to evaluate joints as well as other portions of the fuel system for leakage regardless of whether this language is included or not. Additionally, it is not possible to define a fuel system leakage limit based on a concentration of hydrogen in the surrounding air, as some commenters

suggested. Doing so would require several assumptions to be made regarding factors such as the volume of air in which the hydrogen may accumulate, the location of leakage points relative to the air volume, number of leakage points, and the possibility of air-exchange rates.

To address concerns about the high sensitivity of leak detection equipment, NHTSA has decided to remove the option of using an electronic leak detector and will instead require the use of the bubble test method exclusively. As some commenters noted, the bubble test has been effectively used for decades and provides a practical, reliable means of visually detecting leaks. This method, which is less sensitive than advanced electronic leak detectors, is based on simple visual observation as to the expansion and/or propagation of bubbles and is not dependent on the subjective opinions of individuals. It addresses the need for an objective evaluation of leakage while acknowledging the concerns about detecting insignificant background levels of hydrogen that do not present a direct hazard. The bubble test will allow for a practical assessment of compliance with the no-leakage requirement without the possibility of test equipment detecting harmless levels of hydrogen. If no leakage is detectable using the bubble test specified in S6.6, then the vehicle will be deemed to have acceptable performance. To further clarify this standard, FMVSS No. 307 S5.1.4 has been revised to read: ''When tested in accordance with S6.6, the hydrogen fuel system downstream of the shut-off valve(s) shall not exhibit observable leakage.'' Adding the words ''exhibit observable leakage'' clarifies that leaks which do not result in observable bubble expansion during the S6.6 test procedure are not considered failures.

Additionally, for the reasons discussed below in section IV.C.2.f., *Protection against flammable conditions,* NHTSA has revised the requirement that ''the vehicle shall be set to the 'on' or 'run' position for at least 5 minutes prior to testing, and left operating for the test duration.'' If the vehicle is not a fuel cell vehicle, it shall be warmed up and kept idling. If the test vehicle has a system to stop idling automatically, measures shall be taken to prevent the engine from stopping.'' The new requirement will specify that ''the vehicle propulsion system shall be operated for at least five minutes prior to testing and shall continue to operate throughout the test.'' This change ensures the safe operation of fuel cell vehicles during testing while still meeting the intended objectives of the proposed test protocol.

f. Protection Against Flammable Conditions

Background

NHTSA proposed requiring a visual warning within 10 seconds in the event that the hydrogen concentration in an enclosed or semi-enclosed space exceeds 3.0 percent (75 percent of the LFL). Additionally, consistent with GTR No. 13, NHTSA proposed requiring the shut-off valve to close within 10 seconds if at any point the concentration in an enclosed or semi-enclosed space exceeds 4.0 percent (the LFL).

GTR No. 13 provides two options for evaluating this requirement. The first option is to use a remote-controlled release of hydrogen to simulate a leak, along with laboratory-installed hydrogen concentration detectors in the enclosed or semi-enclosed spaces. The laboratory-installed hydrogen concentration detectors are used to verify that the required warning and shut-off valve closure occur at the appropriate hydrogen concentrations in the enclosed or semi-enclosed spaces. GTR No. 13 allows for the remote-controlled release of hydrogen to be drawn from the vehicle's own CHSS. Therefore, by using this option, it is possible for a vehicle to meet the requirements without a built-in hydrogen concentration detector. This objective is accomplished by the vehicle monitoring hydrogen outflow from its CHSS. The vehicle can then trigger the required warning and shut-off valve closure if significant hydrogen outflow from the CHSS is detected that is not accounted for by fuel cell hydrogen consumption.

The second option for evaluating the requirement is to use an induction hose and a cover to apply hydrogen test gas directly to the vehicle's built-in hydrogen concentration detector(s) within the enclosed or semi-enclosed spaces. Test gas with a hydrogen concentration of 3.0 to 4.0 percent is used to verify the warning, and test gas with a hydrogen concentration of 4.0 to 6.0 percent is used to verify the closure of the shut-off valve. The warning and shut-off valve closure must occur within 10 seconds of applying the respective test gas to the detector. The warning is verified by visual inspection, and the shut-off valve closure can be verified by monitoring the electric power to the shut-off valve or by the sound of the shut-off valve activation.

This second option indirectly requires the presence of at least one hydrogen concentration detector in the enclosed or semi-enclosed spaces that can detect the hydrogen test gas and trigger the warning and shut-off valve closure at appropriate hydrogen concentration levels. NHTSA proposed this second option as the only test method in FMVSS No. 307, which would thereby require each vehicle to have at least one built-in hydrogen concentration detector. NHTSA sought comment on requiring built-in hydrogen concentration detectors and on the reliability of the required warning and shut-off valve closure for vehicles that do not have built-in hydrogen concentration detectors.

In addition to the above requirement regarding a warning and shut-off valve closure, GTR No. 13 includes a requirement that any failure downstream of the main hydrogen shut off valve shall not result in any level of hydrogen concentration in the passenger compartment. This requirement is evaluated by applying a remote-controlled release of hydrogen simulating a leak in the fuel system, along with laboratory-installed hydrogen concertation detectors in the passenger compartment. After remote release of hydrogen, GTR No. 13 requires that the hydrogen concentration in the passenger compartment not exceed 1.0 percent. The number, location, and flow capacity of the release points for the remote-controlled release of hydrogen are determined by the vehicle manufacturer.

NHTSA instead proposed that the remote-controlled release of hydrogen shall not result in a hydrogen concentration exceeding 3.0 percent in the enclosed or semi-enclosed spaces of the vehicle (including the passenger compartment). NHTSA sought comment on this requirement and on specific test procedures for initiating a remote-controlled release of hydrogen in a vehicle.

To evaluate this requirement, NHTSA proposed that a hydrogen concentration detector be installed in any enclosed or semi-enclosed space where hydrogen may accumulate from the simulated hydrogen release. After the remote-controlled release of hydrogen, the hydrogen concentration would be measured continuously using the laboratory-installed hydrogen concertation detector. The test would be completed five minutes after initiating the simulated leak or when the hydrogen concentration does not change for three minutes, whichever is longer. Five minutes was selected as the minimum time for monitoring the hydrogen concentration because five

minutes is generally considered a sufficient time frame for vehicle occupants to evacuate in the event of an emergency.

Comments Received

Agility commented that using built-in hydrogen detectors is feasible and analogous to requirements for liquified natural gas (LNG) vehicle systems. It emphasized the need for electronic detection due to hydrogen's odorless nature, comparing it to the established reliability of natural gas sensors. Agility also stated that any remote release of hydrogen should not be built into every vehicle directly, citing potential safety risks and increased costs. Instead, it recommended using separate testing equipment operated by qualified personnel.

Luxfer Gas Cylinders expressed concern that requiring detectors and warnings for all enclosed and semi-enclosed spaces might be excessively difficult due to the number of such spaces in both light and heavy vehicles. Air Products suggested incorporating passive or mechanical ventilation into the CHSS to help dissipate leaks before they accumulate to hazardous levels, in addition to other safety measures.

Glickenhaus raised safety concerns regarding the idling of fuel cell electric vehicles during tests, commenting that forcing fuel cell vehicles to idle could be dangerous or even impossible depending on the fuel cell's minimum output and battery capacity. Glickenhaus stated that while hydrogen internal combustion vehicles might idle safely, fuel cell vehicles could face significant risks of overcharging or electrical failure.

HATCI sought clarity on specific test requirements. It questioned the definition of the air component in the mixed hydrogen gases for testing and expressed concerns over the difficulty of obtaining the specified mixtures based on geographical availability. Additionally, HATCI supported the flexibility in defining release points downstream of the shut-off valve, as proposed by NHTSA, allowing manufacturers to determine these parameters.

Nikola recommended not adding an additional 10-second requirement for visual warnings beyond what is specified in GTR No. 13. It also preferred allowing OEMs to decide how to meet safety requirements rather than requiring built-in hydrogen detectors. It requested that NHTSA maintain the lower leakage concentration limit of one percent inside the passenger compartment to align with GTR No. 13. FORVIA disagreed with deviations from GTR No. 13, requesting that NHTSA keep the requirements fully aligned and avoid requiring hydrogen detectors in enclosed spaces, suggesting that ventilation might suffice as a safety measure.

Agency Response

After careful consideration of the comments received, NHTSA has decided to maintain the proposed requirements, with the exception of revisions related to the idling requirements, discussed below, and the revision to the definition of enclosed and semi-enclosed spaces, discussed above.

Regarding the use of built-in hydrogen detectors, some commenters supported their use, drawing parallels to systems required in LNG vehicles due to the lack of odorant in the fuel, which makes electronic detection necessary. NHTSA has determined that built-in hydrogen detectors are critical for safety. Hydrogen's odorless and highly flammable properties necessitate on-board hydrogen detection capability to mitigate risks. The proposed test method verifies that hydrogen detectors can activate a warning and shut-off valve closure within the prescribed time frame and concentration thresholds, thereby ensuring that vehicles can detect and respond to hydrogen leaks promptly. There will not be an excessive number of spaces that will require hydrogen detectors because, as discussed above, the definition of ''enclosed and semi-enclosed spaces'' has been revised to be very specific, including only the passenger compartment, luggage compartment, and space under the hood.

With respect to concerns about remote-controlled hydrogen release for testing purposes, some commenters stated that incorporating this feature into every vehicle could introduce safety risks or unnecessary costs. This is not a correct interpretation of the proposal. FMVSS No. 307 S6.4.2(b) states that ''[p]rior to the test, the vehicle is prepared to simulate remotely controllable hydrogen releases from the fuel system or from an external fuel supply.'' This language indicates the use of separate, specialized test equipment that is only applied to the test vehicle(s) rather than integrating the capability into all vehicles.

Regarding the hydrogen concentration limit in the passenger compartment, some commenters advocated for maintaining the 1.0 percent limit specified in GTR No. 13, citing it as more conservative. However, NHTSA proposed a 3.0 percent limit in the enclosed and semi-enclosed spaces (not just the passenger compartment). The 3.0 percent limit aligns with the lower flammability limit (LFL) of hydrogen, and providing a more balanced requirement across all the enclosed and semi-enclosed spaces and ensures that hydrogen concentrations remain below hazardous levels. NHTSA has therefore chosen to maintain this requirement as proposed. Note that the definition for enclosed and semi-enclosed spaces has been revised to eliminate ambiguity, as discussed above in section IV.C.1.

Regarding the comment that the components of the air in the mixed gas were not defined in S6.4.1(b), this concern is unfounded. The proposed regulatory text specifies the required hydrogen concentrations in the test gas mixtures: ''The first test gas has any hydrogen concentration between 3.0 and 4.0 percent by volume in air to verify function of the warning, and the second test gas has any hydrogen concentration between 4.0 and 6.0 percent by volume in air to verify function of the shut-down.'' NHTSA can clarify that ''air'' refers to the natural atmospheric air composition, which is globally consistent across the surface of the Earth. Atmospheric air is primarily composed of approximately 78% nitrogen, 21% oxygen, and trace amounts of other gases such as argon and carbon dioxide. This standard atmospheric composition is well understood and used in numerous industrial and scientific applications. Therefore, the air component in the hydrogen-air mixture is inherently defined and does not require additional specification or definition within the regulatory text.

Regarding the time of 10 seconds to activate the warning or the shut-off valve closure, GTR No 13 does not contain a time limit for activation. The test can continue indefinitely if the warning has not come on or the shut-off valve has not closed. NHTSA cannot have a test that may continue indefinitely; therefore, the agency is maintain the proposed 10-second time limit to activate the warning and close the shut-off valve after the respective mixtures of hydrogen gas are applied.

Lastly, concerns were raised about the idling requirements for fuel cell vehicles during testing. One commenter emphasized that forcing fuel cell vehicles to idle for extended periods could pose significant safety risks, including the potential for battery overcharging or fuel cell malfunction. NHTSA recognizes these concerns and has revised the regulatory language. The new requirement will specify that ''the vehicle propulsion system shall be operated for at least five minutes prior

to testing and shall continue to operate throughout the test.'' This change ensures the safe operation of fuel cell vehicles during testing while still meeting the intended objectives of the proposed test protocol.

(1) Wind Control During Testing

Background

The proposed test procedures in this section would be conducted without the influence of any wind. NHTSA sought comment on providing more specific wind protection requirements and sought comment on limiting the maximum wind velocity during testing to 2.24 meters/second, as in FMVSS No. 304.[52]

Comments Received

Nikola commented that including wind influence in testing would not be feasible unless tests were conducted indoors, which would introduce additional complexities. It supported using the same wind velocity requirement as FMVSS No. 304. Auto Innovators agreed with NHTSA on the need to establish more specific wind protection requirements.

Agency Response

After careful consideration, NHTSA has determined that it will not impose specific limits on wind velocity or require wind shielding measures as part of the testing protocol. While some commenters suggested adopting a wind velocity limit similar to that in FMVSS No. 304, NHTSA has decided against incorporating explicit wind control specifications. Establishing objective wind control requirements, such as specifications for shielding or velocity limits, present logistical challenges. Furthermore, requiring all tests to be conducted indoors to completely eliminate wind effects could introduce additional safety and operational difficulties, further complicating the testing process. These challenges make prescriptive wind control requirements impractical across different test environments.

Therefore, while NHTSA is maintaining the requirement that ''the test shall be conducted without influence of wind,'' the agency will allow individual test facilities the discretion to manage wind conditions according to their capabilities and procedures. This approach offers necessary flexibility, enabling laboratories to conduct tests under conditions suited to their operational constraints, while still ensuring the accuracy and reliability of test results.

g. Warning for Elevated Hydrogen Concentration

Background

NHTSA proposed requiring a telltale warning when hydrogen concentration exceeds 3.0 percent in the enclosed or semi-enclosed spaces of the vehicle. NHTSA also proposed the visual warning be red in color and remain illuminated while the vehicle is in operation with hydrogen concentration levels exceeding 3.0 percent in enclosed or semi-enclosed spaces of the vehicle. The visual warning must be in clear view of the driver. For a vehicle with an Automated Driving System (ADS) and without manually operated driving controls, the visual warning must be in clear view of all the front seat occupants. NHTSA sought comment on whether the warning should be in clear view of all occupants, including occupants in rear seating positions, in vehicles equipped with an ADS. NHTSA also sought comment on whether an auditory warning should be required when hydrogen concentration exceeds 3.0 percent in the enclosed or semi-enclosed spaces of the vehicle.

NHTSA also proposed that a telltale be activated if the hydrogen warning system malfunctions, such as in the case of a circuit disconnection, short circuit, sensor fault, or other system failure. NHTSA proposed that when the telltale activates for these circumstances, it illuminate as yellow to distinguish a malfunction of the warning system from that of excess hydrogen concentration.

Comments Received

Nikola expressed agreement with the proposal. Auto Innovators highlighted the need to align with the requirements in FMVSS No. 101, ''Controls and displays,'' for vehicles equipped with ADS and recommended maintaining current placement requirements for visual warnings. It noted that defining ''clear view'' lacks objectivity and stated that auditory warnings should not be required in ADS-equipped vehicles until further research is conducted. It stated that ''near-term flexibility'' may be needed to prevent consumer confusion. Auto Innovators supported the proposed activation criteria and color scheme, noting consistency with GTR No. 13.

DTNA suggested adding an audible warning to supplement the visual warning, particularly for heavy vehicles and school buses with complex seating arrangements where occupants might not have clear visibility of the visual indicator. It stated that an audible warning would be essential for crew cabs, trucks with sleeper berths, and school buses, where a visual warning alone would not suffice to communicate risk effectively. Similarly, Glickenhaus supported the addition of an auditory warning and favored the placement of visual warnings in clear view of all seating positions in ADS-equipped vehicles.

HATCI supported harmonization with GTR No. 13 and recommended determining visual warning requirements based on a vehicle's automation level. It stated that visual warnings should be in the driver's view for vehicles at SAE Levels 0 to 3 but more broadly visible for vehicles at SAE Levels 4 or 5. However, HATCI advised against requiring auditory warnings, citing concerns about potential confusion due to the numerous existing auditory alerts.

NFA supported the inclusion of a visual telltale in red for high hydrogen concentration levels, in line with FMVSS No. 307, and agreed with the requirement for a yellow malfunction warning. NFA also provided context for its current hydrogen detection system, which includes warnings at 20 percent and 50 percent of the LFL, indicating that its system already meets the proposed standard. Regarding ADS-equipped vehicles, NFA agreed with NHTSA's proposal as written, noting that transit buses are likely to retain an attendant or driver in the front seating position due to the additional duties they perform. NFA recommended that NHTSA consider how to address the requirements in scenarios where no front seat passengers are present.

Agency Response

After careful consideration, NHTSA is maintaining the proposal as originally outlined. With respect to the inclusion of an auditory warning, NHTSA agrees that further research is necessary to assess the most appropriate auditory alerting mechanisms for hydrogen-fueled vehicles. While some commenters advocated for the inclusion of an auditory warning, NHTSA has determined that additional research is needed to evaluate the use of auditory alerts. For example, the possibility of voice alerts may need to be considered. Voice alerts may offer a clearer communication of the hazard without contributing to confusion. Additionally, NHTSA is cognizant that the proliferation of crash avoidance and driving automation systems has resulted in an increased number of telltales and auditory alerts, many of which are

[52] FMVSS No. 304, ''Compressed natural gas fuel container integrity.'' *https://www.ecfr.gov/current/title-49/subtitle-B/chapter-V/part-571/subpart-B/section-571.304.*

voluntarily added by manufacturers. As such, NHTSA will not require auditory warnings at this time. The absence of a requirement for an auditory warning does not preclude manufacturers from voluntarily including such warnings based on their vehicle-specific configurations.

Regarding visual warning placement, NHTSA will not adopt specific requirements based on SAE automation levels at this time. The scope of this final rule is not contingent on a particular vehicle type. NHTSA's focus remains on ensuring that the visual warning is in clear view of the driver or, for ADS-equipped vehicles without manual controls, in view of the front-seat occupants. This approach provides manufacturers with flexibility while maintaining safety for occupants in these advanced vehicles. This approach is also consistent with past updates to the crashworthiness FMVSS to account for ADS-equipped vehicles.[53] The suggestion to include rear-seat occupants in ADS-equipped vehicles is not being implemented at this time, as NHTSA believes that further consideration is needed to determine the most effective and appropriate hydrogen warning systems for rear-seat occupants.

Finally, regarding the distinction between malfunction and hydrogen concentration warnings, NHTSA will retain the proposed color scheme, with yellow indicating a system malfunction and red indicating an elevated hydrogen concentration. This color differentiation is essential to ensure that drivers and occupants can quickly distinguish between a system malfunction and an immediate hydrogen-related hazard.

3. Post-Crash Fuel System Integrity

Background

Consistent with GTR No. 13, NHTSA proposed that the post-crash requirements for vehicles that use hydrogen fuel for propulsion power only apply to passenger cars, multipurpose passenger vehicles, trucks, and buses with a GVWR less than or equal to 4,536 kg (10,000 pounds) and to all school buses. NHTSA did not propose that the post-crash requirements apply to all heavy vehicles with a GVWR greater than 4,536 kg (10,000 pounds). NHTSA sought comment on whether heavy vehicles should be subject to these proposed post-crash requirements and, if so, what crash tests should NHTSA conduct on heavier vehicles.

NHTSA proposed to use the crash tests equivalent to those applied to conventionally fueled vehicles in accordance with FMVSS No. 301. For light vehicles with a GVWR under 4,536 kg, these crash tests include an 80 kilometers per hour (km/h) (~50 miles per hour (mph)) impact of a rigid barrier into the rear of the vehicle, a 48 km/h (~30 mph) frontal crash test into a rigid barrier, and a 53 km/h (~33 mph) impact of a moving deformable barrier into the side of the vehicle. For school buses with a GVWR greater than or equal to 4,536 kg, the crash test is a moving contoured barrier impact at 48 km/h. NHTSA sought comment on whether there are alternative crash tests that should be used for the forthcoming proposed regulations.

NHTSA proposed that there be no fire during the test, and that vehicles meet three additional post-crash requirements described by GTR No. 13. The first proposed requirement is the volumetric flow of hydrogen gas leakage from the CHSS must not exceed an average of 118 normal liters per minute (NL/min) from the time of vehicle impact through a time interval Δt of at least 60-minutes after impact. The volumetric leak rate of hydrogen post-crash is determined as a function of the pressure in the container before and after the crash test. The interval Δt is at least 60 minutes after impact and the pressure drop measurement should be at least 5 percent of the pressure sensor's full range. Helium may be used in place of hydrogen during crash-testing with an allowable leakage limit for helium of 88.5 NL/min.

The second requirement is a hydrogen concentration limit set to four percent by volume (for helium, this corresponds to a concentration of three percent by volume) in enclosed or semi-enclosed spaces. This requirement is satisfied if the CHSS shut-off valve(s) are confirmed to be closed within five seconds of the crash and there is no hydrogen leakage from the CHSS.

For the purpose of measuring the hydrogen concentration, GTR No. 13 specifies that data from the sensors shall be collected at least every five seconds and continue for a period of 60 minutes. GTR No. 13 also discusses filtering of the data to provide smoothing of the data, but is unclear about the exact data filtration method to be used. NHTSA proposed using a three-data-point rolling average for filtering the data steam. Since a data point will be collected at least every five seconds, this rolling average will be, at most, a 15-second rolling average. NHTSA sought comment on this proposed data filtration method.

The third proposed requirement is that the container(s) remain attached to the vehicle by at least one component anchorage, bracket, or any structure that transfers loads from the device to the vehicle structure. This requirement is evaluated by visual inspection of the container attachment points. NHTSA will evaluate the presence of vehicle fire by visual inspection for the duration of the test, which includes the time needed to determine fuel leakage from the CHSS.

In addition to these requirements, NHTSA sought comment on the safety need for a heavy vehicle sled test. NHTSA sought input and comment with supporting data on implementing a possible alternative heavy vehicle impact test for the CHSS. NHTSA sought comment on the possibility of including a moving contoured barrier impact test on heavy vehicles (other than school buses) in accordance with S6.5 of FMVSS No. 301.

Comments Received

Auto Innovators supported NHTSA's decision to limit the scope of FMVSS No. 307 to light vehicles with a GVWR under 10,000 pounds and school buses. It requested that NHTSA conduct a regulatory impact analysis before including heavy vehicles. Auto Innovators noted that heavy vehicles have varied designs and are produced in low volumes, making full-scale crash testing complex and potentially cost-prohibitive. It recommended that if NHTSA considers including heavy vehicles, it should issue a new rulemaking proposal through either a separate rulemaking notice or supplemental notice of proposed rulemaking. Regarding the proposed crash tests, Auto Innovators agreed with using existing crash tests for vehicles under 10,000 pounds GVWR, stating that existing crash tests are representative of commonly occurring crashes in the field and should be suitable for assessing the post-crash fuel system integrity of hydrogen vehicles. Auto Innovators opposed adding alternative crash tests for hydrogen vehicles without supporting data. Auto Innovators also stated that it agrees with NHTSA's proposed data filtration method.

Hyundai concurred with NHTSA's initial decision to apply the post-crash requirements for heavy vehicles only to school buses but highlighted the potential significance of heavy commercial vehicles for hydrogen applications. It stated that post-crash fuel system integrity should be a

[53] *See* 87 FR 18560 (Mar. 30, 2022), *available at https://www.federalregister.gov/documents/2022/03/30/2022-05426/occupant-protection-for-vehicles-with-automated-driving-systems.*

consideration for these vehicles. It stated that the moving deformable barrier test for heavy school buses could be adapted to include other heavy vehicles. However, if the adaptation would delay the rulemaking, Hyundai suggested that NHTSA consider a follow-on rulemaking to address heavy vehicle standards once those procedures have been developed.

Agility agreed with NHTSA's decision to keep the post-crash requirements separate for heavy vehicles, stating that these vehicles differ significantly from light vehicles and require careful consideration and research before establishing specific crash testing requirements. It suggested benchmarking existing standards for light vehicles as a starting point and adapting similar procedures with appropriate performance criteria for heavy vehicle applications. Agility proposed focusing on fuel system-specific tests, such as a sled test, to account for the complexity of heavy vehicle configurations, stating that such tests could yield consistent results independent of the vehicle's body type or chassis. It also noted that current practices under FMVSS Nos. 303 and 304 have been adequate for heavy CNG vehicles and that a sled test could serve as a viable alternative to full vehicle crash tests, potentially simplifying the process. Agility also supported the use of a 15-second rolling average for data filtration.

DTNA supported NHTSA's decision to exclude heavy vehicles, other than school buses, from the proposed post-crash requirements, citing the lack of existing comparable crash tests and the high costs of conducting full-scale tests for heavy vehicle configurations. DTNA recommended a partial vehicle impact test using a moving deformable barrier (MDB), which allows for evaluating crash protection components like shields and panels without the need for full-vehicle tests. It suggested that vehicle simulations could also be used to assess these components. DTNA supported retaining the moving contoured barrier test for school buses over 10,000 pounds GVWR, as it aligns with current FMVSS No. 301 standards. It proposed a simulation similar to the Federal Motor Carrier Safety Administration's 30-foot drop test requirements outlined in 49 CFR 393.67(e)(1) but advised against conducting a 30-foot drop test solely on the container, stating that this test would not reflect real-world conditions since hydrogen containers often have additional protective components.

EMA supported component-level testing for heavy vehicles, noting that full-scale crash tests would be impractical due to the custom designs and low production volumes of these vehicles. It stated that international standards such as GTR No. 20, ''Electric Vehicle Safety,'' and UN ECE R100, ''Uniform provisions concerning the approval of vehicles with regard to specific requirements for the electric power train,'' rely on mechanical shock tests at the component level. EMA agreed with the inclusion of crash tests for hydrogen-fueled school buses, as these tests align with FMVSS No. 301 and provide consistent safety standards with liquid-fueled buses. EMA stated that heavy school buses have relatively few model offering and vehicle configurations.

Nikola supported applying side impact tests when the CHSS falls within the MDB impact zone defined by FMVSS No. 214, ''Side impact protection,'' and suggested allowing manufacturers to determine the specific impact zones based on vehicle design. Nikola completed frontal, side, and rear impact tests for its own designs and proposed that each manufacturer should be responsible for identifying the relevant strike zones on its vehicles. Nikola also stated that the proposed post-crash CHSS retention and leakage requirements seemed reasonable, but it did not see a need for a sled test.

Hyzon agreed with NHTSA's decision not to introduce new post-crash requirements for hydrogen-powered heavy vehicles (HPHV) in FMVSS No. 307, aligning the standard with GTR No. 13 Phase 2. It stated that NHTSA has not set crash test requirements for any other heavy vehicles, and there is no justification for unique post-crash requirements specifically for HPHVs. Hyzon suggested that further research be conducted before considering additional standards. Hyzon suggested waiting for more data from GTR No. 13 Phase 3 before deciding on any new crash tests.

Glickenhaus expressed safety concerns about crash testing vehicles with hydrogen onboard, stating that the proposed regulations do not reference procedures and processes to make that crash test safe. It pointed out that while NHTSA typically includes safety protocols in its standards, such as substituting Stoddard solvent for gasoline during FMVSS No. 301 testing, the proposed regulations under FMVSS Nos. 307 and 308 would allow crashes with hydrogen or helium. It requested that if manufacturers are expected to choose between testing with hydrogen or helium, this expectation should be explicitly stated in the regulation. Glickenhaus stated that two testing laboratories have expressed reluctance to perform crash tests with hydrogen due to safety concerns, preferring helium or other inert gases. It argued that if these experienced labs are not comfortable testing with hydrogen, it is unlikely that manufacturers could safely conduct these tests on their own. Additionally, Glickenhaus recommended using thermal imaging cameras for fire detection, as hydrogen fires are clear and colorless, making them difficult to identify through visual inspection alone.

NFA commented on the need for mechanical shock testing for heavy vehicles but noted a lack of comprehensive data to conclusively assess the relevance of a sled test. It stated that both NFA and its CHSS manufacturers adhere to the mechanical shock requirements in NGV 6.1, ''Compressed natural gas (CNG) fuel storage and delivery systems for road vehicles,'' which requires 8g inertia loading in all three primary axes without failure, and referenced UN ECE R134, which specifies lower inertia loading requirements of 6.6g longitudinally and 5g transversely. NFA commented that harmonizing regulations across North America and Europe would provide consistency. It recommended continuing testing at the CHSS component level, including the mounting system, to ensure tests reflect real-world installations and establish a baseline performance standard applicable to all vehicle types, regardless of available crash data. It also suggested that NHTSA allow calculation or simulation methods, like Finite Element Analysis, to demonstrate compliance to reduce prototyping and testing costs for OEMs. NFA noted the infrequency of crashes involving its vehicles and the limited full-vehicle testing required by current regulations, adding that it currently position CHSS in less vulnerable areas, such as roof-mounted or protected luggage compartments. However, it stated that if sufficient data becomes available to support a performance requirement, testing should be standardized at the CHSS component or assembly level instead of full-vehicle testing.

HATCI stated that it supports the Agency's harmonization with GTR No. 13 for post-crash fuel system integrity.

Agency Response

After consideration of the comments received, NHTSA has decided to maintain the scope of the post-crash requirements as initially proposed for vehicles that use hydrogen fuel for propulsion power, limiting the applicability to passenger cars, multipurpose passenger vehicles,

trucks, and buses with a GVWR of less than or equal to 4,536 kg (10,000 pounds), as well as all school buses. NHTSA will not extend the post-crash requirements to include all heavy vehicles with a GVWR greater than 4,536 kg at this time.

NHTSA agrees with the commenters that limiting the post-crash requirements to light vehicles with a GVWR of 10,000 pounds or less and to all school buses regardless of GVWR is appropriate at this time, as it helps minimize the testing burden and addresses the practical limitations of conducting full-scale vehicle tests on heavier vehicles. NHTSA agrees that more research is needed before considering the inclusion of heavy vehicles other than school buses in the post-crash requirements, given the complexity of these vehicles and the absence of existing crash tests for heavy vehicles. NHTSA is considering future research to address the comments that component-level testing, rather than full vehicle crash testing, may be appropriate for heavy vehicle fuel systems at this time and that benchmarking against existing light vehicle crash testing procedures is a reasonable starting point for future heavy vehicle applications.

Furthermore, NHTSA is not implementing a moving contoured barrier impact test for heavy vehicles at this time due to the complexity associated with developing an objective test applicable to various heavy vehicle designs. Further research is needed to determine appropriate testing methods for tests involving heavy vehicles, and current data is insufficient to justify the inclusion of such tests.

Regarding the use of helium as an alternative to hydrogen for crash testing, NHTSA proposed this option in the regulatory text to provide flexibility for manufacturers. NHTSA will maintain the proposal that the test gas for compliance testing may be either hydrogen or helium, with the choice of test gas being at the manufacturer's option. Hydrogen and helium gas have similar leak characteristics, so it is expected that a vehicle that meets the performance requirements when tested with one gas will also meet the performance requirements when tested with the other.

NHTSA is not currently specifying the use of thermal imaging cameras as a means to detect post-crash fire. However, test labs are encouraged to use available technology such as thermal cameras or other heat detection equipment when evaluating for the presence of post-crash fire.

D. Tolerances

Background

The concept of test parameter tolerances refers to the allowable variations in the conditions or parameters under which a test is conducted, without impacting the validity or reliability of the test results. In regulatory testing, it is often impractical or impossible to maintain exact, fixed values for all parameters throughout the testing process. Therefore, tolerances are established to allow for slight deviations that are considered acceptable within a specified range. These tolerances ensure that even though the exact conditions may not be strictly identical in each test, the outcomes will remain consistent and comparable, as long as they fall within the defined tolerance limits. NHTSA proposed test parameter tolerances that are generally consistent with the suggested tolerances specified in the GTR No. 13. By adopting these established tolerances, NHTSA ensures that test conditions remain controlled and reliable while allowing for practical flexibility in testing environments.

Comments Received

TesTneT stated that in its 35 years of experience with hydraulic pressure cycle testing, it has not faced issues meeting a low-pressure tolerance of 1 MPa. Nikola stated that the proposed low-pressure range for container pressure cycling was ''adequate.'' However, Luxfer Gas Cylinders commented that the proposed lower limits of 1 MPa to 2 MPa for pressure cycling tests are ''too low and too tight.'' Luxfer stated that few containers would likely reach 1 or 2 MPa during actual service, making the test conditions unrealistic. It also noted challenges in maintaining these limits due to industrial testing equipment constraints and recommended revising the range to align with NGV 2, where cycling occurs between no greater than 10 percent of the service pressure and 125 percent of the service pressure.

Auto Innovators expressed concern over NHTSA's application of GTR No. 13 tolerances. It noted that GTR No. 13 specifies target values and allowable tolerances (±α), but the NPRM proposed a range between (X-α) and (X+α) without defining a target. Auto Innovators argued that this proposal could compel manufacturers to set equipment at either extreme of the range, potentially testing at various points in between, which it argued deviates from the test's purpose. Auto Innovators cited the low-pressure cycling test, where NHTSA proposed a range of ''between 1 MPa and 2 MPa.'' It stated that this approach could lead to impractical testing conditions and recommended NHTSA align with GTR No. 13. It also provided a table listing parameters in GTR No. 13 that use minimum (≥) and maximum (≤) values.

H2MOF proposed setting the lower bound of the pressure cycle at no more than 10 percent of the upper cycle, with an absolute maximum of 3 MPa, in line with the standard ISO 11515. H2MOF stated that the upper bound in ISO 11515 is defined as the maximum developed pressure at 65 °C, or approximately 117 percent of NWP. HATCI generally supported harmonizing with GTR No. 13. FORVIA stated that indicators for conditions like 85 degrees Celsius should use ''greater than or equal to'' and for −40 degrees Celsius, ''less than or equal to.'' It also requested maintaining the low-pressure range of 1 MPa to 2 MPa to ensure a margin above ambient pressure.

Agency Response

The use of open-ended tolerances, such as ''greater than or equal to'' (≥) and ''less than or equal to'' (≤) symbols, does not provide the necessary clarity for conducting robust and consistent tests. The use of ''≥'' or ''≤'' without specific upper or lower limits could result in impractical testing conditions, potentially leading to tests at unreasonably high or low values that are irrelevant to real-world performance or safety objectives. Without a defined range, the test could extend to extreme values of temperature or pressure, for example, making the test results unrealistic and inconsistent. A specific range with both upper and lower bounds is essential to ensure the tests reflect conditions relevant to vehicle safety, while also providing a controlled and repeatable environment for assessment.

Furthermore, tolerance ranges allow for slight variation in test parameters during testing while maintaining the validity of the results. Testing at any point within the proposed range will not affect the overall outcome, nor will fluctuations within the range impact the results. This concept allows for flexibility within the defined range that does not materially affect the test results because the allowed variation is small enough to be considered insignificant in relation to the overall test objectives.

NHTSA maintains that the test parameter tolerances proposed in the NPRM are generally consistent with GTR No. 13. When GTR No. 13 provides an open-ended range, such as ''≤ 2 MPa,'' the GTR No. 13 suggested tolerance is not listed with ''±'' because

it is not intended to be applied to both sides of range endpoint. Instead, the tolerance is only intended to be applied to the open end of the range. Hence NHTSA's proposal of between 1 MPa and 2 MPa, based on the GTR No. 13 suggested tolerance of 1 MPa.

GTR No. 13 paragraph 245 provides another example, citing GTR No. 13 paragraph 6.2.3.5., where the static hold pressure is specified as ≥125 per cent NWP. In this case, there is a minimum value of the range, but no maximum. GTR No. 13 paragraph 245 states that in this case, ''the tolerance of 5 percent NWP in the table could be applied, which results in a maximum of 130 percent NWP.''

Hence, for the low-pressure range during hydraulic cycling, NHTSA proposed a tolerance of between 1 MPa and 2 MPa, based on the GTR No. 13 suggested tolerance of 1 MPa. Regarding Luxfer Gas Cylinders' comment that the proposed lower limits of 1 MPa to 2 MPa for pressure cycling tests are ''too low and too tight,'' NHTSA notes that the test tolerances proposed in the NPRM are supported by TestNet's comment that in its 35 years of experience with hydraulic pressure cycle testing, it has not faced issues meeting a low-pressure of 1 MPa.

The argument that tolerances would force manufacturers or test labs to test at extreme ends of the range, such as the lowest or highest allowable point and at all points within the range, is inaccurate. NHTSA believes all of the proposed test procedures are robust enough to accommodate minor fluctuations in parameters without affecting the outcome of the test or repeatability of the results. The entire range is designed to ensure consistent and valid test results, regardless of where within the range the test is performed, or whether there are fluctuations within the range during testing. The parameters, as proposed, provide the necessary testing flexibility without sacrificing the repeatability and reproducibility of the testing procedure. Moreover, the use of a specified range prevents the need for excessive precision, which could make testing more difficult and unnecessarily increase the burden on test laboratories.

E. General Comments

Background

NHTSA received several general comments about the proposed standard, reflecting broad perspectives on the overall proposal. These comments did not address specific technical or procedural issues but instead addressed general aspects of the proposed standards.

Comments Received

An anonymous commenter stated that the establishment of new standards for hydrogen fuel systems was an ''excellent next step'' given the increasing prevalence of hydrogen-powered vehicles. It stated that it was important to consider the risks associated with pressurized hydrogen containers, which differ from non-pressurized gasoline or diesel containers, and noted that hydrogen is highly flammable, particularly in a compressed state. The commenter suggested that implementing a safety standard could reduce risks of death and injury related to the integrity of these containers.

Consumer Reports supported the proposed creation of FMVSS Nos. 307 and 308, stating that while hydrogen fuel cell vehicle sales have been limited, manufacturers are making advancements in this technology. It described the standards as necessary for both fuel system integrity and the compressed hydrogen storage system.

Auto Innovators echoed this support but also recommended that NHTSA revise its proposal to better align with GTR No. 13. It highlighted potential challenges due to differences in certification testing, especially when tests are conducted in series, which could lead to increased costs. Ford similarly supported the proposed standards and highlighted its experience in hydrogen technology research. Ford endorsed Auto Innovators' call for close alignment with GTR No. 13 and stated that GTR No. 13 guides its North American product development. Hyundai expressed support for the proposed adoption of FMVSS Nos. 307 and 308 and agreed with NHTSA's statement that the standards address an emerging safety need. Hyundai acknowledged the rationale behind deviations from GTR No. 13 but suggested exploring additional ways to harmonize with the global regulation, and referred to Auto Innovators' comments for specific recommendations.

Glickenhaus commented that the Department of Transportation (DOT) already has extensive regulations prescribing testing and certification requirements for compressed hydrogen storage containers used for transporting hydrogen on public roads under the Hazardous Materials Regulations (HMR) in 49 CFR Subchapter C. It specifically referenced 49 CFR 172, which lists hazardous materials that include compressed hydrogen and hydrogen fuel cell vehicles, and stated that DOT's requirements for cryogenic and compressed hydrogen storage containers, including their manufacturing, testing, and certification, are outlined in 49 CFR part 173. Glickenhaus stated that it does not appear that any of these requirements are referenced or incorporated into the container requirements for FMVSS No. 308. It suggested that if the pressure vessel or components making up a CHSS have already undergone DOT hazardous material transportation certification, it could potentially reduce additional testing requirements specific to using those containers for fuel storage in hydrogen fuel cell vehicles. Glickenhaus expressed concern that the lack of harmony between DOT's HMR standards for compressed hydrogen containers and FMVSS No. 308's requirements could result in a scenario where a container certified for transporting hydrogen over roads, ships, and airways in the United States might not be legal for use in vehicles on those same roads. Alternatively, it stated, if a container were certified under FMVSS No. 308 but not under DOT's hazardous materials transport standards, any towing company might inadvertently violate hazardous material transportation regulations by transporting a hydrogen fuel cell vehicle and its stored hydrogen. It stated that it does not want this responsibility to fall to towing companies. They stated that they do not want NHTSA to create a regulation that would make it a violation of other DOT requirements to tow or transport a hydrogen fuel cell vehicle.

TTP commented that the proposal is not consistent with existing FMVSS Nos. 303 and 304, and that the intent is unclear regarding establishing standards specifically for fuel systems or for the vehicle as a whole. They expressed uncertainty about how the proposed standards, if required by new FMVSS, would be enforced and noted that testing and verification by NHTSA would be costly and impractical. TTP questioned if the intent was to approach enforcement differently from the current methodology under FMVSS Nos. 303 and 304. They recommended that NHTSA harmonize with existing methodologies and allow industry standards to control certification and compliance wherever possible to maintain consistency. TTP also stated there are significant differences between the production processes for light and heavy vehicle applications and that enforcement of the proposals would not be practical for both. They stated that

light vehicle OEMs build a complete vehicle, which simplifies homologation due to consistent configurations, whereas the heavy market involves a mix of suppliers and intermediate manufacturers, making enforcement of vehicle-specific requirements impractical. TTP further commented that the proposal does not align with existing industry standards for container requirements, such as HGV 2, ''Compressed Hydrogen Gas Vehicle Fuel Containers,'' and NGV 2, and stated that some proposed requirements may compromise safety or prevent the use of containers with good safety records. They stated the proposal is not consistent with industry standards for component-level fuel system requirements specified in HPRD 1 and HGV 3.1, and they requested harmonization with these standards. Additionally, TTP requested clarification on whether the intent of the proposed FMVSS Nos. 307 and 308 would differ from FMVSS Nos. 303 and 304.

Agency Response

Some commenters raised concerns regarding potential misalignment between FMVSS No. 308 and the DOT hazardous materials regulations for compressed hydrogen storage systems. The regulation of the transportation of hydrogen over roads as cargo within tanker trucks in the United States is governed by the PHMSA through 49 CFR Subchapter C- Hazardous Materials Regulations (HMR).[54] PHMSA standards focus on the safe transportation of hazardous materials like hydrogen across all modes of transport, including trucks, and prioritizes minimizing risks during transport and handling of hydrogen, including potential leaks or spills. On the other hand, FMVSS Nos. 307 and 308 focus on the fuel system integrity of motor vehicles that use compressed hydrogen as a fuel source to propel the vehicle with the purpose of reducing deaths and injuries occurring from fires that result from hydrogen fuel leakage during vehicle operation and after motor vehicle crashes and from explosions resulting from the bursting of pressurized hydrogen containers.

FMVSS No. 308 addresses vehicle-specific safety needs with a focus on vehicle occupant safety that go beyond the PHMSA regulations for the transportation of hazardous materials. While PHMSA regulations govern hydrogen storage containers during transportation and are designed to mitigate safety risks during transport and handling of hydrogen, FMVSS No. 308 is specifically designed to ensure safety in the context of real-world driving, fueling, and crash conditions. Hydrogen storage systems in vehicles used for vehicle propulsion must meet performance standards that address risks unique to vehicle operation, including repeated fueling in different fueling conditions, dynamic driving environments, and potential accidents. Therefore, while DOT regulations and FMVSS No. 308 serve related functions, the standards are distinct and necessary for their respective purposes.

Several commenters also questioned the practicality and intent of the proposed FMVSS Nos. 307 and 308, particularly in relation to existing standards like FMVSS Nos. 303 and 304, which apply to CNG systems. NHTSA believes that hydrogen vehicles present distinct safety challenges that require specific regulatory measures. The unique properties of compressed hydrogen, such as its higher storage pressures and greater flammability, necessitate separate performance requirements to mitigate the associated risks. Hydrogen fuel systems have characteristics that differ significantly from CNG systems, and as a result, the proposed standards reflect the distinct differences presented by hydrogen. While FMVSS Nos. 303 and 304 remain effective for CNG, they are not sufficient to address the safety risks unique to hydrogen fueled vehicles.

Some commenters expressed concerns about the potential lack of harmonization between FMVSS Nos. 307 and 308 and GTR No. 13. As discussed above, NHTSA acknowledges these concerns but emphasizes that the proposed standards have been tailored specifically to address the safety needs of hydrogen vehicles in the context of the FMVSS. While GTR No. 13 is the primary basis for the proposed FMVSS Nos. 307 and 308, exact alignment with GTR No. 13 is not possible in FMVSS, for the reasons discussed above in section IV.A.

Similarly, some commenters suggested that existing industry standards for component-level fuel system requirements should be used as the primary basis for FMVSS Nos. 307 and 308. NHTSA acknowledges the value of the standards HGV 2, HGV 3.1, and HPRD 1, and notes that they were considered during the development of GTR No. 13. However, FMVSS are intended to establish minimum vehicle-level safety performance standards, and it is not necessary nor practical to adopt the entirety of industry standards into the FMVSS. While industry standards play an important role in ensuring the safety of individual components, FMVSS Nos. 307 and 308 set baseline requirements for hydrogen fuel systems to ensure that they function safely as part of the overall vehicle system. NHTSA's focus was in aligning the proposed FMVSS Nos. 307 and 308 with GTR No. 23 to enable global harmonization of regulations for hydrogen powered vehicles.

FMVSS establish minimum safety requirements and the FMVSS test procedures provide notice to establish how the agency would verify compliance. However, this does not mean that manufacturers must conduct the exact test in the FMVSS to certify their vehicles. The Motor Vehicle Safety Act[55] requires manufacturers to certify that their vehicles meet all applicable FMVSS, and specifies that manufacturers may not certify compliance if, in exercising reasonable care, the manufacturer has reason to know the certificate is false or misleading. A manufacturer may use component-level tests to certify its vehicles if it exercises reasonable care in doing so. Manufacturers must ensure that their vehicles will meet the requirements of FMVSS Nos. 307 and 308 when NHTSA tests the vehicles in accordance with the test procedures specified in the standards, but manufacturers may use different test procedures to do so.

In response to concerns about the enforceability of the proposed standards, particularly for heavy vehicles with complex production processes, NHTSA believes that the proposed FMVSS Nos. 307 and 308 standards are practical and enforceable across vehicle types. Although the heavy vehicle market involves a diverse supply chain with multiple intermediate manufacturers, the performance-based nature of these standards allows for flexibility in design. The regulations do not prescribe specific design solutions but instead set performance criteria, which manufacturers can meet using various engineering approaches. This adaptability ensures that both light and heavy vehicles can comply with the safety requirements without imposing impractical regulatory burdens. NHTSA is confident that these standards will not result in undue complexity or unnecessary cost in terms of enforcement.

F. Lead Time

Background

In the NPRM, NHTSA proposed two key dates regarding the implementation of FMVSS Nos. 307 and 308. First, the effective date was proposed as 180 days after the publication of the final rule in the **Federal Register**. This is the date when the final rule would officially go into effect. Second, NHTSA proposed a compliance date for manufacturers to fully adhere to the new requirements. The compliance date was initially stated as September 1, two years after the publication of the final rule. However, in the ''Lead Time'' section, a different compliance date was proposed as September 1 in the year following the rule's publication. This was a clerical error, as both compliance dates should have stated ''the first September 1 that is two years after the publication of the final rule.''

Comments Received

Nikola stated they agree with the rule taking effect the following September. EMA commented that heavy vehicle manufacturers would need at least five years from the final rule's publication to comply, stating that GTR No. 13 Phase 2 had only been recently approved and the revision broadened its scope to include heavy vehicles. EMA cited the need for manufacturers to evaluate the new requirements, conduct validation testing, and potentially redesign components. Similarly, Auto Innovators raised concerns about the proposed compliance period, suggesting that an additional five years beyond the one-year compliance date would be necessary. They noted a lack of harmonization with GTR No. 13, which they stated would require significant design, hardware, and software adjustments for manufacturers.

Several commenters, including Auto Innovators, HATCI, and Glickenhaus, also pointed out conflicting compliance dates within the NPRM. Auto Innovators and HATCI pointed out inconsistencies between the **DATES** section, which stated the compliance date as two years after publication, and the Lead Time section, which stated it as one year. Both organizations requested additional lead time due to a lack of harmonization with GTR No. 13 and the substantial vehicle design changes they stated will be required. HATCI requested a compliance date of five years from the first September 1 after the final rule's publication, and cited potential impacts on pre-production vehicles due to a lack of harmonization which will prevent manufacturers from utilizing existing hardware and software.

Glickenhaus requested a three-year extension for low volume manufacturers to avoid disruption to current pilot projects. Hyundai also recommended a five-year compliance period after the September 1 following the rule's publication, stating that this is justified by the significant number of changes from GTR No. 13 in FMVSS Nos. 307 and 308, the inclusion of substantive new requirements, and the time required for design changes, validation and certification. Hyundai also noted that these proposed requirements are generally consistent with current industry practices, so there is no immediate safety necessity warranting a shorter lead time.

Agency Response

NHTSA acknowledges the comments regarding the proposed lead time and the concerns raised about the inconsistency between the compliance dates mentioned in the NPRM. NHTSA acknowledges that the ''Lead Time'' section was not updated correctly to reflect the intended proposed compliance timeline. To clarify this issue, first, NHTSA confirms that the effective date remains as proposed: 180 days after the publication of the final rule in the **Federal Register**.

Second, in response to commenters' requests for additional lead time for the compliance date, particularly from heavy vehicle manufacturers and others citing the need for additional time, NHTSA has revised the compliance date in the final rule. The final rule will adopt a compliance date that will be September 1, 2028, more than 3 years after the publication of the final rule. This extension provides additional time for manufacturers to ensure compliance without causing significant disruption.

However, NHTSA emphasizes that the requirements proposed under FMVSS Nos. 307 and 308 are closely aligned with GTR No. 13 and current industry practices. Many manufacturers have already implemented safety systems and testing procedures that meet the requirements of the final rule, and thus an extended lead time beyond the three-year period is not necessary. NHTSA is not aware of any peculiarities of the U.S. market that would necessitate lead times double or triple the lead times in other markets.[56]

[56] NHTSA knows from its involvement in UN ECE that the lead times in other markets are sometimes substantially shorter than those often requested by manufacturers in the United States. As an example, Europe's General Safety Regulation was adopted in late 2019 and required that manufacturers equip vehicles with certain vehicle safety features by July 2022. See *https://www.tuvsud.com/en-us/resource-centre/stories/revision-of-the-eu-general-safety-regulation.* This period of less than 3 years is less than the timelines often requested by American industry, who often seek much longer lead times.

V. Other Changes to the Regulatory Text

A clerical correction was made to the S3 *Application* section of FMVSS No. 308 to add the words ''to propel the vehicle.'' These words were included in S3 *Application* of FMVSS No. 307, but were inadvertently omitted from FMVSS No. 308 S3. This edit is editorial in nature to improve the clarity of the section, and does not intend to change the application of the standard.

A clerical correction was made to S6.2.2.2(e), deleting the word ''container'' from ''container manufacture may specify.'' The inclusion of the word ''container'' before manufacturer was erroneous since the standard is being applied as a vehicle-level standard, as discussed above. The section will now simply state that the ''manufacturer may specify.''

A clerical correction was made to the definition of ''hydrogen fuel system'' to replace the word ''mean'' with ''means'' for grammatical accuracy.

S5.2.2 was updated to include the words ''The vehicle shall meet at least'' to clarify that the vehicle must meet at least one of the requirements listed in S5.2.2 (a) though (c).

S6.1 was updated to include the words ''individual test'' before vehicle to clarify that the statement is referring to a specific individual test vehicle, not a line or model of vehicle.

S6.4.2(c) was updated to replace the word ''volumes'' with ''spaces.'' The section is referring to enclosed or semi-enclosed spaces, which are defined in the standard, whereas enclosed or semi-enclosed volumes are not defined.

NHTSA replaced all instances of the word ''manufacturer'' with ''vehicle manufacturer'' to clarify that the vehicle manufacturer is responsible for all aspects of the two standards.

VI. Rulemaking Analyses and Notices

Executive Order 12866, Executive Order 13563, and DOT Regulatory Policies and Procedures

We have considered the potential impact of this final rule under Executive Order 12866, Executive Order 13563, and DOT Order 2100.6A. This final rule is nonsignificant under E.O. 12866 and was not reviewed by the Office of Management and Budget. It is also not considered ''of special note to the Department'' under DOT Order

2100.6A, Rulemaking and Guidance Procedures.

Today, there are only two publicly available vehicle models that may be affected by the final rule, which collectively equal less than 5,000 vehicles sold per model year. Most manufacturers and vehicle lines currently in production would be unaffected by this rule. Of those vehicles that would be covered by today's standards, we expect the compliance cost to be minimal. As discussed earlier, the few manufacturers that already offer hydrogen vehicles in the marketplace already take safety precautions to attempt to emulate the safety of conventional and battery electric vehicles, and adhere to the industry guidelines that informed the creation of GTR No. 13. Because the final rule is intended to coalesce industry practice and future designs through harmonized regulations, we do not expect that the rule would pose a significant cost to current manufacturers, or for manufacturers that may be planning to enter the market.

Given NHTSA is establishing these standards during the early development of hydrogen vehicles, there is no baseline to compare today's rule against. While we anticipate the regulations will promote safer hydrogen vehicles, we cannot quantify this benefit with any degree of certainty, especially given that we cannot forecast what the industry would look like in the absence of our proposed standard. Furthermore, most of the safety benefits that will accrue to this rule will only be realized when hydrogen vehicles become more prevalent. The net present value of these future costs and benefits is minimal.

Regulatory Flexibility Act

Pursuant to the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.,* as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996), whenever an agency is required to publish a notice of proposed rulemaking or final rule, it must prepare and make available for public comment a regulatory flexibility analysis that describes the effect of the rule on small entities (*i.e.,* small businesses, small organizations, and small governmental jurisdictions). The Small Business Administration's regulations at 13 CFR part 121 define a small business, in part, as a business entity ''which operates primarily within the United States.'' (13 CFR 121.105(a)(1)). No regulatory flexibility analysis is required if the head of an agency certifies the proposed or final rule will not have a significant economic impact on a substantial number of small entities. SBREFA amended the Regulatory Flexibility Act to require Federal agencies to provide a statement of the factual basis for certifying that a proposed or final rule will not have a significant economic impact on a substantial number of small entities.

I certify that these standards will not have a significant impact on a substantial number of small entities. This action creates FMVSS Nos. 307 and 308 to establish minimum safety requirements for the CHSS and fuel system integrity of hydrogen vehicles. FMVSS Nos. 307 and 308 are vehicle standards. We anticipate any burdens of the standard will fall onto manufacturers of hydrogen vehicles. NHTSA is unaware of any small entities that currently manufacture or are planning to manufacture hydrogen vehicles. Furthermore, NHTSA is adopting standards similar to those already in place across industry. Thus, we anticipate the impacts of this final rule on all manufacturers to be minimal regardless of manufacturer size.

Executive Order 13132

NHTSA has examined this final rule pursuant to Executive Order 13132 (64 FR 43255, August 10, 1999) and concluded that no additional consultation with States, local governments or their representatives is mandated beyond the rulemaking process. The Agency has concluded that this action would not have ''federalism implications'' because it would not have ''substantial direct effects on States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government,'' as specified in section 1 of the Executive order. This final rule would apply to motor vehicle manufacturers. Further, no State has adopted requirements regulating the CHSS or fuel integrity of hydrogen powered vehicles. Thus, Executive Order 13132 is not implicated and consultation with State and local officials is not required.

NHTSA rules can preempt in two ways. First, the National Traffic and Motor Vehicle Safety Act contains an express preemption provision: When a motor vehicle safety standard is in effect under this chapter, a State or a political subdivision of a State may prescribe or continue in effect a standard applicable to the same aspect of performance of a motor vehicle or motor vehicle equipment only if the standard is identical to the standard prescribed under this chapter. 49 U.S.C. 30103(b)(1). It is this statutory command by Congress that preempts any non-identical State legislative and administrative law addressing the same aspect of performance.

The express preemption provision described above is subject to a savings clause under which compliance with a motor vehicle safety standard prescribed under this chapter does not exempt a person from liability at common law. 49 U.S.C. 30103(e). Pursuant to this provision, State common law tort causes of action against motor vehicle manufacturers that might otherwise be preempted by the express preemption provision are generally preserved.

NHTSA rules can also preempt State law if complying with the FMVSS would render the motor vehicle manufacturers liable under State tort law. Pursuant to Executive Order 13132 and 12988, NHTSA has considered whether this rule could or should preempt State common law causes of action. The agency's ability to announce its conclusion regarding the preemptive effect of one of its rules reduces the likelihood that preemption will be an issue in any subsequent tort litigation. To this end, the agency has examined the nature (*i.e.,* the language and structure of the regulatory text) and objectives of this rule and finds that this rule, like many NHTSA rules, would prescribe only a minimum safety standard. As such, NHTSA does not intend this NPRM to preempt State tort law that would effectively impose a higher standard on motor vehicle manufacturers rule. Establishment of a higher standard by means of State tort law will not conflict with the minimum standard adopted here. Without any conflict, there could not be any implied preemption of a State common law tort cause of action.

Executive Order 12988 (Civil Justice Reform)

When promulgating a regulation, Executive Order 12988 specifically requires that the agency must make every reasonable effort to ensure that the regulation, as appropriate: (1) Specifies in clear language the preemptive effect; (2) specifies in clear language the effect on existing Federal law or regulation, including all provisions repealed, circumscribed, displaced, impaired, or modified; (3) provides a clear legal standard for affected conduct rather than a general standard, while promoting simplification and burden reduction; (4) specifies in clear language the retroactive effect; (5) specifies whether administrative proceedings are to be required before parties may file suit in court; (6) explicitly or implicitly defines key terms; and (7) addresses other important issues affecting clarity

and general draftsmanship of regulations.

Pursuant to this Order, NHTSA notes as follows. The preemptive effect of this final rule is discussed above in connection with E.O. 13132. NHTSA notes further that there is no requirement that individuals submit a petition for reconsideration or pursue other administrative proceeding before they may file suit in court.

Executive Order 13609 (Promoting International Regulatory Cooperation)

Executive Order 13609, ''Promoting International Regulatory Cooperation,'' promotes international regulatory cooperation to meet shared challenges involving health, safety, labor, security, environmental, and other issues and to reduce, eliminate, or prevent unnecessary differences in regulatory requirements.

The final rule adopts the technical requirements of GTR No.13, a technical standard for hydrogen vehicles adopted by the United Nations Economic Commission for Europe (UN ECE) World Forum for Harmonization of Vehicle Regulations (WP.29). As a Contracting Party that voted in favor of GTR No. 13, NHTSA was obligated to initiate rulemaking to incorporate safety requirements and options specified in GTR, which the agency satisfied when it published its notice of proposed rulemaking NHTSA is not required to finalize the text of the GTR.

While the final rule does contain some differences from GTR No. 13 to reflect U.S. law, they are consistent with the regulatory process envisioned and encouraged from the outset of GTR No. 13. NHTSA will continue to participate with the international community on GTR No. 13 and evaluate further amendments on their merits as they are adopted by WP.29.

NHTSA has analyzed this final rule under the policies and agency responsibilities of Executive Order 13609 and has determined this rule would have no effect on international regulatory cooperation.

National Environmental Policy Act

NHTSA has analyzed this rule for the purposes of the National Environmental Policy Act (42 U.S.C. 4321 et. seq.), as amended. In accordance with 49 C.F.R § 1.81, 42 U.S.C. 4336, and DOT NEPA Order 5610.1C, NHTSA has determined that this rule is categorically excluded pursuant to 23 CFR 771.118(c)(4) (planning and administrative activities, such as promulgation of rules, that do not involve or lead directly to construction).

This rulemaking establishes two new FMVSS, FMVSS No. 307, ''Fuel system integrity of hydrogen vehicles,'' which specifies requirements for the integrity of the fuel system in hydrogen vehicles during normal vehicle operations and after crashes, and FMVSS No. 308, ''Compressed hydrogen storage system integrity,'' which specifies requirements for the compressed hydrogen storage system to ensure the safe storage of hydrogen onboard vehicles. This rulemaking is not anticipated to result in any environmental impacts, and there are no extraordinary circumstances present in connection with this rulemaking.

NHTSA expects the changes to new and existing vehicles to be minimal, and mitigating the hazards associated with fires that result from hydrogen fuel leakage during vehicle operation and after motor vehicle crashes and from explosions resulting from the burst of pressurized hydrogen containers would result in a public health and safety benefit. For these reasons, the agency has determined that implementation of this action will not have any adverse impact on the quality of the human environment.

Paperwork Reduction Act

Under the procedures established by the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501, et. seq.), Federal agencies must obtain approval from the OMB for each collection of information they conduct, sponsor, or require through regulations. A person is not required to respond to a collection of information by a Federal agency unless the collection displays a valid OMB control number. The Information Collection Request (ICR) for a revision of a previously approved collection described below will be forwarded to OMB for review and comment. In compliance with these requirements, NHTSA asks for public comments on the following proposed collection of information for which the agency is seeking approval from OMB. In this final rule, we are finalizing a revision and reinstatement to a previously approved OMB collection, OMB Clearance No. 2127–0512, Consolidated Labeling Requirements for Motor Vehicles (except the VIN).[57]

Title: Consolidated Labeling Requirements for Motor Vehicles (except the VIN).

OMB Control Number: OMB Control No. 2127–0512.

Type of Request: Revision of a previously approved collection.

Type of Review Requested: Regular.

Requested Expiration Date of Approval: 3 years from the date of approval.

Summary of the Collection of Information: FMVSS No. 307 specifies requirements for the integrity of motor vehicle fuel systems using compressed hydrogen as a fuel source. Each hydrogen vehicle must have a permanent label which lists the fuel type, service pressure, and a statement directing vehicle users/operators to instructions for inspection and service life of the fuel container. FMVSS No. 308 specifies requirements for the integrity of compressed hydrogen storage systems (CHSS). Each hydrogen container must have a permanent label containing manufacturer contact information, the container serial number, manufacturing date, date of removal from service, and applicable BP_O burst pressure. If the proposed requirements are made final, we will submit a request for OMB clearance of the proposed collection of information and seek clearance prior to the effective date of the final rule.

Description of the likely respondents: Vehicle manufacturers.

Estimated Number of Respondents: 10.

Estimated Total Annual Burden Hours: $8,616.

It is estimated that vehicle manufacturers will provide labels on 10 different hydrogen vehicle models. Since manufacturers have provided CNG vehicles with similar required labels for many years, it is estimated that manufacturers will have a generalized label template which only requires minor adjustments for hydrogen and population with the required information. There is an annual 1.0 hour burden for manufacturers to have a Mechanical Drafter put the correct information into a label template to create a model specific label. The annual burden for this label creation is 10 hours (10 hydrogen vehicle model labels * 1 hour per model label) and $478 (10 hydrogen vehicle model labels * 1 hour per model label * $33.62 labor rate per hour ÷ 70.3% of labor rate as total wage compensation). Manufacturers will also bear a cost burden of $1,884 (2,850 hydrogen vehicles * $0.73 per label) for the required labels to be attached to the hydrogen vehicles. The combined total annual burden to vehicle manufacturers from the requirements to have the specified label text on hydrogen vehicles is 10 hours and $2,362. These hour and cost burdens represent a new

[57] In compliance with the requirements of the PRA, NHTSA is separately publishing a notice to request comment on NHTSA's reinstatement with modification of the previously approved information collection request.

addition to this information collection request.

It is estimated that vehicle manufacturers will provide labels on 10 different hydrogen container models. Since manufacturers have provided CNG containers with similar labels for many years, it is estimated that manufacturers will have a generalized label template which requires only minor adjustments for hydrogen and then population with their current contact information, the container serial number, manufacturing date, and date of removal from service. There is an annual 1.0 hour burden for manufacturers to have a Mechanical Drafter put the correct information into a label template to create a model specific label. The annual burden for this label creation is 10 hours (10 hydrogen container model labels * 1.0 hours per model label) and $478 (10 hydrogen container models labels * 1.0 hours per model label * $33.62 labor rate per hour ÷ 70.3% of labor rate as total wage compensation). Manufacturers will also bear a cost burden of $5,776 (7,910 hydrogen containers * $0.730 per label) for the required labels to be attached to the hydrogen containers. The combined total annual burden to vehicle manufacturers from the requirements to have the specified label text on hydrogen containers is 10 hours and $6,254. These hour and cost burdens represent a new addition to this information collection request.

National Technology Transfer and Advancement Act

Under the National Technology Transfer and Advancement Act of 1995 (NTTAA) (Pub. L. 104) Section 12(d) of the National Technology Transfer and Advancement Act (NTTAA) requires NHTSA to evaluate and use existing voluntary consensus standards in its regulatory activities unless doing so would be inconsistent with applicable law (*e.g.,* the statutory provisions regarding NHTSA's vehicle safety authority) or otherwise impractical. Voluntary consensus standards are technical standards developed or adopted by voluntary consensus standards bodies. Technical standards are defined by the NTTAA as ''performance-based or design-specific technical specification and related management systems practices.'' They pertain to ''products and processes, such as size, strength, or technical performance of a product, process or material.''

Examples of organizations generally regarded as voluntary consensus standards bodies include ASTM International, the Society of Automotive Engineers (SAE), and the American National Standards Institute (ANSI). If NHTSA does not use available and potentially applicable voluntary consensus standards, we are required by the Act to provide Congress, through OMB, an explanation of the reasons for not using such standards.

Today's final rule establishes standards that are consistent with voluntary standards cited above such as SAEJ2579_201806, HPRD–1 2021, and HGV 3.1 2022.

This final rule adopting key aspects of GTR No. 13 is consistent with the goals of the NTTAA. This final rule adopts much of a global consensus standard. However this final rule includes some minor deviations from GTR No. 13. As discussed above, FMVSS must maintain objectivity, clarity, and practicability, ensuring that every requirement is measurable and enforceable, with unambiguous test procedures. These adjustments ensure FMVSS remain clear, objective, and enforceable. For example, NHTSA is removing subjective requirements such as the TPRD atmospheric exposure test and the and localized leak requirement from the ambient and extreme gas permeation test. NHTSA is also requiring the testing of only one component for some tests instead of multiple components (as specified in GTR No. 13 for assessing variability in response), and eliminating duplicative requirements like the proof pressure tests. NHTSA has also removed unnecessary requirements for burst pressure variability, and removed a requirement for an overpressure protection device that had no corresponding performance test. NHTSA also selected a more balanced requirement for the hydrogen concentration limit in the enclosed and semi-enclosed spaces, rather than applying the GTR's zero limit to only the passenger compartment.

The GTR was developed by a global regulatory body and is designed to increase global harmonization of differing vehicle standards. The GTR leverages the expertise of governments in developing safety requirements for hydrogen fueled vehicles. NHTSA's consideration of GTR No. 13 accords with the principles of NTTAA as NHTSA's consideration of an established, proven regulation has reduced the need for NHTSA to expend significant agency resources on the same safety need addressed by GTR No. 13.

Incorporation by Reference

Under regulations issued by the Office of the Federal Register (1 CFR 51.5(a)), an agency, as part of a proposed rule that includes material incorporated by reference, must summarize material that is proposed to be incorporated by reference and discuss the ways the material is reasonably available to interested parties or how the agency worked to make materials available to interested parties. At the final rule stage, regulations require that the agency seek formal approval, summarize the material that it incorporates by reference in the preamble of the final rule, discuss the ways that the materials are reasonably available to interested parties, and provide other specific information to the Office of the Federal Register.

NHTSA is incorporating by reference two documents into the Code of Federal Regulations. First, NHTSA is incorporating by reference ASTM D1193–06 (Reapproved 2018), *Standard Specification for Reagent Water.* ASTM D1193–06 is an industry standard that defines the requirements for the purity of water used in laboratories, ensuring that experiments and tests are not compromised by water impurities. NHTSA will use a water supply conforming to Type IV requirements of ASTM D1193–06 in testing the compliance of closure devices with the salt corrosion resistance test in 571.308 S6.2.6.1.4.

NHTSA is also incorporating by reference ISO 6270–2:2017, *Paints and Varnishes—Determination of Resistance to Humidity—Part 2: Condensation (In-Cabinet Exposure with Heated Water Reservoir).* ISO 6270–2:2017 specifies methods for assessing the resistance of materials to humidity by focusing on how materials behave when exposed to high humidity. ISO 6270–2:2017 provides detailed procedures and materials for conducting tests where humidity is the primary variable. NHTSA will use the apparatus described within ISO 6270–2:2017 in testing the compliance of closure devices with the salt corrosion resistance test in 571.308 S6.2.6.1.4.

All standards incorporated by reference in this rule are available for review at NHTSA's headquarters in Washington, DC, and for purchase from the organizations promulgating the standards. The ASTM standard is also available for review at ASTM's online reading room.[58]

Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA), Public Law 104–4, requires Federal agencies to prepare a written assessment of the costs, benefits, and other effects

[58] *https://www.astm.org/READINGLIBRARY/.*

of proposed or final rules that include a Federal mandate likely to result in the expenditure by State, local, or tribal governments, in the aggregate, or by the private sector, of more than $100 million annually (adjusted for inflation with base year of 1995). Adjusting this amount by the implicit gross domestic product price deflator for the year 2022 results in $177 million (111.416/75.324 = 1.48). This rule will not result in a cost of $177 million or more to State, local, or tribal governments, in the aggregate, or the private sector. Thus, this rule is not subject to the requirements of sections 202 of the UMRA.

Executive Order 13045 (Protection of Children From Environmental Health and Safety Risks)

Executive Order 13045, ''Protection of Children from Environmental Health and Safety Risks,'' (62 FR 19885, April 23, 1997) applies to any proposed or final rule that: (1) Is determined to be ''economically significant,'' as defined in E.O. 12866, and (2) concerns an environmental health or safety risk that NHTSA has reason to believe may have a disproportionate effect on children. If a rule meets both criteria, the agency must evaluate the environmental health or safety effects of the rule on children and explain why the rule is preferable to other potentially effective and reasonably feasible alternatives considered by the agency.

This rulemaking is not subject to the Executive Order because it is not economically significant as defined in E.O. 12866.

Executive Order 13211

Executive Order 13211 (66 FR 28355, May 18, 2001) applies to any rulemaking that: (1) is determined to be economically significant as defined under E.O. 12866, and is likely to have a significantly adverse effect on the supply of, distribution of, or use of energy; or (2) that is designated by the Administrator of the Office of Information and Regulatory Affairs as a significant energy action. This rulemaking is not subject to E.O. 13211 as this rule is not economically significant and should not have an adverse effect on the supply of, distribution of, or use of energy for the same reasons explained in our discussion of Executive Orders 12866 and 13563.

Plain Language

Executive Order 12866 requires each agency to write all rules in plain language. Application of the principles of plain language includes consideration of the following questions:

- Have we organized the material to suit the public's needs?
- Are the requirements in the rule clearly stated?
- Does the rule contain technical language or jargon that isn't clear?
- Would a different format (grouping and order of sections, use of headings, paragraphing) make the rule easier to understand?
- Would more (but shorter) sections be better?
- Could we improve clarity by adding tables, lists, or diagrams?
- What else could we do to make the rule easier to understand?

If you have any responses to these questions, please include them in your comments on this proposal.

Regulation Identifier Number (RIN)

The Department of Transportation assigns a regulation identifier number (RIN) to each regulatory action listed in the Unified Agenda of Federal Regulations. The Regulatory Information Service Center publishes the Unified Agenda in April and October of each year. You may use the RIN contained in the heading at the beginning of this document to find this action in the Unified Agenda.

List of Subjects in 49 CFR Part 571

Imports, Incorporation by reference, Motor vehicle safety, Reporting and recordkeeping requirements, Tires.

In consideration of the foregoing, NHTSA amends 49 CFR part 571 as set forth below.

PART 571—FEDERAL MOTOR VEHICLE SAFETY STANDARDS

■ 1. The authority citation for part 571 continues to read as follows:

Authority: 49 U.S.C. 322, 30111, 30115, 30117 and 30166; delegation of authority at 49 CFR 1.95.

■ 2. Amend § 571.5 by:
■ a. Redesignating paragraphs (d)(20) through (33) as paragraphs (d)(21) through (34), respectively;
■ b. Adding new paragraph (d)(20);
■ d. Redesignating paragraphs (i)(1) through (4) as paragraphs (i)(2) through (5), respectively; and
■ e. Adding new paragraph (i)(1).

The additions read as follows:

§ 571.5 Matter incorporated by reference.

* * * * *

(d) * * *

(20) ASTM D1193–06 (Reapproved 2018), *Standard Specification for Reagent Water,* approved March 15, 2018, into § 571.308.

* * * * *

(i) * * *

(1) ISO 6270–2:2017(E), *Paints and Varnishes—Determination of Resistance to Humidity—Part 2: Condensation (In-Cabinet Exposure with Heated Water Reservoir),* Second edition, November 2017, into § 571.308.

* * * * *

■ 3. Section 571.307 is added to read as follows:

§ 571.307 Standard No. 307; Fuel system integrity of hydrogen vehicles

S1. *Scope.* This standard specifies requirements for the integrity of motor vehicle hydrogen fuel systems.

S2. *Purpose.* The purpose of this standard is to reduce deaths and injuries occurring from fires that result from hydrogen fuel leakage during vehicle operation and after motor vehicle crashes.

S3. *Application.* This standard applies to each motor vehicle manufactured on or after September 1, 2028, that uses compressed hydrogen gas as a fuel source to propel the vehicle.

S4. *Definitions.*

Check valve means a valve that prevents reverse flow.

Closure devices mean the check valve(s), shut-off valve(s), and thermally-activated pressure relief device(s) that control the flow of hydrogen into and/or out of a CHSS.

Container means a pressure-bearing component of a compressed hydrogen storage system that stores a continuous volume of hydrogen fuel in a single chamber or in multiple permanently interconnected chambers.

Container attachments mean non-pressure bearing parts attached to the container that provide additional support and/or protection to the container and that may be removed only with the use of tools for the specific purpose of maintenance and/or inspection.

Compressed hydrogen storage system (CHSS) means a system that stores compressed hydrogen fuel for a hydrogen-fueled vehicle, composed of a container, container attachments (if any), and all closure devices required to isolate the stored hydrogen from the remainder of the fuel system and the environment.

Enclosed or semi-enclosed spaces means the passenger compartment, luggage compartment, and space under the hood.

Fuel cell system means a system containing the fuel cell stack(s), air processing system, fuel flow control system, exhaust system, thermal management system, and water management system.

Fueling receptacle means the equipment to which a fueling station nozzle attaches to the vehicle and through which fuel is transferred to the vehicle.

Fuel lines means all piping, tubing, joints, and any components such as flow controllers, valves, heat exchangers, and pressure regulators.

Hydrogen concentration means the percentage of the hydrogen molecules within the mixture of hydrogen and air (equivalent to the partial volume of hydrogen gas).

Hydrogen fuel system means the fueling receptacle, CHSS, fuel cell system or internal combustion engine, fuel lines, and exhaust systems.

Luggage compartment means the space in the vehicle for luggage, cargo, and/or goods accommodation, bounded by a roof, hood, floor, side walls being separated from the passenger compartment by the front bulkhead or the rear bulkhead.

Maximum allowable working pressure (MAWP) means the highest gauge pressure to which a component or system is permitted to operate under normal operating conditions.

Nominal working pressure (NWP) means the settled pressure of compressed gas in a container or CHSS fully fueled to 100 percent state of charge and at a uniform temperature of 15 °C.

Normal milliliter means a quantity of gas that occupies one milliliter of volume when its temperature is 0 °C and its pressure is 1 atmosphere.

Passenger compartment means the space for occupant accommodation that is bounded by the roof, floor, side walls, doors, outside glazing, front bulkhead, and rear bulkhead or rear gate.

Pressure relief device (PRD) means a device that, when activated under specified performance conditions, is used to release hydrogen from a pressurized system and thereby prevent failure of the system.

Rechargeable electrical energy storage system (REESS) means the rechargeable energy storage system that provides electric energy for electrical propulsion.

Service door means a door that allows for the entry and exit of vehicle occupants under normal operating conditions.

Shut-off valve means a valve between the container and the remainder of the hydrogen fuel system that must default to the ''closed'' position when unpowered.

State of charge (SOC) means the density ratio of hydrogen in the CHSS between the actual CHSS condition and that at NWP with the CHSS equilibrated to 15 °C, as expressed as a percentage using equation 1 to this section, where ρ is the density of hydrogen (g/L) at pressure (P) in MegaPascals (MPa) and temperature (T) in Celsius (°C) as listed in table 1 to S4 or linearly interpolated therein:

Equation 1 to § 571.307 S4

$$SOC(\%) = \frac{\rho(P,T)}{\rho(NWP, 15°C)} x100$$

TABLE 1 TO § 571.307 S4

Temperature (°C)	Pressure (MPa)												
	1	10	20	30	35	40	50	60	65	70	75	80	87.5

Thermally-activated pressure relief device (TPRD) means a non-reclosing PRD that is activated by temperature to open and release hydrogen gas.

S5. *Hydrogen fuel system.*

S5.1. *Fuel system integrity during normal vehicle operations.*

S5.1.1. *Fueling receptacle requirements.* (a) A compressed hydrogen fueling receptacle shall prevent reverse flow to the atmosphere.

(b) A label shall be affixed close to the fueling receptacle showing the following information:

(1) The statement, ''Compressed hydrogen gas only.''

(2) The statement, ''Service pressure _____MPa (_____psig).''

(3) The statement, ''See instructions on fuel container(s) for inspection and service life.''

(c) The fueling receptacle shall ensure positive locking of the fueling nozzle.

(d) The fueling receptacle shall be protected from the ingress of dirt and water.

(e) The fueling receptacle shall not be installed in enclosed or semi-enclosed spaces.

S5.1.2. *Hydrogen discharge systems.*

S5.1.2.1. *Pressure relief systems.* (a) If present, the outlet of the vent line for hydrogen gas discharge from the TPRD(s) of the CHSS shall be protected from ingress of dirt and water.

(b) The hydrogen gas discharge from TPRD(s) of the CHSS shall not impinge upon:

(1) Enclosed or semi-enclosed spaces;

(2) Any vehicle wheel housing;

(3) Container(s);

(4) REESS(s);

(5) Any emergency exit(s) as identified in § 571.217 (FMVSS No. 217); nor

(6) Any service door(s).

S5.1.2.2. *Vehicle exhaust system.* When tested in accordance with S6.5 of this standard, the hydrogen concentration at the vehicle exhaust system's point of discharge shall not:

(a) Exceed an average of 4.0 percent by volume during any moving three-second time interval; nor

(b) Exceed 8.0 percent by volume at any time.

S5.1.3. *Protection against flammable conditions.* (a) When tested in accordance with S6.4.1 of this standard, a warning in accordance with S5.1.6 shall be provided within 10 seconds of the application of the first test gas.

When tested in accordance with S6.4.1, the main shut-off valve shall close within 10 seconds of the application of the second test gas.

(b) When tested in accordance with S6.4.2 of this standard, the hydrogen concentration in the enclosed or semi-enclosed spaces shall be less than 3.0 percent.

S5.1.4. *Fuel system leakage.* When tested in accordance with S6.6 of this standard, the hydrogen fuel system downstream of the shut-off valve(s) shall not exhibit observable leakage.

S5.1.5 *Tell-tale warning.* A warning shall be given to the driver, or to all front seat occupants for vehicles without a driver's designated seating position, by a visual signal or display text with the following properties:

(a) Visible to the driver while seated in the driver's designated seating position or visible to all front seat occupants of vehicles without a driver's designated seating position;

(b) Yellow in color if the warning system malfunctions;

(c) Red in color if hydrogen concentration in enclosed or semi-enclosed spaces exceeds 3.0 percent by volume;

(d) When illuminated, shall be visible to the driver (or to all front seat occupants in vehicles without a driver's designated seating position) under both daylight and nighttime driving conditions; and

(e) Remains illuminated when hydrogen concentration in any of the vehicle's enclosed or semi-enclosed spaces exceeds 3.0 percent by volume or when the warning system malfunctions, and the ignition locking system is in the ''On'' (''Run'') position or the propulsion system is activated.

S5.2. *Post-crash fuel system integrity.* Each vehicle with a gross vehicle weight rating (GVWR) of 4,536 kg or less to which this standard applies must meet the requirements in S5.2.1 through S5.2.4 when tested according to S6 under the conditions of S7. Each school bus with a GVWR greater than 4,536 kg to which this standard applies must meet the requirements in S5.2.1 through S5.2.4 when tested according to S6 under the conditions of S7 of this standard.

S5.2.1. *Fuel leakage limit.* If hydrogen gas is used for testing, the volumetric flow of hydrogen gas leakage shall not exceed an average of 118 normal liters per minute for the time interval, Δt, as determined in accordance with S6.2.1 of this standard. If helium is used for testing, the volumetric flow of helium leakage shall not exceed an average of 88.5 normal litres per minute for the time interval, Δt, as determined in accordance with S6.2.2 of this standard.

S5.2.2. *Concentration limit in enclosed spaces.* The vehicle shall meet at least one of the requirements in S5.2.2(a), (b), or (c).

(a) Hydrogen gas leakage shall not result in a hydrogen concentration in the air greater than 4.0 percent by volume in enclosed or semi-enclosed spaces for 60 minutes after impact when tested in accordance with S6.3 of this standard.

(b) Helium gas leakage shall not result in a helium concentration in the air greater than 3.0 percent by volume in enclosed or semi-enclosed spaces for 60 minutes after impact when tested in accordance with S6.3 of this standard.

(c) The shut-off valve of the CHSS shall close within 5 seconds of the crash.

S5.2.3. *Container displacement.* The container(s) shall remain attached to the vehicle by at least one component anchorage, bracket, or any structure that transfers loads from the container to the vehicle structure.

S5.2.4. *Fire.* There shall be no fire in or around the vehicle for the duration of the test.

S6. *Test Requirements.*

S6.1. *Vehicle Crash Tests.* A test vehicle with a GVWR less than or equal to 4,536 kg, under the conditions of S7 of this standard, is subject to any one single barrier crash test of S6.1.1, S6.1.2, and S6.1.3. A school bus with a GVWR greater than 4,536 kg, under the conditions of S7, is subject to the contoured barrier crash test of S6.1.4. A particular vehicle need not meet further test requirements after having been subjected and evaluated to a single barrier crash test.

S6.1.1. *Frontal barrier crash.* The test vehicle, with test dummies in accordance with S6.1 of 571.301 of this chapter, traveling longitudinally forward at any speed up to and including 48.0 km/h, impacts a fixed collision barrier that is perpendicular to the line of travel of the vehicle, or at an angle up to 30 degrees in either direction from the perpendicular to the line of travel of the vehicle.

S6.1.2. *Rear moving barrier impact.* The test vehicle, with test dummies in accordance with S6.1 of § 571.301, is impacted from the rear by a barrier that conforms to S7.3(b) of § 571.301 and that is moving at any speed up to and including 80.0 km/h.

S6.1.3. *Side moving deformable barrier impact.* The test vehicle, with the appropriate 49 CFR part 572 test dummies specified in § 571.214 (FMVSS No. 214) at positions required for testing by S7.1.1, S7.2.1, or S7.2.2 of Standard 214, is impacted laterally on either side by a moving deformable barrier moving at any speed between 52.0 km/h and 54.0 km/h.

S6.1.4. *Moving contoured barrier crash.* The test vehicle is impacted at any point and at any angle by the moving contoured barrier assembly, specified in S7.5 and S7.6 in § 571.301, traveling longitudinally forward at any speed up to and including 48.0 km/h.

S6.2. *Post-crash CHSS leak test.*

S6.2.1. *Post-crash leak test for CHSS filled with compressed hydrogen.* (a) The hydrogen gas pressure, P_0 (MPa), and temperature, T_0 (°C), shall be measured immediately before the impact. The hydrogen gas pressure P_f (MPa) and temperature, T_f (°C) shall also be measured immediately after a time interval Δt (in minutes) after impact. The time interval, Δt, starting from the time of impact, shall be the greater of S6.2.1(a)(1) or (2):

(1) 60 minutes; or

(2) The time interval calculated with equation 2 to this section, where $R_s = P_s/NWP$, P_s is the pressure range of the pressure sensor (MPa), NWP is the Nominal Working Pressure (MPa), and V_{CHSS} is the volume of the CHSS (L):

Equation 2 to § 571.307 S6.2.1(a)(2)

$$\Delta t = V_{CHSS} \times NWP/1000 \times ((-0.027 \times NWP + 4) \times R_s - 0.21) - 1.7 \times R_s$$

(b) The initial mass of hydrogen M_0 (g) in the CHSS shall be calculated from equations 3 through 5 to this section:

Equation 3 to § 571.307 S6.2.1(b)

$$P_0' = P_0 \times 288/(273 + T_0)$$

Equation 4 to § 571.307 S6.2.1(b)

$$\rho_0' = -0.0027 \times (P_0')^2 + 0.75 \times P_0' + 1.07$$

Equation 5 to § 571.307 S6.2.1(b)

$$M_0 = \rho_0' \times V_{CHSS}$$

(c) The final mass of hydrogen in the CHSS, M_f (in grams), at the end of the time interval, Δt, shall be calculated from equations 6 through 8 to this section, where P_f is the measured final pressure (MPa) at the end of the time interval, and T_f (°C) is the measured final temperature:

Equation 6 to § 571.307 S6.2.1(c)

$$P_f' = P_f \times 288/(273 + T_f)$$

Equation 7 to § 571.307 S6.2.1(c)

$$\rho_f' = -0.0027 \times (P_f')^2 + 0.75 \times P_f' + 1.07$$

Equation 8 to § 571.307 S6.2.1(c)

$$M_f = \rho_f' \times V_{CHSS}$$

(d) The average hydrogen flow rate over the time interval shall be calculated from equation 9 to this section, where V_{H2} is the average volumetric flow rate (normal millilitres per min) over the time interval:

Equation 9 to § 571.307 S6.2.1(d)

$V_{H2} = (M_f - M_0)/\Delta t \times 22.41/2.016 \times (P_{target}/P_0)$

S6.2.2 *Post-crash leak test for CHSS filled with compressed helium.*

(a) The helium pressure, P_0 (MPa), and temperature, T_0 (°C), shall be measured immediately before the impact and again immediately after a time interval starting from the time of impact. The time interval, Δt (min), shall be the greater of the values in S6.2.2(a)(1) or (2):

(1) 60 minutes; or

(2) The time interval calculated with equation 10 to this section, where $R_s = P_s/NWP$, P_s is the pressure range of the pressure sensor (MPa), NWP is the Nominal Working Pressure (MPa), and V_{CHSS} is the volume of the CHSS (L):

Equation 10 to § 571.307 S6.2.2(a)(2)

$\Delta t = V_{CHSS} \times NWP/1000 \times (-0.028 \times NWP + 5.5) \times R_s - 0.3) - 2.6 \times R_s$

(b) The initial mass of helium M_0 (g) in the CHSS shall be calculated from equations 11 through 13 to this section:

Equation 11 to § 571.307 S6.2.2(b)

$P_0' = P_0 \times 288/(273 + T_0)$

Equation 12 to § 571.307 S6.2.2(b)

$\rho_0' = -0.0043 \times (P_0')^2 + 1.53 \times P_0' + 1.49$

Equation 13 to § 571.307 S6.2.2(b)

$M_0 = \rho_0' \times V_{CHSS}$

(c) The final mass of helium M_f (g) in the CHSS at the end of the time interval, Δt (min), shall be calculated from equations 14 through 16 to this section, where P_f is the measured final pressure (MPa) at the end of the time interval, and T_f (°C) is the measured final temperature:

Equation 14 to § 571.307 S6.2.2(c)

$P_f' = P_f \times 288/(273 + T_f)$

Equation 15 to § 571.307 S6.2.2(c)

$\rho_f' = -0.0043 \times (P_f')^2 + 1.53 \times P_f' + 1.49$

Equation 16 to § 571.307 S6.2.2(c)

$M_f = \rho_f' \times V_{CHSS}$

(d) The average helium flow rate over the time interval shall be calculated from equation 17 to this section, where V_{He} is the average volumetric flow rate (normal millilitres per min) of helium over the time interval:

Equation 17 to § 571.307 S6.2.2(d)

$V_{He} = (M_f - M_0)/\Delta t \times 22.41/4.003 \times (P_{target}/P_0)$

S6.3. *Post-crash concentration test for enclosed spaces.* (a) Sensors shall measure either the accumulation of hydrogen or helium gas, as appropriate, or the reduction in oxygen.

(b) Sensors shall have an accuracy of at least 5 percent at 4.0 percent hydrogen or 3.0 percent helium by volume in air, and a full-scale measurement capability of at least 25 percent above these criteria. The sensor shall be capable of a 90 percent response to a full-scale change in concentration within 10 seconds.

(c) Prior to the crash impact, the sensors shall be located in the passenger and luggage compartments of the vehicle as follows:

(1) At any interior point at any distance between 240 mm and 260 mm of the headliner above the driver's seat or near the top center of the passenger compartment.

(2) At any interior point at any distance between 240 mm and 260 mm of the floor in front of the rear (or rear most) seat in the passenger compartment.

(3) At any interior point at any distance between 90 mm and 110 mm below the top of luggage compartment(s).

(d) The sensors shall be securely mounted on the vehicle structure or seats and protected from debris, air bag exhaust gas and projectiles.

(e) The vehicle shall be located either indoors or in an area outdoors protected from direct and indirect wind.

(f) Post-crash data collection in enclosed spaces shall commence from the time of impact. Data from the sensors shall be collected at least every 5 seconds and continue for a period of 60 minutes after the impact.

(g) The data shall be compiled into a three-data-point rolling average prior to evaluating the applicable concentration limit in accordance with S5.2.2(a) or (b) of this standard.

S6.4. *Test procedure for protection against flammable conditions.*

S6.4.1. *Test for hydrogen gas leakage detectors.* (a) The vehicle propulsion system shall be operated for at least five minutes prior to testing and shall continue to operate throughout the test.

(b) Two mixtures of air and hydrogen gas shall be used in the test: The first test gas has any hydrogen concentration between 3.0 and 4.0 percent by volume in air to verify function of the warning, and the second test gas has any hydrogen concentration between 4.0 and 6.0 percent by volume in air to verify function of the shut-down.

(c) The test shall be conducted without influence of wind.

(d) A vehicle hydrogen leakage detector located in the enclosed or semi-enclosed spaces is enclosed with a cover and a test gas induction hose is attached to the hydrogen gas leakage detector.

(e) The hydrogen gas leakage detector is exposed to continuous flow of the first test gas specified in S.6.4.1(b) until the warning turns on.

(f) Then the hydrogen gas leakage detector is exposed to continuous flow of the second test gas specified in S.6.4.1(b) until the main shut-off valve closes to isolate the CHSS. The test is completed when the shut-off valve closes.

S6.4.2. *Test for integrity of enclosed spaces and detection systems.* (a) The test shall be conducted without influence of wind.

(b) Prior to the test, the vehicle is prepared to simulate remotely controllable hydrogen releases from the fuel system or from an external fuel supply. The number, location, and flow capacity of the release points downstream of the shut-off valve are defined by the vehicle manufacturer.

(c) A hydrogen concentration detector shall be installed in any enclosed or semi-enclosed spaces where hydrogen may accumulate from the simulated hydrogen release.

(d) Vehicle doors, windows and other covers are closed.

(e) The vehicle propulsion system shall be operated for at least five minutes and shall continue to operate throughout the remainder of the test.

(f) A leak shall be simulated using the remote controllable function.

(g) The hydrogen concentration is measured continuously until the end of the test.

(h) The test is completed 5 minutes after initiating the simulated leak or when the hydrogen concentration does not change for 3 minutes, whichever is longer.

S6.5. *Test for the vehicle exhaust system.* (a) The vehicle propulsion system shall be operated for at least five minutes prior to testing and shall continue to operate throughout the test, except for times when the propulsion system becomes deactivated by the steps taken during S6.5(c).

(b) The measuring section of the measuring device shall be placed along the centerline of the exhaust gas flow within 100 mm of where the exhaust is released to the atmosphere.

(c) The exhaust hydrogen concentration shall be continuously measured during the following steps:

(1) The fuel cell system shall be shut down.

(2) The fuel cell system shall be immediately restarted.

(3) After one minute, the vehicle shall be set to the ''off'' position and measurement continues until the until the vehicle shutdown is complete.

(d) The measurement device shall have a resolution time of less than 300 milliseconds;

(e) The measurement device shall have a measurement response time ($t_0 - t_{90}$) of less than 2 seconds, where t_0 is the moment of hydrogen concentration switching, and t_{90} is the time when 90 percent of the final indication is reached and shall have a resolution time of less than 300 milliseconds (sampling rate of greater than 3.33 Hz).

S6.6. *Test for fuel system leakage.* The vehicle CHSS shall be filled with hydrogen to any pressure between 90 percent NWP and 100 percent NWP for the duration of the test for fuel system leakage.

(a) The vehicle propulsion system shall be operated for at least five minutes prior to testing and shall continue to operate throughout the test.

(b) Hydrogen leakage shall be evaluated at accessible sections of the hydrogen fuel system downstream of the shut-off valve(s) using a leak detecting liquid. Hydrogen gas leak detection shall be performed immediately after applying the liquid.

S7. *Test conditions.* The requirements of S5.2 shall be met under the following conditions. Where a range of conditions is specified, the vehicle must be capable of meeting the requirements at all points within the range.

(a) Prior to conducting the crash test, instrumentation is installed in the CHSS to perform the required pressure and temperature measurements if the vehicle does not already have instrumentation with the required accuracy.

(b) The CHSS is then purged, if necessary, following vehicle manufacturer directions before filling the CHSS with compressed hydrogen or helium gas, as specified by the vehicle manufacturer.

(c) The target fill pressure P_{target} shall be calculated from equation 18 to this section, where NWP is in MPa, T_o is the ambient temperature in °C to which the CHSS is expected to settle, and P_{target} is the target fill pressure in MPa after the temperature settles:

Equation 18 to § 571.307 S7

$$P_{target} = NWP \times (273 + T_o)/288$$

(d) The container(s) shall be filled to any pressure between 95.0 percent and 100.0 percent of the calculated target fill pressure.

(e) After fueling, the vehicle shall be maintained at rest for any duration between 2.0 and 3.0 hours before conducting a crash test in accordance with S6.1 of this standard.

(f) The CHSS shut-off valve(s) and any other shut-off valves located in the fuel system downstream hydrogen gas piping shall be in normal driving condition immediately prior to the impact.

(g) The parking brake is disengaged and the transmission is in neutral prior to the crash test.

(h) Tires are inflated to manufacturer's specifications.

(i) The vehicle, including test devices and instrumentation, is loaded as follows:

(1) A passenger car, with its fuel system filled as specified in S7(d), is loaded to its unloaded vehicle weight plus its rated cargo and luggage capacity weight, secured in the luggage area, plus the necessary test dummies as specified in S6, restrained only by means that are installed in the vehicle for protection at its seating position(s).

(2) A multipurpose passenger vehicle, truck, or bus with a GVWR of 10,000 pounds or less, whose fuel system is filled as specified in S7(d), is loaded to its unloaded vehicle weight, plus the necessary test dummies as specified in S6 of this standard, plus 136.1 kg, or its rated cargo and luggage capacity weight, whichever is less, secured to the vehicle and distributed so that the weight on each axle as measured at the tire-ground interface is in proportion to its gross axle weight rating (GAWR). Each dummy shall be restrained only by means that are installed in the vehicle for protection at its seating position(s).

(3) A school bus with a GVWR greater than 10,000 pounds, whose fuel system is filled as specified in S7(d), is loaded to its unloaded vehicle weight, plus 54.4 kg of unsecured weight at each designated seating position.

■ 4. Section 571.308 is added to read as follows:

§ 571.308 Standard No. 308; Compressed hydrogen storage system integrity

S1. *Scope.* This standard specifies requirements for compressed hydrogen storage systems used in motor vehicles.

S2. *Purpose.* The purpose of this standard is to reduce deaths and injuries occurring from fires that result from hydrogen fuel leakage during vehicle operation and to reduce deaths and injuries occurring from explosions resulting from the burst of pressurized hydrogen containers.

S3. *Application.* This standard applies to each motor vehicle manufactured on or after September 1, 2028, that is equipped with compressed hydrogen gas as a fuel source to propel the vehicle. The standard does not apply to vehicles that are only equipped with cryo-compressed hydrogen storage systems and/or solid-state hydrogen storage system to propel the vehicle.

S4. *Definitions.*

BP_O means the vehicle manufacturer-supplied median burst pressure for a batch of new containers.

Burst means to break apart or to break open.

Burst pressure means the highest pressure achieved for a container tested in accordance with S6.2.2.1 of this standard.

Check valve means a valve that prevents reverse flow.

Closure devices mean the check valve(s), shut-off valve(s), and thermally-activated pressure relief device(s) that control the flow of hydrogen into and/or out of a CHSS.

Container means a pressure-bearing component of a compressed hydrogen storage system that stores a continuous volume of hydrogen fuel in a single chamber or in multiple permanently interconnected chambers.

Container attachments mean non-pressure bearing parts attached to the container that provide additional support and/or protection to the container and that may be removed only with the use of tools for the specific purpose of maintenance and/or inspection.

Compressed hydrogen storage system (CHSS) means a system that stores compressed hydrogen fuel for a hydrogen-fueled vehicle, composed of a container, container attachments (if any), and all closure devices required to isolate the stored hydrogen from the remainder of the fuel system and the environment.

Cryo-compressed hydrogen storage system means a system that stores hydrogen by compressing it to high pressure while simultaneously cooling it to very low temperatures, allowing for a higher density of hydrogen storage compared to standard compressed hydrogen systems.

Hydrogen fuel system means the fueling receptacle, CHSS, fuel cell system or internal combustion engine, fuel lines, and exhaust systems.

Nominal working pressure (NWP) means the settled pressure of compressed gas in a container or CHSS fully fueled to 100 percent state of charge and at a uniform temperature of 15 °C.

Normal milliliter means a quantity of gas that occupies one milliliter of volume when its temperature is 0 °C and its pressure is 1 atmosphere.

Pressure relief device (PRD) means a device that, when activated under specified performance conditions, is used to release hydrogen from a

pressurized system and thereby prevent failure of the system.

Service life (of a container) means the time frame during which service (usage) is authorized by the vehicle manufacturer.

Shut-off valve means a valve between the container and the remainder of the hydrogen fuel system that must default to the ''closed'' position when unpowered.

Solid-state hydrogen storage system means a system that stores hydrogen at ambient temperatures and low pressures within solid materials that can either physically absorb the hydrogen gas or chemically combine with it.

State of charge (SOC) means the density ratio of hydrogen in the CHSS between the actual CHSS condition and that at NWP with the CHSS equilibrated to 15 °C, as expressed as a percentage using the equation 1 to this section,

where ρ is the density of hydrogen (g/L) at pressure (P) in MegaPascals (MPa) and temperature (T) in Celsius (°C) as listed below in Table 1 or linearly interpolated therein:

Equation 1 to § 571.308 S4

$$SOC(\%) = \frac{\rho(P,T)}{\rho(NWP, 15°C)} x100$$

TABLE 1 TO § 571.308 S4

Temperature (°C)	Pressure (MPa)												
	1	10	20	30	35	40	50	60	65	70	75	80	87.5

Thermally-activated pressure relief device (TPRD) means a non-reclosing PRD that is activated by temperature to open and release hydrogen gas.

TPRD sense point means instrumentation that detects elevated temperature for the purpose of activating a TPRD.

S5. *Requirements.*

S5.1. *Requirements for the CHSS.* Each vehicle CHSS shall include the following functions: shut-off valve, check valve, and TPRD. Each vehicle CHSS shall have a NWP of 70 MPa or less. Each vehicle container, closure device, and CHSS shall meet the applicable performance test requirements listed in table 2 to this section.

TABLE 2 TO § 571.308 S5.1

Requirement section	Test article
S5.1.1. *Tests for baseline metrics*	Container.
S5.1.2. *Test for performance durability*	Container.
S5.1.3. *Test for expected on-road performance*	CHSS.
S5.1.4. *Test for service terminating performance in fire*	CHSS.
S5.1.5. *Tests for performance durability of closure devices*	Closure devices.

S5.1.1. *Tests for baseline metrics.*

S5.1.1.1. *Baseline initial burst pressure.* The vehicle manufacturer shall immediately and irrevocably specify upon request, in writing and within 15 business days: whether the primary constituent of the container is glass fiber composite. When a new container with its container attachments (if any) is tested in accordance with S6.2.2.1 of this standard, both of the following requirements shall be met:

(a) The burst pressure of the container shall not be less than 2 times NWP.

(b) The burst pressure of the container having glass-fiber composite as a primary constituent shall not be less than 3.5 times NWP.

S5.1.1.2. *Baseline initial pressure cycle test.* When a new container with its container attachments (if any) is hydraulically pressure cycled in accordance with S6.2.2.2 of this standard to any pressure between 125.0 percent NWP and 130.0 percent NWP,

(a) Containers for vehicles with a GVWR of 10,000 pounds or less

(1) Shall not leak nor burst for at least 7,500 cycles, and

(2) Thereafter shall not burst for an additional 14,500 cycles. If a leak occurs while conducting the test as specified in S5.1.1.2(a)(2), the test is stopped and not considered a failure.

(b) Containers for vehicles with a GVWR of over 10,000 pounds

(1) Shall not leak nor burst for at least 11,000 cycles, and

(2) Thereafter shall not burst for an additional 11,000 cycles. If a leak occurs while conducting the test as specified in S5.1.1.2(b)(2), the test is stopped and not considered a failure.

S5.1.2. *Test for performance durability.* A new container shall not leak nor burst when subjected to the sequence of tests in S5.1.2.1 through S5.1.2.6. Immediately following S5.1.2.6, and without depressurizing the container, the container is subjected to a burst test in accordance with S6.2.2.1(c) and (d) of this standard. The burst pressure of the container at the end of the sequence of tests in this

section shall not be less than 0.8 times the BP_O value specified by the vehicle manufacturer. The sequence of tests and the burst pressure test are illustrated in figure 1 to S5.1.2. The vehicle manufacturer shall immediately and irrevocably specify upon request, in writing and within 15 business days: the BP_O of the container.

S5.1.2.1. *Drop test.* The container with its container attachments (if any) is dropped once in accordance with S6.2.3.2 of this standard in any one of the four orientations specified in that section. Any container with damage from the drop test that prevents further testing of the container in accordance with S6.2.3.4 of this standard shall be considered to have failed to meet the test for performance durability requirements. In the case of an asymmetric container, the vehicle manufacturer shall immediately and irrevocably specify upon request, in writing, and within 15 business days: the center of gravity of the container.

S5.1.2.2. *Surface damage test.* The container, except if an all-metal container, is subjected to the surface damage test in accordance with the S6.2.3.3 of this standard. Container attachments designed to be removed shall be removed and container attachments that are not designed to be removed shall remain in place. Container attachments that are removed shall not be reinstalled for the remainder of S5.1.2; container attachments that are not removed shall remain in place for the remainder of S5.1.2.

S5.1.2.3. *Chemical exposure and ambient-temperature pressure cycling test.* The container is exposed to chemicals in accordance with S6.2.3.4 and then hydraulically pressure cycled in accordance with S6.2.3.4 of this standard for 60 percent of the number of cycles as specified in S5.1.1.2(a)(1) or (b)(1) as applicable. For all but the last 10 of these cycles, the cycling pressure shall be any pressure between 125.0 percent NWP and 130.0 percent NWP. For the last 10 cycles, the pressure shall be any pressure between 150.0 percent NWP and 155.0 percent NWP.

S5.1.2.4. *High temperature static pressure test.* The container is pressurized to any pressure between (or equal to) 125 percent NWP and 130 percent NWP and held at that pressure no less than 1,000 and no more than 1,050 hours in accordance with S6.2.3.5 of this standard and with the temperature surrounding the container at any temperature between 85.0 °C and 90.0 °C.

S5.1.2.5. *Extreme temperature pressure cycling test.* The container is pressure cycled in accordance with S6.2.3.6 for 40 percent of the number of cycles specified in S5.1.1.2(a)(1) or (b)(1) as applicable. The pressure for the first half of these cycles equals any pressure between 80.0 percent NWP and 85.0 percent NWP with the temperature surrounding the container equal to any temperature between −45.0 °C and −40.0 °C. The pressure for the next half of these cycles equals any pressure between 125.0 percent NWP and 130.0 percent NWP and the temperature surrounding the container equal to any temperature between 85.0 °C and 90.0 °C and the relative humidity surrounding the container not less than 80 percent.

S5.1.2.6. *Residual pressure test.* The container is hydraulically pressurized in accordance with S6.2.3.1 of this standard to a pressure between 180.0 percent NWP and 185.0 percent NWP and held for any duration between 240 to 245 seconds.

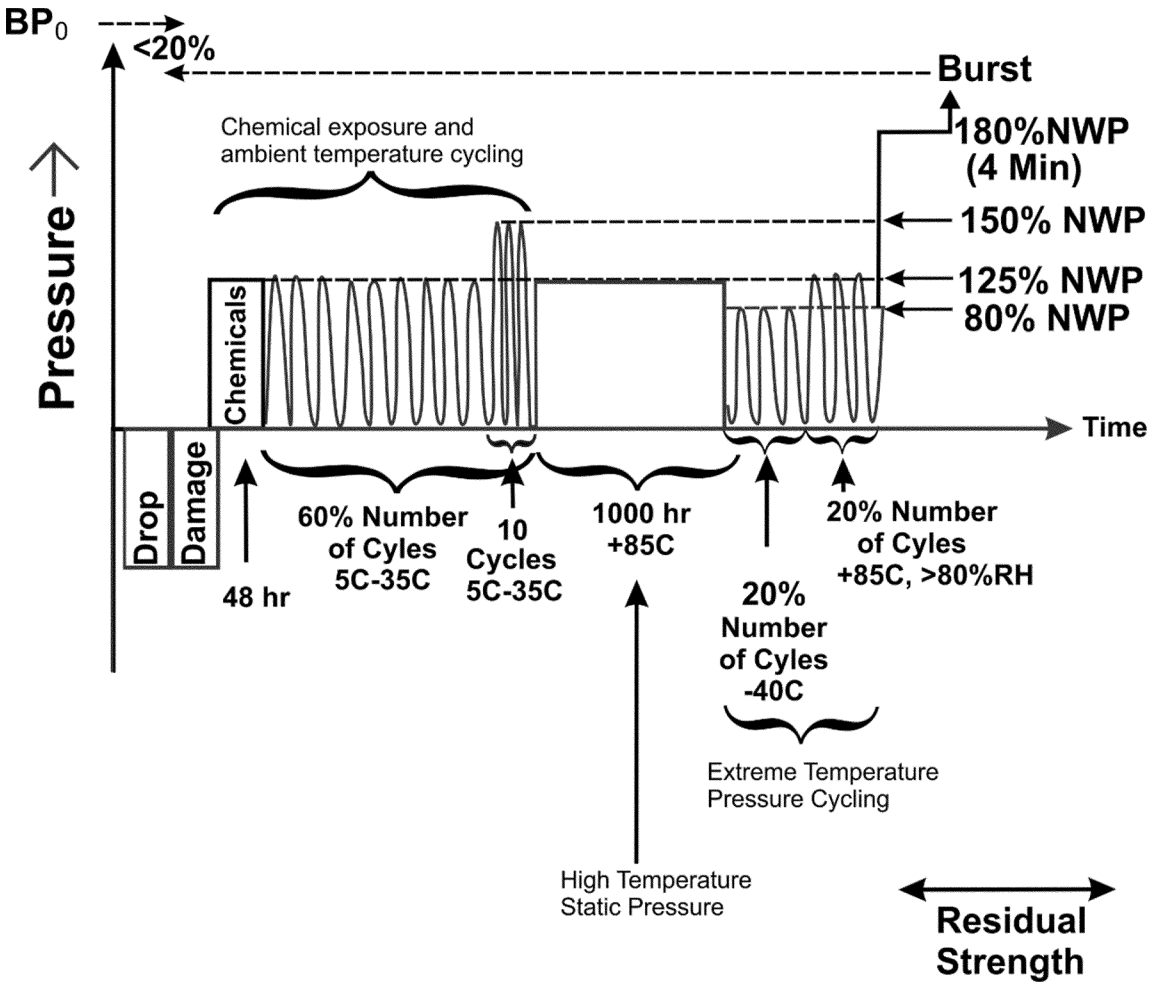

Figure 1 to § 571.308 S5.1.2. Performance Durability Test; (for Illustration Purposes Only)

S5.1.3. *Test for expected on-road performance.* When subjected to the sequence of tests in S5.1.3.1, the CHSS shall meet the permeation and leak requirements specified in S5.1.3.2 and shall not burst. Thereafter, the container of the CHSS shall not burst when subjected to a residual pressure test in accordance with S5.1.3.3. Immediately following the test specified in S5.1.3.3, and without depressurizing the container, the container of the CHSS is subjected to a burst test in accordance with S6.2.2.1(c) and (d) of this standard. The burst pressure of the container at the end of the sequence of tests in this section shall not be less than 0.8 times the BP_O specified by the vehicle manufacturer under S5.1.2.

S5.1.3.1. *Ambient and extreme temperature gas pressure cycling test.* The CHSS is pressure cycled using hydrogen gas for 500 cycles under any temperature and pressure condition for the number of cycles as specified in table 3 to S5.1.3.1, and in accordance with the S6.2.4.1 of this standard test procedure. A static gas pressure leak/permeation test performed in accordance with S5.1.3.2 is conducted after the first 250 pressure cycles and after the remaining 250 pressure cycles.

TABLE 3 TO § 571.308 S5.1.3.1

Number of cycles	*Ambient conditions*	*Initial system equilibration*	*Fuel delivery temperature*	*Cycle initial and final pressure*	*Cycle peak pressure*
5	−30.0 °C to −25.0 °C	−30.0 °C to −25.0 °C	15.0 °C to 25.0 °C	1.0 MPa to 2.0 MPa	100.0% SOC to 105.0% SOC.
5	−30.0 °C to −25.0 °C	−30.0 °C to −25.0 °C	−40.0 °C to −33.0 °C	1.0 MPa to 2.0 MPa	100.0% SOC to 105.0% SOC.
15	−30.0 °C to −25.0 °C	not appliable	−40.0 °C to −33.0 °C	1.0 MPa to 2.0 MPa	100.0% SOC to 105.0% SOC.
5	50.0 °C to 55.0 °C, 80% to 100% relative humidity.	50 °C to 55 °C, 80% to 100% relative humidity.	−40.0 °C to −33.0 °C	1.0 MPa to 2.0 MPa	100.0% SOC to 105.0% SOC.
20	50.0 °C to 55.0 °C, 80% to 100% relative humidity.	not appliable	−40.0 °C to −33.0 °C	1.0 MPa to 2.0 MPa	100.0% SOC to 105.0% SOC.
200	5.0 °C to 35.0 °C	not appliable	−40.0 °C to −33.0 °C	1.0 MPa to 2.0 MPa	100.0% SOC to 105.0% SOC.

TABLE 3 TO § 571.308 S5.1.3.1—Continued

Number of cycles	*Ambient conditions*	*Initial system equilibration*	*Fuel delivery temperature*	*Cycle initial and final pressure*	*Cycle peak pressure*
Extreme temperature static gas pressure leak/permeation test S5.1.3.2.	55.0 °C to 60.0 °C	55.0 °C to 60.0 °C	not appliable	not appliable	100.0% SOC to 105.0% SOC.
25	50.0 °C to 55.0 °C, 80% to 100% relative humidity.	not appliable	−40.0 °C to −33.0 °C	1.0 MPa to 2.0 MPa	100.0% SOC to 105.0% SOC.
25	−30.0 °C to −25.0 °C	not appliable	−40.0 °C to −33.0 °C	1.0 MPa to 2.0 MPa	100.0% SOC to 105.0% SOC.
200	5.0 °C to 35.0 °C	not appliable	−40.0 °C to −33.0 °C	1.0 MPa to 2.0 MPa	100.0% SOC to 105.0% SOC.
Extreme temperature static gas pressure leak/permeation test S5.1.3.2.	55.0 °C to 60.0 °C	55.0 °C to 60.0 °C	not appliable	not appliable	100.0% SOC to 105.0% SOC.

S5.1.3.2. *Extreme temperature static gas pressure leak/permeation test.* When tested in accordance with S6.2.4.2 of this standard after each group of 250 pneumatic pressure cycles in S5.1.3.1, the CHSS shall not discharge hydrogen more than 46 millilitres per hour (mL/h) for each litre of CHSS water capacity.

S5.1.3.3. *Residual pressure test.* The container of the CHSS is hydraulically pressurized in accordance with S6.2.3.1 to any pressure between 1.800 times NWP and 1.850 times NWP and held at that pressure for any duration between 240 to 245 seconds.

S5.1.4. *Test for service terminating performance in fire.* When the CHSS is exposed to the two-stage localized or engulfing fire test in accordance with S6.2.5 of this standard, the container shall not burst. The pressure inside the CHSS shall fall to 1 MPa or less within the test time limit specified in S6.2.5.3(o) of this standard. Any leakage or venting, other than that through TPRD outlet(s), shall not result in jet flames greater than 0.5 m in length. If venting occurs though the TPRD, the venting shall be continuous.

S5.1.5. *Tests for performance durability of closure devices.* All tests are performed at ambient temperature of 5 °C to 35 °C unless otherwise specified.

S5.1.5.1. *TPRD requirements.* The TPRD shall not activate at any point during the test procedures specified in S6.2.6.1.1, S6.2.6.1.3, S6.2.6.1.4, S6.2.6.1.5, S6.2.6.1.6, S6.2.6.1.7, and S6.2.6.1.8 of this standard.

(a) A TPRD subjected to pressure cycling in accordance with S6.2.6.1.1 of this standard shall be sequentially tested in accordance with S6.2.6.1.8, S6.2.6.1.9, and S6.2.6.1.10 of this standard;

(1) When tested in accordance with S6.2.6.1.8, the TPRD shall not exhibit leakage greater than 10 normal milliliters per minute (NmL/hour).

(2) When tested in accordance with S6.2.6.1.9 of this standard, the TPRD shall activate within no more than 2 minutes of the average activation time of three new TPRDs tested in accordance with S6.2.6.1.9;

(3) When tested in accordance with S6.2.6.1.10 of this standard, the TPRD shall have a flow rate of at least 90 percent of the highest baseline flow rate established in accordance with S6.2.6.1.10;

(b)(1) A TPRD shall activate in less than ten hours when tested at the vehicle manufacturer's specified activation temperature in accordance with S6.2.6.1.2 of this standard;

(2) When tested at the accelerated life temperature in accordance with S6.2.6.1.2 of this standard, a TPRD shall not activate in less than 500 hours and shall not exhibit leakage greater than 10 NmL/hour when tested in accordance with S6.2.6.1.8 of this standard;

(c) A TPRD subjected to temperature cycling testing in accordance with S6.2.6.1.3 of this standard shall be sequentially tested in accordance with S6.2.6.1.8(a)(3), S6.2.6.1.9, and S6.2.6.1.10 of this standard;

(1) When tested in accordance with S6.2.6.1.8(a)(3) of this standard, the TPRD shall not exhibit leakage greater than 10 NmL/hour;

(2) When tested in accordance with S6.2.6.1.9 of this standard, the TPRD shall activate within no more than 2 minutes of the average activation time of three new TPRDs tested in accordance with S6.2.6.1.9;

(3) When tested in accordance with S6.2.6.1.10 of this standard, the TPRD shall have a flow rate of at least 90 percent of the highest baseline flow rate established in accordance with S6.2.6.1.10;

(d) A TPRD subjected to salt corrosion resistance testing in accordance with S6.2.6.1.4 of this standard shall be sequentially tested in accordance with S6.2.6.1.8, S6.2.6.1.9, and S6.2.6.1.10 of this standard;

(1) When tested in accordance with S6.2.6.1.8 of this standard, the TPRD shall not exhibit leakage greater than 10 NmL/hour;

(2) When tested in accordance with S6.2.6.1.9 of this standard, the TPRD shall activate within no more than 2 minutes of the average activation time of three new TPRDs tested in accordance with S6.2.6.1.9;

(3) When tested in accordance with S6.2.6.1.10 of this standard, the TPRD shall have a flow rate of at least 90 percent of the highest baseline flow rate established in accordance with S6.2.6.1.10;

(e) A TPRD subjected to vehicle environment testing in accordance with S6.2.6.1.5 of this standard shall not show signs of cracking, softening, or swelling, and thereafter shall be sequentially tested in accordance with S6.2.6.1.8, S6.2.6.1.9, and S6.2.6.1.10 of this standard. Cosmetic changes such as pitting or staining are not considered failures.

(1) When tested in accordance with S6.2.6.1.8 of this standard, the TPRD shall not exhibit leakage greater than 10 NmL/hour.

(2) When tested in accordance with S6.2.6.1.9 of this standard, the TPRD shall activate within no more than 2 minutes of the average activation time of three new TPRDs tested in accordance with S6.2.6.1.9,

(3) When tested in accordance with S6.2.6.1.10 of this standard, the TPRD shall have a flow rate of at least 90 percent of the highest baseline flow rate established in accordance with S6.2.6.1.10;

(f) A TPRD subjected to stress corrosion cracking testing in accordance with S6.2.6.1.6 of this standard shall not exhibit visible cracking or delaminating;

(g) A TPRD shall be subjected to drop and vibration testing in accordance with

S6.2.6.1.7 of this standard. If the TPRD progresses beyond S6.2.6.1.7(c) to complete testing under S6.2.6.1.7(d), it shall then be sequentially tested in accordance with S6.2.6.1.8, S6.2.6.1.9, and S6.2.6.1.10 of this standard.

(1) When tested in accordance with S6.2.6.1.8 of this standard, the TPRD shall not exhibit leakage greater than 10 NmL/hour.

(2) When tested in accordance with S6.2.6.1.9 of this standard, the TPRD shall activate within no more than 2 minutes of the average activation time of three new TPRDs tested in accordance with S6.2.6.1.9,

(3) When tested in accordance with S6.2.6.1.10 of this standard, the TPRD shall have a flow rate of at least 90 percent of the highest baseline flow rate established in accordance with S6.2.6.1.10;

(h) One new TPRD subjected to leak testing in accordance with S6.2.6.1.8 of this standard shall not exhibit leakage greater than 10 NmL/hour;

(i) Three new TPRDs are subjected to a bench top activation test in accordance with S6.2.6.1.9 of this standard. The maximum difference in the activation time between any two of the three TPRDs shall be 2 minutes or less.

S5.1.5.2. *Check valve and shut-off valve requirements.* This section applies to both check valves and shut-off valves.

(a) A valve subjected to hydrostatic strength testing in accordance with S6.2.6.2.1 of this standard shall not leak to an extent that prevents continued pressurization in accordance with S6.2.6.2.1(c) nor burst at less than 250 percent NWP;

(b) A valve subjected to leak testing in accordance with S6.2.6.2.2 of this standard shall not exhibit leakage greater than 10 NmL/hour;

(c)(1) A check valve shall meet the requirements when tested sequentially as follows:

(i) The check valve shall reseat and prevent reverse flow after each cycle when subjected to 13,500 pressure cycles in accordance with S6.2.6.2.3 of this standard to any pressure between 100.0 and 105.0 percent NWP and at any temperature between 5.0 °C and 35.0 °C;

(ii) The same check valve shall reseat and prevent reverse flow after each cycle when subjected to 750 pressure cycles in accordance with S6.2.6.2.3 of this standard to any pressure between 125.0 and 130.0 percent NWP and at any temperature between 85.0 °C and 90.0 °C;

(iii) The same check valve shall reseat and prevent reverse flow after each cycle when subjected to 750 pressure cycles in accordance with S6.2.6.2.3 of this standard to any pressure between 80.0 and 85.0 percent NWP and at any temperature between −45.0 °C and −40.0 °C;

(iv) The same check valve shall be subjected to chatter flow testing in accordance with S6.2.6.2.4 of this standard;

(v) When tested in accordance with S6.2.6.2.2 of this standard, the same check valve shall not exhibit leakage greater than 10 NmL/hour;

(vi) When tested in accordance with S6.2.6.2.1 of this standard, the same check valve shall not leak to an extent that prevents continued pressurization in accordance with S6.2.6.2.1(c), nor burst at less than 250 percent NWP, nor burst at less than 80 percent of the burst pressure of the new unit tested in accordance with S5.1.5.2(a) unless the burst pressure of the valve exceeds 400 percent NWP.

(2) A shut-off valve shall meet the requirements when tested sequentially as follows:

(i) The shut-off valve shall be subjected to 45,000 pressure cycles in accordance with S6.2.6.2.3 to any pressure between 100.0 and 105.0 percent NWP and at any temperature between 5.0 °C and 35.0 °C;

(ii) The same shut-off valve shall be subjected to 2,500 pressure cycles in accordance with S6.2.6.2.3 of this standard to any pressure between 125.0 and 130.0 percent NWP and at any temperature between 85.0 °C and 90.0 °C;

(iii) The same shut-off valve shall be subjected to 2,500 pressure cycles in accordance with S6.2.6.2.3 of this standard to any pressure between 80.0 and 85.0 percent NWP and at any temperature between −45.0 °C and −40.0 °C;

(iv) The same shut-off valve shall be subjected to chatter flow testing in accordance with S6.2.6.2.4 of this standard;

(v) When tested in accordance with S6.2.6.2.2 of this standard, the same shut-off valve shall not exhibit leakage greater than 10 NmL/hour;

(vi) When tested in accordance with S6.2.6.2.1 of this standard, the same shut-off valve shall not leak to an extent that prevents continued pressurization in accordance with S6.2.6.2.1(c), nor burst at less than 250 percent NWP, nor burst at less than 80 percent of the burst pressure of the new unit tested in accordance with S5.1.5.2(a) unless the burst pressure of the valve exceeds 400 percent NWP.

(d) A valve subjected to salt corrosion resistance testing in accordance with S6.2.6.1.4 of this standard shall be tested sequentially in accordance with S6.2.6.2.2 followed by S6.2.6.2.1 of this standard.

(1) When tested in accordance with S6.2.6.2.2 of this standard, the valve shall not exhibit leakage greater than 10 NmL/hour;

(2) When tested in accordance with S6.2.6.2.1 of this standard, the valve shall not leak to an extent that prevents continued pressurization in accordance with S6.2.6.2.1(c), nor burst at less than 250 percent NWP, nor burst at less than 80 percent of the burst pressure of the new unit tested in accordance with S5.1.5.2(a) unless the burst pressure of the valve exceeds 400 percent NWP.

(e) A valve subjected to vehicle environment testing in accordance with S6.2.6.1.5 of this standard shall not show signs of cracking, softening, or swelling and shall be tested sequentially in accordance with S6.2.6.2.2 followed by S6.2.6.2.1 of this standard. Cosmetic changes such as pitting or staining are not considered failures.

(1) When tested in accordance with S6.2.6.2.2 of this standard, the valve shall not exhibit leakage greater than 10 NmL/hour;

(2) When tested in accordance with S6.2.6.2.1 of this standard, the valve shall not leak to an extent that prevents continued pressurization in accordance with S6.2.6.2.1(c), nor burst at less than 250 percent NWP, nor burst at less than 80 percent of the burst pressure of the new unit tested in accordance with S5.1.5.2(a) unless the burst pressure of the valve exceeds 400 percent NWP;

(f) A shut-off valve shall have a minimum resistance of 240 kΩ between the power conductor and the valve casing, and shall not exhibit open valve, smoke, fire, melting, or leakage greater than 10 NmL/hour when subjected to electrical testing in accordance with S6.2.6.2.5 followed by leak testing in accordance with S6.2.6.2.2 of this standard;

(g) A valve subjected to vibration testing in accordance with S6.2.6.2.6 of this standard shall be tested sequentially in accordance with S6.2.6.2.2 followed by S6.2.6.2.1 of this standard.

(1) When tested in accordance with S6.2.6.2.2 of this standard, the valve shall not exhibit leakage greater than 10 NmL/hour;

(2) When tested in accordance with S6.2.6.2.1 of this standard, the valve shall not leak to an extent that prevents continued pressurization in accordance with S6.2.6.2.1(c), nor burst at less than 250 percent NWP, nor burst at less than 80 percent of the burst pressure of the new unit tested in accordance with

S5.1.5.2(a) unless the burst pressure of the valve exceeds 400 percent NWP.

(h) A valve shall not exhibit visible cracking or delaminating when subjected to stress corrosion cracking testing in accordance with S6.2.6.1.6 of this standard.

S5.1.6. *Labeling.* Each vehicle container shall be permanently labeled with the information specified in paragraphs S5.1.6(a) through (g). Any label affixed to the container in compliance with this section shall remain in place and be legible for the vehicle manufacturer's recommended service life of the container. The information shall be in English and in letters and numbers that are at least 6.35 millimeters (¼ inch) high.

(a) The statement: ''If there is a question about the proper use, installation, or maintenance of this compressed hydrogen storage system, contact _____,'' inserting the vehicle manufacturer's name, address, and telephone number. The name provided shall be consistent with the vehicle manufacturer's filing in accordance with 49 CFR part 566.

(b) The container serial number.

(c) The statement: ''Manufactured in _____,'' inserting the month and year of manufacture of the container.

(d) The statement ''Nominal Working Pressure _____MPa (_____psig),'' Inserting the nominal working pressure which shall be no greater than 70 MPa.

(e) The statement ''Compressed Hydrogen Gas Only.''

(f) The statement: ''Do Not Use After _____,'' inserting the month and year that mark the end of the vehicle manufacturer's recommended service life for the container.

(g) The statement: ''This container should be visually inspected for damage and deterioration after a motor vehicle accident or fire, and either: (i) at least every 12 months when installed on a vehicle with a GVWR greater than 4,536 kg, or (ii) at least every 36 months or 36,000 miles, whichever comes first, when installed on a vehicle with a GVWR less than or equal to 4,536 kg.''

S6. *Test procedures.*

S6.1. [Reserved]

S6.2. *Test procedures for compressed hydrogen storage.*

S6.2.1. Unless otherwise specified, data sampling for pressure cycling under S6.2 shall be at least 1 Hz.

S6.2.2. *Test procedures for baseline performance metrics.*

S6.2.2.1. *Burst test.* (a) The container is filled with a hydraulic fluid.

(b) The container, the surrounding environment, and the hydraulic fluid are at any temperature between 5.0 °C and 35.0 °C.

(c) The rate of pressurization shall be less than or equal to 1.4 MPa per second for pressures higher than 1.50 times NWP. If the rate exceeds 0.35 MPa per second at pressures higher than 1.50 times NWP, then the container is placed in series between the pressure source and the pressure measurement device.

(d) The container is hydraulically pressurized until burst and the burst pressure of the container is recorded.

S6.2.2.2. *Pressure cycling test.* (a) The container is filled with a hydraulic fluid.

(b) The container surface, or the surface of the container attachments if present, the environment surrounding the container, and the hydraulic fluid are at any temperature between 5.0 °C and 35.0 °C at the start of testing and maintained at the specified temperature for the duration of the testing.

(c) The container is pressure cycled at any pressure between 1.0 MPa and 2.0 MPa up to the pressure specified in the respective section of S5. The cycling rate shall be any rate up to 10 cycles per minute.

(d) The temperature of the hydraulic fluid entering the container is maintained and monitored at any temperature between 5.0 °C and 35.0 °C.

(e) The vehicle manufacturer may specify a hydraulic pressure cycle profile within the specifications of S6.2.2.2(c). Vehicle manufacturers shall submit this profile to NHTSA immediately and irrevocably, upon request, in writing, and within 15 business days; otherwise, NHTSA shall determine the profile. At NHTSA's option, NHTSA shall cycle the container within 10 percent of the vehicle manufacturer's specified cycling profile.

S6.2.3. *Performance durability test.*

S6.2.3.1. *Residual pressure test.* The container is pressurized smoothly and continually with hydraulic fluid or hydrogen gas as specified until the pressure level is reached and held for the specified time.

S6.2.3.2. *Drop impact test.* The container is drop tested without internal pressurization or attached valves. The surface onto which the container is dropped shall be a smooth, horizontal, uniform, dry, concrete pad or other flooring type with equivalent hardness. No attempt shall be made to prevent the container from bouncing or falling over during a drop test, except for the vertical drop test, during which the test article shall be prevented from falling over. The container shall be dropped in any one of the following four orientations described below and illustrated in figure 2 to S6.2.3.2.

(a) From a position within 5° of horizontal with the lowest point of the container at any height between 1.800 meters and 1.820 meters above the surface onto which it is dropped. In the case of a non-axisymmetric container, the largest projection area of the container shall be oriented downward and aligned horizontally;

(b) From a position within 5° of vertical with the center of any shut-off valve interface location upward and with any potential energy of between 488 Joules and 538 Joules. If a drop energy of between 488 Joules and 538 Joules would result in the height of the lower end being more than 1.820 meters above the surface onto which it is dropped, the container shall be dropped from any height with the lower end between 1.800 meters and 1.820 meters above the surface onto which it is dropped. If a drop energy of between 488 Joules and 538 Joules would result in the height of the lower end being less than 0.100 meters above the surface onto which it is dropped, the container shall be dropped from any height with the lower end between 0.100 meters and 0.120 meters above the surface onto which it is dropped. In the case of a non-axisymmetric container, the center of any shut-off valve interface location and the container's center of gravity shall be aligned vertically, with the center of that shut-off valve interface location upward;

(c) From a position within 5° of vertical with the center of any shut-off valve interface location downward with any potential energy of between 488 Joules and 538 Joules. If a potential energy of between 488 Joules and 538 Joules would result in the height of the lower end being more than 1.820 meters above the surface onto which it is dropped, the container shall be dropped from any height with the lower end between 1.800 meters and 1.820 meters above the surface onto which it is dropped. If a drop energy of between 488 Joules and 538 Joules would result in the height of the lower end being less than 0.100 meters above the surface onto which it is dropped, the container shall be dropped from any height with the lower end between 0.100 meters and 0.120 meters above the surface onto which it is dropped. In the case of a non-axisymmetric container, the center of any shut-off valve interface location and the container's center of gravity shall be aligned vertically, with the center of that shut-off valve interface location downward;

(d) From any angle between 40° and 50° from the vertical orientation with the center of any shut-off valve interface location downward, and with the container center of gravity between 1.800 meters and 1.820 meters above the

surface onto which it is dropped. However, if the lowest point of the container is closer to the ground than 0.60 meters, the drop angle shall be changed so that the lowest point of the container is between 0.60 meters and 0.62 meters above the ground and the center of gravity is between 1.800 meters and 1.820 meters above the surface onto which it is dropped. In the case of a non-axisymmetric container, the line passing through the center of any shut-off valve interface location and the container's center of gravity shall be at any angle between 40° and 50° from the vertical orientation. If this specification results in more than one possible container orientation, the drop shall be conducted from the orientation that results in the lowest positioning of the center of the shut-off valve interface location.

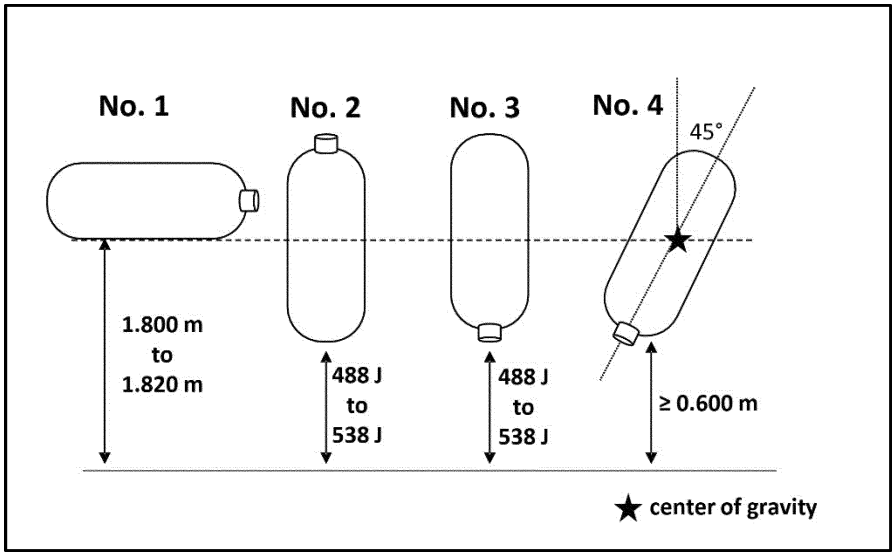

Figure 2 to § 571.308 S6.2.3.2. The Four Drop Orientations; (for Illustration Purposes Only)

S6.2.3.3. *Surface damage test.* The surface damage test consists of surface cut generation and pendulum impacts as described below.

(a) Surface cut generation: Two longitudinal saw cuts are made at any location on the same side of the outer surface of the unpressurized container, as shown in Figure 3, or on the container attachments if present. The first cut is 0.75 millimeters to 1.25 millimeters deep and 200 millimeters to 205 millimeters long; the second cut, which is only required for containers affixed to the vehicle by compressing its composite surface, is 1.25 millimeters to 1.75 millimeters deep and 25 millimeters to 28 millimeters long.

(b) Pendulum impacts: Mark the outer surface of the container, or the container attachments if present, with five separate, non-overlapping circles each having any linear diameter between 100.0 millimeters and 105.0 millimeters, as shown in Figure 3. The marks shall be located on the side opposite from the saw cuts, or located on a different chamber in the case of a container with more than one chamber. Within 30 minutes following preconditioning for any duration from 12 hours to 24 hours in an environmental chamber at any temperature between −45.0 °C and −40.0 °C, impact the center of each of the five areas with a pendulum having a pyramid with equilateral faces and square base, and the tip and edges being rounded to a radius of between 2.0 millimeters and 4.0 millimeters. The center of impact of the pendulum shall coincide with the center of gravity of the pyramid. The energy of the pendulum at the moment of impact with each of the five marked areas on the container is any energy between 30.0 Joules and 35.0 Joules. The container is secured in place during pendulum impacts and is not pressurized above 1 MPa.

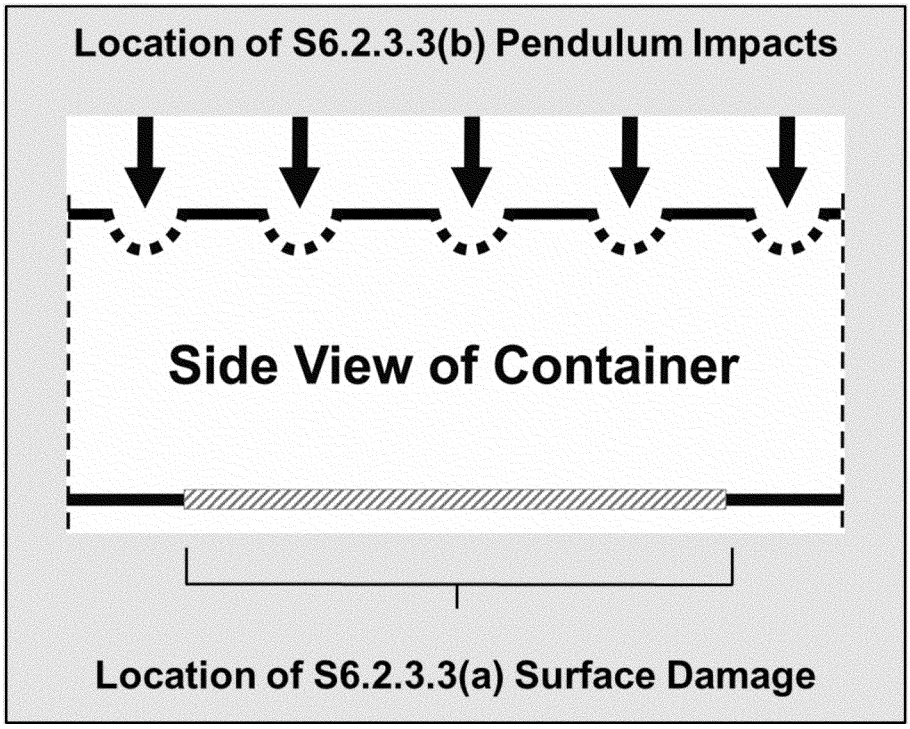

Figure 3 to § 571.308 S6.2.3.3. Locations of Surface Damage for S6.2.3.3(a) and Pendulum Impacts for S6.2.3.3(b); (for Illustration Purposes Only)

S6.2.3.4. *Chemical exposure and ambient temperature pressure cycling test.* (a) Each of the 5 areas preconditioned by pendulum impact in S6.2.3.3(b) is exposed to any one of five solutions:

(1) 19 to 21 percent by volume sulfuric acid in water;

(2) 25 to 27 percent by weight sodium hydroxide in water;

(3) 5 to 7 percent by volume methanol in gasoline;

(4) 28 to 30 percent by weight ammonium nitrate in water; and

(5) 50 to 52 percent by volume methyl alcohol in water.

(b) The container is oriented with the fluid exposure areas on top. A pad of glass wool approximately 0.5 centimeters thick and 100 millimeters in diameter is placed on each of the five preconditioned areas. A sufficient amount of the test fluid is applied to the glass wool to ensure that the pad is wetted across its surface and through its thickness for the duration of the test. A plastic covering shall be applied over the glass wool to prevent evaporation.

(c) The exposure of the container with the glass wool is maintained for at least 48 hours and no more than 60 hours with the container hydraulically pressurized to any pressure between 125.0 percent NWP and 130.0 percent NWP. During exposure, the temperature surrounding the container is maintained at any temperature between 5.0 °C and 35.0 °C.

(d) Hydraulic pressure cycling is performed in accordance with S6.2.2.2 at any pressure within the specified ranges according to S5.1.2.3 for the specified number of cycles. The glass wool pads are removed and the container surface is rinsed with water after the cycles are complete.

S6.2.3.5. *Static pressure test.* The container is hydraulically pressurized to the specified pressure in a temperature-controlled chamber. The temperature of the chamber and the container surface, or the surface of the container attachments if present, are held at the specified temperature for the specified duration.

S6.2.3.6. *Extreme temperature pressure cycling test.* (a) The container is filled with hydraulic fluid for each test;

(b) At the start of each test, the container surface, or the surface of the container attachments if present, the hydraulic fluid, and the environment surrounding the container are at any temperature and relative humidity (if applicable) within the ranges specified in S5.1.2.5 of this standard and maintained for the duration of the testing.

(c) The container is pressure cycled from any pressure between 1.0 MPa and 2.0 MPa up to the specified pressure at a rate not exceeding 10 cycles per minute for the specified number of cycles;

(d) The temperature of the hydraulic fluid entering the container shall be measured as close as possible to the container inlet.

S6.2.4. *Test procedures for expected on-road performance.*

S6.2.4.1. *Ambient and extreme temperature gas pressure cycling test.* (a) In accordance with table 3 to S5.1.3.1 of this standard, the specified ambient conditions of temperature and relative humidity, if applicable, are maintained within the test environment throughout each pressure cycle. When required in accordance with table 3 to S5.1.3.1, the CHSS temperature shall be in the specified initial system equilibration temperature range between pressure cycles.

(b) The CHSS is pressure cycled from any pressure between 1.0 MPa and 2.0 MPa up to any pressure within the specified peak pressure range in accordance with table 3 to this section. The temperature of the hydrogen fuel dispensed to the container is controlled to within the specified temperature range within 30 seconds of fueling initiation. The specified number of pressure cycles are conducted.

(c) The ramp rate for pressurization shall be greater than or equal to the ramp rate given in table 4 to S6.2.4.1(c) according to the CHSS volume, the ambient conditions, and the fuel delivery temperature. If the required ambient temperature is not available in table 4 to this section, the closest ramp rate value or a linearly interpolated

value shall be used. The pressure ramp rate shall be decreased if the gas temperature in the container exceeds 85 °C.

TABLE 4 TO § 571.308 S6.2.4.1(c)

CHSS volume (L)	CHSS pressurization rate (MPa/min)			
	50.0 °C to 55.0 °C ambient conditions −33.0 °C to −40.0 °C fuel delivery temperature	5.0 °C to 35.0 °C ambient conditions −33.0 °C to −40.0 °C fuel delivery temperature	−30.0 °C to −25.0 °C ambient conditions −33.0 °C to −40.0 °C fuel delivery temperature	−30.0 °C to −25.0 °C ambient conditions 15.0 °C to 25.0 °C fuel delivery temperature
50	7.6	19.9	28.5	13.1
100	7.6	19.9	28.5	7.7
174	7.6	19.9	19.9	5.2
250	7.6	19.9	19.9	4.1
300	7.6	16.5	16.5	3.6
400	7.6	12.4	12.4	2.9
500	7.6	9.9	9.9	2.3
600	7.6	8.3	8.3	2.1
700	7.1	7.1	7.1	1.9
1,000	5.0	5.0	5.0	1.4
1,500	3.3	3.3	3.3	1.0
2,000	2.5	2.5	2.5	0.7
2,500	2.0	2.0	2.0	0.5

(d) The de-fueling rate shall be any rate greater than or equal to the intended vehicle's maximum fuel-demand rate. Out of the 500 pressure cycles, any 50 pressure cycles are performed using a de-fueling rate greater than or equal to the maintenance de-fueling rate.

S6.2.4.2. *Gas permeation test.* (a) A CHSS is filled with hydrogen gas to any SOC between 100.0 percent and 105.0 percent and placed in a sealed container. The CHSS is held for any duration between 12 hours and 24 hours at any temperature between 55.0 °C and 60.0 °C prior to the start of the test.

(b) The permeation from the CHSS shall be determined hourly throughout the test.

(c) The test shall continue for 500 hours or until the permeation rate reaches a steady state. Steady state is achieved when at least 3 consecutive leak rates separated by any duration between 12 hours and 48 hours are within 10 percent of the previous rate.

S6.2.5. *Test procedures for service terminating performance in fire.* The fire test consists of two stages: a localized fire stage followed by an engulfing fire stage. The burner configuration for the fire test is specified in S6.2.5.1. The overall test configuration of the fire test is verified using a pre-test checkout in accordance with S6.2.5.2 prior to the fire test of the CHSS. The fire test of the CHSS is conducted in accordance with S6.2.5.3.

S6.2.5.1. *Burner configuration.* (a) The fuel for the burner shall be liquefied petroleum gas (LPG).

(b) The width of the burner shall be between 450 millimeters and 550 millimeters.

(c) The length of the burner used for the localized fire stage shall be between 200 millimeters and 300 millimeters.

(d) The length of the burner used for the engulfing fire stage shall be in accordance with S6.2.5.3(m).

(e) The burner nozzle configuration and installation shall be in accordance with table 5 to S6.2.5.1. The nozzles shall be installed uniformly on six rails.

TABLE 5 TO § 571.308 S6.2.5.1

Item	Description
Nozzle type	Liquefied petroleum gas fuel nozzle with air pre-mix.
LPG orifice in nozzle	0.9 to 1.1 millimeter inner diameter.
Air ports in nozzle	Four (4) holes, 5.8 to 7.0 millimeter inner diameter.
Fuel/Air mixing tube in nozzle	9 to 11 millimeter inner diameter.
Number of rails	6.
Center-to-center spacing of rails	100 to 110 millimeter.
Center-to-center nozzle spacing along the rails	45 to 55 millimeter.

S6.2.5.2. *Pre-test checkout.* (a) The pre-test checkout procedure in this section shall be performed to verify the fire test configuration for the CHSS tested in accordance with S6.2.5.3.

(b) A pre-test container is a 12-inch Schedule 40 Nominal Pipe Size steel pipe with end caps. The cylindrical length of the pre-test container shall be equal to or longer than the overall length of the CHSS to be tested in S6.2.5.3, but no shorter than 0.80 m and no longer than 1.75 m.

(c) The pre-test container shall be mounted over the burner:

(1) At any height between 95 millimeters and 105 millimeters above the burner;

(2) Such that the nozzles from the two center rails are pointing toward the bottom center of the pre-test container; and

(3) Such that the container's position relative to the localized and engulfing zones of the burner is consistent with the positioning of the CHSS over the burner in S6.2.5.3.

(d) For outdoor test sites, wind shielding shall be used. The separation between the pre-test container and the walls of the wind shields shall be at least 0.5 meters.

(e) Temperatures during the pre-test check-out shall be measured at least once per second using 3.2 millimeter diameter or less K-type sheath thermocouples.

(f) The thermocouples shall be located in sets to measure temperatures along the cylindrical section of the pre-test container. These thermocouples are secured by straps or other mechanical attachments within 5 millimeters from the pre-test container surface. One set of thermocouples consists of:

(1) One thermocouple located at the bottom surface exposed to the burner flame,

(2) One thermocouple located mid-height along the left side of the cylindrical surface,

(3) One thermocouple located mid-height along the right side of the cylindrical surface, and

(4) One thermocouple located at the top surface opposite to the burner flame.

(g) One set of thermocouples shall be centrally located at the localized fire zone of the CHSS to be tested as determined in S6.2.5.3. Two additional sets of thermocouples shall be spread out over the remaining length of the engulfing fire zone of the CHSS to be tested that is not part of the localized fire zone of the CHSS to be tested.

(h) Burner monitor thermocouples shall be located between 20 millimeters and 30 millimeters below the bottom surface of the pre-test container in the same three horizontal locations described in S6.2.5.2(g). These thermocouples shall be mechanically supported to prevent movement.

(i) With the localized burner ignited, the LPG flow rate to the burner shall be set such that the 60-second rolling averages of individual temperature readings in the localized fire zone shall be in accordance with the localized stage row in the table below.

(j) With the entire burner ignited, the LPG flow rate to the burner shall be set such that the 60-second rolling averages of individual temperature readings shall be in accordance with the engulfing stage row in table 6 to S6.2.5.2.

TABLE 6 TO § 571.308 S6.2.5.2

Fire stage	Temperature range on bottom of pre-test container	Temperature range on sides of pre-test container	Temperature range on top of pre-test container
Localized	450 °C to 700 °C	less than 750 °C.	less than 300 °C.
Engulfing	Average temperatures of the pre-test container surface measured at the three bottom locations shall be greater than 600 °C.	Not applicable.	Average temperatures of the pre-test container surface measured at the three top locations shall be at least 100 °C, and when greater than 750 °C, shall also be less than the average temperatures of the pre-test container surface measured at the three bottom locations.

S6.2.5.3. *CHSS fire test.* (a) The CHSS to be fire tested shall include TPRD vent lines.

(b) The CHSS to be fire tested shall be mounted at any height between 95 millimeters and 105 millimeters above the burner.

(c) CHSS shall be positioned for the localized fire test by orienting the CHSS such that the distance from the center of the localized fire exposure to the TPRD(s) and TPRD sense point(s) is at or near maximum.

(d) When the container is longer than the localized burner, the localized burner shall not extend beyond either end of the container in the CHSS.

(e) The CHSS shall be filled with compressed hydrogen gas to any SOC between 100.0 percent and 105.0 percent.

(f) For outdoor test sites, the same wind shielding shall be used as was used for S6.2.5.2. The separation between the CHSS and the walls of the wind shields shall be at least 0.5 meters.

(g) Burner monitor temperatures shall be measured below the bottom surface of the CHSS in the same positions as specified in S6.2.5.2(h).

(h) The allowable limits for the burner monitor temperatures during the CHSS fire test shall be established based on the results of the pre-test checkout as follows:

(1) The minimum value for the burner monitor temperature during the localized fire stage ($Tmin_{LOC}$) shall be calculated by subtracting 50 °C from the 60-second rolling average of the burner monitor temperature in the localized fire zone of the pre-test checkout. If the resultant $Tmin_{LOC}$ exceeds 600 °C, $Tmin_{LOC}$ shall be 600 °C.

(2) The minimum value for the burner monitor temperature during the engulfing fire stage ($Tmin_{ENG}$) shall be calculated by subtracting 50 °C from the 60-second rolling average of the average of the three burner monitor temperatures during the engulfing fire stage of the pre-test checkout. If the resultant $Tmin_{ENG}$ exceeds 800 °C, $Tmin_{ENG}$ shall be 800 °C.

(i) The localized fire stage is initiated by starting the fuel flow to the localized burner and igniting the burner.

(j) The 10-second rolling average of the burner monitor temperature in the localized fire zone shall be at least 300 °C within 1 minute of ignition and for the next 2 minutes.

(k) Within 3 minutes of the igniting the burner, using the same LPG flow rate as S6.2.5.2(i), the 60-second rolling average of the localized zone burner monitor temperature shall be greater than $Tmin_{LOC}$ as determined in S6.2.5.3(h)(1).

(l) After 10 minutes from igniting the burner, the engulfing fire stage is initiated.

(m) The engulfing fire zone includes the localized fire zone and extends in one direction towards the nearest TPRD or TPRD sense point along the complete length of the container up to a maximum burner length of 1.65 m.

(n) Within 2 minutes of the initiation of the engulfing fire stage, using the same LPG flow rate as S6.2.5.2(j), the 60-second rolling average of the engulfing burner monitor temperature shall be equal or greater than $Tmin_{ENG}$ as determined in S6.2.5.3(h)(2).

(o) The fire testing continues until the pressure inside the CHSS is less than or equal to 1.0 MPa or until:

(1) A total test time of 60 minutes for CHSS on vehicles with a GVWR of 10,000 pounds or less or;

(2) A total test time of 120 minutes for CHSS on vehicles with a GVWR over 10,000 pounds.

S6.2.6. *Test procedures for performance durability of closure devices.*

S6.2.6.1. *TPRD performance tests.* Unless otherwise specified, testing is performed with either hydrogen gas with a purity of at least 99.97 percent, less than or equal to 5 parts per million of water, and less or equal to 1 part per million particulate, or with an inert gas. All tests are performed at any temperature between 5.0 °C and 35.0 °C unless otherwise specified.

S6.2.6.1.1. *Pressure cycling test.* A TPRD undergoes 15,000 internal pressure cycles at a rate not exceeding 10 cycles per minute. The table below summarizes the pressure cycles. Any condition within the ranges specified in table 7 to this section may be selected for testing.

(a) The first 10 pressure cycles shall be from any low pressure of between 1.0 MPa and 2.0 MPa to any high pressure between 150.0 percent NWP and 155.0 percent NWP. These cycles are conducted at any sample temperature between 85.0 °C to 90.0 °C.

(b) The next 2,240 pressure cycles shall be from any low pressure between 1.0 MPa and 2.0 MPa to any high pressure of between 125.0 percent NWP and 130.0 percent NWP. These cycles are conducted at any sample temperature between 85.0 °C to 90.0 °C.

(c) The next 10,000 pressure cycles shall be from any low pressure of between 1.0 MPa and 2.0 MPa to any high pressure between 125.0 percent NWP and 130.0 percent NWP. These cycles are conducted at a sample temperature between 5.0 °C to 35.0 °C.

(d) The final 2,750 pressure cycles shall be from any low pressure between 1.0 MPa and 2.0 MPa to any high pressure between 80.0 percent NWP and 85.0 percent NWP. These cycles are conducted at any sample temperature between −45.0 °C to −40.0 °C.

TABLE 7 TO § 571.308 S6.2.6.1.1

Number of cycles	Low pressure	High pressure	Sample temperature for cycles
First 10	1.0 MPa to 2.0 MPa	150.0% NWP to 155.0% NWP	85.0 °C to 90.0 °C.
Next 2,240	1.0 MPa to 2.0 MPa	125.0% NWP to 130.0% NWP	85.0 °C to 90.0 °C.
Next 10,000	1.0 MPa to 2.0 MPa	125.0% NWP to 130.0% NWP	5.0 °C to 35.0 °C.
Final 2,750	1.0 MPa to 2.0 MPa	80.0% NWP to 85.0% NWP	−45.0 °C to −40.0 °C.

S6.2.6.1.2. *Accelerated life test.* (a) Two TPRDs undergo testing; one at the vehicle manufacturer's specified activation temperature, and one at an accelerated life temperature, T_L, given in °C using equation 2 to this section, where β = 273.15 °C, T_{ME} is 85 °C, and T_f is the vehicle manufacturer's specified activation temperature in °C.:

Equation 2 to § 571.308 S6.2.6.1.2

$$T_L = \left(\frac{0.502}{\beta + T_f} + \frac{0.498}{\beta + T_{ME}}\right)^{-1} - \beta$$

(b) The TPRDs are placed in an oven or liquid bath maintained within 5.0 °C of the specified temperature per S6.2.6.1.2(a). The TPRD inlets are pressurized with hydrogen to any pressure between 125.0 percent NWP and 130.0 percent NWP and time until activation is measured.

S6.2.6.1.3. *Temperature cycling test.* (a) An unpressurized TPRD is placed in a cold liquid bath maintained at any temperature between −45.0 °C and −40.0 °C. The TPRD shall remain in the cold bath for any duration not less than 2 hours and not more than 24 hours. The TPRD is removed from the cold bath and transferred, within five minutes of removal, to a hot liquid bath maintained at any temperature between 85.0 °C and 90.0 °C. The TPRD shall remain in the hot bath for any duration not less than 2 hours and not more than 24 hours. The TPRD is removed from the hot bath and, within five minutes of removal, transferred back into the cold bath maintained at any temperature between −45.0 °C and −40.0 °C.

(b) Step (a) is repeated until 15 thermal cycles have been achieved.

(c) The TPRD remains in the cold liquid bath for any duration not less than 2 and not more than 24 additional hours, then the internal pressure of the TPRD is cycled with hydrogen gas from any pressure between 1.0 MPa and 2.0 MPa to any pressure between 80.0 percent NWP and 85.0 percent NWP for 100 cycles. During cycling, the TPRD remains in the cold bath and the cold bath is maintained at any temperature between −45.0 °C and −40.0 °C.

S6.2.6.1.4. *Salt corrosion resistance test.* (a) Each closure device is exposed to a combination of cyclic conditions of salt solution, temperatures, and humidity. One test cycle is equal to any duration not less than 22 and not more than 26 hours, and is in accordance with table 8 to S6.2.6.1.4.

TABLE 8 TO § 571.308 S6.2.6.1.4

Accelerated cyclic corrosion conditions
(1 cycle = 22 hours to 26 hours)

Cycle condition	Temperature	Relative humidity	Cycle duration
Ambient stage	22.0 °C to 28.0 °C	35 percent to 55 percent	470 minutes to 490 minutes
Transition 55 min to 60 min			
Humid stage	47.0 °C to 51.0 °C	95 percent to 100 percent	410 minutes to 430 minutes
Transition 170 minutes to 190 minutes			
Dry stage	55.0 °C to 65.0 °C	less than 30 percent	290 minutes to 310 minutes

(b) The apparatus used for this test shall consist of a fog/environmental chamber as defined in ISO 6270–2:2017(E) (incorporated by reference, see § 571.5), with a suitable water supply conforming to Type IV

requirements in ASTM D1193–06 (Reapproved 2018) (incorporated by reference, see § 571.5). The chamber shall include a supply of compressed air and one or more nozzles for fog generation. The nozzle or nozzles used for the generation of the fog shall be directed or baffled to minimize any direct impingement on the closure devices.

(c) During ''wet-bottom'' generated humidity cycles, water droplets shall be visible on the samples.

(d) Steam generated humidity may be used provided the source of water used in generating the steam is free of corrosion inhibitors and visible water droplets are formed on the samples to achieve proper wetness.

(e) The drying stage shall occur in the following environmental conditions: any temperature not less than 60 °C and not greater than 65 °C and relative humidity no more than 30 percent with air circulation.

(f) The impingement force from the salt solution application shall not remove corrosion and/or damage the coatings of the closure devices.

(g) The complex salt solution in percent by mass shall be as specified in S6.2.6.1.4(g)(1) through (5):

(1) Sodium Chloride: not less than 0.08 and not more than 0.10 percent.

(2) Calcium Chloride: not less than 0.095 and not more than 0.105 percent.

(3) Sodium Bicarbonate: not less than 0.07 and not more than 0.08 percent.

(4) Sodium Chloride must be reagent grade or food grade. Calcium Chloride must be reagent grade. Sodium Bicarbonate must be reagent grade. For the purposes of S6.2.6.1.4, water must meet ASTM D1193–06 (Reapproved 2018) Type IV requirements (incorporated by reference, see § 571.5).

(5) Either calcium chloride or sodium bicarbonate material must be dissolved separately in water and added to the solution of the other materials.

(h) The closure devices shall be installed in accordance with the vehicle manufacturer's recommended procedure and exposed to the 100 daily corrosion cycles, with each corrosion cycle in accordance with table 8 to S6.2.6.1.4.

(i) For each salt mist application, the solution shall be sprayed as an atomized mist, using the spray apparatus to mist the components until all areas are thoroughly wet and dripping. Suitable application techniques include using a plastic bottle, or a siphon spray powered by oil-free regulated air to spray the test samples. The quantity of spray applied should be sufficient to visibly rinse away salt accumulation left from previous sprays. Four salt mist applications shall be applied during the ambient stage. The first salt mist application occurs at the beginning of the ambient stage. Each subsequent salt mist application should be applied not less than 90 and not more than 95 minutes after the previous application.

(j) The time from ambient to the wet condition shall be any duration not less than 60 and not more than 65 minutes and the transition time between wet and dry conditions shall be any duration not less than 180 and not more than 190 minutes.

S6.2.6.1.5. *Vehicle environment test.* (a) The inlet and outlet connections of the closure device are connected or capped in accordance with the vehicle manufacturer's installation instructions. All external surfaces of the closure device are exposed to each of the following fluids for any duration between 24 hours and 26 hours. The temperature during exposure shall be any temperature between 5.0 °C and 35.0 °C. A separate test is performed with each of the fluids sequentially on a single closure device.

(1) Sulfuric acid: not less than 19 and not more than 21 percent by volume in water;

(2) Ethanol/gasoline: not less than 10 and not more than 12 percent by volume ethanol and not less than 88 and not more than 90 percent by volume gasoline; and

(3) Windshield washer fluid: not less than 50 and not more than 52 percent by volume methanol in water.

(b) The fluids are replenished as needed to ensure complete exposure for the duration of the test.

(c) After exposure to each fluid, the closure device is wiped off and rinsed with water.

S6.2.6.1.6. *Stress corrosion cracking test.* (a) All components exposed to the atmosphere shall be degreased. For check valves and shut-off valves, the closure device shall be disassembled, all components degreased, and then reassembled.

(b) The closure device is continuously exposed to a moist ammonia air mixture maintained in a glass chamber having a glass cover. The exposure lasts any duration not less than 240 hours and not more than 242 hours. The aqueous ammonia shall have a composition of between 19 weight percent and 21 weight percent ammonium hydroxide in water. Aqueous ammonia shall be located at the bottom of the glass chamber below the sample at any volume not less than 20 mL and not more than 22 mL of aqueous ammonia per liter of chamber volume. The bottom of the sample is positioned any distance not less than 30 and not more than 40 millimeters above the aqueous ammonia and supported in an inert tray.

(c) The moist ammonia-air mixture is maintained at atmospheric pressure and any temperature not less than 35 °C and not more than 40 °C.

S6.2.6.1.7. *Drop and vibration test.* (a) The TPRD is aligned vertically to any one of the six orientations covering the opposing directions of three orthogonal axes: vertical, lateral and longitudinal.

(b) A TPRD is dropped in free fall from any height between 2.00 meters and 2.02 meters onto a smooth concrete surface. The TPRD is allowed to bounce on the concrete surface after the initial impact.

(c) Any sample with damage from the drop that results in the TPRD not being able to be tested in accordance with S6.2.6.1.7(d) shall not proceed to S6.2.6.1.7(d) and shall not be considered a failure of this test.

(d) Each TPRD dropped in S6.2.6.1.7(a) that did not have damage that results in the TPRD not being able to be tested is mounted in a test fixture in accordance with vehicle manufacturer's installation instructions and vibrated for any duration between 30.0 minutes and 35.0 minutes along each of the three orthogonal axes (vertical, lateral and longitudinal) at the most severe resonant frequency for each axis.

(1) The most severe resonant frequency for each axis is determined using any acceleration between 1.50 g and 1.60 g and sweeping through a sinusoidal frequency range from 10 Hz to 500 Hz with any sweep time between 10.0 minutes and 20.0 minutes. The most severe resonant frequency is identified by a pronounced increase in vibration amplitude.

(2) If the resonance frequency is not found, the test shall be conducted at any frequency between 35 Hz and 45 Hz.

S6.2.6.1.8. *Leak test.* Unless otherwise specified, the TPRD shall be thermally conditioned to the ambient temperature condition, then checked for leakage, then conditioned to the high temperature condition, then checked for leakage, then conditioned to low temperature, then checked for leakage.

(a) The TPRD shall be thermally conditioned at test temperatures in each of the test conditions and held for any duration between 1.0 hour and 24.0 hours. The TPRD is pressurized with hydrogen at the inlet. The required test conditions are:

(1) Ambient temperature: condition the TPRD at any temperature between 5.0 °C and 35.0 °C; test in accordance with S6.2.6.1.8(b) at any pressure between 1.5 MPa and 2.5 MPa and then

at any pressure between 125.0 percent NWP and 130.0 percent NWP.

(2) High temperature: condition the TPRD at any temperature between 85.0 °C and 90.0 °C; test in accordance with S6.2.6.1.8(b) at any pressure between 1.5 MPa and 2.5 MPa and then at any pressure between 125.0 percent NWP and 130.0 percent NWP.

(3) Low temperature: condition the TPRD at any temperature between −45.0 °C and −40.0 °C; test in accordance with S6.2.6.1.8(b) at any pressure between 1.5 MPa and 2.5 MPa and then at any pressure between 100.0 percent NWP and 105.0 percent NWP.

(b) Following conditioning at each of the specified test temperature ranges, the TPRD is observed for leakage while immersed in a temperature-controlled liquid at the same specified temperature range for any duration between 1.0 minutes and 2.0 minutes at each of the pressure ranges listed above. If no bubbles are observed for the specified time period, it is not considered a failure. If bubbles are detected, the leak rate is measured.

S6.2.6.1.9. *Bench top activation test.* (a) The test apparatus consists of either a forced air oven or chimney with air flow. The TPRD is not exposed directly to flame. The TPRD is mounted in the test apparatus according to the vehicle manufacturer's installation instructions.

(b) The temperature of the oven or chimney is at any temperature between 600.0 °C and 605.0 °C for any duration between 2 minutes and 62 minutes prior to inserting the TPRD.

(c) Prior to inserting the TPRD, pressurize the TPRD to any pressure between 1.5 MPa and 2.5 MPa.

(d) The pressurized TPRD is inserted into the oven or chimney, the temperature within the oven or chimney is maintained at any temperature between 600.0 °C and 605.0 °C, and the time for the TPRD to activate is recorded. If the TPRD does not activate within 120 minutes from the time of insertion into the oven or chimney, the TPRD shall be considered to have failed the test.

S6.2.6.1.10. *Flow rate test.* (a) At least one new TPRD is tested to establish a baseline flow rate.

(b) After activation in accordance with S6.2.6.1.9, and without cleaning, removal of parts, or reconditioning, the TPRD is subjected to flow testing using hydrogen, air or an inert gas;

(c) Flow rate testing is conducted with any inlet pressure between 1.5 MPa and 2.5 MPa. The outlet is at atmospheric pressure.

(d) Flow rate is measured in units of kilograms per minute with a precision of at least 2 significant digits.

S6.2.6.2. *Check valve and shut-off valve performance tests.* Unless otherwise specified, testing shall be performed with either hydrogen gas with a purity of at least 99.97 percent, less than or equal to 5 parts per million of water, and less than or equal to 1 part per million particulate, or with an inert gas. All tests are performed at any temperature between 5.0 °C and 35.0 °C unless otherwise specified.

S6.2.6.2.1. *Hydrostatic strength test.* (a) The outlet opening is plugged and valve seats or internal blocks are made to assume the open position.

(b) Any hydrostatic pressure between 250.0 percent NWP and 255.0 percent NWP is applied using water to the valve inlet for any duration between 180.0 seconds and 185.0 seconds. The unit is examined to ensure that burst has not occurred.

(c) The hydrostatic pressure is then increased at a rate of less than or equal to 1.4 MPa/sec until component failure. The hydrostatic pressure at failure is recorded.

S6.2.6.2.2. *Leak test.* Each unit shall be thermally conditioned to the ambient temperature condition, then checked for leakage, then conditioned to the high temperature condition, then checked for leakage, then conditioned to low temperature, then checked for leakage.

(a) Each unit shall be pressurized to any pressure between 2.0 MPa and 3.0 MPa and held for any duration between 1.0 hours and 24.0 hours in the specified temperature range before testing. The outlet opening is plugged. The test conditions are:

(1) Ambient temperature: condition the unit at any temperature between 5.0 °C and 35.0 °C; test at any pressure between 1.5 MPa and 2.5 MPa and at any pressure between 125.0 percent NWP and 130.0 percent NWP.

(2) High temperature: condition the unit at any temperature between 85.0 °C and 90.0 °C; test at any pressure between 1.5 MPa and 2.5 MPa and at any pressure between 125.0 percent NWP and 130.0 percent NWP.

(3) Low temperature: condition the unit at any temperature between −45.0 °C and −40.0 °C; test at any pressure between 1.5 MPa and 2.5 MPa and at any pressure between 100.0 percent NWP and 105.0 percent NWP.

(b) While within the specified temperature and pressure range, the unit is observed for leakage while immersed in a temperature-controlled liquid held within the same specified temperature range as the test condition for any duration between 1.0 minutes and 2.0 minutes at each of the test pressures. If no bubbles are observed for the specified time period, the sample passes the leak test. If bubbles are detected, the leak rate is measured.

S6.2.6.2.3. *Extreme temperature pressure cycling test.* (a) The valve unit is connected to a test fixture.

(b) For a check valve, the pressure is applied in six incremental pulses to the check valve inlet with the outlet closed. The pressure is then vented from the check valve inlet. The pressure is lowered on the check valve outlet side to any pressure between 55.0 percent NWP and 60.0 percent NWP prior to the next cycle.

(c) For a shut-off valve, the specified pressure is applied through the inlet port. The shut-off valve is then energized to open the valve and the pressure is reduced to any pressure less than 50 percent of the specified pressure range. The shut-off valve shall then be de-energized to close the valve prior to the next cycle.

S6.2.6.2.4. *Chatter flow test.* The valve is subjected to between 24.0 hours and 26.0 hours of chatter flow at a flow rate that causes the most valve flutter.

S6.2.6.2.5. *Electrical Tests.* This section applies to shut-off valves only.

(a) The solenoid valve is connected to a variable DC voltage source, and the solenoid valve is operated as follows:

(1) Held for any duration between 60.0 and 65.0 minutes at any voltage between 0.50 V and 1.5 times the rated voltage.

(2) The voltage is increased to any voltage between 0.5 V to two times the rated voltage, or between 60.0 V and 60.5 V, whichever is less, and held for any duration between 60.0 seconds and 70.0 seconds.

(b) Any voltage between 1,000.0 V DC and 1,010.0 V DC is applied between the power conductor and the component casing for any duration between 2.0 seconds to 4.0 seconds.

S6.2.6.2.6. *Vibration test.* (a) The valve is pressurized with hydrogen to any pressure between 100.0 percent NWP and 105.0 percent NWP, sealed at both ends, and vibrated for any duration between 30.0 and 35.0 minutes along each of the three orthogonal axes (vertical, lateral and longitudinal) at the most severe resonant frequencies.

(b) The most severe resonant frequencies are determined using any acceleration between 1.50 g and 1.60 g and sweeping through a sinusoidal frequency range from 10 Hz to 500 Hz with any sweep time between 10.0 minutes and 20.0 minutes. The resonance frequency is identified by a pronounced increase in vibration amplitude.

(c) If the resonance frequency is not found, the test shall be conducted at any frequency between 35 Hz and 45 Hz.

Issued in Washington, DC, under authority delegated in 49 CFR 1.95 and 501.

Adam Raviv,

Chief Counsel.

Coast Guard

33 CFR Parts 101 and 160
Cybersecurity in the Marine Transportation System; Final Rule

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Parts 101 and 160

[Docket No. USCG–2022–0802]

RIN 1625–AC77

Cybersecurity in the Marine Transportation System

AGENCY: Coast Guard, DHS.

ACTION: Final rule; request for comments.

SUMMARY: The Coast Guard is updating its maritime security regulations by establishing minimum cybersecurity requirements for U.S.-flagged vessels, Outer Continental Shelf facilities, and facilities subject to the Maritime Transportation Security Act of 2002 regulations. This final rule addresses current and emerging cybersecurity threats in the marine transportation system by adding minimum cybersecurity requirements to help detect risks and respond to and recover from cybersecurity incidents. These include requirements to develop and maintain a Cybersecurity Plan, designate a Cybersecurity Officer, and take various measures to maintain cybersecurity within the marine transportation system. The Coast Guard is also seeking comments on a potential delay for the implementation periods for U.S.-flagged vessels.

DATES: This final rule is effective July 16, 2025.

Comment period for solicited comments: Comments on a potential 2-to-5-year delay for the implementation periods for U.S.-flagged vessels in Section VII of this preamble must be submitted by March 18, 2025.

ADDRESSES:

Docket: To view documents mentioned in this preamble as being available in the docket, go to *www.regulations.gov,* type USCG–2022–0802 in the search box, and click ''Search.'' Next, in the Document Type column, select ''Supporting & Related Material.''

Comment period for solicited additional comments: You may submit comments on the implementation periods for U.S.-flagged vessels discussed in Section VII of this preamble via the electronic Federal Docket Management System. To do so, go to *www.regulations.gov,* type USCG–2022–0802 in the search box and click ''Search.'' Next, look for this document in the Search Results column, and click on it. Then click on the Comment option. If you cannot submit your material by using *www.regulations.gov,* call or email the person in the **FOR FURTHER INFORMATION CONTACT** section of this final rule for alternate instructions.

FOR FURTHER INFORMATION CONTACT: For information about this document, email *MTSCyberRule@uscg.mil* or call Commander Brandon Link, Office of Port and Facility Compliance, 202–372–1107; or Commander Christopher Rabalais, Office of Design and Engineering Standards, 202–372–1375.

II. Executive Summary

The maritime industry faces increasing cybersecurity threats as it increasingly relies on cyber-connected systems. The purpose of this final rule is to safeguard the marine transportation system (MTS) against current and emerging threats associated with cybersecurity by adding minimum cybersecurity requirements to 33 CFR part 101 to help detect, respond to, and recover from cybersecurity risks that may cause transportation security incidents (TSIs). This final rule addresses risks from the increased interconnectivity and digitalization of the MTS and current and emerging cybersecurity threats to maritime security in the MTS with the additional minimum requirements specified below.

First, this final rule requires that owners or operators of U.S.-flagged vessels, facilities, or Outer Continental Shelf (OCS) facilities required to have a security plan under 33 CFR parts 104, 105, and 106 to develop and maintain a Cybersecurity Plan and Cyber Incident Response Plan. The Cybersecurity Plan must include seven account security measures for owners or operators of a U.S.-flagged vessel, facility, or OCS facility: (1) enabling of automatic account lockout after repeated failed log in attempts on all password protected information technology (IT) systems; (2) changing default passwords (or implementing other compensating security controls if unfeasible) before using any IT or operational technology (OT) systems; (3) maintaining a minimum password strength on all IT and OT systems technically capable of password protection; (4) implementing multifactor authentication on password-protected IT and remotely accessible OT systems; (5) applying the principle of least privilege to administrator or otherwise privileged accounts on both IT and OT systems; (6) maintaining separate user credentials on critical IT and OT systems; and (7) removing or revoking user credentials when a user leaves the organization.

The Cybersecurity Plan also must include four device security measure requirements: (1) develop and maintain a list of any hardware, firmware, and software approved by the owner or operator that may be installed on IT or OT systems; (2) ensure that applications running executable code are disabled by default on critical IT and OT systems; (3) maintain an accurate inventory of network-connected systems including those critical IT and OT systems; and (4) develop and document the network map and OT device configuration information. In addition, the Cybersecurity Plan must include two data security measure requirements: (1) ensure that logs are securely captured, stored, and protected and accessible only to privileged users, and (2) deploy effective encryption to maintain confidentiality of sensitive data and integrity of IT and OT traffic when technically feasible. Owners or operators of U.S.-flagged vessels, facilities, or OCS facilities must also prepare and document a Cyber Incident Response Plan that outlines instructions on how to respond to a cyber incident and identifies key roles, responsibilities, and decision-makers amongst personnel.

Owners or operators must also designate a Cybersecurity Officer (CySO) who must ensure that U.S.-flagged vessel, facility, or OCS facility personnel implement the Cybersecurity Plan and the Cyber Incident Response Plan. The CySO must also ensure that the Cybersecurity Plan is up to date and undergoes an annual audit. The CySO must also arrange for cybersecurity inspections, ensure that personnel have adequate cybersecurity training, record and report cybersecurity incidents to the owner or operator, and take steps to mitigate them.

With this final rule, the Coast Guard finalizes the requirements that were proposed in the notice of proposed rulemaking (NPRM), ''Cybersecurity in the Marine Transportation System,'' published on February 22, 2024.[1] We also respond to the public comments that we received to the NPRM and make several clarifications regarding the regulatory framework. The changes we make in this final rule as compared to the NPRM include the following:

Applicability

- Revised the language in § 101.605 to clarify that these cyber regulations apply to the owners and operators of U.S.-flagged vessels, facilities, and OCS facilities required to have security plans under 33 CFR parts 104, 105, and 106.
- Added text to § 101.660 to clarify that Alternative Security Program (ASP) provisions apply to cybersecurity compliance documentation.

Definitions

- Revised the definition of ''backup'' in § 101.615 to remove the phrase ''in a secondary location'' and the implication that backups must be stored ''offsite.''
- Amended the definition of ''hazardous condition'' in § 160.202 by incorporating the term ''cyber incident.''
- Revised the definition of ''cybersecurity officer'' in § 101.615 to clarify that the owner or operator must designate a CySO, but that they also may designate an alternate CySO to assist in the duties and responsibilities at all times, including at times when the CySO may be away from the U.S.-flagged vessel, facility, or OCS facility.

Owner or Operator

- Amended § 101.620(b)(7) to clarify that all entities not subject to 33 CFR 6.16–1 must report all reportable cyber incidents to the National Response Center (NRC) and amended § 101.650(g)(1) to clarify that all entities not subject to 33 CFR 6.16–1 report reportable cyber incidents to the NRC without delay.

Cybersecurity Officer

- Removed the term ''major amendment'' from §§ 101.625(d)(13) (as well as 101.630(e)(2)) to prevent ambiguity about which amendments require resubmission of the Cybersecurity Plan and for consistency with existing requirements in 33 CFR parts 104, 105, and 106.
- Revised § 101.625(d)(10), regarding the CySO's responsibilities in reporting incidents, to refer to reportable cyber incidents, rather than breaches of security, suspicious activity that may result in TSIs. Breaches of security and suspicious activity reporting are already addressed under 33 CFR 101.305, whereas these regulations are meant to address the reporting of reportable cyber incidents as defined in this final rule.

Cybersecurity Plan

- Added references to OCS Facility Security Plans (FSPs) in § 101.630(a) to clarify that OCS FSPs follow the same

[1] 89 FR 13404.

requirements as Vessel Security Plans (VSPs) and FSPs.

- Revised § 101.630(d) to remove the requirement to submit a letter certifying that the Cybersecurity Plan meets the regulatory requirements.
- Revised § 101.630(e)(1)(ii) to clarify that the owner and operator will have at least 60 days to submit its proposed amendments, and to leave the timeframes for curing any deficiencies up to the local Captain of the Port (COTP) identifying them rather than requiring that entities cure any deficiencies within the 60-day period.
- Revised § 101.630(e)(2) to add new paragraph (e)(2)(i) to note that nothing in that section should be construed as limiting the owner or operator of a U.S.-flagged vessel, facility, or OCS facility from the timely implementation of such additional security measures as necessary to address exigent security situations.
- Revised § 101.655 to reflect that the Cybersecurity Plan must also be submitted to the Coast Guard for review and approval within 24 months of the effective date of this final rule, rather than during the second annual audit following the effective date.

Drills and Exercises

- Revised § 101.635(b)(1) to require two cybersecurity drills every 12 months instead of requiring at least one cybersecurity drill every 3 months and added ''as required by 33 CFR 104.230, 105.220, or 106.225,'' where appropriate.

Definitions

- Revised § 101.615 to add a definition for the term ''logs'' and revised § 101.650(c)(1) to refer to the term ''logs'' rather than ''data logs,'' consistent with guidance from the National Institute of Standards and Technology (NIST) and CISA's CPGs.
- Revised § 101.615 to change the definition of Cybersecurity Plan and the reference to Plan submission in § 101.630(a) to clarify that separate submissions are acceptable.
- Revised § 101.615 to change the definition of multifactor authentication from ''a layered approach to securing data and applications where a system requires users to present a combination of two or more credentials to verify their identity for login'' to ''a layered approach to securing data and applications for a system that requires users to present more than one distinct authentication factor for successful authentication. Multifactor authentication can be performed using a multifactor authenticator or by a combination of authenticators that provide different factors. The three authentication factors are (1) something you know, (2) something you have, and (3) something you are.''

Cybersecurity Measures

- Revised § 101.650(a)(1) to remove the reference to OT systems and specified that the requirements in § 101.650(e)(1)(i) and (iv) are for critical IT and OT systems in accordance with the Cybersecurity Performance Goals (CPGs) of the Cybersecurity and Infrastructure Security Agency (CISA).
- Revised § 101.650(b) to clarify that each owner or operator or designated CySO of a U.S.-flagged vessel, facility, or OCS facility must ensure the device security measures are in place, addressed in Section 6 of the Cybersecurity Plan, and made available to the Coast Guard upon request.
- Revised § 101.650(c)(2) to specify that effective encryption must be deployed to maintain confidentiality of sensitive data and integrity of IT and OT traffic and to require that only sensitive data be encrypted.
- Revised § 101.650(e)(1) to specify that owners and operators will need to conduct the cyber assessment within 24 months of the effective date of this final rule, which increases the timeframe from the originally required 12 months.
- Revised § 101.650(e)(1)(i) to limit the identification of vulnerabilities to only ''critical'' OT and IT systems rather than all OT and IT systems and revised § 101.650(e)(iv) to remove ''mitigate any unresolved vulnerabilities'' and, instead, require that the owner or operator ensure patching or implementation of documented compensating controls for all known exploited vulnerabilities (KEVs) in critical IT or OT systems, without delay.
- Revised § 101.650(e)(2) in this final rule to clarify that penetration testing must be completed in conjunction with renewing the Cybersecurity Plan and to specify that the CySO must submit a letter verifying that the test was conducted, as well as all vulnerabilities identified from the penetration testing.
- Revised § 101.650(f)(2) to remove the references to ''breaches'' and ''incidents'' and replaced them with ''reportable cyber incidents,'' consistent with the decision to define ''reportable cyber incident'' and use that term in these regulations. The definition of ''reportable cyber incident'' being an incident that leads to, or, if still under investigation, can reasonably lead to substantial loss of confidentiality, integrity, or availability of a covered information system, network, or OT system; (2) disruption or significant adverse impact on the reporting entity's ability to engage in business operations or deliver goods or services including those that have a potential for significant impact on public health or safety or may cause serious injury or death; (3) disclosure or unauthorized access directly or indirectly of non-public personal information of a significant number of individuals; (4) other potential operational disruption to critical infrastructure systems or assets; or (5) incidents that otherwise may lead to a TSI as defined in 33 CFR 101.105.
- Revised § 101.650(f)(2) to remove the references to ''breaches'' and ''incidents'' and replaced them with ''reportable cyber incidents,'' consistent with the decision to define ''reportable cyber incident'' and use that term in these regulations. The definition of ''reportable cyber incident'' being an incident that leads to, or, if still under investigation, can reasonably lead to substantial loss of confidentiality, integrity, or availability of a covered information system, network, or OT system; (2) disruption or significant adverse impact on the reporting entity's ability to engage in business operations or deliver goods or services including those that have a potential for significant impact on public health or safety or may cause serious injury or death; (3) disclosure or unauthorized access directly or indirectly of non-public personal information of a significant number of individuals; (4) other potential operational disruption to critical infrastructure systems or assets; or (5) incidents that otherwise may lead to a TSI as defined in 33 CFR 101.105.

Noncompliance, Waivers, and Equivalents

- Revised § 101.665 to clarify that an owner or operator, after completing the required Cybersecurity Assessment, may seek a waiver or an equivalence determination for the requirements in subpart F consistent with the waiver and equivalence provisions in 33 CFR parts 104, 105, and 106. A Cybersecurity Assessment is necessary so that an owner or operated can identify which requirements are unnecessary. These changes ensure consistency with other regulations for requesting waiver or equivalence.
- Revised § 101.665 to specify that owners or operators must notify the Coast Guard when they must temporarily deviate from the requirements rather than when they are temporarily unable to meet the requirements. This revised text is more consistent with other regulations regarding temporary waiver.

Compliance Dates

Table 1 shows the phased implementation schedule for this final rule. Note that the rule's effective date will be July 16, 2025. In Section VII of this preamble, we are requesting public comment on a potential 2-to-5-year delay for the implementation periods for U.S.-flagged vessels.

Table 1: Timing of This Final Rule's Requirements

Effective Dates	Provisions
Immediately Upon Effective Date of This Final Rule	Entities that have not reported to the Coast Guard pursuant to, or are not subject to, 33 CFR 6.16-1 begin ensuring that all reportable cyber incidents are reported to the National Response Center (NRC). § 101.620(b)(7).
Within 6 Months From the Effective Date of this Final Rule and Annually Thereafter	All personnel must complete the training specified in § 101.650(d)(1)(ii) through (v) that includes recognition and detection of cybersecurity threats and all types of cyber incidents, techniques used to circumvent cybersecurity measures, procedures for reporting a cyber incident to the CySO, and OT-specific cybersecurity training (for all personnel whose duties include using OT). Key personnel must also complete the training specified in § 101.650(d)(2) about their roles and responsibilities during a cyber incident and response procedure and how to maintain current knowledge of changing cybersecurity threats and countermeasures. (Additional training requirements include the following: Training for new personnel not in place at the time of the effective date of this final rule must be completed within 5 days of gaining system access, but no later than within 30 days of hiring, and annually thereafter. Training for personnel on new IT or OT systems not in place at the time of the effective date of this final rule must be completed within 5 days of system access, and annually thereafter.)
Within 24 Months from the Effective Date of This Final Rule	Owners and operators must designate, in writing, the CySO. § 101.620(b)(3) and (c)(1). Owners and operators must conduct the Cybersecurity Assessment within 24 months of the effective date of this final rule and annually thereafter (or sooner than annually if there is a change in ownership). § 101.650(e)(1). Owners and operators must submit the Cybersecurity Plan to the Coast Guard for approval within 24 months of the effective date of this final rule. § 101.655.
After Receiving Approval of the Cybersecurity Plan	Owners and operators must conduct cybersecurity drills at least twice each calendar year. Owners and operators must also conduct cybersecurity exercises at least once each calendar year with no more than 18 months between cybersecurity exercises. § 101.635(b)(1) and (c)(1). All personnel must complete the training specified in § 101.650(d)(1)(i) within 60 days of receiving approval of the Cybersecurity Plan. Each owner or operator must ensure that the cybersecurity portion of their Plan and penetration test results are available to the Coast Guard upon request. § 101.660.

The Coast Guard estimates that this final rule creates costs for industry and Government of approximately $1.2 billion total and $138.7 million annualized, discounted at 2 percent (2022 dollars). This increased estimate

from the NPRM is primarily driven by increases to our estimates of costs related to cybersecurity drills, exercises, and penetration testing. Cost estimates are also increased due to updated affected population data. Benefits of this final rule include reduced risk and mitigation of cyber incidents to protect impacted entities and downstream economic participants, and improved protection of MTS business operations to build consumer trust and promote increased commerce in the U.S. economy. Additional benefits include improved minimum standards of cybersecurity to protect the MTS, which is vital to the U.S. economy and U.S. national security, and to avoid supply chain disruptions.

III. Basis and Purpose

A. Cybersecurity Threats

The purpose of this final rule is to safeguard the MTS against current and emerging threats associated with cybersecurity by adding minimum cybersecurity requirements to 33 CFR part 101 to help detect, respond to, and recover from cybersecurity risks that may cause TSIs. This final rule addresses current and emerging cybersecurity threats to maritime security in the MTS. The maritime industry is undergoing a significant transformation that involves the increased use of cyber-connected systems. While these increasingly interconnected and networked systems improve commercial vessel and port facility operations, they also bring a new set of challenges affecting design, operations, safety, security, training, and the workforce.

Every day, malicious actors (including, but not limited to, individuals, groups, and adversary nations posing a threat) attempt unauthorized access to control system devices or networks using various communication channels. An example of a successful attempt occurred in May 2021, when a Russian-based cybercriminal group, DarkSide, conducted a ransomware attack that forced a major pipeline company to go offline, resulting in a weeklong shutdown of 5,500 miles of petroleum pipelines on the East Coast of the United States. Cybersecurity threats require the maritime community to effectively manage constantly changing risks to create a safe cyber environment.

This final rule creates a regulatory environment for cybersecurity in the maritime domain for U.S.-flagged vessels, facilities, and OCS facilities. Vulnerabilities in the operation of vital systems increase the risk of cyber-attacks. Unmitigated cyber-related risks to the maritime domain can compromise the critical infrastructure that people and companies depend on to fulfill their daily needs and that maintain the effective operation of the MTS.

A 2018 report by the Council of Economic Advisors (CEA) stated that ''[a] firm with weak cybersecurity imposes negative externalities on its customers, employees, and other firms, tied to it through partnerships and supply chain relations. In the presence of externalities, firms would rationally underinvest in cybersecurity relative to the socially optimal level. Therefore, it often falls to regulators to devise a series of penalties and incentives to increase the level of investment to the desired level.'' [2]

In the report, the CEA also emphasized that ''[c]ontinued cooperation between the public and private sectors is the key to effectively managing cybersecurity risks. . . . The government is likewise important in incentivizing cyber protection—for example, by disseminating new cybersecurity standards, sharing best practices, conducting basic research on cybersecurity, protecting critical infrastructures, preparing future employees for the cybersecurity workforce, and enforcing the rule of law in cyberspace.'' [3]

Furthermore, the CEA acknowledged that ''[f]irms and private individuals are often outmatched by sophisticated cyber adversaries. Even large firms with substantial resources committed to cybersecurity may be helpless against attacks by sophisticated nation-states.'' [4] As an example, the CEA stated, ''firms that own critical infrastructure assets, such as parts of the nation's power grid, may generate pervasive negative spillover effects for the wider economy.'' [5]

Lastly, the CEA stated another problem that exists in the marketplace is, ''firms' reluctance to share information on cyber threats and exposures,'' which ''impairs effective cybersecurity.'' [6] The CEA further stated that ''firms remain reluctant to increase their exposure to legal and public affairs risks. The lack of information on cyber-attacks and data breaches suffered by other firms may cause less sophisticated small firms to conclude that cybersecurity risk is not a pressing problem. . . . [T]he lack of data may be stymying the ability of law enforcement and other actors to respond quickly and effectively and may be slowing the development of the cyber insurance market.'' [7]

This final rule applies to the owners and operators of U.S.-flagged vessels required to have a security plan under 33 CFR part 104 (Maritime Security: Vessels), facilities required to have a security plan under 33 CFR part 105 (Maritime Security: Facilities), and OCS facilities required to have a security plan under 33 CFR part 106 (Marine Security: Outer Continental Shelf (OCS) Facilities).

B. Legislation, Regulations, and Policy

In the Maritime Transportation Security Act of 2002 (MTSA),[8] Congress provided a framework for the Secretary of Homeland Security (''Secretary''), acting through the Coast Guard,[9] and maritime industry to identify, assess, and prevent TSIs in the MTS. MTSA vested the Secretary with authorities for broad security assessment, planning, prevention, and response activities to address TSIs, including the authority to require and set standards for FSPs, OCS FSPs, and VSPs, to review and approve such plans, and to conduct inspections and take enforcement actions.[10] The Coast Guard's implementing regulations address a range of considerations to prevent TSIs to the maximum extent practicable [11] and require, among other general and specific measures, security assessments and measures related to radio and telecommunication systems, including computer systems and networks.[12]

The Coast Guard has also issued additional guidance and policies to help regulated entities address potential cyber incidents in FSPs, OCS FSPs, and VSPs,[13] including a cybersecurity risk

[13] One of the Coast Guard's guidance documents is the Navigation and Vessel Inspection Circular (NVIC) 01–20, *Guidelines for Addressing Cyber Risks at Maritime Transportation Security Act Regulated Facilities* (85 FR 16108). This NVIC outlined Coast Guard's view on requirements for FSPs and facility security, including cybersecurity. A similar understanding with regard to VSPs was expressed in the Coast Guard's Office of

Continued

assessment model that was issued in January 2023,[14] and voluntary guidance issued to Area Maritime Security Committees (AMSCs) in July 2023.[15] Congress has repeatedly reaffirmed the MTSA framework, including through amendments passed in 2016,[16] 2018,[17] and 2021.[18] In the 2018 amendments, Congress amended MTSA to specifically require VSPs, FSPs, and OCS FSPs to include provisions for detecting, responding to, and recovering from cybersecurity risks that may cause TSIs.[19] By doing so, Congress explicitly identified cybersecurity risk as an area of specific concern in the maritime domain that deserved focused governmental regulatory effort. These regulations fall squarely within the MTSA authorities that Congress expressly expanded to address cybersecurity risk. The regulatory amendments to 33 CFR part 101 reflect the Coast Guard's view on cybersecurity under MTSA, including, but not limited to, recent amendments to MTSA (such as 46 U.S.C. 70103). The amendments provide more detailed mandatory baseline requirements for U.S.-flagged vessels and facilities subject to MTSA.

In response to the growing national security threat from malicious cyber actions, presidential policy over the last three presidential administrations has advanced cybersecurity in the maritime domain. Executive Order 13636 of February 12, 2013 (Improving Critical Infrastructure Cybersecurity) recognized the Federal Government's role to secure our nation's critical infrastructure by working with the private sector—including owners and operators of U.S.-flagged vessels, facilities, and OCS facilities—to prepare for, prevent, mitigate, and respond to cybersecurity threats.[20]

To defend against malicious cyber-related activities, Executive Order 13694 of April 1, 2015 (Blocking the Property of Certain Persons Engaging in Significant Malicious Cyber-Enabled Activities) recognized malicious cyber-related activities as an ''extraordinary threat to the national security, foreign policy, and economy of the United States,'' warranting a national emergency.[21] The National Emergency with Respect to Significant Malicious Cyber-Enabled Activities was extended on March 26, 2024.[22]

Executive Order 14028 of May 12, 2021 (Improving the Nation's Cybersecurity) also recognized that ''the private sector must adapt to the continuously changing threat environment, ensure its products are built and operate securely, and partner with the Federal Government to foster a more secure cyberspace.'' [23]

On July 28, 2021, the President issued the ''National Security Memorandum on Improving Cybersecurity for Critical Infrastructure Control Systems,'' [24] which required the Secretary of Homeland Security to coordinate with the Secretary of Commerce (through the Director of NIST) and other agencies, as appropriate, to develop baseline CPGs. These baseline CPGs will further a common understanding of the baseline security practices that critical infrastructure owners and operators should follow to protect national and economic security, as well as public health and safety. CISA's release of the CPGs in October 2022 was ''intended to help establish a common set of fundamental cybersecurity practices for critical infrastructure, and especially help small- and medium-sized organizations kickstart their cybersecurity efforts.'' [25] The Coast Guard relied on CISA's CPGs as a benchmark for technical requirements in this final rule.

On February 21, 2024, the President signed Executive Order 14116 (Amending Regulations Relating to the Safeguarding of Vessels, Harbors, Ports, and Waterfront Facilities of the United States), amending 33 CFR part 6 regulations, which are issued pursuant to 46 U.S.C. 70051.[26] In that Order, the President found that ''the security of the United States is endangered by reasons of disturbance in the international relations of the United States that exist as a result of persistent and increasingly sophisticated malicious cyber campaigns against the United States, and that such disturbances continue to endanger such relations.''

The Executive Order expanded the regulatory authorities of the Coast Guard COTP, a designated officer of the Coast Guard, to address, inspect, and search vessels when there is an articulable cybersecurity threat; take possession and control of vessels within the territorial waters of the United States; and prevent access of things (including data, information, network, program, system, or other digital infrastructure) to vessels or waterfront facilities whenever it appears that such actions are necessary to prevent damage or injury, including damage to any data, information, network, program, system, or other digital infrastructure on such vessel, or to any vessel, waterfront facility, or the waters of the United States.[27] Furthermore, the Commandant's authority was extended to prescribe conditions and restrictions relating to waterfront facilities and vessels in port, specifically to ''prevent, detect, assess, and remediate an actual or threatened cyber incident.'' [28] The Commandant exercised this authority in a February 21, 2024 Maritime Security (MARSEC) Directive.[29]

The Executive Order also amended the reporting requirement in 33 CFR part 6 to add CISA and to also require the reporting of actual or threatened cyber incidents. The amended 33 CFR 6.16–1 now requires the reporting of ''evidence of sabotage, subversive activity, or an actual or threatened cyber incident[s] involving or endangering any vessel, harbor, port, or waterfront facility'' to the Federal Bureau of Investigation (FBI), CISA, and the COTP or their respective representatives.[30]

OCS facilities are not required to report under Part 6.

In 2021, the Coast Guard published its Cyber Strategic Outlook (CGCSO) to highlight the importance of managing cybersecurity risks in the MTS.[31] The CGCSO highlighted three lines of effort, or priorities, to improve Coast Guard readiness in cyberspace: (1) Defend and Operate the Coast Guard Enterprise Mission Platform; (2) Protect the MTS; and (3) Operate in and through Cyberspace.[32] As outlined in the CGCSO's second line of effort, ''Protect the MTS,'' the Coast Guard has implemented a risk-based regulatory, compliance, and assessment regime. We have established minimum requirements for Cybersecurity Plans that facilitate the use of international and industry-recognized cybersecurity standards to manage cybersecurity risks by owners and operators of maritime critical infrastructure.[33] Specifically, this final rule promulgates the Coast Guard's baseline cybersecurity regulations for U.S.-flagged vessels and facilities (including OCS facilities) subject to MTSA.

As noted, in January 2023, the Coast Guard released the Maritime Cybersecurity Assessment and Annex Guide (MCAAG). The MCAAG was developed through coordination with the National Maritime Security Advisory Committee (NMSAC), AMSCs, and other maritime stakeholders, consistent with the activities described in section 2(e) of the National Institute of Standards and Technology Act (specifically, 15 U.S.C. 272(e)). The MCAAG provides more detailed recommendations on implementing existing MTSA regulations as they relate to computer systems and networks. For example, the Coast Guard recommended a Cyber Annex Template for stakeholders to address possible cybersecurity vulnerabilities and risks.

This final rule expands and clarifies the information required in security plans to remain consistent with 46 U.S.C. 70103(c)(3), including section 70103(c)(3)(C)(v), which requires FSPs, OCS FSPs, and VSPs to include provisions for detecting, responding to, and recovering from cybersecurity risks that may cause TSIs. Some terms we use in the MCAAG, such as *cybersecurity vulnerability,* may have a set definition in this final rule.

C. Legal Authority

The Coast Guard is promulgating these regulations under 43 U.S.C. 1333(d); 46 U.S.C. 3306, 3703, 70102 through 70104, 70124; and the Department of Homeland Security (DHS) Delegation No. 00170.1, Revision No. 01.4.

Section 4 of the Outer Continental Shelf Lands Act of 1953 (OCSLA), classified as amended at 43 U.S.C. 1333(d), authorizes the Secretary to promulgate regulations with respect to lights and other warning devices, safety equipment, and other matters relating to the promotion of safety of life and property on the artificial islands, installations, and other devices on the OCS thereto. This authority was delegated to the Coast Guard by DHS Delegation No. 00170.1(II)(90), Revision No. 01.4.

Section 3306 of Title 46 of the United States Code authorizes the Secretary to prescribe necessary regulations for the design, construction, alteration, repair, equipping, manning and operation of vessels, propulsion machinery, auxiliary machinery, boilers, unfired pressure vessels, piping, electric installations, and accommodations for passengers and crew. This authority was delegated to the Coast Guard by DHS Delegation No. 00170.1(II)(92)(b), Revision No. 01.4.

Section 3703 of Title 46 of the United States Code authorizes the Secretary to prescribe similar regulations relating to tank vessels that carry liquid bulk dangerous cargoes, including the design, construction, alteration, repair, maintenance, operation, equipping, personnel qualification, and manning of the vessels. This authority was delegated to the Coast Guard by DHS Delegation No. 00170.1(II)(92)(b), Revision No. 01.4.

Sections 70102 through 70104 of Title 46 of the United States Code authorize the Secretary to evaluate for compliance vessel and facility vulnerability assessments, security plans, and response plans, which must address cybersecurity risks. Section 70124 authorizes the Secretary to promulgate regulations to implement Chapter 701, including sections 70102 through 70104, dealing with vulnerability assessments for the security of vessels and facilities (which include OCS facilities); security plans for vessels, facilities, and OCS facilities; and response plans for vessels, facilities, and OCS facilities. These authorities were delegated to the Coast Guard by DHS Delegation No. 00170.1(II)(97)(a) through (c), and (n), Revision No. 01.4.

IV. Background

A. The Current State of Cybersecurity in the MTS

The maritime industry is relying increasingly on digital solutions for operational optimization, cost savings, safety improvements, and more sustainable business. These developments, to a large extent, rely on IT systems and OT systems, which also increases potential cyber vulnerabilities and risks. Cybersecurity risks result from vulnerabilities to vital systems that increase the likelihood of cyber-attacks on U.S.-flagged vessels, facilities, and OCS facilities.

Cyber-attacks on critical infrastructure across multiple sectors have raised awareness of the need to protect the systems and equipment that facilitate operations within the MTS because cyber-attacks have the potential to disable the IT and OT on board U.S.-flagged vessels, facilities, and OCS facilities. Autonomous vessel technology, automated OT, and remotely operated machines provide further opportunities for cyber-attackers. These systems and equipment are prime targets for cyber-attacks stemming from insider threats, criminal organizations, nation state actors, and others.

Also, the MTS has become increasingly susceptible to cyber-attacks due to the growing integration of digital technologies in their operations. These types of cyber-attacks can range from altering a vessel's navigational systems to disrupting its communication with ports, which can lead to delays, accidents, or even potential groundings that can potentially disrupt vessel movements and shut down port operations, such as loading and unloading cargo. This disruption can also negatively affect the MTS by interrupting the transportation and commerce of goods, raw resources, and passengers, as well as potential military operations when needed.

An attack that compromises navigational or operational systems can pose a serious safety risk. It can result in accidents at sea, potential environmental disasters like oil spills,

[31] U.S. Coast Guard, ''Cyber Strategic Outlook,'' August 2021, *https://www.uscg.mil/Portals/0/Images/cyber/2021-Cyber-Strategic-Outlook.pdf,* accessed August 13, 2024.

[32] These lines of effort evolved from the three ''strategic priorities'' introduced in the Coast Guard's Cyber Strategy, June 2015. As cyber threats and vulnerabilities evolve, so will the Coast Guard's posture. *https://www.dco.uscg.mil/Portals/10/Cyber/Docs/CG_Cyber_Strategy.pdf?ver=nejX4g9gQdBG29cX1HwFdA%3D%3D,* accessed August 12, 2024.

[33] The Coast Guard is aware that some entities already follow industry standards related to cybersecurity. The minimum requirements seek to establish a common baseline for all the regulated vessels, facilities, and OCS facilities that is not incompatible with such standards, recognizing that in some instances these minimums may increase a requirement, but in other circumstances may already be satisfied. The owner or operator can indicate within their Cybersecurity Plan that they are following a particular standard and highlight how their compliance with that standard satisfies Coast Guard requirements.

and loss of life. The maritime industry is not immune to ransomware attacks where cybercriminals are targeting critical systems or data. Given the critical nature of marine transportation to global trade, continued efforts are being made to improve cybersecurity measures in the sector.

Maritime stakeholders can better detect, respond to, and recover from cybersecurity risks that may cause TSIs by adopting a range of cyber risk management (CRM) measures, as described in this final rule. It is important that the Coast Guard work with the maritime community to address both safety and security risks to better facilitate operations and to protect MTS entities from creating hazardous conditions within ports and waterways. Updating regulations to include minimum cybersecurity requirements will strengthen the security posture and increase resilience against cybersecurity threats in the MTS.

In 2017, the International Maritime Organization (IMO) took steps to address cybersecurity risks in the shipping industry by publishing the Marine Safety Committee/Facilitation Committee (MSC–FAL) Circular 3, *Guidelines on Maritime Cyber Risk Management,*[34] and MSC Resolution 428(98).[35] The IMO affirmed that an approved Safety Management System (SMS) should involve CRM to manage cybersecurity risks in accordance with the objectives and functional requirements of the International Safety Management (ISM) Code. An SMS is a structured and documented set of procedures enabling company and vessel personnel to effectively implement safety and environmental protection policies that are specific to that company or vessel.

For applicable U.S.-flagged vessels, this final rule establishes a baseline level of protection throughout the MTSA-regulated vessel fleet. Having regulatory oversight over U.S.-flagged vessels, the Coast Guard can ensure these cybersecurity regulations are implemented appropriately by approving Cybersecurity Plans and conducting routine inspections. As discussed in Section VII of this preamble, the Coast Guard requests public comment on a potential 2-to-5-year delay for the implementation periods for U.S.-flagged vessels. (See the **ADDRESSES** portion of this preamble, under *Comment period for solicited additional comments,* for instructions on submitting comments.) This final rule also applies to facilities regulated by 33 CFR part 105 and OCS facilities regulated by 33 CFR part 106.

B. Current MTSA Regulations Related to Cybersecurity

The MTSA-implementing regulations in 33 CFR parts 101, 103, 104, 105, and 106 give the Coast Guard the authority to review and approve security assessments and plans that apply broadly to the various security threats facing the maritime industry. Through the Navigation and Vessel Inspection Circular (NVIC) 01–20 [36] (85 FR 16108, March 20, 2020), the Coast Guard interpreted 33 CFR parts 105 and 106 as requiring owners and operators of facilities and OCS facilities to address cybersecurity in their Facility Security Assessments (FSAs) and OCS FSAs, as well as in their FSPs and OCS FSPs. The NVIC provides non-binding guidance on how regulated entities can address these issues.

This final rule also expands upon the agency's previous actions by establishing minimum performance-based cybersecurity requirements for the MTS within the MTSA regulations. Similar to the existing requirements in 33 CFR parts 104, 105, and 106, the Coast Guard allows owners and operators the flexibility to determine the best way to implement and comply with these new requirements. Following the effective date of this final rule, personnel must complete certain training requirements within approximately 6 months, and owners or operators must sequentially complete a Cybersecurity Assessment and submit the Cybersecurity Plan to the Coast Guard for review and approval within 24 months. The Cybersecurity Plan also includes designating the CySO. These implementation periods allow sufficient time for the owners and operators of applicable U.S.-flagged vessels, facilities, and OCS facilities to comply with the requirements of this final rule.[37]

V. Discussion of Comments and Changes

In response to the NPRM we published on February 22, 2024,[38] we received 99 written submissions to our docket. These written submissions are available in the public docket for this rulemaking, where indicated under the **ADDRESSES** portion of the preamble, or use the direct link *www.regulations.gov/docket/USCG-2022-0802.* The Coast Guard appreciates the comments from the public, as these insights continue to inform Coast Guard actions and programs. Below, we summarize the comments and our responses.

Extension of Comment Period and Public Meetings

The Coast Guard received a number of comments about extending the initial comment period of 60 days for additional time to review the proposed rule and the impacts. The requests asked for additional time ranging from 30 to 90 days, with 30 days being the most common request. After considering these comments, we extended the comment period by 30 days through May 22, 2024.[39] The Coast Guard determined that the extended comment period offered sufficient opportunity for industry stakeholders, and the general public to express their feedback on the NPRM.

One commenter requested that we hold a public hearing during which they could ask us questions and receive further information before submitting a public comment on the NPRM. The Coast Guard did not grant this request. Any public meeting that we held would include a presentation about the contents of the NPRM and an opportunity for members of the public to submit oral comments, but it is unlikely that we would have been able to share information materially different than the information that was already provided in the published NPRM.

One commenter requested that the Coast Guard hold a series of ''industry days'' focused on specific threats to the maritime stakeholders.

This comment was received on May 22, 2024, the day the extended comment period closed, which did not allow time to consider this request or hold a public meeting or series of ''industry days'' before the end of the comment period. Additionally, we had already extended the comment period to allow for more time for industry to submit comments about specific impacts to the maritime industry. We received many comments during that period and have carefully considered them in developing this final rule.

[39] 89 FR 24751.

A. General Comments

Several commenters submitted positive comments. Commenters commended us for strengthening cybersecurity and noted that the rule is needed, is very important for the marine transportation system, and is a ''great idea.'' One commenter supported our inclusion of specific proposals regarding device security measures in § 101.650(b). Another commenter supported requirements for vulnerability scanning and penetration testing. One commenter noted that the increasing interconnectivity of ports expands the attack surface and vulnerabilities exploitable by cyber actors.

The Coast Guard agrees with the commenter. We are finalizing this regulation to help mitigate these risks.

Out of Scope Comments

We received several comments that were out of scope for this rulemaking. One commenter expressed concern about the ship-to-shore cranes manufactured in the People's Republic of China (PRC).

Specific language to address PRC-manufactured cranes is outside the scope of this regulation, which establishes general, baseline cybersecurity requirements for regulated entities.

Another commenter asked for a list of crane manufacturers or providers impacted by MARSEC Directive 105–4 related to the PRC-manufactured cranes.

The Coast Guard announced the availability of MARSEC Directive 105–4 on February 23, 2024, which provided actions for owners or operators of ship-to-shore cranes manufactured by the PRC to manage cybersecurity risks (89 FR 13726). This MARSEC Directive was announced at the same time as the NPRM for this final rule, but its requirements are separate. Interested parties should refer to the notice of availability for MARSEC Directive 105–4.[40]

One commenter noted that CPGs specific to the maritime subsector should be prioritized. The commenter also inquired about how feasible it was to incorporate risk-based assessment processes into the MST [Marine Science Technician] ''A'' School curriculum.

The Coast Guard is not currently working on sector-specific CPGs. Entities are welcome to use their preferred references and standards to help inform their required Assessments and Plans. ''A'' school curricula are outside the scope of this regulation.

[40] 89 FR 13726, February 23, 2024.

Formalizing Training

One commenter stated that the Coast Guard needs to consider continuously monitoring OT devices and asked the Coast Guard to formalize training, leverage industry best practices to apply to maritime operations, and implement a ''Bug Bounty'' program like that of the Department of Defense (DoD).[41]

The commenter did not give additional information or a reason why the Coast Guard should formalize the training. While formal training can be beneficial, the Coast Guard will not mandate a specific training format. It is up to the owners and operators of U.S.-flagged vessels, facilities, and OCS facilities to assess the necessary level of training based on their unique cyber threats and risks.

This final rule provides minimum baseline standards. Owners and operators are welcome to implement additional cybersecurity measures if they wish, including leveraging industry best practices, continuous monitoring of OT devices, and establishing processes for vulnerability notification such as the ''Bug Bounty'' program. However, these additional measures are not required by this final rule.

Identity Protection and Authentication

Another commenter applauded the inclusion of identity protection and authentication practices, and noted that some current practices, such as ''bring your own device'' and ''work from anywhere'' models, increase the risks of relying on traditional authentication methods and further weaken obsolescent legacy security technologies.

The Coast Guard agrees that the rule's provisions appropriately address current cybersecurity risks.

Automated Technologies

One commenter advised caution regarding ''unchecked reliance'' on automated technologies and processes in the maritime industry. The commenter also noted the lack of Federal regulations for ''smart'' containers. Another commenter recommended that the Coast Guard's cybersecurity regulations should require private stakeholders to collaborate with DHS to ensure national security and protect American dockworkers from cyber-attacks and risks from automated technologies.

These comments fall outside the scope of the regulations, as our intent is not to address specific issues associated with ''smart'' containers in particular. This final rule focuses on cybersecurity threats and risks that may impact OT and IT systems on board vessels and at facilities.

One commenter noted that some ports and ships are becoming ''smart'' with use of artificial intelligence, algorithms, and other IT solutions. The commenter argued that the proposed regulations fell short of addressing the cybersecurity risks of more sophisticated systems by only providing minimum baseline requirements.

These regulations provide minimum baseline requirements that allow each owner or operator to customize the Cybersecurity Plan to the needs of their organization. We expect that organizations with more sophisticated systems, such as those described by the commenter, will use the Cybersecurity Assessment to identify their specific cybersecurity needs, which will then be accounted for in the Plan. The structure of this final rule provides each owner or operator the flexibility to customize their Plan based on their own needs and also to add other requirements they deem appropriate for their organization.

Additional Inspections

One commenter recommended that any vessel that visits an ''adversarial controlled shipyard'' for maintenance or repair should necessitate thorough inspections following the maintenance.

This is outside the scope of this rulemaking. We did not propose any requirements for such inspections and do not have any plans to pursue them at this time.

Rulemaking Process

One commenter suggested that issuing an advance notice of proposed rulemaking (ANPRM) first would have improved the process for crafting these regulations.

The Coast Guard considered an ANPRM, but ultimately decided that it was not necessary for this rulemaking project. We received robust comments on the NPRM that provided useful input on the cybersecurity regulations we proposed and that we have carefully considered in developing this final rule.

Several commenters stated that the Coast Guard did not engage with industry stakeholders before the release of the NPRM.

While we did not engage with industry on the NPRM specifically prior to its release, the Coast Guard regularly engages with MTS industry and other stakeholders on cyber and other risks at Government agency- or industry-hosted conferences and workshops, and other forums. In these engagements, we

[41] A ''Bug Bounty'' program is an initiative that rewards individuals for reporting bugs and vulnerabilities in software.

discuss the Coast Guard's current cyber posture in terms of vessel and facility compliance with MTSA. Cybersecurity presents challenging problems, along with a need to address them promptly to implement critical cybersecurity measures.

Port Security Grant Program

Some commenters requested that the Port Security Grant Program account for, or even give prioritization to, smaller facilities to address cybersecurity concerns.

The Coast Guard will seek to work with the Federal Emergency Management Agency (FEMA) to further highlight cybersecurity through the FEMA-administered Port Security Grant Program. Because we do not manage that program, we cannot make any representation about future prioritization of grant funds. As noted in FEMA's Fiscal Year 2024 Notice of Funding Opportunity for this program, all entities subject to an Area Maritime Transportation Security Plan, as defined by 46 U.S.C. 70103(b), may apply for program funding.[42] Eligible applicants include but are not limited to port authorities, facility operators, and State, local, and territorial government agencies.[43] FEMA identified enhancing cybersecurity as a key priority for Fiscal Year 2024.[44]

Coast Guard Experience With Enforcing Cybersecurity

Some commenters stated that they did not feel that the Coast Guard had the expertise to enforce these regulations or to conduct cybersecurity inspections. They also stated that the nature of personnel rotations among active-duty military meant that members would constantly require training, and the Coast Guard could not retain the expertise necessary to review and approve the Cybersecurity Plans. Some also felt that reviews of the Cybersecurity Plan should be held in a centralized location, due to the COTP not having enough cybersecurity expertise.

The Coast Guard maintains a diverse workforce of military and civilian personnel to balance the need to maintain institutional knowledge while keeping the ability to flexibly assign personnel to a wide range of billets and locations. Whether it is knowledge of commercial vessel safety regulations, hazardous materials regulations, or these new cybersecurity regulations, the Coast Guard will ensure adequately trained personnel will be available to enforce these regulations, including through reviewing Cybersecurity Plans. Although this final rule addresses training requirements for regulated entities and not Coast Guard personnel, the Coast Guard will ensure appropriate, adequate training is available for the personnel conducting associated work and missions. Additionally, the Coast Guard recognizes the comment regarding centralized reviews of the Cybersecurity Plans. The Coast Guard has not yet identified where ownership of initial and subsequent review of Cybersecurity Plans will reside, but will determine that upon assessing the process that optimizes resources and expertise. Whatever the Coast Guard determines, it will not alter the requirements for developing and submitting such Plans.

In addition, the Coast Guard has significant experience with the maritime security of vessels, facilities, and OCS facilities. We have specific cybersecurity units and capabilities dedicated to identifying threats and risks and to protecting the cybersecurity of the United States. We work in partnership with the DoD and other DHS components, specifically CISA and the Transportation Security Administration (TSA). We are confident that, by leveraging this experience and these partnerships, along with additional training, we can enforce the requirements in this final rule.

Some commenters asked if the Coast Guard planned to allow Recognized Organizations (ROs) to assist with reviewing Cybersecurity Plans.

The Coast Guard currently does not plan to allow ROs to assist with reviewing Cybersecurity Plans, but regulated entities may consult with ROs to ensure compliance with this final rule if they choose.

B. Comments Related to the Applicability of This Final Rule

One commenter asked us to clearly define the scope of the Coast Guard's jurisdictional authority to regulate cybersecurity as it applies to marine infrastructure.

As discussed in the legal authority section, the Coast Guard has statutory authority under MTSA, as amended and codified at 46 U.S.C. chapter 701, to regulate cybersecurity in the MTS. As already long-established by the existing regulations in 33 CFR subchapter H, MTSA is applicable to the vessels, facilities, and OCS facilities that are subject to this final rule. The authority to regulate ''cybersecurity risk'' was specifically added to MTSA by the Maritime Security Improvement Act of 2018.[45]

One commenter explained that some ports oversee airports under their jurisdiction and thus, have dual cybersecurity requirements with the Federal Aviation Administration (FAA). The commenter sought clarification that new requirements, including incident reporting requirements, would not apply to systems that are under the port authority's charge but that are unrelated to maritime port activities. The commenter expressed concern that, if the Coast Guard rule were to apply to all systems under a port authority's charge, many ports would have dual reporting requirements for the same incidents—a significant inefficiency.

This final rule is applicable to those facilities currently regulated under existing MTSA regulations. By and large, airport facilities are not regulated under this rule. If a situation arose where a MTSA-regulated entity was potentially subject to conflicting requirements from the Federal Aviation Administration—or any other agency's requirements—the entity should raise the issue of any perceived conflicts with the COTP and that agency's respective point of contact so that each agency is aware of the concern and can evaluate if there are conflicts for compliance. With respect to incident reporting, if there are occurrences where a cybersecurity incident affects systems or equipment falling under multiple regulatory jurisdictions, an owner or operator will have to ensure all reporting requirements are met. And with respect to the rule in general, if appropriate, the Coast Guard, acting through the COTP, may recommend the entity consider a request for equivalence in order to avoid overlapping requirements.

Some commenters stated that the United States should not impose specific requirements for the flag state on its vessels without imposing the same on foreign-flagged vessels. One commenter also suggested that U.S.-flagged vessels should be subject to requirements no greater than those applied to foreign-flagged vessels with a safety management system. The commenter asserted that, once the IMO establishes international requirements, a new NPRM should be issued to implement these requirements for U.S.-flagged vessels. Other commenters said the United States should not impose requirements that deviate from international standards, including those

[42] See FEMA, ''The U.S. Department of Homeland Security (DHS) Notice of Funding Opportunity (NOFO) Fiscal Year 2024 Port Security Grant Program,'' April 16, 2024, *https://www.fema.gov/print/pdf/node/676012,* accessed October 23, 2024.

[43] Id. at 14.

[44] Id. at 6.

[45] Pub. L. 115–254, Div. J.

that are presently being negotiated at the IMO.

The Coast Guard believes that protecting U.S. national security and the nation's sovereign interests is a paramount concern. As the flag administration, the United States believes that these baseline requirements for U.S.-flagged vessels are important preventive measures. Not only will establishing these requirements help protect the U.S. commercial fleet from cybersecurity threats, but it will also further establish the United States as a leader in this space and offers a model for the necessary actions that other flag administrations should take with respect to the cybersecurity of vessels.

The Coast Guard acknowledges that this final rule adds new requirements on U.S.-flagged vessels. However, the Coast Guard believes that proactive cybersecurity regulations are essential for ensuring the continued safety, security, and resilience of the domestic MTS. Consistent with this approach, the United States is actively engaged in international efforts to address maritime cybersecurity at the IMO. The Coast Guard believes that extending regulations to foreign-flagged vessels at this time while these discussions are ongoing would disrupt the established processes for port state control and possibly jeopardize U.S. national interests. The Coast Guard may consider revising this rule at a later date as the threat environment and international standards develop, including after the IMO speaks to cybersecurity with additional specificity.

Multiple commenters requested clarification on how these regulations apply to existing U.S.-flagged vessels, facilities, and OCS facilities, and stated that it could be difficult for existing vessels to meet some requirements. Specifically, concerns were raised about the inability to implement data encryption, the feasibility of compliance with network segmentation, frequent operator changes, difficulty in identifying personnel to fill a specialized position, and the presence of minimal computer networks and electronic systems. One commenter stated that vessels operating exclusively on inland waters, such as barges and towing vessels, have a minimal cyber footprint and should be excluded from this rulemaking.

This final rule is applicable to U.S.-flagged vessels, facilities, and OCS facilities, and includes both existing U.S.-flagged vessels, facilities, and OCS facilities, as well as any new or future U.S.-flagged vessels, facilities, and OCS facilities. The Coast Guard understands that IT and OT footprints can vary across vessels. As discussed in Section VII of this preamble, for the reasons indicated below, the Coast Guard requests public comment on a potential 2-to-5-year delay for the implementation periods for U.S.-flagged vessels, which may partially address the commenters' concerns about vessels. Conducting the required Cybersecurity Assessment allows for regulated entities to determine and not merely speculate about their specific IT and OT footprint, including potential vulnerabilities. Even vessels with a small IT or OT footprint may still face cybersecurity risks that could impact operations, safety, and security, which must then be addressed. Some such limitations may be addressed in the Cybersecurity Plan. When a regulated entity believes that certain requirements are not applicable or they are unable to comply with specific requirements within this regulation, they may follow the procedures in § 101.665 to request a waiver or equivalency.

While the Coast Guard recognizes that issues such as frequent operator changes may result in additional work for a regulated entity, this final rule is in line with existing requirements applicable to owner or operator changes. The Coast Guard believes that cybersecurity training remains crucial for safeguarding the MTS against evolving cybersecurity threats. Each new operator introduces a potential vulnerability, and, without adequate training, this could compromise both IT and OT systems. To mitigate these risks, it is vital that all operators, regardless of turnover frequency, are equipped with fundamental cybersecurity knowledge and skills. While formal training may be appropriate, the Coast Guard is not mandating a format of training in this final rule. However, the training would have to, at minimum, cover relevant provisions of the Cybersecurity Plan to include recognizing, detecting, and preventing cybersecurity threats, and reporting cyber incidents to the CySO. When a regulated entity believes they are unable to comply with specific requirements within this regulation, they may follow the procedures in § 101.665 to request a waiver or equivalency.

Some commenters suggested that the Coast Guard should create a separate rulemaking for vessels.

The Coast Guard is not considering a separate rulemaking for vessels at this time. This final rule is consistent with the Coast Guard's authority under MTSA as it applies to vessels.

Some commenters asked that this final rule not apply to vessels such as small passenger vessels, towing vessels, and barges, as well as to facilities with minimal or no IT and OT footprint. One commenter stated that the NPRM outlined cybersecurity procedures broadly applicable to many vessels and facilities but failed to consider those with minimal computer networks and systems that would not significantly impact operations, security, or safety if compromised. Another commenter stated that OT systems on vessels are distinct and should be assessed separately from shoreside infrastructure, as cyber incidents typically impact only one vessel at a time due to segmentation. In contrast, shoreside incidents can have wider repercussions. For inland vessels, the primary vulnerabilities are personally identifiable information (PII) and positional data theft. Thus, the commenter recommended a tiered risk system to determine suitable cybersecurity measures for vessels.

The Coast Guard does not agree with changing the applicability of this final rule. Developing a definition or standard for ''little or no IT and OT footprint'' would be challenging, and the Coast Guard did not seek comment on such a definition in this rulemaking. Moreover, the Coast Guard is not aware of a definition for ''little or no IT and OT footprint'' in other regulations or in other recognized standards.

Until an Assessment is completed, it would be difficult to know the full extent of a regulated entity's IT and OT footprint, and even a smaller IT and OT footprint could still allow cybersecurity threats and vulnerabilities and could still result in a cyber incident. It is necessary for all regulated entities under this final rule to first conduct the required Cybersecurity Assessment to determine the extent of their IT and OT footprint. Upon completion of that assessment, each regulated U.S.-flagged vessel, facility, or OCS facility can then develop a Cybersecurity Plan based on the applicable requirements. Even if an Assessment identifies only a minimal IT and OT footprint, that footprint may still represent levels of risk to the owner or operator, as well as the MTS. If the owner or operator finds there are portions of these regulations that do not apply to their U.S.-flagged vessel, facility, or OCS facility, the Coast Guard offers procedures in § 101.665 for an owner or operator to request a waiver or equivalence determination for the requirements. While an item may be identified by an owner or operator as not applicable, and therefore requires a waiver request from the requirement, it is necessary to identify that through the Cybersecurity Assessment and

document in a Cybersecurity Plan so that it can be reviewed in the future as needed.

Multiple commenters recommended the Coast Guard coordinate with the Bureau of Safety and Environmental Enforcement (BSEE) in the Department of the Interior before issuing any cybersecurity requirements for OCS facilities because of the shared authorities in OCSLA.

The Coast Guard and BSEE have a shared mission of ensuring safety on the OCS. We work closely together to ensure our requirements are not in conflict with each other. The Coast Guard will continue to work with BSEE and our other interagency partners to harmonize efforts as appropriate and according to OCSLA and any other applicable law.

One commenter requested clarity about applicability to §§ 104.105(b) and 105.105(b).

The Coast Guard revised the language in § 101.605 to clarify that these cybersecurity regulations apply to the owners and operators of U.S.-flagged vessels, facilities, and OCS facilities required to have a security plan under parts 104, 105, and 106. The text ''required to have a security plan'' is the clearest means to clarify the applicability without the loss of legal precision, especially as MTSA addresses regulated entities in a similar manner at 46 U.S.C 70103.

The Coast Guard received multiple comments suggesting that the applicability for these requirements should be a risk-based approach based on the varied levels of IT and OT footprints, or how extensive a cybersecurity incident would be, based on vessel, facility, or OCS facility size and type of operation, including a consideration for the applicability to U.S. domestic vessels. Multiple commenters contended that prescribing the same requirements for all vessels and not scaling the applicability of requirements based on risk profile would impose unfeasible requirements and undue burdens on owners and operators of vessels. One commenter indicated that this risk-based approach should also apply to penetration test requirements. Another commenter further suggested that the Coast Guard add objective criteria for cybersecurity controls similar to what is currently addressed in NVIC 01–20.

The Coast Guard determined that these cybersecurity requirements should apply to the same entities to which MTSA currently applies, but that there are areas where a waiver under § 101.665 could apply. The Coast Guard would not currently be able to identify the unique aspects of each vessel and facility to develop a comprehensive risk factor system and base requirements off that. Additionally, risk factors could change, so the Coast Guard would either risk developing factors that become outdated, or otherwise could not keep up with a changing IT and OT landscape. The Coast Guard feels that the best approach is to develop a broad range of cybersecurity requirements in this final rule, which serve as baseline requirements across all regulated entities rather than a risk-based approach. Since each individual entity will have unique features, including their IT and OT footprint, we believe it makes the most sense for them to assess themselves, and, if needed, identify where they cannot comply or when a requirement is not applicable.

It is practical to maintain the existing MTSA applicability, particularly in requiring those regulated stakeholders to complete a Cybersecurity Assessment to identify the extent of their IT and OT footprint, so all entities can determine which requirements under these regulations would apply. In cases when an owner or operator determines, through their assessment, that certain criteria do not apply, they may follow the procedures in § 101.665 to request a waiver or equivalency. NVIC 01–20 serves as general guidance for incorporating cybersecurity into existing FSA and FSP requirements in 33 CFR part 105. This final rule represents more comprehensive cybersecurity requirements that go beyond those addressed by NVIC 01–20. An owner or operator may, however, use the principles of NVIC 01–20 to help inform their compliance with these regulations.

One commenter suggested that the Coast Guard revise § 101.605 so that this final rule would not apply to a vessel or facility that has not installed an IT or OT system that, if compromised, could result in a TSI. The commenter also suggested that the Coast Guard modify 33 CFR 104.305 and 105.305 so that VSAs and FSAs require an analysis of cybersecurity threats as defined in § 101.615.

The Coast Guard does not agree with this recommendation as we are not making changes to existing regulatory requirements in 33 CFR parts 104 and 105. In addition, the recommendation to revise 33 CFR part 101 would introduce too much uncertainty into applicability, especially as it relates to the need for entities to conduct a Cybersecurity Assessment to evaluate risks as a threshold matter. It would be premature to carve-out a regulated entity based on an assumption the regulated entity's IT or OT poses no risk to the MTS or risk of TSI before such an evaluation is made through a Cybersecurity Assessment. The function of the Cybersecurity Assessment is to provide the necessary information to develop the appropriate mitigation measures within the Cybersecurity Plan and to provide the substance that would inform any discussions with the COTP or MSC, especially as it may relate to requests for waivers or equivalencies.

One commenter requested clarification as to the applicability of these regulations in cases of a landlord port and tenant facilities.

These regulations create new baseline cybersecurity responsibilities for the owner or operator of an applicable U.S.-flagged vessel, facility, or OCS facility. ''Owner or operator'' is a term defined at 46 U.S.C. 70101(5). The applicability of these regulations may depend on the nature of any specific landlord port and tenant facility agreements. Therefore, the Coast Guard cannot make a blanket determination about all landlord-tenant relationships as it relates to the responsibility for compliance with the requirements of this final rule.

Some commenters suggested that the Coast Guard incorporate these rules into the existing 33 CFR parts 104, 105, and 106 requirements, as opposed to creating 33 CFR subpart F.

The Coast Guard considered this approach but determined that putting these cybersecurity requirements in a single subpart within 33 CFR part 101, which would then follow the applicability of 33 CFR parts 104, 105, and 106, allowed for the best alignment across regulated entities. The Coast Guard has chosen to articulate the cybersecurity requirements within 33 CFR part 101 because these regulations impact U.S.-flagged vessels, facilities, and OCS facilities collectively. This format is presented in a more organized and accessible manner to the maritime partners who are already familiar with the MTSA regulations.

Some commenters asked us to clarify whether 33 CFR subpart F will supersede NVIC 01–20.

NVIC 01–20 is a guidance document that states the Coast Guard's policy stance and an interpretation of its existing regulations. NVIC 01–20 itself is not enforceable as a legislative rule. The cybersecurity guidance provided by NVIC 01–20 relates to the requirements in 33 CFR part 105 that predate this rulemaking. Upon the effective date of this final rule, the requirements in these regulations will have the force of law. This final rule will supersede NVIC 01–20.

Some commenters raised concerns that some stakeholders will be affected

by limited workforce and resources and questioned the cybersecurity benefits. The commenters asserted that these challenges would be a significant hindrance to operational effectiveness and urged the Coast Guard to provide sufficient time and flexibility for operators to understand and implement the new requirements. The Coast Guard recognizes that regulated entities will have different workforce levels, as well as financial and other resources, that affect how they will comply with this final rule. In many cases, regulated entities with a smaller workforce and fewer resources will likewise have a smaller IT and OT footprint to assess and address in a Cybersecurity Plan. If those entities do have a large IT and OT footprint, then that reinforces the need to comply with the requirements in this final rule to prevent, mitigate, and respond to cybersecurity threats, vulnerabilities, and incidents.

One commenter stated that this final rule had an unclear impact on marine terminal operators participating in unified port authority cybersecurity programs.

The Coast Guard encourages participation and collaboration between stakeholders and maritime entities in addressing cybersecurity and other security risks throughout a port complex. However, a unified port authority cybersecurity program or similar higher-level arrangement may not adequately account for the unique cyber threats and vulnerabilities for a specific regulated entity. This final rule represents requirements for each regulated U.S.-flagged vessel, facility, and OCS facility, consistent with existing security requirements according to 33 CFR parts 104, 105, and 106.

The Coast Guard believes that both this final rule and unified port authority cybersecurity programs can work in complement to each other, as they both pursue the same goal of bolstering cybersecurity, where the port authority program can be viewed as a macro-level plan, rather than the micro-level, individualized plan specific to the U.S.-flagged vessel, facility, or OCS facility. This final rule is based on CISA's CPGs, which themselves are informed by NIST's Cybersecurity Framework (CSF), and all leverage commonly accepted cybersecurity best practices that should not conflict with other programs. This final rule represents minimum baseline standards that a regulated entity can further build upon in coordination with unified port authority cybersecurity programs.

Many ports have an active and robust AMSCs, which may include a Cybersecurity Subcommittee that can address coordination. Since this final rule and unified port authority cybersecurity programs all share a common goal of ensuring cybersecurity, the Coast Guard expects that regulated entities and port authorities will work together to ensure programs are not in conflict. Additionally, in cases when a unified port authority cybersecurity program may impact a regulated entity's specific cybersecurity plan, and owner or operator may be able to address the impact through the provisions in § 101.665 for noncompliance, waivers, and equivalents.

C. Comments Related to Definitions

Sources for Definitions Used in This Final Rule

Some commenters suggested using definitions for certain terms used in this final rule that come from sources such as NIST, DoD's Cybersecurity Maturity Model Certification program, and other standards.

The Coast Guard selected the definitions used in this final rule based on definitions used by our interagency partners to ensure alignment and harmonization across the interagency. The NPRM [46] discussed the citations for these definitions. The Coast Guard recognizes that there are numerous definitions for many of the terms used in this final rule, and that many might choose other sources, but these definitions meet the needs of the Coast Guard and are overwhelmingly accepted by stakeholders. The definitions used here are standard cybersecurity definitions used across industry and Government agencies and are listed in NIST's CSF. This common lexicon helps limit miscommunication.

Harmonizing Definitions

One commenter noted that harmonization of definitions for existing and proposed cybersecurity requirements is vital.

As discussed in the preamble of the NPRM, the Coast Guard consulted numerous sources for the definitions used in the NPRM. These sources include Executive Order 14028, the James M. Inhofe National Defense Authorization Act for Fiscal Year 2023 (Pub. L. 117–263) (the Act), the Homeland Security Act of 2002 (Pub. L. 107–296), as amended, CISA's National Initiative for Cybersecurity Careers and Studies, and NIST's Computer Security Resource Center (CSRC). We believe that these sources are reliable and generally accepted by the industry and Government agencies. Additionally, these terms are appropriate for usage in the maritime setting. The definitions used here are standard cybersecurity definitions used across industry and Government agencies and are listed in NIST's CSF. However, we also recognize that there is some variance in the cybersecurity terms used by industry and Government sources. For example, NIST defines a ''cyber incident'' as ''an occurrence that results in actual or potential jeopardy to the confidentiality, integrity, or availability of an information system or the information the system processes, stores, or transmits, or that constitutes a violation or imminent threat of violation of security policies, security procedures, or acceptable use policies.'' Part 6 of title 33 of the CFR uses similar, but not identical, language to define a cyber incident as an occurrence that:

(1) Actually or imminently jeopardizes, without lawful authority, the integrity, confidentiality, or availability of information or an information system; or

(2) Constitutes a violation or imminent threat of violation of law, security policies, security procedures, or acceptable use policies.[47]

The Homeland Security Act of 2002 also uses similar language, defining an incident as ''an occurrence that actually or imminently jeopardizes, without lawful authority, the integrity, confidentiality, or availability of information on an information system, or actually or imminently jeopardizes, without lawful authority, an information system.'' [48]

After reviewing all these definitions, we selected the ones that best fit the maritime setting and ensured that the regulatory definitions are consistent with the relevant statutory definitions. The definitions used here align with standard cybersecurity definitions used across industry and Government agencies and are listed in NIST's CSF. These sources provide a common lexicon for everyone to use to limit miscommunication and do not differ because they are used in a maritime setting.

Adding New Terms to the Final Rule

Several commenters suggested that we introduce new terms that were not defined in the NPRM, such as ''Marine Transportation System (MTS),'' ''Critical Cybersecurity Equipment,'' and ''transportation security incident.'' In some cases, commenters proposed adding new definitions to enhance understanding of this final rule. For

[46] 89 FR 13404.

[47] 33 CFR 6.01–8 and 44 U.S.C. 3552(b)(2).

[48] 6 U.S.C. 650(12).

example, they requested definitions for ''key personnel'' as described in § 101.650(d), Cybersecurity Training for Personnel, and ''sensitive or critical data'' instead of the current requirement that ''all data'' must be protected under § 101.650(c), Data Security Measures. The commenters noted that these suggestions were made to clarify specific requirements and improve the overall clarity and implementation of this final rule.

We did not make changes in response to most of these suggestions. Adding these terms is unnecessary, as many of them are already well-defined and have been commonly used in the maritime sector for many years. For example, ''Marine Transportation System'' or ''Maritime Transportation System'' are terms that are widely recognized and understood by industry and Government agencies.[49] Similarly, transportation security incident is a term that, although mentioned several times in the NPRM, was not defined because it is already defined at 46 U.S.C. 70101 and in 33 CFR 101.105. This definition has been in place for over 20 years under the MTSA regulations. Therefore, we do not see the need to introduce additional definitions for these terms.

Some commenters suggested that the Coast Guard define what is a ''significant number'' when disclosure or unauthorized access directly or indirectly of nonpublic personal information of individuals information requires reporting in the proposed definition for reportable cyber incident.

The Coast Guard did not make changes in response to these requests. We recognize that we use several terms, such as ''significant number,'' in this final rule without defining them. We intentionally left this and other terms undefined because their meanings can vary significantly depending on an organization's operational conditions and cybersecurity risks. This approach ensures that the definition is appropriately tailored to the unique context and needs of each organization. By allowing organizations to define these terms themselves, we aim to provide a more flexible approach to meet the requirements in the evolving cybersecurity environment in the maritime sector.

Defining the Term ''Reportable Cyber Incident''

Numerous commenters responded affirmatively to our request for comments on whether we should define and use the term ''reportable cyber incident'' in this rulemaking to clarify what incidents trigger reporting obligations. Some commenters offered suggestions on edits to this proposed definition, including reordering subparagraphs. One commenter suggested limiting the definition to known incidents and not including those still under investigation considering the DHS report, informed by the work of the Cyber Incident Reporting Council (CIRC), which advises that the Federal Government should adopt a consistent model definition of a ''reportable cyber incident'' wherever practicable. Another commenter noted that establishing a threshold for reportable cyber incidents based on the potential that the incident could result in a TSI would clarify what does and does not need to be reported. Another commenter recommended that the Coast Guard should narrowly tailor ''reportable cyber incident'' to align with the Coast Guard's mission and the underlying purpose of the MTSA.

The Coast Guard agrees with the suggestion to define and use the term reportable cyber incident. We have included the term reportable cyber incident in this final rule. The Coast Guard's definition of reportable cyber incident is based on the model definition proposed in the CIRC-informed DHS Report (the ''CIRC Model Definition'').[50] Interagency stakeholders reviewed this term and its definition to ensure alignment and harmonization to the extent practical. The Coast Guard did not adopt the suggested edits to the proposed definition. We are maintaining the definition we included in the preamble to the NPRM, based on other public comments and discussion with interagency partners on harmonization.

One commenter stated that the definition for reportable cyber incident should include clearly defined thresholds for such incidents.

The Coast Guard does not agree. The definition for a reportable cyber incident provides sufficient detail to allow owners, operators, or CySOs to determine what constitutes such an incident and reflects harmonization among the interagency on the substance of this definition.

As noted previously, after considering all public input, we have decided to include the term reportable cyber incident as defined in the NPRM. We concur with the many comments that this term is sufficiently well-defined to provide clear guidance on when and under what conditions cyber incidents must be reported to the NRC. This clarity will help eliminate the need to report minor cyber incidents, which will reduce the administrative burden on owners and operators as a result.

One commenter suggested that the Coast Guard include the definition for a reportable cyber incident, but to allow for a threshold that would include unauthorized attempts by third-party actors to access sensitive information. The commenter also stated that these incidents should include phishing attempts, attempts to gain access to terminal operating systems, and unsuccessful malware attacks, as well as loss of network availability, exposure of sensitive data, and disruption of business operations as a result of unauthorized access by third parties.

We did not adopt this suggestion. The Coast Guard's definition allows for the owner, operator, or CySO to determine if an incident meets the criteria for reporting. Further, the Coast Guard encourages stakeholders to report any situation or incident out of the ordinary if there is doubt or if they question whether it meets the definition of reportable cyber incident.

We acknowledge the concerns raised by some commenters about redundancy and the need for interagency coordination. The Coast Guard will continue to work with other Government agencies to ensure our language aligns among all regulations and ensure harmonization of efforts to the extent practicable.

The Coast Guard emphasizes information sharing among its interagency partners. The Coast Guard shares information with other Federal agencies through multiple channels: NRC reports of incidents are shared with DHS, CISA, and other relevant agencies. As a Co-Sector Risk Management Agency for the Transportation Systems Sector, the Coast Guard regularly communicates with the U.S. Department of Transportation, the Maritime Administration, TSA, and CISA.[51] The Coast Guard is a participant on numerous National Security Council-led Interagency Policy Committees. Engagement among local, State, Federal, and Tribal agencies also occurs through AMSCs. The Coast Guard shares cyber-focused products such as marine safety

information bulletins, cyber advisories, and other products across interagency partners.

One commenter noted that they support defining reportable cyber incident to distinguish between incidents that must be reported and those that do not; however, they find the current definition of ''cyber incident'' in § 101.615 is too broad and overly focused on IT. The commenter also noted that they have concerns with the proposed definition of reportable cyber incident and its alignment, or lack thereof, with other definitions for reportable cyber incidents in regulation and policy.

The Coast Guard definition of cyber incident is based on the existing definition of incident in Title XXII of the Homeland Security Act of 2002,[52] which is not textually identical, but is substantively similar in relevant part to, the definition of ''cyber incident'' in Executive Order 14116. An incident in the Homeland Security Act of 2002 is ''an occurrence that actually jeopardizes, without lawful authority, the integrity, confidentiality, or availability of information or an information system, or actually jeopardizes, without lawful authority, an information system.'' Although the Coast Guard recognizes that not all commenters may agree with our chosen definition, the Coast Guard values alignment with these established terms to minimize potential conflicts that could be created by significant deviations between definitions in these regulations and existing statutes.

''Information system'' is defined in this final rule as an interconnected set of information resources under the same direct management control that shares common functionality. Typically, a system includes hardware, software data, applications, communications, and people. It includes the application of IT, OT, or a combination of both. The definition of information system clearly covers both IT and OT systems.

The Coast Guard's definition of reportable cyber incident is based on the model definition proposed in the CIRC Model Definition. However, in CISA's proposed rule implementing the Cyber Incident Reporting for Critical Infrastructure Act of 2022 (CIRCIA) (Pub. L. 117–103), the proposed definition of ''substantial cyber incident'' (which is used within the definition of ''covered cyber incident,'' the term that describes what cyber incidents are required to be reported under CIRCIA) does not include the CIRC Model definition's phrase ''or, if still under the covered entity's investigation, could reasonably lead to any of the following,'' as CISA interprets CIRCIA to require an incident to actually result in one of the impacts listed in the definition of substantial (in this case, reportable) cyber incident under CIRCIA.[53] For similar reasons, CISA did not propose including in the definition of ''substantial cyber incident,'' the CIRC Model Definition's fourth threshold prong, ''potential operational disruption.'' A ''reportable cyber incident'' is a type of ''cyber incident'' as these terms are defined in this final rule. A ''reportable cyber incident'' as defined in this final rule would also trigger a reporting obligation under 33 CFR 6.16–1 for entities required to report a cyber incident as such term is defined in 33 CFR part 6.

Revising the Definition of ''Breach''

One commenter noted that the term ''breach,'' when used by the Coast Guard to discuss a breach of security, could have serious, significant legal and financial impacts in reference to cybersecurity.

We revised § 101.625(d)(10) in this final rule to refer to ''reportable cyber incidents'' rather than ''breaches of security, suspicious activity that may result in TSIs, TSIs, and cyber incidents.'' This is also consistent with our decision to define and include the term reportable cyber incident.

Adding a Definition for ''Cybersecurity Threat''

One commenter recommended adding the definition of ''cybersecurity threats'' to 33 CFR parts 104 and 105.

The Coast Guard does not agree to add the definition of ''cybersecurity threat'' because it is already encompassed by the defined term ''cyber threat'' the Coast Guard uses in this final rule. Cyber threat is the term used in CIRCIA, which amended the Homeland Security Act of 2002 (Pub. L. 107–296). CIRCIA defined cyber threat by cross-referencing to the term cybersecurity threat as it was already defined in the Homeland Security Act of 2002. The two statutory terms share the same definition, which is substantively repeated in this final rule. For the sake of consistency in this final rule, the Coast Guard has chosen cyber threat as the term-of-art for these regulations.

Furthermore, the Coast Guard does not concur with the suggestion to amend 33 CFR parts 104 and 105 because, except for amending 33 CFR 160.202, this final rule is limited to establishing requirements in 33 CFR part 101. Adding or removing requirements in parts 104, 105, or 106 is outside the scope of this final rule. The new definitions in § 101.615 are sufficient for this final rule.

Revising the Definition of ''Backup''

One commenter raised a concern that the primary issue with the concept of ''backup'' is that it lacks the flexibility to rebuild or re-instantiate a system from something other than a backup. When restoring from backups, time can be a critical factor. Therefore, the commenter recommended that the Coast Guard expand this definition and eliminate the requirement for all backups to be stored offsite.

The Coast Guard agrees with this commenter. We revised the definition of backup in § 101.615 to remove the phrase ''in a secondary location'' and the implication that backups must be stored ''offsite.'' Instead, we added language to clarify our definition of backup. In this final rule, backups refer to ''copies being stored separately for preservation and recovery.'' With these changes, the revised definition is sufficient for the requirements in these regulations. If an owner or operator of a U.S.-flagged vessel, facility, or OCS facility identifies a method that they feel falls outside of that definition, they may follow the process to request a waiver according to § 101.665.

Defining the Term ''Transportation Security Incident''

One commenter questioned the clarity of the definition of a ''transportation security incident,'' while another suggested a definition of ''security incident.''

Transportation security incident is defined by the MTSA, codified at 46 U.S.C. 70101, and in 33 CFR 101.105. Further guidance on what constitutes a TSI (as well as a ''breach of security'' or ''suspicious activity'') is provided in NVIC 02–24.

Revising the Definition of ''Hazardous Condition''

Multiple commenters addressed our request for input on whether we should amend the definition of ''hazardous condition'' in 33 CFR 160.202 by adding ''cyber incidents.'' The Coast Guard received several comments in favor of amending the definition of hazardous condition to include cyber incidents. Conversely, one commenter advised against including cyber incidents under the definition of hazardous condition in § 160.202. The commenter warned that doing so could lead to unnecessary sharing of sensitive information during

[52] Public Law 107–296, as added by Public Law 117–263, section 7143, classified to 6 U.S.C. 650.

[53] 89 FR 23644.

cyber incidents, such as losing confidential data, that do not impact marine operations. The commenter recommended against additional reporting requirements beyond those mandated by CISA if cyber incidents are added to the definition of hazardous condition. Other commenters also suggested that the Coast Guard clarify the application of this definition to marine terminals and OCS facilities, as much of this section pertains to vessel requirements and may cause confusion.

The Coast Guard concurs with the recommendations to include the term. Accordingly, we amended the definition of hazardous condition in that section to include the term cyber incident. Including the term cyber incident is a helpful example that adds clarity to the existing regulation in 33 CFR 160.202, which applies only to vessels. The Coast Guard recognizes that not all occurrences with a cyber aspect will create a hazardous condition, but believes the term's inclusion in the list of examples will be beneficial by highlighting that cybersecurity is an important consideration that operators should be cognizant of when assessing hazardous conditions.

As discussed elsewhere in this preamble, the Coast Guard amended the definition of hazardous condition to include cyber incidents. The Coast Guard is not changing the applicability of § 160.203 to include facilities or OCS facilities because § 160.203 relates to the Notice of Arrival and Departure regulations for vessels. This clarification to the definition of hazardous condition is distinct from the new baseline cybersecurity requirements for MTSA-regulated entities.

One commenter expressed concern with the NPRM's approach to requesting input on whether to define and use reportable cyber incident, and whether to amend the definition of ''hazardous condition.'' The commenter strongly advocated for harmonizing the reporting process, noting that owners and operators of U.S.-flagged vessels are already familiar with reporting to the NRC. They suggested that all cyber incidents should be reported through this channel, allowing the NRC to relay information to other Federal agencies as needed.

The Administrative Procedure Act requires that we provide general notice of a proposed rulemaking, including notice of the terms or substance of a proposed rule or a description of the subjects and issues involved.[54] Asking the public to comment on specific items, in addition to the NPRM as whole, is a commonly accepted way to seek public participation in the rulemaking process. In fact, as discussed above, we received numerous comments responsive to our request.

D. Comments Related to Owner or Operator

We received a series of comments about the responsibilities of the owner or operator for managing the Cybersecurity Plan.

One commenter recommended assigning responsibilities to the operator to ensure compliance with applicable regulations for regulated facilities. One commenter recommended assigning overall responsibility for vessels to the company or organization (in this case, a Document of Compliance (DOC) holder) if the owner and operator of a vessel are separate entities. Another commenter recommended the term ''owner and operator'' be clarified to signify a single responsibility for the vessel (in this case, a DOC holder), OCS facility, or other facility owned or operated, based on IMO practice.

We did not make changes in response to these recommendations. The Coast Guard desires consistency with the existing regulations and uses the term ''owner or operator'' as defined in § 101.105 throughout this final rule. The Coast Guard does not agree that further clarification of the term ''owner or operator'' is needed. The term owner or operator in this final rule is consistent with existing MTSA regulations, and it is unnecessary to specify further criteria for the entity with overall responsibility (such as requiring them to be holding a DOC).

One commenter requested clarification of the differences between the roles and responsibilities of the owner or operator and the CySO as there are similar or overlapping roles to both.

The roles and responsibilities of the CySO and owner or operator are clearly outlined in this final rule in §§ 101.625 and 101.620, respectively, and are in line with the existing relationships between the owner or operator, Vessel Security Officer (VSO), and Facility Security Officer (FSO) in existing regulations. While there is some overlap between the roles, any redundancy or overlap does not take away from the responsibilities of the CySO and owner or operator and enables the owner or operator to maintain oversight over the CySO position.

One commenter recommended that the Coast Guard change the phrase ''responsible for'' to ''accountable for'' in § 101.620(a) when referring to owners and operators assigning security duties to other personnel. According to the commenter, this change would highlight the importance of how these roles will be staffed and implemented, indicating a more structured approach to accountability within the organization.

The Coast Guard declined to make this change, as the term ''responsible for'' is consistent with existing language for VSOs, FSOs, and OCS FSOs in current regulations and is long-standing industry practice.

One commenter questioned whether ''person'' as stated in § 101.620(b)(2) is synonymous with ''role.''

An owner or operator subject to this final rule is required to identify each person exercising cybersecurity duties and responsibilities. Any person having such duties and responsibilities would likewise have a ''role.'' Owners and operators should focus on the language of this final rule and identify each person, as stated. The Coast Guard is concerned that the necessary duties are properly assigned and performed. The particular manner which an entity identifies and assign those duties, whether by individual name or by role, is left to the entity's discretion. The Coast Guard encourages owners and operators to comply with the requirements under § 101.620(b)(2) consistent with how their U.S.-flagged, facility, OCS facility, or organization addresses similar requirements in their VSP, FSP, or OCS FSP.

E. Comments Related to Cybersecurity Officer

Some commenters stated that they did not believe that cybersecurity warrants another designation for security personnel, in this case a CySO, and felt that a specific cybersecurity plan was not needed. They recommended adding cybersecurity duties to existing responsibilities of the Company Security Officer (CSO) and VSO. Another commenter felt that the CySO position might be unnecessary and requested a process for waiving this requirement. Another commenter believed that this final rule should state the actions that an organization must take, rather than specifying the individual role that needs to accomplish those actions. They felt that organizations should be able to identify who that person would be for their organization, which may align to other positions or titles within their organization.

The Coast Guard strongly believes that the present and evolving cybersecurity threats in the MTS require specific regulations to help prevent, mitigate, and respond to cybersecurity incidents and vulnerabilities. This final rule provides minimum cybersecurity

[54] 5 U.S.C. 553(b)(3).

requirements for a common cybersecurity baseline for regulated maritime entities. The threats and vulnerabilities addressed are not adequately covered by existing regulations. The requirements to designate a CySO and to develop a Cybersecurity Plan reflect the reality that cybersecurity threats, risks, and vulnerabilities exist in the MTS, and have the potential to significantly affect the safety and security of individual entities, as well as the MTS and other transportation critical infrastructure. The Coast Guard has determined that it is necessary to identify a specific CySO, similar to the identification of a VSO or FSO, that serves as the primary lead to organize these efforts within their U.S.-flagged vessel, facility, or OCS facility, to ensure that there is at least one representative focusing on and addressing the relevant requirements. Consistent with § 101.625, the CySO may perform other duties such as CSO, FSO, or VSO. It will be up to owners and operators of U.S.-flagged vessels, facilities, and OCS facilities to decide whether they need to designate a sole security officer that focuses exclusively on cybersecurity.

One commenter stated that the requirements for cybersecurity should be directed at the executive level, and not create a CySO position to handle many of these requirements.

The owner or operator has ultimate responsibility for compliance with this final rule. This includes the designating a CySO, as required by § 101.620(b)(3). It is the responsibility of each regulated entity to ensure their executive leadership is aligned with the CySO and other cybersecurity professionals. Placing full ownership of cybersecurity requirements on the owner or operator, without the designation of a CySO, would be burdensome to the owner or operator. The position of CySO ensures the regulated entity has personnel with the necessary professional expertise to address cybersecurity.

Several commenters stated that the qualifications listed in these regulations did not fully encompass what would be required for a successful CySO position. Additionally, a commenter questioned the qualifications of the Coast Guard or a third-party organization to evaluate what is required of a specific organization's CySO. The commenter also suggested that either the Coast Guard or a third-party organization would be in a poor position to evaluate whether they meet the necessary qualifications. Another commenter stated that it could be difficult for small organizations to have someone on staff with these qualifications.

This final rule presents minimum baseline requirements, including the requirements of a CySO for a U.S.-flagged vessel, facility, or OCS facility. The qualifications required serve as a baseline that should be attainable and easily evaluated by organizations of any size or complexity. Organizations are welcome to identify additional requirements, such as additional qualifications, that they would require of their CySO position as best suits their individual needs, so long as the minimum requirements of this final rule are met. It is up to the owner or operator of a U.S.-flagged vessel, facility, or OCS facility to determine that their candidate meets these requirements, and for the Coast Guard to evaluate whether the owner or operator met their required responsibilities in their review of the Cybersecurity Plan.

The Coast Guard does not, and will not, have a role in an organization's hiring of new personnel or designation of new roles and responsibilities to existing personnel. These decisions are left up to the owner or operator. The Coast Guard has stated that the CySO can be an existing employee at a U.S.-flagged vessel, facility, or OCS facility. The Coast Guard will verify that a qualified CySO has been designated by the owner or operator according to this final rule. The Coast Guard recognizes that this final rule will result in costs incurred by industry. Failure to designate a CySO, as well as failure to comply with any other aspect of this final rule, would be subject to actions as determined by the COTP or other appropriate Coast Guard representative.

One commenter asked the Coast Guard to clarify if the CySO must be a U.S. citizen.

The Coast Guard does not impose citizenship requirements for the CySO position in this final rule. The Coast Guard may consider this issue in a subsequent rulemaking, as appropriate.

Some commenters noted that for small operators, or those with limited resources, the CySO would likely be a collateral duty. Another commenter similarly commented that it was not reasonable to expect every owner or operator of a vessel to employ a cybersecurity expert, and that the CySO position requires too much specialized knowledge and too much time to be added to an existing position. Many small companies without an in-house IT department might have to rely on a third-party provider for all cybersecurity needs and protections. Consequently, the commenters were concerned that this final rule would impose unrealistic requirements and undue burdens on small operators. Some commenters requested that the Coast Guard clarify that a CySO could be someone designated at the corporate level.

The Coast Guard notes in this final rule that the CySO designation may be given to an employee with other responsibilities consistent with § 101.625. The CySO role may be a collateral duty so long as all the requirements and responsibilities of the position are met. It is the responsibility of owners and operators to ensure that cybersecurity risks are managed and addressed, whether through in-house resources or through third-party services. While we understand the concerns regarding the potential burden of compliance, it is essential that cybersecurity requirements are met to safeguard the organization's assets and ultimately, maritime critical infrastructure and the MTS. Ensuring robust cybersecurity defenses is critical to protecting against potential threats and maintaining operational integrity.

The Coast Guard developed these regulations, including the cybersecurity requirements, to enable owners and operators to identify a person who can manage the requirements, even if they must rely on other cybersecurity, IT, or OT professionals for more technical items in the rule. Regardless of the size of an organization itself, the size of their IT and OT footprint dictates how much a CySO will have to address. A company with a small IT or OT footprint would likewise be scaled towards fewer items that the CySO would be responsible for. A company with a larger IT or OT footprint would similarly require more of the CySO position, commensurate to the level of risk posed. The Coast Guard believes, therefore, that there would be little to no undue burden or unrealistic requirement of any regulated entity, as the level of cybersecurity actions required of the CySO directly correlates to their cyber footprint. The Coast Guard reiterates that this final rule allows for the designation of the CySO role to an existing employee at any level of the organization, so long as the requirements and responsibilities are met for each individual U.S.-flagged vessel, facility, or OCS facility.

Some commenters requested that the Coast Guard recognize that a facility may designate an alternate CySO. Their concern is that, for a company with multiple facilities, one CySO may not have the knowledge or practical capability to effectively manage all of them.

The Coast Guard revised the definition for *Cybersecurity Officer* in § 101.615 to clarify that the owner or operator must designate a CySO, but

they also may designate an alternate CySO to assist in the duties and responsibilities at all times, including at times when the CySO may be away from the U.S.-flagged vessel, facility, or OCS facility.

One commenter supports including the phrase ''or equivalent job experience'' to the CySO requirements.

The Coast Guard agrees that the ''or equivalent job experience'' is an important phrase and maintains it as part of the final rule in § 101.625(e).

Some commenters requested that we rename the CySO position from ''CySO'' to ''Facility Cybersecurity Officer'' due to potential confusion with other positions and titles, such as the Chief Information Security Officer (CISO) or other ''C-Suite'' personnel. These commenters expressed concern that the Coast Guard was introducing a term that has not previously been used by other agencies and offered alternative titles for the role.

This final rule clearly defines the CySO position and differentiates it from other positions and titles at a U.S.-flagged vessel, facility, OCS facility, or organization. We do not agree with changing the name of the position in this final rule, especially as this applies specifically to U.S.-flagged vessels, facilities, and OCS facilities. We selected this term to differentiate from other roles identified in existing regulations, while clearly outlining the requirements of the position. If an owner or operator prefers to refer to the position by a different title within the organization, then they are free to do so as long as they explain the different title in their Cybersecurity Plan.

One commenter expressed concern that this final rule does not address how the CySO is expected to interact with the CSO, and that the relationship between these two positions should be clearly defined. They stated that the CSO should have ultimate responsibility on all security-related matters, including cybersecurity, and that the CSO should approve the Cybersecurity Plan.

The Coast Guard notes that the roles and responsibilities of the CSO are clearly outlined in existing regulations, and the roles and responsibilities of the CySO are clearly outlined in this final rule. Any interaction between the CySO and other security positions should be determined by the owner or operator at the U.S.-flagged vessel, facility, OCS facility, or organizational level, as appropriate. As long as statutory and regulatory requirements are met, it is the discretion of each owner or operator of U.S.-flagged vessel, facility, or OCS facility to determine how their employees interact.

One commenter requested that specific criteria be developed for the CySO position to develop training programs. The commenter requested that Government-funded training courses be considered for existing CSOs to be trained for the CySO designation. This commenter also requested that third-party training programs be eligible for Federal grant programs, such as FEMA's Port Security Grant Program.

The Coast Guard notes that the criteria in § 101.625 is sufficient as baseline requirements for the CySO position. When determining the baseline requirements for the CySO, we looked at similar jobs and pulled those requirements that suited the need. The Coast Guard does not currently have plans to develop and fund training programs for the CySO position. We advise affected entities that they are welcome to work with FEMA, local port partners, their Area Maritime Security Committee, and others, as appropriate, in requesting support through any Federal grant program in support of maritime security. The decision on what is eligible for, and would receive such grant funding, is not made by the Coast Guard.

One commenter requested clarification on the specifics of cybersecurity inspections that are the responsibility of the CySO, including how they will be conducted.

Coast Guard inspections are intended to verify compliance with an approved Cybersecurity Plan. When arranging for and during the inspection, it is the responsibility of the CySO to ensure that any disruptions to operations are minimized. The cybersecurity portion of the inspection will follow standard inspections procedures, similar in methodology to physical facility inspections, in verifying compliance with the regulations. The Coast Guard may consider future policy development, if needed, on the conduct of cybersecurity inspections.

One commenter recommended mandatory training and certification for the position of the CySO. For vessel CySOs, one commenter suggested implementing a certificate of proficiency similar to those required for other roles under the International Convention on Standards of Training, Certification, and Watchkeeping for Seafarers.

After reviewing the requirements for designating a CySO, the Coast Guard is not including additional requirements or certifications at this time. This final rule provides minimum baseline requirements necessary for the identification of this role, and the Coast Guard does not intend to place too prescriptive requirements that could impede stakeholders' ability to identify suitable candidates. Owners and operators are welcome to add additional requirements on their own, so long as they meet compliance with these regulations.

Some commenters questioned why there are physical security controls under the CySO when these are under the existing purview of VSOs, FSOs, and OCS FSOs.

The Coast Guard notes that physical security controls for IT and OT systems are listed in § 101.630(c)(8) as being part of the Cybersecurity Plan, which is developed and implemented by the CySO. These regulations do not preclude the VSO, FSO, or OCS FSO from performing their required roles and responsibilities and helping to inform the Cybersecurity Plan, or otherwise working with the CySO in the completion of security-related requirements.

One commenter expressed concern that the roles and responsibilities of the CySO are too complex for just one person, and often these functions are performed by a team or multiple employees.

The Coast Guard notes that the CySO is required to ''ensure'' that certain actions are conducted and allows for them to work with the team and others who assist in carrying out those functions. The CySO is also able to assign security duties as needed.

One commenter stated that the requirements under §§ 101.625(d)(8) and 101.625(d)(9) were very similar and could be combined. The requirements in question are to ensure the cybersecurity awareness and vigilance of personnel through briefings, drills, exercises, and training and to ensure adequate cybersecurity training of personnel.

The Coast Guard agrees with this comment and removed ''through briefings, drills, exercises, and training'' from § 101.625(d)(8) to provide CySOs with more flexibility, and less prescriptive measures, on how they would meet the requirements, and also alleviate redundancy in the language between paragraphs (d)(8) and (d)(9).

Several commenters requested that the Coast Guard remove the requirement for cybersecurity inspections to be arranged in conjunction with U.S.-flagged vessel, facility, and OCS facility inspections, as a U.S.-flagged vessel, facility, or OCS facility might feel that they need to conduct the cybersecurity inspection separately due to factors such as availability of the CySO.

In this final rule, the Coast Guard revised § 101.625(d)(6), which requires the CySO to arrange for the cybersecurity inspection to reflect that cybersecurity inspections may be held in conjunction with physical security inspections, to increase flexibility and decrease burden, for the U.S.-flagged vessel, facility, or OCS facility. The Coast Guard notes that scheduling inspections is ultimately up to the local COTP or the Officer in Charge, Marine Inspections (OCMI) in working with the regulated U.S.-flagged vessel, facility, or OCS facility.

F. Comments Related to the Cybersecurity Plan

Several commenters noted that there is a lack of clarity whether one Cybersecurity Plan for a fleet is acceptable, or if each vessel and facility requires its own Plan.

Each regulated U.S.-flagged vessel, facility, and OCS facility is required to develop and maintain a Cybersecurity Plan.

Multiple commenters noted a lack of reference to ASPs. One commenter also recommended that the Coast Guard allow the Passenger Vessel Association (PVA) specific ASP. As noted in § 101.660 of this final rule, the Coast Guard will allow owners and operators to use ASPs to comply with this final rule. We added additional text to § 101.660 to clarify that ASP provisions apply to cybersecurity compliance documentation. Given the unique nature of cybersecurity threats, vulnerabilities, and mitigation strategies, owners and operators must ensure that use of ASPs includes those items specific to each U.S.-flagged vessel, facility, and OCS facility. The Coast Guard will evaluate each ASP's cybersecurity component to ensure full regulatory compliance with each applicable requirement, including the PVA-specific ASP.

One commenter recommended that § 101.630(a) be amended to add ASPs and OCS FSPs to the requirement for CySOs.

The Coast Guard partially concurs with the recommendation and added references to OCS FSPs in § 101.630(a) to clarify that OCS FSPs follow the same requirements as VSPs and FSPs. However, we do not find it necessary to add the term ''Alternative Security Program'' because ASPs are already included as an option in § 101.660 and are also expressly addressed in 33 CFR parts 104, 105, and 106.

Some commenters stated that the Cybersecurity Plan should include additional security measures for the vessel, facility, or OCS facility to take in cases of increased MARSEC levels. For instance, MARSEC Level 3 Cybersecurity Controls may involve reviewing and authorizing all remote access sessions; removing unpatched systems from direct internet access; isolating or shutting down nonessential systems; requiring multifactor authentication for all accounts; and reporting suspicious activity to stakeholders, ISACs, CISA, and the Coast Guard. Cybersecurity MARSEC actions should be specific, achievable, and deliver meaningful security benefits. This enables the vessel or facility to reduce vulnerabilities and enhance resilience, even for short periods. They also suggested that the Cybersecurity Plan should encourage owners or operators to implement additional measures anytime credible threat information is known.

This final rule does not prevent a U.S.-flagged vessel, facility, or OCS facility from adding such language or additional measures to their Cybersecurity Plan, should they desire. However, the Coast Guard did not add requirements for increased MARSEC levels in this final rule and will not mandate this language because of multiple factors. First, it is difficult to set MARSEC conditions solely based on cybersecurity threats. Cybersecurity threats are constantly evolving, with new vulnerabilities, attack vectors, and tactics emerging regularly. This makes it challenging to establish static threat conditions that can effectively address all potential scenarios. Additionally, cybersecurity threats can originate from various sources, including nation-states, cybercriminals, insiders, hacktivists, and others. Each source has different capabilities, motivations, and methods, requiring tailored threat conditions that are difficult to generalize. Even if we were to set MARSEC conditions based on cybersecurity threats, it would be challenging to list one-size-fits-all requirements that would work for a wide array of vessels and port facilities, each with different risk profiles and operational conditions. For example, vessels may face different types of cyber-attacks depending on their routes, locations, cargoes, and onboard technologies. Imposing blanket cybersecurity requirements based on MARSEC conditions may not be practical in these cases.

Furthermore, creating specific requirements for each MARSEC level would necessitate constant updates and adjustments to keep pace with the dynamic nature of cyber threats. This would place a significant administrative burden on both the Coast Guard and the maritime industry. Instead, we are maintaining a flexible and adaptive approach to cybersecurity in this final rule that allows for tailored responses based on the unique circumstances of each U.S.-flagged vessel, facility, and OCS facility.

One commenter inquired about how a CySO would respond to elevations in MARSEC levels.

The regulations in this final rule do not tie these minimum baseline requirements to elevation in enforcement due to MARSEC level. Guidance on responding to elevated MARSEC levels would come in a separate Coast Guard directive.

One commenter questioned the use of ''major amendment'' when requiring a resubmission of a Cybersecurity Plan in the regulations and suggested further clarification or definition would be needed. Another commenter expressed appreciation for the flexibility for each owner or operator to determine what constitutes a ''major amendment'' as appropriate for their organization based on types of changes to their security measures and operational risks,'' but cautioned that this creates its own uncertainty. The commenter requested that in the final rule, the Coast Guard be more explicit or provide thresholds or examples of what it considers ''major.'' The commenter also suggested that factors such as cost and operational burden should be considered (for example, more operators and employees or more equipment), and that the threshold may be a percent of the current budget for cybersecurity since each company will be different. The commenter reasoned that this threshold would also provide clarity for Coast Guard personnel. Another commenter suggested that such further clarification would be similar to the Coast Guard's clarification of ''major conversion'' for materiel requirements. Similarly, a commenter stated that the proposed 30-day notice to the Coast Guard for approval of any proposed major amendments to the Cybersecurity Plan would be overly burdensome and would likely cause the Cybersecurity Plan to be in a constant state of flux because of waiting for approvals and revisions, or could unnecessarily delay security enhancements that may trigger a required audit or approval cycle.

The Coast Guard recognizes these concerns. The Coast Guard considered the suggestion to define ''major amendment'' much like the Coast Guard has done with ''major conversion'' for materiel requirements but does not agree with it. Rather than define the term ''major amendment,'' we removed it from §§ 101.625(d)(13) and 101.630(e)(2) in this final rule. This removes any ambiguity about which

amendments require resubmission of the Cybersecurity Plan. It is also consistent with our physical security requirements in 33 CFR parts 104, 105, and 106, which do not specify that only ''major'' amendments must be sent to the Coast Guard for approval. *See* 33 CFR 104.415(a)(2), 105.415(a)(2), 106.415(a)(2). Removing the term ''major'' allows stakeholders to address amendments uniformly across both physical security and cybersecurity requirements. We retained the requirement to submit proposed amendments within 30 days but note that § 101.630(e)(2)(i) provides that nothing in this section should be construed as limiting the owner or operator of the U.S.-flagged vessel, facility, or OCS facility from the timely implementation of such additional security measures not enumerated in the approved VSP, FSP, or OCS FSP as necessary to address exigent security situations.

Some commenters recommended that the Coast Guard strike the requirements, or make modifications to the requirements, related to an owner or operator's submission of proposed amendments to the Cybersecurity Plan. Some commenters suggested tailoring this to ''material'' or ''significant'' changes.

In this final rule, the Coast Guard did not remove this requirement, as it is consistent with existing practice and 33 CFR parts 104, 105, and 106. However, we revised § 101.630 to remove ambiguity by eliminating the term ''major amendment,'' as well as the associated requirement that changes to the Cybersecurity Plan must be proposed to the Coast Guard before implementation, as discussed above. We added language to § 101.630(e)(2)(i) to address situations when an owner or operator may feel that security measures are needed while an amendment is under review by the Coast Guard.

One commenter stated that it was not clear to the owner, operator, or CySO whether they submit their Cybersecurity Plan to the COTP or OCMI, or to the U.S. Coast Guard's MSC.

Under § 101.625(d)(13), and according to § 101.630(d), the CySO must ensure the owner or operator submits the Cybersecurity Plan for approval to the cognizant COTP or OCMI for facilities or OCS facilities, or to the MSC for U.S.-flagged vessels.

One commenter suggested removing the requirement that the CySO include ''a letter certifying that the plan meets the requirements of this subpart must accompany the submission'' under § 101.630(d).

The Coast Guard agrees with this recommendation, as submitting the Cybersecurity Plan itself qualifies as certification that the Plan meets all the requirements. The Coast Guard revised § 101.630(d) to remove the requirement to send this letter.

One commenter requested clarification on whether the Cybersecurity Assessment and Cybersecurity Plan could be done separately from the existing requirements for conducting an Assessment and Plan according to 33 CFR parts 104, 105, and 106. Additionally, they sought clarification on how this final rule affects § 105.305(c)(1)(iv) for existing security measures and procedures relating to services and utilities, and § 105.305(d)(2)(v) for radio and telecommunication systems, including computer systems and networks.

This final rule allows for regulated U.S.-flagged vessels, facilities, and OCS facilities to choose whether to incorporate Cybersecurity Assessments and Cybersecurity Plans into their existing assessments and plan submissions, or to submit them as separate documents. Nothing in this final rule is meant to replace existing regulations, and regulated entities should ensure compliance with all applicable regulations. In the event there is overlap, entities may identify where requirements are being simultaneously satisfied. We revised the definition in § 101.615 of *Cybersecurity Plan* and the reference to Plan submission in § 101.630(a) to clarify that separate submissions are acceptable.

Several commenters recommended adopting various specific standards, such as the NIST CSF, NIST's special publications, the Defense Counterintelligence and Security Agency's National Industrial Security Program, DoD's Cybersecurity Maturity Model Certification program 2.0, IEc 62443, IMO, ISO/IEc 17020, the International Association of Ports and Harbors' Cybersecurity Guidelines for Ports and Port Authorities, the International Association of Classification Societies' (IACS) Unified Requirements (UR) E26 and E27, the North American Electric Reliability Corporation's CIP–013, and the American Bureau of Shipping's (ABS) Cyber Resilience Program for vessels. Other commenters inquired about leveraging third-party inspection standards, such as ISO/IEc 17020. One commenter stated that this final rule's minimum cybersecurity requirements and the ABS' Cyber Resilience Program for vessels both leverage the NIST CSF and IEc 62443 and appear to be directing the same efforts under the same framework. They inquired about ABS and Coast Guard collaboration and alignment on these efforts.

The Coast Guard intentionally created this final rule to allow flexibility in implementing a CSF. In developing this final rule, the Coast Guard leveraged CISA's Cyber Performance Goals, which themselves are mapped to NIST's CSF, but this does not preclude owners and operators of U.S.-flagged vessels, facilities, and OCS facilities from using other resources. Owners and operators may use NIST's standards or other standards and frameworks to help inform how they comply with the mandatory requirements in this final rule. This final rule provides minimum baseline requirements, but we encourage affected entities to include items in their Cybersecurity Plan that they deem in their best interest to enhance cybersecurity. Each Plan will be evaluated by the cognizant COTP or the OCMI for facilities and OCS facilities, and the MSC for U.S.-flagged vessels to ensure it meets the Coast Guard requirements.

The Coast Guard acknowledges that there are many third party and international standards and frameworks that could be used to meet the regulations. The owner or operator may use ABS or other third-party frameworks to assist them in meeting the Coast Guard's requirements, though this approach does not guarantee automatic acceptance or approval by the Coast Guard. However, the Coast Guard retains all statutory functions under MTSA and international responsibilities under the International Ship and Port Facility Security Code. At this time, we do not intend to delegate any functions to third parties under this final rule.

One commenter stated that the current format, which closely follows the regulatory format of 33 CFR parts 104, 105, and 106, was not well-suited for cybersecurity requirements, and that something more in line with NIST's Framework would be better.

The Coast Guard has chosen to articulate the cybersecurity requirements within 33 CFR part 101 because these regulations impact U.S.-flagged vessels, facilities, and OCS facilities collectively. This format is presented in a more organized and accessible manner to the maritime partners who are familiar with the MTSA regulations. Additionally, § 101.650 lists cybersecurity measures that are based on CISA's CPGs, which are aligned with NIST's CSF. This approach ensures clarity and facilitates easier compliance, allowing stakeholders to view all pertinent

cybersecurity regulations in a single, consolidated section.

One commenter felt that certain areas of the NPRM were too prescriptive, and that the Coast Guard should take an outcome-based approach of the appropriate NIST CSF function.

Pursuing an outcome-based approach was not feasible based on necessary timelines to develop and implement cybersecurity measures, and the Coast Guard feels that its rules strike the best balance of prescriptiveness because they are based on existing MTSA regulations and existing interagency guidelines generally accepted by industry. We recognize that some stakeholders may feel the requirements are too prescriptive, while others commented that the requirements were not prescriptive enough. The cybersecurity measures listed in § 101.650 are based on CISA's CPGs, which are performance-based goals and recommended actions and align with the NIST CSF. This approach ensures clarity and facilitates easier compliance, allowing stakeholders to view all pertinent cybersecurity regulations in a single, consolidated section. The Coast Guard acknowledges that there are many third-party and international standards and frameworks that could be used to meet the regulations. Owners and operators of U.S.-flagged vessels, facilities, and OCS facilities may base their Cybersecurity Plan on a standard or framework that they prefer and explain how the requirements of this final rule are met.

One commenter requested that the Coast Guard update language in the regulations to clarify that the CySO does not conduct audits but is limited to ensuring audits are conducted. Another commenter asked for clarification on the scope of the audit the CySO must perform.

The Coast Guard agrees with this suggestion and revised § 101.630(f)(2) in this final rule to clarify that the CySO does not conduct the audit themselves and that the CySO must only ensure that an audit is conducted. The Coast Guard did not add the additional language to the regulatory text defining the term audit as it allows for flexibility in how the regulated entity conducts their audit. The regulatory text in § 101.630(f) is in line with existing audit requirements in 33 CFR parts 104, 105, and 106.

One commenter expressed support for Cybersecurity Assessments being part of the Cybersecurity Plan renewal every 5 years when there is a change in vessel or facility ownership, or there are major amendments to the Cybersecurity Plan. However, they disagreed with requiring a Cybersecurity Assessment annually, citing that annual Cybersecurity Assessments are excessive for small businesses.

The Coast Guard did not make changes to the frequency required for Cybersecurity Assessments. We believe that annual Cybersecurity Assessments are important for regulated entities to continually monitor for cybersecurity developments pursuant to § 101.650(e). The cybersecurity environment can change so rapidly that conducting a Cybersecurity Assessment less frequently than annually could lead to vulnerabilities going unnoticed, with potentially drastic consequences. Moreover, the NIST guidelines state that risk assessments such as this should be conducted no less than annually. We expect that entities with a smaller or less complex IT and OT footprint will have shorter Cybersecurity Assessments with annual assessments.

G. Comments Related to Drills and Exercises

We received many comments about requirements for drills and exercises. Several commenters asked about the frequency and scope of drills and exercises. Some commenters from regulated entities noted that quarterly drills and annual exercises seemed excessive for smaller, seasonal operators and low-risk MTSA-regulated entities. These commenters suggested that quarterly drills and annual exercises would create an excessive time and resource burden on those entities, especially those with limited cyber exposure. One commenter noted that the biggest security threats facing a domestic passenger vessel remain a physical breach of security and suspicious individuals or activities associated with criminal activity and not cyber activities.

Other commenters referenced existing drills and exercise requirements for MTSA-regulated entities and recommended that the Coast Guard allow for overlap with new cybersecurity drills and exercises and existing required drills and exercises. Commenters also suggested that drills should be conducted at the organizational level rather than at the vessel or facility level. One commenter asked if drills are expected to be a comprehensive test of the Cybersecurity Plan, meaning the entirety of cybersecurity capabilities outlined in the Cybersecurity Plan. Another commenter expressed confusion regarding exercise requirements and tabletop simulation. One commenter stated that separate drill requirements were excessive and unnecessary.

Another commenter requested further explanation on required crew involvement. The commenter explained that onboard personnel have little to no involvement in cyber-specific drills and recommended the Coast Guard provide further explanation on the intent and extent of crew involvement with these drills.

The Coast Guard believes that, while different stakeholders have varying IT and OT footprints, it remains critical to incorporate some level of drills and exercises to ensure that owners, operators, and regulated entities are prepared to prevent and respond to increasing cybersecurity threats. After considering these comments, in this final rule, we have adjusted the frequency of conducting drills from quarterly to twice each calendar year. We believe that two drills annually will ensure sufficient proficiency with the procedures, while allowing for a regulated entity to conduct additional drills if they choose to, and we understand how quarterly drills and exercises could be too frequent for some vessel operations, as noted by some commenters. The Coast Guard felt that one drill annually would not be sufficient, while requiring three drills annually would not be a significant decrease from the original requirement of four drills annually. We also clarified that cybersecurity drills required under this part may be performed in conjunction with existing MTSA-required drills and exercises. We decided to maintain annual exercises but will also similarly allow exercises to be performed in combination with existing MTSA-required exercises.

While owners and operators are authorized to conduct drills at the organization level, each vessel, facility, and OCS facility has unique risks and operators at the vessel, facility, and OCS facility level should be experienced in addressing those unique vulnerabilities and prepared to respond to such incidents appropriately. This final rule states that drills should test individual elements of the Cybersecurity Plan and, therefore, are not a comprehensive test of the entirety of cybersecurity capabilities. The Coast Guard feels that tabletop exercises, if selected by the regulated entity to comply with our requirements, can serve as a full test of the CSF. This is similar to tabletop exercises under §§ 104.230(c)(2)(ii), 105.220(c)(2)(ii), and 106.225(c)(2)(ii), as participants can discuss and simulate the implementation of specific measures found within the Cybersecurity Plan.

The Coast Guard believes that this final rule provides the necessary level of detail on the requirements on the

conduct and elements of drills and exercises. This final rule allows each regulated entity the flexibility to determine the specific drills and exercises they wish to conduct. Additionally, individual stakeholders can determine the level of crew involvement in drills and exercises based on individual crew and employee roles and responsibilities within the organization.

Furthermore, the Coast Guard understands that each U.S.-flagged vessel, facility, and OCS facility operates facing different cybersecurity risks. Owners and operators may seek an exemption or waiver using the procedures in § 101.665. This flexibility is intended to accommodate varying levels of risk and operational needs across different U.S.-flagged vessels, facilities, and OCS facilities.

H. Comments Related to Records and Documentation

One commenter noted that the 2-year recordkeeping mandate could be quite costly compared to its value proposition.

The 2-year recordkeeping requirement is consistent with the existing regulations and aligns with incorporating the Cybersecurity Plan into a VSP, FSP, or OCS FSP if a regulated entity chooses to include the Cybersecurity Plan as part of their VSP, FSP, or OCS FSP. The Coast Guard recognizes that there may be varied costs associated with record keeping but expects that these additional records would be maintained similar to the existing records and could prove important in the event of a future cyber incident.

One commenter requested clarification on what the Coast Guard was not obtaining from covered entities' use of the Cyber Annex—which supports an FSP and OCS FSP—under the MCAAG.

The Cyber Annex was intended to provide only initial cyber guidance based on the regulations available at the time. Moreover, the MCAAG is only a voluntary ''how-to'' guide and is not, itself, a regulation. The Coast Guard recognizes that further actions are needed to better secure the MTS from cyber threats and vulnerabilities. This final rule is the next step for a new suite of baseline requirements specific to cybersecurity that go beyond what was addressed previously in the regulations and earlier guidance documents.

Some commenters expressed concerns over omitting FSP and OCS FSP Cyber Annexes in the new regulatory framework and the implications for companies that have already invested resources in developing these annexes.

The existing requirement for the owners and operators of MTSA-regulated facilities and OCS facilities to analyze vulnerabilities associated with radio and telecommunication equipment, including computer systems and networks, allows an owner or operator to demonstrate compliance in a variety of formats. The information may be provided in a separate Cyber Annex to the FSP or OCS FSP, or incorporated into the FSP or OCS FSP together with the physical security measures. Regulated entities who chose to create a separate Cyber Annex may use the content of the existing Cyber Annex to help develop a Cybersecurity Plan that reflects all cybersecurity measures required in subpart F, as appropriate, to mitigate risks identified during the Cybersecurity Assessment. As noted in § 101.630(a), the Cybersecurity Plan may be included in an existing VSP or FSP or VSP or FSP annex. This final rule amended § 101.630(a) to clarify that the Cybersecurity Plan may also be included in an OCS FSP, part of an approved ASP, annex to the OCS FSP, or may be provided in a separate submission (but is still considered a part of the VSP, FSP, or OCS FSP).

The Coast Guard believes that this final rule provides sufficient information for regulated entities to comply with requirements for a Cyber Incident Response Plan. The term is defined in § 101.615, and the requirements for inclusion are described in §§ 101.620(b)(6), 101.625(d)(4), and 101.650(g)(2).

One commenter noted that some ship OT systems have cybersecurity requirements as mandated by the DoD and noted that some required compliance elements pose a documentation duplication effort. They asked what exceptions would be considered for those having to meet DoD requirements.

The Coast Guard recognizes that cybersecurity requirements of other Federal agencies may be similar to these requirements. However, due to the specific nature of maritime cybersecurity considerations while operating in the MTS, the Coast Guard requires documentation specifically showing compliance with these regulations. At this time, we are not considering blanket compliance exemptions for regulations of other Federal agencies. Owners or operators may use this similar, but separate, compliance to inform their compliance with Coast Guard regulations.

I. Comments Related to Communications

One commenter noted that it was important to foster open communication and explore diverse solutions for information sharing and collaboration across stakeholders.

The Coast Guard agrees and encourages interested stakeholders to communicate and explore information-sharing solutions. These regulations are intended to establish certain baseline requirements that establish a common regulatory framework for all stakeholders to have those discussions.

J. Comments Related to Incident Reporting

The Coast Guard received numerous comments in response to our request for input on the reporting of cybersecurity incidents and whether those reports should be made to the Coast Guard through the NRC or to CISA. Commenters were split between the two options, with some citing the existing requirement to report security incidents to the NRC as a reason to maintain this process, while others cited the proposed requirements of CISA's CIRCIA rulemaking project. One commenter suggested that reporting to CISA be updated to a 72-hour requirement, whereas other comments suggested that the reporting be delayed until a cybersecurity incident has been investigated by an entity. Another commenter suggested that Global Positioning System (GPS) jamming and spoofing should be included as incidents that require mandatory reporting. One commenter suggested reporting to the Defense Cyber Crimes Center (DC3)/DoD-Defense Industrial Base Collaborative Information Sharing Environment (DCISE). One commenter suggested that reporting should not be directed to the NRC due to the NRC being short-staffed and not suited to receive the incident reports. One commenter noted that CISA is already in a position to catalog such reports and share critical information with those impacted in both private industry and Government sectors, as this is part of their current mission.

One commenter cited the various reporting requirements of CIRCIA's proposed rulemaking,[55] the Coast Guard's NPRM, Executive Order 14116 (Amending Regulations Relating to the Safeguarding of Vessels, Harbors, and Waterfront Facilities of the United States), along with the Coast Guard's NVIC 02–24 and Policy Letter 08–16. The commenter requested that the Coast

[55] 89 FR 23644, April 4, 2024.

Guard work with CISA, who is less familiar with the maritime industry, and deconflict the reporting requirements. In response to whether the Coast Guard should require reporting of ransomware payments, one commenter stated that they did not feel this would be wise. Other commenters stated that they felt that ransomware and related payments should indeed be reported. One commenter expressed concern with reporting of incidents or KEVs between CySOs, noting that information specific to a company should not be shared with other companies.

One commenter asked how the Coast Guard intended to share reported information with all regulated entities. Another commenter similarly suggested that the Coast Guard establish procedures within these regulations for the reporting of Government incidents to other parties. One commenter expressed concern that NRC personnel who will take reports of cybersecurity incidents might not be specialized in cybersecurity or have the appropriate knowledge and experience; therefore, NRC personnel would be unequipped to take reports of cybersecurity incidents. One commenter expressed concern about the limitations for vessels when reporting an incident to the NRC via telephone. The commenter noted that vessels might have limited internet connections and requested that the Coast Guard allow alternative communication methods such as very high frequency (VHF) or International Maritime Satellite (INMARSAT) as options for reporting to the NRC.

With this final rule, the Coast Guard is expecting reportable cyber incidents be reported to the NRC only by those entities not already required to report cyber incidents under 33 CFR 6.16–1, as amended by Executive Order 14116. Title 33 of the CFR, part 6.16–1, requires the reporting of evidence of sabotage, subversive activity, or an actual or threatened cyber incident involving or endangering any vessel, harbor, port, or waterfront facility, which includes all current MTSA-regulated U.S. vessels and facilities regulated by this rule. 33 CFR part 6.16–1 does not apply to OCS facilities regulated under 33 CFR part 106. Therefore, those OCS facilities are subject to the reporting requirements of this rule. Reporting to the NRC by these entities is in line with established requirements and timelines, including under § 101.305. It also enables a timely response to incidents by the Coast Guard, as well as partner agencies with whom the NRC shares incident reports immediately upon receipt. To minimize duplicative reporting from the same entity, the requirement to report under this final rule does not apply if the entity has reported the cybersecurity incident to the Coast Guard pursuant to 33 CFR 6.16–1, highlighting that because OCS facilities are not subject to the reporting requirements in 33 CFR part 6, OCS facilities must report cyber incidents to the NRC under this final rule.

Entities subject to reporting cybersecurity incidents under 33 CFR 6.16–1 must also report to the FBI and CISA, and they may also be subject to reporting to CISA under CIRCIA once the final rule is published and effective. The Coast Guard and CISA are committed to minimizing the burden on entities and will assess the need for additional policy guidance regarding the content of reports and the mechanism for reporting to satisfy applicable requirements in this part, § 101.305, 33 CFR part 6, and the CIRCIA final rule to be issued by CISA. The Coast Guard and CISA are committed to proactively collaborating and issuing guidance to entities to harmonize cyber reporting requirements to the extent possible and to clarify procedures for reporting cyber incidents to the Coast Guard and to CISA, respectively under current regulations, as well as in the future once CIRCIA's regulations take effect.

Cyber incident reports to the Coast Guard and CISA serve complementary but distinct operational purposes that are consistent with each agency's respective missions and authorities. Reports to the Coast Guard ''without delay'' under this part, § 101.305, and 33 CFR part 6 serve as an immediate notification to support the rapid response to events that may result in a TSI. Notifications to the NRC are immediately shared with CISA, FBI, and other relevant agencies to allow for the earliest mobilization of response and resources. Cyber incidents can quickly escalate and evolve, and any delays to the reporting can affect the ability to successfully respond to an incident. Reporting to the NRC without delay allows the Coast Guard COTPs to understand the potential risks of an incident and apply their authority to protect the MTS, including the use control and compliance measures as provided at § 101.410. In many cases, the goal of the initial response is to ensure public safety, mitigate the consequences of disastrous events, or prevent cascading impacts on critical infrastructure or the public. This includes but is not limited to minimizing loss of life and property, preventing environmental disasters or other accidents at sea, assisting in the recovery of critical IT or OT systems at ports or other facilities, defending the sovereignty of the United States, and facilitating legitimate use of maritime waterways. After the initial response, the notifications enable the Coast Guard to evaluate the broader risks to the MTS based on the specific vulnerability.

Separate from the Coast Guard's authorities under MTSA, but consistent with what Congress has envisioned in CIRCIA, reporting ''covered cyber incidents'' to CISA under its future regulation within 72 hours of having a reasonable belief that such an incident occurred (and ransom payments resulting from a ransomware attack within 24 hours of the payment being made) serves a complementary but distinct operational purpose from Coast Guard reporting requirements. As the lead agency for Federal cybersecurity and the national coordinator for critical infrastructure risk and resilience, CISA is well-positioned to support Coast Guard cyber related operations and address cross-sector cyber risk more broadly under its forthcoming CIRCIA regulations. By collecting more technical information via the CISA incident report then was collected by the NRC in the initial report and cross-referencing that information with other incidents reported in other critical infrastructure sectors, CISA can support the Coast Guard's operations, assist other entities in the MTS in mitigating exploited vulnerabilities, quickly identify other entities that may be at risk across critical infrastructure sectors, automate sharing information across the public and private sectors to protect against similar incidents in the future, and counter sophisticated cyber campaigns earlier.

CISA's further sharing of reported threat activity and impact information (for example, techniques, tactics, and procedures used to cause physical, functional, or informational impacts) will enable other Federal and non-Federal stakeholders to more effectively allocate resources and inform the development of more secure products. Furthermore, reporting incidents to CISA under the CIRCIA final rule will improve the U.S. Government's collective visibility into the national cyber threat landscape and close critical information gaps.

The Coast Guard does not specify specific incident types in this final rule but relies on the definition of reportable cyber incidents, as well as existing definitions for *breaches of security* and *transportation security incidents,* as defined in § 101.105, and *suspicious activity* as described in § 101.305.

The Coast Guard through this final rule is not requiring reporting to any entity outside of the NRC, such as DC3

or DCISE, as the NRC already has an established process and relationship with the regulated entities affected by this final rule.

The Coast Guard disagrees that the NRC would be unable to accommodate reported cybersecurity incidents. The NRC already receives reports of cybersecurity incidents according to the reporting requirements of § 101.305, which includes cybersecurity.

The Coast Guard agrees that reporting requirements, including those of existing MTSA regulations, this final rule, and the recent Executive Order 14116 updating 33 CFR 6.16–1 on cybersecurity, should be harmonized to the extent practicable and in accordance with the law. Policy Letter 08–16 was superseded by NVIC 02–24, which provides guidance on existing MTSA reporting requirements as well as those addressed by the recent Executive Order. The Coast Guard will work with partner agencies to maximize harmonization and alignment with this final rule to the extent practicable by assessing the need for new policy guidance regarding reporting requirements under this final rule, 33 CFR 6.16–1, and the CIRCIA final rule to be issued to CISA.

The definition for a reportable cyber incident provides regulated entities with sufficient information to determine when to report a ransomware incident. The Coast Guard did not add a requirement for the reporting of a ransomware payment. Note that a separate requirement to report ransom payments to CISA may be included in the forthcoming CIRCIA final rule issued by CISA.

In § 101.650(e)(3)(iii), this final rule requires each owner or operator of a regulated entity to maintain a method to share threat and vulnerability information with external stakeholders, but does not require sharing information with private companies that have no relationship with the regulated entity or do not have a role in facilitating cybersecurity response or the cybersecurity posture of the regulated entity.

The requirements in this final rule for reporting cybersecurity incidents apply to U.S.-flagged vessels, facilities, and OCS facilities and detail how to report to the Government. This final rule does not establish requirements for the Government to share information with the public, and the Coast Guard does not intend to immediately share cybersecurity incident reports from a regulated entity with other private stakeholders. If needed, the Coast Guard or other agencies can develop bulletins, advisories, or other guidance to address cybersecurity threats, risks, and vulnerabilities that may be discovered. Similarly, this final rule does not establish processes or procedures for the Government to report its own incidents to the public, as this final rule only addresses requirements for those entities addressed under the Applicability section in § 101.605.

The Coast Guard disagrees with any suggestion that NRC personnel would be unable to take a report of a cybersecurity incident. NRC personnel stand watch 24 hours a day, 7 days a week, receive cybersecurity incident reports according to § 101.305, and have demonstrated the capability to collect the necessary required information made in an initial incident report. Upon receipt of the incident report, the NRC immediately shares the information with the Coast Guard Cyber Command (CGCYBER), DHS, CISA and other relevant Government agencies that have the specialization, knowledge, and experience to conduct any further follow up after the initial report.

The Coast Guard is not prescribing an alternative reporting process through VHF or INMARSAT, but this final rule does not limit the reporting of reportable cyber incidents by telephone only and affirms reports can be made by any means necessary. Vessels without connectivity are encouraged to use alternative methods to contact their designated person ashore to assist with reporting the incident without delay.

One commenter suggested that a vessel's RO be the one to report cyber issues to the Coast Guard.

The Coast Guard disagrees with this suggestion. This final rule provides sufficient clarification as to which entities should be reporting in each situation (for example, an assessment, audit, or a reportable cyber incident), and is consistent with existing MTSA regulations.

One commenter recommended that organizations develop tiered levels of cyber incident events and incidents in their Cyber Incident Response Plan.

The Coast Guard agrees that owners and operators of U.S.-flagged vessels, facilities, and OCS facilities should take the approach that best suits their needs when developing their Cyber Incident Response Plan. However, the Coast Guard does not prescribe any specific requirements in this final rule. While a tiered approach to cyber incident reporting can provide structure, it may inhibit the adaptability and responsiveness that are crucial for effectively managing cyber incidents in a rapidly evolving threat landscape. The Coast Guard prefers owners and operators to customize their incident response plans to meet their unique needs and requirements.

K. Comments Related to Cybersecurity Measures (§ 101.650)

One commenter requested that § 101.650 for cybersecurity measures include a caveat that, in situations when security measures might create safety risks, then the safety concern is to be prioritized.

The Coast Guard appreciates the concern for safety, and we do not intend for these regulations to conflict with other Coast Guard regulations for safety. The Coast Guard does not foresee a degradation in physical safety caused by these cybersecurity regulations and believes it would generate confusion if an undefined safety-based caveat were included. If owners or operators have concerns with specific application of the cybersecurity regulations, the Coast Guard encourages those owners and operators to discuss with the cognizant COTP, OCMI, or MSC, as appropriate. This final rule provides procedures for requesting equivalencies or waiver from the Coast Guard, if appropriate, in § 101.665.

One commenter suggested that cybersecurity measures be incorporated for heightened threat periods.

The Coast Guard has issued these regulations as baseline cybersecurity requirements, as cybersecurity can pose a risk at all times, even under normal threat periods. The Coast Guard encourages owners or operators of U.S.-flagged vessels, facilities, and OCS facilities to address and incorporate cybersecurity measures for heightened threat periods, if desired and as best fits their needs. The Coast Guard is also able to issue cybersecurity guidance or directives as needed, if there are specific threats and incidents. At this time, we do not believe that any specific and standing requirements for heightened threat periods should be added to this final rule.

One commenter requested that the Coast Guard add language specific to GPS denial and spoofing, and Automatic Identification System (AIS) and timing concerns.

The Coast Guard is not including a definitive list of systems and equipment in this final rule. We encourage affected entities to address those vulnerabilities which they identify in their own Assessments, or are otherwise concerned about, and to tailor drills and exercises to those areas where they have the most concern, which may include GPS denial and AIS spoofing. We also do not mandate training or drills on specific vulnerabilities or threats.

One commenter asked why outdated CPGs were used for the NPRM.

At the time the Coast Guard initially developed these regulations, Version 1.0 of CISA's CPGs were the most recent. The Coast Guard conducted an analysis to identify any significant changes between versions 1.0 and 2.0 and made changes to the regulatory text where appropriate. Only minor changes were needed. The Coast Guard will continue to monitor CISA's efforts related to CPGs to determine whether a subsequent rulemaking will be needed in the future.

One commenter suggested that the Coast Guard should clarify how this final rule applies to facilities already regulated by other authorities, particularly TSA's Security Directives. The commenter also suggested that docking ship connections be limited to systems essential for mooring, emergency operations, and ship-to-shore communications.

If an owner or operator is concerned that it may be subject to TSA's requirements and needs clarification on harmonizing compliance between TSA and Coast Guard requirements, they should notify the cognizant COTP or OCMI. If appropriate, the Coast Guard will consider procedures for waivers or equivalents in § 101.665 or have additional conversations with TSA. The Coast Guard is not placing specific requirements on what docking ship connections are allowed, and instead leaves this determination to the owner or operator.

One commenter recommended inclusion of additional requirements for logs, as well as a Shipboard Security Information and Event Management. They further recommended requirements for post-shipyard inspections and maintenance, particularly after a vessel departs an adversarial port.

The Coast Guard seeks to strike a balance and chose not to impose requirements that would be so prescriptive that compliance would be too difficult for some segments of the regulated industry. These requirements generally provide latitude for owners, operators, or CySOs to determine the specific means needed to comply with the regulatory requirements. These regulations represent minimum baseline requirements, but the Coast Guard encourages regulated entities to take any additional actions they feel are necessary to address their cybersecurity needs, so long as such additional cybersecurity measures are documented in their Cybersecurity Plans.

L. Comments Related to Account Security Measures (§ 101.650(a))

Some commenters requested changes to the section on account security measures, seeking to modify requirements for account lockout, multifactor authentication, and user credentials as they relate to certain OT systems. They expressed concerns that these measures could disrupt critical operations, deny access during emergency situations, and potentially be exploited by malicious actors to halt operations. One commenter suggested an outcome-based requirement for OT systems because the prescriptive approach may not suit many organizations and could quickly become outdated due to advancing technology.

The Coast Guard reviewed § 101.650(a) and revised specific requirements as appropriate, as they relate to OT systems. In some cases, we maintained the proposed text in line with CISA's CPGs, recognizing what provided the best level of cyber protection. The Coast Guard recognizes that OT systems may have unique considerations that are different from IT systems. The Coast Guard agrees that automatic account lockout in OT systems could have catastrophic consequences in emergency situations. We adjusted these requirements to reflect updates that CISA provided to its CPGs based on public comments they received. These updated requirements took into consideration the concerns noted in public comments that certain items, such as account lockout and multifactor authentication when applied to OT systems, could result in the concerns noted by the public comments.[56] Based on this review, we revised § 101.650(a)(1) to remove the references to OT systems and automatic account lockout due to failed logins.

The Coast Guard disagrees that these requirements are too prescriptive. The Coast Guard reiterates that these regulations represent minimum baseline requirements, and owners and operators are welcome to take additional actions and measures as they deem necessary or appropriate to best protect their systems and equipment. In cases when owners or operators do not feel that they can comply with account security measures, or that they feel a requirement is unnecessary, they may submit a request for a waiver or equivalent using the procedures in § 101.665.

One commenter noted the benefits of zero-trust architecture. Some commenters noted the importance of logs in detecting and responding to cyber-attacks and recommended that we accept next-generation logging capabilities. One commenter offered an example of one such system.

The Coast Guard notes that zero-trust architecture is one of many solutions that organizations may choose to use to comply with this final rule. The Coast Guard does not prescribe specific systems or equipment or ways to comply with these requirements. The Coast Guard recognizes that there are multiple systems, equipment, and products available, and it is up to the owner or operator to identify the option that best suits their needs while ensuring they meet the requirements of this final rule.

Some commenters expressed concern with multifactor authentication on vessels. They stated that the owner or operator should have flexibility to adequately and specifically address this, rather than a prescriptive approach. These commenters noted it is challenging especially for internationally operating vessels with a constantly changing crew and limited or no access to internet while in transit. They also stated that providing mobile phones to the crew is not advisable, noting that encouraging the use of personal devices may lead to significant resistance. The commenters believed that an alternative, such as hardware tokens for two-factor authentication, presents challenges, including distribution, configuration, and the risk of tokens being misplaced. Another commenter requested that multifactor authentication only be in place for remote access from untrusted networks into OT systems according to IACS UR E27 [57] for new ships, and with an implementation period for existing ships.

The Coast Guard recognizes that measures such as two-factor authentication may pose unique challenges to vessels, but also notes that there are multiple ways to implement multifactor authentication that do not require internet access. While carriers may not currently provide phones or other devices for this purpose, the nature of this being new rulemaking lends itself to the realization that owners and operators may have to take actions and steps that were not previously done, if that is how they determine they can best comply with the regulations. It is up the owner or operator to implement appropriate multifactor authentication given their

[56] *See https://www.cisa.gov/cybersecurity-performance-goals,* accessed November 12, 2024.

[57] IACS UR E27, Cyber Resilience of On-Board Systems and Equipment, press release information available at: *https://iacs.org.uk/news/iacs-ur-e26-and-e27-press-release,* accessed August 16, 2024.

business operations and accessibility to internet connectivity. Such multifactor authentication may include a variety of methods, including passwords, physical devices such as security tokens or access cards, or biometrics. Additionally, as is the case for all requirements in this final rule, if an owner or operator has reviewed all possible options and determines that they cannot comply with any aspect of the regulations, they may follow the process for requesting a waiver or equivalence. The Coast Guard is not relaxing the requirements further for U.S.-flagged vessels. If owners or operators do not feel that they can comply with account security measures, they may submit a request for a waiver or equivalent using the procedures in § 101.665.

One commenter requested clarification on the use of passwords; if they are required, and, if so, what the requirements for them would be.

The Coast Guard does not mandate the use of a password, only that if passwords are used or if a system is capable of password protection, the passwords are of sufficient strength and meet certain criteria to help defend against cyber-attacks based on the criticality of the system as described in § 101.650(a).

M. Comments Related to Device Security Measures (§ 101.650(b))

One commenter expressed concern about including a network map in the Cybersecurity Plan.

The Coast Guard recognizes the sensitivity of network maps. We revised § 101.650(b) to clarify that each owner or operator or designated CySO of a U.S.-flagged vessel, facility, or OCS facility must ensure the device security measures are in place, addressed in Section 6 of the Cybersecurity Plan, and made available to the Coast Guard upon request. Therefore, network maps do not need to be submitted with the Plan, but they must be maintained by the regulated entity and made available to the Coast Guard upon request.

One commenter noted that far too few entities have inventoried their IT and OT assets and supported the requirement to maintain an up-to-date asset inventory. The commenter also noted that recognizing the unique needs and limitations of OT environments is essential for effective cybersecurity regulation and implementation. Finally, the commenter strongly supported the requirement for owners and operators of covered infrastructure to designate and inventory critical IT and OT systems. The commenter noted, however, that frequent IT patches and updates are impractical in OT environments, as they can disrupt critical operations and complicate compatibility testing due to real-time demands.

The Coast Guard appreciates the support for an IT and OT system inventory. It is up to the owner or operator to determine the frequency at which OT patches and updates are conducted according to their Cybersecurity Plan to mitigate the risks identified in their Cybersecurity Assessment.

Several commenters indicated concerns regarding requirements relating to OT systems. Paragraph (e)(3)(v) of § 101.650 indicates that no OT system is to be connected to the publicly accessible internet unless explicitly required for operation, if there is documented justification. However, the commenters noted that an OT system connected to the internet can transmit machine data to the manufacturer, enabling the manufacturer to offer Smart Planned Maintenance decision support to the owner.

The Coast Guard appreciates these concerns and notes that each situation will be evaluated on its own merits on a case-by-case basis. Regulated entities may discuss specific concerns with the cognizant COTP, OCMI, or the MSC as appropriate. An owner or operator may also request a waiver or equivalence determination for the requirements according to the procedures in § 101.665.

Several commenters indicated concern regarding creating and maintaining an approved list of hardware, software, and firmware.

The Coast Guard acknowledges the potential burden in creating an approved list of hardware, software, and firmware; however, it is necessary to increase visibility into deployed technology assets and reduce the likelihood of breach by users installing unapproved hardware, firmware, or software. The Coast Guard anticipates that after developing the initial list, it will be easier for owners and operators to update the list in the future. Owners and operators may also find that their list is similar across multiple vessels or facilities within their organization. The Coast Guard does acknowledge that this will rely on coordination and cooperation of vendors and managed service providers.

One commenter requested clarification whether the proposed requirements are applicable only to mission critical IT and OT systems, or, applicable to all onboard IT and OT systems.

The Coast Guard revised this final rule to clarify where the regulations apply to all IT and OT systems and where they apply to the critical IT and OT systems. For example, we removed reference to OT systems in § 101.650(a)(1) and specified that the requirements in § 101.650(e)(1)(i) and (iv) are for critical IT and OT systems.

One commenter stated that the requirement in § 101.650(b)(2) to ensure applications running executable code must be disabled by default on critical IT and OT systems is unclear and requested adjustment to the text.

The Coast Guard disagrees that this text is unclear. The text requires entities to disable applications running executable code on critical IT and OT systems. The primary vulnerability associated with executable code is the potential for malicious code to be embedded within them, allowing attackers to exploit vulnerable systems when users open certain programs without being aware what is being done in the background. This essentially turns the device into a vehicle for launching cyberattacks or can lead to data theft, unauthorized system access, and other harmful actions. Executable code technologies include Java applets, JavaScript, HTML5, WebGL, and VBScript as well as macros used within products like Microsoft Office. IT and OT personnel will be familiar with the vulnerabilities associated with executable code and will understand the requirements of this provision.

N. Comments Related to Data Security Measures (§ 101.650(c))

One commenter stated that the phrase ''document and mitigate any vulnerabilities'' in § 101.650(e)(1)(iv) caused concern with the use of the word ''any,'' as there may not be mitigations or patches available.

The Coast Guard revised paragraph (e)(1)(iv) in § 101.650 to clarify that the regulated entity will ensure patching or implementation of documented compensating controls for all KEVs in critical IT or OT systems, without delay, at the time of their annual assessment, as well as part of routine maintenance.

One commenter expressed concern about the lack of specificity in the level and type of logging and monitoring of IT and OT systems for breaches of security, suspicious activity, TSIs, and cyber incidents.

Given the wide array of IT and OT systems, mandating a one-size-fits-all level of logging is not practical. Each U.S.-flagged vessel, facility, and OCS facility should customize its logging system to best address its specific risks

and technologies and document the customization in the Plan.

Some commenters expressed concern about encrypting data, at transit and at rest, on IT and OT systems, as it may be difficult to do on OT systems, or other legacy systems.

The Coast Guard revised § 101.650(c)(2) to better describe our expectations regarding data encryption. The revised text specifies that effective encryption must be deployed to maintain confidentiality of sensitive data and integrity of IT and OT traffic, when technically feasible. Encrypting data, at transit and at rest, is an example of when a requirement may not be technically feasible. In this case, the regulated entity should describe the aspects that they can comply with in their Cybersecurity Plan. Additionally, if an owner or operator has further concerns about how they can comply with these requirements, they can follow the process for requesting a waiver or equivalent according to § 101.665.

One commenter recommended that the Coast Guard add specific requirements for wireless communications as noted in IACS UR E26 4.2.5.3.[58]

The Coast Guard has not added specific requirements for wireless communications. During their Cybersecurity Assessment, each owner or operator of a regulated U.S.-flagged vessel, facility, or OCS facility may identify wireless communications as part of their IT and OT systems and equipment being assessed, as applicable.

One commenter suggested adding the requirement that remote connections to OT systems be made with secure connection and endpoint authentication, protection of integrity and authentication, and encryption at network or transport layer.

The Coast Guard disagrees that additional requirements are necessary. This final rule's requirements for remote connections are sufficient as minimum baseline requirements as noted in § 101.650(a)(4). Owners or operators of U.S.-flagged vessels, facilities, and OCS facilities are welcome to take additional measures as appropriate to their systems, equipment, and operations.

Some commenters questioned the requirements for all data requiring encryption. Another commenter suggested that data security should include PII, to include employee records and access control data, such as access control databases used for physical access, which could include information on Transportation Worker Identification Credentials, other PII, etc. Physical Access Control Systems (PACS) log physical entries into a facility, and this should likewise be treated as PII and sensitive security information. When practical, PACS servers, networks, devices, applications, and software should be air-gapped or isolated from IT and OT networks to prevent intrusion or alteration of data to allow unauthorized physical access.

The Coast Guard revised § 101.650(c)(2) to clarify that only sensitive data be encrypted. The Coast Guard has not, however, added these specific items to the requirements, but, rather, allows for the owner or operator to determine whether this is considered sensitive data subject to the requirements of this regulation.

One commenter asked if there would be specific guidance on PACS, emergency management devices or applications, OT applications and architecture, and safety devices.

The Coast Guard notes that items related to the safety and security of the U.S.-flagged vessel, facility, or OCS facility, as it pertains to cybersecurity threats and vulnerabilities to such systems, should be addressed within the Cybersecurity Plan as determined by the owner, operator, or CySO according to the requirements stated in this final rule. The Coast Guard will determine whether it is necessary to address this further in future guidance.

One commenter inquired how facilities will address PACS and emergency management systems that are network-enabled. The commenter recommended that the Coast Guard add regulatory language speaking to the interdependency of the FSO and the CySO with respect to placing, conducting maintenance, and monitoring PACS.

The Coast Guard does not agree that such regulatory mandates are needed to address interdependency of the FSO and CySO as it is up to the owner, operator, FSO, and CySO to establish relationships and ensure personnel with security duties are interacting to support the full safety and security of each U.S.-flagged vessel, facility, and OCS facility.

One commenter suggested that PACS be included in the requirement for backing up critical IT and OT systems.

The Coast Guard has determined that the CySO is best positioned to determine and should have the discretion to identify whether a system would be included under critical IT or OT systems.

One commenter questioned the requirement that the owner or operator must ensure that users maintain separate credentials on critical IT and OT systems, which could be read to mean that individual users must have different usernames and passwords for each of the critical systems to which they have access. The commenter was concerned that even if the intent is to limit shared accounts, this is not always technically feasible for OT systems.

The Coast Guard has not changed the text in § 101.650(a)(6), which requires separate credentials for IT and OT systems. The requirement sets out the measures that owners or operators must take, which are minimum baseline requirements noted in § 101.650(a). If an owner or operator does not feel that they can comply with the requirements as written, they may follow the process for requesting a waiver or equivalent according to § 101.665.

One commenter requested clarification of the Coast Guard's proposed data security measures in § 101.650(c). The commenter stated that the term ''data logs'' is undefined, makes it unclear as to what is required and whether encryption with a suitably strong algorithm is appropriate.

The Coast Guard has added a definition for the term ''logs'' to these regulations and updated the requirement in the regulation from ''data logs'' to ''logs,'' consistent with NIST and CISA's Cyber Performance Goals. In addition, we revised § 101.650(c)(2) to provide that effective encryption must be deployed to maintain confidentiality of sensitive data and integrity of IT and OT traffic, when technically feasible, rather than the proposed regulatory text requiring it be encrypted ''using a suitably strong algorithm.'' We made that change based on the feedback that the standard was unclear.

O. Comments Related to Cybersecurity Training for Personnel (§ 101.650(d))

One commenter requested clarification on how often OT-specific training should be conducted, and what topics it should cover.

Given the wide array of OT systems (for example, crane control, navigation, propulsion and steering control) and operational settings (for example, different types of vessels and port facilities), mandating a one-size-fits-all cybersecurity training is not practical. Owners and operators of each type of U.S.-flagged vessel, facility, and OCS facility will need to customize their training so that it addresses the specific risks and technologies of each regulated entity. The timeframe and frequency for

[58] IACS (UR E26 4.2.5.3) Cyber Resilience of Ships: *https://www.american-club.com/files/files/ur-e26-new-apr-2022.pdf,* accessed November 13, 2024.

completing cybersecurity training are described in § 101.650(d)(4) of this final rule.

Some commenters stated that the requirements for training are overly broad and burdensome, and difficult to track and ensure training for contractors and temporary workers. They suggested that the requirements for training be updated to ease the required training. Others noted that it would not be possible to obtain training within 5 days of gaining system access. Some suggested that the training requirements be eliminated for contractors completely.

The Coast Guard disagrees that the training is overly burdensome. The nature of cybersecurity, the growing presence of cyber systems in the operations of U.S.-flagged vessels, facilities, and OCS facilities, and the evolving nature of cybersecurity threats and vulnerabilities necessitate that personnel who will be operating within the IT and OT environment be sufficiently trained. This includes contractors, whose access to IT and OT systems and equipment may be no different than that of regular employees when it comes to potential impacts and need for training and awareness. We recognize that some contracted and part-time personnel will be on board and operating on IT and OT systems and equipment for such a short duration that meeting the training requirements may be difficult, and there may be situations where an employee may not be able to receive initial training within the timeframe stated in this final rule. To accommodate this, we revised § 101.650(d)(3) to allow for those personnel to be escorted or accompanied by personnel who already have the required training.

One commenter recommended that the Coast Guard formalize training and leverage industry best practices to apply to maritime operations.

The Coast Guard does not prescribe specific training programs or methods in this final rule. It is at the discretion of each owner or operator of a U.S.-flagged vessel, facility, or OCS facility to determine the training program that best meets their individual needs. The Coast Guard encourages maritime stakeholders to work together to share best practices.

One commenter stated that the § 101.650(d)(1)(i) requirement for training on relevant provisions of the Cybersecurity Plan was vague. They also noted that the § 101.650(d)(1)(iii) requirement for all personnel to be trained on techniques used to circumvent cybersecurity measures was a suboptimal blanket approach and should be limited in some manner. Another commenter requested that the Coast Guard clarify the specific requirements, cadence, and expectations for training programs, drills, and audits.

The training required by this final rule provides the best baseline requirements to protect IT and OT systems and equipment, as well as the personnel operating the systems and equipment. The Coast Guard believes educating relevant personnel on these techniques, they become more aware of potential risks and can recognize suspicious activities. This knowledge fosters a culture of vigilance and preparedness. However, it is up to the owner or operator, in conjunction with the CySO, to determine, which provisions of the Cybersecurity Plan apply, depending on the individual employee requiring the training. The requirements, cadence, and expectations are sufficiently addressed in these regulations, while providing regulated entities with the necessary flexibility to determine how to comply with these regulations while accounting for their unique systems, equipment, and operations. If an owner, operator, or CySO has any questions, they may bring them to their COTP, OCMI, or MSC, as appropriate.

P. Comments Related to Risks and Vulnerabilities (§ 101.650(e))

One commenter suggested that the Coast Guard use Federal Advisory Committees to develop a rank-ordered list of cybersecurity risks to be used as a benchmark against which objectives could be pursued.

The Coast Guard recognizes the benefits of working with Federal Advisory Committees but is not using a rank-ordered list of cybersecurity risks to develop the requirements. As such, there is no need to work with Federal Advisory Committees to develop such a list. Our requirements for conducting a Cybersecurity Assessment and developing a Cybersecurity Plan are designed to help each owner or operator identify the particular cybersecurity risks and vulnerabilities at the regulated U.S.-flagged vessel, facility, or OCS facility.

Some commenters suggested that the Coast Guard change the requirements for the frequency of audits, assessments, and amendments. One commenter stated that it was unnecessary to conduct these if no systems or equipment has changed.

Coast Guard does not concur with the comments. The audit and assessment intervals in § 101.630(f) are appropriate for assessing rapidly changing cybersecurity risks, vulnerabilities, and threats. Moreover, these audit and assessment intervals are consistent with existing requirements in 33 CFR parts 104, 105, and 106. The Coast Guard disagrees that no change in systems or equipment means a Cybersecurity Assessment is unnecessary because the fact that there has been no change does not mean there is a lack of new threats or vulnerabilities.

One commenter recommended that the Coast Guard change ''mitigate'' to ''manage'' when referring to responding to vulnerabilities under ''risk management'' in these regulations. The commenter also suggested that the Coast Guard change the requirements on the frequency of these actions. Another commenter suggested that patching and mitigating of vulnerabilities be done according to an organization's policies and procedures, as opposed to the requirements stated in these regulations.

The Coast Guard revised § 101.650(e)(1)(iv) to remove ''mitigate any unresolved vulnerabilities'' and, instead, require that the owner or operator ensure patching or implementation of documented compensating controls for all KEVs in critical IT or OT systems, without delay. The Coast Guard did not alter the frequency for the requirement, as we believe that ''without delay'' is more appropriate than ''per the organization's vulnerability management policies and processes.'' Owners and operators of U.S.-flagged vessels, facilities, and OCS facilities subject to this final rule may not have vulnerability management policies and processes that would adequately protect their critical IT and OT given the current cybersecurity risks and threats. Therefore, ''without delay'' provides the expectation to all entities subject to this final rule that identification and mitigation of all KEVs in critical IT or OT systems is necessary to prevent a cyber incident. This provision also ensures the patching and documented compensating controls take place when there is a KEV in a critical IT or OT system. An owner or operator who is unable to meet the requirements of subpart F may seek a waiver or an equivalence determination using the procedures in § 101.665.

One commenter stated that no maritime organization should ever be made to ensure that no zero days could ever exist for their internet connected systems.

The Coast Guard does not reference zero-day vulnerabilities in these regulations. In § 101.650(e)(3)(iv), we require that owners and operators of U.S.-flagged vessels, facilities, and OCS facilities must ensure there are no exploitable channels directly exposed to

internet-accessible systems. The owner or operator should take precautions based on their risk posture to ensure that all internet connections are protected and monitored appropriately when complying with these requirements.

One commenter noted that arranging for Cybersecurity Assessments in conjunction with security inspections for vessels, facilities, and OCS facilities might not be realistic. The commenter also noted that a Cybersecurity Assessment conducted at the enterprise level would be more advantageous.

The Cybersecurity Assessments, audits, and inspections are each separate actions, and may need to be separate. Audits and assessments are conducted by the regulated entity, which are separate from inspections conducted by the Coast Guard. With respect to the commenter's preference for an enterprise-level Cybersecurity Assessment, while some aspects of the Cybersecurity Plan might be similar throughout an enterprise, each regulated U.S.-flagged vessel, facility, or OCS facility possesses unique aspects and characteristics that likely pose particular risks that must be addressed on an individual basis.

Some commenters questioned the use of the term ''without delay,'' and stated that it was unclear. Its interpretation may differ by each organization, potentially ranging from minutes to hours or even days.

The term ''without delay'' is recognized in existing MTSA regulation (§ 101.305 (a)) and requires urgent action as soon as reasonably and safely possible. This term represents the criticality of the action being required. For situations in this final rule when urgency is expected because of the critical nature of the threat, the expectation is that action should be taken as soon as possible, taking into account any immediate safety concerns. The Coast Guard clarified the requirement to read ''as soon as reasonably practicable, in light of the individual circumstances, but, in any case, not longer than 96 hours'' where appropriate throughout the regulatory text in this final rule. The 96-hour limit is intended as a reasonable timeline for owners and operators to accomplish any related processing and paperwork for administrative matters that are important, but do not rise to the level of urgency as other critical security actions that must be taken ''without delay.'' In the event that a CySO, owner, or operator believes more time is necessary they may discuss their concerns with the COTP or MSC who may grant additional time if warranted.

One commenter indicated concern with the consistency of accepting mitigations for unresolved vulnerabilities and inquired whether mitigations provided by owners would generally be accepted.

Each situation will be evaluated on its own merits on a case-by-case basis. Regulated entities may discuss specific concerns with the cognizant COTP, OCMI, or the MSC, as appropriate. The Coast Guard provides procedures in § 101.665 for an owner or operator to request a waiver or equivalence determination for the requirements.

One commenter stated that the minimum requirement of patching or implementing countermeasures for all KEVs is too prescriptive and noted that OT environments, patches, and countermeasures are often unavailable. Another commenter noted that CISA already has a KEV system in place and the Coast Guard should not require another one in this rulemaking.

This final rule allows either patching or implementation of documented compensating controls for all KEVs in critical IT or OT systems. Owners and operators are welcome to use an established process to comply with the requirements of these regulations.

Some commenters indicated concern with the proposed definition of *known exploited vulnerability (KEV)* and highlighted that the Coast Guard did not reference CISA's Known Exploited Vulnerability Catalog. The commenter also noted that the definition of *multifactor authentication* needs adjustment. Additionally, the commenter pointed out that multifactor authentication is not always technically feasible.

The Coast Guard intends its definition of *known exploited vulnerability* to be interpreted based on CISA's Known Exploited Vulnerability Catalog that CISA maintains and updates as necessary. The Coast Guard revised § 101.615 to reflect the recommended adjustment to *multifactor authentication.* With respect to concerns about the technical feasibility of multifactor authentication, the Coast Guard allows an owner or operator to request a waiver or equivalence determination using the procedures in § 101.665. Owners and operators may also discuss specific concerns with the cognizant COTP, OCMI, or the MSC, as appropriate.

Some commenters suggested the Coast Guard revise the requirements for amending Cybersecurity Plans to account for situations when an owner or operator believes they need to make an amendment and take associated action immediately because of a cyber threat, even while the cognizant COTP, OCMI, or MSC is still reviewing the Plan.

The Coast Guard revised § 101.630(e) to add a new paragraph (e)(2)(i) that states that nothing in that section should be construed as limiting the owner or operator of a U.S.-flagged vessel, facility, or OCS facility from the timely implementation of such additional security measures as necessary to address exigent security situations.

One commenter expressed concern that the 60 days for an owner or operator to amend a Cybersecurity Plan and cure deficiencies that may be identified by the COTP, OCMI, or MSC was an arbitrary number. The commenter noted that 60 days may be insufficient, as vessels operate internationally and access to materials and equipment may not be readily available and suggested a more practical timeframe of 180 days to address a deficiency.

The Coast Guard revised § 101.630(e)(1)(ii) to clarify that the owner and operator will have at least 60 days to submit its proposed amendments. We are not extending the timeframe to address a deficiency to 180 days because that period would be excessive in many cases. Many cybersecurity deficiencies need to be resolved quickly. If an owner or operator determines that more time is needed, then they should communicate the need to the COTP, OCMI, or the MSC, as appropriate.

Q. Comments Related to Penetration Testing (§ 101.650(e)(2))

Some commenters noted that the requirements for penetration testing are overly prescriptive or burdensome, while another commenter questioned what the Coast Guard's expectation was for penetration testing.

The regulation provides minimum baseline cybersecurity requirements. The Coast Guard does not agree that the penetration testing requirements are overly prescriptive. The requirements in § 101.650(e)(2) do not dictate the scope of the test but, instead, state that the owner or operator or designated CySO of a U.S.-flagged vessel, facility, or OCS facility must only ensure that a penetration test has been completed.

Some commenters requested clarification on multiple aspects of the penetration testing requirements, including whether the frequency is linked to the renewal of a VSP, FSP, or OCS FSP.

The Coast Guard revised § 101.650 in this final rule to clarify that penetration testing must be completed in conjunction with renewing the

Cybersecurity Plan. Furthermore, the owner or operator has the discretion to determine who has the capabilities to perform a penetration test. If personnel on the U.S.-flagged vessel, facility, or OCS facility have the technical expertise, penetration testing can be done internally. If personnel on the U.S.-flagged vessel, facility, or OCS facility do not have such technical expertise, then an external organization must conduct the penetration testing.

One commenter noted that not every cybersecurity incident has the potential to result in a TSI. The requirement to report threats could be arbitrary and overly burdensome, especially given the influx of reports from multiple threat vectors. One commenter requested that the Coast Guard adjust the language for what information the regulated entity is required to submit for the penetration test and suggested that owners and operators should provide the Coast Guard a letter certifying that a penetration test was conducted. This approach simplifies reporting expectations for the industry while alleviating pressure on the NRC.

The Coast Guard's definition of a reportable cyber incident in this final rule includes, among other things, ''Incidents that otherwise may lead to a transportation security incident'' which 33 CFR 101.105 defines as ''a security incident resulting in a significant loss of life, environmental damage, transportation system disruption, or economic disruption in a particular area.'' The Coast Guard feels that the scope of this definition allows stakeholders to report a cybersecurity incident they reasonably identify as potentially leading to a TSI but also includes other types of cybersecurity incidents that would not require the entity estimate TSI risks. The scope of the definition also helps ensure the Coast Guard receive sufficient information so that it can best evaluate the risk of TSI and, in turn, coordinate any necessary response. It is likely the Coast Guard will be better positioned than a single regulated entity to evaluate the available facts, especially in circumstances when multiple entities are affected.

The Coast Guard has also issued, and will update as needed, guidance on incident reporting in the form of a NVIC. If there is a question as to whether an incident would meet these criteria, a regulated entity may report to the NRC, or they may notify their local Captain of the Port for guidance.

The Coast Guard notes that the requirements to report cybersecurity incidents in accordance with this final rule are satisfied by entities that are also covered by 33 CFR part 6 and report pursuant to 33 CFR 6.16–1. The Coast Guard recognized, based on public comments, that stakeholders would be best served with clear guidance on what would be required for submission to verify the penetration tests. The Coast Guard agreed that a letter verifying that the test was conducted, while noting any identified vulnerabilities, would represent a minimal burden on industry regarding submission requirements.

We revised § 101.650(e)(2) to specify that the CySO must submit a letter verifying that the test was conducted, as well as all vulnerabilities identified from the penetration testing. Additionally, the Coast Guard will consider developing a letter template as part of future guidance that will further assist stakeholders in meeting requirements. This information must be included in the Vessel Security Assessment (VSA), FSA, or OCS FSA, according to 33 CFR 104.305, 105.305, and 106.305. Further documentation related to the penetration tests must be made available to the Coast Guard upon request as required by § 101.660.

One commenter inquired if it would be possible for the owner or operator to apply for an exemption to the penetration test if there are not any major modifications during the 5 years in between penetration tests.

Each situation will be evaluated on its own merits on a case-by-case basis. Regulated entities may discuss specific concerns with the cognizant COTP, OCMI, or the MSC, as appropriate. The Coast Guard provides procedures in § 101.665 for an owner or operator to request a waiver or equivalence determination for the requirements.

One commenter asked if the Coast Guard would accept penetration testing of the same architecture but in a lab environment in light of the safety and operational risks active vessels face while conducting penetration testing on a voyage. The commenter noted that many vessels typically do not stop for prolonged periods of time. The commenter also asked if penetration testing of the IT environment could be limited to noncritical systems.

The Coast Guard understands the concern about conducting penetration testing on voyages. If an owner or operator of a U.S.-flagged vessel, facility, or OCS facility believes that their method of compliance with these regulations is outside of the stated requirements, or believes the requirements are not applicable to certain operations, they may request a waiver or equivalency according to the procedures in § 101.665. For example, if the organization wants to conduct the penetration testing in a lab environment, they can request an equivalent and explain how the lab environment satisfies the stated requirements in their case. In some cases, a temporary waiver may be appropriate. In terms of whether penetration testing could be limited to non-critical systems, if an owner or operator believes that penetration testing of their IT environment could be limited to noncritical systems, then they may request a waiver or equivalency according to the procedures in § 101.665.

One commenter noted that penetration testing should be considered a method of conducting a Cybersecurity Assessment and that penetration testing should be conducted with the audit as an assessment every several years, or as needed by the facility.

In this final rule, the Coast Guard considers penetration testing, Cybersecurity Assessments, and audits to be distinct actions. They are not interchangeable, and each serves specific functions as part of the comprehensive cybersecurity requirements of this final rule. These are separate and distinct actions ranging from less technical to very technical. Audits are on the less technical side. Audits serve to determine the accuracy and validity of a document against any potential changes since the last review, and usually include a review of policies, procedures, and records. Cybersecurity Assessments assist in identifying actual or potential vulnerabilities, whether new, evolving, or pre-existing, in a regulated entity's IT and OT systems, equipment, and procedures, so that the stakeholder can then address such vulnerabilities in a Cybersecurity Plan. Assessments also generally help ensure that policies and procedures are followed and verify that automated process are completed according to those policies and procedures (for example, whether patching was deployed accordingly). Penetration testing is a more technical test of the entity's cybersecurity to see what an outside cyberattack or inside threat could do. It may uncover gaps that an Assessment may not. The owner or operator of a U.S.-flagged vessel, facility, or OCS facility may choose, but is not required, to conduct the penetration testing in conjunction with a Cybersecurity Assessment and an audit.

R. Comments Related to Supply Chain (§ 101.650(f))

One commenter suggested that the Coast Guard not use the term ''breach''

when referring to incidents requiring reporting of a cyber incident by vendors to owners or operators. Other commenters indicated that any requirement for a vendor or service provide to notify a regulated entity of vulnerabilities or incidents was not practical.

The Coast Guard revised § 101.650(f)(2) to remove the references to ''breaches'' and ''incidents'' and replaced them with ''reportable cyber incidents,'' consistent with the decision to define and use that term in these regulations. It is our position that it is appropriate to require owners and operators of U.S.-flagged vessels, facilities, and OCS facilities to establish a process for receiving information from vendors and third parties to best address potential threats and vulnerabilities. The Coast Guard recognizes that, with any cybersecurity vulnerability or incident, it may not be discovered immediately, and in fact, it could be any length of time before it is discovered, whether by the regulated entity itself or by a vendor, third party, or other entity. Vendors and third parties often have a significant role in an entity's operations, and in cases when they impact a regulated entity's IT and OT systems and equipment, it is vital to address this as a potential source of a cybersecurity threat and vulnerability. The Coast Guard believes that ignoring the potential cybersecurity impact of vendors and third parties is to ignore an identified threat vector.

The Coast Guard does not feel it is an undue burden to require regulated entities to incorporate a requirement in contracts or other agreements with vendors and third-party services that when a partner identifies a cybersecurity vulnerability or incident, they must notify regulated entities that could likewise be adversely impacted. Without requiring a notification when a vendor or third-party service provider is aware of an issue but there is no mechanism for their service partners to be made aware, our regulated entities are potentially subject to cybersecurity vulnerabilities and incidents for which they might otherwise be able to take more timely action to prevent, mitigate, and respond.

One commenter asked if there would be a list of approved vendors for equipment, services, and assessments.

The Coast Guard does not plan to provide a list of ''approved'' vendors. Owners or operators may choose those vendors that best meet their individual needs, which may not be the same for every organization. One commenter requested additional clarity regarding what information or capabilities are required of vendors and third-party contractors when providing services to vessels, facilities, and OCS facilities.

The Coast Guard does not determine what requirements or criteria a specific vendor, supply-chain provider, or other third party must meet. This final rule requires that owners and operators consider cybersecurity capabilities. It is up to the owner or operator of a U.S.-flagged vessel, facility, or OCS facility to determine whether a provider meets the requirements that best support their operations and what they feel are the necessary capabilities to safely and securely support their business operations.

One commenter suggested that the Coast Guard provide broad oversight of vendors that provide critical services to broad spectrums of the maritime industry.

This final rule applies to owners or operators of U.S.-flagged vessels, facilities, and OCS facilities who will need to select vendors or third parties based on their own criteria and to ensure regulatory requirements are met. The commenter's suggestion is outside the scope of the rulemaking. The Coast Guard will not create or maintain a list of approved vendors.

One commenter stated that the requirement for owners or operators to analyze all networks to identify vulnerabilities to IT and OT systems and the risks posed by each digital asset was overly burdensome, particularly because of the words ''all'' and ''each.''

The Coast Guard revised § 101.650(e)(1)(i) to clarify that the owner or operator of a U.S.-flagged vessel, facility, or OCS facility must analyze all networks to identify vulnerabilities to critical IT and OT systems, consistent with our definition and use of the term *critical IT and OT systems* throughout this final rule.

S. Comments Related to Resilience (§ 101.650(g))

One commenter suggested we require backups of critical IT and OT systems ''periodically'' as opposed to ''frequently.''

The term ''frequently'' in § 101.650(g)(4) emphasizes a timely review and the need to keep up with the rapidly evolving threat landscape that cybersecurity poses to the MTS. It is up to the owner or operator of a U.S.-flagged vessel, facility, or OCS facility to interpret ''frequently,'' develop a schedule that is appropriate for their organization, and document it in their Cybersecurity Plan. For these reasons, we did not make a change in response to this comment.

One commenter suggested that requirements for backups should include testing of restore processes for operations-critical systems and data annually.

The requirements for backups in this final rule are sufficient as minimum baseline requirements. Owners or operators of U.S.-flagged vessels, facilities, and OCS facilities are welcome to take additional measures as appropriate to their systems, equipment, and operations. For this reason, we did not make a change in response to this comment.

T. Comments Related to Network Segmentation (§ 101.650(h))

One commenter noted that the network segmentation requirements are too prescriptive, while other commenters recommended a ''standards-based, technology-neutral approach.''

The Coast Guard notes that the network segmentation requirements in § 101.650(h) provide minimum baseline standards while allowing an owner or operator of a U.S.-flagged vessel, facility, or OCS facility flexibility in conducting the segmentation. Regulated entities may discuss specific concerns with the cognizant COTP, OCMI, or MSC, as appropriate. When deviations must occur or equivalency to other cybersecurity standards are proposed, the owner or operator may file a waiver or equivalency request according to the procedures in § 101.665.

U. Comments Related to Cybersecurity Compliance Dates (§ 101.655)

Some commenters recommended that the Coast Guard extend the implementation period and compliance dates for the cybersecurity requirements in this final rule beyond the 12 to 18 months that we proposed in the NPRM. For example, one commenter asked the Coast Guard to allow an implementation period of 36 to 48 months following the effective date of a final rule. The commenter believed that the proposed implementation period would be insufficient because cybersecurity programs require more time to mature. The commenter stated that 36 to 48 months would afford sufficient time for owners and operators to comply. Another commenter requested that a phased schedule be developed to allow time to implement the proposed regulations. Another commenter stated that six months is not a sufficient amount of time for a vessel operator to develop a Cybersecurity Plan and develop and implement cybersecurity training on that Cybersecurity Plan. The commenter recommended that the Coast

Guard extend the deadline for completion of cybersecurity training to the date 365 days after the effective date of the final rule.

The Coast Guard does not agree with the suggestion to delay the overall implementation by 36 to 48 months, but has implemented a phased implementation period for all regulated entities. Under this rule, the regulatory text will take effect, and reporting requirements under this rule will commence, 180 days after publication. Training requirements are due 180 days thereafter, followed by a 24-month implementation period for the rule's requirements to conduct a Cybersecurity Assessment, submit a Cybersecurity Plan, and designate a CySO. We believe that this approach, which results in a one-year lead time for cybersecurity training accounts for the need for action to address continually evolving cybersecurity threats and vulnerabilities, and provides regulated entities with adequate time to comply with this final rule and address its requirements.

We revised § 101.650(e)(1) to specify that owners and operators will need to conduct the Cybersecurity Assessment within 24 months of the effective date of this final rule. The Cybersecurity Plan must also be submitted to the Coast Guard for review and approval within 24 months of the effective date of this final rule, rather than during the second annual audit following the effective date, as stated in the NPRM. We revised § 101.655 to reflect this change. We note that in Section VII of this preamble, we are requesting public comment on a potential 2-to-5-year delay for the implementation periods for U.S.-flagged vessels.

The Coast Guard has declined to phase in implementation based on a specific organization's audit date, in order to ensure that owners and operators are generally on equal footing with respect to the amount of time in which to implement these requirements. Owners and operators who prefer to align their Cybersecurity Plans with existing plans may submit their required Plans at any time before the 24-month deadline. Additionally, owners and operators may contact the cognizant COTP or OCMI for facilities or OCS facilities or the MSC for U.S.-flagged vessels, or follow the procedures for requesting a waiver, equivalence determination, or temporary permission under § 101.665 if more time is needed to comply with the requirements.

V. Comments Related to Cybersecurity Compliance Documentation (§ 101.660)

Some commenters expressed concern about portions of the Cybersecurity Plan being submitted to the Coast Guard, with the information being at risk of inadvertent release. The commenters believed this could unnecessarily expose participating entities to cybersecurity threats, inconsistent outcomes, foreseeable delays, and additional effort.

The Coast Guard understands the concerns with submitting information that could put a U.S.-flagged vessel, facility, OCS facility, or organization at risk of cybersecurity threats. However, the Coast Guard regularly handles sensitive information and does not agree that submitting Cybersecurity Plans will result in inconsistent outcomes, foreseeable delays, additional effort, or risk. If an owner or operator has concerns about submitting a specific section or portion of their Cybersecurity Plan, they may discuss these concerns with the cognizant COTP, OCMI, or MSC, who will work with the regulated entity to determine whether certain information could be submitted directly or made available to the Coast Guard through other means. The Coast Guard will also continuously evaluate any such concerns and feedback and, if necessary, provide amplifying guidance to all regulated entities as well as Coast Guard personnel to ensure uniform application of the requirements. While the Coast Guard will always emphasize consistency, it is noted that each entity's Plan will be assessed individually, and differences may result based on the regulated entity's specific Plan and cybersecurity needs.

One commenter stated that they believed that cybersecurity records should not be maintained on board a vessel but would be best kept shoreside. Another commenter recommended vessels follow processes similar to the International Convention for Safety of Life at Sea, 1974 (SOLAS) rules, where an RO system is already in place.

These regulations do not prescribe where the records need to be kept but do require that they be made available to the Coast Guard upon request. Each owner or operator may determine where their records are best secured, according to 49 CFR part 1520, and how to ensure the records can be made readily available to the Coast Guard upon request. So long as it meets these requirements, an owner or operator may choose to use an existing system, where appropriate.

One commenter expressed concerns about the level of details included in documentation of penetration testing. They believe that this information should be made available to the Coast Guard only with reasonable cause.

The Coast Guard does not agree with the commenter's assertion that required documentation under these regulations should be made available only with reasonable cause. This final rule allows for certain documentation to be maintained by the owner or operator, and to be made available to the Coast Guard upon request, as required by § 101.660, so that Coast Guard can ensure compliance with the regulations. Regarding the requirements for penetration testing, we revised § 101.650(e)(2) in this final rule to specify that following the penetration test, a letter certifying that the test was conducted, as well as all identified vulnerabilities, must be included in the VSA, FSA, or OCS FSA, according to 33 CFR 104.305, 105.305, and 106.305.

One commenter requested that these regulations include a mechanism for industry to share information and best practices with each other.

In § 101.650(e)(3)(iii) for routine maintenance, we require the owner or operator to maintain a method to share threat and vulnerability information with external stakeholders. We do not prescribe the particular mechanism and, instead, leave that to the discretion of the individual owners and operators.

One commenter recommended that the completed Cybersecurity Assessment, along with approval from vessel's master, facility manager, and port master be retained for a specified duration, as well as any action plan designed to reduce the residual risk.

The Coast Guard provides minimum baseline recordkeeping requirements for regulated entities in these regulations. As such, we are not specifying a minimum duration for retention of completed Cybersecurity Assessments by the regulated entity. Owners or operators may impose additional recordkeeping requirements if they desire.

One commenter suggested that the Coast Guard require ''Management of Change'' in documentation requirements.

The Coast Guard believes that ''Management of Change'' documentation is an internal process issue for the owner or operator, and that it is unnecessary to address it in these regulations. Each owner or operator should make their own determination as to whether and how they address their Management of Change processes and procedures.

One commenter acknowledged the importance of maintaining cybersecurity

documentation as required by this regulation, and the need to have the documentation made available to the Coast Guard upon request. They requested additional information as to how the Coast Guard will conduct its reviews of the documentation.

The Coast Guard cannot provide specifics about its procedures in conducting cybersecurity documentation reviews based on this final rule, as each situation will be handled on a case-by-case basis, starting with the local COTP.

W. Comments Related to Noncompliance, Waivers, and Equivalents (§ 101.665)

One commenter noted that some systems on board their facilities are fully managed by the system vendor, and modifying these systems to meet new regulations might affect the warranty and support of these systems. They questioned who is ultimately the accountable party for vendor-managed systems.

Owners and operators are ultimately responsible for the systems and equipment at their U.S.-flagged vessel, facility, or OCS facility. They should work with vendors to identify what security measures are in place that could meet the requirements of these regulations, or how they will adjust ensure systems and equipment are secured. Additionally, we have added language for the procedures for noncompliance, waivers, and equivalents with regulatory compliance.

One commenter requested that the Coast Guard provide a form of credit, equivalence, or exemption to owners and operators who already have similar structures in place to comply with these regulations. Some commenters asked about the ability to request alternative compliance methods.

The Coast Guard does not provide a blanket credit, equivalence, or exemption based on a regulated entity's compliance with similar regulations or requirements. An owner or operator of a U.S.-flagged vessel, facility, or OCS facility may use those structures to inform their Cybersecurity Assessment, Cybersecurity Plan, and compliance with this final rule and, as needed, may follow the procedures in § 101.665 to request a waiver or equivalence determination. When compliance with similar or parallel regulations or requirements is the basis for an owner or operator to request a waiver, the Coast Guard notes that the owner or operator must still detail the portions of the Coast Guard's regulation they meet, and the specific measures taken under that similar or parallel compliance when requesting a waiver or equivalency. An owner or operator simply stating that they are complying with equivalent measures does not provide the Coast Guard with enough information to ensure regulatory compliance.

Some commenters requested the Coast Guard exempt facilities subject to the TSA's Pipeline Security Directives or otherwise clarify the applicability of facilities subject to both this final rule and the Security Directives.

TSA's Pipeline Security Directives are issued under separate authorities and with a separate purpose from these regulations. This final rule establishes baseline cybersecurity requirements for a broader segment of the maritime industry than the entities under the Pipeline Security Directives. Stakeholders subject to this final rule that believe there is an overlap between agencies' requirements, stakeholders may use their compliance measures for the other requirements (for example, TSA's Pipeline Security Directive) to inform their compliance with the Coast Guard's cybersecurity requirements in this final rule. The Coast Guard may seek documentation that demonstrates to the Coast Guard how they are implementing the other agencies' cybersecurity requirements. Stakeholders may also submit a request for waiver or equivalency according to § 101.665 of this final rule.

X. Comments Related to Costs

Several commenters stated that Coast Guard underestimated the supply chain costs related to monitoring and that additional employee(s) may be necessary.

The Coast Guard decided not to estimate costs for § 101.650(f)(1) and (f)(2) because owners and operators would need to consider cybersecurity capabilities only when selecting third-party vendors for IT and OT systems or services. In addition, we assumed most third-party providers have existing cybersecurity capabilities and already have systems in place to notify the owners and operators of U.S.-flagged vessels, facilities, and OCS facilities of any cybersecurity vulnerabilities, incidents, or breaches that take place. Therefore, we assume the commenter is primarily referring to our cost estimate for § 101.650(f)(3), which requires owners and operators to monitor and document all third-party remote connections to detect cyber incidents.

While we include costs for documenting remote third-party connections when developing the Cybersecurity Plan and costs for annual maintenance, we did not include a separate cost estimate for monitoring those connections but instead noted them as unquantifiable costs. The Coast Guard acknowledges that this could take additional time, mostly through reviewing logs for remote connections. The amount of time this could take is dependent on the size of the organization, making accurate estimates difficult. However, we disagree that most owners or operators will need to hire additional employees, since many affected entities are considered small (see our Final Regulatory Flexibility Analysis (FRFA)) and likely do not have complex networks that would require full-time active monitoring. Estimating costs associated with the hiring of a full-time employee would represent a severe overestimate for many of the small owner and operators affected by this final rule, and we have decided not to include those costs in the RA.

Several commenters stated that the Coast Guard underestimated the costs related to the required device security measures and that costs may ''balloon'' with each additional vessel, facility, or OCS facility owned or operated.

In our efforts to capture the costs related to device security measures outlined in § 101.650(b), the Coast Guard considered those measures as a part of the overall Cybersecurity Plan development and included any associated hour burden in the estimated hour burdens associated with Cybersecurity Plans. The Coast Guard acknowledges that these items take time, but we believe our hour-burden estimates reflect averages for owners and operators of U.S.-flagged vessels, facilities, and OCS facilities of various types and sizes in the affected population, based on information and data from several different sources that we outlined in the *Cybersecurity Measure Costs* section of this RA.

Regarding the commenter's suggestion that the cost may balloon with each additional U.S.-flagged vessel, facility, or OCS facility, we estimated Cybersecurity Plan costs for each facility and OCS facility rather than for the owner or operator of a facility or OCS facility in the affected population, as explained in the RA. However, for owners and operators of U.S.-flagged vessels, we assumed that a CySO will not need to expend a great deal of additional time developing a Cybersecurity Plan for each U.S.-flagged vessel owned by a U.S.-flagged vessel company. We believe it is more likely that the CySO will create a master Cybersecurity Plan for all the U.S.-flagged vessels in the fleet, and then tailor each Plan according to a specific U.S.-flagged vessel, as necessary.

Because a large portion of the provisions required under this final rule will impact company-wide policies regarding network, account, and data security practices, as well as company-wide cybersecurity training, reporting procedures, and testing, we do not believe there will be much variation in how these provisions are implemented between specific U.S.-flagged vessels owned by the same owner or operator.

Similarly, we assume that much of the IT and OT technology on board the affected U.S.-flagged vessels will be consistent across vessels in the same fleet, making estimates that balloon with each additional vessel owned prone to overestimation. As a result, the Coast Guard decided to maintain its current cost estimates for the device security measures outlined in § 101.650(b) as part of the Cybersecurity Plan development and maintenance, barring the availability of any specific data from the affected population.

Several commenters stated that the costs related to penetration testing were grossly underestimated. Another commenter who represents operators of offshore supply vessels (OSVs) stated that our estimates failed to consider the costs associated with the additional internet protocol (IP) addresses [59] connecting to networks from industrial personnel, employees with multiple devices, and OT systems.

To estimate costs related to penetration testing, the Coast Guard used estimates provided to us by NMSAC members and Coast Guard SMEs with experience contracting for and performing penetration tests. We also relied on the Jones Walker survey,[60] which is a publicly available survey of the portion of facilities that currently conduct penetration testing. Our goal was to use an average estimate based on real world data. We also attempted to include some variability to capture increased costs for larger sized organizations by basing a portion of the cost on the number of IP addresses or employees in an organization. Though we did not receive additional estimates or data on real costs incurred by members of the affected population via public comments, we have adjusted our cost estimate for penetration testing. We base our adjustments on suggestions from public commenters who stated that we underestimated costs and failed to account for all IP addresses along with additional information collected from SMEs, who have experience performing penetration tests. With this additional data, we doubled our estimate of the initial penetration testing cost from $5,000 in the NPRM to $10,000 for the final rule, the cost per IP address from $50 in the NPRM to $100 for the final rule, and the number of IP addresses per organization, which is now based on the number of employees in an organization multiplied by 2. Please see the *Penetration Testing* section of the RA to see the impact of these changes on our cost estimates in the final rule for U.S.-flagged vessels, facilities, and OCS facilities.

One commenter stated that Coast Guard underestimated the cost of routine system maintenance, and that additional employee(s) may be necessary to perform the actions.

Concerning cost estimates related to routine system maintenance, the costs associated with § 101.650(e)(3)(i) through (v) are included in the costs for conducting a Cybersecurity Assessment and developing a Cybersecurity Plan. For § 101.650(e)(3)(vi), we included a separate cost for the annual subscription cost of a vulnerability scanner. The Coast Guard acknowledges that the patching in paragraph (e)(3)(i), monitoring for submitted vulnerabilities in paragraph (e)(3)(ii) and scanning for vulnerabilities in paragraph (e)(3)(vi) could require additional time to monitor in some circumstances, mainly related to OT systems. However, the Coast Guard disagrees that this is true for most of the affected population. Patching for IT systems can be set to automatically update and download without much risk, and vulnerability scans are typically background processes that only need monitoring in the event of an alert or incident. Patching for OT systems may be more complicated to allow for automatic updates, but the Coast Guard lacks data on how prevalent these systems are in the affected population, and how much time this could take. The estimates we used for the monetized portion of this provision in § 101.650(e)(3)(vi) are based on information from CGCYBER and NMSAC, as we outlined in the *Routine System Maintenance for Risk Management* section of this RA. As such, we do not anticipate the need for these items to require a full-time employee for most owners or operators in the affected population, and we are unable to adjust the cost estimates without more specific data provided to us through public comments.

Several commenters stated that the costs for drills and exercises were underestimated. Some commenters stated that the costs for drills were underestimated because the cybersecurity drills could not be rolled into existing drills. Further, multiple commenters stated that the CySO is not the only individual that would be involved, and so costs for other personnel should be included in the calculations. Another commenter stated that our estimates in the NPRM failed to take into account the costs of training personnel to supervise drills, documenting the conduct of drills, identifying lessons learned, and disseminating information to employees. Another commenter encouraged the Coast Guard to consult vessel operators to develop a more accurate understanding of the time burden and costs associated with drill development. Other commenters also requested that the Coast Guard reduce the frequency of drills, with some requesting a general frequency reduction, others requesting annual or semi-annual drill requirements, and others requesting a schedule of requirements based on the cybersecurity risk faced by the affected U.S.-flagged vessels and facilities.

Another comment, from trade associations representing nearly 750 MTSA regulated facilities, stated that they disagreed with the Coast Guard cybersecurity exercise estimates that did not require additional time from participants. The commenters disagreed that these new cyber exercises could be easily combined with existing security exercises because they are similar in scope and size. According to the commenter, to combine both would require the exercise to test more subject matter, and result in longer exercises requiring more participant time and preparation.

The Coast Guard agrees with suggestions from commenters that costs have been underestimated for drills and exercises if they are not combined with existing drills and exercises. As mentioned by multiple commenters, requiring drills and exercises at the same interval as physical security drills and exercises already required in 33 CFR parts 104, 105, and 106 facilitates the combination of cybersecurity and physical security drills, and this is still allowed in the final rule. However, we accept the points raised, which were shared by several other commenters, that cybersecurity drills and exercises

[59] An IP address is a unique numerical identifier for each device or network that connects to the internet.

[60] A survey conducted by Jones Walker, a limited liability partnership (Jones Walker LLP). The title of the survey is ''Ports and Terminals Cybersecurity Survey,'' which they conducted in 2022. This survey helped the Coast Guard to gain an understanding of the cybersecurity measures that are currently in place at facilities and OCS facilities in the United States. We cite relevant data from the survey when calculating industry costs throughout the RA. Readers can access the survey at *https://www.joneswalker.com/en/insights/2022-Jones-Walker-LLP-Ports-and-Terminals-Cybersecurity-Survey-Report.html,* accessed August 16, 2024.

are not always easily combined with physical security drills and exercises given the scope and material being tested. The Coast Guard acknowledges that employees beyond the CySO will need to participate in the drills and exercises in instances where they are not combined. For the purposes of our RA of this final rule, we now assume that no owners or operators will combine their cybersecurity drills or exercises with existing drills or exercises, and that a certain portion of employees at the organization will participate in the new drills and exercises.

Based on new information from Coast Guard SMEs in the Office of Port and Facility Compliance (CG–FAC) and the Atlantic Area (LANTAREA), we have adjusted our cost estimates to reflect 8 hours for drill development and 4 hours for drill participation for participating employees. Because our estimated costs are now higher due to the increased hour burden estimate per drill, and based on public commenter suggestions, we have reduced the frequency of the cybersecurity drill requirement from quarterly to at least 2 drills every 12 months, to relieve the burden on owners and operators. Upon review and consideration of comments, the Coast Guard recognizes that regulated entities can assess their cybersecurity risks and vulnerabilities and the status of their cybersecurity measures through 2 drills every 12 months instead of more frequent occurrences. While there are benefits of a more robust drill schedule, we believe that this reduction in the number of drills lowers costs and increases marginal benefits by allowing affected owners and operators to use resources that would have been directed to those drills to improve remaining drills or implement cybersecurity measures that can help reduce the risk of a cyber incident in other ways. Further, by having fewer drills to develop and conduct, we believe the remaining drills will be less superficial, which one commenter remarked was a concern with previously proposed frequency cybersecurity drills. However, the Coast Guard believes that anything less frequent than two drills per year could lead to a decrease in focus on the issues that a drill would emphasize. This is especially true with regard to cybersecurity, as risk and vulnerabilities can change rapidly over the course of a year.

In addition, we have adjusted our cost estimates for exercises to reflect 20 hours for exercise development and 4 hours for exercise participation for participating employees. According to § 101.635(a), drills and exercises must test the proficiency of the U.S.-flagged vessel, facility, and OCS facility personnel in assigned cybersecurity duties. Because we do not have data on which portion of a given owner or operator's employees will have cybersecurity responsibilities, we use the estimated 33 percent ''shoreside'' share of employees for vessel owners and operators, and the same percentage of employees for facility and OCS facility owners and operators, to estimate the costs associated with drill and exercise participation. We feel this is in line with the requirements of the regulatory text and suggestions from a commenter who stated that ''onboard personnel have little to no involvement in cyber specific drills.'' Please see the *Drills and Exercises* sections of the RA to see the impact of these changes on our cost estimates for U.S.-flagged vessels, facilities, and OCS facilities.

Several commenters stated the Coast Guard underestimated costs associated with network segmentation.

The Coast Guard acknowledges a challenge in estimating costs for network segmentation. As mentioned in this RA, network segmentation can be particularly difficult in the MTS, because of the age of infrastructure in the affected population of U.S.-flagged vessels, facilities, and OCS facilities. The older the infrastructure, the more challenging network segmentation may be. Given this, and the amount of diversity regarding the state of infrastructure across the various groups in our affected population, we are not able to fully estimate the compliance costs associated with this provision. We also did not receive any additional information or data from commenters that could be used to help us improve our estimate of the potential costs for network segmentation, which represented one of the largest sources of uncertainty in the RA. Therefore, we retained the original estimates from the NPRM for this provision.

In accordance with OMB Circular A–4, uncertainty analysis is a tool that can be used by Federal agencies to present uncertainty associated with the estimation of costs, sources of data, and more, in an RA. In table 42 of the RA, we list uncertainties related to the economic impact of certain provisions of this final rule, including the state of infrastructure for network segmentation. In some cases, we list a range of potential cost estimates, if a point estimate was not available for use in the RA. For other provisions of this final rule, where we received additional data or information from commenters, we used this information and updated our estimate of costs and burden hours, if applicable, in the RA.

One commenter stated that the affected population counts used in the NPRM for U.S.-flagged vessels regulated under subchapters H and K were inaccurate and provided updated numbers. According to the comment, the affected populations listed in table 6 of the NPRM for vessels inspected under 46 CFR subchapter H (34 vessels) and subchapter K (379 vessels) are too low. The commenter cited the USCG—PVA Quality Partnership Annual Report for the years 2021–2023, which indicated that there are 136 vessels inspected under 46 CFR subchapter H and 428 vessels inspected under subchapter K that would be subject to the cybersecurity requirements.

The Coast Guard thanks the commenter for noting the discrepancy in the population for U.S.-flagged vessels under subchapters H and K. We inadvertently removed certain public vessels that are included under the applicability of this final rule, or in ''Applicability'' in 33 CFR 101.605, which resulted in the error. Therefore, we now estimate the revised population for U.S.-flagged vessels under subchapters H and K to be approximately 131 and 430, respectively, based on our updated population data we obtained from our Marine Information for Safety and Law Enforcement (MISLE) database. These figures are only slightly different from those highlighted in the USCG–PVA Quality Partnership Annual Report for the years 2021–2023, which we assume is the result of small year-to-year changes in vessel populations. As a part of this update, we also updated all our other affected population data. Readers can view the section, *Affected Population,* and table 6 in the RA.

Several commenters stated that a there is a substantial additional cost to contract cybersecurity services or hire additional staff based on the estimates provided in the RA.

The Coast Guard thanks the commenter for raising the concern. However, in § 101.625 of this final rule, we do not require any owner or operator of a U.S.-flagged vessel, facility, or OCS facility to hire a dedicated CySO to perform the duties stated in this part or in § 101.630 for the Cybersecurity Plan. In the *Cybersecurity Plan Costs* section of the RA, we state that a CySO can be an existing person within a given organization who may perform the duties and assume the responsibilities of a CySO provided that this person can maintain their current responsibilities within the organization. Therefore, an organization has the flexibility to

determine if an existing employee such as a VSO, FSO, or CSO can perform the functions of a CySO. Despite this, we acknowledge that some owners or operators may need to hire a CySO if no existing employees are able take on these duties. However, rather than estimating the hours associated with bringing on a full-time employee, the hour burdens associated with CySO duties have been quantified in various sections of the cost analysis. This can capture the costs associated with contracting for the individual CySO duties or assigning them to a new or existing employee.

One commenter stated that we miscategorized the role of the CySO under the ''Information Security Analyst'' category, rather than using a CISO. The commenter also suggested that it is unlikely a single individual could perform all the required functions, indicating an underestimation of costs and management overhead. The commenter also noted that U.S. maritime academies currently lack curriculum for producing maritime cybersecurity professionals, making it difficult to fill CySO positions with qualified personnel. As a result, the commenter urged the Coast Guard to engage with public and private maritime academies to address a lack of qualified personnel.

The Coast Guard disagrees with the assertion that we have miscategorized the CySO role. A CISO, as the commenter suggests, is typically a C-suite or executive-level management position. While it is acceptable for affected entities to hire or designate an existing CISO as the CySO to comply with this final rule, it is not required. We believe that the roles and responsibilities assigned to the CySO role are of a smaller scope and scale than what would typically be expected of a C-suite level CISO, and that estimates in line with typical CISO wages would greatly overestimate the costs of this final rule for owners and operators of smaller U.S.-flagged vessels, facilities, and OCS facilities.

We believe the same is true for the claim that multiple individuals would need to take on the CySO duties. Assuming multiple personnel would result in overestimates for most small entities with less comprehensive cybersecurity programs and risks. Therefore, we used the estimates that we believe best reflect the average burden for the affected entities.

In order to have as large a population of CySOs as possible, graduation from a maritime academy, or having a Merchant Mariner Credential (MMC), is not required. Cybersecurity systems in the maritime industry are not so unique from other industries as to require specialization in MTSs. An MMC would be required only if the CySO's duties, as required by the company and its Cybersecurity Plan, require additional duties in a location, such as on a vessel, would otherwise require an MMC. CySOs, like VSOs, FSOs, or OCS FSOs, require only general knowledge of their company's maritime operations. The Coast Guard has no plans to create a CySO MMC. If maritime academies wish to develop CySO training programs so a graduate earns an MMC along with CySO credentials, they are encouraged to develop such programs.

One commenter stated that the cost for the commercial shipping sector is substantial, especially for smaller vessel owners and operators in an economic environment that has tight margins and substantial risk.

The Coast Guard acknowledges that this final rule will create significant costs for affected small entities, based on our FRFA, but it will also create significant benefits for the affected entities and the maritime industry as a whole. In several areas of this final rule, we referenced CEA's 2018 report (see the III. Basis and Purpose and the *Benefits* sections of the preamble and RA, respectively) on the state of cybersecurity in the marketplace and how firms viewed cybersecurity or behaved when faced with cybersecurity challenges. In support of this final rule, we provided excerpts from this report, which in part state that firms ''[r]ationally underinvest in cybersecurity relative to the socially optimal level'' and ''[i]t often falls to regulators to devise a series of penalties and incentives to increase the level of investment to the desired level.'' [61] With this understanding, we formulated minimum cybersecurity requirements that may assist firms and regulated entities with their cybersecurity posture in an effort to reduce the likelihood, vulnerability, and risk of a cyber incident. If a cyber incident occurs, the Coast Guard believes that the minimum cybersecurity requirements will mitigate its impact on firms, and regulated entities, and the U.S. economy, and create the intended benefits for the regulated entities.

In table 51 of the RA, we list the potential benefits of this final rule, and ones specifically related to cybersecurity measures for firms where we state, ''A cyber-resilient organization can maintain or quickly resume operations in the event of a cyber-attack, minimizing downtime and ensuring that essential services remain available to customers and stakeholders. This reduces the potential for costly disruptions to maritime operations,'' and reduces the downstream impacts to ''economic participants.'' Generally, firms with strong cybersecurity measures will have benefits that include improved preparedness, reduced vulnerability, improved data protection, reduced risk of reportable cyber incidents, improved training, improved incident response, and enhanced trust with economic partners, among many others we listed.

In our consideration of public comments in the FRFA, we state that we will provide assistance to small entities through reducing the required frequency of cybersecurity drills from quarterly to twice annually, extending the implementation period and compliance dates for the Cybersecurity Assessment and Cybersecurity Plan in this final rule to 24 months rather than the 12 to 18 months that we proposed in the NPRM. By using the same implementation period for each group of regulated entities rather than basing this on the organization's audit date, the relevant owners and operators will have the same amount of time in which to implement these requirements, and in many cases will have additional time to come into compliance when compared to the NPRM. Please see our Small Entity Compliance Guide, which is available in the docket, for additional help regarding how small entities can best comply with this final rule.

One commenter stated that the time requirement for updates under § 101.630 may be unrealistic due to vessels that are operating internationally with limited access to materials or equipment.

The Coast Guard understands that each U.S.-flagged vessel, facility, and OCS facility operates facing different cybersecurity risks. Owners and operators may seek an equivalency or waiver by following the procedures in § 101.665. This flexibility is intended to accommodate varying levels of risk and operational needs across different vessels, facilities, and OCS facilities. We revised § 101.630(e)(1)(ii) to clarify that the owner and operator will have at least 60 days to submit its proposed amendments. Further, we have revised § 101.655 to reflect that the Cybersecurity Plan must be submitted to the Coast Guard for review and approval within 24 months of the effective date of this final rule, rather than during the second annual audit following the effective date. In addition, we revised § 101.650(e)(1) to specify that owners

[61] Economic Report of the President *supra* note 2 at 323–24.

and operators will need to conduct the cyber assessment within 24 months of the effective date of this final rule, an increase from 12 months proposed in the NPRM. All these revisions should give owners and operators more time and flexibility to comply with this final rule.

One commenter stated that the Coast Guard failed to delineate costs between OCS and waterfront facilities in the RA, leading to potentially inaccurate cost estimates for the 33 OCS facilities operated by 9 different entities. In addition, the commenter stated that the Coast Guard failed to acknowledge the traditional costs for inspection of OCS facilities, including the commercial helicopter contract used to reach the OCS facility platforms.

The Coast Guard acknowledges that OCS facilities were grouped in with the waterfront facilities in the RA in the NPRM. The Coast Guard believes that the cost estimates for compliance with this final rule are similar across waterfront facilities and OCS facilities. Nonetheless, for greater clarity, in the RA for this final rule we highlight the specific OCS-related cost estimates for OCS facilities as a subset of the overall facility cost estimates, at the end of each section of the analysis.

Regarding the inspection costs for OCS facilities, we included cost estimates for the marginal increase in onsite inspection time for the population of facilities and OCS facilities. Coast Guard SMEs within CG–FAC conferred with local inspection offices to estimate the expected marginal increase in facility and OCS facility inspection time. Local facility inspectors estimate that the additional cybersecurity provisions from this final rule will add an average of 1 hour to an onsite inspection. We believe this is possible under the existing framework for facility and OCS facility inspections.

The Coast Guard also received an internal comment from Coast Guard District 9 that stated that we used the incorrect vessel inspector rank and wage in our analysis of Government costs.

In the NPRM, the Coast Guard assumed that vessel inspections are performed by an E–5 rank Petty Officer Second Class with a mean hourly wage rate of $58. We now assume that vessel inspections are performed by an O–2 rank Lieutenant Junior Grade with a mean hourly wage rate of $72 based on the commenter's suggestion. Readers can view the *Government Costs* section of the RA for more detail on the way this impacts the cost estimates of this final rule.

VI. Discussion of the Final Rule

This final rule adds minimum cybersecurity requirements to 33 CFR part 101 in new subpart F. Subpart F—Cybersecurity consists of the following sections:

- 101.600 Purpose
- 101.605 Applicability
- 101.610 Federalism
- 101.615 Definitions
- 101.620 Owner or Operator
- 101.625 Cybersecurity Officer
- 101.630 Cybersecurity Plan
- 101.635 Drills and Exercises
- 101.640 Records and Documentation
- 101.645 Communications
- 101.650 Cybersecurity Measures
- 101.655 Cybersecurity Compliance Dates
- 101.660 Cybersecurity Compliance Documentation
- 101.665 Noncompliance, Waivers, and Equivalents
- 101.670 Severability

A section-by-section explanation of the additions and changes follows. In addition to the additions and changes described there, we also made revisions to refer to ''U.S.-flagged vessels, facilities, and OCS facilities'' throughout for consistency and clarity related to the applicability of this final rule, as well as making other minor editorial changes.

Section 101.600—Purpose

This section states that the purpose of 33 CFR part 101, subpart F, is to set minimum cybersecurity requirements for U.S.-flagged vessels, facilities, and OCS facilities to safeguard and ensure the security and resilience of the MTS. The requirements will help safeguard the MTS from the evolving risks of cyber threats and align with the DHS goal of protecting critical U.S. infrastructure.

Section 101.605—Applicability

This section requires that subpart F apply to the owners and operators of U.S.-flagged vessels, facilities, and OCS facilities required to have a security plan under parts 104, 105, and 106. A list of the vessels subject to subpart F is as follows:

- U.S. mobile offshore drilling units (MODUs), cargo vessels, or passenger vessels subject to SOLAS, Chapter XI–1 or Chapter XI–2;
- Self-propelled U.S. cargo vessels greater than 100 gross register tons subject to 46 CFR chapter I, subchapter I, except commercial fishing vessels inspected under 46 CFR part 105;
- U.S. vessels subject to 46 CFR chapter I, subchapter L;
- U.S. passenger vessels subject to 46 CFR chapter I, subchapter H;
- U.S. passenger vessels certificated to carry more than 150 passengers;
- U.S. passenger vessels carrying more than 12 passengers, including at least 1 passenger-for-hire, that are engaged on an international voyage;
- U.S. barges subject to 46 CFR chapter I, subchapter D or O;
- U.S. barges carrying certain dangerous cargo in bulk or barges that are subject to 46 CFR chapter I, subchapter I, that are engaged on an international voyage;
- U.S. tankships subject to 46 CFR chapter I, subchapter D or O; and
- U.S. towing vessels greater than 8 meters (26 feet) in registered length inspected under 46 CFR subchapter M, that are engaged in towing a barge or barges and subject to 33 CFR part 104, except a towing vessel that—
  - Temporarily assists another vessel engaged in towing a barge or barges subject to 33 CFR part 104;
  - Shifts a barge or barges subject to this part at a facility or within a fleeting facility;
  - Assists sections of a tow through a lock; or
  - Provides emergency assistance.

This rule does not apply to any foreign-flagged vessels subject to 33 CFR part 104. Cybersecurity regulations for foreign-flagged vessels under domestic law may create unintended consequences with the ongoing and future efforts to address maritime cybersecurity in the international arena and could be contrary to international law as U.S. regulatory authority over foreign-flagged vessels is limited. The traditional means to regulate vessels on the international-level is through diplomatic engagement at the IMO and through various treaty-based mechanisms. The IMO addressed cybersecurity measures for foreign-flagged vessels through MSC–FAL.1/Circ.3 and MSC Resolution 428(98). Therefore, based on IMO guidelines and recommendations, an SMS approved under the ISM Code should address foreign-flagged vessel cybersecurity and provide guidance to other flag administrations on how to regulate vessels subject to their jurisdiction.

In addition, the Coast Guard verifies how CRM is incorporated into a vessel's SMS via the process described in the updated October 11, 2023, CVC–WI–027(3), *Vessel Cyber Risk Management Work Instruction*.[62] This process will continue to be the Coast Guard's primary means of ensuring cybersecurity readiness on foreign-flagged vessels, which are exempt from this final rule. This includes working

[62] See footnote 13.

with their flag administrations to address possible deficiencies in cybersecurity.

Section 101.610—Federalism

We discuss the purpose and contents of this section in section VIII.E, *Federalism,* in this preamble.

Section 101.615—Definitions

This section lists new cybersecurity related definitions the Coast Guard has included in 33 CFR part 101, in addition to the maritime security definitions already in 33 CFR 101.105. These definitions explain concepts relevant to cybersecurity and will help eliminate uncertainty in referencing and using these terms in 33 CFR part 101.

The Coast Guard consulted several guides and authoritative sources for these new definitions. These sources include Executive Order 14028, 6 U.S.C. 148, and the Act.[63]

Another informal source for cybersecurity information is the CISA's National Initiative for Cybersecurity Careers and Studies website,[64] which is an online Federal resource for cybersecurity training and education. The Coast Guard also reviewed NIST's CSRC.[65] NIST maintains the CSRC to educate the public on computer security, cybersecurity, information security, and privacy. CISA and NIST are regarded as authoritative sources of information in areas related to technology and cybersecurity.

In addition, the Coast Guard has defined the term *cybersecurity risk* consistent with the definition at section 2200 of the Homeland Security Act of 2002 (Pub. L. 107–296), as amended. The Coast Guard notes, however, that it does not believe paragraph (7)(B) of section 2200, which contains an exception for actions that solely involve a ''violation of a consumer term of service or a consumer licensing agreement'' is relevant to the U.S.-flagged vessels, facilities, and OCS facilities, that are the subject of this rulemaking. Therefore, we expect that exception will not be applicable to the regulated entities of this final rule. Nevertheless, for consistency with the definition found in the Homeland Security Act of 2002 and the sake of completeness, we have included the complete definition in this rule. *See also* 46 U.S.C. 70101(2); Public Law 115–254, sec. 1805(b)(2).

The Coast Guard has included definitions for *Cyber incident, Cyber risk, Cyber threat,* and *Cybersecurity vulnerability. Cyber incident* is related to *information systems* and is inclusive of both *Information Technology or IT* and *Operational Technology or OT.* The Coast Guard also defines new terms that are applicable to maritime cybersecurity, including *Critical Information Technology (IT) or Operational Technology (OT) systems, Cyber Incident Response Plan, Cybersecurity Officer or CySO,* and *Cybersecurity Plan.* A CySO, for example, is the person(s) responsible for developing, implementing, and maintaining cybersecurity portions of the VSP, FSP, or OCS FSP. The CySO also acts as a liaison with the COTP and CSOs, VSOs, and FSOs.

The Coast Guard revised some definitions to clarify their meaning based on public comments we received and added two definitions. These revisions are discussed in more detail in section V. Discussion of Comments and Changes, in the portion on *Comments Related to Definitions* in this preamble.

We revised *backup* to remove the reference to a secondary location and instead specify that the files and databases should be stored separately for preservation and recovery.

We revised *Cybersecurity Officer, or CySO* to add that owner or operator may designate an alternate CySO to assist with the duties and responsibilities of the CySO, including during periods when the CySO is on leave, unavailable, or unable to perform their duties.

We revised *Cybersecurity Plan* to add that a separate document may be submitted, in addition the originally proposed options to include the Cybersecurity Plan in the VSP, FSP, OCS FSP or the Annex to one of those plans.

We added a new definition for *log,* which means a record of the events occurring within an organization's systems and networks.

We revised *multifactor authentication* to mean more than one distinct authentication factor for successful authentication. In addition, we clarified that multifactor authentication can be performed using a multifactor authenticator or by a combination of authenticators that provide different factors. In addition, the three authentication factors are (1) something you know, (2) something you have, and (3) something you are.

Based on support from public comments, we added a definition for *reportable cyber incident.* The definition of a *reportable cyber incident* is based on the model definition in DHS's CIRC-informed Report to Congress of September 19, 2023.[66] The term *reportable cyber incident* replaces *cyber incident* in §§ 101.620(b)(7) and 101.650(g)(1). Specifically, a reportable cyber incident means an incident that leads to, or, if still under investigation, can reasonably lead to any of the following:

(1) Substantial loss of confidentiality, integrity, or availability of a covered information system, network, or OT system;

(2) Disruption or significant adverse impact on the reporting entity's ability to engage in business operations or deliver goods or services, including those that have a potential for significant impact on public health or safety or may cause serious injury or death;

(3) Disclosure or unauthorized access directly or indirectly of non-public personal information of a significant number of individuals;

(4) Other potential operational disruption to critical infrastructure systems or assets; or

(5) Incidents that otherwise may lead to a TSI as defined in 33 CFR 101.105.

The Coast Guard's existing regulations in 33 CFR part 101 require regulated entities to report suspicious activity that may result in a TSI, breaches of security, and TSIs involving computer systems and networks. *See* 33 CFR 101.305. The purpose of defining a reportable cyber incident in this final rule is to establish a threshold between the cyber incidents that have to be reported and the ones that do not.

Section 101.620—Owner or Operator

This section requires each owner and operator of a U.S.-flagged vessel, facility, or OCS facility to assign qualified personnel to develop a Cybersecurity Plan and ensure that the Cybersecurity Plan incorporates detailed preparation, prevention, and response activities for cybersecurity threats and vulnerabilities.

Additional responsibilities of owners and operators of U.S.-flagged vessels, facilities, and OCS facilities include:

- Designating a CySO, in writing, by name and title, and identifying how the CySO can be contacted at any time. A CySO must be accessible to the Coast Guard 24 hours a day, 7 days a week (see § 101.620(b)(3));

[63] Public Law 117–263, Sec. 11224(a)(1) (2022).

[64] National Initiative for Cybersecurity Careers and Studies, *Explore Terms: A Glossary of Common Cybersecurity Words and Phrases, https://niccs.cisa.gov/cybersecurity-career-resources/glossary,* accessed August 13, 2024.

[65] CSRC, *https://csrc.nist.gov/glossary,* accessed September 15, 2023.

[66] *See* DHS Office of Strategy, Policy, and Plans, Harmonization of Cyber Incident Reporting to the Federal Government (Sept. 19, 2023), *https://www.dhs.gov/publication/harmonization-cyber-incident-reporting-federal-government,* accessed August 13, 2024.

• Ensuring that a Cybersecurity Assessment is conducted annually or sooner, under the circumstances described in this final rule (see §§ 101.620(b)(4) and 101.650(e)(1));

• Ensuring that a Cybersecurity Plan is developed and submitted for Coast Guard approval, either as a separate document or as an addition to an existing FSP, VSP, or OCS FSP (see §§ 101.620(b)(1) and 101.630(a));

• Operating the U.S.-flagged vessel, facility, or OCS facility in accordance with the approved Cybersecurity Plan (see § 101.620(b)(5)); and

Reporting all reportable cyber incidents, including TSIs, to the NRC and relevant authorities according to the Cybersecurity Plan (see §§ 101.305 and 101.620(b)(7)). We revised this paragraph in this final rule to specify that *reportable cyber incidents* need to be reported, not all *cyber incidents.* We also removed the reference to a telephone number to allow flexibility in the way reports are made to the NRC.

Section 101.625—Cybersecurity Officer

The CySO may be a full-time, collateral, or contracted position. The same person may serve as the CySO for more than one U.S.-flagged vessel, facility, or OCS facility. The CySO needs to have general knowledge of a range of issues relating to cybersecurity, such as cybersecurity administration, relevant laws and regulations, current threats and trends, risk assessments, inspections, control procedures, and procedures for conducting exercises and drills. When considering assignment of the CySO role to the existing security officer, the owner or operator should consider the depth and scope of these new responsibilities in addition to existing security duties.

The most important duties a CySO performs include ensuring development, implementation, and finalization of a Cybersecurity Plan; auditing and updating the Plan; ensuring the Cyber Incident Response Plan is executed and exercised; ensuring adequate training of personnel; and ensuring that the U.S.-flagged vessel, facility, or OCS facility is operating in accordance with the Plan and in continuous compliance with this subpart. The CySO has the authority to assign cybersecurity duties to other personnel; however, the CySO remains responsible for the performance of these duties. Depending on operational conditions and cybersecurity risks, the CySO, owner, or operator may develop the required Cyber Incident Response Plan as a separate document or as an addition to the Cybersecurity Plan.

We revised § 101.625(a) to add that the CySO may serve in other roles or positions within the owner or operator's organization. In § 101.625(d)(6), we revised the text to clarify that cybersecurity inspections may be conducted in conjunction with any scheduled U.S.-flagged vessel, facility or OCS facility inspections. In § 101.625(d)(8), to allow greater flexibility for the CySO we changed the word ''ensure'' to ''enhance'' cybersecurity awareness and vigilance of personnel and removed ''through briefings, drills, exercises, and training.'' In § 101.625(d)(10), which requires the CySO to report and report information to the owner and operator, we replaced ''breaches of security, suspicious activity that may result in TSIs, TSIs, and cyber incidents'' with *reportable cyber incidents.* In § 101.625(d)(13), which covers submission of Cybersecurity Plans for approval, we removed reference to ''substantive changes (or major amendments)'' and instead only refer to amendments. In § 101.625(e) we added that a CySO may obtain the necessary qualifications for the position through education.

Section 101.630—Cybersecurity Plan

This section contains minimum requirements for the Cybersecurity Plan. The Cybersecurity Plan must be maintained consistent with the recordkeeping requirements in 33 CFR 104.235 for vessels, 33 CFR 105.225 for facilities, and 33 CFR 106.230 for OCS facilities. *See* § 101.640. A Cybersecurity Plan incorporates the results of a Cybersecurity Assessment and considers the recommended measures appropriate for the U.S.-flagged vessel, facility, or OCS facility. A Cybersecurity Plan can be combined with or complement an existing FSP, VSP, or OCS FSP. We revised § 101.630(a) to add that a separate submission may be used in addition to the originally proposed options to include the Cybersecurity Plan in the VSP, FSP, OCS FSP or the Annex to one of those Plans.

A Cybersecurity Plan can be kept in an electronic format if it can be protected from being deleted, destroyed, overwritten, accessed, or disclosed without authorization.

The format of a Cybersecurity Plan required under this final rule includes the following individual sections:

(1) Cybersecurity organization and identity of the CySO (see § 101.625 Cybersecurity Officer);

(2) Personnel training (see § 101.625(d)(8), (9) Cybersecurity Officer);

(3) Drills and exercises (see § 101.635 Drills and Exercises);

(4) Records and documentation (see § 101.640 Records and Documentation);

(5) Communications (see § 101.645 Communications);

(6) Cybersecurity systems and equipment with associated maintenance; (see § 101.650(e)(3) Cybersecurity Measures: Routine Maintenance);

(7) Cybersecurity measures for access control, including computer, IT, and OT areas (see § 101.650(a) Cybersecurity Measures: Account Measures);

(8) Physical security controls for IT and OT systems (see § 101.650(i) Cybersecurity Measures: Physical Security);

(9) Cybersecurity measures for monitoring (see § 101.650(f) Cybersecurity Measures: Supply Chain; (h) Network Segmentation; (i) Physical Security);

(10) Audits and amendments to the Cybersecurity Plan (see § 101.630(f) Cybersecurity Plan: Audits);

(11) Cybersecurity audit and inspection reports to include documentation of resolution or mitigation of all identified vulnerabilities (see § 101.650(e) Cybersecurity Measures: Risk Management);

(12) Documentation of all identified unresolved vulnerabilities to include those that are intentionally unresolved due to risk acceptance by the owner or operator (see § 101.650(e) Cybersecurity Measures: Risk Management);

(13) Cyber incident reporting procedures in accordance with part 101 of this subchapter (see § 101.650(g) Cybersecurity Measures: Resilience); and

(14) Cybersecurity Assessment (see § 101.650(e) Cybersecurity Measures: Risk Management).

Depending on operational conditions and cybersecurity risks, the owner or operator may develop the required Cyber Incident Response Plan as a separate document or as an addition to the Cybersecurity Plan.

Submission and Approval of the Cybersecurity Plan

An owner or operator must submit a Cybersecurity Plan for review to the cognizant COTP or the OCMI for facilities and OCS facilities, or to the MSC for U.S.-flagged vessels. *See* § 101.630(d). We removed the requirement for a letter certifying that the Plan meets the requirements of this subpart must accompany the submission in § 101.630(d). Once the COTP or MSC finds that the Plan meets the cybersecurity requirements in

§ 101.630, they will send a letter to the owner or operator approving the Cybersecurity Plan or approving the Plan under certain conditions.

If the cognizant COTP, OCMI, or MSC requires additional time to review the Plan, they have the authority to return a written acknowledgement to the owner or operator stating that the Coast Guard will review the Cybersecurity Plan submitted for approval, and that the U.S.-flagged vessel, facility, or OCS facility may continue to operate as long as it remains in compliance with the submitted Cybersecurity Plan. *See* § 101.630(d)(1)(iv).

If the COTP, OCMI, or MSC finds that the Cybersecurity Plan does not meet the requirements in § 101.630, the Plan will be returned to the owner or operator with a letter explaining why the Plan did not meet the requirements. In this final rule, we revised § 101.630(e)(1)(ii) to clarify that the owner or operator has at least 60 days to submit its proposed amendments. Until the amendments are approved, the owner or operator must ensure temporary cybersecurity measures are implemented to the satisfaction of the Coast Guard. *See* § 101.630(e)(1)(ii).

If the owner or operator disagrees with the deficiency determination, they have the right to appeal or submit a petition for reconsideration or review to the respective COTP, District Commander, OCMI, or MSC per 33 CFR 101.420.

When submitting amendments to the Coast Guard, either after a Cybersecurity Assessment or at other times, the owner or operator is not required to submit the Cybersecurity Plan with the amendment. Consistent with the discussion above concerning our elimination of the term ''major amendment,'' we removed the reference to major amendment from § 101.630(e)(2). We added a new paragraph, § 101.630(e)(2)(i), which provides that nothing in this section should be construed as limiting the owner or operator of the U.S.-flagged vessel, facility, or OCS facility from the timely implementation of such additional security measures not enumerated in the approved VSP, FSP, or OCS FSP as necessary to address exigent security situations. This new paragraph addresses questions from public commenters about whether entities would be able to implement necessary changes to their Plan to protect against cybersecurity threats and clarifies that stakeholders are not precluded from taking action to protect their systems.

Additionally, we moved the requirement that the owner or operator must notify the cognizant COTP for a facility or OCS facility, or the MSC for U.S.-flagged vessels, by the most rapid means practicable as to the nature of the additional measures, the circumstances that prompted these additional measures, and the period of time these additional measures are expected to be in place into new paragraph § 101.630(e)(2)(ii). This paragraph provides that when the entity makes changes that do not allow for Coast Guard approval before implementation, they must notify the appropriate Coast Guard contact as soon as possible so that the Coast Guard has the most up-to-date and accurate description of the Cybersecurity Plan.

Finally, we clarified in § 101.630(e)(3) and (4) that the CySO must amend the Cybersecurity Plan, as soon as reasonably practicable, in light of the individual circumstances, but, in any case, not longer than 96 hours, when the owner or operator has changed.

Under § 101.630(f)(1), the CySO must ensure that an audit of the Cybersecurity Plan and its implementation is performed annually, beginning no later than 1 year from the initial date of approval. Additional audits must be conducted if there is a change in ownership or modifications of cybersecurity measures, but such audits may be limited to sections of the Plan affected by the modification. See § 101.630(f)(2) and (3). Those conducting an internal audit must have a level of knowledge and independence specified in § 101.630(f)(4). Under § 101.630(f)(5), if the results of the audit require the Cybersecurity Plan to be amended, the CySO must submit the amendments to the Coast Guard for review within 30 days of completing the audit.

Section 101.635—Drills and Exercises

Under § 101.635(a)(1), cybersecurity drills and exercises are required to test the proficiency of U.S.-flagged vessel, facility, and OCS facility personnel in assigned cybersecurity duties and in the effective implementation of the VSP, FSP, OCS FSP, and Cybersecurity Plan. Drills and exercises must also enable the CySO to identify any related cybersecurity deficiencies that need to be addressed. Additionally, in § 101.635(a)(2), we changed ''cyber incident'' to a ''reportable cyber incident.''

Cybersecurity drills generally test an operational response of at least one specific element of the Cybersecurity Plan, as determined by the CySO, such as access control for a critical IT or OT system, or network scanning. In this final rule, we changed the requirement in § 101.635(b)(1) from conducting at least one cybersecurity drill every 3 months to conducting two cybersecurity drills every 12 months, and added ''as required by 33 CFR 104.230, 105.220, or 106.225,'' where appropriate.

Cybersecurity exercises are a full test of an organization's cybersecurity regime and include substantial and active participation of cybersecurity personnel. The participants may include local, State, and Federal Government personnel. Cybersecurity exercises generally test and evaluate the organizational capacity to manage a combination of elements in the Cybersecurity Plan, such as detecting, responding to, and mitigating a cyber incident.

The exercises are required at least once each calendar year, with no more than 18 months between exercises. In § 101.635(c)(2)(iii), where exercises may be combined with other appropriate exercises, we added ''as required by 33 CFR 104.230, 105.220, or 106.225.'' Exercises may be specific to a U.S.-flagged vessel, facility, or OCS facility, or may serve as part of a cooperative exercise program or port exercises. The exercises for the Cybersecurity Plans can be combined with other required security exercises, if appropriate.

The drill or exercise requirements specified in this section may be satisfied by implementing cybersecurity measures required by the VSP, FSP, OCS FSP, and Cybersecurity Plan after a cyber incident, as long as the U.S.-flagged vessel, facility, or OCS facility achieves and documents the drill and exercise goals for the cognizant COTP or MSC. Any corrective action must be addressed and documented as soon as possible.

Section 101.640—Records and Documentation

This section requires owners and operators to follow the recordkeeping requirements in 33 CFR 104.235 for vessels, 33 CFR 105.225 for facilities, and 33 CFR 106.230 for OCS facilities. For example, records must be kept for at least 2 years and be made available to the Coast Guard upon request. The records can be kept in paper or electronic format and must be protected against unauthorized access, deletion, destruction, amendment, and disclosure. Records that each U.S.-flagged vessel, facility, or OCS facility keep vary because each organization maintains records specific to their operations. At a minimum, the records must capture the following activities: training, drills, exercises, cybersecurity threats, reportable cyber incidents, and audits of the Cybersecurity Plan as set

forth in the cited recordkeeping requirements above and made applicable to records under this subpart, per § 101.640. We revised the list of activities in § 101.640 to replace ''incidents'' with ''reportable cyber incidents,'' since we have revised this final rule to use that term.

Section 101.645—Communications

This section requires the CySO to maintain an effective means of communication to convey changes in cybersecurity conditions to the personnel of the U.S.-flagged vessel, facility, or OCS facility. In addition, the CySO must maintain an effective and continuous means of communicating with their security personnel, U.S.-flagged vessels interfacing with the facility or OCS facility, the cognizant COTP, and national and local authorities with security responsibilities. We revised § 101.645(a) to clarify that the means for effective notification must be documented in Section 5 of the Cybersecurity Plan. Documenting the communication process for changes will promote active information sharing among the various people responsible for the cybersecurity measures of the U.S.-flagged vessel, facility, or OCS facility.

Section 101.650—Cybersecurity Measures

This section lists specific cybersecurity measures to identify risks, detect threats and vulnerabilities, protect critical systems, and recover from cyber incidents. Any intentional gaps in cybersecurity measures must be documented as accepted risks under § 101.630(c)(12). If the owner or operator is unable to comply with the requirements of this subpart, they may seek a waiver or an equivalence determination under § 101.665.

A discussion of each component of § 101.650 follows.

Section 101.650 Paragraph (a): Account Security Measures

This paragraph lists minimum account measures to protect critical IT and OT systems from unauthorized cyber access and limit the risk of a cyber incident. Access control is a foundational category, highlighted as a ''Protect'' function of NIST's CSF.[67] Existing regulations in §§ 104.265, 105.255 through 105.260, and 106.260 through 106.265 prescribe control measures to limit access to restricted areas and detect unauthorized introduction of devices capable of damaging U.S.-flagged vessels, facilities, OCS facilities, or ports. This provision is derived from NIST's standards mentioned earlier for the cyber domain and establish minimum account security measures to manage credentials and secure access to critical IT and OT systems.

Account security measures for cybersecurity include lockouts on repeated failed login attempts, password requirements, multifactor authentication, applying the principle of least privilege to administrator or otherwise privileged accounts, and removing credentials of personnel no longer associated with the organization. Numerous consensus standards that are generally accepted employ similar requirements.[68] Together, these provisions mitigate the risks of brute force attacks, unauthorized access, and privilege escalation. The owner or operator is responsible for implementing and managing these account security measures, including ensuring that user credentials are removed or revoked when a user leaves the organization. The CySO must ensure documentation of such measures in Section 7 of the Cybersecurity Plan. We revised § 101.650(a)(1), which required automatic account lockouts after repeated failed login attempts for both IT and OT systems to remove the reference to OT systems. In § 101.650(a)(2), we added the information that, when changing default passwords is not feasible, appropriate compensating security controls must be implemented and documented.

Section 101.650 Paragraph (b): Device Security Measures

This paragraph provides specific requirements to mitigate risks and vulnerabilities in critical IT and OT systems and equipment. With increased connectivity to public internet, networks on U.S.-flagged vessels, facilities, and OCS facilities have an expansive attack surface. These provisions reduce the risks of unauthorized access, malware introduction, and service interruption. This paragraph applies the ''Identify'' function of the NIST CSF.[69] Existing regulations in 33 CFR 104.265, 105.255 through 105.260, and 106.260 through 106.265 are similar. For example, § 105.260 limits access to areas that require a higher degree of protection.

Paragraph (b) also requires owners and operators to designate critical IT and OT systems.[70] Developing and maintaining an accurate inventory and network map reduces the risk of unknown or improperly managed assets. The Cybersecurity Plan also governs device management. The CySO must maintain the network map and develop and maintain the list of approved hardware, software, and firmware. In addition to identifying risks, these provisions aid in the proper lifecycle management of assets, including patching and end-of-life management. These requirements are foundational to many industry consensus standards and reinforce Coast Guard regulations to protect communication networks. We revised § 101.650(b) to require that device security measures must be addressed, rather than documented, in Section 6 of the Cybersecurity Plan and also to clarify that they must be made available to the Coast Guard upon request. In § 101.650(b)(2), we removed the requirement that exemptions must be justified and documented in the Cybersecurity Plan.

Section 101.650 Paragraph (c): Data Security Measures

This paragraph prescribes fundamental data security measures that stem from the ''Protect'' function of the NIST CSF. Data security measures protect personnel, financial, and operational data and are consistent with basic risk management activities of the maritime industry. The IMO recognizes the importance of risk management related to data security on U.S.-flagged vessels,[71] and the Coast Guard previously highlighted data security

[71] MSC–FAL.1/Circ.3/Rev.1: ''Implement risk control processes and measures, and contingency planning to protect against a cyber-event and ensure continuity of shipping operations.''

measures in its policy for MTSA-regulated facilities.[72]

Data security measures prevent data loss and aid in detection of malicious activity on critical IT and OT systems. The fundamental measures here establish baseline protections upon which owners and operators can build. This paragraph requires logs to be securely captured, stored, and protected so that they are accessible only by privileged users, and require encryption for data in transit and data at rest. CySOs will rely on generally accepted industry standards and risk management principles to determine the suitability of specific encryption algorithms for certain purposes, such as protecting critical IT and OT data with a more robust algorithm than for routine data. [73] Consistent with the discussion earlier about the term ''logs,'' we revised § 101.650(c)(1) to refer to logs, which we have defined in this final rule, rather than data logs. Additionally, we revised § 101.650(c)(2) to provide that effective encryption must be deployed to maintain confidentiality of sensitive data and integrity of IT and OT traffic, when technically feasible, rather than specifically referring to suitably strong algorithms. A CySO must establish detailed data security policies in Section 4 of the Cybersecurity Plan, adapting these policies to the unique operations of the U.S.-flagged vessel, facility, or OCS facility.

Section 101.650 Paragraph (d): Cybersecurity Training for Personnel

This paragraph specifies cybersecurity training requirements. Security training is a vital aspect of the MTSA. Relevant provisions in 33 CFR already require all personnel to have knowledge, through training, or equivalent job experience, in the ''Recognition and detection of dangerous . . . devices.'' [74] Since 2020, the Coast Guard has interpreted this requirement to include relevant cybersecurity training.[75] While formal training may be appropriate, the Coast Guard is not mandating a format of training. However, the training must, at minimum, cover relevant provisions of the Cybersecurity Plan to include recognizing, detecting, and circumventing cybersecurity threats; and reporting cyber incidents to the CySO.

The types of training must also be consistent with the roles and responsibilities of personnel, including access to critical IT and OT systems and operating network-connected machineries. Key cybersecurity personnel and management need to have current knowledge of threats to deal with potential cyber-attacks and understand procedures for responding to a cyber incident. The owner, operator, or CySO must ensure that all personnel designated by the CySO complete the core training within 5 days of gaining system access, but no later than 30 days after hiring, and annually thereafter, and that key personnel receive specialized training annually or more frequently as needed. Existing personnel are required to receive training on relevant provisions of the Cybersecurity Plan within 60 days of the Plan being approved, and, for all other required training, within 180 days of the effective date of this final rule and annually thereafter. (See § 101.650(d)(4)). We added a requirement in § 101.650(d)(3) that when personnel must access IT or OT systems but are unable to receive cybersecurity training as specified in paragraphs (d)(1) and (d)(2) of this section, they must be accompanied or monitored by a person who has completed the training specified in paragraphs (d)(1) and (d)(2) of this section. As a result, we redesignated the originally proposed § 101.650(d)(3) as § 101.650(d)(4).

Section 101.650 Pharagraph (e): Risk Management

This paragraph establishes three levels of Cybersecurity Assessment and risk management: (1) conducting annual Cybersecurity Assessments; (2) completing penetration testing upon renewal of a VSP, FSP, or OCS FSP; and (3) ensuring ongoing routine system maintenance. The owner, operator, or designated CySO must ensure that these activities, which are listed in Sections 11 and 12 of the Cybersecurity Plan, are documented and completed.

Following a Cybersecurity Assessment, the CySO must incorporate feedback from the assessment into the Cybersecurity Plan through an amendment to the Plan. We revised the timeframe that a Cybersecurity Assessment must be conducted from within 1 year from the effective date of a final rule and annually thereafter to 24 months after the effective date of the final rule and annually thereafter. The Assessment must be conducted sooner than annually if there is a change in ownership of a U.S.-flagged vessel, facility, or OCS facility. We removed the requirement for more frequent Cybersecurity Assessments if there is a major amendment to the Cybersecurity Plan.

We updated the implementation period in § 101.650(e)(1) to be 24 months from the effective date of this final rule. We revised § 101.650(e)(1)(i) to clarify that owners or operators must analyze all networks to identify vulnerabilities to *critical* IT and OT systems and the risk posed by each digital asset. We added a new paragraph § 101.650(e)(1)(iv) to explain that the Cybersecurity Assessment must document and ensure patching or implementing of documented compensating controls for all KEVs in critical IT or OT systems, without delay, rather than mitigate any unresolved vulnerabilities. We also redesignated the originally proposed § 101.650(e)(1)(iv) as § 101.650(e)(1)(v).

While Cybersecurity Assessments provide a valuable picture of potential security weaknesses, penetration tests can add additional context by demonstrating whether malicious actors can leverage those weaknesses. Penetration tests can also help prioritize resources based on what poses the most risk. We revised § 101.650(e)(2) to specify that penetration testing must be conducted in conjunction with Plan renewal and that a letter certifying that the test was conducted, as well as all identified vulnerabilities, must be included in the VSA, FSA, or OCS FSA.

Routine system maintenance requires an ongoing effort to identify vulnerabilities and must include scanning and reviewing KEVs by documenting, tracking, and monitoring them. These provisions mirror the security system and equipment maintenance requirements in 33 CFR 104.260 for vessels, 33 CFR 105.250 for facilities, and 33 CFR 106.255 for OCS facilities, and reflect the Coast Guard's longstanding view on cybersecurity. To improve risk management across the maritime sector, each owner, operator, or designated CySOs must establish, subject to any applicable antitrust law limitations,[76] information-sharing

[72] NVIC 01–20 at page 2: ''Each facility should also determine how, and where, its data is stored and, if it is stored offsite, whether the data has a critical link to the safety and/or security functions of the facility. If such a critical link exists, the facility should address any vulnerabilities . . . . ''

[73] *See,* for example, ISA 62443–3–3, CIS CSC 13, 14 in the EDM NIST Cybersecurity Framework Crosswalks, available at *www.cisa.gov/sites/default/files/publications/4_NIST_CSF_EDM_Crosswalk_v3_April_2020.pdf,* accessed August 13, 2024.

[74] 33 CFR 104.225(c) (Vessels), 105.215(c) (Facilities), and 106.220(c) (OCS Facilities).

[75] NVIC 01–20 ENCL(1) at page 3: ''Describe how cybersecurity is included as part of personnel training, policies, and procedures, and how this material will be kept current and monitored for effectiveness.''

[76] The sharing of competitively sensitive information between or among competitors raises antitrust concerns. For example, information sharing is not exempted under the Cybersecurity Information Sharing Act of 2015 if the information shared results in price fixing, market allocation,

procedures for their organizations, to include procedures to receive and act on KEVs, as well as methods for sharing threat and vulnerability information.

The ''Protect'' function of the NIST CSF emphasizes the importance of strong processes and procedures for protecting information.[77] For example, organizations must ensure that information and records (data) are managed consistently with the organization's risk strategy to protect the confidentiality, integrity, and availability of information. Risk management is key in protecting IT and OT components that may include cybersecurity vulnerabilities in their design, code, or configuration.

Owners and operators may use information-sharing services or organizations such as an Information Sharing and Analysis Center or an Information Sharing and Analysis Organization. The Coast Guard does not endorse specific information-sharing organizations; owners and operators are free to use information-sharing organizations to suit their needs.[78] Industry consensus standards provide generally accepted techniques that sanitize and reduce attribution to information to ensure that information sharing does not compromise proprietary business information.[79] In addition, regardless of the services or organizations used, owners and operators should comply with applicable antitrust laws and not share competitively sensitive information, such as price or cost data, that can result in unlawful price-fixing, market allocation, or other forms of competitor collusion. Use of any information-sharing services or organizations do not meet or replace reporting requirements under 33 CFR 101.305.

The Coast Guard emphasized its commitment to helping maritime industry stakeholders identify and address vulnerabilities in its *2023 Cyber Trends and Insights in the Marine Environment* report.[80] In that report, the Coast Guard highlighted additional resources that CySOs should leverage to manage cybersecurity vulnerabilities.

Section 101.650 Paragraph (f): Supply Chain

This paragraph includes provisions to specify measures to manage cybersecurity risks in the supply chain. Legitimate third-party contractors and vendors may inadvertently provide a means of attack or vectors that allow malicious actors to exploit vulnerabilities within the supply chain. Section 1.1 of the NIST CSF emphasizes managing cybersecurity risks in the supply chain as part of the ''Identify'' function.[81]

Under this paragraph, the owner, operator, or CySO must ensure that measures to manage cybersecurity risks in the supply chain are in place to mitigate the risks associated with external parties. These measures include considering cybersecurity capabilities in selecting vendors, establishing a process through which all IT and OT vendors or service providers notify the owner or operator or designated CySO of any cybersecurity vulnerability or reportable cyber incident, without delay, and monitoring third-party connections. In § 101.650(f)(3), we replaced ''incidents'' with ''reportable cyber incidents,'' since we have revised this final rule to use that term, where applicable, and removed ''breaches.''

Through their contractual agreements, vendors must ensure the integrity and security of software and hardware, such as software releases and updates, notifications, and mitigations of vulnerabilities. These provisions must establish a minimum level of CRM within the supply chain. Industry standards provide additional measures.[82] The IMO also recognizes cybersecurity risks in the supply chain, and these provisions align with the guidelines and recommendations referenced in MSC–FAL Circ. 3/Rev.1.[83]

Section 101.650 paragraph (g): Resilience

This paragraph lists a few key activities to ensure that U.S.-flagged vessels, facilities, and OCS facilities can recover from major cyber incidents with minimal impact to critical operations. Provisions under response and recovery can help an organization recover from a cyber-attack and restore capabilities and services.

This final rule requires the owner, operator, or CySO to ensure the following response and recovery activities: report reportable cyber incidents to the NRC; develop, implement, maintain, and exercise the Cyber Incident Response Plan; periodically validate the effectiveness of the Cybersecurity Plan; and perform backups of critical IT and OT systems. The Coast Guard accepts review of a cyber incident as meeting the periodic validation requirement in § 101.650(g). We revised § 101.650(g)(1) to replace the provisional ''any cyber incidents'' with ''reportable cyber incidents,'' since that is now a defined term in this final rule, after we received and considered public comments on that term. We removed the reference to a telephone number for reporting to the NRC. We also revised § 101.650(g)(3) to remove ''tabletop'' and refer only to ''exercises.'' The Coast Guard changed this for consistency with § 101.635, which defines ''exercises'' to include live exercises as well as ''tabletop simulations.'' The intent here is to use the more general ''exercises,'' which includes but is not limited to tabletop exercises or simulations, for consistency with § 101.635.

In addition, the NIST CSF describes numerous provisions within the ''Recover'' function aimed at improving response and recovery.[84] The IMO also notes resilience.[85]

Section 101.650 Paragraph (h): Network Segmentation

This paragraph requires a CySO to ensure that the network is segmented and to document those activities in the Cybersecurity Plan. Network integrity is a key provision under the ''Protect'' function of the NIST CSF.[86] Network architectures vary widely based on the operations of a U.S.-flagged vessel, facility, or OCS facility. Separating IT and OT networks is challenging, and it

boycotting, monopolistic conduct, or other collusive conduct.

[86] NIST CSF, Version 1.1, ''PR.AC–5: Network integrity is protected (for example, network segregation, network segmentation).'' *csf.tools/reference/nist-cybersecurity-framework/v1-1/pr/pr-ac/pr-ac-5/*, accessed July 19, 2023.

becomes increasingly difficult with an increase in the various devices connected to the network. Network segmentation ensures that valuable information is not shared with unauthorized users and decreases damage that can be caused by malicious actors. Nonetheless, the Coast Guard recognizes that the IT and OT interface represents a weak link. Industry standards in this area are evolving, and it is an area that NIST continues to research.[87]

Section 101.650 Paragraph (i): Physical Security

This paragraph specifies that, along with the cybersecurity provisions for inclusion in this part, owners, operators, or CySOs must manage physical access to IT and OT systems. As described in the ''Protect'' function of the NIST CSF, physical security protects critical IT and OT systems by limiting access to the human-machine interface (HMI).[88] Physical security measures here supplement the existing VSA, FSA, and OCS FSA requirements in 33 CFR 104.270 for vessels, 33 CFR 105.260 for facilities, and 33 CFR 106.260 for OCS facilities. Similarly, under this paragraph, the CySO must designate areas restricted to authorized personnel and secure HMIs and other hardware. Also under this paragraph, the CySO must establish policies to restrict the use of unauthorized media and hardware. These provisions mirror existing Coast Guard policy outlined in NVIC 01–20.[89]

Section 101.655—Cybersecurity Compliance Dates

This section states that a Cybersecurity Plan, as required by this final rule, must be made available to the Coast Guard for review no later than 24 months from the effective date of this final rule, as required by 33 CFR 104.410 for vessels, 33 CFR 105.410 for facilities, and 33 CFR 106.410 for OCS facilities. We updated § 101.655 to reflect the revised implementation period. We also corrected the cross-references in this section from §§ 104.415, 105.415, and 106.415 to §§ 104.410, 105.410, and 106.410, respectively.

Section 101.660—Cybersecurity Compliance Documentation

This section allows the Coast Guard to verify an approved Cybersecurity Plan for U.S.-flagged vessels, facilities, and OCS facilities. Each owner or operator must ensure that the cybersecurity portion of their Plan and penetration test results are available to the Coast Guard upon request. We revised what we proposed in § 101.660 to expressly state that Alternative Security Program provisions apply to cybersecurity compliance documentation.

Section 101.665—Noncompliance, Waivers, and Equivalents

This section provides owners and operators the opportunity for waiver and equivalence determinations from the cybersecurity requirements in subpart F of this final rule, pursuant to the existing regulations in 33 CFR 104.130, 104.135, 105.130, 105.135, and 106.130. Under this section, an owner or operator, after completion of the required Cybersecurity Assessment, may seek a waiver or an equivalence determination for the requirements in subpart F using the standards and submission procedures applicable to a U.S.-flagged vessel, facility, or OCS facility, as outlined in 33 CFR 104.130, 104.135, 105.130, 105.135, 106.125, or 106.130.

The Coast Guard revised § 101.665 to clarify that the owner or operator must conduct the Cybersecurity Assessment prior to requesting a waiver or equivalence because it is not possible to know if a requirement is unnecessary until the Cybersecurity Assessment is completed. As previously noted, one of the primary purposes of an Assessment is to identify whether there are actual or potential vulnerabilities to IT or OT systems, equipment, or procedures. The Assessment is the evaluation that helps determine whether there exists IT or OT systems, equipment, procedures, or other cyber elements that may be applicable to these rules. It is the review a regulated entity can point to in explaining why the request for a waiver or equivalence is necessary.

The Coast Guard finds it unlikely that any regulated entity would have no IT or OT systems or equipment. However, if an entity has no IT or OT footprint, then their Assessment would easily identify that fact.

While this was implied and accounted for in the NPRM by our assumption that all owners and operators would need to complete a Cybersecurity Assessment and Plan (see RA, section *Cybersecurity Plan Costs*), we have now stated this explicitly within the text. The Coast Guard will also need the information an owner or operator will gain from completing an Assessment to assess the flexibility possible for the entity making the request, in light of their individual circumstances.

The Coast Guard removed the text requiring the vessel or facility to be ''unable to meet the requirements in subpart F,'' as originally proposed. Instead, we specify that the waiver or equivalence determination may be sought using the same standards and submission procedures applicable to a U.S.-flagged vessel, facility, or OCS facility, as outlined in 33 CFR 101.130, 104.130, 104.135, 105.130, 105.135, 106.125, or 106.130. We made this change for consistency with the existing waiver and equivalence provisions in 33 CFR parts 104, 105, and 106.

Additionally, this section provides that, if an owner or operator must temporarily deviate from the requirements in this part, they must notify the cognizant COTP for facilities or OCS facilities, or the MSC for U.S.-flagged vessels, and may request temporary permission to continue to operate under the provisions as outlined in 33 CFR 104.125, 105.125, or 106.120. We updated this text from ''if an owner or operator is temporarily unable to meet'' the requirements to ''if an owner or operator must temporarily deviate from'' for consistency with existing temporary waiver regulations as outlined in 33 CFR 104.125, 105.125, or 106.120.

Finally, the Coast Guard made editorial changes within § 101.665 to reflect that facilities and OCS facilities will notify the cognizant COTP for temporary waiver requests, whereas U.S.-flagged vessels will make this notification to the MSC.

Section 101.670—Severability

This section reflects the Coast Guard's intent that the provisions of subpart F be considered severable from each other to the greatest extent possible. For instance, if a court of competent jurisdiction were to hold that this final rule or a portion thereof may not be applied to a particular owner or operator or in a particular circumstance, the Coast Guard intends for the court to leave the remainder of this final rule in place with respect to all other covered persons and circumstances. The inclusion of a severability clause in subpart F does not imply a position on

[87] *See* NIST Special Publication 800–82r3,'' Guide to Operational Technology (OT) Security,'' draft published April 26, 2022; *doi.org/10.6028/NIST.SP.800–82r3.ipd,* accessed July 19, 2023.

[88] NIST CSF, Version 1.1, ''PR.AC–2: Physical Access to Assets is Managed and Protected.'' *csf.tools/reference/nist-cybersecurity-framework/v1-1/pr/pr-ac/pr-ac-2/*, accessed July 19, 2023.

[89] NVIC 01–20, enclosure (1), at page 4: ''Security measures for access control 33 CFR 105.255 and 106.260 Establish security measures to control access to the facility. This includes cyber systems that control physical access devices such as gates and cameras, as well as cyber systems within secure or restricted areas, such as cargo or industrial control systems. Describe the security measures for access control.'' (85 FR 16108).

severability in other Coast Guard regulations.

Section 160.202—Definitions

This section revises the definition for hazardous condition to add cyber incident. In the NPRM, we requested public comments on whether we should amend this definition, and commenters were supportive of the change, as discussed previously.

VII. Request for Comment

The Coast Guard requests public comment on a potential 2-to-5-year delay for the implementation periods for new requirements applicable to U.S.-flagged vessels. This rule contains three broad categories of implementation periods, only two of which would be affected by a delay.

First, entities that have not reported to the Coast Guard pursuant to, or are not subject to, 33 CFR 6.16–1 must ensure that all reportable cyber incidents are reported to the NRC (§ 101.620(b)(7)) immediately upon the effective date of this rule. Because U.S.-flagged vessels have been subject to the reporting requirements in 33 CFR 6.16–1 since the issuance of Executive Order 14116 on February 21, 2024, we are not seeking comments on whether to delay the implementation period for incident reporting.

Second, this rule contains a variety of training requirements in § 101.650 that must be implemented within 6 months after the effective date of this rule.

Third, this rule contains three provisions, as follows, that must be implemented within 24 months after the effective date of this rule:

- Owners and operators must designate, in writing, the CySO (§ 101.620(b)(3) and (c)(1));
- Owners and operators must conduct the Cybersecurity Assessment within 24 months after the effective date of this final rule and annually thereafter (or sooner than annually if there is a change in ownership) (§ 101.650(e)(1)); and
- Owners and operators must submit the Cybersecurity Plan to the Coast Guard for approval within 24 months after the effective date of this final rule (§ 101.655).

As noted in Section V of this preamble, the Coast Guard received several public comments asking us to extend the implementation period for different periods, ranging from 36 to 48 months beyond those we proposed in the NPRM. Many of these comments were specific to vessels. Some commenters suggested that U.S.-flagged vessels would require more time than facilities to implement new requirements in this rule because of differences in the pre-existing guidance provided for vessels in CVC–WI–027(3), Vessel Cyber Risk Management Work Instruction, as opposed to guidance for facilities in NVIC 01–20, Guidelines for Addressing Cyber Risks at Maritime Transportation Security Act (MTSA) Regulated Facilities.[90] Some commenters also remarked on the rule's potential burden on U.S.-flagged vessels, writing that the United States should not impose specific requirements for the flag state on its vessels without imposing the same on foreign-flagged vessels. A commenter asserted that, once the IMO establishes international requirements, a new NPRM should be issued to implement these requirements for U.S.-flagged vessels. And some commenters remarked upon U.S.-flagged vessels' ability to complete training requirements within six months of the rule's effective date.

As described earlier in this preamble, in response to these comments, the Coast Guard has adjusted the final rule generally to contain a phased-in implementation schedule that results in greater lead time for implementation. Particularly in light of the public comments specific to vessels described in the previous paragraph, the Coast Guard invites the public to comment on whether we should further delay the implementation periods for new requirements applicable to U.S.-flagged vessels for a period of 2 to 5 years beyond what is specified in this rule. Comments submitted should include information supporting the specific period that the commenter suggests, with respect to specific provisions of the rule. (See the **ADDRESSES** portion of this preamble, under *Comment period for solicited additional comments,* for instructions on submitting comments.) After reviewing any comments and supporting information received, the Coast Guard may issue a future rule to implement this additional delay to provide time for U.S.-flagged vessels to come into compliance with these requirements. The Coast Guard also welcomes comment on whether a delay for vessels alone could result in unanticipated consequences for facilities.

VIII. Regulatory Analyses

We developed this final rule after considering numerous statutes and Executive orders related to rulemaking. A summary of our analyses based on these statutes or Executive orders follows.

[90] See footnote 13.

A. Regulatory Planning and Review

Executive Order 12866 (Regulatory Planning and Review), as amended by Executive Order 14094 (Modernizing Regulatory Review), and Executive Order 13563 (Improving Regulation and Regulatory Review), direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

The Office of Management and Budget (OMB) has designated this rule a ''significant regulatory action,'' as defined under section 3(f) of Executive Order 12866, as amended by Executive Order 14094, but it is not significant under section 3(f)(1) because its annual effects on the economy do not exceed $200 million in any year of the analysis. Accordingly, OMB has reviewed this rule. A final RA follows.

The Coast Guard received 99 comment submissions during the 90-day comment period that ended on May 22, 2024. We received numerous public comments related to the RA in the NPRM, including several commenters stating that the Coast Guard underestimated the costs related to certain provisions. These provisions included supply chain measures, device security measures, penetration testing, routine system maintenance, drills and exercises, network segmentation, CySO wages, and OCS facility inspections. In light of some of these comments, we have increased certain cost estimates associated with drills, exercises, and penetration testing. In addition, we have lowered the proposed frequency of drill requirements from quarterly to twice annually, which reduces the real burden faced by affected entities, even though our increased hour burden estimates associated with development and participation involved with drill and exercise requirements have increased our cost estimates. This also increases marginal benefits of drills by allowing owners and operators to develop and focus on more comprehensive drills for the remaining drills or allocate resources to the implementation or improvement of other cybersecurity measures. Beyond these cost estimate updates, and an update to our affected population based on a discrepancy noted by another public commenter, the

methodology employed in the RA is unchanged.

In accordance with OMB Circular A–4 (available at *www.whitehouse.gov/omb/circulars/*), we have prepared an accounting statement showing the classification of impacts associated with this final rule.

Agency/Program Office: U.S. Coast Guard

Rule Title: Cybersecurity in the Marine Transportation System

RIN#: 1625–AC77

Date: August 2024 (millions, 2022 dollars)

Table 2: OMB Circular A-4 Accounting Statement Categorizing Impacts for the Cybersecurity in the Marine Transportation System Final Rule

Category	*Primary Estimate*	*Low Estimate*	*High Estimate*	*Dollar Year*	*Discount Rate*	*Time Horizon*	*Source*
BENEFITS							
Annualized monetized benefits	-	-	-	2022	2%	10 Years	RA
Annualized quantified, but non-monetized, benefits	-	-	-	2022	2%	10 Years	RA
	Reduce the risk of cyber incidents through enhanced detection and correction of vulnerabilities in IT and OT systems. Improve mitigation for the impacted entity and downstream economic participants if an incident occurs.						RA
	Improve protection of data of MTS firms and customers to safeguard business operations, build consumer trust, and promote increased commerce in the U.S. economy.						RA
Unquantified benefits	Improve the minimum standard for cybersecurity to protect the MTS and avoid disruptions to the supply chain, which is vital to the U.S. economy and U.S. national security.						RA
COSTS							
Annualized monetized costs	$138.7 million	-	-	2022	2%	10 Years	RA
Annualized quantified, but non-monetized, costs	-	-	-	2022	2%	10 Years	RA
Unquantified costs	The unquantifiable costs of this final rule are associated with the actions to mitigate the cyber risks identified as a result of this final rule. These actions may involve changes to the physical security of hardware and physical access ports, network segmentation, the data space and encryption required for data backups and data logging measures, disabling applications running executable code, any necessary future software or hardware upgrades in addition to the incompatibility between older and newer software, and correcting vulnerabilities or issues identified during the implementation of this final rule.						RA
TRANSFERS							
Annualized monetized Federal budgetary transfers	N/A	N/A	N/A				
Bearers of transfer gain and loss?	N/A	N/A	N/A				
Other annualized monetized transfers	N/A	N/A	N/A				
Bearers of transfer gain and loss?	N/A	N/A	N/A				
NET BENEFITS							
Annualized monetized net benefits	-	-	-				
Effects on State, local, or Tribal governments	None						

Effects on small businesses	We conducted a FRFA and estimate that this final rule will have a significant economic impact on a substantial number of small entities.	RA/FRFA
Effects on wages	None	
Effects on growth	Not measured	

The Coast Guard has updated its maritime security regulations by adding minimum cybersecurity requirements to a new subpart F in 33 CFR part 101 for U.S.-flagged vessels, facilities, and OCS facilities required to have a security plan under 33 CFR parts 104, 105, and 106. Specifically, this final rule requires owners and operators of U.S.-flagged vessels, facilities, and OCS facilities to develop an effective Cybersecurity Plan, which includes actions to prepare for, prevent, and respond to threats and vulnerabilities. One of these actions is to assign qualified personnel to implement the Cybersecurity Plan and all activities within the Plan. The Cybersecurity Plan includes the following: designating a CySO; conducting a Cybersecurity Assessment; developing and submitting the Plan to the Coast Guard for approval; operating a U.S.-flagged vessel, facility, and OCS facility in accordance with the Plan; implementing security measures based on new cybersecurity vulnerabilities; and reporting cyber incidents to the NRC, as defined in this preamble.

This final rule further requires owners and operators of U.S.-flagged vessels, facilities, and OCS facilities to perform cybersecurity drills and exercises in accordance with their VSP, FSP, and OCS FSP. Owners and operators of U.S.-flagged vessels, facilities, and OCS facilities are also required to maintain records of cybersecurity related information in paper or electronic format.

Lastly, this final rule requires certain cybersecurity measures to identify risks, detect threats and vulnerabilities, protect critical systems, and to recover from cyber incidents. These measures include account security measures, device security measures, data security measures, cybersecurity training for personnel, risk management, supply chain risk measures, penetration testing, resilience measures, network segmentation, and physical security.

Baseline Summary

The Coast Guard is not codifying existing guidance in this final rule. The requirements of this final rule and the costs and benefits we estimate in this RA are new. The Coast Guard drafted the requirements of this final rule based on NIST's *Framework for Improving Critical Infrastructure Cybersecurity,* NIST's standards and best practices, and CISA's CPGs.

In February 2020, the Coast Guard issued NVIC 01–20, which provided clarity and guidance to MTSA-regulated facility and OCS facility owners and operators regarding existing requirements in the MTSA for computer systems and network vulnerabilities. However, the NVIC does not contain cybersecurity requirements for facility and OCS facility owners. Furthermore, the NVIC does not address the topic of cybersecurity for vessel owners and operators.

The IMO has issued other guidance on Cybersecurity in the past 7 years. In 2017, the IMO adopted resolution MSC.428(98) to the ISM Code on ''Maritime Cyber Risk Management in Safety Management Systems.'' Generally, this resolution states that an SMS should consider CRM and encourages Administrations to appropriately address cyber risks in an SMS by a certain date, in accordance with the ISM Code. In 2022, the IMO provided further guidance on maritime CRM in MSC–FAL.1/Circ.3–Rev.2, *Guidelines on Maritime Cyber Risk Management,* in an effort to raise awareness about cybersecurity risks in the maritime domain.

In addition, survey data indicates that some portions of the affected population of owners and operators of facilities and OCS facilities are already implementing cybersecurity measures consistent with select provisions of this final rule, including 87 percent who have implemented account security measures, 83 percent who have implemented multifactor authentication, 25 percent who have implemented annual cybersecurity training, and 68 percent who conduct penetration tests.[91] While we lack similar data on cybersecurity activities in the affected population of U.S.-flagged vessels, we acknowledge that it is likely that many owners and operators have implemented cybersecurity measures in response to private incentives and increasing cybersecurity risks over time. For the purpose of this analysis, however, we assume that owners and operators have no baseline cybersecurity activity, in the areas in which we lack data.

Estimated Costs of this Final Rule

We estimate the total discounted costs of this final rule to industry and the Federal Government to be approximately $1,245,594,930 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $138,667,759, using a 2-percent discount rate. See table 3.

[91] See footnote 60. In addition, for our cybersecurity training assumption, we use the more conservative brown-water facility rate of 25 percent rather than the blue-water rate of 57 percent given a lack of data about which facilities in the affected population would be considered brown- or blue-water. Further, while the survey does not specify if any of the surveyed population includes OCS facilities, the Coast Guard assumes that findings reflect current compliance for OCS facilities because we assume the scale of port and terminal operations surveyed would be similar to those on the OCS. Readers can access the survey at *https://www.joneswalker.com/en/insights/2022-Jones-Walker-LLP-Ports-and-Terminals-Cybersecurity-Survey-Report.html,* accessed August 26, 2024.

Table 3: Total Estimated Costs of the Final Rule to Industry and Government (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rate)

Year	Facility and OCS Facility Costs	U.S.-flagged Vessel Costs	Government Costs	Total Costs	2 Percent
1	$57,844,636	$81,181,976	$402,629	$139,429,241	$136,695,334
2	$68,199,840	$110,518,021	$18,794,061	$197,511,922	$189,842,293
3	$55,747,636	$67,404,700	$2,405,426	$125,557,762	$118,315,883
4	$55,747,636	$67,404,700	$2,405,426	$125,557,762	$115,995,964
5	$55,747,636	$67,404,700	$2,405,426	$125,557,762	$113,721,533
6	$55,747,636	$67,404,700	$2,405,426	$125,557,762	$111,491,699
7	$55,920,448	$105,034,449	$4,809,252	$165,764,149	$144,307,667
8	$55,747,636	$67,404,700	$2,405,426	$125,557,762	$107,162,341
9	$55,747,636	$67,404,700	$2,405,426	$125,557,762	$105,061,119
10	$55,747,636	$67,404,700	$2,405,426	$125,557,762	$103,001,097
Total	**$572,198,376**	**$768,567,346**	**$40,843,924**	**$1,381,609,646**	**$1,245,594,930**
Annualized					**$138,667,759**

Note: Totals may not sum due to independent rounding.

We present a summary of the impacts of this final rule in table 4.

Table 4: Summary of Impacts of the Final Rule

Category	Summary
Applicability: new sections to 33 CFR part 101, subpart F—Cybersecurity	• Cybersecurity requirements for owners and operators of U.S.-flagged vessels, facilities, and OCS facilities.
Affected Population	• Approximately 1,372 facility owners and operators of approximately 3,718 facilities (33 of which are OCS facilities, with 9 unique owners or operators). • Approximately 2,075 U.S.-flagged vessel owners and operators of approximately 11,222 U.S.-flagged vessels (or 1,686 owners and operators of 6,379 U.S.-flagged vessels, excluding barges, where applicable).
Total Costs of the Final Rule (2-percent discount rate—all estimates in table)	**Costs to Industry:** Total discounted cost: $1.2 billion Annualized cost: $134.5 million Total discounted cost to facilities and OCS facilities cost $514.9 million Annualized cost: $57.3 million Total discounted cost to only OCS facilities: $3.7 million Annualized cost: $0.4 million Total discounted cost to U.S.-flagged vessels: $693.2 million Annualized cost: $77.2 million **Costs to Federal Government:** Total discounted cost: $37.5 million Annualized cost: $4.2 million **Total Costs of Final Rule:** Total discounted cost: $1.2 billion Annualized cost: $138.7 million

Unquantified Costs	• Costs associated with the physical security of physical access ports and removable media. • Costs associated with network segmentation. • The cost of data encryption and acquiring data space needed to store logs and backups. • Costs associated with disabling applications running executable code. • Costs associated with monitoring and all remote third-party connections. • Costs associated with patching and scanning for vulnerabilities in OT systems. • Costs associated with any future software or hardware upgrades needed to maintain system compatibility in the face of evolving cybersecurity threats. • Costs associated with the correction of vulnerabilities identified during the implementation of the provisions of this final rule.
Unquantified Benefits	• Reduce the risk of cyber incidents through enhanced detection and correction of vulnerabilities in IT and OT systems. Improve mitigation for impacted entities and downstream economic participants if an incident occurs. • Improve protection of MTS firm and customer data to protect business operations, build consumer trust, and promote increased commerce in the U.S. economy. • Improve the minimum standard for cybersecurity to protect the MTS and avoid supply chain disruptions, which is vital to the U.S. economy and U.S. national security.

Public Comments and Changes From the NPRM to the Final Rule

The Coast Guard received numerous public comments with implications for the RA. Summaries of those comments, and the Coast Guard's responses, are found in section V., Discussion of Comments and Changes, in the preamble of this final rule.

Table 5 describes the resulting changes from comments and the impacts on our cost estimates for this final rule. In addition to the changes described in table 5, the Coast Guard has also updated the analysis to a 2-percent discount rate, consistent with guidance in the updated OMB Circular A–4, published November 2023.[92]

[92] See page 75 in OMB Circular A–4, Regulatory Analysis, found at: *https://www.whitehouse.gov/wp-content/uploads/2023/11/CircularA-4.pdf,* accessed August 26, 2024.

Table 5: Summary of Changes from NPRM to Final Rule

Element of the Analysis	NPRM	Final Rule	Resulting Change in the RA[93]
Affected Population	10,286 U.S.-flagged vessels (1,775 owners and operators) and 3,411 facilities and OCS facilities (1,708 owners and operators). Inadvertently excluded a portion of publicly owned vessels and facilities from the affected population.	11,222 U.S.-flagged vessels (2,075 owners and operators) and 3,718 facilities and OCS facilities (1,372 owner and operators). Now includes impacted publicly owned vessels and facilities and more accurately consolidates the number of owners and operators.[94]	-Increases total and annualized cost estimates for the rule. NPRM Costs (2%): Total cost - $711.7M Annualized - $79.2M Final Rule Costs (2%): Total cost - $1.2B Annualized - $138.7M
Cybersecurity Drills in § 101.635(b)	Cybersecurity drills required every 3 months or quarterly combined with existing physical security drills required under 33 CFR parts 104, 105, and 106. Cost estimates based on the CySO developing cyber components to add to existing drills, taking 30 minutes per drill, or 2 hours annually.	Cybersecurity drills required twice annually and held separately with all employees participating. Cost estimates based on the CySO developing new cybersecurity drills, taking 8 hours per drill, or 16 hours annually. 33 percent of employees per owner or operator will take 4 hours to participate in each drill, or 8 hours annually.	-Halving the annual drill requirement lowers the burden on the affected population, but the total and annual cost estimates for drills are increased. NPRM Costs (2%): Total cost - $5.3M Annualized - $0.6M Final Rule Costs (2%): Total cost - $298M Annualized - $33.2M
Cybersecurity Exercises in § 101.635(c)	Cybersecurity exercises required annually combined with existing physical security exercises. Cost estimates based on the CySO developing cyber components to add to existing exercises, taking 8 hours annually.	Cost estimates based on the CySO developing cyber exercises, taking 20 hours annually, and participating employees taking 4 hours annually. 33 percent of employees estimated to participate in cybersecurity exercises.	-Increased total and annualized exercise cost estimates. NPRM costs (2%): Total cost - $21.1M Annualized - $2.3M Final Rule costs (2%): Total cost - $180.3M Annualized - $20.1M
Penetration Testing in § 101.650(e)(2)	Testing required with submission of the Cybersecurity Plan in Years 2 and 7 of the period of analysis.	Initial cost estimate increased to $10,000 and $100 per IP address. Number of employees multiplied	- Increased total and annualized penetration testing cost estimates. NPRM costs (2%):

	Initial cost estimate was $5,000 for a third party to conduct the test, and $50 per IP address. Number of employees used as a proxy for number of IP addresses at a given company.	by 2 used as a proxy for the number of IP addresses at a given company.	Total cost - $35M Annualized - $3.9M Final Rule costs (2%): Total cost - $100.2M Annualized - $11.2M
Vessel Inspector Wage	Vessel inspector assumed to be an E-5 rank Petty Officer Second Class with a mean hourly wage rate of $58.	Vessel inspector assumed to be an O-2 rank Lieutenant Junior Grade with a mean hourly wage rate of $72.	- Increased total and annualized Government vessel inspection cost estimates. NPRM costs (2%): Total cost - $894,935 Annualized - $0.1M Final rule costs (2%): Total cost - $1.2 million Annualized - $0.1M
Reportable Cyber Incident Reporting	20 reportable cyber incidents required to be reported to NRC annually (18 from facilities population, and 2 from vessel population). Estimated that each incident took 0.15 hours to report.	Reportable cyber incidents only required to be reported to NRC for the population of 33 OCS facilities not already required to report cyber incidents under 33 CFR 6.16-1, as amended by Executive Order 14116. With only 1 reportable cyber incident report by OCS facilities since 2018, we consider the annual estimated costs negligible in the final rule.	- Removes total and annualized reportable cyber incident reporting costs. NPRM Costs (2%): Total cost - $2,263 Annualized - $252 Final rule costs (2%): Total cost - $0 Annualized - $0

Affected Population

This final rule affects owners and operators of U.S.-flagged vessels subject to 33 CFR part 104 (Maritime Security: Vessels), facilities subject to 33 CFR part 105 (Maritime Security: Facilities), and OCS facilities subject to 33 CFR part 106 (Marine Security: Outer Continental Shelf (OCS) Facilities). The Coast Guard estimates this final rule will affect approximately 11,222 vessels and 3,718 facilities (including 33 OCS facilities).

The affected U.S.-flagged vessel population includes:

- U.S. towing vessels greater than 8 meters (26 feet) in registered length inspected under 46 CFR, subchapter M that are engaged in towing a barge or barges inspected under 46 CFR, subchapters D and O;
- U.S. tankships inspected under 46 CFR, subchapters D and O;
- U.S. barges inspected under 46 CFR, subchapters I (includes combination barges), D, and O, carrying certain dangerous cargo in bulk or barges and engaged on international voyages;
- Small U.S. passenger vessels carrying more than 12 passengers, including at least 1 passenger-for-hire, that are engaged on international voyages;
- Small U.S. passenger vessels inspected under 46 CFR, subchapter K that are certificated to carry more than 150 passengers;
- Large U.S. passenger vessels inspected under 46 CFR, subchapter H;
- OSVs inspected under 46 CFR, subchapter L;
- Self-propelled U.S. cargo vessels greater than 100 gross register tons inspected under 46 CFR, subchapter I, except for commercial fishing vessels inspected under 46 CFR part 105; and
- U.S. MODUs and cargo or passenger vessels subject to SOLAS (1974), Chapter XI–1 or Chapter XI–2.

The affected facility population includes:

- Facilities subject to 33 CFR parts 126 (Handling of Dangerous Cargo at Waterfront Facilities) and 127 (Waterfront Facilities Handling Liquefied Natural Gas and Liquefied Hazardous Gas);
- Facilities that receive vessels certificated to carry more than 150

[93] We have updated NPRM cost totals to 2-percent discounting to better compare with the estimated cost totals from the final rule.

[94] See table 6 for more information on the number of affected facilities and OCS facilities and U.S.-flagged vessels by vessel type. Along with changes related to the inclusion of publicly owned vessels, removal of duplicate vessels in the Sub I vessel population, and more accurately consolidating the counts of owners and operators, the number of towing vessels has increased by approximately 901 vessels (4,822–3,921 = 901) primarily due to the ''Inspection of Towing Vessels'' final rule published June 20, 2016. See 81 FR 40004 or 46 CFR 136.202(a). This final rule requires owners and operators owning more than 1 towing vessel to have 100 percent of their towing vessels inspected and have valid certificates of inspection by July 19, 2022. This means our original data missed some of the affected population of towing vessels because their inspections were not yet recorded in MISLE when we pulled our data for the NPRM.

passengers, except vessels not carrying and not embarking or disembarking passengers at the facility;

- Facilities that receive vessels subject to SOLAS (1974), Chapter XI;
- Facilities that receive foreign cargo vessels greater than 100 gross register tons;
- Facilities that receive U.S. cargo vessels, greater than 100 gross register tons, inspected under 46 CFR, subchapter I, except facilities that receive only commercial fishing vessels inspected under 46 CFR part 105; and
- Barge fleeting facilities that receive barges carrying, in bulk, cargoes regulated by 46 CFR subchapter I, inspected under 46 CFR, subchapters D or O, or certain dangerous cargoes.

Table 6 presents the affected population of U.S.-flagged vessels, facilities, and OCS facilities of this final rule.[95] For the vessel population, the Coast Guard assumes the same number of vessels that leave and enter service. Therefore, we assume the population to be constant over the 10-year period of analysis. We also make the same assumption for facilities and OCS facilities. Additionally, we assume that changes in the ownership of vessels and facilities is very rare, and any audits that result from a change in ownership are accounted for by the annual audit requirements.

[95] This data was retrieved from the Coast Guard's MISLE database in July 2024.

Table 6: Estimated Affected U.S. Population of the Final Rule

Population Group	Total Number of Vessels or Facilities
Vessels	
U.S. towing vessels greater than 8 meters (26 feet) in registered length inspected under 46 CFR subchapter M that are engaged in towing a barge or barges inspected under 46 CFR subchapters D and O.	4,822
U.S. tankships inspected under 46 CFR subchapters D and O.	114
Self-propelled U.S. cargo and miscellaneous vessels—self-propelled vessels greater than 100 gross register tons inspected under 46 CFR subchapter I, except for commercial fishing vessels inspected under 46 CFR part 105.	398
Small U.S. passenger vessels carrying more than 12 passengers, including at least 1 passenger-for-hire, that are engaged on international voyages.	53
Small U.S. passenger vessels inspected under 46 CFR subchapter K (certificated to carry more than 150 passengers).	430
Large U.S. passenger vessels inspected under 46 CFR subchapter H.	131
OSVs inspected under 46 CFR subchapter L	430
U.S. MODUs subject to SOLAS Chapter XI-1 or Chapter XI-2 that are inspected under 46 CFR subchapter I-A.	1
U.S. barges inspected under 46 CFR subchapters D, O, or I (includes combination barges) carrying certain dangerous cargo in bulk or barges engaged on international voyages.	4,843
Total U.S.-flagged vessel population	**11,222 (2,075 owners and operators)**
Facilities	
33 CFR part 105 - facilities	**3,685**
33 CFR part 106 - OCS facilities	**33**
Total facilities and OCS facilities (includes MTSA-regulated facilities)	**3,718 facilities (1,372 owners and operators)**

Cost Analysis of the Final Rule

This final rule imposes costs on the U.S. maritime industry for cybersecurity requirements that include:

- Developing a Cybersecurity Plan, which includes designating a CySO, in 33 CFR 101.630;
- Performing drills and exercises in 33 CFR 101.635; and
- Ensuring and implementing cybersecurity measures in 33 CFR 101.650, such as account security measures, device security measures, data security measures, cybersecurity

training for personnel, reporting cyber incidents, risk management, supply chain management, resilience, network segmentation, and physical security.

We present the costs associated with some of the regulatory provisions in the following analysis; however, we are not able to estimate the costs fully for certain provisions because of the lack of data and the uncertainty associated with these provisions. Also, some regulatory provisions may be included in developing the Cybersecurity Plan and maintaining it on an annual basis; therefore, we may not have estimated a cost for these specific provisions in this analysis. We clarify this in the analysis where applicable.

In addition, U.S. barges inspected under 46 CFR subchapters D, O, or I (including combination barges), carrying certain dangerous cargo in bulk or barges engaged on international voyages, represent a special case in our analysis of cybersecurity-related costs. Unlike other vessels in the affected population of this final rule, in most cases, barges do not have IT or OT systems on board. Many types of barges rely on the IT and OT systems on board their associated towing vessels or the facilities where they deliver their cargo. This also means that barges are typically unmanned, making the costs associated with provisions such as cybersecurity training difficult to estimate. While we acknowledge that there are some barges with IT or OT systems on board, for the purposes of this analysis, we calculate costs only for the affected population of barges related to developing, resubmitting, maintaining, and auditing the Cybersecurity Plan, as well as developing cybersecurity-related drill and exercise components.

We believe that the hour-burden estimates associated with the components of the Cybersecurity Plan should still be sufficient to capture the implementation of any cybersecurity measures identified as necessary by the owner or operator of a barge. In addition, we believe it should capture any burden associated with requests for waivers or equivalents for provisions that do not apply to a vessel or vessel company lacking significant IT or OT systems.

Cybersecurity Plan Costs

Each owner and operator of a U.S.-flagged vessel, facility, or OCS facility is required to develop and submit a Cybersecurity Plan to the Coast Guard. The CySO will develop, implement, and verify a Cybersecurity Plan for each U.S.-flagged vessel, facility, or OCS facility. The owner or operator will submit a copy of the Plan for approval to the cognizant COTP or the OCMI for a facility or OCS facility, or to the MSC for a U.S.-flagged vessel. The contents of the Cybersecurity Plan are detailed in § 101.630.

Unless otherwise stated, in this RA we used information and obtained estimates from SMEs in the Coast Guard's Office of Commercial Vessel Compliance (CG–CVC), CG–FAC, and the Coast Guard's Office of Design and Engineering Standards (CG–ENG). We also obtained information from CGCYBER and NMSAC.

The Coast Guard acknowledges that some owners and operators of U.S.-flagged vessels, medium-sized and larger facilities, and OCS facilities may have already adopted a cybersecurity posture and implemented measures to counter and prevent a cyber incident. We also acknowledge that owners and operators of smaller U.S.-flagged vessels, facilities, and OCS facilities might not have any cybersecurity measures in place. For the purpose of calculations in this analysis, we assume that all owners or operators of U.S.-flagged vessels, facilities, and OCS facilities will comply with the full extent of the requirements of this final rule, and we assume no waivers or exemptions outside of the population of U.S.-flagged barges with limited IT and OT systems. Cost estimates for requesting waivers or exemptions for U.S.-flagged barges are included in the Cybersecurity Plan development costs. For example, we assume that rather than taking the time to implement account security measures for nonexistent IT and OT systems, CySOs working for owners and operators of U.S.-flagged barges will use the time normally taken to document those measures to instead request a waiver and place the approval in their plan. As such, we include U.S.-flagged barges in our cost estimates for Cybersecurity Plan development and maintenance costs even though we do not include them in our estimates for the implementation of many of the cybersecurity measures analyzed later in the RA. Regarding waivers for implementing cybersecurity measures on other types of vessels or in facilities or OCS facilities, the Coast Guard is unable to estimate who in the affected population will request waivers and for which provisions. Instead, we discuss this as a source of uncertainty in table 42.

However, we have survey data indicating that a portion of owners and operators of affected facilities and OCS facilities already have some cybersecurity measures in place.[96] We present this survey data in the applicable sections of the cost analysis. For other regulatory provisions, we do not estimate regulatory costs for industry because the Coast Guard does not have data on the extent of cybersecurity measures currently in the industry for these provisions.

We list the regulatory provisions included in developing and maintaining a Cybersecurity Plan that we did not estimate costs for in other sections of this RA:

- Designation of a CySO in §§ 101.620(b)(3) and 101.630(c)(1);
- Device security measures in § 101.650(b)(1) through (4);
- Cybersecurity Assessment in § 101.650(e)(1);
- Letter certifying a completed penetration test and documentation of identified vulnerabilities in § 101.650(e)(2);
- Routine system maintenance measures in § 101.650(e)(3)(i) through (vi); and
- Supply chain management in § 101.650(f)(1) through (3);
- Development and maintenance of a Cyber Incident Response Plan in § 101.650(g)(2);
- Drafting of waiver or equivalence determination requests in § 101.665.

Developing a Cybersecurity Plan has five major cost components: the initial development of the Plan; annual maintenance of the Plan (including amendments); revision and resubmission of the Plan as needed; renewal of the Plan after 5 years; and the cost for annual audits. Owners and operators of U.S.-flagged vessels, facilities, and OCS facilities are required to submit their Cybersecurity Plan to the Coast Guard within 2 years following the effective date of this final rule; therefore, submitting a Cybersecurity Plan for approval will likely not occur until the second year of the 10-year period of analysis.

The CySO is responsible for all aspects of developing and maintaining the Cybersecurity Plan. While several public commenters indicated that they may need to hire a dedicated, salaried employee to serve as a CySO, the Coast Guard does not have specific data on what portion of owners and operators of vessels, facilities, and OCS facilities will need to do so. In this final rule, § 101.625 states that a CySO may serve in other roles and may perform other duties within an owner or operator's

[96] Readers can access the survey at *https://www.joneswalker.com/en/insights/2022-Jones-Walker-LLP-Ports-and-Terminals-Cybersecurity-Survey-Report.html,* accessed August 26, 2024.

organization, and that a person may serve as a CySO for more than one U.S.-flagged vessel, facility, or OCS facility. For facilities and OCS facilities, this person may be the FSO. For vessels, this person may be the VSO. When considering assigning the CySO role to the existing security officer, the owner or operator should consider the depth and scope of these new responsibilities in addition to existing security duties. For the purpose of this analysis, we assume that an existing person in a U.S.-flagged vessel, facility, or OCS facility company or organization will assume the duties and responsibilities of a CySO. This means that, while the Coast Guard is not requiring any security credentials for the CySO at this time, any costs associated with obtaining security credentials at the discretion of the owner or operator would already be incurred before the implementation of this final rule. Additionally, if the designated CySO has security responsibilities that overlap with an existing VSO, FSO, or CSO, we assume that those individuals will work together to handle those duties.

Despite our assumption that owners and operators will redesignate an existing employee, we acknowledge that some owners or operators may need to hire a CySO if no existing employees are able take on these duties. However, rather than estimating the hours associated with bringing on a full-time employee, the hour burdens associated with CySO duties have been quantified in various sections of the cost analysis. This can capture the costs associated with contracting for the individual CySO duties or assigning them to a new or existing employee.

We use the Bureau of Labor Statistics' (BLS) Occupational Employment and Wage Statistics (OEWS) for the United States for May 2022. A CySO is comparable to the occupational category of ''Information Security Analysts'' with an occupational code of 15–1212 and an unloaded mean hourly wage rate of $57.63.[97] In order to obtain a loaded mean hourly wage rate, we use BLS's ''Employer Costs for Employee Compensation'' database to calculate the load factor, which we applied to the unloaded mean hourly wage rate using fourth quarter data from 2022.[98] We determine the load factor for this occupational category to be about 1.46, rounded. We then multiply this load factor by the unloaded mean hourly wage rate of $57.63 to obtain a loaded mean hourly wage rate of about $84.14, rounded ($57.63 × 1.46).

Cybersecurity Plan Cost for Facilities and OCS Facilities

This final rule requires owners and operators of facilities and OCS facilities to create a Cybersecurity Plan for each facility within a company. For the purpose of this analysis, the cost to develop a Cybersecurity Plan is a function of the number of facilities, not the number of owners and operators, because an owner or operator may own more than one facility. Based on data obtained from the Coast Guard's MISLE database, we estimate this final rule will affect about 3,685 facilities and 33 OCS facilities (including MTSA-regulated facilities), and about 1,372 owners and operators of these facilities. MISLE data contains incomplete information on owners and operators for 951 of the 3,718 facilities and OCS facilities included in the affected population. Of the 2,767 facilities and OCS facilities with complete information for owners and operators, we found 1,055 unique owners. This means that, on average, each owner owns approximately 3 facilities (2,767 ÷ 1,055 = 2.62, or 3.0 rounded). We apply this rate of ownership to the remaining facilities and OCS facilities without complete ownership information to arrive at our total of 1,372 owners [1,055 + (951 ÷ 3)].

We use hour-burden estimates from Coast Guard SMEs and the currently approved OMB Information Collection Request (ICR), Control Number 1625–0077, titled, ''Security Plans for Ports, Vessels, Facilities, and Outer Continental Shelf Facilities and Other Security-Related Requirements.'' The hour-burden estimates in ICR 1625–0077 include 100 hours for developing the Cybersecurity Plan (average hour burden), 10 hours for annual maintenance of the Cybersecurity Plan (which includes amendments), and 15 hours to resubmit Cybersecurity Plans every 5 years. In addition, SMEs estimate that it takes 40 hours to conduct annual audits of Cybersecurity Plans.

While the Cybersecurity Plan can be incorporated into an existing FSP for a facility or OCS facility, this does not mean that the Cybersecurity Plan is expected to be less complex to develop or maintain than an FSP. In general, the provisions outlined in this rule are meant to reflect the depth and scope of the physical security provisions established by MTSA. As a result, we feel the hour-burden estimates for developing and maintaining the FSP represents a fair proxy for what is expected with respect to a Cybersecurity Plan.

Based on estimates from the Coast Guard's FSP reviewers at local inspections offices, approximately 10 percent of Plans will need to be revised and resubmitted in the second year, which is consistent with the current resubmission rate for FSPs. Plans must be renewed after 5 years (occurring in the seventh year of the analysis period), and we estimate that 10 percent of renewals will also require revision and resubmission. We estimate the time to revise and resubmit the Cybersecurity Plan to be about half the time to develop the Plan itself, or 50 hours in the second year of submission, and 7.5 hours after 5 years (in the seventh year of the analysis period).

Because we include the annual Cybersecurity Assessment in the cost to develop Cybersecurity Plans, and we do not assume that owners and operators will wait until the second year of analysis to begin developing the Plan or implementing related cybersecurity measures, we divide the estimated 100 hours to develop Plans equally across the first and second years of analysis. We estimate the first- and second-year (the first year of Plan submission) undiscounted cost to develop a Cybersecurity Plan for owners and operators of facilities and OCS facilities to be about $31,283,252 (3,718 Plans × 100 hours × $84.14). We estimate the second-year undiscounted cost for owners and operators to resubmit Plans for facilities or OCS facilities (or to send amendments) for corrections to be about $1,565,004 (372 Plans or amendments × 50 hours × $84.14). Therefore, we estimate the total undiscounted first- and second-year cost to facility and OCS facility owners and operators to

[97] Readers can access BLS's website at *https://www.bls.gov/oes/2022/may/oes151212.htm* to obtain information about the wage we used in this analysis, accessed August 22, 2024.

[98] A loaded mean hourly wage rate is what a company pays per hour to employ a person, not the hourly wage an employee receives. The loaded mean hourly wage rate includes the cost of non-wage benefits (health insurance, vacation, etc.). We calculated the load factor by accessing the ECEC Multi-Screen database tool at *https://data.bls.gov/multi-screen?survey=cm*. We then selected the category of ''2 Private industry workers'' at screen 1. At screen 2, we first selected the category ''01 Total compensation,'' then we continued to select ''530000 Transportation and materials moving occupations'' at screen 3, then ''All Workers'' at screens 4 and 5, and then for ''Area,'' we selected ''99999 United States (National)'' at screen 6. At screen 7, we selected the category ''D Cost of compensation (Cost per hour worked).'' At screen 8, we selected the category ''not seasonally adjusted.'' At screen 9, we selected the series ID, CMU2010000520000D. We used the ''Cost of Compensation'' for quarter 4 of 2022, or $33.07. We performed this process again to obtain the value for ''02 Wages and salaries,'' which we selected on screen 2. On screen 9, we selected the series ID CMU2020000520000D and obtained a value of $22.64. We divided $33.07 by $22.64 and obtained a load factor of 1.46, rounded, accessed August 15, 2024.

develop, submit, and resubmit a Cybersecurity Plan to be approximately $32,848,256 ($31,283,252 + $1,565,004)).

In years 3 through 6 and years 8 through 10 of the analysis period, owners and operators of facilities and OCS facilities will be required to maintain their Cybersecurity Plans. This may include recordkeeping and documenting cybersecurity items at a facility or OCS facility, as well as amending the Plan. The CySO is required to maintain each Plan for each facility or OCS facility. Maintaining the Plan does not occur in the second year (initial year of Plan submission) or in the renewal year, Year 7 of the analysis period. We again obtain the hour-burden estimate for the annual maintenance of Plans from ICR 1625–0077, which is 10 hours.

In the same years of the analysis period, this final rule also requires owners and operators of facilities and OCS facilities to conduct annual audits. The audits will be necessary for owners and operators of facilities and OCS facilities to identify vulnerabilities (via the Cybersecurity Assessment) and to mitigate them.[99] Audits will also be necessary if there is a change in the ownership of a facility, but because the costs for audits are estimated annually, this should capture audits as a result of very rare changes in ownership each year as well. The CySO is responsible for ensuring the audit of a Cybersecurity Plan, and we assume that an individual of similar experience and wage rate will conduct the annual audit. Based on input provided by Coast Guard SMEs who review Plans at the Coast Guard, we estimate the time to conduct an audit to be about 40 hours for each Plan. We estimate the undiscounted cost for the annual maintenance of Cybersecurity Plans for owners and operators of facilities and OCS facilities to be approximately $3,128,325 (3,718 facility Plans × 10 hours × $84.14). We estimate the undiscounted cost for annual audits of Cybersecurity Plans to be approximately $12,513,301 (3,718 facility Plans × 40 hours × $84.14). We estimate the total undiscounted annual cost each year in years 3 through 6 and 8 through 10 for Cybersecurity Plans to be approximately $15,641,626 ($3,128,325 + $12,513,301).

Because a Cybersecurity Plan approved by the Coast Guard is valid for 5 years, in Year 7 of the analysis period, owners and operators of facilities and OCS facilities will be required to renew the approval of their Plans with the Coast Guard. We use the hour-burden estimate in ICR 1625–0077 for renewing the Plan, which is 15 hours. The hour-burden estimate for revision and resubmission of renewals is half of the original hour-burden for renewals, or 7.5 hours. The CySO is responsible for resubmitting the Cybersecurity Plan to the Coast Guard for renewal, including additional resubmissions because of corrections. We estimate the undiscounted cost for renewing and resubmitting a Cybersecurity Plan due to corrections to be approximately $4,927,238 [(3,718 facility Plans × 15 hours × $84.14) + (372 resubmitted facility Plans × 7.5 hours × $84.14)].

We estimate the total discounted cost of this final rule for developing Cybersecurity Plans for owners and operators of facilities and OCS facilities to be approximately $132,678,949 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $14,770,687, using a 2-percent discount rate. See table 7. We estimate that the subset of 33 OCS facilities operated by 9 owners will incur costs of $1,176,239 over a 10-year period of analysis and $130,947 annualized, using a 2-percent discount rate.

BILLING CODE 9110–04–P

[99] The Jones Walker survey (see footnote 60) reports about 72 percent of ports and terminals conduct a risk assessment at least once a year. We did not estimate a separate cost for this item because the Coast Guard believes that a risk assessment can be a part of an annual audit. Readers can access the survey at *https://www.joneswalker.com/en/insights/2022-Jones-Walker-LLP-Ports-and-Terminals-Cybersecurity-Survey-Report.html,* accessed August 26, 2024.

Total									**$147,266,876**	**$132,678,949**
Annualized										**$14,770,687**

Note: Totals may not sum due to independent rounding.

Cybersecurity Plan Cost for U.S.-Flagged Vessels

The methodology for owners and operators of U.S.-flagged vessels to develop a Cybersecurity Plan is the same as for facilities and OCS facilities. We estimate the affected vessel population to be about 11,222. We estimate the number of owners and operators of these vessels to be about 2,075.

We use estimates provided by Coast Guard SMEs and ICR 1625–0077 for the hour-burden estimates for vessels as we did for facilities and OCS facilities. The hour-burden estimates in ICR 1625–0077 include 80 hours for developing the Cybersecurity Plan, 8 hours for annual Plan maintenance, and 12 hours to renew the Plan every 5 years. In addition, Coast Guard SMEs estimate that it takes 40 hours to conduct annual audits of Plans for vessels. Similar to facilities, we estimate 10 percent of all Cybersecurity Plans for vessels will need to be resubmitted for corrections in the second year (initial year of Plan submission), and 10 percent of Cybersecurity Plans for vessels will need to be revised and resubmitted in the seventh year of the analysis period. Based on information from Coast Guard SMEs, we estimate the time to make corrections to the Plan in the second year will be about half of the initial time to develop the Plan, or 40 hours in the second year, and 6 hours in the seventh year. We include the annual Cybersecurity Assessment in the cost to develop Plans, and we do not assume that owners and operators will wait until the second year of analysis to begin developing the Cybersecurity Plan or implementing related cybersecurity measures. Therefore, we divide the estimated 80 hours to develop Plans equally across the first and second years of analysis.

The methodology to determine the cost to develop a Cybersecurity Plan for U.S.-flagged vessels is slightly different than the methodology for facilities and OCS facilities. The Coast Guard does not believe that a CySO for U.S.-flagged vessels will expend 80 hours developing a Plan for each vessel in a company's fleet. For example, if a vessel owner or operator has 10 vessels, it would take a CySO 800 hours of time to develop Plans for all 10 vessels, which is nearly 40 percent of the total hours of work in a calendar year. It is more likely that the CySO will create a master Cybersecurity Plan for all the vessels in the fleet, and then tailor each Plan according to a specific vessel, as necessary.

Because a large portion of the provisions required under this final rule will impact company-wide policies regarding network, account, and data security practices, as well as company-wide cybersecurity training, reporting procedures, and testing, we do not believe there will be much variation in how these provisions are implemented between specific vessels owned by the same owner or operator. Therefore, the cost to develop a Cybersecurity Plan for vessels becomes a function of the number of vessel owners and operators and not a function of the number of vessels.

When a vessel owner or operator submits a Plan to the Coast Guard for approval, the owner or operator will send the master Cybersecurity Plan, which might include a more tailored or abbreviated Plan for each vessel. For example, the owner or operator of 10 vessels will send the master Cybersecurity Plan along with the tailored Plans for each vessel in one submission to the Coast Guard for approval, instead of 10 separate documents.

We estimate the first- and second-year (initial year of Plan submission) undiscounted cost for owners and operators of U.S.-flagged vessels to develop a Cybersecurity Plan to be approximately $13,967,240 (2,075 Plans × 80 hours × $84.14) split over the first two years of analysis. We estimate the second-year undiscounted cost for owners and operators to resubmit vessel Plans (or send amendments) for corrections to be approximately $700,045 (208 Plans or amendments × 40 hours × $84.14). Therefore, we estimate the total undiscounted first- and second-year cost to the owners and operators of U.S.-flagged vessels to develop a Cybersecurity Plan to be approximately $14,667,285 ($13,967,240 + $700,045).

As with facilities and OCS facilities, in years 3 through 6 and years 8 through 10 of the analysis period, CySOs, on behalf of owners and operators of U.S.-flagged vessels, will be required to maintain their Cybersecurity Plans. We again obtain the hour-burden estimate for annual maintenance of Plans from ICR 1625–0077, which is 8 hours. In the same years of the analysis period, this final rule also requires owners and operators of U.S.-flagged vessels to conduct annual audits. The audits will be necessary for owners and operators of U.S.-flagged vessels to identify vulnerabilities through the Cybersecurity Assessment and to mitigate them. Audits will also be necessary if there is a change in the ownership of a vessel. The CySO would likely conduct an audit of the master Cybersecurity Plan, which includes each vessel, instead of conducting a separate audit for each individual vessel.

The time estimate for a CySO to conduct an audit for U.S.-flagged vessels in a fleet is the same as it is for facilities and OCS facilities, or 40 hours per Plan. We estimate the undiscounted cost for the annual maintenance of Cybersecurity Plans for the owners and operators of U.S.-flagged vessels to be about $1,396,724 (2,075 Plans × 8 hours × $84.14). We estimate the undiscounted cost for annual audits of Cybersecurity Plans to be approximately $6,983,620 (2,075 Plans × 40 hours × $84.14). We estimate the total undiscounted annual cost each year in years 3 through 6 and 8 through 10 for Cybersecurity Plans to be approximately $8,380,344 ($1,396,724 + $6,983,620).

Again, as with facilities and OCS facilities, Coast Guard approval for the Cybersecurity Plan is valid for 5 years. Therefore, in Year 7 of the analysis period, owners and operators of U.S.-flagged vessels will be required to renew their Plans with the Coast Guard. We use the hour-burden estimate in ICR 1625–0077 for Plan renewal, which is 12 hours. The CySO is responsible for resubmitting the Cybersecurity Plan to the Coast Guard for renewal. We estimate the undiscounted cost for owners and operators of U.S.-flagged vessels to renew the Plan to be approximately $2,200,093 [(2,075 Plans × 12 hours × $84.14) + (208 resubmitted vessel Plans × 6 hours × $84.14)].

We estimate the total discounted cost of this final rule for owners and operators of U.S.-flagged vessels to develop Cybersecurity Plans to be approximately $67,857,908 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $7,554,385, using a 2-percent discount rate. See table 8.

Total									**$75,529,786**	**$67,857,908**
Annualized										**$7,554,385**

Note: Totals may not sum due to independent rounding.

Drills

In § 101.635(b), this final rule requires drills that test the proficiency of U.S.-flagged vessel, facility, and OCS facility personnel who have assigned cybersecurity duties and individual elements of the Plan, including responses to cybersecurity threats and incidents. The drills enable the CySO to identify any cybersecurity deficiencies that need to be addressed. The CySO will need to conduct the drills at least twice annually, and they may be held in conjunction with other security or non-security-related drills, as appropriate. After considering public comments, in this final rule, we have adjusted the frequency of conducting drills from quarterly to twice each calendar year. We believe that two drills annually will ensure sufficient proficiency with the procedures, while allowing for a regulated entity to conduct additional drills if they choose to, and we understand how quarterly drills and exercises could be too frequent for some vessel operations, as noted by some commenters.

While there are benefits of a more robust drill schedule, we believe that this reduction in the number of drills lowers costs and increases marginal benefits by allowing affected owners and operators to use resources more efficiently. Further, by having fewer drills to develop and conduct, we believe the remaining drills will be the primary focus, addressing the commenter's concern about the previously proposed frequency and integration of cyber drills with other required drills. However, the Coast Guard believes that anything less frequent than two drills per year could lead to a decrease in benefits that drills provide. This is especially true with regard to cybersecurity, as risk and vulnerabilities can change rapidly over the course of a year.

The Coast Guard does not have data on who is currently conducting cybersecurity drills in either the population of facilities and OCS facilities or the population of U.S.-flagged vessels. Therefore, we assume that the entire population of facilities and U.S.-flagged vessels will need to develop new cybersecurity related drills to comply with the requirements. While owners and operators in the affected population are allowed to combine these new cybersecurity drills with the drills required in accordance with 33 CFR parts 104, 105, and 106, several commenters suggested that combining these drills would be difficult or impossible. Accordingly, we have updated our cost estimates to reflect a longer time to develop and conduct drills and include employee participation in the new drills. Coast Guard SMEs who are familiar with MTSA's requirements and practices for drills and exercises, as well as Coast Guard SMEs at LANTAREA who have reviewed current drills in the affected population estimate that it will take a CySO 8 hours to develop each new cybersecurity drill.

The CySO is the person who develops cybersecurity drills. Each CySO, on behalf of the owner or operator of a facility or OCS facility, will be required to develop the drill's components beginning in the first year of the analysis period and document procedures in the Cybersecurity Plan.

In addition to the development costs, we also estimate the costs of employee participation in the cybersecurity drills. Coast Guard SMEs who are familiar with MTSA's requirements and practices for drills and exercises, as well as Coast Guard SMEs at LANTAREA who have reviewed current cybersecurity drills in the affected population estimate that each drill requires 4 hours of participation per employee. According to § 101.635(a)(1), drills and exercises must be used to test the proficiency of personnel in assigned cybersecurity duties. Because the Coast Guard is unable to determine which employees at a given facility or OCS facility will be in assigned cybersecurity duties and required to participate in the drills, we assume that 33 percent of employees will participate.[100] This share of employees is consistent with the estimated share of shoreside employees in the affected population of owners and operators of U.S.-flagged vessels. Coast Guard SMEs with knowledge of existing cybersecurity drill practices believe this is a more reasonable estimate than assuming the entire portion of employees will participate. We obtain the average number of facility employees from a Coast Guard contract that uses D&B Hoovers' database for company employee data (spreadsheet analysis available in the docket for this rulemaking, see file titled ''facilities_hoovers_employee_counts''). The average number of employees at a facility company is 74. We estimate that the average number of employees that will participate in cybersecurity drills is 24 (74 employees × 0.33 = 24.42).

To obtain the unloaded mean hourly wage rate of employees at facilities and OCS facilities, we use BLS's Quarterly Census of Employment and Wages (QCEW) data. We also use the North American Industry Classification System (NAICS) code for ''Port and Harbor Operations,'' which is 488310, to obtain the representative hourly wage for employees at facilities and OCS facilities. The BLS reports the weekly wage to be $1,653.[101] Dividing this value by the standard number of hours in a work week, or 40, we obtain the unloaded hourly wage rate of approximately $41.33. We once again apply a load factor of 1.46 to this wage to obtain a loaded mean hourly wage rate for facility employees of approximately $60.34 ($41.33 × 1.46).

We estimate the cost for facilities to develop and conduct cybersecurity drills by using the number of owners and operators of facilities we presented earlier (1,372), the CySO's loaded mean hourly wage rate, the estimated time to develop the drill's components (8 hours), the estimated time to participate in the drills (4 hours), the average number of employees at a facility company (24 employees), the facility employee wage, and the frequency of the drill (twice annually).[102] We estimate the undiscounted annual cost for owners and operators of facilities and OCS facilities to develop, conduct, and participate in drills to be approximately $17,742,045 [1,372 facility companies × ((2 drills per year × 8 hours per drill development × $84.14 CySO wage) + (2 drills per year × 4 hours drill participation × 24 facility employees × $60.34 facility employee wage))]. We estimate the total discounted cost of drills for owners and operators of facilities and OCS facilities to be approximately $159,369,428 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the

[100] Under § 101.635(a)(1), cybersecurity drills and exercises are required to test the proficiency of U.S.-flagged vessel, facility, and OCS facility personnel in assigned cybersecurity duties. Full participation in drills and exercises from all personnel, including those without assigned cybersecurity duties, is not a requirement of this final rule.

[101] Readers can access this web page at *www.bls.gov/cew/*. Select the dropdown under ''QCEW data'' and click ''Databases.'' On this page, select the one-screen tool (*https://data.bls.gov/PDQWeb/en*). In fields 1 and 2, select ''U.S. TOTAL.'' In field 3, select ''NAICS 488310 Port and harbor operations.'' Select ''Private,'' ''All establishment sizes,'' and ''Average Weekly Wage'' in fields 4, 5, and 6, respectively. Click ''Add to selection'' and then ''Get Data.'' Relevant Series ID is ENUUS000405488310). For this RA, we used Q1 2022 QCEW data. We use the average weekly wage here because this QCEW database does not contain mean hourly wage data, accessed on August 15, 2024.

[102] For the purposes of capturing the cost of the CySO delivering the drill, we assume that the CySO is averaged into the number of employees participating in the drill. As such, we do not estimate a separate cost for CySO delivery of the drill.

annualized cost to be approximately $17,742,045, using a 2-percent discount rate. See table 9. We estimate that the subset of 33 OCS facilities operated by 9 owners will incur costs of $1,045,430 over a 10-year period of analysis and $116,384 annualized, using a 2-percent discount rate.

Table 9: Estimated Costs of the Final Rule for Drills for Facilities and OCS Facilities (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rate)

Year	Number of Facility Companies (a)	CySO Wage (b)	Drill Development Hours (c)	Hours to Conduct Drill (d)	Frequency of Drills (e)	Facility Employee Wage (f)	Number of Employees (g)	Total Cost = [a × ((b × c × e) + (d × e × f × g))]	2 Percent
1	1372	$84.14	8	4	2	$60.34	24	$17,742,045	$17,394,162
2	1372	$84.14	8	4	2	$60.34	24	$17,742,045	$17,053,100
3	1372	$84.14	8	4	2	$60.34	24	$17,742,045	$16,718,725
4	1372	$84.14	8	4	2	$60.34	24	$17,742,045	$16,390,907
5	1372	$84.14	8	4	2	$60.34	24	$17,742,045	$16,069,517
6	1372	$84.14	8	4	2	$60.34	24	$17,742,045	$15,754,428
7	1372	$84.14	8	4	2	$60.34	24	$17,742,045	$15,445,518
8	1372	$84.14	8	4	2	$60.34	24	$17,742,045	$15,142,665
9	1372	$84.14	8	4	2	$60.34	24	$17,742,045	$14,845,750
10	1372	$84.14	8	4	2	$60.34	24	$17,742,045	$14,554,656
Total								$177,420,450	**$159,369,428**
Annualized									**$17,742,045**

Note: Totals may not sum due to independent rounding.

We use the same methodology and estimates for U.S.-flagged vessel drills. As we presented previously, there are about 2,075 CySOs, on behalf of owners and operators of U.S.-flagged vessels, who are required to develop drills with this final rule. As with facilities and OCS facilities, we have increased our development and hour-burden estimates, and now include cost estimates for a share of employees participating in cybersecurity drills. To determine the costs for employee participation, we use estimates for the number of employees per company and mean hourly wage estimates for employees based on vessel types.[103] We then subtract the total number of seafaring crew from the number of total company employees.[104] We use the estimated 33 percent ''shoreside'' share of employees for owners and operators of vessels because we do not have data on which portion of a given owner or operator's employees will have cybersecurity responsibilities. We feel this is more in line with the requirements of the regulatory text than assuming that all employees would participate. It also better aligns with suggestions from a public commenter who stated that ''onboard personnel have little to no involvement in cyber specific drills.''

For the vessel employee wage estimates, we chose several representative labor categories of vessel employees based on the manning requirements listed in the certificates of inspection for each vessel.[105] From the BLS OEWS program, we use the labor categories, ''Captains, Mates, and Pilots of Water Vessels,'' with an occupational code of 53–5021, ''Sailors and Marine Oilers,'' with an occupational code of 53–5011, and ''Ship Engineers,'' with an occupational code of 53–5031.[106] The unloaded mean hourly wage rates from May 2022 for these occupations are $50.09, $25.65, and $48.55, respectively. We also use an assortment of labor categories to estimate a mean hourly wage for the industrial personnel identified in the certificate of inspection for MODUs in the affected population. According to SMEs with CG–CVC, industrial personnel aboard MODUs generally include a mixture of hotel and steward staff; laborers and riggers; specialized technicians; and mechanics, electricians, and electronic technicians for maintenance. For these groups, we find a combined unloaded weighted mean hourly wage of $25.16. For each vessel type, we weight the representative wages based on the average occupational ratios across vessels in the population. See Appendix A: Wages Across Vessel Types, in the docket of this rulemaking, for more details on how the industrial personnel and weighted mean hourly wages for

[103] To estimate the average number of mariners and shoreside employees for each company, Coast Guard conducted an internet search for publicly available employment data for the owners and operators of MTSA-regulated vessels. In total, Coast Guard was able to identify eight owners and operators of MTSA-regulated vessels who publicly provided their shoreside and seafarer employment numbers. Using this data, we calculated the percentage of total employees working shoreside for each vessel. We then took an average of these percentages and applied that average to the population of owners and operators of MTS-regulated vessels. The percentage of shoreside employees ranged from 8 to 87 percent, with an average of 33 percent, which we used for each subpopulation of vessels.

[104] For example, the average OSV in the affected population carries 12 seafaring crew per vessel according to certificate of inspection manning requirements. We multiply this by 1.33 to arrive at 16 total employees per OSV. We then subtract the 12 seafaring crew from the 16 total employees to isolate the 4 shoreside employees per vessel that would need to participate in the cybersecurity drills.

[105] Manning requirements for U.S.-flagged vessels were established by regulation in 46 CFR part 15.

[106] See *https://www.bls.gov/oes/2022/may/oes_nat.htm#00-0000* for 2022 wage rates associated with the listed occupations, accessed August 22, 2024.

each vessel type were calculated.[107] We apply the same load factor we used previously in this analysis, 1.46, to these wage rates, to obtain the loaded mean hourly wage rates shown in table 10.

Table 10: Estimated Weighted Mean Hourly Wage Rates for Employees On board U.S.-flagged Vessels[108]

Vessel Type	Loaded Weighted Mean Hourly Wage
MODU	$39.60
Subchapter I Vessels	$46.36
OSVs	$54.92
Subchapter H Passenger Vessels	$41.85
Subchapter K Passenger Vessels	$45.52
Subchapter M Towing Vessels	$51.28
Subchapter D and Combination Subchapters O&D Tank Vessels	$55.94
Subchapters K and T International Passenger Vessels	$44.59

We estimate the undiscounted annual cost of cybersecurity drill participation for vessel employees to be approximately $12,644,432 (number of vessels for each affected vessel category × number of employees for each vessel type × representative mean hourly wage for vessel type × 4 hours for drill participation × 2 drills per year).[109] For example, using OSVs, there are about 430 OSVs, with 4 shoreside employees for each OSV. Therefore, we estimate the annual drill participation cost for OSVs to be about $755,699 (430 OSVs × 4 shoreside employees × $54.92 × 4 hours × 2 drills), rounded. We perform this calculation for all for the affected vessel types in this final rule and add it to the estimated costs for drill development. We estimate the undiscounted annual cost to develop cybersecurity drills to be approximately $2,793,448 (2,075 vessel companies × 1 CySO per vessel company × $84.14 × 8 hours to develop drills × 2 drills per year)]. This means the total undiscounted annual drill cost for the affected population of U.S.-flagged vessels is $15,437,880 ($12,644,432 drill participation costs + $2,793,448 drill development costs). Table 11 displays the total employee drill participation costs for each vessel type impacted by the drill requirement.

[107] It should be noted that the wage calculations in Appendix A: Wages Across Vessel Types, are conducted with occupational ratios based on employee counts without the 1.33 shoreside employee modifier applied. Applying this multiplier evenly across all the employee counts would not have an impact on the occupational ratios, and thus would not impact our estimated weighted mean hourly wages. Because we do not have a good grasp on what occupations the shoreside employees would have, we simply apply the weighted mean hourly wages to all employees in the given population of vessels.

[108] See Appendix A: Wages Across Vessel Types for more information on how these wages rates were calculated.

[109] To capture the cost of the CySO delivering the drill, we assume that the CySO is averaged into the number of employees participating in the drill. As such, we do not estimate a separate cost for CySO delivery of the drill.

Table 11: Estimated Costs of the Final Rule for Drill Participation by Vessel Type for U.S.-flagged Vessels (2022 Dollars, Undiscounted Costs)

Vessel Type	Number of Vessels	Number of Shoreside Employees per Vessel	Drill Wage	Number of Drills per year	Hours to Complete Drills per Year	Total
MODU	1	92	$39.60	2	4	$29,146
Subchapter I Vessels	398	20	$46.36	2	4	$2,952,205
OSVs	430	4	$54.92	2	4	$755,699
Subchapter H Passenger Vessels	131	21	$41.85	2	4	$921,035
Subchapter K Passenger Vessels	430	9	$45.52	2	4	$1,409,299
Subchapter M Towing Vessels	4822	3	$51.28	2	4	$5,934,532
Subchapter D and Combination O&D Tank Vessels	114	10	$55.94	2	4	$510,173
Subchapters K and T International Passenger Vessels	53	7	$44.59	2	4	$132,343
Total						**$12,644,432**

We estimate the total discounted cost of drills for U.S.-flagged vessels to be approximately $138,672,070 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $15,437,880, using a 2-percent discount rate. See table 12.

Table 12: Estimated Costs of the Final Rule for Drills for U.S.-flagged Vessels (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rate)

Year	Total Cost	2 Percent
1	$15,437,880	$15,135,176
2	$15,437,880	$14,838,408
3	$15,437,880	$14,547,459
4	$15,437,880	$14,262,215
5	$15,437,880	$13,982,564
6	$15,437,880	$13,708,396
7	$15,437,880	$13,439,604
8	$15,437,880	$13,176,082
9	$15,437,880	$12,917,727
10	$15,437,880	$12,664,439
Total	$154,378,800	**$138,672,070**
Annualized		**$15,437,880**

Note: Totals may not sum due to independent rounding.

We estimate the total discounted cost of this final rule for drills for the owners and operators of U.S.-flagged vessels, facilities, and OCS facilities to be approximately $298,041,496 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $33,179,925, using a 2-percent discount rate. See table 13.

Table 13: Estimated Costs of the Final Rule for Drills for U.S.-flagged Vessels, Facilities, and OCS Facilities (2022 Dollars, 10-year period of Analysis, 2-percent Discount Rate)

Year	Facilities Drill Cost	Vessel Drill Cost	Total Cost	2 Percent
1	$17,742,045	$15,437,880	$33,179,925	$32,529,338
2	$17,742,045	$15,437,880	$33,179,925	$31,891,508
3	$17,742,045	$15,437,880	$33,179,925	$31,266,184
4	$17,742,045	$15,437,880	$33,179,925	$30,653,122
5	$17,742,045	$15,437,880	$33,179,925	$30,052,080
6	$17,742,045	$15,437,880	$33,179,925	$29,462,824
7	$17,742,045	$15,437,880	$33,179,925	$28,885,121
8	$17,742,045	$15,437,880	$33,179,925	$28,318,747
9	$17,742,045	$15,437,880	$33,179,925	$27,763,477
10	$17,742,045	$15,437,880	$33,179,925	$27,219,095
Total	$177,420,450	$154,378,800	$331,799,250	**$298,041,496**
Annualized				**$33,179,925**

Note: Totals may not sum due to independent rounding.

Exercises

In § 101.635(c), this final rule requires exercises that test the communication and notification procedures of U.S.-flagged vessels, facilities, and OCS facilities. These exercises may be vessel- or facility-specific, or part of a cooperative exercise program or comprehensive port exercises. The exercises are a full test of the cybersecurity program with active participation by the CySO and may include Government authorities and vessels visiting a facility. The exercises must be conducted at least once each calendar year, with no more than 18 months between exercises.

As with drills, we assume that exercises will begin in the first year of the analysis period as CySOs develop Cybersecurity Plans. We also assume that the exercises developed to satisfy § 101.635(c) will also satisfy the exercise requirements outlined in § 101.650(g)(2) and (3), which requires the exercise of the Cybersecurity Plan and Cyber Incident Response Plan.

The Coast Guard does not have data on who is currently conducting cybersecurity exercises in either the population of facilities and OCS facilities or the population of U.S.-flagged vessels. In addition, because the affected populations are already required to conduct exercises per §§ 104.230, 105.220, and 106.225, this final rule allows for owners and operators to hold cybersecurity exercises in conjunction with other exercises. However, based on suggestions from public commenters, the size and scope of these exercises may make them difficult to combine in all cases. Due to a lack of data on who will be able to combine exercises, we assume that the entire populations will need to develop new cybersecurity-related exercises to comply with the requirements. In either case, these development and participation hour-burden estimates could cover the development of new internal exercises, or preparation and participation in local area exercises.

Coast Guard SMEs who are familiar with MTSA's requirements and practices for drills and exercises, Coast Guard SMEs at LANTAREA who have reviewed current exercises in the affected population, and Coast Guard SMEs at Sector San Juan who worked to develop cybersecurity exercises with the local AMSC estimate that it takes a CySO 20 hours on average to develop new functional, full scale cybersecurity exercises. We have increased our hour-burden estimate for developing exercise components from 8 hours in the NPRM to 20 hours in the final rule to reflect the development of full-scale exercises since we no longer assume that they will be combined with existing exercises. It should be noted that CySOs can access widely available resources and planning materials for developing cybersecurity exercises online.[110] In addition, the proliferation of cybersecurity components already being added to AMSC exercises around the United States provide examples for CySOs working to develop their own exercises.[111]

We assume each CySO, on behalf of the owner and operator of a facility or OCS facility, will develop the exercises specified in this final rule. Using the 1,372 facility owners and operators we presented earlier, the CySO's loaded mean hourly wage rate, the 20-hour estimate for developing the exercise, and one annual exercise, we estimate the cost for facilities to develop cybersecurity exercise components. We estimate the undiscounted annual cost of exercises for owners and operators of facilities and OCS facilities to be approximately $2,308,802 (1,372 facility CySOs × 20 hours per exercise × $84.14 CySO wage).

In addition to the development costs, we also estimate the costs of employee participation in the cybersecurity exercises. Coast Guard SMEs who are

[110] For example, CISA offers free resources on cybersecurity scenarios and cybersecurity exercises on their website. See *https://www.cisa.gov/cybersecurity-training-exercises,* accessed August 22, 2024.

[111] See *https://digitaleditions.walsworthprintgroup.com/publication/?i=459304&article_id=2956672&view=articleBrowser* and *https://www.news.uscg.mil/Press-Releases/Article/3920011/coast-guard-area-maritime-security-partners-conduct-2-cyber-security-exercises/* for just two examples of AMSC cyber exercises in recent years, accessed August 22, 2024.

familiar with MTSA's requirements and practices for drills and exercises, Coast Guard SMEs at LANTAREA who have reviewed current cybersecurity drills in the affected population, and Coast Guard SMEs at Sector San Juan who worked to develop cybersecurity exercises with the local AMSC estimate that each exercise requires 4 hours of participation per employee. This is based on the average length of time it took to lead and administer local AMSC cybersecurity exercises.[112]

According to § 101.635(a)(1), drills and exercises must be used to test the proficiency of personnel in assigned cybersecurity duties. Because the Coast Guard is unable to determine which employees at a given facility or OCS facility will be in assigned cybersecurity duties and required to participate in the exercises, we assume that 33 percent of employees will participate.[113] This share of employees is consistent with the estimated share of shoreside employees in the affected population of owners and operators of U.S.-flagged vessels. Coast Guard SMEs with knowledge of existing cybersecurity exercise practices believe this is a more reasonable estimate than assuming the entire portion of employees will participate. We estimate that the average number of employees that will participate in cybersecurity exercises is 24 (74 total employees × 0.33 = 24.42) with a loaded mean hourly wage of $60.34.

We estimate the cost for facilities to develop and conduct cybersecurity exercises by using the number of facilities owners and operators we presented earlier (1,372), the CySO's loaded mean hourly wage rate, the estimated time to develop the exercise components (20 hours), the estimated time to participate in the exercises (4 hours), the average number of participating employees at a facility company (24 employees), and the facility employee wage.[114]

We estimate the undiscounted annual cost for owners and operators of facilities and OCS facilities to develop and conduct exercises to be approximately $10,256,304 [1,372 facility companies × ((20 hours exercise development × $84.14 CySO wage) + (4 hours exercise participation × 24 facility employees × $60.34 facility employee wage))].[115] We estimate the total discounted cost of exercises for owners and operators of facilities and OCS facilities to be approximately $92,128,123 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $10,256,304, using a 2-percent discount rate.

We estimate that the subset of 33 OCS facilities operated by 9 owners will incur costs of $604,339 over a 10-year period of analysis and $67,279 annualized, using a 2-percent discount rate. See table 14.

[112] We estimate similar lengths of participation time for both exercises and drills because, while drills are meant to test individual elements of the Cybersecurity Plan and exercises are required to be a full test of the cybersecurity program, depending on what is being drilled, drills can be more open-ended or involve lengthy and in-depth practice of incident response and recovery procedures. Consider a suite of cybersecurity drills that includes phishing attack simulations, which would involve the CySO sending false emails from a seemingly trusted source in order to extract personal identifying information from recipients. For example, a mock phishing email can have an attachment or link that alerts the testing team when it's opened, or can include a link that goes to a mock login page. This will allow the CySO to see how many people not only click the link but also insert their credentials. Drilling through this scenario could take hours to wait and see who interacts with the email, record results, and assemble their team to discuss lessons learned and response procedures if the phishing attempt is successful. While only an example, drilling one of these scenarios (or another like it) in-depth can require a similar length of time as a full exercise when considering time to conduct the drill, record results, practice response procedures, and discuss lessons learned as a team.

[113] Under § 101.635(a)(1), cybersecurity drills and exercises are required to test the proficiency of U.S.-flagged vessel, facility, and OCS facility personnel in assigned cybersecurity duties. Full participation in drills and exercises from all personnel, including those without assigned cybersecurity duties, is not a requirement of this final rule.

[114] To capture the cost of the CySO delivering the exercise, we assume that the CySO is averaged into the number of employees participating in the exercise. As such, we do not estimate a separate cost for CySO delivery of the exercise.

[115] To capture the cost of the CySO administering the exercise, we assume that the CySO is averaged into the number of employees participating in the exercise. As such, we do not estimate a separate cost for CySO delivery of the exercise.

Table 14: Estimated Costs of the Final Rule for Exercises for Facilities and OCS Facilities (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rate)

Year	Number of Facility Companies (a)	CySO Wage (b)	Exercise Development Hours (c)	Exercise Participation Hours (d)	Facility Employee Wage (e)	Number of Employees (f)	Total Cost = [a × ((b × c) + (d × e × f))]	2 Percent
1	1372	$84.14	20	4	$60.34	24	$10,256,304	$10,055,200
2	1372	$84.14	20	4	$60.34	24	$10,256,304	$9,858,039
3	1372	$84.14	20	4	$60.34	24	$10,256,304	$9,664,744
4	1372	$84.14	20	4	$60.34	24	$10,256,304	$9,475,240
5	1372	$84.14	20	4	$60.34	24	$10,256,304	$9,289,451
6	1372	$84.14	20	4	$60.34	24	$10,256,304	$9,107,304
7	1372	$84.14	20	4	$60.34	24	$10,256,304	$8,928,730
8	1372	$84.14	20	4	$60.34	24	$10,256,304	$8,753,657
9	1372	$84.14	20	4	$60.34	24	$10,256,304	$8,582,016
10	1372	$84.14	20	4	$60.34	24	$10,256,304	$8,413,742
Total							$102,563,040	**$92,128,123**
Annualized								**$10,256,304**

Note: Totals may not sum due to independent rounding.

We use the same methodology and estimates for vessel exercises that we use for facilities. About 2,075 CySOs, on behalf of vessel owners and operators, will be required to conduct exercises with this final rule. As with facilities and OCS facilities, we have increased our development hour-burden estimates, and now include cost estimates for shoreside employees participating in cybersecurity exercises. To determine the costs for employee participation, we use estimates for the number of employees per company and mean hourly wage estimates for employees based on vessel types previously calculated in our analysis of cybersecurity drill costs. See table 10 for a breakdown of the mean hourly wage estimates used for employees in the U.S.-flagged vessel population.

We estimate the undiscounted annual cost of cybersecurity exercise participation for vessel employees to be approximately $6,322,216 (number of vessels for each affected vessel category × number of employees for each vessel type × representative mean hourly wage for vessel type × 4 hours for exercise participation).[116] For example, using OSVs, there are about 430 OSVs, with 4 shoreside employees for each OSV. Therefore, we estimate the annual exercise participation cost for OSVs to be about $377,850 (430 OSVs × 4 shoreside employees × $54.92 employee wage × 4 hours), rounded. We perform this calculation for all for the affected vessel types in this final rule and add it to the estimated costs for exercise development. We estimate the undiscounted annual cost to develop cybersecurity exercises to be approximately $3,491,810 (2,075 vessel companies × 1 CySO per vessel company × $84.14 CySO wage × 20 hours to develop exercises)]. This means the total undiscounted annual exercise cost for the affected population of U.S.-flagged vessels is $9,814,026 ($6,322,216 exercise participation costs + $3,491,810 exercise development costs). Table 15 displays the total employee exercise participation costs for each vessel type impacted by the exercise requirement.

[116] To capture the cost of the CySO administering the exercise, we assume that the CySO is averaged into the number of employees participating in the exercise. As such, we do not estimate a separate cost for CySO delivery of the exercise.

Table 15: Estimated Costs of the Final Rule for Exercise Participation by Vessel Type for U.S.-flagged Vessels (2022 Dollars, Undiscounted Costs)

Vessel Type	Number of Vessels	Number of Shoreside Employees	Employee Wage	Number of Exercises	Hours to Complete Exercises per Year	Total
MODU	1	92	$39.60	1	4	$14,573
Subchapter I Vessels	398	20	$46.36	1	4	$1,476,102
OSVs	430	4	$54.92	1	4	$377,850

Subchapter D and Combination O&D Tank Vessels	114	10	$55.94	1	4	$255,086
Subchapters K and T International Passenger Vessels	53	7	$44.59	1	4	$66,172
Total						**$6,322,216**

We estimate the total discounted cost of exercises for U.S.-flagged vessels to be approximately $88,155,323 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $9,814,026, using a 2-percent discount rate. See table 16.

Table 16: Estimated Costs of the Final Rule for Exercises for U.S.-flagged Vessels (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rate)

Year	Total Cost	2 Percent
1	$9,814,026	$9,621,594
2	$9,814,026	$9,432,935
3	$9,814,026	$9,247,976
4	$9,814,026	$9,066,643
5	$9,814,026	$8,888,866
6	$9,814,026	$8,714,574
7	$9,814,026	$8,543,700
8	$9,814,026	$8,376,177
9	$9,814,026	$8,211,938
10	$9,814,026	$8,050,920
Total	$98,140,260	**$88,155,323**
Annualized		**$9,814,026**

Note: Totals may not sum due to independent rounding.

We estimate the total discounted cost of this final rule for the owners and operators of U.S.-flagged vessels, facilities, and OCS facilities for exercises to be approximately $180,283,445 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $20,070,330, using a 2-percent discount rate. See table 17.

Table 17: Estimated Cost of the Final Rule for Exercises for U.S.-flagged Vessels Facilities, and OCS Facilities (2022 Dollars, 10-year Period of Analysis, 2-percent Discount Rate)

Year	Facilities Exercise Cost	Vessel Exercise Cost	Total Cost	2 Percent
1	$10,256,304	$9,814,026	$20,070,330	$19,676,794
2	$10,256,304	$9,814,026	$20,070,330	$19,290,975
3	$10,256,304	$9,814,026	$20,070,330	$18,912,720
4	$10,256,304	$9,814,026	$20,070,330	$18,541,883
5	$10,256,304	$9,814,026	$20,070,330	$18,178,316
6	$10,256,304	$9,814,026	$20,070,330	$17,821,879
7	$10,256,304	$9,814,026	$20,070,330	$17,472,430

Total	$102,563,040	$98,140,260	$200,703,300	**$180,283,445**
Annualized				**$20,070,330**

Note: Totals may not sum due to independent rounding.

We estimate the total discounted cost of this final rule for the owners and operators of U.S.-flagged vessels, facilities, and OCS facilities to conduct annual drills and exercises to be approximately $478,324,941 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $53,250,255, using a 2-percent discount rate. See table 18.

Table 18: Summary of Discounted Costs of the Final Rule for Drills and Exercises (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rate)

	Facilities and OCS Facilities	U.S.-flagged Vessels	Total Cost	2 Percent
Drills	$177,420,450	$154,378,800	**$331,799,250**	**$298,041,496**
Exercises	$102,563,040	$98,140,260	**$200,703,300**	**$180,283,445**
Total	$279,983,490	$252,519,060	**$532,502,550**	**$478,324,941**
Annualized				**$53,250,255**

Note: Totals may not sum due to independent rounding.

Cybersecurity Measure Costs

The remaining regulatory provisions with associated costs are the cybersecurity measures in § 101.650. There are four cost provisions associated with cybersecurity measures: account security measures, cybersecurity training for personnel, penetration testing, and risk management.

The first provision is account security measures in § 101.650(a). The owners and operators of each U.S.-flagged vessel, facility, and OCS facility will ensure that account security measures are implemented and documented. This includes general account security measures in § 101.650(a)(1) through (3) and (5) through (7) and multifactor authentication for end users in § 101.650(a)(4). Based on the Jones Walker ''Ports and Terminals Cybersecurity Survey,'' (see footnote 60), 87 percent of facilities currently have account security measures, and 83 percent of facilities currently use multifactor authentication software. Using the total number of 1,372 facility and OCS facility owners and operators, we multiply this number by 0.13 and 0.17, respectively, to obtain the number of facility owners and operators who need to implement security measures and have multifactor authentication software under this final rule, or about 178 and 233, respectively.

We obtain the hour estimates and the labor category for these security measures for implementing and managing account security from NMSAC members with extensive experience in contracting to implement similar account security measures for facilities and OCS facilities in the affected population. A database administrator ensures that account security measures are implemented. Using wage data from the BLS OEWS program as previously referenced, the unloaded mean hourly wage rate for this labor category, occupational code of 15–1242, is $49.29.[117] Using Employer Costs for Employee Compensation data from BLS, we apply the same load factor of 1.46 to the aforementioned wage rate to obtain a loaded mean hourly wage rate of approximately $71.96.

It takes a database administrator about 8 hours to implement the account security measures and 8 hours for account security management annually thereafter for 178 facility and OCS facility companies. We estimate the undiscounted initial-year cost to implement account security for 178 facilities and OCS facilities and the annually recurring cost of account security management to be approximately $102,471, rounded [(178 facility companies × ($71.96 × 8 hours)].

The number of facility and OCS facility companies that will need multifactor authentication security is about 233. Based on estimates from CG–FAC SMEs with experience implementing multifactor authentication at other Government agencies, implementation of multifactor authentication will cost each facility anywhere from $3,000 to $15,000 in the initial year for setup and configuration. For this RA, we use the average of approximately $9,000 for the costs of initial setup and configuration. It will also cost each facility approximately $150 per end user for annual maintenance and support of the implemented multifactor authentication system. These costs represent the average costs for implementing and maintaining a multifactor authentication system across different organization and company sizes based on the SMEs' experience.

We use the total number of estimated employees at an affected facility company in our analysis of costs because the Coast Guard currently lacks data on (1) which systems in use at a facility or OCS facility will need multifactor authentication, and (2) whether only a subset of the total employees will require access. This is largely because owners and operators have the discretion to designate both critical IT and OT systems as well as the number of employees needing access. Therefore, for the purpose of this RA, we assume all employees will need multifactor authentication access.

We obtain the average number of facility employees from a Coast Guard contract that uses D&B Hoovers' database for company employee data (available in the docket for this rulemaking). The average number of employees at a facility company is 74. We estimate the undiscounted initial-year cost to implement multifactor authentication for 233 facility and OCS facility companies to be approximately $2,097,000 (233 facilities × $9,000). We estimate the undiscounted initial-year and annual cost for multifactor authentication support and maintenance at facilities and OCS facilities to be approximately $2,586,300 (233 facility companies × 74 employees × $150).

We estimate the total undiscounted initial-year cost to implement account security measures and multifactor authentication for facilities and OCS facilities to be approximately $4,785,771 ($102,471 cost to implement account security measures + $2,097,000 cost to set up and configure multifactor authentication + $2,586,300 cost for multifactor authentication support). We estimate the undiscounted annual cost in Years 2 through 10 to be approximately $2,688,771 ($102,471 cost to manage account security + $2,586,300 cost to maintain and provide multifactor authentication support).

We estimate the total discounted cost to implement account security measures for (1) 178 facilities and OCS facilities that will need to implement general account security measures and (2) 233 facilities and OCS facilities that will need to implement multifactor authentication to be approximately

[117] See *https://www.bls.gov/oes/2022/may/oes151242.htm,* accessed August 22, 2024.

$26,207,997 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $2,917,645, using a 2-percent discount rate.

Using the same rates of baseline activity for the total population of facilities, we estimate that a subset of (1) 1 OCS facility owner or operator that will need to implement general account security measures and (2) 2 OCS facility owners or operators that will need to implement multifactor authentication to be approximately $222,234 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $24,741, using a 2-percent discount rate. See table 19.

Table 19: Estimated Costs of the Final Rule for Account Security Measures and Multifactor Authentication for Facilities and OCS Facilities (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rate)

Year	Account Security Measure Costs	Multifactor Authentication Costs	Total Cost	2 Percent
1	$102,471	$4,683,300	$4,785,771	$4,691,932
2	$102,471	$2,586,300	$2,688,771	$2,584,363
3	$102,471	$2,586,300	$2,688,771	$2,533,689
4	$102,471	$2,586,300	$2,688,771	$2,484,009
5	$102,471	$2,586,300	$2,688,771	$2,435,303
6	$102,471	$2,586,300	$2,688,771	$2,387,552
7	$102,471	$2,586,300	$2,688,771	$2,340,737
8	$102,471	$2,586,300	$2,688,771	$2,294,840
9	$102,471	$2,586,300	$2,688,771	$2,249,843
10	$102,471	$2,586,300	$2,688,771	$2,205,729
Total			$28,984,710	**$26,207,997**
Annualized				**$2,917,645**

Note: Totals may not sum due to independent rounding.

Owners and operators of U.S.-flagged vessels will need to implement the same account security measures as facilities and OCS facilities. The population of vessels affected, where applicable, will be about 6,379, rather than 11,222, because we subtract the barge population of 4,843 from 11,222, the total number of affected vessels. Because barges are unmanned, we assume they do not have computer systems on board and, therefore, may not require account security measure implementation. Instead, we assume they will request waivers for these provisions, a cost included in Cybersecurity Plan development costs estimated earlier in the analysis.

The number of affected vessel owners and operators will be about 1,686, excluding 389 barge owners and operators that do not own or operate other affected vessels. Based on the NMSAC estimates detailed above, it will take a database administrator about 8 hours to implement the account security measures and 8 hours to manage account security annually thereafter on behalf of each owner and operator of a vessel. We estimate the undiscounted initial-year cost to implement and annually recurring cost to manage account security measures for owners and operators of U.S.-flagged vessels, excluding barge owners and operators, to be approximately $970,596 [(1,686 vessel owners and operators × (8 hours × $71.96)].

The number of owners and operators who will require multifactor authentication security is about 1,686, for approximately 6,379 vessels. Based on Coast Guard information, multifactor authentication systems will be implemented at the company level because networks and account security policies will be managed at the company level, and not for each individual vessel. Any security updates or multifactor authentication programs implemented at the company level can be pushed out to devices located on board vessels owned or operated by the company. We use the same cost estimate from CG–FAC that we use for facilities. It will cost the owner or operator of a vessel approximately $9,000 to implement multifactor authentication in the first year and about $150 annually for multifactor authentication support and maintenance per end user. To determine the number of employees for each vessel company, we use data from the certificate of inspection manning requirements in MISLE for each vessel subpopulation as described in the cost analysis for cybersecurity drills. Similarly, we assume 2 crews and multiply the total number of seafaring crew by 1.33 to account for shoreside staff to obtain an estimate of total company employees per vessel. We estimate the total undiscounted initial-year cost to implement multifactor authentication for 1,686 vessel owners and operators to be approximately $15,174,000 (1,686 vessel owners and operators × $9,000).

To calculate the annual cost per end user, we multiply the number of vessels for a given vessel type by the average number of employees per vessel and the $150 annual cost of support and maintenance. For example, there are

about 430 OSVs in the affected population, with an average number of 16 employees for each OSV. Therefore, the undiscounted annual cost of support and maintenance for OSV owners and operators will be approximately $1,032,000 (16 employees per each OSV (including shoreside) × $150 × 430 OSVs). We perform this calculation for each vessel type in the affected population and add the costs together to obtain the total initial-year cost and annual cost thereafter. We estimate the total undiscounted annual cost for multifactor authentication maintenance and support on vessels to be about $20,212,500 (number of employees for each vessel type × $150 × number of vessels for each vessel type). See table 20. We add these costs to the previously calculated implementation costs to obtain the initial-year costs associated with multifactor authentication of $35,386,500 ($15,174,000 implementation costs + $20,212,500 annual support and maintenance costs) as seen in column 3 of table 21.

Table 20: Estimated Annual Costs of the Final Rule for Multifactor Authentication Support and Maintenance for U.S.-flagged Vessel Companies by Vessel Type (2022 Dollars)

Vessel Type	Number of Vessels	Number of Employees Per Vessel (Includes Shoreside)	Multifactor Authentication Annual Cost Per End User	Annual Costs
MODU	1	372	$150	$55,800
Subchapter I Vessels	398	82	$150	$4,895,400
OSVs	430	16	$150	$1,032,000
Subchapter H Passenger Vessels	131	85	$150	$1,670,250
Subchapter K Passenger Vessels	430	35	$150	$2,257,500
Subchapter M Towing Vessels	4822	13	$150	$9,402,900
Subchapter D and Combination O&D Tank Vessels	114	40	$150	$684,000
Subchapters K and T International Passenger Vessels	53	27	$150	$214,650
Total				**$20,212,500**

Note: Totals may not sum due to independent rounding.

We estimate the total undiscounted initial-year cost to implement account security measures in § 101.650(a)(1) through (3), and (5) through (7) and multifactor authentication for end users in § 101.650(a)(4) for 1,686 owners and operators of U.S.-flagged vessels to be approximately $36,357,096 ($970,596 cost to implement account security + $35,386,500 cost to implement and provide multifactor support). We estimate the total undiscounted annual cost in Years 2 through 10 to be approximately $21,183,096 ($970,596 cost to manage account security + $20,212,500 cost to maintain and provide multifactor authentication).

We estimate the total discounted cost to implement all the account security measures in § 101.650(a)(1) through (3), and (5) through (7) and multifactor authentication for end users in § 101.650(a)(4) for 1,686 owners and operators of U.S.-flagged vessels to be approximately $205,155,431 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $22,839,242 using a 2-percent discount rate. See table 21.

Table 21: Estimated Costs of the Final Rule for Account Security Measures and Multifactor Authentication for U.S.-flagged Vessels (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rate)

Year	Account Security Measure Costs	Multifactor Authentication Costs	Total Cost	2 Percent
1	$970,596	$35,386,500	$36,357,096	$35,644,212
2	$970,596	$20,212,500	$21,183,096	$20,360,531
3	$970,596	$20,212,500	$21,183,096	$19,961,304
4	$970,596	$20,212,500	$21,183,096	$19,569,906
5	$970,596	$20,212,500	$21,183,096	$19,186,183
6	$970,596	$20,212,500	$21,183,096	$18,809,983
7	$970,596	$20,212,500	$21,183,096	$18,441,160
8	$970,596	$20,212,500	$21,183,096	$18,079,568
9	$970,596	$20,212,500	$21,183,096	$17,725,067
10	$970,596	$20,212,500	$21,183,096	$17,377,517
Total			$227,004,960	**$205,155,431**
Annualized				**$22,839,242**

Note: Totals may not sum due to independent rounding.

We estimate the total discounted cost to implement account security measures for owners and operators of U.S.-flagged vessels, facilities, and OCS facilities, including multifactor authentication, to be approximately $231,363,427 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $25,756,887, using a 2-percent discount rate. See table 22.

Table 22: Summary of Costs of the Final Rule for Account Security Measures and Multifactor Authentication for U.S.-flagged Vessels, Facilities, and OCS Facilities (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rate)

Year	Facilities and OCS Facilities Cost	U.S.-flagged Vessels Cost	Total Cost	2 Percent
1	$4,785,771	$36,357,096	$41,142,867	$40,336,144
2	$2,688,771	$21,183,096	$23,871,867	$22,944,893
3	$2,688,771	$21,183,096	$23,871,867	$22,494,993
4	$2,688,771	$21,183,096	$23,871,867	$22,053,915
5	$2,688,771	$21,183,096	$23,871,867	$21,621,485
6	$2,688,771	$21,183,096	$23,871,867	$21,197,535
7	$2,688,771	$21,183,096	$23,871,867	$20,781,897
8	$2,688,771	$21,183,096	$23,871,867	$20,374,409
9	$2,688,771	$21,183,096	$23,871,867	$19,974,910
10	$2,688,771	$21,183,096	$23,871,867	$19,583,246
Total			**$255,989,670**	**$231,363,427**
Annualized				**$25,756,887**

Note: Totals may not sum due to independent rounding.

Cybersecurity Training Cost

The second cost provision under cybersecurity measures, in § 101.650(d), will be training. All persons with access to IT and OT will need annual training in topics such as the relevant aspects of the owner or operator's specific cybersecurity technology and concerns, recognition of threats and incidents, and incident reporting procedures. Given the importance of having a workforce trained on onsite cybersecurity systems as soon as possible to detect and mitigate cyber incidents, cybersecurity training will be verified during annual inspections following the implementation of this final rule. This means we assume there will be costs related to training in the first year of analysis.

Based on information from the Jones Walker ''Ports and Terminals Cybersecurity Survey,'' (see footnote 60), about 25 percent of facilities are currently conducting cybersecurity training on an annual basis.[118] Therefore, we estimate the number of owners and operators of facilities and OCS facilities who need to implement training to be about 1,029 (1,372 owners and operators × 0.75).

Based on information from Coast Guard SMEs, we assume that the CySO at a facility or OCS facility will spend 2 hours per year to develop, update, and provide cybersecurity training. This is an average estimate based on the time it would take to either develop unique training or identify existing training resources to use within their organizations. This length of time will vary widely based on the complexity of the material and general familiarity with the subject matter but is aided by publicly available training resources online.[119] Subject matter experts with Coast Guard also estimate that it will take 1 hour per facility employee to complete the training annually, based on existing industry-leading cyber awareness training programs.[120]

This final rule will also require part-time employees and contractors to complete the training but allow for personnel unable to receive cybersecurity training to be accompanied or monitored by a person who has completed the required training when accessing IT or OT systems. However, the Coast Guard has data only on the number of full-time employees at facilities and OCS facilities, so we use this estimate. We acknowledge that costs may be higher for facilities than we estimate in this analysis if we take other employees into account. Missing from this estimate are part-time employees and contractors, and if pertinent, estimated costs for the unknown number of employees who will need to be accompanied when accessing IT or OT systems. If included, the training costs would be higher than currently estimated. However, it is possible that some of these individuals would already require an escort under 33 CFR part 105 for access to designated secure areas, and that this would not lead to any change in operations. As before, we use the estimate of the average number of employees at facilities and OCS facilities, or 74. We also use the previously calculated loaded mean hourly wage rate of approximately $60.34 for the facility employees.

We estimate the undiscounted initial-year and annual cost for facility and OCS facility owners and operators to train employees on aspects of cybersecurity to be approximately $4,767,810, rounded [1,029 facility owners and operators × ((74 employees at each facility company × $60.34 facility employee wage × 1 hour) + (1 CySO developing training × $84.14 CySO wage × 2 hours))].

We estimate the discounted cost for facility and OCS facility owners and operators to complete annual training to be approximately $42,827,259 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $4,767,810, using a 2-percent discount rate. See table 23. Using the same rate of baseline activity estimated for the overall population of facilities, we estimate that the subset of 7 owners or operators of OCS facilities will incur costs of $291,340 over a 10-year period of analysis and $32,434 annualized, using a 2-percent discount rate.

[118] See footnote 60 and page 48 of the survey in the docket.

[119] For example, see CISA's compilation of Cybersecurity Education and Training Resources: *https://www.cisa.gov/sites/default/files/2024-02/Resources%20Collection_02062024_508c.pdf,* accessed October 11, 2024.

[120] In addition, CG–FAC recently worked with ABS to deliver Cybersecurity Awareness Training for AMSC members. This training took approximately 1 hour to deliver and is available here: *https://ww2.eagle.org/en/news/abs-news/abs-leads-cyber-trainings-for-us-coast-guard-maritime-security-committee-members.html,* accessed October 11, 2024.

Table 23: Estimated Training Costs of the Final Rule for Owners and Operators of Facilities and OCS Facilities (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rates)

Year	Total Cost	2 Percent
1	$4,767,810	$4,674,324
2	$4,767,810	$4,582,670
3	$4,767,810	$4,492,814
4	$4,767,810	$4,404,719
5	$4,767,810	$4,318,352
6	$4,767,810	$4,233,679
7	$4,767,810	$4,150,666
8	$4,767,810	$4,069,280
9	$4,767,810	$3,989,490
10	$4,767,810	$3,911,265
Total	$47,678,100	**$42,827,259**
Annualized		**$4,767,810**

Note: Totals may not sum due to independent rounding.

Employees on board U.S.-flagged vessels will also be required to complete annual cybersecurity training. The hour estimates for the CySO to develop cybersecurity training and employees to complete the training are the same as for facility estimates, 2 hours and 1 hour, respectively. The training costs for U.S.-flagged vessels are based upon the number of employees for each vessel type (excluding barges), similar to the cost analysis for drills and account security measures. Similarly, we use the loaded mean hourly wage rates shown in table 10 in our cost analysis for cybersecurity drills.

We estimate the undiscounted initial-year and annual cost of cybersecurity training for vessel employees to be approximately $6,590,094 (number of vessels for each affected vessel category × number of employees for each vessel type × representative mean hourly wage for vessel type × 1 hours for training). For example, using OSVs, there are about 430 OSVs, with 16 employees for each OSV (including shoreside). Therefore, we estimate the annual training cost for OSVs to be about $377,850 (430 OSVs × 16 employees × $54.92 OSV employee wage × 1 hour), rounded. We perform this calculation for all for the affected vessel types in this final rule and add it to the estimated costs for training development. We estimate the undiscounted annual cost to develop cybersecurity training to be approximately $283,720 (1,686 vessel companies (excluding barge companies) × 1 CySO per vessel company × $84.14 CySO wage × 2 hours to develop training)]. This means the total undiscounted annual training cost for the affected population of U.S.-flagged vessels is $6,873,814 ($6,590,094 employee training costs + $283,720 training development costs). Table 24 displays the total employee training costs for each vessel type impacted by the training requirement.

Table 24: Estimated Training Costs of the Final Rule for U.S.-flagged Vessels by Vessel Type (2022 Dollars)

Vessel Type	Number of Vessels	Number of Employees (Includes Shoreside)	Trainee Wage	Total
MODU	1	372	$39.60	$14,731
Subchapter I Vessels	398	82	$46.36	$1,513,005
OSVs	430	16	$54.92	$377,850
Subchapter H Passenger Vessels	131	85	$41.85	$466,000
Subchapter K Passenger Vessels	430	35	$45.52	$685,076
Subchapter M Towing Vessels	4822	13	$51.28	$3,214,538
Subchapter D and Combination O&D Tank Vessels	114	40	$55.94	$255,086
Subchapters K and T International Passenger Vessels	53	27	$44.59	$63,808
Total				**$6,590,094**

Note: Totals may not sum due to independent rounding.

We estimate the discounted cost for employees aboard U.S.-flagged vessels to complete annual cybersecurity training to be approximately $61,744,618 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $6,873,814, using a 2-percent discount rate. See table 25.

Table 25: Estimated Training Costs of the Final Rule for U.S.-flagged Vessels (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rate)

Year	Total Cost	2 Percent
1	$6,873,814	$6,739,033
2	$6,873,814	$6,606,895
3	$6,873,814	$6,477,348
4	$6,873,814	$6,350,342
5	$6,873,814	$6,225,825
6	$6,873,814	$6,103,750
7	$6,873,814	$5,984,069
8	$6,873,814	$5,866,734
9	$6,873,814	$5,751,700
10	$6,873,814	$5,638,922
Total	$68,738,140	**$61,744,618**
Annualized		**$6,873,814**

Note: Totals may not sum due to independent rounding.

We estimate the total discounted cost of cybersecurity training for facilities and vessels to be approximately $104,571,877 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $11,641,624, using a 2-percent discount rate. See table 26.

Table 26: Summary of Training Costs of the Final Rule for U.S.-flagged Vessels, Facilities, and OCS Facilities (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rate)

Year	Facilities and OCS Facilities	U.S.-flagged Vessels	Total Cost	2 Percent
1	$4,767,810	$6,873,814	$11,641,624	$11,413,357
2	$4,767,810	$6,873,814	$11,641,624	$11,189,566
3	$4,767,810	$6,873,814	$11,641,624	$10,970,162
4	$4,767,810	$6,873,814	$11,641,624	$10,755,061
5	$4,767,810	$6,873,814	$11,641,624	$10,544,178
6	$4,767,810	$6,873,814	$11,641,624	$10,337,429
7	$4,767,810	$6,873,814	$11,641,624	$10,134,734
8	$4,767,810	$6,873,814	$11,641,624	$9,936,014
9	$4,767,810	$6,873,814	$11,641,624	$9,741,190
10	$4,767,810	$6,873,814	$11,641,624	$9,550,186
Total	**$47,678,100**	**$68,738,140**	**$116,416,240**	**$104,571,877**
Annualized				**$11,641,624**

Note: Totals may not sum due to independent rounding.

Penetration Testing

The third provision under cybersecurity measures that will impose costs on industry is penetration testing, in § 101.650(e)(2). The CySO for each U.S.-flagged vessel, facility, and OCS facility will ensure that a penetration test is completed in conjunction with renewing the Cybersecurity Plan. We assume facility and vessel owners and operators in the affected population will pay a third party to conduct a penetration test to maintain safety and security within the IT and OT systems for all KEVs. The cost for penetration testing is a function of the number of vessel and facility owners and operators, because networks are typically managed at a corporate level. At the conclusion of the test, the CySO will also need to include a letter certifying the test was conducted and document all identified vulnerabilities in the FSA, OCS FSA, or VSA—a cost that is included in our analysis of annual Cybersecurity Plan maintenance. Further, it is expected that the CySO will also work to correct or mitigate the identified vulnerabilities. However, the methods employed and time taken to correct or mitigate these vulnerabilities represent a source of uncertainty in our analysis, and we are unable to estimate the associated costs.

Based on the Jones Walker survey (see footnote number 60), 68 percent of facilities and OCS facilities are currently conducting penetration testing. Using 1,372 affected owners and operators of facilities and OCS facilities, the number of owners and operators of facilities and OCS facilities who need to conduct penetration testing is about 439 (1,372 × 0.32). Using cost estimates for penetration testing from NMSAC members who have experience conducting and contracting with facilities and OCS facilities to conduct penetration tests, as well as Coast Guard SMEs with similar experience, we estimate it will cost each owner or operator of a facility or OCS facility $10,000 for the initial penetration test and an additional $100 for each IP address on the network to capture the additional costs of network complexity.

In the NPRM, we estimated initial costs of $5,000 for the penetration test, an additional $50 per IP address, and used the number of employees as a rough estimate for the number of IP addresses on a given network. We received several public comments on these estimates that suggested that we were underestimating the costs of penetration testing and the number of IP addresses by not including estimates for additional industrial personnel and OT systems. While none of the commenters provided specific cost estimates beyond stating that our estimates were underestimates, one comment from Offshore Marine Service Association stated that we did not include all relevant costs by assuming that there would be IP addresses equal to the number of employees at a company. In addition to crewmembers outlined in a certificate of inspection, vessels will often carry additional crew or industrial personnel with their own devices, and many vessels will contain OT systems with unique IP addresses. Although this comment is focused on U.S.-flagged vessels, it is evident that these same concerns could apply to estimated costs in the population of facilities and OCS facilities.

Based on these comments, the Coast Guard revisited its initial estimates and, in order to better estimate the costs associated with penetration testing, doubled the initial cost estimate to $10,000 and the estimate of the cost per IP address to $100, which better reflects industry averages.[121] In addition, to better estimate number of IP addresses on a given company's network, we now

[121] In 2023, RSI Security estimated that on average, a high quality, professional penetration test can cost from $10,000–$30,000, depending on the size, complexity, methodology, and scope of the test, among other factors. Our estimated range of $24,800 for owners and operators of facilities or OCS facilities, and $12,600 to $27,000 for most owners of one U.S.-flagged vessel, depending on the type of vessel, fall within this estimated range. Costs can exceed this range when considering owners of multiple vessels, or our estimated costs for the owner of the MODU in our population ($84,400, see section *Total Costs of the Final Rule per Affected Owner or Operator* in this RA for more details on this outlier vessel) given the additional network complexity we would expect to see based on the size of the organization and number of employees using its IT and OT systems. See *https://blog.rsisecurity.com/what-is-the-average-cost-of-penetration-testing/* for more information on industry estimates and factors contributing to penetration testing costs, accessed November 5, 2024.

use the number of employees and multiply it by 2 to capture employees potentially using multiple devices, additional industrial personnel working at facilities, or any OT systems on the network. We acknowledge that some owners or operators could face costs in excess of these estimates because of the large range of costs and network complexity, but our SMEs with penetration testing experience believe these adjustments better reflect average costs.

The number of employees for each facility is 74, meaning we estimate 148 IP addresses per owner or operator of a facility or OCS facility. Owners and operators of facilities and OCS facilities will incur penetration testing costs in conjunction with submitting and renewing the Cybersecurity Plan, or every 5 years. This means costs for penetration testing will be incurred in the second and seventh year of analysis. We estimate the undiscounted second- and seventh-year costs to owners and operators of facilities and OCS facilities for penetration testing to be about $10,887,200 [(439 facility owners and operators × $10,000) + (148 IP addresses × 439 facility owners and operators × $100)]. We estimate the discounted cost for owners and operators of facilities and OCS facilities to conduct penetration testing to be about $19,942,400 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be about $2,220,118 using a 2-percent discount rate. Using the same rate of baseline activity estimated for the overall population of facilities, we estimate that the subset of 3 owners or operators of OCS facilities will incur costs of $136,281 over a 10-year period of analysis and $15,172 annualized, using a 2-percent discount rate. See table 27.

Table 27: Estimated Costs of the Final Rule for Penetration Testing for Facilities and OCS Facilities (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rate)

Year	Number of Facility Owners and Operators	Number of IP Addresses per Owner and Operator	Initial Cost of Penetration Test	Cost per IP Address	Total Cost	2 Percent
1	0	0	$0	$0	$0	$0
2	439	148	$10,000	$100	$10,887,200	$10,464,437
3	0	0	$0	$0	$0	$0
4	0	0	$0	$0	$0	$0
5	0	0	$0	$0	$0	$0
6	0	0	$0	$0	$0	$0
7	439	148	$10,000	$100	$10,887,200	$9,477,963
8	0	0	$0	$0	$0	$0
9	0	0	$0	$0	$0	$0
10	0	0	$0	$0	$0	$0
Total					**$21,774,400**	**$19,942,400**
Annualized						**$2,220,118**

Note: Totals may not sum due to independent rounding.

Owners and operators of U.S.-flagged vessels will also need to conduct penetration testing, similar to facilities and OCS facilities. We do not include barges or barge-specific owners and operators, given the unmanned nature of barges and their relatively limited onboard IT and OT systems. Instead, we assume they will request waivers for these provisions, a cost included in Cybersecurity Plan development costs estimated earlier in the analysis. All estimates for penetration testing on U.S.-flagged vessels are the same as for facilities and OCS facilities. We estimate the undiscounted second- and seventh-year costs for owners and operators of vessels to conduct penetration testing to be approximately $43,810,000 [(1,686 vessel owners and operators × $10,000) + (number of vessels for each vessel type × number of IP addresses for each vessel type × $100)]. See table 28 for a calculation of the costs per IP address for the various vessel populations, which can be added to the costs per owner or operator, or $16,860,000 (1,686 owners and operators × $10,000) in Years 2 and 7.

Table 28: Estimated Costs of the Final Rule for Penetration Testing per IP Address for U.S.-flagged Vessels by Vessel Type (2022 Dollars, Undiscounted)

Vessel Type	Number of Vessels	Number of IP Addresses per Vessel	Cost per IP Address	Total for Population
MODU	1	744	$100	$74,400
Subchapter I Vessels	398	164	$100	$6,527,200
OSVs	430	32	$100	$1,376,000
Subchapter H Passenger Vessels	131	170	$100	$2,227,000
Subchapter K Passenger Vessels	430	70	$100	$3,010,000
Subchapter M Towing Vessels	4822	26	$100	$12,537,200
Subchapter D and Combination O&D Tank Vessels	114	80	$100	$912,000
Subchapters K and T International Passenger Vessels	53	54	$100	$286,200
Total				**$26,950,000**

Note: Totals may not sum due to independent rounding.

We estimate the discounted cost for owners and operators of U.S.-flagged vessels to conduct penetration testing to be approximately $80,248,045 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $8,933,736 using a 2-percent discount rate. See table 29.

Table 29: Estimated Costs of the Final Rule for Penetration Testing for U.S.-flagged Vessels (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rate)

Annualized				**$11,153,854**

Note: Totals may not sum due to independent rounding.

Routine System Maintenance for Risk Management

The final cost provision under cybersecurity measures will be routine system maintenance for risk management, in § 101.650(e)(3)(i) through (vi). This final rule will require the CySO of a U.S.-flagged vessel, facility, or OCS facility to (1) ensure patching (software updates) or implementing controls for all KEVs in critical IT and OT systems in paragraph (e)(3)(i), (2) maintain a method to receive or act on publicly submitted vulnerabilities in paragraph (e)(3)(ii), (3) maintain a method to share threat and vulnerability information with external stakeholders in paragraph (e)(3)(iii), (4) ensure there are no exploitable channels exposed to internet accessible systems in paragraph (e)(3)(iv), (5) ensure that no OT is connected to the publicly accessible internet unless explicitly required for operation in paragraph (e)(3)(v), and (6) conduct vulnerability scans according to the Cybersecurity Plan in paragraph (e)(3)(vi).

Based on information from CGCYBER and NMSAC, we estimate costs for only the vulnerability scans in this RA, because it is expected that CySOs will incorporate many of these provisions into the initial development and annual maintenance of the Cybersecurity Plan. Provisions that require setting up routine patching, developing methods for communicating vulnerabilities, and ensuring limited network connectivity of OT and other exploitable systems are expected to be less time-intensive efforts that will be completed following an initial Cybersecurity Assessment and documented in the Cybersecurity Plan. As a result, we include those costs in that portion of the analysis. However, if an OT system does need to be taken offline to be patched or segmented from other IT systems, the Coast Guard does not have information on how long or intensive that process would be because of the great degree of variability in OT systems within the affected population. We discuss patching of OT systems, network segmentation, and uncertainty more in later sections in this final rule.

Based on information from CGCYBER, the cost for each owner or operator of a U.S.-flagged vessel, facility, and OCS facility to acquire third-party software capable of vulnerability scans will be approximately $3,390 annually, including the cost for a software subscription. We base our analysis on the cost of a prevalent vulnerability scanner or virus software for business.

Vulnerability scans can occur in the background while systems are operational and represent a less intensive method of monitoring IT and OT systems for vulnerabilities, which complements more intensive penetration tests that will be required every 5 years. For this reason, we do not estimate an hour burden in addition to the annual subscription cost of securing vulnerability scanning software. We estimate the undiscounted annual cost for owners and operators of facilities and OCS facilities to subscribe to and use vulnerability scanning software to be approximately $4,651,0800 (1,372 facility owners and operators × $3,390). We estimate the undiscounted annual cost for the subset of 33 facilities owned and operated by 9 unique operators to subscribe to and use vulnerability scanning software to be approximately $30,510 (9 OCS facility owners and operators × $3,390) of the total cost estimate for facilities. We estimate the undiscounted annual cost for owners and operators of U.S.-flagged vessels to subscribe to and use vulnerability scanning software to be approximately $5,715,540 (1,686 vessel owners and operators × $3,390).

Combined, we estimate the total discounted cost for owners and operators of U.S.-flagged vessels, facilities, and OCS facilities to use vulnerability scanning software to be approximately $93,119,046 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $10,366,620, using a 2-percent discount rate. See table 31.

Table 31: Estimated Costs of the Final Rule for Vulnerability Scanning Software for U.S.-flagged Vessels, Facilities, and OCS Facilities (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rate)

Year	Facility and OCS Facility Costs	U.S.-flagged Vessel Costs	Total Cost	2 Percent
1	$4,651,080	$5,715,540	$10,366,620	$10,163,353
2	$4,651,080	$5,715,540	$10,366,620	$9,964,072
3	$4,651,080	$5,715,540	$10,366,620	$9,768,698
4	$4,651,080	$5,715,540	$10,366,620	$9,577,154
5	$4,651,080	$5,715,540	$10,366,620	$9,389,367
6	$4,651,080	$5,715,540	$10,366,620	$9,205,262
7	$4,651,080	$5,715,540	$10,366,620	$9,024,767
8	$4,651,080	$5,715,540	$10,366,620	$8,847,810
9	$4,651,080	$5,715,540	$10,366,620	$8,674,324
10	$4,651,080	$5,715,540	$10,366,620	$8,504,239
Total			$103,666,200	**$93,119,046**
Annualized				**$10,366,620**

Note: Totals may not sum due to independent rounding.

Total Costs of the Final Rule to Industry

We estimate the total discounted cost of this final rule to the affected population of facilities and OCS facilities to be approximately $514,932,875 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $57,325,689, using a 2-percent discount rate. See table 32.

As a subset of the cost estimate for facilities, we estimate that the 33 OCS facilities operated by 9 different owners and operators will incur costs of approximately $3,749,921 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized costs for OCS facilities to be approximately $417,466, using a 2-percent discount rate. See table 33.

BILLING CODE 9110–04–P

Table 32: Summary of Total Discounted Costs of the Final Rule for Facilities and OCS Facilities (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rate)

Year	Cybersecurity Plan Costs	Drills and Exercises Costs	Account Security and Multifactor Authentication Costs	Training Costs	Penetration Testing Costs	Vulnerability Management Costs	Total Costs	2 Percent

BILLING CODE 9110–04–C

As seen in table 32, the primary cost drivers for the population of facilities and OCS facilities are costs for drills and exercises at 48.93 percent of the

total costs to industry. Cybersecurity Plan-related costs and costs for training come in second and third at 25.74 percent and 8.33 percent of the total costs, respectively. We believe some of this is due to the analysis of drills and exercises, and Cybersecurity Plan costs, which assume no baseline activity within the affected population because of a lack of information. Costs that appear as a higher percentage of the total costs in the population of U.S.-flagged vessels (account security measures and multifactor authentication, for example) have been adjusted based on current baseline activity within the population of facilities based on survey results, and thus, appear as smaller impacts to the population in general.

We estimate the total discounted cost of this final rule to the affected population of U.S.-flagged vessels to be approximately $693,173,722 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $77,168,624, using a 2-percent discount rate. See table 34.

BILLING CODE 9110–04–P

Note: Totals may not sum due to independent rounding.

BILLING CODE 9110–04–C

As in table 34, the primary cost drivers for the population of U.S.-flagged vessels are costs related to drills and exercises at 32.86 percent of the

total costs to industry. Costs related to account security measures and multifactor authentication come in second at 29.54 percent of the total costs. Costs related to penetration testing are third at 11.40 percent of the total costs. We estimate that costs for account security measures and multifactor authentication represent such a high portion of the overall costs related to cybersecurity because the Coast Guard was unable to estimate current baseline activity for these provisions and used conservative (upper-bound) estimates related to the population required to implement and manage multifactor authentication. In the NPRM, the Coast Guard requested public comment on who in the affected population of U.S.-flagged vessels has already implemented multifactor authentication and what the associated costs were but received no additional information.

We estimate the total discounted cost of this final rule to industry to be approximately $1,208,106,595 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $134,494,313, using a 2-percent discount rate. See table 35.

BILLING CODE 9110–04–P

Total Costs of the Final Rule per Affected Owner or Operator

We estimate the average annual cost per owner or operator of a facility or OCS facility to be approximately $50,362, under the assumption that an owner or operator will need to implement each of the provisions required by this final rule. Each additional facility owned or operated will increase the estimated annual costs by an average of $4,396 per facility, since each facility or OCS facility will require an individual Cybersecurity Plan. Year 2 of the analysis period represents the year with the highest costs incurred per owner, with estimated costs of $73,320 for an owner or operator with one facility or OCS facility. See table 36 for a breakdown of the costs per entity for an owner or operator owning one facility or OCS facility.

Table 36: Summary of Total Costs of the Final Rule per Owner or Operator of a Facility or OCS Facility (2022 Dollars, 10-year Undiscounted Costs)[122]

Year	Facility Count	Cybersecurity Plan	Drills and Exercises	Account Security Measures	Multifactor Authentication	Cybersecurity Training	Penetration Testing	Vulnerability Management	Total
1	1	$4,207	$20,407	$576	$20,100	$4,633	$0	$3,390	$53,313
2	1	$8,414	$20,407	$576	$11,100	$4,633	$24,800	$3,390	$73,320
3	1	$4,207	$20,407	$576	$11,100	$4,633	$0	$3,390	$44,313
4	1	$4,207	$20,407	$576	$11,100	$4,633	$0	$3,390	$44,313
5	1	$4,207	$20,407	$576	$11,100	$4,633	$0	$3,390	$44,313

10	1	$4,207	$20,407	$576	$11,100	$4,633	$0	$3,390	$44,313
Total									**$503,623**
Annualized									**$50,362**

Note: Totals may not sum due to independent rounding.

To estimate the cost for an owner or operator of a facility or OCS facility to develop, resubmit, conduct annual maintenance and audit the Cybersecurity Plan, we use estimates provided earlier in the analysis. The hour-burden estimates are 100 hours for developing the Cybersecurity Plan (average hour burden), 10 hours for annual maintenance of the Cybersecurity Plan (which will include amendments), 15 hours to renew Cybersecurity Plans every 5 years, and 40 hours to conduct annual audits of Cybersecurity Plans.

Based on estimates from Coast Guard FSP and OCS FSP reviewers at local inspections offices, approximately 10 percent of Cybersecurity Plans will need to be resubmitted in the second year due to revisions that will be needed to the Plans, which is consistent with the current resubmission rate for FSPs and OCS FSPs. For renewals of Plans after 5 years (occurring in the seventh year of the analysis period), Plans will need to be further revised and resubmitted in approximately 10 percent of cases as well. However, in this portion of the RA, we estimate costs as though the owner or operator will need to revise and resubmit their Plans in all cases, resulting in an upper-bound (high) estimate of costs for each entity. We estimate the time for revision and resubmission to be about half the time to develop the Plan itself, or 50 hours in the second year of submission, and 7.5 hours after 5 years (in the seventh year of the analysis period). Because we include the annual Cybersecurity Assessment in costs to develop Plans, and we do not assume that owners and operators will wait until the second year of analysis to begin developing the Cybersecurity Plan or implementing relevant cybersecurity measures, we divide the estimated 100 hours to develop Plans equally across the first and second years of analysis.

Using the CySO loaded hourly CySO wage of $84.14, we estimate the Cybersecurity Plan-related costs by adding the total number of hours to develop, resubmit, maintain, and audit each year and multiplying by the CySO wage. For example, we estimate owners and operators will incur $8,414 in costs in Year 2 of the analysis period [1 facility × $84.14 CySO wage × (50 hours to develop the Plan + 50 hours to revise and resubmit the Plan) = $8,414]. Table 37 displays the cost estimates per entity for an owner or operator of 1 facility or OCS facility over a 10-year period of analysis. For an owner or operator of multiple facilities or OCS facilities, we estimate the total costs by multiplying the total costs in table 37 by the number of owned facilities.

Table 37: Cybersecurity Plan-Related Costs of the Final Rule per Owner or Operator of a Facility or OCS Facility (2022 Dollars, 10-year Undiscounted Costs)

Year	Facility Count	CySO Wage	Hours to Develop Plan	Hours to Resubmit Plan	Annual Maintenance Hours	Audit Hours	Total
1	1	$84.14	50	0	0	0	$4,207
2	1	$84.14	50	50	0	0	$8,414
3	1	$84.14	0	0	10	40	$4,207
4	1	$84.14	0	0	10	40	$4,207
5	1	$84.14	0	0	10	40	$4,207
6	1	$84.14	0	0	10	40	$4,207
7	1	$84.14	15	7.5	0	0	$1,893
8	1	$84.14	0	0	10	40	$4,207
9	1	$84.14	0	0	10	40	$4,207
10	1	$84.14	0	0	10	40	$4,207
Total							**$43,963**
Average							**$4,396**

Note: Totals may not sum due to independent rounding.

Similarly, we use earlier estimates for the calculation of costs for each entity for drills and exercises, account security measures, multifactor authentication, cybersecurity training, penetration testing, and vulnerability management.

For drills and exercises, we assume that a CySO on behalf of each owner and operator will develop cybersecurity drills and cybersecurity exercises. This development is expected to take 8 hours for each of the 2 annual drills and 20 hours for an annual exercise. We also include costs for drill and exercise participation for a portion of facility or OCS facility employees. We assume 33 percent of all employees will take 4 hours to participate in each drill and exercise, consistent with the share of shoreside employees estimated at U.S.-flagged vessel organizations. Using the loaded hourly wage for a CySO of

[122] The cost totals in table 36 represent cost estimates for owners and operators of one facility or OCS facility under the assumption that they will need to implement all cost-creating provisions of this final rule. Therefore, when multiplied over the full number of affected entities, the calculated totals will exceed those estimated for the population of facilities and OCS facilities elsewhere in the analysis. In addition, the cost estimates for items related to the Cybersecurity Plan are dependent upon the number of facilities owned and must be multiplied accordingly by the number of facilities owned. This is discussed in further detail later in the analysis of costs per owner or operator.

$84.14 and the loaded hourly wage for a facility employee of $60.34, we estimate annual costs of approximately $20,407 per facility owner or operator [($84.14 CySO wage × 8 hours × 2 drills) + ($84.14 CySO wage × 20 hours × 1 exercise) + (24 employees × $60.34 facility employee wage × 4 hours × 2 drills) + (24 employees × $60.34 facility employee wage × 4 hours × 1 exercise = $20,407], as seen in table 36.

For account security measures, we assume that a database administrator on behalf of each owner or operator will spend 8 hours each year implementing and managing account security. Using the loaded hourly wage for a database administrator of $71.96, we estimate annual costs of approximately $576 ($71.96 database administrator wage × 8 hours = $576), as seen in table 36.

For multifactor authentication, we assume that an owner or operator of a facility or OCS facility will spend $9,000 in the initial year on average to implement a multifactor authentication system and spend approximately $150 per employee annually for system maintenance and support. Therefore, we estimate first year costs of approximately $20,100 [$9,000 implementation cost + ($150 support and maintenance costs × 74 average facility company employees)], and subsequent year costs of $11,100 ($150 support and maintenance costs × 74 average facility company employees), as seen in table 36.

For cybersecurity training, we assume that a CySO will take 2 hours each year to develop and manage employee cybersecurity training, and employees at a facility or OCS facility will take 1 hour to complete the training each year. Using the estimated CySO wage of $84.14 and the estimated facility employee wage of $60.34, we estimate annual training costs of approximately $4,633 [($84.14 × 2 hours) + ($60.34 × 74 facility company employees × 1 hour)], as seen in table 36.

For penetration testing, we estimate costs only in the second and seventh years of analysis since tests are required to be performed in conjunction with submitting and renewing the Cybersecurity Plan. We assume that owners and operators of facilities and OCS facilities will spend approximately $10,000 per penetration test and an additional $100 per IP address at the organization to capture network complexity. We use the total number of company employees multiplied by 2 as a proxy for the number of IP addresses, based on suggestions from public commenters stating that networks often include employees with multiple devices, outside industrial personnel accessing the networks, and OT systems that increase the number of IP addresses and the network complexity at a given company. As a result, we estimate second- and seventh-year costs of approximately $24,800 [$10,000 testing cost + ($100 × 148 IP addresses)], as seen in table 36.

For vulnerability management, we assume that each owner or operator of a facility or OCS facility will need to secure a vulnerability scanning program or software. Because vulnerability scans can occur in the background, we do not assume an additional hour burden associated with the implementation or use of a vulnerability scanner each year. Using the annual subscription cost of an industry leading vulnerability scanning software, we estimate annual costs of approximately $3,390, as seen in table 36.

We perform the same calculations to estimate the costs per entity for owners and operators of U.S.-flagged vessels. However, the estimates for the population of U.S.-flagged vessels have more dependency upon the type and number of vessels owned by the company being analyzed. This is largely due to the varying numbers of employees per vessel, by vessel type. We estimate average annual costs for each entity of approximately $14,052 per U.S.-flagged vessel owner or operator, as seen in table 38.

Table 38: Summary of Costs of the Final Rule per Owner or Operator of U.S.-flagged Vessels (2022 Dollars, 10-year Undiscounted Costs)[123]

Year	Cybersecurity Plan	Drills and Exercises	Account Security Measures	Multifactor Authentication	Cybersecurity Training	Penetration Testing	Vulnerability Management	Total
1	$3,366	$3,029	$576	$9,000	$168	$0	$3,390	$19,529
2	$6,731	$3,029	$576	$0	$168	$10,000	$3,390	$23,894
3	$4,039	$3,029	$576	$0	$168	$0	$3,390	$11,202

9	$4,039	$3,029	$576	$0	$168	$0	$3,390	$11,202
10	$4,039	$3,029	$576	$0	$168	$0	$3,390	$11,202
Total								**$140,515**
Annualized								**$14,052**

Note: Totals may not sum due to independent rounding.

To estimate the costs that depend on the number and type of U.S.-flagged vessel for each entity, we use the number of employees per vessel and, in the case of cybersecurity training costs, a unique weighted hourly wage based on the personnel employed on each vessel type as calculated in Appendix A: Wages Across Vessel Types. Table 39 displays the average number of employees for each vessel type, including shoreside employees, and their unique weighted mean hourly wages. Table 40 displays the per-vessel costs associated with each type of vessel.

Table 39: Summary of Employees and Wages by Vessel Type

Vessel Type	Number of Employees per Vessel (Includes Shoreside)	Weighted Mean Hourly Wage
MODU	372	$39.60
Subchapter I Vessels	82	$46.36
OSVs	16	$54.92
Subchapter H Passenger Vessels	85	$41.85
Subchapter K Passenger Vessels	35	$45.52
Subchapter M Towing Vessels	13	$51.28
Subchapter D and Combination Subchapters O&D Tank Vessels	40	$55.94
Subchapter D, O, or I Barges	0	$0.00
Subchapters K and T International Passenger Vessels	27	$44.59

[123] The cost estimates in table 38 represent the costs incurred at a company level for each owner and operator of U.S.-flagged vessels, so they must be added to the costs calculated in table 42, which are dependent on the type and number of vessels owned. We do this to create a full picture of the estimated costs per owner or operator. When these totals are multiplied over the full number of affected entities, the calculated totals will exceed those estimated for the population of U.S.-flagged vessels elsewhere in this RA because we assume that each owner or operator will need to implement all provisions of this final rule that create costs. This is discussed in further detail in the analysis of costs per owner or operator.

Table 40: Summary of Annual Costs of the Final Rule per U.S.-flagged Vessels Based on Type of Vessel (2022 Dollars, Undiscounted Costs)

Vessel Type	Vessel Count	Multifactor Authentication	Cybersecurity Training	Penetration Testing (Years 2 and 7)[124]	Drills and Exercises	Total
MODU	1	$55,800	$14,731	$74,400	$43,718	$188,649
Subchapter I Vessels	1	$12,300	$3,802	$16,400	$11,126	$43,628
OSVs	1	$2,400	$879	$3,200	$2,636	$9,115
Subchapter H Passenger Vessels	1	$12,750	$3,557	$17,000	$10,546	$43,853
Subchapter K Passenger Vessels	1	$5,250	$1,593	$7,000	$4,916	$18,759
Subchapter M Towing Vessels	1	$1,950	$667	$2,600	$1,846	$7,063
Subchapter D and Combination O&D Tank Vessels	1	$6,000	$2,238	$8,000	$6,713	$22,951
Subchapter D, O, or I Barges	1	$0	$0	$0	$0	$0
Subchapters K and T International Passenger Vessels	1	$4,050	$1,204	$5,400	$3,746	$14,400

To calculate the total cost for each entity in the population of U.S.-flagged vessels, we add the annual per-vessel costs from table 40 based on the number and types of vessels owned to the per-entity costs estimated in table 38.

To estimate the cost for an owner or operator of a U.S.-flagged vessel to develop, resubmit, conduct annual maintenance for, and audit the Cybersecurity Plan, we use estimates provided earlier in this RA. The hour-burden estimates are 80 hours for developing the Cybersecurity Plan (average hour burden), 8 hours for annual maintenance of the Cybersecurity Plan (which will include amendments), 12 hours to renew Cybersecurity Plans every 5 years, and 40 hours to conduct annual audits of Cybersecurity Plans. Based on estimates from reviewers of Coast Guard VSPs at MSC, approximately 10 percent of Plans will need to be resubmitted in the second year due to revisions that will be needed to the Plans, which is consistent with the current resubmission rate for VSPs. For renewals of Plans after 5 years (occurring in the seventh year of the analysis period), Cybersecurity Plans will need to be further revised and resubmitted in approximately 10 percent of cases as well. However, in this portion of this RA, we estimate costs as though the owner or operator will need to revise and resubmit their Plans in all cases resulting in an upper-bound (high) estimate of costs for each entity.

We estimate the time for revision and resubmission to be about half the time to develop the Cybersecurity Plan itself, or 40 hours in the second year of submission, and 6 hours after 5 years (in the seventh year of the analysis period). Because we include the annual Cybersecurity Assessment in the cost to develop Plans, and we do not assume that owners and operators will wait until the second year of analysis to begin developing the Cybersecurity Plan or implementing related cybersecurity measures, we divide the estimated 80 hours to develop Plans equally across the first and second years of analysis.

Using the CySO loaded hourly CySO wage of $84.14, we estimate the Cybersecurity Plan-related costs by adding the total number of hours to develop, resubmit, maintain, and audit each year and multiplying by the CySO wage. For example, we estimate owners and operators will incur approximately $6,731 in costs in Year 2 of the analysis period [$84.14 CySO wage × (40 hours to develop the Plan + 40 hours to revise and resubmit the Plan) = $6,731]. See table 41.

[124] When adding these costs to the per-entity costs for owners and operators, add only these estimated penetration costs in Years 2 and 7.

Table 41: Cybersecurity Plan-Related Costs of the Final Rule per Owner or Operator of a U.S.-flagged Vessel (2022 Dollars, 10-year Undiscounted Costs)

Year	CySO Wage	Hours to Develop Plan	Hours to Resubmit Plan	Annual Maintenance Hours	Audit Hours	Total
1	$84.14	40	0	0	0	$3,366
2	$84.14	40	40	0	0	$6,731
3	$84.14	0	0	8	40	$4,039
4	$84.14	0	0	8	40	$4,039
5	$84.14	0	0	8	40	$4,039
6	$84.14	0	0	8	40	$4,039
7	$84.14	12	6	0	0	$1,515
8	$84.14	0	0	8	40	$4,039
9	$84.14	0	0	8	40	$4,039
10	$84.14	0	0	8	40	$4,039
Total						**$39,885**
Average						**$3,989**

Note: Totals may not sum due to independent rounding.

Similarly, we use earlier estimates for the calculation of costs for each entity for drills and exercises, account security measures, multifactor authentication, cybersecurity training, penetration testing, and vulnerability management.

For drills and exercises, we assume that, on behalf of each owner and operator, a CySO will develop new cybersecurity drills and cybersecurity exercises. This development is expected to take 8 hours for each of the 2 annual drills and 20 hours for an annual exercise. We also include costs for drill participation for a portion of U.S.-flagged vessel employees. We assume only shoreside employees will take 4 hours to participate in each drill and exercise. The costs per employee associated with drills and exercises vary depending on the types and number of vessels and will be based on the average number of shoreside employees per vessel and the associated weighted hourly wage. For example, using the estimated CySO wage of $84.14 and the estimated OSV employee wage of $54.92, we estimate annual drills and exercises costs of approximately $5,665 [($84.14 × 8 hours × 2 drills) + ($84.14 × 20 hours × 1 exercise) + ($54.92 × 4 average shoreside employees per OSV × 4 hours × 2 drills) + ($54.92 × 4 average shoreside employees per OSV × 4 hours × 1 exercise)]. Development costs per entity of $3,029 can be found in table 38 and variable per-vessel participation costs can be found in table 40.

For account security measures, we assume that, on behalf of each owner or operator, a database administrator will spend 8 hours each year implementing and managing account security. Using the loaded hourly wage for a database administrator of $71.96, we estimate annual costs of approximately $576 ($71.96 database administrator wage × 8 hours = $576), as seen in table 38.

For multifactor authentication, we assume that an owner or operator of a U.S.-flagged vessel will spend $9,000 in the initial year on average to implement a multifactor authentication system and spend approximately $150 per employee annually for system maintenance and support. Therefore, we estimate first-year implementation costs of approximately $9,000 for all owners and operators, with annual costs in Years 2 through 10, depending on the number of employees for each type of vessel. For example, we estimate the first-year costs to an owner or operator of one OSV to be approximately $11,400 [$9,000 implementation cost + ($150 support and maintenance costs × 16 average employees per OSV)], and subsequent year costs of $2,400 ($150 support and maintenance costs × 16 average employees per OSV). Implementation costs per entity of $9,000 for implementing the multifactor authentication system can be found in table 38, and variable costs per vessel can be found in table 40.

For cybersecurity training, we assume that on behalf of each owner or operator of a U.S.-flagged vessel, a CySO will take 2 hours each year to develop and manage employee cybersecurity training, and vessel employees will take 1 hour to complete the training each year. The costs per employee associated with training vary depending on the types and number of vessels and will be based on the average number of employees per vessel and the associated weighted hourly wage. For example, using the estimated CySO wage of $84.14 and the estimated OSV employee wage of $54.92, we estimate annual training costs of approximately $1,047 [($84.14 × 2 hours) + ($54.92× 16 average employees per OSV × 1 hour)]. Development costs per entity of $168 can be found in table 38 and variable per vessel participation costs can be found in table 40.

For penetration testing, we estimate costs only in the second and seventh years of analysis since tests are required to be performed in conjunction with submitting and renewing the Cybersecurity Plan. We assume that owners and operators of U.S.-flagged vessels will spend approximately $10,000 per penetration test and an additional $100 per IP address at the organization to capture network complexity. We use the average number of employees per vessel multiplied by 2 as a proxy for the number of IP addresses, based on suggestions from

public commenters stating that networks often include employees with multiple devices, outside industrial personnel accessing the networks, and OT systems that increase the number of IP addresses and network complexity at a given company. As a result, we estimate second- and seventh-year costs as follows: [10,000 testing cost + ($100 × average number of employees per vessel)]. For example, we estimate second- and seventh-year cost of approximately $13,200 for an owner or operator of an OSV [$10,000 testing cost + ($100 × 32 average IP addresses per OSV)]. Initial costs of $10,000 per entity can be found in table 38, and variable per-vessel costs can be found in table 40.

For vulnerability management, we assume that each U.S.-flagged vessel owner or operator will need to secure a vulnerability scanning program or software. Because vulnerability scans can occur in the background, we do not assume an additional hour burden associated with the implementation or use of a vulnerability scanner each year. Using the annual subscription cost of an industry leading vulnerability scanning software, we estimate annual costs of approximately $3,390, as seen in table 38.

Unquantifiable Cost Provisions or No-Cost Provisions of This Final Rule

Communications

Under § 101.645, this final rule requires CySOs to have a method to effectively notify owners and operators of U.S.-flagged vessels, facilities, and OCS facilities, as well as personnel of changes in cybersecurity conditions. The requirements will allow effective and continuous communication between security personnel on board U.S.-flagged vessels and at facilities and OCS facilities; U.S.-flagged vessels interfacing with a facility or an OCS facility, the cognizant COTP, and national and local authorities with security responsibilities. Based on communication requirements established in 33 CFR 104.245 for vessels, 33 CFR 105.235 for facilities, and 33 CFR 106.240 for OCS facilities, the Coast Guard assumes that owners and operators of U.S.-flagged vessels, facilities, and OCS facilities already have communication channels established for physical security notifications which can easily be used for cybersecurity notifications. As a result, we do not estimate regulatory costs for communications. The Coast Guard received no public comments on this assumption and whether this communications provision will add an additional time burden.

Device Security Measures

Under § 101.650(b)(1), this final rule requires owners and operators of U.S.-flagged vessels, facilities, and OCS facilities to develop and maintain a list of company-approved hardware, firmware, and software that may be installed on IT or OT systems. This approved list will be documented in the Cybersecurity Plan. Because this requirement is included in developing the Cybersecurity Plan, we estimated these costs earlier in that section of the cost analysis.

Under § 101.650(b)(2), this final rule requires owners and operators of U.S.-flagged vessels, facilities, and OCS facilities to ensure applications running executable code are disabled by default on critical IT and OT systems. Based on information from CGCYBER, the time it will take to disable such applications is likely minimal; however, we currently lack data on how prevalent these applications are within the affected population. Therefore, we are unable to estimate the regulatory costs of this provision.

Under § 101.650(b)(3) and (4), this final rule requires owners and operators of U.S.-flagged vessels, facilities, and OCS facilities to develop and maintain an accurate inventory of network-connected systems, the network map, and OT device configuration. Because these items will be developed and documented as a part of the Cybersecurity Plan, we previously estimated these costs in that section of the cost analysis. The Coast Guard received several public comments on the NPRM related to its analysis of device security measures under this provision, stating that the Coast Guard underestimated costs. However, the Coast Guard received no additional information or cost-specific data that would allow us to adjust our estimates. As such, we retain our assumption that the 80 to 100 hours estimated for the overall Cybersecurity Plan development and maintenance are sufficient to capture the hour burdens associated with these device security measures like developing a network map or system inventory in addition to documenting policies and results related to measures like drills or training. As a result, our cost estimates are unchanged.

Data Security Measures

Under § 101.650(c), this final rule requires owners and operators of U.S.-flagged vessels, facilities, and OCS facilities to securely capture, store, and protect logs, as well as use encryption to maintain confidentiality of sensitive data and integrity of IT and OT traffic, when technically feasible. The Jones Walker survey (see footnote number 60) reveals that 64 percent of facilities and OCS facilities are currently performing active data logging and retention, and 45 percent are always encrypting data for the purpose of communication.

Because data logging can be achieved with default virus-scanning tools, such as Windows Defender on Microsoft systems, the cost of storage and protection of data logs is primarily a function of the data space required to store them. Based on information from CGCYBER, cloud storage can cost from $21 to $41 per month for 1 terabyte of data, $54 to $320 per month for 10 terabytes, and up to $402 to $3200 per month for 100 terabytes of data. However, the Coast Guard does not have information on the amount of data space the affected population will need to comply with this final rule, or if data purchases will be necessary in all cases. The Coast Guard requested public comment on these estimates in order to update the analysis but received none. Therefore, we are unable to estimate regulatory costs for this provision.

Similarly, encryption is often available in default systems or in publicly available algorithms.[125] The Coast Guard will accept these encryption standards that came with the software or on default systems. However, there are potentially some IT and OT systems in use that do not have native encryption capabilities. In these instances, encryption will likely represent an additional cost. However, the Coast Guard does not have information on the number of systems lacking encryption capabilities. As a result, we are unable to estimate the regulatory costs for encryption above and beyond what is included in default systems. Instead, in accordance with OMB Circular A–4, we include the storage and encryption of logs as source of uncertainty listed in table 42.

Routine System Maintenance

Under § 101.650(e)(3)(i) and (vi), owners and operators are required to patch KEVs in critical IT and OT systems (paragraph (e)(3)(i)) and conduct vulnerability scans (paragraph (e)(3)(vi)). The Coast Guard believes that these are processes that are typically

[125] For example, see the following web pages for descriptions of default encryption policies on Google and Microsoft programs and cloud-based storage systems: *https://cloud.google.com/docs/security/encryption/default-encryption* and *https://learn.microsoft.com/en-us/microsoft-365/compliance/encryption?view=o365-worldwide,* accessed August 22, 2024.

conducted in the background without much active work. However, we acknowledge the potential for these requirements to take additional time in certain circumstances, particularly when considering the complexity of patching and monitoring critical OT systems. Patching for IT systems can be set to automatically update and download without much risk, and vulnerability scans are typically background processes that need monitoring only in the event of an alert or incident. However, patching and monitoring of OT systems may be more complicated to allow for automatic updates and could even require periodically taking the systems offline. The Coast Guard lacks data on how prevalent critical OT systems are in the affected population, and how much time patching and monitoring could take in these unique systems.

While we received a public comment suggesting that we underestimated costs related to these provisions, we disagree with the commenter's suggestion that the provisions would require hiring additional employees, given our understanding of these processes as primarily occurring in the background.[126] As a result, without additional data on costs related to OT systems, we are unable to estimate costs for this provision, and instead include patching and monitoring of critical OT systems as a source of uncertainty listed in table 42.

Supply Chain Management

Under § 101.650(f)(1) and (2), this final rule includes provisions to specify measures for managing risks to the supply chain. This will not create any additional hour burden, as owners and operators will need to consider cybersecurity capabilities only when selecting third-party vendors for IT and OT systems or services. In addition, based on information from CGCYBER, most third-party providers have existing cybersecurity capabilities and already have systems in place to notify the owners and operators of U.S.-flagged vessels, facilities, and OCS facilities of any cybersecurity vulnerabilities, incidents, or breaches that take place. Therefore, the Coast Guard does not estimate a cost for this provision.

Additionally, under § 101.650(f)(3), this final rule requires owners and operators of U.S.-flagged vessels, facilities, and OCS facilities to monitor third-party remote connections and document how and where a third party connects to their networks. Based on information from CGCYBER, many IT and OT vendors provide systems with the ability to remotely access the system to perform maintenance or trouble-shoot problems as part of a warranty or service contract. Because remote access is typically identified in warranties and service contracts, the Coast Guard assumes that industry is already aware of these types of connections and will need to document them only when developing the Cybersecurity Plan. We estimated these costs previously in the development of the Cybersecurity Plan section of this RA.

The Coast Guard requested public comment on the validity of this assumption and received several public comments stating that we underestimated costs, and that this requirement could require the hiring an additional employee. The Coast Guard acknowledges that this could take additional time, mostly through reviewing logs for remote connections, but we disagree that this would require a full-time employee, in most cases. The amount of time it takes is highly dependent on the size of the organization and its risk appetite, making accurate estimates difficult across organizations of various types and sizes, especially for those with simple networks and limited remote connections. As a result, we are unable to estimate costs for this provision, and instead include monitoring remote third-party connections as a source of uncertainty listed in table 42.

Resilience

Under § 101.650(g), each CySO for a U.S.-flagged vessel, facility, and OCS facility will be required to develop a Cyber Incident Response Plan, validate the effectiveness of Cybersecurity Plans through annual exercises or periodic reviews of incident response cases, and perform backups of critical IT and OT systems. In addition, entities not subject to 33 CFR 6.16–1 must report reportable cyber incidents to the NRC without delay. Of these requirements, the costs associated with developing a Cyber Incident Response Plan are already captured in the overall costs to develop the Cybersecurity Plan. Any subsequent annual maintenance for the Cyber Incident Response Plan will be captured in the costs for annual maintenance of the Cybersecurity Plan. In addition, costs associated with validating Cybersecurity Plans through annual exercises or periodic reviews of incident response cases is already captured in the costs estimated for drills and exercises in § 101.635.

For the population of entities not subject to 33 CFR 6.16–1 who must report reportable cyber incidents to the NRC without delay, we consider costs to be minimal, and do not include them in our total cost estimates. We base this decision on the removal of NRC reporting requirements for all U.S.-flagged vessels and facilities, as proposed in the NPRM. Now that reporting requirements only apply to entities not subject to 33 CFR 6.16–1, the only portion of the affected population subject to the new reporting requirements are the 33 OCS facilities affected by this final rule.

Based on historical cyber incident reporting data from 2018 to 2022, the NRC fielded and processed an average of 18 cyber incident reports from facilities and OCS facilities and an average of 2 cyber incident reports from U.S.-flagged vessels, for a total of 20 cyber incident reports per year. However, OCS facilities only reported 1 cyber incident over that 5-year span. Although we anticipate that this number can increase or decrease following the publication of a final rule focused on cybersecurity standards and procedures, we use the historical averages to estimate costs for the affected population.[127] As a result, we estimate that OCS facilities only report 0.2 cyber incidents per year, on average. Using the methodology established in the NPRM, we assume that it will take 8.5 minutes (0.15 hours) of a CySO's time to report a cyber incident to the NRC. We base this estimated hour burden on the time to report suspicious maritime activity to the NRC in currently approved ICR 1625–0096. This means that for the affected OCS facilities, we estimate annual undiscounted costs of $2.52 (0.2 cyber incident reports × 0.15 hours to report × $84.14 CySO wage). Given this low annual estimated cost, the Coast Guard does not include costs related to cyber incident reporting in its estimate of costs related to the final rule.

Further, the Coast Guard does not have data on the IT resources that

[126] Leading cybersecurity and vulnerability management firms like Qualys and Tenable produce vulnerability scanner technology that operates continuously in the background. In addition, Microsoft Defender (Microsoft's own vulnerability scanner for Windows, one of the most popular operating systems) has built-in and agentless scanners to continuously monitor and detect risk. See *https://learn.microsoft.com/en-us/defender-vulnerability-management/defender-vulnerability-management* for more details on how this scanner works in practice, accessed October 11, 2024.

[127] The Coast Guard believes that cyber incident reports can increase following publication of this final rule due to greater enforcement of reporting procedures and greater awareness surrounding the need to report. However, the Coast Guard acknowledges that cyber incident reports can also decrease because greater prevention measures would be implemented because of this final rule. As a result, we use historical cyber incident reporting data to analyze costs moving forward.

owners and operators will need to back up data, either internally or externally. Coast Guard SMEs indicate that most of the affected population is likely already performing data backups.[128] The time burden of backing up data is minimal because backups can occur in the background through automated processes, making any new costs a result of making space for data storage. Providing external storage of data will require cloud storage (that is, storage on an external server), and the cost will be dependent upon the capacity needed; for example, 1 terabyte or 100 terabytes of space. These costs will likely be incurred on a monthly basis, although we do not know how much additional data space an owner or operator will need, if any. Coast Guard SMEs with CG–CYBER indicate that the current market prices for cloud storage subscriptions range from $21 to $41 per month for 1 terabyte of data, $54 to $320 per month for 10 terabytes, and up to $402 to $3200 per month for 100 terabytes of data. There may also be costs associated with the encryption of data that we are not able to estimate in this analysis. Instead, we consider these sources of uncertainty in table 42.

Network Segmentation

Under § 101.650(h)(1) and (2), this final rule requires owners and operators of U.S.-flagged vessels, facilities, and OCS facilities to segment their IT and OT networks and log and monitor all connections between them. Based on information from CGCYBER, CG–CVC, and NMSAC, network segmentation can be particularly difficult in the MTS, largely due to the age of infrastructure in the affected population of U.S.-flagged vessels, facilities, and OCS facilities. The older the infrastructure, the more challenging network segmentation may be. Given the amount of diversity and our uncertainty regarding the state of infrastructure across the various groups in our affected population, we are not able to estimate the regulatory costs associated with this provision. The Coast Guard requested public comment on the anticipated costs of network segmentation within the affected population, especially from those who have previously segmented networks at their organizations. While we received several comments that stated we have underestimated costs related to network segmentation, we received no additional information that would have allowed us to adjust our analysis. Instead, in accordance with OMB Circular A–4, we include the storage and encryption of logs as source of uncertainty listed in table 42.

Physical Security

Under § 101.650(i)(1) and (2), this final rule will require owners and operators of U.S.-flagged vessels, facilities, and OCS facilities to limit physical access to IT and OT equipment; secure, monitor, and log all personnel access; and establish procedures for granting access on a by-exception basis. The Coast Guard assumes that owners and operators have already implemented physical access limitations and systems, by which access can be granted on a by-exception basis, based on requirements established in §§ 104.265 and 104.270 for vessels, §§ 105.255 and 105.260 for facilities, and §§ 106.260 and 106.265 for OCS facilities. Therefore, we do not believe that this final rule will impose new regulatory costs on owners and operators of U.S.-flagged vessels, facilities, and OCS facilities for this provision. However, we understand that § 101.650(i)(2), which requires potential blocking, disabling, or removing of unused physical access ports on IT and OT infrastructure, may represent taking steps above and beyond what has been expected under established requirements. The Coast Guard currently lacks information on the prevalence of these physical access ports on systems in use in the affected population and, therefore, cannot currently calculate an associated cost. We requested but did not receive public comments on the anticipated costs associated with physical security provisions in this final rule above and beyond what has already been incurred under existing regulation. As such, we retain our assumption that this will not create additional costs, and leave costs associated with blocking, disabling, or removing of unused physical access ports on IT and OT infrastructure as a source of uncertainty in the analysis.

Hazardous Conditions

In addition to the requirements outlined in 33 CFR part 101, the Coast Guard is also amending the definition of a hazardous condition found in 33 CFR 160.202 to include ''cyber incident.'' This change impacts but does not create costs for the population of 11,222 U.S.-flagged vessels and the population of 11,490 foreign-flagged vessels that visit the U.S. each year on average.[129] Before this final rule, 33 CFR 160.202 defined a hazardous condition as ''any condition that may adversely affect the safety of any vessel, bridge, structure, or shore area or the environmental quality of any port, harbor, or navigable waterway of the United States. It may, but need not, involve collision, allision, fire, explosion, grounding, leaking, damage, injury or illness of a person aboard, or manning-shortage.'' The Coast Guard already interpreted this as including cyber incidents given the definition referring to ''any condition'' that ''may, but need not, involve,'' a list of potential conditions. This was never meant to be an exhaustive list, and, while the Coast Guard has previously interpreted it as including cyber incidents, we are now adding ''cyber incident'' to the list of example conditions to further clarify the affected population's obligation to report in light of this final rule. Accordingly, the Coast Guard does not estimate any costs related to this change.

Installation of Any New Software

Lastly, it is likely that this final rule will have unquantifiable costs associated with the incompatibility between the installation of the newer software and the use of older or legacy software systems on board U.S.-flagged vessels, facilities, and OCS facilities. We did not receive comments from the public on the anticipated costs associated with this difference in software for the affected population of this final rule, and instead include it as a source of uncertainty in table 42.

Sources of Uncertainty Related to Quantified Costs in the Rule

Given the large scope of this final rule, our analysis contains several areas of uncertainty that can lead us to overestimate or underestimate the quantified costs associated with certain provisions. In table 42, we outline the various sources of uncertainty, the expected impact on cost estimates due to the uncertainty, potential cost ranges, and a ranking of the source of uncertainty based on how much we believe it is impacting the accuracy of our estimates. A rank of 1 indicates that we believe the source of uncertainty has the potential to cause larger overestimates or underestimates than a

[128] For example, the Ports and Terminals Cybersecurity Survey produced by Jones Walker referenced in footnote 60 asked facility owners and operators if their backups were ''segmented offline, cloud, redundant.'' Beyond this question appearing to assume that owners and operators are already conducting backups, 83 percent of respondents answered that their backups met the criteria, indicating that most owners and operators are conducting backups in this population.

[129] MISLE data indicates that, on average, 11,490 distinct foreign-flagged vessels entered the United States from 2021 through 2023 (11,346 in 2021, 11,717 in 2022, and 11,407 in 2023). Data was retrieved June 11, 2024. See table 6 in the *Affected Population* section of the analysis for more details on how the total of 11,222 U.S.-flagged vessels was calculated.

source of uncertainty ranked 2, and so on. The Coast Guard requested public comments from members of the affected populations of U.S.-flagged vessels, facilities, and OCS facilities who could provide insight into the areas of uncertainty specified in table 42, especially those relating to potential cost estimates, hour burdens, or current baseline activities. While we received several comments regarding underestimated costs, we did not receive information that allowed us to update our cost estimates for our sources of uncertainty.

BILLING CODE 9110–04–P

Table 42: Sources of Uncertainty in the Final Rule

Source of Uncertainty or Relevant Provision	Reason for Uncertainty	Impact on Cost Estimates	Potential Cost Range	Rank
Baseline cybersecurity activities in the U.S.-flagged vessel population	The Coast Guard was able to estimate current cybersecurity activity related to some of the provisions in the population of facilities and OCS facilities based on the results of the "Ports and Terminals Cybersecurity Survey" conducted by Jones Walker. However, we lack similar information on current cybersecurity activity in the population of U.S.-flagged vessels, and instead assumed that affected vessel entities have no level of baseline activity. This has led to overestimated costs for the affected population of U.S.-flagged vessels.	Overestimate	Not able to estimate.	1

Correction of vulnerabilities, performing fixes, and alleviating issues discovered in assessments, testing, or scanning	This final rule includes various types of provisions dealing with cybersecurity testing, assessment, and monitoring that are designed to help owners and operators identify vulnerabilities and other security issues that may be impacting an organization's IT and OT systems. While the provisions for cybersecurity measures of this final rule are designed to address many vulnerabilities that may be discovered, the Coast Guard has no way of calculating the costs associated with any fixes or mitigations that may be necessary above and beyond what is outlined in the rule. The costs associated with mitigations and vulnerability corrections will be highly dependent on what is discovered and will vary from affected entity to affected entity, making cost estimates unreliable.	Underestimate	Not able to estimate.	2
Future cybersecurity technology upgrades	Many of the provisions for cybersecurity measures under § 101.650 involve the implementation of hardware and software solutions to improve cybersecurity or monitor vulnerabilities within an organization's IT and OT systems. Because cybersecurity technology is rapidly evolving, we expect that upgrades to implemented solutions may be necessary in later years. However, the Coast Guard lacks information on how often or how costly these upgrades may be.	Underestimate	Not able to estimate.	3

§ 101.650(h)(1) and (2) - Network segmentation	Network segmentation can be particularly difficult in the MTS, largely due to the age of infrastructure in the affected population of U.S.-flagged vessels, facilities, and OCS facilities. The older the infrastructure, the more challenging network segmentation may be. Given the amount of diversity and our uncertainty regarding the state of infrastructure across the various groups in our affected population, we are not able to estimate the regulatory costs associated with this provision.	Underestimate	Not able to estimate.	4

§ 101.650(e)(3)(i) and (vi) - Patching and scanning for vulnerabilities in OT systems	The Coast Guard believes that patching of KEVs in critical IT and OT systems required under (i) and conducting vulnerability scans required under (vi) are processes that are typically conducted in the background without much active work. However, we acknowledge the potential for these requirements to take additional time in certain circumstances, particularly when considering the complexity of patching and monitoring critical OT systems. Patching for IT systems can be set to automatically update and download without much risk, and vulnerability scans are typically background processes that only need monitoring in the event of an alert or incident. Patching of OT systems may be more complicated to allow for automatic updates, but the Coast Guard lacks data on how prevalent these systems are in the affected population, and how much time this could take.	Underestimate	Not able to estimate.	5
§ 101.650(f)(3) - Monitoring and documenting all remote third-party connections	While we include costs for documenting remote third-party connections in the Cybersecurity Plan development and annual maintenance costs, we did not include a separate cost estimate for monitoring those connections under the assumption that the CySO would be aware of these remote connections as they would be specified in their existing contracts with third-party vendors. However, the Coast Guard acknowledges that this could take additional time, mostly through reviewing logs for remote connections.	Underestimate	Not able to estimate.	6

	The amount of time this could take is dependent on the size of the organization and its risk appetite, making accurate estimates difficult. As a result, we are unable to estimate costs for this provision.			
§ 101.665 Waivers and equivalency determinations	We acknowledge that it is likely there are other organizations beyond barge owners and operators with limited IT and OT systems who may request waivers under this rule. However, we are unable to determine who in the affected population will request waivers, and for which provisions, due to a lack of data. As a result, we are unable to estimate costs for this provision or determine where our other cost estimates may be overestimated. Costs for these organizations could be lower if they are able to secure a waiver rather than spend time or other resources to implement the required provisions.	Overestimate	Not able to estimate, but costs for drafting waiver requests could be included in the currently estimated Cybersecurity Plan development hours if the hour burdens to document the waived cybersecurity measures are reallocated.	7

§ 101.650(c) - Store logs and encrypt data	Logging can be achieved in the background using programs native to common computer operating systems, and therefore has a negligible cost. The primary cost will be the data space necessary to store the logs. The Coast Guard does not currently know who in the affected population will need to purchase additional data space to store logs, if any. Similarly, the Coast Guard does not know who in the affected population will need to purchase data encryption capabilities given a lack of information on systems in use that lack encryption capabilities.	Underestimate	The costs will scale with the amount of data space purchased. Based on current market prices, cloud-based storage can cost from $21 to $41 per month for 1 terabyte of data, $54 to $320 per month for 10 terabytes, and up to $402 to $3200 per month for 100 terabytes of data.	8

§ 101.650(g)(4) - Perform and secure data backups	Backing up data can be achieved in the background using programs native to common computer operating systems, and therefore has a negligible cost. The primary cost will be the data space necessary to store the data logs. The Coast Guard does not currently know who in the affected population will need to purchase additional data space to store logs, if any. Similarly, the Coast Guard does not know who in the affected population will need to purchase data encryption capabilities or other security measures for data backups given a lack of information on systems in use that lack these capabilities.	Underestimate	The costs will scale with the amount of data space purchased. Based on current market prices, cloud-based storage can cost from $21 to $41 per month for 1 terabyte of data, $54 to $320 per month for 10 terabytes, and up to $402 to $3200 per month for 100 terabytes of data.	9
§ 101.650(i)(2) - Removable media and hardware	While the Coast Guard believes that limiting of physical access to critical IT and OT systems is likely already being done under existing regulation, requiring blocking, disabling, or removing of unused physical access ports on IT and OT infrastructure may represent efforts above and beyond requirements already in regulation. However, the Coast Guard currently lacks information on the prevalence of these physical access ports on systems in use in the affected population, and therefore cannot currently estimate an associated cost.	Underestimate	Costs can range from installing security or antitamper tape over unused USB or other access ports, installing access port locks, or taking the time to manually disable or remove ports from system hardware. According to Coast Guard SMEs, costs for antitamper tape typically range from approximately $10 to $20 per 55-yard roll. Costs for access port	10

			locks range from approximately $10 to $20 for a pack of 10 locks. Costs for manually disabling ports on system hardware will be dependent on the time taken to disable, either through a software program or physically with a medium like caulk or epoxy resin. In either case, we estimate this will take approximately 1 to 5 minutes per access port.	11
		Underestimate	Potential costs are likely negligible. The time required to disable these applications is likely small and only required to be performed once. Many operating systems include this policy by default, and it can be considered a no-cost provision of the rule.	
	The Coast Guard has limited data on what applications are prevalent in the affected population that may need to have executable code disabled.			
	§ 101.650(b)(2) - Disable applications running executable code by default on critical IT and OT systems			

BILLING CODE 9110–04–C

The uncertainty surrounding these aspects of this analysis makes estimating many costs challenging. The Coast Guard has considered several

alternative scenarios to demonstrate how alternative assumptions may affect the cost estimates presented in this analysis.

First, we consider an alternative assumption regarding the baseline cybersecurity activities in the population of U.S.-flagged vessels, which we determined may have the biggest impact on our cost estimates for this final rule. Because the Coast Guard lacks data on current cybersecurity activities in the population of U.S.-flagged vessels, we assume that all owners and operators of U.S.-flagged vessels have no baseline cybersecurity activity to avoid potentially underestimating costs in the preceding cost analysis. However, we were able to use existing survey data to estimate baseline cybersecurity activity in the population of facilities and OCS facilities, which allowed us to more accurately estimate the cost impacts of many of the provisions.

If we use the same rates of baseline activity we assume for facilities and OCS facilities for the U.S.-flagged vessels as well, we would see a reduction in undiscounted cost estimates related to account security measures, multifactor authentication implementation and management, cybersecurity training, and penetration testing. Like the rates of baseline activity cited for the population of facilities and OCS facilities, this alternative would assume that 87 percent of the U.S.-flagged vessel population are managing account security, 83 percent have implemented multifactor authentication, 25 percent are conducting cybersecurity training, and 68 percent are conducting penetration tests.[130] Using these assumptions would result in estimated annual population costs of approximately $126,177 for account security ($970,596 primary estimated cost × 0.13), $6,015,705 for multifactor authentication implementation and maintenance ($35,386,500 primary estimated cost × 0.17), $5,155,361 for cybersecurity training ($6,873,814 primary estimate cost × 0.75), and $14,019,200 for penetration testing ($43,810,000 primary estimated cost × 0.32). This would result in reduced undiscounted annual cost estimates of approximately $61,724,467 for the population of U.S.-flagged vessels. See table 43.

Table 43: Comparison of Primary and Alternative Cost Estimates for U.S.-flagged Vessel Population (2022 Dollars, Undiscounted Costs)

Source of Cost	Primary Cost Estimates	Alternative Estimates
Account Security Costs	$970,596	$126,177
Multifactor Authentication Costs	$35,386,500	$6,015,705
Cybersecurity Training Costs	$6,873,814	$5,155,361
Penetration Testing Costs	$43,810,000	$14,019,200
Total	**$87,040,910**	**$25,316,443**

The Coast Guard requested but did not receive public comments on whether these assumptions of baseline activity are more reasonable than what is currently used in this RA, or if there are additional alternative assumptions about baseline activities in these areas or other areas not discussed that would lead to more accurate estimates. As such, we retained our assumption of no baseline activity in the affected population of U.S.-flagged vessels.

In addition, we considered adding cost estimates for those areas of uncertainty where we were able to estimate a range of potential costs. For provisions in § 101.650(c) and (g) related to storing logs and performing data backups, we anticipate that this data storage will be set up to occur in the background, meaning systems will not need to be taken offline and no burden hours. However, this makes the associated cost a function of the data space required to store and backup data. While we do not have information on how much data space a given company would need, we can estimate industry costs based on SME estimates for a range of potential data space amounts. As described in table 42, current market prices indicate that cloud-based storage can cost from $21 to $41 per month for 1 terabyte of data, $54 to $320 per month for 10 terabytes, and up to $402 to $3200 per month for 100 terabytes of data. To estimate the annual cost of 1 additional terabyte of data, we take the average estimated monthly cost of $31 [($41 + $21) ÷ 2] and multiply it by 12 to find the average annual cost of $372 per terabyte. If each facility and OCS facility company required an additional terabyte of data space because of this final rule, we would estimate approximately $510,384 ($372 × 1,372 facility owners and operators) in additional undiscounted annual costs to industry. Similarly, if we assumed each U.S.-flagged vessel company required an additional terabyte of data space because of this final rule, we would estimate approximately $771,900 ($372 × 2,075 vessel owners and operators) in additional undiscounted annual costs to industry. See table 44.

[130] See footnote 60.

Table 44: Comparison of Cost Estimates for Alternative Data Space for the Affected Population and Impact on Undiscounted Cost Totals (2022 Dollars, Undiscounted Costs)

Affected Population	Annual Data Space Cost Estimates	Total Data Space Cost Estimates Over 10 Years	Primary Population Cost Totals Over 10 Years	Alternative Population Cost Totals Over 10 Years
Facilities and OCS Facilities	$510,384	$5,103,840	$572,198,376	$577,302,216
U.S.-flagged Vessels	$771,900	$7,719,000	$768,567,346	$776,286,346
Total	**$1,282,284**	**$12,822,840**	**$1,340,765,722**	**$1,353,588,562**

These costs can change if we were to add additional assumptions about current baseline activities or adjusted the expected need for data space. We requested public comment on the accuracy and inclusion of these estimates but received none. As such, we were unable to add these cost estimates to our overall cost estimates for the rule.

Government Costs

There are two primary drivers of Government costs associated with this final rule. The first will be under § 101.630(d), where owners and operators of the affected population of U.S.-flagged vessels, facilities, and OCS facilities will be required to submit a copy of their Cybersecurity Plan for review and approval to either the cognizant COTP or the OCMI for facilities or OCS facilities, or to the MSC for U.S.-flagged vessels. In addition, § 101.630(e) will require owners and operators to submit Cybersecurity Plan amendments to the Coast Guard, under certain conditions, for review and approval. The second cost driver is related to the marginal increase in inspection time because of added Cybersecurity Plan components that will be reviewed as a part of an on-site inspection of U.S.-flagged vessels, facilities, and OCS facilities. An additional potential cost driver will be under § 101.650(g)(1), where owners and operators of the affected population of OCS facilities will be required to report cyber incidents to the NRC. The NRC will then need to process the report and generate notifications for each incident report they receive. However, based on historic NRC data related to cybersecurity incidents in the OCS facility population, we only estimate negligible costs related to this provision. The Coast Guard examines these costs under the assumption that we will use the existing frameworks in place to review security plans and amendments, process incident reports, and conduct inspections. Given uncertainty surrounding Coast Guard staffing needs related to this final rule, we have not estimated costs associated with new hires or the establishment of a centralized office.

First, we analyze the costs to the Government associated with reviewing and approving Cybersecurity Plans and amendments. Based on Coast Guard local facility inspector estimates, it will take Plan reviewers about 40 hours to review an initial Cybersecurity Plan for a facility or OCS facility, 8 hours to review a resubmission of a Plan in the initial year, and 4 hours to review an amendment in years 3 through 6 and 8 through 10 of the analysis period. It will also take about 8 hours of review for the renewal of Plans in Year 7 of the analysis period, and another 8 hours for any necessary resubmissions of Plan renewals. The estimated hours to review initial, resubmitted, and renewal Cybersecurity Plans and amendments include review and approval of any requested waivers or equivalence determinations received from the affected owners and operators. The hour-burden and frequency estimates for resubmissions and amendments are consistent with estimates for resubmissions of FSPs and OCS FSPs, as we expect the Cybersecurity Plans and amendments to be of a similar size and scope. As discussed earlier in the analysis, we estimate that resubmissions of initial Cybersecurity Plans and Plan renewals occur at a rate of 10 percent in Years 2 and 7 of the analysis period. We use the number of facilities and OCS facilities that will submit Plans, which will be about 3,718 (33 of which are OCS facilities).

We determine the wage of a local facility inspector using publicly available data found in Commandant Instruction 7310.1W.[131] We use an annual mean hourly wage rate of $89 for an inspector at the O–3 (Lieutenant) level, based on the occupational labor category used in ICR 1625–0077.

We estimate the undiscounted second-year (initial year of Plan review) cost for the Coast Guard to review Cybersecurity Plans for facilities and OCS facilities to be approximately $13,500,944 [(3,718 facility Plan initial submissions × $89.00 × 40 hours) + (372 facility Plan resubmissions × $89.00 × 8 hours)]. Except in Year 7, when renewal of all Plans will occur, we estimate the undiscounted annual cost to the Coast Guard for the review of amendments to be approximately $1,323,608 (3,718 amendments × $89.00 × 4 hours). In Year 7, we estimate the undiscounted cost to be approximately $2,912,080 [(3,718 Plans for 5-year renewal × $89.00 × 8 hours) + (372 facility Plan resubmissions × $89.00 × 8 hours)]. We estimate the discounted cost for the Coast Guard to review U.S. facility and OCS facility Cybersecurity Plans to be approximately $23,679,103 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $2,636,112, using a 2-percent discount rate. See table 45.

Table 45: Estimated Final Rule Costs for Government to Review Facility and OCS Facility Cybersecurity Plans and Amendments (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rate)

Year	Reviewer Wage	Facility Cybersecurity Plan Submissions	Facility Cybersecurity Resubmissions	Cybersecurity Plan Review Hours	Resubmission Review Hours	Amendment Review Hours	Total Cost	2 Percent
1	$89.00	0	0	0	0	0	$0	$0
2	$89.00	3718	372	40	8	0	$13,500,944	$12,976,686
3	$89.00	3718	0	0	0	4	$1,323,608	$1,247,265
4	$89.00	3718	0	0	0	4	$1,323,608	$1,222,809
5	$89.00	3718	0	0	0	4	$1,323,608	$1,198,833
6	$89.00	3718	0	0	0	4	$1,323,608	$1,175,326
7	$89.00	3718	372	8	8	0	$2,912,080	$2,535,141
8	$89.00	3718	0	0	0	4	$1,323,608	$1,129,687
9	$89.00	3718	0	0	0	4	$1,323,608	$1,107,536
10	$89.00	3718	0	0	0	4	$1,323,608	$1,085,820
Total							**$25,678,280**	**$23,679,103**
Annualized								**$2,636,112**

Note: Totals may not sum due to independent rounding.

BILLING CODE 9110–04–C

Based on Coast Guard MSC estimates, it will take about 28 hours to review an initial U.S.-flagged vessel Cybersecurity Plan, 8 hours to review a resubmission

of the Cybersecurity Plan in the initial year, and 4 hours to review an amendment in years 3 through 6 and 8 through 10 of the analysis period. It will also take about 8 hours of review for the renewal of Plans, and another 8 hours to review resubmitted Plan renewals in Year 7 of the analysis period. The hour-burden and frequency estimates for resubmissions and amendments are consistent with estimates for resubmissions of VSPs, as we expect the Cybersecurity Plans and amendments to be of a similar size and scope. We use the number of U.S.-flagged vessel owners and operators who will submit Plans, about 2,075. As discussed earlier in the analysis, we estimate that resubmissions of initial Cybersecurity Plans and Plan renewals occur at a rate of 10 percent in Years 2 and 7 of the analysis period.

According to ICR 1625–0077, the collection of information related to VSPs, FSPs, and OCS FSPs, the MSC uses contract labor to conduct Plan and amendment reviews. The MSC provided us with its independent Government cost estimate for their existing contract for VSP reviews. The average loaded annual mean hourly wage rate for the various contracted reviewers from the independent Government cost estimate is $81.83.

We estimate the undiscounted second-year cost for the Coast Guard to review Cybersecurity Plans for U.S.-flagged vessels to be approximately $4,890,488 [(2,075 initial vessel Plan submissions × $81.83 × 28 hours) + (208 vessel Plan resubmissions × $81.83 × 8 hours)]. Except in Year 7, when resubmission of all Plans will occur, we estimate the undiscounted annual cost to the Coast Guard for reviewing amendments to be approximately $679,189 (2,075 amendments × $81.83 × 4 hours). In Year 7, we estimate the undiscounted cost to be approximately $1,494,543 [(2,075 Plans for 5-year renewal × $81.83 × 8 hours) + (208 vessel Plan resubmissions × $81.83 × 8 hours)]. We estimate the discounted cost for the Coast Guard to review U.S.-flagged vessel Cybersecurity Plans to be approximately $10,192,585 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $1,134,705, using a 2-percent discount rate. See table 46.

BILLING CODE 9110–04–P

Table 46: Estimated Final Rule Costs for Government to Review U.S.-flagged Vessel Cybersecurity Plans and Amendments (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rate)

Year	Reviewer Wage	Vessel Cybersecurity Plan Submissions	Vessel Cybersecurity Plan Resubmissions	Cybersecurity Plan Review Hours	Resubmission Review Hours	Amendment Review Hours	Total Cost	2 Percent
1	$81.83	0	0	0	0	0	$0	$0
2	$81.83	2075	208	28	8	0	$4,890,488	$4,700,584
3	$81.83	2075	0	0	0	4	$679,189	$640,015
4	$81.83	2075	0	0	0	4	$679,189	$627,466
5	$81.83	2075	0	0	0	4	$679,189	$615,162
6	$81.83	2075	0	0	0	4	$679,189	$603,100
7	$81.83	2075	208	8	8	0	$1,494,543	$1,301,090
8	$81.83	2075	0	0	0	4	$679,189	$579,681
9	$81.83	2075	0	0	0	4	$679,189	$568,315
10	$81.83	2075	0	0	0	4	$679,189	$557,172
Total							**$11,139,354**	**$10,192,585**
Annualized								**$1,134,705**

Note: Totals may not sum due to independent rounding.

BILLING CODE 9110–04–C

The second source of Government costs is the marginal increase in onsite inspection time due to the expansion of FSPs, OCS FSPs, and VSPs to include

the Cybersecurity Plans and provisions by this final rule. The cybersecurity provisions will add to the expected onsite inspection times for the populations of U.S.-flagged vessels, facilities, and OCS facilities. Coast Guard SMEs within CG–FAC conferred with local inspection offices to estimate the expected marginal increase in facility and OCS facility inspection time. Local facility inspectors estimate that the additional cybersecurity provisions from this final rule will add an average of 1 hour to an onsite inspection, and that the inspection will typically be performed by an inspector at a rank of O–2 (Lieutenant Junior Grade). According to Commandant Instruction 7310.1W Reimbursable Standard Rates, an inspector with an O–2 rank has a fully loaded wage rate of $72.[132] Therefore, we estimate the annual undiscounted Government cost associated with the expected marginal increase in onsite inspections of facilities and OCS facilities is $267,696 (3,718 facilities and OCS facilities × 1 hour inspection time × $72 facility inspector wage). We estimate the total discounted cost of increased inspection time to be approximately $2,404,602 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $267,696, using a 2-percent discount rate. See table 47.

Table 47: Estimated Final Rule Costs for Government for On-site Inspection of Facilities and OCS Facilities (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rate)

Year	Number of Facilities	Facility Inspection Hours	Facility Inspector Wage	Total Cost	2 Percent
1	3718	1	$72	$267,696	$262,447
2	3718	1	$72	$267,696	$257,301
3	3718	1	$72	$267,696	$252,256
4	3718	1	$72	$267,696	$247,310
5	3718	1	$72	$267,696	$242,461
6	3718	1	$72	$267,696	$237,706
7	3718	1	$72	$267,696	$233,045
8	3718	1	$72	$267,696	$228,476
9	3718	1	$72	$267,696	$223,996
10	3718	1	$72	$267,696	$219,604
Total				**$2,676,960**	**$2,404,602**
Annualized					**$267,696**

Note: Totals may not sum due to independent rounding.

Similarly, Coast Guard SMEs within CG–ENG and inspectors in Coast Guard District 9 estimate that the additional cybersecurity provisions from this final rule will add an average of 0.167 hours (10 minutes) to an on-site inspection of a U.S.-flagged vessel and that the inspection will also typically be performed by an inspector at a rank of O–2 (Lieutenant Junior Grade). According to Commandant Instruction 7310.1W Reimbursable Standard Rates, an inspector with an O–2 rank has a fully loaded wage rate of $72. Therefore, we estimate the annual undiscounted Government cost associated with the expected marginal increase in onsite inspections of U.S.-flagged vessels is $108,696 (11,222 vessels × 0.167 hours inspection time × $72 vessel inspector wage). We estimate the total discounted cost of increased inspection time to be approximately $1,212,046 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $134,933, using a 2-percent discount rate. See table 48.

[132] Readers can view Commandant Instruction 7310.1W for military personnel at *media.defense.gov/2022/Aug/24/2003063079/-1/-1/0/CI_7310_1W.PDF*, accessed August 19, 2024.

Table 48: Estimated Final Rule Costs for Government for On-site Inspection of U.S.-flagged Vessels (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rate)

Year	Number of Vessels	Vessel Inspection Hours	Vessel Inspector Wage	Total Cost	2 Percent
1	11222	0.167	$72	$134,933	$132,287
2	11222	0.167	$72	$134,933	$129,693
3	11222	0.167	$72	$134,933	$127,150
4	11222	0.167	$72	$134,933	$124,657
5	11222	0.167	$72	$134,933	$122,213
6	11222	0.167	$72	$134,933	$119,817
7	11222	0.167	$72	$134,933	$117,467
8	11222	0.167	$72	$134,933	$115,164
9	11222	0.167	$72	$134,933	$112,906
10	11222	0.167	$72	$134,933	$110,692
Total				**$1,349,330**	**$1,212,046**
Annualized					**$134,933**

Note: Totals may not sum due to independent rounding.

The final potential source of Government costs from this final rule is the time to process and generate notifications for each cyber incident reported to the NRC. As discussed earlier in our analysis of costs associated with cyber incident reporting, from 2018 to 2022, the NRC fielded and processed an average of 0.2 cyber incident reports from OCS facilities per year. Cyber incident reports for other U.S.-flagged vessels and facilities are not included in this analysis because they are already required under 33 CFR 6.16–1. In addition, the NRC generated an average of 31 notifications for appropriate Federal, State, local, and Tribal agencies per processed cyber incident over that same time period. However, because the rate of reportable cyber incidents in the population of OCS facilities is so low (only 0.2 reportable cyber incidents per year, on average), we estimate that any associated costs would be negligible. Therefore, we do not include cyber incident report processing costs in our estimated Government cost totals.

We estimate the total discounted Government costs of this rule for the review of Cybersecurity Plans and marginal increase in on-site inspection time to be approximately $37,488,336 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $4,173,446, using a 2-percent discount rate. See table 49.

Table 49: Total Estimated Costs of the Final Rule for Government (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rate)

Year	Facility Cybersecurity Plan Review Costs	Vessel Cybersecurity Plan Review Costs	Facility Inspection Costs	Vessel Inspection Costs	Total Cost	2 Percent
1	$0	$0	$267,696	$134,933	$402,629	$394,734
2	$13,500,944	$4,890,488	$267,696	$134,933	$18,794,061	$18,064,265
3	$1,323,608	$679,189	$267,696	$134,933	$2,405,426	$2,266,687
4	$1,323,608	$679,189	$267,696	$134,933	$2,405,426	$2,222,242
5	$1,323,608	$679,189	$267,696	$134,933	$2,405,426	$2,178,668
6	$1,323,608	$679,189	$267,696	$134,933	$2,405,426	$2,135,949
7	$2,912,080	$1,494,543	$267,696	$134,933	$4,809,252	$4,186,743
8	$1,323,608	$679,189	$267,696	$134,933	$2,405,426	$2,053,008
9	$1,323,608	$679,189	$267,696	$134,933	$2,405,426	$2,012,753
10	$1,323,608	$679,189	$267,696	$134,933	$2,405,426	$1,973,287
Total					**$40,843,924**	**$37,488,336**
Annualized					**$4,084,392**	**$4,173,446**

Note: Totals may not sum due to independent rounding.

Total Costs of the Rule

We estimate the total discounted costs of this final rule to industry and Government to be approximately $1,245,594,930 over a 10-year period of analysis, using a 2-percent discount rate. We estimate the annualized cost to be approximately $138,667,759, using a 2-percent discount rate. See table 50.

Table 50: Total Estimated Costs of the Final Rule to Industry and Government (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rates)

Year	Facility and OCS Facility Costs	U.S.-flagged Vessel Costs	Government Costs	Total Costs	2 Percent
1	$57,844,636	$81,181,976	$402,629	$139,429,241	$136,695,334
2	$68,199,840	$110,518,021	$18,794,061	$197,511,922	$189,842,293
3	$55,747,636	$67,404,700	$2,405,426	$125,557,762	$118,315,883
4	$55,747,636	$67,404,700	$2,405,426	$125,557,762	$115,995,964
5	$55,747,636	$67,404,700	$2,405,426	$125,557,762	$113,721,533
6	$55,747,636	$67,404,700	$2,405,426	$125,557,762	$111,491,699
7	$55,920,448	$105,034,449	$4,809,252	$165,764,149	$144,307,667
8	$55,747,636	$67,404,700	$2,405,426	$125,557,762	$107,162,341
9	$55,747,636	$67,404,700	$2,405,426	$125,557,762	$105,061,119
10	$55,747,636	$67,404,700	$2,405,426	$125,557,762	$103,001,097
Total	**$572,198,376**	**$768,567,346**	**$40,843,924**	**$1,381,609,646**	**$1,245,594,930**
Annualized				**$138,160,965**	**$138,667,759**

Note: Totals may not sum due to independent rounding.

Benefits

While the Coast Guard is able to describe the qualitative benefits that this final rule may have for owners and operators of U.S.-flagged vessels, facilities, and OCS facilities, and others who would be affected by a cyber-attack, the Coast Guard is not able to quantify and monetize benefits. One reason is that it is challenging to project the number of cyber-attacks that would occur over a relevant period without this final rule; another reason is that it is challenging to quantify the magnitude of the harm from such attacks. It is further challenging to quantify the marginal impact of this final rule, both because the Coast Guard cannot quantify the effectiveness of the included provisions (how many attacks will be prevented or how much damage will be mitigated) and because the Coast Guard has uncertainty around the appropriate baseline to consider regarding what cybersecurity actions are being taken for reasons beyond this rulemaking. Without such projections and quantification, it is not possible to monetize the benefits of the rule in terms of harms averted. We summarize public comments that highlight benefits of the final rule, provide a qualitative analysis of benefits, and analyze cyber incidents and risks addressed by the final rule below.

Public Comments That Support the Final Rule or Address Benefits

We received several public comments for the support of specific provisions of this final rule. For IT and OT systems, one commenter supports the requirements to ''designate critical IT and OT systems'' and to keep an inventory of these systems given the importance of an owner or operator knowing their own cybersecurity environment in order to properly defend it. Another commenter agrees ''that network segmentation is in fact an effective practice to help mitigate the damage caused by an attack on an IT or OT network.'' A third commenter ''strongly supports'' the ''requirements to analyze networks to identify IT and OT vulnerabilities, mitigate unresolved vulnerabilities, conduct vulnerability scans, and conduct annual penetration testing,'' because these provisions are key in ensuring resilience and preventing cybersecurity incidents.

We also received several comments about the use of and lack of reference to ASPs in the NPRM. Commenters recommended the Coast Guard to include the Cybersecurity Plan in existing ASPs. One commenter stated that submitting separate Cybersecurity Plans to the MSC for vessels and the local COTP for facilities is ''resource-intensive,'' and that ''the ASP framework has proved to be effective in allowing owners and operators to determine the best way to implement security requirements across the domestic passenger vessel fleet.'' The same commenter added, ''ASP should be added to applicable sections of the proposed rule when referencing requirements for FSP, VSP, or OCS FSP.'' Another commenter suggested permitting a Cybersecurity Plan to be included in an Alternative Security Program. This commenter stated that ''ASPs have been proven to be successful at both managing vessel and facility security risks and reducing costs and administrative burdens for vessel and facility operators, as well as the Coast Guard.''

Based on these comments, the Coast Guard revised § 101.660 of this final rule to explicitly allow owners and operators to use ASPs to comply with this final rule. We added additional text in § 101.660 to clarify that ASP provisions apply to cybersecurity compliance documentation. Given the unique nature of cybersecurity threats, vulnerabilities, and mitigation strategies, owners and operators must ensure that use of ASPs includes those items specific to each U.S.-flagged vessel, facility, and OCS facility. The Coast Guard will evaluate each ASP's cybersecurity component to ensure full regulatory compliance with each applicable requirement. These changes to this final rule can create marginal cost reductions and will create marginal benefits for owners and operators using ASPs because they are less resource intensive, as argued by several commenters. These owners and operators will not be required to submit separate Plans to the Coast Guard, and they will be able to include a Cybersecurity Plan as part of an approved ASP, which will allow owners and operators using ASPs to reallocate resources to implement or improve other cybersecurity measures.

We received numerous comments on the term ''reportable cyber incident.'' As a result, and as we stated in our response to comments in V. Discussion of Comments and Changes of this preamble, we included the use and definition of the term in this final rule, which will provide clear guidance on when and under what conditions cyber incidents must be reported to the NRC. This clarity will help eliminate the need to report minor cyber incidents, which will reduce the administrative burden on owners and operators.

We also received several public comments on the frequency of drills, with some requesting a general frequency reduction, others requesting annual or semi-annual drill requirements, and others requesting a schedule of requirements based on the cybersecurity risk faced by the affected U.S.-flagged vessels and facilities. These requests were made because commenters felt that the proposed quarterly drill requirements were too burdensome. As a result, the Coast Guard reduced the frequency of drills from quarterly to 2 drills in a calendar year. This will have a marginal benefit for affected owners and operators to use and direct resources to improve remaining drills or implement other cybersecurity measures that can help reduce the risk of a cyber incident in other ways.

Qualitative Analysis of Benefits

Malicious cyber actors, including individuals, groups, and nation states, have rapidly increased in sophistication over the years and use techniques that make them more and more difficult to detect. Recent years have seen the rise of cybercrime as a service, where malicious cyber actors are hired to conduct cyber-attacks.[133] In a paper published by Akpan, Bendiab, Shiaeles, Karamperidis, and Michaloliakos (2022), the authors state that the maritime sector has shown a 900-percent increase in cybersecurity

[133] See *https://cybernews.com/security/crimeware-as-a-service-model-is-sweeping-over-the-cybercrime-world/* for a description of cybercrime as a service and *https://cybersecurityventures.com/cybercrime-damage-costs-10-trillion-by-2025/* for a description of its growth in recent years, accessed July 15, 2024.

breaches as it enters the digital era.[134] The paper adds that many automated systems on vessels, by their nature, are vulnerable to a cyber-attack, and include navigation systems such as Electronic Chart Display and Information Systems, GPS, and Global Navigation Satellite Systems. Other affected systems include radar systems; AIS; communication systems; and systems that control the main engine, generators, among others (Akpan et al., 2022).[135] Furthermore, the paper presents the vulnerabilities and consequences of cyber-attacks to ships' systems ranging from hijacking ships, destroying and stealing data, damaging equipment, disrupting vessel operations, uploading malware to computer systems, losing lives and cargo, and more (Akpan et al., 2022).[136]

In a paper by Jones (2016), the author noted that outdated systems are vulnerable to cyber-attacks. The paper refers to a study that states 37 percent of servers running Microsoft failed to download the correct patch and left systems vulnerable to a cyber-attack. Additionally, Jones states that ''many ships were built before cyber security was a major concern'' and goes on to state that many newer software systems are not compatible with older software systems.[137]

Akpan, et al. (2022) also list a few cyber-attacks that have occurred in the maritime transportation sector in the past few years. Allianz Global Corporate and Specialty (AGCS) reports that there was a record 623 million ransomware attacks in 2021.[138] In a paper published by Meland, Bernsmed, Wille, Rodseth, and Nesheim (2021), the authors state that 46 successful [139] cyber-attacks with a significant impact on the maritime industry have occurred worldwide between 2010 and 2020, or an average of 4.2 attacks a year.[140] Some national governments have also used ransomware to advance their strategic interests, including evading sanctions.[141] The increased growth of cybercrime is a factor that has intensified in the last 20 years. Per the FBI's cybercrime reporting unit, financial losses from reported incidents of cybercrime exceeded $10.3 billion in 2022, and $35.9 billion from 2001 to 2022.[142] While there are significant private economic incentives for MTS participants to implement their own cybersecurity measures, and survey results indicate that MTS participants are more confident in their cybersecurity capabilities than in years past, the same survey indicates that there are important gaps in capabilities that leave the MTS exposed to risk.[143] In its 2018 report, the CEA stated, ''[b]ecause no single private entity faces the full costs of the adverse cyber events, the Government can step in to achieve the optimal level of cybersecurity, either through direct involvement or by incentivizing private firms to increase cyber protection.'' [144]

The overall benefit of this final rule is the reduction in the probability of a cyber incident and, if an incident occurs, improvement in the mitigation of its impacts. This benefits owners and operators and help protect the maritime industry and the United States. We expect this final rule to have significant but currently unquantifiable benefits for the owners and operators of U.S.-flagged vessels, facilities, and OCS facilities, as well as downstream economic participants [145] and the public at large. This final rule benefits owners and operators of U.S.-flagged vessels, facilities, and OCS facilities by having a means, through the Cybersecurity Plan, to ensure that all cybersecurity measures are in place and tested periodically, which improves the resiliency of owners and operators to respond to a cyber incident and to maintain a current cybersecurity posture, reducing the risk of economic losses for owners and operators as well as downstream economic participants. For example, this final rule requires training, drills, and exercises, which benefits owners and operators by having a workforce that is knowledgeable and trained in most aspects of cybersecurity, which reduces the risk of a cyber incident and mitigates the impact if an incident occurs. Conducting training, drills, and exercises also enables the owners and operators of U.S.-flagged vessels, facilities, and OCS facilities to prevent, detect, and respond to a cyber incident with improved capabilities.

In addition, cybersecurity measures in this final rule require owners and operators of U.S.-flagged vessels, facilities, and OCS facilities to identify weaknesses or vulnerabilities in their IT and OT systems and to develop strategies or safeguards to identify and detect security breaches when they occur. The software and physical requirements of this final rule ensure the minimal level of protection for critical IT and OT systems and allow for the proper monitoring of these systems. In table 51, we list the expected benefits associated with each major regulatory provision of this final rule.

[144] Economic Report of the President *supra* note 2 at 369.

[145] Downstream economic participants are entities or individuals involved in the later stages of the supply chain or production process, such as distributors, wholesalers, service providers, and retailers that supply and sell products directly to consumers.

Table 51. Expected Actions of the Final Rule that Accrue Benefits

§ 101.630 Cybersecurity Plan	1. Improved incident response: A well-designed Cybersecurity Plan includes procedures for incident response and enables vessels and port facilities to address cybersecurity incidents quickly and effectively to minimize their impact and duration. 2. Employee awareness and training: A Cybersecurity Plan includes employee training and awareness programs, which ensures that staff members (1) understand their role in protecting both the vessel and port facility's digital assets to prevent cyber incidents, and (2) know how to respond to potential threats to minimize their impact and duration.
§ 101.635 Drills and Exercises	1. Increased awareness and understanding: Cybersecurity drills and exercises promote a better understanding of the risks and challenges associated with cyber threats among all stakeholders, including crew members, port facility personnel, and other relevant parties, allowing them to better prevent cyber incidents. 2. Improved preparedness: Regular drills and exercises help organizations to identify vulnerabilities in their cybersecurity posture, allowing them to develop and implement effective countermeasures to address potential threats and prevent cyber incidents. 3. Enhanced response capabilities: Drills and exercises allow staff to practice their roles and responsibilities during a potential cybersecurity incident, ensuring they can respond quickly and effectively to minimize the impact of any potential cyber-attacks. 4. Identification of gaps and weaknesses: By simulating real-world cyber-attacks, organizations can identify gaps in their security policies, procedures, and technologies, and take appropriate steps to address gaps in those areas to prevent cyber incidents. 5. Continuous improvement: Regularly conducting drills and exercises allows organizations to learn from their experiences and refine and update their Cybersecurity Plans and strategies to ensure ongoing effectiveness in preventing cyber incidents.
§ 101.645 Communications	1. Improved situational awareness: Clear communication enables stakeholders to stay informed about potential cyber threats and vulnerabilities, allowing them to respond promptly and effectively. 2. Enhanced collaboration: Effective communication fosters collaboration between different departments, stakeholders, and external partners, such as shipping companies, port authorities, and cybersecurity

	experts. This collaboration is crucial for identifying and mitigating cybersecurity risks. 3. Streamlined incident response: In the event of a cyber-attack or security breach, effective communication helps ensure that all relevant parties are aware of the situation and can coordinate their response efforts, minimizing the impact of the incident.
§ 101.650 Cybersecurity Measures. (a) *Account security measures*.	1. Preventing unauthorized use: A secured account prevents malicious actors from using it as a platform to spread malware, spam, or launch other attacks, ensuring systems remain operational and free from disruption. 2. Preserving digital identity: Prevents cyber criminals from using compromised accounts to impersonate the account holder, reducing identity theft or other fraudulent activities. This promotes trust in clients and partners and maintains the positive reputation of the organization in the marketplace. 3. Personal data protection: Accounts often contain or provide access to personal and sensitive information. Securing them ensures this data remains confidential and prevents it from being stolen, altered, or deleted. Further, the organizations can promote greater consumer confidence by protecting client data from malicious actors. 4. Maintaining privacy: Securing accounts helps in safeguarding private communications, photos, videos, and other personal content from unauthorized access and prevents it from being stolen, altered, or deleted, retaining the trust of clients and partners.
§ 101.650 Cybersecurity Measures. (b) *Device security measures*.	1. Limiting spread: Secured devices can prevent malware or malicious activities from spreading to other connected devices or networks, mitigating the effects of a cyber incident. 2. Data protection: Prevent unauthorized access, theft, or damage to personally identifiable information (PII) and other sensitive data. This includes financial information, health records, intellectual property, and other confidential data. By protecting the digital assets of the organization and its clients, organizations can help prevent their customers from becoming unwitting victims of cybercrime and lessen the impacts of cyber incidents on other economic participants, increasing consumer trust and commerce in the U.S. economy. 3. Reduced vulnerability: Regularly updated and secured devices are less vulnerable to the newest exploits or zero-day attacks, reducing the chance of

	cyber-attacks and mitigating the effects of a cyber incident. 4. Limiting spread: Secured devices can prevent malware or malicious activities from spreading to other connected devices or networks, mitigating the effects of a cyber incident.
§ 101.650 Cybersecurity Measures. (c) *Data security measures*.	1. Protecting sensitive information: Both vessels and port facilities handle sensitive data, such as personal information from crew and passengers, cargo details, financial transactions, and operational data. Data security measures help protect this information from unauthorized access, ensuring privacy and compliance with regulations for data protection. This measure helps prevent sensitive data from being stolen, altered, or deleted. Thus, the organization retains the trust of clients and partners and helps protect downstream economic participants from the effects of a cyber incident. 2. Building trust and reputation: Ensuring sensitive information remains secure and maintaining reliable operations contribute to a positive reputation for shipping companies and port facilities. This can lead to increased business opportunities, better relationships with stakeholders, and improved trust of clients and partners. 3. Promoting collaboration and information sharing subject to any applicable antitrust limitations: Secure data sharing between vessels, port facilities, and other stakeholders in the maritime industry is essential for effective collaboration and coordination, which helps facilitate early warnings about cyber threats and incidents to improve response times and mitigate impacts to other actors. Also, collective data and lessons learned can be used to develop better security practices and policies, helps determine the "appropriate levels of defense investments," and facilitate the "effective functioning of the cyber insurance market."[146] Data security measures help create an environment where parties can confidently share information without compromising its confidentiality, integrity, or availability. In its 2018 report, the CEA stated, "Government-monitored information-sharing platforms for anonymous disclosures of adverse cyber events are designed to increase the real-time awareness of cyber vulnerabilities and facilitate timely and publicly shared security solutions." The CEA also states that

	"the Government can be a valuable contributor to sharing threat information."[147]
§ 101.650 Cybersecurity Measures. (d) *Cybersecurity training for personnel.*	1. Enhanced security awareness: Cybersecurity training increases awareness of potential threats, vulnerabilities, and best practices, empowering personnel to take a proactive approach to addressing potential cyber risks and preventing cyber incidents. 2. Risk reduction: Training helps reduce the risk of successful cyber-attacks by teaching personnel how to identify, mitigate, and respond to threats. This reduces the potential for costly disruptions to maritime operations. 3. Improved incident response: Training equips personnel with the skills necessary to effectively respond to and recover from cyber incidents, which minimizes damage and downtime. 4. Strengthened collaboration and communication: Cybersecurity training fosters a culture of shared responsibility among all stakeholders, encouraging collaboration and communication between onboard and port facility personnel, as well as with other entities in the maritime industry, which helps prevent cyber incidents. 5. Continuous improvement: Regular cybersecurity training helps to keep personnel updated on the latest threats, technologies, and best practices, ensuring that maritime cybersecurity measures remain effective at preventing cyber incidents over time. 6. Reduction in human error: Cybersecurity training helps reduce the likelihood of human errors, such as falling victim to phishing attacks or accidentally exposing sensitive information, which are some of the most common causes of security incidents. This prevents an accidental cyber incident or falling victim to cyber-attacks such as a phishing attack.
§ 101.650 Cybersecurity Measures. (e) *Risk management.*	1. Protection of critical assets: By managing cybersecurity risks, ship and port facilities can better protect essential assets such as navigation systems, communication systems, cargo handling equipment, and access control systems from cyber threats, preventing disruptions to the system and maintaining business continuity. 2. Strengthened resilience: Developing a comprehensive CRM plan enables vessels and port facilities to respond to and recover from cyber incidents more quickly, mitigating the impact of an attack and recovering quickly from cyber-attacks.
§ 101.650 Cybersecurity	1. Reduced risk of cyber-attacks: By ensuring that hardware and software components are genuine,

Measures. (f) *Supply chain.*	untampered, and up to date, a secure supply chain helps to minimize vulnerabilities that can be exploited by cyber-attackers. Organizations with a secure supply chain can assure partners and customers of the reliability and safety of their goods and services. The benefit of avoiding supply chain disruptions may be the reduction in the "spillover effects to economically linked firms" and possibly a reduction in risk to "corporate partners, employees, customers, and firms with a similar business model."[148] Multiple authentication methods "may help to prevent cyber breaches across the supply chain,"[149] thereby reducing the cost of incidents when they occur. 2. Enhanced trust: A secure supply chain promotes trust among stakeholders, such as customers, partners, and regulatory agencies, by demonstrating a commitment to maintaining high cybersecurity standards. Organizations with a secure supply chain are better equipped to deal with disruptions, ensuring smooth operations and uninterrupted supply chain processes for their business partners, which maintains their organization's share of the commerce. 3. Better risk management: A comprehensive understanding of supply chain security risks allows organizations to develop effective risk management strategies, reducing the likelihood of cyber-attacks and their potential impact.
§ 101.650 Cybersecurity Measures. (g) *Resilience*.	1. Protection of sensitive data: Cyber resilience helps protect sensitive information, such as customer data, intellectual property, and trade secrets, from being stolen or compromised by hackers. Cyber resilience is about minimizing the financial losses associated with data breaches, ransomware, and other cyber threats. In its 2018 report, the CEA stated from a case study that a data breach of PII "will likely negatively affect the firm's ability to raise new capital and make new investments" and generally may adversely affect a firm's stock price.[150] Therefore, protecting sensitive information may be beneficial in protecting a firm's market value. 2. Business continuity: A cyber-resilient organization can maintain or quickly resume operations in the event of a cyber-attack, minimizing downtime and ensuring that essential services remain available to customers and stakeholders.

	3. Reputation and trust: A strong cyber resilience posture can enhance an organization's reputation and foster trust with customers, partners, and stakeholders, as it demonstrates a commitment to protecting their data and interests.
§ 101.650 Cybersecurity Measures. (h) *Network segmentation.*	1. Enhanced security: By segregating the network into separate segments, each with its own access controls, network segmentation helps to minimize the risk of unauthorized access to critical systems and sensitive data. This reduces the potential for cyber-attacks, data breaches, and other security incidents. It also reduces disruptions to operations and the impact of the cyber incident, and, thereby, economic losses to firms. 2. Easier monitoring and management: Segmented networks can be more easily monitored and managed. Administrators can more effectively track network traffic and troubleshoot issues, as well as apply and enforce security policies on a per-segment basis, preventing cyber incidents. 3. Isolating issues: If a security breach or a technical problem occurs within one network segment, it can be more easily contained, preventing the issue from spreading throughout the entire network. This can minimize the impact on operations and reduce the time and resources required to address the issue.
§ 101.650 Cybersecurity Measures. (i) *Physical security.*	1. Prevention of unauthorized access: Physical security measures can prevent unauthorized individuals from accessing sensitive areas or equipment, such as data centers, server rooms, or computer systems, where critical information is stored. Direct access to critical assets like servers, computers, and storage devices can cause immediate and significant damage. For example, destruction of physical assets can be a greater financial burden and more difficult to recover from after an attack, and the loss or destruction of PII, loss of financial data, and online services being down during the attack may result in lost revenues. 2. Protection of hardware: Implementing physical security measures can protect valuable hardware and equipment from theft, tampering, or damage. This includes devices like servers, workstations, routers, switches, and storage devices. Physical security represents a first line of defense against an internal attack. Direct access would enable the attackers to bypass digital security measures like firewalls or encryption, directly impacting core systems and data. Protecting hardware may help prevent against the loss or destruction of PII, loss of financial data, lost revenue, and so on.

	3. Deterrent to attackers: Visible physical security measures can deter potential attackers and make it more difficult for them to execute a cyber-attack. This can include security cameras, access control systems, or security personnel. Physical damage to infrastructure can take longer to recover from, be more costly, and is potentially irreversible. 4. Minimize the risk of insider threats: Physical security measures can help detect and prevent insider threats, such as employees or contractors attempting to access sensitive information or systems without authorization. Unlike digital breaches that often leave digital traces, physical breaches that are carried out by employees or contractors may go unnoticed until significant damage has occurred. Insider attacks can lead to loss of trust among customers, business partners, and stakeholders which can reduce the flow of commerce.

BILLING CODE 9110–04–C

Cyber Incidents and Risks Addressed by the Final Rule

In May 2021, a major pipeline company suffered a cyber-attack that disrupted the supply of fuel to the east coast of the United States. The company was forced to shut down operations for 6 days, which created gasoline and fuel shortages. In addition to the direct financial losses incurred by the company, the shutdown and subsequent shortages negatively impacted consumers, creating a 4 cents-per-gallon increase in average gasoline prices in the impacted areas, with price increases lingering even after the pipeline returned to operation.[151] Further, fuel shortages caused some fuel stations to temporarily close due to shortened supply. Some airlines in the impacted area were forced to scramble for additional fuel sources and added stops along select long-haul flights.[152] This was a ransomware cyber-attack that, based on public reports, was a result of the attackers using a legacy Virtual Private Network and the pipeline company not having a two-factor authentication method, more commonly known as multifactor authentication, in place on its computer systems.[153] Therefore, it was possible for computer hackers to access the pipeline company's computer systems with only a password.

This final rule can prevent an attack similar to the pipeline company attack from occurring by requiring owners and operators of vessels, facilities, and OCS facilities to implement account security measures and multifactor authentication on their computer systems. An example of multifactor authentication would be requiring a five- or six-digit passcode after a password has been entered by company personnel. Multifactor authentication is part of account security measures in § 101.650.

The encryption of data in § 101.650 under data security measures may have also relegated stolen data to being useless in the event of a cyber-attack. Furthermore, the pipeline company would likely have benefitted from a penetration test, which they had not conducted, to ensure the safety and security of its critical systems. The requirement of a penetration test simulates real-world cyber-attacks that helps companies identify the risks to their computer systems and prepare the necessary measures to lessen the severity of a cyber-attack.

Additionally, under § 101.650 for device security measures, documenting and identifying the network map and OT device configuration information, the pipeline company may have been able to detect exactly where the connections to the affected systems were and may have been able to isolate the problem without having to shut down all pipeline operations, as it did temporarily, which greatly affected its fuel supply operations.

Lastly, the pipeline company did not have a Cybersecurity Plan in place but did have an emergency response plan. With § 101.630, Cybersecurity Plan, and § 101.635, Drills and Exercises, a Cybersecurity Plan could have benefitted the company because it includes periodic training and exercises that increase the awareness of potential cyber threats and vulnerabilities throughout the organization. A Cybersecurity Plan also creates best practices so company personnel have the knowledge and skills to identify, mitigate, and respond to cyber threats when they occur. Creating the Cybersecurity Plan will allow the CySO to ensure all aspects of the Plan have been implemented at a CySO's respective company. Improved awareness of potential cybersecurity vulnerabilities and the steps taken to correct them could have helped the pipeline company identify the issue of a weak password before it was exploited.

In another cyber-attack that occurred in 2017 against a major global shipping company, computer hackers, based on public reports, exploited the company's computer systems because of vulnerabilities in Microsoft's Windows operating system. The malware was disguised as ransomware, which created

more damage to the company's computer systems. In 2016, one year before the attack, IT professionals at the shipping company highlighted imperfect patching policies, outdated operating systems, and a lack of network segmentation as the largest holes in the company's cybersecurity. While there were plans to implement measures to address these concerns, they were not undertaken, leaving the company exposed and underprepared for the attack it faced in 2017.

The effects of this attack were far-reaching. Beyond the direct financial losses incurred by the company (estimated at nearly $300 million), shipping delays and supply chain disruptions caused additional downstream economic losses that are much more difficult to quantify as shipments went unfulfilled for businesses and consumers, and trucks were forced to sit and wait at ports.[154] Under § 101.650, cybersecurity measures such as patching would likely prevent a similar attack from occurring and help prevent such losses. Patching U.S.-flagged vessel, facility, and OCS facility computer systems ensures they are not vulnerable to a cyber-attack because the latest software updates will be installed on these systems with periodic software patches.

Additionally, penetration testing may have identified the vulnerabilities in the shipping company's computer systems. Regular cybersecurity drills and exercises may have enabled the company's employees to quickly identify the cyber threat and may have reduced the impact and longevity of the cyber-attack. Further, network segmentation as in § 101.650(h) could have helped stop the spread of malware to all its computer systems, which ultimately crippled its operations. By separating networks, the shipping company could have better isolated the attack and kept larger portions of its business open, meaning fewer financial losses and downstream economic impacts to other companies and consumers.

Resilience played a significant role in the company's ability to recover from the cyber-attack quickly. Company personnel worked constantly to recover the affected data and eventually restored the data after 2 weeks.[155] In this final rule, § 101.650 contains provisions for resilience, which owners and operators of companies such as this must possess to recover from a cyber-attack. With proper backups of critical IT and OT systems, this company may have been able to recover more quickly from the attack.

The Coast Guard emphasizes that this final rule might also have quantifiable benefits from reducing or preventing lost productivity from a cyber incident and possibly lost revenues from the time that critical IT and OT systems are inoperable as a result of a cyber incident, if one occurs. Such benefits accrue to owners and operators of vessels and facilities, as well as to downstream participants in related commerce and to the public at large. For instance, short-term disruptions to the MTS can result in increases to commodity prices, while prolonged disruptions can lead to widespread supply chain shortages. Short- and long-term disruptions and delays may affect other domestic critical infrastructure and industries, such as our national defense system, that depend on materials transported via the MTS.

The societal impacts from a cybersecurity incident such as the attack that occurred against the global shipping company are difficult to quantify. They may include the effects of delays in cargo being delivered, which can result in the loss of some or all the cargo, especially if the cargo is comprised of perishable items such as food or raw goods; for example, certain types of oil that would be used later in the supply chain to manufacture final goods for consumption. Delays themselves may result in the unfulfillment of shipping orders to customers as vessels wait offshore to enter a port. This can create downstream effects for customers who would not receive goods because delivery trucks would sit idle at ports until OT and IT systems, either at the port or on board vessels, become operational again after the attack. Other societal impacts can include, but are not limited to, delays in shipments of medical supplies that may be carried on board vessels that would not be delivered on time to individuals and medical institutions relying on these supplies for their healthcare needs and service. Therefore, it should be noted that a cyber-attack may have considerable economic impacts on multiple industries in the United States such as, but not limited to, healthcare, food, transportation, utilities, defense, and retail. It should also be noted that the Coast Guard is not able to estimate, quantify, or predict the societal harm of shipping delays from a cyber-attack on the MTS or the economic impact it can cause because it would be dependent on many variables such as the type of attack, the severity of the attack, the length of the attack, the response by the affected parties to the attack, and so on.

The benefits of this final rule can be particularly salient in the case of a coordinated attack by a malicious actor seeking to disrupt critical infrastructure for broader purposes. For instance, in a circumstance where this final rule's provisions prevented a terrorist or nation-state actor[156] from using a cyber-attack in connection with a broader scheme that threatened human life, a strategic waterway, or a major port, the avoided economic and social costs may be substantial.

With respect to the latter, as noted by Cass R. Sunstein in *Laws of Fear: Beyond the Precautionary Principle (The Seeley Lectures, Series Number 6),* ''fear is a real social cost, and it is likely to lead to other social costs.''[157] In addition, Ackerman and Heinzerling state ''terrorism 'works' through the fear and demoralization caused by uncontrollable uncertainty.''[158] As devastating as the direct impacts of a successful cyber-attack can be on the

[154] Andy Greenberg, ''The Untold Story of NotPetya, the Most Devastating Cyberattack in History,'' *WIRED,* August 22, 2018; *https://www.wired.com/story/notpetya-cyberattack-ukraine-russia-code-crashed-the-world/,* accessed August 15, 2024.

[155] News reports suggest this recovery time was luck and not due to existing cybersecurity practices. ''Maersk staffers finally found one pristine backup in their Ghana office. By a stroke of luck, a blackout had knocked the server offline before the NotPetya attack, disconnecting it from the network. It contained a single clean copy of the company's domain controller data, and its discovery was a source of great relief to the recovery team.'' See Daniel E. Capano, ''Throwback Attack: How NotPetya Ransomware Took Down Maersk,'' September 30, 2021, *https://www.industrialcybersecuritypulse.com/threats-vulnerabilities/throwback-attack-how-notpetya-accidentally-took-down-global-shipping-giant-maersk/,* accessed August 15, 2024.

[156] For instance, the Office of the Director of National Intelligence recently reported on the cyber espionage and attack threats from multiple nation-states with respect to U.S. critical infrastructure. *See* Office of the Director of National Intelligence, Annual Threat Assessment of the U.S. Intelligence Community at 10, 15, 19 (Feb. 6, 2023), available at *https://www.dni.gov/files/ODNI/documents/assessments/ATA-2023-Unclassified-Report.pdf* (last visited August 15, 2024) (describing cyber threats associated with China, Russia, and Iran). A recent multi-national cybersecurity advisory noted that ''Russian state-sponsored cyber actors have demonstrated capabilities to compromise IT networks; develop mechanisms to maintain long-term, persistent access to IT networks; exfiltrate sensitive data from IT and [OT] networks; and disrupt critical [ICS/OT] functions by deploying destructive malware.'' *See* Joint Cybersecurity Advisory, Russian State Sponsored and Criminal Cyber Threat to Critical Infrastructure, Alert AA22–110A (May 9, 2022), available at: *https://www.cisa.gov/uscert/ncas/alerts/aa22-110a,* accessed August 15, 2024.

[157] Cass R. Sunstein, *Laws of Fear,* at 127; Cambridge University Press (2005).

[158] Frank Ackerman and Lisa Heinzerling, ''Priceless: On Knowing the Price of Everything and the Value of Nothing,'' 136–137 (2004).

U.S. MTS and supply chain, avoiding the impacts of the more difficult to measure indirect effects of fear and demoralization in connection with a coordinated attack would also entail substantial benefits. However, the Coast Guard is not able to quantify these potential benefits because they would depend on the incident, the duration of the incident, and how various private and public actors would respond to the incident.

Through the provisions of this final rule, benefits from implementing and enhancing a cybersecurity program may likely increase over time. By requiring that a range of cybersecurity measures be implemented, such as account security measures, vulnerability scanning, and automated backups, an organization can drastically reduce the downtime it takes to remedy a breach. Education and training can also help guide employees to identify potential email phishing scams, suspect links, and other criminal efforts, which will likely increase protection against external and internal threats before they occur. Further, because so many of the provisions include periodic updates and modifications following tests or assessments, we believe that cybersecurity programs will continue to improve each time they are tested and reexamined by the implementing entity.

This final rule addresses the challenges facing businesses today by requiring the implementation of safeguards to cybersecurity on the MTS. In adopting these measures, owners and operators of U.S.-flagged vessels, facilities, and OCS facilities can take preemptive action before malicious actors and the threats they pose take advantage of vulnerabilities in their critical IT and OT systems.

Analysis of Alternatives

The Coast Guard received multiple public comments regarding the penetration testing requirements that were the primary focus of our alternatives analysis in the NPRM. While we did receive a comment in support of the penetration testing requirement, many of the relevant comments highlighted concerns. Several commenters noted that penetration tests are expensive, and that the Coast Guard underestimated costs associated with the requirement. Further, some commenters stated that penetration tests would be ineffective at the frequency required in this final rule. In response, the Coast Guard revised our cost estimates to better reflect industry averages and continued to consider alternative frequencies of penetration testing in our analysis of alternatives. Despite the increased cost estimates, we ultimately decided to retain the proposed frequency of penetration testing, as analyzed below.

Cybersecurity has become a critical issue across all sectors. The maritime industry, a pivotal component of the global supply chain, is no exception. With an increasing amount of sensitive data being stored and processed online, regulations are needed to protect this data from unauthorized access and breaches. As cyber threats grow more sophisticated and pervasive, it has become increasingly apparent that clear and actionable cybersecurity regulations are needed for the maritime industry. Furthermore, cybersecurity is not just a matter of individual or business concerns, it is also a national security issue. Robust regulations help protect critical infrastructure and Government services from cyber-attacks that can threaten national stability. For instance, unauthorized access to a vessel's navigation system can lead to disastrous consequences, including collisions or groundings, which can put people at risk and lead to economic losses for the affected entities and the U.S. economy. To prevent incidents like this, the Coast Guard has included several regulatory provisions in this final rule that identify potential network and system vulnerabilities. Of these provisions, penetration testing is one of the more intensive and costly, but provides important benefits, including demonstrating where and how malicious actors can exploit system weaknesses, so that organizations can better prioritize cybersecurity upgrades and improvements based on risk.

Given the relatively high costs associated with penetration testing, and the significant vulnerability risks associated with not performing these tests, the Coast Guard contemplated four alternatives: (1) maintain the status quo; (2) require annual penetration testing and submission of results to the Coast Guard; (3) allow penetration testing at the discretion of the owner or operator; or (4) require penetration testing every 5 years in conjunction with the submission and approval of Cybersecurity Plans (the preferred alternative).

(1) Status quo

Currently, the Coast Guard does not require owners and operators of U.S.-flagged vessels, facilities, and OCS facilities to conduct penetration tests as a part of their security plans. Despite this, survey data indicates that some MTS entities are already conducting penetration tests for their organizations as they face an evolving cyber threat landscape. While we expect the adoption of penetration testing policies to grow over time, 32 percent of owners and operators of facilities and OCS facilities (see footnote number 60) and an unknown number of owners and operators of U.S.-flagged vessels have yet to add this test to their suite of cybersecurity measures.

Maintaining the status quo by not requiring any penetration testing would reduce the costs for affected owners and operators of this final rule by $100,190,445, with an annualized cost reduction of $11,153,854 over a 10-year period of analysis, discounted at 2 percent, when compared to the preferred alternative. However, not requiring penetration testing would leave a significant gap in vulnerability detection capabilities of a large portion of the MTS, exposing MTS stakeholders and the wider U.S. economy to greater risk. Without periodic penetration tests to determine weaknesses in critical IT and OT systems, the affected population puts itself at greater risk of cyber incidents, which can endanger employees, consumers, and the supply chain. As a result, the Coast Guard rejected the status quo alternative and chose to require penetration tests every 5 years, aligned with the renewal of a Cybersecurity Plan, as discussed in alternative (4), below.

(2) Annual Penetration Testing

Penetration testing represents a crucial element of a comprehensive cybersecurity strategy. It involves proactively testing computer systems, networks, and software applications to identify vulnerabilities that might be exploited by attackers. Because penetration testing provides a much more in-depth review of the vulnerabilities and weaknesses of IT and OT systems, the Coast Guard considered an alternative that would require it on an annual basis. Through annual penetration testing, an organization would be better equipped to identify weaknesses within their systems and prepare for real cyber threats. However, the costs and resources needed for penetration testing can be significant. As such, annual testing might impose an undue burden on the affected organizations.

Based on Coast Guard estimates, penetration testing costs approximately $10,000 per test, plus an additional $100 per IP address at the organization to capture network complexity. By increasing the frequency of these tests, the costs to U.S.-flagged vessels, facilities, and OCS facilities would increase significantly. Under the preferred alternative, which requires

penetration testing every 5 years in conjunction with the submission and renewal of a Cybersecurity Plan, the Coast Guard estimates total costs of penetration testing to industry of $100,190,445 and annualized costs of $11,153,854 over a 10-year period of analysis, discounted at 2 percent (see the *Penetration Testing* section of the RA for more details on the calculations underlying this estimate). Requiring annual penetration testing would increase industry costs for penetration testing by just under 400 percent, to approximately $491,322,248 total and $54,697,200 annualized over a 10-year period of analysis, discounted at 2 percent. This alternative would result in a 31.4-percent increase in the total cost of this final rule, bringing the total cost to industry and the Government to approximately $1,636,726,735 total and $182,211,104, annualized, over a 10-year period of analysis, discounted at 2 percent. The Coast Guard believes these increased costs are prohibitive and ultimately decided to reject this alternative. See table 52 for the costs associated with annual penetration testing over a 10-year period of analysis.

Table 52: Estimated Penetration Testing Costs of the Alternative for U.S.-flagged Vessels, Facilities, and OCS Facilities (2022 Dollars, 10-year Discounted Costs, 2-percent Discount Rates)

Year	Facilities and OCS Facilities Cost	U.S.-flagged Vessel Cost	Total Cost	2 Percent
1	$10,887,200	$43,810,000	$54,697,200	$53,624,706
2	$10,887,200	$43,810,000	$54,697,200	$52,573,241
3	$10,887,200	$43,810,000	$54,697,200	$51,542,393
4	$10,887,200	$43,810,000	$54,697,200	$50,531,758
5	$10,887,200	$43,810,000	$54,697,200	$49,540,939
6	$10,887,200	$43,810,000	$54,697,200	$48,569,548
7	$10,887,200	$43,810,000	$54,697,200	$47,617,204
8	$10,887,200	$43,810,000	$54,697,200	$46,683,534
9	$10,887,200	$43,810,000	$54,697,200	$45,768,170
10	$10,887,200	$43,810,000	$54,697,200	$44,870,755
Total	**$108,872,000**	**$438,100,000**	**$546,972,000**	**$491,322,248**
Annualized				**$54,697,200**

Note: Totals may not sum due to independent rounding.

(3) Penetration Testing at the Discretion of an Owner or Operator

Given the cost of penetration testing, particularly for small businesses with limited resources, the Coast Guard considered an alternative that would make penetration an optional provision. This would allow those in the affected population to choose to prioritize different cybersecurity measures. The decision to undertake penetration testing could be made as a result of thorough risk assessments for each organization, considering its operational environments, risk profile, and pertinent threats.

Under this alternative, an owner or operator, or a CySO, on their behalf, could determine when a penetration test is warranted, if at all. Because the testing would be optional, we assume that fewer owners and operators would conduct penetration testing in a given year; however, we have no way of knowing how many this would be. If none of the affected owners or operators elected to conduct penetration testing, this can hypothetically reduce costs for owners and operators for penetration testing down to zero, meaning a cost reduction of $100,190,445 and an annualized cost reduction of $11,153,854 over a 10-year period of analysis, discounted at 2 percent when compared to the preferred alternative.

However, the value of penetration testing for most organizations cannot be overstated. When integrated into a comprehensive cybersecurity strategy, penetration testing can be very effective in identifying vulnerabilities. By fostering a proactive rather than reactive approach in cybersecurity, penetration testing enables organizations to stay ahead of potential threats and better understand how malicious actors can exploit weaknesses in IT and OT systems. This is particularly crucial given the quickly evolving landscape of cyber threats. In addition, because the costs of a potential cyber incident can be high, with potential downstream economic impacts, the Coast Guard must prioritize some level of oversight on provisions that can lessen the risk of a cyber incident. Therefore, we rejected this alternative, despite the potential cost savings. It should be noted, however, that according to § 101.665, owners and operators of U.S.-flagged vessels, facilities, and OCS facilities can seek a waiver or an equivalence determination, penetration testing included.

(4) Penetration Testing in Conjunction With Cybersecurity Plan Submission (Preferred Alternative)

In an effort to best balance the cost of annual penetration testing with the risk of leaving the MTS vulnerable to cyber incidents with even more costly impacts, the Coast Guard considered (and ultimately chose) requiring penetration tests every 5 years, aligned with the renewal of a Cybersecurity Plan. This is the preferred alternative because penetration testing would

supplement other cybersecurity measures in the regulations such as vulnerability scanning, annual Cybersecurity Assessments and audits, quarterly drills, and annual exercises, which may limit the necessity of annual penetration testing. However, making penetration testing an optional requirement for organizations can inadvertently leave them more exposed to cyber-attacks and limit the Coast Guard's understanding of the MTS' cybersecurity readiness. Under the preferred alternative, owners and operators are still free to conduct more frequent tests at their discretion if they would like to increase their awareness of vulnerabilities. Alternatively, they can apply for waivers or equivalence determinations if they feel like they cannot meet the requirements related to penetration testing or find them unnecessary. According to § 101.665, an owner or operator, after completing the required Cybersecurity Assessment, may seek a waiver or an equivalence determination for any requirements in subpart F consistent with parallel waiver and equivalence provisions in 33 CFR parts 104, 105, and 106. If an owner or operator must temporarily deviate from the requirements, they must notify the cognizant COTP for facilities or OCS facilities, or the MSC for U.S.-flagged vessels, and may request temporary permission to continue to operate.

B. Small Entities

Under the Regulatory Flexibility Act (RFA), 5 U.S.C. 601–612, we have considered the impact of this final rule on small entities. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The U.S. Small Business Administration (SBA) provides guidelines on the analytical process to assess the impact of a particular rulemaking on small entities.[159] With its proposed rule, the Coast Guard prepared and published an Initial Regulatory Flexibility Analysis (IRFA) because a threshold analysis indicated that the proposed rule may have a significant impact on a substantial number of small entities. After reviewing public comments, the Coast Guard's conclusion has not changed; it cannot certify the rule pursuant to the RFA. As a result, it is required to prepare a FRFA for publication with the final rule. A FRFA discussing the impact of this rule on small entities follows.

A FRFA addresses the following:

(1) A statement of the need for, and objectives of, the rule.

(2) A statement of the significant issues raised by public comments in response to the IRFA, a statement of the assessment of the agency of such issues, and a statement of any changes made in the proposed rule as a result of such comments.

(3) The response of the agency to any comments filed by the Chief Counsel for Advocacy of the Small Business Administration in response to the proposed rule, and a detailed statement of any change made to the proposed rule in the final rule as a result of the comments.

(4) A description of and an estimate of the number of small entities to which the rule will apply or an explanation of why no such estimate is available.

(5) A description of the projected reporting, recordkeeping, and other compliance requirements of the rule, including an estimate of the classes of small entities which will be subject to the requirement and the type of professional skills necessary for preparation of the report or record.

(6) A description of the steps the agency has taken to minimize the significant economic impact on small entities consistent with the stated objectives of applicable statutes, including a statement of the factual, policy, and legal reasons for selecting the alternative adopted in the final rule and why each of the other significant alternatives to the rule considered by the agency which affect the impact on small entities was rejected.

1. A statement of the need for, and objective of, the rule.

The maritime industry is undergoing a significant transformation that involves the increased use of cyber-connected systems. While these increasingly interconnected and networked systems improve commercial vessel and port facility operations, they also bring a new set of challenges affecting design, operations, safety, security, training, and the workforce.

Every day, malicious actors (including, but not limited to, individuals, groups, and adversary nations posing a threat) attempt unauthorized access to control system devices or networks using various communication channels. Cybersecurity threats require the maritime community to effectively manage constantly changing risks to create a safe cyber environment. Vulnerabilities in the operation of vital systems increase the risk of cyber-attacks. Unmitigated cyber-related risks to the maritime domain can compromise the critical infrastructure that people and companies depend on to fulfill their daily needs and that maintain the effective operation of the MTS.

A 2018 report by the CEA stated that ''[a] firm with weak cybersecurity imposes negative externalities on its customers, employees, and other firms, tied to it through partnerships and supply chain relations. In the presence of externalities, firms would rationally underinvest in cybersecurity relative to the socially optimal level. Therefore, it often falls to regulators to devise a series of penalties and incentives to increase the level of investment to the desired level.'' In the report, the CEA also emphasized the following:

''[c]ontinued cooperation between the public and private sectors is the key to effectively managing cybersecurity risks. . . . The government is likewise important in incentivizing cyber protection—for example, by disseminating new cybersecurity standards, sharing best practices, conducting basic research on cybersecurity, protecting critical infrastructures, preparing future employees for the cybersecurity workforce, and enforcing the rule of law in cyberspace.'' [160]

The objective of this final rule is to respond to the growing need for cybersecurity regulation in the MTS by establishing minimum performance-based cybersecurity requirements for U.S.-flagged vessels, facilities, and OCS facilities subject to MTSA. The requirements include account security measures, device security measures, data security measures, governance and training, risk management, supply chain management, resilience, network segmentation, reporting, and physical security.

2. A statement of the significant issues raised by public comments in response to the IRFA, a statement of the assessment of the agency of such issues, and a statement of any changes made in the proposed rule as a result of such comments.

The Coast Guard did not receive any public comments specifically addressing the IRFA. However, it received several comments addressing costs experienced by regulated owners and operators of facilities and vessels, which affect estimates of per-entity costs, including the following:

[159] U.S. Small Business Administration (SBA). 2017. *A Guide for Government Agencies: How to Comply with the Regulatory Flexibility Act. https://advocacy.sba.gov/wp-content/uploads/2019/07/How-to-Comply-with-the-RFA-WEB.pdf*, accessed November 1, 2024.

[160] Economic Report of the President *supra* note 2 at 324–25.

• *Commenters stated that the cost estimates for penetration testing in the NPRM were underestimated.* In response to these comments, the Coast Guard adjusted its penetration testing cost estimates based on information provided by Coast Guard SMEs. The Coast Guard doubled the estimate of the initial penetration testing cost from $5,000 in the NPRM to $10,000 for the final rule, the cost per IP address from $50 in the NPRM to $100 for the final rule. In addition, the number of IP addresses per organization, which is now based on the number of employees in an organization, multiplied by 2.

• *Commenters raised concerns about the feasibility of combining cybersecurity and physical security drills and exercises and stated that we underestimated costs.* In its cost analysis, the Coast Guard now assumes that that no owners or operators will combine their cybersecurity drills with existing drills, and that all employees at the organization will participate in the new drills. Based on new information from Coast Guard SMEs in CG–FAC and LANTAREA, Coast Guard adjusted its cost estimates to reflect 8 hours for drill development and 4 hours for drill participation for vessel shoreside employees and the same share of facility and OCS facility employees. Based on this information, Coast Guard also adjusted its cost estimate for cybersecurity exercise development from 8 hours to 20 hours. To reduce the burden associated with the higher estimated cost of drills and exercises, the Coast Guard has reduced the frequency of required drills from quarterly to at least two drills every 12 months.

• Commenters noted a lack of reference to Alternative Security Programs (ASPs), and one commenter recommended that the Coast Guard amend § 101.630(a) to add ASPs to the requirement for CySOs. Some commenters specifically asked about using an ASP from the PVA, a trade association that represents several small entities. The Coast Guard will allow owners and operators to use ASPs to comply with this final rule. We added additional text to § 101.660 to clarify that ASP provisions apply to cybersecurity compliance documentation, giving small entities greater flexibility in how they can comply with the final rule. Given the unique nature of cybersecurity threats, vulnerabilities, and mitigation strategies, owners and operators must ensure that use of ASPs—including PVA's ASP, or ASPs developed on behalf of other small entities—contains those items specific to each U.S.-flagged vessel, facility, and OCS facility. The Coast Guard will evaluate each ASP's cybersecurity component to ensure full regulatory compliance with each applicable requirement.

• *Comments suggested that the affected population counts for U.S.-flagged vessels regulated under subchapters H and K used in the NPRM were inaccurate and provided updated numbers.* The Coast Guard updated its approach to counting the vessels that will be required to comply with this final rule. After including the public vessels, the Coast Guard finds that the population counts for U.S.-flagged vessels under subchapters K and H are approximately 430 and 131, respectively.

One commenter also stated that the regulation would create substantial costs for small entities in the commercial shipping sector. The Coast Guard has made waivers and equivalencies in § 101.665 available to affected owners and operators. These waivers offer additional flexibility to small entities, regardless of sector, that are not able to meet the full requirements. To further reduce the burden for impacted entities, the Coast Guard has opted for a delayed effective date of 180 days after the rule's publication in the **Federal Register**, extended the compliance deadline for the required Cybersecurity Assessment from 12 months to 24 months after the rule's effective date, and extended the compliance deadline for the Cybersecurity Plan from after the second annual audit of the existing physical security plan to 24 months after the rule's effective date. The Coast Guard is also requesting comment on a potential 2–5-year delay of the implementation periods for U.S.-flagged vessels and any potential costs or benefits the delay may have on small entities. However, beyond these changes to the implementation period and the reduction in cybersecurity drill frequency, the requirements of this final rule remain unchanged.

3. The response of the agency to any comments filed by the Chief Counsel for Advocacy of the Small Business Administration in response to the proposed rule, and a detailed statement of any change made to the proposed rule in the final rule as a result of the comments.

The Chief Counsel for Advocacy of the SBA did not provide comment on the NPRM or the IRFA.

4. A description of and estimate of the number of small entities to which the rule will apply or an explanation of why no such estimate is available.

This section considers the number of small entities likely to be affected by this final rule. First, we determined which owners of U.S.-flagged vessels, facilities, and OCS facilities in the affected population qualify as small businesses, small not-for-profit organizations, or small governments. Then, we compared reported annual revenues among the identified small entities with annual compliance costs estimated by the Coast Guard.

Number of Small Entities Affected

As a first step, we identified the universe of affected owners and operators of U.S.-flagged vessels, facilities, and OCS facilities using information contained in the Coast Guard's MISLE database.[161] The affected population includes a mix of businesses, not-for-profit organizations, and governments. Because we applied a different method to determine which governments are small governments, the first step was to distinguish Government entities from all other entities in the affected population. To accomplish this, we searched on several keywords to identify and separate the universe of Government entities.[162] From the full population of affected owners (for profit, not-for-profit, and governments), we selected a random sample of U.S.-flagged vessel owners and a separate random sample of facility and OCS facility owners.[163]

For the sample of affected facility and vessel owners that are businesses and not-for-profit organizations, we identified which are likely to be small entities by matching business- and organization-specific information for a random sample with size standards for small businesses published in the SBA's Table of Small Business Size Standards.[164] [165] The SBA defines small

[161] The Coast Guard provided MISLE data to IEc on August 13, 2024.

[162] These keywords included: city, town, borough, state, commonwealth, district, authority, administration, municipality, department, army, port, division, and government. We visually inspect the results of the keyword searches to ensure that the identified entities are governments.

[163] Following the Coast Guard's recommended approach for drawing a random sample, we obtain sample sizes by applying two equations ($S = [(Z-2) \times p \times q] \div (e-2)$, and $S = N \div [1+(N \times (e-2))]$ where S is the sample size, Z=1.96, e= 0.05, p=0.5, q=0.5, and N = the number of vessel or facility owners in MISLE), and selecting the higher value obtained. We then apply random numbers between 0 and 1 to the unique owners identified in MISLE and select S number of owners with the highest random values. We perform this process separately for vessel owners and facility owners.

[164] U.S. Small Business Association (SBA). ''Table of size standards.'' Available at: *https://www.sba.gov/document/support-Table-size-standards* accessed November 14, 2024. Effective March 17, 2023.

businesses in terms of firm revenues or number of employees. Size thresholds of small businesses differ depending on the industry sector, defined in terms of NAICS codes; therefore, the analysis also requires us to identify the relevant NAICS codes for the affected owners of facilities and vessels. This analysis relied on the following steps:

(1) Upload the names and location information of the sampled entities to D&B Hoovers' website and rely on D&B Hoovers' proprietary algorithm to match entities with the information stored in its database; [166]

(2) Collect the primary NAICS code, ownership type,[167] number of employees,[168] and annual revenue information from entities that matched the information in D&B Hoovers' database;

(3) Determine which owners are small businesses and small not-for-profit organizations based on the SBA's definitions of small businesses matched to each NAICS code; [169] [170]

(4) Calculate the proportion of sampled businesses and not-for-profit organizations that are small entities; and

(5) Estimate the number of small businesses or small not-for-profit organization in the population by multiplying the sample proportions by the number of unique affected businesses and organizations in MISLE.

For the sample of government or quasi-governmental organization owners, we applied a different method to determine which are small. Small governmental jurisdictions are defined as governments of cities, counties, towns, townships, villages, school districts, or special districts, with a population of less than 50,000 (5 U.S.C. 601). The 2020 U.S. Census informed our classification of Government jurisdictions.[171]

Facility and OCS Facility Owners

Coast Guard identified 1,372 affected facility owners in MISLE.[172] Of these, a keyword search identified that 94 are Government entities and the remaining 1,278 are businesses and not-for-profit organizations. We generated a random sample of 384 affected owners, which included 37 of the affected governments also identified using the same keywords.[173] The names and location information of the owners in the sample were uploaded to D&B Hoovers. For the 347 business and not-for-profit organizations included in the sample, the search function returned information for 184 (53 percent) with at least 1 identified NAICS code.[174] Included among the owners that matched with records in D&B Hoovers were 181 businesses and 3 not-for-profit organizations. The 181 businesses categorize into 83 NAICS codes and 1 independent code used for ''Unclassified Establishments.'' [175]

Table 53 reports the number of businesses in the top 10 most frequently occurring classification codes (NAICS and the code for Unclassified Establishments) in the sample, as well as the portion that meet the definition of small business. An additional row summarizes the businesses across the remaining 74 NAICS codes. As presented, 155 of 181 businesses (86 percent) qualify as small based on their revenue or number of employees. Additionally, all 3 not-for-profit organizations are small organizations (100 percent). Under the assumption that all 163 facility owners in the sample for which D&B Hoovers profiles are not available are small businesses or organizations, we estimate that 321 of the 347 sampled facility owners are small entities (93 percent). Table 53 also presents findings for the governments. This analysis identifies that 11 of the 37 sampled government owners are small governments (30 percent).

Applying the percentage of affected small businesses and not-for-profit organizations identified in the sample (93 percent) to the total number of businesses and organizations identified in MISLE (1,278), we estimate that approximately 1,189 small businesses and small not-for-profit organizations may be directly affected by this final rule. Multiplying the percentage of affected small governments in the sample (30 percent) by the total number of governments identified with a keyword search of MISLE data (94), we estimate that approximately 28 small governments may be affected by this final rule. In total, 1,217 small entities that own facilities and OCS facilities may be affected by this final rule.

BILLING CODE 9110–04–P

[165] To determine whether not-for-profit organizations are small entities, we rely on the self-identified NAICS code reported by each organization to D&B Hoovers and the SBA's small business size standard for that NAICS code. Any organization qualifying as a small business pursuant to SBA's threshold is considered to be ''not dominant in its field'' (15 U.S.C. 632) and is categorized as a small organization. If no NAICS code is available, we assume the organization is small.

[166] This process relies on D&B Hoovers' automated search functions to identify the business profiles associated with a list of businesses, not manual business-by-business searching. This search functionality is described in more detail in D&B Hoovers User Guide (2019, p. 25). You can find this resource at *https://app.dnbhoovers.com/product/wp-content/uploads/2020/10/DB-Hoovers-User-Guide-920.pdf.* The matched data were downloaded from D&B Hoovers on September 2, 2024, accessed via: *https://app.dnbhoovers.com/login.*

[167] D&B Hoovers provides ownership type for the matched entities. For all entities not identified as governments using the keywords presented in footnote 160, this analysis considers all entities marked as ''private,'' ''public,'' or ''partnership'' as businesses. ''Nonprofit'' ownership status is used to identify not-for-profit organizations.

[168] D&B Hoovers contains data fields for both ''employees at single site'' and ''employees at all sites.'' When both numbers are provided, we default to using the ''employees at all sites'' entry to capture the size of the larger parent company. When only the ''employees at single site'' information is available, we use that entry instead.

[169] In some cases, SBA provides a size standard for the NAICS code as well as an ''exeption'' for a sub-set of businesses with specific activity types. This analysis does not consider the ''exeptions'' when classifying businesses and not-for-profit organizations as small.

[170] Revenue data contained in D&B Hoovers is presumed to be reported in 2023 dollars, aligned with the year preceding our download. This dollar year directly matches the year SBA last published its definitions of small businesses therefore we make no adjustments to the information from D&B Hoovers when comparing with SBA's reported thresholds.

[171] 2020 U.S. Census data accessed from: *https://www.census.gov/quickfacts/,* accessed October 21, 2024.

[172] Owners of facilities and OCS facilities are determined using various data fields in MISLE. Owner information is not reported in a standard format. Therefore, considerable data cleaning was necessary to identify unique owner names and location information. This analysis assumes that the sample of facilities with owner information identified is broadly representative of all regulated facility owners.

[173] The sample size of 384 is generated using the procedure described in footnote 161. Because OCS owners represent 1 percent of all facility owners in MISLE, we randomly selected 3 (1 percent of 384) OCS owners and 381 (99 percent of 384) facility owners from the unique owners identified in MISLE.

[174] Information for the identified governments were included in the D&B Hoovers search, but the D&B Hoovers output for these entities is not used in the analysis. Instead, government population data were manually obtained from the U.S. census.

[175] D&B Hoovers uses code 999990 for ''Unclassified Establishments.'' Because SBA does not provide a size standard for this code, we assume all entities with code 999990 are small. For the matched facilities owners, 5 entities are classified with this code in D&B Hoovers.

Table 53: Number and Portion of Small Entities in Random Sample Affected by the Final Rule's Requirements for Facilities and OCS Facilities

NAICS Code	Type of Industry	Size Standard Type	Size Standard (2023 Dollars)	Total Sampled Owners	Number of Sampled Owners Classified as Small	Percent Small
424720	Petroleum and Petroleum Products Merchant Wholesalers (except Bulk Stations and Terminals)	Number of employees	200	14	12	86%
488320	Marine Cargo Handling	Revenue	$47 million	9	9	100%
213112	Support Activities for Oil and Gas Operations	Revenue	$47 million	7	4	57%
336611	Ship Building and Repairing	Number of employees	1,300	7	7	100%
493190	Other Warehousing and Storage	Revenue	$36.5 million	6	5	83%
324110	Petroleum Refineries	Number of employees	1,500	6	6	100%
325211	Plastics Material and Resin Manufacturing	Number of employees	1,250	6	4	67%
483211	Inland Water Freight Transportation	Number of employees	1,050	5	5	100%
999990	Unclassified Establishments	Not available	Not available	5	5	100%
221118	Other Electric Power Generation	Number of employees	650	5	2	40%

Unmatched Business and Organizations				**163**	**163**	**100%**

All Sampled Business and Not-for-Profit Organizations					**347**	**321**	**93%**
All Sampled Governments	**Public Sector**	**Population**	**50,000**		**37**	**11**	**30%**

Notes:

- The first 10 rows include the most frequently occurring classification codes among businesses in the sample of owners that matched in D&B Hoovers.
- NAICS codes and type of industry reflect the 2022 NAICS classification.
- Small businesses and small not-for-profit organizations were identified using the SBA's Table of Small Business Size Standards (March 17, 2023, version).
- The owners considered in this analysis were established from the Coast Guard's MISLE database and classified as small entities based on information obtained from D&B Hoovers and the 2020 U.S. Census.
- See the main text for further analytic details and assumptions.
- Code 999990 is used by D&B Hoovers to identify "Unclassified Establishments." All entities identified by code 999990 are assumed to be small.

BILLING CODE 9110–04–C

Vessel Owners

Across the categories of U.S.-flagged vessels regulated by the Coast Guard and considered for this rule, MISLE identifies over 10,000 vessels owned by 2,075 unique entities, including 72 government owners and 2,003 business and not-for-profit organization owners. We generated a random sample of 385 affected owners, which included 14 affected governments.[176] The names and location information in the sample were uploaded to D&B Hoovers. For the 371 business and not-for-profit organizations in the sample, the search function returned information for 249 owners (67 percent) with at least 1 identified NAICS code. Included among the owners that matched with records in D&B Hoovers were 244 businesses and 5 not-for-profit organizations. The 244 businesses categorize into 74 NAICS codes and 1 independent code used for ''Unclassified Establishments.[177]

Table 54 reports the number of businesses in the top 10 most frequently occurring classification codes (NAICS and the code for Unclassified Establishments) in the sample, as well as the portion that meet the definition of small business. An additional row summarizes the businesses across the remaining 65 NAICS codes. As presented, 228 of 244 businesses (93 percent) qualify as small based on their revenue or number of employees. Additionally, the 5 not-for-profit organizations include 4 small organizations (80 percent). Under the assumption that all 122 U.S.-flagged vessel owners in the sample for which D&B Hoovers profiles are not available are small entities, we estimate that 354 of the 371 sampled U.S.-flagged vessel owners (95 percent) are small businesses or small not-for-profit organizations. Table 54 additionally reports that our sample of 14 governments includes 2 small governments (14 percent).

Applying the percentage of affected small businesses and not-for-profit organizations identified in the sample (95 percent) to the total number of businesses and organizations identified in MISLE (2,003), we estimate that approximately 1,903 small businesses and small not-for-profit organizations may be directly affected by this final rule. Multiplying the percentage of affected small governments in the sample (14 percent) by the total number of governments identified with a keyword search of MISLE data (72), we estimate that approximately 10 small governments may be affected by this final rule. In total, 1,913 small U.S. entities that own U.S.-flagged vessels may be affected by this final rule.

BILLING CODE 9110–04–P

[176] The sample size of 385 is obtained by applying the procedure described in footnote 161 and including the one MODU owner identified in MISLE. To ensure that vessel owners of all affected types are represented in the sample, we sampled based on the distribution of owners by vessel type in MISLE: 211 Towing (55 percent of 384), 76 Barge (20 percent), 30 [U.S.-flagged passenger vessels subject to subchapter K] Pax K (8 percent), 25 OSV (7 percent), 21 Sub I (5 percent), 8 Tank (2 percent), 7 Pax H (2 percent), and 6 Pax International Travel (2 percent). Percentages do not sum to 100 due to rounding.

[177] D&B Hoovers uses code 999990 for ''Unclassified Establishments.'' Because SBA does not provide a size standard for this code, we assume all entities with code 999990 are small. For the matched vessel owners, 34 entities are classified with this code in D&B Hoovers.

Table 54: Number and Portion of Small Entities in Random Sample Affected by the Final Rule's Requirements for U.S.-flagged Vessels

NAICS Code	Type of Industry	Size Standard Type	Size Standard (2023 Dollars)	Total Sampled Owners	Number of Sampled Owners Classified as Small	Percent Small
999990	Unclassified Establishments	Not available	Not available	34	34	100%

BILLING CODE 9110–04–C

Summary

Across the combined 3,447 affected owners of U.S.-flagged vessels, facilities, or OCS facilities, we estimate that 3,130 small entities (91 percent) may be affected, including small businesses, small not-for-profit organizations, and small governments. Because this analysis assumes all owners for which NAICS codes, employment, or revenue information is unmatched in D&B Hoovers are small entities, the projected number of affected small entities may be overestimated.

Costs Relative to Revenues

This section compares the cost of the changes per U.S.-flagged vessel and facility owner with annual revenues of affected small entities. Revenue information is obtained from D&B Hoovers for small businesses and small not-for-profit organizations.[178] For small governments, we use revenue information contained in publicly available annual financial reports for the year 2022. We assume that the findings of this analysis are indicative of the impacts on entities for which revenue information is not readily available.

The RFA does not define a ''significant effect'' in quantitative terms. In its guidance to agencies on how to comply with the RFA, SBA states, ''[i]n the absence of statutory specificity, what is 'significant' will vary depending on the economics of the industry or sector to be regulated. The agency is in the best position to gauge the small entity impacts of its regulation.'' SBA also provides a list of options that can be used to determine whether an impact could be significant on a small entity, ''the impact could be significant if the cost of the proposed regulation (a) eliminates more than 10 percent of the businesses' profits; (b) exceeds 1 percent of the gross revenues of the entities in a particular sector or (c) exceeds 5 percent of the labor costs of the entities in the sector.'' [179] Therefore, this analysis considers the 1-percent threshold when analyzing these potential impacts.

Facility and OCS Facility Owners

Assuming that an operator would need to implement each of the provisions required by this final rule, the Coast Guard estimates that the highest single-year costs are incurred in Year 2 of the analysis period. We estimate that the Year 2 cost is $73,320 for an owner or operator with one facility. Each additional facility owned or operated would increase the estimated annual costs by the cost of an additional Cybersecurity Plan, since each facility will require an individual Cybersecurity Plan.[180] Table 55 provides a breakdown of the costs per owner or operator of one facility. The text that follows provides more detail on these cost calculations.

BILLING CODE 9110–04–P

[178] Revenue data from D&B Hoovers is presumed to be reported in 2023 dollars, the fiscal year preceding the year of download. We deflate these data to 2022 dollars to make the cost estimates using Gross Domestic Product reports from the Bureau of Economic Analysis, available at: *https://apps.bea.gov/iTable/?ReqID=19&step=4&isuri=1&1921=flatfiles.* See Table 1.1.9 of Section 1, accessed July 1, 2024.

[179] U.S. Small Business Administration (SBA). 2017. A Guide for Government Agencies: How to Comply with the Regulatory Flexibility Act. Available at: *https://advocacy.sba.gov/2017/08/31/a-guide-for-government-agencies-how-to-comply-with-the-regulatory-flexibility-act/.* Pages 18–19, accessed October 21, 2024.

[180] For example, consider an entity that owns four facilities. The estimated cost to that entity in Year 2 is calculated as follows: = $73,320 + (3 × $8,414) = $98,562.

Table 55: Summary of Total Costs of the Final Rule per Owner or Operator of One Facility and OCS Facility (2022 Dollars, 10-year Undiscounted Costs)

Year	Facility Count	Cybersecurity Plan	Drills and Exercises	Account Security Measures	Multifactor Authentication	Cybersecurity Training	Penetration Testing	Vulnerability Management	Total
1	1	$4,207	$20,407	$576	$20,100	$4,633	$0	$3,390	$53,313
2	1	$8,414	$20,407	$576	$11,100	$4,633	$24,800	$3,390	$73,320
3	1	$4,207	$20,407	$576	$11,100	$4,633	$0	$3,390	$44,313
4	1	$4,207	$20,407	$576	$11,100	$4,633	$0	$3,390	$44,313
5	1	$4,207	$20,407	$576	$11,100	$4,633	$0	$3,390	$44,313
6	1	$4,207	$20,407	$576	$11,100	$4,633	$0	$3,390	$44,313
7	1	$1,893	$20,407	$576	$11,100	$4,633	$24,800	$3,390	$66,799
8	1	$4,207	$20,407	$576	$11,100	$4,633	$0	$3,390	$44,313
9	1	$4,207	$20,407	$576	$11,100	$4,633	$0	$3,390	$44,313
10	1	$4,207	$20,407	$576	$11,100	$4,633	$0	$3,390	$44,313
Total									**$503,623**

Note: Totals may not sum due to independent rounding.

BILLING CODE 9110–04–C

To estimate the cost of the Cybersecurity Plan development, resubmission, annual maintenance, and audits for an individual facility or OCS facility owner or operator, we utilize the following estimates: The hour-burden estimates are 100 hours for developing the Cybersecurity Plan (average hour burden), 10 hours for annual maintenance of the Cybersecurity Plan (which will include amendments), 15 hours to renew Cybersecurity Plans every 5 years, and 40 hours to conduct annual audits of Cybersecurity Plans.

Based on estimates from the Coast Guard's FSP and OCS FSP reviewers at local inspections offices, approximately

10 percent of Plans will need to be revised and resubmitted in the second year, which is consistent with the current resubmission rate for FSPs and OCS FSPs. For renewals of plans after 5 years (occurring in the seventh year of the analysis period), Plans will need to be further revised and resubmitted in approximately 10 percent of cases as well. However, in this portion of the analysis, we estimate costs as though the owner or operator will need to revise and resubmit their Plans in all cases, resulting in an upper-bound (high) estimate of per-entity costs. We estimate the time for revision and resubmission to be about half the time to develop the plan itself, or 50 hours in the second year of submission, and 7.5 hours after 5 years (in the seventh year of the analysis period). Because we include the annual Cybersecurity Assessment in the development cost of plans, and we do not assume that owners and operators will wait until the second year of analysis to begin developing the Cybersecurity Plan or implementing related cybersecurity measures, we divide the estimated 100 hours to develop plans equally across the first and second years of analysis.

Using the CySO loaded hourly wage of $84.14, we estimate the Cybersecurity Plan related costs by adding the total number of hours to develop, resubmit, maintain, and audit each year and multiplying by the CySO wage. For example, we estimate that owners will incur $8,414 in costs in Year 2 of the analysis period [1 facility × $84.14 CySO wage × (50 hours to develop the Plan + 50 hours to revise and resubmit the Plan) = $8,414]. Table 56 displays the per-entity cost estimates for an owner or operator of one facility over a 10-year period of analysis. For an owner or operator with multiple facilities, we estimate the total costs by multiplying the estimates in table 56 by the number of owned facilities.

Table 56: Cybersecurity Plan-Related Costs per Owner or Operator of a Facility and OCS Facility (2022 Dollars, 10-year Undiscounted Costs)

Year	Facility Count	CySO Wage	Hours to Develop Plan	Hours to Resubmit Plan	Annual Maintenance Hours	Audit Hours	Total
1	1	$84.14	50	0	0	0	$4,207
2	1	$84.14	50	50	0	0	$8,414
3	1	$84.14	0	0	10	40	$4,207
4	1	$84.14	0	0	10	40	$4,207
5	1	$84.14	0	0	10	40	$4,207
6	1	$84.14	0	0	10	40	$4,207
7	1	$84.14	15	7.5	0	0	$1,893

Total							**$43,963**
Note: Totals may not sum due to independent rounding.							

For drills and exercises, we assume that a CySO on behalf of each owner and operator will develop cybersecurity drills and cybersecurity components to add to existing exercises. This development is expected to take 8 hours for each of the 2 annual drills and 20 hours for an annual exercise. We also include costs for drill and exercise participation for facility or OCS facility employees. Because the Coast Guard is unable to determine which employees at a given facility or OCS facility will be in assigned cybersecurity duties and required to participate in the drills, we assume that 33 percent of all employees will participate. This share of employees is consistent with the estimated share of shoreside employees in the affected population of owners and operators of U.S.-flagged vessels. Coast Guard SMEs believe this is a more reasonable estimate than assuming the entire portion of employees will participate. We obtain the average number of facility employees from a Coast Guard contract that uses D&B Hoovers' database for company employee data. The average number of employees at a facility company is 74. We estimate that the average number of employees that will participate in cybersecurity drills is 24 (74 employees × 0.33). We assume that employees will take 4 hours to participate in each drill and 4 hours to participate in each exercise.

Using the loaded hourly wage for a CySO of $84.14 and the loaded hourly wage for a facility employee of $60.34, we estimate annual costs of approximately $20,407 per facility owner or operator [($84.14 CySO wage × 8 hours × 2 drills) + ($84.14 CySO wage × 20 hours × 1 exercise) + (24 employees × $60.34 facility employee wage × 4 hours × 2 drills) + (24 employees × $60.34 facility employee wage × 4 hours × 1 exercise) = $20,407] as seen in table 55.

For account security measures, we assume that a database administrator on behalf of each owner or operator will spend 8 hours each year implementing and managing account security. Using the loaded hourly wage for a database administrator of $71.96, we estimate annual costs of approximately $576 ($71.96 database administrator wage × 8 hours = $576), as seen in table 55.

For multifactor authentication, we assume that a facility owner or operator will spend $9,000 in the initial year on

average to implement a multifactor authentication system and spend approximately $150 per employee annually for system maintenance and support. Therefore, we estimate first year costs of approximately $20,100 [$9,000 implementation cost + ($150 support and maintenance costs × 74 average facility company employees)], and subsequent year costs of $11,100 ($150 support and maintenance costs × 74 average facility company employees), as seen in table 55.

For cybersecurity training, we assume that a CySO will take 2 hours each year to develop and manage employee cybersecurity training, and facility employees will take 1 hour to complete the training each year. Using the estimated CySO wage of $84.14 and the estimated facility employee wage of $60.34, we estimate annual training costs of approximately $4,633 [($84.14 × 2 hours) + ($60.34 × 74 facility company employees × 1 hour)], as seen in table 55.

For penetration testing, we estimate costs only in the second and seventh years of analysis since tests are required to be performed in conjunction with Cybersecurity Plan submission and renewal. We assume that facility owners and operators will spend approximately $10,000 per penetration test and an additional $100 per IP address at the organization in order to capture network complexity. We use the total number of company employees multiplied by 2 as a proxy for the number of IP addresses. This is based on suggestions from public commenters stating that networks often include employees with multiple devices, outside industrial personnel accessing the networks, and OT systems that increase the number of IP addresses and the network complexity at a given company. As a result, we estimate second- and seventh-year costs of approximately $24,800 [$10,000 testing cost + ($100 × 148 IP addresses)], as seen in table 55.

Finally, for vulnerability management, we assume that each facility or OCS facility will need to secure a vulnerability scanning program or software. Because vulnerability scans can occur in the background, we do not assume an additional hour burden associated with the implementation or use of a vulnerability scanner each year. Using the annual subscription cost of an industry leading vulnerability scanning software, we estimate annual costs of approximately $3,390, as seen in table 55.

As demonstrated in table 55, affected entities are expected to incur the highest costs in Year 2 of this final rule. This analysis estimates the cost of the rule in Year 2 per affected small entity, using the information presented in table 55 and adjusting for the number of facilities and OCS facilities owned by the entity as recorded in MISLE. Among the 332 presumed small entities in the sample (including those for which a D&B Hoovers profile was not matched, see table 53), 180 owners (54 percent) are associated with one facility ($73,320 cost in Year 2). The average small entity owns approximately 3 facilities, and the average cost across small entities is $90,148 in Year 2. The small entity in the sample with the highest projected cost owns 31 facilities ($325,740 cost in Year 2).

Table 57 compares the entity-specific Year 2 costs with the annual revenues of 131 small entities in our sample of affected facilities for which revenue information is provided in D&B Hoovers or obtained from 2022 annual financial reports (39 percent of the 332 small entities in our sample).[181] As shown, approximately 56 percent of small entities may incur costs that meet or exceed 1 percent of annual revenue in the second year of this final rule [(17 + 56) ÷ 131 = 56 percent]. The sampled small entity with the highest ratio of cost to revenue is projected to incur costs of 138 percent of its reported annual revenue, although it is possible that revenue data is underreported.

Table 17: Revenue Impact of the Final Rule on Sampled Small Entities Owning Facilities and OCS Facilities

% Revenue Impact	Greatest Annual Cost (Year 2)	
	Sampled Small Facility Owners with Known Revenue	Percentage of Sampled Small Facility Owners with Known Revenue
<1%	58	44%
1-3%	17	13%
>3%	56	43%
Total	**131**	**100%**

U.S.-Flagged Vessel Owners

The costs to owners and operators of U.S.-flagged vessels differ from the costs to owners and operators of facilities and OCS facilities and are more heavily influenced by the number of vessels owned. Table 58 presents the average annual costs per entity, regardless of the number of vessels owned and vessel type, in the first 10 years of rule implementation. The annual cost per entity ranges from $11,202 to $23,894. The data and assumptions underlying these estimates are provided later in this section.

BILLING CODE 9110–04–P

[181] Entity-specific Year 2 costs account for the number of facilities owned by the entity in question.

Table 58: Summary of Costs of this Final Rule per Owner or Operator of U.S.-flagged Vessels (2022 Dollars, 10-year Undiscounted Costs)

Year	Cybersecurity Plan	Drills and Exercises	Account Security Measures	Multifactor Authentication	Cybersecurity Training	Penetration Testing	Vulnerability Management	Total
1	$3,366	$3,029	$576	$9,000	$168	$0	$3,390	$19,529
2	$6,731	$3,029	$576	$0	$168	$10,000	$3,390	$23,894
3	$4,039	$3,029	$576	$0	$168	$0	$3,390	$11,202
4	$4,039	$3,029	$576	$0	$168	$0	$3,390	$11,202
5	$4,039	$3,029	$576	$0	$168	$0	$3,390	$11,202
6	$4,039	$3,029	$576	$0	$168	$0	$3,390	$11,202
7	$1,515	$3,029	$576	$0	$168	$10,000	$3,390	$18,678
8	$4,039	$3,029	$576	$0	$168	$0	$3,390	$11,202
9	$4,039	$3,029	$576	$0	$168	$0	$3,390	$11,202
10	$4,039	$3,029	$576	$0	$168	$0	$3,390	$11,202
Total								**$140,515**

Note: Totals may not sum due to independent rounding.

BILLING CODE 9110–04–C

Several other categories of costs are dependent on the type and number of vessels owned by each entity. These costs are calibrated to the average number of employees by U.S.-flagged vessel type, as well as a unique weighted hourly wage based on the personnel employed on the U.S.-flagged vessels.[182] Table 59 displays the average number of employees for each U.S.-

[182] The average per-vessel employee counts were taken from manning requirements in the certificates of inspection in MISLE. We averaged the mariner counts listed for each vessel within a subpopulation of vessels, then applied a 1.33 shoreside employee modifier to account for non-mariner employees. The calculation of wage rates across vessel types are described in ''Appendix A: Wages Across Vessel Types.''

flagged vessel type, including shoreside employees, and their unique weighted mean hourly wages. Table 60, which follows, displays the per-vessel costs associated with each type of U.S.-flagged vessel. To calculate the total cost per entity in the population of U.S.-flagged vessels, we add the annual per-vessel costs from table 60, multiplied by the number and types of U.S.-flagged vessels owned, to the per-entity costs presented in table 58.[183]

Table 59: Summary of Employees and Wages by Vessel Type

U.S.-flagged Vessel Type	Number of Employees per Vessel (Includes Shoreside)	Weighted Mean Hourly Wage
MODU	372	$39.60
Subchapter I Vessels	82	$46.36
OSVs	16	$54.92
Subchapter H Passenger Vessels	85	$41.85
Subchapter K Passenger Vessels	35	$45.52
Subchapter M Towing Vessels	13	$51.28
Subchapter D and Combination O&D Tank Vessels	40	$55.94
Subchapter D, O, or I Barges	0	$0.00
Subchapters K and T International Passenger Vessels	27	$44.59

Table 60: Summary of Annual Costs of the Final Rule per U.S.-flagged Vessels Based on Type of Vessel (2022 Dollars, Undiscounted Costs)

Vessel Type	Vessel Count	Multifactor Authentication	Cybersecurity Training	Penetration Testing (Years 2 and 7)	Drills and Exercises	Total
MODU	1	$55,800	$14,731	$74,400	$43,718	$188,649
Subchapter I Vessels	1	$12,300	$3,802	$16,400	$11,126	$43,628
OSVs	1	$2,400	$879	$3,200	$2,636	$9,115
Subchapter H Passenger Vessels	1	$12,750	$3,557	$17,000	$10,546	$43,853
Subchapter K Passenger Vessels	1	$5,250	$1,593	$7,000	$4,916	$18,759
Subchapter M Towing Vessels	1	$1,950	$667	$2,600	$1,846	$7,063
Subchapter D and Combination O&D Tank Vessels	1	$6,000	$2,238	$8,000	$6,713	$22,951
Subchapter D, O, or I Barges	1	$0	$0	$0	$0	$0
Subchapters K and T International Passenger Vessels	1	$4,050	$1,204	$5,400	$3,746	$14,400

[183] For example, consider an entity that owns two subchapter H passenger vessels. The estimated cost to that entity in Year 2 is calculated as follows: (2 × $43,853) + $23,894 = $111,600.

To estimate the cost for an owner or operator of a U.S.-flagged vessel to develop, resubmit, conduct annual maintenance, and audit the Cybersecurity Plan, we use estimates provided earlier in the analysis. The hour-burden estimates are 80 hours for developing the Cybersecurity Plan (average hour burden), 8 hours for annual maintenance of the Cybersecurity Plan (which will include amendments), 12 hours to renew Cybersecurity Plans every 5 years, and 40 hours to conduct annual audits of Cybersecurity Plans. Based on estimates from Coast Guard VSP reviewers at MSC, approximately 10 percent of Plans will need to be resubmitted in the second year due to revisions that will be needed to the Plans, which is consistent with the current resubmission rate for VSPs. For renewals of plans after 5 years (occurring in the seventh year of the analysis period), plans will need to be further revised and resubmitted in approximately 10 percent of cases as well. However, in this portion of the analysis, we estimate costs as though the owner or operator will need to revise and resubmit their Plans in all cases, resulting in an upper-bound (high) estimate of per-entity costs. We estimate the time for revision and resubmission to be about half the time to develop the Plan itself, or 40 hours in the second year of submission, and 6 hours after 5 years (in the seventh year of the analysis period). Because we include the annual cybersecurity assessment in the development cost of Plans, and we do not assume that owners and operators will wait until the second year of analysis to begin developing the Cybersecurity Plan or implementing related cybersecurity measures, we divide the estimated 80 hours to develop plans equally across the first and second years of analysis.

Using the CySO loaded hourly wage of $84.14, we estimate the Cybersecurity Plan related costs by adding the total number of hours to develop, resubmit, maintain, and audit each year and multiplying by the CySO wage. For example, we estimate that owners and operators will incur approximately $6,731 in costs in Year 2 of the analysis period [$84.14 CySO wage × (40 hours to develop the Plan + 40 hours to revise and resubmit the Plan) = $6,731]. See table 61.

Table 61: Cybersecurity Plan-Related Costs per Owner or Operator of a U.S.-flagged Vessel (2022 Dollars, 10-year Undiscounted Costs)

Year	CySO Wage	Hours to Develop Plan	Hours to Resubmit Plan	Annual Maintenance Hours	Audit Hours	Total
1	$84.14	40	0	0	0	$3,366
2	$84.14	40	40	0	0	$6,731
3	$84.14	0	0	8	40	$4,039
4	$84.14	0	0	8	40	$4,039
5	$84.14	0	0	8	40	$4,039
6	$84.14	0	0	8	40	$4,039
7	$84.14	12	6	0	0	$1,515
8	$84.14	0	0	8	40	$4,039
9	$84.14	0	0	8	40	$4,039
10	$84.14	0	0	8	40	$4,039
Total						**$39,885**
Note: Totals may not sum due to independent rounding.						

Similarly, we use earlier estimates for the calculation of per-entity costs for drills and exercises, account security measures, multifactor authentication, cybersecurity training, penetration testing, vulnerability management, and resilience.

For drills and exercises, we assume that a CySO on behalf of each owner and operator will develop new cybersecurity drills and cybersecurity components to add to existing physical security exercises. This development is expected to take 8 hours for each of the 2 annual drills and 20 hours for an annual exercise. We also include costs for both drill and exercise participation for all U.S.-flagged vessel employees. We assume that employees will take 4 hours to participate in each drill and 4 hours to participate in each exercise.

Note that the per-employee costs associated with drills and exercises vary depending on the types and number of U.S.-flagged vessels. To determine the number of employees for each U.S.-flagged vessel company, we use data from the certificate of inspection manning requirements in MISLE for each vessel subpopulation. We assume 2 crews and multiply the total number of seafaring crew by 1.33 to account for shoreside staff to obtain an estimate of total company employees per vessel. We then subtract the total number of seafaring crew from the number of total company employees to arrive at the share of employees participating in the cybersecurity drills.[184] As an example, using the estimated CySO wage of $84.14 and the estimated OSV employee wage of $54.92, we estimate annual drills and exercises costs of

[184] For example, the average OSV in the affected population carries 12 seafaring crew per vessel, according to certificate of inspection manning requirements. We multiply this by 1.33 to arrive at 16 total employees per OSV. We then subtract the 12 seafaring crew from the 16 total employees to isolate the 4 shoreside employees per vessel that would need to participate in the cybersecurity drills.

approximately $5,665 [($84.14 × 8 hours × 2 drills) + ($84.14 × 20 hours × 1 exercise) + ($54.92 × 4 average employees per OSV × 4 hours × 2 drills) + ($54.92 × 4 average employees per OSV × 4 hours × 1 exercise)]. Development per-entity costs of $3,029 can be found in table 58, and variable per-vessel costs can be found in table 60.

For account security measures, we assume that a database administrator on behalf of each owner or operator will spend 8 hours each year implementing and managing account security. Using the loaded hourly wage for a database administrator of $71.96, we estimate annual costs of approximately $576 ($71.96 database administrator wage × 8 hours = $576), as seen in table 58.

For multifactor authentication, we assume that a U.S.-flagged vessel owner or operator will spend $9,000 in the initial year on average to implement a multifactor authentication system and approximately $150 per employee annually for system maintenance and support. Therefore, we estimate first year implementation costs of approximately $9,000 for all owners and operators, with annual costs in Years 2 through 10 depending on the number of employees for each type of U.S.-flagged vessel. For example, we estimate the first-year costs to an owner or operator of one OSV to be approximately $11,400 [$9,000 implementation cost + ($150 support and maintenance costs × 16 average employees per OSV)], and subsequent year costs of $2,400 ($150 support and maintenance costs × 16 average employees per OSV). Per-entity implementation costs of $9,000 can be found in table 58, and variable per-vessel costs can be found in table 60.

For cybersecurity training, we assume that a CySO for each U.S.-flagged vessel owner or operator will take 2 hours each year to develop and manage employee cybersecurity training, and U.S.-flagged vessel employees will take 1 hour to complete the training each year. The per-employee costs associated with training vary depending on the types and number of U.S.-flagged vessels and will be based on the average number of employees per vessel and the associated weighted hourly wage. For example, using the estimated CySO wage of $84.14 and the estimated OSV employee wage of $54.92, we estimate annual training costs of approximately $1,047 [($84.14 × 2 hours) + ($54.92 × 16 average employees per OSV × 1 hour)]. Development per-entity costs of $168 can be found in table 58, and variable per-vessel costs can be found in table 60.

For penetration testing, we estimate costs only in the second and seventh years of analysis, since tests are required to be performed in conjunction with submitting and renewing the Cybersecurity Plan. We assume that U.S.-flagged vessel owners and operators will spend approximately $10,000 per penetration test and an additional $100 per IP address at the organization, to capture network complexity. We utilize the average number of employees per U.S.-flagged vessel multiplied by 2 as a proxy for the number of IP addresses. We do this based on suggestions from public commenters stating that networks often include employees with multiple devices, outside industrial personnel accessing the networks, and OT systems that increase the number of IP addresses and network complexity at a given company. As a result, we estimate second- and seventh-year costs as follows: [$10,000 testing cost + ($100 × average IP addresses per vessel)]. For example, we estimate second- and seventh-year cost of approximately $13,200 for an owner or operator of an OSV [$10,000 testing cost + ($100 × 32 average IP addresses per OSV)]. Initial per-entity costs of $10,000 can be found in table 58, and variable per-vessel costs can be found in table 60.

For vulnerability management, we assume that each U.S.-flagged vessel owner or operator will need to secure a vulnerability scanning program or software. Because vulnerability scans can occur in the background, we do not assume an additional hour burden associated with the implementation or use of a vulnerability scanner each year. Using the annual subscription cost of an industry leading vulnerability scanning software, we estimate annual costs of approximately $3,390, as seen in table 58. This analysis calculates U.S.-flagged vessel owner-specific annual compliance costs based on the type and number of vessels associated with each small entity in the sample. For the small entities that only own barges, there are no variable costs per vessel. We assume that they will incur only per-company costs related to the Cybersecurity Plan, as well as the development of and participation in drills and exercises. This means that the greatest per-owner costs occur in Year 2.

Our analysis identifies 67 small entities in the sample that fall into this category and presumes that this final rule will cost these entities $9,760 each in Year 2 ($6,731 Cybersecurity Plan related costs + $3,029 drills and exercises costs). For all other small entities that own U.S.-flagged vessels, the costs include a per-owner component as well as per-vessel costs that vary by vessel type. The highest total annual costs per owner also occur in Year 2. Among the 289 sampled small entities in this category, 164 owners (57 percent) are associated with one U.S.-flagged vessel (with an average cost of $38,229 in Year 2). The average small entity in the sample owns 3 U.S.-flagged vessels, and the average cost across all sampled small entities is $43,612 in Year 2. The small entity in the sample with the highest projected costs owns 8 U.S.-flagged vessels (with a cost of $299,214 in Year 2).

Table 62 compares the entity-specific costs in Year 2 with the greatest costs with the annual revenues of 222 small entities in our sample of affected U.S.-flagged vessel owners for which revenue information is provided in D&B Hoovers or through revenue information released by small governments (62 percent of 356 sampled small entities). As shown, 81 percent of small entities in the sample may incur costs that meet or exceed 1 percent of annual revenue in the second year of this final rule [(50 + 130) ÷ 222 = 81 percent]. After removing 1 significant outlier, the small entity in the sample with the highest ratio of cost to revenue is projected to incur costs of 131 percent of its reported annual revenue; although, it is possible that revenue data is underreported.

Table 62: Revenue Impact of the Final Rule on Small Entities Owning U.S.-flagged Vessels

% Revenue Impact	Greatest Annual Cost (Year 2)	
	Sampled Small Vessel Owners with Known Revenue	Percentage of Sampled Small Vessel Owners with Known Revenue
<1%	42	19%
1-3%	50	23%
>3%	130	59%
Total	**222**	**100%**

(*) Components may not add to total due to rounding.

Summary

The analysis above characterizes the revenue impacts on small entities by projecting costs for each affected owner specific to the number and type of U.S.-flagged vessels, as well as the number of facilities and OCS facilities owned, according to data from the Coast Guard. We estimate that 56 percent of small facility and OCS facility owners and 81 percent of small U.S.-flagged vessel owners may incur costs that meet or exceed 1 percent of their annual revenue.

There are two reasons that the estimated compliance costs and, therefore, the impacts on small entities, are likely to be overestimated. First, the cost estimation approach assumes that all owners will incur costs associated with all provisions required in the rule. However, it is highly likely that many affected owners already have invested in some of the cybersecurity measures, absent the rule. Data available to the Coast Guard demonstrate this is the case for many facility owners, although whether those facility owners are small entities is uncertain. Second, some affected owners are unlikely to have IT or remotely accessible OT systems to which this final rule will apply. Those owners will only incur the cost associated with requesting a waiver or equivalence, costs which are likely to be far less than the costs described in this section.

5. A description of the projected reporting, recordkeeping, and other compliance requirements of the rule, including an estimate of the classes of small entities which will be subject to the requirement and the type of professional skills necessary for preparation of the report or record.

This rule will call for a new collection of information under the Paperwork Reduction Act of 1995, 44 U.S.C. 3501–3520. As defined in 5 CFR 1320.3(c), ''collection of information'' comprises reporting, recordkeeping, monitoring, posting, labeling, and other similar actions. Section VIII.D., Collection of Information, in the preamble of this final rule, includes the title and description of the information collection, a description of those who must collect the information, and an estimate of the total annual burden. For a description of all other compliance requirements and their associated costs, please see the preceding analysis of the per-entity costs of the rule.

6. A description of the steps the agency has taken to minimize the significant economic impact of small entities consistent with the stated objectives of applicable statutes, including a statement of the factual, policy, and legal reasons for selecting the alternative adopted in the final rule and why each of the other significant alternatives to the rule considered by the agency which affect the impact on small entities was rejected.

The purpose of this rule is to safeguard the MTS against current and emerging threats associated with cybersecurity by adding minimum cybersecurity requirements to 33 CFR part 101. However, rather than making these requirements prescriptive, the Coast Guard has listed minimum performance-based cybersecurity requirements for the MTS. Like the existing requirements in 33 CFR parts 104, 105, and 106, the Coast Guard allows owners and operators the flexibility to determine the best way to implement and comply with these new requirements. This means that, while the Coast Guard may require the implementation of a multifactor authentication system, for example, it is up to the discretion of the impacted owner or operator to determine what shape or form that system may take, and how many resources should be expended to implement it. As a result, many of the cost estimates in this FRFA represent conservative (upper-bound) estimates, as we attempt to capture costs for a wide range of affected owners and operators. Further, the Coast Guard has made waivers and equivalencies available to affected owners and operators who feel they are unable to meet the requirements of this rule, offering additional flexibility to small entities that are not able to meet the full requirements.

In addition to these intentional flexibilities, the Coast Guard made changes in response to public comments on the NPRM that will lessen the economic impact on all affected entities, including small entities. First, we reduced the required frequency of cybersecurity drills from quarterly to twice annually, reducing the overall effort expended on drills. In addition, the Coast Guard extended the implementation period and compliance dates for the cybersecurity requirements in this final rule beyond the 12 to 18 months that we proposed in the NPRM. We revised § 101.650(e)(1) to specify that owners and operators will need to conduct the Cybersecurity Assessment within 24 months of the effective date of this final rule. The Cybersecurity Plan must also be submitted to the Coast Guard for review and approval within 24 months of the effective date of this final rule, rather than during the second annual audit following the effective date, as stated in the NPRM. We revised § 101.655 to reflect this change. By using the same implementation period for each group of regulated entities rather than basing this on the

organization's audit date, the relevant owners and operators will have the same amount of time in which to implement these requirements, and in many cases will have additional time to come into compliance when compared to the NPRM.

Beyond the adopted changes and intentional flexibilities developed into this final rule, the Coast Guard also considered an alternative that would make the penetration testing requirements of this rule optional for small entities. Given the nature of penetration testing, it can often come with a high cost, particularly for small entities with limited resources. Leaving the penetration testing requirements up to owner discretion could allow small entities in the affected population to prioritize different cybersecurity measures that may make more sense for their organization. The decision to undertake penetration testing could be made as a result of thorough risk assessments for each organization, considering its operational environments, risk profile, and pertinent threats. Under this alternative, an owner or operator, or a CySO on their behalf, could determine when a penetration test is warranted, if at all.

Because penetration testing would be optional, this could hypothetically reduce costs for owners and operators for penetration testing down to zero, meaning an estimated cost reduction of $24,800 in the second and seventh years of analysis for an owner or operator of 1 facility or OCS facility. It would also lead to estimated cost reductions in the second and seventh years of $84,400 ($10,000 + $74,400) for owners and operators of a single MODU, $26,400 ($10,000 + $16,400) for owners and operators of a single U.S.-flagged vessel under subchapter I, $13,200 ($10,000 + $3,200) for owners and operators of a single OSV, $27,000 ($10,000 + $17,000) for owners and operators of a single passenger vessel under subchapter H, $17,000 ($10,000 + $7,000) for owners and operators of a single passenger vessel under subchapter K, $12,600 ($10,000 + $2,600) for owners and operators of a single towing vessel under subchapter M, $18,000 ($10,000 + $8,000) for owners and operators of a single tank vessel under subchapter D and a combination of subchapters O&D, and $15,400 ($10,000 + $5,400) for owners and operators of a single international passenger vessel under subchapters K and T. The estimated cost reductions could be higher if ownership of multiple vessels is considered.

Despite the potential for minimizing economic impacts, however, the value of penetration testing for most organizations, including small entities, cannot be overstated. When integrated into a comprehensive cybersecurity strategy, penetration testing can be very effective in identifying vulnerabilities. By fostering a proactive rather than reactive approach in cybersecurity, penetration testing enables organizations to stay ahead of potential threats and better understand how malicious actors can exploit weaknesses in IT and OT systems. This is particularly crucial given the quickly evolving landscape of cyber threats. In addition, because the costs of a potential cyber incident are so high, the Coast Guard must prioritize some level of oversight on provisions that can lessen the risk of a cyber incident. Therefore, we rejected this alternative, despite the potential cost reductions.

It should be noted, however, that according to § 101.665, owners and operators of U.S.-flagged vessels, facilities, and OCS facilities can seek a waiver or an equivalence determination if they are unable to meet any requirements, penetration testing included.

C. Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996, Pub. L. 104–121, we want to assist small entities in understanding this rule so that they can better evaluate its effects on them and participate in the rulemaking. If the rule affects your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person in the **FOR FURTHER INFORMATION CONTACT** section of this rule. The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247).

D. Collection of Information

This rule calls for a new collection of information under the Paperwork Reduction Act of 1995, 44 U.S.C. 3501–3520. As defined in 5 CFR 1320.3(c), ''collection of information'' comprises reporting, recordkeeping, monitoring, posting, labeling, and other similar actions. The title and description of the information collection, a description of those who must collect the information, and an estimate of the total annual burden follow. The estimate covers the time for reviewing instructions, searching existing sources of data, gathering, and maintaining the data needed, and completing and reviewing the collection.

Title: Cybersecurity Plans.

OMB Control Number: 1625–new.

Summary of Collection of Information: This collection of information is new. The Coast Guard will collect information from the owners and operators of U.S.-flagged vessels, facilities, and OCS facilities under 33 CFR part 101, subpart F. The information collection will be for the submission of Cybersecurity Plans, amendments to Cybersecurity Plans in 33 CFR 101.630, and cyber incident reports in 33 CFR 101.650(g)(1).

Need for Information: The Coast Guard is creating new cybersecurity requirements for owners and operators of U.S.-flagged vessels, facilities, and OCS facilities to mitigate or prevent a cyber incident from occurring. The information we request from industry will be from (1) the development of Cybersecurity Plans, which will include details on implemented drills and exercise, training, and various cybersecurity measures in § 101.650 that might safeguard critical IT and OT systems from cyber incidents; (2) amendments to Cybersecurity Plans; and (3) reporting cyber incidents to the NRC.

Use of Information: The Coast Guard will use this information to determine if vessel and facility owners and operators have cybersecurity measures in place and to ensure that owners and operators are conducting periodic reviews of Cybersecurity Plans and testing their IT and OT systems for adequacy. Additionally, the Coast Guard will ensure vessel and facility owners and operators are reporting cyber incidents to the Coast Guard.

Description of the Respondents: The respondents are owners and operators of U.S.-flagged vessels, facilities, and OCS facilities.

Number of Respondents: The number of respondents will be about 2,075 U.S.-flagged vessel owners and operators and about 1,372 facility and OCS facility owners and operators. We assume that a CySO will be responsible for the reporting and recordkeeping requirements of the rule on behalf of each owner and operator.

Frequency of Response: The number of responses to this rule will vary annually.

Burden of Response: The burden of response will vary for each regulatory requirement.

Estimate of Total Annual Burden: The estimate of annual burden varies based on the year of analysis. For the initial year of analysis, the hour burden for Cybersecurity Plan activities and cyber incident reporting will be about 268,900 hours across the affected population. This is derived from the development of 3,718 facility and OCS facility Cybersecurity Plans for 50 hours each and 2,075 vessel Cybersecurity Plans for 40 hours each [(3,718 × 50) + (2,075 × 40)]. For more information on how these and other burden estimates were developed, see the Regulatory Planning and Review section of this final rule.

For the second year of analysis, the hour burden for Cybersecurity Plan activities and cyber incident reporting will be about 295,820 hours across the affected population. The second year of analysis represents the highest estimated hour burden for all years of analysis. This is derived from the development of 3,718 facility and OCS facility Cybersecurity Plans for 50 hours each, 372 facility and OCS facility Cybersecurity Plans being revised and resubmitted for an additional 50 hours, 2,075 vessel Cybersecurity Plans for 40 hours each, and 208 vessel Cybersecurity Plans being revised and resubmitted for an additional 40 hours [(3,718 × 50) + (372 × 50) + (2,075 × 40) + (208 × 40)].

For the third through the sixth years of analysis, and the eighth through the tenth years of analysis, when Cybersecurity Plans are being maintained and amendments are being developed, the hour burden for Cybersecurity Plan activities and cyber incident reporting will be about 53,780 hours across the affected population. This is derived from the maintenance and amendment of 3,718 facility and OCS facility Cybersecurity Plans for 10 hours each, and the maintenance and amendment of 2,075 vessel Cybersecurity Plans for 8 hours each [(3,718 × 10) + (2,075 × 8)].

For the seventh year of analysis, when Cybersecurity Plans are renewed, the hour burden for Cybersecurity Plan activities and cyber incident reporting will be about 84,708 hours across the affected population. This is derived from the renewal of 3,718 facility and OCS facility Cybersecurity Plans for 15 hours each, 372 facility and OCS facility Cybersecurity Plans being revised and resubmitted for an additional 7.5 hours, 2,075 vessel Cybersecurity Plans being renewed for 12 hours each, and 208 vessel Cybersecurity Plans being revised and resubmitted for an additional 6 hours [(3,718 × 15) + (372 × 7.5) + (2,075 × 12) + (208 × 6)].

This leads to an average annual hour burden total of 102,589 hours over the 10-year period of analysis.

As required by 44 U.S.C. 3507(d), we will submit a copy of this rule to OMB for its review of the collection of information.

You need not respond to a collection of information unless it displays a currently valid control number from OMB. OMB has not yet completed its review of this collection. Once OMB completes action on our ICR, we will publish a **Federal Register** notice describing OMB's action.

E. Federalism

A rule has implications for federalism under Executive Order 13132 (Federalism) if it has a substantial direct effect on States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of Government. We have analyzed this rule under Executive Order 13132 and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132. Our analysis follows.

It is well settled that States may not regulate in categories reserved for regulation by the Coast Guard and that all categories covered in 46 U.S.C. 3306, 3703, 7101, and 8101 (design, construction, alteration, repair, maintenance, operation, equipping, personnel qualification, and manning of vessels), as well as the reporting of casualties and any other category in which Congress intended the Coast Guard to be the sole source of a vessel's obligations, are within the field foreclosed from regulation by the States. *See United States* v. *Locke,* 529 U.S. 89 (2000). This final rule will expand maritime security requirements under MTSA to expressly address current and emerging cybersecurity risks and safeguard the MTS. In enacting MTSA, Congress articulated a need to address port security threats around the United States while preserving the free flow of interstate and foreign commerce. MTSA's mandatory, comprehensive maritime security regime, founded on this stated interest of facilitating interstate and international maritime commerce, indicates that States and local governments are generally foreclosed from regulating in this field. Particularly with respect to vessels subject to this new subpart F, the Coast Guard's above-noted comprehensive law and regulations will preclude State and local laws. OCS facilities, which do not generally fall under any State or local jurisdiction, are principally subject to Federal law and regulation.

Notwithstanding MTSA's general preemptive effect, States and local governments have traditionally shared certain regulatory jurisdiction with the Federal Government over waterfront facilities. Accordingly, current MTSA regulations make clear that the maritime facility security requirements of 33 CFR part 105 only preempt State or local regulation when the two conflict.[185] Similarly, the cybersecurity requirements of this final rule as they apply to a facility under 33 CFR part 105 will only have preemptive effect over a State or local law or regulation insofar as the two actually conflict (meaning compliance with both requirements is impossible or the State or local requirement frustrates an overriding Federal need for uniformity).

In light of the foregoing analysis, this rule is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

While it is well settled that States may not regulate in categories in which Congress intended the Coast Guard to be the sole source of a vessel's obligations or where compliance with both a State and Federal laws is impossible or when a state law stands as an obstacle to the full purpose and objective of Congress, the Coast Guard recognizes the key role that State and local governments may have in making regulatory determinations. Additionally, for rules with federalism implications and preemptive effect, Executive Order 13132 specifically directs agencies to consult with State and local governments during the rulemaking process. If you believe this rule will have implications for federalism under Executive Order 13132, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section of this preamble.

F. Unfunded Mandates

The Unfunded Mandates Reform Act of 1995, 2 U.S.C. 1531–1538, requires Federal agencies to assess the effects of their discretionary regulatory actions. The Unfunded Mandates Reform Act of 1995addresses actions that may result in the expenditure by a State, local, or Tribal Government, in the aggregate, or by the private sector of $100 million (adjusted for inflation) or more in any one year.

[185] 33 CFR 101.112(b).

After adjusting for inflation, this action will result in the expenditure of $176 million or more in any one year, in 2022 dollars. To obtain this inflated value, we use the 2022 and 1995 annual gross domestic product implicit price deflator values of 117.973 and 66.939, respectively. We divide these values to obtain a factor of approximately 1.76, rounded (117.973 ÷ 66.939 = 1.76).[186] Multiplying this factor by the expenditure amount identified in the Unfunded Mandates Reform Act of 1995 gives us our expenditure amount adjusted for inflation (1.76 × 100,000,000 = 176,000,000). Because this rule will result in the expenditure by the private sector of approximately $178,717,861 in undiscounted 2022 dollars in the most cost-heavy year, this action requires an assessment. The RA, prepared in conjunction with this final rule, satisfies the Unfunded Mandates Reform Act of 1995's requirements under 2 U.S.C. 1532. In addition to the estimated impacts, it should be noted that many of the provisions in this rule are intentionally designed to take owner or operator discretion into account, which can help reduce anticipated expenditures. While this rule may require action related to a security measure (implementing multifactor authentication, for example), the method or policy used to achieve compliance with the provision is at the discretion of the impacted owner or operator. This final rule also includes the option for waivers and equivalents, in § 101.665, for any requirements in subpart F. These intentional flexibilities can help reduce expected costs for those in the affected population and allow for more tailored cybersecurity solutions.

G. Taking of Private Property

This final rule will not cause a taking of private property or otherwise have taking implications under Executive Order 12630 (Governmental Actions and Interference with Constitutionally Protected Property Rights).

H. Civil Justice Reform

This final rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, (Civil Justice Reform), to minimize litigation, eliminate ambiguity, and reduce burden.

I. Protection of Children

We analyzed this final rule under Executive Order 13045 (Protection of Children from Environmental Health Risks and Safety Risks). This final rule will not create an environmental risk to health or risk to safety that might disproportionately affect children.

J. Indian Tribal Governments

This final rule does not have Tribal implications under Executive Order 13175 (Consultation and Coordination with Indian Tribal Governments), because it will not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

K. Energy Effects

We have analyzed this final rule under Executive Order 13211 (Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use). We have determined that it is not a ''significant energy action'' under that order because, although it is a ''significant regulatory action'' under Executive Order 12866, it is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

L. Technical Standards

The National Technology Transfer and Advancement Act, codified as a note to 15 U.S.C. 272, directs agencies to use voluntary consensus standards in their regulatory activities unless the agency provides Congress, through OMB, with an explanation of why using these standards will be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (for example, specifications of materials, performance, design, or operation; test methods; sampling procedures; and related management systems practices) that are developed or adopted by voluntary consensus standards bodies.

This final rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

M. Environment

We have analyzed this final rule under Department of Homeland Security Management Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** portion of this preamble.

This final rule is categorically excluded under paragraphs A3 and L54 of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. Paragraph A3 pertains to promulgation of rules, issuance of rulings or interpretations, and the development and publication of policies, orders, directives, notices, procedures, manuals, advisory circulars, and other guidance documents, notably those of a strictly administrative or procedural nature; and those that interpret or amend an existing regulation without changing its environmental effect. Paragraph L54 pertains to regulations that are editorial or procedural. This final rule involves establishing minimum cybersecurity requirements in Coast Guard regulations such as account security measures, device security measures, governance and training, risk management, supply chain management, resilience, network segmentation, reporting, and physical security. This final rule promotes the Coast Guard's maritime security mission by establishing measures to safeguard the MTS against emerging threats associated with cybersecurity. This final rule also promotes the Coast Guard's marine environmental protection mission by preventing or mitigating marine environmental damage that can ensue due to a cybersecurity incident.

N. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), the Office of Information and Regulatory Affairs has determined that this final rule meets the criteria in 5 U.S.C. 804(2).

List of Subjects

33 CFR Part 101

Harbors, Maritime security, Reporting and recordkeeping requirements, Security measures, Waterways.

33 CFR Part 160

Administrative practice and procedure, Harbors, Hazardous materials transportation, Marine safety,

[186] We use the implicit price deflator for gross domestic product values from the Bureau of Economic Analysis National Income and Product Accounts interactive data tables. See *https://apps.bea.gov/iTable/?reqid=19&step=3&isuri=1&1921=survey&1903=11#eyJhcHBpZCI6MTksInN0ZXBzIjpbMSwyLDMsM10sImRhdGEiOltbIk5JUEFfVGFibGVfTGlzdCIsIjEzIl0sWyJDYXRlZ29yaWVzIiwiU3VydmV5Il0sWyJGaXJzdF9ZZWFyIiwiMTk5NSJdLFsiTGFzdF9ZZWFyIiwiMjAyMyJdLFsiU2NhbGUiLCIwIl0sWyJTZXJpZXMiLCJBll1dfQ==,* accessed August 20, 2024.

Navigation (water), Personally identifiable information, Reporting and recordkeeping requirements, Seamen, Vessels, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR parts 101 and 160 as follows:

PART 101—MARITIME SECURITY: GENERAL

■ 1. The authority citation for part 101 is revised to read as follows:

Authority: 46 U.S.C. 70101–70104 and 70124; Executive Order 12656, 3 CFR, 1988 Comp., p. 585; 33 CFR 1.05–1, 6.04–11, 6.14, 6.16, and 6.19; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.4.

■ 2. Amend part 101 by adding subpart F, consisting of §§ 101.600 through 101.670, to read as follows:

Subpart F—Cybersecurity

Sec.

101.600 Purpose.
101.605 Applicability.
101.610 Federalism.
101.615 Definitions.
101.620 Owner or operator.
101.625 Cybersecurity Officer.
101.630 Cybersecurity Plan.
101.635 Drills and exercises.
101.640 Records and documentation.
101.645 Communications.
101.650 Cybersecurity measures.
101.655 Cybersecurity compliance dates.
101.660 Cybersecurity compliance documentation.
101.665 Noncompliance, waivers, and equivalents.
101.670 Severability.

§ 101.600 Purpose.

The purpose of this subpart is to set minimum cybersecurity requirements for U.S.-flagged vessels, facilities, and Outer Continental Shelf (OCS) facilities to safeguard and ensure the security and resilience of the Marine Transportation System (MTS).

§ 101.605 Applicability.

(a) This subpart applies to the owners and operators of U.S.-flagged vessels, facilities, and OCS facilities required to have a security plan under 33 CFR parts 104, 105, and 106.

(b) This subpart does not apply to any foreign-flagged vessels subject to 33 CFR part 104.

§ 101.610 Federalism.

Consistent with § 101.112(b), with respect to a facility regulated under 33 CFR part 105 to which this subpart applies, the regulations in this subpart have preemptive effect over a State or local law or regulation insofar as the State or local law or regulation applicable to the facility conflicts with these regulations, either by actually conflicting or by frustrating an overriding Federal need for uniformity.

§ 101.615 Definitions.

Unless otherwise specified, as used in this subpart:

Approved list means an owner or operator's authoritative catalog for products that meet cybersecurity requirements.

Backup means a copy of physical or virtual files or databases stored separately for preservation and recovery. It may also refer to the process of creating a copy.

Credentials means a set of data attributes that uniquely identifies a system entity such as a person, an organization, a service, or a device, and attests to one's right to access to a particular system.

Critical Information Technology (IT) or Operational Technology (OT) systems means any Information Technology (IT) or Operational Technology (OT) system used by the vessel, facility, or OCS facility that, if compromised or exploited, could result in a transportation security incident (TSI), as determined by the Cybersecurity Officer (CySO) in the Cybersecurity Plan. Critical IT or OT systems include those business support services that, if compromised or exploited, could result in a TSI. This term includes systems whose ownership, operation, maintenance, or control is delegated wholly or in part to any other party.

Cyber incident means an occurrence that actually jeopardizes, without lawful authority, the integrity, confidentiality, or availability of information or an information system, or actually jeopardizes, without lawful authority, an information system.

Cyber Incident Response Plan means a set of predetermined and documented procedures to respond to a cyber incident. It is a document that gives the owner or operator or a designated CySO instructions on how to respond to a cyber incident and pre-identifies key roles, responsibilities, and decision-makers.

Cyber threat means an action, not protected by the First Amendment to the Constitution of the United States, on or through an information system that may result in an unauthorized effort to adversely impact the security, availability, confidentiality, or integrity of an information system or information that is stored on, processed by, or transiting an information system. The term ''cyber threat'' does not include any action that solely involves a violation of a consumer term of service or a consumer licensing agreement.

Cybersecurity Assessment means the appraisal of the risks facing an entity, asset, system, or network, organizational operations, individuals, geographic area, other organizations, or society, and includes identification of relevant vulnerabilities and threats and determining the extent to which adverse circumstances or events could result in operational disruption and other harmful consequences.

Cybersecurity Officer, or CySO, means the person designated as responsible for the development, implementation, and maintenance of the cybersecurity portions of the Vessel Security Plan (VSP), Facility Security Plan (FSP), or Outer Continental Shelf (OCS) FSP, and for liaison with the Captain of the Port (COTP) and Company, Vessel, and Facility Security Officers. The owner or operator may designate an alternate CySO(s) to assist with the duties and responsibilities of the CySO, including during periods when the CySO is on leave, unavailable, or unable to perform their duties. Hereafter, ''CySO'' will refer to both the CySO and the alternate CySO(s), as applicable.

Cybersecurity Plan means a plan developed as a part of the VSP, FSP, or OCS FSP to ensure application and implementation of cybersecurity measures designed to protect the owners' or operators' systems and equipment, as required by this part. A Cybersecurity Plan is either included in a VSP, FSP, or OCS FSP; as an annex to a VSP, FSP, or OCS FSP; provided in a separate submission from the VSP, FSP, or OCS FSP; or addressed through an Alternative Security Program.

Cybersecurity risk means threats to and vulnerabilities of information or information systems and any related consequences caused by or resulting from unauthorized access, use, disclosure, degradation, disruption, modification, or destruction of such information or information systems, including such related consequences caused by an act of terrorism. It does not include any action that solely involves a violation of a consumer term of service or a consumer licensing agreement.

Cybersecurity vulnerability means any attribute of hardware, software, process, or procedure that could enable or facilitate the defeat of a security control.

Encryption means any procedure used in cryptography to convert plain text into cipher text to prevent anyone but the intended recipient from reading that data.

Executable code means any object code, machine code, or other code readable by a computer when loaded into its memory and used directly by such computer to execute instructions.

Exploitable channel means any information channel (such as a portable media device and other hardware) that allows for the violation of the security policy governing the information system and is usable or detectable by subjects external to the trusted user.

Firmware means computer programs (which are stored in and executed by computer hardware) and associated data (which is also stored in the hardware) that may be dynamically written or modified during execution.

Hardware means, collectively, the equipment that makes up physical parts of a computer, including its electronic circuitry, together with keyboards, readers, scanners, and printers.

Human-Machine Interface, or HMI, means the hardware or software through which an operator interacts with a controller for industrial systems. An HMI can range from a physical control panel with buttons and indicator lights to an industrial personal computer with a color graphics display running dedicated HMI software.

Information system means an interconnected set of information resources under the same direct management control that shares common functionality. A system normally includes hardware, software data, applications, communications, and people. It includes the application of IT, OT, or a combination of both.

Information Technology, or IT, means any equipment or interconnected system or subsystem of equipment, used in the acquisition, storage, analysis, evaluation, manipulation, management, movement, control, display, switching, interchange, transmission, or reception of data or information.

Known Exploited Vulnerability, or KEV, means a computer vulnerability that has been exploited in the past.

Log means a record of the events occurring within an organization's systems and networks.

Multifactor authentication means a layered approach to securing data and applications for a system that requires users to present more than one distinct authentication factor for successful authentication. Multifactor authentication can be performed using a multifactor authenticator or by a combination of authenticators that provide different factors. The three authentication factors are something you know, something you have, and something you are.

Network means information system(s) implemented with a collection of interconnected components. A network is a collection of computers, servers, mainframes, network devices, peripherals, or other devices connected to allow data sharing. A network consists of two or more computers that are linked in order to share resources, exchange files, or allow electronic communications.

Network map means a visual representation of internal network topologies and components.

Network segmentation means a physical or virtual architectural approach that divides a network into multiple segments, each acting as its own subnetwork, to provide additional security and control that can help prevent or minimize the impact of a cyber incident.

Operational Technology, or OT, means programmable systems or devices that interact with the physical environment (or manage devices that interact with the physical environment). These systems or devices detect or cause a change through the monitoring or control of devices, processes, and events.

Patching means updating software and operating systems to address cybersecurity vulnerabilities within a program or product.

Penetration test means a test of the security of a computer system or software application by attempting to compromise its security and the security of an underlying operating system and network component configurations.

Principle of least privilege means that an individual should be given only those privileges that are needed to complete a task. Further, the individual's function, not identity, should control the assignment of privileges.

Privileged user means a user who is authorized (and, therefore, trusted) to perform security functions that ordinary users are not authorized to perform.

Reportable cyber incident means an incident that leads to or, if still under investigation, could reasonably lead to any of the following: Substantial loss of confidentiality, integrity, or availability of a covered information system, network, or OT system; Disruption or significant adverse impact on the reporting entity's ability to engage in business operations or deliver goods or services, including those that have a potential for significant impact on public health or safety or may cause serious injury or death; Disclosure or unauthorized access directly or indirectly of nonpublic personal information of a significant number of individuals; Other potential operational disruption to critical infrastructure systems or assets; or Incidents that otherwise may lead to a transportation security incident as defined in 33 CFR 101.105.

Risk means a measure of the extent to which an entity is threatened by a potential circumstance or event, and typically is a function of: The adverse impact, or magnitude of harm, that would arise if the circumstance or event occurs; and the likelihood of occurrence.

Software means a set of instructions, data, or programs used to operate a computer and execute specific tasks.

Supply chain means a system of organizations, people, activities, information, and resources for creating computer products and offering IT services to their customers.

Threat means any circumstance or event with the potential to adversely impact organizational operations (including mission, functions, image, or reputation), organizational assets, individuals, other organizations, or the Nation through an information system through unauthorized access, destruction, disclosure, modification of information, or denial of service.

Vulnerability means a characteristic or specific weakness that renders an organization or asset (such as information or an information system) open to exploitation by a given threat or susceptible to a given hazard.

Vulnerability scan means a technique used to identify hosts or host attributes and associated vulnerabilities.

§ 101.620 Owner or operator.

(a) Each owner or operator of a U.S.-flagged vessel, facility, or OCS facility is responsible for compliance with the requirements of this subpart.

(b) For each U.S.-flagged vessel, facility, or OCS facility, the owner or operator must—

(1) Ensure a Cybersecurity Plan is developed, approved, and maintained;

(2) Define in Section 1 of the Cybersecurity Plan the cybersecurity organizational structure and identify each person exercising cybersecurity duties and responsibilities within that structure, with the support needed to fulfill those obligations;

(3) Designate, in writing, by name and by title, a Cybersecurity Officer (CySO) who is accessible to the Coast Guard 24 hours a day, 7 days a week, and identify how the CySO can be contacted at any time;

(4) Ensure that cybersecurity exercises, audits, and inspections, as well as the Cybersecurity Assessment, are conducted as required by this part and in accordance with the Cybersecurity Plan (see § 101.625(d)(1), (3), (6) and (7));

(5) Ensure that the U.S.-flagged vessel, facility, or OCS facility operates in

compliance with the approved Cybersecurity Plan;

(6) Ensure the development, approval, and execution of the Cyber Incident Response Plan; and

(7) For entities that have not reported to the Coast Guard pursuant to, or are not subject to, 33 CFR 6.16–1, ensure all reportable cyber incidents are reported to the National Response Center (NRC).

§ 101.625 Cybersecurity Officer.

(a) *Other duties.* The Cybersecurity Officer (CySO) may serve in other roles or positions and may perform other duties within the owner's or operator's organization (U.S.-flagged vessel, facility, or OCS facility), provided the person is able to perform the duties and responsibilities required of the CySO by this part.

(b) *Serving as CySO for Multiple Vessels, Facilities, or OCS Facilities.* The same person may serve as the CySO for more than one U.S.-flagged vessel, facility, or OCS facility. If a person serves as the CySO for more than one U.S.-flagged vessel, facility, or OCS facility, the name of each U.S.-flagged vessel, facility, or OCS facility for which that person is the CySO must be listed in the Cybersecurity Plan of each U.S.-flagged vessel, facility, or OCS facility for which that person is the CySO.

(c) *Assigning Duties Permitted.* The CySO may assign security duties to other U.S.-flagged vessel, facility, or OCS facility personnel; however, the CySO retains ultimate responsibility for these duties.

(d) *Responsibilities.* For each U.S.-flagged vessel, facility, or OCS facility for which they are designated, the CySO must—

(1) Ensure that the Cybersecurity Assessment is conducted as required by this part;

(2) Ensure the cybersecurity measures in the Cybersecurity Plan are developed, implemented, and operating as intended;

(3) Ensure that an annual audit of the Cybersecurity Plan and its implementation is conducted and, if necessary, ensure that the Cybersecurity Plan is updated;

(4) Ensure the Cyber Incident Response Plan is executed and exercised;

(5) Ensure the Cybersecurity Plan is exercised in accordance with § 101.635(c);

(6) Arrange for cybersecurity inspections, which may be conducted as their own inspections, or in conjunction with any scheduled Coast Guard inspection of a U.S.-flagged vessel, facility, or OCS facility;

(7) Ensure the prompt correction of problems identified by exercises, audits, or inspections;

(8) Enhance the cybersecurity awareness and vigilance of personnel;

(9) Ensure adequate cybersecurity training of personnel;

(10) Ensure all reportable cyber incidents are recorded and reported to the owner or operator;

(11) Ensure that records required by this part are maintained in accordance with § 101.640;

(12) Ensure any reports as required by this part have been prepared and submitted;

(13) Ensure that the Cybersecurity Plan, as well as proposed amendments to cybersecurity measures included in the Plan, are submitted for approval to the cognizant COTP or the Officer in Charge, Marine Inspections (OCMI) for facilities or OCS facilities, or to the Marine Safety Center (MSC) for U.S.-flagged vessels, prior to amending the Cybersecurity Plan, in accordance with § 101.630;

(14) Ensure relevant security and management personnel are briefed regarding changes in cybersecurity conditions on board the U.S.-flagged vessel, facility, or OCS facility; and

(15) Ensure identification and mitigation of all KEVs in critical IT or OT systems, without delay.

(e) *Qualifications.* The CySO must have general knowledge, through training, education, or equivalent job experience, in the following:

(1) General vessel, facility, or OCS facility operations and conditions;

(2) General cybersecurity guidance and best practices;

(3) The vessel, facility, or OCS facility's Cyber Incident Response Plan;

(4) The vessel, facility, or OCS facility's Cybersecurity Plan;

(5) Cybersecurity equipment and systems;

(6) Methods of conducting cybersecurity audits, inspections, control, and monitoring techniques;

(7) Relevant laws and regulations pertaining to cybersecurity;

(8) Instruction techniques for cybersecurity training and education;

(9) Handling of Sensitive Security Information and security related communications;

(10) Current cybersecurity threat patterns and KEVs;

(11) Recognizing characteristics and behavioral patterns of persons who are likely to threaten security; and

(12) Conducting and assessing cybersecurity drills and exercises.

§ 101.630 Cybersecurity Plan.

(a) *General.* The CySO must develop, implement, and verify a Cybersecurity Plan for U.S.-flagged vessels, facilities, or OCS facilities. The Cybersecurity Plan must reflect all cybersecurity measures required in this subpart, as appropriate, to mitigate risks identified during the Cybersecurity Assessment. The Plan must describe in detail how the requirements of subpart F will be met. The Cybersecurity Plan may be included in a VSP, FSP, or an OCS FSP; as an annex to the VSP, FSP, or OCS FSP; as part of an approved Alternative Security Program; or may be provided in a separate submission from the VSP, FSP, or OCS FSP.

(b) *Protecting sensitive security information.* The Cybersecurity Plan is sensitive security information and must be protected in accordance with 49 CFR part 1520.

(c) *Format.* The owner or operator must ensure that the Cybersecurity Plan consists of the individual sections listed in this paragraph. If the Cybersecurity Plan does not follow the order as it appears on the list, the owner or operator must ensure that the Plan contains an index identifying the location of each of the following sections:

(1) Cybersecurity organization and identity of the CySO;

(2) Personnel training;

(3) Drills and exercises;

(4) Records and documentation;

(5) Communications;

(6) Cybersecurity systems and equipment, with associated maintenance;

(7) Cybersecurity measures for access control, including the computer, IT, and OT access areas;

(8) Physical security controls for IT and OT systems;

(9) Cybersecurity measures for monitoring;

(10) Audits and amendments to the Cybersecurity Plan;

(11) Reports of all cybersecurity audits and inspections, to include documentation of resolution or mitigation of all identified vulnerabilities;

(12) Documentation of all identified, unresolved vulnerabilities, to include those that are intentionally unresolved due to owner or operator risk acceptance;

(13) Cyber incident reporting procedures in accordance with part 101 of this subchapter; and

(14) Cybersecurity Assessment.

(d) *Submission and approval.* Each owner or operator must submit one copy of their Cybersecurity Plan for review and approval to the cognizant COTP or the OCMI for a facility or OCS facility, or to the MSC for a U.S.-flagged vessel.

(1) The COTP, OCMI, or MSC will evaluate each submission for compliance with this part, and either—

(i) Approve the Cybersecurity Plan and return a letter to the owner or operator indicating approval and any conditional approval;

(ii) Require additional information or revisions to the Cybersecurity Plan and return a copy to the owner or operator with a brief description of the required revisions or additional information; or

(iii) Disapprove the Cybersecurity Plan and return a copy to the owner or operator with a brief statement of the reasons for disapproval.

(iv) If the cognizant COTP, OCMI, or MSC requires additional time to review the Plan, they may return a written acknowledgement to the owner or operator stating that the Coast Guard will review the Cybersecurity Plan submitted for approval, and that the U.S.-flagged vessel, facility, or OCS facility may continue to operate as long as it remains in compliance with the submitted Cybersecurity Plan.

(2) Owners or operators submitting one Cybersecurity Plan to cover two or more U.S.-flagged vessels, facilities, or OCS facilities of similar operations must ensure the Plan addresses the specific cybersecurity risks for each U.S.-flagged vessel, facility, or OCS facility.

(3) A Plan that is approved by the COTP, OCMI, or MSC is valid for 5 years from the date of its approval.

(e) *Amendments to the Cybersecurity Plan.* (1) Amendments to a Coast Guard-approved Cybersecurity Plan must be initiated by either—

(i) The owner or operator or the CySO; or

(ii) When the COTP, OCMI, or MSC finds that the Cybersecurity Plan no longer meets the requirements in this part, the Plan will be returned to the owner or operator with a letter explaining why the Plan no longer meets the requirements and requires amendment. The owner or operator will have at least 60 days to submit its proposed amendments. Until the amendments are approved, the owner or operator must ensure temporary cybersecurity measures are implemented to the satisfaction of the Coast Guard.

(2) Proposed amendments to the Cybersecurity Plan must be sent to the Coast Guard at least 30 days before the proposed amendment's effective date. The Coast Guard will approve or disapprove the proposed amendment in accordance with this part.

(i) Nothing in this section should be construed as limiting the owner or operator of the U.S.-flagged vessel, facility, or OCS facility from the timely implementation of such additional security measures not enumerated in the approved VSP, FSP, or OCS FSP as necessary to address exigent security situations.

(ii) In such cases, the owner or operator must notify the cognizant COTP for a facility or OCS facility, or the MSC for U.S.-flagged vessels, by the most rapid means practicable as to the nature of the additional measures, the circumstances that prompted these additional measures, and the period of time these additional measures are expected to be in place.

(3) If the owner or operator has changed, the CySO must amend the Cybersecurity Plan as soon as reasonably practicable in light of the individual circumstances, but, in any case, not longer than 96 hours, to include the name and contact information of the new owner or operator and submit the affected portion of the Plan for review and approval in accordance with this part.

(4) If the CySO has changed, the Coast Guard must be notified as soon as reasonably practicable in light of the individual circumstances, but, in any case, not longer than 96 hours, and the affected portion of the Cybersecurity Plan must be amended and submitted to the Coast Guard for review and approval in accordance with this part as soon as reasonably practicable in light of the individual circumstances, but, in any case, not longer than 96 hours.

(f) *Audits.* (1) The CySO must ensure that an audit of the Cybersecurity Plan and its implementation is performed annually, beginning no later than 1 year from the initial date of approval. The CySO must attach a report to the Plan certifying that the Plan meets the applicable requirements of this subpart.

(2) In addition to the annual audit, the CySO must ensure that an audit of the Cybersecurity Plan occurs if there is a change in the owner or operator of the U.S.-flagged vessel, facility, or OCS facility, or if there have been modifications to the cybersecurity measures, including, but not limited to, physical access, incident response procedures, security measures, or operations.

(3) Additional audits of the Cybersecurity Plan as a result of modifications to the U.S.-flagged vessel, facility, or OCS facility, or because of changes to the cybersecurity measures in accordance with paragraph (f)(2) of this section, may be limited to those sections of the Plan affected by the modifications.

(4) Personnel conducting internal audits of the cybersecurity measures specified in the Plan or evaluating its implementation must—

(i) Have knowledge of methods of conducting audits and inspections, as well as access control and monitoring techniques;

(ii) Not have regularly assigned cybersecurity duties for the U.S.-flagged vessel, facility, or OCS facility being audited; and

(iii) Be independent of any cybersecurity measures being audited.

(5) If the results of an audit require amending the Cybersecurity Plan, the CySO must submit, in accordance with this part, the amendments to the Coast Guard for review and approval no later than 30 days after completion of the audit.

§ 101.635 Drills and exercises.

(a) *General.* (1) Drills and exercises must be used to test the proficiency of the U.S.-flagged vessel, facility, and OCS facility personnel in assigned cybersecurity duties and the effective implementation of the VSP, FSP, OCS FSP, and Cybersecurity Plan. The drills and exercises must enable the CySO to identify any related cybersecurity deficiencies that need to be addressed.

(2) The drill or exercise requirements specified in this section may be satisfied with the implementation of cybersecurity measures required by the VSP, FSP, OCS FSP, and Cybersecurity Plan as the result of a cyber incident, as long as the U.S.-flagged vessel, facility, or OCS facility achieves and documents attainment of drill and exercise goals for the cognizant COTP.

(b) *Drills.* (1) The CySO must ensure that cybersecurity drills are conducted at least twice each calendar year. Cybersecurity drills may be held in conjunction with other security or non-security drills, as required by 33 CFR 104.230, 105.220, or 106.225, where appropriate.

(2) Drills must test individual elements of the Cybersecurity Plan, including responses to cybersecurity threats and incidents. Cybersecurity drills must take into account the types of operations of the U.S.-flagged vessel, facility, or OCS facility; changes to the U.S.-flagged vessel, facility, or OCS facility personnel; the type of vessel a facility is serving; and other relevant circumstances.

(3) If a vessel is moored at a facility on a date a facility has planned to conduct any drills, the facility cannot require the vessel or vessel personnel to be a part of or participate in the facility's scheduled drill.

(c) *Exercises.* (1) Exercises must be conducted at least once each calendar

year, with no more than 18 months between exercises.

(2) Exercises may be—

(i) Full-scale or live;

(ii) Tabletop simulation;

(iii) Combined with other appropriate exercises as required by 33 CFR 104.230, 105.220, or 106.225; or

(iv) A combination of the elements in paragraphs (c)(2)(i) through (iii) of this section.

(3) Exercises may be vessel-, facility-, or OCS facility-specific, or part of a cooperative exercise program to exercise applicable vessel, facility, and OCS facility Cybersecurity Plans or comprehensive port exercises.

(4) Each exercise must test communication and notification procedures and elements of coordination, resource availability, and response.

(5) Exercises are a full test of the cybersecurity program and must include the substantial and active participation of the CySO(s).

(6) If any corrective action identified during an exercise is needed, it must be addressed and documented as soon as possible.

§ 101.640 Records and documentation.

All records, reports, and other documents mentioned in this subpart must be created and maintained in accordance with 33 CFR 104.235 for U.S.-flagged vessels, 105.225 for facilities, and 106.230 for OCS facilities. At a minimum, the records must be created for the following activities: training, drills, exercises, cybersecurity threats, reportable cyber incidents, and audits of the Cybersecurity Plan.

§ 101.645 Communications.

(a) The CySO must have a means to effectively notify owners or operators and personnel of a U.S.-flagged vessel, facility, or OCS facility of changes in cybersecurity conditions at the U.S.-flagged vessel, facility, and OCS facility and document these means in Section 5 of the Cybersecurity Plan.

(b) Communication systems and procedures must allow effective and continuous communications between U.S.-flagged vessel, facility, and OCS facility security personnel, vessels interfacing with a facility or an OCS facility, the cognizant COTP, and national and local authorities with security responsibilities.

§ 101.650 Cybersecurity measures.

(a) *Account security measures.* Each owner or operator of a U.S.-flagged vessel, facility, or OCS facility must ensure, at a minimum, the following account security measures are in place and documented in Section 7 of the Cybersecurity Plan:

(1) Automatic account lockout after repeated failed login attempts must be enabled on all password-protected IT systems;

(2) Default passwords must be changed before using any IT or OT systems. When changing default passwords is not feasible, appropriate compensating security controls must be implemented and documented;

(3) A minimum password strength must be maintained on all IT and OT systems that are technically capable of password protection;

(4) Multifactor authentication must be implemented on password-protected IT and remotely accessible OT systems. When multifactor authentication is not feasible, appropriate compensating security controls must be implemented and documented;

(5) The principle of least privilege must be applied to administrator or otherwise privileged accounts on both IT and OT systems;

(6) The owner or operator must ensure that users maintain separate credentials on critical IT and OT systems; and

(7) The owner or operator must ensure that user credentials are removed or revoked when a user leaves the organization.

(b) *Device security measures.* Each owner or operator or designated CySO of a U.S.-flagged vessel, facility, or OCS facility must ensure the following device security measures are in place, addressed in Section 6 of the Cybersecurity Plan, and made available to the Coast Guard upon request:

(1) Develop and maintain a list of approved hardware, firmware, and software that may be installed on IT or OT systems. Any hardware, firmware, and software installed on IT and OT systems must be on the owner- or operator-approved list;

(2) Ensure applications running executable code are disabled by default on critical IT and OT systems;

(3) Maintain an accurate inventory of network-connected systems, including designation of critical IT and OT systems; and

(4) Develop and maintain accurate documentation identifying the network map and OT device configuration information.

(c) *Data security measures.* Each owner or operator or designated CySO of a U.S.-flagged vessel, facility, or OCS facility must ensure the following data security measures are in place and documented in Section 4 of the Cybersecurity Plan:

(1) Logs must be securely captured, stored, and protected so that they are accessible only by privileged users; and

(2) Effective encryption must be deployed to maintain confidentiality of sensitive data and integrity of IT and OT traffic, when technically feasible.

(d) *Cybersecurity training for personnel.* The training program to address requirements under this paragraph must be documented in Sections 2 and 4 of the Cybersecurity Plan.

(1) All personnel with access to the IT or OT systems, including contractors, whether part-time, full-time, temporary, or permanent, must have cybersecurity training in the following topics:

(i) Relevant provisions of the Cybersecurity Plan;

(ii) Recognition and detection of cybersecurity threats and all types of cyber incidents;

(iii) Techniques used to circumvent cybersecurity measures;

(iv) Procedures for reporting a cyber incident to the CySO; and

(v) OT-specific cybersecurity training for all personnel whose duties include using OT.

(2) Key personnel with access to the IT or remotely accessible OT systems, including contractors, whether part-time, full-time, temporary, or permanent, must also have cybersecurity training in the following additional topics:

(i) Understanding their roles and responsibilities during a cyber incident and response procedure; and

(ii) Maintaining current knowledge of changing cybersecurity threats and countermeasures.

(3) When personnel must access IT or OT systems but are unable to receive cybersecurity training as specified in paragraphs (d)(1) and (2) of this section, they must be accompanied or monitored by a person who has completed the training specified in paragraphs (d)(1) and (2) of this section.

(4) All personnel must complete the training specified in paragraphs (d)(1)(ii) through (v) of this section by January 12, 2026, and annually thereafter. Key personnel must complete the training specified in paragraph (d)(2) of this section by January 12, 2026, and annually thereafter, or more frequently as needed. Training for new personnel not in place at the time of the effective date of this rule must be completed within 5 days of gaining system access, but no later than within 30 days of hiring, and annually thereafter. Training for personnel on new IT or OT systems not in place at the time of the effective date of this rule must be completed within 5 days of system access, and

annually thereafter. All personnel must complete the training specified in paragraph (d)(1)(i) within 60 days of receiving approval of the Cybersecurity Plan. The training must be documented and maintained in the owner's or operator's records in accordance with 33 CFR 104.235 for U.S.-flagged vessels, 105.225 for facilities, and 106.230 for OCS facilities.

(e) *Risk management.* Each owner or operator or designated CySO of a U.S.-flagged vessel, facility, or OCS facility must ensure the following measures for risk management are in place and documented in Sections 11 and 12 of the Cybersecurity Plan:

(1) *Cybersecurity Assessment.* Each owner or operator or designated CySO of a U.S.-flagged vessel, facility, or OCS facility must ensure completion of a Cybersecurity Assessment that addresses each covered U.S.-flagged vessel, facility, and OCS facility. A Cybersecurity Assessment must be conducted no later than July 16, 2027, and annually thereafter. However, the Cybersecurity Assessment must be conducted sooner than annually if there is a change in ownership of a U.S.-flagged vessel, facility, or OCS facility. In conducting the Cybersecurity Assessment, the owner or operator must—

(i) Analyze all networks to identify vulnerabilities to critical IT and OT systems and the risk posed by each digital asset;

(ii) Validate the Cybersecurity Plan;

(iii) Document recommendations and resolutions in the Vessel Security Assessment (VSA), Facility Security Assessment (FSA), or OCS FSA, in accordance with 33 CFR 104.305, 105.305, and 106.305;

(iv) Document and ensure patching or implementing of documented compensating controls for all KEVs in critical IT or OT systems, without delay; and

(v) Incorporate recommendations and resolutions from paragraph (e)(1)(iii) of this section into the Cybersecurity Plan through an amendment, in accordance with § 101.630(e).

(2) *Penetration testing.* In conjunction with Cybersecurity Plan renewal, the owner, operator, or designated CySO must ensure that a penetration test has been completed. Following the penetration test, a letter certifying that the test was conducted, as well as all identified vulnerabilities, must be included in the VSA, FSA, or OCS FSA, in accordance with 33 CFR 104.305, 105.305, and 106.305.

(3) *Routine system maintenance.* Each owner or operator or a designated CySO of a U.S.-flagged vessel, facility, or OCS facility must ensure the following measures for routine system maintenance are in place and documented in Section 6 of the Cybersecurity Plan:

(i) Ensure patching or implementation of documented compensating controls for all KEVs in critical IT or OT systems, without delay;

(ii) Maintain a method to receive and act on publicly submitted vulnerabilities;

(iii) Maintain a method to share threat and vulnerability information with external stakeholders;

(iv) Ensure there are no exploitable channels directly exposed to internet-accessible systems;

(v) Ensure no OT is connected to the publicly accessible internet unless explicitly required for operation, and verify that, for any remotely accessible OT system, there is a documented justification; and

(vi) Conduct vulnerability scans as specified in the Cybersecurity Plan.

(f) *Supply chain.* Each owner or operator or designated CySO of a U.S.-flagged vessel, facility, or OCS facility must ensure the following supply-chain measures are in place and documented in Section 4 of the Cybersecurity Plan:

(1) Consider cybersecurity capability as criteria for evaluation to procure IT and OT systems or services;

(2) Establish a process through which all IT and OT vendors or service providers notify the owner or operator or designated CySO of any cybersecurity vulnerabilities or reportable cyber incidents, without delay; and

(3) Monitor and document all third-party remote connections to detect cyber incidents.

(g) *Resilience.* Each owner or operator or designated CySO of a U.S.-flagged vessel, facility, or OCS facility must ensure the following measures for resilience are in place and documented in Sections 3 and 9 of the Cybersecurity Plan:

(1) For entities that have not reported to the Coast Guard pursuant to, or not subject to, 33 CFR 6.16–1, report reportable cyber incidents to the NRC without delay;

(2) In addition to other plans mentioned in this subpart, develop, implement, maintain, and exercise the Cyber Incident Response Plan;

(3) Periodically validate the effectiveness of the Cybersecurity Plan through annual exercises, annual reviews of incident response cases, or post-cyber incident review, as determined by the owner or operator; and

(4) Perform backup of critical IT and OT systems, with those backups being sufficiently protected and tested frequently.

(h) *Network segmentation.* Each owner or operator or designated CySO of a U.S.-flagged vessel, facility, or OCS facility must ensure the following measures for network segmentation are in place and documented in Sections 7 and 8 of the Cybersecurity Plan:

(1) Implement segmentation between IT and OT networks; and

(2) Verify that all connections between IT and OT systems are logged and monitored for suspicious activity, breaches of security, TSIs, unauthorized access, and cyber incidents.

(i) *Physical security.* Each owner, operator, or designated CySO of a U.S.-flagged vessel, facility, or OCS facility must ensure the following measures for physical security are in place and documented in Sections 7 and 8 of the Cybersecurity Plan:

(1) In addition to any other requirements in this part, limit physical access to OT and related IT equipment to only authorized personnel, and confirm that all HMIs and other hardware are secured, monitored, and logged for personnel access; and

(2) Ensure unauthorized media and hardware are not connected to IT and OT infrastructure, including blocking, disabling, or removing unused physical access ports, and establishing procedures for granting access on a by-exception basis.

§ 101.655 Cybersecurity compliance dates.

All Cybersecurity Plans mentioned in this subpart must be submitted to the Coast Guard for review and approval no later than July 16, 2027, according to 33 CFR 104.410 for U.S.-flagged vessels, 33 CFR 105.410 for facilities, or 33 CFR 106.410 for OCS facilities.

§ 101.660 Cybersecurity compliance documentation.

Each owner or operator must ensure that the cybersecurity portion of their Plan and penetration test results are available to the Coast Guard upon request. The Alternative Security Program provisions apply to cybersecurity compliance documentation and are addressed in 33 CFR 104.140 for vessels, 33 CFR 105.140 for facilities, and 33 CFR 106.135 for OCS facilities.

§ 101.665 Noncompliance, waivers, and equivalents.

An owner or operator, after completion of the required Cybersecurity Assessment, may seek a waiver or an equivalence determination for the requirements in subpart F using the standards and submission

procedures applicable to a U.S.-flagged vessel, facility, or OCS facility as outlined in 33 CFR 101.130, 104.130, 104.135, 105.130, 105.135, 106.125, or 106.130. If an owner or operator must temporarily deviate from the requirements in this part, they must notify the cognizant COTP for facilities or OCS facilities, or the MSC for U.S.-flagged vessels, and may request temporary permission to continue to operate under the provisions as outlined in 33 CFR 104.125, 105.125, or 106.120.

§ 101.670 Severability.

Any provision of this subpart held to be invalid or unenforceable as applied to any person or circumstance shall be construed so as to continue to give the maximum effect to the provision permitted by law, including as applied to persons not similarly situated or to dissimilar circumstances, unless such holding is that the provision of this subpart is invalid and unenforceable in all circumstances, in which event the provision shall be severable from the remainder of this subpart and shall not affect the remainder thereof.

PART 160—PORTS AND WATERWAYS SAFETY—GENERAL

■ 3. The authority citation for part 160 is revised to read as follows:

Authority: 46 U.S.C. 70001–70003, 70034, and Chapter 701; DHS Delegation 00170.1, Revision No. 01.4. Subpart C is also issued under the authority of 46 U.S.C. 3715 and 46 U.S.C. 70011.

■ 4. Amend § 160.202 by revising the definition for Hazardous condition to read as follows:

§ 160.202 Definitions.

* * * * *

Hazardous condition means any condition that may adversely affect the safety of any vessel, bridge, structure, or shore area or the environmental quality of any port, harbor, or navigable waterway of the United States. It may, but need not, involve collision, allision, fire, explosion, grounding, leaking, damage, cyber incident, injury or illness of a person aboard, or manning-shortage.

RIN 1685–AA00 (Formerly RIN 1515–AE65)

Agreement Between the United States of America, the United Mexican States, and Canada (USMCA) Implementing Regulations Related to Textile and Apparel Goods, Automotive Goods, and Other USMCA Provisions

AGENCY: U.S. Customs and Border Protection, Department of Homeland Security; Department of the Treasury.

ACTION: Interim final rule; request for comments.

SUMMARY: This interim final rule amends the U.S. Customs and Border Protection (CBP) regulations to add implementing regulations for the preferential tariff treatment and related customs provisions of the Agreement Between the United States of America, the United Mexican States, and Canada (USMCA) with respect to general definitions, drawback and duty-deferral programs, textile and apparel goods, and automotive goods. This document also amends the regulations to implement the temporary admission of goods, to delineate recordkeeping and protest requirements, to clarify the fee provisions, and to make conforming amendments, including technical corrections to other laws as required by statute.

DATES: This interim final rule is effective on March 18, 2025. However, compliance with the labor value content certification, steel purchasing certification, and aluminum purchasing certification provisions in §§ 182.95, 182.96, and 182.97 will only be required for those vehicle certifications submitted to CBP on or after May 19, 2025. Comments regarding this interim final rule must be received by March 18, 2025.

ADDRESSES: Please submit comments, identified by *docket number* USCBP–2024–0017, by the following method:

Federal eRulemaking Portal at *http://www.regulations.gov*. Follow the instructions for submitting comments.

Instructions: All submissions received must include the agency name and docket number for this rulemaking. All comments received will be posted without change to *http://www.regulations.gov,* including any personal information provided. For detailed instructions on submitting comments and additional information on the rulemaking process, see the ''Public Participation'' heading of the **SUPPLEMENTARY INFORMATION** section of this document.

Docket: For access to the docket to read background documents or comments received, go to *http://www.regulations.gov*.

FOR FURTHER INFORMATION CONTACT: *Operational Aspects and Audit Aspects:* Raymond J. Irizarry, Director, Textiles and Trade Agreements Division, Trade Policy and Programs, Office of Trade, U.S. Customs and Border Protection, (202) 945–7236 or *FTA@cbp.dhs.gov*.

Legal Aspects: Yuliya A. Gulis, Director, Commercial and Trade Facilitation Division, Regulations and Rulings, Office of Trade, U.S. Customs and Border Protection, (202) 325–0042 or *yuliya.a.gulis@cbp.dhs.gov*.

SUPPLEMENTARY INFORMATION:

I. Public Participation

Interested persons are invited to participate in this rulemaking by submitting written data, views, or arguments on all aspects of this interim final rule. U.S. Customs and Border Protection (CBP) also invites comments that relate to the economic, environmental, or federalism effects that might result from this interim final rule. Comments that will provide the most assistance to CBP will reference a specific portion of the interim final rule, explain the reason for any recommended change, and include data, information or authority that support such recommended change.

II. Background

On November 30, 2018, the ''Protocol Replacing the North American Free Trade Agreement with the Agreement Between the United States of America, the United Mexican States, and Canada'' (the Protocol) was signed to replace the North American Free Trade Agreement (NAFTA). The Agreement Between the United States of America, the United Mexican States (Mexico), and Canada (the USMCA) [1] is attached as an annex to the Protocol and was subsequently amended to reflect certain modifications and technical corrections in the ''Protocol of Amendment to the Agreement Between the United States of America, the United Mexican States, and Canada'' (the Amended Protocol), which the Office of the United States Trade Representative (USTR) signed on December 10, 2019.

Pursuant to section 106 of the Bipartisan Congressional Trade Priorities and Accountability Act of 2015 (19 U.S.C. 4205) and section 151 of the Trade Act of 1974 (19 U.S.C. 2191), the United States approved and implemented the USMCA through the enactment of the United States—Mexico—Canada Agreement Implementation Act (USMCA Implementation Act), Pub. L. 116–113, 134 Stat. 11 (19 U.S.C. Chapter 29), on January 29, 2020. Section 103(a)(1)(B) of the USMCA Implementation Act (19 U.S.C. 4513(b)(1)) provides the authority for new or amended regulations to be issued to implement the USMCA, as of the date of its entry into force.

Mexico, Canada, and the United States certified their preparedness to implement the USMCA on December 12, 2019, March 13, 2020, and April 24, 2020, respectively. As a result, pursuant to paragraph 2 of the Protocol, which provides that the USMCA will take effect on the first day of the third month after the last signatory party provides written notification of the completion of its domestic procedures required for entry into force, the USMCA entered into force on July 1, 2020.

Subsequent to the USMCA's entry into force date, on December 27, 2020, the Consolidated Appropriations Act, 2021 (Appropriations Act), Pub. L. 116–260, was enacted with Title VI of the Act containing technical corrections to the USMCA Implementation Act. All of the changes contained within Title VI of the Appropriations Act are retroactively effective on July 1, 2020, the USMCA's entry into force date. *See* sections 601(h) and 602(g) of Title VI of the Appropriations Act. These changes included amending section 202 of the USMCA Implementation Act (19 U.S.C. 4531) to prohibit non-originating goods used in production processes within foreign trade zones (FTZs) from qualifying as originating goods under the USMCA. *See* section 601(b) of Title VI of the Appropriations Act. Additionally, section 601(e) of Title VI of the Appropriations Act amended 19 U.S.C. 1520(d) to allow the refund of merchandise processing fees for USMCA post-importation claims. The Appropriations Act also included technical corrections to other laws. These other laws, such as the African Growth and Opportunity Act and the Caribbean Basin Economic Recovery Act, implemented the relevant trade preference programs using the NAFTA

[1] The Agreement Between the United States of America, the United Mexican States, and Canada is the official name of the USMCA treaty. Please be aware that, in other contexts, the same document is also referred to as the United States-Mexico-Canada Agreement.

rules of origin. With the repeal of the North American Free Trade Agreement Implementation Act (NAFTA Implementation Act), section 602(a) and (b) of Title VI of the Appropriations Act amended these other laws to include the USMCA rules of origin.

Pursuant to USMCA Article 5.16, the United States, Mexico, and Canada trilaterally negotiated and agreed to Uniform Regulations. The USMCA Free Trade Commission adopted the Uniform Regulations in its Decision No.1, effective as of the date of entry into force of the USMCA. Annex I to that decision includes: [2]

- The Uniform Regulations Regarding the Interpretation, Application, and Administration of Chapter 4 (Rules of Origin) and Related Provisions in Chapter 6 (Textile and Apparel Goods) of the Agreement Between the United States of America, the United Mexican States, and Canada (Uniform Regulations regarding Rules of Origin), and
- The Uniform Regulations Regarding the Interpretation, Application, and Administration of Chapters 5 (Origin Procedures), 6 (Textile and Apparel Goods), and 7 (Customs Administration and Trade Facilitation) of the Agreement Between the United States of America, the United Mexican States, and Canada (Uniform Regulations regarding Origin Procedures).

In accordance with USMCA Article 5.16, modifications or additions to the Uniform Regulations shall be considered regularly by the USMCA Parties to reduce their complexity and to ensure better compliance. To this end, further iterations of the Uniform Regulations may be negotiated. Part 182 of title 19 of the Code of Federal Regulations (CFR) (19 CFR part 182) contains the Uniform Regulations regarding Chapter 4 Rules of Origin and related provisions of Chapter 6 in Appendix A. The Uniform Regulations for Chapter 5, remaining provisions of Chapter 6, and Chapter 7 regarding Origin Procedures are incorporated in title 19 of the CFR, including 19 CFR part 182, as appropriate for U.S. administrative processes and procedures. Part 182 of title 19 of the CFR will be amended through subsequent rulemaking to reflect future changes to both sets of the Uniform Regulations, as needed.

The USMCA superseded NAFTA and its related provisions on the date that USMCA entered into force. *See* Protocol, paragraph 1. Section 601 of the USMCA Implementation Act repealed the NAFTA Implementation Act, Pub. L. 103–182, 107 Stat. 2057 (19 U.S.C. 3301), as of the date that the USMCA entered into force. The NAFTA provisions set forth in part 181 of title 19 of the CFR (19 CFR part 181) and in General Note 12, Harmonized Tariff Schedule of the United States (HTSUS), continue to apply to goods entered for consumption, or withdrawn from warehouse for consumption, prior to July 1, 2020.

Claims for preferential treatment under the USMCA may be made as of July 1, 2020. On July 1, 2020, CBP published an interim final rule (IFR), entitled ''Implementation of the Agreement Between the United States of America, the United Mexican States, and Canada (USMCA) Uniform Regulations Regarding Rules of Origin,'' (CBP Dec. 20–11) in the **Federal Register** (85 FR 39690), amending part 181 and adding a new part 182 containing several USMCA provisions, including the Uniform Regulations regarding Rules of Origin as Appendix A of part 182 to title 19 of the CFR (19 CFR part 182), which was trilaterally agreed upon by the United States, Mexico, and Canada. CBP later published an IFR on July 6, 2021, entitled, ''Agreement Between the United States of America, the United Mexican States, and Canada (USMCA) Implementing Regulations Related to the Marking Rules, Tariff-rate Quotas, and Other USMCA Provisions,'' (CBP Dec. 21–10) in the **Federal Register** (86 FR 35566), which was effective on July 1, 2021. The IFR amended part 182 to implement USMCA Chapters 1, 2, 5, and 7 related to general definitions, confidentiality, import requirements, export requirements, post-importation duty refund claims, a portion of the drawback and duty-deferral programs, general verifications and determinations of origin, commercial samples, goods re-entered after repair or alteration in Canada or Mexico, and penalties. It also amended several other parts of title 19 of the CFR necessary to implement the USMCA. In addition to those regulations and the regulations set forth in this document, persons intending to make USMCA preference claims may refer to the CBP website at *https://www.cbp.gov/trade/priority-issues/trade-agreements/free-trade-agreements/USMCA* for further guidance. The United States International Trade Commission has modified the HTSUS to include the addition of General Note 11, incorporating the USMCA rules of origin for preference purposes, and the insertion of the special program indicator ''S'' or ''S+'' for the USMCA in the HTSUS ''special'' rate of duty subcolumn.[3]

A. The Customs Related USMCA Provisions

The USMCA is composed of 34 chapters along with additional side letters. CBP is responsible for administering the customs related provisions contained within Chapters 1 (Initial Provisions and General Definitions), 2 (National Treatment and Market Access for Goods), 4 (Rules of Origin), 5 (Origin Procedures), 6 (Textile and Apparel Goods) and 7 (Customs Administration and Trade Facilitation) of the USMCA and, pursuant to Article 5.16 of the USMCA, the Uniform Regulations regarding Rules of Origin as well as the Uniform Regulations regarding Origin Procedures. This IFR amends the CBP regulations to implement remaining customs related USMCA provisions that CBP is responsible for administering, as described below.

Chapter 1 of the USMCA contains the general definitions and country-specific definitions applicable to the USMCA, unless otherwise provided.

Chapter 2 of the USMCA sets forth the national treatment and market access provisions. Unless otherwise provided, each USMCA country shall apply a customs duty on an originating good in accordance with its Schedule in Annex 2–B (Tariff Commitments) of Chapter 2 of the USMCA. *See* Article 2.4 of the USMCA. USMCA Chapter 2 also contains the drawback and duty-deferral program provisions (Article 2.5) and the temporary admission of goods provisions (Article 2.7).

USMCA Chapter 4 contains the general rules of origin for preferential tariff treatment. Annex 4–B contains the product-specific rules of origin. Specifically, the Appendix to Annex 4–B of Chapter 4 of the USMCA sets forth the provisions related to the product-specific rules of origin for automotive goods. *See* USMCA Article 4.10. USMCA Appendix to Annex 4–B includes the automotive good-specific definitions (Article 1); the averaging provisions for purposes of calculating the regional value content of a passenger vehicle, light truck, heavy truck, or automotive good (Article 5); the steel purchasing and aluminum purchasing requirements (Article 6); the labor value content requirements (Article 7); and

[2] Available at: *https://ustr.gov/trade-agreements/free-trade-agreements/united-states-mexico-canada-agreement/free-trade-commission-decisions/usmca-free-trade-commission-decision-no-1.*

[3] The S+ indicator is used for certain agricultural goods and textile tariff preference levels (TPLs).

the provisions related to the transition period during which a qualifying passenger vehicle, light truck, or heavy truck may be originating under the USMCA pursuant to an alternative staging regime (Article 8).

Chapter 5 of the USMCA sets forth the origin procedures. This includes the recordkeeping requirements for importers, exporters, and producers (Article 5.8); the general origin verification requirements and procedures (Article 5.9); determinations of origin (Article 5.10); advance rulings relating to origin (Article 5.14); and the review and appeal of determinations of origin and advance rulings (Article 5.15).

Chapter 6 includes the product-specific rules of origin specific to textiles and apparel goods. Except as specifically provided for in USMCA Chapter 6, USMCA Chapters 4 (Rules of Origin) and 5 (Origin Procedures) apply to textile and apparel goods as well. *See* USMCA Article 6.1. Chapter 6 contains the textile and apparel goods site visit verification provisions (Article 6.6), and the determination of origin provisions (Article 6.7). Annex 6–A of Chapter 6 of the USMCA sets forth the special provisions applicable to certain textile and apparel goods. *See* USMCA Article 6.3. Section C of Annex 6–A sets forth the tariff preference level provisions related to preferential tariff treatment for non-originating goods of another USMCA country, including the requirements and applicable procedures. USMCA Annex 6–B contains the schedule of conversion factors that apply to tariff preference levels.

USMCA Chapter 7 sets forth provisions related to customs administration and trade facilitation, specifically provisions on advance rulings (Article 7.5) and on review and appeal of customs determinations (Article 7.15).

The Chapters 1, 2, 4, 5, 6, and 7 provisions discussed above are reflected in this IFR. CBP is soliciting public comments in this document. CBP will address any public comments received from the IFRs implementing the USMCA in a final rule published in the **Federal Register**. Additionally, future trilateral negotiations on the Uniform Regulations may result in additional provisions that will be included in a future rulemaking process at a later date.

B. Textiles and Apparel Goods

Under the USMCA, a textile or apparel good is defined as a good classified in Harmonized System (HS) subheading 4202.12, 4202.22, 4202.32, or 4202.92 (luggage, handbags and similar articles with an outer surface of textile materials); headings 50.04 through 50.07, 51.04 through 51.13, 52.04 through 52.12, 53.03 through 53.11; Chapters 54 through 63; heading 66.01 (umbrellas) or heading 70.19 (yarns and fabrics of glass fiber); subheading 9404.90 (articles of bedding and similar furnishing); or heading 96.19 (babies diapers and other sanitary textile articles). *See* USMCA Article 1.5. Chapter 6 of the USMCA contains the provisions that apply only to the treatment of textile and apparel goods. Unless otherwise noted, the provisions in USMCA Chapter 6 are additional requirements, with the rules of origin in USMCA Chapter 4 and the origin procedures in USMCA Chapter 5 also applying to textile and apparel goods.

Tariff Preference Levels (TPLs)

USMCA Chapter 6 contains special provisions in Annex 6–A allowing specified quantities of certain textile and apparel goods, which do not meet the rules of origin in General Note 11, HTSUS, or the Uniform Regulations regarding Rules of Origin, to claim USMCA preferential tariff treatment because the goods undergo significant processing in one or more USMCA countries. *See* USMCA Article 6.3. Specifically, Section C of Annex 6–A sets the tariff preference levels (TPLs). TPLs require that each USMCA country apply the preferential tariff treatment applicable to originating goods (as set out in the goods' schedule in USMCA Annex 2–B (Tariff Commitments)) for certain non-originating apparel goods of Chapters 61 and 62, HTSUS, and textile and apparel goods, other than wadding, of heading 9619, HTSUS; certain non-originating cotton or man-made fiber fabrics and textile goods, and certain goods of subheading 9404.90, HTSUS; and certain non-originating cotton or man-made fiber spun yarn, up to the annual quantities specified in the appendices to Annex 6–A, in the square meter equivalent measurement (SME) indicated. The SME is a unit of measurement that results from the application of the conversion factors set out in Annex 6–B, to a primary unit of measure such as a unit, dozen, or kilogram and is used in the appendices to Annex 6–A to determine the annual quantities of each specified textile and apparel good that is eligible for USMCA preferential tariff treatment under the TPLs. *See* USMCA Annex 6–A, Section A.

A USMCA country will manage each TPL on a first-come, first-served basis, and will calculate the quantity of goods that enter under a TPL on the basis of its imports. *See* USMCA Annex 6–A, Section C. When imports exceed the established annual quantitative levels, the imported goods are subject to most-favored nation (MFN) rates of duty. An importer may make a claim for preferential tariff treatment of a good under a TPL for at least one year after the good is imported, if the annual quantitative limit has not been reached and other TPL requirements are met. Goods imported under TPLs are exempt from merchandise processing fees.

Pursuant to section 103(c)(1) of the USMCA Implementation Act (19 U.S.C. 4513(c)), which grants the President proclamation authority to take the actions necessary to apply USMCA Article 6.3 and Annex 6–A, the special classification provisions in Subchapter XXIII of Chapter 98 of the HTSUS have been modified to insert U.S. Note 11 containing the Mexican and Canadian textile and apparel goods, with the SME indicated, that are eligible for special tariff treatment subject to the TPLs. Additionally, the HTSUS was modified to include the insertion of the special program indicator ''S+'' in the HTSUS ''special'' rate of duty subcolumn. The special program indicator ''S+'' is used when the HTSUS provides different preferential tariff treatment to each of the USMCA countries such as with TPLs.

As goods subject to TPLs are not originating goods, the certification of origin requirement does not apply for textile or apparel goods subject to a TPL claiming USMCA preferential tariff treatment. Instead, pursuant to USMCA Annex 6–A, Section C, the USMCA country where the good is being imported may require a document issued by the competent authority of a USMCA country, such as a certificate of eligibility, to provide information demonstrating that the good qualifies for duty-free treatment under a TPL, to track allocation and use of a TPL, or as a condition to grant duty-free treatment to the good under a TPL. Each USMCA country must notify the other USMCA countries if it requires a certificate of eligibility or other documentation. CBP has determined that TPLs under the USMCA will be administered using a certificate of eligibility. Thus, CBP is adding the TPL requirements, including the requirements for the certificate of eligibility, to 19 CFR part 182, subpart H.

The USMCA provisions related to claims for preferential tariff treatment generally apply, with the exception of the certification of origin requirement, to textile or apparel goods subject to TPLs, including the general verification requirements under USMCA Article 5.9

and the textile and apparel goods-specific verification provisions in USMCA Article 6.6. *See* USMCA Annex 6–A, Section C.

Textile and Apparel Good Verifications

Pursuant to USMCA Article 5.9, a USMCA country may conduct a verification to determine whether a good qualifies for preferential tariff treatment by one or more of the following means: a written request or questionnaire issued to the importer, exporter, or producer; a verification visit to the premises of the exporter or producer; for a textile or apparel good, the procedures set out in USMCA Article 6.6; or any other procedure as may be decided by the USMCA countries.

Accordingly, the USMCA provides a USMCA country with the discretion to conduct a textile or apparel good verification either pursuant to the general verification procedures set forth in USMCA Article 5.9 or pursuant to a site visit under USMCA Article 6.6. A verification under USMCA Article 5.9 is conducted to verify whether a good qualifies for preferential tariff treatment. A site visit under USMCA Article 6.6 (hereinafter referred to as a ''site visit'') may only be conducted to verify textile and apparel goods. A USMCA country may perform a site visit of an exporter or producer to verify whether a textile or apparel good qualifies for USMCA preferential tariff treatment or to verify whether customs offenses with regard to a textile or apparel good are occurring or have occurred. Consequently, under USMCA Article 6.6.3, during a site visit, a USMCA country may request access to records and facilities relevant to the claim for preferential tariff treatment or records and facilities relevant to the customs offenses being verified.

USMCA Article 1.5 defines a customs offense to mean any act committed for the purpose of, or having the effect of, avoiding a USMCA country's laws or regulations pertaining to the provisions of the USMCA governing importations or exportations of goods between, or transit of goods through, the territories of the USMCA countries, specifically those that violate a customs law or regulation for restrictions or prohibitions on imports or exports, duty evasion, transshipment, falsification of documents relating to the importation or exportation of goods, fraud, or smuggling of goods.

A site visit's procedures and processes differ significantly from a verification visit under USMCA Article 5.9. Prior to conducting a site visit in a USMCA country, the USMCA country conducting the site visit is not required to notify the exporter or producer whose premises are going to be visited. The USMCA country conducting the site visit, however, must notify the USMCA country where the site visit will occur (the ''host USMCA country''). USMCA Article 6.6 sets forth the requirements and specific information that the USMCA country that is seeking to conduct the site visit with respect to a textile or apparel good must provide to the host USMCA country, not later than 20 days prior to the date of the first visit to an exporter or producer. This information exchange between the USMCA countries is governed by the confidentiality provisions in USMCA Article 5.12 to ensure that information is treated as confidential when it is designated as confidential or is confidential under the receiving USMCA country's laws.[4] *See* USMCA Articles 5.12 and 6.9. Additionally, in accordance with USMCA Article 6.6.7(c), the USMCA countries will limit communication regarding the site visit to relevant government officials and not inform any person outside the government of the host USMCA country in advance of the site visit or provide any other information not publicly available that could undermine the effectiveness of the site visit.

The USMCA country conducting the site visit is required to request permission in order to access the relevant records or facilities from the exporter, producer, or a person having capacity to consent on behalf of the exporter or producer, either prior to the site visit, if this would not undermine the effectiveness of the site visit, or at the time of the site visit. *See* USMCA Article 6.6.7(d). Pursuant to the Uniform Regulations regarding Origin Procedures, the USMCA country performing the site visit would inform the person from whom it is requesting permission, at the time of the request for permission, of the legal authority for the visit, the specific purpose of the visit, and the names and titles of the officials performing the visit. Pursuant to USMCA Article 6.6.7(e), if permission is denied or access to the records or facilities is denied, the site visit will not occur. If the exporter, producer, or person having capacity to consent on behalf of the exporter or producer is not able to receive the USMCA country officials to carry out the site visit, the site visit will be conducted on the following business day unless the USMCA country conducting the site visit agrees otherwise, or there is a valid reason that the site visit cannot occur at that time. An unsubstantiated reason or a reason that the USMCA country conducting the site visit does not deem acceptable may result in the consent for the site visit to be deemed denied, though the USMCA country conducting the site visit should give consideration to any reasonable alternative proposed dates. *See* USMCA Article 6.6.7(e).

On completion of a site visit, the USMCA country performing the site visit will, upon request of the host USMCA country or the exporter or producer, provide its relevant findings of the results of the site visit. *See* USMCA Article 6.6.8. Pursuant to USMCA Article 6.7, a USMCA country may deny a claim for preferential tariff treatment for a textile or apparel good for the reasons listed in USMCA Article 5.10; or, if pursuant to a site visit, the USMCA country has not received sufficient information to determine that the textile or apparel good qualifies for preferential tariff treatment; or, if the USMCA country is unable to conduct the site visit as access or permission for a site visit is denied, the USMCA country officials are prevented from completing the site visit, or the exporter or producer does not provide access to the relevant records or facilities during a site visit.

Under USMCA Article 6.6.11, if verifications of identical textile or apparel goods indicate a pattern of conduct by an exporter or producer of making false or unsupported representations that a good imported into the USMCA country qualifies for preferential tariff treatment, the USMCA country may withhold preferential treatment for identical textile or apparel goods imported, exported, or produced by that person until it is demonstrated to the USMCA country that the identical goods qualify for preferential tariff treatment.

Section 207(a)(2) of the USMCA Implementation Act (19 U.S.C. 4533(a)(2)) provides the Secretary of the Treasury authority to conduct a USMCA Article 6.6 site visit to verify whether the textile or apparel good qualifies for preferential tariff treatment under the USMCA or whether customs offenses are occurring or have occurred with respect to the good. Section 207(b) of

[4] The exchange of information between USMCA countries is governed by 19 U.S.C. 1628. *See also* 19 CFR 182.2(b) for the USMCA confidentiality regulations setting forth the legally permitted disclosures that allow CBP to share the confidential information it receives from the public, including the disclosures CBP is authorized to make to other USMCA countries. Please also refer to the Agreement Between the United States of America, the United Mexican States, and Canada (USMCA) Implementing Regulations Related to the Marking Rules, Tariff-rate Quotas, and Other USMCA Provisions interim final rule (86 FR 35566), published in the **Federal Register** on July 6, 2021, for additional information regarding confidential information and the USMCA.

the USMCA Implementation Act (19 U.S.C. 4533(b)(1)) sets forth the basis for issuing a negative determination of origin. Specifically, section 207(b)(1)(B)(iv) of the USMCA Implementation Act provides that, for a Chapter 6 site visit, a negative determination is a determination by the Secretary that access or permission for a site visit is denied; U.S. officials are prevented from completing a site visit on the proposed date and the exporter or producer does not provide an acceptable alternative date for the site visit; or the exporter or producer does not provide access to relevant documents or facilities during a site visit. Upon making a negative determination of origin, the Secretary may deny preferential tariff treatment under the USMCA. *See* 19 U.S.C. 4533(c)(1). The Secretary also may withhold preferential tariff treatment for identical goods based on a pattern of conduct. *See* section 207(c)(2) of the USMCA Implementation Act (19 U.S.C. 4533(c)(2)).

To address the specific requirements and procedures for filing a claim for USMCA preferential tariff treatment for a textile or apparel good subject to a TPL and to set forth the procedures related to USMCA Article 6.6 site visits, CBP has included a separate subpart H, *Textile and Apparel Goods,* in part 182 of title 19 of the CFR, that applies only to textile and apparel goods.

C. Automotive Goods

An automotive good is defined as either a covered vehicle (a passenger vehicle, light truck, or heavy truck), or a part, component, or material listed in Tables A.1, A.2, B, C, D, E, F, or G of the Appendix to Annex 4–B of the USMCA (also referred to as the ''Automotive Appendix''). *See* section 202A(a)(4) and (a)(7) of the USMCA Implementation Act (19 U.S.C. 4532(a)(4) and (a)(7)). The definitions of passenger vehicle, light truck, and heavy truck are contained in the USMCA Automotive Appendix. In addition to the general rules of origin set forth in USMCA Chapter 4, the USMCA contains numerous product-specific rules of origin for automotive goods and additional provisions. These product-specific rules of origin and additional requirements are contained in the USMCA Automotive Appendix, including higher regional value content (RVC) thresholds than those in NAFTA, labor value content (LVC) requirement, steel purchasing requirement, and aluminum purchasing requirement. *See* USMCA Article 4.10 and Appendix to Annex 4–B. The importer, exporter, or producer who completes the certification of origin for a covered vehicle is certifying that the covered vehicle is an originating good that has complied with all the product-specific rules of origin, including the LVC, steel purchasing, and aluminum purchasing requirements.

Section 202A of the USMCA Implementation Act (19 U.S.C. 4532) sets forth the special rules for automotive goods, including definitions specific to automotive goods, the vehicle certification requirements for covered vehicles, the alternative staging regime provisions, the administration of the high-wage components of the LVC requirement by the Department of Labor (DOL), and the extra procedures for verification of the LVC requirement. Covered vehicles imported into the United States are only eligible for USMCA preferential tariff treatment if the producer of the covered vehicle (passenger vehicles, light trucks, and heavy trucks) submits three properly filed vehicle certifications to CBP. These vehicle certifications are the LVC certification, steel purchasing certification, and aluminum purchasing certification.

The product-specific rules of origin for automotive goods are set forth in General Note 11, HTSUS, Appendix A to part 182 of title 19 of the CFR (containing the Uniform Regulations regarding Rules of Origin), and the USMCA Automotive Appendix. To address the specific additional requirements and procedures applicable to claims for USMCA preferential tariff treatment for covered vehicles, CBP has included subpart I, *Automotive Goods,* in part 182 of title 19 of the CFR.

Steel Purchasing and Aluminum Purchasing Requirements

USMCA Article 6 of the Automotive Appendix sets forth the steel purchasing and aluminum purchasing requirements. In addition to the other product-specific rules of origin and requirements in USMCA Chapter 4, a covered vehicle imported into the United States is eligible for USMCA preferential tariff treatment only if the producer of the covered vehicle meets both the steel purchasing and the aluminum purchasing requirements, as set forth in USMCA Article 6 of the Automotive Appendix, section 17 of the Uniform Regulations regarding Rules of Origin, and General Note 11(k)(v), HTSUS, or, if the producer is subject to an alternative staging regime, as set forth in USMCA Articles 6 and 8 of the Automotive Appendix, section 19 of the Uniform Regulations regarding Rules of Origin, and General Note 11(k)(viii), HTSUS.

Generally, subject to certain exceptions and conditions, the steel purchasing and aluminum purchasing requirements provide that a passenger vehicle, light truck, or heavy truck is originating under the USMCA only if, during the calculation period specified, at least 70 percent, by value, of the vehicle producer's purchases, at the corporate level in the territories of one or more of the USMCA countries, of steel are of originating goods, and at least 70 percent, by value, of the vehicle producer's purchases at the corporate level in the territories of one or more of the USMCA countries of aluminum are of originating goods. *See* USMCA Article 6 of the Automotive Appendix and section 17(1) of the Uniform Regulations regarding Rules of Origin. In order to facilitate implementation of the steel and aluminum purchasing requirements in accordance with USMCA Article 6.3 of the Automotive Appendix, Table S of the Uniform Regulations regarding Rules of Origin contains the HS subheadings for the steel and aluminum, including structural steel or aluminum goods used in the production of covered vehicles, that are subject to the USMCA steel purchasing and aluminum purchasing requirements.

For purposes of determining whether the producer of a covered vehicle has met the steel purchasing and aluminum purchasing requirements, the producer may calculate the purchases of this steel and aluminum on the basis of the categories set forth in section 17(9) of the Uniform Regulations regarding Rules of Origin. The applicable calculation periods, over which the producer of a covered vehicle may calculate the purchases of steel or aluminum, are provided for in sections 16(4), 16(5) and 17(7) of the Uniform Regulations regarding Rules of Origin. The producer of a covered vehicle may choose different calculation periods for its steel purchasing calculation and its aluminum purchasing calculation. *See* section 17(10) of the Uniform Regulations regarding Rules of Origin.

A covered vehicle is eligible for USMCA preferential tariff treatment only if the producer of the covered vehicle provides a properly filed certification to CBP that the producer meets its steel purchasing and aluminum purchasing requirements, and the producer has information on record to support the calculations relied on for the certification. *See* section 202A(c)(2)(A) of the USMCA Implementation Act (19 U.S.C. 4532(c)(2)(A)). The producer of a covered vehicle is required to provide both a steel purchasing certification and

an aluminum purchasing certification to CBP. CBP must ensure that both the steel purchasing certification and the aluminum purchasing certification do not contain omissions or errors before the certification is considered properly filed. *See* 19 U.S.C. 4532(c)(2)(B)(i). Section 202A(c)(2)(C) of the USMCA Implementation Act (19 U.S.C. 4532(c)(2)(C)) authorizes the Secretary of the Treasury to prescribe regulations for a producer of a covered vehicle to certify that it meets the steel purchasing and aluminum purchasing requirements to qualify for USMCA preferential tariff treatment. Accordingly, CBP is adding regulations to 19 CFR part 182, subpart I, setting forth the steel purchasing and aluminum purchasing requirements, and the requirements and procedures for submission of the steel purchasing certification and the aluminum purchasing certification.

LVC Requirement

USMCA Article 7 of the Automotive Appendix sets forth the LVC requirement. In addition to the other product-specific rules of origin and requirements in USMCA Chapter 4, a covered vehicle imported into the United States is eligible for USMCA preferential tariff treatment only if the producer of the covered vehicle meets the LVC requirement, as set forth in USMCA Article 7 of the Automotive Appendix, section 18 of the Uniform Regulations regarding Rules of Origin, and General Note 11(k)(vi), HTSUS, or, if the producer is subject to an alternative staging regime, as set forth in USMCA Articles 7 and 8 of the Automotive Appendix, section 19 of the Uniform Regulations regarding Rules of Origin, and General Note 11(k)(viii), HTSUS. The applicable calculation periods, over which the producer of a covered vehicle may calculate the LVC, are provided for in sections 16(4), 16(5), and 18(19) (note only the calculation periods in section 18(19) are referenced in the DOL interim regulations at 29 CFR part 810) of the Uniform Regulations regarding Rules of Origin.

The LVC requirement is administered by both CBP and DOL. Section 202A of the USMCA Implementation Act (19 U.S.C. 4532) prescribes CBP's and DOL's roles in implementing and administering the LVC requirement. Each agency has distinct areas of responsibility and CBP will work in conjunction with DOL to review the LVC certification and to perform verifications of covered vehicles that involve the LVC requirement. Pursuant to section 202A of the USMCA Implementation Act (19 U.S.C. 4532), DOL is responsible for implementing and administering the high-wage components of the LVC requirement, which include the wage components of the high-wage material and manufacturing expenditures, the high-wage technology expenditures, and the high-wage assembly expenditures. CBP is responsible for determining whether a covered vehicle meets the LVC requirement generally, based on DOL's high-wage components analysis and CBP's analysis of the valuation and other components of the LVC calculation. CBP is solely responsible for determining whether a covered vehicle is an originating good qualifying for USMCA preferential tariff treatment. The DOL regulations that set forth the high-wage components of the LVC requirement and the applicable procedures are contained in 29 CFR part 810. The DOL and CBP regulations, including the requirements and procedures, are intended to operate in conjunction with each other in accordance with 19 U.S.C. 4532(c)(1) and (e). CBP's and DOL's roles in the implementation and the administration of the LVC requirement are described in more detail below.

A covered vehicle is only eligible for USMCA preferential tariff treatment if the producer of the covered vehicle provides a properly filed certification to CBP that the production of covered vehicles by the producer meets the LVC requirement, and the producer has information on record to support those calculations. *See* section 202A(c)(1)(A) of the USMCA Implementation Act (19 U.S.C. 4532(c)(1)(A)). For purposes of determining whether a covered vehicle meets the LVC requirement, the producer of the covered vehicle must calculate the LVC requirement pursuant to General Note 11(k)(vi), HTSUS, section 18 of the Uniform Regulations regarding Rules of Origin, the requirements for the high-wage components of the LVC requirement set forth in the DOL regulations at 29 CFR part 810, and these regulations.

The USMCA Implementation Act also sets forth CBP's and DOL's responsibilities with respect to the review of the LVC certification. The Secretary of Labor, in consultation with the Commissioner of CBP, must ensure that the LVC certification does not contain omissions or errors before the certification is considered properly filed. *See* 19 U.S.C. 4532(c)(1)(B)(i). Consistent with the USMCA Implementation Act and the DOL regulations, DOL's role in the LVC certification is limited to reviewing the high-wage components of the LVC certification for omissions or errors. Section 202A(c)(1)(C) of the USMCA Implementation Act (19 U.S.C. 4532(c)(1)(C)) authorizes the Secretary of the Treasury, in consultation with the Secretary of Labor, to prescribe regulations for a producer of a covered vehicle to certify that it meets the LVC requirement to qualify for USMCA preferential tariff treatment. On July 1, 2020, DOL promulgated its USMCA implementing regulations in an IFR published in the **Federal Register** (85 FR 39782), entitled ''High-Wage Components of the Labor Value Content Requirements Under the United States-Mexico-Canada Agreement Implementation Act,'' which added a new part 810 to title 29 of the CFR to address the requirements and establish procedures for vehicle producers to follow concerning the high-wage components of the LVC requirement. In this document, CBP is adding regulations to 19 CFR part 182, subpart I, setting forth the LVC requirement, and the requirements and procedures for submission of the LVC certification to CBP.

Alternative Staging Regime

The USMCA includes a standard staging regime for automotive good requirements to allow for a period of transition to lessen the burden on vehicle producers and grant them more time to meet the new requirements. Additionally, the USMCA Automotive Appendix includes provisions allowing vehicle producers to request an alternative staging regime to facilitate a longer period of transition to ensure that future production is able to meet the new requirements of the USMCA. The alternative staging regime differs from the standard staging regime by providing the vehicle producer with additional time, different phase-ins for certain product-specific rules of origin for automotive goods, and different threshold requirements.

While an alternative staging regime provides an alternative to certain product-specific rules of origin requirements for covered vehicles, it does not replace any other USMCA rules of origin or provisions of general applicability for covered vehicles claiming USMCA preferential tariff treatment. Specifically, USMCA Article 8 of the Automotive Appendix states that each USMCA country will provide that, for a period ending no later than five years after entry into force (July 1, 2025) or any other period provided for in the producer's approved alternative staging regime for passenger vehicles or light trucks and for a period ending no later than seven years after entry into force (July 1, 2027) for heavy trucks, covered vehicles may be originating

under the USMCA pursuant to an alternative staging regime. An alternative staging regime is the application of the less stringent requirements of USMCA Article 8 of the Automotive Appendix to the production of covered vehicles for the duration of the alternative staging regime period to allow producers of such vehicles to bring production into full compliance with the more stringent requirements of USMCA Articles 2 through 7 of the Automotive Appendix. *See* 19 U.S.C. 4532(a)(1). As provided in USMCA Article 8.6 of the Automotive Appendix, a rule of origin applicable to a covered vehicle as a result of an alternative staging regime applies in place of any other rule of origin for that good.

Pursuant to General Note 11(k)(viii), HTSUS, including as may be further provided for in subchapter XXIII of chapter 99 of the HTSUS, and the Uniform Regulations regarding Rules of Origin, a covered vehicle may be originating pursuant to an alternative staging regime. Section 202A(d) of the USMCA Implementation Act (19 U.S.C. 4532(d)) sets forth the U.S. alternative staging regime. USTR, in consultation with the Interagency Committee on Trade in Automotive Goods established in Executive Order 13908 (February 28, 2020) (''Interagency Committee''), has the authority to set the alternative staging regime requirements, procedures, and criteria to submit petitions to use an alternative staging regime, as well as to review petitions to use an alternative staging regime, approve an alternative staging regime, approve requests for modifications of the petitions, as necessary, and make determinations that a vehicle producer subject to the alternative staging regime failed to meet the requirements of the alternative staging regime.

In accordance with 19 U.S.C. 4532(d)(1), on April 21, 2020, USTR published a notice in the **Federal Register** (85 FR 22238), entitled ''Procedures for the Submission of Petitions by North American Producers of Passenger Vehicles or Light Trucks To Use the Alternative Staging Regime for the USMCA Rules of Origin for Automotive Goods,'' providing guidance to vehicle producers seeking to request an alternative staging regime for the USMCA rules of origin for automotive goods. The **Federal Register** notice specified the vehicle producers that are eligible to petition for an alternative staging regime and the requirements that vehicle producers must comply with during and after the alternative staging regime.

CBP may deny USMCA preferential tariff treatment for claims where vehicle producers fail to meet the standard automotive good requirements without an authorized alternative staging regime, or a determination has been made that the producer fails to meet the requirements of the alternative staging regime as outlined by USTR in the **Federal Register** notice. An alternative staging regime for a passenger vehicle or light truck is valid for five years (in contrast to seven years for heavy trucks) after the USMCA's entry into force unless the vehicle producer requests a longer period and that longer period is accepted by USTR. In accordance with 19 U.S.C. 4532(d)(3)(B), USTR will maintain a public list of the names of vehicle producers it has authorized to use an alternative staging regime. If USTR subsequently determines pursuant to 19 U.S.C. 4532(d)(5) that a producer failed to meet the requirements of its alternative staging regime, USTR may remove the producer's name from the public list. In that instance, the producer's vehicles will no longer be eligible for USMCA preferential tariff treatment pursuant to the previously approved alternative staging regime and notwithstanding the finality of a liquidation of an entry, the importer of any covered vehicle of that producer will be liable for the duties, taxes, and fees that would have been applicable to that vehicle if USMCA preferential tariff treatment pursuant to the alternative staging regime had not been applied plus interest assessed on or after the date of entry and before the date of the USTR determination. *See* 19 U.S.C. 4532(d)(5)(A). After expiration of the alternative staging period, all claims for USMCA preferential tariff treatment for covered vehicles must meet the rules of origin set forth in USMCA Articles 2 through 7 of the Automotive Appendix.

Recordkeeping

As explained in more detail below in section III.D. of this IFR, section 206(a) of the USMCA Implementation Act amended 19 U.S.C. 1508 to implement the USMCA recordkeeping requirements. Certain amendments apply only to covered vehicles. Pursuant to section 206(a) of the USMCA Implementation Act (19 U.S.C. 1508(b)(4)(B)), any vehicle producer whose goods are the subject of a claim for USMCA preferential tariff treatment must make, keep, and pursuant to the rules and regulations promulgated by the Secretary of the Treasury and Secretary of Labor, render for examination and inspection records and supporting documents related to the LVC, steel purchasing, and aluminum purchasing requirements. The vehicle producer must retain these records and supporting documents for a period of at least five years after the date of filing of the vehicle certifications and render them for examination and inspection upon request. *See* 19 U.S.C. 1508(b)(5)(C)(ii). The DOL recordkeeping requirements related to the high-wage components for the LVC requirement for vehicle producers are located at 29 CFR part 810.

Any importer who claims USMCA preferential tariff treatment for a good imported into the United States must make, keep, and, pursuant to the rules and regulations prescribed by the Secretary of the Treasury and the Secretary of Labor, render for examination and inspection the records and supporting documentation related to the importation, all records and supporting documents related to the origin of the good if the importer completed the certification of origin, and the transshipment records. *See* 19 U.S.C. 1508(b)(4)(A). Since the vehicle certifications and any records and supporting documents related to the LVC, steel purchasing, and aluminum purchasing certifications are records related to the origin of the good under 19 U.S.C. 1508(b)(4)(A)(ii), an importer is only required to make, keep, and render for examination and inspection these records if the importer completed the certification of origin. The DOL recordkeeping requirements, related to the high-wage components of the LVC requirement, for importers making a claim for USMCA preferential tariff treatment for covered vehicles, are located at 29 CFR part 810.

Verifications

A USMCA country may conduct a verification of a covered vehicle pursuant to the general verification means, requirements, and procedures set forth in USMCA Article 5.9. Pursuant to section 202A(e)(1) of the USMCA Implementation Act (19 U.S.C. 4532(e)(1)), as part of a general verification conducted under USMCA Article 5.9 (19 U.S.C. 4533), the Secretary of the Treasury, in conjunction with the Secretary of Labor, may conduct a verification of whether a covered vehicle complies with the LVC requirement. The USMCA Implementation Act specifies the role of CBP and the role of DOL in a verification of a covered vehicle. DOL, in cooperation with the Secretary of the Treasury, will participate in any verification of the LVC requirement by verifying whether the production of covered vehicles by a producer meets the high-wage components of the LVC requirement, including the wage component of the high-wage material

and manufacturing expenditures, the high-wage technology expenditures, and the high-wage assembly expenditures. *See* 19 U.S.C. 4532(e)(2). During a verification of a covered vehicle involving the LVC requirement, the Secretary of the Treasury will verify the components of the LVC requirement not covered by DOL and determine whether the producer has met the LVC requirement. *See* 19 U.S.C. 4532(e)(3). The USMCA Implementation Act also specifies the actions that DOL will take during a verification and the nature of the information that may be requested. *See* 19 U.S.C. 4532(e)(4). In accordance with these requirements, CBP is adding verification requirements and procedures to the regulations in 19 CFR part 182, subpart I, addressing verifications of covered vehicles involving the LVC requirement. These verification requirements will apply in addition to the general verification regulations in 19 CFR part 182, subpart G. Furthermore, the DOL regulations at 29 CFR part 810 set forth the parameters, requirements, and procedures for DOL's verification of the high-wage component of the LVC requirement.

III. Amendments to the Regulations

Pursuant to section 210(a) of the USMCA Implementation Act (19 U.S.C. 4535(a)), the Secretary of the Treasury has the authority to prescribe regulations as needed to implement the USMCA. Pursuant to this authority, this IFR codifies numerous key USMCA provisions implementing the USMCA for the United States. This IFR promulgates CBP regulations to implement the USMCA requirements and procedures trilaterally agreed to by the USMCA countries under the USMCA, the Uniform Regulations regarding the Rules of Origin, and the Uniform Regulations regarding Origin Procedures. Specifically, this IFR amends existing provisions and adds new provisions to the CBP regulations to implement the additional USMCA Chapter 1 general definitions; the remaining USMCA Chapter 2 drawback and duty-deferral program provisions; the USMCA Article 2.7 temporary admission of goods provisions; the USMCA Chapter 4 product-specific rules of origin for automotive goods; the USMCA Article 5.8 recordkeeping requirements for importers, exporters, and producers; the USMCA general origin verification requirements and procedures; the USMCA Article 5.10 determination of origin provisions; the USMCA Article 5.14 advance rulings requirements; the USMCA Article 5.15 review and appeal of determinations of origin and advance rulings provisions; the USMCA Chapter 6 product-specific rules of origin for textiles and apparel goods; and the USMCA Chapter 7 provisions related to customs administration and trade facilitation.

In order to provide transparency and facilitate their use, the majority of the USMCA implementing regulations are set forth in part 182 of title 19 of the CFR, entitled the *United States-Mexico-Canada Agreement*. Part 182 sets forth the USMCA preferential tariff treatment and other customs related provisions. This IFR amends part 182 to add regulations implementing remaining portions of USMCA Chapters 1, 2, 4, 5, and 6, as discussed above, to the existing part 182 regulatory framework. Additionally, this IFR makes amendments to other parts of title 19 of the CFR, including parts 10, 24, 113, 123, 141, 144, 163, and 174, to implement relevant provisions in USMCA Chapters 2, 5, 6, and 7.

All of the regulatory amendments made in this document implement the USMCA, the Uniform Regulations regarding Rules of Origin, and the Uniform Regulations regarding Origin Procedures, as trilaterally agreed to by the United States, Mexico, and Canada, into the CBP regulations. These regulatory amendments are also consistent with the USMCA Implementation Act (19 U.S.C. Chapter 29). The United States adopted the USMCA through the enactment of the USMCA Implementation Act, which provides CBP with the statutory authority to promulgate these additional USMCA implementing regulations appropriate to carry out the actions required by or authorized under the USMCA Implementation Act or proposed in the Statement of Administrative Action approved under 19 U.S.C. 4511(a)(2) to implement the USMCA, as required by Section 103(b)(1) of the USMCA Implementation Act (19 U.S.C. 4513(b)(1)).

A. Part 10

1. Section 10.31

Section 10.31 sets forth the temporary importations under bond (TIB) provisions for articles brought into the United States temporarily and claimed to be exempt from duty under Chapter 98, Subchapter XIII, HTSUS. Paragraph (f) of § 10.31 provides exceptions to the general rule that for temporary importations, a bond is required in an amount equal to double the duties and fees (or a larger amount as required by the Center of Excellence and Expertise (Center) director), which it is estimated the articles would accrue had all the articles covered by the entry been entered under an ordinary consumption entry.

USMCA Article 2.7, *Temporary Admission of Goods,* provides that each USMCA country must grant duty-free temporary admission for: (a) professional equipment, including equipment for the press or television, software, and broadcasting and cinematographic equipment, that is necessary for carrying out the business activity, trade, or profession of a person who qualifies for temporary entry; (b) a good intended for display or demonstration, including its component parts, ancillary apparatus and accessories; (c) commercial samples and advertising films and recordings; and (d) a good admitted for sports purposes, admitted from the territory of another USMCA country, regardless of its origin. *See* USMCA Article 2.7.1. Under USMCA Article 2.7.2, a USMCA country may condition the duty-free temporary admission of the above-mentioned goods on certain requirements. Under Article 2.7.2(d) of the USMCA, a USMCA country may also condition the duty-free temporary admission of one of the above-mentioned goods on the requirement that the good be accompanied by security in an amount no greater than 110 percent of the charges that would otherwise be owed on entry or importation, and releasable on exportation of the good. Section 10.31(f) currently provides that ''the bond required to be given shall be in an amount equal to 110 percent of the estimated duties, including fees, determined at the time of entry.'' Section 10.31(f) applies this 110 percent limitation to the goods listed in USMCA Article 2.7.1(a) through (d) when the goods are originating and applies to the goods listed in USMCA Article 2.7.1(a) and (c) when the goods are non-originating. Thus, CBP is adding a new last sentence to 19 CFR 10.31(f) to clarify that this 110 percent limitation also applies to the goods listed in USMCA Article 2.7.1(b) and (d) when the goods are non-originating. The new last sentence reads: ''In the case of articles imported for sports purposes and articles intended for display or demonstration, if brought into the United States by a national of Canada or Mexico, the bond shall be without surety or cash deposit in an amount equal to 110 percent of the estimated duties and fees determined at the time of entry, if the entered article is not originating, within the meaning of General Notes 11 and 12, HTSUS, in the country of which the importer is a national.''

Pursuant to USMCA Article 2.7.2(a), another requirement that a USMCA country may condition the duty-free temporary admission of a good on is the good being imported by a national of another USMCA country who seeks temporary entry. Article 1.5 (Section B) of USMCA Chapter 1 defines ''a national of the United States'' as defined in the *Immigration and Nationality Act.* Additionally, a bond for customs duties must not be required for an originating good. *See* USMCA Article 2.7.2(d).

In accordance with these requirements, § 10.31(f) allows for the duty-free temporary importation of the remaining above-mentioned articles without a bond if the articles qualify as originating. Section 10.31(f) currently states that, in the case of professional equipment necessary for carrying out the business activity, trade or profession of a business person, equipment for the press or for sound or television broadcasting, cinematographic equipment, articles imported for sports purposes and articles intended for display or demonstration, if brought into the United States by a resident of Canada or Mexico and entered under Chapter 98, Subchapter XIII, HTSUS, no bond or other security will be required if the entered article is an originating good. For this purpose, an originating good is defined as originating within the meaning of certain general notes of the HTSUS listed in § 10.31(f), in the country of which the importer is a resident.

In accordance with USMCA Article 2.7.2(a), CBP is revising the sixth sentence of 19 CFR 10.31(f) to require that the article being brought into the United States be brought in by a national of Canada or Mexico, as opposed to a resident of Canada or Mexico, to qualify as originating goods. Additionally, CBP is revising the sixth sentence of 19 CFR 10.31(f) to add General Note 11, HTSUS, to the list of applicable general notes.
