Finally, CBP is revising 19 CFR 10.31(f) to clarify the general rule that, for temporary importations, a bond is required in an amount equal to double the duties and fees (or a larger amount as required by the Center of Excellence and Expertise (Center) director), which it is estimated the articles would accrue had all the articles covered by the entry been entered under an ordinary consumption entry. Fees and duties are distinct and are covered by separate articles in the General Agreement on Tariffs and Trade (GATT). Thus, CBP is revising the language in 19 CFR 10.31(f) from ''duties, including fees'' in both instances where it is referenced to ''duties and fees'' to clarify that fees are not included in duties.

2. Section 10.36a

Section 10.36a sets forth the provisions for the temporary importation of vehicles, pleasure boats, and aircraft brought into the United States by an operator for repair or alteration. Specifically, § 10.36a currently defines the phrase ''for repair or alteration'' with a reference to §§ 10.8, 10.490, 10.570, and 181.64 of title 19 of the CFR. The definition of ''repairs or alterations'' in §§ 10.490, 10.570, and 181.64 of title 19 of the CFR provides that ''repairs or alterations'' means restoration, addition, renovation, re-dyeing, cleaning, re-sterilizing, or other treatment that does not destroy the essential characteristics of, or create a new or commercially different good from, the good exported from the United States. This definition of ''repairs or alterations'' is included in 19 CFR 182.112, which contains the rules that apply for purposes of obtaining duty-free treatment of goods returned after repair or alteration in Canada or Mexico under the USMCA. CBP has decided that, rather than adding additional cross-references in § 10.36a to § 182.112 and the other relevant FTA regulations, CBP will add the definition of ''repair or alteration'' to § 10.36a to make it more transparent to the public. Thus, CBP is revising § 10.36a to remove the cross-references and to add the text of the definition of ''repairs or alterations.''

3. Section 10.41a

Pursuant to section 322(a) of the Tariff Act of 1930, as amended (19 U.S.C. 1322(a)), vehicles and other instruments of international traffic, of any class specified by the Secretary of the Treasury, shall be excepted from the application of the customs laws to the extent that such terms and conditions are prescribed in regulations or instructions. Sections 10.41, 10.41a, and 10.41b of title 19 of the CFR set forth the qualifications for designating instruments of international traffic (IITs) and the conditions under which they may be released without entry or the payment of duty. Section 10.41a(a)(1) designates lift vans, cargo vans, shipping tanks, skids, pallets, caul boards, and cores for textile fabrics, arriving (whether loaded or empty) in use or to be used in the shipment of merchandise in international traffic as ''instruments of international traffic.'' The Commissioner of CBP is also authorized, under § 10.41a(a)(1), to designate additional articles or classes of articles as instruments of international traffic. CBP has repeatedly held that to qualify as an instrument of international traffic, the article must be a substantial container or holder.

A container that is designated as an instrument of international traffic is deemed to remain in international traffic provided that the container exits the United States within 365 days of the date it was admitted. *See* 19 CFR 10.41a(g)(1). When such a container does not exit the United States within 365 days of the date on which it is admitted, it shall be considered to have been removed from international traffic and an entry for consumption must be made. *See* 19 CFR 10.41a(g)(3).

Currently, § 10.41a(g) does not allow for an extension beyond the prescribed 365-day time period. Any instrument of international traffic that remains in the United States for a period exceeding 365 days triggers the entry requirement imposed by § 10.41a(g)(3). However, USMCA Article 2.7.11 specifically requires that each USMCA country must extend the timeframe for temporary admission of a shipping container or other substantial holder beyond the period initially fixed at the request of the person concerned. Accordingly, CBP is revising 19 CFR 10.41a(g)(1) to allow CBP to grant an extension and permit the IIT container to remain in international traffic beyond the 365-day time period, at the request of the person who filed the application for release under § 10.41a(a)(1), when the container is designated as an instrument of international traffic and was admitted from Canada or Mexico. The request for extension should be submitted to CBP in the Automated Commercial Environment (ACE), prior to the end of the 365-day time period. The request must contain the container number, last arrival date, intended departure date, and the reason for delay in removing the container or holder from the United States. CBP will notify the individual who filed the application for release of the details of the extension in ACE.

CBP is also amending paragraph (g)(3) to clarify that a container that does not exit the United States by the date the extension expires shall be treated the same as a container, without an extension, that does not exit the United States within the prescribed 365-day time period. A container that is designated as an instrument of international traffic and granted an extension under paragraph (g)(1) will be considered to have been removed from international traffic and an entry for consumption must be made if the container does not exit the United States prior to the date of expiration of the extension granted.

4. Section 10.301

Subpart G of part 10 sets forth the provisions related to the United States-Canada Free Trade Agreement. Specifically, § 10.301 provides the scope and applicability of the United States-Canada Free Trade Agreement, including that the United States and Canada agreed to suspend operation of the Agreement from January 1, 1994. This suspension date was to coincide with the entry into force of NAFTA. With the simultaneous repeal of NAFTA (*see* section 601 of the USMCA Implementation Act) and the entry into force of the USMCA as of July 1, 2020, the United States and Canada have agreed to continue suspending operation of the United States-Canada Free Agreement.

Section 501(c) of the United States-Canada Free Trade Agreement Implementation Act of 1988 (Pub. L. 100–449; 19 U.S.C. 2112 note) sets forth the termination or suspension provisions of the United States-Canada Free Trade Agreement. In section 602 of the USMCA Implementation Act, Congress amended section 501(c)(3) of the United States-Canada Free Trade Agreement Implementation Act of 1988 to state that the United States and Canada agreed to suspend the operation of the United States-Canada Free Trade Agreement by reason of the entry into force of the USMCA until such time as the suspension of the United States-Canada Free-Trade Agreement may be terminated. Accordingly, CBP is revising 19 CFR 10.301 to add a reference to the USMCA to indicate that the United States-Canada Free Trade Agreement continues to remain suspended with the entry into force of the USMCA and to provide the public with the relevant citation to the USMCA regulations in part 182.

5. Technical Corrections in Part 10

The implementing legislation for the African Growth and Opportunity Act (AGOA) and the Caribbean Basin Economic Recovery Act (CBERA), as amended by the United States-Caribbean Basin Trade Partnership Act (CBTPA), trade preference programs contained the NAFTA rules of origin. *See* 19 U.S.C. 3721 and 19 U.S.C. 2702. Accordingly, the implementing regulations for these programs in part 10 of title 19 of the CFR, which followed the statutory language, contain numerous references to NAFTA. Subpart D of part 10 sets forth the textile and apparel articles under the AGOA provisions (*see* 19 CFR 10.211–10.217) and subpart E of part 10 contains the textile and apparel articles and the non-textile articles under the CBTPA provisions (*see* 19 CFR 10.221–10.237).

As stated above, on July 1, 2020, section 601 of the USMCA Implementation Act repealed the NAFTA Implementation Act and references to NAFTA became outdated. On December 27, 2020, section 602 of Title VI of the Appropriations Act set forth technical corrections to other laws, including AGOA and CBERA (as amended by CBTPA), which replaced the outdated references to NAFTA with references to the USMCA. *See* section 602(a) and (b) of Title VI of the Appropriations Act. These technical corrections are retroactively effective on July 1, 2020, the USMCA's entry into force date. *See* section 602(g) of Title VI of the Appropriations Act. Accordingly, CBP is amending §§ 10.212(l), 10.213(a)(8), 10.214(b), 10.214(c)(12), 10.222, 10.223(a)(7), 10.224(c)(12), 10.232, 10.233(b), and 10.237(b), which include various references to NAFTA (*e.g.,* definitions for ''NAFTA'' in §§ 10.212, 10.222, and 10.232), to include accurate references to the USMCA in accordance with the technical corrections made to 19 U.S.C. 3721 and 19 U.S.C. 2702.

B. Part 24

1. Section 24.23

Section 24.23 provides the terms and conditions for merchandise processing fees. Paragraph (c) contains the exemptions. Specifically, paragraph (c)(3) states that the ad valorem, surcharge, and specific fees provided for under paragraphs (b)(1) and (b)(2) will not apply to goods originating in Canada or Mexico under NAFTA within the meaning of General Note 12, HTSUS.

The USMCA also provides a merchandise processing fee exemption. USMCA Article 2.16.3 states that no USMCA country shall adopt or maintain a customs user fee on an originating good, with footnote 3 further clarifying that this commitment only applies to the United States with respect to the merchandise processing fee. In accordance with this commitment, section 203 of the USMCA Implementation Act amended section 13031(b)(10)(B) of the Consolidated Omnibus Budget Reconciliation Act of 1985 (19 U.S.C. 58c(b)(10)(B)) to specify that no fee for the processing of merchandise may be charged for goods that qualify as originating goods under 19 U.S.C. 4531 or that qualify for duty-free treatment under USMCA Annex 6–A.

Accordingly, CBP is revising 19 CFR 24.23(c)(3) to clarify that originating goods and textile or apparel goods subject to a TPL, for which a claim for preferential tariff treatment under the USMCA is made, are also exempt from the merchandise processing fees. When the importer makes a claim for USMCA preferential tariff treatment, the ad valorem, surcharge, and specific fees provided for under § 24.23(b)(1) and (b)(2) do not apply to goods originating under the USMCA within the meaning of General Note 11, HTSUS (*see also* 19 U.S.C. 4531), or to textile or apparel goods subject to a TPL that qualify for preferential tariff treatment under § 182.82 (*see also* Annex 6–A of the USMCA), that are entered for consumption, or withdrawn from warehouse for consumption, on or after July 1, 2020.

2. Section 24.36

Section 24.36 sets forth the procedures and conditions under which a refund of excessive duties, taxes, fees, or interest will be due when discovered upon, or prior to, liquidation or reliquidation of an entry or reconciliation. Paragraph (a)(1) provides that the refund shall include interest on the excess money deposited with CBP and the dates that such interest shall start to accrue, including for proper claims filed under 19 U.S.C. 1520(d) and subpart D of part 181. Since the statutory authority for this regulation, 19 U.S.C. 1505, allows for interest on excess moneys to accrue for claims made under 19 U.S.C. 1520(d), CBP is removing the specific reference to subpart D of part 181. The addition of the cross-reference to subpart D of part 181, which contains the NAFTA post-importation claim provisions, unintentionally limited § 24.36 to apply only to NAFTA post-importation claims when 19 U.S.C. 1505 allows for interest on refunds on 19 U.S.C. 1520(d) claims.

C. Part 123

Section 123.0

Part 123 contains the special regulations pertaining to CBP procedures at the Canadian and Mexican borders including provisions governing reports of arrival, manifesting, unlading and lading, instruments of international traffic, shipments in transit through Canada or Mexico, commercial traveler's samples transiting the United States or Canada, baggage arriving from Canada or Mexico, and electronic information for rail and truck cargo in advance of arrival. Section 123.0 sets forth the scope of part 123 and provides the relevant cross-references to the other applicable parts of title 19 of the CFR that address CBP procedures for

Canadian and Mexican goods. Accordingly, CBP is revising § 123.0 to add the applicable cross-reference to the USMCA regulations in part 182.

D. Part 163

Part 163, *Recordkeeping,* sets forth the recordkeeping requirements and procedures governing the maintenance, production, inspection, and examination of records. Pursuant to section 508 of the Tariff Act of 1930, as amended (19 U.S.C. 1508(a)), any owner, importer, consignee, importer of record, entry filer, or other party who imports merchandise into the customs territory of the United States, files a drawback claim, transports or stores merchandise carried or held under bond, or knowingly causes the importation or transportation or storage of merchandise carried or held under bond into or from the customs territory of the United States, or an agent of any of these parties, or a person whose activities require the filing of a declaration or entry or both, must make, keep, and render for examination and inspection certain records. The USMCA recordkeeping requirements are set forth in USMCA Article 5.8 and the Uniform Regulations regarding Origin Procedures. USMCA Article 5.8.1 provides the types of records that importers must maintain and the retention periods while Article 5.8.2 includes a list of records applicable exporters and producers must maintain and the retention periods. To implement these USMCA recordkeeping requirements, section 206 of the USMCA Implementation Act amended 19 U.S.C. 1508(b) and (e)(1) to add the recordkeeping requirements and penalty provisions that apply to USMCA exports and imports.

CBP is amending part 163, as applicable, to include these recordkeeping requirements. Also, as noted in the scope of part 163, § 163.0, which was previously amended in a prior rulemaking, additional provisions concerning records maintenance and examination applicable to U.S. importers, exporters, and producers under the USMCA are contained in part 182. If the importer, exporter, or producer who is required to maintain records pursuant to parts 163 and 182 does not maintain, or denies access to, the records or documentation required under 19 U.S.C. 1508, CBP may deny USMCA preferential tariff treatment. Failure to comply with these recordkeeping requirements by U.S. importers, exporters, or producers may result in the imposition of penalties under 19 U.S.C. 1508(e)(1).

1. Exporter and Producer Recordkeeping Responsibilities

In accordance with 19 U.S.C. 1508(a), the part 163 recordkeeping provisions generally do not apply to exporters and producers, with a few notable exceptions. These exceptions are set forth in § 163.2(c) and include applicable NAFTA exporters and USMCA exporters and producers. CBP, in a prior rulemaking, amended § 163.2(c)(2) to add USMCA exporters and producers who complete a certification of origin, or USMCA producers who provide a written representation, for a good exported from the United States to Canada or Mexico, to the list of persons required to maintain records in accordance with part 163. Accordingly, U.S. USMCA exporters and producers must maintain the required records pursuant to the requisite retention periods in part 163 and in the prescribed format as described in § 163.5. An exporter or producer who completes a certification of origin or a producer that provides a written representation must maintain all records necessary to demonstrate that the good is originating, including the records specified in USMCA Article 5.8.2(a), (b), and (c), for five years after the date on which the certification of origin was completed. *See also* 19 U.S.C. 1508(b)(2). To implement this USMCA requirement, CBP, in a prior rulemaking, added 19 CFR 182.21(c) requiring U.S. exporters or producers exporting from the United States to Canada or Mexico to maintain these records.

Additionally, in accordance with 19 U.S.C. 1508(b), CBP has promulgated recordkeeping requirements on foreign exporters and producers whose goods are imported into the United States under the USMCA. It is important to note that these requirements are set forth in 19 CFR part 182, not part 163, because the requirements are imposed on foreign exporters and producers whose goods are imported into the United States, and not on the U.S. exporters and producers covered by part 163. *See* 19 CFR 163.2(c)(2). These additional provisions concerning records maintenance and examination applicable to exporters and producers under the USMCA include 19 CFR 182.73(a)(2) and 182.74(c), which require exporters and producers subject to a verification to make the records available for inspection by a CBP official during the verification, 19 CFR part 182, subpart H, which requires that exporters and producers subject to a USMCA Article 6.6 site visit make certain records available, and 19 CFR part 182, subpart I, which establishes additional recordkeeping requirements for producers of covered vehicles whose vehicles are imported into the United States in accordance with 19 U.S.C. 1508(b)(4)(B), including the requirement in § 182.103 for vehicle exporters and producers to maintain records.

2. Importer Recordkeeping Responsibilities

USMCA Article 5.8.1 requires that an importer making a claim for USMCA preferential tariff treatment maintain certain records for a period of no less than five years from the date of importation of the good. In accordance with USMCA Article 5.8.1, 19 U.S.C. 1508(b)(4)(A) requires that any importer who claims preferential tariff treatment under the USMCA for a good imported into the United States must make, keep, and, pursuant to the regulations prescribed by the Secretary of the Treasury and the Secretary of Labor, render for examination and inspection: the records and supporting documentation related to the importation; all records and supporting documents related to the origin of the good, if the importer completed the certification of origin; and records and supporting documents related to transshipment.

To implement this USMCA requirement, CBP, in a prior rulemaking, added these importer recordkeeping requirements to 19 CFR 182.15. CBP also added 19 CFR 182.73(a)(2), which requires importers subject to a verification to make the records available for inspection by a CBP official during the verification. Importers making a claim for USMCA preferential tariff treatment for covered vehicles imported into the United States must meet the additional recordkeeping requirements set forth in subpart I of part 182, as described in more detail in section III.F., *Subpart I—Automotive Goods,* of this IFR, and must maintain any records related to the high-wage component of the LVC requirement as required by DOL pursuant to 29 CFR part 810. In accordance with 19 U.S.C. 1508(b)(4)(A)(ii), CBP's additional recordkeeping responsibilities for importers of covered vehicles are dependent on whether the importer completed the certification of origin. Specifically, as provided in § 182.104, importers who complete the certification of origin must maintain the vehicle certifications and all the records and supporting documents related to whether the covered vehicle is originating under the LVC, steel purchasing, and aluminum purchasing requirements while an importer who

claims USMCA preferential tariff treatment for a covered vehicle based on a certification of origin completed by the exporter or producer must only maintain the records and supporting documents related to the vehicle certifications that are in the importer's possession.

CBP is amending part 163, as described below, to implement the recordkeeping requirements contained in 19 U.S.C. 1508(b)(4)(A), USMCA Article 5.8, the Uniform Regulations regarding Origin Procedures, and 19 CFR part 182.

a. Section 163.1

Pursuant to § 163.2(a), all importers must maintain, produce, and make the records available for inspection and examination as required under part 163. Section 163.1(a)(1) defines the terms ''records,'' for purposes of part 163, as any information made or normally kept in the ordinary course of business that pertains to any activity listed in § 163.1(a)(2). The term ''records'' includes any information required for the entry of merchandise (the (a)(1)(A) list) and other information pertaining to, or from which is derived, any information element set forth in a collection of information required by the Tariff Act of 1930, as amended, in connection with any activity listed in § 163.1(a)(2). Thus, CBP is amending § 163.1(a)(2) to redesignate paragraph (xviii) as (xix) and add a new paragraph (xviii) to include USMCA records in the list of activities. Specifically, the new paragraph (xviii) will provide for the maintenance of any documentation in support of a claim for preferential tariff treatment under the USMCA pursuant to part 182, including the certification of origin. These records must be maintained by the importer pursuant to § 163.2(a) and the U.S. exporter or producer pursuant to § 163.2(c)(2). Vehicle certifications are not specified in § 163.1(a)(2)(xviii) because, as explained above, the importer is not required to maintain the vehicle certifications and supporting documentation in all instances. Instead, the specific requirements for importers of covered vehicles are addressed by adding 19 CFR 182.104.

b. Section 163.7

Section 163.7 describes the parties to whom CBP may issue a summons to appear and produce records or to give relevant testimony under oath or both, during the course of an investigation, audit, or other inquiry. This includes, among others, importers and any person who exported merchandise or knowingly caused merchandise to be exported to a NAFTA country. CBP is revising § 163.7(a)(2) to add any person who exported merchandise, or knowingly caused merchandise to be exported, to a USMCA country.

c. Appendix to Part 163—Interim (a)(1)(A) List

Section 509(a)(1)(A) of the Tariff Act of 1930, as amended by title VI of Public Law 103–182, commonly referred to as the Customs Modernization Act (19 U.S.C. 1509(a)(1)(A)), requires the production of records, within a reasonable time after demand by CBP if such record is required by law or regulation for the entry of the merchandise, whether or not CBP required its presentation at the time of entry. Pursuant to 19 U.S.C. 1509(e), CBP is required to identify and publish a list of the records and entry information that is required to be maintained and produced under subsection (a)(1)(A) of section 509 (19 U.S.C. 1509(a)(1)(A)). This list is commonly referred to as ''the (a)(1)(A) list.'' CBP is amending section IV of the appendix to part 163 (the (a)(1)(A) list) to add the USMCA documents to the list of records or information required for the entry of merchandise. Accordingly, CBP is adding a reference to 19 CFR 182.13, which sets forth the USMCA importer's obligations, to the (a)(1)(A) list to indicate that USMCA records that the importer may have in support of a USMCA claim for preferential tariff treatment, including the certification of origin, are required entry documents. Vehicle certifications are not included in the (a)(1)(A) list because, as explained above, the importer is not required to maintain the vehicle certifications and supporting documentation in all instances. CBP is also revising the § 10.307 listing in the (a)(1)(A) list to clarify that the United States-Canada Free Trade Agreement (CFTA) provisions continue to be suspended while USMCA remains in effect.

E. Part 174

Part 174, *Protests,* sets forth the general protest procedures pursuant to 19 U.S.C. 1514 for the administrative review of decisions of the port director and Center director. This part contains the requirements for the filing of protests, amendments of protests, review of protests, requests for accelerated disposition, and provisions dealing with further administrative review. Pursuant to 19 U.S.C. 1514(c)(3), a protest of a decision must be filed with CBP within 180 days after the date of liquidation or reliquidation, or if such a date is inapplicable, the date of the decision as to which protest is made.

In extending the protest rights under part 174 to USMCA importers and qualifying exporters or producers, CBP is fulfilling its USMCA commitments under Articles 5.15.1 and 7.15. Article 5.15.1 of the USMCA requires each USMCA country to grant substantially the same rights of review and appeal for determinations of origin to exporters and producers who completed a certification of origin as are granted to importers in its territory. Accordingly, an importer, or a qualified exporter or producer, may file a protest to contest a denial of USMCA preferential tariff treatment of a claim made at entry or a denial of a USMCA post-importation claim. Pursuant to 19 CFR 174.21, the Center director generally must review and act on a protest within two years from the date the protest was filed. If the protest is allowed in whole or in part, the goods will be eligible for USMCA preferential tariff treatment and CBP will refund the duties in accordance with § 174.29.

Article 7.15 of the USMCA addresses the review and appeal of customs determinations. Article 7.15 provides, in part, that the USMCA country must provide the protesting party its decision in the review or appeal in writing and include the reasons for the decision. Article 7.15 also requires that each USMCA country ensure that any person to whom a customs administration issues a determination has access to an administrative appeal or review by an administrative authority higher than or independent of the employee or office that issued the determination, and access to a quasi-judicial or judicial review or appeal made at the final level of administrative review. In accordance with Article 7.15, if the protest is denied, CBP will issue a notice of denial of a protest to any person filing a protest or his/her agent, with the exception of those in which accelerated disposition was requested and no action has been taken within 30 days. The notice of denial will include a statement of the reasons for the denial and a statement informing the protesting party of the right to file a civil action contesting the denial of the protest under 19 U.S.C. 1514. *See* 19 CFR 174.30. Any person whose protest has been denied, in whole or in part, may contest the denial by filing a civil action with the United States Court of International Trade in accordance with 28 U.S.C. 2632. *See* 19 CFR 174.31.

1. Section 174.12

Section 174.12 sets forth the procedures for filing a protest.

Specifically, paragraph (a) states who may file a protest, including the importer, consignee, or their surety, any person paying or receiving a refund of any charge or exaction, any person seeking entry or delivery, any person filing for drawback, and any of these persons' authorized agents. USMCA Article 5.15.1 requires each USMCA country to grant substantially the same rights of review and appeal of determinations of origin to USMCA exporters and producers, who have completed a certification of origin for a good that is the subject of the determination of origin, as it provides to its importers.

Pursuant to 19 U.S.C. 1514(c)(2)(E), any USMCA exporter or producer of merchandise subject to a determination of origin as provided for under 19 U.S.C. 4531 may file a protest, if the exporter or producer completed and signed the certification of origin. Accordingly, CBP is amending § 174.12 by redesignating paragraph (a)(6) as paragraph (a)(7) and by adding a new paragraph (a)(6) stating that, with respect to a determination of origin under subpart G of part 182, any exporter or producer of the merchandise subject to the determination, who completed and signed the USMCA certification of origin, may file a protest. CBP is also amending the redesignated paragraph (a)(7) to allow any authorized agent of the exporter or producer described in paragraph (a)(6) to file a protest on their behalf, subject to the provisions of § 174.3.

While CBP will issue a determination of origin to USMCA exporters and producers of textile or apparel goods subject to TPLs, as explained in more detail in section III.F., *Subpart H-Textile and Apparel Goods,* of this IFR, as required under § 182.75(b), these exporters and producers may not file a protest of this determination of origin under part 174, unless the exporter or producer is also acting as the importer of record. As explained above, pursuant to 19 U.S.C. 1514(c)(2)(E), any USMCA exporter or producer of merchandise subject to a determination of origin as provided for under 19 U.S.C. 4531 may file a protest if the exporter or producer completed and signed the certification of origin. Since goods subject to TPLs are not originating goods, the certification of origin requirement does not apply to textile or apparel goods subject to a TPL claiming USMCA preferential tariff treatment. Accordingly, CBP has no statutory authority to allow these exporters or producers to file a protest under part 174.

Additionally, it is important to note that while USMCA exporters and producers may, to the extent described above, file a protest of a determination of origin, USMCA exporters and producers may not file a protest of a marking determination under the USMCA, unless the exporter or producer is also acting as the importer of record. As noted in the scope of part 174 (19 CFR 174.0), Canadian and Mexican exporters and producers seeking administrative review and appeal of adverse marking decisions under NAFTA had the right to appeal and such rights were set forth in part 181. These specific rights of review and appeal for marking determinations were explicitly contained in Article 510 of NAFTA. However, the USMCA does not provide any such rights. Section 209 of the USMCA Implementation Act struck the language from subsection (k) of section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304(k)), that provided these specific petition rights, such as adverse marking decisions, for NAFTA exporters and producers. Thus, these specific rights and procedures are not provided for under the USMCA or the USMCA Implementation Act, or the relevant statutory or regulatory authority for protests in 19 U.S.C. 1514 and 19 CFR part 174. Accordingly, Canadian and Mexican exporters and producers may not request administrative review of and appeal of marking decisions under the USMCA.

2. Section 174.13

Section 174.13 sets forth the required contents of a protest. Paragraph (a)(9) currently requires the protestant to include a declaration as to whether the entry is the subject of drawback, or whether the entry has been referenced on a certificate of delivery or certificate of manufacture and delivery so as to enable a party to make such entry the subject of drawback. CBP is revising § 174.13(a)(9) to remove the references to the certificate of delivery and the certificate of manufacture and delivery because these certificates were eliminated by the Trade Facilitation and Trade Enforcement Act of 2015 (TFTEA) (Pub. L. 114–125, 130 Stat. 122, February 24, 2016). Accordingly, paragraph (a)(9) will only require a declaration as to whether the entry is the subject of drawback or if there is the ability for a party to make such entry the subject of drawback. CBP is also updating the list of cross-references in § 174.13(a)(9) to include the USMCA drawback provision, § 182.50, and the relevant part 190, *Modernized Drawback,* provision, § 190.81.

3. Section 174.15

Section 174.15 provides for the consolidation of separate protests relating to the same category of merchandise covered by an entry filed by different parties. Pursuant to 19 U.S.C. 1514(c)(1), only one protest may be filed for each entry of merchandise, except that where the entry covers merchandise of different categories, a separate protest may be filed for each category. Separate protests filed by different parties with respect to any one category of merchandise or with respect to a USMCA determination of origin under 19 U.S.C. 4531 are deemed to be part of a single protest. *See* 19 U.S.C. 1514(c)(1). Section 174.15(b) addresses the consolidation of multiple protests concerning a determination of origin for NAFTA transactions, if a NAFTA exporter or producer files one of the protests. In accordance with 19 U.S.C. 1514(c)(1), CBP is revising § 174.15(b) to include determinations of origin for USMCA transactions, if a USMCA exporter or producer described in § 174.12(a)(6) files one of the protests. Paragraph (b)(1) of § 174.15 covers USMCA transactions where all the interested parties who filed protests specifically submit written requests for consolidation. In these instances, all the interested parties are deemed to have waived their rights to confidentiality under § 182.2. Paragraph (b)(2) covers USMCA transactions where no such written requests for consolidation are submitted. In these instances, the interested parties are not deemed to have waived their rights to confidentiality under § 182.2. A separate notice of the decision will be issued to each interested party and must adhere to the USMCA confidentiality provisions set forth in § 182.2.

4. Section 174.22

Pursuant to 19 U.S.C. 1515(a), unless a request for an accelerated disposition of a protest is filed, CBP must review the protest and allow or deny the protest in whole or in part within two years from the date the protest is filed. Subsection (b) of 19 U.S.C. 1515 allows for a request for accelerated disposition of a protest to be submitted to CBP at any time concurrent with or following the filing of the protest, in accordance with 19 U.S.C. 1514. Section 174.22 of title 19 of the CFR sets forth the procedure for filing a request for an accelerated disposition of a protest.

Section 202A(e)(6)(A) of the USMCA Implementation Act (19 U.S.C. 4532(e)(6)(A)) provides that when a protest of a decision regarding the eligibility for USMCA preferential tariff

treatment of a covered vehicle relates to DOL's analysis of the high-wage components of the LVC requirement, the Secretary of Labor will conduct an administrative review of the portion of the decision relating to such requirements and provide the results of that review to the CBP Commissioner. The DOL regulations at 29 CFR part 810 contain the administrative review procedures of DOL's initial analysis when notified by CBP of a protest involving DOL's analysis of the high-wage components of the LVC requirement. Pursuant to 29 CFR part 810, DOL will strive to issue a decision within one year from the date that it receives the notice of protest from CBP and will provide a determination containing the results of the administrative review to CBP.

Section 202A(e)(6)(B) of the USMCA Implementation Act (19 U.S.C. 4532(e)(6)(B)) explicitly states that an importer may not request accelerated disposition under 19 U.S.C. 1515 of a protest against a decision related to the DOL's analysis of the high-wage components for a covered vehicle's LVC requirement. Accordingly, CBP is revising 19 CFR 174.22(a) to limit the availability of the accelerated disposition of a protest. CBP is adding a sentence to § 174.22(a) stating that the accelerated disposition of a protest is not available for protests involving eligibility for USMCA preferential tariff treatment of a covered vehicle if the protest relates to the DOL's analysis of the high-wage components of the LVC requirement as described in 19 CFR part 182, subpart I, and 29 CFR part 810.

5. Section 174.29

Section 174.29 provides the conditions under which CBP allows or denies protests and describes the process through which the Center director will remit or refund any duties, charge, or exaction found to be collected in excess if the protest is allowed. Specifically, § 174.29 states that if a protest filed by an exporter or producer related to a NAFTA determination of origin is allowed in whole or in part, any monies found to have been collected in excess shall be refunded to the party who paid the monies even if such party did not file an appropriate and timely protest. CBP is revising this language to add a cross-reference to § 174.12(a)(6), which applies to protests filed by a qualified exporter or producer with respect to a USMCA determination of origin.

F. Part 182

Part 182, *United States-Mexico-Canada Agreement,* implements the duty preference and related customs provisions applicable to goods imported under the USMCA. CBP is amending part 182 of title 19 of the CFR (19 CFR part 182) to promulgate additional remaining USMCA implementing regulations related to USMCA Chapters 1, 2, 4, 5, and 6. Currently, part 182 contains a significant portion of the USMCA implementing regulations and a framework for the remaining subparts. The existing part 182 substantive provisions include Subpart A (General Provisions), which contains the scope, general definitions, and confidentiality provisions, Subparts B (Import Requirements), C (Export Requirements), D (Post-Importation Duty Refund Claims), numerous substantive provisions related to drawback in subpart E (Restrictions on Drawback and Duty-Deferral Programs), F (Rules of origin), G (Origin Verifications and Determinations), J (Commercial Samples and Goods Returned after Repair or Alteration), K (Penalties), and Appendix A, which contains the Uniform Regulations regarding Rules of Origin, which were trilaterally agreed upon by the United States, Mexico, and Canada.

This document amends part 182 to revise § 182.0 (Scope) and subpart G (Origin Verifications and Determinations), and to add general definitions in § 182.1, additional drawback and duty-deferral provisions in Subpart E (Restrictions on Drawback and Duty-Deferral Programs), and implementing regulations in subparts H (Textile and Apparel Goods) and I (Automotive Goods).

Subpart A—General Provisions

1. Scope

Section 182.0 contains the scope of part 182. Part 182 implements the duty preference and related customs provisions applicable to imported and exported goods under the USMCA. While § 182.0 was added in a prior rulemaking, CBP is revising the section to provide the relevant cross-references to the other parts of the CBP regulations that apply to the USMCA. Accordingly, CBP is adding a new sentence to § 182.0 to clarify that additional provisions applicable to the USMCA are contained in parts 10, 24, 163, 174, and 177 of title 19 of the CFR.

In addition to the CBP regulations in parts 10, 24, 163, and 174 that are being amended in this document, CBP is also including a cross-reference to part 177. Part 177, *Administrative Rulings,* allows CBP to issue rulings to importers and other interested parties. Applying the advance ruling requirements and procedures in part 177 of title 19 of the CFR (19 CFR part 177) to all advance rulings related to USMCA transactions fulfills CBP's commitment under USMCA Article 7.5 requiring each USMCA country to issue written advance rulings, prior to the importation of a good into its territory, regarding the treatment the good will receive at the time of importation. While no amendments to part 177 are necessary to implement USMCA Articles 5.14 and 7.5, CBP is including the cross-reference to part 177 in § 182.0 to clarify that part 177 applies to advance rulings related to USMCA transactions. CBP believes this clarification is needed since § 177.0 specifically excludes advance rulings related to NAFTA transactions from the scope of part 177. CBP wishes to further clarify that while producers are not explicitly granted the right to request a ruling pursuant to § 177.1(c), CBP considers a Canadian or Mexican producer of a good imported into the United States under the USMCA, a Canadian or Mexican producer of a material that is used in the production of a good imported into the United States under the USMCA, and a Canadian or Mexican exporter of a material used in the production of a good under the USMCA to be persons with a direct and demonstrable interest who have the right to request a ruling pursuant to § 177.1(c), in accordance with USMCA Article 7.5.2. Please note that CBP publishes its advance rulings on the Customs Rulings Online Search System (CROSS), available on the publicly accessible website, *https://rulings.cbp.gov/home.*

2. Definitions

Section 182.1 sets forth the general definitions applicable to part 182. Chapter 1 of the USMCA sets forth the general and country-specific definitions to be applied throughout the USMCA, unless otherwise noted. Since § 182.1 contains the definitions of the common terms that are used in multiple places in part 182, it includes definitions from 19 U.S.C. 4502, several Chapters of the USMCA, and the Uniform Regulations regarding Rules of Origin set forth in Appendix A to part 182. General definitions containing references to specific HTSUS subheadings, if these subheadings were trilaterally negotiated and agreed upon under the USMCA, contain additional language clarifying that the subheadings that apply are those HTSUS subheadings that were in effect on July 1, 2020, the date that the USMCA entered into force. Additional definitions that are not common terms throughout part 182 and are applicable

only to the Uniform Regulations regarding Rules of Origin are set forth in Appendix A to part 182.

Subpart E—Restrictions on Drawback and Duty-Deferral Programs

Subpart E of part 182 (19 CFR 182.41–182.55) sets forth the provisions regarding drawback claims and duty-deferral programs, as provided for under Article 2.5 of the USMCA, and applies to any good that is a ''good subject to USMCA drawback'' within the meaning of 19 U.S.C. 4534. Drawback, as generally provided for in section 313 of the Tariff Act of 1930, as amended (19 U.S.C. 1313), is the refund or remission, in whole or in part, of certain duties, taxes, and fees imposed and paid under Federal law upon entry or importation. Article 1.5 of the USMCA defines a ''duty deferral program'' to include measures such as those governing foreign trade zones, temporary importations under bond, bonded warehouses, ''maquiladoras,'' and inward processing programs.

The requirements and procedures set forth in subpart E for USMCA drawback are in addition to the general definitions, requirements, and procedures for drawback claims set forth in part 190 of title 19 of the CFR, unless otherwise specified. Further, the requirements and procedures of subpart E are also in addition to those for manipulation, manufacturing, and smelting and refining warehouses contained in parts 19 and 144, for FTZs under part 146, and for temporary importations under bond in part 10.

CBP previously promulgated a significant portion of the USMCA implementing regulations for drawback and duty-deferral programs in subpart E of part 182 of title 19 of the CFR. Sections 182.41, 182.46, 182.49, 182.51, 182.52, and 182.54 in subpart E are unchanged from the prior rulemaking. In this document, CBP is revising § 182.42(c) to provide clarification regarding the USMCA requirements. The other specific regulatory amendments provided for in this document are, for the most part, the result of subsequent policy determinations and supplement the provisions in subpart E that were added in the prior rulemaking. Accordingly, CBP is also revising §§ 182.43, 182.45(c), 182.47, as appropriate, revising § 182.50(b), which was reserved in the prior rulemaking, and adding a new § 182.44(h) and (i). CBP is also adding §§ 182.48, *Person entitled to receive drawback,* and 182.53, *Collection and waiver or reduction of duty under duty-deferral programs,* to subpart E, which were not previously reserved in the prior rulemaking. Sections 182.48 and 182.53 generally follow the corresponding regulation in part 181, with some conforming and nomenclature changes made. However, with respect to the FTZ provisions in § 182.53, it should be noted that the USMCA Implementation Act did not include an exception to the rules of origin for goods produced in an FTZ, which was included for NAFTA in section 202 of the NAFTA Implementation Act and prevented a claim of U.S. origin on non-originating materials used in the production of a good when those goods are produced in an FTZ. This exception was enacted in subsequent legislation, the Appropriations Act, which was retroactive to July 1, 2020. Section 601(b) of Title VI of the Appropriations Act amended section 202 of the USMCA Implementation Act (19 U.S.C. 4531(c)(3)) to prohibit, under USMCA, producers from using non-originating materials in an FTZ manufacturing to claim U.S. origin.

Finally, CBP is adding a new section to subpart E, which was also not previously reserved in the prior rulemaking and for which there is no corresponding regulation in part 181. Section 182.55, *Goods exported from duty-deferral programs that are not subject to USMCA drawback within the meaning of 19 U.S.C. 4534,* is being added to subpart E to provide clarity regarding the timing of claims for when the importer or its agent is claiming that a good is not subject to USMCA drawback within the meaning of 19 U.S.C. 4534.

Subpart G—Origin Verifications and Determinations

Subpart G of part 182 (19 CFR 182.71–182.76) contains the general USMCA verification and determination of origin provisions. These regulations were promulgated during a prior rulemaking. CBP is amending certain sections of subpart G in this document to add the relevant cross-references for textile and apparel goods and for automotive goods.

Section 182.71 contains the applicability provision for subpart G. CBP is adding two sentences to § 182.71 to clarify that there are additional verification requirements and procedures applicable to automotive goods in subpart I and alternative verification means and procedures for textile and apparel goods in § 182.83 of subpart H.

Section 182.75 sets forth the determination of origin provisions. Specifically, § 182.75(c) contains the provisions that apply to negative determinations of origin when CBP intends to deny USMCA preferential tariff treatment. Paragraph (c)(2) contains the reasons that CBP may deny USMCA preferential tariff treatment as set forth in USMCA Article 5.10.2. CBP is amending § 182.75(c)(2) to reflect the application of the USMCA Article 5.10.2 reasons for denial related to textile and apparel goods and automotive goods to ensure that paragraph (c)(2) contains a comprehensive list of the reasons for denial with the appropriate cross-references.

Section 182.75(c)(4) describes when CBP will issue a negative determination of origin and the determination of origin contents. Currently, § 182.75(c)(4) states that, in addition to the contents of the determination of origin set forth in § 182.75(a), unless CBP determines that there is a pattern of conduct of false or unsupported representations pursuant to § 182.76, a negative determination of origin will provide the exporter or producer with the information necessary to file a protest as provided for in 19 U.S.C. 1514(e) and part 174. CBP is revising § 182.75(c)(4) to remove the language ''unless CBP determines that a pattern of conduct of false or unsupported representations pursuant to § 182.76'' to fulfill our commitment to USMCA Article 7.15. As stated above, Article 7.15 of the USMCA addresses the review and appeal of customs determinations. Article 7.15.2 provides, in part, that the USMCA country must provide each person to whom it issues an administrative determination with access to information on how to request reviews and appeals. Thus, to fulfill this USMCA commitment, CBP must provide all exporters and producers, who are issued a negative determination of origin, with the information necessary to file a protest. In practice, CBP has already been providing all importers, exporters, and producers issued a negative determination of origin with this information necessary to file a protest since the USMCA entered into force.

It is important to note that, as discussed above, while CBP will issue a determination of origin to USMCA exporters and producers of textile or apparel goods subject to TPLs as required under § 182.75(b), these exporters and producers may not file a protest of this determination of origin under part 174, in accordance with 19 U.S.C. 1514(c)(2)(E), unless the exporter or producer is also acting as the importer of record. Accordingly, since 19 U.S.C. 1514(e) only authorizes CBP to disclose the entry information necessary to file a protest to the exporters or producers referred to in 19 U.S.C. 1514(c)(2)(E), CBP will not

provide exporters or producers of textile or apparel goods subject to TPLs with the information necessary to file a protest when issuing a negative determination under § 182.75(c)(4).

Subpart H—Textile and Apparel Goods

Subpart H of part 182 (19 CFR 182.81–182.83) contains the USMCA textile and apparel good provisions, as provided for in USMCA Chapter 6, including the TPL provisions and the site visit provisions. The applicable definitions, including the definition of a textile or apparel good, are set forth in § 182.1, which is the general definitions section of part 182.

1. Tariff Preference Level

A TPL is defined in § 182.1 to mean a quantitative limit for certain non-originating textile or apparel goods that may be entitled to preferential tariff treatment based on the goods meeting the requirements set forth in § 182.82. Section 182.82, *Claim for preferential tariff treatment under tariff preference level,* contains the TPL requirements and procedures. These regulations are in accordance with USMCA Annex 6–A, which as explained in detail above in Section II.B. of this IFR, governs the USMCA preferential tariff treatment of eligible non-originating textile or apparel goods subject to a TPL. As these goods are non-originating, the rules of origin set forth in General Note 11, HTSUS, and Appendix A to part 182 do not apply.

While a claim for USMCA preferential tariff treatment is typically made pursuant to § 182.11(b), a claim for preferential tariff treatment for textile or apparel goods subject to a TPL is made pursuant to § 182.82. Paragraph (a) of § 182.82, *Basis of claim,* sets forth the requirements that must be met for an importer to make a claim for USMCA preferential tariff treatment, including an exemption from the merchandise processing fee, for textile or apparel goods subject to a TPL, including that the goods be eligible for a TPL claim, that the annual quantitative limit has not been reached for the subject TPL, and that the claim is based on a certificate of eligibility. Paragraph (b), *Goods eligible for TPL claims,* lists the specific types of textile or apparel goods that are eligible for TPLs. These eligible goods and the quantitative limits that are eligible for TPLs are contained in U.S. Note 11, Subchapter XXIII, Chapter 98, HTSUS. Paragraph (c), *Making a TPL claim,* provides the procedure that an importer must follow to properly file a claim for USMCA preferential tariff treatment. A TPL claim must be filed as an entry type ''02'' as it is subject to quantitative restraints.

As a TPL claim is for non-originating textile or apparel goods, an importer who makes a claim for preferential tariff treatment, pursuant to § 182.82(c), is not required to submit a certification of origin, as otherwise required under § 182.12. Instead, an importer who makes a claim for preferential tariff treatment subject to a TPL, pursuant to § 182.82(c), must submit, at the request of CBP, a certificate of eligibility issued by an authorized official of the government of Mexico or Canada. The number assigned to the certificate of eligibility is required to be submitted to CBP when the TPL claim is filed in accordance with the procedures in paragraph (c). Paragraph (d), *Certificate of eligibility,* sets forth the requirements and procedures for submitting the certificate of eligibility.

Pursuant to USMCA Annex 6–A, Section C, an importer may make a claim for preferential tariff treatment of a good under a TPL at least one year after the good is imported, if the annual quantitative limit has not been reached and the other TPL requirements are met. While post-importation claims for USMCA preferential tariff treatment are otherwise filed in accordance with 19 U.S.C. 1520(d) and subpart D of part 182, post-importation claims for preferential tariff treatment for textile or apparel goods subject to a TPL are not. Under 19 U.S.C. 1520(d), CBP may reliquidate an entry to refund any excess duties paid at importation on a good qualifying for preferential tariff treatment under the rules of origin for certain enumerated trade agreements for which a claim for preferential tariff treatment was not filed at importation. Since goods that qualify for preferential tariff treatment subject to a TPL do not qualify as originating under the rules of origin, there is no statutory authority to apply 19 U.S.C. 1520(d) to these claims. Accordingly, paragraph (e), *Post-importation claims,* sets forth the right to make a post-importation claim for preferential tariff treatment within one year after the date of importation of the good pursuant to the filing procedures created for these post-importation claims in paragraph (e)(2). The post-importation claim must be filed with a certificate of eligibility dated the same calendar year that the textile or apparel goods were imported. Post-importation claims will not be granted if the quantitative limits for the subject TPL for the year the entry summary, or equivalent documentation, is accepted by CBP, have already been reached.

An importer making a TPL claim for USMCA preferential tariff treatment under § 182.82(c) must adhere to the recordkeeping requirements in § 182.15 and part 163. Section 182.15, *Maintenance of records,* requires an importer claiming USMCA preferential tariff treatment to maintain all records and documents that demonstrate that the good qualifies for preferential tariff treatment, for a minimum of five years from the date of importation of the good. For a TPL claim, these records and documents would include a copy of the certificate of eligibility.

Paragraph (f), *Denial of preferential tariff treatment,* sets forth the circumstances when CBP may deny preferential tariff treatment that are only applicable to TPLs. Additional reasons CBP may deny preference are set forth in § 182.75(c)(2). Paragraph (g), *Verifications,* notes that CBP will conduct verifications of goods subject to TPLs using the same verification means and procedures that CBP has the discretion to utilize for all textile and apparel goods. Specifically, CBP has the discretion to choose to conduct a verification of textile or apparel goods subject to TPLs pursuant to either the general verification means and procedures set forth in part 182, subpart G, or pursuant to the site visit procedures in § 182.83 of subpart H.

2. Textile and Apparel Goods Verification Procedures

Section 182.83, *Verifications of textile and apparel goods,* contains the requirements and procedures for a textile or apparel good verification conducted pursuant to a USMCA Article 6.6 site visit. As described in more detail above in Section II.B. of this IFR, for textile and apparel goods, CBP has two alternative means of conducting a verification. CBP may conduct a verification for purposes of determining whether a textile and apparel good qualifies for preferential tariff treatment using the USMCA Article 5.9 general verification means described in § 182.72(a) and the procedures set forth in subpart G of part 182. Alternatively, as described in § 182.83(a), CBP may conduct a site visit to the premises of the exporter or producer of textile or apparel goods in Mexico or Canada for the purpose of determining that a textile or apparel good qualifies for preferential tariff treatment or that customs offenses with regard to a textile or apparel good are occurring or have occurred. The term ''customs offenses'' is defined in § 182.1, which provides the general definitions that are applicable to part 182. Paragraph (b) of § 182.83, *Verification of a material during a site visit,* allows for the verification of a material, that is used in the production

of a textile or apparel good, during a site visit.

Paragraph (c), *Site visit procedures,* sets forth the site visit procedures applicable to the exporter or producer in Mexico or Canada whose premises CBP is going to visit during the site visit. Pursuant to USMCA Article 6.6, while CBP must notify the Canadian or Mexican customs administration of CBP's intention to conduct the visit prior to conducting a site visit in Canada or Mexico, CBP is not required to notify the exporter or producer whose premises are going to be visited prior to conducting the site visit if doing so will undermine the effectiveness of the verification. Paragraph (c) provides the consent requirements for the site visit, what happens when the exporter, producer, or person having the capacity to consent on behalf of the exporter or producer is not able to receive CBP on the initial date of the site visit, and the records and facilities that CBP may request access to during the site visit.

Paragraph (d), *Right to request report of the site visit,* provides the circumstances under which the exporter or producer may request that CBP send its relevant findings from the written report of the results of the site visit upon completion of the site visit. Paragraph (e), *Denial of preferential tariff treatment,* states the reasons that CBP may deny preferential tariff treatment to any textile or apparel good imported or produced by the person that is the subject of the verification.

Paragraph (f), *Intent to deny and determination of origin,* states that, after CBP has completed a site visit pursuant to § 182.83, CBP will issue a determination of origin in accordance with the requirements and procedures set forth in § 182.75, with the exception of § 182.75(c)(1). CBP is extending the notification of the intent to deny to more parties than is required under USMCA Article 6.6.9. Specifically, in accordance with § 182.75(c)(3), CBP will send an intent to deny to the importer, and the exporter or producer who is subject to the verification and either completed the certification of origin or provided information directly to CBP during the verification, subject to the confidentiality provisions in § 182.2. By cross-referencing the procedures set forth in § 182.75 in subpart H, including the intent to deny, CBP is ensuring that consistent determination of origin procedures and notifications are applied to all textile and apparel good verifications regardless of whether CBP chooses to conduct the verification pursuant to the USMCA Article 5.9 general verification procedures in subpart G or the site visit procedures in § 182.83. Paragraph (g), *Pattern of conduct for textile or apparel goods,* provides that CBP may withhold preferential tariff treatment to identical textile or apparel goods imported or produced by an exporter or producer when CBP determines that a pattern of conduct of false or unsupported representations exists.

Subpart I—Automotive Goods

Subpart I of part 182 (19 CFR 182.91–182.107) contains the USMCA automotive good provisions, as provided for in USMCA Chapter 4 and the Uniform Regulations regarding Rules of Origin. The applicable definitions, including the definitions of automotive good, covered vehicle, passenger vehicle, light truck, and heavy truck, are set forth in § 182.1, which is the general definitions section of part 182. Subpart I of part 182 applies to all automotive goods, including new and used covered vehicles, entered for consumption, or withdrawn from warehouse for consumption, on or after July 1, 2020. As noted in the applicability section of subpart I, § 182.91, covered vehicles claiming USMCA preferential tariff treatment must also meet the applicable requirements and follow the applicable procedures contained throughout part 182.

An importer may only make a claim for USMCA preferential tariff treatment if the covered vehicle complies with the USMCA rules of origin, including the product-specific rules of origin, and the additional requirements and procedures set forth in subpart I. Section 182.92, *Claim for preferential tariff treatment for covered vehicles,* specifies additional requirements that a covered vehicle must meet to make a claim for USMCA preferential tariff treatment, including the LVC requirement in § 182.93, the steel purchasing and aluminum purchasing requirements in § 182.94, and certifications attesting that the vehicle producer has complied with the LVC, steel purchasing, and aluminum purchasing certification requirements under §§ 182.95, 182.96, and 182.97. When making a claim for preferential tariff treatment under § 182.11(b) or § 182.32, an importer must also submit the unique identifier assigned by CBP for each of the LVC, steel purchasing, and aluminum purchasing certifications that form the basis for the covered vehicle's eligibility for preferential tariff treatment. These unique identifiers provide CBP with the ability to link the importation of the covered vehicle to the specific vehicle certifications that form the basis for the covered vehicle's eligibility for preferential tariff treatment and to demonstrate compliance with the vehicle certification requirements.

1. LVC, Steel Purchasing, and Aluminum Purchasing Requirements and Certifications

Sections 182.93, *Labor value content (LVC) requirement,* and 182.94, *Steel purchasing and aluminum purchasing requirements,* specify the requirements that must be met in General Note 11, HTSUS, and Appendix A to part 182, the applicable requirements if the producer is subject to an alternative staging regime, the calculation methods, and the choice of calculation periods. With respect to the LVC requirement, DOL is responsible for implementing and administering the high-wage components of the LVC requirement. The DOL regulations are contained in 29 CFR part 810. The producer of a covered vehicle must use the rules set forth in the DOL regulations, including for high-wage material and manufacturing expenditures, high-wage technology expenditures, and high-wage assembly expenditures, to properly calculate and determine the high-wage components of the LVC requirement. CBP determines whether a covered vehicle meets the LVC requirement generally based on an analysis of the high-wage components by DOL and CBP's determination of the components of the LVC requirement not governed by DOL, including the valuation and other components of the LVC calculation. CBP has sole authority to determine whether a covered vehicle qualifies for USMCA preferential tariff treatment.

Sections 182.95, *Labor value content (LVC) certification,* 182.96, *Steel purchasing certification,* and 182.97, *Aluminum purchasing certification,* contain the respective vehicle certification provisions. A covered vehicle is eligible for USMCA preferential tariff treatment only if the producer of the covered vehicle has certified to CBP that the production of the vehicle by the producer meets the LVC requirement, as described in § 182.93, the steel purchasing requirement, as described in § 182.94, and the aluminum purchasing requirement, as described in § 182.94. Unless specifically exempt under an alternative staging regime, all three vehicle certifications must be submitted to CBP and considered properly filed for a covered vehicle to qualify for USMCA preferential tariff treatment. The producer of the covered vehicle must have information in its possession that proves the accuracy of the calculations relied on for the certifications.

Paragraph (c) of §§ 182.95, 182.96, and 182.97 contains the data elements for each of the vehicle certifications. With respect to § 182.95(c)(1), CBP wishes to clarify that the alternative unique identification number of the producer's choosing must be a publicly available identifier, such as the examples provided in § 182.95(c)(1) and may not be an identification number generated internally by the producer's organization, such as a business partner ID or supplier code.

CBP has added several data elements in §§ 182.95(c), 182.96(c), and 182.97(c), in addition to the list of data elements contained in the U.S. Implementing Instructions issued on June 30, 2020 (and in the DOL regulations at 29 CFR part 810), for each of the vehicle certifications to ensure that CBP has all the information needed to establish that the producer meets the LVC, steel purchasing, and aluminum purchasing requirements. The data elements that have been added to the CBP regulations for the steel purchasing and aluminum purchasing certifications are: any Manufacturers Identification Code (MID), Federal Employer Identification Number (EIN), or Importer of Record number (IOR) associated with the producer; the vehicle category for which the steel or aluminum purchases are calculated, as specified in section 17(9) of Appendix A to part 182; and the name and address for each steel or aluminum producer, service center, or distributor relied upon in calculating the total value of purchases of steel or aluminum that qualify as originating goods and any MID, EIN, or IOR numbers associated with those entities. These enumerated data elements are necessary to clarify information in the certifications and consist of information that the certifier, who is completing the vehicle certification, must already have to certify compliance with the steel purchasing and aluminum purchasing requirements. CBP has also added LVC certification data elements to further align the LVC certification with the steel purchasing and aluminum purchasing requirements, to clarify information in the certification, and to collect information that the vehicle producer already has when making the underlying LVC calculation. The added LVC certification data elements are: the name, title, and contact information of the certifier (the person completing the LVC certification); the LVC calculation used to determine that the production of the covered vehicles meets the LVC requirement in General Note 11(k)(vi), HTSUS, 19 CFR 182.93(c), and Appendix A to part 182 including the resulting LVC percentage; and the authorized certifier's signature, date signed, and certifying statement. An LVC certification submitted to CBP must include all the information in § 182.95(c) and the DOL regulations at 29 CFR part 810.

Any vehicle certification submitted to CBP pursuant to § 182.95(f), 182.96(f), or 182.97(f) on or after the delayed compliance date of May 19, 2025 must contain the full list of data elements in § 182.95(c), 182.96(c), or 182.97(c) and the DOL regulations at 29 CFR part 810, with vehicle certifications for covered vehicles subject to an exemption or different requirements under an alternative staging regime required to comply with the requirements set forth in § 182.95(b), 182.96(b), or 182.97(b), and § 182.106(c). Revised vehicle certifications resubmitted to CBP under the procedures set forth in § 182.95(i), 182.96(i), or 182.97(i), which were initially submitted to CBP prior to the IFR's delayed compliance date, are not required to contain the full list of data elements. Furthermore, vehicle producers are not required to request a modification of a properly filed certification submitted prior to the IFR's delayed compliance date, under § 182.95(k), 182.96(k), or 182.97(k), solely due to the absence of the full list of data elements in § 182.95(c), 182.96(c), or 182.97(c). However, any new, modified vehicle certification that the producer submits to CBP on or after the IFR's delayed compliance date, pursuant to § 182.95(k), 182.96(k), or 182.97(k), must include all the data elements in § 182.95(c), 182.96(c), or 182.97(c) for the entirety of the certification period, with vehicle certifications for covered vehicles subject to an exemption or different requirements under an alternative staging regime required to comply with the requirements set forth in § 182.95(b), 182.96(b), or 182.97(b) and § 182.106(c). Please see below for additional information regarding the resubmission and modification process.

In order to grant the trade additional time to adjust its business practices to comply with the new USMCA automotive good requirements, CBP, in accordance with its USMCA Phase I Implementation Policy, allowed vehicle producers until December 31, 2020 to submit the required vehicle certifications needed to receive preferential tariff treatment beginning July 1, 2020. However, following this initial submission, the submission date for vehicle certifications is based on each producer's chosen calculation period(s) under § 182.93(d) and (e) or § 182.94(c) and (d). Pursuant to §§ 182.95(f), 182.96(f), and 182.97(f), for any vehicle certification submitted to CBP on or after the delayed compliance date of May 19, 2025, the producer of the covered vehicle must submit the LVC, steel purchasing, and aluminum purchasing certifications to CBP through an authorized electronic data interchange system or other specified means at least 90 days prior to the beginning of the certification period. Vehicle certifications submitted to CBP prior to the IFR's delayed compliance date are not required to comply with the 90-day submission requirement. The IFR's delayed compliance date allows vehicle producers sufficient time to timely submit the vehicle certifications at least 90 days prior to the beginning of the certification period and to include the additional required data elements.

It is important to note that the calculation period does not necessarily align with the certification period. The calculation period is the period over which the LVC requirement was calculated or the qualifying steel or aluminum purchases were made for a given vehicle category. In contrast, the certification period is the period over which the vehicle certification is effective for the vehicles produced (or exported, if applicable) within that period for a given vehicle category. Since the certification period determines which vehicles are eligible for USMCA preferential tariff treatment, the certification period is the relevant period for determining when the vehicle producer must submit the vehicle certification. Different certification periods are applicable depending on the calculation period that the vehicle producer selects to calculate the LVC, steel purchasing, and aluminum purchasing requirements for U.S. imports. The producer may select from several different calculation periods, such as the previous fiscal year of the producer, previous calendar year, and the other calculation periods set forth in § 182.93(d) and (e) or § 182.94(c) and (d). If the producer relies on a calculation period based on its fiscal year, the producer must indicate in the vehicle certification that the calculation period corresponds to its fiscal year. A vehicle producer may choose different calculation periods for its LVC calculation, its steel purchasing calculation and its aluminum purchasing calculation. Paragraph (j) of §§ 182.95, 182.96, and 182.97 sets forth the applicable certification periods based on the calculation period that the producer chooses.

The producer of the covered vehicle must submit the LVC, steel purchasing, and aluminum purchasing certifications

to CBP through an authorized electronic data interchange system or other specified means. *See* §§ 182.95(f), 182.96(f), and 182.97(f). Details on how to submit the certifications can be found at the CBP website at *https://www.cbp.gov/trade/priority-issues/trade-agreements/free-trade-agreements/USMCA and https://trade.cbp.gov/USMCA/s/.* Currently, vehicle producers can file vehicle certifications through a portal on the CBP website at *https://trade.cbp.gov/USMCA/s/automotive-certification-request.* If the USMCA portal is down, certifications can be emailed to *USMCAautoRoO@cbp.dhs.gov.* CBP will notify the public on our website at *https://www.cbp.gov/trade/priority-issues/trade-agreements/free-trade-agreements/USMCA* and *https://trade.cbp.gov/USMCA/s/,* and update the regulations, as needed, if the means of submission are updated at a later date.

After the producer submits the LVC, steel purchasing, and aluminum purchasing certification(s) to CBP, the certification(s) will be reviewed for omissions and errors. An omission would include, for example, the vehicle producer failing to include with its vehicle certification one of the data elements listed in § 182.95(c), 182.96(c), or 182.97(c). An error would include, for example, a vehicle certification that is based on the wrong type of information, such as calculating the producer's purchases of steel over a calculation period not provided for in § 182.94(c) and (d). For the LVC certification, in accordance with 19 U.S.C. 4532(c)(1)(B)(i), the Secretary of Labor, in consultation with the Commissioner of CBP, will ensure that the LVC certification does not contain omissions or errors before the certification is considered properly filed. CBP is solely responsible for ensuring that the steel purchasing and aluminum purchasing certifications do not contain omissions or errors before the certification is considered properly filed. *See* 19 U.S.C. 4532(c)(2)(B)(i).

Paragraph (g) of §§ 182.95, 182.96, and 182.97 details the review process for omissions and errors. If the vehicle certification is determined to be properly filed, the certification is effective for the certification period specified in paragraph (j). Upon receipt of a notification that an omission or error was discovered, the producer will have five business days to submit to CBP a revised vehicle certification, correcting the error or omission that CBP or DOL discovered or providing an explanation of why the producer believes that the certification contains no omissions or errors. The submission of this revised certification is an opportunity for the producer to correct the discovered error or omission or provide an explanation before a determination is made regarding whether the certification is properly filed. If the revised certification contains an omission or error or if no revised certification is submitted within the prescribed timeframe, CBP will provide written or electronic notification to the producer of the covered vehicle that the certification was not properly filed.

While the vehicle certification is being reviewed for omissions and errors, an importer may make a claim for USMCA preferential tariff treatment under § 182.11(b) or § 182.32 for such covered vehicles until the producer has received notice from CBP that the certification that forms the basis for the covered vehicle's eligibility for preferential tariff treatment has not been properly filed. As described in the U.S. Implementing Instructions, at this time, the review process for omissions and errors may take up to 120 days. Consequently, this provision facilitates trade by allowing importers to make claims for USMCA preferential tariff treatment while CBP and DOL, if applicable, are still reviewing the vehicle certification(s). If the producer receives notice that a certification has not been properly filed, the producer must send a notification, with a copy to CBP, to any known importers of the covered vehicle, of that determination within 30 days of receipt of the CBP notice. *See* 19 CFR 182.95(h), 182.96(h), and 182.97(h). If a vehicle certification is not properly filed, an importer, upon receipt of notification from the producer, must promptly and voluntarily correct any claims for covered vehicles for which that vehicle certification formed the basis for the vehicle's eligibility for preferential tariff treatment, pay any duties that may be due, and submit the required statement pursuant to § 182.11(c).

Within 10 business days of receiving the notification from CBP that the vehicle certification was determined to be not properly filed under paragraph (g), the producer may resubmit the certification in accordance with §§ 182.95(i), 182.96(i), and 182.97(i). This resubmission process allows the vehicle producer, after the initial vehicle certification was determined to be not properly filed, to submit a new vehicle certification for the same category and same calculation period. This new certification would undergo the same review for omissions and errors process that the initial certification underwent, as described in paragraph (g). The producer may resubmit a vehicle certification under §§ 182.95(i), 182.96(i), and 182.97(i) for the same category and same calculation period up to two times per certification period. During the resubmission period, after the vehicle certification has been determined to not be properly filed, an importer does not have a reasonable basis for claiming that the covered vehicle meets the product-specific rules of origin, and thus, an importer should not submit claims for USMCA preferential tariff treatment under § 182.11(b) or § 182.32. The importer may only submit a claim for USMCA preferential tariff treatment after the producer receives notice that the resubmitted certification that forms the basis for the covered vehicle's eligibility for preferential tariff treatment has been properly filed. An importer may make a post-importation claim, if it qualifies, under § 182.32, for covered vehicles entered for consumption, or withdrawn from warehouse for consumption, during the vehicle certification resubmission period when the certifications that form the basis for the covered vehicle's eligibility for preferential tariff treatment have subsequently been determined to be properly filed.

During the certification period, if there are any material changes to the information contained in the vehicle certification that would affect its validity, for example, changes to the vehicle certification period, vehicle category chosen, or the calculation period of LVC requirement and/or steel or aluminum purchases, the producer must request a modification of the properly filed certification pursuant to § 182.95(k), 182.96(k), or 182.97(k). This modification process, as described in paragraph (k), only applies to vehicle certifications that have been previously considered properly filed. If CBP determines that the new, modified certification is properly filed under paragraph (g) or (i), the new certification supersedes the former certification and the new certification is effective for the certification period specified in paragraph (j). Accordingly, the new, modified vehicle certification that the producer submits to CBP must include all the applicable information in §§ 182.95(c), 182.96(c), and 182.97(c) for the entirety of the certification period and should not be limited to the modification. Additionally, the producer must submit a list of the material changes to the information contained in the certification and an explanation as to why the modification is necessary with respect to the validity

of the certification. Within 30 days of receiving notice that the new certification has been properly filed, the producer must send a notification, with a copy to CBP, to any known importers of that determination.

Section 182.98, *Appeal of the determination that LVC, steel purchasing, or aluminum purchasing certification is not properly filed,* sets forth the appeals process, following the review of the second resubmission of the vehicle certification pursuant to §§ 182.95(i)(2), 182.96(i)(2), and 182.97(i)(2), for the vehicle producer to appeal a determination that the LVC, steel purchasing, or aluminum purchasing certification is not properly filed. While CBP believes that it is unlikely that a vehicle producer will need to resubmit a vehicle certification twice and file an appeal, CBP is establishing this appeals process, pursuant to its general USMCA rulemaking authority in 19 U.S.C. 4535(a), to provide a recourse for appeal and a means for a vehicle producer to submit arguments to CBP explaining why it believes the vehicle certification should be considered properly filed. Once it has been determined that a vehicle certification has not been properly filed, the covered vehicle is not considered an originating good under the USMCA, and the importer may not make a claim for USMCA preferential tariff treatment. Given that the appeal of a determination that a vehicle certification is not properly filed is not a matter subject to protest under 19 U.S.C. 1514(a)(1) through (a)(7), neither the vehicle producer nor the importer may file a protest under 19 U.S.C. 1514 or part 174, if a claim for USMCA preferential tariff treatment of the covered vehicle has not yet been made when the determination is made. Since there is no existing recourse enabling the vehicle producer or the importer to appeal a determination that the vehicle certification is not properly filed in this scenario, CBP has established this new appeals process, which is limited to vehicle certifications. Section 182.98 contains the scope of the appeal, the procedures, and the applicable timelines. The appeal cannot be filed until both opportunities for resubmission of a vehicle certification pursuant to §§ 182.95(i)(2), 182.96(i)(2), and 182.97(i)(2) have been completed. When an appeal involves DOL's review of the LVC certification for omissions and errors, CBP will coordinate with DOL regarding the appeal, as necessary. An importer of the covered vehicle should not submit claims for USMCA preferential tariff treatment under § 182.11(b) or § 182.32 for covered vehicles until the producer has received notice that the certification that forms the basis for the covered vehicle's eligibility for preferential tariff treatment has been properly filed. At that time, if the vehicle certifications have been determined to be properly filed, the importer may make a post-importation claim, if it qualifies, under § 182.32.

2. Motor Vehicle Averaging

For the purpose of calculating the RVC or LVC of a covered vehicle, the producer of the vehicle may elect to average the RVC or LVC calculation. These averaging elections are described in § 182.100, *Motor vehicle averaging elections.* To elect RVC averaging, the producer must comply with all the RVC averaging provisions set forth in section 16 of Appendix A of part 182, including the averaging categories and averaging periods. To elect LVC averaging, the vehicle producer must comply with all the LVC averaging provisions set forth in section 18 of Appendix A of part 182, including the averaging categories. The LVC averaging periods are set forth in § 182.93(d) and (e). A producer who elects to average its RVC or LVC calculation must separately average covered vehicles that are subject to an alternative staging regime. The producer may not average its RVC or LVC across covered vehicles that are subject to an alternative staging regime and covered vehicles that are not subject to an alternative staging regime.

When filing an RVC averaging election, the averaging election must include the required data elements in § 182.100(d). CBP is discontinuing use of the motor vehicle averaging election form, CBP Form 447, which was required when filing an RVC averaging election under NAFTA, and instead allowing the RVC averaging election data elements to be provided to CBP in a free format. The LVC averaging election is a new election under USMCA. When filing an LVC averaging election, the averaging election must include the required data elements in § 182.100(e). Pursuant to § 182.100(f), a vehicle producer who files an RVC or LVC averaging election must submit, at the request of CBP, a cost submission reflecting the actual costs incurred in the production of the category of motor vehicles for which the election was made.

A producer of a covered vehicle who elects to average its RVC or LVC calculation must file an averaging election with CBP pursuant to § 182.100(c) at least 10 days before the first day of the producer's fiscal year during which the vehicles will be exported, or such shorter period as CBP may accept. The producer may request a shorter period by contacting CBP via email. Details on how to submit the averaging elections can be found at the CBP website at *https://www.cbp.gov/trade/priority-issues/trade-agreements/free-trade-agreements/USMCA and https://trade.cbp.gov/USMCA/s/.* Currently, vehicle producers can file the RVC or LVC averaging elections through a portal on the CBP website at *https://trade.cbp.gov/USMCA/s/automotive-certification-request.* If the USMCA portal is down, the averaging elections can be emailed to *USMCAautoRoO@cbp.dhs.gov.* CBP will notify the public on our website at *https://www.cbp.gov/trade/priority-issues/trade-agreements/free-trade-agreements/USMCA, https://trade.cbp.gov/USMCA/s/,* and update the regulations, as needed, if the means of submission are updated at a later date.

Section 182.101, *Averaging for other automotive goods,* provides the applicable provisions in Appendix A of part 182 governing the averaging of automotive parts and other vehicles. This regulation clarifies that the producer is not required to file an RVC averaging election when averaging the RVC of these automotive goods.

3. Required Year-End Reconciliation

Section 16(9) and section 17(11) of the Uniform Regulations regarding Rules of Origin, contained in Appendix A of part 182, require a year-end analysis of the actual costs of the RVC if the producer calculated the RVC based on estimated costs, and a year-end analysis of the actual purchases of steel or aluminum made over the calculation period if the producer calculated the steel or aluminum purchases on the basis of estimates. Depending on the certification period that a vehicle producer chooses, the vehicle certification may be based in whole or in part on projected costs or projected purchases. Section 182.102, *Required year-end reconciliation to actual costs when estimated costs or purchases used,* requires the producer of a covered vehicle, who has calculated the RVC or LVC of its vehicles or its steel or aluminum purchases on the basis of estimates, to conduct a reconciliation at the end of the producer's fiscal year to the actual costs incurred or the actual purchases made. CBP has added the LVC year-end reconciliation requirement to ensure that the producer has met all the applicable USMCA requirements during that period with actual, not projected, costs. Therefore, this year-end reconciliation is required

irrespective of whether the producer filed an averaging election pursuant to § 182.100. If, based on the year-end reconciliation performed, the covered vehicle does not satisfy the RVC or LVC requirement on the basis of the actual costs, or the steel or aluminum purchasing requirement on the basis of the actual purchases, the producer must make the notifications contained in paragraph (b) that the vehicle is a non-originating good. In addition to the notifications required pursuant to sections 16(9) and 17(11) of Appendix A of part 182, CBP is also requiring the producer to notify CBP to ensure that CBP is aware that the producer did not meet the USMCA requirements for preferential tariff treatment.

4. Recordkeeping Requirements

Pursuant to section 206(a) of the USMCA Implementation Act (19 U.S.C. 1508(b)(4)(B)), any vehicle producer whose goods are the subject of a claim for USMCA preferential tariff treatment must make, keep, and pursuant to the rules and regulations promulgated by the Secretary of the Treasury and Secretary of Labor, render for examination and inspection records and supporting documents related to the LVC, steel purchasing, and aluminum purchasing requirements. Section 182.103, *Producer and exporter recordkeeping responsibilities for records relating to LVC, steel purchasing, and aluminum purchasing requirements,* sets forth the producer of the covered vehicle's recordkeeping responsibilities and the exporter who completed the certification of origin's recordkeeping responsibilities. The vehicle producer must make and keep, for a minimum of five years from the date that the vehicle certifications were submitted to CBP, the LVC certification, the steel purchasing certification, the aluminum purchasing certification, and all records and supporting documents necessary to demonstrate whether the covered vehicle meets the LVC, steel purchasing, and aluminum purchasing requirements. CBP encourages vehicle producers subject to an alternative staging regime to keep these records and supporting documentation for longer than the minimum five years required to demonstrate compliance with the LVC, steel purchasing and aluminum purchasing requirements should USTR later make a determination that the vehicle producer failed to meet the requirements for the alternative staging regime under 19 U.S.C. 4532(d)(5). The vehicle producer must also maintain any records related to the high-wage components of the LVC requirement as required by DOL pursuant to 29 CFR part 810. The records must be capable of being retrieved upon lawful request and must be produced to CBP or DOL upon request.

Pursuant to § 182.103(b), an exporter who completed the certification of origin for a covered vehicle must keep, for a minimum of five years from the date that the certification of origin was completed, the LVC certification, steel purchasing certification, aluminum purchasing certification, and all records and supporting documents to demonstrate whether the covered vehicle meets the LVC, steel purchasing, and aluminum purchasing requirements. The exporter must also maintain any records related to the high-wage components of the LVC requirement as required by DOL pursuant to 29 CFR part 810. The records must be capable of being retrieved upon lawful request and must be produced to CBP or DOL upon request.

CBP may deny USMCA preferential tariff treatment, as described in § 182.107, when vehicle producers or exporters do not meet these recordkeeping requirements.

Section 182.104, *Importer's responsibility to maintain records relating to LVC, steel purchasing, and aluminum purchasing requirements,* contains the importer of a covered vehicle's recordkeeping responsibilities. All importers claiming USMCA preferential tariff treatment, including importers of covered vehicles, are required to comply with the recordkeeping requirements in 19 CFR parts 163 and 182, and must also maintain any records related to the high-wage components of the LVC requirement as required by DOL pursuant to 29 CFR part 810. The extent of the importer's additional recordkeeping responsibilities for covered vehicles is contingent on whether the importer completed the certification of origin. If the claim for USMCA preferential tariff treatment is based on a certification of origin completed by the exporter or producer, the importer must maintain, for a minimum of five years from the date of importation of the covered vehicle, any records and supporting documents in the importer's possession relating to the vehicle certifications. If the claim for USMCA preferential tariff treatment is based on a certification of origin completed by the importer, the importer must maintain, in accordance with 19 U.S.C. 1508(b)(4)(A), for a minimum of five years from the date of importation of the covered vehicle, the vehicle certifications, and all records and supporting documents necessary to demonstrate whether the covered vehicle meets the LVC, steel purchasing, and aluminum purchasing requirements. These records must be maintained by importers as provided in § 163.5 and produced to CBP or DOL upon request. CBP encourages all importers who import vehicles subject to an alternative staging regime to keep the records and supporting documentation for longer than the minimum five years required to demonstrate compliance with the LVC, steel purchasing and aluminum purchasing requirements. These records and supporting documents will be valuable should USTR later make a determination that the vehicle producer failed to meet the requirements for the alternative staging regime under 19 U.S.C. 4532(d)(5).

5. Verifications

CBP will initiate and conduct verifications of automotive goods in accordance with the general verification and determination of origin provisions in subpart G of part 182. Section 182.105, *Verification of automotive goods,* contains additional verification provisions that are applicable for automotive good verifications, including when a verification involves the LVC requirement. CBP will conduct a verification of a covered vehicle involving the high-wage components of the LVC requirement in conjunction with DOL. Accordingly, the provisions in § 182.105 set forth DOL's and CBP's roles in the verification, the additional requirements that the importer, exporter, or producer must comply with, and any added procedures necessitated by DOL's involvement in the verification.

CBP will initiate all verifications of covered vehicles pursuant to the verification means in § 182.72(a), including a request for information, a questionnaire, and/or a verification visit. When CBP initiates a verification of a covered vehicle and the verification involves whether the covered vehicle meets the LVC requirement, CBP will notify the producer of the covered vehicle that CBP has initiated a verification of the covered vehicle and advise the producer whether the verification involves the high-wage components of the LVC requirement, necessitating DOL's involvement. DOL is responsible, pursuant to 19 U.S.C. 4532(e) and the DOL requirements and procedures in 29 CFR part 810, for conducting the verification of the high-wage components of the LVC requirement and determining whether the covered vehicle meets the high-wage components of the LVC requirement.

CBP is responsible for verifying all other aspects of the LVC requirement, and is ultimately responsible for determining whether the covered vehicle meets the LVC requirement, the requirements in 19 CFR part 182, and whether the covered vehicle qualifies for USMCA preferential treatment.

During a verification of a covered vehicle, the importer, exporter, and producer must provide all records requested by CBP or DOL and make these records available for inspection by the appropriate CBP or DOL official as provided for in § 182.105(c). As stated in § 182.105(b), CBP or DOL also may conduct a verification of a part, component, or material that is used in the production of a covered vehicle. During the verification of such a part, component, or material, the producer of the part, component, or material must provide CBP or DOL with all the records requested and make these records available for inspection by the appropriate CBP or DOL official, and failure to do so may result in a determination that the part, component, or material is non-originating.

CBP will determine whether the covered vehicle meets the LVC requirement and qualifies for USMCA preferential tariff treatment based in part on DOL's determination on whether the covered vehicle complied with the high-wage components of the LVC requirement, and DOL's verification findings and analysis. CBP will then issue a determination of origin to the qualifying parties pursuant to § 182.75. An importer, exporter, or producer, who has the right to file a protest pursuant to § 174.12(a)(6), may protest a CBP determination of origin under 19 U.S.C. 1514 and part 174. When a protest involves DOL's analysis of the high-wage components of the LVC requirement, CBP will coordinate with DOL regarding the review of the protest. DOL is responsible, pursuant to 19 U.S.C. 4532(e)(6)(A), for conducting an administrative review of its initial analysis pursuant to its administrative review procedures in the DOL's regulations at 29 CFR part 810 and providing a determination containing the results of the administrative review to CBP. As explained in more detail in section III.E. of this IFR, CBP will review and act on the protest pursuant to the procedures and requirements set forth in part 174.

6. Alternative Staging Regime

As described in more detail above in section II.C. of this IFR, a covered vehicle may be originating pursuant to an alternative staging regime. Section 182.106, *Alternative staging regime,* sets forth the conditions under which a covered vehicle is eligible for USMCA preferential tariff treatment under an alternative staging regime. Pursuant to paragraph (c) of § 182.106, a producer of a covered vehicle is required to submit to CBP a separate vehicle certification that covers only those vehicles subject to the alternative staging regime under certain circumstances. If the terms of the alternative staging regime specifically exempt the producer from the LVC, steel purchasing, or aluminum purchasing requirement (including when the producer qualifies for NAFTA 403.6 treatment), then the producer must submit to CBP a vehicle certification for that LVC, steel purchasing, or aluminum purchasing requirement covering only those vehicles subject to the alternative staging regime. If the terms of the alternative staging regime contain different requirements from sections 13 through 18 of Appendix A to 19 CFR part 182, then the producer must submit to CBP a vehicle certification for that LVC, steel purchasing, or aluminum purchasing requirement that covers only those vehicles subject the alternative staging regime. This additional vehicle certification must meet the requirements set forth in §§ 182.95, 182.96, and 182.97, as applicable, with the exception of the certifying statement, and must contain the additional information, including the certifying statement, as set forth in paragraph (c) of this section.

7. Reasons for Denial of USMCA Preferential Tariff Treatment of Covered Vehicles

In addition to the general reasons for denial set forth in § 182.75(c)(2) of subpart G, CBP may deny a claim for USMCA preferential tariff treatment of covered vehicles for the additional reasons set forth in § 182.107, *Denial of preferential tariff treatment of a covered vehicle.* These reasons for denial relate specifically to the LVC, steel purchasing, and aluminum purchasing requirements, the vehicle certifications, and the additional recordkeeping requirements for covered vehicles. If CBP determines that one of these reasons for denial set forth in § 182.107 applies to a vehicle certification that forms the basis for a claim's eligibility for USMCA preferential tariff treatment, CBP may deny USMCA preferential tariff treatment for any claim which uses that vehicle certification as a basis for eligibility for USMCA preferential tariff treatment regardless of whether the importer lacks prior knowledge of the vehicle producer's failure to meet the LVC, steel purchasing, or aluminum purchasing requirements because of the unique nature of the vehicle certifications.

G. Other Conforming Amendments

CBP is also amending certain sections of title 19 of the CFR, including §§ 10.31(h), 113.62(a), 141.0a(a), 141.0a(f), 141.68(i), and 144.38(b), to add the appropriate cross-references to the USMCA drawback and duty-deferral program provisions alongside existing references to NAFTA duty-deferral and drawback provisions.

IV. Statutory and Regulatory Requirements

A. Administrative Procedure Act

Under the Administrative Procedure Act (APA) (5 U.S.C. 553), agencies generally are required to publish a notice of proposed rulemaking in the **Federal Register** that solicits public comment on the proposed regulatory amendments, considers public comments in deciding on the content of the final amendments, and publishes the final amendments at least 30 days prior to their effective date. This rule is exempt from APA rulemaking requirements pursuant to 5 U.S.C. 553(a)(1) as a foreign affairs function of the United States because it implements the preferential tariff treatment and customs related provisions of the USMCA, which is a specific trilateral agreement negotiated between the United States, Mexico, and Canada. This IFR implements trilaterally agreed upon provisions in the USMCA, the Uniform Regulations regarding the Rules of Origin, and the Uniform Regulations regarding Origin Procedures. The regulatory amendments promulgated in this IFR fulfill the United States' USMCA commitments. This IFR amends 19 CFR part 182 to add regulations implementing provisions from USMCA Chapters 1, 2, 4, 5, and 6, as well as the USMCA Uniform Regulations regarding the Rules of Origin and the Uniform Regulations regarding Origin Procedures. Additionally, this IFR makes the amendments to 19 CFR parts 10, 24, 113, 123, 141, 144, 163, and 174 to implement provisions from USMCA Chapters 2, 5, 6, and 7 as well as the USMCA Uniform Regulations regarding Origin Procedures. This IFR meets the U.S. commitments to the other USMCA countries, as agreed to in the USMCA, and fulfills our international obligations.

B. Executive Orders 12866 and 13563

Executive Order 12866 (Regulatory Planning and Review), as reaffirmed by Executive Order 13563 (Improving Regulation and Regulatory Review) and

amended by Executive Order 14094 (Modernizing Regulatory Review), directs agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

Rules involving the foreign affairs function of the United States are exempt from the requirements of Executive Orders 12866, as amended by Executive Order 14094, and 13563. Because this rule involves a foreign affairs function of the United States by implementing a specific trilateral agreement negotiated between the United States, Mexico, and Canada, the rule is not subject to the provisions of Executive Orders 12866, as amended by Executive Order 14094, and 13563.

C. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801, *et seq.*), the Office of Information and Regulatory Affairs (OIRA) designated this rule as a ''major rule,'' as defined by 5 U.S.C. 804(2).

D. Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*), as amended by the Small Business Regulatory Enforcement and Fairness Act of 1996, requires an agency to prepare and make available to the public a regulatory flexibility analysis that describes the effect of a proposed rule on small entities (*i.e.,* small businesses, small organizations, and small governmental jurisdictions) when the agency is required to publish a general notice of proposed rulemaking for a rule. Since a notice of proposed rulemaking is not necessary for this rule, CBP is not required to prepare a regulatory flexibility analysis for this rule.

E. Paperwork Reduction Act

The collection of information in this document was submitted to OMB for review in accordance with the requirements of the Paperwork Reduction Act (44 U.S.C. 3507). Approval and assigned OMB control number are pending. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid control number assigned by OMB. These regulations provide for a new collection of information for USMCA's automotive goods requirements. Vehicle producers will be required to submit three new vehicle certifications to CBP, including the labor value content (LVC) certification, the aluminum purchasing certification, and the steel purchasing certification. In addition, vehicle producers may submit motor vehicle averaging elections, including an averaging election for labor value content (LVC) and regional value content (RVC). This information is used by CBP to determine if vehicles imported from Canada and Mexico are entitled to preferential tariff treatment under USMCA.

The proposed information collection requirements will result in the following estimated burden hours:

Aluminum Purchasing Certification

Estimated Number of Annual Respondents: 25.

Estimated Number of Annual Responses per Respondent: 1.5.

Estimated Total Annual Responses: 37.

Estimated Time per Response: 2 hours.

Estimated Total Annual Burden Hours: 74.

Labor Value Content Certification

Estimated Number of Annual Respondents: 25.

Estimated Number of Annual Responses per Respondent: 1.5.

Estimated Total Annual Responses: 37.

Estimated Time per Response: 2 hours.

Estimated Total Annual Burden Hours: 74.

Steel Purchasing Certification

Estimated Number of Annual Respondents: 25.

Estimated Number of Annual Responses per Respondent: 1.5.

Estimated Total Annual Responses: 37.

Estimated Time per Response: 2 hours.

Estimated Total Annual Burden Hours: 74.

Labor Value Content Averaging Election

Estimated Number of Annual Respondents: 25.

Estimated Number of Annual Responses per Respondent: 1.

Estimated Total Annual Responses: 25.

Estimated Time per Response: 1 hour.

Estimated Total Annual Burden Hours: 25.

Regional Value Content Averaging Election

Estimated Number of Annual Respondents: 25.

Estimated Number of Annual Responses per Respondent: 1.

Estimated Total Annual Responses: 25.

Estimated Time per Response: 1 hour.

Estimated Total Annual Burden Hours: 25.

Comments concerning the collection of information and the accuracy of the estimated annual burden, and suggestions for reducing that burden, should be posted to the docket of this rulemaking or to reginfo.gov. Comments are specifically welcome on (a) whether the proposed collection of information is necessary for the proper performance of the mission of the agencies, and whether the information will have practical utility; (b) the accuracy of the estimate of the burden of the collections of information; (c) ways to enhance the quality, utility, and clarity of the information collection; (d) ways to minimize the burden of the information collection, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to maintain the information. Comments should be received on or before March 18, 2025.

Signing Authority

In accordance with Treasury Order 100–20, the Secretary of the Treasury delegated to the Secretary of Homeland Security the authority related to the customs revenue functions vested in the Secretary of the Treasury as set forth in 6 U.S.C. 212 and 215, subject to certain exceptions. This regulation is being issued in accordance with DHS Directive 07010.3, Revision 03, which delegates to the Commissioner of CBP the authority to prescribe and approve/sign regulations related to customs revenue functions.

Pete Flores, Senior Official Performing the Duties of the Commissioner, having reviewed and approved this document, has delegated the authority to electronically sign the document to the Director (or Acting Director, if applicable) of the Regulations and Disclosure Law Division of CBP, for purposes of publication in the **Federal Register**.

List of Subjects

19 CFR Part 10

Bonds, Exports, Imports, Reporting and recordkeeping requirements, Trade agreements.

19 CFR Part 24

Accounting, Claims, Exports, Freight, Harbors, Reporting and recordkeeping requirements, Taxes.

19 CFR Part 113

Common carriers, Exports, Freight, Laboratories, Reporting and recordkeeping requirements, Surety bonds.

19 CFR Part 123

Canada, Freight, International boundaries, Mexico, Motor carriers, Railroads, Reporting and recordkeeping requirements, Vessels.

19 CFR Part 141

Reporting and recordkeeping requirements.

19 CFR Part 144

Reporting and recordkeeping requirements, Warehouses.

19 CFR Part 163

Administrative practice and procedure, Exports, Imports, Penalties, Reporting and recordkeeping requirements.

CFR Part 174

Administrative practice and procedure.

19 CFR Part 182

Administrative practice and procedure, Canada, Exports, Mexico, Reporting and recordkeeping requirements, Trade agreements.

Amendments to the CBP Regulations

For the reasons stated above, U.S. Customs and Border Protection and the Department of the Treasury amend 19 CFR parts 10, 24, 113, 123, 141, 144, 163, 174, and 182 of title 19 of the Code of Federal Regulations as set forth below:

PART 10—ARTICLES CONDITIONALLY FREE, SUBJECT TO A REDUCED RATE, ETC.

■ 1. The general and specific authority citations for part 10 continue to read as follows:

Authority: 19 U.S.C. 66, 1202 (General Note 3(i), Harmonized Tariff Schedule of the United States (HTSUS)), 1321, 1481, 1484, 1498, 1508, 1623, 1624, 4513.

* * * * *

Sections 10.41, 10.41a, 10.107 also issued under 19 U.S.C. 1322;

Sections 10.211 through 10.217 also issued under 19 U.S.C. 3721;

Sections 10.221 through 10.228 and §§ 10.231 through 10.237 also issued under 19 U.S.C. 2701 *et seq.*

* * * * *

■ 2. In § 10.31, paragraphs (f) and (h) are revised to read as follows:

§ 10.31 Entry; bond.

* * * * *

(f) With the exceptions stated herein, a bond shall be given on CBP Form 301, containing the bond conditions set forth in § 113.62 of this chapter, in an amount equal to double the duties and fees, which it is estimated would accrue (or such larger amount as the Center director shall state in writing or by the electronic equivalent to the entrant is necessary to protect the revenue) had all the articles covered by the entry been entered under an ordinary consumption entry. In the case of samples solely for use in taking orders entered under subheading 9813.00.20, HTSUS, motion-picture advertising films entered under subheading 9813.00.25, HTSUS, and professional equipment, tools of trade and repair components for such equipment or tools entered under subheading 9813.00.50, HTSUS, the bond required to be given shall be in an amount equal to 110 percent of the estimated duties and fees, determined at the time of entry. If appropriate, a carnet, under the provisions of part 114 of this chapter, may be filed in lieu of a bond on CBP Form 301 (containing the bond conditions set forth in § 113.62 of this chapter). Cash deposits in the amount of the bond may be accepted in lieu of sureties. When the articles are entered under subheading 9813.00.05, 9813.00.20, or 9813.00.50, HTSUS without formal entry, as provided for in §§ 10.36 and 10.36a, or the amount of the bond taken under any subheading of Chapter 98, Subchapter XIII, HTSUS, is less than $25, the bond shall be without surety or cash deposit, and the bond shall be modified to so indicate. In addition, notwithstanding any other provision of this paragraph, in the case of professional equipment necessary for carrying out the business activity, trade or profession of a business person, equipment for the press or for sound or television broadcasting, cinematographic equipment, articles imported for sports purposes and articles intended for display or demonstration, if brought into the United States by a national of Canada or Mexico, or by a resident of Singapore, Chile, Morocco, Australia, El Salvador, Guatemala, Honduras, Nicaragua, the Dominican Republic, Costa Rica, Bahrain, Oman, Peru, the Republic of Korea, Colombia, or Panama and entered under Chapter 98, Subchapter XIII, HTSUS, no bond or other security will be required if the entered article is a good originating, within the meaning of General Notes 11, 12, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, and 35, HTSUS, in the country of which the importer is a national or resident, as applicable. In the case of articles imported for sports purposes and articles intended for display or demonstration, if brought into the United States by a national of Canada or Mexico, the bond shall be without surety or cash deposit in an amount equal to 110 percent of the estimated duties and fees determined at the time of entry, if the entered article is not originating, within the meaning of General Notes 11 and 12, HTSUS, in the country of which the importer is a national.

* * * * *

(h) After the entry and bond have been accepted, the articles may be released to the importer. The entry shall not be liquidated as the transaction does not involve liquidated duties. However, a TIB importer may be required to file an entry for consumption and pay duties, or pay liquidated damages under its bond for a failure to do so, in the case of merchandise imported under subheading 9813.00.05, HTSUS, and subsequently exported to Canada or Mexico (*see* § 181.53 or 182.53 of this chapter).

■ 3. In § 10.36a, paragraph (a) is revised to read as follows:

§ 10.36a Vehicles, pleasure boats and aircraft brought in for repair or alteration.

(a) A vehicle (such as an automobile, truck, bus, motorcycle, tractor, trailer), pleasure boat, or aircraft brought into the United States by an operator of such vehicle, pleasure boat, or aircraft for repair or alteration (with repair or alteration defined as restoration, addition, renovation, re-dyeing, cleaning, re-sterilizing, or other treatment that does not destroy the essential characteristics of, or create a new or commercially different good from, the good imported into the United States) may be entered on the operator's baggage declaration, in lieu of formal entry and examination, and may be passed under subheading 9813.00.05, Harmonized Tariff Schedule of the United States (HTSUS), at the place of arrival in the same manner as passengers' baggage. When the vehicle, aircraft, or pleasure boat to be entered is being towed by or transported on another vehicle, the operator of the towing or transporting vehicle may make entry for the vehicle, aircraft or pleasure boat to be repaired or altered.

The bond, prescribed by § 10.31(f), filed to support entry under this section, shall be without surety or cash deposit except as provided by this paragraph and paragraph (d) of this section. The examination may be made by an inspector who is qualified to determine the amount of such bond to be filed in support of the entry. The privilege accorded by this paragraph shall not apply when two or more vehicles, pleasure boats, or aircraft are to be entered by the same importer under subheading 9813.00.05, HTSUS, at the same time. In that event, the importer must file a formal entry supported by bond with surety or cash deposit in lieu of surety.

* * * * *

■ 4. In § 10.41a, paragraphs (g)(1) and (3) are revised to read as follows:

§ 10.41a Lift vans, cargo vans, shipping tanks, skids, pallets, and similar instruments of international traffic; repair components.

* * * * *

(g)(1) Except as provided in paragraph (j) of this section, a container (as defined in Article 1 of the Customs Convention on Containers) that is designated as an instrument of international traffic is deemed to remain in international traffic provided that the container exits the United States within 365 days of the date on which it was admitted under this section. A container that is designated as an instrument of international traffic and admitted from Canada or Mexico is deemed to remain in international traffic beyond this 365-day time limit when CBP grants an extension, at the request of the person who filed the application for release under paragraph (a)(1) of this section, provided that the container exits the United States prior to the date of expiration of the extension granted. An exit from the United States in this context means a movement across the border of the United States into a foreign country where either:

(i) All merchandise is unladen from the container; or

(ii) Merchandise is laden aboard the container (if the container is empty).

* * * * *

(3) If the container does not exit the United States within 365 days of the date on which it is admitted under this section, or, by the date on which an extension granted under paragraph (g)(1) of this section expires, such container shall be considered to have been removed from international traffic, and entry for consumption must be made within 10 business days after the end of the month in which the container is deemed removed from international traffic. When entry is required under this section, any containers considered removed from international traffic in the same month may be listed on one entry. Such entry may be made at any port of entry. Under 19 U.S.C. 1484(a)(1)(B), the importer of record is required, using reasonable care, to complete the entry by filing with CBP the declared value, classification and rate of duty applicable to the merchandise. The importer of record must use the value of the container as determined in accordance with section 402, Tariff Act of 1930 (19 U.S.C. 1401a), as amended by the Trade Agreements Act of 1979 (TAA).

■ 5. In § 10.212, paragraph (l) is revised to read as follows:

§ 10.212 Definitions.

* * * * *

(l) *USMCA.* ''USMCA'' means the Agreement between the United States of America, the United Mexican States, and Canada, entered into force by the United States, Canada and Mexico on July 1, 2020.

* * * * *

§ 10.213 [Amended]

■ 6. In § 10.213(a)(8), remove the words ''General Note 12(t)'' and add, in their place, the words ''General Note 11''.

§ 10.214 [Amended]

■ 7. Amend § 10.214 as follows:

■ a. In paragraph (b), remove the word ''NAFTA'' from the table and add, in its place, the word ''USMCA''; and

■ b. In paragraph (c)(12), remove the word ''NAFTA'' and add, in its place, the word ''USMCA''.

■ 8. In § 10.222, remove the definition for ''NAFTA'' and add, in alphabetical order, the definition for ''USMCA''.

The addition reads as follows:

§ 10.222 Definitions.

* * * * *

USMCA. ''USMCA'' means the Agreement between the United States of America, the United Mexican States, and Canada, entered into force by the United States, Canada and Mexico on July 1, 2020.

* * * * *

§ 10.223 [Amended]

■ 9. In § 10.223(a)(7), remove the words ''Annex 401 of the NAFTA'' and add, in their place, the words ''Annex 4–B of the USMCA''.

§ 10.224 [Amended]

■ 10. In § 10.224(c)(12), remove the word ''NAFTA'' and add, in its place, the word ''USMCA''.

■ 11. Amend § 10.232 as follows:

■ a. Remove the definition for ''NAFTA'';

■ b. Amend the definition of ''Preferential tariff treatment'' by removing the words ''Annex 302.2 of the NAFTA'' and adding, in their place, the words ''Annex 2–B of the USMCA''; and

■ c. Add, in alphabetical order, the definition for ''USMCA''.

The addition reads as follows:

§ 10.232 Definitions.

* * * * *

USMCA. ''USMCA'' means the Agreement between the United States of America, the United Mexican States, and Canada, entered into force by the United States, Canada and Mexico on July 1, 2020.

■ 12. In § 10.233, revise paragraphs(b) introductory text and (b)(1) to read as follows:

§ 10.233 Articles eligible for preferential treatment.

* * * * *

(b) *Application of the USMCA rules of origin.* In determining whether an article is a CBTPA originating good for purposes of paragraph (a) of this section, application of the provisions of General Note 11 of the HTSUS, and part 182, appendix A of this chapter, will be subject to the following rules:

(1) No country other than the United States and a CBTPA beneficiary country may be treated as being a party to the USMCA;

* * * * *

■ 13. In § 10.237, revise paragraph (b) to read as follows:

§ 10.237 Verification and justification of claim for preferential tariff treatment.

* * * * *

(b) *Importer requirements.* In order to make a claim for preferential tariff treatment under § 10.235, the importer:

(1) Must have records that explain how the importer came to the conclusion that the article qualifies for preferential tariff treatment. Those records must include documents that support a claim that the article in question qualifies for preferential tariff treatment because it meets the applicable rule of origin set forth in General Note 11, HTSUS, and in part 182, appendix A of this chapter. A properly completed Certificate of Origin in the form prescribed in § 10.236(b) is a record that would serve this purpose;

* * * * *

■ 14. Revise § 10.301 to read as follows:

§ 10.301 Scope and applicability.

The provisions of §§ 10.302 through 10.311 of this part relate to the

procedures for obtaining duty preferences on imported goods under the United States-Canada Free-Trade Agreement (the Agreement) entered into on January 2, 1988, and the United States-Canada Free-Trade Agreement Implementation Act of 1988 (102 Stat. 1851). The United States and Canada agreed to suspend operation of the Agreement with effect from January 1, 1994, to coincide with the entry into force of the North American Free Trade Agreement (*see* part 181 of this chapter) and to continue suspending operation of the Agreement with the entry into force of the Agreement Between the United States of America, the United Mexican States, and Canada (USMCA) (*see* part 182 of this chapter) and, accordingly, the provisions of §§ 10.302 through 10.311 of this part apply only to goods imported from Canada that were entered for consumption, or withdrawn from warehouse for consumption, during the period January 1, 1989, through December 31, 1993. In situations involving goods subject to bilateral restrictions or prohibitions, or country of origin marking, other criteria for determining origin may be applicable pursuant to Article 407 of the Agreement.

PART 24—CUSTOMS FINANCIAL AND ACCOUNTING PROCEDURE

■ 15. The general and specific authority citation for part 24 is revised to read as follows:

Authority: 5 U.S.C. 301; 19 U.S.C. 58a-58c, 66, 1202 (General Note 3(i), Harmonized Tariff Schedule of the United States), 1505, 1520, 1624; 26 U.S.C. 4461, 4462; 31 U.S.C. 3717, 9701; Pub. L. 107–296, 116 Stat. 2135 (6 U.S.C. 1 *et seq.*).

* * * * *

Section 24.23 also issued under 19 U.S.C. 4531; Sec. 892, Public Law 108–357, 118 Stat. 1418 (19 U.S.C. 58c); Sec. 32201, Public Law 114–94, 129 Stat. 1312 (19 U.S.C. 58c); Public Law 115–271, 132 Stat. 3895 (19 U.S.C. 58c).

* * * * *

Section 24.36 also issued under 26 U.S.C. 5001(c)(4), 5041(c)(7), 5051(a)(6), 6423; Public Law 115–97; Public Law 116–260; 134 Stat. 3046.

■ 16. In § 24.23, paragraph (c)(3) is revised to read as follows:

§ 24.23 Fees for processing merchandise.

* * * * *

(c) * * *

(3) The ad valorem, surcharge, and specific fees provided for under paragraphs (b)(1) and (2) of this section will not apply to goods originating within the meaning of General Note 11, HTSUS (*see also* 19 U.S.C. 4531), or to goods that qualify for preferential tariff treatment under § 182.82 of this chapter (*see also* Annex 6–A of the USMCA), that are entered for consumption, or withdrawn from warehouse for consumption, on or after July 1, 2020. The ad valorem, surcharge, and specific fees will also not apply to goods originating in Canada or Mexico within the meaning of General Note 12, HTSUS, that are entered for consumption, or withdrawn from warehouse for consumption, prior to July 1, 2020 where such goods qualify to be marked, respectively, as goods of Canada or Mexico pursuant to Annex 311 of the North American Free Trade Agreement and without regard to whether the goods are marked. For qualifying goods originating in Mexico, the exemption applies to goods entered or released (as defined in this section) after June 29, 1999. Where originating goods or goods that qualify for preferential tariff treatment under § 182.82 of this chapter are entered or released with other goods that are not originating goods or are goods that do not qualify for preferential tariff treatment, the ad valorem, surcharge, and specific fees will apply only to those goods which are not originating goods or are goods that do not qualify for preferential tariff treatment.

* * * * *

■ 17. In § 24.36, paragraph (a)(1) introductory text is revised to read as follows:

§ 24.36 Refunds of excessive duties, taxes, etc.

(a) * * *

(1) Except as otherwise provided in paragraphs (a)(1)(i) through (iii) of this section, the refund shall include interest on the excess moneys deposited with Customs, and such interest shall accrue from the date the duties, taxes, fees or interest were deposited or, in a case in which a proper claim is filed under 19 U.S.C. 1520(d), from the date such claim is filed, to the date of liquidation or reliquidation of the applicable entry or reconciliation. An example follows:

* * * * *

PART 113—CBP BONDS

■ 18. The general authority citation for part 113 continues to read as follows:

Authority: 19 U.S.C. 66, 1623, 1624.

* * * * *

■ 19. In § 113.62, revise paragraph (a)(1) to read as follows:

§ 113.62 Basic importation and entry bond conditions.

* * * * *

(a) *Agreement to pay duties, taxes, and charges.* (1) If merchandise is imported and released from CBP custody or withdrawn from a CBP bonded warehouse into the commerce of, or for consumption in, the United States, or under § 181.53 or 182.53 of this chapter is withdrawn from a duty-deferral program for exportation to Canada or Mexico or for entry into a duty-deferral program in Canada or Mexico, the obligors (principal and surety, jointly and severally) agree to:

* * * * *

PART 123—CBP RELATIONS WITH CANADA AND MEXICO

■ 20. The general authority citation for part 123 continues to read as follows:

Authority: 19 U.S.C. 66, 1202 (General Note 3(i), Harmonized Tariff Schedule of the United States (HTSUS)), 1415, 1431, 1433, 1436, 1448, 1624, 2071 note.

* * * * *

■ 21. Revise § 123.0 to read as follows:

§ 123.0 Scope.

This part contains special regulations pertaining to CBP procedures at the Canadian and Mexican borders. Included are provisions governing report of arrival, manifesting, unlading and lading, instruments of international traffic, shipments in transit through Canada or Mexico or through the United States, commercial traveler's samples transiting the United States or Canada, baggage arriving from Canada or Mexico including baggage transiting the United States or Canada or Mexico, and electronic information for rail and truck cargo in advance of arrival. Aircraft arriving from or departing for Canada or Mexico are governed by the provisions of part 122 of this chapter. The arrival of all vessels from, and clearance of all vessels departing for, Canada or Mexico are governed by the provisions of part 4 of this chapter. Fees for services provided in connection with the arrival of aircraft, vessels, vehicles and other conveyances from Canada or Mexico are set forth in § 24.22 of this chapter. Regulations pertaining to the treatment of goods from Canada or Mexico under the North American Free Trade Agreement are contained in part 181 of this chapter. Regulations pertaining to the treatment of goods from Canada or Mexico under the Agreement Between the United States of America, the United Mexican States, and Canada (USMCA) are contained in part 182 of this chapter. The requirements for the United States Postal Service to transmit advance electronic information for inbound international mail shipments are set forth in § 145.74 of this chapter.

PART 141—ENTRY OF MERCHANDISE

■ 22. The general and specific authority citations for part 141 continue to read as follows:

Authority: 19 U.S.C. 66, 1448, 1484, 1498, 1624.

* * * * *

Section 141.68 also issued under 19 U.S.C. 1315;

* * * * *

■ 23. In § 141.0a, paragraphs (a) and (f) are revised to read as follows:

§ 141.0a Definitions.

* * * * *

(a) *Entry.* ''Entry'' means that documentation or data required by § 142.3 of this chapter to be filed with the appropriate CBP officer or submitted electronically to the Automated Commercial Environment (ACE) or any other CBP-authorized electronic data interchange system to secure the release of imported merchandise from CBP custody, or the act of filing that documentation. ''Entry'' also means that documentation or data required by § 181.53 or 182.53 of this chapter to be filed with CBP to withdraw merchandise from a duty-deferral program in the United States for exportation to Canada or Mexico or for entry into a duty-deferral program in Canada or Mexico.

* * * * *

(f) *Entered for consumption.* ''Entered for consumption'' means that an entry summary for consumption has been filed with CBP in proper form, including electronic submission to the Automated Commercial Environment (ACE) or any other CBP-authorized electronic data interchange system, with estimated duties attached. ''Entered for consumption'' also means the necessary documentation has been filed with CBP to withdraw merchandise from a duty-deferral program in the United States for exportation to Canada or Mexico or for entry into a duty-deferral program in Canada or Mexico (*see* § 181.53 or 182.53 of this chapter).

* * * * *

■ 24. In § 141.68, paragraph (i) is revised to read as follows:

§ 141.68 Time of entry.

* * * * *

(i) *Exportation to Canada or Mexico of goods imported into the United States under a duty-deferral program defined in § 181.53 or 182.53 of this chapter.* When merchandise in a U.S. duty-deferral program is withdrawn for exportation to Canada or Mexico or for entry into a duty-deferral program in Canada or Mexico, the date of entry is the date that the entry is required to be filed under § 181.53(a)(2)(iii) or 182.53(a)(2)(iii) of this chapter.

* * * * *

PART 144—WAREHOUSE AND REWAREHOUSE ENTRIES AND WITHDRAWALS

■ 25. The general authority citation for part 144 continues to read as follows:

Authority: 19 U.S.C. 66, 1484, 1557, 1559, 1624.

* * * * *

■ 26. In § 144.38, paragraph (b) is revised to read as follows:

§ 144.38 Withdrawal for consumption.

* * * * *

(b) *Withdrawal for exportation to Canada or Mexico.* A withdrawal for exportation to Canada or Mexico or for entry into a duty-deferral program in Canada or Mexico is considered a withdrawal for consumption pursuant to § 181.53 or 182.53 of this chapter.

* * * * *

PART 163—RECORDKEEPING

■ 27. The general authority citation for part 163 continues to read as follows:

Authority: 5 U.S.C. 301; 19 U.S.C. 66, 1484, 1508, 1509, 1510, 1624.

■ 28. Amend § 163.1(a)(2) as follows:

■ a. Redesignate paragraph (a)(2)(xviii) as paragraph (a)(2)(xix);

■ b. In newly redesignated paragraph (a)(2)(xix), remove the word ''Customs'' and add in its place the word ''CBP''; and

■ c. Add a new paragraph (a)(2)(xviii).

The addition reads as follows:

§ 163.1 Definitions.

* * * * *

(a) * * *

(2) * * *

(xviii) The maintenance of any documentation in support of a claim for preferential tariff treatment under the Agreement Between the United States of America, the United Mexican States, and Canada (USMCA) pursuant to part 182 of this chapter, including the certification of origin.

* * * * *

§ 163.7 [Amended]

■ 29. Amend § 163.7(a)(2) by adding the phrase ''to a USMCA country as defined in 19 U.S.C. 4502(10) (*see also* part 182 of this chapter) or'' after the phrase ''knowingly caused merchandise to be exported,''.

■ 30. Amend Appendix to part 163 as follows:

■ a. Revise the § 10.307 listing; and

■ b. Add a new listing under section IV in numerical order.

The revision and addition read as follows:

Appendix to Part 163—Interim (a)(1)(A) List

* * * * *

IV. * * *

† [§ 10.307 Documents, etc. required for entries under CFTA Certificate of origin of CF 353]

[† CFTA provisions are suspended while USMCA remains in effect. See part 182.]

* * * * *

§ 182.13 USMCA records that the importer may have in support of a USMCA claim for preferential tariff treatment, including the certification of origin.

* * * * *

PART 174—PROTESTS

■ 31. The general authority citation for part 174 continues to read as follows:

Authority: 19 U.S.C. 66, 1514, 1515, 1624.

■ 32. Amend § 174.12(a) as follows:

■ a. In paragraph (a)(5), remove the word ''or'' after the phrase ''§ 181.11(a) of this chapter;'';

■ b. Redesignate paragraph (a)(6) as paragraph (a)(7);

■ c. Add a new paragraph (a)(6); and

■ d. In newly redesignated paragraph (a)(7), remove the number ''5'' and add in its place the number ''6''.

The addition reads as follows:

§ 174.12 Filing of protests.

(a) * * *

(6) With respect to a determination of origin under part 182, subpart G, of this chapter, any exporter or producer of the merchandise subject to the determination of origin, if the exporter or producer completed and signed a certification of origin covering the merchandise as provided for in § 182.12 of this chapter; or

* * * * *

■ 33. Revise § 174.13(a)(9) to read as follows:

§ 174.13 Contents of protest.

(a) * * *

(9) A declaration, to the best of the protestant's knowledge, as to whether the entry is the subject of drawback, or if there is the ability for a party to make such entry the subject of drawback (*see* §§ 181.50, 182.50, 190.81, and 191.81 of this chapter).

* * * * *

■ 34. Revise § 174.15(b) to read as follows:

§ 174.15 Consolidation of protests filed by different parties.

* * * * *

(b) *NAFTA or USMCA transactions.* The following rules shall apply to a consolidation of multiple protests concerning a determination of origin under part 181, subpart G, or part 182, subpart G, of this chapter if one of the protests is filed by or on behalf of an exporter or producer described in § 174.12(a)(5) or (a)(6) of this part:

(1) If consolidation under paragraph (a) of this section is pursuant to specific written requests for consolidation received from all interested parties who filed protests under this part, those interested parties shall be deemed to have waived their rights to confidentiality as regards business information within the meaning of § 181.121 of this chapter for NAFTA transactions or within the meaning of § 182.2 of this chapter for USMCA transactions. In such cases, a separate notice of the decision will be issued to each interested party under this part but without regard to whether the notice reflects confidential business information obtained from one but not all of those interested parties.

(2) If consolidation under paragraph (a) of this section is done by the port director or Center director, before January 19, 2017, or the Center director on or after January 19, 2017, in the absence of specific written requests for consolidation from all interested parties who filed protests under this part, no waiver of confidentiality by those interested parties shall be deemed to have taken place. In such cases, a separate notice of the decision will be issued to each interested party and each such notice shall adhere to the principle of confidentiality set forth in § 181.121 of this chapter for NAFTA transactions or § 182.2 of this chapter for USMCA transactions.

■ 35. In § 174.22, amend paragraph (a) by adding a sentence to the end of the paragraph.

§ 174.22 Accelerated disposition of protest.

(a) * * * Accelerated disposition of a protest is not available for protests involving eligibility for USMCA preferential tariff treatment of a covered vehicle if the protest relates to the Department of Labor's analysis of the high-wage components of the labor value content (LVC) requirements as described under § 182.105(e) of this chapter.

* * * * *

§ 174.29 [Amended]

■ 36. In § 174.29, add the phrase ''or (a)(6)'' after the phrase ''under § 174.12(a)(5)''.

PART 182—UNITED STATES-MEXICO-CANADA AGREEMENT

■ 37. The general and specific authority citations for part 182 are revised to read as follows:

Authority: 19 U.S.C. 66, 1202 (General Note 3(i) and General Note 11, Harmonized Tariff Schedule of the United States (HTSUS)), 1624, 4513, 4535; Section 182.1 also issued under 19 U.S.C. 4502; Subpart D also issued under 19 U.S.C. 1520(d); Subpart E also issued under 19 U.S.C. 4534; Subpart 182.61 also issued under 19 U.S.C. 4531, 4532; Subpart G also issued under 19 U.S.C. 4533; Subpart H also issued under 19 U.S.C. 4533; Subpart I also issued under 19 U.S.C. 4532.

Subpart A—General Provisions

■ 38. Amend § 182.0 by adding a sentence to the end of the paragraph to read as follows:

§ 182.0 Scope.

* * * Additional provisions applicable to the USMCA are contained in parts 10, 24, 163, 174, and 177 of this chapter.

■ 39. Amend § 182.1 by adding the definitions for ''Alternative staging regime'',

''Automotive good'', ''Corporate level'', ''Covered vehicle'', ''Customs offenses'',

''DOL'', ''Heavy truck'', ''Light truck'', ''Passenger vehicle'', ''Tariff preference level'',

''Textile or apparel good'', ''USMCA drawback'', ''Vehicle certifications'', and ''Wool apparel'' in alphabetical order to read as follows:

§ 182.1 General definitions.

* * * * *

Alternative staging regime means the application of the requirements of section 19 of Appendix A to this part to the production of covered vehicles to allow producers of such vehicles to bring such production into compliance with the requirements of sections 13 through 18 of Appendix A to this part;

Automotive good means either a covered vehicle or a part, component, or material listed in Table A.1, A.2, B, C, D, E, F, or G of Appendix A to this part;

* * * * *

Corporate level. For an independent producer of a covered vehicle, its purchases or expenditures at the corporate level means the producer's total purchases or expenditures by value in one or more of the USMCA countries. For a subsidiary company whose financial information is included in the parent company's consolidated financial statements, its purchases or expenditures at the corporate level means the parent company's total purchases or expenditures by value in one or more of the USMCA countries. For purposes of the high-wage technology expenditures credit for the labor value content (LVC) requirement, corporate level must include all USMCA countries with such expenditures.

Covered vehicle means a passenger vehicle, light truck, or heavy truck;

* * * * *

Customs offenses means any act committed for the purpose of, or having the effect of, avoiding the laws or regulations of the United States pertaining to the provisions of the USMCA governing importations or exportations of goods between, or transit of goods through, the territories of the United States, Canada, and Mexico, specifically those that violate a customs law or regulation for restrictions or prohibitions on imports or exports, duty evasion, transshipment, falsification of documents relating to the importation or exportation of goods, fraud, or smuggling of goods;

* * * * *

DOL means the United States Department of Labor;

* * * * *

Heavy truck means a vehicle other than a vehicle that is solely or principally for off-road use of subheading 8701.20, 8704.22, 8704.23, 8704.32 or 8704.90, HTSUS, or a chassis fitted with an engine of heading 8706, HTSUS, as in effect on July 1, 2020, that is for use in such a vehicle;

* * * * *

Light truck means a vehicle of subheading 8704.21 or 8704.31, HTSUS, as in effect on July 1, 2020, except for a vehicle that is solely or principally for off-road use;

* * * * *

Passenger vehicle means a vehicle of subheading 8703.21 through 8703.90, HTSUS, as in effect on July 1, 2020, except for: A vehicle with a compression-ignition engine of subheadings 8703.31 through 8703.33, HTSUS, as in effect on July 1, 2020, or a vehicle of subheading 8703.90, HTSUS, as in effect on July 1, 2020, with both a compression-ignition engine and an electric motor for propulsion, a three- or four-wheeled motorcycle, an all-terrain vehicle, a motorhome or entertainer coach, or an ambulance, hearse or prison van;

* * * * *

Tariff preference level means a quantitative limit for certain non-originating textile or apparel goods that may be entitled to preferential tariff treatment based on the goods meeting the requirements set forth in § 182.82 of this part;

Textile or apparel good means a textile or apparel good classified in the HTSUS Chapters 54 through 63 or the following HTSUS headings or subheadings, as in effect on July 1, 2020: 4202.12, 4202.22, 4202.32, 4202.92, 5004 through 5007, 5104 through 5113, 5204 through 5212, 5303 through 5311, 6601, 7019, 9404.90, and 9619;

* * * * *

USMCA drawback means any drawback, waiver, or reduction of U.S. customs duty provided for in subpart E of this part;

* * * * *

Vehicle certifications means the labor value content (LVC) certification, steel purchasing certification, and aluminum purchasing certification for covered vehicles required by §§ 182.95, 182.96, and 182.97 of this part;

Wool apparel means apparel predominantly of wool, by weight; woven apparel predominantly of man-made fibers by weight, and containing 36 percent or more of wool, by weight; or knitted or crocheted apparel predominantly of man-made fibers by weight, and containing 23 percent or more of wool by weight;

* * * * *

Subpart E—Restrictions on Drawback and Duty-Deferral Programs

■ 40. Revise § 182.42(c) to read as follows:

§ 182.42 Duties and fees not subject to drawback.

* * * * *

(c) Customs duties paid or owed under unused merchandise substitution drawback. There will be no payment of such drawback under 19 U.S.C. 1313(c)(2), 1313(j)(2), and 1313(p), when the basis for drawback is imported duty-paid petroleum derivatives (that is, not articles manufactured under 19 U.S.C. 1313(a) or (b)), pursuant to § 190.173 of this chapter, on goods exported to Canada or Mexico per Article 2.5 of the USMCA.

■ 41. Revise § 182.43 to read as follows:

§ 182.43 Eligible goods subject to USMCA drawback.

Except as otherwise provided in this subpart, drawback is authorized for an imported good that is entered for consumption and is:

(a) Subsequently exported to Canada or Mexico;

(b) Used as a material in the production of another good that is subsequently exported to Canada or Mexico; or

(c) Substituted by a good of the same kind and quality as defined in § 182.44(d) of this subpart and used as a material in the production of another good that is subsequently exported to Canada or Mexico.

■ 42. Amend § 182.44 by adding new paragraphs (h) and (i) to read as follows:

§ 182.44 Calculation of drawback.

* * * * *

(h) *Substitution of finished petroleum derivatives under 19 U.S.C. 1313(p) for derivatives manufactured under 19 U.S.C. 1313(a) or (b).* Upon presentation of a USMCA drawback claim under 19 U.S.C. 1313(p) for manufactured or produced petroleum derivatives in accordance with § 190.174 of this chapter, the amount of drawback payable is based on the lesser amount of the customs duties paid on the good either to the United States or to Canada or Mexico. The amount of drawback payable may not exceed the amount of drawback attributable to the article manufactured or produced under 19 U.S.C. 1313(a) or (b) which serves as the basis for drawback. For purposes of substitution drawback under this subpart, the term ''same kind and quality'' is as used in 19 U.S.C. 1313(p) and part 190, subpart Q, of this chapter dealing with substitution of finished petroleum derivatives.

(i) *Goods sold at retail and returned under 19 U.S.C. 1313(c)(1)(C)(ii).* Upon presentation of the USMCA drawback claim under 19 U.S.C. 1313(c)(1)(C)(ii) for goods ultimately sold at retail by the importer or the person who received the merchandise from the importer, and for any reason returned to and accepted by the importer or the person who received the merchandise from the importer, the amount of drawback payable is based on the lesser amount of the customs duties paid on the good either to the United States or to Canada or Mexico. The amount of drawback payable may not exceed 99 percent of the duty paid on such imported merchandise into the United States. Substitution pursuant to 19 U.S.C. 1313(c)(2) is not permitted (s*ee* § 182.42(c) of this subpart).

■ 43. In § 182.45, revise paragraph (c) to read as follows:

§ 182.45 Goods eligible for full drawback.

* * * * *

(c) *Goods not conforming to sample or specifications or shipped without consent of consignee under 19 U.S.C. 1313(c)(1)(C)(i).* An imported good exported to Canada or Mexico by reason of failure of the good to conform to sample or specification or by reason of shipment of the good without the consent of the consignee is eligible for drawback under 19 U.S.C. 1313(c)(1)(C)(i) without regard to the limitation on drawback set forth in § 182.44 of this subpart. Such a good must be exported or destroyed within the statutory five-year time period and in compliance with the requirements set forth in part 190, subpart D, of this chapter, as applicable.

* * * * *

■ 44. Revise § 182.47 to read as follows:

§ 182.47 Completion of claim for drawback.

(a) *General.* A claim for drawback will be granted, upon the submission of appropriate documentation to substantiate compliance with the drawback laws and regulations of the United States, evidence of exportation to Canada or Mexico, and satisfactory evidence of the payment of duties to Canada or Mexico. Unless otherwise provided in this subpart, the documentation, filing procedures, time and place requirements and other applicable procedures required to determine whether a good qualifies for drawback must be in accordance with the provisions of part 190 of this chapter, as appropriate; however, a drawback claim subject to the provisions of this subpart must be filed separately from any part 190 drawback claim (that is, a claim that involves goods exported to countries other than Canada or Mexico). Claims inappropriately filed or otherwise not completed within the periods specified in § 182.46 of this subpart will be considered abandoned.

(b) *Complete drawback claim*—(1) *General.* A complete drawback claim under this subpart must consist of the filing of the appropriate completed drawback entry, evidence of exportation (a copy of the Canadian or Mexican customs entry showing the amount of duty paid to Canada or Mexico) and its supporting documents. Each drawback entry filed under this subpart must be filed using the indicator ''USMCA Drawback''.

(2) *Specific claims.* The following documentation must be submitted to CBP in order for a drawback claim to be processed under this subpart. Missing documentation or incorrect or incomplete information on required customs forms or supporting documentation will result in an incomplete drawback claim.

(i) *Manufacturing drawback claim.* The following must be submitted in connection with a claim for direct identification manufacturing drawback or substitution manufacturing drawback:

(A) A manufacturing drawback ruling number;

(B) CBP Form 7501, or its electronic equivalent, or the import entry number;

(C) Evidence of exportation and satisfactory evidence of the payment of duties in Canada or Mexico. Satisfactory evidence must include the Canadian or Mexican customs entry number and the amount of duty paid to Canada or Mexico;

(D) Waiver of right to drawback. If the person exporting to Canada or Mexico was not the importer or the manufacturer, written waivers executed by the importer or manufacturer and by any intervening person to whom the good was transferred must be submitted in order for the claim to be considered complete; and

(E) An affidavit of the party claiming drawback stating that no other drawback claim has been made on the designated goods, that such party has not provided an exporter's certification of origin pertaining to the exported goods to another party except as stated on the drawback claim, and that the party agrees to notify CBP if the party subsequently provides such an exporter's certification of origin to any person.

(ii) *Unused merchandise drawback claim under 19 U.S.C. 1313(j)(1).* The following must be submitted in connection with a drawback claim covering a good eligible for unused merchandise drawback under 19 U.S.C. 1313(j)(1):

(A) The foreign entry number and date of entry, the HTSUS classification for the foreign entry, the amount of duties paid for the foreign entry and the applicable exchange rate. For goods in the same condition, a certification from the claimant that provides as follows: ''Same condition—The undersigned certifies that the merchandise herein described is in the same condition as when it was imported under the import entry(s) and further certifies that this merchandise was not subjected to any process of manufacture or other operation except the allowable operations as provided for by regulation.'';

(B) Information sufficient to trace the movement of the imported goods after importation;

(C) In-bond application submitted pursuant to part 18 of this chapter, if applicable. This is required for merchandise which is examined at one port but exported through border points outside of that port. Such goods must travel in bond from the location where they were examined to the point of the border crossing (exportation). If examination is waived, in-bond transportation is not required;

(D) CBP must be notified at least five business days in advance of the intended date of exportation in order to have the opportunity to examine the goods (*see* § 190.35 of this chapter);

(E) Acceptable documentary evidence of exportation to Canada or Mexico may include originals or copies of any of the following documents that are issued by the exporting carrier: bill of lading, air waybill, freight waybill, export ocean bill of lading, Canadian customs manifest, and cargo manifest. Supporting documentary evidence must establish fully the time and fact of exportation, the identity of the exporter, and the identity and location of the ultimate consignee of the exported goods;

(F) If the party exporting to Canada or Mexico was not the importer, a written waiver from the importer and from each intermediate person to whom the goods were transferred is required in order for the claim to be considered complete; and

(G) An affidavit of the party claiming drawback stating that no other drawback claim has been made on the designated goods.

(iii) *Nonconforming or improperly shipped goods drawback claim.* The following must be submitted in the case of goods not conforming to sample or specifications, or shipped without the consent of the consignee and subject to a drawback claim under 19 U.S.C. 1313(c)(1)(C)(i):

(A) CBP Form 7501, or its electronic equivalent, to establish the fact of importation, the receipt of the imported goods, and the identity of the party to whom drawback is payable (*see* § 182.48(c) of this subpart);

(B) Documentary evidence to support the claim that the goods did not conform to sample or specifications, or were shipped without the consent of the consignee. In the case of nonconforming goods, such documentation may include a copy of a purchase order and any related documents such as a specification sheet, catalogue or advertising brochure from the supplier, the basis for which the order was placed, and copy of a letter or credit memo from the supplier indicating acceptance of the returned merchandise. This documentation is necessary to establish that the goods are, in fact, being returned to the party from which they were procured or that they are being sent to the supplier's other customer directly;

(C) CBP Form 7512, or its electronic equivalent, if applicable;

(D) Notification of intent to export or waiver of prior notice. CBP must be notified at least five business days in advance of the intended date of exportation in order to have the opportunity to examine the goods (*see* § 190.42 of this chapter); and

(E) Evidence of exportation, as provided in paragraph (b)(2)(ii)(E) of this section.

(iv) *Meats cured with imported salt.* The provisions of paragraph (b)(2)(i) of this section relating to direct identification manufacturing drawback will apply to claims for drawback on meats cured with imported salt filed under this subpart insofar as applicable to and not inconsistent with the provisions of this subpart, and the forms referred to in that paragraph must be modified to show that the claim is being made for refund of duties paid on salt used in curing meats.

(v) *Jet aircraft engines.* The provisions of paragraph (b)(2)(i) of this section relating to direct identification manufacturing drawback will apply to claims for drawback on foreign-built jet aircraft engines repaired or reconditioned in the United States filed under this subpart insofar as applicable to and not inconsistent with the provisions of this subpart and the provisions of part 190, subpart N, of this chapter.

(vi) *Substitution of finished petroleum derivatives under 19 U.S.C. 1313(p) for derivatives manufactured under 19 U.S.C. 1313(a) or (b).* The provisions of paragraph (b)(2)(i) of this section relating to manufacturing drawback will apply to claims for drawback on manufactured or produced petroleum derivatives, in accordance with § 190.174 of this chapter, filed under this subpart insofar as applicable to and not inconsistent with the provisions of this subpart and the provisions of part 190, subpart Q, of this chapter.

(vii) *Goods sold at retail and returned under 19 U.S.C. 1313(c)(1)(C)(ii).* The following must be submitted in the case of goods ultimately sold at retail by the importer or the person who received the merchandise from the importer, and for any reason returned to and accepted by the importer or the person who received the merchandise from the importer and subject to a drawback claim under 19 U.S.C. 1313(c)(1)(C)(ii):

(A) CBP Form 7501, or its electronic equivalent, to establish the fact of importation, the receipt of the imported goods, and the identity of the party to

whom drawback is payable (*see* § 182.48(c) of this subpart);

(B) Documentary evidence to support the claim that the goods were ultimately sold at retail by the importer or the person who received the merchandise from the importer, and were returned to and accepted by the importer or the person who received the merchandise from the importer;

(C) CBP Form 7512, or its electronic equivalent, if applicable;

(D) Notification of intent to export or waiver of prior notice. CBP must be notified at least five business days in advance of the intended date of exportation in order to have the opportunity to examine the goods (*see* § 190.42 of this chapter); and

(E) Evidence of exportation, as provided in paragraph (b)(2)(ii)(E) of this section.

(c) *Evidence of exportation and of duties paid in Canada or Mexico.* For purposes of this subpart, evidence of exportation and satisfactory evidence of payment of duties in Canada or Mexico must consist of one of the following types of documentation, provided that, for purposes of evidence of duties paid, such documentation includes the import entry number, the date of importation, the tariff classification number, the rate of duty and the amount of duties paid:

(1) In the case of Canada, the Canadian entry document, presented with either the K–84 Statement or the Detailed Coding Statement. A Canadian customs document that is not accompanied by a valid receipt is not adequate evidence of exportation and payment of duty in Canada;

(2) In the case of Mexico, the Mexican entry document (the ''pedimento'');

(3) The final customs duty determination of Canada or Mexico, or a copy thereof, with respect to the relevant entry; or

(4) An affidavit, from the person claiming drawback, which is based on information received from the importer of the good in Canada or Mexico.

■ 45. Add § 182.48 to subpart E to read as follows:

§ 182.48 Person entitled to receive drawback.

(a) General. The person named as exporter on the notice of exportation or on the bill of lading, air waybill, freight waybill, Canadian or Mexican customs manifest, cargo manifest, or certified copies of these documents, will be considered the exporter and entitled to drawback.

(b) *Manufacturing drawback.* The person named as the exporter is entitled to claim manufacturing drawback, unless the manufacturer or producer reserves the right to claim drawback. The manufacturer or producer who reserves this right may claim drawback, will receive payment upon production of satisfactory evidence that the reservation was made with the knowledge and consent of the exporter. Drawback also may be granted to the agent of the manufacturer, producer, or exporter, or to the person the manufacturer, producer, exporter, or agent directs in writing to receive the drawback of duties.

(c) *Nonconforming or improperly shipped goods drawback under 19 U.S.C. 1313(c)(1)(C)(i) and drawback on goods sold at retail and returned under 19 U.S.C. 1313(c)(1)(C)(ii).* The person named as the exporter is entitled to claim rejected merchandise drawback; if the claimant was not the importer of the merchandise or its agent, the claimant must submit a statement signed by the importer and every other person, other than the ultimate purchaser, that owned the goods, that no other claim for drawback was made on the goods (*see* § 190.42(b) of this chapter).

(d) *Unused merchandise drawback under 19 U.S.C. 1313(j)(1).* The person named as the exporter is entitled to claim drawback under 19 U.S.C. 1313(j)(1) unless the exporter has in writing waived its right to claim drawback (*see* § 190.33 of this chapter).

■ 46. Add § 182.50(b) to read as follows:

§ 182.50 Liquidation and payment of drawback claims.

* * * * *

(b) *Time for liquidation.* A drawback claim will not be liquidated until either a written waiver of the right to protest under 19 U.S.C. 1514 is filed with CBP or the liquidation of the import entry has become final under U.S. law. In addition, except in the case of goods covered by § 182.45 of this subpart, a drawback claim must not be liquidated for a period of three years after the date of entry of the goods in Canada or Mexico. A drawback claim may be adjusted pursuant to 19 U.S.C. 4534(e)(1) even after liquidation of the U.S. import entry has become final.

* * * * *

■ 47. Add § 182.53 to subpart E to read as follows:

§ 182.53 Collection and waiver or reduction of duty under duty-deferral programs.

(a) *General*—(1) *Definitions.* The following definitions apply for purposes of this section:

(i) *Date of exportation. Date of exportation* means the date of importation into Canada or Mexico as reflected on the applicable Canadian or Mexican entry document (*see* § 182.47(c)(1) and (2) of this subpart).

(ii) *Duty-deferral program.* A *duty-deferral program* means any measure which postpones duty payment upon arrival of a good in the United States until withdrawn or removed for exportation to Canada or Mexico or for entry into a Canadian or Mexican duty-deferral program. Such measures govern manipulation warehouses, manufacturing warehouses, smelting and refining warehouses, foreign trade zones, and those temporary importations under bond that are specified in paragraph (b)(5) of this section.

(2) *Treatment as entered or withdrawn for consumption*—(i) *General.*

(A) Where a good is imported into the United States pursuant to a duty-deferral program and is subsequently withdrawn from the duty-deferral program for exportation to Canada or Mexico or is used as a material in the production of another good that is subsequently withdrawn from the duty-deferral program for exportation to Canada or Mexico, and provided that the good is a ''good subject to USMCA drawback'' within the meaning of 19 U.S.C. 4534 and is not described in § 182.45 of this subpart, the documentation required to be filed under this section in connection with the exportation of the good will, for purposes of this chapter, constitute an USMCA entry or withdrawal for consumption and the exported good must be subject to duty which will be assessed in accordance with paragraph (b) of this section.

(B) Where a good is imported into the United States pursuant to a duty-deferral program and is subsequently withdrawn from the duty-deferral program and entered into a duty-deferral program in Canada or Mexico or is used as a material in the production of another good that is subsequently withdrawn from the duty-deferral program and entered into a duty-deferral program in Canada or Mexico, and provided that the good is a ''good subject to USCMA drawback'' within the meaning of 19 U.S.C. 4534 and is not described in § 182.45 of this subpart, the documentation required to be filed under this section in connection with the withdrawal of the good from the U.S. duty-deferral program will, for purposes of this chapter, constitute a USMCA entry or withdrawal for consumption and the withdrawn good must be subject to duty which will be assessed in accordance with paragraph (b) of this section.

(C) Any assessment of duty under this section must include the duties and fees referred to in § 182.42(a) and (b) of this subpart and the fees provided for in § 24.23 of this chapter; these inclusions will not be subject to refund, waiver, reduction or drawback.

(ii) *Bond requirements.* The provisions of § 142.4 of this chapter will apply to each withdrawal and exportation transaction described in paragraph (a)(2) of this section. However, in applying the provisions of § 142.4 of this chapter in the context of this section, any reference to release from CBP custody in § 142.4 of this chapter will be taken to mean exportation to Canada or Mexico.

(iii) *Documentation filing and duty payment procedures*—(A) *Persons required to file.* In the circumstances described in paragraph (a)(2) of this section, the documentation described in paragraph (a)(2)(iii)(B) of this section must be filed by one of the following persons:

(*1*) In the case of a withdrawal of the goods from a warehouse, the person who has the right to withdraw the goods in accordance with § 144.31 of this chapter;

(*2*) In the case of a temporary importation under bond (TIB) specified in paragraph (b)(5) of this section, the TIB importer whether or not it sells the goods for export to Canada or Mexico unless § 10.31(h) of this chapter applies; or

(*3*) In the case of a withdrawal from a foreign trade zone, the person who has the right to make entry (see § 146.62 of this chapter). However, if a zone operator is not the person with the right to make entry of the good, the zone operator will be responsible for the payment of any duty due in the event the zone operator permits such other person to remove the goods from the zone (§§ 146.67 and 146.68 of this chapter) and such other person fails to comply with the requirements of this provision.

(B) *Documentation required to be filed and required filing date.* The person required to file must file CBP Form 7501, or its electronic equivalent, no later than 10 working days after the date of exportation to Canada or Mexico or 10 working days after the goods' being entered into a duty-deferral program in Canada or Mexico. Except where the context otherwise requires and except as otherwise specifically provided in this section, the procedures for completing and filing CBP Form 7501, or its electronic equivalent, in connection with the entry of merchandise under this chapter will apply for purposes of this paragraph. For purposes of completing CBP Form 7501, or its electronic equivalent, under this paragraph, any reference to the entry date will be taken to refer to the date of exportation of the good or the date the good is entered into a duty-deferral program in Canada or Mexico. The CBP Form 7501, or its electronic equivalent, required under this paragraph, may be transmitted electronically. *See* §§ 141.62, 141.63, and 144.38 (bonded warehouse) of this chapter.

(C) *Duty payment.* The duty estimated to be due under paragraph (b) of this section must be deposited with CBP 60 calendar days after the date of exportation of the good. If a good is entered into a duty-deferral program in Canada or Mexico, the duty estimated to be due under paragraph (b) of this section, but without any waiver or reduction provided for in that paragraph, must be deposited with CBP 60 calendar days after the date the good is entered into such duty-deferral program. Nothing precludes the deposit of such estimated duty at the time of filing the CBP Form 7501, or its electronic equivalent, under paragraph (a)(2)(iii)(B) of this section or at any other time within the 60-day period prescribed in this paragraph. However, any interest calculation will run from the date the duties are required to be deposited.

(3) *Waiver or reduction of duties—(i) General.* Except in the case of duties and fees referred to in § 182.42(a) and (b) of this subpart and fees provided for in § 24.23 of this chapter, CBP may waive or reduce the duties paid or owed under paragraph (a)(2) of this section by the person who is required to file the CBP Form 7501, or its electronic equivalent (*see* paragraph (a)(2)(iii)(A) of this section) in accordance with paragraph (b) of this section, provided that a claim for waiver or reduction of the duties is filed with CBP within the appropriate 60-day time frame. The claim must be based on evidence of exportation or entry into a Canadian or Mexican duty-deferral program and satisfactory evidence of duties paid in Canada or Mexico (*see* § 182.47(c) of this subpart).

(ii) *Filing of claim and payment of reduced duties.* A claim for a waiver or reduction of duties under paragraph (a)(3)(i) of this section must be made on CBP Form 7501, or its electronic equivalent, which must set forth, in addition to the information required under paragraph (a)(2)(iii)(B) of this section, a description of the goods exported to Canada or Mexico, and the Canadian or Mexican import entry number, date of importation, tariff classification number, rate of duty and amount of duty paid. If a claim for reduction of duties is filed under this paragraph, the reduced duties must be deposited with CBP when the claim is filed.

(iii) *Drawback on goods entered into a duty-deferral program in Canada or Mexico.* After goods within a duty-deferral program in the United States, which were exported from the United States and entered into a duty-deferral program in Canada or Mexico, are then withdrawn from that Canadian or Mexican duty-deferral program either for entry into Canada or Mexico or for export to a non-USMCA country, the person who filed the CBP Form 7501, or its electronic equivalent and the information required in paragraph (a)(2)(iii)(B) of this section, may file a claim for drawback if the goods are withdrawn within five years from the date of the original importation of the good into the United States. If the goods are entered for consumption in Canada or Mexico, drawback will be calculated in accordance with § 182.44 of this subpart.

(4) *Liquidation of entry*—(i) *If no claim is filed.* If no claim for a waiver or reduction of duties is filed in accordance with paragraph (a)(3) of this section, CBP will determine the final duties due under paragraph (a)(2)(i) of this section and will post a notice of liquidation of the entry filed under this section in accordance with § 159.9 of this chapter. Where no claim was filed in accordance with this section and CBP fails to liquidate, or extend liquidation of, the entry filed under this section within one year from the date of entry, upon the date of expiration of that one-year period the entry will be deemed liquidated by operation of law in the amount asserted by the exporter on the CBP Form 7501, or its electronic equivalent, filed under paragraph (a)(2)(iii)(A) of this section. A protest under 19 U.S.C. 1514 and part 174 of this chapter must be filed within 180 days from the date of liquidation under this section.

(ii) *If a claim is filed.* If a claim for a waiver or reduction of duties is filed in accordance with paragraph (a)(3) of this section, an extension of liquidation of the entry filed under this section will take effect for a period not to exceed three years from the date the entry was filed. Before the close of the extension period, CBP will liquidate the entry filed under this section and will post a bulletin of liquidation in accordance with § 159.9 of this chapter. If CBP fails to liquidate the entry filed under this section within four years from the date of the entry, upon the date of expiration of that four-year period the entry will be

deemed liquidated by operation of law in the amount asserted by the exporter on the CBP Form 7501, or its electronic equivalent, filed under paragraph (a)(3)(ii) of this section. A protest under 19 U.S.C. 1514 and part 174 of this chapter must be filed within 180 days from the date of liquidation under this section.

(b) *Assessment and waiver or reduction of duty*—(1) *Manipulation in warehouse.* Where a good subject to USMCA drawback under this subpart is withdrawn from a bonded warehouse (*see* 19 U.S.C. 1562) after manipulation for exportation to Canada or Mexico or for entry into a duty-deferral program in Canada or Mexico, duty will be assessed on the good in its condition and quantity, and at its weight, at the time of such withdrawal from the warehouse and with such additions to, or deductions from, the final appraised value as may be necessary by reason of its change in condition. Such duty must be paid no later than 60 calendar days after the date of exportation or of entry into the duty-deferral program of Canada or Mexico, except that, upon filing of a proper claim under paragraph (a)(3) of this section, the duty will be waived or reduced in an amount that does not exceed the lesser of the total amount of duty payable on the good under this section or the total amount of customs duties paid to Canada or Mexico.

(2) *Bonded manufacturing warehouse.* Where a good is manufactured in a bonded warehouse (*see* 19 U.S.C. 1311) with imported materials and is then withdrawn for exportation to Canada or Mexico or for entry into a duty-deferral program in Canada or Mexico, duty will be assessed on the materials in their condition and quantity, and at their weight, at the time of their importation into the United States. Such duty must be paid no later than 60 calendar days after either the date of exportation or of entry into a duty-deferral program of Canada or Mexico, except that, upon filing of a proper claim under paragraph (a)(3) of this section, the duty will be waived or reduced in an amount that does not exceed the lesser of the total amount of duty payable on the materials under this section or the total amount of customs duties paid to Canada or Mexico.

(3) *Bonded smelting or refining warehouse.* For any qualifying imported metal-bearing materials (*see* 19 U.S.C. 1312), duty will be assessed on the imported materials and the charges against the bond canceled no later than 60 calendar days after either the date of exportation of the treated materials to Canada or Mexico or the date of entry of the treated materials into a duty-deferral program of Canada or Mexico, either from the bonded smelting or refining warehouse or from such other customs bonded warehouse after the transfer of the same quantity of material from a bonded smelting or refining warehouse. However, upon filing of a proper claim under paragraph (a)(3) of this section, the duty on the imported materials will be waived or reduced in an amount that does not exceed the lesser of the total amount of duty payable on the imported materials under this section or the total amount of customs duties paid to Canada or Mexico.

(4) *Foreign trade zone.* For a good that is manufactured or otherwise changed in condition in a foreign trade zone (*see* 19 U.S.C. 81c(a)) and then withdrawn from the zone for exportation to Canada or Mexico or for entry into a Canadian or Mexican duty-deferral program, the duty assessed, as calculated under paragraph (b)(4)(i) or (ii) of this section, must be paid no later than 60 calendar days after either the date of exportation of the good to Canada or Mexico or the date of entry of the good into a duty-deferral program of Canada or Mexico, except that, upon filing of a proper claim under paragraph (a)(3) of this section, the duty will be waived or reduced in an amount that does not exceed the lesser of the total amount of duty payable on the good under this section or the total amount of customs duties paid to Canada or Mexico.

(i) *Nonprivileged foreign status.* In the case of a nonprivileged foreign status good, duty is assessed on the good in its condition and quantity, and at its weight, at the time of its exportation from the zone to Canada or Mexico, or its entry into a duty-deferral program of Canada or Mexico.

(ii) *Privileged foreign status.* In the case of a privileged foreign status good, duty is assessed on the good in its condition and quantity, and at its weight, at the time privileged status is elected.

(5) *Temporary importation under bond.* Except in the case of a good imported from Canada or Mexico for repair or alteration, where a good, regardless of its origin, was imported temporarily free of duty for repair, alteration or processing (subheading 9813.00.05, HTSUS) and is subsequently exported to Canada or Mexico, duty will be assessed on the good on the basis of its condition at the time of its importation into the United States. Such duty must be paid no later than 60 calendar days after either the date of exportation or the date of entry into a duty-deferral program of Canada or Mexico, except that, upon filing of a proper claim under paragraph (a)(3) of this section, the duty will be waived or reduced in an amount that does not exceed the lesser of the total amount of duty payable on the good under this section or the total amount of customs duties paid to Canada or Mexico.

(c) *Recordkeeping requirements.* If a person intends to claim a waiver or reduction of duty on goods under this section, that person must maintain records concerning the value of all involved goods or materials at the time of their importation into the United States and concerning the value of the goods at the time of their exportation to Canada or Mexico or entry into a duty-deferral program of Canada or Mexico, and if a person files a claim under this section for a waiver or reduction of duty on goods exported to Canada or Mexico or entered into a Canadian or Mexican duty-deferral program, that person must maintain evidence of exportation or entry into a Canadian or Mexican duty-deferral program and satisfactory evidence of the amount of any customs duties paid to Canada or Mexico on the good (*see* § 182.47(c) of this subpart). Failure to maintain adequate records will result in denial of the claim for waiver or reduction of duty.

(d) *Failure to file proper claim.* If the person identified in paragraph (a)(2)(iii)(A) of this section fails to file a proper claim within the 60-day period specified in this section, that person, or the FTZ operator, pursuant to paragraph (a)(2)(iii)(A)(3) of this section, will be liable for payment of the full duties assessed under this section and without any waiver or reduction thereof.

(e) *Subsequent claims for preferential tariff treatment.* If a claim for a refund of duties is allowed by the Canadian or Mexican customs administration under Article 5.11 of the USMCA (post-importation claim) or under any other circumstance after duties have been waived or reduced under this section, CBP may reliquidate the entry filed under this section pursuant to 19 U.S.C. 4534(e) even after liquidation of the entry has become final.

■ 48. Add § 182.55 to subpart E to read as follows:

§ 182.55 Goods exported from duty-deferral programs that are not a ''good subject to USMCA drawback'' within the meaning of 19 U.S.C. 4534.

(a) An importer, or its agent, claiming a good is not a ''good subject to USMCA drawback'' within the meaning of 19 U.S.C. 4534 must notify CBP at:

(1) The time of importation and admission into the duty-deferral program; or

(2) The time of filing the documentation required under § 182.53(a)(2)(iii)(B) of this subpart.

(b) A person must maintain records supporting a claim that a good is not a ''good subject to USMCA drawback'' within the meaning of 19 U.S.C. 4534. The records must be made available for examination and inspection by a CBP official in the same manner as provided in part 163 of this chapter in the case of U.S. importer records.

Subpart G—Origin Verifications and Determinations

■ 49. In § 182.71, add two sentences to the end of the section

§ 182.71 Applicability.

* * * Additional verification procedures apply to automotive goods and are set forth in subpart I of this part. For textile and apparel goods, CBP may choose to conduct a verification pursuant to the verification means and procedures contained in this subpart or may alternatively choose to conduct a verification pursuant to a site visit as described in § 182.83 of this part.

■ 50. Amend § 182.75 as follows:

■ a. Revise paragraph (c)(2); and

■ b. In paragraph (c)(4), remove the phrase ''unless CBP determines that there is a pattern of conduct of false or unsupported representations pursuant to § 182.76,''.

The revision reads as follows:

§ 182.75 Determinations of origin.

* * * * *

(c) * * *

(2) *Denial of preferential tariff treatment.* CBP may deny the claim for preferential tariff treatment if:

(i) The certification of origin is not submitted to CBP upon request as required pursuant to § 182.12(a) of this part, or, for textile or apparel goods claiming USMCA preferential tariff treatment under a tariff preference level (TPL), the certificate of eligibility is not submitted to CBP upon request as required pursuant to § 182.82(d) of this part;

(ii) The claim or certification of origin is invalid or based on inaccurate information and is not corrected within the required time period pursuant to § 182.11(c) of this part;

(iii) CBP determines that the importer, exporter, or producer failed to provide sufficient information to substantiate the claim;

(iv) CBP determines that the good does not qualify for preferential tariff treatment, including failing to meet the rules of origin requirements in General Note 11, HTSUS, and Appendix A to this part, or the TPL requirements in § 182.82 of this part;

(v) The importer, exporter, or producer fails to respond to the request for information pursuant to § 182.73(f)(1) subject to the conditions in § 182.75(c)(1) of this subpart;

(vi) The importer, exporter, or producer fails to respond to the questionnaire pursuant to § 182.73(f)(1) of this subpart;

(vii) The exporter or producer fails to consent to a verification visit pursuant to § 182.74 of this subpart;

(viii) The importer, exporter, or producer fails to maintain records demonstrating that the good qualifies for preferential tariff treatment as required pursuant to this part;

(ix) The importer, exporter, or producer denies access, as requested by CBP, to records or documentation that are in its possession or required to be maintained pursuant to this part;

(x) The exporter or producer denies access to records or documentation that are in its possession or required to be maintained, or to facilities during a verification visit as required pursuant to this part;

(xi) CBP finds a pattern of conduct pursuant to § 182.76 of this subpart or, for textile and apparel goods, pursuant to § 182.83(g) of this part;

(xii) CBP determines, pursuant to a site visit for textiles or apparel goods conducted under § 182.83 of this part, that any of the reasons for denial set forth in § 182.83(e) of this part applies;

(xiii) CBP determines, for automotive goods, that any of the reasons for denial set forth in § 182.107 of this part applies; or

(xiv) CBP determines that any other reason to deny a claim for preferential tariff treatment as set forth in this part applies.

* * * * *

Subpart H—Textile and Apparel Goods

■ 51. Revise § 182.81 to read as follows:

§ 182.81 Applicability.

This subpart applies only to textile or apparel goods. This subpart contains the provisions for textile or apparel goods that are claiming USMCA preferential tariff treatment under a tariff preference level (TPL) and the provisions related to site visits. With the exception of §§ 182.11, 182.12, 182.14, 182.16, subpart D, and the rules of origin set forth in Appendix A of this part, the relevant requirements and procedures set forth in this part apply to TPLs. For textile or apparel goods, including TPLs, CBP has the discretion to conduct a verification pursuant to the general verification means and procedures contained in subpart G of this part or to choose to conduct a verification pursuant to a site visit as set forth in this subpart. Unless otherwise specified in this subpart, the requirements and procedures set forth in subpart G of this part do not apply to a site visit conducted pursuant to this subpart.

■ 52. Revise § 182.82 to read as follows:

§ 182.82 Claim for preferential tariff treatment under tariff preference level.

(a) *Basis of claim.* Textile or apparel goods described in paragraph (b) of this section that do not qualify as originating goods under the rules of origin in General Note 11, HTSUS, and Appendix A of this part may qualify for preferential tariff treatment under the USMCA under an applicable tariff preference level (TPL). An importer, who cannot make a claim pursuant to § 182.11(b) for these non-originating goods, may make a claim for USMCA preferential tariff treatment under a TPL, including an exemption from the merchandise processing fee, for such textile or apparel goods provided that:

(1) The textile or apparel goods are eligible for a TPL claim under paragraph (b) of this section;

(2) The annual quantitative limit has not been reached for the subject TPL as indicated in U.S. Note 11, Subchapter XXIII, Chapter 98, HTSUS, and paragraph (b) of this section; and

(3) The claim is based on a certificate of eligibility, as specified in paragraph (d) of this section.

(b) *Goods eligible for TPL claims.* The following goods are eligible for a TPL claim made under paragraph (c) of this section:

(1) *Cotton or man-made fiber apparel goods of a USMCA country.* Cotton or man-made fiber apparel goods described in U.S. Notes 11(a)(i) and (b)(i), Subchapter XXIII, Chapter 98, HTSUS, that are both cut (or knit-to-shape) and sewn or otherwise assembled in the territory of a USMCA country, and that meet the applicable conditions for preferential tariff treatment under the USMCA, other than the condition that they are originating goods. The preferential tariff treatment is limited to the quantities specified in U.S. Notes 11(a) and 11(b), Subchapter XXIII, Chapter 98, HTSUS;

(2) *Wool apparel goods of a USMCA country.* Wool apparel goods described in U.S. Note 11, Subchapter XXIII, Chapter 98, HTSUS, and that meet the applicable conditions for preferential tariff treatment under the USMCA, other than the condition that they are originating goods. The preferential tariff treatment is limited to the quantities

specified in U.S. Note 11(a)(i)(B) and (b)(i)(C), Subchapter XXIII, Chapter 98, HTSUS;

(3) *Cotton or man-made fiber fabrics and made-up goods.* Fabrics and made-up goods described in U.S. Note 11(a)(ii) and (b)(ii), Subchapter XXIII, Chapter 98, HTSUS, made from cotton or man-made fiber, provided that the goods meet the applicable conditions for preferential tariff treatment under the USMCA, other than the condition that they are originating goods. The preferential tariff treatment is limited to the quantities specified in U.S. Note 11(a)(ii) and (b)(ii), Subchapter XXIII, Chapter 98, HTSUS; and

(4) *Cotton or man-made fiber spun yarn.* Yarn described in U.S. Note 11(a)(iii) and (b)(iii), Subchapter XXIII, Chapter 98, HTSUS, made from cotton or man-made fiber, provided that the yarn meets the applicable conditions for preferential tariff treatment under the USMCA, other than the condition that they are originating goods. The preferential tariff treatment is limited to the quantities specified in U.S. Note 11(a)(iii) and (b)(iii), Subchapter XXIII, Chapter 98, HTSUS.

(c) *Making a TPL claim.* A claim for preferential tariff treatment under a TPL is made by including on the entry summary, or equivalent documentation, or by the method specified for equivalent reporting via an authorized electronic data interchange system, the applicable subheading in Chapter 98, HTSUS, the applicable subheading under which each non-originating textile or apparel good is classified with the letter ''S+'' as a prefix to the subheadings of the HTSUS, and the certificate of eligibility number. The applicable subheadings in Chapter 98, HTSUS, are:

(1) For goods described in paragraph (b)(1) of this section, subheadings 9823.52.01 and 9823.53.01;

(2) For goods described in paragraph (b)(2) of this section, subheadings 9823.52.02, 9823.52.03, 9823.53.02;

(3) For goods described in paragraph (b)(3) of this section, subheadings 9823.52.04, 9823.52.05, 9823.52.06, 9823.53.03, 9823.53.04, and 9823.53.05; and

(4) For goods described in paragraph (b)(4) of this section, subheadings 9823.52.07, 9823.52.08, and 9823.53.06.

(d) *Certificate of eligibility.* An importer who makes a claim for preferential tariff treatment pursuant to paragraph (c) of this section must submit, at the request of CBP, a certificate of eligibility issued by an authorized official of the government of Mexico or Canada. The certificate of eligibility must contain information demonstrating that a good is eligible for a TPL claim as set forth in paragraph (b) of this section and to track allocation and use of a TPL. The certificate of eligibility must be transmitted electronically pursuant to any electronic means authorized by CBP for that purpose.

(e) *Post-importation claims.* (1) *Right to make a post-importation claim.* Where a textile or apparel good would have qualified for preferential tariff treatment under paragraph (a) of this section when it was imported into the United States but no claim for preferential tariff treatment was made under paragraph (c) of this section, the importer of that good may file a claim for a refund of any excess customs duties at any time within one year after the date of importation of the good. As this post-importation claim is not filed in accordance with 19 U.S.C. 1520(d) or subpart D of this part, the claim must be filed in accordance with the procedures set forth in paragraph (e)(2) of this section.

(2) *Filing procedures.* Post-importation claims under a TPL must be filed with the certificate of eligibility for the year the entry summary, or equivalent documentation, is accepted by CBP. Post-importation claims will not be granted if the quantitative limits for the subject TPL, as provided for in paragraph (b) of this section, are already met.

(f) *Denial of preferential tariff treatment.* If the importer fails to comply with the requirements under this section, including the submission of a certificate of eligibility upon request in accordance with paragraph (d) of this section, or if the textile or apparel good is not eligible to make a TPL claim under paragraph (b) of this section, CBP may deny preferential tariff treatment to the textile or apparel good.

(g) *Verifications.* CBP will conduct a verification of a textile or apparel good claiming USMCA preferential tariff treatment under a TPL pursuant to the means and procedures in either subpart G of this part or § 182.83 of this subpart.

■ 53. Add § 182.83 to subpart H to read as follows:

§ 182.83 Verifications of textile and apparel goods.

(a) *Verification of textile and apparel goods.* For textile and apparel goods, CBP has two alternative means of conducting a verification. CBP may conduct a verification for purposes of determining whether a textile and apparel good qualifies for preferential tariff treatment using any of the means described in § 182.72(a) of this part. Alternatively, as described in this section, CBP may conduct a site visit to the premises of the exporter or producer of textile or apparel goods in Mexico or Canada for the purpose of determining:

(1) That a textile or apparel good qualifies for preferential tariff treatment; or

(2) That customs offenses with regard to a textile or apparel good are occurring or have occurred.

(b) *Verification of a material during a site visit.* When conducting a verification of a textile or apparel good imported into the United States, CBP may conduct a verification of the material that is used in the production of that good. A verification of a material producer may be conducted pursuant to the site visit procedures set forth in this section. With the exception of § 182.75, the provisions in this section also apply to the verification of a material and references to the term ''producer'' apply to a producer of a textile or apparel good or to a material producer.

(c) *Site visit procedures.* (1) *Consent required.* Prior to conducting a site visit in Canada or Mexico pursuant to this section, CBP must obtain the consent of the exporter, producer, or a person having capacity to consent on behalf of the exporter or producer, either prior to the site visit or at the time of the site visit, to access the relevant records or facilities. CBP must, at the time of the request for consent, inform the exporter, producer, or person having the capacity to consent to a site visit of:

(i) The legal authority for the visit;

(ii) The specific purpose of the visit; and

(iii) The names and titles of the U.S. officials performing the visit.

(2) *Failure to receive CBP on initial date.* (i) If the exporter, producer, or a person having the capacity to consent on behalf of the exporter or producer is not able to receive CBP to carry out the site visit, the site visit will be conducted on the following business day unless:

(A) CBP agrees otherwise; or

(B) The exporter, producer, or person having the capacity to consent on behalf of the exporter or producer substantiates a valid reason acceptable to CBP for why the site visit cannot occur on the following business day.

(ii) If the exporter, producer, or person having the capacity to consent on behalf of the exporter or producer, does not have a valid reason acceptable to CBP for why the site visit cannot take place on the following business day, CBP will consider any reasonable alternative proposed dates, taking into account the availability of relevant employees or facilities of the exporter or producer to be visited. After such consideration, CBP may deem consent

for the site visit or access to the records or facilities to be denied.

(3) *Availability of records and facilities.* During a site visit, CBP may request access to:

(i) Records and facilities relevant to the claim for preferential tariff treatment; or

(ii) Records and facilities relevant to the customs offenses being verified.

(d) *Right to request report of the site visit.* The exporter or producer may request CBP's written report of the results of the site visit. The exporter or producer must submit this request in writing to CBP. CBP will provide the exporter or producer the portions of the report that pertain to that exporter or producer, including any findings, subject to the confidentiality provisions in § 182.2 of this part.

(e) *Denial of preferential tariff treatment.* CBP may deny preferential tariff treatment to any textile or apparel good imported or produced by the person that is the subject of the verification if CBP determines any of the following:

(1) CBP determines, pursuant to a site visit conducted under this section, that it has not received sufficient information to determine that the textile or apparel good qualifies for preferential tariff treatment;

(2) CBP determines that the textile or apparel good does not qualify for preferential tariff treatment, including failing to meet the rules of origin requirements in General Note 11, HTSUS, and Appendix A to this part, or the TPL requirements in § 182.82 of this subpart;

(3) CBP is unable to determine, pursuant to a site visit conducted under paragraph (a)(2) of this section, that the exporter or producer is complying with applicable customs measures affecting trade in textile or apparel goods;

(4) CBP is unable to conduct a site visit because access to or consent for the site visit is denied by the exporter, producer, or person having the capacity to consent on behalf of the exporter or producer;

(5) The exporter, producer, or a person having the capacity to consent on behalf of the exporter or producer prevents CBP from completing the site visit on the initial date of the site visit and the exporter or producer does not provide an acceptable alternative date for the site visit;

(6) The exporter, producer, or person having the capacity to consent on behalf of the exporter or producer fails to provide CBP with access to relevant documents or facilities during a site visit as required under § 182.83(c)(3) of this section; or

(7) CBP determines that any other reason to deny a claim for preferential tariff treatment as set forth in § 182.75(c)(2) of this part applies.

(f) *Intent to deny and determination of origin.* After CBP conducts a site visit under this section, CBP will issue a determination of origin pursuant to the procedures set forth in § 182.75, with the exception of § 182.75(c)(1). If CBP conducts a site visit under this section and, as a result, intends to deny preferential tariff treatment to a textile or apparel good, it must, prior to issuing a determination of origin, issue an intent to deny pursuant to § 182.75(c)(3).

(g) *Pattern of conduct for textile or apparel goods.* Where the verification of identical textile or apparel goods by CBP indicates a pattern of conduct by an exporter or producer of false or unsupported representations that a textile or apparel good imported into the territory of the United States qualifies for preferential tariff treatment, CBP may withhold preferential tariff treatment to identical textile or apparel goods imported, exported, or produced by that person until it is demonstrated to CBP that those identical textile or apparel goods qualify for preferential tariff treatment.

Subpart I—Automotive Goods

■ 54. Add § 182.91 to read as follows:

§ 182.91 Applicability.

This subpart contains the additional requirements and procedures applicable only to automotive goods, including covered vehicles claiming USMCA preferential tariff treatment under § 182.11(b) or § 182.32 of this part. Covered vehicles claiming USMCA preferential tariff treatment must also meet the requirements and follow the procedures contained in this part, including the requirements set forth in Appendix A of this part. This subpart contains the labor value content (LVC), steel purchasing, and aluminum purchasing requirements for covered vehicles (passenger vehicles, light trucks, and heavy trucks), the LVC, steel purchasing, and aluminum purchasing certification requirements and procedures, the motor vehicle averaging election requirements and procedures, the recordkeeping requirements, the verification procedures applicable to automotive goods, and additional reasons that CBP may deny preferential tariff treatment to covered vehicles.

■ 55. Add § 182.92 to read as follows:

§ 182.92 Claim for preferential tariff treatment for covered vehicles.

(a) *General.* An importer may make a claim for USMCA preferential tariff treatment under § 182.11(b) or § 182.32 of this part for a covered vehicle only if the requirements set forth in this part are met, including the certification of origin requirement in § 182.12 of this part, the LVC requirement in § 182.93 of this subpart, and the steel purchasing and aluminum purchasing requirements in § 182.94 of this subpart, and if the vehicle producer has complied with the LVC, steel purchasing, and aluminum purchasing certification requirements under §§ 182.95, 182.96, and 182.97 of this subpart.

(b) *Requirement to include vehicle certification unique identifier.* An importer making a claim for USMCA preferential tariff treatment for a covered vehicle under § 182.11(b) of this part must include on the entry summary or equivalent documentation, or by the method specified for equivalent reporting via an authorized data interchange system, the unique identifier assigned by CBP for each of the LVC, steel purchasing, and aluminum purchasing certifications that forms the basis for the covered vehicle's eligibility for preferential tariff treatment. An importer making a claim for USMCA preferential tariff treatment for a covered vehicle under § 182.32 of this part must include, in the post-importation claim, the unique identifier assigned by CBP for each of the LVC, steel purchasing, or aluminum purchasing certifications that forms the basis for the covered vehicle's eligibility for preferential tariff treatment.

■ 56. Add § 182.93 to read as follows:

§ 182.93 Labor value content (LVC) requirement.

(a) *General.* A covered vehicle is eligible for USMCA preferential tariff treatment only if the producer of the covered vehicle meets the LVC requirement, as set forth in General Note 11(k)(vi), HTSUS, and section 18 of Appendix A to this part or, if the producer is subject to the alternative staging regime, General Note 11(k)(viii), HTSUS, and section 19 of Appendix A to this part.

(b) *Administering the LVC component.* The Department of Labor (DOL) is responsible for implementing and administering the high-wage components of the LVC requirement. The DOL regulations that set forth information concerning the high-wage components of the LVC requirement and the applicable procedures are in 29 CFR part 810. CBP is responsible for determining whether a covered vehicle

meets the LVC requirement generally, setting procedures for submitting the LVC certification, verifying the LVC requirement in conjunction with DOL, and determining whether a covered vehicle qualifies for USMCA preferential tariff treatment. CBP and DOL may exchange information as necessary to properly administer the LVC requirement, subject to the confidentiality provisions in § 182.2 of this part and the DOL regulations in 29 CFR part 810.

(c) *LVC calculation.* For the purpose of determining whether a covered vehicle meets the LVC requirement, the producer of the covered vehicle must calculate the LVC requirement pursuant to General Note 11(k)(vi), HTSUS, and section 18 of Appendix A to this part and the requirements for the high-wage components of the LVC requirement set forth in the DOL regulations at 29 CFR part 810.

(d) *Calculation periods.* The producer of a covered vehicle may base the LVC calculation over the calculation periods set forth in either this paragraph or paragraph (e) of this section. The following calculation periods are provided for in section 18(19) of Appendix A to this part, and include:

(1) The previous fiscal year of the producer;

(2) The previous calendar year;

(3) The quarter or month to date in which the vehicle is produced or exported;

(4) The producer's fiscal year to date in which the vehicle is produced or exported; or

(5) The calendar year to date in which the vehicle is produced or exported.

(e) *Additional calculation periods.* If the fiscal year of the producer of a covered vehicle begins after July 1, 2020, but before July 1, 2021, the producer may base the LVC calculation over the period beginning on July 1, 2020 and ending at the end of the following fiscal year, as provided for in sections 16(4) and 16(5) of Appendix A to this part.

(1) *Additional calculation periods applicable to all covered vehicles.* For the period from July 1, 2020 to June 30, 2023, the producer of a covered vehicle may base the LVC calculation over the following periods:

(i) July 1, 2020 to June 30, 2021;

(ii) July 1, 2021 to June 30, 2022;

(iii) July 1, 2022 to June 30, 2023; and

(iv) July 1, 2023 to the end of the producer's fiscal year.

(2) *Additional calculation periods for heavy trucks.* In addition to the calculation periods contained in paragraph (e)(1) of this section, the producer of a heavy truck may base the LVC calculation of a heavy truck over the following additional periods:

(i) July 1, 2023 to June 30, 2024;

(ii) July 1, 2024 to June 30, 2025;

(iii) July 1, 2025 to June 30, 2026;

(iv) July 1, 2026 to June 30, 2027; and

(v) July 1, 2027 to the end of the producer's fiscal year.

(3) *Calculation periods.* When basing the LVC calculation over the additional calculation periods set forth in this paragraph, the producer may calculate:

(i) Beginning on July 1 of the previous year and ending on June 30 of the current year, except for the additional calculation periods set forth in paragraph (e)(1)(iv) or (e)(2)(v) of this section when the period ends at the end of the producer's fiscal year; or

(ii) Beginning on July 1 of the current year and ending on June 30 of the following year, except for the additional calculation periods in paragraph (e)(1)(iv) or (e)(2)(v) of this section when the period ends at the end of the producer's fiscal year.

■ 57. Add § 182.94 to subpart I to read as follows:

§ 182.94 Steel purchasing and aluminum purchasing requirements.

(a) *General.* A covered vehicle is eligible for USMCA preferential tariff treatment only if the producer of the covered vehicle meets both the steel purchasing and the aluminum purchasing requirements, as set forth in General Note 11(k)(v), HTSUS, and section 17 of Appendix A to this part or, if the producer is subject to alternative staging regime, General Note 11(k)(viii), HTSUS, and section 19 of Appendix A of this part.

(b) *Steel and aluminum purchasing calculations.* For the purpose of determining whether the producer of a covered vehicle has met the steel or aluminum purchasing requirement, the producer must calculate the steel and aluminum requirements pursuant to General Note 11(k)(v), HTSUS, and section 17 of Appendix A to this part. The producer may calculate the value of the steel and aluminum purchases using a method in section 17(6) of Appendix A to this part and may calculate the purchases of steel or aluminum on the basis of the categories set forth in in section 17(9) of Appendix A to this part.

(c) *Calculation periods.* The producer of a covered vehicle may calculate the purchases of steel or aluminum over the calculation periods set forth in either this paragraph or paragraph (d) of this section. The following calculation periods are provided for in section 17(7) of Appendix A to this part, and include:

(1) The previous fiscal year of the producer;

(2) The previous calendar year;

(3) The quarter or month to date in which the vehicle is exported;

(4) The producer's fiscal year to date in which the vehicle is exported; or

(5) The calendar year to date in which the vehicle is exported.

(d) *Additional calculation periods.* If the fiscal year of a producer begins after July 1, 2020, but before July 1, 2021, the producer of a covered vehicle may calculate the purchases of steel and aluminum over the period beginning on July 1, 2020 and ending at the end of the following fiscal year, as provided for in sections 16(4) and 16(5) of Appendix A to this part.

(1) *Additional calculation periods applicable to all covered vehicles.* For the period from July 1, 2020 to June 30, 2023, the producer of a covered vehicle may calculate the purchases of steel and aluminum over the following periods:

(i) July 1, 2020 to June 30, 2021;

(ii) July 1, 2021 to June 30, 2022;

(iii) July 1, 2022 to June 30, 2023; and

(iv) July 1, 2023 to the end of the producer's fiscal year.

(2) *Additional calculation periods for heavy trucks.* In addition to the calculation periods set forth in paragraph (d)(1) of this section, the producer of a heavy truck may calculate the purchases of steel and aluminum for a heavy truck over the additional following periods:

(i) July 1, 2023 to June 30, 2024;

(ii) July 1, 2024 to June 30, 2025;

(iii) July 1, 2025 to June 30, 2026;

(iv) July 1, 2026 to June 30, 2027; and

(v) July 1, 2027 to the end of the producer's fiscal year.

(3) *Calculation periods.* When calculating the purchases of steel and aluminum over the additional calculation periods set forth in this paragraph, the producer may calculate:

(i) beginning on July 1 of the previous year and ending on June 30 of the current year, except for the additional calculation periods set forth in paragraph (d)(1)(iv) or (d)(2)(v) of this section when the period ends at the end of the producer's fiscal year; or

(ii) beginning on July 1 of the current year and ending on June 30 of the following year, except for the additional calculation periods in paragraph (d)(1)(iv) or (d)(2)(v) of this section when the period ends at the end of the producer's fiscal year.

(e) *Calculation periods may differ.* The producer of a covered vehicle may choose different calculation periods for its steel purchasing calculation and aluminum purchasing calculation.

■ 58. Add § 182.95 to subpart I to read as follows:

§ 182.95 Labor value content (LVC) certification.

(a) *General.* A covered vehicle is eligible for USMCA preferential tariff treatment only if the producer of the covered vehicle has certified to CBP that the production of the vehicle by the producer meets the LVC requirement, as described in § 182.93 of this subpart. The producer of the covered vehicle must have information in its possession in accordance with § 182.103(a) of this subpart that proves the accuracy of the calculations relied on for the LVC certification.

(b) *Submission of LVC certification for vehicles subject to an exemption or different requirements under an alternative staging regime.* For covered vehicles that qualify as originating pursuant to an alternative staging regime, if the terms of the alternative staging regime specifically exempt the producer from the LVC requirement or contain different requirements than the LVC requirement set forth in § 182.93 of this subpart, the producer of the covered vehicle must submit to CBP a LVC certification that covers only those vehicles subject to the alternative staging regime pursuant to § 182.106(c) of this subpart.

(c) *LVC certification data elements.* The LVC certification must include the information required by 29 CFR part 810 and the following information:

(1) *Producer.* The certifying vehicle producer's name, corporate address (including country), Federal Employer Identification Number or alternative unique identification number of the producer's choosing, such as a Business Number (BN) issued by the Canada Revenue Agency, *Registro Federal de Contribuyentes* (RFC) number issued by Mexico's Tax Administration Service (SAT), Legal Entity Identifier (LEI) number issued by the Global Legal Entity Identifier Foundation (GLEIF), or an identification number issued to the person or enterprise by CBP, and a point of contact for the certifying vehicle producer;

(2) *Certifier.* The name, title, address (including country), telephone number, and email address of the person completing the certification;

(3) *LVC calculation.* The calculation used to determine that the production of covered vehicles specified under paragraph (c)(4) of this section meets the LVC requirement in General Note 11(k)(vi), HTSUS, § 182.93(c) of this subpart, and Appendix A to this part. The calculation should include each of the elements described in the formula based on net cost, as set forth in section 18(6)(a) of Appendix A to this part, or in the formula based on total annual purchase value, as set forth in section 18(6)(b) of Appendix A to this part, and the resulting LVC percentage;

(4) *Vehicle category.* The vehicle class, model line, and/or other category indicating the motor vehicles covered by the certification;

(5) *Calculation period.* For the calculation provided in paragraph (c)(3) of this section, the calculation period over which the calculation is made, as specified in § 182.93(d) and (e) of this subpart;

(6) *Plant or facility information.* The name, address, and Federal Employer Identification Number or alternative unique identification number of the producer's choosing, such as a Business Number (BN) issued by the Canada Revenue Agency, *Registro Federal de Contribuyentes* (RFC) number issued by Mexico's Tax Administration Service (SAT), Legal Entity Identifier (LEI) number issued by the Global Legal Entity Identifier Foundation (GLEIF), or an identification number issued to the person or enterprise by CBP, for each plant or facility the producer of the covered vehicle is relying on to meet the high-wage material and manufacturing expenditures component of the LVC requirement for the calculation provided in paragraph (c)(3) in this section;

(7) *Average hourly base wage rate.* A statement that the average hourly base wage rate, calculated as required by DOL's regulations at 29 CFR part 810, meets or exceeds US $16 per hour for each plant or facility identified in paragraph (c)(6) of this section;

(8) *High-wage transportation or related costs.* If applicable, a statement that the producer is using high-wage transportation or related costs to meet the high-wage material and manufacturing expenditures component. If the producer is using high-wage transportation or related costs, the producer must identify the company name, address, and Federal Employer Identification Number or alternative unique identification number of the producer's choosing, such as a Business Number (BN) issued by the Canada Revenue Agency, *Registro Federal de Contribuyentes* (RFC) number issued by Mexico's Tax Administration Service (SAT), Legal Entity Identifier (LEI) number issued by the Global Legal Entity Identifier Foundation (GLEIF), or an identification number issued to the person or enterprise by CBP, for each company the producer used to calculate its high-wage transportation or related costs for the calculation provided in paragraph (c)(3) of this section;

(9) *High-wage technology expenditures credit.* If applicable, a statement that the producer is using the high-wage technology expenditures credit to meet the LVC requirement for the calculation provided in paragraph (c)(3) of this section. If the producer is using the high-wage technology expenditures credit, a producer must identify the percentage the producer is claiming as a credit towards the total LVC requirement; and

(10) *High-wage assembly expenditures credit.* If applicable, a statement that the producer is using the high-wage assembly expenditures credit to meet the LVC requirement for the calculation provided in paragraph (c)(3) of this section. If the producer is using the high-wage assembly expenditures credit, the producer must identify the following:

(i) The name, address, and Federal Employer Identification Number (for U.S. plants) or alternative unique identification number of the producer's choosing, such as a Business Number (BN) issued by the Canada Revenue Agency, *Registro Federal de Contribuyentes* (RFC) number issued by Mexico's Tax Administration Service (SAT), Legal Entity Identifier (LEI) number issued by the Global Legal Entity Identifier Foundation (GLEIF), or an identification number issued to the person or enterprise by CBP, for the assembly plant the producer used to qualify for the high-wage assembly expenditures credit; and

(ii) A statement that the average hourly base wage rate, calculated as required by DOL's regulations at 29 CFR part 810, meets or exceeds US $16 per hour for the assembly plant used to qualify for the high-wage assembly expenditures credit.

(11) *Authorized signature, date and certifying statement.* The certification must be signed and dated by the certifier and include the following certifying statement: ''I certify that, for the vehicle category and over the relevant period indicated in this document, the producer has satisfied the LVC requirement as set out in General Note 11(k)(vi), HTSUS, section 18 of the Uniform Regulations regarding Rules of Origin, and 19 CFR 182.93. The information in this document is true and accurate, and I assume responsibility for proving such representations and agree to maintain and present upon request or to make available during a verification visit, documentation necessary to support this certification.''

(d) *Responsible official or agent.* The LVC certification must be signed and dated by a responsible official of the

producer, or by the producer's authorized agent having knowledge of the relevant facts.

(e) *Language.* The LVC certification must be completed in English, French, or Spanish. If the LVC certification is not in English, CBP may require the producer to submit an English translation of the certification.

(f) *Submission of LVC certification.* The producer of the covered vehicle must submit the LVC certification to CBP through an authorized electronic data interchange system or other specified means at least 90 days prior to the beginning of the certification period described in paragraph (j) of this section.

(g) *Review of LVC certification to determine whether it is properly filed.* After the producer of the covered vehicle submits the LVC certification to CBP pursuant to paragraphs (f) or (i) of this section, the LVC certification will be reviewed for omissions and errors to determine whether the certification has been properly filed.

(1) *Review for omissions and errors.* DOL, in consultation with CBP, will review the LVC certification for omissions and errors to determine whether the certification has been properly filed.

(2) *LVC certification contains no omissions or errors.* Upon a determination that the LVC certification contains no omissions or errors, CBP will provide written or electronic notification to the producer of the covered vehicle that the certification has been properly filed and is effective for the period specified in paragraph (j) of this section.

(3) *LVC certification contains omissions or errors.* Upon a determination that the LVC certification contains an omission or error, CBP will provide written or electronic notification to the producer of the covered vehicle that an omission or error was discovered, provide a description of the omission or error, and that the producer has the right to submit a revised LVC certification.

(i) *Submission of revised LVC certification.* Upon receipt of this notification that an omission or error was discovered, the producer must submit a revised certification or an explanation of why the producer believes the certification contains no omission or error to CBP within five business days. If no revised certification is submitted within the five business days, CBP will provide written or electronic notification to the producer of the covered vehicle that the certification has not been properly filed.

(ii) *Review of revised LVC certification.* Upon a determination that the revised LVC certification contains no omissions or errors, CBP will provide written or electronic notification to the producer of the covered vehicle that the certification has been properly filed and is effective for the period specified in paragraph (j) of this section. Upon a determination that the revised LVC certification contains an omission or error, CBP will provide written or electronic notification to the producer of the covered vehicle that the certification was not properly filed.

(h) *Making a claim for USMCA preferential tariff treatment during review for omissions and errors period.* If the LVC certification was filed by the required date, as specified in paragraph (f) of this section, an importer may make a claim for USMCA preferential tariff treatment under § 182.11(b) or § 182.32 of this part for such covered vehicles during the period of review for omissions and errors, as described in paragraph (g) of this section, until the producer has received notice from CBP that the LVC certification that forms the basis for the covered vehicle's eligibility for preferential tariff treatment has not been properly filed under paragraph (g)(3)(ii) of this section. If the producer receives notice that the LVC certification has not been properly filed under paragraph (g)(3)(ii) of this section, the producer must send a notification, with a copy to CBP, to any known importers of the covered vehicle of that determination within 30 days of receipt of the CBP notice.

(i) *Resubmission of the LVC certification upon determination that the LVC certification was not properly filed.* Upon notification that the LVC certification has not been properly filed under paragraph (g)(3)(ii) of this section, the producer of the covered vehicle may, within 10 business days of receiving the notification, resubmit a new LVC certification to CBP.

(1) *Resubmission process.* The producer must resubmit a new LVC certification to CBP pursuant to the means set forth in paragraph (f) of this section and CBP will use the review of omissions and errors process as described in paragraph (g) of this section to determine whether the new certification is properly filed.

(2) *Right to resubmit LVC certification.* The producer may resubmit a new LVC certification for the same category and same calculation period up to two times per certification period, as described in this section.

(3) *Making a claim for USMCA preferential tariff treatment during resubmission period.* Notwithstanding paragraph (h) of this section, if a producer chooses to resubmit the new LVC certification, an importer of the covered vehicle should not submit claims for USMCA preferential tariff treatment under § 182.11(b) or § 182.32 of this part for such covered vehicles until the producer has received notice that the new certification that forms the basis for the covered vehicle's eligibility for preferential tariff treatment has been properly filed.

(j) *Certification periods.* (1) For an LVC calculation based on the previous fiscal year of the producer pursuant to § 182.93(d)(1) of this subpart, the certification period begins on the first day of the following fiscal year of the producer. If the certification is considered properly filed, the certification is effective for covered vehicles produced or exported, as the case may be, within that period;

(2) For an LVC calculation based on the previous calendar year pursuant to § 182.93(d)(2) of this subpart, the certification period begins on the first day of the following calendar year. If the certification is considered properly filed, the certification is effective for covered vehicles produced or exported, as the case may be, within that period;

(3) For all other LVC calculation periods pursuant to § 182.93(d) of this subpart, the certification period begins on the first day of that calculation period. If the certification is considered properly filed, the certification is effective for covered vehicles produced or exported, as the case may be, within that period;

(4) For an LVC calculation based on an additional calculation period calculated pursuant to § 182.93(e)(3)(i) of this subpart, the certification period begins on first day of the following period, meaning July 1 of the current year and ends on June 30 of the following year, except for the additional calculation periods in § 182.93(e)(1)(iv) or (e)(2)(v) when the certification period begins on the first day of the following fiscal year of the producer. If the certification is considered properly filed, the certification is effective for covered vehicles produced or exported, as the case may be, within that period; and

(5) For an LVC calculation based on an additional calculation period calculated pursuant to § 182.93(e)(3)(ii) of this subpart, the certification period begins on the first day of that calculation period, meaning July 1 of the current year and ends on the last day of the calculation period, except for the additional calculation periods in § 182.93(e)(1)(iv) or (e)(2)(v) when the certification period begins on the first

day of the current fiscal year of the producer. If the certification is considered properly filed, the certification is effective for covered vehicles produced or exported, as the case may be, within that period.

(k) *Request for modification of a properly filed LVC certification.* The producer of the covered vehicle must request a modification of a properly filed LVC certification in the event of any material changes to the information contained in the certification that would affect its validity.

(1) *Submission process.* The producer must submit a modification request to CBP by submitting a new certification through the means set forth in paragraph (f) of this section, along with a list of the material changes to the information contained in the certification and an explanation as to why the modification is necessary with respect to the validity of the certification. If CBP grants the modification request, DOL, in consultation with CBP, will review the new LVC certification to determine whether it is properly filed in accordance with the procedures set forth in paragraph (g) of this section. If CBP denies the modification request, CBP will provide written or electronic notification to the producer of the covered vehicle.

(2) *Resubmission process.* The producer may resubmit the new certification, pursuant to the procedures in paragraph (i) of this section, upon a determination that the new certification was not properly filed. The producer may resubmit the new LVC certification up to two times in accordance with paragraph (i)(2) of this section.

(3) *Effective date of new LVC certification.* If CBP determines that the new certification is properly filed under paragraph (g) or (i) of this section, the new certification supersedes the former certification and is effective for the period specified in paragraph (j) of this section. Within 30 days of receiving notice that the new certification has been properly filed, the producer must send a notification, with a copy to CBP, to any known importers of that determination.

■ 59. Add § 182.96 to subpart I to read as follows:

§ 182.96 Steel purchasing certification.

(a) *General.* A covered vehicle is eligible for USMCA preferential tariff treatment only if the producer of the covered vehicle has certified to CBP that the production of the vehicle by the producer meets the steel purchasing requirement, as described in § 182.94 of this subpart. The producer of the covered vehicle must have information in its possession in accordance with § 182.103(a) of this subpart that proves the accuracy of the calculations relied on for the steel purchasing certification.

(b) *Submission of steel purchasing certification for vehicles subject to an exemption or different requirements under an alternative staging regime.* For covered vehicles that qualify as originating pursuant to an alternative staging regime, if the terms of the alternative staging regime specifically exempt the producer from the steel purchasing requirements or contain different requirements from the steel purchasing requirements set forth in § 182.94 of this subpart, the producer of the covered vehicle must submit to CBP a steel purchasing certification that covers only those vehicles subject to the alternative staging regime pursuant to § 182.106(c) of this subpart.

(c) *Steel purchasing certification data elements.* The steel purchasing certification must include:

(1) *Producer.* The producer of the covered vehicle's name, address (including country), email address, telephone number, and any Manufacturers Identification Codes (MID), Federal Employer Identification Numbers (EIN), or Importer of Record Numbers (IOR) associated with the producer. The address of a producer provided under this paragraph is the place of production of the good in a USMCA country's territory;

(2) *Certifier.* The name, title, address (including country), telephone number, and email address of the person completing the certification;

(3) *Producer's purchases of steel.* The calculation used to determine that the producer of the covered vehicle has complied with the steel purchasing requirement in General Note 11(k)(v), HTSUS, and Appendix A to this part. The calculation should include the total value of the vehicle producer's purchases at the corporate level of steel listed in Table S of Appendix A to this part in the territories of one or more of the USMCA countries, the total value of those purchases that qualify as originating goods, and the resulting percentage;

(4) *Vehicle category.* For the calculation provided in paragraph (c)(3) of this section, the vehicle category for which the purchases are calculated, as specified in section 17(9) of Appendix A to this part;

(5) *Calculation periods.* For the calculation provided in paragraph (c)(3) of this section, the calculation period over which the purchases are made, as specified in § 182.94(c) and (d) of this subpart;

(6) *Steel producer, service center, or distributor.* The name and address (including country) for each steel producer, service center, or distributor relied upon in calculating the total value of purchases of steel that qualify as originating goods under paragraph (c)(3) of this section, and any Manufacturers Identification Codes (MID), Federal Employer Identification Numbers (EIN), or Importer of Record Numbers (IOR) associated with those entities; and

(7) *Authorized signature, date and certifying statement.* The certification must be signed and dated by the certifier and include the following certifying statement: ''I certify that, for the vehicle category and over the relevant period indicated in this document, the producer has satisfied the steel purchasing requirement as set out in General Note 11(k)(v), HTSUS, section 17 of the Uniform Regulations regarding Rules of Origin, and 19 CFR 182.94. The information in this document is true and accurate, and I assume responsibility for proving such representations and agree to maintain and present upon request or to make available during a verification visit, documentation necessary to support this certification.''

(d) *Responsible official or agent.* The steel purchasing certification must be signed and dated by a responsible official of the producer, or by the producer's authorized agent having knowledge of the relevant facts.

(e) *Language.* The steel purchasing certification must be completed in English, French, or Spanish. If the certification is not in English, CBP may require the producer to submit an English translation of the certification.

(f) *Submission of steel purchasing certification.* The producer of the covered vehicle must submit the steel purchasing certification to CBP through an authorized electronic data interchange system or other specified means at least 90 days prior to the beginning of the certification period described in paragraph (j) of this section.

(g) *Review of steel purchasing certification to determine whether it is properly filed.* After the producer of the covered vehicle submits the steel purchasing certification to CBP pursuant to paragraph (f) or (i) of this section, CBP will review the certification for errors or omissions to determine whether the certification has been properly filed.

(1) *Steel purchasing certification contains no omissions or errors.* If, upon review of the certification, CBP determines the certification contains no

omissions or errors, CBP will provide written or electronic notification to the producer of the covered vehicle that the certification has been properly filed and is effective for the period specified in paragraph (j) of this section.

(2) *Steel purchasing certification contains omissions or errors.* If, upon review of the certification, CBP determines that the certification contains an omission or error, CBP will provide written or electronic notification to the producer of the covered vehicle that an omission or error was discovered, provide a description of the omission or error, and that the producer has the right to submit a revised steel purchasing certification.

(i) *Submission of revised steel purchasing certification.* Upon receipt of this notification that an omission or error was discovered, the producer must submit a revised certification or an explanation of why the producer believes the certification contains no omission or error to CBP within five business days. If no revised certification is submitted within the five business days, CBP will provide written or electronic notification to the producer of the covered vehicle that the certification has not been properly filed.

(ii) *Review of revised steel purchasing certification.* Upon a determination that the revised steel purchasing certification contains no omissions or errors, CBP will provide written or electronic notification to the producer of the covered vehicle that the certification has been properly filed and is effective for the period specified in paragraph (j) of this section. Upon a determination that the revised steel purchasing certification contains an omission or error, CBP will provide written or electronic notification to the producer of the covered vehicle that the certification was not properly filed.

(h) *Making a claim for USMCA preferential tariff treatment during review for omissions and errors period.* If the steel purchasing certification was filed by the required date, as specified in paragraph (f) of this section, an importer may make a claim for USMCA preferential tariff treatment under § 182.11(b) or § 182.32 of this part for such covered vehicles during the period of review for omissions and errors, as described in paragraph (g) of this section, until the producer has received notice from CBP that the steel purchasing certification that forms the basis for the covered vehicle's eligibility for preferential tariff treatment has not been properly filed under paragraph (g)(2)(ii) of this section. If the producer receives notice that the steel purchasing certification has not been properly filed under paragraph (g)(2)(ii) of this section, the producer must send a notification, with a copy to CBP, to any known importers of the covered vehicle of that determination within 30 days of receipt of the CBP notice.

(i) *Resubmission of the steel purchasing certification upon determination that the steel purchasing certification was not properly filed.* Upon notification that the steel purchasing certification has not been properly filed under paragraph (g)(2)(ii) of this section, the producer of the covered vehicle may, within 10 business days of receiving the notification, resubmit a new steel purchasing certification to CBP.

(1) *Resubmission process.* The producer must resubmit a new steel purchasing certification to CBP pursuant to the means set forth in paragraph (f) of this section and CBP will use the review of omissions and errors process as described in paragraph (g) of this section to determine whether the new certification is properly filed.

(2) *Right to resubmit steel purchasing certification.* The producer may resubmit a new steel purchasing certification for the same category and same calculation period up to two times per certification period, as described in this section.

(3) *Making a claim for USMCA preferential tariff treatment during resubmission period.* Notwithstanding paragraph (h) of this section, if a producer chooses to resubmit the new steel purchasing certification, an importer of the covered vehicle should not submit claims for USMCA preferential tariff treatment under § 182.11(b) or § 182.32 of this part for such covered vehicles until the producer has received notice that the new certification that forms the basis for the covered vehicle's eligibility for preferential tariff treatment has been properly filed.

(j) *Certification periods.* (1) For a steel purchasing calculation based on the previous fiscal year of the producer pursuant to § 182.94(c)(1) of this subpart, the certification period begins on the first day of the following fiscal year of the producer. If the certification is considered properly filed, the certification is effective for covered vehicles produced within that period;

(2) For a steel purchasing calculation based on the previous calendar year pursuant to § 182.94(c)(2) of this subpart, the certification period begins on the first day of the following calendar year. If the certification is considered properly filed, the certification is effective for covered vehicles produced within that period;

(3) For all other steel purchasing calculation periods pursuant to § 182.94(c) of this subpart, the certification period begins on the first day of that calculation period. If the certification is considered properly filed, the certification is effective for covered vehicles exported within that period;

(4) For a steel purchasing calculation based on an additional calculation period calculated pursuant to § 182.94(d)(3)(i) of this subpart, the certification period begins on first day of the following period, meaning July 1 of the current year and ends on June 30 of the following year, except for the additional calculation periods in § 182.94(d)(1)(iv) or (d)(2)(v) when the certification period begins on the first day of the following fiscal year of the producer. If the certification is considered properly filed, the certification is effective for covered vehicles produced within that period; and

(5) For a steel purchasing calculation based on an additional calculation period calculated pursuant to § 182.94(d)(3)(ii) of this subpart, the certification period begins on the first day of that calculation period, meaning July 1 of the current year and ends on the last day of the calculation period, except for the additional calculation periods in § 182.94(d)(1)(iv) or (d)(2)(v) when the certification period begins on the first day of the current fiscal year of the producer. If the certification is considered properly filed, the certification is effective for covered vehicles exported within that period.

(k) *Request for modification of a properly filed steel purchasing certification.* The producer of the covered vehicle must request a modification of a properly filed steel purchasing certification in the event of any material changes to the information contained in the certification that would affect its validity.

(1) *Submission process.* The producer must submit a modification request to CBP by submitting a new certification through the means set forth in paragraph (f) of this section, along with a list of the material changes to the information contained in the certification and an explanation as to why the modification is necessary with respect to the validity of the certification. If CBP grants the modification request, CBP will review the new steel purchasing certification to determine whether it is properly filed in accordance with the procedures set forth in paragraph (g) of this section. If CBP denies the modification request, CBP will provide written or electronic

notification to the producer of the covered vehicle.

(2) *Resubmission process.* The producer may resubmit the new certification, pursuant to the procedures in paragraph (i) of this section, upon a determination that the new certification was not properly filed. The producer may resubmit the new steel purchasing certification up to two times in accordance with paragraph (i)(2) of this section.

(3) *Effective date of new steel purchasing certification.* If CBP determines that the new certification is properly filed under paragraph (g) or (i) of this section, the new certification supersedes the former certification and is effective for the period specified in paragraph (j) of this section. Within 30 days of receiving notice that the new certification has been properly filed, the producer must send a notification, with a copy to CBP, to any known importers of that determination.

■ 60. Add § 182.97 to subpart I to read as follows:

§ 182.97 Aluminum purchasing certification.

(a) *General.* A covered vehicle is eligible for USMCA preferential tariff treatment only if the producer of the covered vehicle has certified to CBP that the production of the vehicle by the producer meets the aluminum purchasing requirement, as described in § 182.94 of this subpart. The producer of the covered vehicle must have information in its possession in accordance with § 182.103(a) of this subpart that proves the accuracy of the calculations relied on for the aluminum purchasing certification.

(b) *Submission of aluminum purchasing certification for vehicles subject to an exemption or different requirements under an alternative staging regime.* For covered vehicles that qualify as originating pursuant to an alternative staging regime, if the terms of the alternative staging regime specifically exempt the producer from the aluminum purchasing requirements or contain different requirements from the aluminum purchasing requirements set forth in § 182.94 of this subpart, the producer of the covered vehicle must submit to CBP an aluminum purchasing certification that covers only those vehicles subject to the alternative staging regime pursuant to § 182.106(c) of this subpart.

(c) *Aluminum purchasing certification data elements.* The aluminum purchasing certification must include:

(1) *Producer.* The producer of the covered vehicle's name, address (including country), email address, telephone number, and any Manufacturers Identification Codes (MID), Federal Employer Identification Numbers (EIN), or Importer of Record Numbers (IOR) associated with the producer. The address of a producer provided under this paragraph is the place of production of the good in a USMCA country's territory;

(2) *Certifier.* The name, title, address (including country), telephone number, and email address of the person completing the certification;

(3) *Producer's purchase of aluminum.* The calculation used to determine that the producer of the covered vehicle has complied with the aluminum purchasing requirement in General Note 11(k)(v), HTSUS, and Appendix A to this part. The calculation should include the total value of the vehicle producer's purchases at the corporate level of aluminum listed in Table S of Appendix A to this part in the territories of one or more of the USMCA countries, the total value of those purchases that qualify as originating goods, and the resulting percentage;

(4) *Vehicle category.* For the calculation provided in paragraph (c)(3) of this section, the vehicle category for which the purchases are calculated, as specified in section 17(9) of Appendix A to this part;

(5) *Calculation periods.* For the calculation provided in paragraph (c)(3) of this section, the calculation period over which the purchases are made, as specified in § 182.94(c) and (d) of this subpart;

(6) *Aluminum producer, service center, or distributor.* The name and address (including country) for each aluminum producer, service center, or distributor relied upon in calculating the total value of purchases of aluminum that qualify as originating goods under paragraph (c)(3) of this section, and any Manufacturers Identification Codes (MID), Federal Employer Identification Numbers (EIN), or Importer of Record Numbers (IOR) associated with those entities; and

(7) *Authorized signature, date and certifying statement.* The certification must be signed and dated by the certifier and include the following certifying statement: ''I certify that, for the vehicle category and over the relevant period indicated in this document, the producer has satisfied the aluminum purchasing requirement as set out in General Note 11(k)(v), HTSUS, section 17 of the Uniform Regulations regarding Rules of Origin, and 19 CFR 182.94. The information in this document is true and accurate, and I assume responsibility for proving such representations and agree to maintain and present upon request or to make available during a verification visit, documentation necessary to support this certification.''

(d) *Responsible official or agent.* The aluminum purchasing certification must be signed and dated by a responsible official of the producer, or by the producer's authorized agent having knowledge of the relevant facts.

(e) *Language.* The aluminum purchasing certification must be completed in English, French, or Spanish. If the certification is not in English, CBP may require the producer to submit an English translation of the certification.

(f) *Submission of aluminum purchasing certification.* The producer of the covered vehicle must submit the aluminum purchasing certification to CBP through an authorized electronic data interchange system or other specified means at least 90 days prior to the beginning of the certification period described in paragraph (j) of this section.

(g) *Review of aluminum purchasing certification to determine whether it is properly filed.* After the producer of the covered vehicle submits the aluminum purchasing certification to CBP pursuant to paragraph (f) or (i) of this section, CBP will review the certification for errors or omissions to determine whether the certification has been properly filed.

(1) *Aluminum purchasing certification contains no omissions or errors.* If, upon review of the certification, CBP determines the certification contains no omissions or errors, CBP will provide written or electronic notification to the producer of the covered vehicle that the certification has been properly filed and is effective for the period specified in paragraph (j) of this section.

(2) *Aluminum purchasing certification contains omissions or errors.* If, upon review of the certification, CBP determines that the certification contains an omission or error, CBP will provide written or electronic notification to the producer of the covered vehicle that an omission or error was discovered, provide a description of the omission or error, and that the producer has the right to submit a revised aluminum purchasing certification.

(i) *Submission of revised aluminum purchasing certification.* Upon receipt of this notification that an omission or error was discovered, the producer must submit a revised certification or an explanation of why the producer believes the certification contains no

omission or error to CBP within five business days. If no revised certification is submitted within the five business days, CBP will provide written or electronic notification to the producer of the covered vehicle that the certification has not been properly filed.

(ii) *Review of revised aluminum purchasing certification.* Upon a determination that the revised aluminum purchasing certification contains no omissions or errors, CBP will provide written or electronic notification to the producer of the covered vehicle that the certification has been properly filed and is effective for the period specified in paragraph (j) of this section. Upon a determination that the revised aluminum purchasing certification contains an omission or error, CBP will provide written or electronic notification to the producer of the covered vehicle that the certification was not properly filed.

(h) *Making a claim for USMCA preferential tariff treatment during review for omissions and errors period.* If the aluminum purchasing certification was filed by the required date, as specified in paragraph (f) of this section, an importer may make a claim for USMCA preferential tariff treatment under § 182.11(b) or § 182.32 of this part for such covered vehicles during the period of review for omissions and errors, as described in paragraph (g) of this section, until the producer has received notice from CBP that the aluminum purchasing certification that forms the basis for the covered vehicle's eligibility for preferential tariff treatment has not been properly filed under paragraph (g)(2)(ii) of this section. If the producer receives notice that the aluminum purchasing certification has not been properly filed under paragraph (g)(2)(ii) of this section, the producer must send a notification, with a copy to CBP, to any known importers of the covered vehicle of that determination within 30 days of receipt of the CBP notice.

(i) *Resubmission of the aluminum purchasing certification upon determination that the aluminum purchasing certification was not properly filed.* Upon notification that the aluminum purchasing certification has not been properly filed under paragraph (g)(2)(ii) of this section, the producer of the covered vehicle may, within 10 business days of receiving the notification, resubmit a new aluminum purchasing certification to CBP.

(1) *Resubmission process.* The producer must resubmit a new aluminum purchasing certification to CBP pursuant to the means set forth in paragraph (f) of this section and CBP will use the review of omissions and errors process as described in paragraph (g) of this section to determine whether the new certification is properly filed.

(2) *Right to resubmit aluminum purchasing certification.* The producer may resubmit a new aluminum purchasing certification for the same category and same calculation period up to two times per certification period, as described in this section.

(3) *Making a claim for USMCA preferential tariff treatment during resubmission period.* Notwithstanding paragraph (h) of this section, if a producer chooses to resubmit the new aluminum purchasing certification, an importer of the covered vehicle should not submit claims for USMCA preferential tariff treatment under § 182.11(b) or § 182.32 of this part for such covered vehicles until the producer has received notice that the new certification that forms the basis for the covered vehicle's eligibility for preferential tariff treatment has been properly filed.

(j) *Certification periods.* (1) For an aluminum purchasing calculation based on the previous fiscal year of the producer pursuant to § 182.94(c)(1) of this subpart, the certification period begins on the first day of the following fiscal year of the producer. If the certification is considered properly filed, the certification is effective for covered vehicles produced within that period;

(2) For an aluminum purchasing calculation based on the previous calendar year pursuant to § 182.94(c)(2) of this subpart, the certification period begins on the first day of the following calendar year. If the certification is considered properly filed, the certification is effective for covered vehicles produced within that period;

(3) For all other aluminum purchasing calculation periods pursuant to § 182.94(c) of this subpart, the certification period begins on the first day of that calculation period. If the certification is considered properly filed, the certification is effective for covered vehicles exported within that period;

(4) For an aluminum purchasing calculation based on an additional calculation period calculated pursuant to § 182.94(d)(3)(i) of this subpart, the certification period begins on first day of the following period, meaning July 1 of the current year and ends on June 30 of the following year, except for the additional calculation periods in § 182.94(d)(1)(iv) or (d)(2)(v) when the certification period begins on the first day of the following fiscal year of the producer. If the certification is considered properly filed, the certification is effective for covered vehicles produced within that period; and

(5) For an aluminum purchasing calculation based on an additional calculation period calculated pursuant to § 182.94(d)(3)(ii) of this subpart, the certification period begins on the first day of that calculation period, meaning July 1 of the current year and ends on the last day of the calculation period, except for the additional calculation periods in § 182.94(d)(1)(iv) or (d)(2)(v) when the certification period begins on the first day of the current fiscal year of the producer. If the certification is considered properly filed, the certification is effective for covered vehicles exported within that period.

(k) *Request for modification of a properly filed aluminum purchasing certification.* The producer of the covered vehicle must request a modification of a properly filed aluminum purchasing certification in the event of any material changes to the information contained in the certification that would affect its validity.

(1) *Submission process.* The producer must submit a modification request to CBP by submitting a new certification through the means set forth in paragraph (f) of this section, along with a list of the material changes to the information contained in the certification and an explanation as to why the modification is necessary with respect to the validity of the certification. If CBP grants the modification request, CBP will review the new aluminum purchasing certification to determine whether it is properly filed in accordance with the procedures set forth in paragraph (g) of this section. If CBP denies the modification request, CBP will provide written or electronic notification to the producer of the covered vehicle.

(2) *Resubmission process.* The producer may resubmit the new certification, pursuant to the procedures in paragraph (i) of this section, upon a determination that the new certification was not properly filed. The producer may resubmit the new aluminum purchasing certification up to two times in accordance with paragraph (i)(2) of this section.

(3) *Effective date of new aluminum purchasing certification.* If CBP determines that the new certification is properly filed under paragraph (g) or (i) of this section, the new certification supersedes the former certification and is effective for the period specified in paragraph (j) of this section. Within 30 days of receiving notice that the new

certification has been properly filed, the producer must send a notification, with a copy to CBP, to any known importers of that determination.

■ 61. Add § 182.98 to subpart I to read as follows:

§ 182.98 Appeal of the determination that LVC, steel purchasing, or aluminum purchasing certification is not properly filed.

(a) *Producer of a covered vehicle's right to appeal.* If, following the review of the second resubmission of the vehicle certification pursuant to §§ 182.95(i)(2), 182.96(i)(2), and 182.97(i)(2) of this subpart, CBP determines that the vehicle certification is not properly filed as provided in §§ 182.95(g)(3)(ii), 182.96(g)(2)(ii), and 182.97(g)(2)(ii) of this subpart, the producer of the covered vehicle may file a written appeal. This filing cannot be made unless the producer utilized both opportunities for resubmission of a vehicle certification and the producer has received notification from CBP that the resubmitted certification has not been properly filed. The determination as to whether a vehicle certification is properly filed does not qualify as a matter subject to protest under part 174 of this chapter.

(b) *Appeal of not properly filed determination.* Upon receipt of notification that the vehicle certification is not properly filed, following the second resubmission of the vehicle certification pursuant to §§ 182.95(i)(2), 182.96(i)(2), and 182.97(i)(2) of this subpart, the producer of the covered vehicle may file a written appeal to CBP Headquarters, Trade Policy and Programs, Office of Trade. This filing must be received by CBP within 14 days of the producer of the covered vehicle receiving the notification that, following the second resubmission, the certification was not properly filed. The Office of Trade will review the not properly filed determination and will render a written decision on the appeal within 30 days after receipt of the appeal. When an appeal involves DOL's review of the LVC certification for omissions and errors, CBP will coordinate with DOL regarding the appeal as necessary.

(c) *Making a claim for USMCA preferential tariff treatment during appeal period.* If a producer of the covered vehicle chooses to appeal the determination that a vehicle certification is not properly filed under this section, an importer of the covered vehicle may not submit claims for USMCA preferential tariff treatment under § 182.11(b) or § 182.32 of this part for such covered vehicles until the producer has received notice that the vehicle certification that forms the basis for the covered vehicle's eligibility for preferential tariff treatment has been properly filed.

§ 182.99 [Reserved]

■ 62. Add and reserve § 182.99 to subpart I.

■ 63. Add § 182.100 to subpart I to read as follows:

§ 182.100 Motor vehicle averaging elections.

(a) *RVC averaging.* For the purpose of calculating the regional value content (RVC) of a covered vehicle, the producer of the vehicle may elect to average the RVC calculation. The producer must comply with all the RVC averaging provisions set forth in section 16 of Appendix A to this part to elect RVC averaging.

(1) *RVC averaging categories.* The producer of a covered vehicle may elect to average its RVC calculation using any of the categories provided for in section 16(1) of Appendix A to this part, on the basis of either all motor vehicles in the category or only those motor vehicles in the category that are exported to the territory of one or more of the other USMCA countries:

(i) The same model line of motor vehicles in the same class of vehicles produced in the same plant in the territory of a USMCA country;

(ii) The same class of motor vehicles produced in the same plant in the territory of a USMCA country;

(iii) The same model line or same class of motor vehicles produced in the territory of a USMCA country; or

(iv) Any other category as the USMCA countries may decide.

(2) *RVC averaging periods.* For purposes of calculating the RVC of a covered vehicle, the calculation may be averaged over the producer's fiscal year. If the fiscal year of a producer begins after July 1, 2020, but before July 1, 2021, the producer may base the RVC calculation over the period beginning on July 1, 2020 and ending at the end of the following fiscal year, as provided for in section 16(4) and 16(5) of Appendix A to this part.

(i) *RVC averaging periods applicable to all covered vehicles.* For the period from July 1, 2020 to June 30, 2023, the producer of a covered vehicle may base the RVC calculation over the following periods:

(A) July 1, 2020 to June 30, 2021;

(B) July 1, 2021 to June 30, 2022;

(C) July 1, 2022 to June 30, 2023; and

(D) July 1, 2023 to the end of the producer's fiscal year.

(ii) *Additional RVC averaging periods for heavy trucks.* In addition to the calculation periods set forth in paragraph (a)(2) of this section, a producer of a heavy truck may base the RVC calculation of a heavy truck over the additional following periods:

(A) July 1, 2023 to June 30, 2024;

(B) July 1, 2024 to June 30, 2025;

(C) July 1, 2025 to June 30, 2026;

(D) July 1, 2026 to June 30, 2027; and

(E) July 1, 2027 to the end of the producer's fiscal year.

(3) *Election to average.* A producer of a covered vehicle who elects to average its RVC calculation must file an averaging election with CBP pursuant to paragraph (c) of this section.

(b) *LVC averaging.* For purposes of calculating the LVC of a covered vehicle, the producer of the vehicle may elect to average the LVC calculation. The producer must comply with all the LVC averaging provisions set forth in section 18 of Appendix A to this part to elect LVC averaging.

(1) *LVC averaging categories.* The producer of a covered vehicle may elect to average its LVC calculation using any of the categories provided for in section 18(15) of Appendix A to this part, on the basis of either all motor vehicles in the category or only those motor vehicles in the category that are exported to the territory of one or more of the other USMCA countries.

(2) *LVC averaging periods.* For purposes of calculating the LVC of a covered vehicle, the calculation may be averaged over the calculation periods as described in § 182.93(d) and (e) of this subpart.

(3) *Election to average.* A producer of a covered vehicle who elects to average its LVC calculation must file an averaging election with CBP pursuant to paragraph (c) of this section.

(c) *Filing of RVC and LVC averaging elections.* If the producer of a covered vehicle elects to average its RVC or LVC calculations, the producer must file an RVC or LVC averaging election with CBP via an authorized electronic data interchange system or other specified means at least 10 days before the first day of the producer's fiscal year during which the vehicles will be exported, or such shorter period as CBP may accept.

(d) *RVC averaging election required data elements.* When filing an RVC averaging election pursuant to paragraph (c) of this section, the averaging election must include:

(1) *Producer.* The producer of the covered vehicle's name, address (including country), email address, and telephone number;

(2) *Averaging period.* The period with respect to which the election is made pursuant to paragraph (a)(2) of this

section, including the starting and ending dates;

(3) *Averaging category.* The averaging category chosen by the producer pursuant to paragraph (a)(1) of this section;

(4) *Vehicles to be averaged.* The model name, the model line (if the averaging category under section 16(1)(a) or 16(1)(c) of Appendix A to this part is chosen), class of motor vehicle, and tariff classification of the motor vehicles in that category;

(5) *Location of the plant.* The location(s) of the plant at which the motor vehicles are produced;

(6) *Basis of calculation.* Whether the basis of the calculation is all vehicles in that category chosen by the producer or only those vehicles in that category that are exported to the territory of one or more of the other USMCA countries;

(7) *Basis of regional value content.* The basis of the calculation in determining the estimated RVC of motor vehicles pursuant to paragraph (a) of this section; and

(8) *Authorized signature and date.* The authorized officer's name, title, address (including country), telephone number, email address, signature, and date.

(e) *LVC averaging election required data elements.* When filing an LVC averaging election pursuant to paragraph (c) of this section, the averaging election must include:

(1) *Producer.* The producer's name, address (including country), email address, and telephone number;

(2) *Averaging period.* The period with respect to which the election is made pursuant to paragraph (b)(2) of this section, including the starting and ending dates;

(3) *Averaging category.* The averaging category chosen by the producer pursuant to paragraph (b)(1) of this section;

(4) *Vehicles to be averaged.* The model name, the model line (if the averaging category under section 18(15)(a) and 18(15)(c) of Appendix A to this part is chosen), class of motor vehicle, and tariff classification of the motor vehicles in that category;

(5) *Location of the plant.* The location(s) of the plant at which the motor vehicles are produced;

(6) *Basis of calculation.* Whether the basis of the calculation is all vehicles in that category chosen by the producer or only those vehicles in that category that are exported to the territory of one or more of the other USMCA countries;

(7) *Estimated LVC and net cost.* The estimated LVC and net cost of vehicles in that category with respect to the basis of calculation ; and

(8) *Authorized signature and date.* The authorized officer's name, title, address (including country), telephone number, email address, signature, and date.

(f) *Cost submission for motor vehicles.* A producer of a covered vehicle who files an RVC or LVC averaging election pursuant to paragraph (c) of this section must submit, at the request of CBP, a cost submission reflecting the actual costs incurred in the production of the category of motor vehicles for which the election was made. The requested cost submission must be submitted to CBP within 180 calendar days after the close of the producer's fiscal year or within 60 days from the date on which the request was made, whichever is later.

■ 64. Add § 182.101 to subpart I to read as follows:

§ 182.101 Averaging for other automotive goods.

(a) *Automotive parts.* For the purpose of calculating the RVC of an automotive good provided for in section 16(10) of Appendix A to this part, the producer of the automotive good may average its RVC calculation pursuant to the provisions set forth in sections 16(5) and 16(10) of Appendix A to this part.

(b) *Other vehicles.* For the purpose of calculating the RVC of a motor vehicle provided for in sections 20(2) or (3) of Appendix A to this part, the producer of the automotive good may average its RVC calculation pursuant to the provisions set forth in sections 16(5) and section 20(6) of Appendix A to this part.

(c) *Averaging election not required.* The producer of the automotive good is not required to file an RVC averaging election with CBP when averaging the RVC pursuant to this section.

■ 65. Add § 182.102 to subpart I to read as follows:

§ 182.102 Required year-end reconciliation to actual costs when estimated costs or purchases used.

(a) *Year-end reconciliation required.* (1) *RVC and LVC.* When the producer of a covered vehicle has calculated the RVC or LVC of its vehicles on the basis of estimated costs, including standard costs, budgeted forecasts or other similar estimating procedures, before or during the producer's fiscal year, the producer must conduct a reconciliation at the end of the producer's fiscal year to the actual costs incurred over the period with respect to the production of the vehicle, irrespective of whether the producer filed an averaging election pursuant to § 182.100 of this subpart.

(2) *Steel and aluminum purchases.* When the producer of a covered vehicle has calculated steel and aluminum purchases on the basis of estimates before or during the applicable period, the producer must conduct a reconciliation at the end of the producer's fiscal year to the actual purchases made over the period with respect to the production of the vehicle.

(b) *Notification.* If, based on the year-end reconciliation performed under paragraph (a) of this section, the covered vehicle does not satisfy the RVC or LVC requirement on the basis of the actual costs, or the steel or aluminum purchasing requirement on the basis of the actual purchases, the producer must, within 30 days of making that determination:

(1) Provide written notification to CBP that the vehicle is a non-originating good; and

(2) Inform any person to whom the producer has provided a certification of origin for the vehicle, or a written statement that the vehicle is an originating good, that the vehicle is a non-originating good.

■ 66. Add § 182.103 to subpart I to read as follows:

§ 182.103 Producer and exporter recordkeeping responsibilities for records relating to LVC, steel purchasing, and aluminum purchasing requirements.

(a) *Producer recordkeeping responsibilities.* A producer of a covered vehicle whose good is subject to a claim for USMCA preferential tariff treatment must make and keep, for a minimum of five years from the date that the vehicle certifications were submitted to CBP, the LVC certification, the steel purchasing certification, the aluminum purchasing certification, and all records and supporting documents that the producer of the covered vehicle has to demonstrate whether the covered vehicle meets the LVC, steel purchasing, and aluminum purchasing requirements. The records must be capable of being retrieved upon lawful request or demand by CBP. The producer of the covered vehicle must also maintain any records related to the high-wage components of the LVC requirement as required by DOL pursuant to 29 CFR part 810, and produce such records to DOL upon request.

(b) *Exporter who completed the certification of origin recordkeeping responsibilities.* An exporter who completed the certification of origin for a covered vehicle must keep, for a minimum of five years from the date that the certification of origin was completed, the LVC certification, the steel purchasing certification, the aluminum purchasing certification, and

all records and supporting documents that the exporter has to demonstrate whether the covered vehicle meets the LVC, steel purchasing, and aluminum purchasing requirements. The records must be capable of being retrieved upon lawful request or demand by CBP. The exporter must also maintain any records related to the high-wage components of the LVC requirement as required by DOL pursuant to 29 CFR part 810, and produce such records to DOL upon request.

■ 67. Add § 182.104 to subpart I to read as follows:

§ 182.104 Importer's responsibility to maintain records relating to LVC, steel purchasing, and aluminum purchasing requirements.

(a) *General.* In addition to any other records that the importer is required to prepare, maintain, or make available to CBP under this part or under part 163 of this chapter, an importer claiming USMCA preferential tariff treatment for a covered vehicle has additional recordkeeping responsibilities. The extent of the importer's recordkeeping responsibilities depends on whether the importer completed the certification of origin.

(1) *Claims based on certification of origin completed by the exporter or producer.* If the claim for USMCA preferential tariff treatment is based on a certification of origin completed by the exporter or producer, the importer must maintain, for a minimum of five years from the date of importation of the covered vehicle, any records and supporting documents in the importer's possession relating to the LVC, steel purchasing, and aluminum purchasing certifications that formed the basis for the covered vehicle's eligibility for USMCA preferential tariff treatment; or

(2) *Claims based on certification of origin completed by the importer.* If the claim for USMCA preferential tariff treatment is based on a certification of origin completed by the importer, the importer must maintain, for a minimum of five years from the date of importation of the covered vehicle, the LVC certification, the steel purchasing certification, the aluminum purchasing certification, and all records and supporting documents to demonstrate whether the covered vehicle meets the LVC, steel purchasing, and aluminum purchasing requirements. The importer must also maintain any records related to the high-wage components of the LVC requirement as required by DOL pursuant to 29 CFR part 810, and produce such records to DOL upon request.

(b) *Method of maintenance.* The records referred to in paragraph (a) of this section must be maintained by importers as provided in § 163.5 of this chapter.

(c) *Relation to other recordkeeping requirements.* Nothing in this section precludes compliance with any other applicable recordkeeping or reporting requirements, including, but not limited to, any recordkeeping requirements set forth in this chapter, and the DOL regulations at 29 CFR part 810.

■ 68. Add § 182.105 to subpart I to read as follows:

§ 182.105 Verification of automotive goods.

(a) *General.* CBP will initiate all verifications of automotive goods, including covered vehicles, pursuant to the means set forth in § 182.72(a) of this part. The general verification and determination provisions set forth in subpart G of this part and the provisions contained in this section are applicable for automotive good verifications.

(b) *Verification of a part, component, or material of a covered vehicle.* When conducting a verification of a covered vehicle imported into the United States, CBP may conduct a verification of the parts, components, or materials used in the production of that covered vehicle. This verification will be conducted in conjunction with DOL, if applicable. A verification of a part, component, or material producer may be conducted pursuant to any of the verification means set forth in § 182.72(a) of this part. With the exception of § 182.73(c) and § 182.75, the provisions in subpart G of this part apply to the verification of a part, component, or material, and, with the exception of paragraph (d)(1) of this section, the provisions in this section also apply to the verification of a part, component, or material. References to the term ''producer'' in this section apply to a producer of a covered vehicle or to a part, component, or material producer.

(c) *Availability of records*—(1) *Verification of a covered vehicle.* During a verification of a covered vehicle, the importer, exporter, and producer must make all records that they are required to maintain pursuant to this part, including §§ 182.103 and 182.104 of this subpart, and the DOL regulations at 29 CFR part 810, available for inspection by a CBP or DOL official conducting a verification. With respect to records related to vehicle certifications, an importer, whose claim is based on a certification of origin completed by the exporter or producer, must only make those records in the importer's possession, as described in § 182.104, available for inspection by a CBP or DOL official conducting a verification. CBP may deny the claim for preferential tariff treatment of the covered vehicle for failure to maintain the records required by CBP or DOL or for denying a CBP or DOL official access to these records.

(2) *Verification of a part, component, or material of a covered vehicle.* During the verification of a part, component, or material used in the production of a covered vehicle, any records in the part, component, or material producer's possession related to whether the part, component, or material qualifies as originating must be made available for inspection by a CBP or DOL official conducting a verification. CBP may consider the part, component, or material that is used in the production of the covered vehicle and is the subject of the verification to be a non-originating part, component, or material if a CBP or DOL official is denied access to these records.

(d) *Verification of the high-wage components of the LVC requirement.* When conducting a verification of a covered vehicle involving the high-wage components of the LVC requirement, CBP will conduct the verification in conjunction with DOL. DOL is responsible, pursuant to 19 U.S.C. 4532(e) and the DOL requirements and procedures in 29 CFR part 810, for conducting the verification of the high-wage components of the LVC requirement and determining whether the covered vehicle meets the high-wage components of the LVC requirement. CBP is responsible for verifying all other aspects of the LVC requirement not covered by DOL, including the annual purchase value and cost components of the high-wage material and manufacturing expenditures, and is ultimately responsible for determining whether the covered vehicle meets the LVC requirement, the requirements in this part, and whether the covered vehicle qualifies for USMCA preferential treatment.

(1) *Producer notification.* When CBP initiates a verification of a covered vehicle and that verification involves determining whether the covered vehicle meets the LVC requirement, CBP will notify the producer of the covered vehicle, through one of the communication means specified in § 182.73(d)(2) of this part, that CBP has initiated a verification of the covered vehicle and advise whether DOL will verify the high-wage components of the LVC requirement, subject to the confidentiality provisions in § 182.2 of this part and the DOL's regulations at 29 CFR part 810.

(2) *Determinations of origin involving the LVC requirement.* When issuing a determination of origin pursuant to § 182.75 of this part, CBP will determine whether the covered vehicle meets the LVC requirement and qualifies for preferential tariff treatment based in part on DOL's determination of whether the covered vehicle complied with the high-wage components of the LVC requirement and DOL's verification findings and analysis.

(e) *Protests.* An importer, exporter, or producer, who has the right to file a protest pursuant to § 174.12(a)(6) of this chapter, may protest a CBP determination of origin under part 174 of this chapter. When a protest involves DOL's analysis of the high-wage components of the LVC requirement, CBP will coordinate with DOL regarding the review of the protest and accelerated disposition of the protest will not be available pursuant to § 174.22 of this chapter. DOL is responsible, pursuant to 19 U.S.C. 4532(e)(6)(A), for conducting an administrative review of its initial analysis pursuant to DOL's regulations at 29 CFR part 810 and providing a determination containing the results of the administrative review to CBP. CBP will review and act on the protest pursuant to the procedures and requirements set forth in part 174 of this chapter.

■ 69. Add § 182.106 to subpart I to read as follows:

§ 182.106 Alternative staging regime.

(a) *General.* Pursuant to General Note 11(k)(viii), HTSUS, Appendix A to this part, and as may be further provided for in subchapter XXIII of chapter 99 of the HTSUS, a covered vehicle may be originating pursuant to an alternative staging regime. A covered vehicle is only eligible for USMCA preferential tariff treatment under an alternative staging regime provided that:

(1) Use of the alternative staging regime has been authorized by the Office of the U.S. Trade Representative (USTR);

(2) USTR has not made a determination that the producer of the covered vehicle failed to meet the requirements for use of an alternative staging regime under 19 U.S.C. 4532(d)(5);

(3) The alternative staging regime period is in effect;

(4) The terms of the alternative staging regime petition, as authorized by the USTR, are met; and

(5) The covered vehicle meets the requirements in this part, including the requirements in this subpart, unless the terms of the alternative staging regime specifically exempt the producer from these requirements or contain different requirements.

(b) *Verifications.* CBP will conduct a verification of a covered vehicle subject to an alternative staging regime pursuant to the same procedures that govern other covered vehicles as set forth in § 182.105 of this subpart.

(c) *Vehicle certifications for covered vehicles subject to an exemption or different requirements under an alternative staging regime.* For covered vehicles that qualify as originating pursuant to an alternative staging regime, if the terms of the alternative staging regime specifically exempt the producer from the LVC, steel purchasing, or aluminum purchasing requirement, or contain different requirements from sections 13 through 18 of Appendix A to this part, then the producer must submit to CBP a vehicle certification for that requirement that covers only those vehicles subject the alternative staging regime. In addition to meeting all other requirements set forth in §§ 182.95, 182.96, and 182.97 of this subpart, as applicable, with the exception of §§ 182.95(c)(11), 182.96(c)(7), and 182.97(c)(7), a producer's vehicle certification submitted pursuant to this paragraph must include the following additional information:

(1) A list of the vehicles covered by the alternative staging regime;

(2) A description of the applicable exemption or different requirements as provided under the alternative staging regime; and

(3) An authorized signature, date, and the following certifying statement: ''I certify that, for the vehicles listed and over the relevant period indicated in this document, the producer has satisfied the requirements of the alternative staging regime as set out in General Note 11(k)(viii), HTSUS, section 19 of the Uniform Regulations regarding Rules of Origin, 19 CFR 182.106, and under the terms authorized by the Office of the U.S. Trade Representative (USTR). The information in this document is true and accurate, and I assume responsibility for proving such representations and agree to maintain and present upon request or to make available during a verification visit, documentation necessary to support this certification.''

■ 70. Add § 182.107 to subpart I to read as follows:

§ 182.107 Denial of preferential tariff treatment of covered vehicles.

CBP may deny any claim for preferential tariff treatment of any covered vehicle if:

(a) CBP determines that the good does not qualify for preferential tariff treatment due to a failure to meet the LVC, steel purchasing, or aluminum purchasing requirements set forth in General Note 11, HTSUS, Appendix A to this part, or §§ 182.93 and 182.94 of this subpart;

(b) The producer of the covered vehicle fails to submit the required LVC, steel purchasing, or aluminum purchasing certifications to CBP, pursuant to §§ 182.95, 182.96, and 182.97 of this subpart;

(c) CBP determines that an LVC, steel purchasing, or aluminum purchasing certification that forms the basis for a covered vehicle's eligibility for USMCA preferential tariff treatment is not properly filed pursuant to §§ 182.95, 182.96, and 182.97 of this subpart;

(d) CBP determines that an LVC, steel purchasing, or aluminum purchasing certification that forms the basis for a covered vehicle's eligibility for USMCA preferential tariff treatment is invalid after it was determined to be properly filed;

(e) The importer, exporter, or producer fails to maintain records of the vehicle certifications and supporting documents as required pursuant to §§ 182.103 and 182.104 of this subpart;

(f) The importer, exporter, or producer fails to provide a CBP or DOL official the records or documentation that are in its possession or required to be maintained pursuant to § 182.105(c) of this subpart; or

(g) CBP determines that any other reason to deny a claim for preferential tariff treatment as set forth in § 182.75(c)(2) of this part applies.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

42 CFR Part 12

Expansion of Buprenorphine Treatment via Telemedicine Encounter

AGENCY: Drug Enforcement Administration, Department of Justice; Substance Abuse and Mental Health Services Administration, Department of Health and Human Services.

ACTION: Final rule.

SUMMARY: The Drug Enforcement Administration and the Department of Health and Human Services are amending their regulations to expand the circumstances under which practitioners registered by the Drug Enforcement Administration are authorized to prescribe schedule III–V controlled substances approved by the Food and Drug Administration for the treatment of opioid use disorder via a telemedicine encounter, including an audio-only telemedicine encounter. Under these new regulations, after a practitioner reviews the patient's prescription drug monitoring program data for the state in which the patient is located during the telemedicine encounter, the practitioner may prescribe an initial six-month supply of such medications (split amongst several prescriptions totaling six calendar months) through audio-only means. Additional prescriptions can be issued under other forms of telemedicine as authorized under the Controlled Substances Act, or after an in-person medical evaluation is conducted. This regulation also requires the pharmacist to verify the identity of the patient prior to filling a prescription. The *Ryan Haight Online Pharmacy Consumer Protection Act of 2008* generally requires an in-person medical evaluation prior to issuance of a controlled substance prescription. However, this regulation falls under one of the exceptions found within the *Ryan Haight Act.* Additionally, this regulation does not affect practitioner-patient relationships in cases where an in-person medical evaluation has previously occurred. The purpose of this regulation is to prevent lapses of care by continuing some of the telemedicine flexibilities that currently exist for those patients seeking treatment for opioid use disorder.

DATES: This rule is effective February 18, 2025.

FOR FURTHER INFORMATION CONTACT: Heather E. Achbach, Regulatory Drafting and Policy Support Section, Diversion Control Division, Drug Enforcement Administration; Telephone: (571) 776–3882.

SUPPLEMENTARY INFORMATION:

I. Executive Summary

This final rule falls under the last category of telemedicine under the *Ryan Haight Act,* Public Law 110–425, 122 Stat. 4820 (2008), which authorizes the practice of telemedicine in specified circumstances when no in-person medical evaluation has occurred. The Administrator of the Drug Enforcement Administration (DEA) (pursuant to delegation by the Attorney General) [1] and the Substance Abuse and Mental Health Services Administration (on behalf of the Secretary of Health and Human Services (HHS) jointly issue this regulation and have each determined that this regulation is consistent with effective controls against diversion and with the public health and safety as required under 21 U.S.C. 802(54)(G).

In March 2023, DEA published a notice of proposed rulemaking (NPRM) titled *Expansion of Induction of Buprenorphine via Telemedicine Encounter.*[2] DEA and HHS are now finalizing the rule, with several modifications to the proposed provisions to address concerns brought forth by commenters. Under this final rule, a DEA-registered practitioner, prior to issuing a prescription via telemedicine for a schedule III–V controlled substance approved by the Food and Drug Administration (FDA) for use in the treatment of opioid use disorder (OUD),[3] must review the prescription drug monitoring program (PDMP) data of the state in which the patient is located when the telemedicine encounter occurs, and the pharmacist must verify the identity of the patient [4] prior to filling the prescription. The practitioner is authorized to prescribe up to an initial six-month supply (split amongst several prescriptions totaling six calendar months); additional prescriptions may be issued under other forms of telemedicine as authorized by the Controlled Substances Act (CSA) or after an in-person medical evaluation is conducted.

This final rule pertains to practitioners prescribing controlled substances to patients for the treatment of OUD in circumstances where the prescribing practitioner has not conducted an in-person medical evaluation of the patient prior to the issuance of the prescription. Therefore, it is important to emphasize that the limitations set forth in this final rule, and those associated with the ''practice of telemedicine'' as defined in 21 U.S.C. 802(54) generally, do not apply to practitioner-patient relationships in which there has already been a prior in-person medical evaluation of the patient by the prescribing practitioner.

II. Legal Authority and Background

DEA implements and enforces the Comprehensive Drug Abuse Prevention and Control Act of 1970, often referred to as the CSA, and the Controlled Substances Import and Export Act, (21 U.S.C. 801–971), as amended. DEA publishes the implementing regulations for these statutes in 21 CFR parts 1300 through 1399. These regulations are designed to ensure a sufficient supply of controlled substances for medical, scientific, and other legitimate purposes, and to deter the diversion of controlled substances for illicit purposes.

As mandated by the CSA, DEA establishes and maintains a closed system of control for manufacturing, distribution, and dispensing of controlled substances, and requires any person who manufactures, distributes, dispenses, imports, exports, or conducts research or chemical analysis with controlled substances to register with DEA, unless they meet an exemption, pursuant to 21 U.S.C. 822.[5] The CSA further authorizes the Attorney General (and the Administrator of DEA by delegation through 28 CFR part 0) to promulgate regulations necessary and appropriate to execute the functions of

[1] The Attorney General has delegated this authority to the Administrator of DEA under 28 CFR 0.100.

[2] 88 FR 12890 (Mar. 1, 2023).

[3] Treatment of OUD means the use of effective FDA-approved medications including methadone, buprenorphine, and naltrexone to treat opioid use disorder. See NIDA. 2021, December 2. Overview. *https://nida.nih.gov/publications/research-reports/medications-to-treat-opioid-addiction/overview.* Last accessed on January 8, 2025.

[4] DEA understands there are situations where the patient (for whom the prescription was written) may not be the individual picking up the prescription at the pharmacy. In these situations, DEA defers to the definition of ''ultimate user'' as found in 21 U.S.C. 802(27). As such, this regulation authorizes the pharmacist to verify the identity of the patient by accepting identification from any individual who falls under the definition of ''ultimate user'' prior to filling a prescription.

[5] ''Dispense'' in the context of this rulemaking means to deliver a controlled substance to an ultimate user, which includes the prescribing of a controlled substance. 21 U.S.C 802(10).

subchapter I (Control and Enforcement) and subchapter II (Import and Export) of the CSA.[6]

The Ryan Haight Act

The *Ryan Haight Online Pharmacy Consumer Protection Act of 2008* (*Ryan Haight Act*) amended the CSA, in part, by adding several new provisions to prevent the illegal distribution and dispensing of controlled substances by means of the internet. The *Ryan Haight Act* generally requires that a practitioner conduct an in-person medical evaluation before issuing a prescription to a patient. This requirement is set forth in 21 U.S.C. 829(e), which provides that ''[n]o controlled substance that is a prescription drug as determined under the Federal Food, Drug, and Cosmetic Act may be . . . dispensed by means of the internet without a valid prescription.'' [7] A ''valid prescription'' is defined as ''a prescription that is issued for a legitimate medical purpose in the usual course of professional practice by . . . a practitioner who has conducted at least 1 in-person medical evaluation of the patient.'' [8] Section 829(e) further provides an exception to the in-person medical evaluation when a practitioner is ''engaged in practice of telemedicine.'' [9] The practice of telemedicine is defined as ''the practice of medicine in accordance with applicable Federal and state laws by a practitioner (other than a pharmacist) who is at a location remote from the patient and is communicating with the patient, or health care professional who is treating the patient, using a telecommunications system [10] referred to in section 1395m(m) of Title 42.'' [11]

The *Ryan Haight Act* sets forth seven distinct categories in which a prescribing practitioner may engage in the practice of telemedicine even though no in-person medical evaluation has been conducted.[12] In these circumstances, provided certain safeguards are in place to ensure that the practitioner who is engaged in the practice of telemedicine is able to conduct a *bona fide* medical evaluation of the patient at the remote location, and is otherwise acting in the usual course of professional practice, the *Ryan Haight Act* contemplates that the practitioner will be permitted to prescribe controlled substances via telemedicine encounters despite not having conducted an in-person medical evaluation prior to prescribing. Specifically, the last category provides that a telemedicine encounter may occur between the practitioner and the patient ''under any other circumstances that the Attorney General and the Secretary [of Health and Human Services] have jointly, by regulation, determined to be consistent with effective controls against diversion and otherwise consistent with the public health and safety.'' [13]

As noted above, when practitioners engage in the practice of telemedicine, the practitioner must use ''a telecommunications system referred to in section 1395m(m) of Title 42.'' For purposes of section 1395m(m), the Centers for Medicare and Medicaid Services (CMS) has defined ''interactive telecommunications system'' as multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication between the patient and distant site physician or practitioner. Interactive telecommunications system may also include two-way, real-time audio-only communication technology for any telehealth service furnished to a patient in their home if the distant site physician or practitioner is technically capable of using an interactive telecommunications system as defined in the previous sentence, but the patient is not capable of, or does not consent to, the use of video technology.[14] DEA and HHS are utilizing the aforementioned definition of ''interactive telecommunications system'' within this final rule.

COVID–19 Public Health Emergency

In response to the COVID–19 Public Health Emergency (PHE), as declared by the Secretary of HHS on January 31, 2020, pursuant to the authority under section 319 of the Public Health Service Act (42 U.S.C. 247),[15] DEA granted temporary exceptions to the *Ryan Haight Act* and DEA's implementing regulations under 21 U.S.C. 802(54)(D), one of the seven distinct categories of telemedicine envisioned under the statutory definition of the practice of telemedicine. In order to prevent lapses in care, these exceptions authorized the prescribing of controlled-substance medications via telemedicine encounters even when the prescribing practitioner had not conducted an in-person medical evaluation of the patient. These telemedicine flexibilities authorized practitioners to prescribe schedule II–V controlled substances via audio-video telemedicine encounters, including schedule III–V controlled substances approved by the FDA for the treatment of OUD via audio-only telemedicine encounters. DEA granted the temporary exceptions to the *Ryan Haight Act* and DEA's implementing regulations via two letters published in March 2020:

- A March 25, 2020 ''Dear Registrant'' letter signed by William T. McDermott, DEA's then-Assistant Administrator, Diversion Control Division (the McDermott Letter); [16] and
- A March 31, 2020 ''Dear Registrant'' letter signed by Thomas W. Prevoznik, DEA's then-Deputy Assistant Administrator, Diversion Control Division (the Prevoznik Letter).[17]

Temporary Rules and Telemedicine Listening Sessions

On May 10, 2023 DEA, jointly with HHS (with the Substance Abuse and Mental Health Services Administration (SAMHSA) acting on behalf of HHS), issued a temporary extension (First Temporary Rule) pursuant to 21 U.S.C. 802(54)(G), which extended the full set of telemedicine flexibilities regarding the prescribing of controlled substances that had been in place under the COVID–19 PHE, through November 11, 2023.[18] On September 12 and 13, 2023,

[18] Temporary Extension of COVID–19 Telemedicine Flexibilities for Prescription of Controlled Medications, 88 FR 30037 (May 10, 2023).

DEA hosted live, in-person *Telemedicine Listening Sessions,* to receive additional input concerning the practice of telemedicine, namely, the advisability of permitting telemedicine prescribing of certain controlled substances without any in-person medical evaluation. Approximately 58 stakeholders, including DEA-registered institutional and individual practitioners, pharmacists, trade associations, state agencies, and other public interest groups, presented at the listening sessions. On October 10, 2023, DEA, jointly with HHS, issued a second temporary extension (Second Temporary Rule), also pursuant to 21 U.S.C. 802(54)(G), thereby extending the full set of telemedicine flexibilities regarding prescription of controlled substances as were in place during the COVID–19 PHE through December 31, 2024.[19] This extension authorized all DEA-registered practitioners to prescribe schedule II–V controlled substances via telemedicine through December 31, 2024. On November 19, 2024, DEA, jointly with HHS, issued a third temporary extension (Third Temporary Rule) extending the current telemedicine flexibilities that have been in place since March 2020 through December 31, 2025.[20]

III. The Opioid Overdose Epidemic and Buprenorphine Use in Treating Opioid Use Disorder

One way to assist individuals experiencing acute opioid withdrawal symptoms and seeking treatment for OUD is with the administration of certain narcotic controlled substances. The use of medications approved by the FDA for the treatment of OUD can effectively assist an individual in successfully recovering from opioid dependence. Currently, the only schedule III–V controlled substance narcotic drug approved by the FDA for the treatment of OUD is buprenorphine.[21]

DEA classifies buprenorphine as a schedule III narcotic controlled substance because it has a currently accepted medical use in treatment, and has less potential for misuse than controlled substances in schedules I and II under the CSA.[22] Buprenorphine is a long-acting partial opioid agonist. Its effects last for a longer period of time compared to a short-acting medication.[23] For people who are not used to taking opioids, it can cause effects such as euphoria or respiratory depression, but these effects are weaker, and with less risk, including lower risk of overdose, than those caused by full opioid agonists such as heroin or fentanyl.[24] When buprenorphine is taken as prescribed and at the appropriate dosage, it can significantly diminish cravings, lower physical dependence on other opioids, eliminate withdrawal symptoms, and reduce morbidity and cases of death from overdose.[25] Buprenorphine is an effective medication for treating OUD, especially when used as part of a complete, individualized, treatment plan.

However, because buprenorphine is itself an opioid, it can be misused or abused, and it should be used under the care of a practitioner to decrease the likelihood of diversion. As explained below, this final rule will expand access to OUD treatments by authorizing DEA-registered practitioners with schedule III–V authority the ability to prescribe schedule III–V controlled substances approved by the FDA for the treatment of OUD via audio-only telemedicine encounter, while also mitigating the risks of diversion.

A. The Opioid Overdose Epidemic and Treatments

The estimated number of deaths from opioid overdoses for the 12-month period ending in October 2023 was 79,695, with a peak of 83,985 opioid overdose deaths in the 12-month period ending in May 2023.[26] Although the opioid overdose epidemic has plagued the United States for many decades, overdose deaths have been attributed to ''several distinct waves'' beginning in the late 1990s with expanded opioid analgesic prescribing for pain; another wave following in 2010 involving heroin; and a third wave began in 2013 related to illicit fentanyl, primarily illicitly made fentanyl.[27] The United States is currently experiencing a fourth wave related to rising polysubstance use and co-involvement of fentanyl and stimulant drugs such as methamphetamine.[28]

To combat substance abuse and assist individuals in receiving proper treatment, DEA published regulations in October 1974 to implement the Narcotic Addict Treatment Act of 1974 (NATA), authorizing practitioners to administer and dispense certain narcotic controlled substances, like methadone (schedule II) for detoxification treatment or maintenance treatment as long as the practitioners were separately registered as a narcotic treatment program (NTP or Opioid Treatment Program (OTP) as termed by SAMHSA).[29] The Drug Addiction Treatment Act of 2000 (DATA) further expanded treatment options for OUD by authorizing physicians who met certain qualifications to treat OUD with FDA-approved medications, like buprenorphine, in treatment settings other than NTPs/OTPs.[30] These DEA-registered practitioners became known as ''DATA-waived practitioners.'' Most recently, the Consolidated Appropriations Act, 2023 (CAA, 23) (Pub. L. 117–328) removed the DATA-waiver requirement, expanding practitioner ability to prescribe buprenorphine.[31] Under the CAA, DEA-registered practitioners with the authority to prescribe schedule III controlled substances can prescribe buprenorphine to their patients without needing a DATA waiver or having a limit or cap as to the number of patients they can treat.[32]

B. Barriers To Access and Risk of Diversion of Buprenorphine

Access to buprenorphine decreases the risk of opioid-related overdose.[33] Increasing access to buprenorphine after a drug overdose has also been associated with a reduced risk of death.[34] However, barriers to access remain. One study showed that of those Americans who likely would benefit from treatment for OUD, only 28% actually received such treatment.[35] Another impediment occurs at pharmacies where pharmacists decline to fill buprenorphine prescriptions. For example, during the *Telemedicine Listening Sessions,* one speaker stated that pharmacies have sometimes declined to fill telemedicine prescriptions for buprenorphine, which they may perceive as inferior or suspect solely because the prescription was issued through telemedicine.[36]

Expanding the circumstances under which practitioners are authorized to prescribe buprenorphine via telemedicine encounters, including audio-only encounters, would increase access to treatment for those individuals with OUD who may not want to seek treatment, or are unable to seek treatment, due to various economic, geographical, sociological, and logistical reasons. Many patients may lack the financial means to obtain in-person treatment traditionally or through audio-video telemedicine encounters. Patients who are unhoused, unemployed, or facing other challenges may find it prohibitive to afford devices capable of audio-video telemedicine encounters or to find consistent access to wireless internet and/or data plans adequate to support bandwidth demands of audio-video telemedicine encounters.[37]

This final rule authorizing audio-only telemedicine of buprenorphine in certain circumstances does not imply that buprenorphine cannot be, or is not, diverted. Some presenters spoke to these issues during the *Telemedicine Listening Sessions.* According to one presentation, there is a ''robust illicit market for buprenorphine,'' and patients may be selling buprenorphine to fund abuse of other controlled substances.[38] Another presenter said that drugs that contain Suboxone®, which contains buprenorphine [39] prescribed to treat OUD, can be used as a ''currency'' to purchase other drugs like methamphetamine, adding that, in the individual's community, ''if [abuse or misuse of] methamphetamine is involved, you can pretty much be assured the diversion of buprenorphine is involved.'' [40]

Though, as with all transactions involving controlled substances, there is an inherent risk of diversion, DEA and HHS believe these regulatory provisions have been narrowly tailored to enable DEA and HHS to mitigate the risk of diversion associated with buprenorphine prescriptions issued pursuant to these new regulations. Moreover, considering the efficacy of treating OUD with buprenorphine when taken appropriately and subject to the additional safeguards in this rule, DEA and HHS believe that expanding access to buprenorphine through audio-only telemedicine outweighs the relatively lower risk of misuse and diversion of buprenorphine.

IV. Summary of Notice of Proposed Rulemaking

DEA published an NPRM titled *Expansion of Induction of Buprenorphine via Telemedicine Encounter,* jointly with HHS, on March 1, 2023.[41] Within this NPRM, DEA and HHS proposed adding definitions for ''prescription drug monitoring program'' and ''telemedicine encounter.'' This NPRM proposed to authorize practitioners to prescribe buprenorphine for maintenance treatment and detoxification treatment [42] of OUD via telemedicine encounter, to include an audio-only telemedicine encounter, if all of the following certain conditions were met: (1) the practitioner would have needed to be registered under 21 U.S.C. 823(g), *see* 21 CFR 1301.13(e)(1)(iv), in the state in which the practitioner was located; (2) the practitioner would have needed to be authorized by state law to engage in the practice of telemedicine in both the state where the practitioner is located and the patient is located; (3) the practitioner would have needed to be authorized under 21 CFR 1301.28; and (4) the practitioner would have needed to be technologically capable of conducting a telemedicine encounter by using audio and video equipment. Prior to prescribing, the practitioner would have been required to review and consider the PDMP data of the state in which the patient is located regarding any controlled substance prescriptions issued to the patient in the last year, or if less than one year's worth of PDMP data was available, the entire available period.

The practitioner would have been required to review the PDMP data within seven days of the telemedicine encounter and would then have been authorized to prescribe an initial 30-day supply of schedule III–V buprenorphine-containing medication until a subsequent in-person medical evaluation of the patient had been conducted. Specifically, in order to prescribe more than a 30-day supply, the practitioner would have had three options as to how to conduct that subsequent in-person medical evaluation: (1) an in-person medical evaluation in which the patient would be in the physical presence of the prescribing practitioner; (2) an in-person medical evaluation in which the patient would be in the physical presence of a DEA-registered practitioner (other than the prescribing practitioner) and the two practitioners and patient were participating in a simultaneous real-time audio-video conference (''Telepresenter'' Model); or (3) an in-person medical evaluation would be conducted by a DEA-registered practitioner who then issued a written ''qualifying telemedicine referral'' for the patient to a prescribing practitioner before sharing an electronic medical record for the patient with the prescribing practitioner. Ultimately,

[42] For the purposes of this rule, reference to treatment of OUD via telemedicine encounters refers to all stages of treatment of OUD, including ''maintenance treatment'' and ''detoxification treatment'' as defined under 21 U.S.C. 802(29)–(30).

under any of these three pathways, the patient would have been required to be in the physical presence of a DEA-registered practitioner at some point to receive more than a 30-day supply of medication. Furthermore, additional recordkeeping requirements would have been mandatory if the medical evaluation occurred in the presence of another DEA-registered practitioner or through a qualifying telemedicine referral. For example, the prescribing practitioner would have been required to record whether the encounter was conducted via audio-video or audio-only means and record the reason a patient chose an audio-only telemedicine encounter when applicable. The NPRM also would have required practitioners to maintain copies of all qualifying telemedicine referrals, if the referral pathway had been used to conduct the subsequent in-person medical evaluation. If the practitioner was unable to access the required PDMP data, the practitioner would have been authorized to issue a seven-day buprenorphine prescription and would have been required to record both the dates and times of any attempts to access the PDMP data, as well as why the practitioner was unable to access the PDMP data.

V. Summary of Changes From the NPRM

After reviewing comments received in response to the NPRM, as will be discussed in more detail below, DEA and HHS have amended the requirements for this rulemaking. Most significantly, DEA and HHS have expanded the initial 30-day prescription supply limitation via audio-only telemedicine to a six calendar month supply limitation. In addition, DEA is no longer amending 21 CFR part 1300 relating to definitions and part 1304 relating to records and reports of registrants. Specifically, DEA and HHS are no longer defining the terms ''prescription drug monitoring program'' or ''telemedicine encounter'' that were found in the NPRM. DEA and HHS have also removed the requirement that in order to prescribe more than the initial supply of buprenorphine, an in-person medical evaluation of some sort *must* be conducted. In other words, DEA and HHS have removed the three options through which a subsequent in-person medical evaluation may be conducted and specified instead that continued prescribing may occur pursuant to other forms of the practice of telemedicine as defined in 21 U.S.C. 802(54).

In drafting the NPRM, DEA and HHS sought to ensure that patient access to buprenorphine via telemedicine encounters, including audio-only telemedicine encounters, would still be authorized to continue once the COVID flexibilities ended, but also included additional requirements, not found within the flexibilities, to ensure that effective controls are in place to combat diversion. To this end, DEA and HHS created a framework under which specific types of in-person medical evaluations would have been required to be conducted after the initial 30-day prescription. However, a review of the comments persuaded DEA and HHS that the requirements found within the NPRM would be overly burdensome for the majority of patients, contradicting an important goal of this rulemaking. Therefore, in its place, DEA and HHS have expanded the 30-day supply limitation to an initial six-month prescription supply limitation, after which two options can be used by the practitioner in order to continue prescribing to the patient: (1) conduct an in-person medical evaluation as defined in 21 U.S.C. 829(e)(2)(B); or (2) continue treating the patient via another form of telemedicine as defined in 21 U.S.C. 802(54). Since the supply limitation has been increased and a patient will not necessarily need to be seen in-person by the prescribing practitioner at any point, DEA and HHS have included an identification verification requirement, wherein the pharmacist must verify a patient's identity prior to filling a prescription issued under these regulations.

Additionally, pursuant to this final rule, the practitioner will be required to review the PDMP data of the state in which the patient is located when the telemedicine evaluation occurred, prior to issuing a prescription. The practitioner will also be required to annotate the date and time that the PDMP was reviewed. If the PDMP is unavailable or inaccessible for any reason, the practitioner will be required to notate the date and time that such review was attempted and will be authorized to prescribe renewable seven-day prescriptions until the six-month limitation is reached; attempts must be made to review the PDMP every seven days in this situation. The remaining recordkeeping requirements from the NPRM, including maintaining a record of whether the encounter was conducted via audio-visual or audio-only means, why the patient chose an audio-only telemedicine encounter, and maintaining copies of all qualifying telemedicine referrals, have not been promulgated within the final rule.

Lastly, DEA and HHS invited comments for any additional safeguards or flexibilities that should be considered with respect to the proposed regulatory changes. Based on comments received in response, and as noted above and discussed in more detail below, DEA and HHS are promulgating an additional provision which would require pharmacists to verify the identification of the patient receiving the prescription under this framework prior to dispensing the controlled substance medication.[43]

VI. Discussion of Public Comments Received

DEA and HHS received a total of 2,915 comments in response to the NPRM. Of those comments, 68 were intended for the separately published NPRM titled *Telemedicine Prescribing of Controlled Substances When the Practitioner and the Patient Have Not Had a Prior In-Person Medical Evaluation*[44] and 178 were deemed outside the scope of the proposed rulemaking. As such, those comments will not be discussed further within this rulemaking. DEA and HHS received comments from practitioners, pharmacists, lawyers, professional associations, government entities, Tribal nations and associations, law firms and law school clinics, private companies, medical organizations, hospitals and medical practices, pharmacies, educational institutions, health insurance companies, and other members of the general public. DEA and HHS thank all commenters for their input during the rulemaking process.

All comments have been reviewed. DEA and HHS have grouped the comments into several distinct categories below in order to more easily summarize and respond to the large number of comments received in response to the NPRM. Of the comments received, some comments pertained to only one issue while others involved several issues.

In-Person Medical Examination Requirement

Comment: DEA and HHS received the largest number of comments pertaining to the NPRM's proposed in-person medical evaluation requirement following the initial 30-day supply. Commenters raised several issues and concerns with this requirement. The following is a summary of the comments received. One thousand two hundred and eighty (1,280) commenters expressed concern that the proposed in-person medical evaluation requirement would be costly and/or time-prohibitive to patients. Commenters stated that the

[43] 21 CFR 1306.51(b)(4).

[44] 88 FR 12875 (Mar. 1, 2023).

in-person medical evaluation requirement created obstacles, such as: living in a rural area, work responsibilities or an inability to take leave from work, family and childcare obligations, and transportation issues. Three hundred and fifty-nine (359) commenters stated that the in-person medical evaluation requirement would result in a lack of care or reduced access to care because the in-person medical evaluation requirement would be a barrier to treatment. These commenters stated that patients may drop out of their treatment program and potentially relapse due to the in-person medical evaluation requirement potentially limiting access to buprenorphine via remote care. Two hundred and thirty (230) commenters stated that there still remains stigma within their community regarding OUD treatment and requiring patients to be seen in-person could expose them to harm, ''out them'' to the general public, and/or reduce their ability to keep their treatment private. Two hundred and seventeen (217) commenters expressed concern about a physical or mental hardship or risk potentially limiting their ability to fulfill an in-person medical evaluation requirement; these included mental health conditions such as agoraphobia, physical conditions, other conditions such as autism, and/or wanting to avoid interactions with other patients receiving OUD treatment out of concern that such interactions could increase the likelihood of a relapse. One hundred and twenty one (121) commenters stated that an evaluation conducted in-person is generally the same as one conducted via a virtual appointment and there is no separate benefit in receiving a medical evaluation in-person for purposes of OUD treatment. Sixty nine (69) commenters stated that an in-person medical evaluation requirement would have a disparate impact on or discriminate against certain persons, including those with disabilities, persons of color, American Indians/Alaska Natives, the elderly, and those recently incarcerated.

Sixty seven (67) commenters stated that an in-person medical evaluation would be nearly impossible for them to schedule because of a general practitioner shortage and 44 commenters expressed the same concern because of a buprenorphine practitioner shortage within their geographic area. Fifty three (53) commenters, many of whom identified themselves as practitioners, stated that the decision to conduct or not conduct an in-person examination constitutes a clinical decision that should be left to the practitioner's discretion and therefore, there should be no in-person medical evaluation requirement imposed by regulation. Twenty two (22) commenters stated that in-person medical evaluations are rarely utilized for those receiving OUD treatment. One commenter stated that the *Ryan Haight Act* does not require an in-person medical evaluation, and if an in-person medical evaluation is required under the *Ryan Haight Act,* the in-person medical evaluation can be conducted by the prescribing practitioner or a practice group. Nine hundred and eleven (911) commenters expressed general disapproval of the in-person medical evaluation requirement.

Response: DEA and HHS understand the many hardships an in-person medical evaluation requirement could cause patients and notes the multitude of reasons provided by commenters as to why this requirement would be burdensome to many patients. Therefore, DEA and HHS have expanded the initial prescription supply that may occur pursuant to audio-only telemedicine encounters from 30 days to six months. In addition, DEA and HHS have promulgated this final rule offering two options pursuant to which the prescribing practitioner is authorized to issue additional prescriptions for the treatment of OUD via telemedicine encounters subsequent to this initial six-month supply: (1) the practitioner can conduct an in-person medical evaluation; or (2) the practitioner can engage in other forms of the practice of telemedicine as defined in 21 U.S.C. 802(54). DEA and HHS believe this solution, which will allow subsequent prescribing pursuant to additional telemedicine pathways as DEA (and for rules that must be issued jointly, HHS) promulgate regulations permitting them, likely will further alleviate the various concerns raised by commenters as to the options for continued treatment.

Comment: DEA and HHS received 11 comments agreeing with the inclusion of the in-person medical evaluation requirement. These commenters stated that the requirement is important because in-person medical evaluations prior to buprenorphine induction allow a practitioner to better determine the state of the patient and ensure the patient is not under the influence of any other substances.

Response: DEA and HHS agree that an in-person medical evaluation provides a prescribing practitioner with valuable information about the patient that might not be fully discerned via a telemedicine encounter. The in-person medical evaluation allows a prescribing practitioner to conduct a thorough physical assessment of the patient, more accurately assess the patient's physical and mental health, and provides more accurate treatment options.[45] Additionally, DEA and HHS believe an in-person medical evaluation can serve as an effective control against diversion by allowing the practitioner to better discern whether the medications the patient has been prescribed are working effectively and are being taken appropriately by the patient.[46] However, DEA and HHS understand that not all patients are able to schedule and attend an in-person medical evaluation. As mentioned above, given the unique circumstances of increasing access to potentially life-saving medications for the treatment of OUD during the overdose epidemic, DEA and HHS believe that removing the in-person medical evaluation requirement is appropriate in this situation. Therefore, within this final rule, DEA and HHS have provided the option for the practitioner to conduct an in-person medical evaluation; otherwise, practitioners are able to continue prescribing via other forms of telemedicine authorized under the CSA after the initial six-month prescription.

In-Person Medical Evaluation Requirement Alternatives

Comment: DEA and HHS received 144 total comments regarding the non-traditional methods of fulfilling the in-person medical evaluation requirement,'' *i.e.,* the Telepresenter Model or the qualifying telemedicine referral, listed within the NPRM. Seven comments addressed the Telepresenter Model, *i.e.,* a scenario in which the patient attends an in-person medical evaluation in the physical presence of a DEA-registered practitioner (other than the prescribing practitioner) and the two practitioners and patient participate in a simultaneous real-time audio-video conference; 137 comments addressed the qualifying telemedicine referral model. For the Telepresenter Model, commenters expressed concern that this model also requires a substantial amount of travel (especially if the patient resides in a rural area); that it would be extremely difficult for the patient to try to coordinate the schedules of two practitioners; that these consults would be cumbersome

[45] K. Moulaei et al., *Patients' perspectives and preferences toward telemedicine versus in-person visits: a mixed-methods study on 1226 patients* (Nov. 15, 2023). *https://www.ncbi.nlm.nih.gov/pmc/articles/PMC10647122/#:~:text=The%20primary%20reasons%20for%20selecting,better%20treatment%20of%20the%20disease.* Last accessed Aug. 5, 2024.

[46] *Id.*

and unmanageable; that this model is not common practice in this type of medical care; and that getting an in-person appointment would be difficult especially for those who face stigma within their community for receiving OUD treatment. With regards to the qualifying telemedicine referral, the commenters stated that the referral process would be overly cumbersome and unnecessary; some practitioners may refuse to conduct an in-person medical evaluation for the purpose of issuing a referral; it takes too long to get a referral; some patients don't have medical insurance and requiring an in-person medical evaluation and a referral would not be possible; it is hard to make an in-person appointment with a primary care physician (PCP) as many people don't have PCPs; if a patient needs care from an addiction specialist the patient would need to wait for the referral before beginning treatment; and the referral process would be a barrier and diminish success of the treatment program.

Response: DEA and HHS acknowledge that these non-traditional methods for fulfilling the in-person medical evaluation requirement may not represent feasible options for many patients. As noted above, DEA and HHS have removed both the Telepresenter Model and the qualifying telemedicine referral process from the final rule. DEA and HHS agree that, for many patients, these proposed provisions were not practicable and would create an undue burden on both patients and practitioners. After the initial six-month period, the option to conduct a traditional in-person medical evaluation remains should the practitioner and patient wish to continue treatment in such a manner.

30-Day Prescription Supply Limitation

Comment: DEA and HHS received many comments related to the 30-day time period limitation. The comments asserting that 30 days was too short a time period in which to obtain an in-person medical evaluation are summarized in the above sections relating to in-person medical evaluations. DEA and HHS received a total of 68 comments related specifically to the 30-day prescription supply limitation. Some commenters stated that 30 days was too short a duration for buprenorphine dispensing before an in-person medical evaluation could be obtained, while other commenters generally supported the 30-day supply limitation. The commenters who believed 30 days was not enough time cited to various reasons: 10 commenters believed that the 30-day supply limitation was arbitrary and that it is not the typical length of prescription provided for OUD treatment; three commenters stated that 30 days represents insufficient supply and will interrupt a treatment regimen that has already been established; and one commenter stated the limit should be removed if the patient is clinically indicated for a buprenorphine prescription. 41 commenters stated there should be a prescription limitation but requested that the time period be increased from 30 days. Five commenters stated the supply limitation should be removed and prescriptions should be issued indefinitely; while two commenters stated that the prescribing practitioner should decide how long a prescription should be issued for.

Four commenters expressed support for the 30-day supply limitation and indicated that 30 days was an appropriate time period. One of these commenters (a patient) stated they currently receive a 30-day supply of buprenorphine at a time and had no concerns with that limit. Two commenters indicated a 30-day supply prior to an in-person medical evaluation was too permissive: one commenter stated that after the initial 30-day supply, refills should only occur seven days at a time until an in-person medical evaluation could be obtained; and the other commenter stated that prescriptions should be restricted to three-to-seven days for new patients with documentation that an in-person medical evaluation was not practical with one three-to-seven-day refill prescribed by a fully trained addiction physician. Additionally, some of these commenters asked clarifying questions about whether the 30-day supply limitation was only for a buprenorphine initiation period and not for every 30-day period of buprenorphine treatment, and also requested clarification about how the proposed regulations would have addressed a patient who started with a 30-day supply and then was ''lost to follow-up'' but later re-engaged with treatment.

Response: DEA and HHS acknowledge the commenters' concerns and agree that 30 days is too short of a timeframe to receive an initial buprenorphine prescription before being required to obtain an in-person medical evaluation to receive additional prescriptions. After reviewing the comments and feedback from the various listening sessions, DEA and HHS agree that many patients would have difficulty in scheduling an in-person medical evaluation with a practitioner and/or specialist within a 30-day time period. At the same time however, DEA and HHS believe that prescriptions issued pursuant to audio-only telemedicine should not be issued indefinitely or solely at the discretion of the practitioner, given the increased risks of abuse, misuse, or other forms of diversion posed by audio-only telemedicine without a visual or in-person component. Several commenters suggested 180 days (six months) as a supply limitation before an in-person medical evaluation should be conducted. DEA and HHS agree and believe a six-month supply provides adequate time for a patient to be stabilized on medication via audio-only medical encounter(s) without unduly increasing the risk of diversion. Therefore, the final rule allows for an initial prescription limitation of six calendar months after which time either an in-person medical evaluation must be conducted or the practitioner can continue prescribing via another form of telemedicine. DEA is also clarifying that the six-month (previously 30-day) supply limitation applies when the patient is treated by the same practitioner, regardless of when the six-month prescriptions are issued. For example, if a patient receives a prescription for a one-month supply three times by a practitioner, then stops treatment with that practitioner, the patient can only receive prescriptions for another three months of supply upon resuming treatment with that same practitioner, regardless of the reason treatment was stopped and time period that treatment was paused. Once an in-person medical evaluation has been conducted, the practitioner and patient are no longer engaged in the practice of telemedicine under 21 U.S.C. 802(54) and are thus no longer bound to the requirements found within this rule.

Mandatory PDMP Review

Comment: DEA received 30 comments opposing the mandatory PDMP review prior to issuing a buprenorphine prescription under this framework. These commenters, many of whom identified themselves as practitioners or as part of professional medical associations, stated that PDMP checks do not provide valuable information because they only show prescribed medications, not substances bought on the street illegally; state PDMPs do not all require practitioners to report the same medications (as which medications must be reported is based on state law); telehealth appointments are already limited in duration and valuable time would be spent by the practitioner reviewing the PDMP; DEA should defer to state law as to whether a PDMP check is required; patients

should not be penalized and limited to a seven-day supply if the PDMP is inaccessible or inoperable; practitioners may not have access to a state's PDMP; and the recordkeeping requirement associated with the PDMP review is too burdensome. Conversely, 15 commenters agreed with the PDMP requirement.

Response: DEA and HHS believe it is essential for a practitioner to review the PDMP data for possible drug interactions and to discern whether there is any potential misuse or abuse of prescribed medications within a patient's history. PDMP reviews have been shown to combat the fraudulent prescribing of medications, reduce incidences of multiple overlapping prescriptions for the same controlled medications, known as doctor shopping, aid in the monitoring of controlled substance abuse and misuse, and help reduce drug-poisoning deaths.[47] For these reasons, this final rule requires practitioners to review PDMP data prior to prescribing buprenorphine and restricts prescriptions to seven days at a time when the PDMP cannot be accessed. A review of PDMP laws and regulations of the 50 states, along with the District of Columbia, Guam, Puerto Rico, and the Northern Mariana Islands, shows that at least four states require a review of PDMP data prior to issuing any prescriptions and at least three states require the PDMP to be reviewed prior to issuing any telemedicine prescriptions. Further, 54 states/territories require that buprenorphine prescriptions be reported to a PDMP and 48 states/territories require review of a patient's PDMP data prior to issuing a buprenorphine prescription. Since most states/territories already have PDMP requirements, DEA and HHS believe this requirement poses a minimal administrative burden on practitioners, which are significantly outweighed by the benefits of reviewing this data.

As for recordkeeping requirements, this final rule will require practitioners to review the PDMP data and notate the date and time that such a review took place within the patient's electronic health record (EHR) or paper record. This notation will ensure that the prescribing practitioner has reviewed, or attempted to review, the PDMP prior to a prescription being issued. DEA and HHS understand that many EHR systems already contain this capability as this information is automatically integrated into the patient's record as soon as the data has been reviewed by the prescribing practitioner. If the PDMP data is inaccessible for any reason, the prescribing practitioner will be required to notate the date and time that such review was attempted, indicate why the PDMP was inaccessible, and will be limited to prescribing a seven-day supply. This seven-day supply can be renewed (up to six calendar months) if, every time the prescribing practitioner tries to review the PDMP data, the PDMP system is inoperable. While this is not meant to penalize either the practitioner or the patient, it should be a rare occurrence for a PDMP to be inaccessible for a full six-month time period. DEA and HHS believe the benefits of requiring a practitioner to review the patient's data for signs of abuse or misuse of controlled substances as soon as it becomes available outweigh any potential ''harms'' to the patient should the patient only receive an initial seven-day supply, especially since this seven-day supply can be renewed for up to six months.

Recordkeeping Requirements

Comment: DEA and HHS received 105 comments voicing disapproval and eight comments supporting the recordkeeping requirements found within the NPRM. Specifically, 75 commenters stated the requirements were administratively burdensome, time consuming, and confusing; would cause delays in workflow and patient care; practitioners should not need to record why audio-only telemedicine was chosen; the NPI and registration number of practitioners should not be required to be recorded; and practitioners were uncomfortable recording their home or physical address.

Twenty four (24) comments pertained to the requirement that the practitioner maintain a record that the encounter was conducted via audio-visual or audio-only means. Commenters indicated that this requirement would exacerbate the already common occurrence of pharmacies refusing to fill telemedicine prescriptions; there would be no clinical value; and it would create confusion. Six commenters asked for a 12-month grace period in order to update EHR systems to comply with the requirements.

Response: DEA and HHS agree with the commenters who raised concern with the stated recordkeeping requirements and does not believe the requirements would fulfill their intended purpose. The majority of the recordkeeping requirements detailed within the NPRM therefore have been removed and the final rule contains only one recordkeeping requirement that pertains to the PDMP review (explained in the previous comment response). DEA and HHS believe the other safeguards found within this final rule will help to prevent diversion without being overly burdensome for either patients or practitioners. The prescribing practitioner will need to notate the date and time the PDMP review was conducted or, if such review could not be completed, the date and time the PDMP review was attempted and why the review could not be completed. As many EHR systems already have this functionality integrated within their systems, DEA and HHS do not believe additional time needs to be allocated in order to update systems or bring them into compliance with this requirement.

Diversion of Buprenorphine

Comment: DEA and HHS received 791 comments regarding diversion of buprenorphine. Five hundred and twenty (520) commenters stated that the proposed rule would result in an increase of drug poisonings or overdoses due to patients having limited access to or losing access to their current buprenorphine treatment. One hundred and thirty five (135) commenters stated that there is no evidence to show that telemedicine care leads to higher diversion of buprenorphine than in-person care and cited to studies concluding that the COVID–19 PHE flexibilities did not lead to higher diversion or misuse of buprenorphine. The remainder of the comments stated that if legitimate prescriptions were easier to obtain there would be less diversion; if buprenorphine is diverted, then it is diverted for therapeutic purposes or to mitigate withdrawal; the buprenorphine combination product with naloxone (Suboxone®) actually deters diversion and is harder to overdose on when misused because of its chemical makeup; and increasing access to buprenorphine should outweigh any potential harm from diversion. Twelve (12) commenters voiced approval for the rule and stated that diversion and overdoses of buprenorphine are of real concern and there is further cause for concern because for-profit telehealth companies or ''virtual pill mills'' have been expanding their buprenorphine business, which could lead to more diversion of the medication.

Response: DEA and HHS understand that the COVID–19 PHE flexibilities have allowed for greater access to buprenorphine and it is DEA and HHS's

[47] F. Alogaili et al., *Prescription drug monitoring programs in the US: A systematic literature review on its strengths and weakness,* Journal of Infection and Public Health (Sept. 30, 2020). *https://www.sciencedirect.com/science/article/pii/S1876034120305657?via%3Dihub.* Last accessed Aug. 5, 2024.

intention to continue expanding access to buprenorphine via telemedicine for patients who have a legitimate need for treatment as the flexibilities come to an end. DEA and HHS have relaxed many of the requirements found within the NPRM, in response to concerns raised by commenters that patients may have limited access or lose access to treatment otherwise.

However, DEA has a mandate and commitment to detect and prevent the diversion of controlled substances, regardless of the reason for diversion, so DEA and HHS must nevertheless place certain safeguards on the telemedicine prescribing of buprenorphine. DEA and HHS note that several commenters expressed concern over buprenorphine diversion and the growth of ''virtual pill mill'' companies during the time the COVID–19 PHE flexibilities have been in place. Determining the reasons for diversion of buprenorphine in any particular case may prove difficult to discern, and a patient may divert buprenorphine for both claimed therapeutic and non-therapeutic purposes. Specifically, and as noted above, buprenorphine constitutes an effective treatment for OUD, but it can also create euphoric feelings similar in kind—even if not in intensity—to other opioid agonists. For these reasons, it is possible that some diverted buprenorphine might be used for reasons other than therapeutic purposes or mitigation of withdrawal. As the practice of telemedicine facilitates wider access to buprenorphine, DEA must ensure certain safeguards remain in place to deter potential diversion—whether for claimed therapeutic or non-therapeutic uses.

DEA and HHS have promulgated this final rule taking into consideration the many concerns raised by the thousands of comments received in response to the NPRM. DEA and HHS have amended the requirements from the NPRM to the final rule in large part in response to the comments and concerns expressed by the public, and the data they have provided. The safeguards that are found within the final rule will continue to expand access to OUD treatment by allowing for buprenorphine treatment via audio-only encounters and will allow patients and practitioners to continue using telemedicine as a means of receiving treatment. The telemedicine flexibilities established during the COVID–19 PHE were intended to be temporary flexibilities during a time when in-person care was not universally routinely and safely available. The COVID–19 PHE flexibilities should not continue indefinitely at a time when receiving in-person care no longer poses a significant risk to public health and safety. This final rule acknowledges that telemedicine encounters are more flexible and convenient to many patients but also acknowledges that safeguards need to be in place to prevent misuse and abuse of controlled substances, especially during a time when an increasing number of for-profit telehealth companies continue to grow their practices without any permanent regulatory requirements or safeguards.

Additional Safeguards Requested by Commenters

Comment: DEA and HHS received 41 comments requesting additional regulatory safeguards be put in place on top of the requirements already laid out in the NPRM. Commenters suggested requiring urine drug screens or blood tests, monthly pill counts, testing for alcohol use, psychological and physical monitoring, psychosocial support, and/or follow-up in-person medical evaluations every three months for the first year of treatment. Some commenters were in favor of buprenorphine prescribing via telehealth only if an in-person medical evaluation and drug screen were required while others believed that even with an in-person medical evaluation and drug screen, buprenorphine should not be prescribed via telehealth encounter.

Response: DEA and HHS acknowledge these concerns. As noted above the detection and prevention of diversion of buprenorphine is a significant priority of this rulemaking. At the same time, DEA and HHS understand that the addition of too many regulatory requirements may cause some patients to abandon their current OUD treatment or to decline to enter treatment in the first place. Within this rulemaking, DEA and HHS are attempting to continue to expand treatment options for OUD and make permanent some of the flexibilities permitted during the COVID–19 PHE. DEA and HHS are confident that the safeguards in place within this final rule will help alleviate diversion concerns while also allowing for patients to seek and obtain safe treatment for OUD.

Additionally, as noted above, practitioners who have conducted an in-person medical evaluation of a patient are not required to adhere to the telemedicine requirements established by the *Ryan-Haight Act* when prescribing a controlled substance to that patient. More generally, those practitioner-patient relationships no longer constitute telemedicine as defined by the *Ryan Haight Act* and are outside the scope of this rulemaking.

DEA 823(g) Registration of Practitioners

Comment: DEA and HHS received 18 comments regarding DEA registrations under 21 U.S.C. 823(g). Three commenters stated that a practitioner should only need one DEA registration and be legally authorized to practice telemedicine in the state in which the patient is located. Six commenters stated that the practitioner should only need to be DEA-registered and fully licensed in the state in which the patient is located. Two commenters stated that a practitioner should be able to prescribe controlled substances via telemedicine as long as they are licensed to practice medicine in the state the patient is located and that, furthermore, the practitioner should not also need a DEA registration for the state the patient is located in. Four commenters stated it was unclear if the NPRM was requiring that a practitioner needs a DEA registration in both the state in which the practitioner is located and state in which the patient is located. One commenter agreed generally with the NPRM and stated that telemedicine companies should be required to have a DEA registration in every state they want to prescribe. Two commenters requested an exception for separate DEA registrations for practitioners that have medical licensing reciprocity requirements.

Response: DEA and HHS understand some confusion may have arisen from the NPRM regarding registration. As DEA has made clear elsewhere, under current statutes and regulations, practitioners are required, unless subject to an exception, to obtain a DEA registration both in the state in which the practitioner dispenses controlled substances and in the state in which the patient is located.[48]

[48] The CSA requires all practitioners to be registered in the state in which the patients to which they are prescribing controlled substances are located, regardless of whether the prescribing is taking place via telemedicine. The CSA provides that every person who dispenses, or who proposes to dispense, any controlled substance shall obtain from DEA a registration issued in accordance with DEA rules and regulations. *See* 21 U.S.C. 822(a)(2). Under the CSA, such dispensing includes prescribing and administering controlled substances. *Id.* 802(10). DEA may only register a person to dispense a controlled substance if that person is permitted to do so by the jurisdiction in which his or her patients are located. *See id.* 802(21), 823(f). Thus, unless an applicable exception applies, DEA regulations require a practitioner to obtain a separate DEA registration in each state in which a patient to whom he or she prescribes a controlled substance is located when the prescription is made, regardless of whether the prescription is made via telemedicine. The CSA also contains provisions (added by the Ryan Haight Act) expressly requiring a practitioner to be registered in the state in which the patient to whom he is prescribing is located when he or she is

Definitions

Comment: DEA and HHS received 14 comments relating to definitions found within the NPRM. Seven commenters requested a definition of ''mental health disorders'' be included in the rule; two commenters requested removal of the ''prognosis'' of OUD requirement as it relates to the qualifying telemedicine referral; two commenters requested a definition for ''telemedicine prescription''; two commenters requested amending the definition of ''patient's location''; and one commenter stated that DEA should not rely on the CMS definition of ''interactive telecommunications system.''

Response: DEA and HHS have greatly simplified the final rule, which includes omitting any changes to current definitions within the Code of Federal Regulations. Additionally, as certain requirements from the NPRM have been removed, such as the qualifying telemedicine referral and the need for a notation on the telemedicine prescription, there is no need to provide definitions for those terms. DEA and HHS do not believe a definition for ''mental health disorders'' is needed as that question falls outside the scope of this rule. Furthermore, HHS regulations define the terms ''drug abuse'' and ''drug addiction'' in 42 CFR 34.2(h) and (i) as ''current substance use disorder or substance-induced disorder, mild'' and ''current substance use disorder or substance-induced disorder, moderate to severe'', respectively, using the most recent edition of the Diagnostic and Statistical Manual for Mental Disorders. This rule authorizes the treatment of OUD through audio-only means solely to treat substance use disorders under this definition. The final rule also does not enact any regulations that explicitly require the ''patient's location'' to be disclosed, so no definition is needed. While DEA and HHS anticipate that many of these audio-only encounters will occur in a private setting, such as a patient's home, this rule is not placing any additional regulations or requirements upon the practitioner or the patient to verify the patient's location. DEA and HHS will continue to rely on the CMS definition of ''interactive telecommunications system'' within this rule, as the current definition of the term ''practice of telemedicine'' uses the CMS definition.[49]

Rule's Applicability to Pharmacists

Comment: DEA and HHS received seven comments related to the rule's applicability to pharmacists. Four commenters requested clarification as to whether DEA-registered pharmacists who are granted controlled substance prescriptive authority within their state would be allowed to prescribe and dispense medications under this rule, and whether they could conduct the in-person medical evaluation (or serve as the referring provider) under the framework proposed in the NPRM. Additionally, three commenters were concerned that the rulemaking would require pharmacists to ''police'' the practice of telemedicine, placing an undue burden on pharmacists and overwhelming pharmacy operations. These commenters expressed concern and sought clarity as to if, and how, a pharmacist would be required to verify that the in-person medical evaluation requirement had been fulfilled; how a pharmacist would discern which prescriptions are telemedicine prescriptions absent an indicator on the face of the prescription denoting it as such; and how a pharmacist would access or receive this information without violating the Health Insurance Portability and Accountability Act (HIPAA) and other patient privacy laws.

Response: DEA and HHS understand the important role pharmacists play when they fill controlled substance prescriptions and appreciates the legitimate concerns raised by these comments. DEA and HHS are aware there still remains stigma associated with OUD treatment and has decided not to require a notation on the face of the prescription denoting that the prescription is one issued via telemedicine. DEA and HHS understand this may place more responsibility on a pharmacist and urges pharmacists to treat all buprenorphine prescriptions equally, while continuing to fulfill their longstanding corresponding responsibilities, without attempting to discern whether the prescription was issued via a telemedicine encounter. Pharmacists will not be required to access a patient's record to figure out whether the in-person medical evaluation has been conducted or whether an evaluation was completed via telemedicine. This rule is not intended to place pharmacists in the role of ''policing'' the practice of telemedicine, but rather reflects that pharmacists play an integral role in helping to prevent drug misuse. As set forth in 21 CFR 1306.04(a), ''The responsibility for the proper prescribing and dispensing of controlled substances is upon the prescribing practitioner, but a corresponding responsibility rests with the pharmacist who fills the prescription.'' Therefore, the pharmacist will be required to verify the identity of the patient prior to filling a prescription. As explained in further detail below, many states already have placed on pharmacists an identification verification requirement for many controlled substances, including buprenorphine, as a matter of state law, and DEA and HHS believe placing an identity verification responsibility on pharmacists as a matter of Federal law generally should not represent an additional burden in the vast majority of cases.

Effective Date

Comment: DEA and HHS received 43 comments solely concerned with the potential effective date of the final rule. Twenty (20) comments requested that the COVID–19 PHE flexibilities continue indefinitely for the duration of the ongoing opioid epidemic PHE; 19 commenters requested that the COVID flexibilities continue for six months after publication of the final rule, until the end of calendar year 2023, or until the end of calendar year 2024; and five commenters requested that the COVID flexibilities continue until the final rule is published.

Response: The NPRM for this final rule was published on March 1, 2023, and at the time the NPRM was published, the COVID–19 PHE flexibilities were set to expire on May 11, 2023. The COVID–19 PHE flexibilities have since been temporarily extended until December 31, 2025, while DEA and, for rules that must be issued jointly, HHS have worked on other rulemakings. Once published, this final rule will be effective February 18, 2025. DEA and HHS believe this effective date, in concert with the latest extension of the telemedicine flexibilities, satisfies the concerns of those who commented on this issue.

Executive Order 12866—60 Day Comment Period

Comment: DEA and HHS received nine comments stating that the 30-day comment period found within the NPRM violated Executive Order (E.O.) 12866, which allegedly requires a 60-day comment period.

Response: The language contained within E.O. 12866 states ''each agency should afford the public a meaningful opportunity to comment on any

engaged in certain forms of telemedicine. Under the CSA, a prescription for a controlled substance issued by means of the internet must generally be predicated on an in-person medical evaluation. *See id.* 829(e)(1). This requirement does not apply, however, when a practitioner is practicing telemedicine as defined by the CSA.

[49] *See* 21 U.S.C. 802(54).

proposed regulation, which in most cases *should* include a comment period of not less than 60 days.'' [50] Since the 60-day comment period is not a requirement and because, at the time of publication of the NPRM, the COVID–19 PHE telemedicine flexibilities were set to expire on May 11, 2023, DEA chose to use a 30-day comment period to ensure all comments were received and to allow adequate time to publish a final rule.

Indian Tribes and Tribal Organizations

Comment: DEA and HHS received two comments regarding the effect of this rulemaking on American Indian and Alaska Native (AI/AN) Tribes and Tribal organizations. One commenter requested an exemption from registration for all Indian Health Service (IHS) and Tribal health system and Indian Health Care providers.

Both commenters indicated that consultation and coordination with Indian Tribes and Tribal organizations is required under Executive Order 13175 and requested that DEA meaningfully consult with Tribal officials prior to promulgating the final rule.

Response: DEA and HHS thank these commenters for voicing their concerns. DEA held *Telemedicine Listening Sessions* on September 12 and 13, 2023, and held Tribal Consultations with various Tribal governments and organizations on June 13 and 27, 2024. DEA and HHS have taken the opinions and concerns raised during both the listening sessions and consultations into account when promulgating this final rule. As such, DEA and HHS believe the requirements of Executive Order 13175 have been satisfied.

Other Comments

Comment: One commenter asked for clarification on how patients in various stages of buprenorphine treatment would be impacted by the rule, given the rule's focus on ''induction'' of buprenorphine. The commenter stated that there are various stages of buprenorphine treatment, including: (1) patients being prescribed buprenorphine to initiate therapy (general understanding of ''induction''); (2) patients being re-established on buprenorphine treatment when previously prescribed the controlled substance medication; and (3) patients being moved from the ''induction'' phase to maintenance phase. The commenter sought clarification as to whether DEA intended to include all these stages under the proposed rule, and if not, the commenter asked that the rule allow buprenorphine at all stages of treatment.

Response: Both the NPRM and this final rule are published with the intent of authorizing buprenorphine treatment via telemedicine. This final rule allows for any patient, beginning on February 18, 2025, to either begin treatment for OUD or continue treatment for OUD (*i.e.,* all ''stages'' of treatment) via audio-only telemedicine encounter if the requirements of 42 CFR 410.78(a)(3) are met. Beginning on this date, when a practitioner provides the patient with a prescription or prescription refill for buprenorphine as medication for OUD via telemedicine, the practitioner must review the PDMP prior to issuing the prescription. And the pharmacist, prior to filling the prescription, must verify the identity of the patient.

Once the initial six-month supply has been prescribed, the practitioner and patient can choose to continue treatment either once an in-person medical evaluation has been conducted or through other forms of telemedicine pursuant to 21 U.S.C. 802(54). In other words, a patient has six months from the date a prescription (or prescription refill) has been issued pursuant to this final rule to either obtain an in-person medical evaluation or continue with another form of telemedicine.

Comment: DEA and HHS received one comment stating DEA lacks the legal authority to limit telemedicine prescriptions to the FDA-approved indications contained in a medication's FDA-approved labeling. This commenter argued that DEA would effectively be attempting to define general standards of accepted medical practice, a power which is usually reserved for states.

Response: DEA and HHS, jointly, have the legal authority to promulgate regulations regarding the practice of telemedicine that are consistent with the public health and safety.[51] DEA reiterates that practitioners who are otherwise authorized under state and Federal law (including under the *Ryan Haight Act*) might prescribe buprenorphine for indications other than for treatment of OUD. This final rule only applies to circumstances where the prescribing practitioner has not conducted an in-person medical evaluation of the patient and is otherwise unable to prescribe buprenorphine while engaged in the practice of telemedicine under 21 U.S.C. 802(54) but for the authority provided in this final rule.

Comment: One commenter stated that DEA should hold an annual review of the efficacy and burden of the in-person medical evaluation requirement and this review should be published in the **Federal Register**.

Response: DEA appreciates this comment and will take this recommendation under consideration and advisement; however, no definitive response can be provided on this issue at this time.

VII. Provisions of the Final Rule

Under this final rule, a DEA-registered practitioner may prescribe buprenorphine via audio-only or audio-video telemedicine encounter as defined by 42 CFR 410.78(a)(3). After a practitioner reviews the PDMP data for the state in which the patient is located and annotates in the patient's EHR that such a review was conducted, the practitioner may prescribe an initial six-month supply of buprenorphine. DEA and HHS expect that the practitioner will not issue the six-month prescription at one time but will rather issue prescriptions as medically appropriate. Following the initial six-month supply, practitioners may prescribe buprenorphine only by other forms of telemedicine or practices authorized by the CSA, or after conducting an in-person medical examination. Additionally, prior to dispensing under this framework, the pharmacist will need to verify the identity of the patient [52] with either a state or Federal Government-issued photographic identification card or other form of identification.

A. Prescription Drug Monitoring Program Check by Prescribing Practitioner

The regulation at 21 CFR 1306.51(b)(1), found within this final rule, provides that the prescribing practitioner must review the PDMP data of the state in which the patient is located. The prescribing practitioner will then need to ensure that the date and time of the PDMP review is annotated in the patient's EHR or paper record. If, for any reason, the PDMP is unavailable or inaccessible and the

[50] Executive Order 12866, Regulatory Planning and Review, 58 FR 51735 (Oct. 4, 1993) (emphasis added).

[51] *See* 21 U.S.C. 821, 21 U.S.C. 871, and 21 U.S.C. 802(54)(G).

[52] As noted previously, DEA understands there are situations where the patient (for whom the prescription was written) may not be the individual picking up the prescription at the pharmacy. In these situations, DEA defers to the definition of ''ultimate user'' as found in 21 U.S.C. 802(27). As such, this regulation authorizes the pharmacist to verify the identity of the patient by accepting identification from any individual who falls under the definition of ''ultimate user'' prior to filling a prescription.

practitioner is unable to review the PDMP data for the patient, the prescribing practitioner should annotate in the patient's EHR the reason such a review was unable to be completed.

1. If PDMP Data Can Be Reviewed

Prior to prescribing buprenorphine to the patient, the practitioner will be required to review the PDMP data of the state in which the patient is located and ensure that the date and time of such review is annotated in the patient's EHR or paper record. The prescribing practitioner will be required to review the PDMP data for the last year, or if less than one year's worth of data is available, for the entire period. The inclusion of this requirement prior to prescribing is to ensure that the practitioner has the information needed in order to make the clinical decision of whether or not to prescribe buprenorphine to a patient under this framework. Inherent in the telemedicine context, and especially through audio-only means, there may be situations where it is difficult for a practitioner to ascertain if a patient is being truthful about their medical history and prior usage of controlled substances. The requirement of a mandatory PDMP review can furnish the prescribing practitioner with valuable information regarding a patient's controlled substance prescription history, and by using their own clinical judgment, the practitioner can make an informed decision.

Regarding the date and time requirement, DEA and HHS understand that many EHR systems already integrate state PDMP data into their systems. For these systems, a date and time stamp recording when a prescribing practitioner reviews PDMP data should be automatically integrated into the patient's EHR. For other EHR systems where only the date of PDMP access is integrated into the patient's EHR or no integrations exist at all, the prescribing practitioner will be required to manually input the date and time the PDMP review was conducted prior to closing or signing off on a patient's chart. DEA and HHS understand this may be burdensome to practitioners but DEA and HHS are confident that as technology changes, many EHR systems will likely update their platforms to enable automatic integration.

2. If PDMP Data Cannot Be Reviewed

The regulation at 21 CFR 1306.51(b)(3) provides that if, for any reason, the PDMP data cannot be reviewed for a patient, the prescribing practitioner should ensure that the reason for this is noted in the patient's EHR or paper record. For example, if a state PDMP is inaccessible or unavailable due to technological issues, the prescribing practitioner should note the date and time that an attempt to view such data was made. In these situations, when PDMP data cannot be reviewed, a practitioner would only be permitted to prescribe an initial seven-day supply of buprenorphine. The practitioner may not prescribe an additional supply without again checking the PDMP data for that patient. However, the practitioner would be authorized to issue additional limited seven-day supply prescriptions (up until the six-calendar month limitation is reached) if the PDMP remained unavailable or inaccessible, as long as each time a review is attempted, the date and time of each attempt is annotated in the patient's EHR or paper record.

B. Time Limitation of Buprenorphine Prescriptions

The regulation at 21 CFR 1306.51(b)(2) provides that buprenorphine prescriptions issued pursuant to audio-visual or audio-only telemedicine encounters are limited to a period ending no later than six calendar months after the date of the first prescription. This six-month supply must be split across multiple prescriptions or refills as the practitioner deems medically appropriate. Subsequent prescriptions may be issued once the practitioner has met with the patient for a follow-up evaluation either through any other form of telemedicine as defined in 21 U.S.C. 802(54) or through an in-person examination of the patient by the prescribing practitioner. Additionally, this requirement would comport with the current regulations found in 21 CFR 1306.22(a) regarding refilling of prescriptions for controlled substances listed in schedule III or IV.

1. Other Authorized Forms of Telemedicine or Practices Established by Regulation

After an initial six-month prescription of buprenorphine via audio-visual or audio-only means, additional prescriptions may be written pursuant to any other form of telemedicine as defined in 21 U.S.C. 802(54). This includes the regulations found within any final rule that may be issued setting forth a special registration framework. In the event DEA issues future regulations setting forth practices DEA determines to be consistent with effective controls against diversion, pursuant to 21 U.S.C. 829(e)(3)(B), additional prescriptions would also be permitted to be issued pursuant to those practices.[53]

2. In-Person Medical Evaluation

Practitioners who conduct an in-person medical evaluation of a patient subsequent to the initial six-month supply restriction would, from that point on, no longer be required to adhere to the telemedicine requirements established by the *Ryan-Haight Act* for that patient. As explained above, this rulemaking contemplates situations only wherein the prescribing practitioner has never conducted an in-person examination. Once an in-person examination has been conducted by the prescribing practitioner, the duties and obligations found within this final rule no longer apply.

C. ID Requirement for Pharmacists

Under new 21 CFR 1306.51(b)(4), prior to filling a prescription that was issued pursuant to the authorities created by this final rule, the pharmacist will be required to verify that, as a general matter, the identity of the individual picking up the prescription at the pharmacy matches the name of the patient listed on the prescription itself.[54] Before the pharmacist can fill a prescription issued pursuant to the regulations found in this final rule, they must inspect the patient's state or Federal Government-issued photographic identification card, or in the absence of such identification, any other form of documentation showing that the patient is the same person as the patient listed on the prescription. The form of identification presented need not contain the patient's address. Such forms of identification include, but are not limited to: state issued driver's licenses and identification cards; U.S. passport; U.S. military card or military dependent's identification card; Native American tribal documents; paycheck; bank or credit card statement; utility bill; tax bill; or voter registration card. For minors under the age of 18, unhoused persons, and those without photographic identification, examples of other permissible forms of identification include: school transcripts; school

[53] No such practices have yet been determined by future DEA regulation to be consistent with effective controls against diversion.

[54] As noted previously, DEA understands there are situations where the patient (for whom the prescription was written) may not be the individual picking up the prescription at the pharmacy. In these situations, DEA defers to the definition of ''ultimate user'' as found in 21 U.S.C. 802(27). As such, this regulation authorizes the pharmacist to verify the identity of the patient by accepting identification from any individual who falls under the definition of an ''ultimate user'' prior to filling a prescription.

report cards; or a letter from a homeless shelter employee or a letter from a Tribal government official or other Tribal leader verifying the identity of the patient. As indicated, the acceptable forms of identification provided as examples within this final rule are not intended to be an exhaustive list.

As mentioned above, even absent the ID provision, DEA and HHS believe that the requirements as proposed in the NPRM and modified as a result of public comment and promulgated herein would be sufficient to mitigate and provide effective controls against diversion under this framework. As a result of the *Telemedicine Listening Sessions,* DEA's survey of state law, input received from public comments, and DEA's collaboration with HHS, DEA and HHS are promulgating 21 CFR 1306.51(b)(4) as an additional layer of protection against diversion. In sum, verifying the identity of the patient prior to dispensing is intended to ensure that the individual who is receiving the controlled substance medication from the pharmacist is the same individual for whom the prescription was issued.

During the *Telemedicine Listening Sessions,* seven presenters spoke on the importance of verifying a patient's identification prior to dispensing a controlled substance. Many of these presenters, who are practitioners themselves, indicated they already require a valid form of identification during a telemedicine encounter and require patients to provide proof of identification prior to prescribing. The practitioners subsequently keep a record of that identification. These presenters emphasized this policy helps to prevent illegal access to and misuse of medication. Since DEA and HHS believe that many prescribers already require proof of identification during the telemedicine encounter itself and since practitioners will be required to review PDMP data, DEA and HHS have promulgated this identification verification requirement for the pharmacist to provide an extra layer of protection against diversion by ensuring the prescription is being dispensed to the patient for whom the prescription was issued.

DEA and HHS further believe this requirement is a codification of widely employed current practice, as many state laws currently require pharmacists to verify the identity of the patient prior to dispensing. DEA conducted a review of the laws and regulations of all 50 states along with the District of Columbia and found that there are currently 43 states that have an identification requirement placed on pharmacists prior to filling a prescription. The situations in which identification verification is required varies: some states require verification outright, some states indicate that the pharmacist ''may'' verify identification, and some states only require verification if the patient is ''unknown'' to the pharmacist. Additionally, states vary as to what medications require verification: some states only require it for schedule II controlled substances, some for controlled substances found within schedules II–V, and some for ephedrine or pseudoephedrine products or precursors. Since several states already impose identification verification requirements on pharmacists, DEA and HHS do not believe imposing this requirement on buprenorphine prescriptions will create an undue burden on pharmacists. Additionally, as DEA and HHS are not requiring government-issued photo identification, DEA and HHS believe providing the pharmacist with any documentation that sufficiently verifies identity will not be a burden on patients. Even though some states do not have statutes which mirror this new provision, DEA and HHS believe this provision largely codifies existing practice and assists in mitigating the risk of diversion.

DEA and HHS have thus chosen to include this requirement in the context of schedule III–V prescriptions for the treatment of OUD issued pursuant to this final rule, which permits prescriptions based on audio-only telemedicine encounters, in order to assist in reducing the risk of unauthorized individuals diverting buprenorphine for illicit purposes. DEA and HHS believe this additional layer of protection will help curtail any potential diversion. This identification requirement will help ensure that the patient using the buprenorphine prescription picked up at the pharmacy is the same patient that received the buprenorphine prescription from the audio-only telemedicine encounter.[55]

Should the identification requirements described in 21 CFR 1306.51(b)(4), or 42 CFR 12.3(b)(4), be held to be invalid or unenforceable as applied to any person or circumstance, or stayed pending agency action, it shall be construed so as to continue to give the maximum effect to the provision permitted by law, including as applied to persons not similarly situated or to dissimilar circumstances, unless such holding is that the identification requirements described in 21 CFR 1306.51(b)(4), or 42 CFR 12.3(b)(4), are invalid and unenforceable in all circumstances, in which event 21 CFR 1306.51(b)(4) and 42 CFR 12.3(b)(4), shall be severable from the remainder of 21 CFR 1306.51(b) and 42 CFR 12.3(b).

D. Scope-Clarifying Provisions

The three remaining provisions of 21 CFR 1306.51 serve to clarify the scope of the final rule. The regulation at 21 CFR 1306.51(b)(5) provides that this final rule only applies to prescriptions issued for the treatment of OUD, even if the schedule III–V controlled substance approved by the FDA for use in the treatment of OUD also has other medical uses; for example, there are drugs containing buprenorphine that have been approved by the FDA to treat acute moderate-to-severe pain.[56] Though buprenorphine-containing drugs have other FDA-approved uses, the intention of this paragraph, and this final rule writ large, is to increase patient access to buprenorphine for the treatment of OUD. The regulation at 21 CFR 1306.51(b)(6) makes explicit that this final rule only applies to practitioners who are already registered, or otherwise exempt from registration, to dispense buprenorphine.

Finally, 21 CFR 1306.51(b)(7) provides that prescriptions issued pursuant to this final rule must otherwise comply with relevant DEA regulations. For example, a prescription issued under this final rule must be dated and signed and must include the patient's name and address, the name, strength, dosage, form and quantity of the drug, directions for use, and the practitioner's name, address, and DEA registration number of the practitioner.[57]

VIII. Regulatory Analyses

Executive Orders 12866, 13563, and 14094 (Regulatory Review)

DEA and HHS have determined that this rulemaking is a ''significant regulatory action'' under section 3(f) of Executive Order 12866, Regulatory Planning and Review, but it is not a section 3(f)(1) significant action. Accordingly, this final rule has been

[55] As noted previously, DEA understands there are situations where the patient (for whom the prescription was written) may not be the individual picking up the prescription at the pharmacy. In these situations, DEA defers to the definition of ''ultimate user'' as found in 21 U.S.C. 802(27). As such, this regulation authorizes the pharmacist to verify the identity of the patient by accepting identification from any individual who falls under the definition of an ''ultimate user'' prior to filling a prescription.

[57] 21 CFR. 1306.05(a).

submitted to the Office of Management and Budget (OMB) for review. This final rule has been drafted and reviewed in accordance with Executive Order 12866, ''Regulatory Planning and Review,'' section 1(b), Principles of Regulation; Executive Order 13563, ''Improving Regulation and Regulatory Review,'' section 1(b), General Principles of Regulation; and Executive Order 14094, ''Modernizing Regulatory Review.''

DEA and HHS are amending their regulations to expand the circumstances under which DEA-registered practitioners are authorized to prescribe schedule III–V controlled substances approved by the FDA for the treatment of OUD via a telemedicine encounter, including an audio-only telemedicine encounter. Under these new regulations, after a prescribing practitioner reviews the patient's state PDMP data, the practitioner can prescribe an initial six-month prescription (split amongst several prescriptions totaling six calendar months) of such medications through audio-only means. This final rule does not affect practitioner-patient relationships in cases where an in-person medical evaluation has previously occurred.

Number of Telemedicine Encounters, Providers, and Patients

The number of telemedicine encounters, including audio-only telemedicine, leading to buprenorphine prescriptions under the temporary guidance during the COVID–19 PHE forms the basis for estimating the number of audio-only telemedicine encounters pursuant to this final rule.

Based on CMS claims data provided by the Department of Health & Human Services Office of Inspector General (HHS OIG), from March 2020, the start of the COVID–19 health emergency shutdowns, to December 2021, 24,285 Medicare fee-for-service and managed care telemedicine services were identified as being linked to buprenorphine Part D prescription fills.[58] These telemedicine services were rendered by 7,733 providers to 15,521 patients.[59] Of the 24,285 matching telemedicine services, 3,083 were billed with audio-only procedure codes, rendered by 1,806 providers to 2,548 patients.[60]

Based on the CMS data, the telemedicine services and associated buprenorphine prescriptions identified spiked at the beginning of the COVID–19 PHE and stayed relatively steady in 2021. Therefore, 2021 data is used to estimate the number of telemedicine encounters for this analysis.

In 2021, there were a total of 1,929,151 Part D buprenorphine prescriptions associated with 1,332,353 beneficiaries.[61] Over the same period, there were 11,956 telemedicine Medicare fee-for-service and managed care telemedicine services, including audio-only telemedicine, identified as being linked to buprenorphine Part D prescriptions fills.[62] These telemedicine services were provided by 4,533 providers to 8,182 patients.[63] The 1,929,151 Part D buprenorphine claims associated with 1,332,353 beneficiaries equates to a ratio of 1.45 [64] claims per beneficiary. Therefore, the 11,956 services represent an estimated 8,257 (11,956/1.45) initial prescriptions, which equates to 0.428 percent (8,257/1,929,151) of total Part D claims for buprenorphine (1,929,151 total claims). Based on IQVIA data, the total number of new prescriptions for buprenorphine in the U.S. in 2021 was 15,782,652.[65] Applying the telemedicine share of total Part D buprenorphine prescriptions to the estimated number of total services associated with a buprenorphine prescription yields an estimated 67,552 (0.428 percent × 15,782,652) initial prescriptions. DEA and HHS believe this is a high estimate, as the telemedicine share of total Part D buprenorphine prescriptions may include telemedicine services allowed by regulation prior to the PHE.

Affected Persons

This final rule would affect practitioners prescribing schedule III–V controlled substances for the treatment of OUD using audio-video or audio-only technology and the patients being treated using this technology. Based on the analysis above, DEA and HHS expect the final rule to affect 67,552 patients annually. As previously discussed, in 2021, 8,182 patients received a prescription for buprenorphine under the Medicare Part D program, from 4,533 providers, equating to a ratio of approximately 1.80 patients per provider. Applying this ratio to the number of affected patients, DEA and HHS estimate 37,425 providers are affected by this final rule.

Impact on Physicians or Practitioners

The final rule would permit the use of audio-video or audio-only telemedicine provided that (1) the DEA-registered practitioner meets all requisite state and Federal registration requirements for both prescribing of controlled substances and engaging in the practice of telemedicine, (2) reviews state PDMP data regarding any controlled substance prescriptions issued to the patient and annotates this within the patient's EHR, (3) is limited to prescribing a six-month supply, across all such prescriptions, until the practitioner conducts an in-person medical evaluation or engages in other forms of authorized telemedicine, and (4) the pharmacist filling the prescription confirms the patient identity using a valid government-issued ID or other acceptable form of identification. Below is the analysis of the four requirements stated above:

1. DEA Registration Requirement: DEA and HHS assume all practitioners who would issue prescriptions via telemedicine encounters pursuant to this final rule are authorized under DEA regulations under 21 CFR 1301.13(e)(1)(iv) as well as the states where the practitioner is located (unless otherwise excepted). Therefore, the impact of this requirement is minimal.

2. *Review PDMP data and annotate within the EHR:* Based on a 2018 study, it takes a practitioner 27 seconds to log in and 37 seconds to retrieve a report once logged in. The total time it takes to retrieve a PDMP report is roughly a minute (27 + 37 = 64 seconds) or 0.0167 of an hour (1/60).[66] Based on an estimated loaded hourly rate of $169.80,[67] the cost of a review of the

[67] For the purpose of this analysis, the cost per registrant is estimated by multiplying the loaded labor rate by the estimated time to complete the review. The loaded labor rate is based on the estimated loaded hourly wage for 29–1229, Physicians, all other. Bureau of Labor Statistics, *Occupational Employment and Wages, May 2023, https://www.bls.gov/oes/current/oes291229.htm.* The average hourly wage is $119.54, with benefits estimated at an additional 42.05% of the base wage. The load factor is calculated by comparing the benefits for private workers as a share of wages, 29.6%/70.4% = 42.05%. Bureau of Labor Statistics,

Continued

PDMP is $2.83 ($169.80 × 0.0167). Applying this cost to 67,552 services, the total cost of PDMP review is $191,171 ($2.83 × 67,552), annually.[68] While many practitioners already check PDMP data prior to issuing a prescription for controlled substances for a variety of reasons, DEA and HHS will consider the full cost of checking the PDMP, $191,171, as a cost of this final rule to be conservative.

3. *Limited to a six-month supply:* Increasing the limit to a six-month supply under this final rule will give patients and prescribing practitioners more time to schedule follow-up appointments and reduce the likelihood of a relapse by a patient due to lack of medication, and will allow prescribing practitioners greater flexibility in managing their patient populations. While DEA and HHS do not have a basis to quantify the economic impact of the six-month supply limit, six months of medication for treatment is believed to be a net benefit compared to a baseline of zero to seven days of medication for treatment.

4. *Pharmacist ID verification:* Pharmacists must verify the patient's identity with either a state or Federal Government-issued photographic identification card, or another acceptable form of identification as listed above. The practice of checking identification when providing prescriptions is already well-established and widespread, and DEA expects any additional labor costs for pharmacists to be minimal.

In summary, the total cost to practitioners is $191,171 annually, which is the cost associated with checking PDMPs.

Impact on Patients

As discussed earlier, DEA and HHS estimate this final rule will affect 67,552 patients per year. DEA and HHS anticipate that patients will fall into one of two categories:

(1) Patients who would otherwise not receive treatment or prescriptions for OUD absent this final rule. These patients have no other means to receive treatment. They are unable to visit a practitioner in-person or otherwise visit a practitioner engaged in the practice of telemedicine as defined in 21 CFR 1300.04(i), but are able to have an audio-video or audio-only telemedicine visit pursuant to this final rule.

(2) Patients who would eventually receive treatment and prescriptions even absent the final rule. These patients are able to either visit a practitioner in-person or have a telemedicine visit with a practitioner engaged in the practice of telemedicine as defined in 21 CFR 1300.04(i); however, such visit is delayed for any variety of reasons, *e.g.,* long wait times for an appointment with the practitioner, personal hardship, etc. This final rule, if implemented, would create additional flexibilities, potentially allowing the patient to more quickly start treatment, absent this final rule.

DEA and HHS do not have a basis to estimate how many of the estimated 67,552 patients fall into the two groups. However, DEA and HHS anticipate a larger impact for the first group. The impact on the first group of patients is a result of receiving treatment for OUD. There would be a cost of treatment and the benefit generated from the treatment, which would not have been possible without this final rule. The impact on the second group would be the result of receiving treatment sooner than they would have without this final rule. For both groups, the impact could potentially be lifesaving. However, DEA and HHS do not have access to data that would permit them to estimate the number of lives the improved access could save. There would be a cost of treatment and the benefit of earlier treatment, including potential cost-offsets associated with reduced healthcare and public safety expenditures. According to a December 2021 research report, treatment costs with buprenorphine for a stable patient provided in a certified Opioid Treatment Program, including medication and twice-weekly visits, were $115 per week or $5,980 per year.[69] This is likely higher than the cost of treating a stable patient in a primary care setting, where patients are more likely to see providers once per week and where there are no associated specialized costs. However, using the $5,980 per year estimate serves to establish an upper boundary for potential costs in any cost-benefit comparison. Estimates of the impact of buprenorphine use in the treatment of OUD suggests a 23.7% decrease in total deaths, and 31.2% reduction in drug poisonings (both fatal and nonfatal). In total, the combined cost-savings of buprenorphine (including both health-care costs as well as criminal justice costs) was estimated by one study at $60,000 per person.[70] At the costs listed above, the savings from the treatment of one person would cover the cost of buprenorphine treatment for ten others.

A study published in 2021 of the societal costs for OUD found that the ''costs for opioid use disorder and fatal opioid overdose in 2017 were estimated to be $1.02 trillion. The majority of the economic burden is due to reduced quality of life from opioid use disorder and the value of life lost due to fatal opioid overdose.'' [71] According to the report, in 2017 total non-fatal costs were $471 billion and total fatal costs were $550 billion and there were 2.1 million persons ages 12 years and older with OUD, and 47,000 fatal opioid overdoses.[72] Non-fatal costs include costs associated with health care, substance use disorder treatment, criminal justice, lost productivity, and the value of reduced quality of life. Dividing the total non-fatal cost of $471 billion by the number of persons ages 12 and older with OUD of 2.1 million, the societal cost of non-fatal OUD is approximately $224,000 ($471 billion/2.1 million) per person per year. While DEA and HHS are unable to quantify how many of the affected patients will be successfully treated for OUD or how many fatal opioid overdoses will be avoided as a result of this final rule, the potential economic benefit is disproportionally large compared to any cost associated with this rule.

Risk of Diversion

This final rule will reduce the requirements imposed on practitioners who wish to prescribe schedule III–V controlled substances as part of treatment for OUD. DEA and HHS understand that there is potential for the misuse of controlled substances approved for OUD treatment, which could be worsened by an increase in prescribing.

While this final rule may increase the risk of diversion, with the safeguards, DEA and HHS estimate this increased risk will be minimal. Requirements to check the state PDMP prior to issuance of a prescription, in-person requirements for follow-up

Employer Costs for Employee Compensation—December 2023, https://www.bls.gov/news.release/archives/ecec_03132024.pdf. The loaded wage was therefore $119.54 × 1.4205 = $169.80 per hour for private physicians, all other.

[68] Numbers shown are rounded for presentation and clarity. Calculations using the provided numbers may not yield exactly the same results due to this rounding

[69] *How much does opioid treatment cost?,* NIDA. (Apr. 13, 2021), *https://nida.nih.gov/publications/research-reports/medications-to-treat-opioid-addiction/how-much-does-opioid-treatment-cost.*

[72] *Id.*

appointments under current law, and the requirement that pharmacists verify identification prior to filling a prescription are expected to minimize the diversion of buprenorphine via telemedicine, including audio-only telemedicine. Practitioners already have the authority to prescribe buprenorphine. Studies have found that, in 2019, the percentage of buprenorphine misuse among adults with past-year use was 29.2%. Of those adults who misused buprenorphine in a previous year, 71.8%–74.7% did not have their own prescription.[73] Given the misuse of buprenorphine is often for self-treatment of OUD symptoms, these numbers underscore the need for expanded access to buprenorphine treatment for OUD.

The growth of waivers to prescribe buprenorphine was slower among prescribers working in small nonmetropolitan counties than urban counties. Prescribers in rural counties were associated with low buprenorphine dispensing.[74] DEA and HHS believe that by providing increased access for rural areas, the benefits of increasing access to buprenorphine outweigh any added risk of diversion as the result of this rule.

Other Potential Costs

DEA and HHS also examined the cost of technology, both capital investment and operation expenses, in order to provide audio-only telemedicine in compliance with the final rule. DEA and HHS believe that the use of telemedicine will not require any additional capital expenditures on the part of practitioners or patients. Recordkeeping requirements are likely to have a minimal impact because current recordkeeping practices are likely to meet the requirements imposed by the final rule, and any additional time is expected to be minimal. EHRs may be updated in the future to reflect the final rule change, such as the integration of state PDMP data into a patient's EHR, but such changes are likely to be minor and included as part of any normal software update.

Summary

In summary, DEA and HHS estimate this rule would affect 37,425 providers and 67,552 patients, annually. DEA and HHS believe that this rule would increase patient access to buprenorphine for two types of patients: those who otherwise would be unable or unwilling to seek treatment, as well as those who would seek treatment but with some form of delay. Increased access to buprenorphine is expected to reduce the number of opioid drug poisonings annually, however, DEA and HHS cannot quantify the size or total benefits of such a reduction. There would be a slight increase in labor costs per practitioner, due to increased time spent reviewing PDMP databases. The estimated total cost to the 37,425 providers is $191,171 annually. DEA and HHS estimate recordkeeping requirements are likely to have a minimal impact because current recordkeeping practices are likely to meet the requirements imposed by this final rule, and any additional time is expected to be minimal. The increase in the availability and flexibility of treatment with schedule III–V controlled substances may increase the risk of diversion, however DEA and HHS believe that any increase would be small and outweighed by the benefit to patients and reduction in the societal cost of OUD.

Executive Order 12988, Civil Justice Reform

This final rule meets the applicable standards set forth in sections 3(a) and 3(b)(2) of E.O. 12988 to eliminate drafting errors and ambiguity, minimize litigation, provide a clear legal standard for affected conduct, and promote simplification and burden reduction.

Executive Order 13132, Federalism

This final rule does not have federalism implications warranting the application of E.O. 13132. The final rule does not have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government.

Executive Order 13175, Consultation and Coordination With Indian Tribal Governments

DEA and HHS are committed to the principles of collaboration and consultation with Tribal governments, as demonstrated through its plans to conduct the appropriate Executive Order 13175 Tribal consultations and recognizes the significance of these consultations and their role in shaping regulations that impact Tribal communities. DEA and HHS have determined that there is a reasonable basis to believe that this rule may have Tribal implications, consistent with the definition in Executive Order 13175.

On June 13 and 27, 2024, DEA held virtual consultations with numerous Tribal governments and organizations. DEA and HHS considered the valuable insights from Tribal persons and organizations received during the comment period of the Buprenorphine NPRM from March 2023 (88 FR 12890), the *Telemedicine Listening Sessions* held in September 2023, and the most recent virtual consultations from June 2024. DEA's intentions have been to engage in consultations as appropriate throughout the rulemaking process, fostering a collaborative environment that respects the sovereignty and interests of Tribal governments, while enhancing the overall quality and effectiveness of DEA's regulatory efforts. As such, DEA and HHS have incorporated these concerns, as necessary, within this final rule to ensure DEA and HHS's regulations align with the diverse needs and considerations of various stakeholders impacted by DEA oversight.

Regulatory Flexibility Act

The Administrator and the Secretary, in accordance with the Regulatory Flexibility Act (5 U.S.C. 601–612) (RFA), have reviewed this proposed rule and by approving it certifies that it will not have a significant economic impact on a substantial number of small entities.

Due to the COVID–19 PHE, DEA issued guidance which authorized prescribing of buprenorphine to new and existing patients with OUD via telephone by otherwise authorized practitioners without requiring such practitioners to first conduct an examination of the patient in person.[75] To continue the flexibilities of audio-only telemedicine prescribing of schedule III–V controlled substances approved by the FDA for the treatment of OUD beyond the COVID–19 PHE, DEA and HHS have promulgated regulations which would balance the need to increase patient access to legitimate medical treatment with the goal of providing effective controls against diversion. Thus, within this final rule, DEA and HHS are explaining the conditions in which a practitioner is authorized to prescribe buprenorphine via an audio-only telemedicine encounter, and the obligations which arise once a practitioner prescribes to patients.

Affected Persons

This final rule affects DEA-registered practitioners prescribing schedule III–V controlled substances for the treatment of OUD via telemedicine, including audio-only telemedicine. As stated

[73] Han, Beth et al. ''Trends in and Characteristics of Buprenorphine Misuse Among Adults in the US.'' JAMA Netw Open. 2021 Oct 1; 4(10):e2129409. Accessed 9/15/2022.

[74] *Id.*

[75] Prevoznik Letter.

above, DEA and HHS estimate this final rule will affect 37,425 DEA-registered practitioners and 67,552 patients annually. Because patients are individuals and not small entities, this analysis examines the impact of the final rule on affected practitioners and small entities that employ the affected practitioners.

With respect to practitioners, this final rule would permit the use of audio-only telemedicine provided that the practitioner (1) meets all requisite state and Federal registration requirements for both prescribing of controlled substances and engaging in the practice of telemedicine, (2) reviews PDMP data regarding any controlled substance prescriptions issued to the patient in the previous year, and (3) is limited to prescribing a six-month supply, across all such prescriptions, until the practitioner conducts an in-person medical evaluation or engages in other forms of telemedicine.

A significant number of practitioners work in offices and institutions that meet the RFA's definition of small entities. To estimate the number of affected entities, DEA and HHS first determined the North American Industry Classification System (NAICS) codes that most closely represent businesses that would employ the practitioners who would prescribe buprenorphine via an audio-only telemedicine encounter. Then, DEA and HHS researched economic data for those codes. The source of the economic data is the Small Business Administration (SBA) Office of Advocacy, and is based on data provided by the U.S. Census Bureau Statistics of U.S. Businesses (SUSB).[76] The following business NAICS codes are estimated to represent businesses that employ the affected persons:

- 621111—Offices of Physicians, Except Mental Health Specialists
- 621112—Offices of Physicians, Mental Health Specialists
- 621420—Outpatient Mental Health and Substance Abuse Centers
- 622110—General Medical and Surgical Hospitals
- 622210—Psychiatric and Substance Abuse Hospitals

SUSB data contains the number of firms by size ranges for each of the NAICS codes. For the purposes of this analysis, the term ''firm'' as defined in the SUSB is used interchangeably with ''entity'' as defined in the RFA.

To estimate the number of affected entities that are small entities, DEA and HHS compared the SUSB data for the number of firms in various firm size ranges with SBA size standards for each of the representative NAICS codes. The SBA size standard is the firm size based on the number of employees or annual receipts depending on industry. The SBA size standards for NAICS codes 621111, 621112, 621420, 622110, and 622210 are annual receipts of $14 million, $12 million, $16.5 million, $41.5 million, and $41.5 million, respectively.

The firms in each size range below the SBA size standard are small firms. The number of firms below the SBA size standard was added to determine the total number of small firms in each NAICS code. DEA and HHS estimate there are 161,286, 10,561, 6,523, 2,560, and 396 entities in the 621111, 621112, 621420, 622110, and 622210 industries. Based on the SUSB data on the firm sizes, DEA and HHS estimate there are 157,060, 10,392, 5,849, 1,047, and 204 small entities in the 621111, 621112, 621420, 622110, and 622210 industries. In total, DEA and HHS estimate there are 181,326 entities in the three potentially affected industries, of which 174,552 (96.3 percent) are small entities. The analysis is summarized in table 1 below.

TABLE 1—NUMBER OF AFFECTED ENTITIES AND SMALL ENTITIES

NAICS code	Number of firms	SBA size standard ($)	Number of small firms *
621111—Offices of Physicians, Excepting Mental Health Specialists	161,286	14,000,000	157,060
621112—Offices of Physicians, Mental Health Specialists	10,561	12,000,000	10,392
621420—Outpatient Mental Health and Substance Abuse Centers	6,523	16,500,000	5,849
622110—General Medical and Surgical Hospitals	2,560	41,500,000	1,047
622210—Psychiatric and Substance Abuse Hospitals	396	41,500,000	204
Total	181,326	.....	174,552
Percent of Total	.....	.....	96.3%

* Not all decimal places shown.

From above, E.O. 12866 section, DEA and HHS estimate that audio-only telemedicine services will be provided by 37,425 providers to 67,552 patients, annually. Therefore, this final rule is estimated to affect 37,425 individual practitioners employed by some of the 174,552 small businesses in industries potentially affected by this final rule. Since some small entities will employ more than one practitioner, the number of affected small entities is expected to be less than 37,425 and is expected to be concentrated in the 621111, 621112, and 621420 industries, with a combined total of 173,301 small entities. Therefore, the number of small entities affected by this final rule is estimated to be approximately 21.6%, which is a substantial number of the representative industries.

The cost of the final rule will impact the affected entities and small entities on a ''per person'' basis. Rather than estimating the number of practitioners per firm, then the cost per firm, then whether the cost is significant, DEA and HHS employed a more direct approach based on the following logic:

- In order to continue, the affected firms must generate enough revenue to pay the wages of practitioners, and other operating expenses.
- Therefore, revenue for firms must be greater than the wages paid to practitioners.
- Therefore, if the cost of the final rule is not economically significant when compared to individual wages for practitioners, the cost of the final rule is not economically significant when

[76] SUSB's employer data contain the number of firms, number of establishments, employment, and annual payroll for employment size of firm categories by location and industry. A ''firm'' is defined as an aggregation of all establishments owned by a parent company (within a geographic location and/or industry) with some annual payroll. Small Business Administration, *Firm Size Data, https://www.sba.gov/advocacy/firm-size-data* (last visited Apr 25, 2024). The data table is available at *https://www.sba.gov/sites/default/files/files/static_us_11.xls* (last visited April 25, 2024).

compared to the annual revenue of the firms.

From 2021 data provided by CMS, DEA and HHS estimate that 67,552 patients received telemedicine services prior to receiving a prescription for buprenorphine. These services were provided by 37,425 separate providers, for approximately 1.8[77] patients per provider.

DEA and HHS estimate a non-loaded median hourly wage of $119.54[78] and $62.11[79] for potentially affected physicians and MLPs, respectively. Applying the hourly wage rates to the estimated time to apply, DEA and HHS estimate the labor cost per PDMP review is $1.99 ($119.54 × 1/60) and $1.04 ($62.11 × 1/60) per physician and MLP, respectively. The non-loaded wage rates are calculated to represent the cost to the individual, whereas previously the loaded wage rates were calculated to represent the total cost of employment to the entity and to the economy. These rates are multiplied by 1.8 patients, for total labor costs of $3.59 and $1.88, respectively.

The loaded unit cost of conducting a PDMP review is compared to the non-loaded annual wage rate for practitioners. Based on the Bureau of Labor Statistics' (''BLS'') Occupational and Employment and Wages data, DEA and HHS estimate an average annual wage of $248,640 for physicians and $118,553 for MLPs. Unit costs of $3.59 and $1.88 represent 0.001 0.002 percent of those wages. Table 2 presents the details of the calculation.

TABLE 2—COSTS AND FEES AS PERCENT OF WAGES

	Mean hourly wage ($)	Time to review (hours)	Cost per patient ($)	Cost per 1.8 patients ($)	Mean annual wage ($)	Additional costs as percent of wage (%)
Physicians	119.54	0.0167	1.99	3.59	248,640	0.001
MLP	62.11	0.0167	1.04	1.88	118,553	0.002

The economic impact of additional time spent conducting PDMP reviews represents a small fraction (0.001 and 0.002 percent) of annual wages. DEA and HHS estimate this final rule will not have a significant economic impact on individual practitioners. The entities and small entities that employ the potentially affected practitioners are expected to generate enough revenue to pay their wages.

In addition to DEA-registered prescribers detailed above, the proposed rule would require pharmacists to verify the identification of any person receiving a prescription for Buprenorphine via an audio-only telemedicine visit. Identity verification is already a common practice and DEA believes that this would not impose any significant additional time or labor costs to the actions of pharmacist registrants. Therefore, DEA and HHS conclude this final rule will not have a significant economic impact on a substantial number of small entities.

Unfunded Mandates Reform Act of 1995

The estimated annual impact of this rule is minimal. Thus, DEA and HHS have determined in accordance with the Unfunded Mandates Reform Act of 1995 (UMRA) (2 U.S.C. 1501 *et seq.*) that this action would not result in any Federal mandate that may result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more (adjusted for inflation) in any one year. Therefore, neither a Small Government Agency Plan nor any other action is required under provisions of UMRA.

Congressional Review Act

Pursuant to subtitle E of the Small Business Regulatory Enforcement Fairness Act of 1996 (also known as the Congressional Review Act), the Office of Information and Regulatory Affairs has determined that this rule does not meet the criteria set forth in 5 U.S.C. 804(2).

Paperwork Reduction Act of 1995

This final rule is finalizing a new collection of information under the Paperwork Reduction Act (PRA), 44 U.S.C. 3501–3521. As required under PRA, DEA proposed the creation of a new collection of information in the NPRM, which OMB assigned the following control number: 1117–NEW. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a valid OMB control number. Copies of existing information collections approved by OMB may be obtained at *http://www.reginfo.gov/public/do/PRAMain.*

A. Collections of Information Associated With the Final Rule

1. Title: Recordkeeping Related to PDMP.

OMB Control Number: 1117–NEW.

Form Number: N/A.

DEA and HHS are amending their regulations by authorizing initiation of schedule III–V controlled medications approved for use in the treatment of OUD via telemedicine encounter, to include audio-only means. Prior to prescribing, the practitioner must review the PDMP data of the state in which the patient is located and annotate the date and time that such a review was conducted in the patient's EHR. If the PDMP is unavailable or inaccessible for any reason, the prescribing practitioner must annotate the date and time that such a review was attempted in the patient's EHR and provide a reason as to why a review was unable to be completed.

DEA and HHS estimate the following number of respondents and burden associated with this collection of information:

- *Number of respondents:* 37,425.
- *Frequency of response:* 1.804996.
- *Number of responses:* 67,552.
- *Burden per response:* 1 minute (0.01666667 hours).
- *Total annual hour burden:* 1,126 Hours.

If you need a copy of the information collection instrument(s) with

[77] Numbers shown are rounded for presentation and clarity. Calculations using the provided numbers may not yield exactly the same results due to this rounding

Signing Authority

This document of the Drug Enforcement Administration was signed on January 13, 2025, by Administrator Anne Milgram. That document with the original signature and date is maintained by DEA. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DEA Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of DEA. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Heather Achbach,

Federal Register Liaison Officer, Drug Enforcement Administration.

Miriam E. Delphin-Rittmon,

Assistant Secretary for Mental Health and Substance Use, Department of Health and Human Services.

DRUG ENFORCEMENT ADMINISTRATION

For the reasons set out above, the Drug Enforcement Administration amends 21 CFR part 1306 as follows:

PART 1306—PRESCRIPTIONS

■ 1. The authority citation for part 1306 continues to read as follows:

Authority: 21 U.S.C. 821, 823, 829, 829a, 831, 871(b) unless otherwise noted.

§§ 1306.28 through 1306.49 [Added and Reserved]

■ 2. Add reserved §§ 1306.28 through 1306.49.

■ 3. Add an undesigned center heading and § 1306.51 to read as follows:

Special Circumstances for Telemedicine Prescribing

§ 1306.51 Telemedicine prescribing of schedule III–V medications for the treatment of Opioid Use Disorder.

(a) For purposes of this section, terms defined in part 1300 of this chapter, elsewhere in this chapter, or in 21 U.S.C. 802 and 829 shall have the definitions set forth therein.

(b) A practitioner may issue a prescription for schedule III–V controlled substances listed in 42 CFR 8.12(h)(2) as approved by the Food and Drug Administration (FDA) for use in the treatment of Opioid Use Disorder (OUD), defined as the use of an effective medication such as buprenorphine to treat OUD, pursuant to a communication between the prescribing practitioner and the patient using an interactive telecommunications system, including an audio-only telecommunications system, as described in 42 CFR 410.78(a)(3), if the following conditions are met:

(1) *Prescription drug monitoring program review.* The prescribing practitioner must be authorized to access the applicable prescription drug monitoring program (PDMP) data of the state in which the patient is located at the time of the telemedicine encounter. The prescribing practitioner shall review such data regarding any controlled substance prescriptions issued to the patient in the last year, or, if less than one year of data is available, in the entire available period. The prescribing practitioner shall ensure the date and time of such a review is annotated in the patient's electronic health record (EHR) or paper record. This review, or attempted review, must be conducted prior to issuing a prescription in a manner authorized under this section.

(2) *Time limit.* The practitioner may issue prescriptions to the patient pursuant to this section for a period not to exceed six calendar months beginning on the date the first prescription is issued. The practitioner may issue additional prescriptions to the patient for schedule III–V controlled substances approved by the FDA for use in the treatment of OUD either:

(i) After the prescribing practitioner has conducted at least one in-person medical evaluation of the patient, as defined in 21 U.S.C. 829(e)(2)(B); or

(ii) As otherwise authorized by 21 U.S.C. 829(e), including pursuant to any other form of telemedicine as defined in 21 U.S.C. 802(54) or pursuant to practices as determined by regulation issued pursuant to 21 U.S.C. 829(e)(3)(B).

(3) *PDMP inaccessible or unavailable.* If the PDMP data is inaccessible or unavailable for any reason, the prescribing practitioner shall annotate in the patient's EHR or paper record the date and time that an attempt to view the PDMP data was made and the reason the data could not be reviewed. A practitioner may prescribe a seven-day supply of medication and must perform another PDMP review before prescribing another seven-day supply. Each time the PDMP is reviewed or attempted to be reviewed, the date and time must be annotated in the patient's EHR. A seven-day supply prescribed pursuant to this paragraph (b)(3) counts toward the time limit described in paragraph (b)(2) of this section.

(4) *Pharmacy identification requirement.* The pharmacist shall verify the identity of the patient prior to filling a controlled substance prescription issued under the authority of this section. The pharmacist shall verify the identity of the patient with a state or Federal Government-issued photographic identification card or other form of identification. For the purposes of verifying the identity of the patient, the pharmacist may accept identification in the manner described herein from any qualifying ''ultimate user'' as defined in 21 U.S.C. 802(27) prior to filling the prescription.

(5) *Prescription only for treatment of OUD.* Controlled substance prescriptions issued pursuant to this section may only be issued for the treatment of OUD, and subject to the requirements of this section.

(6) *Authorization to prescribe.* The practitioner must be:

(i) Authorized under §§ 1301.11, 1301.12(a), and 1301.13(e)(1)(iv) of this chapter to prescribe the basic class of controlled substance specified on the prescription; or

(ii) Exempt from obtaining a registration to dispense controlled substances under 21 U.S.C. 822(d).

(7) *Consistent with general prescription requirements.* The issuance of the controlled substance prescription otherwise complies with the requirements set forth in this part.

Department of Health and Human Services

For the reasons set out above, the Department of Health and Human

Services amends 42 CFR part 12 as follows:

PART 12—TELEMEDICINE FLEXIBILITIES

■ 4. The authority citation for part 12 continues to read as follows:

Authority: 21 U.S.C. 802(54)(G).

■ 5. Add subpart B to read as follows:

Subpart B—Telemedicine Prescribing

§ 12.3 Telemedicine prescribing of schedule III–V medications for the treatment of Opioid Use Disorder.

(a) For purposes of this section, terms defined in 21 CFR part 1300, elsewhere in 21 CFR chapter II, or in 21 U.S.C. 802 and 829 shall have the definitions set forth therein.

(b) A practitioner may issue a prescription for schedule III–V controlled substances listed in 42 CFR 8.12(h)(2) as approved by the Food and Drug Administration (FDA) for use in the treatment of Opioid Use Disorder (OUD), defined as the use of an effective medication such as buprenorphine to treat OUD, pursuant to a communication between the prescribing practitioner and the patient using an interactive telecommunications system, including an audio-only telecommunications system, as described in 42 CFR 410.78(a)(3), if the following conditions are met:

(1) *Prescription drug monitoring program review.* The prescribing practitioner must be authorized to access the applicable prescription drug monitoring program (PDMP) data of the state in which the patient is located at the time of the telemedicine encounter. The prescribing practitioner shall review such data regarding any controlled medication prescriptions issued to the patient in the last year, or, if less than one year of data is available, in the entire available period. The prescribing practitioner shall ensure the date and time of such a review is annotated in the patient's electronic health record (EHR) or paper record. This review, or attempted review, must be conducted prior to issuing a prescription in a manner authorized under this section.

(2) *Time limit.* The practitioner may issue prescriptions to the patient pursuant to this section for a period not to exceed six calendar months beginning on the date the first prescription is issued. The practitioner may issue additional prescriptions to the patient for schedule III–V controlled substances approved by the FDA for use in the treatment of OUD either:

(i) As authorized by 21 U.S.C. 829(e), including pursuant to any other form of telemedicine as defined in 21 U.S.C. 802(54) or pursuant to practices as determined by regulation issued pursuant to 21 U.S.C. 829(e)(3)(B); or

(ii) After the prescribing practitioner has conducted at least one in-person medical evaluation of the patient, as defined in 21 U.S.C. 829(e)(2)(B).

(3) *PDMP inaccessible or unavailable.* If the PDMP data is inaccessible or unavailable for any reason, the prescribing practitioner shall annotate in the patient's EHR or paper record the date and time that an attempt to view the PDMP data was made and the reason the data could not be reviewed. A practitioner may prescribe a seven-day supply of medication and must perform another PDMP review before prescribing another seven-day supply. Each time the PDMP is reviewed or attempted to be reviewed, the date and time must be annotated in the patient's EHR. A seven-day supply prescribed pursuant to this paragraph (b)(3) counts toward the time limit described in paragraph (b)(2) of this section.

(4) *Pharmacy identification requirement.* The pharmacist shall verify the identity of the patient prior to filling a controlled medication prescription issued under the authority of this section. The pharmacist shall verify the identity of the patient with a state or Federal Government-issued photographic identification card or other form of identification. For the purposes of verifying the identity of the patient, the pharmacist may accept identification in the manner described herein from any qualifying ''ultimate user'' as defined in 21 U.S.C. 802(27) prior to filling the prescription.

(5) *Prescription only for treatment of OUD.* Controlled medication prescriptions issued pursuant to this section may only be issued for the treatment of OUD.

(6) *Authorization to prescribe.* The practitioner must be:

(i) Authorized under 21 CFR 1301.13(e)(1)(iv) to prescribe the basic class of controlled medication specified on the prescription; or

(ii) Exempt from obtaining a registration to dispense controlled substances under 21 U.S.C. 822(d).

(7) *Consistent with general prescription requirements.* The issuance of the controlled substance prescription otherwise complies with the requirements set forth in 21 CFR part 1306.

[Docket No. DEA–407VA]

RIN 1117–AB40; 1117–AB88

DEPARTMENT OF HEALTH AND HUMAN SERVICES

42 CFR Part 12

Continuity of Care via Telemedicine for Veterans Affairs Patients

AGENCY: Drug Enforcement Administration, Department of Justice; Substance Abuse and Mental Health Services Administration, Department of Health and Human Services.

ACTION: Final rule.

SUMMARY: This final rule authorizes Department of Veterans Affairs (VA) practitioners acting within the scope of their VA employment to prescribe controlled substances via telemedicine to a VA patient with whom they have not conducted an in-person medical evaluation. VA practitioners are permitted to prescribe controlled substances to VA patients if another VA practitioner has, at any time, previously conducted an in-person medical evaluation of the VA patient, subject to certain conditions.

DATES: This final rule is effective February 18, 2025.

FOR FURTHER INFORMATION CONTACT: Heather Achbach, Regulatory Drafting and Policy Support Section, Diversion Control Division, Drug Enforcement Administration; Telephone: (571) 776–3882.

SUPPLEMENTARY INFORMATION: This rule is a final rule that finalizes portions of the proposed rule titled *Telemedicine Prescribing of Controlled Substances When the Practitioner and the Patient have Not Had a Prior In-Person Medical Evaluation,* specifically those proposed regulations affecting VA practitioners prescribing controlled substances.[1] Under this final rule, a VA practitioner who is acting within their scope of employment with the VA may prescribe controlled substances while engaged in the practice of telemedicine with a VA patient with whom they have not conducted an in-person medical evaluation, if another VA practitioner has previously conducted an in-person medical evaluation with the VA patient. Additionally, prior to issuing a prescription via telemedicine for a

[1] 88 FR 12875 (Mar. 1, 2023).

schedule II–V controlled substance, the prescribing practitioner must review both the patient's VA electronic health record (EHR) (to include the internal prescription database) and the prescription drug monitoring program (PDMP) data for the state in which the VA patient is located at the time of the telemedicine encounter (if the state has such a program) for prescriptions of controlled substances issued to the VA patient. Should either the VA EHR (to include the VA internal prescription database) or the state PDMP (if the state has a PDMP program) be unavailable or non-operational, the practitioner must limit the prescription to a 7-day supply and must later review both the VA patient's VA EHR (to include the internal prescription database) and the PDMP data for the state in which the patient is located at the time of the telemedicine encounter for prescriptions of controlled substances issued to the patient before continuing to prescribe controlled substances to the patient via telemedicine. If no PDMP program exists for the state in which the VA patient is located at the time of the telemedicine encounter the practitioner must review the VA EHR, to include the VA internal prescription database, prior to issuing a prescription for controlled substances for more than a 7-day supply. For reasons discussed more fully below, this final rule does not apply to contracted practitioners located outside a VA facility or clinic providing care via the community care network (CCN) or conducting disability compensation evaluations.

I. Legal Authority and Background

In March 2023, the Drug Enforcement Administration (DEA) published a notice of proposed rulemaking (NPRM) titled *Telemedicine Prescribing of Controlled Substances When the Practitioner and the Patient Have Not Had a Prior In-Person Medical Evaluation* (the General Telemedicine NPRM).[2] DEA is now partially finalizing the rule, specifically the sections of that proposed rule that pertain to Department of Veterans Affairs (VA) practitioners.[3] DEA has modified the proposed provisions to address concerns brought forth by commenters that are specific to VA practitioners prescribing controlled substances through the practice of telemedicine under the statutory authority of 21 U.S.C. 802(54)(G). This final rule pertains only to VA practitioners prescribing controlled substances to VA patients in circumstances where the prescribing VA practitioner has not conducted an in-person medical evaluation of the VA patient prior to the issuance of the prescription.[4]

This final rule falls under the last category of the ''practice of telemedicine'' as defined in the *Ryan Haight Online Pharmacy Consumer Protection Act of 2008* (Ryan Haight Act),[5] which authorizes the prescribing of controlled substances in specified circumstances where the prescribing practitioner has not conducted an in-person medical evaluation of the patient. The Administrator of the DEA (pursuant to delegation by the Attorney General)[6] and the Secretary of Health and Human Services (HHS) jointly issue this regulation and have both determined that this regulation is consistent with effective controls against diversion and with the public health and safety, as required under 21 U.S.C. 802(54)(G).

DEA implements and enforces the Controlled Substances Act (CSA) and the Controlled Substances Import and Export Act (21 U.S.C. 801–971), as amended. DEA publishes the implementing regulations for these statutes in 21 CFR parts 1300 through 1399. These regulations are designed to ensure a sufficient supply of controlled substances for medical, scientific, and other legitimate purposes, and to deter the diversion of controlled substances for illicit purposes. As mandated by the CSA, DEA establishes and maintains a closed system of control for manufacturing, distributing, and dispensing of controlled substances, and requires any person who manufactures, distributes, dispenses, imports, exports, or conducts research or chemical analysis with controlled substances to register with DEA, unless they meet an exemption, pursuant to 21 U.S.C. 822.[7] The CSA further authorizes the Attorney General (and the Administrator of DEA by delegation through 28 CFR part 0) to promulgate regulations necessary and appropriate to execute the functions of subchapter I (Control and Enforcement) and subchapter II (Import and Export) of the CSA.[8]

The Ryan Haight Online Pharmacy Consumer Protection Act of 2008

The Ryan Haight Act amended the CSA by, among other things, adding several new provisions to prevent the illegal distribution and dispensing of controlled substances by means of the internet. A central feature of the Ryan Haight Act is the in-person medical evaluation requirement. The in-person medical evaluation requirement is set forth in 21 U.S.C. 829(e), which provides that ''[n]o controlled substance that is a prescription drug as determined under the Federal Food, Drug, and Cosmetic Act may be . . . dispensed by means of the internet without a valid prescription,''[9] and which defines ''valid prescription'' in part as ''a prescription that is issued for a legitimate medical purpose in the usual course of professional practice by . . . a practitioner who has conducted at least 1 in-person medical evaluation of the patient . . .''[10]

However, pursuant to 21 U.S.C. 829(e)(3)(A), there is an exception to this in-person medical evaluation requirement where the practitioner is ''engaged in the practice of telemedicine.''[11] Pursuant to 21 U.S.C. 802(54), the *practice of telemedicine* means ''the practice of medicine in accordance with applicable Federal and State laws by a practitioner (other than a pharmacist)[12] who is at a location remote from the patient and is communicating with the patient, or health care professional who is treating the patient, using a telecommunications system referred to in section 1395m(m) of Title 42,'' and which also falls within

[2] 88 FR 12875 (Mar. 1, 2023).

[3] A ''VA practitioner'' refers to an individual authorized to prescribe, dispense, or administer controlled substances within the Department of Veterans Affairs, consistent with the definition of ''practitioner'' in 21 U.S.C. 802(21). This includes any licensed individual permitted by the VA to perform professional medical duties within the scope of VA healthcare practices.

[4] Pursuant to 21 CFR 1300.04(f), the term ''in-person-medical evaluation'' means a medical evaluation that is conducted with the patient in the physical presence of the practitioner.

[5] Public Law 110–425, 122 Stat. 4820 (2008).

[6] The Attorney General has delegated this authority to the Administrator of DEA under 28 CFR 0.100(b).

[7] The term ''dispense'' in the context of this rulemaking means to deliver a controlled substance to an ultimate user, which includes the prescribing of a controlled substance. 21 U.S.C. 802(10).

[8] 21 U.S.C. 871(b), 958(f).

[9] 21 U.S.C. 829(e)(1).

[10] *Id.* 829(e)(2)(A)(i). Under the Ryan Haight Act, the requirement of an in-person medical evaluation does not apply to a ''covering practitioner,'' *id.* 829(e)(2)(A)(ii), as defined by 829(e)(2)(C). A prescribing practitioner meeting this definition of a covering practitioner need not conduct an in-person medical evaluation as a prerequisite to prescribing a controlled substance to a given patient, provided that the practitioner for whom the practitioner is covering has provided an in-person medical evaluation of that patient and provided further that this covering arrangement is taking place on only a temporary basis. In addition, the covering practitioner—as with all DEA-registered practitioners who prescribe controlled substances—remains subject to the requirement that such prescriptions may be issued only for a legitimate medical purpose in the usual course of professional practice. *Id.*

[11] *Id.* 829(e)(3)(A).

[12] This definition of telemedicine does not exclude a pharmacist functioning as a mid-level practitioner authorized to prescribe controlled substances.

one of seven distinct categories that Congress determined were appropriate to allow for the prescribing of controlled substances via telemedicine despite the practitioner never having conducted an in-person medical evaluation of the patient.[13]

As a general matter, those seven distinct categories include telemedicine encounters where: (1) patients are physically located at DEA-registered hospital or clinic, and the remote prescribing practitioner is DEA-registered in the state in which the patient is located at the time of the telemedicine encounter; (2) patients are being treated by a practitioner, and in the physical presence of a DEA-registered practitioner in the state in which the patient is located; (3) the practitioner is an employee or contractor of the Indian Health Service, acting within the scope of the practitioner's employment, who has been designated an *Internet Eligible Controlled Substances Provider* by HHS; (4) they take place during a public health emergency declared by HHS; (5) the practitioner has obtained a *Special Registration* with DEA; [14] (6) there is a medical emergency that prevents the patient from being in the physical presence of an employee or contractor of the Veterans Health Administration (VHA) and one of its hospitals or clinics, and immediate intervention by the practitioner using controlled substances is required to prevent injury or death; and (7) any other circumstances that DEA and HHS have jointly determined to be consistent with effective controls against diversion and otherwise consistent with the public health and safety.[15]

The seven distinct categories provided under the statutory definition of the practice of telemedicine involve circumstances in which the prescribing practitioner might be unable to satisfy the Ryan Haight Act's in-person medical evaluation requirement, yet nonetheless may be able to prescribe a controlled substance for a legitimate medical purpose in the usual course of professional practice. In these circumstances, provided certain safeguards are in place to ensure that the practitioner who is engaged in the practice of telemedicine is able to conduct a bona fide medical evaluation of the patient at the remote location, and is otherwise acting in the usual course of professional practice, the Ryan Haight Act contemplates that the practitioner will be permitted to prescribe controlled substances by means of the internet despite not having conducted an in-person medical evaluation.

As noted above, when a practitioner engages in the practice of telemedicine, the practitioner must use ''a telecommunications system referred to in section 1395m(m) of Title 42.'' The Centers for Medicare and Medicaid Services has defined telehealth for the Medicare program, in part, as ''multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication between the patient and distant site physician or practitioner.'' [16]

COVID–19 Public Health Emergency

In response to the COVID–19 public health emergency (PHE), as declared by the Secretary of HHS on January 31, 2020, pursuant to the authority under section 319 of the Public Health Service Act (42 U.S.C. 247), DEA granted temporary exceptions (listed below) to the Ryan Haight Act. To prevent lapses in care, these exceptions authorized the prescribing of controlled substances via telemedicine encounters even when the prescribing practitioner had not conducted an in-person medical evaluation of the patient prior to prescribing. These telemedicine flexibilities authorized DEA-registered practitioners to prescribe schedule II–V controlled substances via audio-video telemedicine encounters, including schedule III–V narcotic controlled substances approved by FDA for maintenance and withdrawal management treatment of opioid use disorder via audio-only telemedicine encounters, provided that such controlled substance prescriptions otherwise comply with the requirements outlined in DEA guidance documents, DEA regulations, and applicable Federal and State law. DEA granted those temporary exceptions to the Ryan Haight Act and DEA's implementing regulations via two letters published in March 2020:

- A March 25, 2020 ''Dear Registrant'' letter signed by William T. McDermott, DEA's then-Assistant Administrator, Diversion Control Division; [17] and
- A March 31, 2020 ''Dear Registrant'' letter signed by Thomas W. Prevoznik, DEA's then-Deputy Assistant Administrator, Diversion Control Division.[18]

Prior NPRMs and Temporary Rules; Telemedicine Listening Sessions

On March 1, 2023, DEA, in concert with HHS and pursuant to 21 U.S.C. 802(54)(G), published two NPRMs in the **Federal Register**, *Telemedicine Prescribing of Controlled Substances When the Practitioner and the Patient Have Not Had a Prior In-Person Medical Evaluation* (the General Telemedicine NPRM) [19] and *Expansion of Induction of Buprenorphine via Telemedicine Encounter* (the Buprenorphine NPRM).[20] These NPRMs proposed to expand patient access to prescriptions for controlled substances via telemedicine encounters relative to the pre-COVID–19 PHE landscape. The intent of the two proposed rules was to make permanent some of the telemedicine flexibilities established during the COVID–19 PHE in order to facilitate patient access to controlled substance medications via telemedicine when consistent with public health and safety, while maintaining effective controls against diversion.

The General Telemedicine NPRM proposed specific requirements for telemedicine prescribing of controlled substances by both VA and non-VA practitioners, addressing both the types of drugs permitted and the procedural safeguards necessary for prescribing via telemedicine without an in-person medical evaluation. For practitioners, the General Telemedicine NPRM proposed permitting prescribing schedule III–V non-narcotic controlled substances via telemedicine for up to a 30-day supply prior to conducting an in-person medical evaluation. However, for schedule II substances or narcotics, or any controlled substance prescription exceeding a 30-day supply, the General Telemedicine NPRM proposed that a ''qualifying telemedicine referral'' is necessary. As proposed in the General Telemedicine NPRM, the qualifying

[13] 21 U.S.C. 802(54).

[14] Congress enacted legislation in addition to the Ryan Haight Act which required DEA to ''promulgate final regulations specifying . . . the limited circumstances in which a special registration for telemedicine may be issued.'' 21 U.S.C. 831(h)(2). In particular, the SUPPORT for Patients and Communities Act, signed into law on October 24, 2018, mandated that, in consultation with the Secretary of Health and Human Services, the Attorney General shall promulgate final regulations specifying—(A) the limited circumstances in which a special registration for telemedicine may be issued; and (B) the procedure for obtaining a special registration for telemedicine.

[15] 21 U.S.C. 802(54).

[20] 88 FR 12890 (Mar. 1, 2023).

referral would involve a physical evaluation conducted by another DEA-registered practitioner, who would then formally refer the patient to the prescribing practitioner. Additionally, practitioners would be required to conduct a review of the PDMP for the state where the patient is located at the time of the telemedicine encounter to monitor recent controlled substance prescriptions, as a safeguard against potential misuse. The General Telemedicine NPRM proposed that in instances where the PDMP is temporarily unavailable, the prescribing practitioner would be authorized to prescribe up to a 7-day supply until the prescribing practitioner is able to review the PDMP.

The General Telemedicine NPRM also proposed to mandate detailed recordkeeping, whereby the telemedicine practitioner would be required to thoroughly document each controlled substance prescribed via telemedicine, including the date, patient details, medication specifics, and locations of both the practitioner and the patient during the encounter. Moreover, each prescription issued via a telemedicine encounter would be required to bear a notation on its face indicating it was issued via a telemedicine encounter. These extra safeguards were intended to provide an additional layer of transparency for DEA audits and investigations.

The General Telemedicine NPRM proposed certain provisions for VA practitioners prescribing controlled substances via telemedicine. Specifically, VA practitioners prescribing controlled substances during telemedicine encounters with VA patients utilizing the VA healthcare system would be exempt from the 30-day supply limitation, allowing VA practitioners to prescribe controlled substances, including schedule II drugs, without a qualifying referral. This proposed exemption recognized the VA's integrated healthcare system, and the reliable, centralized patient data systems bridging all VA facilities, which ensures a continuity of patient care provided within its healthcare system. To mitigate risks related to diversion or misuse, the General Telemedicine NPRM proposed to require VA practitioners to consult not only the PDMP for the state the VA patient is located during the telemedicine encounter, but also the VA's internal prescription database, ensuring a comprehensive review of the VA patient's controlled substance prescription history.

These distinctions underscore DEA's intention in the General Telemedicine NPRM to balance access to care via telemedicine with the necessary safeguards against diversion or misuse of controlled substances. Specifically, the General Telemedicine NPRM emphasized the continuity and security of care for VA patients receiving healthcare services through the VA system. By structuring the requirements differently for VA and non-VA practitioners, the General Telemedicine NPRM sought to leverage the VA's established telemedicine infrastructure and patient monitoring capabilities to enhance safety without imposing excessive restrictions on the VA's healthcare delivery model. Unlike other healthcare providers, VA operates under Federal law and is a nationally integrated, closed healthcare system with rigorous internal policies and controls that ensure patient safety, continuity of care, and thorough monitoring of prescriptions. VA practitioners have access to shared information systems that enable continuity of care and veterans' data sharing across VA facilities. This includes access to VA's internal prescription database, allowing VA practitioners to monitor and manage controlled substance prescriptions. This infrastructure ensures the safety of telemedicine prescribing without necessitating an additional registration layer, as VA practitioners operate within a highly regulated and cohesive system tailored specifically to veterans' needs.

The comment period for the General Telemedicine NPRM and Buprenorphine NPRM closed on March 31, 2023. The General Telemedicine NPRM generated a total of 35,454 comments.

On May 10, 2023, DEA jointly with HHS (with the Substance Abuse and Mental Health Services Administration (SAMHSA) acting on behalf of HHS) issued a Temporary Extension of COVID–19 Telemedicine Flexibilities for Prescription of Controlled Medications (First Temporary Rule) pursuant to 21 U.S.C. 802(54)(G), which extended through November 11, 2023, the full set of telemedicine flexibilities regarding the prescribing of controlled substances, as had been in place under the COVID–19 PHE.[21] The First Temporary Rule also provided a one-year grace period, through November 11, 2024, to any practitioner-patient telemedicine relationships that had been or would be established on or before November 11, 2023.

On September 12 and 13, 2023, DEA hosted live, in-person Telemedicine Listening Sessions to receive additional public input concerning the practice of telemedicine with regard to prescribing controlled substances, and potential safeguards that could effectively prevent and detect diversion of controlled substances prescribed via telemedicine. DEA invited the public to express their views concerning the advisability of permitting prescribing of certain controlled substances via telemedicine without any in-person medical evaluation at all, the availability and types of data that would be useful in detecting diversion of controlled substances via telemedicine that are either already reported or could be reported, and specific additional safeguards that could be placed around the prescribing of schedule II-controlled substances via telemedicine. Approximately 58 stakeholders, practitioners, pharmacists, trade associations, state agencies, and other public interest groups presented at the listening sessions.

On October 10, 2023, in light of the need to further evaluate the best course of action given the comments received in response to the General Telemedicine and Buprenorphine NPRMs and the presentations at the Telemedicine Listening Sessions, DEA, jointly with HHS, issued the Second Temporary Extension of COVID–19 Telemedicine Flexibilities for Prescription of Controlled Medications (Second Temporary Rule), also pursuant to 21 U.S.C. 802(54)(G), thereby extending through December 31, 2024, the full set of telemedicine flexibilities regarding prescription of controlled substances as were in place during the COVID–19 PHE.[22] The extension authorized all DEA-registered practitioners to prescribe schedule II–V controlled substances via telemedicine through December 31, 2024, whether or not the patient and DEA-registered practitioner had established a telemedicine relationship on or before November 11, 2023. In other words, the grace period provided in the First Temporary Rule was effectively subsumed by the Second Temporary Rule, which continued the extension of the current flexibilities for all practitioner-patient relationships—not just those established on or before November 11, 2023—until the end of 2024. The purpose of the Second Temporary Rule, like the one before it, was to ensure a smooth transition for patients and DEA-registered

[21] Temporary Extension of COVID–19 Telemedicine Flexibilities for Prescription of Controlled Medications, 88 FR 30037 (May 10, 2023).

[22] 88 FR 30037 (May 10, 2023).

practitioners that have come to rely on the availability of telemedicine for controlled substance prescriptions, as well as to allow adequate time for providers to come into compliance with any new standards or safeguards that are promulgated as part of a final set of telemedicine regulations.

On November 19, 2024, DEA and HHS issued a Third Temporary Extension of COVID–19 Telemedicine Flexibilities for Prescription of Controlled Medications (Third Temporary Rule) to again extend the temporary exceptions originally authorized under the COVID–19 PHE, through December 31, 2025. This extension allows telemedicine flexibilities for all practitioners, extending patient access to care until broader telemedicine rulemaking is complete. Additionally, these temporary exemptions, now extended through December 31, 2025, ensure that practitioners can continue to prescribe controlled substances without an in-person medical evaluation, maintaining continuity of care while DEA works to establish tailored regulations for both VA and non-VA practitioners. DEA's NPRM titled *Special Registrations for Telemedicine and Limited State Telemedicine Registrations* (RIN 1117–AB40) (Special Registrations NPRM), published elsewhere in this issue of the **Federal Register**, focuses on non-VA practitioners and allows for further opportunity for public comment and development of a framework suited to the diverse operational environments outside the VA's integrated healthcare system.

DEA is specifically tailoring this final rule to practitioners within the VA healthcare system to accommodate VA's unique healthcare infrastructure while safeguarding effective prescribing of controlled substances via telemedicine. This final rule is distinct from the broader Special Registrations NPRM to acknowledge the VA's unique structure and patient population, particularly VA patients in rural or underserved areas who benefit significantly from telemedicine services. This final rule reflects the VA's robust internal controls and centralized framework, which ensure continuity and quality of care across VA facilities and practitioners.

After careful consideration of the public comments and discussions with the VA, DEA and HHS have decided to promulgate this final rule only with respect to VA practitioners. Specifically, DEA and HHS have decided to extend telemedicine prescribing authority to VA practitioners to accommodate VA's unique healthcare infrastructure while safeguarding effective prescribing of controlled substances via telemedicine. Unlike non-VA practitioners, who operate in a variety of healthcare systems with diverse, non-integrated records management structures, VA practitioners are governed by a unified, closed-loop healthcare system, which offers comprehensive patient oversight, centralized health information and a dedicated internal prescription database, facilitating safe and effective telemedicine practices specific to VA patients and veterans' healthcare needs. Thus, DEA and HHS believe that promulgating this final rule would maintain critical patient access to necessary medications without creating an unreasonable risk of diversion. Although DEA and HHS are not extending this authority to non-VA practitioners at this time, DEA is committed to working with HHS to periodically evaluate whether extending telemedicine prescribing authority to non-VA practitioners under 21 U.S.C. 802(54)(G) would be appropriate in the future.

Additionally, DEA notes that the Special Registrations NPRM, proposes to create a special registration for telemedicine which would authorize telemedicine prescribing authority for non-VA practitioners. DEA encourages the public to review and comment on that proposed rule.

II. Need for Rulemaking Specific to the Department of Veteran Affairs

As a result of discussions held between DEA, HHS, and the VA, as well as the comments received in response to the General Telemedicine NPRM, DEA and HHS have determined that the best course of action to ensure continued access to care for patients receiving care from VA healthcare, while maintaining sufficient safeguards to detect and protect against the diversion of controlled substances, is to promulgate regulatory changes that enable a VA practitioner to prescribe controlled substances, via telemedicine, to a VA patient who has previously had an in-person medical evaluation with a different VA practitioner. The proposed expansion of authorized internet prescribing for VA practitioners responds directly to the evolving landscape of the healthcare needs of VA patients, advancements in telemedicine, and DEA's capacity to implement safeguards that protect against potential misuse. The need for comprehensive, accessible medical care for VA patients has been a consistent priority; however, recent factors underscore the necessity for regulatory updates. Notably, the COVID–19 pandemic accelerated the adoption and acceptance of telemedicine, demonstrating its effectiveness in maintaining continuity of care without in-person interactions, particularly for vulnerable populations as discussed below.[23] This shift has underscored the need for accessible controlled-substance prescribing via telemedicine, enabling VA practitioners to respond swiftly and safely to VA patients' healthcare needs. VA now has improved tools and data systems, including enhanced monitoring of telemedicine practices and centralized systems like the VA's internal prescription monitoring database, allowing for more effective oversight than what was available in the past.[24] These advances support a framework that meets current clinical and oversight needs.

Further, alternative telemedicine provisions, such as those outlined in 21 U.S.C. 802(54)(A)–(B), (F), are insufficient to address the unique policy goals of this rulemaking. For instance, the requirement for an in-person medical evaluation to establish a prescribing relationship fails to accommodate VA patients with limited mobility, access issues, or chronic health conditions that make travel difficult. While theoretically possible for some VA patients to attend an in-person medical evaluation with every provider, practical barriers mean that an in-person medical evaluation is often not feasible or results in delayed access to needed medications. VA's centralized healthcare model offers a unique opportunity to manage these challenges responsibly, with systems that allow for comprehensive patient oversight across facilities, secure data sharing, and a controlled, consistent telemedicine infrastructure. The rule thus leverages the VA's specific capabilities to meet VA patients' needs without over-relying on a one-size-fits-all approach to telemedicine, creating tailored, effective access to care for VA patients while maintaining appropriate oversight that ensures the continued protection of patient health through the mitigation of diversion and prevention of overprescribing.

This approach is based on several considerations:

A. Specialized Needs of Veterans

Upon separation from the military, many veterans face physical, mental,

[23] Aday, L.A. (2002). At Risk in America: The Health and Health Care Needs of Vulnerable Populations in the United States, 2 (13).

[24] Frequently Asked Questions—VA EHR Modernization. *https://digital.va.gov/ehr-modernization/frequently-asked-question/#:~:text=VA%27s%20Electronic%20Health%20Record%20Modernization%20(EHRM)%20program%20is%20managing%20the,)%2C%20to%20the%20Federal%20EHR.*

and social issues that categorize them as a vulnerable population. Due to the nature of their military service, the veteran population is comprised of individuals who may be diagnosed with serious medical conditions which require specialized care.[25] Some of these medical conditions include, but are not limited to, traumatic brain injury, Post-Traumatic Stress Disorder (PTSD), loss of limb(s), and medical conditions related to exposure to hazardous environments and materials (*e.g.,* medical conditions associated with the exposure to the herbicide ''Agent Orange'' during the Vietnam War).[26] To ensure that VA is able to accomplish its mission to provide comprehensive medical care to all veterans receiving care through its healthcare system, this final rule provides that VA practitioners are authorized to prescribe controlled substances via telemedicine, so long as the VA patient has an established medical relationship with any VA practitioner who has conducted at least one in-person medical evaluation of the patient, at any time, among other requirements. It is important to note, that within the scope of this final rule, ''VA patient'' refers to a veteran as defined in 38 CFR 3.1 as ''a person who served in the active military, naval, or space service and who was discharged or released under conditions other than dishonorable'' and is receiving medical care via the VA healthcare system. It also includes persons otherwise eligible under title 38, United States Code, or any other law authorizing the Secretary of Veterans Affairs to furnish health care.

1. *Vulnerable Population.* The veteran population is comprised of individuals from a cross-section of the American people, including the elderly, disabled, chronically ill, racial and ethnic minorities, individuals who identify as lesbian, gay, bisexual, transgender, or queer (LGBTQ), and those who are economically disadvantaged.[27] These vulnerable groups face an increased risk of health-related problems, and due to a lack of access to health care, their mortality rates are higher, and their quality of life may be lower than that of the American population at-large.[28] [29]

2. *Geographic and Physical Barriers to Care.* Approximately 2.7 million veterans receive VA healthcare and live in rural or underserved areas where access to healthcare facilities is limited, particularly for the complex care needed by many veterans.[30] [31] Of these veterans, 54 percent are aged 65 or older, and 44 percent earn less than $35,000 per year.[32] Requiring frequent in-person medical evaluation for veterans who have already established a relationship with the VA healthcare system would create a significant barrier to care, potentially leading to undiagnosed or untreated conditions and worsening health outcomes.

Additionally, for veterans with significant mobility issues or chronic pain, traveling to in-person appointments can be daunting and may discourage them from seeking necessary medical attention.[33] One of the top five cited reasons that veterans cancel medical appointments is transportation issues.[34] Authorizing VA practitioners to prescribe controlled substance medications via telemedicine would facilitate access to medications that are crucial for managing patients' overall health and wellbeing.

3. *Mental Health Considerations.* Veterans have a higher risk for mental health disorders, traumatic brain injuries, and suicide when compared to their civilian counterparts.[35] One in three veterans experience some type of mental health issue, including but not limited to PTSD, depression, or anxiety.[36] In the 2023 VA Annual Benefits Report, 2,564,653 veterans were receiving disability compensation benefits for a mental health condition. Of these, 1.4 million were for PTSD and an additional 322,158 veterans were receiving benefits for major depressive disorder.[37] The stigma associated with seeking mental health help can deter veterans from attending in-person appointments, making telehealth an essential alternative path to receiving care.[38] By allowing VA practitioners to prescribe controlled substances without requiring more than one in-person medical evaluation with a VA practitioner, this final rule will support the mental health needs of the veteran community, making it easier for them to access treatments and controlled substance medications that can significantly improve their quality of life.

B. Unique Structure of VA Health Care

The VHA is one of the largest Federal health care systems in the United States, providing care at more than 1,300 facilities, including more than 150 VA Medical Centers and 1,100 VHA outpatient clinics to over 9 million veterans in the integrated VA health care program.[39] [40] As a Federal healthcare system, the VA establishes, maintains, and ensures compliance with standardized internal policies and procedures, including those to prevent and detect diversion of controlled substances, and engages in quality improvement and inspection activities.[41]

[39] It is important to note that the VA is comprised of three entities that serve unique missions: (1) the Veteran Benefits Administration, which provides benefits and services, such as disability compensation and needs-based pension benefits; (2) the VHA, which provides healthcare to veterans; and (3) the National Cemetery Administration, which provides veterans with burial services and memorials. The scope of this final rule focuses solely on the VHA, as it is responsible for the administration of healthcare to the veteran population.

[40] About VHA—Veterans Health Administration (*va.gov*). As a general matter, integrated healthcare refers to ''coordinated care that addresses all aspects of patient health, focuses on a patient's individual needs, and involves a multidisciplinary team of health care professionals.'' *https://www.va.gov/health/aboutvha.asp#:~:text=The%20Veterans%20Health%20Administration%20(VHA,Veterans%20enrolled%20in%20the%20VA.*

[41] Readiness for the Patient-Centered Medical Home: Structural Capabilities of Massachusetts Primary Care Practices—PMC (*nih.gov*) *https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2629002/*

1. *VA Oversight and Control.* The VA's continued commitment to patient safety is evidenced by its ongoing efforts to combat prescription drug misuse through education, monitoring, and intervention programs. These rigorous internal controls include regular audits, prescription monitoring programs, and adherence to established clinical guidelines, ensuring that controlled substances are prescribed ethically and as appropriate for the patient.[42] Additionally, the VA continues to collaborate closely with DEA and other regulatory bodies to ensure compliance with applicable Federal and state regulations related to prescribing controlled substances, including to ensure that VA practitioners acting in the usual course of their professional practice issue controlled substance prescriptions for legitimate medical purposes. This continued partnership enhances the VA's ability to maintain high standards of care while ensuring the safety of veterans receiving controlled substances.

2. *Movement Towards an Integrated EHR.* As a Federal health care system, VA delivers standardized medical care through multidisciplinary team(s) of health care professionals who share information regarding veteran patients through data systems that cross VA facilities.[43] VA's national, integrated health care system allows VA practitioners to access information on a VA patient's encounter history, prior prescriptions, and any relevant treatment plans. VA is transitioning from its current medical records system to a more robust Federal EHR which will share information among the VA, the Department of Defense, the U.S. Coast Guard, the National Oceanic and Atmospheric Administration, and participating community care providers.[44]

III. Summary of the General Telemedicine NPRM's Veteran Affairs-Specific Provisions and Changes in This Final Rule

As noted above, safeguards within the regulations proposed in the General Telemedicine NPRM generally would have limited initial prescriptions of non-narcotic schedules III–V controlled substances to no more than a 30-day supply in instances where the patient had never had an in-person medical evaluation with the prescribing practitioner, and additional prescriptions beyond the initial 30-day prescription would have required that the patient undergo an in-person medical evaluation. The proposed General Telemedicine NPRM also would have generally prohibited the telemedicine prescribing of schedule II and narcotic controlled substances in schedules III through V, unless there had been a qualifying referral.

As also noted above, in the General Telemedicine NPRM, the provisions governing VA practitioners largely took the form of exemptions from these safeguards applicable to non-VA practitioners. Specifically, the General Telemedicine NPRM proposed that, subject to safeguards discussed below, a VA practitioner would be authorized to issue a prescription for controlled substances via telemedicine to a VA patient without a qualifying referral if that VA patient had previously been evaluated in-person by a VA practitioner. It additionally proposed that the VA practitioner would be authorized to prescribe a supply in addition to the 30-day supply if the in-person medical evaluation had been conducted by a VA practitioner. The NPRM proposed this would include controlled substances in schedules II–V.

In addition to these proposed exemptions from some of the safeguards in the General Telemedicine NPRM, VA practitioners would also be subject to certain additional safeguards relative to other telemedicine practitioners. Specifically, before prescribing controlled substances pursuant to the regulations proposed in the General Telemedicine NPRM, VA practitioners would be required to review not only the PDMP of the state in which the patient was located at the time of the telemedicine visit, but also the VA's internal prescription database when prescribing controlled substances via telemedicine.

After reviewing comments received in response to the General Telemedicine NPRM, as will be discussed in more detail below, DEA and HHS are adopting this final rule to treat VA practitioners as was proposed in the General Telemedicine NPRM. However, while the General Telemedicine NPRM proposed a generally applicable telemedicine scheme, and then created exemptions or additional requirements for VA practitioners relative to that generally applicable scheme, DEA and HHS are now finalizing only the proposed treatment of VA practitioners from the General Telemedicine NPRM, without finalizing the broader scheme. Most notably, when VA patients have had an in-person medical evaluation with a VA practitioner previously, this final rule authorizes a different VA practitioner, via the practice of telemedicine, to issue prescriptions for that patient for schedule II–V controlled substances, without being limited to a 30-day supply.

In this final rule, DEA and HHS are also finalizing, among other things, the General Telemedicine NPRM's proposed requirement for a VA practitioner to review the VA's internal prescription database and the PDMP data of the state in which the patient is located during the telemedicine encounter prior to issuing a prescription via telemedicine. It also finalizes the proposed requirement that a prescription for controlled substances be limited to a 7-day supply in situations when either the VA's internal prescription database or the PDMP data of the state in which the patient is located during the telemedicine encounter is unavailable or non-operational. It also requires that under circumstances where the VA patient is located in a state which does not have a PDMP program, the VA practitioner review the VA EHR prior to issuing a prescription for controlled substances in excess of a 7-day supply. DEA and HHS believe these changes will provide VA practitioners with necessary and appropriate flexibilities to provide care for our Nation's veterans, while still ensuring effective controls are in place to safeguard against diversion or misuse of controlled substances.

IV. Discussion of Veteran-Related Public Comments Received in Response to the March 1, 2023, General Telemedicine NPRM

DEA received a total of 233 veteran-related comments in response to the General Telemedicine NPRM.[45] Of those comments, 87 focused on non-VA healthcare or unrelated issues and therefore are outside the scope of this final rule, as this rulemaking focuses solely on the practice of telemedicine by VA practitioners within the VA

[45] 88 FR 12875 (Mar. 1, 2023).

healthcare system. As such, those comments will not be discussed further within this rulemaking. DEA and HHS thank all commenters for their input during the telemedicine rulemaking process.

In this final rule, DEA and HHS are only finalizing the proposals specific to the VA from the General Telemedicine NPRM. Therefore, in this final rule DEA will not be responding to comments deemed outside the scope of VA telemedicine. Moreover, the Special Registrations NPRM, focuses on non-VA practitioners and allows for further opportunity for public comment and additional development of a framework suited to the diverse operational environments outside the VA's integrated healthcare system. DEA has grouped the comments into several distinct categories below in order to effectively summarize and respond to the VA-related comments received in response to the General Telemedicine NPRM. Of the comments received, some comments pertained to only one issue while others encompassed several issues.

In-Person Medical Evaluation Requirement

Comment: DEA received the largest number of comments with concerns pertaining to the General Telemedicine NPRM's proposed requirement that, as a general matter, would require an in-person medical evaluation as a predicate to receiving a telemedicine prescription for either (1) a schedule II substance or a narcotic controlled substance in schedules III–V or (2) more than a 30-day supply of a non-narcotic controlled substance in schedules III–V. Specifically, commenters stated that requiring an in-person medical evaluation to receive such prescriptions would create an undue barrier for veterans seeking care within the VA healthcare system.

Response: DEA and HHS recognize the hardships an in-person medical evaluation requirement could cause to receive such prescriptions and why this requirement could be burdensome to VA patients.[46] Consequently, this final rule expands the telemedicine prescribing authority of VA practitioners so long as another VA practitioner has conducted an in-person medical evaluation with the VA patient. This expansion eliminates the need for a VA patient to undergo an in-person medical evaluation with the prescribing practitioner prior to receiving telemedicine services. For the reasons discussed above, DEA and HHS believe that this expansion reduces the burdens placed on VA patients receiving medical care from the VA and addresses these commenters' concerns, while at the same time providing sufficient safeguards against diversion.

Access to Care

Comment: DEA received 45 comments raising concerns about the challenges VA patients face, including disabilities that cause mobility issues and residency in rural areas, emphasizing that telemedicine is often their only viable option for accessing healthcare (particularly specialized care). Commenters asserted that the General Telemedicine NPRM posed practical barriers to care due to the burdens associated with conducting an in-person medical evaluation, such as long travel times and lack of available providers.

Response: DEA and HHS acknowledge that in-person medical evaluation requirements may be burdensome for patients with limited ability, either geographically or physically, to receive an in-person medical evaluation in order to be prescribed controlled substances either in the first instance or for additional duration. As noted above, this final rule authorizes indefinite prescribing via telemedicine so long as the VA patient has previously had at least one prior in-person medical evaluation with another VA practitioner. DEA and HHS believe that this will reduce the overall burden placed on VA patients living in rural areas and those with mobility issues, while still providing sufficient safeguards against diversion.

Negative Impact on VA Patients and VA Healthcare

Comment: DEA received 39 comments specifically highlighting potential adverse effects the General Telemedicine NPRM's in-person medical evaluation requirements would have on VA patients, including veterans, who rely on VA telemedicine services. Commenters stated that the VA's national telemedicine system, which is considered efficient and widely utilized, could be impacted by an in-person medical evaluation requirement. Many of these commenters urged for an exemption for VA practitioners due to the unique needs of the VA's patient population, which includes veterans.

Response: DEA and HHS agree that VA's use of telemedicine services has been effective and has taken under advisement the potential impact that any restrictions would impose on the VA healthcare system. Accordingly, this final rule authorizes indefinite prescribing via telemedicine so long as the VA patient has previously had at least one prior in-person medical evaluation with another VA practitioner, as noted above.

Mental Health Care

Comment: DEA received 28 comments from mental health professionals or patients within the VA healthcare system who emphasized the importance of telemedicine in providing continuous care for VA patients with mental health conditions. These commentors raised concerns that limiting telemedicine would have severe consequences for VA patient populations, including veterans.

Response: DEA and HHS recognize the unique challenges that mental health patients and providers face, particularly as it relates to veterans. DEA and HHS note that 1 in 3 veterans experience some type of mental health issue, including, but not limited to, PTSD, depression, and anxiety.[47] DEA and HHS believe that the changes incorporated within this final rule provide an environment where continuity of care can be maintained, while still helping to ensure VA patient safety and safeguard against diversion.

V. Scope of Final Rule

Once an in-person medical evaluation of a VA patient has been conducted by a VA practitioner, this practitioner-patient relationship is extended to all VA practitioners engaging in the practice of telemedicine (which is defined as ''telehealth'' in 38 CFR 17.417).[48] Under such circumstances, this rulemaking essentially avoids the need for VA practitioners to obtain a DEA Special Registration for telemedicine before issuing prescriptions for controlled substances; such Special Registrations are the subject of the Special Registrations NPRM. The VA-specific regulations discussed below align with DEA's core responsibilities of regulating controlled substances, while enabling the VA to leverage its existing integrated and standardized model of care to allow VA practitioners to prescribe controlled substances to VA patients when they have not conducted an in-person medical evaluation. It is important to

[46] DEA is proposing to address this issue more generally for individuals outside of the VA healthcare system under the Special Registrations NPRM.

[47] McGuffin, J. J., Riggs, S.A., Raiche, E.M., & Romero, D.H. (2021). Military and Veteran help-seeking behaviors: Role of mental health stigma and leadership. Military Psychology, 33(5), 332–340. *https://doi.org/10.1080/08995605.2021.1962181.*

[48] 38 CFR 17.417(a)(4) and (b) define a healthcare professional's scope while practicing telemedicine within the VA healthcare system.

emphasize that this final rule will only be applicable in situations where the VA patient has previously undergone an in-person medical evaluation with a VA practitioner, thus establishing a preexisting relationship of care with the VA healthcare system. A preexisting relationship of care between a VA patient and the VA healthcare system will be deemed to exist if, even prior to promulgation of this rule, the VA patient has undergone an in-person medical evaluation with a VA practitioner. The changes to DEA's regulations are consistent ''with effective controls against diversion and otherwise consistent with the public health and safety'' pursuant to 21 U.S.C. 802(54)(G). DEA is promulgating these regulatory changes in concert with HHS, and HHS was consulted in the creation of these regulatory provisions and concurs with this rulemaking. HHS also has advised DEA that no further rulemaking by HHS is necessary for the promulgation of this joint final rule. Moreover, these regulations, and DEA regulations generally, do not apply to telehealth encounters that do not result in a prescription for controlled substances.[49] Simply put, the regulations promulgated in this final rule do *not* apply unless a VA practitioner deems it necessary to prescribe controlled substances to a VA patient via telemedicine and that VA patient has previously had an in-person medical evaluation performed by a VA practitioner.

The following provides the criteria that must be met to allow a VA practitioner to engage in the practice of telemedicine under this final rule:

A. *Criteria for Practitioners.* To be eligible for the provisions within these regulations, the VA practitioner must meet each of the following criteria:

i. Be either employed by, or in contract with, the VA, and be operating within the scope of their employment as defined in 38 CFR 17.419.[50]

ii. For VA contracted practitioners, the prescribing practitioner conducting the telemedicine encounter must be practicing at either a VA facility or a VA community clinic. For the scope of this rule, practitioners providing medical care to VA patients as part of the Community Care Network (CCN) are not considered to be practicing within a VA facility or a VA community clinic.

iii. Be registered with DEA under 21 U.S.C 823(g) in any State or be utilizing the DEA registration of a hospital or clinic operated by the VA registered under section 823(g).

iv. Be prescribing within the usual course of their practice and ensure all prescribing practices are in accordance with applicable State and Federal law(s).

The above criteria are designed to ensure that a practitioner engaging in the practice of telemedicine is operating within their capacity as a VA practitioner and is acting in accordance with both applicable Federal and state law(s) and regulation(s).

B. *Requirements for Previous In-Person Medical Evaluation.* To be eligible for the provisions within these regulations, an in-person medical evaluation must have been conducted by a VA practitioner, who at the time of the evaluation:

i. Conducted the evaluation within their official capacity as an employee of the VA (as defined above), and

ii. The nature of the in-person medical evaluation falls within the scope of their practice of medicine as defined in 38 CFR 17.419.

The criteria in this section establish the circumstances when a previous in-person medical evaluation conducted by another VA practitioner would establish the necessary relationship of care between patient and the VA healthcare system so as to allow for use of the telemedicine flexibilities finalized in this final rule.

C. Requirements for the Review of the VA's Internal Prescription Database and Prescription Drug Monitoring Program. Before issuing a telemedicine-controlled substance prescription otherwise authorized by this final rule, the prescribing practitioner must:

i. Review both the VA patient's EHR (to include the VA's internal prescription database) and the PDMP data of the state in which the patient is located at the time of the telemedicine encounter for any prescriptions of controlled substances issued to the patient and annotate the date and time that such a review was conducted in the patient's EHR. If either the VA's internal prescription database or the PDMP for the state where the patient is located at the time of the telemedicine encounter is unavailable or inaccessible for any reason, the prescribing practitioner must annotate the date and time that such a review was attempted in the patient's EHR and provide a reason as to why a review was unable to be completed.

ii. The review of the VA patient's EHR (to include the VA's internal prescription database) and state PDMP must encompass the previous 12 calendar months, proceeding the controlled substance prescription, of the patient's record, or if less than a year of data is available, for the entire period of data availability.

iii. In instances where the VA patient's EHR (to include the VA's internal prescription database) or the state PDMP for the state the patient is located at the time of the telemedicine encounter (if the state has such a program) are either unavailable or non-operational, prescribing VA practitioners must limit the supply of the controlled substance prescription to 7-days. Once access is restored to the VA patient's EHR (to include the VA's internal prescription database) and the PDMP, if one exists for the state where the VA patient is located at the time of the telemedicine encounter, the prescribing practitioner must review the relevant data prior to prescribing an additional supply of the controlled substance, in accordance with the otherwise applicable requirements discussed above. Additionally, the prescribing VA practitioner must annotate the date and time that such a review was attempted in the patient's EHR and provide a reason as to why a review was unable to be completed. The VA practitioner may then issue a controlled substance prescription in excess of a 7-day supply limit.

iv. If the VA patient is located in a state which does not use a PDMP, the VA practitioner must review the patient's EHR before issuing a prescription for controlled substances for more than a 7-day supply.

The above criteria are designed to safeguard against the risk of diversion of controlled substances. The review of the patient's VA medical record (to include the internal prescription database) and the PDMP data for the state in which the patient is located gives the prescribing VA practitioner additional insight into the patient's prescription history of controlled substances, allowing for additional clarity on the medical appropriateness of an additional controlled substance prescription issued via telemedicine. Moreover, limiting the quantity of controlled substances that can be prescribed during periods when the either the VA patient's EHR (to

[49] This is an important distinction given potential conflation between colloquial use of the term ''telemedicine'' and the statutory definition of the ''practice of telemedicine'' in the CSA and these regulations. To illustrate this point, the following scenarios are non-exhaustive examples in which ''telemedicine'' may occur (in the colloquial sense) but would not constitute the ''practice of telemedicine'' under the CSA or these regulations: (1) a practitioner issues a prescription for a non-controlled substance; (2) a practitioner treats the patient through audio-visual means and, after doing so, determines the patient does not require controlled substances; or (3) a practitioner is a mental health counselor who treats patients using ''talk therapy'' exclusively, without prescribing controlled substances.

[50] 38 CFR 17.419 provides the requirements for an individual to be considered a health care professional within the scope of the VA healthcare system.

include the VA's internal prescription database) or the PDMP for the state where the VA patient is located at the time of the telemedicine encounter is unavailable provides an additional safeguard to ensure that controlled substances are prescribed appropriately, while preventing a lapse in care.

VI. Regulatory Analyses

Executive Orders 12866, 13563, and 14094 (Regulatory Review)

DEA and HHS have determined that this rulemaking is a ''significant regulatory action'' under section 3(f) of Executive Order (E.O.) 12866, Regulatory Planning and Review, but it is not a section 3(f)(1) significant action. Accordingly, this final rule has not been submitted to the Office of Management and Budget for review. This rule has been drafted and reviewed in accordance with E.O. 12866, Regulatory Planning and Review, section 1(b), Principles of Regulation; E.O. 13563, Improving Regulation and Regulatory Review, section 1(b), General Principles of Regulation; and E.O. 14094, Modernizing Regulatory Review.

This final rule authorizes Department of Veterans Affairs practitioners acting within the scope of their VA employment to prescribe controlled substances via telemedicine to a VA patient with whom they have not conducted an in-person medical evaluation. VA practitioners are permitted to prescribe controlled substance medications to VA patients if, among other things, another VA practitioner has previously conducted an in-person medical evaluation of the VA patient. DEA and HHS estimate the total annual cost savings of this rule is $2.54 million due to patient travel time and cost savings. Two million three hundred ninety thousand dollars ($2.39 million) of the cost savings is realized by the patient and $0.15 million of the cost savings is realized by the VA in form of reduced transfers (travel reimbursements). Government benefit payments are considered as ''transfers.'' [51] Additionally, DEA and HHS estimate an additional annual cost to the VA of $1.76 million due to the required EHR and PDMP reviews. The full analysis of costs, cost savings, and transfer savings is provided below.

1. Baseline

For DEA and HHS's analysis of the economic impact of this final rule, the baseline is the period before the temporary COVID–19 PHE exceptions to the Ryan Haight Act. During the baseline period, under 21 U.S.C. 829(e), the Ryan Haight Act has generally required an in-person medical evaluation prior to the prescription of controlled substances. This final rule provides:

(1) *In-Person medical evaluation exemption:* exempts VA practitioners from the requirement of an in-person medical evaluation if the patient has had a prior in-person medical evaluation from any VA practitioner (21 CFR 1306.52(a)(3)).

(2) *PDMP review:* requires a PDMP review of the state in which the patient is located, if the state has such a program (21 CFR 1306.52(b)(1)).

The costs, cost savings, and benefits associated with exempting VA practitioners from the requirement of conducting an in-person medical evaluation under the circumstances permitted by this rule were evaluated from the perspective of the following impacted parties in the following areas: patients, the VA, and the risk of diversion. Those costs, cost savings, and benefits are discussed below.

2. Patient Costs, Cost Savings, and Benefits

This rule benefits VA patients by reducing transportation costs and travel time costs, and by expanding access to medical care. The cost savings associated with this rule predominantly stem from reductions in two categories of costs: (1) the cost of time, and (2) the cost of transportation.

a. Patient's Cost of Time per Practitioner Visit

To derive patients' cost of time, DEA needed to assess two factors: the average length of time to travel and wait for a practitioner's appointment, and the average opportunity cost (*i.e.,* forgone wages) to travel and wait for a practitioner's appointment. Simply put, (average length of the time) × (opportunity cost) = patient's cost of time. To determine an appropriate average length of time, DEA consulted relevant medical articles. While the practice of telemedicine in this final rule is a subset of telehealth that focuses on clinical services by practitioners, broader telehealth research can inform our understanding of telemedicine and provide a greater array of research to use in our analysis. It is also common for research to indicate it relates to ''telehealth,'' even when it may be more appropriate to call it a ''telemedicine'' study.[52]

To determine the average length of time to be used in this analysis, DEA consulted various studies. A 2023 study focused on cancer (non-elderly) telehealth patients treated between April 1, 2020, and June 30, 2021. This study found that telehealth patients saved about 2.9 hours of round-trip driving time and 1.2 hours of in-clinic time per visit, including time spent with a practitioner.[53]

However, as this study focused on non-elderly cancer patients, it did not adequately represent the broader scope of telehealth patients considered in this analysis. In contrast, a 2019 study indicated that the average length of time (combining travel and waiting time) was 45 minutes (0.75 hours) per visit.[54] Given that 68.2 percent of all current telehealth claims are related to mental health, not non-elderly cancer patients, DEA believes that the 45-minute average is more relevant for this analysis.[55] DEA, however, acknowledges that there may be significant variability in the average lengths of time across different patient populations.

To determine an appropriate average opportunity cost (*i.e.,* forgone wages) to travel and wait for a practitioner's appointment, DEA consulted relevant data from the U.S. Bureau of Labor Statistics (BLS). DEA used median hourly wage data for all occupations ($23.11) as a proxy for the hourly average opportunity cost of travel and wait time for all patients, as can be seen in table 1 below.[56] Additionally, BLS reports that average wages and salaries for civilians are 68.8 percent of total compensation. The 68.8 percent of total compensation equates to 45.3 percent (100 percent/68.8 percent—1) load on wages and salaries.[57] The load of 45.3 percent, or $10.47 (0.453 × $23.11), is added to the hourly rate to estimate the loaded hourly rates. As can be seen in table 1, the loaded hourly wage for patients is $33.58 ($23.11 + $10.47).

[51] Office of Management and Budget (OMB) Circular A–4.

[52] Accordingly, in discussing such studies, DEA will use the word the word ''telehealth'' instead of telemedicine.

[53] Patel KB, Turner K, Alishahi Tabriz A, et al. Estimated Indirect Cost Savings of Using Telehealth Among Nonelderly Patients With Cancer. JAMA Netw Open. 2023;6(1):e2250211.

[54] Rhyan C. Travel and Wait Times are Longest for Health Care Services and Result in an Annual Opportunity Cost of $89 Billion. Altarum (Feb. 22, 2019), *https://altarum.org/travel-and-wait* (accessed 9/5/2023).

[55] Fair Health, ''Monthly Telehealth Regional Tracker.'' *https://www.fairhealth.org/fh-trackers/telehealth* (accessed 8/4/2023 selecting May 2023 using National Statistics data dropdown menu).

[56] Bureau of Labor Statistics, Occupational Employment and Wages, May 2023 National Occupational Employment and Wage Estimates, Occupation code: 00–0000 All Occupations, *https://www.bls.gov/oes/2023/may/oes_nat.htm.*

[57] Bureau of Labor Statistics, Employer Costs for Employee Compensation—June 2024, *https://www.bls.gov/news.release/archives/ecec_09102024.pdf* (accessed 11/13/2024).

Therefore, the $33.58 loaded hourly wage represents the hourly *average opportunity cost* to travel and wait for a practitioner's appointment.

TABLE 1—PATIENTS LOADED HOURLY WAGE

Occupation	Hourly wage ($)	Load for benefits ($)	Loaded hourly wage ($)
All Occupations	23.11	10.47	33.58

Therefore, the patient's cost of time to travel and wait for a practitioner's visit—and thus the time cost savings achieved by telemedicine patients who could forego such a trip—equals $25.19 ($0.75 \times \$33.58$), as can be seen in table 2 below.

TABLE 2—PATIENT COST OF TIME

[per Practitioner's Appointment]

Cost savings	Hourly opportunity cost ($)	Travel and wait time (hours)	Cost per appointment ($)
Time cost savings	33.58	0.75	25.19

b. Patient's Net Cost of Travel per Practitioner Visit

DEA estimates there will be cost savings to VA patients as a result of not having to travel to a VA practitioner for a visit. The patient's net cost of travel is the cost of travel net of reimbursements received from the VA. To determine the cost of travel to and from a practitioner's appointment, DEA used data from the *Southwest Rural Health Research Center* in the *Texas A&M School of Public Health,* and mileage reimbursement rates from the U.S. Internal Revenue Service (IRS). According to a 2017 survey by the *Southwest Rural Health Research Center,* the average national round-trip travel distance for a doctor's visit was 9.9 miles, or 19.8 miles round-trip.[58] Using the IRS travel reimbursement rate for businesses of 67 cents per mile as an estimate of travel cost,[59] the estimated patient's cost of travel to and from a practitioner's appointment is $13.27 ($0.67 \times 19.8$), as can be seen in table 3 below.

TABLE 3—PATIENT TRAVEL COST PER TRIP

Cost savings	Travel cost per mile ($)	Travel distance (miles)	Per appointment cost ($)
Patient travel cost	0.67	19.8	13.27

The VA reimbursement rate is $0.415 per mile for approved, health-related travel, with a current deductible of $6 round-trip for each appointment, up to $18 total each month.[60] Assuming VA patients generally do not reach the $18 monthly deductible limit, the estimated VA mileage reimbursement is $8.22 ($0.415 \times 19.8$) per visit. After a $6 deductible, the net VA reimbursement after deductible is $2.22 ($8.22 − $6) and the patient's net cost of travel is $11.05 ($13.27 − $2.22). Table 4 summarizes the VA reimbursement and patient's net cost of travel.

TABLE 4—VA REIMBURSEMENT AND PATIENT NET TRAVEL COST PER TRIP

	Travel cost per mile ($)	Travel distance (miles)	Per appointment cost ($)
VA mileage reimbursement per trip	0.415	19.8	8.22
Deductible (paid by patient)	N/A	N/A	6.00
Net VA mileage reimbursement per trip	N/A	N/A	2.22
Patient net travel cost per trip	N/A	N/A	11.05

c. Total Number of Telemedicine Visits

This final rule's patient cost savings results from eliminating the need for an in-person medical evaluation or visit. Subsequent telemedicine visits are allowed after that initial in-person medical evaluation or visit, even without the COVID–19 PHE telemedicine flexibilities. So, to calculate the total patient cost savings under this rule, DEA needed to estimate the total number of first-time telemedicine visits resulting in prescriptions for controlled substances.[61] Given the absence of direct information on this point, however, it was necessary for DEA to perform a multi-step analysis or derivation using different available data sources at each step to derive an estimate. First, the number of practitioner visits conducted via telemedicine was reduced to those that constituted first-time telemedicine visits. Second, DEA determined the proportion of the first-time telemedicine visits that would result in prescriptions. Third, it refined the total number of first-time telemedicine visits resulting in prescriptions of controlled substances. And lastly, DEA considered the impact of the rule's requirements and determined the total number of first-time telemedicine visits resulting in prescriptions of controlled substances under this rule. DEA performed this multi-step analysis to derive an estimate of *the number* of first-time telemedicine visits resulting in prescriptions for controlled substances, which resulted in an estimate of the current value for the total patient cost savings.

Step 1: First-Time Visits. Based on a VHA 2023 annual report there were over 9.4 million telehealth encounters to veterans in the home or other offsite locations.[62] DEA needed to further refine the total number of telemedicine practitioner visits to those that constituted first-time telemedicine visits. DEA's focus on first-time telemedicine practitioner visits, rather than all telemedicine visits, was to prevent an overestimation of the total patient cost savings. Under the status quo, after one bona fide in-person medical evaluation, patients are typically permitted to be seen via telehealth thereafter when receiving prescriptions for controlled substances. A potential overestimate of total patient cost savings arises from the fact that patient cost savings under this rule primarily hinge on the bypassing of a first-time, in-person medical evaluation, but not subsequent telemedicine visits.

A 2022 study analyzing trends between 2017–2020 in interstate telehealth use by Medicare beneficiaries, a subset of the population impacted by this rule, shows that the vast majority of practitioner visits are for returning patients, and approximately 10 percent of those practitioner visits are new visits.[63] This is in line with the Center for Disease Control and Prevention's (CDC) 2019 National Ambulatory Medical Care (NAMC) non-Federal survey where 16.8 percent of office visits were for new patients. The CDC's 2019 NAMC survey, however, was not limited to telehealth visits, so DEA decided that the 10 percent estimate from the 2022 interstate telehealth study was more applicable to this analysis.[64] Taking 10 percent of 9,400,000 practitioner visits conducted via telemedicine would provide a total of approximately 940,000 first-time, telemedicine practitioner visits, as can be seen in table 5.

TABLE 5—NUMBER OF FIRST-TIME TELEMEDICINE VISITS

Telemedicine visits	9,400,000
First-time telemedicine visit rate	0.1
First-time telemedicine visits	940,000

Step 2: Visits Resulting in Prescriptions. DEA needed to determine the fraction of first-time telemedicine visits that would result in prescriptions. Looking again at CDC's 2019 NAMC survey, DEA determined, as reflected in table 6, that 291,394,000 visits did not include any prescribing, which means 745,090,000 of the 1,036,484,000 visits, or approximately 72 percent of the visits, did in fact result in the issuance of prescriptions. Because only 72 percent of visits resulted in a prescription, DEA applied the 72 percent to the calculated 940,000 first-time, telemedicine visits resulting in approximately a total of 676,800 first-time telemedicine visits resulting in the issuance of prescriptions, as can be seen in table 7.

TABLE 6—ESTIMATE OF NUMBER OF PRESCRIPTIONS USING VISIT DATA

Number of prescriptions	Number of visits (thousands)	Total number of prescriptions (thousands)
0	291,394	
1	192,488	192,488
2	129,561	259,122
3	84,898	254,694
4	60,766	243,064
5	52,613	263,065
6	34,041	204,246
7	28,900	202,300
8	29,043	232,344
9	23,393	210,537
10	15,320	153,200
11	17,034	187,374
12	14,744	176,928
13	13,419	174,447
14	10,635	148,890

[61] Total Patient Cost Savings = (number of first-time telemedicine visits resulting in prescriptions for controlled substances) * (patient cost savings).

TABLE 6—ESTIMATE OF NUMBER OF PRESCRIPTIONS USING VISIT DATA—Continued

Number of prescriptions	Number of visits (thousands)	Total number of prescriptions (thousands)
15+	38,236	*573,540
Total	**1,036,485	3,476,239

*Used 15 as an approximation for 15+.
**The published total shows 1,036,484, so there is a rounding error of 1.

TABLE 7—ESTIMATE OF NUMBER OF FIRST-TIME TELEMEDICINE VISITS WITH PRESCRIPTIONS

First-time telemedicine visits	.....	940,000
NAMC survey visits—total	1,036,484,000	.....
NAMC survey visits—0 prescriptions	291,394,000	.....
NAMC survey rate—0 prescriptions	0.28	.....
NAMC survey rate—with prescriptions	0.72	0.72
First-time telemedicine visits with prescriptions	.....	676,800

Step 3: Prescriptions for Controlled Substances. DEA then refined the total number of first-time telemedicine visits resulting in prescriptions for controlled substances. According to the Federal Trade Commission (FTC), *Surescripts* has 95% market share in e-prescribing services as of 2023.[65] DEA was able to use 2021 data from the *Surescripts National Progress Report* to determine that approximately 16 percent of all prescriptions (paper and electronic) are for controlled substances.[66] Applying this 16 percent to the total number of 676,800 telemedicine visits resulting in the issuance of prescriptions, provides a value of approximately 108,288 first-time telemedicine visits resulting in prescriptions for controlled substances, as can be seen in table 8.

TABLE 8—CURRENT ESTIMATE OF NUMBER OF FIRST-TIME TELEMEDICINE VISITS RESULTING IN PRESCRIPTIONS OF CONTROLLED SUBSTANCES

First-time telemedicine visits with prescriptions	676,800
Controlled substance (CS) rate	0.16
First-time telemedicine visits with CS prescriptions	108,288

Step 4: Effect of this Rule. Lastly, DEA determined the total number of first-time telemedicine visits resulting in prescriptions of controlled substances under this rule. Under this final rule, patients would not have an in-person follow-up visit after the first-time telemedicine visit; they would never have to see the prescribing practitioner in person. Based on a study by *Epic Research* of primary care visits between March 1, 2020 and October 15, 2022, 61 percent of telehealth visits did not require an in-person follow-up.[67] A similar study by *Epic Research* on specialty visits provided that 85 percent of mental health and psychiatry telehealth visits did not have an in-person follow-up visit.[68] Because this rule is not limited to mental health, DEA applied the broader and lower 61 percent to the 108,288 first-time telemedicine visits resulting in prescriptions of controlled substances. The multi-step analysis ultimately derived a current estimate of 66,056 first-time telemedicine visits resulting in prescriptions of controlled substances under this rule, as can be seen in table 9.

[65] *FTC Reaches Proposed Settlement with Surescripts in Illegal Monopolization Case Federal Trade Commission* (July 27, 2023), *https://www.ftc.gov/news-events/news/press-releases/2023/07/ftc-reaches-proposed-settlement-surescripts-illegal-monopolization-case* (accessed 9/24/2024).

[66] According to the Surescripts National Progress Report, there were 256.9 million prescriptions of controlled substances prescribed through EPCS, accounting for 73 percent of the total number of prescriptions of controlled substances. Using these figures, DEA derived the total number of prescriptions of controlled substances to be 351.9 million ((256.9 million) * (100)/(73) = 351.9 million). There were 2.12 billion prescriptions of controlled substances and non-controlled substances prescribed electronically, accounting for 94 percent of the total number of all prescriptions paper or electronic for controlled substances or non-controlled substances. DEA derived the total number of all prescriptions paper or electronic for controlled substances or non-controlled substances to be 2.26 billion ((2.12 billion) * (100)/(94) = 2.26 billion). Using the total of all controlled substances prescriptions (351.9 million) and the total of all prescriptions (2.26 billion), DEA determined that 16% of all prescriptions are for controlled substances ((256.9 million) * (100)/2.26 billion = 16 percent).

First-time telemedicine visits with prescriptions			*676,800*	676,800
Controlled substance (CS) rate				0.16
First-time telemedicine visits with CS prescriptions				*108,288*
First-time telemedicine visits that do not have an in-person follow up visit.				0.61
First-time telemedicine visits under this rule with CS prescriptions				66,056

d. Total Patient Cost Savings

Each telemedicine visit saves patients time and travel costs of $25.19 and $13.27, respectively, for a total savings of $38.46. Applying the cost savings of $38.46 to the estimated number of first-time telemedicine visits under the proposed rule with controlled substance prescriptions results in a total patient cost savings of $2,540,514 ($38.46 × 66,056) per year.

Additionally, from table 4, DEA estimates VA will reimburse the patient $2.22 per trip. Applying this reimbursement amount to the number of trips, the VA reimbursement amount (transfers to the patient) is $146,644 ($2.22 × 66,056). Subtracting the VA reimbursement amount from the total cost savings, DEA estimates a total patient net cost savings of $2,393,870 ($2,540,514 − $146,644) per year. Table 10 summarizes this calculation.

TABLE 10—TOTAL COST/TRANSFER SAVINGS

	Total cost savings ($)	VA reimbursement ($)	Patient net cost savings ($)
Patient cost savings (per visit)	38.46	2.22	N/A
Patient cost savings	2,540,514	146,644	2,393,870

e. Patient Benefit: Increased Access to Care

While DEA estimated the patient cost savings for the estimated 66,056 patient visits that would fall under this final rule, DEA is unable to quantify the number of patients that will be treated that would not have been treated absent this regulation. In recent years, telemedicine has emerged as a vital solution for enhancing healthcare accessibility for VA patients, especially in the face of healthcare shortages. Notably, telemedicine extends its benefits to patients in remote and other underserved areas, including by offering access to specialized care. While DEA is unable to quantify the number of patients that will be treated that would not have been treated absent this regulation, it is reasonable to assume there will be VA patients that will fall in this category and the benefits of increased access to care are not negligible.

3. VA Costs and Transfer Savings

Impact on the VA is primarily due to two primary factors, additional burden for VA patient EHR and PDMP reviews prior to prescribing and reduced travel reimbursements to VA patients.

Prior to prescribing, the practitioner must conduct a review of both the patient's VA medical record, to include in the VA's internal prescription database, and the PDMP of the state in which the patient is located at the time of the telemedicine encounter (if the State has such a program) for controlled substance prescription(s) for the patient's previous twelve (12) months preceding the controlled substance prescription(s), or if less than a year of data is available, for the entire prescription period. Additionally, the VA practitioner must annotate in the VA patient's EHR their attempts to obtain the PDMP of the state in which the patient is located and VA internal prescription database data. DEA estimated the cost of this requirement by estimating the cost per review and applying the cost to the number of patient visits.

Based on the BLS wage data, DEA estimated the cost per review for physicians, nurse practitioners (NPs), and physician's assistants (PAs), then calculated a weighted average cost per review based on the number of physicians, NPs, and PAs.[69]

The mean wage data for physicians is $129.71 and the median wage for PAs and NPs are $62.51 and $60.70, respectively.[70] Additionally, BLS reports that average wages and salaries for civilians are 68.8 percent of total compensation. The 68.8 percent of total compensation equates to 45.3 percent (100 percent/68.8 percent − 1) load on wages and salaries.[71] The load of 45.3 percent is added to wages and salaries by multiplying the wages and salaries by 1.453 (1 + 0.453). The resulting loaded hourly rates are $188.47 ($129.71 × 1.453), $90.83 ($62.51 × 1.453), and $88.20 ($60.70 × 1.453), for physicians, PAs, and NPs, respectively.

Based on a 2018 study, it takes a practitioner 27 seconds to log in and 37 seconds to retrieve a report once logged

[69] Bureau of Labor Statistics, Occupational Employment and Wages, May 2023 National Occupational Employment and Wage Estimates, *https://www.bls.gov/oes/2023/may/oes_nat.htm* (accessed 10/18/2024). The following occupation codes were used: 29–1210 Physicians and 29–1240 Surgeons (for ''physician''), 29–1171 Nurse Practitioners, and 29–1071 Physician Assistants.

[70] *Id.* (Weighted average of mean hourly wages for 29–1210 Physicians and 29–1240 Surgeons. Used ''mean'' hourly wages because ''median'' was not available.)

[71] Bureau of Labor Statistics, Employer Costs for Employee Compensation—March 2023, *https://www.bls.gov/news.release/archives/ecec_06162023.pdf* (accessed 9/24/2024).

in.[72] The total time it takes to retrieve a PDMP report is roughly a minute (27 + 37 = 64 seconds) or 0.017 (1/60) hours. Applying 0.017 hours to the loaded hourly rates, the estimated labor cost to complete the review for physicians is $3.20 ($188.47 × 0.017), for physician assistants is $1.54 ($90.83 × 0.017), and for nurse practitioners is $1.50 ($88.20 × 0.017). Table 11 summarizes the results.

TABLE 11—EHR AND PDMP CHECK TIME COST

Occupation	Hourly wage ($)	Load for benefits ($)	Loaded hourly wage ($)	PDMP check time (hours)	Cost per PDMP check ($)
Physicians	129.71	58.76	188.47	0.017	3.20
Physician Assistant	62.51	28.32	90.83	0.017	1.54
Nurse Practitioners	60.70	27.50	88.20	0.017	1.50

As of October 19, 2024, DEA estimates there were 15,148 physicians, 5,351 NPs, and 1,513 PAs registered with DEA that meet the VA employment requirements of this final rule.[73] For simplicity, DEA calculated a single cost of a review based on the weighted average of the three occupations. The weighted average of the cost of review is $2.67. Table 12 details the calculation.

TABLE 12—EHR PDMP CHECK TIME COST

Occupation	VA registrants	VA registrant weights	Cost per PDMP check ($)	Weighted cost per PDMP check ($)
Physicians	15,148	0.6882	3.20	2.20
Physician Assistant	1,513	0.0687	1.54	0.11
Nurse Practitioners	5,351	0.2431	1.50	0.36
Total	22,012	N/A	N/A	2.67

As discussed earlier in table 9, DEA estimates that annually, there will be 66,056 first time telemedicine patient visits, which are patients visiting a specific practitioner for the first time, that result in a prescription for a controlled substances that fall under this final rule. However, unlike patient travel time and cost savings, since the EHR and PDMP reviews are required for all visits and not just first-time visits, there will not be a first-time visit adjustment. While EHR and PDMP reviews will be required for all prescriptions under this rule, DEA believes PDMP checks are already conducted in most cases, lowering the additional burden imposed by this rule. However, to be conservative, DEA applied the full cost of $2.67 to all telemedicine visits leading to a prescription by backing out the 0.1 factor applied for first-time visits (table 9), in other words, by multiplying the number of first-time telemedicine visits (66,056) by 10 for 660,560 total visits. Applying the cost of $2.67 to the total number of visits results in a total cost of $1,763,695 ($2.67 × 660,560) per year.

As discussed earlier in table 10, DEA estimates the VA will save $146,644 annually from reduced travel reimbursements to patients.

While there may be reduced costs to the VA as a result of fewer patient visits to its facilities, for the purposes of this analysis, DEA and HHS anticipate that there will be no significant net economic impact on the VA's healthcare systems due to the rule. According to one peer-reviewed medical journal article from 2020, telehealth is expected to reduce costs in health systems between 32 percent to 53 percent of the time.[74]

However, evidence suggests that it does not routinely reduce the cost of care delivery for the health system as a whole.[75] A more recent 2023 study, focused on payment analysis for telehealth and in-person care, comes to a similar conclusion, noting the lack of cost differential and concluding that the primary benefit of telehealth is increased access and convenience, not cost savings.[76]

4. Risk of Diversion

Requiring an in-person medical evaluation serves as a safeguard against diversion, consistent with the Ryan Haight Act. Since the advancement of telemedicine technology, new diversion paradigms have emerged in telemedicine.[77] Therefore, to address new ways of delivering care, DEA believes that other anti-diversion safeguards—such as those in this final rule—are necessary, beyond the measures that have been in place since March 2020, to address the ongoing risks of diversion.

Admittedly, there is little quantified data on diversion since the onset of the COVID–19 pandemic. However, Dea is

[77] See, *e.g.,* Founder/CEO and Clinical President of Digital Health Company Arrested for $100M Adderall Distribution and Health Care Fraud Scheme, U.S. Department of Justice, Press Release Number: 24–752 (June 13, 2024), *https://www.justice.gov/opa/pr/founderceo-and-clinical-president-digital-health-company-arrested-100m-adderall-distribution.*

concerned that the intentionally concealed and frequently underreported nature of drug diversion makes these illicit activities inherently difficult to track.[78] By design, illegal activities like diversion are meant to evade detection, which complicates the collection of comprehensive and reliable quantitative data. Furthermore, diversion of controlled substances can take on many forms, from theft and fraud to improper prescribing making it difficult to quantify in a standardized method.

Given the dearth of comprehensive standardized data on diversion, DEA has had to rely on qualitative information and insights, such as anecdotal information, expert testimony from industry, and the specialized experience and knowledge of DEA's diversion investigators to identify emerging trends and inform enforcement strategies. Under this rule, DEA is requiring prescribers to review patient records and check PDMPs prior to prescribing controlled substances. DEA believes the requirements of this rule and the VA's internal safeguards will adequately manage the risk of diversion. DEA and HHS would like to protect and advance access to care for Veterans. Accordingly, this final rule will help to advance access to care while protecting against potential diversion risk.

[78] In some comments to the March 2023 NPRMs and during some of the presentations during the Telemedicine Listening Sessions, individuals cited studies demonstrating a lack of increased proportion of overdose deaths involving buprenorphine during the initial months of the pandemic, when the telemedicine flexibilities were first put in place, as evidence of a lack of diversion of controlled substances more generally. However, it is important to note that these studies focused solely on buprenorphine, and it would be inappropriate to extrapolate their findings to all controlled substances given the unique characteristics of buprenorphine, particularly the combination buprenorphine product (*Suboxone*), which adds naloxone designed to deter diversion and misuse. Consistent with this data, buprenorphine has been provided unique treatment under this rule and under the separate *Expansion of Buprenorphine Treatment via Telemedicine Encounter* final rule (RIN 1117–AB78), published elsewhere in this issue of the **Federal Register**. *See, e.g.,* Tanz LJ, Jones CM, Davis NL, Compton WM, Baldwin GT, Han B, Volkow ND. *Trends and Characteristics of Buprenorphine-Involved Overdose Deaths Prior to and During the COVID–19 Pandemic.* JAMA Netw Open. 2023 Jan 3;6(1): e2251856. doi: 10.1001/jamanetworkopen.2022.51856. PMID: 36662523; PMCID: PMC9860517; and Sade E. Johns, Mary Bowman, F. Gerard Moeller, *Utilizing Buprenorphine in the Emergency Department after Overdose,* Trends in Pharmacological Sciences, Volume 39, Issue 12, (2018), *https://doi.org/10.1016/j.tips.2018.10.002,* available: *https://www.sciencedirect.com/science/article/pii/S0165614718301809.*

5. Summary of Economic Impact

DEA and HHS estimate the total annual cost savings of this final rule is $2.54 million due to patient travel time and cost savings. $2.39 million of the cost savings is realized by the patient and $0.15 million of the cost savings is realized by the VA in form of reduced transfers (travel reimbursements). Additionally, DEA and HHS estimates an additional annual cost to the VA of $1.76 million due to the required EHR and PDMP reviews.

DEA believes that the benefits of increased availability for treatment outweigh the dangers of a potential increase in diversion, so long as VA practitioners adhere to the anticipated safeguards VA and/or DEA will implement or have already implemented with respect to the practice of telemedicine.

Regulatory Flexibility Act

The Administrator of DEA, in accordance with the Regulatory Flexibility Act (5 U.S.C. 601–612) (RFA), has reviewed this rule and by approving it certifies that it will not have a significant economic impact on a substantial number of small entities.

This final rule affects the VA and its individual patients. The VA is not a small entity. Therefore, this rule will not have significant economic impact on a substantial number of small entities.

Paperwork Reduction Act of 1995

This action would not create or modify a collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) (PRA). An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. PRA is not applicable when the information is being collected from Federal employees or contractors as a part of their job. In this final rule, all recordkeeping actions are taken by Federal employees as a part of their work-related duties with the VA.

Executive Order 12988, Civil Justice Reform

This final rule meets the applicable standards set forth in sections 3(a) and 3(b)(2) of E.O. 12988 to eliminate drafting errors and ambiguity, minimize litigation, provide a clear legal standard for affected conduct, and promote simplification and burden reduction.

Executive Order 13132, Federalism

This final rule does not have federalism implications warranting the application of E.O. 13132. The final rule does not have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government.

Executive Order 13175, Consultation and Coordination With Indian Tribal Governments

This final rule does not have substantial direct effects on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes.

Unfunded Mandates Reform Act of 1995

The estimated annual impact of this final rule is minimal. Thus, DEA has determined in accordance with the Unfunded Mandates Reform Act of 1995 (UMRA) (2 U.S.C. 1501 *et seq.*) that this action would not result in any Federal mandate that may result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more (adjusted for inflation) in any one year. Therefore, neither a Small Government Agency Plan nor any other action is required under provisions of UMRA.

Congressional Review Act

Pursuant to Subtitle E of the Small Business Regulatory Enforcement Fairness Act of 1996 (also known as the Congressional Review Act), the Office of Information and Regulatory Affairs has determined that this rule does not meet the criteria set forth in 5 U.S.C. 804(2). DEA will submit a copy of this final rule to both Houses of Congress and to the Comptroller General.

42 CFR Part 12

Administrative practice and procedure.

Signing Authority

This document of the Drug Enforcement Administration was signed on January 13, 2025, by Administrator Anne Milgram. That document with the original signature and date is maintained by DEA. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DEA **Federal Register** Liaison Officer has been authorized to sign and submit the document in electronic format for

publication, as an official document of DEA. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Heather Achbach,

Federal Register Liaison Officer, Drug Enforcement Administration.

Miriam E. Delphin-Rittmon,

Assistant Secretary for Mental Health and Substance Use, Department of Health and Human Services.

Drug Enforcement Administration

For the reasons set out above, the Drug Enforcement Administration amends 21 CFR part 1306 as follows:

PART 1306—PRESCRIPTIONS

■ 1. The authority citation for part 1306 continues to read as follows:

Authority: 21 U.S.C. 821, 823, 829, 829a, 831, 871(b) unless otherwise noted.

■ 2. Add § 1306.52 to read as follows:

§ 1306.52 Other circumstances where Department of Veterans Affairs practitioners may prescribe controlled substances via the practice of telemedicine.

A practitioner may prescribe controlled substance(s) to a patient via the practice of telemedicine under § 1300.04(i)(7) of this chapter if all the following conditions are met:

(a) The practitioner is:

(1) An employee or contractor of the Department of Veterans Affairs (VA) who is acting in the scope of such employment or contract, and registered under section 303(g) of the Act (21 U.S.C. 823(g)) (§ 1301.13 of this chapter) in any state or is utilizing the registration of a hospital or clinic operated by the VA registered under section 303(f);

(2) Prescribing to a VA patient who has previously received, at any time, an in-person medical evaluation by any VA practitioner who at the time of the in-person medical evaluation was acting within the scope of their VA employment or contract and had prescribing authority, or would reasonably be expected to have prescribing authority based on their credentials (*e.g.,* medical doctor) or organizational role (*e.g.,* primary care provider), as described in paragraph (a)(1) of this section;

(3) Not a contracted practitioner located outside a VA facility or clinic providing care via the community care network or conducting disability compensation evaluations; and

(4) Prescribing a controlled substance(s) for a legitimate medical purpose in the usual course of professional practice, and in accordance with applicable Federal and State law(s).

(b) Prior to prescribing, the practitioner must conduct a review of both the VA EHR, to include the VA's internal prescription database, and the PDMP data of the state in which the patient is located at the time of the telemedicine encounter (if the state has such a program) for controlled substance prescription(s) for the patient's previous twelve (12) months preceding the controlled substance prescription(s), or if less than a year of data is available, for the entire prescription period.

(1) Should either the patient's VA electronic health record, to include the VA's internal prescription database, or the PDMP of the state in which the patient is located at the time of the telemedicine encounter (if the state has such a program) be unavailable or non-operational, for any reason, the VA practitioner must limit the prescription to a 7-day supply. Once the VA's internal prescription database and the PDMP are available or operational, a review of the databases as outlined in this paragraph (b) must be completed to continue prescribing the controlled substance(s) to the VA patient.

(2) If no PDMP exists in the state in which the patient is located at the time of the telemedicine encounter, the VA practitioner must review the VA internal prescription database prior to issuing a controlled substance prescription. A prescription may extend beyond 7 days under this circumstance.

(3) The VA practitioner must annotate in the VA patient's EHR their attempts to access the PDMP data of the state in which the patient is located, and VA internal prescription database data. If no PDMP exists in the state in which the patient is located at the time of the telemedicine encounter, the prescribing practitioner must annotate that in the VA patient's EHR. If the prescribing VA practitioner fails to access the PDMP data of the state in which the patient is located or VA internal prescription database data as described in paragraph (b)(1) of this section, the VA practitioner must annotate in the VA patient's EHR the dates and times that the VA practitioner attempted to gain access, the reason why the VA practitioner was unable to gain access, and any follow-up attempts made to gain access to the system. The attempts must be recorded in accordance with the VA's internal policies and recordkeeping requirements.

(c) The controlled substance prescription(s) must be otherwise in conformity with the requirements of the Controlled Substances Act and this chapter.

Department of Health and Human Services

For the reasons set out above, the Department of Health and Human Services amends 42 CFR part 12 as follows:

PART 12—TELEMEDICINE FLEXIBILITIES

■ 3. The authority citation for part 12 continues to read as follows:

Authority: 21 U.S.C. 802(54)(G).

■ 4. Add § 12.4 to read as follows:

§ 12.4 Telemedicine prescribing of schedule II–V medications by the Department of Veterans Affairs practitioners.

A practitioner may prescribe controlled substance(s) to a patient via the practice of telemedicine under 21 CFR 1300.04(i)(7) if all the following conditions are met:

(a) The practitioner is:

(1) An employee or contractor of the Department of Veterans Affairs (VA) who is acting in the scope of such employment or contract, and registered under section 303(g) of the Controlled Substances Act (Act) (21 U.S.C. 823(g)) (21 CFR 1301.13) in any state or is utilizing the registration of a hospital or clinic operated by the VA registered under section 303(f);

(2) Prescribing to a patient who has previously received, at any time, an in-person medical evaluation by any VA practitioner who at the time of the in-person medical evaluation was acting within the scope of their VA employment or contract and had prescribing authority, or would reasonably be expected to have prescribing authority based on their credentials (*e.g.,* medical doctor) or organizational role (*e.g.,* primary care provider), as described in paragraph (a)(1) of this section;

(3) Not a contracted practitioner located outside a VA facility or clinic providing care via the community care network or conducting disability compensation evaluations; and

(4) Prescribing a controlled substance(s) for a legitimate medical purpose in the usual course of professional practice, and in accordance with applicable Federal and State law(s).

(b) Prior to prescribing, the practitioner must conduct a review of both the VA EHR, to include the VA's internal prescription database, and the PDMP data of the state in which the patient is located at the time of the

telemedicine encounter (if the state has such a program) for controlled substance prescription(s) for the patient's previous twelve (12) months preceding the controlled substance prescription(s), or if less than a year of data is available, for the entire prescription period.

(1) Should either the patient's VA electronic health record, to include the VA's internal prescription database, or the PDMP data of the state in which the patient is located at the time of the telemedicine encounter (if the state has such a program) be unavailable or non-operational, for any reason, the VA practitioner must limit the prescription to a 7-day supply. Once the VA's internal prescription database and the PDMP are available or operational, a review of the databases as outlined in this paragraph (b) must be completed to continue prescribing the controlled substance(s) to the VA patient.

(2) If no PDMP exists in the state in which the patient is located at the time of the telemedicine encounter, the VA practitioner must review the VA internal prescription database prior to issuing a controlled substance prescription. A prescription may extend beyond 7 days under this circumstance.

(3) The VA practitioner must annotate in the VA patient's EHR their attempts to access the PDMP data of the state in which the patient is located, and VA internal prescription database data. If the prescribing VA practitioner fails to access the PDMP data of the state in which the patient is located or VA internal prescription database data as described in paragraph (b)(1) of this section, the VA practitioner must annotate in the VA patient's EHR the dates and times that the VA practitioner attempted to gain access, the reason why the VA practitioner was unable to gain access, and any follow-up attempts made to gain access to the system. The attempts must be recorded in accordance with the VA's internal policies and recordkeeping requirements.

(c) The controlled substance prescription(s) is otherwise in conformity with the requirements of the Act and 21 CFR chapter II.

[FR Doc. 2025–01044 Filed 1–15–25; 8:45 am]

BILLING CODE 4410–09–P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

21 CFR Parts 1300, 1301, 1304, and 1306

[Docket No. DEA–407]

RIN 1117–AB40

Special Registrations for Telemedicine and Limited State Telemedicine Registrations

AGENCY: Drug Enforcement Administration, Department of Justice.

ACTION: Notice of proposed rulemaking.

SUMMARY: The *Ryan Haight Online Pharmacy Consumer Protection Act of 2008* (the ''*Ryan Haight Act*'') generally requires an in-person medical evaluation prior to the issuance of a prescription of controlled substances but provides an exception to this in-person medical evaluation requirement where the practitioner is engaged in the ''practice of telemedicine'' within the meaning of the *Ryan Haight Act.* These proposed regulatory changes would establish a Special Registration framework and authorize three types of Special Registration. This proposed rulemaking also provides for heightened prescription, recordkeeping, and reporting requirements. DEA believes such changes are necessary to effectively expand patient access to controlled substance medications via telemedicine while mitigating the risks of diversion associated with such expansion. A summary of this rule may be found at *https://www.regulations.gov/docket/DEA-2023-0029.*

DATES: Electronic comments must be submitted, and written comments must be postmarked, on or before March 18, 2025. Commenters should be aware that the electronic Federal Docket Management System will not accept comments after 11:59 p.m. Eastern Time on the last day of the comment period. All comments concerning collections of information under the *Paperwork Reduction Act* must be submitted to the Office of Management and Budget (OMB) on or before March 18, 2025.

ADDRESSES: To ensure proper handling of comments, please reference ''Docket No. DEA–407'' on all correspondence, including any attachments.

- *Electronic comments:* DEA encourages that all comments be submitted electronically through the Federal eRulemaking Portal, which provides the ability to type comments directly into the comment field on the web page or to attach a file containing comments. Please go to *http://www.regulations.gov* and follow the online instructions at that site for submitting comments. Upon completion of your submission, you will receive a Comment Tracking Number for your comment generated by *http://www.regulations.gov.* Please be aware that submitted comments are not instantaneously available for public view on *http://www.regulations.gov.* If you have received a Comment Tracking Number, your comment has been successfully submitted, and there is no need to resubmit the same comment.
- *Paper comments:* Paper comments that duplicate the electronic submission are discouraged. Should you wish to mail a paper comment *in lieu of* submitting a comment electronically, it should be sent via regular or express mail to: Drug Enforcement Administration, Attn: DEA Federal Register Representative/DPW, 8701 Morrissette Drive, Springfield, Virginia 22152. Hand-delivered comments will not be accepted.
- *Paperwork Reduction Act Comments:* All comments concerning collections of information under the *Paperwork Reduction Act* must be submitted to the Office of Information and Regulatory Affairs, OMB, Attention: Desk Officer for DOJ, Washington, DC 20503. Please state that your comment refers to RIN 1117–AB40/Docket No. DEA–407.

FOR FURTHER INFORMATION CONTACT: Heather E. Achbach, Regulatory Drafting and Policy Support Section, Diversion Control Division, Drug Enforcement Administration; Telephone: (571) 776–3882.

SUPPLEMENTARY INFORMATION:

Posting of Public Comments

Please note that all comments received, including attachments and other supporting materials, in response to this docket are considered part of the public record. The Drug Enforcement Administration (DEA) will make all comments available for public inspection online at *http://www.regulations.gov.* The *Freedom of Information Act* applies to all comments received. Confidential information or personal identifying information (PII), such as account numbers or Social Security numbers, or names of other individuals, should not be included. Submissions will not be edited to remove any identifying or contact information.

Comments with confidential information, which should not be made available for public inspection, should be submitted as written/paper submissions. Two written/paper copies should be submitted. One copy will include the confidential information with a heading or cover sheet that states ''CONTAINS CONFIDENTIAL INFORMATION.'' DEA will review this copy, including the claimed confidential information, in its consideration of comments. The second copy should have the claimed confidential information redacted/blacked out. DEA will make this copy available for public inspection online at *http://www.regulations.gov.* Other information, such as name and contact information, that should not be made available, may be included on the cover sheet but not in the body of the comment, and must be clearly identified as ''confidential.'' Any information clearly identified as ''confidential'' will not be disclosed except as required by law.

Overview

I. Executive Summary
II. Legal Authority and Background
III. Need for Further Rulemaking: *Special Registration*
IV. Section-by-Section Discussion of Proposed Rule
A. Registration Requirements Under 21 CFR Part 1301
1. Three Types of *Special Registration* and Eligibility of *Clinician Practitioners* and *Platform Practitioners*
a. *Telemedicine Prescribing Registration* Eligibility
b. *Advanced Telemedicine Prescribing Registration* Eligibility
c. *Telemedicine Platform Registration* Eligibility
2. Ancillary Registrations: *State Telemedicine Registrations*
3. *Special Registration* Application Process
a. *Special Registration* Application, Cycles, and Fees
b. Supplemental *Special Registration* Application Requirements (*Form 224S*)
c. Notification of Changes to Application Information and Other Modifications (*Form 224S–M*)
4. *Special Registration* Actions
a. Approvals and Denials of *Special Registration* Applications
b. Suspension and Revocations of *Special Registrations*

I. Executive Summary

The *Ryan Haight Online Pharmacy Consumer Protection Act of 2008* (the ''*Ryan Haight Act*''), amended the Controlled Substances Act (CSA) by, among other things, requiring all prescription drugs which are dispensed by means of the *internet* [1] be issued as a ''valid prescription.'' [2] Generally, a valid prescription requires, at a minimum, at least one ''in-person medical evaluation,'' [3] which is issued for a legitimate medical purpose in the usual course of professional practice.[4] The *Ryan Haight Act* does, however, provide an exception to this in-person medical evaluation requirement, when the practitioner is ''engaged in the practice of telemedicine.'' [5]

The *Ryan Haight Act* provides seven (7) distinct categories of the *practice of telemedicine* in which a prescribing practitioner need not satisfy the *Ryan Haight Act's* in-person medical evaluation requirement, yet nonetheless may be able to prescribe a controlled substance for a legitimate medical purpose in the usual course of professional practice.[6] In these circumstances, provided certain safeguards are in place to ensure that the practitioner who is engaged in the *practice of telemedicine* is able to conduct a *bona fide* medical evaluation of the patient at the remote location, and is otherwise acting in the usual course of professional practice, the *Ryan Haight Act* contemplates that the practitioner will be permitted to prescribe controlled substances by means of the *internet* despite not having conducted an in-person medical evaluation.

Thus far, DEA has permitted, or promulgated regulations to permit, the *practice of telemedicine* pursuant to two of the seven categories of telemedicine authorized under the *Ryan Haight Act.* In March 2020, in response to the COVID–19 Public Health Emergency (''COVID–19 PHE'') declared by the Secretary (the ''Secretary'') of the Department of Health and Human Services (HHS) on January 31, 2020, pursuant to the authority under section 319 of the Public Health Service Act (42 U.S.C. 247), DEA used its authority under 21 U.S.C. 802(54)(D) to grant temporary exceptions to the *Ryan Haight Act* and its implementing regulations, allowing authorized practitioners to generally prescribe controlled substances in Schedules II–V through telemedicine.

Three years later, in March 2023, DEA, in concert with HHS, promulgated two notices of proposed rulemakings (NPRMs) (the ''General Telemedicine NPRM,'' and ''Buprenorphine NPRM'') pursuant to 21 U.S.C. 802(54)(G), which collectively proposed to expand patient access to prescriptions via telemedicine relative to the pre-COVID–19 PHE landscape. On May 10, 2023, to prevent a lapse of care with the expiration of the COVID–19 PHE, DEA, jointly with HHS, promulgated a rule (the ''First Temporary Rule'') pursuant to 21 U.S.C.802(54)(G) to extend the temporary exceptions originally authorized under the COVID–19 PHE through November 11, 2023.

On September 12 and 13, 2023, DEA hosted live, in-person Telemedicine Listening Sessions to receive additional input concerning the *practice of telemedicine* with regards to controlled substances and potential safeguards that could effectively prevent and detect diversion of controlled substances prescribed via telemedicine. DEA invited the public to express their views concerning the advisability of permitting telemedicine prescribing of certain controlled substances without any in-person medical evaluation at all, the availability and types of data that would be useful in detecting diversion of controlled substances via telemedicine, and specific additional safeguards that could be placed around the prescribing of Schedule II controlled substances via telemedicine.

On October 10, 2023, in light of the need to further evaluate the best course of action given the comments received in response to the March 2023 NPRMs and the presentations at the September 2023 Telemedicine Listening Sessions, DEA, jointly with HHS, issued a second temporary rule (the ''Second Temporary Rule'') to further extend the temporary exceptions originally authorized under the COVID–19 PHE through December 31, 2024. On November 19, 2024, DEA and HHS issued a third temporary rule (the ''Third Temporary Rule'') to again extend the temporary exceptions originally authorized under the COVID–19 PHE through December 31, 2025, to ensure a smooth transition for patients and practitioners that have come to rely on the availability of telemedicine for controlled substance prescriptions.

The Third Temporary Rule has also provided additional time for DEA to promulgate the *Special Registration* regulations proposed in this NPRM, and additional time for practitioners to come into compliance with any new standards or safeguards eventually found within a final rule establishing a *Special Registration* framework. DEA has determined that the best course of action to ensure patient access to care, while maintaining sufficient safeguards to prevent and detect diversion of controlled substances, is to establish and maintain a regulatory scheme including three separate *Special Registrations* pursuant to 21 U.S.C. 802(54)(E) and 21 U.S.C. 831(h).

These separate *Special Registrations* would allow more comprehensive prescribing, including prescribing of Schedule II and narcotic and non-narcotic controlled substances in limited circumstances, by properly registered physicians and *mid-level practitioners* (hereinafter collectively referred to as *clinician practitioners*), and dispensing by online telemedicine platforms that constitute *covered online telemedicine platforms,* in their capacity as *platform practitioners,* who have proven to have a legitimate need for such *Special Registrations* and where DEA has concluded that such registration is consistent with the public interest. Once properly registered under the *Special Registration* framework, *clinician practitioners* would be considered *clinician special registrants* and *covered online telemedicine platforms,* in their capacity as *platform practitioners,* would be considered *platform special registrants.*

This NPRM introduces the three types of *Special Registrations for Telemedicine:* (1) a *Telemedicine Prescribing Registration,* authorizing qualified *clinician practitioners* to prescribe Schedule III–V controlled substances via telemedicine, (2) an *Advanced Telemedicine Prescribing Registration,* authorizing qualified, specialized *clinician practitioners* (*e.g.,* psychiatrists, *hospice care* physicians) to prescribe Schedule II–V controlled substances via telemedicine, and (3) a *Telemedicine Platform Registration,* authorizing *covered online telemedicine platforms,* in their capacity as *platform practitioners,* to dispense Schedule II–V controlled substances.[7] To satisfy the

[6] 21 U.S.C. 802(54).

[7] The term ''institutional practitioner'' is currently defined at 21 CFR 1300.01. Proposed changes to 21 CFR 1300.01 will explicitly exclude

statutory requirements under 21 U.S.C. 831(h), DEA would also require the *special registrant* to maintain a *State Telemedicine Registration* for every state in which a patient is treated by the *special registrant,* unless otherwise exempted. The *State Telemedicine Registration* would be issued by DEA, not the states, and operate as an ancillary credential, contingent on the *Special Registration* held by the *special registrant.*

To streamline the *Special Registration* application process, the NPRM would introduce a new registration application form, known as Form 224S. The three types of *Special Registrations* (*Telemedicine Prescribing Registration, Advanced Telemedicine Prescribing Registration,* and *Telemedicine Platform Registration*) and the *State Telemedicine Registration* (one type for *clinician special registrants* and one type for *platform special registrants*) would be on a three-year cycle. The NPRM also proposes heightened prescription requirements addressing the manner in which *special registration prescriptions* are issued, as well as additional elements required to be on a *special registration prescription* issued under a *Special Registration.*

Special registration prescriptions issued under the *Special Registration* would be required to be prescribed through electronic prescribing for controlled substances (EPCS), and after the *special registrant* has verified the identity of the patient and carried out a nationwide Prescription Drug Monitoring Program (PDMP) check of all 50 states and any U.S. district or territory that maintains its own PDMP (referred to as the ''nationwide PDMP check''). The nationwide PDMP check requirement, however, would have a delayed effective date of three years. In the interim, for all Schedule II–V controlled substances, *clinician special registrants* would be required to conduct a PDMP check of: (1) the state/territory where the patient is located; (2) the state/territory where the *clinician special registrant* is located; and (3) any state/territory that has a PDMP reciprocity agreement with the states/territories where the patient and *clinician special registrant* are located.

Furthermore, *special registration prescriptions* would require the inclusion of the *Special Registration* numbers of the *clinician special registrant* and the *platform special registrant* (if a *platform special registrant* facilitated the prescription), and the *State Telemedicine Registration* numbers of the *clinician special registrant* and *platform special registrant* (if a *platform special registrant* facilitated the prescription). To ensure clarity and easy identification of the type of registration, *Special Registration* numbers and *State Telemedicine Registration* numbers would be formatted distinctly. This would allow registrants and DEA to differentiate them from each other and from conventional DEA registration numbers issued under 21 U.S.C. 823(g). Additionally, pharmacies filling *special registration prescriptions* would be able to easily verify these registration numbers to confirm that the prescribing *clinician practitioner* is authorized to prescribe controlled substances within a given Schedule via a *Special Registration,* and that a *platform practitioner,* if one facilitated the *special registration prescription,* is authorized to dispense controlled substances under the *Special Registration* framework.

It is also important to note when the proposed regulations would not apply. The *Ryan Haight Act,* and the telemedicine regulations implementing it thereunder, apply only in limited circumstances, impacting only a subset of practitioner-patient relationships: those where the prescribing practitioner intends to prescribe controlled substances, and has never conducted an in-person medical evaluation of the patient prior to the issuance of the prescription. In other words, the regulations implemented under the *Ryan Haight Act* would not be applicable to practitioner-patient relationships in which there has ever been a prior in-person medical evaluation of the patient by the practitioner.

Moreover, the regulations proposed in this rule are further limited to telemedicine practiced under a *Special Registration,*[8] but would not apply to the other forms of the *practice of telemedicine* authorized under the *Ryan Haight Act.* The proposed regulations within this NPRM would not apply to the *practice of telemedicine* authorized under 21 U.S.C. 802(54)(A)–(D), (F), and (G). Therefore, these proposed regulations would not apply to the *practice of telemedicine* authorized under the *Expansion of Buprenorphine Treatment via Telemedicine Encounter* final rule (RIN 1117–AB78) or the *Continuity of Care via Telemedicine for Veterans Affairs Patients* final rule (RIN 1117–AB88) published elsewhere in this issue of the **Federal Register**. Under the authority of 21 U.S.C. 802(54)(G), these final rules permit, in limited circumstances, certain prescribing practitioners to issue prescriptions for controlled substances by telemedicine, without having personally performed an in-person medical evaluation or fulfilling the *Special Registration* requirements as proposed within this rule. At this stage, DEA remains committed to actively soliciting and considering feedback from the public and revising the *Special Registration* regulations as necessary and appropriate.[9]

II. Legal Authority and Background

DEA implements and enforces the CSA and the *Controlled Substances Import and Export Act,* (21 U.S.C. 801–971), as amended. DEA publishes the implementing regulations for these statutes in 21 CFR parts 1300 to end. These regulations are designed to ensure a sufficient supply of controlled substances for medical, scientific, and other legitimate purposes, and to deter the diversion of controlled substances for illicit purposes. As mandated by the CSA, DEA establishes and maintains a closed system of control for manufacturing, distribution, and dispensing of controlled substances, and requires any person who manufactures, distributes, dispenses, imports, exports, or conducts research or chemical analysis with controlled substances to register with DEA, unless they meet an exemption, pursuant to 21 U.S.C. 822.[10] The CSA further authorizes the Attorney General (and the Administrator by delegation through 28 CFR part 0) to promulgate regulations necessary and appropriate to execute the functions of subchapter I (Control and Enforcement) and subchapter II (Import and Export) of the CSA.[11]

The Ryan Haight Online Pharmacy Consumer Protection Act of 2008. The *Ryan Haight Act* amended the CSA by, among other things, adding several new provisions to prevent the illegal distribution and dispensing of controlled substances by means of the *internet.* A central feature of the *Ryan Haight Act* is the in-person medical evaluation requirement. The in-person medical evaluation requirement is set forth in 21 U.S.C. 829(e), which provides that ''[n]o controlled substance that is a prescription drug as determined under the Federal Food, Drug, and

''covered online telemedicine platform'' to clarify that such an entity is not an ''institutional practitioner.''

[8] 21 U.S.C. 802(54)(E).

[9] *See* Appendix A for Chart: *Do I Need a Special Registration for Telemedicine?*

[10] ''Dispense'' in the context of this rulemaking means to deliver a controlled substance to an ultimate user, which includes the prescribing of a controlled substance. 21 U.S.C 802(10).

[11] 21 U.S.C. 871(b), 958(f).

Cosmetic Act may be . . . dispensed by means of the internet without a valid prescription,'' [12] and which defines ''valid prescription'' as ''a prescription that is issued for a legitimate medical purpose in the usual course of professional practice by . . . a practitioner who has conducted at least 1 in-person medical evaluation of the patient.'' [13] Section 829(e), however, provides an exception to this in-person medical evaluation requirement where the practitioner is ''engaged in the practice of telemedicine.'' [14]

Pursuant to 21 U.S.C. 802(54) the *practice of telemedicine* means ''the practice of medicine in accordance with applicable Federal and state laws by a practitioner (other than a pharmacist) [15] who is at a location remote from the patient and is communicating with the patient, or health care professional who is treating the patient, using a telecommunications system [16] referred to in section 1395m(m) of Title 42,'' and which also falls within one of seven distinct categories that Congress determined were appropriate to allow for the prescribing of controlled substances via telemedicine despite the practitioner never having conducted an in-person medical evaluation of the patient.

The seven distinct categories provided under the statutory definition of the *practice of telemedicine* generally involve either circumstances in which an in-person medical evaluation has been rendered impracticable due to temporary emergencies, or circumstances in which the prescribing practitioner might be unable to satisfy the *Ryan Haight Act's* in-person medical evaluation requirement, yet nonetheless has sufficient medical information to prescribe a controlled substance for a legitimate medical purpose in the usual course of professional practice. In these circumstances, provided certain safeguards are in place to ensure that the practitioner who is engaged in the *practice of telemedicine* is able to conduct a *bona fide* medical evaluation of the patient at the remote location, and is otherwise acting in the usual course of professional practice, the *Ryan Haight Act* contemplates that the practitioner will be permitted to prescribe controlled substances by means of the *internet* despite not having conducted an in-person medical evaluation. The *Ryan Haight Act* defines these categories through the definition of ''practice of telemedicine,'' which is set forth in 21 U.S.C. 802(54).

As a general matter, those seven distinct categories include telemedicine encounters where: (1) a patient is physically located at a DEA-registered hospital or clinics, and the remote prescribing practitioner is DEA-registered in the state in which the patient is located; (2) a patient is being treated by a prescribing practitioner, and in the physical presence of a DEA-registered practitioner in the state in which the patient is located; (3) the prescribing practitioner is an employee or contractor of the Indian Health Service (IHS), acting within the scope of the practitioner's employment, who has been designated an *internet Eligible Controlled Substances Provider* by HHS; (4) it takes place during a public health emergency declared by HHS under section 247d of title 42; (5) the practitioner has obtained a *Special Registration* with DEA; [17] (6) there is a medical emergency that prevents the patient from being in the physical presence of an employee or contractor of the Veterans Health Administration (VHA) and one of its hospitals or clinics, and immediate intervention by the practitioner using controlled substances is required to prevent injury or death; and (7) any other circumstances that DEA and HHS have jointly determined to be consistent with effective controls against diversion and otherwise consistent with the public health and safety.[18]

As noted above, the *Ryan Haight Act,* and the telemedicine regulations implementing it thereunder, apply only in limited circumstances, impacting only a subset of practitioner-patient relationships: where the prescribing practitioner wishes to prescribe controlled substances and has never conducted an in-person medical evaluation of the patient prior to the issuance of the prescription. In other words, the regulations proposed in this rule would not be applicable to practitioner-patient relationships in which there has been a prior in-person medical evaluation of the patient by the practitioner.

COVID–19 Public Health Emergency. In response to the COVID–19 PHE, as declared by the Secretary on January 31, 2020, pursuant to the authority under section 319 of the *Public Health Service Act* (42 U.S.C. 247), DEA granted temporary exceptions to the *Ryan Haight Act* and DEA's implementing regulations under 21 U.S.C. 802(54)(D), one of the seven distinct categories of telemedicine envisioned under the statutory definition of the *practice of telemedicine.* In order to prevent lapses in care, these exceptions allowed for the prescribing of controlled substances via

[12] 21 U.S.C. 829(e)(1).

[13] *Id.* at 829(e)(2)(A)(i). Under the Ryan Haight Act, the requirement of an in-person medical evaluation does not apply to a ''covering practitioner,'' *id.* 829(e)(2)(A)(ii), as defined by 829(e)(2)(C). A prescribing practitioner meeting this definition need not conduct an in-person medical evaluation as a prerequisite to prescribing a controlled substance to a given patient, provided that the practitioner for whom the practitioner is covering has provided an in-person medical evaluation of that patient and provided further that this covering arrangement is taking place on only a temporary basis. In addition, the covering practitioner—as with all practitioners who prescribe controlled substances—remains subject to the requirement that such prescriptions may be issued only for a legitimate medical purpose in the usual course of professional practice. *Id.*

[14] *Id.* 829(e)(3)(A).

[15] While this statutory definition of the *practice of telemedicine* explicitly excludes pharmacists, such exclusion does not apply to situations where a pharmacist is acting in their capacity as a *mid-level practitioner,* authorized to dispense controlled substances in accordance with their state licensure.

[16] 42 U.S.C. 1395m(m) references, but does not define, such *telecommunications systems.* The Center for Medicare and Medicaid Services (CMS) promulgated regulations implementing these statutory provisions and define the term *interactive telecommunications system.* 42 CFR 410.78(a)(3) defines *interactive telecommunications system* as ''. . . [the] multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication between the patient and distant site physician or practitioner. For services furnished *for purposes of diagnosis, evaluation, or treatment of a mental health disorder to a patient* in their home, interactive telecommunications *may include two-way, real-time audio-only communication technology* if the distant site physician or practitioner is technically capable to use an interactive telecommunications system as defined in the previous sentence, but the patient is not capable of, or does not consent to, the use of video technology'' (emphases added). Though DEA's proposed regulatory definition for *audio-video telecommunications system* largely aligns with CMS's definition of *interactive telecommunications system,* DEA's proposed regulations would not authorize the use of audio-only communication technology for the diagnosis, evaluation, or treatment of mental health disorders, subject to one exception for opioid use disorder discussed in more depth later. These provisions reflect the heightened risks associated with prescribing controlled substances specifically.

[17] Congress enacted legislation in addition to the *Ryan Haight Act* which required DEA to ''promulgate final regulations specifying . . . the limited circumstances in which a special registration for telemedicine may be issued.'' 21 U.S.C. 831(h)(2). In particular, the SUPPORT for Patients and Communities Act (''SUPPORT Act''), signed into law on October 24, 2018, mandated that, in consultation with the Secretary [of Health and Human Services], the Attorney General shall promulgate final regulations specifying—(A) the limited circumstances in which a special registration for telemedicine . . . may be issued; and (B) the procedure for obtaining [a] special registration for telemedicine.'' *Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act* (SUPPORT Act), Public Law 115–271, 3232, 132 Stat. 3894, 3950 (2018). The Attorney General has delegated this authority to the Administrator of DEA. *See* 28 CFR 0.100. As required by the SUPPORT Act, DEA has consulted with representatives of the Secretary of Health and Human Services regarding the substance of this proposed rule.

[18] 21 U.S.C. 802(54).

telemedicine encounters even when the prescribing practitioner had not conducted an in-person medical evaluation of the patient. These telemedicine flexibilities authorized practitioners to prescribe Schedule II–V controlled substances via audio-video telemedicine encounters, including Schedule III–V opioid controlled substances approved by the Food and Drug Administration (FDA) for maintenance and withdrawal management treatment of opioid use disorder via audio-only telemedicine encounters, provided that such prescriptions otherwise comply with the recommendations outlined in DEA guidance documents, the requirements outlined in DEA regulations, and applicable Federal and State law. DEA granted those temporary exceptions to the *Ryan Haight Act* and DEA's implementing regulations via two letters published in March 2020:

- A March 25, 2020 ''Dear Registrant'' letter signed by William T. McDermott, DEA's then-Assistant Administrator, Diversion Control Division (the McDermott Letter); [19] and
- A March 31, 2020 ''Dear Registrant'' letter signed by Thomas W. Prevoznik, DEA's then-Deputy Assistant Administrator, Diversion Control Division (the Prevoznik Letter).[20]

Prior NPRMs and Temporary Rules; Telemedicine Listening Sessions. On March 1, 2023, DEA, in concert with HHS and pursuant to 21 U.S.C. 802(54)(G), promulgated two NPRMs in the **Federal Register**, *Telemedicine Prescribing of Controlled Substances When the Practitioner and the Patient Have Not Had a Prior In-Person Medical Evaluation* (the ''General Telemedicine NPRM'') [21] and *Expansion of Induction of Buprenorphine via Telemedicine Encounter* (the ''Buprenorphine NPRM''),[22] which proposed to expand patient access to prescriptions for controlled substances via telemedicine encounters relative to the pre-COVID–19 PHE landscape. The purpose of the two proposed rules was to make permanent some of the telemedicine flexibilities established during the COVID–19 PHE in order to facilitate patient access to controlled substance medications via telemedicine when consistent with public health and safety, while maintaining effective controls against diversion. The comment period for these two NPRMs closed on March 31, 2023. Those NPRMs generated a total of 38,369 public comments—35,454 comments on the General Telemedicine NPRM and 2,915 comments on the Buprenorphine NPRM.

On May 10, 2023 DEA, jointly with HHS (with the Substance Abuse and Mental Health Services Administration (SAMHSA) acting on behalf of HHS), issued the First Temporary Rule pursuant to 21 U.S.C. 802(54)(G), which extended the full set of telemedicine flexibilities regarding the prescribing of controlled substances, as had been in place under the COVID–19 PHE, through November 11, 2023.[23] The First Temporary Rule also provided a one-year grace period, through November 11, 2024, to any practitioner-patient telemedicine relationships that had been or would be established on or before November 11, 2023.

On September 12 and 13, 2023, DEA hosted the live, in-person Telemedicine Listening Sessions, to receive additional input concerning the practice of telemedicine with regards to prescribing controlled substances and potential safeguards that could effectively prevent and detect diversion of controlled substances prescribed via telemedicine. DEA invited the public to express their views concerning the advisability of permitting telemedicine prescribing of certain controlled substances without any in-person medical evaluation at all, the availability and types of data that would be useful in detecting diversion of controlled substances via telemedicine that are either already reported or could be reported, and specific additional safeguards that could be placed around the prescribing of Schedule II controlled substances via telemedicine. Approximately 58 stakeholders, including *institutional practitioners* and *clinician practitioners,* pharmacists, trade associations, state agencies, and other public interest groups, presented at the listening sessions.

On October 10, 2023, in light of the need to further evaluate the best course of action given the comments received in response to the March 2023 NPRMs and the presentations at the Telemedicine Listening Sessions, DEA, jointly with HHS, issued the Second Temporary Rule, also pursuant to 21 U.S.C. 802(54)(G), thereby extending the full set of telemedicine flexibilities regarding prescription of controlled substances as were in place during the COVID–19 PHE through December 31, 2024.[24] The extension authorized all DEA-registered practitioners to prescribe Schedule II–V controlled substances via telemedicine through December 31, 2024, whether or not the patient and practitioner established a telemedicine relationship on or before November 11, 2023. In other words, the grace period provided in the First Temporary Rule was effectively subsumed by this Second Temporary Rule, which continued the extension of the current flexibilities for all practitioner-patient relationships—not just those established on or before November 11, 2023—until the end of 2024. The purpose of the Second Temporary Rule, like the one before it, was to ensure a smooth transition for patients and practitioners that have come to rely on the availability of telemedicine for controlled substance prescriptions, as well as to allow adequate time for providers to come into compliance with any new standards or safeguards that are promulgated as part of a final set of telemedicine regulations.

Tribal Consultations. On June 13 and 27, 2024, the Office of Tribal Justice, Department of Justice (OTJ) collaborated with DEA to host two virtual DOJ Government-to-Government Tribal Consultations to seek input from Tribal governments on the practice of telemedicine within American Indian/Alaskan Native (AI/AN) communities. OTJ and DEA invited the Tribal leaders of all federally recognized Tribes using the Bureau of Indian Affairs Tribal Leaders Directory, and provided a framing paper detailing the flexibilities, public engagement, and regulatory actions taken by DEA in recent years concerning telemedicine. OTJ and DEA invited Tribal input on any question or topic of interest related to the use of telemedicine by AI/AN communities, and specifically requested input on potential regulatory requirements and suggestions on what would help Tribal governments implement and comply with a future rule. OTJ and DEA also welcomed the submission of any written comments as well.

III. Need for Further Rulemaking: Special Registration for Telemedicine

In the process of reviewing and evaluating the comments to the

[24] Second Temporary Extension of COVID–19 Telemedicine Flexibilities for Prescription of Controlled Medications, 88 FR 69879 (October 10, 2023).

proposed 2023 General Telemedicine NPRM and Buprenorphine NPRM, as well as the presentations made by various stakeholders at the Telemedicine Listening Sessions, DEA has determined that the best course of action to ensure patient access to care, while maintaining sufficient safeguards to detect and protect against the diversion of controlled substances, is to establish and maintain a separate *Special Registration for Telemedicine* (also referred to as simply ''Special Registration''), *i.e.,* the regulatory scheme Congress specifically authorized in 21 U.S.C. 802(54)(E) and 21 U.S.C. 831(h). As compared to the pre-COVID–19 PHE landscape, the *Special Registration* proposed herein would allow more comprehensive prescribing, including prescribing of Schedule II narcotics and non-narcotic controlled substances in limited circumstances, by properly registered *clinician practitioners* and dispensing by *platform practitioners* with a legitimate need for the *Special Registration.*

In determining when a *Special Registration* should be issued under 21 U.S.C. 802(54)(E), DEA must consider the criteria set forth in 21 U.S.C. 831(h). First, DEA must evaluate a practitioner's legitimate need for such a *Special Registration,* as well as clearly define the limited circumstances under which a *Special Registration* is appropriate.[25] These statutory requirements emphasize the need for careful consideration when extending prescribing privileges through telemedicine. This evaluation is crucial in determining whether telemedicine serves a necessary role, especially given the heightened risks of diversion and inappropriate prescribing of controlled substances posed by remote services where a patient has never undergone an in-person medical evaluation with the prescribing practitioner.

While the COVID–19 PHE created a genuine need for increased use of telemedicine, it also highlighted the inherent risks associated with remote prescribing, particularly in the absence of in-person medical evaluations. In a 2021 *Harris Poll* online survey conducted on behalf of *Quest Diagnostics,* 67 percent of physicians expressed concerns about missing signs of drug use or use disorders during the COVID–19 PHE, and 75 percent of physicians felt that telemedicine constrained their ability to assess whether patients were at risk of, or already, misusing prescription drugs.[26] Although the telemedicine flexibilities during the PHE allowing practitioners to prescribe controlled substances without prior in-person medical evaluations were necessary to prevent lapses of care amid a global pandemic, it also facilitated the emergence of concerning business models engaged in the widespread diversion of controlled substances, taking advantage of the flexibilities established during the COVID–19 PHE.[27]

Second, DEA may only issue a *Special Registration* if the practitioner is ''registered under 21 U.S.C. 823(g) in the state which the patient will be located'' when receiving the telemedicine treatment, unless the *practitioner* is excepted from 823(g) registration.[28] Such 823(g) registration in the patient's state is a critical validation of the practitioner's qualifications and expertise in prescribing controlled substances within a given state. Moreover, the definition of ''practice of telemedicine'' under the *Ryan Haight Act* requires the practitioner to engage in the practice of medicine only ''in accordance with applicable Federal and state laws.'' A *special registrant* under this proposed framework would need to continue to comply with the laws and regulations of the state in which registered, and the laws and regulations of the state in which they are issuing *special registration prescriptions*[29] via a telemedicine encounter. Thus, where one state's law and regulations are more restrictive than the other state's law and regulations, the *special registrant* would be required to follow the more restrictive state law and regulations.[30]

Third, in all instances, *clinician practitioners* ''must establish and maintain a bonafide doctor-patient relationship in order to act 'in the usual course of . . . professional practice' and to issue a prescription for a 'legitimate medical purpose.' ''[31] The ''usual course of professional practice'' is defined by the state in which a registrant practices, because ''[c]onsistent with the CSA's recognition of the State's primary role in regulating the practice of medicine, the [CSA] generally looks to State law and standards of medical practice to determine whether a doctor and patient have established (and are maintaining) a bonafide doctor-patient relationship'' at the time of the prescription.[32]

Direct-to-Consumer Online Telemedicine Platforms. In today's rapidly evolving healthcare landscape, third-party online telemedicine platforms play a large and integral role, as intermediaries, in the delivery of remote healthcare to patients beyond traditional medical settings, with a shift towards predominantly virtual interactions. Many of these online telemedicine platforms employ a direct-to-consumer (''DTC'') business model in which they introduce or connect

[25] 21 U.S.C. 831(h)(1)(A).

[26] *Majority of Physicians Worry Signs of Addiction Were Missed During Pandemic, Finds New Quest Diagnostics Health Trends Report,* Quest Diagnostics (Nov. 15, 2021), *https://newsroom.questdiagnostics.com/2021-11-15-Majority-of-Physicians-Worry-Signs-of-Addiction-Were-Missed-During-Pandemic,-Finds-New-Quest-Diagnostics-Health-Trends-R-Report#assets_30649_137302-130:199.* While a survey conducted on behalf of a diagnostics services company, such as *Quest Diagnostics,* may carry the potential for bias—given the company's potential preference for traditional in-person healthcare models—it still offers valuable insights, even if interpreted with some caution. When considered in context, such information still provides a unique data point, that when weighted accordingly, can inform this analysis. The results of the *Harris Poll* survey are further reinforced by a 2024 National Center for Health Statistics (NCHS) Data Brief that shows the percentage of physicians who feel telemedicine *fully* provides the same care as in-person is 4.0 percent for primary care, 6.3 percent for surgical specialty, and 6.0 percent for medical specialty. Myrick K, Mahar M, DeFrances CJ. *Telemedicine Use Among Physicians by Physician Specialty: United States, 2021. NCHS Data Brief,* no 493. (Feb. 2024), *https://www.cdc.gov/nchs/data/databriefs/db493.pdf.*

[27] In June 2024, the founder and clinical president of a telehealth company were arrested for allegedly participating in a scheme to distribute *Adderall* and other stimulants online and conspiring to commit healthcare fraud. Specifically, they have been accused of arranging the prescription of over 40 million pills of *Adderall* and other stimulants, often with no legitimate medical purpose. The company allegedly provided easy access to controlled substances in exchange for a monthly subscription fee, leading to tragic consequences, including overdoses and deaths. These allegations underscore DEA's need to judiciously evaluate when a practitioner has a legitimate need for a *Special Registration,* and to ensure that any rule permanently authorizing telemedicine contains sufficient safeguards. *Founder/CEO and Clinical President of Digital Health Company Arrested for $100M Adderall Distribution and Health Care Fraud Scheme,* U.S. Department of Justice, Press Release Number: 24–752 (June 13, 2024), *https://www.justice.gov/opa/pr/founderceo-and-clinical-president-digital-health-company-arrested-100m-adderall-distribution.*

[28] 21 U.S.C. 831(h)(1)(B).

[29] Proposed 21 CFR 1300.04 defines a *special registration prescription* to mean ''a prescription, defined under [21 CFR 1300.01], for controlled substances issued under a practitioner's Special Registration for Telemedicine for a legitimate medical purpose in the usual course of professional practice through the utilization of an audio-video telecommunications system defined in § 1300.04 of this chapter.

[30] Under some circumstances, a special registrant may operate under a state reciprocity agreement or other form of state permission that would authorize the special registrant to comply only with the normally applicable law or regulations of either the state in which they are registered or the state in which they are practicing. In other words, states may deem compliance with one state's normally applicable law and regulations as compliance with both states' laws and regulations. In this context, DEA would understand the special registrant to be complying with both states' laws and regulations, because the special registrant's prescribing of controlled substances would be authorized by both states.

[31] Dewey C. MacKay, 75 FR 49956, 49973 (2010), aff'd, *MacKay* v. *DEA,* 664 F.3d 808 (10th Cir. 2011).

[32] *Id.*

patients with a remote *clinician practitioner* enabling the patient to be ''seen'' anywhere using a computer or smart phone, forgoing the need for the patient to go to a medical facility to use the facility's telecommunications system.

Today's DTC online telemedicine platforms often engage in marketing to attract new patients, whom they then introduce or match with *clinician practitioners* under the platforms' direct employment or contract. The payment arrangements between the patient and the platform vary, but some platforms offer subscriptions, where patients pay a monthly fee for virtual consultations, sometimes up to and including an unlimited number of consultations, with a *clinician practitioner.* Often, but not always, the online telemedicine platform may own and operate the virtual environment, including the telecommunications system, where the patient and practitioner virtually ''meet,'' providing the technological infrastructure or support. Unlike traditional medical settings, the *clinician practitioner* conducts the medical evaluation remotely, after which they may prescribe medications, including controlled substances. While the DTC online telemedicine platforms are not entirely new, they proliferated in recent years, in large part due to the COVID–19 pandemic.

Dispensing by Practitioners under the CSA. Although these third-party, DTC online telemedicine platforms do not directly prescribe to patients or physically dispense controlled substances to patients, certain platforms' central involvement as intermediaries in the remote dispensing of controlled substances qualifies them as ''practitioners'' engaged in ''dispensing'' under the CSA. Under the CSA, to ''dispense'' means ''to deliver a controlled substance to an ultimate user or research subject by, or pursuant to the lawful order of, a practitioner, including the prescribing and administering of a controlled substance.'' [33] This statutory definition encompasses not only the physical act of handing out medications, but the broader process of providing them to patients under the direction of a licensed healthcare provider.

The online telemedicine platforms serving as intermediaries for the prescribing of controlled substances fall squarely within the CSA's broad definition of ''practitioner.'' Under the CSA a ''practitioner'' means ''a physician, dentist, veterinarian, scientific investigator, pharmacy, hospital, or other person licensed, registered, or otherwise permitted, by the United States or the jurisdiction in which he practices or does research, to distribute, dispense, conduct research with respect to, administer, or use in teaching or chemical analysis, a controlled substance in the course of professional practice or research.'' [34] According to this statutory definition, a ''practitioner'' is not limited solely to individual healthcare providers, but also encompasses entities permitted by law to distribute or dispense controlled substances. Furthermore, considering the evolving nature of healthcare delivery, recognizing certain DTC online telemedicine platforms as practitioners engaged in dispensing under the CSA reflects the current landscape of telemedicine practice and ensures that DEA's regulations remain relevant and responsive to changes in healthcare technology.[35]

DEA Registration of Intermediaries. The registration of telemedicine intermediaries is not a novel concept. In fact, when Congress amended the CSA with the *Ryan Haight Act,* it recognized the integral role telepresenters, serving as intermediaries, played in certain telemedicine models. In 21 U.S.C. 802(54)(A)–(B), Congress specifically authorized two categories of telemedicine, both involving an intermediary healthcare provider facilitating a medical evaluation between a patient and a *clinician practitioner* located at a distance. Such intermediaries, in this context, are referred to as telepresenters. To uphold the integrity of the closed system, Congress required that such telepresenters, as intermediaries, be registered with DEA. Registration, the cornerstone of the closed system, helps to ensure that such intermediaries are qualified and accountable to DEA, reducing the risk of vulnerabilities or loopholes in this closed system that could lead to diversion and abuse of controlled substances.[36]

Special Registration of Certain DTC Online Telemedicine Platforms. Certain modern DTC online telemedicine platforms of today, which play a substantial and integral role as intermediaries in the remote dispensing of controlled substances, also require registration with DEA. These platforms are indispensable for delivering telemedicine services directly to patients through virtual platforms, in contrast to the other telemedicine models such as those that utilize telepresenters under 21 U.S.C. 802(54)(A)–(B). The necessity for oversight of these newer telemedicine intermediaries is heightened by concerns arising from business practices that have come to light during and after the COVID–19 pandemic. These practices include platforms that incentivize the prescription of controlled substances to patients by practitioners and the exertion of control over the medications prescribed to patients. DEA has been informed by some clinicians that there have been instances when they terminated their relationship with an online telemedicine platform and, in doing so, forfeited access to their patient's medical records stored by the platform. This renders such records non-compliant with DEA regulations, which mandate that the records be readily retrievable by the practitioner, because they become entirely inaccessible to the *clinician practitioner.*

As discussed in further detail below, DEA is proposing the *Special Registration* of these DTC online telemedicine platforms when they meet the proposed regulatory definition of a *covered online telemedicine platform.* DEA is proposing a definition for *covered online telemedicine platform,* delineating the criteria that indicate their substantial and integral role as intermediaries in the remote dispensing of controlled substances, qualifying them as practitioners engaged in dispensing under the CSA and subject to the requirements imposed upon non-

[33] 21 U.S.C. 802(10).

[34] Public Law 91–513 and 21 U.S.C. 802(21). The definition of *practitioner* has also remained unchanged since the enactment of the original CSA.

[35] *See* Senate Report 110–521, *Ryan Haight Online Pharmacy Consumer Protection Act of 2007,* accompanying S.980, November 17, 2008 (providing ''[c]ertain telemedicine practices are exempted from the in-person medical evaluation requirement. The Committee recognizes that telemedicine is a practice tool that can improve health outcomes and reduce costs. It is not the intent of the Committee to restrict the legitimate practice of telemedicine or the emerging practices of telemedicine which are consistent with medical practice guidelines of the State in which the practitioner is licensed, provided such practices do not contravene the goal of effectively controlling the diversion of controlled substances'').

[36] In addition to these two telepresenter categories, Congress created two additional regulatory categories (the *special registration* category and the joint rule category) to allow DEA to carry out its diversion control mission in light of future industry developments. *See* Senate Report 110–521, *Ryan Haight Online Pharmacy Consumer Protection Act of 2007,* accompanying S.980, November 17, 2008 (noting that the statute provides that the Attorney General and the Secretary of Health and Human Services may promulgate regulations that allow for the full practice of telemedicine consistent with medical practice guidelines, so long as these regulations continue to effectively control diversion).

pharmacist practitioners [37] under the *Controlled Substances Act* and its regulations.

When any one of the four outlined factors are present, it solidifies the platform's role as an integral intermediary in the remote dispensing of controlled substances.[38] The proposed definition and criteria are intended to provide a practical and clear framework for identifying when a DTC online telemedicine platform's conduct qualifies them as a *covered online telemedicine platform,* mandating registration as a dispenser with DEA.[39] As proposed, this definition is intended to limit the *Special Registration* requirements only to those DTC online telemedicine platforms that play a substantial and integral role as intermediaries in the remote dispensing of controlled substances.

The definition of *covered online telemedicine platform* also explicitly excludes certain types of entities, including hospitals, clinics, insurance providers, and *local in-person medical practices. Local in-person medical practice* is, in turn, defined by this rule to be a medical practice where all its offices are within 100 miles of each other, and where less than 50 percent of the total prescriptions for controlled substances collectively issued by the practice's physicians and *mid-level practitioners* are issued via telemedicine in any given calendar month, but is not a hospital, clinic, or insurance provider. The type of entities excluded from the definition of *covered online telemedicine platform* are entities that engage in conduct that could potentially fall under the definition's criteria but are not the types of entities whose primary business operations rely on, or center around, telemedicine services. Moreover, it should be noted that the proposed definition of *local in-person medical practice* uses the term ''telemedicine'' rather than ''*practice of telemedicine.*'' This distinction is significant, as ''telemedicine'' is used in its general, colloquial sense, whereas the ''*practice of telemedicine*'' carries the specific statutory meaning defined by the *Ryan Haight Act.*

Determining whether an entity dispenses controlled substances and meets the criteria of a *covered online telemedicine platform* is a fact-specific inquiry. If there is any uncertainty regarding the entity's role as a dispenser, particularly concerning its involvement in the practitioner-patient relationship, registering may be advisable to avert the risk of enforcement action based on potential unregistered, and thus illegal, dispensing of controlled substances.

IV. Section-by-Section Discussion of Proposed Rule

The proposed regulations discussed below are designed to satisfy the statutory mandates of 21 U.S.C. 831(h) and 21 U.S.C. 802(54)(E), while fulfilling DEA's core responsibilities of regulating controlled substances and adapting to the evolving landscape of telemedicine, including the rise of new types of DTC online telemedicine platforms engaged in dispensing of controlled substances. Before discussing the proposed regulations, it is important to once again highlight what they do not govern or permit. First, as emphasized previously, the proposed regulations do not affect practitioner-patient relationships in cases where an in-person medical evaluation has occurred at any point within the relationship. Once an in-person medical evaluation has taken place, the practitioner-patient relationship falls outside the scope of the *Ryan Haight Act* and the DEA regulations implementing the *Ryan Haight Act.* Second, these proposed regulations primarily focus on the *practice of telemedicine* under the *Special Registration* framework authorized by the *Ryan Haight Act.*[40] Other categories of telemedicine established by the *Ryan Haight Act,* such as telemedicine occurring during a public health emergency declared by HHS as authorized under 21 U.S.C. 802(54)(D), are not subject to the registration, prescription, and recordkeeping and reporting regulations proposed in this NPRM.

Third, these proposed regulations would not apply in the absence of a prescription for controlled substances.[41] In other words, practitioners would *not* be required to obtain a *Special Registration* unless they wish to prescribe or otherwise dispense controlled substances to patients via telemedicine encounters. And fourth, the proposed regulations would only permit the *prescribing* of controlled substances through telemedicine by *clinician practitioners.* Under the *Special Registration* framework, *clinician practitioners* would not be authorized to engage in other modes of ''dispensing,'' such as ''administering'' controlled substances to patients via telemedicine.[42]

A. Registration Requirements Under 21 CFR Part 1301

As discussed earlier, registration is the cornerstone of the closed system of control for manufacturing, distribution, and dispensing of controlled substances, and requires any person who manufactures, distributes, dispenses, imports, exports, or conducts research or chemical analysis with controlled substances to register with DEA, unless otherwise exempted. Establishing a *Special Registration* for telemedicine would enhance patient access to care by allowing certain practitioners to prescribe controlled substances via telemedicine without the limitations of geographical barriers. At the same time, it would establish the appropriate circumstances and guardrails for telemedicine-based prescribing and dispensing of controlled substances where an in-person medical evaluation has never been performed by the prescribing practitioner. The rise of DTC online telemedicine platforms in recent years has further transformed healthcare delivery, but it has also introduced new challenges and heightened risks of diversion due to the remote nature of care delivery. The proposed registration requirements for telemedicine-based prescribing and dispensing create a new business activity within DEA's overarching registration framework, distinguishing it from the traditional modes of dispensing under a 21 U.S.C. 823(g) registration.

---

[37] *See supra* footnote 15.

[38] The behaviors listed in these four factors are included solely to determine whether a platform is serving as an integral intermediary. Federal, state, or local laws and/or regulations may impose statutory or regulatory requirements related to these behaviors. The inclusion of these behaviors in the definition of *covered online telemedicine platform* does not indicate that such behaviors are permitted under any particular law or regulation.

[39] The definition of *covered online telemedicine platform* and the four criteria are discussed in further detail below in the NPRM's discussion of proposed regulatory definitions.

[40] *Ryan Haight Online Pharmacy Consumer Protection Act of 2008,* Public Law 110–425, 122 Stat. 4820, § 3(a) (2008) (codified as amended in 21 U.S.C. 802(54)(E)).

[41] This is an important distinction given potential conflation between colloquial use of the term ''telemedicine'' and the statutory definition of the ''practice of telemedicine'' in the CSA and these proposed regulations. To illustrate this point, the following scenarios are non-exhaustive examples in which ''telemedicine'' may occur in the colloquial sense but would not constitute the ''practice of telemedicine'' under the CSA or these proposed regulations: (1) a practitioner issues a prescription for a non-controlled substance; (2) a practitioner treats the patient through audio-visual means and, after doing so, determines the patient does not require controlled substances; or (3) a practitioner is a mental health counselor who treats patients using ''talk therapy'' exclusively, without prescribing controlled substances.

[42] 21 U.S.C. 802(2) defines ''administer'' to mean the ''direct application of a controlled substance to the body of a patient or research subject by a practitioner (or, in his presence, by his authorized agent), or the patient or research subject at the direction and in the presence of the practitioner, whether such application be by injection, inhalation, ingestion, or any other means.''

1. Three Types of Special Registration; Registrant Eligibility

The proposed requirements for the *Special Registration* [43] are devised to meet the statutory requirements of 21 U.S.C. 831(h). This provision authorizes DEA to issue a *Special Registration* if the practitioner demonstrates a legitimate need for a *Special Registration.*[44] Moreover, this statutory provision requires DEA to promulgate regulations specifying the limited circumstances under which a *Special Registration* may be issued and establish clear eligibility criteria for practitioners and the procedure for seeking a *Special Registration.*[45] To accommodate the varying legitimate needs of practitioners, including both *clinician practitioners* and *covered online telemedicine platforms,* in their capacity as *platform practitioners,* the proposed framework offers three distinct categories of *Special Registrations.*

The first category, the *Telemedicine Prescribing Registration,* would authorize the prescribing of Schedules III through V controlled substances by *clinician practitioners.*[46] The second category, the *Advanced Telemedicine Prescribing Registration,* would authorize certain specialized *clinician practitioners* the privilege to prescribe not only Schedule III through V controlled substances, but Schedule II controlled substances as well,[47] even though such substances have higher potential for abuse and dependence.[48] And lastly, the third category, the *Telemedicine Platform Registration,* would authorize *covered online telemedicine platforms* to dispense Schedules II through V controlled substances through a *clinician practitioner* possessing either a *Telemedicine Prescribing Registration* or an *Advanced Telemedicine Prescribing Registration.*[49]

Under proposed § 1301.11(c)(1)(A), an applicant for one of the three types of *Special Registration* would be required to already have one or more DEA registrations under 21 U.S.C. 823(g) to prescribe (if an *clinician practitioner*) or dispense (if a *platform practitioner*) controlled substances in a state in which they are licensed, registered, or otherwise permitted to prescribe or dispense controlled substances through telemedicine, unless they are otherwise exempted.

This requirement for *Special Registration* streamlines the review and approval process for applications for *Special Registrations* by building upon the checks and assessments already conducted for 21 U.S.C. 823(g) registrations. While the proposed framework allows for VA *practitioners* to seek and obtain a *Special Registration,* DEA and HHS have also jointly promulgated the *Continuity of Care via Telemedicine for Veterans Affairs Patients* final rule (RIN 1117–AB88), published elsewhere in this issue of the **Federal Register**, which specifically addresses the *practice of telemedicine* within the VA health care system. As discussed above, a DTC online telemedicine platform that qualifies as a *covered online telemedicine platform* dispenses controlled substances and must register with DEA in its capacity as a dispenser. It also bears emphasizing that proposed § 1301.11(c)(1) requires that *covered online telemedicine platforms,* like their *clinician practitioner* counterparts, already have one or more DEA registrations under 21 U.S.C. 823(g) to dispense controlled substances; DEA registrations under 21 U.S.C. 823(g) in turn require licensing of the activity by the state in which DEA registration under 21 U.S.C. 823(g) is sought.

Proposed § 1301.11(c)(1)(i) makes it clear that those officials for whom the requirement of registration to prescribe is generally waived under § 1301.23(a) of this chapter must still obtain a *Telemedicine Prescribing Registration* or *Advance Telemedicine Prescribing Registration* before issuing *special registration prescriptions.*[50] Such officials are, as described below, exempt from obtaining *State Telemedicine Registrations,* though they must identify all the states in which patients will be treated via telemedicine on their registration application.

a. Telemedicine Prescribing Registration (Schedules III–V) Clinician Practitioners Eligibility

To be eligible for the *Telemedicine Prescribing Registration* under proposed § 1301.11(c)(2), *clinician practitioners* would need to demonstrate that they have a legitimate need for a *Special Registration.* DEA has determined that physicians and board-certified *mid-level practitioners* (defined under 21 CFR 1300.01) have a legitimate need to prescribe Schedules III through V controlled substances when they anticipate that they will be treating patients for whom requiring in-person medical evaluations prior to prescribing Schedule III–V controlled substances could impose significant burdens on *bona fide* practitioner-patient relationships. For example, practitioners may have a legitimate need for the *Special Registration* when their patients face significant challenges in attending in-person medical evaluations, such as severe weather conditions, living in remote or distant areas, or having communicable diseases, which make in-person appointments difficult or even unadvisable.

b. Advanced Telemedicine Prescribing Registration (Schedules II–V) Clinician Practitioner Eligibility

To be eligible for the *Advanced Telemedicine Prescribing Registration* under proposed § 1301.11(c)(3), physicians and *mid-level practitioners,* as *clinician practitioners,* would not only need to demonstrate they have a legitimate need for the *Special Registration* but that such need warrants the authorization of prescribing of Schedule II controlled substances in addition to Schedules III through V controlled substances. DEA has determined that certain specialized physicians and board-certified *mid-level practitioners* have a legitimate need to prescribe Schedule II controlled substances via telemedicine when treating particularly vulnerable patient populations. Such authorization is reserved only for the most compelling use cases, ensuring that Schedule II prescribing via telemedicine is used only when necessary.

Consistent with these concerns regarding vulnerable patient populations, and cognizant of the high potential for abuse that exists for Schedule II controlled substances, DEA has determined that only certain specialized physicians and board-certified *mid-level practitioners* have a legitimate need for the *Advanced Telemedicine Prescribing Registration,* in the following limited circumstances or practice specialties:

(1) psychiatrists;
(2) *hospice care* physicians;
(3) *palliative care* physicians;
(4) physicians rendering treatment at *long term care facilities;*
(5) pediatricians; [51]

[43] Proposed 21 CFR 1301.11.
[44] 21 U.S.C. 831(h)(1)(A).
[45] *Id.;* 831(h)(2)(A).
[46] Proposed 21 CFR 1301.11(c)(2).
[47] Proposed 21 CFR 1301.11(c)(3).
[48] *See* 21 U.S.C. 812(b)(2), (3).
[49] Proposed 21 CFR 1301.11(c)(4).

[50] 21 CFR 1301.23(a) waives the requirement of registration ''for any official of the U.S. Army, Navy, Marine Corps, Air Force, Space Force, Coast Guard, Public Health Service, or Bureau of Prisons who is authorized to prescribe, dispense, or administer, but not to procure or purchase, controlled substances in the course of his/her official duties.''

[51] Proposed 21 CFR 1306.45(e) would also require that the parent or guardian of patients under the age of 18 be present in the room with the patients when the patients are being issued prescriptions for a Schedule II controlled substance.

(6) neurologists; and

(7) *mid-level practitioners* and physicians from other specialties who are board certified in the treatment of psychiatric or psychological disorders, *hospice care, palliative care,* pediatric care, or neurological disorders unrelated to the treatment and management of pain.

The type of specialized practitioners and board-certified *mid-level practitioners* eligible for the *Advanced Telemedicine Prescribing Registration* typically treat patients that face significant healthcare accessibility challenges, and, in some cases, who suffer from particularly debilitating or terminal illnesses. The hardships faced by such patients were discussed at length by certain speakers during the Telemedicine Listening Sessions. For example, some speakers discussed accessibility issues created by shortages of psychiatrists, and the need for qualified, perhaps board-certified, psychiatrists to diagnose and treat illnesses like ADHD.[52] Another group of speakers addressed the accessibility challenges faced by *palliative* and *hospice* patients, often homebound, who may need urgent pain treatment and symptom management.[53] The heightened specificity of these limited circumstances is intended to strike a balance between ensuring access to necessary medications for vulnerable patients while controlling the prescribing of Schedule II controlled substances that have a higher potential risk of abuse and dependence.

Furthermore, these eligible specialized physicians and board-certified *mid-level practitioners* are uniquely positioned to provide expert care for specific, vulnerable patient populations. These specialized physicians and *mid-level practitioners* have specialized training and in-depth knowledge to equip them to make informed decisions regarding the use of Schedule II controlled substances when prescribed remotely to particularly vulnerable patient groups. While DEA is not proposing regulations that delineate specific criteria for practitioners falling into the designated practice specialties, *clinician* practitioners are required to furnish information on their *Special Registration* applications that would demonstrate their specialized training. For example, the *clinician practitioner* could cite or provide information on board certification in a specialty, specialized training, or the percentage of the *clinician practitioner's* overall practice that falls within one of the specialized practices. *Mid-level practitioners* are, however, required to be board-certified under this proposed framework. DEA invites public comments on all facets of the proposed regulations, including this specific provision.[54] Particularly, DEA seeks input on whether other types of practitioners should be included if they can demonstrate specific training in expertise in managing conditions that are traditionally treated with Schedule II controlled substances. DEA also seeks input on alternative methods to ensure that practitioners seeking to prescribe Schedule II controlled substances pursuant to the *Advanced Telemedicine Prescribing Registration* have the appropriate training and expertise to do so safely.

c. Telemedicine Platform Registration (Schedules II–V) Platform Practitioner Eligibility

To be eligible for the *Telemedicine Platform Registration* under proposed § 1301.11(c)(4), *covered online telemedicine platforms* would need to demonstrate that they have a legitimate need for a *Special Registration.* DEA has determined that *covered online telemedicine platforms* (defined under 21 CFR 1300.04), in their capacity as *platform practitioners,* have a legitimate need to dispense Schedules II through V controlled substances when they anticipate providing necessary services to introduce or facilitate connections between patients and *clinician practitioners* via telemedicine for the diagnosis, treatment, and prescription of controlled substances, are compliant with federal and state regulations, provide oversight over *clinician practitioners'* prescribing practices, and take measures to prioritize patient safety and prevent diversion, abuse, or misuse of controlled substances. The *platform practitioner* would be required to attest to its legitimate need on their *special registration* application. If, however, it is later discovered that the practitioner provided false information to obtain the *special registration* or used it for unlawful or inappropriate purposes, the practitioner could be found in violation of 21 U.S.C. 824(a), which could lead to penalties such as revocation or suspension of the registration.

As discussed previously, the registration of *covered online telemedicine platforms* within the *Special Registration* framework is necessary given the pivotal role they sometimes play in the delivery of healthcare through telemedicine. While these *covered online telemedicine platforms* may improve healthcare accessibility by connecting patients with *clinician practitioners,* their emergence also brings more, and sometimes easier, avenues to divert or abuse controlled substances, particularly when such entities have financial incentives tied to prescriptions and/or do not adequately screen the *clinician practitioners* utilizing their system or platform. The lack of proper oversight and verification of *clinician practitioners'* credentials open the door to ''doctor shopping'' [55] on the systems or platforms, particularly when bad actors are aware of, and exploit, the lack of oversight and credential verification by *covered online telemedicine platforms.*

2. Ancillary Registration: State Telemedicine Registrations

Pursuant to 21 U.S.C. 802(54), the *practice of telemedicine,* including such practice authorized under a *Special Registration,* must be ''in accordance'' or consistent with Federal and *State* law. Section 831(h)(1)(B) authorizes DEA to issue a *Special Registration* to a practitioner if the practitioner is registered under 21 U.S.C. 823(g) in the *state* in which the patient is located when receiving a prescription for controlled substance via telemedicine (a ''823(g) patient state registration), subject to certain exceptions. While the proposed *Special Registration* framework must comply with these

As discussed in the First Temporary Rule, while the conduct of certain online telemedicine platforms has raised concerns and such platforms may be subject to investigation for problematic prescribing practices, many others have acted in good faith to expand access to care. ''Doctor shopping is defined as seeing multiple treatment providers, either during a single illness episode or to procure prescription medications illicitly.'' Sansone RA, Sansone LA. Doctor shopping: a phenomenon of many themes. Innov Clin Neurosci. 2012 Nov;9(11–12):42–6. PMID: 23346518; PMCID: PMC3552465.

statutory provisions, DEA is mindful that telemedicine is largely designed to overcome geographical constraints. Therefore, to reduce the administrative burden and cost on *special registrants,* DEA is proposing a limited type of 21 U.S.C. 823(g) registration for a lower registration fee, the *State Telemedicine Registration.*

Pursuant to proposed § 1301.11(d), a *clinician special registrant* would be required to obtain a *State Telemedicine Registration,* which is a DEA-issued registration and not a registration issued by the individual states, for every state in which they intend to issue prescriptions for controlled substances to patients via telemedicine. Likewise, a *platform special registrant* would be required to obtain a *State Telemedicine Registration* for every state in which it dispenses Schedule II–V controlled substances to a patient. The *State Telemedicine Registration* would operate as an ancillary credential, contingent on the *Special Registration* held by the *clinician practitioner* or *platform practitioner.* In other words, a *State Telemedicine Registration* for a given state would allow the *special registrant* to prescribe only via telemedicine encounters as to that state, and only for the scheduled controlled substances authorized by their *Special Registration* (*i.e., Telemedicine Prescribing Registration, Advanced Telemedicine Prescribing Registration, or Telemedicine Platform Registration*).

Proposed 21 CFR 1301.11(d) stipulates that a practitioner's eligibility for the *State Telemedicine Registration* for a specific state depends on their authorization, such as state licensure or state-level registration, to prescribe or otherwise dispense controlled substances through telemedicine within that state. Consistent with the criteria for all 823(g) registrations, DEA will consider the public interest factors outlined in 21 U.S.C. 823(g)(1)(A)–(E) before granting a *State Telemedicine Registration.* The requirement of state authorization aligns with 21 U.S.C. 823(g)(1)(D), which assesses compliance with *state,* federal, and local laws regarding controlled substances.

Exemptions to the State Telemedicine Registration Requirement. Section 21 U.S.C. 831(h)(1)(B) does, however, provide two categories of exemptions to the state registration requirement. Generally, a *clinician special registrant* would not be required to obtain a section 823(g) registration in each patient state to prescribe via telemedicine, if the *clinician special registrant* is either: (1) subject to a regulatory exemption applicable to all states pursuant to 21 U.S.C. 822(d),[56] or (2) the *clinician special registrant* is an employee or contractor of the VA.[57]

As to the first category of exemptions, there is currently one regulatory exemption, promulgated pursuant to 21 U.S.C. 822(d), applicable to registration in all states. Specifically, 21 CFR 1301.23(a) waives registration ''for any official of the U.S. Army, Navy, Marine Corps, Air Force, Space Force, Coast Guard, Public Health Service, or Bureau of Prisons who is authorized to prescribe, dispense, or administer, but not to procure or purchase, controlled substances in the course of his/her official duties.'' The second category of exemptions is the one explicitly extended to VA employees or contractors by statute.[58] When an employee or contractor of the VA is acting in the scope of such employment or contract, and is registered under section 823(g) in *any state* or is utilizing the registration of a hospital or clinic operated by the VA registered under 21 U.S.C. 823(g), the prescriber would not need to possess a *State Telemedicine Registration* in each state in which a patient is located.[59]

While proposed § 1301.11(d) incorporates these exemptions, those *clinician practitioners* who are exempted from the *State Telemedicine Registration* requirement remain subject to other *Special Registration* eligibility requirements and are required to identify all the states in which patients will be treated via telemedicine on their registration application for the *Telemedicine Prescribing Registration* or the *Advanced Telemedicine Prescribing Registration.* DEA must have this information to coordinate oversight and verify that *State Telemedicine Registration*-exempted *clinician special registrants* are operating within the boundaries of their exemption while upholding regulatory standards. The *State Telemedicine Registration*-exempted *clinician special registrants* would also be exempted from the $50 fee per state under proposed 21 CFR 1301.13(e)(1)(xiii), further discussed below.[60]

[56] Pursuant to 21 U.S.C. 822(d), ''[t]he Attorney General may, by regulation, waive the requirement for registration of certain manufacturers, distributors, or dispensers if he finds it consistent with the public health and safety.''

[57] 21 U.S.C. 802(54)(A)(ii)(III).

[58] 21 U.S.C. 802(54)(A)(ii)(III)(bb).

[59] 21 U.S.C. 831(h)(1)(B)(i)–(ii).

[60] *See* Appendix C for Chart: *Which State Telemedicine Registrations Do I Need, If Any?*

3. Special Registration Application Process

The *Special Registration* application process for obtaining the proposed *Telemedicine Prescribing Registration, Advanced Telemedicine Prescribing Registration,* and the *Telemedicine Platform Registration* would differ from the standard 21 U.S.C. 823(g) registration application process. The proposed amendments to 21 CFR 1301.13 outline the new *Special Registration* application requirements.

a. Special Registration Application, Cycles, Fees, Generally

Proposed 21 CFR 1301.13(e)(1)(xi)–(xv) summarizes the *Special Registration* Application, Cycle, and Fees. DEA proposes issuing a new registration application, *Form 224S* (*Application for Special Registration for Telemedicine Under the Controlled Substances Act*), tailored for *Special Registrations. Special Registration* applicants would use the *Form 224S* to apply for one of the three types of the *Special Registration* (*i.e., Telemedicine Prescribing Registration, Advanced Telemedicine Prescribing Registration,* or *Telemedicine Platform Registration*), as well as the *State Telemedicine Registrations* for each state in which telemedicine patients will be located. The regulations propose a tiered fee structure to address the administrative demands specific to the new business activities. The regulations propose a three-year cycle for the *Special Registrations* (*i.e., Telemedicine Prescribing Registration, Advanced Telemedicine Prescribing Registration,* and *Telemedicine Platform Registration*), as well as the *State Telemedicine Registrations* (*i.e., Clinician Practitioner State Telemedicine Registration* and the *Platform Practitioner State Telemedicine Registration*).

For any one of the three types of *Special Registration,* the registration fee would be $888. The fee for the *Platform Practitioner State Telemedicine Registration* would be $888 for each state in which a *State Telemedicine Registration* is sought; however, the *Clinician Practitioner State Telemedicine Registration* would be discounted to $50 for each state in which the *clinician practitioner* sought a *State Telemedicine Registration.*[61] The fee for the *State Telemedicine Registration* for *clinician practitioners* is discounted to account for the expected

[61] 21 CFR 1301.21 exempts certain *clinician practitioner* applicants from payment of application fees for registration, including for *Special Registrations* and *State Telemedicine Registrations.*

lower volume of telemedicine that would be conducted by *clinician practitioners* compared to *covered online telemedicine platforms.* The $50 registration fee for the *Clinician Practitioner State Telemedicine Registration* would be waived for those exempted from registration pursuant to 21 U.S.C. 831(h)(1)(B) and proposed 21 CFR 1301.11(c)(3). In DEA's preliminary assessment, the registration fees are reasonable and are expected to account for the full operating costs associated with the heightened administrative and resource demands on the Diversion Control Program that will arise from regulating a new registration class; however, DEA may adjust these fees as it acquires additional information about the new registration classes to ensure appropriate funding for regulatory oversight.[62]

b. Supplemental Requirements on Special Registration Application (Form 224S)

Special Registered Location. Pursuant to proposed § 1301.13(k)(1), all *Special Registration* applicants would be required to designate one of their existing 21 U.S.C. 823(g) registered locations as the registered location/physical address (''*special registered location*'') of their *Special Registration.* The *special registered location* would serve as the physical point of contact for DEA telemedicine inquires and compliance actions. As will be further discussed below, the proposed rule would also mandate that the records arising from telemedicine encounters under the *Special Registration* be maintained at the *special registered location.*[63] Such centralized recordkeeping would allow DEA to more efficiently review records and ensure that prescriptions are being issued in accordance with DEA regulations. Proposed § 1301.13(k)(1) would provide an exemption for applicants who are exempted from the *State Telemedicine Registration* requirement under proposed § 1301.11(d); however, such exempted persons would be required to provide another physical address on the application to serve as their *special registered location.*

Form 224S Supplementary Disclosures and Attestations. Proposed 21 CFR 1301.13(k)(2) would require the *Special Registration* applicant to provide certain disclosures and attestations on the Form 224S. Such information would enhance transparency, patient safety, and anti-diversion efforts. First, proposed § 1301.13(k)(2)(i) would require *platform practitioners* applying for the *Telemedicine Platform Registration* to attest to all employment, contractual relationships, or professional affiliations with any *clinician special registrant* and Online Pharmacy and their respective registration numbers on the Form 224S. Likewise, proposed § 1301.13(k)(2)(ii) would require *clinician practitioners* applying for the *Telemedicine Prescribing Registration* or the *Advanced Telemedicine Prescribing Registration* to attest to all employment, contractual relationships, and professional affiliations, including but not limited to those with *covered online telemedicine platforms* (and the respective online telemedicine platform's *Telemedicine Platform Special Registration number,* if applicable) on the Form 224S. By understanding each prescriber's professional associations, DEA can more effectively evaluate the prescriber's qualifications, conflicts of interest, and compliance with DEA regulations.[64] Second, proposed § 1301.13(k)(2)(iii) would require that *clinician practitioners* and *platform practitioners* applying for a *Special Registration* to attest that they have devised, and are committed to maintaining, anti-diversion policies and procedures.

Third, proposed § 1301.13(k)(2)(iv) would require *clinician practitioners* applying for the *Advanced Telemedicine Prescribing Registration* to disclose their practice specialties, *e.g. hospice care* or *palliative care.* DEA would use this information in conjunction with other investigative information to help detect and prevent diversion of controlled substances via telemedicine. This would include circumstances where *clinician practitioners* appear to be prescribing medications for conditions unrelated to their practice specialties. DEA would also use this information as needed to check the applicant's eligibility for the *Advanced Telemedicine Prescribing Registration,* which is limited to certain specialized physicians and *mid-level practitioners* treating vulnerable patient populations who have a legitimate need to prescribe Schedule II controlled substances.

As discussed above, under the proposed 21 CFR 1301.11(c)(3), only psychiatrists, *hospice care* physicians, *palliative care* physicians, physicians rendering treatment at *long term care facilities,* pediatricians, neurologists, and *mid-level practitioners* board certified in the treatment of psychiatric or psychological disorders, *hospice care, palliative care,* pediatric care, or neurological disorders unrelated to the treatment and management of pain, would be eligible for the *Advanced Telemedicine Prescribing Registration.* Lastly, proposed § 1301.13(k)(2)(v) would require that, for each type of *Special Registration,* the applicant required to attest to their legitimate need on their *special registration* application. If, however, it is later discovered that practitioner provided false information to obtain the *Special Registration* or used it for unlawful or inappropriate purposes, they could be found in violation of 21 U.S.C. 824(a), which could lead to penalties such as revocation or suspension of registration.

c. Notification of Application Changes; Modifications (Form 224S–M)

Proposed 21 CFR 1301.13(l) would require *special registrants* to promptly notify DEA of any changes to the information provided in their original *Special Registration* application (Form 224S) within 14 business days on a Form 224S–M (*Application for Changes and Modifications to Special Registration*). For example, if a *clinician special registrant* began employment with, or otherwise entered an arrangement with, a new DTC online telemedicine platform not previously disclosed on their original Form 224S, the *clinician special registrant* would be required to submit a Form 224S–M to DEA within 14 business days of any such change. The Form 224S–M would also be used by *clinician special registrants* and *platform special registrants* to make modifications to their *Special Registration.* For example, the *special registrant* would submit a Form 224S–M to apply for additional *State Telemedicine Registrations* to engage in telemedicine in states for which the *special registrant* did not originally apply on their Form 224S.

[62] Pursuant to 21 U.S.C. 821, DEA is authorized to charge reasonable fees relating to registration and control of the dispensing (including prescribing) of controlled substances. Furthermore, 21 U.S.C. 886a(1)(C) requires those fees to be set at a level that ensures the recovery of the full costs of operating the various aspects of the Diversion Control. Program. For more information on fee scheduling, see Registration and Reregistration Fees for Controlled Substance and List I Chemical Registrants, 85 FR 44710–44734 (July 24, 2020).

[63] *See* Proposed 21 CFR 1304.04(j).

[64] *See* Telemedicine Listening Sessions, Dr. Shabana Khan (American Psychiatric Association and American Academy of Child and Adolescent Psychiatry), 38:16–19 (Sept. 12, 2023) (recommending that DEA could require the reporting of the prescriber's employer to hold the telemedicine employers accountable).

4. Special Registration for Telemedicine Actions

a. Approval and Denial of Special Registration Applications

Proposed amendments to 21 CFR 1301.35 address the approval and denial criteria that would be considered on an application for *Special Registration* under 21 U.S.C. 831(h). The proposed amendment to § 1301.35(a) states that the Administrator shall issue a Certificate of Registration (DEA Form 223) to a *Special Registration* applicant if: (1) the *Special Registration* applicant satisfies the eligibility requirements specified at proposed 21 CFR 1301.11(c)(2) (*Telemedicine Prescribing Registration*), proposed 21 CFR 1301.11(c)(3) (*Advanced Telemedicine Prescribing Registration*), proposed 21 CFR 1301.11(c)(4) (*Telemedicine Platform Registration*) or proposed 21 CFR 1301.11(d) (*State Telemedicine Registration*); and (2) after considering the public interest factors provided at 21 U.S.C. 823(g)(1)(A)–(E), the Administrator has determined that the *Special Registration* will be consistent with the public interest.

By evaluating *Special Registration* applicants on the eligibility requirements and considering the public interest factors under Section 823(g), DEA can ensure that only qualified practitioners, whether a *clinician practitioner* or a *platform practitioner,* who prioritize public safety and regulatory compliance are granted *Special Registrations for Telemedicine.* As is required for applications for other registrations (issued under 21 U.S.C. 823 and 21 U.S.C. 958), proposed 21 CFR 1301.35(a) requires the Administrator—if intending to deny an application—to issue an *Order to Show Cause* pursuant to 21 CFR 1301.37,[65] and, if requested by the applicant, hold a hearing on the application pursuant to 21 CFR 1301.31 for *Special Registration* Applications.

Proposed 21 CFR 1301.35(d) would specify what information a Certificate of Registration (DEA Form 223) issued for a *Special Registration* shall contain: name; *special registered location; Special Registration for Telemedicine* (*Telemedicine Prescribing Registration, Advanced Telemedicine Prescribing Registration,* or *Telemedicine Platform Registration*), and *State Telemedicine Registration(s);* the activity authorized by the *Special Registration,* the Schedules and/or Administration Controlled Substances Code Number (as set forth in part 1308 of this chapter) of the controlled substances which the registrant is authorized to handle; the amount of fee paid (or exemption) for each registration, and the expiration date of each registration. Proposed 21 CFR 1301.35(d) would also require a special registrant to maintain the Certificate of Registration at the *special registered location* in a readily retrievable manner and to permit inspection of the certificate by any official, agent or employee of the DEA or of any Federal, State, or local agency engaged in enforcement of laws relating to controlled substances.

b. Suspension and Revocation of Special Registrations

The proposed amendments to 21 CFR 1301.36 outline when *Special Registrations for Telemedicine* (*Telemedicine Prescribing Registration, Advanced Telemedicine Prescribing Registration,* and *Telemedicine Platform Registration*), and *State Telemedicine Registrations* may be suspended or revoked. Proposed 21 CFR 1301.36(c) would provide that such *Special Registrations for Telemedicine* can be suspended or revoked based on the grounds specified in 21 U.S.C. 824(a), which are fundamentally designed to authorize DEA to intervene when registrants jeopardize the responsible handling of controlled substances. A *Special Registration* is contingent on the good standing of the registrant's other DEA registrations; therefore, proposed 21 CFR 1301.36(k) stipulates that the suspension or revocation of any registration under 21 U.S.C. 823 will trigger an automatic suspension or revocation of any registration issued under 21 U.S.C. 831. These automatic suspensions and revocations are designed to prevent registrants who have had one registration suspended or revoked due to non-compliance or risk to patient safety, from exploiting alternate registrations.

B. Special Registration Prescriptions Issued by Clinician Special Registrants Under 21 CFR Part 1306

Proposed 21 CFR 1306.41 through 1306.47 provide heightened requirements for *clinician special registrants* when they issue *special registration prescriptions.* Along with these heightened *special registration prescription* requirements, *clinician special registrants* would remain obligated to comply with all prescription regulations required under their 21 U.S.C. 823(g) registration. The combination of heightened telemedicine standards and continued adherence to existing regulations ensures that the quality and integrity of medical practice are maintained, even in the evolving landscape of remote healthcare services. Generally, these proposed regulations address the manner in which prescriptions are issued by *clinician special registrants,* and certain elements required to be a part of *special registration prescriptions.*

1. Manner of Issuance of Special Registration Prescriptions

Prescription Origination within the United States. Proposed 21 CFR 1306.41 would require that the *clinician special registrant* be physically present in the United States when conducting a telemedicine encounter and issuing a *special registration prescription.* Additionally, proposed 21 CFR 1306.41 would require that the *clinician special registrant* hold the proper licensure and authorization within the state and territory where the practitioner is located when the telemedicine encounter takes place.[66] For the purposes of this proposed rule, the ''United States'' means the 50 states of the United States of America and the District of Columbia, the Commonwealth of Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, the U.S. Virgin Islands, America Samoa, Wake Island, Midway Islands, Kingman Reef, Johnston Atoll, and any other trust territory or possession of the United States. This proposed requirement ensures that DEA retains jurisdictional control over *special registration prescriptions* and maintains clear boundaries on where these prescriptions are issued, ensuring compliance with U.S. laws and regulations. Restricting *clinician special registrants* from operating outside the U.S. also minimizes the risk associated with international boundaries, such as different regulatory frameworks and potential challenges in oversight and accountability.

Electronic Prescribing for Controlled Substances (EPCS). Proposed 21 CFR 1306.42 requires all *special registration prescriptions* be issued through EPCS.[67] For the practice of telemedicine, in which physical practitioner-patient interactions do not exist, EPCS would be instrumental in securing the prescription process. It would establish a traceable and secure platform that reduces the risk of unauthorized access

[65] 28 CFR Pt. 0, Subpt. R., App., Sec. 7 delegates the authority to sign final orders connected with the suspension, denial, or revocation of registration to the Deputy Assistant Administrator of the DEA Office of Diversion Control.

[66] The practitioner would also be required to be licensed and authorized to practice telemedicine in the state where the patient is located pursuant to the relevant *State Telemedicine Registration. See* proposed 21 CFR 1301.11(d).

[67] *Electronic Prescriptions for Controlled Substances,* 75 FR 16236 (March 31, 2010).

and forgeries. Moreover, the majority of states have enacted EPCS mandates to combat the opioid crisis by focusing on opioid access and enhanced oversight of possible misuse.[68] According to one 2021 study of New York's e-prescribing mandate, the mandate reduced the rate of overdoses involving natural and semi-synthetic opioids by 22 percent.[69] EPCS offers a robust and accountable system that prevents misuse and diversion of controlled substances, helping to maintain the integrity of prescribing among *clinician special registrants.*

Nationwide Prescription Drug Monitoring Program (PDMP) Check. Proposed 21 CFR 1306.43 requires that *clinician special registrants* perform a check of relevant PDMPs. For a period of three (3) years from the date that a final rule becomes effective, before issuing any *special registration prescription* for controlled substance to a patient, the *individual special registrant* would be required to check the PDMPs for: (1) the state or territory where the patient is located; (2) state or territory where the *clinician practitioner* is located; and (3) any state or territory with PDMP reciprocity agreements with either the state or territory where the patient is located or the state or territory where the *clinician practitioner* is located. While the proposed regulation would require, at a minimum, that *clinician special registrants* check these three categories, DEA encourages *clinician special registrants* to check any other state PDMP that the registrant determines to be clinically appropriate.

After three years, however, the *individual special registrant* would be required, before issuing any *special registration prescription* for controlled substances to a patient, to check the PDMPs of all 50 states of the United States and any other U.S. district or territory that maintains its own PDMP. This requirement for a broader, nationwide PDMP check would not begin until three (3) years after the final rule's effective date, to allow registrants and industry sufficient time to comply with the new requirement. If, however, there is no mechanism to perform such a nationwide check after these three years, then *individual special registrants* would remain required to continue performing PDMPs checks of the states in the three categories described above, and *individual special registrants* would only be able to issue *special registration prescriptions* for Schedule II controlled substances to patients located within the same state as the *individual special registrant, i.e.,* where there is an intra-state practitioner-patient relationship. The proposed nationwide PDMP check requirement is intended to ensure that *clinician practitioners* and pharmacists have full visibility of a patient's controlled substance prescription history, not to proactively furnish DEA with access to this data. Accordingly, this rule does not propose that DEA would gain any new avenues, by means of this rule, to collect information from state PDMPs beyond what is otherwise authorized by federal and state laws.

This delayed nationwide PDMP check requirement also reflects that the fragmented nature of PDMPs across states and territories has created challenges for healthcare providers in obtaining comprehensive patient data, particularly in cases involving telemedicine. In the context of telemedicine, the extension of medical services across state boundaries increases the complexity of controlling diversion of controlled substances. Telemedicine allows patients to consult *clinician practitioners* located in different states, creating a scenario where patients might seek multiple prescriptions from different *clinician practitioners* practicing in different regions, *i.e.* ''doctor shop,'' by exploiting the current fragmented nature of PDMPs across the states. Moreover, the absence of in-person interaction with telemedicine patients may limit the practitioner's ability to gauge whether patients are being honest about their medical history, potentially enabling the concealment of pertinent information related to controlled substances. During the Telemedicine Listening Sessions, various speakers highlighted the challenges resulting from the fragmented nature of PDMPs across states and territories and called for enhanced interoperability of PDMPs nationwide; some speakers also advocated for a unified national or federal PDMP to address these concerns more effectively.[70]

To address these risks to public health and safety, it is imperative that *clinician special registrants* ultimately be required to perform this comprehensive PDMP check of all 50 states, and any other U.S. district or territory that maintains its own PDMP. This comprehensive nationwide PDMP check would provide the *clinician special registrants* a comprehensive view of the patient's prescription history, helping to prevent over-prescribing and mitigating the risk of patients engaging in ''doctor shopping'' to obtain multiple controlled substance prescriptions across state lines. DEA acknowledges that it is currently unlikely that any one healthcare provider has access to all PDMPs nationwide. However, DEA also recognizes that current efforts to standardize, centralize, and interconnect PDMP data are making headway. These initiatives, aimed at creating a more unified and accessible system, offer a feasible future solution to bridge the gap and improve the accessibility of vital prescription information.

Special Registration Prescriptions and Audio-Video Telecommunication Systems. Proposed 21 CFR 1306.44(a) mandates that a *clinician special registrant* utilize both audio and video components of an *audio-video telecommunications system* to prescribe under the *Special Registration* framework for every telemedicine encounter whether an initial visit or subsequent visit or follow-up. This requirement underscores the critical need to not only audibly, but visually, assess patients when prescribing controlled substances. Controlled substances, which often carry a substantial risk of misuse or diversion, require a more comprehensive evaluation. Visual observation of the patient is crucial for providers, because it communicates valuable information that cannot be obtained through other means and allows for more effective identity verification.[71] By observing a

PMID: 33254147; PMCID: PMC7883801 (Available: *https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7883801/*); and Bramstedt, Katrina, Ph.D., MA. *The Use of Visual Arts as a Window to Diagnosing Medical Pathologies.* AMA J Ethics. 2016;18(8):843–854. doi: 10.1001/journalofethics.2016.18.8.imhl1–1608 (Available: *https://journalofethics.ama-assn.org/article/use-visual-arts-window-diagnosing-medical-pathologies/2016-08*).

patient's physical appearance, demeanor, and body language, providers can gather important indications of misuse or diversion of controlled substances. Though DEA has permitted audio-only telemedicine on a temporary basis for patients during and immediately after the COVID–19 PHE, the current landscape calls for a reevaluation. The Department of Health and Human Services (HHS) declared an end to the Federal PHE for COVID–19 under section 319 of the Public Health Service Act on May 11, 2023,[72] and as pointed out by some researchers, the ''risk benefit calculation of audio-only visits has changed, and it is increasingly important to protect patients from potentially lower-quality audio-only visits,'' especially when visual observations are critical.[73] At the Telemedicine Listening Sessions, various speakers advocated for the use of audio-video telemedicine specifically.[74] Expressing their concerns about the use of audio-only telemedicine, one speaker said, ''we require video visits. On rare occasions we do the telephone. Just for the fact you can lay eyes on the people. They may tell you they're perfectly fine, but they may have tears coming down their face. They may have physical problems. They may have meth marks. You know, things that people need to see. So video's important.'' [75]

The utilization of *audio-video telecommunication systems*—as opposed to audio-only communication technology—not only offers advantages in helping prevent diversion, but it also allows the *clinician special registrant* to visually confirm the patient's identity in real time. This would be achieved by comparing the patient to their existing photo identification on file, which will exist in the vast majority of cases given the requirements under proposed 21 CFR 1304.04(i). This direct visual verification serves as a further safeguard against the diversion of controlled substances during telemedicine encounters.[76]

Schedule III–V Special Registration Prescriptions for Opioid Use Disorder. Proposed 21 CFR 1306.44(b) would allow *clinician special registrants* to issue *special registration prescriptions* for, and *platform special registrants* to dispense, Schedule III–V controlled substances approved by the FDA for the treatment of Opioid Use Disorder (''OUD'') through the use of an *audio-only telecommunications system* as described in 42 CFR 410.78(a)(3), provided that the treatment was initiated through the use of an *audio-video telecommunications system* as defined in the proposed 1300.04 of this chapter. According to one survey of 866 mental health (MH), primary care (PC), and specialty care (SC) clinicians in the Department of Veterans Affairs New England Healthcare System (VANEHS), less than one-third of the clinicians surveyed rated phone as equivalent to or higher in quality when treating new patients. However, the survey indicated that support for such audio-only telecommunications increased significantly when treating established patients. These results highlight the importance of visual assessments for new patients, while showing that audio-only telecommunications may be more acceptable or useful once a patient is established.[77]

Currently, the only Schedule III–V narcotic drug approved by the FDA for the treatment of OUD is buprenorphine.[78] DEA's proposed authorization for the use of *audio-only telecommunications systems* for the treatment of OUD is rooted in the unique nature of OUD treatment. The complex and long-term management of OUD often necessitates a continuum of care that might be best accommodated through flexibility in telecommunication methods. Expanding the circumstances under which *clinician practitioners* are authorized to prescribe buprenorphine via telemedicine encounters, including audio-only encounters, would increase access to treatment for those individuals with OUD who may not want to seek treatment, or are unable to seek treatment, due to various economic, geographical, sociological, and logistical reasons.

Many OUD patients may lack the financial means to obtain in-person treatment traditionally or through audio-video telemedicine encounters. OUD patients who are unhoused, unemployed, or facing other challenges may find it prohibitive to afford devices capable of audio-video telemedicine encounters or consistent access to wireless internet and/or data plans adequate to support bandwidth demands of telemedicine encounters.[79] The estimated number of deaths from opioid overdoses for the 12-month period ending in October 2023 were 79,695, with a peak of 83,985 opioid overdose deaths for the 12-month period ending in May 2023.[80] Access to buprenorphine decreases the risk of overdosing,[81] and increasing access to buprenorphine after a drug overdose has also been associated with a reduced risk of death.[82] This allowance acknowledges the specific challenges faced by OUD patients and the importance of ensuring consistent therapeutic relationships with limited interruptions.

It also important to highlight that the *Expansion of Buprenorphine Treatment via Telemedicine Encounter* final rule (RIN 1117–AB78), jointly promulgated with HHS elsewhere in this issue of the **Federal Register**, allows a DEA-registered practitioner without a *Special Registration* to issue a prescription for a Schedule III–V controlled substance approved by the FDA for the treatment of OUD via audio-only or audio-video telemedicine for an initial consecutive six-month supply. Following the initial six-month supply, practitioners may prescribe the controlled substance by other forms of the *practice of telemedicine* authorized under the CSA (such as pursuant to a *Special*

Registration) or after conducting an in-person medical evaluation.

This proposed Special Registration NPRM would not preclude a *clinician special registrant* from utilizing the authority under the *Expansion of Buprenorphine Treatment via Telemedicine Encounter* final rule (RIN 1117–AB78) for the prescription of buprenorphine for the treatment of OUD. However, after the six-month supply has been completed, a *clinician special registrant* would need to initiate further prescribing of the controlled substance through an *audio-video telecommunications system.* After this initial audio-video telemedicine encounter, the *clinician special registrant* may then use *audio-only telecommunications systems* to prescribe buprenorphine for the treatment of OUD to the patient for the duration of the practitioner-patient relationship.

DEA's proposed authorization of audio-only telemedicine follow-ups under the *Special Registration* framework does not or should not be taken to imply that buprenorphine cannot be or is not diverted. Some presenters spoke to these issues during the Telemedicine Listening Sessions. According to one presentation, there is a ''robust illicit market for buprenorphine,'' and anecdotal reports of patients are selling buprenorphine to fund abuse of other controlled substances.[83] Another presenter said that drugs like suboxone and buprenorphine, prescribed to treat OUD, are used as a ''currency'' to purchase other drugs like methamphetamines, and that in his community, ''if methamphetamine is involved, you can pretty much be assured the diversion of buprenorphine is involved.'' [84]

Such anecdotal information, however, must be considered in the context of the nation's opioid crisis, as well as recent data showing a lower risk of diversion for buprenorphine relative to other controlled substances. In November 2023, a report by the Office of the Inspector General of HHS found that 97 percent of Part D enrollees received the recommended amounts or less of buprenorphine for OUD in 2022, suggesting that the risk of misuse or diversion of buprenorphine in Medicare Part D may be low.[85] Considering this data and the additional proposed safeguards in this rule for *special registration prescriptions,* including the initiation of buprenorphine through audio-video telemedicine encounters, DEA believes that expanding access to buprenorphine through audio-only follow-ups outweighs the relatively lower risk of misuse and diversion of buprenorphine.

Schedule II Controlled Substance Prescriptions. Proposed 21 CFR 1306.45 requires that every *special registration prescription* for a Schedule II controlled substance be issued by a *clinician special registrant* that maintains the *Advanced Telemedicine Prescribing Registration,* who is issuing the prescription while the *clinician special registrant* is practicing within their given medical specialty. Proposed 21 CFR 1306.45(a) imposes further conditions on *clinician special registrants* who are pediatricians or board-certified in pediatric care and requires the mandatory presence of the minor's parent or guardian when the *clinician special registrant* prescribes a Schedule II controlled substance to the minor. This proposed provision is rooted in DEA's commitment to safeguarding the well-being of minors, particularly given the substantial risks associated with Schedule II controlled substances, including opioids.

This safeguard aligns with the broader intent of the *Ryan Haight Act,* which was enacted following the death of Ryan Haight, who tragically died after obtaining prescription opioids online without a valid prescription and without having ever been seen by the prescribing physician. Ryan Haight was only 17 years old when he purchased the opioids, and 18 years old when he died.[86] The direct parental or guardian supervision would help to discourage any potential misuse or attempts to acquire a Schedule II controlled substance for non-medical reasons. While DEA acknowledges potential concerns of minors who may perceive this as an intrusion on their privacy, it is crucial to balance this consideration against the inherent risks associated with Schedule II controlled substances in particular. It should also be noted that this proposed requirement would not extend to cases where a pediatrician prescribes a Schedule III through V controlled substance under the *Special Registration* framework.

Given the higher potential for abuse and dependence of Schedule II controlled substances, 21 CFR 1306.45 proposes two additional requirements when issuing a *special registration prescription* for a Schedule II controlled substance; DEA anticipates imposing one or both of the proposed requirements based on the comments received by stakeholders. The first of the two proposed requirements, under proposed 21 CFR 1306.45(b), would require that the *clinician special registrant* be physically located in the same state as the patient when issuing a *special registration prescription* for a Schedule II controlled substance. Under this same-state limitation, when issuing a Schedule II *special registration prescription,* a *clinician special registrant* would not only have to have the *Advanced Telemedicine Prescribing Registration,* and a *State Telemedicine Registration* in the state in which the patient is located, but the *clinician special registrant* would also have to be physically located in the same state as the patient.[87] Requiring the *clinician special registrant* to be in the same state as the patient helps mitigate the risks associated with the prescribing of Schedule II controlled substances across state lines. Geographical proximity enables more effective oversight by state regulatory agencies to ensure compliance with state laws governing the prescription of these high-risk medications and will make it more likely that the *clinician special registrant* can see the patient in-person should any medical or diversion concerns arise.

The second of the two proposed requirements, under proposed 21 CFR 1306.45(c), would require that the average number of *special registration prescriptions* for Schedule II controlled substances constitutes less than 50 percent of the total number of Schedule II prescriptions issued by the *clinician special registrant* in their telemedicine and non-telemedicine practice in a calendar month. Limiting the proportion of Schedule II prescriptions issued through telemedicine would help to manage the risks associated with the prescribing of Schedule II controlled substances by ensuring that a significant portion of these prescriptions are issued following in-person medical evaluations, which can provide a more comprehensive assessment of the

[87] It should be noted, however, that the *Special Registered Location* associated with the *Advanced Telemedicine Prescribing Registration* would not have to be in the same state in which the patient was issued the Schedule II controlled substance.

patient's medical history and condition than can be done remotely.

State Laws Applicable to Special Registration Prescriptions. Proposed 21 CFR 1306.46 would require special registrants, when issuing a *special registration prescription,* to comply with the laws and regulations of the state in which the special registrant is located during the telemedicine encounter resulting in the *special registration prescription*; the state in which the patient is located during the telemedicine encounter resulting in the *special registration prescription*; and any state or states in which the special registrant maintains a DEA registration to dispense controlled substances or a medical license, to the extent that the law or regulation applies to telemedicine encounters between practitioners and patients located in the states in which the special registrant and the patient are each located during the telemedicine encounter resulting in the *special registration prescription.* This provision would require that the practice of telemedicine be conducted in accordance with applicable state laws set forth in 21 U.S.C. 802(54).

2. Additional Elements on a Special Registration Prescription

A prescription for controlled substances, whether issued via telemedicine or not, must contain the elements specified in 21 CFR 1306.05(a), which encompass the signature of the prescriber, issue date, patient's full name and address, drug details (name, strength, dosage form, and quantity), directions for use, and the practitioner's name, address, and registration number.[88] Proposed 21 CFR 1306.47 would require two additional elements for *special registration prescriptions:* (1) the *Special Registration* numbers of the *clinician practitioner* and, if a *platform practitioner* facilitated the prescription, the *platform practitioner*; and (2) *State Telemedicine Registration* numbers of the *clinician practitioner* and, if a *platform practitioner* facilitated the prescription, the *platform practitioner* (unless exempted from obtaining a *State Telemedicine Registration* under proposed 21 CFR 1301.11(d)).[89] Proposed 21 CFR 1306.47(c) would add a corresponding liability provision for these new requirements, to track the current provision in 21 CFR 1306.05(f) that imposes a corresponding liability on a pharmacist who fills a prescription not prepared in the form prescribed in 21 CFR 1306.05(a).

The inclusion of the *Special Registration* numbers of the *clinician practitioner* and the *platform practitioner* (if a platform practitioner facilitated the prescription) would provide the pharmacist the information necessary to determine whether the *clinician practitioner* has the authority to prescribe a Schedule II controlled substance under the *Special Registration* framework, and that the *platform practitioner* (if a *platform practitioner* facilitated the prescription) has the authority to dispense a Schedule II controlled substance. The inclusion of *State Telemedicine Registration* numbers would provide pharmacists the information necessary to verify that patients are only being prescribed *special registration prescriptions* by *special registrants* authorized to practice in the specific state where the patient is located; registered pharmacists would be able to verify these registration numbers on DEA's *CSA Registration Validation Tool*.

Pharmacists occasionally encounter what they may perceive as ''red flags'' for certain telemedicine prescriptions, which can stem from the nature of telemedicine itself, where patients may receive prescriptions from prescribers located at distances far away (both inside and outside the state where the patient is located). The geographical distance can raise doubts about the legitimacy of the prescription and could lead pharmacists to question its validity and refuse to fill the prescription. By verifying the *State Telemedicine Registration* numbers, pharmacists would be provided a level of assurance that a *special registration prescription* is legitimate when it originates from a prescriber located a significant distance from the patient. For *clinician special registrants* exempted from obtaining *State Telemedicine Registrations,* proposed 21 CFR 1306.47(a) would require them to instead provide a notation on the prescription identifying the state in which the patient is located.

C. Recordkeeping and Reporting Under 21 CFR Part 1304

Clinician special registrants would remain subject to their existing recordkeeping and reporting obligations under their 21 U.S.C. 823(g) registrations; however, they would also be subject to supplementary requirements within the *Special Registration* framework. *Clinician special registrants* would be required to establish and maintain photographic records for patient verification and maintain their *special registration prescription* records at their designated *special registered location. Platform special registrants,* on the other hand, would be required to maintain and update credential verification and documentation records. As to data reported to DEA, pharmacies dispensing *special registration prescriptions* would be required to report monthly aggregated *special registration prescription* data on Schedule II controlled substances and certain Schedule III–V controlled substances, and *special registrants* would be required to report annually aggregated information about their telemedicine practice, including the number of new patients they treat through telemedicine, and the total number of *special registration prescriptions* for Schedule II controlled substances, and certain Schedule III–V controlled substances, they dispensed for the preceding year.

1. Patient Verification Photographic Record

Proposed 21 CFR 1304.04(i) would generally require that a *clinician special registrant,* or a delegated employee or contractor under the direct supervision of the *clinician special registrant,* verify the identity of a patient seeking treatment via telemedicine by requiring that the patient present a state or federal government-issued photo identification card through the camera of the *audio-video telecommunications system.* At the first telemedicine encounter, the *clinician special registrant* would also be required to capture a photographic record of the patient presenting their federal or state-issued photo identification card or other acceptable documents and use the photographic records to confirm the patient's identity in subsequent telemedicine encounters.

If for some reason the patient does not consent to their photo being captured, proposed 21 CFR 1304.04 would allow the *clinician special registrant* (or their delegated employee or contractor under their direct supervision) to accept a copy of the patient's federal or state government-issued photo identification card or other forms of documentation provided by the patient. To ensure that patient privacy is protected, the patient verification photographic records would be securely stored in the patient's medical record or chart, separate from the *special registration prescription* records/data reported to DEA under proposed 21 CFR 1304.40.

Recognizing that not all persons may have a photo identification card,

[88] *https://www.fda.gov/drugs/development-approval-process-drugs/national-drug-code-database-background-information; https://www.fda.gov/drugs/drug-approvals-and-databases/national-drug-code-directory.*

[89] Proposed 21 CFR 1306.47(b) would not require that the Special Registrant provide the registration number associated with their conventional registration under 21 U.S.C. 823(g).

proposed 21 CFR 1304.04(i)(1) would allow a *clinician special registrant,* or a delegated employee or contractor under the direct supervision of the *clinician special registrant,* to verify the identity of the patient with other forms of documentation, and would require the *clinician special registrant* to maintain a record of how they verified the patient's identity and what documents were used to verify the patient's identity. For example, a *clinician special registrant* (or their delegated employee or contractor under their direct supervision) might verify patient identity by observing a patient's pay stub and/or a bill with the patient's home address, a letter provided by a shelter employee if the patient is unhoused, or a patient's school identification card or report card if the patient is a minor.

This proposed requirement would ensure that the patient's identity is verified at each telemedicine encounter, reducing the risk of unauthorized individuals diverting controlled substances. Throughout the Telemedicine Listening Sessions, various presenters underscored the importance of implementing strong patient identification measures in the context of telemedicine.[90] According to some physicians who presented during the Telemedicine Listening Sessions, identity verification of telemedicine patients is currently a typical practice and constitutes a component of good care.[91] Furthermore, the photographic record provides a clear link between the patient's identity and the telemedicine encounter, supporting accurate recordkeeping under the *Special Registration* framework.[92]

2. Special Registration Telemedicine Encounter Record

For every telemedicine encounter resulting in a *special registration prescription,* proposed 21 CFR 1304.04(j) would require that *clinician special registrants* maintain a record of the date and time of the telemedicine encounter, the address of the patient during the telemedicine encounter, and the home address of the patient. Like patient verification photographic records, the *clinician special registrant* would be required to maintain *Special Registration* telemedicine encounter records for a minimum of two (2) years from the date of the telemedicine encounter. The proposed *Special Registration* telemedicine encounter record provides an additional layer of verification for the telemedicine encounter, detailed documentation that can be referenced by the *clinician special registrant* in the future and helps ensure that the patient is located in a state in which the *clinician special registrant* is authorized to prescribe controlled substances under the proposed *Special Registration* framework.

3. Credential Verification and Conduct-Related Documentation

Proposed 21 CFR 1304.04(k) would require *platform special registrants* to maintain records related to *clinician special registrants* with whom they enter and maintain a *covered platform relationship,* including:[93] (1) verification of the *clinician special registrant* credentials, including but not limited to records on education, training, board or specialty certifications, and their *Special Registration* number and *State Telemedicine Registration* number(s); (2) the employment contract and any other contract between the *platform special registrant* and the *clinician special registrant;* and (3) any disciplinary actions or sanctions, or documentation of complaints, disputes, or incidents involving the *practice of telemedicine*. The *platform special registrant* would be required to maintain and update the credential verification and conduct-related records for a minimum of every two (2) years, which should be readily available for inspection by DEA.

This proposed requirement is intended to address DEA's concerns regarding the adequacy of the screening of the prescribers utilizing the services of the *covered online telemedicine platforms* as discussed above. By mandating the verification and documentation of *clinician registrants'* qualifications and credentials, these records should serve as evidence of thorough screening processes by the *platform special registrants,* helping to ensure that only qualified and vetted *clinician practitioners* are practicing telemedicine under the *Special Registration* framework and reducing the risk of improper remote prescribing of controlled substances. Furthermore, by requiring that *platform special registrants* maintain such records, they are compelled to assume responsibility for the conduct and prescribing practices of the *clinician special registrants* whose telemedicine prescribing is facilitated by their platform.

4. Centralized Recordkeeping at the *Special Registered Location*

Proposed 21 CFR 1304.04(l) mandates that records arising from telemedicine encounters under the *Special Registration* framework be kept at the *special registered location.* Given the nationwide reach of telemedicine—where a *special registrant* could serve patients in any state—it would pose an unreasonable administrative burden to require the *special registrant* to maintain records in every state where telemedicine patients are located. By consolidating these records, DEA investigations are more efficient, enhancing the detection of diversion patterns, which is vital for preventing the diversion and misuse of controlled substances. This approach enhances public safety while ensuring a practical burden for practitioners. Furthermore, this proposed regulation keeps pace with modern recordkeeping practices, as the majority of healthcare providers already maintain electronic records, which can be easily centralized and accessed when required.

5. Pharmacy Reporting of *Special Registration Prescription* Data

Proposed 21 CFR 1304.60 would require that a pharmacy report aggregate data, within the first seven (7) days of the start of every month, for the *special registration prescriptions* filled during the preceding month for each Schedule II controlled substance and certain Schedule III–V controlled substances, including Ketamine, Tramadol, and any depressants that constitute a benzodiazepine (including their salts, isomers, and salt of isomers).[94] For each

[90] Telemedicine Listening Sessions: Lori Uscher-Pines (RAND Corporation), 131:15–19 (Sept. 12, 2023); Bruce Bassi, M.D., 29:18–30:3 (Sept. 13, 2023); Dr. Phillip Moore (Gaudenzia), 85:10–16, 86:14–87:8 (Sept. 13, 2023); and Dan Golden (East Coast Telepsychiatry), 218:9–14 (Sept. 13, 2023).

[91] Telemedicine Listening Sessions: Dr. Shabana Khan (American Psychiatric Association and American Academy of Child and Adolescent Psychiatry), 33:20–34:5, 43:9–19 (Sept. 12, 2023); Dr. Brian Clear (Bicycle Health), 77:13–22 (Sept. 12, 2023); Telemedicine Listening Sessions: Lori Uscher-Pines (RAND Corporation), 131:15–19 (Sept. 12, 2023); Bruce Bassi, M.D., 29:18–30:3 (Sept. 13, 2023); Dr. Phillip Moore (Gaudenzia), 85:10–16, 86:14–87:8 (Sept. 13, 2023); and Dan Golden (East Coast Telepsychiatry), 218:9–14 (Sept. 13, 2023).

[92] *See* Telemedicine Listening Sessions, Bruce Bassi, M.D., 31:12–20 (Sept. 13, 2023).

[93] Proposed 21 CFR 1300.04 would define a *covered platform relationship* to mean ''the formal association between the online telemedicine platform, in its capacity as a *platform practitioner,* and the *clinician practitioner* it directly employs, contracts with, or is otherwise professionally affiliated with to introduce or facilitate connections between patients seeking remote medical consultations and the *clinician practitioner,* via an audio-video telecommunications system, for the diagnosis, treatment, and prescription of controlled substances.''

[94] DEA has identified 36 depressants that constitute a benzodiazepine Scheduled in 21 CFR 1308.14(c) at the time of this publication.

of these controlled substances, the pharmacy would provide the following information, organized by the different *State Telemedicine Registration numbers* of the *individual special registrants* who prescribed the controlled substance, and organized by the National Drug Code (NDC) for each formulation of the controlled substance dispensed: the number of prescriptions filled, the volume of the controlled substance dispensed, and the number of patients prescribed the controlled substance. A NDC is a unique, 10-digit three-segment number that serves as a universal product identifier for human drugs, including controlled substances. It is used by drug establishments, such as manufacturers and distributors, to report all drugs made, prepared, propagated, compounded or processed for sale in the U.S. to the Food and Drug Administration (FDA).[95] At this time, Schedule III–V controlled substances subject to this proposed requirement under 21 CFR 1304.60 are limited to those specifically identified. However, additional Schedule III–V controlled substances may be included in the future via regulation based on trends in diversion and misuse.

Requiring timely collection and reporting of aggregate patient-anonymized prescription data ensures that DEA has current information on the prescribing of controlled substances via telemedicine, vital for protecting public health and safety, especially amid the national opioid overdose epidemic. Following the COVID–19 PHE, the opioid overdose epidemic has only worsened. According to the Centers for Disease Control and Prevention (CDC), the ''number of people who died from a drug overdose in 2021 was over six times the number in 1999. The number of drug overdose deaths increased more than 16% from 2020 to 2021. Over 75% of the nearly 107,000 drug overdose deaths in 2021 involved an opioid.'' [96]

While the opioid overdose epidemic has, in recent years, been largely fueled by illicitly manufactured *fentanyl,* a synthetic opioid, the diversion of prescribed opioids exacerbates the opioid crisis by increasing the overall opioid supply available on the illicit market. Proposed 21 CFR 1304.60 would arm DEA with the data necessary to timely intervene in cases of diversion or other acts in violation of the law.

Recognizing the importance of data to combat diversion, various stakeholders speaking at the Telemedicine Listening Sessions—many of whom were practitioners—advocated for DEA to collect prescription data to help identify potential exploitative practices.[97] One physician said, ''I urge DEA to design any new process to improve [its] ability to oversee and audit prescribing patterns and to intervene when exploitative practice is identified. . . .'' [98]

The aggregation of prescription data would also allow DEA to employ advanced data analytics to further combat diversion. With such data, for example, DEA could detect outliers, irregular prescription volumes, and abnormal geographic concentrations of controlled substances. As identified by the Government Accountability Office (GAO) in its 2020 recommendations to DEA, which encouraged the enhanced utilization of data analytics to identify problematic patterns and trends to combat the opioid epidemic, ''data-analytics activities can include a variety of techniques to prevent and detect diversion, including data matching and data mining. Data matching is the largescale comparison of records and files to detect errors or incorrect information. It can be used to verify information provided by recipients or detect unreported changes. Data mining is the use of automated computer algorithms to detect patterns, including those that are otherwise not obvious, correlations, or anomalies within large data sets indicative of potential diversion.'' [99] At the Telemedicine Listening Sessions, similar recommendations to those of the GAO were echoed.[100] Various stakeholders advocated for the leveraging of data analytics as a tool to be used by DEA to address bad actors or exploitative practices.[101]

Data analytics could help recognize patterns in how controlled substances are combined to provide DEA with critical information about emerging trends in polysubstance abuse.[102] Recent examples highlight the dangers of such combinations, underscoring the need for proactive measures. Benzodiazepines, Schedule IV depressants, have been used to amplify the effect of opioids, especially when injected.[103] The combination of opioids and benzodiazepines can have dire consequences, as their use together increases the risk of overdose as both drugs cause sedation and suppress breathing.[104] According to one study, overdose death rates among patients taking both drugs was 10 times higher than among those only receiving opioids.[105] By staying informed about emerging drug use trends, particularly polysubstance abuse, DEA can take proactive measures to prevent these trends from evolving into widespread problems. This information not only aids in prevention but could also guide DEA in strategically directing resources and investigative efforts to ensure the most effective responses to emerging challenges.

Lastly, DEA could use the aggregated data to make more informed, evidence-based policy decisions. For instance, DEA could timely monitor controlled substance prescription patterns and demand indicators to make informed quota decisions to prevent or mitigate shortages and ensure a steady and reliable supply of controlled substances for legitimate medical purposes. The data could also be used to better retrospectively assess the impact of DEA's policy positions and promulgated

Epub 2012 Aug 2. PMID: 22857878; PMCID: PMC3454351 (Available: *https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3454351/*).

[104] National Institute on Drug Abuse (NIDA). *Benzodiazepines and Opioids.* (November 7, 2022), Available: *https://nida.nih.gov/research-topics/opioids/benzodiazepines-opioids.*

[105] Dasgupta N, Funk MJ, Proescholdbell S, Hirsch A, Ribisl KM, Marshall S. *Cohort Study of the Impact of High-Dose Opioid Analgesics on Overdose Mortality.* Pain Med. 2016 Jan;17(1):85–98. doi: 10.1111/pme.12907. Erratum in: Pain Med. 2016 Apr;17(4):797–8. PMID: 26333030, *https://pubmed.ncbi.nlm.nih.gov/26333030/*).

regulations.[106] For example, DEA could use the prescription data to evaluate: patient outcomes associated with *special registration prescriptions*; the impact of the proposed *Special Registration* regulations on patient access to controlled substances (especially in remote or rural areas); the efficacy of the proposed *Special Registration* regulations on preventing and detecting diversion associated with remote prescribing; and trends or changes to telemedicine prescription practices that might necessitate regulatory reforms.

It should be emphasized that the prescription data reporting would be aggregated and patient-anonymized, and will not be shared with persons or entities outside of DEA. Like all data provided to, and handled by, DEA, the security and privacy of such data will be handled with the highest standards of security and privacy. All data transmitted to and stored by DEA is encrypted, including data transmitted between external systems and internal databases. Furthermore, all data transmitted from registrants to DEA is additionally protected by Department of Justice firewalls and network monitoring. Access to the data is limited to certain authorized persons, employed or contracted by DEA. External user access to applications receiving and providing data require a unique username and a strong, complex password, internal users of the data are vetted by DEA and its Diversion Control Division's security and privacy processes, and access is restricted according to a need-to-know-basis.

6. Annual Special Registrant Reporting of Special Registration Prescription Data

Proposed 21 CFR 1304.61 would require that *individual special registrants* and *platform special registrants* report annual data on the total number of new patients in each state for which they issued at least one *special registration prescription* for a Schedule II controlled substance or certain Schedule III–V controlled substances, including Ketamine, Tramadol, and any depressant constituting a benzodiazepine; the total number of *special registration prescriptions* for Schedule II controlled substances issued by the *special registrant,* in aggregate and across all states; and the total number of *special registration prescriptions* for certain Schedule III–V controlled substances, including Ketamine, Tramadol, and any depressant constituting a benzodiazepines (including their salts, isomers, and salt of isomers), which were issued by the *special registrant,* in aggregate and across all states.

This proposed reporting requirement would provide DEA with necessary data to proactively monitor for concerning trends that may signal the existence of digital pill mills exploiting the proposed *special registration* framework to provide patients with medically unnecessary controlled substances.[107] Data on new patients and distribution of Schedule IIs and certain Schedule III–V controlled substances on an annual basis would allow DEA to assess prescribing behaviors of controlled substances, identify spikes and anomalies in prescription volume, and take timely action against suspicious activity. At this time, Schedule III–V controlled substances subject to this proposed requirement under 21 CFR 1304.61 are limited to those specifically identified. However, additional Schedule III–V controlled substances may be included in the future via regulation based on trends in diversion and misuse.

D. Regulatory Definitions Under 21 CFR part 1300

This last section provides an overview of proposed regulatory definitions and revisions to 21 CFR part 1300. These proposed definitions are intended to provide clarity as to the authorities and obligations of *special registrants* under the registration requirements (21 CFR 1301), prescription requirements (21 CFR 1306), and the recordkeeping and reporting requirements (21 CFR 1304). The proposed amendments offer definitions for the different, relevant registrations under the *Special Registration* framework, including the: *Telemedicine Prescribing Registration, Advanced Telemedicine Prescribing Registration, Telemedicine Platform Registration, State Telemedicine Registration,* and *special registered location*. The core aspects of these proposed definitions have largely been addressed in the preceding sections, requiring minimal discussion of many of them here.

That said, the proposed term and definition of a *covered online telemedicine platform* warrants further discussion. A *covered online telemedicine platform* means an entity that facilitates connections between patients and *clinician practitioners,* via an *audio-video telecommunications system,* for the diagnosis and treatment of patients that may result in the prescription of controlled substances, but is not a hospital, clinic, *local in-person medical practice,* or insurance provider, and meets one or more of the following criteria:

(1) the entity explicitly promotes or advertises the prescribing of controlled substances through the platform;

(2) the entity has financial interests, whether direct incentives or otherwise, tied to the volume or types of controlled substance prescriptions issued through the platform, including but not limited to, ownership interest in pharmacies used to fill patients' prescriptions, or rebates from those pharmacies;

(3) the entity exerts control or influence on clinical decision-making processes or prescribing related to controlled substances, including, but not limited to: prescribing guidelines or protocols for *clinician practitioners* employed or contracted by the platform; consideration of *clinician practitioner* prescribing rates in the entity's hiring, retention, or compensation decisions; imposing explicit or de facto prescribing quotas; directing patients to preferred pharmacies; and/or

(4) the entity has control or custody of the prescriptions or medical records of patients who are prescribed controlled substances through the platform.

When any one of the four factors are present, it solidifies the platform's role as an integral intermediary in the remote dispensing of controlled substances. The proposed definition and criteria are intended to provide a practical and clear framework for identifying when a DTC online telemedicine platform's conduct qualifies them as a *covered online telemedicine platform,* mandating registration as a dispenser with DEA. As proposed, this definition is intended to limit the *Special Registration* requirements only to those DTC online telemedicine platforms that play a substantial and integral role as intermediaries in the remote dispensing of controlled substances.

Under the first criterion, when an entity explicitly promotes or advertises the prescribing of controlled substances through the platform, it is directly influencing patient behavior and decision-making. This targeted promotion guides patients to seek medical consultations and prescriptions for controlled substances through the platform, effectively influencing the

[106] *See* Administrative Conference of the United States (ACUS), *Administrative Conference Recommendation 2021–2: Periodic Retrospective Review* (June 17, 2021) (Available: *https://www.acus.gov/document/periodic-retrospective-review*).

[107] Stevens, Morgan. *Click Here for Adderall: Fixing Telehealth Advertising and Services to Prevent Stimulant Misuse,* Center for Data Innovation (Dec. 5, 2022), *https://www2.datainnovation.org/2022-telehealth-stimulant-abuse.pdf*.

demand and supply of this service. This active role in attracting and managing patient flow makes the platform more involved as an integral intermediary in the remote prescribing of controlled substances. Under the second criterion, when an entity has financial interests tied to the volume or types of controlled substances prescriptions issued through the platform, the platform's role extends beyond mere facilitation—it becomes a key player that directly affects the flow and distribution of controlled substances. The financial ties ensure that the platform's operations are closely linked to the outcome of prescription activities, making it an integral intermediary in the process of remote prescribing of controlled substances.

Under the third criterion, when an entity exerts control or influence on clinical decision-making processes or prescribing related to controlled substances, including but not limited to prescribing guidelines or protocols for *clinician practitioner*s employed or contracted by the platform, imposing explicit or de facto prescribing quotas, or directing patients to preferred pharmacies, it plays a direct and active role in the decision-making processes that affect patient care and the distribution of controlled substances. The platform becomes an essential link in the chain between the *clinician practitioner* and the patient, making it an integral intermediary in the process of remote prescribing of controlled substances. Under the fourth and last criterion, when an entity has control or custody of the prescriptions or medical records of patients who are prescribed controlled substances through the platform, it has significant control over sensitive and regulated information, actively involving the platform in the handling and processing of controlled substances. Moreover, control or custody of such information allows a platform to influence patient treatment plans, underscoring their position as an intermediary, and thus dispenser, in the process of remote prescribing of controlled substances.

It is important to clarify that ownership and operation of the online or digital system or platform on which the virtual visit takes places are not mandatory criteria within the proposed definition of a *covered online telemedicine platform*. Similarly, an entity solely operating a platform or system that merely provides the technological service or conduit for a telemedicine encounter to occur, without the presence of one of the additional four factors, would not constitute a *covered online telemedicine platform*. As discussed above, the definition is also drafted to exclude entities that engage in conduct that could potentially fall under the definition's criteria but are not the types of entities whose primary business operations rely on, or center around, telemedicine services.

The definition of *covered online telemedicine platform* also explicitly excludes certain types of entities, including hospitals, clinics, insurance providers, and *local in-person medical practices. Local in-person medical practice* is, in turn, defined by this rule to be a medical practice where less than 50 percent of the total prescriptions for controlled substances collectively issued by the practice's physicians and *mid-level practitioners* are issued via telemedicine in any given calendar month, but is not a hospital, clinic, or insurance provider. The type of entities excluded from the definition of *covered online telemedicine platform* are entities that engage in conduct that could potentially fall under the definition's criteria but are not the types of entities whose primary business operations rely on, or center around, telemedicine services.

Determining whether an entity dispenses controlled substances and meets the criteria of a *covered online telemedicine platform* is a fact-specific inquiry. If there is any uncertainty regarding the entity's role as a dispenser, particularly concerning its involvement in the practitioner-patient relationship, registering may be advisable to avert the risk of enforcement action based on potential unregistered, and thus illegal, dispensing of controlled substances.

Turning elsewhere, DEA is incorporating CMS's current definitions and standards for the terms *hospice care* and *palliative care.*[108] DEA acknowledges that its core expertise and mission revolve around combating the diversion of controlled substances, and therefore is leveraging the medical expertise of CMS by adopting its healthcare standards as to these terms. Lastly, the rulemaking rule proposes to revise the DEA regulatory definition of ''practice of telemedicine'' to mean practice in accordance with applicable federal and state laws by a practitioner (other than a pharmacist) who is at a remote location from the patient and communicates with the patient, or health care professional who is treating the patient, using a telecommunications system defined in 42 CFR 410.78(a)(3), which practice falls within a category specified in the definition.[109]

[108] *See* 42 CFR 418.3.

E. Request for Comments

With respect to the proposed rule, DEA invites comments regarding the need for any clarifications or suggested modifications to the proposed regulations, which are consistent with the public health and safety. The public's input and insights are instrumental in achieving the appropriate balance between expanding access to care and implementing the necessary safeguards to prevent diversion of controlled substances effectively. In particular, DEA seeks the public's input on the newly introduced *Special Registrations* (*Telemedicine Prescribing Registration, Advanced Telemedicine Prescribing Registration,* and *Telemedicine Platform Registration*), and the *State Telemedicine Registrations.* Again, DEA recognizes the broad nature of the proposed requirements, and highly encourages the public to provide input on appropriate implementation timelines, or on-ramps for phased or gradual adoption, to help ensure a smoother transition when the final rule takes effect. Practitioners, pharmacies, and industry are encouraged to provide their input on the time necessary to operationalize the proposed requirements.

Furthermore, DEA is considering the inclusion of a severability clause in the final rule. Under such a clause, if any specific provision of the rule is found to be invalid or unenforceable by a court, the remaining provisions would continue to be operative and enforceable. We encourage public comments on the inclusion of such a clause, as well as whether any particular provisions of the proposed rule are especially integral to its overall implementation. All public insight, including responsive data, as to the effectiveness or appropriateness of the proposed safeguards is also encouraged. However, the public is asked to refrain from commenting on provisions that are simply republished existing regulatory definitions. These are included to provide context to the newly proposed definitions and to reduce editorial resources required for publishing the proposed rule.

[109] Proposed 21 CFR 1300.04. The current regulatory definition, 21 CFR 1300.04, initially implemented the *Ryan Haight Act's* statutory definition by repeating the statutory provision and requiring the use of a ''telecommunications system referred to in section 1834(m) of the Social Security Act'' [codified at 42 U.S.C. 1395m(m)].

For Schedule II Prescriptions:
1) The practitioner must be physically located in the same state as the patient; and
2) No more than 50% of the practitioners total telemedicine and non-telemedicine prescriptions for Schedule II controlled substances were prescribed under my *Advanced Telemedicine Prescribing Registration*.

BILLING CODE 4410–09–C

V. Regulatory Analyses

Executive Orders 12866, 13563, and 14094 (Regulatory Review)

DEA has determined that this rulemaking is a ''significant regulatory action'' under section 3(f) of *Executive Order (E.O.) 12866, Regulatory Planning and Review* and is also a section 3(f)(1) significant action. Accordingly, this proposed rule has been submitted to the Office of Management and Budget (OMB) for review. This proposed rule has been drafted and reviewed in accordance with E.O. 12866, ''Regulatory Planning and Review,'' section 1(b), Principles of Regulation; E.O. 13563, ''Improving Regulation and Regulatory Review,'' section 1(b), General Principles of Regulation; and E.O. 14094, ''Modernizing Regulatory Review.''

Due to many uncertainties, DEA made a range of estimates: a low estimate, a moderate (primary) estimate, and a high estimate. Based on the moderate (primary) estimate, DEA projects that this proposed rule will result in a total annualized cost of $16 million, a total annualized cost savings of $23 million, for a net annualized cost savings of $7 million. The low estimate results in a total annualized cost of $0.60 million, a total annualized cost savings of $0.85 million, for a net annualized cost savings of $0.25 million. The high estimate results in a total annualized cost of $86 million, a total annualized cost savings of $122 million, for a net annualized cost savings of $36 million. Additionally, the proposed rule is estimated to increase annualized transfers (registration fees) to the federal government by $0.90 million, $24 million, and $128 million per year, for the low, moderate (primary), and high estimates, respectively. Fees paid to the federal government are considered transfer payments and not costs.[110] The full analysis of cost savings, costs, transfers, and benefits is provided below.

G. Summary of Practitioner Costs, Cost Savings, Benefits, and Transfers
IV. Pharmacy Costs
V. Healthcare System Costs and Cost Savings
VI. State Costs
VII. Diversion
VIII. Summary of Economic Impact

I. Regulatory Alternatives Considered

DEA considered three alternatives, including the selected alternative: (1) finalizing the proposed March 2023 General Telemedicine NPRM and Buprenorphine NPRM; (2) an alternative that would allow the prescribing of Schedules III–V controlled substances under a single *Special Registration for Telemedicine* pursuant to 21 U.S.C. 802(54)(E) and 831(h); and (3) the selected alternative.

First, DEA considered promulgating final rules based on the proposed March 2023 General Telemedicine NPRM and Buprenorphine NPRM pursuant to 21 U.S.C. 802(54)(G). The proposed General Telemedicine NPRM would have allowed for an initial prescription of non-narcotic Schedules III–V controlled substances for no more than a 30-day supply in instances where the patient has never had an in-person medical evaluation, and additional prescriptions beyond the initial 30-day prescription would require that the patient undergo an in-person medical evaluation. The proposed General Telemedicine NPRM generally would have required that a patient undergo an initial in-person medical evaluation prior to the prescription of Schedule II controlled substances, and Schedule III–V narcotic controlled substances (with the exception of buprenorphine for opioid use disorder (''OUD'') treatment), unless there was a *qualifying referral.*

Generally, the Buprenorphine NPRM would have allowed practitioners to prescribe buprenorphine for the induction of OUD treatment for no more than a 30-day supply through audio-only telemedicine. To obtain an additional supply of buprenorphine however, the patient would have to undergo an in-person medical evaluation within 30 days of the induction of the OUD treatment. Ultimately, DEA determined that final rules of the proposed regulations would have been potentially too burdensome on practitioners and patients, leading to reduced access to care.

The second alternative considered by DEA would have allowed practitioners—irrespective of their medical specialty or the patients they treat—to prescribe Schedule III–V controlled substances under a single *Special Registration for Telemedicine* pursuant to 21 U.S.C. 802(54)(E) and 831(h). Under this alternative, practitioners would not be authorized to prescribe Schedule II controlled substances. While this alternative could have established a more streamlined *Special Registration* framework, it would not take into consideration the diverse *legitimate needs* that practitioners may have to prescribe other controlled substances through telemedicine based on their medical specialties or the patients they serve. Additionally, it does not consider the fact that certain practitioners possess the necessary qualifications to prescribe Schedule II controlled substances through telemedicine, despite the heightened risk of abuse associated with Schedule II controlled substances. Consequently, DEA opted against this alternative.

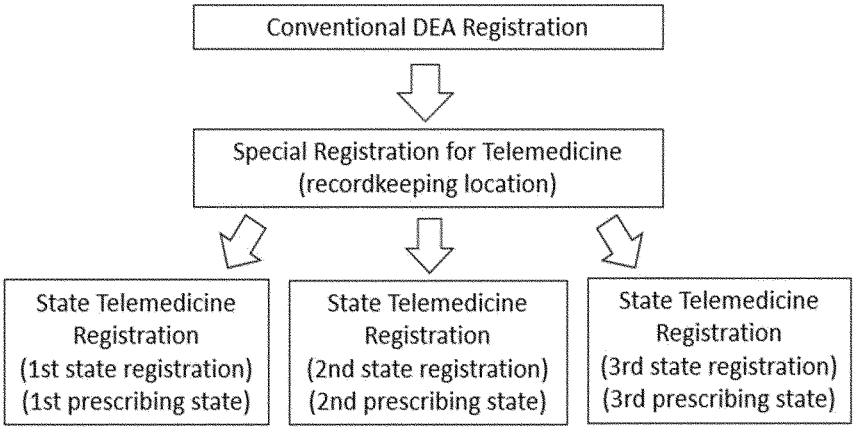
Finally, DEA is proposing the selected alternative, which would not require an in-person medical evaluation such as required under the first alternative and would allow certain qualified practitioners who demonstrate a *legitimate need* to prescribe Schedule II controlled substances through telemedicine unlike the second alternative. The selected, proposed alternative would establish a *Special Registration* framework pursuant to 21 U.S.C. 802(54)(E) and 21 U.S.C. 831(h), and authorize three types of *Special Registrations:* the (1) *Telemedicine Prescribing Registration* allowing qualified *clinician practitioners* to prescribe Schedule III–V controlled substances via telemedicine; the (2) *Advanced Telemedicine Prescribing Registration,* allowing qualified specialized *clinician practitioners* (*e.g.,* psychiatrists, *hospice care* physicians) and board-certified *mid-level practitioners* to prescribe Schedule II–V controlled substances via telemedicine, and (3) the *Telemedicine Platform Registration* for *covered online telemedicine platforms* in their capacity as *platform practitioners.*

Baseline. For our analysis of the economic impact of the selected alternative, the baseline for the selected alternative is the period before the temporary COVID–19 PHE exceptions to the *Ryan Haight Act.* During the baseline period, under 21 U.S.C. 829(e), the *Ryan Haight Act* has generally required an in-person medical evaluation prior to the prescription of controlled substances.

Proposed Requirements. The *Ryan Haight Act* does, however, provide an exception to this in-person medical evaluation requirement, where the practitioner is ''engaged in the practice of telemedicine.'' The *Ryan Haight Act* generally provides seven (7) distinct categories of the *practice of telemedicine* in which a prescribing practitioner might be unable to satisfy the *Ryan Haight Act's* in-person medical evaluation requirement, yet nonetheless may be able to prescribe a controlled substance for a legitimate medical purpose in the usual course of professional practice. The proposed requirements would allow a practitioner to obtain a *Special Registration for Telemedicine,* which is one of the seven categories of the *practice of telemedicine* as defined under the *Ryan Haight Act.* To engage in the *practice of telemedicine* under the proposed Special Registration framework, the practitioner must possess each of the following:

- An existing conventional DEA registration under 21 U.S.C. 823(g);
- One of the three types of *Special Registration for Telemedicine* authorizing the prescribing of controlled substances via telemedicine; and
- A *State Telemedicine Registration* allowing the prescribing of controlled substances via telemedicine for each state in which a patient is located.

Graphic 1: Necessary Registrations



As Graphic 1 shows, these types of DEA registrations are interconnected for the purposes of prescribing controlled substances under the Special Registration framework. To issue a *special registration prescription* to a patient located in a particular state, the practitioner must first obtain a *State Telemedicine Registration* for that state. However, a *State Telemedicine Registration* can only be obtained if the practitioner already holds or is simultaneously applying for a *Special Registration for Telemedicine.* In turn, the *Special Registration for Telemedicine* requires that the practitioner have an existing conventional DEA registration under 21 U.S.C. 823(g). The proposed rule has certain requirements for:

1. *The application process:* such as reporting professional affiliations with employers (21 CFR 1301.13(k)(2)(i)–(ii)), medical specialty (as mentioned above) (21 CFR 1301.13(k)(2)(iv)), that the practitioner will maintain anti-diversion policies (21 CFR 1301.13(k)(2)(iii)); and the facts and circumstances that form the basis for a legitimate need for a *Special Registration for Telemedicine* (21 CFR 1301.13(k)(2)(v)).

2. *The prescription process:* such as PDMP checks for the patient state, special registrant state, and any states with reciprocity agreement with either state (21 CFR 1306.43(a), a comprehensive nationwide PDMP check for all 50 states and any U.S. districts and territories that maintain a PDMP, if possible, starting three years from the effective date of the final rule (21 CFR 1306.43(b)), all prescriptions issued through EPCS (21 CFR 1306.42), telemedicine encounters being audio-visual with limited exception (21 CFR 1306.44), the inclusion of additional elements on special registration prescriptions (21 CFR 1306.47) and, for Schedule II controlled substances, prescriptions issued for care under an appropriate specialty and other safeguards (21 CFR 1306.45).

3. *Recordkeeping and reporting requirements:* such as patient verification using photographic records (21 CFR 1304.04(i)), *Special Registration* telemedicine encounter records (21 CFR 1304.04(j)), credential verifications of *clinician special registrants* (21 CFR 1304.04(k)), centralized recordkeeping at the *special registered location* (21 CFR 1304.04(l)), pharmacy reporting of telemedicine prescription data to DEA (21 CFR 1304.60) and special registrant reporting of the number of new telemedicine patients and prescription aggregated data to DEA (21 CFR 1304.61).

The costs, cost savings, benefits, and transfers associated with the proposed rule were evaluated from the perspective of the following impacted parties: patients, practitioners (including *mid-level practitioners*), pharmacies, healthcare systems, states, and society at large. The high and low ranges of economic impact are based on two factors: the rate of telemedicine visits resulting from this proposed rule and the level of participation by registrants under the proposed rule.

II. Patient Costs, Cost Savings, and Benefits

The proposed rule would benefit patients by reducing transportation costs, travel time costs, and expanding access to medical care. The cost savings associated with the proposed rule predominantly stem from reductions in two costs: (1) the cost of time, and (2) the cost of transportation.

A. Patient's Cost of Time per Practitioner Visit

To derive patients' cost of time, DEA needed to assess two factors: the *average length of time* to travel and wait for a practitioner's appointment, and the *average opportunity cost* (*i.e.,* forgone wages) to travel and wait for a practitioner's appointment. Simply put, (*average length of the time*) × (*opportunity cost*) = *patient's cost of time.* To determine an appropriate *average length of time,* DEA consulted relevant medical articles. While the *practice of telemedicine* proposed in this rule is a subset of telehealth that focuses on clinical services by practitioners, broader telehealth research can inform our understanding of telemedicine and provide a greater array of research to use in our analysis. It is also common for research to indicate it relates to ''telehealth,'' even when it may be more appropriate to call it a ''telemedicine'' study.[111]

To determine the *average length of time* to be used in this analysis, DEA consulted various studies. A 2023 study focused on cancer (non-elderly) telehealth patients treated between April 1, 2020, and June 30, 2021. This study found that telehealth patients saved about 2.9 hours of round-trip driving time and 1.2 hours of in-clinic time per visit, including time spent with a practitioner.[112] However, as this study focused on non-elderly cancer patients, it did not adequately represent the broader scope of telehealth patients considered in this analysis. In contrast, a 2019 study indicated that the *average length of time* (combining travel and waiting time) was 45 minutes (0.75 hours) per visit.[113] Given that 68.2 percent of all current telehealth claims are related to mental health, not non-elderly cancer patients, DEA believes that the 45-minute average is more

[111] Accordingly, in discussing such studies, DEA will use the word the word ''telehealth'' instead of telemedicine.

[112] Patel KB, Turner K, Alishahi Tabriz A, et al. Estimated Indirect Cost Savings of Using Telehealth Among Nonelderly Patients with Cancer. JAMA Netw Open. 2023;6(1):e2250211.

[113] Rhyan C. *Travel and Wait Times are Longest for Health Care Services and Result in an Annual Opportunity Cost of $89 Billion.* Altarum. (Feb. 22, 2019), *https://altarum.org/travel-and-wait* (accessed 9/5/2023).

relevant for this analysis.[114] DEA, however, acknowledges that there may be significant variability in the *average lengths of time* across different patient populations.

To determine an appropriate *average opportunity cost* (*i.e.,* forgone wages) to travel and wait for a practitioner's appointment, DEA consulted relevant data from the U.S. Bureau of Labor Statistics (BLS). DEA used median hourly wage data for all occupations ($23.11) as a proxy for the hourly *average opportunity cost* of travel and wait time for all patients, as can be seen in Table 1 below.[115] Additionally, BLS reports that average wages and salaries for civilians are 68.8 percent of total compensation. The 68.8 percent of total compensation equates to 45.3 percent (100 percent/68.8 percent—1) load on wages and salaries.[116] The load of 45.3 percent, or $10.47 (0.453 x $23.11), is added to the hourly rate to estimate the loaded hourly rates. As can be seen in Table 1, the loaded hourly wage for patients is $33.58 ($23.11 + $10.47). Therefore, the $33.58 loaded hourly wage represents the hourly *average opportunity cost* to travel and wait for a practitioner's appointment.

TABLE 1—PATIENTS LOADED HOURLY WAGE

Occupation	Hourly wage ($)	Load for benefits ($)	Loaded hourly wage ($)
All Occupations	23.11	10.47	33.58

Therefore, the patient's *cost of time* to travel and wait for a practitioner's visit—and thus the time cost savings achieved by telemedicine patients who could forego such a trip—equals $25.19 ($0.75 \times \$33.58$), as can be seen in Table 2 below.

TABLE 2—PATIENT COST OF TIME

[per Practitioner's Appointment]

Cost savings	Hourly opportunity cost ($)	Travel and wait time (hours)	Cost per appointment ($)
Time cost savings	33.58	0.75	25.19

B. Patient's Cost of Travel per Practitioner Visit

To determine the *cost of travel* to and from a practitioner's appointment, DEA used data from the *Southwest Rural Health Research Center* in the *Texas A&M School of Public Health,* and mileage reimbursement rates from the U.S. Internal Revenue Service (IRS). According to a 2017 survey by the *Southwest Rural Health Research Center,* the average national round-trip travel distance for a doctor's visit was 9.9 miles, or 19.8 miles round-trip.[117] The IRS travel reimbursement rate for businesses is 67 cents per mile.[118] Therefore, the patient's *cost of travel* to and from a practitioner's appointment—and thus the travel cost savings achieved by telemedicine patients who could forego such a trip—equals $13.27 (19.8 miles x $0.67 per mile), as can be seen in Table 3 below.

TABLE 3—PATIENT TRAVEL COST SAVINGS PER TRIP

Cost savings	Travel cost per mile ($)	Travel distance (miles)	Per appointment cost ($)
Travel cost savings	0.67	19.8	13.27

C. Total Number of Telemedicine Visits

The proposed rule's patient cost savings result from eliminating the need for an initial in-person medical evaluation or visit. Subsequent telemedicine visits are allowed after that initial in-person medical evaluation or visit, even without the COVID–19 PHE telemedicine flexibilities. So, to calculate the total patient cost savings under the proposed rule, DEA needed to estimate the *total number of first-time telemedicine visits resulting in prescriptions for controlled substances.*[119] Given the absence of direct information on this point, however, it was necessary for DEA to perform a multi-step analysis or derivation using different available data sources at each step to derive an estimate. First, DEA established the *total annual practitioner visits* using available data. Second, the total was further refined to those practitioner visits conducted *via telemedicine.* Third, the total was reduced to those that constituted *first-time* telemedicine visits. Fourth, DEA determined the proportion of the first-time telemedicine visits that would *result in prescriptions.* Fifth, it refined the total number of first-time telemedicine visits resulting in prescriptions of *controlled substances.* And lastly, DEA considered the impact of proposed requirements and determined the total number of first-time telemedicine visits resulting in prescriptions of controlled substances *under the proposed rule.* DEA performed this multi-step analysis to derive the low, moderate (primary), and high estimates of the *number of first-time telemedicine visits resulting in prescriptions for controlled substances,* which resulted in low, moderate (primary), and high values for the total patient cost savings.

i. Total Number of Telemedicine Visits Under the Current Telemedicine Rate

Step 1: Total Annual Practitioner Visits. As described above, DEA initially established the *total annual practitioner visits* using available data. According to the Centers' for Disease Control and Prevention (CDC) 2019 National Ambulatory Medical Care (NAMC) sample survey, it was estimated that there were a total of 1,036,484,000 practitioner visits that year, although not all of these visits resulted in prescriptions, as can be seen in Table 4.[120] An analysis of this survey revealed that a total of 3,476,239,000 prescriptions were issued during medical visits that year, as can be seen in Table 4.[121] This means that for every one practitioner visit, there were approximately 3.35 prescriptions, calculated as a coefficient of roughly 0.2982, which can be seen in Table 5.

TABLE 4—ESTIMATE OF NUMBER OF PRESCRIPTIONS USING VISIT DATA

Number of prescriptions	Number of visits (thousands)	Total number of prescriptions (thousands)
0	291,394	
1	192,488	192,488
2	129,561	259,122
3	84,898	254,694
4	60,766	243,064
5	52,613	263,065
6	34,041	204,246
And 7	28,900	202,300
8	29,043	232,344
9	23,393	210,537
10	15,320	153,200
11	17,034	187,374
12	14,744	176,928
13	13,419	174,447
14	10,635	148,890
15+	38,236	*573,540
Total	**1,036,485	3,476,239

*Used 15 as an approximation for 15+.
**The published total shows 1,036,484, so there is a rounding error of 1.

TABLE 5—ESTIMATE OF VISIT PER PRESCRIPTION COEFFICIENT

NAMC prescriptions	3,476,239,000
Prescriptions per visits ratio	3.35
Visit per prescription coefficient	0.2982

To estimate the total number of practitioner's visits, DEA did not use the NAMC survey because the survey results have been volatile year-to-year, and it only includes ''nonfederal office-based patient care physicians, excluding anesthesiologists, radiologists, and pathologists.'' [122] Instead, DEA used the derived coefficient in conjunction with IQVIA's more comprehensive 2019 prescription data to derive a more representative figure.[123] In 2019, IQVIA reported 4,386,834,000 prescriptions.[124] By multiplying this number by the coefficient 0.2982, DEA estimated that there were approximately *1,308,153,900 practitioner visits,* as can be seen in Table 6.

[119] Total Patient Cost Savings = (number of first-time telemedicine visits resulting in prescriptions for controlled substances) * (patient cost savings).

[120] U.S. Department of Health and Human Services, Centers for Disease Control and Prevention, National Center for Health Statistics. (2019). *National Ambulatory Medical Care Survey: 2019 National Summary Tables.* Retrieved from *https://www.cdc.gov/nchs/data/ahcd/namcs_summary/2019-namcs-web-tables-508.pdf.*

[121] *Id.*

[122] From the survey: ''Due to uncertainty regarding the true number of out-of-scope physicians in the 2018 NAMCS, the weighted frequency estimates for 2018 should be treated with caution. However, proportional estimates were not found to be significantly different between the 2018 NAMCS and 2019 NAMCS.''

[123] The IQVIA Institute. The Use of Medicines in the U.S. 2023. May 02, 2023. *https://www.iqvia.com/insights/the-iqvia-institute/reports-and-publications/reports/the-use-of-medicines-in-the-us-2023* (accessed 4/23/2024) reports 4,437 million for 2019 unadjusted, but 6,218 million adjusted. A DEA IQVIA query of chain store prescriptions for 2019 was 4,386,834,000 but would be higher if food stores and independent were included. Ultimately, the 3,476,239,000 number from the survey appears low. However, even the number DEA used could be considered low, but DEA has chosen to be conservative.

[124] *Id.*

TABLE 6—ESTIMATE OF NUMBER OF PRACTITIONER VISITS

Coefficient	0.2982
IQVIA prescriptions	4,386,834,000
Visits—IQVIA prescriptions	1,308,153,900

Step 2: Rate of Telemedicine. DEA then further refined the total number of practitioner visits to those *conducted through telemedicine.* According to the *Fair Health Monthly Telehealth Regional Tracker,* as of July 2024, 4.7 percent of medical claims were conducted through telehealth.[125] As can be seen in Table 7, DEA then used this percentage to refine the total 1,308,153,900 practitioner visits to those likely to be conducted through telemedicine once a final rule is promulgated. Applying 4.7 percent, or the current telemedicine rate, to the 1,308,153,900 total practitioner's visits gives a total of *68,024,003 practitioner visits conducted via telemedicine,* as can be seen in Table 7.

TABLE 7—NUMBER OF TELEMEDICINE VISITS

Total practitioner visits	1,308,153,900
Telemedicine rate	0.047
Telemedicine visits	68,024,003

Step 3: First-Time Visits. DEA needed to further refine the total number of telemedicine practitioner visits to those that constituted *first-time* telemedicine visits. DEA's focus on first-time telemedicine practitioner visits, rather than all telemedicine visits, was to prevent an overestimation of the total patient cost savings. Under the status quo, after one bona fide in-person medical evaluation, patients are typically permitted to be seen via telehealth thereafter when receiving prescriptions for controlled substances. A potential overestimate of total patient cost savings arises from the fact that patient cost savings under the proposed rule primarily hinge on the bypassing of a first-time, in-person medical evaluation, but not subsequent telemedicine visits.

A 2022 study analyzing trends between 2017–2020 in interstate telehealth use by Medicare beneficiaries, a subset of the population impacted by the proposed rule, shows that the vast majority of practitioner visits are for returning patients, and approximately 10 percent of those practitioner visits are new visits.[126] This is in line with the CDC's 2019 NAMC nonfederal survey where 16.8 percent of office visits were for new patients. The CDC's 2019 NAMC survey, however, was not limited to telehealth visits, so DEA decided that the 10 percent estimate from the 2022 interstate telehealth study was more applicable to this analysis.[127] Taking 10 percent of 68,024,003 practitioner visits conducted via telemedicine would provide a total of approximately *6,802,400 first-time, telemedicine practitioner visits,* as can be seen in Table 8.

TABLE 8—NUMBER OF FIRST-TIME TELEMEDICINE VISITS

Telemedicine visits	68,024,003
First-time telemedicine visit rate	0.1
First-time telemedicine visits	6,802,400

Step 4: Visits Resulting in Prescriptions. DEA needed to determine the fraction of first-time telemedicine visits that would *result in prescriptions.* Looking again at CDC's 2019 NAMC survey (Table 4 above), DEA determined, as reflected in Table 4, that 291,394,000 visits did not include any prescribing, which means 745,090,000 of the 1,036,484,000 visits, or approximately 72 percent of the visits, did in fact result in the issuance of prescriptions. Because only 72 percent of visits resulted in a prescription, DEA applied the 72 percent to the calculated 6,802,400 first-time, telemedicine visits resulting in approximately a total of *4,889,996 first-time telemedicine visits resulting in the issuance of prescriptions,* as can be seen in Table 9.

[125] Fair Health, ''Monthly Telehealth Regional Tracker.'' *https://www.fairhealth.org/fh-trackers/telehealth.* (accessed 10/19/2024 selecting July 2024 using National Statistics data dropdown menu).

Health Affairs, 41(6). Appendix Exhibit 1 show that in person level 3 and level 4 new visits are 6.8% (3.5% + 3.3%) and out-of-state new visits are 10.7% (5.6% + 5.1%).

[127] U.S. Department of Health and Human Services, Centers for Disease Control and Prevention, National Center for Health Statistics. (2019). * Rounded.

Step 5: Prescriptions for Controlled Substances. DEA then refined the total number of first-time telemedicine visits resulting in prescriptions for *controlled substances.* According to the Federal Trade Commission (FTC), *Surescripts* has 95% market share in e-prescribing services as of 2023.[128] DEA was able to use 2021 data from the *Surescripts National Progress Report* to determine that approximately 16 percent of all prescriptions (paper and electronic) are for controlled substances.[129] Applying this 16 percent to the total number of 4,889,996 telemedicine visits resulting in the issuance of prescriptions, provides a value of approximately *782,399 first-time telemedicine visits resulting in prescriptions for controlled substances,* as can be seen in Table 10.

TABLE 10—CURRENT ESTIMATE OF NUMBER OF FIRST-TIME TELEMEDICINE VISITS RESULTING IN PRESCRIPTIONS OF CONTROLLED SUBSTANCES

First-time telemedicine visits with prescriptions	4,889,995.73
Controlled substance (CS) rate	0.16
First-time telemedicine visits with CS prescriptions	782,399

Step 6: Effect of the Proposed Rule. Lastly, DEA determined the total number of first-time telemedicine visits resulting in prescriptions of controlled substances *under the proposed rule.* Under the proposed rule, patients would not have an in-person follow-up visit after the first-time telemedicine visit; they would never have to see the prescribing practitioner in person. Based on a study by *Epic Research* of primary care visits between March 1, 2020, and October 15, 2022, 61 percent of telehealth visits did not require an in-person follow-up.[130] A similar study by *Epic Research* on specialty visits provided that 85 percent of mental health and psychiatry telehealth visits did not have an in-person follow-up visit.[131] Because this proposed rule is not limited to mental health, DEA applied the broader and lower 61 percent to the 782,399 first-time telemedicine visits resulting in prescriptions of *controlled substances.* The multi-step analysis ultimately derived a current estimate of *477,264 first-time telemedicine visits resulting in prescriptions of controlled substances under the proposed rule,* as can be seen in Table 11.

[128] *FTC Reaches Proposed Settlement with Surescripts in Illegal Monopolization Case Federal Trade Commission.* (July 27, 2023), *https://www.ftc.gov/news-events/news/press-releases/2023/07/ftc-reaches-proposed-settlement-surescripts-illegal-monopolization-case* (accessed 9/24/2024).

[129] According to the Surescripts National Progress Report, there were 256.9 million prescriptions of controlled substances prescribed through EPCS, accounting for 73 percent of the total number of prescriptions of controlled substances. Using these figures, DEA derived the total number of prescriptions of controlled substances to be 351.9 million ((256.9 million) * (100)/(73) = 351.9 million). There were 2.12 billion prescriptions of controlled substances and non-controlled substances prescribed electronically, accounting for 94 percent of the total number of all prescriptions paper or electronic for controlled substances or non-controlled substances. DEA derived the total number of all prescriptions paper or electronic for controlled substances or non-controlled substances to be 2.26 billion ((2.12 billion) * (100)/(94) = 2.26 billion). Using the total of all controlled substances prescriptions (351.9 million) and the total of all prescriptions (2.26 billion), DEA determined that 16% of all prescriptions are for controlled substances ((256.9 million) * (100)/2.26 billion = 16 percent).

First-time telemedicine visits under the proposed rule with CS prescriptions					477,264

ii. Forecasted Total Number of Telemedicine Visits

To project the future level of telemedicine visits, a forecast is required, utilizing the usage rate of telemedicine.[132] A forecast has two critical elements:

1. Baseline (or starting) value, and the
2. Growth rate from that baseline value.

A typical forecast relies on the existing value and the historic data to extrapolate an expected growth rate. However, this process becomes more complex with volatile historical data, as fluctuations make it challenging to determine a stable baseline and reliable growth trend.[133] In the case of telemedicine, the past five years have seen significant volatility in usage rates, resulting in baseline level and growth rates that have been significantly distorted, with the rate both increasing and decreasing depending on the time interval, as can be seen in Table 12. Specifically, the rate of telemedicine usage surged from 0.2 percent in 2019 to 13 percent in the April 2020 peak according to Fair Health's analysis of medical claims and to 31.2 percent in the second quarter of 2020 based on an analysis of doctor visits by *Epic Research.* [134] However, this trend reversed in subsequent years, with rates gradually declining. By the third quarter of 2023, the telemedicine usage rate had dropped to 5.8%, and as of July 2024, it stood at 4.7 percent, based on data from Epic Research.[135]

TABLE 12—HISTORICAL TELEMEDICINE RATE

Year	Month	Fair health (claims) (%)	YOY change (%)	Quarter	Epic research (doctor visits) (%)	YOY change (%)
2019	April	0.15		2Q	0.2	
2020	April	13.0	8566.7	2Q	31.2	15500.0
2021				2Q	9.1	−70.8
2022				2Q	7.1	−22.0
2023	May	5.4		2Q	6.0	−15.5
2024	May	4.8	−11.1			
2024	July	4.7				

Uncertainty and Factors that May Affect Future Telemedicine Usage. The future of telemedicine is difficult to predict. Patients may start to embrace telemedicine again, or they may continue to return to in-person visits as pandemic habits recede, especially given the lack of in-person exams and vital sign measurements in telehealth.[136] This uncertainty is reflected in corporate behavior. In March 2023, Walmart announced plans to further expand its telehealth services by opening 28 additional health centers.[137] However, less than a year later, in May 2024, the company reversed course, announcing the closure of all 51 of their health centers and its telehealth service as it no longer believed it a sustainable business model.

Even if the rule proposed in this NPRM were finalized, it remains unclear how state-level regulations will evolve and impact the telemedicine market. While 43 states and the District of Columbia (DC) may require commercial insurers to cover telehealth services (coverage parity), only a handful of states mandate equal reimbursement rates for telehealth and in-person care (payment parity).[138] Further, some states have rolled back telemedicine flexibilities introduced during the pandemic and reverted to pre-pandemic restrictions. As of December 2023, 30 states have banned or heavily restricted telehealth appointments with out-of-state doctors.[139]

Technology could also play a critical role in shaping the telemedicine market.

[132] The usage rate of telemedicine is the percent of medical visits conducted via telemedicine.

[133] For instance, for those who want to understand the potential of an economy, recessions may distort Gross Domestic Product (GDP) data. To counter that distortion interested parties may think in terms of the GDP at full employment and think how that full employment GDP grows every year. For some background see Universities-National Bureau Committee for Economic Research. *The Measurement and Behavior of Unemployment.* 1957. *https://www.nber.org/system/files/chapters/c2638/c2638.pdf* (accessed 10/20/2024).

[134] *Monthly Telehealth Regional Tracker,* Fair Health, *https://www.fairhealth.org/fh-trackers/telehealth.* (accessed 8/4/2023 selecting April 2020, which had April 2019 data, using National Statistics data dropdown menu); Bartelt K, Piff A, Allen S, Barkley E. *Telehealth Utilization Higher Than Pre-Pandemic Levels, but Down from Pandemic Highs.* Epic Research. *https://www.epicresearch.org/articles/telehealth-utilization-higher-than-pre-pandemic-levels-but-down-from-pandemic-highs* (accessed 10/19/2024), S&P Global. Telehealth finds mental health, provider niche as usage drops from pandemic peak. September 9, 2021. *https://www.spglobal.com/marketintelligence/en/news-insights/latest-news-headlines/telehealth-finds-mental-health-provider-niche-as-usage-drops-from-pandemic-peak-66229670* (accessed 10/1/2024); The difference in the peak levels of demand could be due to Fair Health looking at claims that include filling prescription drugs and other non-visit related claims. However, Fair Health does look at a much larger volume of claims, possibly over 3 billion each year (*https://www.fairhealth.org/data*), than the Epic Research study, which only studied 475 million claims throughout the entire study period.

[139] Trotter C. In 30 states, you cannot use telehealth with out-of-state doctors. Pacific Legal Foundation. December 13, 2023. *https://pacificlegal.org/30-states-telehealth-rules/* (accessed 10/24/2024).

For example, technological advances could reduce the cost of remote patient monitoring devices, further driving the demand of telemedicine.[140] On the other hand, some communities may still not be able to utilize telemedicine in their homes, because they continue to lack the broadband internet to support the technology either because such broadband service is unavailable or unaffordable.[141] Ultimately, the telemedicine market has been shaped by a shifting landscape of factors, making it difficult to pinpoint any one baseline value or rate of growth with any certainty.

Low, Moderate (Primary), and High Estimates. Given these uncertainties, DEA analyzed a range of possible baseline values and growth rates for telemedicine usage (*i.e.,* rates of telemedicine) to demonstrate a range of possible outcomes. This approach allows for the derivation of a low, moderate, and high estimate of the total number of telemedicine visits over the next 10 years.

- For the low estimate, DEA selected a baseline telemedicine usage rate of 0.2 percent, reflecting the lower levels of use observed in 2019, prior to the COVID–19 pandemic. A growth rate of 2 percent was chosen, corresponding to the projected growth rate of primary care between 2022 and 2026.[142]
- For the moderate (primary) estimate, DEA used a baseline telemedicine usage rate of 4.7 percent, mirroring the current rate of telemedicine. A growth rate of 4.95% was derived by taking the average of two different projections: a robust growth rate of 19 percent and a negative rate of –9.1 percent.[143]
- For the high estimate, DEA selected a baseline telemedicine usage rate of 13 percent, reflecting the usage observed at the April 2020 peak by Fair Health's more comprehensive claims data during the pandemic. A growth rate of 19 percent was chosen based on estimates from one source, *Fortune Business Insights,* which projected that growth rate per year between 2024 and 2032.[144]

The scenarios provided are informed projections, based on factors that could influence telemedicine usage and growth. While these projections draw on available data and insights from healthcare, they are ultimately speculative. The scenarios are summarized in Table 13 below.

TABLE 13—SUMMARY OF THE THREE SCENARIOS

Scenario	Telemedicine Rate (%)	Growth (%)	Demand
Low	0.20	2	Telemedicine usage returns to pre-pandemic level with low growth, corresponding to demand for healthcare services.
Moderate (Primary)	4.70	4.95	Telemedicine usage remains at current level with moderate growth.
High	*13	19	Telemedicine usage surges to the pandemic peak level and grows at high growth rate.

As seen in Table 11, ''telemedicine rate'' of ''0.047'' (4.7 percent) is a key factor in estimating ''first-time telemedicine visits under the proposed rule with [controlled substance] prescriptions'' of 477,264. Varying the ''telemedicine rate'' to 0.2 percent and 13 percent would result in ''first-time telemedicine visits under the proposed rule with [controlled substance] prescriptions'' to 20,309 (477,264 × (0.2/4.7)) and 1,320,092 (477,264 × (13/4.7)), respectively. DEA estimates the number of first-time telemedicine visits under the proposed rule with controlled substance prescriptions would reach these levels in the first year of implementation of this proposed rule. Table 14 below summarizes the first-year numbers and growth rates of first-time telemedicine visits under the proposed rule with controlled substance prescriptions for the low, moderate (primary), and high estimates.

TABLE 14—''YEAR 1'' VISITS AND GROWTH RATES

	Low	Moderate (primary)	High
(Year 1) First-time telemedicine visits under the proposed rule with CS prescriptions	20,309	477,264	1,320,092
Annual Growth Rate	2.00%	4.95%	19.00%

[142] Jain S. *Projected Growth in Demand for Healthcare Services is Tepid. Trilliant Health: The Compass.* 11/6/2022, *https://www.trilliant health.com/market-research/studies/projected-growth-in-demand-for-healthcare-services-is-tepid* (accessed 10/24/2024).

[143] Adjusting the recent decline in the rate of telemedicine of 11.1 percent by the 2.0 percent growth of overall doctor visits means telemedicine visits may have fallen 9.1%. The 19 percent was taken from Fortune Business Insight. Telemedicine Market Size, Share & Industry Analysis, By Type (Products and Services), By Modality (Store-and-forward (Asynchronous), Real-time (Synchronous), and Others), By Application (Teleradiology, Telepathology, Teledermatology, Telecardiology, Telepsychiatry, and Others), By End-User (Healthcare Facilities, Homecare, and Others), and Regional Forecast, 2024–2032 *https://www.fortune businessinsights.com/industry-reports/telemedicine-market-101067* (Accessed 10/20/24); For simplicity a single growth rate was assumed. However, an alternative measure could project the gradual slowing of the annual decline of −22 percent, −15.5 percent, and −11.1 percent from Table 12. Just using the change in decline in latest data of 4.4 percent (15.5 − 11.1) would give −6.7 percent in year 1, −2.3 percent in year 2, 2.1 percent in year 3, 6.5 percent in year 4, 10.9 percent in year 5, 15.3 percent in year 6, and 19.7 percent in year 7. This is probably more in line with the expected course of telemedicine but is still uncertain.

[144] Fortune Business Insight. Telemedicine Market Size, Share & Industry Analysis, By Type (Products and Services), By Modality (Store-and-forward (Asynchronous), Real-time (Synchronous), and Others), By Application (Teleradiology, Telepathology, Teledermatology, Telecardiology, Telepsychiatry, and Others), By End-User (Healthcare Facilities, Homecare, and Others), and Regional Forecast, 2024–2032 *https://www.fortune businessinsights.com/industry-reports/telemedicine-market-101067* (Accessed 10/20/24).

Applying the growth rates to the 'Year 1' patient visit figures, DEA generated a 10-year forecast as shown in Table 15 below.

TABLE 15—NUMBER OF VISITS FORECAST

Year	Low		Moderate (primary)		High	
	Growth rate (%)	Patient visits	Growth rate (%)	Patient visits	Growth rate (%)	Patient visits
1	.....	20,309	.....	477,264	.....	1,320,092
2	2	20,715	4.95	500,889	19	1,570,909
3	2	21,129	4.95	525,683	19	1,869,382
4	2	21,552	4.95	551,704	19	2,224,565
5	2	21,983	4.95	579,013	19	2,647,232
6	2	22,423	4.95	607,674	19	3,150,206
7	2	22,871	4.95	637,754	19	3,748,745
8	2	23,328	4.95	669,323	19	4,461,007
9	2	23,795	4.95	702,454	19	5,308,598
10	2	24,271	4.95	737,225	19	6,317,232

D. Total Patient Cost Savings

Each telemedicine visit saves patients time and travel costs of $25.19 and $13.27, respectively, for a total savings of $38.46. Applying the cost savings of $38.46 to the estimated number of first-time telemedicine visits under the proposed rule with controlled substance prescriptions results in a 10-year forecast of patient cost savings for low, moderate (primary), and high scenarios as shown in Table 16 below.

TABLE 16—PATIENT ANNUAL TOTAL COST SAVINGS

Year	Low ($)	Moderate (primary) ($)	High ($)
1	781,084	18,355,573	50,770,738
2	796,699	19,264,191	60,417,160
3	812,621	20,217,768	71,896,432
4	828,890	21,218,536	85,556,770
5	845,466	22,268,840	101,812,543
6	862,389	23,371,142	121,156,923
7	879,619	24,528,019	144,176,733
8	897,195	25,742,163	171,570,329
9	915,156	27,016,381	204,168,679
10	933,463	28,353,674	242,960,743
Present Value*	7,657,624	205,278,372	1,096,535,599
Annualized Cost*	852,497	22,852,928	122,073,501

* Present value and annualized values are based on a two percent (2%) discount rate.

E. Patient Benefit: Increased Access to Care

DEA believes this proposed rule may improve patient access to care. However, DEA maintains that telemedicine is not as effective as in-person visits. According to a NCHS Data Brief from February 2024, only 4.0 percent of primary care physicians, 6.3 percent of surgical specialty physicians, and 6.0 percent of medical special physicians believe telemedicine is as effective as in-person visits.[145]

Telemedicine has emerged as a vital solution for enhancing healthcare accessibility, especially in the face of healthcare shortages. Notably, it extends its benefits to patients in remote and other underserved areas, including by providing access to specialized care. As of July 2024, telehealth utilization is 4.7 percent of medical claims (Table 12), a significant leap from the 0.17 percent recorded in January 2019, before the COVID–19 pandemic, demonstrating its growing importance.[146] Most notably, mental health claims using telehealth had risen from 39.6 percent to 68.2 percent during this period, demonstrating that the utilization of telemedicine for mental healthcare experienced a significant surge during the pandemic.[147]

The importance of telemedicine becomes even more apparent when considering the acute shortage of mental health professionals. Over 75 percent of all U.S. counties are classified as having mental health shortage areas, with 50 percent lacking any mental health professionals. Long-distance travel for treatment remains a major accessibility barrier for individuals in rural areas with limited transportation options.[148] As of June 2023, there were 6,546 designated ''Mental Health—Health Professional Shortage Areas'' covering a total population of 163,355,252

[145] Myrick K, Mahar M, DeFrances CJ. *Telemedicine Use Among Physicians by Physician Specialty: United States,* 2021. NCHS Data Brief, no 493. February 2024. *https://www.cdc.gov/nchs/data/databriefs/db493.pdf.*

people.[149] However, it is crucial to note that the healthcare shortage issue extends beyond mental health professionals. A September 2022 report revealed that 97.6 million Americans live in areas with a primary health professional shortage, highlighting a broad need for enhanced access to a range of specialties.[150]

The utilization of telehealth is more prevalent among urban Americans and Americans between the ages of 31 to 50 with respect to non-hospital-based provider-to-patient telehealth claims, which is the largest category of telehealth.[151] However, when examining discharge-related provider-to-patient telehealth claims, rural Americans and those over age 50 are the most prevalent.[152] DEA is not certain as to why these disparities exist, but they could suggest that limited access to routine and preventative care in rural areas and for older patients result in higher rates of hospitalizations, leading to more discharge-related provider-to-patient telehealth claims. With greater access, rural Americans and older patients may increase their non-hospital-based provider-to-patient telemedicine. With the potential for a broader range of telemedicine practices enabled by the proposed *Special Registration* framework, qualified practitioners and MLPs could effectively reach a larger patient population, ultimately resulting in improved healthcare outcomes and reduced costs for patients across the nation.

As discussed further below, healthcare systems may, instead of lowering costs, be able to provide increased care at a similar cost based on an evaluation of health care systems.[153] While practitioners may be able to reduce travel to and from the office, this time saving is likely much less than patients' since practitioners may still go to the office and may see many patients. However, this travel time savings may allow practitioners to become more available to patients, increasing access to care. While DEA is unable to quantify all the benefits to increased patient access to care, DEA believes it is not negligible.

III. Practitioner and MLP Costs, Cost Savings, and Transfers

The proposed rule would impact qualified practitioners (limited to physicians, *mid-level practitioners,* and *covered online telemedicine platforms*) by imposing registration costs, imposing recordkeeping costs, creating transfer payments, allowing for travel cost savings, and allowing for greater demand for their services. Costs of the proposed rule are specific to the cost of applying for the *conventional registration* (for *covered online telemedicine platforms*), *Special Registration for Telemedicine, State Telemedicine Registration,* and for PDMP checks due to the increased risk of diversion from more practitioners having the authority to prescribe Schedule II–V controlled substances. DEA estimates that there will be no additional infrastructure cost for patients or providers with the *Special Registration for Telemedicine,* as DEA has concluded that most patients and providers will already possess or have ready access to a telecommunications system meeting the requirements of the proposed rule. An analysis of all costs is detailed below.

A. Number of Conventional Registrations, Special Registrations, and State Telemedicine Registrations

When it comes to analyzing the costs, cost savings, benefits, and transfers of practitioners, DEA has to consider that qualified practitioners will need to apply for two new types of registrations, with *covered online telemedicine platforms* needing to first ensure that they have a conventional registration with DEA pursuant to 21 U.S.C. 823(g) in their capacity as a *platform practitioner.* As discussed above, practitioners will have to apply for a *Special Registration* (either the *Telemedicine Prescribing Registration,* the *Advanced Telemedicine Prescribing Registration, or the Telemedicine Platform Registration*), as well as *State Telemedicine Registrations (either State Telemedicine Registration for Clinician Special Registrants* or *State Telemedicine Registration for Platform Special Registrants),* an ancillary type of registration required for each state in which patients are located that will be treated by the practitioner.

The number of conventional registrations under 21 U.S.C. 823(g) will be equal to the number of *Telemedicine Platform Registrations,* because one conventional registration is required to obtain a *Telemedicine Platform Registration;* currently, no online telemedicine platforms have a conventional registration. As a starting point to determine the number of conventional registrations, *Special Registrations* and *State Telemedicine Registrations* to be expected under the proposed rule, DEA first looked at current registrations held by practitioners. For the number of *covered online telemedicine platforms,* DEA used the number of telemedicine companies as a proxy.

As of October 19, 2024, there were 2,153,900 DEA registrants.[154] Among them, 1,122,940 were physicians who fall under this proposed rule (medical doctors and doctors of osteopathy), 403,748 were nurse practitioners (''NPs''), and 168,201 were physician assistants (''PAs''), as shown in Table 17 below.[155] These numbers exceed the actual employment figures in these fields. Specifically, there are 770,850 physicians, 280,140 nurse practitioners, and 145,740 physician assistants according to BLS.[156] This variation can be attributed to the fact that some registrants maintain registrations in multiple states or locations.[157] The number of employed can serve as a proxy for primary registrations, *i.e.* the 823(g) registration predominantly used by a practitioner, while the difference between these two sets of numbers (number of registrants and employment numbers) provides an estimate of non-primary registrations.

[157] IBISWorld. Telehealth Services in the US—Number of Businesses. February 15, 2024. *https://www.ibisworld.com/industry-statistics/number-of-businesses/telehealth-services-united-states/* (accessed 4/20/2024).

TABLE 17—REGISTRATIONS BY OCCUPATION

Occupation	Number of employed	Number of registrants	Registrations per employed	Primary registrations	Non-primary registrations
Physicians	770,850	1,122,940	1.46	770,850	352,090
Nurse Practitioner	280,140	403,748	1.44	280,140	123,608
Physician Assistant	145,740	168,201	1.15	145,740	22,461
Total	1,196,730	1,694,889	1.42	1,196,730	498,159

* Non-Primary Registrations figures are the differences between the Number of Registrants and Number of Employed.

DEA believes *covered online telemedicine platforms* are best represented by telemedicine companies. IBISWorld estimates that as of 2023 there were 1,306 such companies in the United States.[158]

Current Telemedicine Rate Estimate of Number of Registrations. According to the Fair Health Monthly Telehealth Regional Tracker, as of July 2024, 4.7 percent of medical claims were conducted through telehealth.[159] There may be some variation in how Physicians, Nurse Practitioners, and Physician Assistants prescribe.[160] Telemedicine prescribing also may not be at the exact same rate as in-person.[161] However, given the uncertainty in the exact difference and for simplicity, DEA has assumed that each practitioner type prescribes at the same rate and uses telemedicine to prescribe at the same rate as in-person. DEA applied the 'telemedicine rates' in Table 13 to the total number of employed physicians, nurse practitioners, and physician assistants to estimate the number of individual practitioner *Special Registrations* there will be under the proposed rule. Applying the 'telemedicine rates' of 0.2 percent, 4.7 percent, and 13 percent to the total number of physicians, nurse practitioners, and physician assistants of 1,196,730, the estimated number of individual telemedicine prescribing registrations are 2,393, 56,246, and 155,575 for low, moderate (primary), and high estimates, respectively.[162] Using the 2023 IBISWorld estimate of telemedicine companies of 1,306 provides an estimate of 1,306 *Telemedicine Platform Registrations*.[163] The number of conventional registrations would then also be 1,306, in line with *Telemedicine Platform Registrations.* Applying the relationship between the low (0.2 percent), moderate (primary) (4.7 percent), and high (13 percent) ''telemedicine rates'' to the moderate (primary) estimate of 1,306 *Telemedicine Platform Registrations* from IBISWorld, results in a low estimate of 56 ($1{,}306 \times (0.2/4.7)$) and a high estimate of 3,612 ($1{,}306 \times (13/4.7)$).

Assuming the rate of registrants obtaining DEA registrations are in line with the rate of those that will obtain clinician *State Telemedicine Registrations,* DEA used 0.2 percent, 4.7 percent, and 13 percent of the total number of registrations to provide the low, moderate (primary), and high estimates of how many clinician *State Telemedicine Registrations* there will be under the proposed rule. Multiplying the total number of registrations of 1,694,889 (from Table 17) by 0.2 percent, 4.7 percent, and 13 percent, results in 3,390, 79,660, and 220,336 clinician *State Telemedicine Registrations* for low, moderate (primary), and high estimates, respectively. Assuming a similar relationship holds for platforms, the number of platform *State Telemedicine Registrations* are estimated to be 42 percent (from Table 17, 1.42 registrations per employed minus 1) higher than the level of *Telemedicine Platform Registrations.* However, platforms are expected to be registered in more states than *clinician practitioners.* Based on a DEA analysis of the distributions of other national registrant types, a rate of 10 times the *clinician practitioner* rate was chosen.[164] The number of platform *State Telemedicine Registrations* is then estimated to be 420% ($42\% \times 10$) higher than the level of *Telemedicine Platform Registrations,* or 291 (56×5.20), 6,791 ($1{,}306 \times 5.20$), and 18,782 ($3{,}612 \times 5.20$) for low, moderate (primary), and high estimates respectively. DEA estimates the number of special registrations would reach these levels in the first year of implementation of this proposed rule. Table 18 below summarizes the first-year numbers and growth rates of special registrations for the low, moderate (primary), and high estimates.

TABLE 18—''YEAR 1'' SPECIAL REGISTRATIONS AND GROWTH RATES

	Low	Moderate (primary)	High
''Telemedicine rate''	0.20%	4.70%	13.00%
Year 1 Patient Visits	20,309	477,264	1,320,092
Year 1 Telemedicine Prescribing-Individual	2,393	56,246	155,575
Year 1 State Telemedicine-Individual	3,390	79,660	220,336
Year 1 Conventional-Platform	56	1,306	3,612

[158] IBISWorld. Telehealth Services in the US—Number of Businesses. February 15, 2024. *https://www.ibisworld.com/industry-statistics/number-of-businesses/telehealth-services-united-states/* (accessed 4/20/2024).

[159] Fair Health, ''Monthly Telehealth Regional Tracker.'' *https://www.fairhealth.org/fh-trackers/telehealth.* (accessed 10/19/2024 selecting July 2024 using National Statistics data dropdown menu).

[162] Employment was used because practitioner commonly have multiple conventional registrations to cover each practice location, but only need one special registration.

[163] IBISWorld. *Telehealth Services in the US—Number of Businesses.* Feb. 15, 2024. *https://www.ibisworld.com/industry-statistics/number-of-businesses/telehealth-services-united-states/* (accessed 4/20/2024).

[164] DEA manufacturers and distributors with the most registrations have ten, with the median being one. Assuming platforms have a similar distribution, but have a max of 50, it would imply a median of five. This is approximately 10 times the *clinician practitioner* rate of 0.42.

TABLE 18—"YEAR 1" SPECIAL REGISTRATIONS AND GROWTH RATES—Continued

	Low	Moderate (primary)	High
Year 1 Telemedicine Platform	56	1,306	3,612
Year 1 State Telemedicine-Platform	291	6,791	18,782
Year 1 Total Registrations	6,186	145,309	401,917
Annual Growth Rate	2.00%	4.95%	19.00%

Applying the growth rates to the 'Year 1' registration figures, DEA generated 10-year forecasts for the low, moderate (primary), and high estimates as shown in Tables 19, 20, and 21 below.

TABLE 19—REGISTRATIONS FORECAST (LOW, 0.2 PERCENT "TELEMEDICINE RATE")

Year	Growth rate (%)	Telemedicine prescribing-individual	State telemedicine-individual	Conventional-platform	Telemedicine platform	State telemedicine-platform
1		2,393	3,390	56	56	291
2	2	2,441	3,458	57	57	297
3	2	2,490	3,527	58	58	303
4	2	2,540	3,598	59	59	309
5	2	2,591	3,670	60	60	315
6	2	2,643	3,743	61	61	321
7	2	2,696	3,818	62	62	327

9	2	2,805	3,972	64	64	341
10	2	2,861	4,051	65	65	348

TABLE 20—REGISTRATIONS FORECAST (MODERATE (PRIMARY), 4.7 PERCENT "TELEMEDICINE RATE")

Year	Growth rate (%)	Telemedicine prescribing-individual	State telemedicine-individual	Conventional-platform	Telemedicine platform	State telemedicine-platform
1		56,246	79,660	1,306	1,306	6,791
2	4.95	59,030	83,603	1,371	1,371	7,127
3	4.95	61,952	87,741	1,439	1,439	7,480
4	4.95	65,019	92,084	1,510	1,510	7,850
5	4.95	68,237	96,642	1,585	1,585	8,239
6	4.95	71,615	101,426	1,663	1,663	8,647
7	4.95	75,160	106,447	1,745	1,745	9,075
8	4.95	78,880	111,716	1,831	1,831	9,524
9	4.95	82,785	117,246	1,922	1,922	9,995
10	4.95	86,883	123,050	2,017	2,017	10,490

TABLE 21—REGISTRATIONS FORECAST (HIGH, 13.0 PERCENT "TELEMEDICINE RATE")

Year	Growth rate (%)	Telemedicine prescribing-individual	State telemedicine-individual	Conventional-platform	Telemedicine platform	State telemedicine-platform
1		155,575	220,336	3,612	3,612	18,782
2	19	185,134	262,200	4,298	4,298	22,351
3	19	220,309	312,018	5,115	5,115	26,598
4	19	262,168	371,301	6,087	6,087	31,652
5	19	311,980	441,848	7,244	7,244	37,666
6	19	371,256	525,799	8,620	8,620	44,823
7	19	441,795	625,701	10,258	10,258	53,339
8	19	525,736	744,584	12,207	12,207	63,473
9	19	625,626	886,055	14,526	14,526	75,533
10	19	744,495	1,054,405	17,286	17,286	89,884

DEA also expects that *State Telemedicine Registrations* could potentially be much greater than this estimate given the fact that *State Telemedicine Registrations* will not require a physical location. However, based on an analysis done on Medicare beneficiaries using 2020 data, only 5 percent of telemedicine takes place across state lines and most of this out-of-state care was for established patient care.[165] To the extent established patient care was a practitioner-patient relationship established following an in-person medical evaluation it would also not be considered telemedicine per the proposed rule. Further, out of state telehealth represented only 0.8 percent of all visits.[166] It is unclear how willing practitioners will be to register in multiple states to handle a very limited number of their patients who need telemedicine across state lines, and which represents such a small share of their total patient load. However, DEA believes these numbers could grow substantially based on having permanent telemedicine flexibilities in place around which practitioners can restructure their practices without comparable worry of future removal or expiration. This would be in line with an increasing number of practitioners working for platforms that serve a much broader geographical region compared to a typical physician office.

B. Practitioner and MLP Cost to Apply for Special Registration

In order to estimate the time cost for applying for the conventional registration, *Special Registration* (*Telemedicine Prescribing Registration* and the *Advanced Telemedicine Prescribing Registration,* or the *Telemedicine Platform Registration*) and the *State Telemedicine Registration* (*State Telemedicine for Individual Special Registrants* or *State Telemedicine for Platform Special Registrants*), DEA used an estimate of the amount of time and the value of that time for a practitioner to apply for the registration. To calculate the labor cost of applying for either the conventional registration, *Special Registration* or the *State Telemedicine Registration,* DEA estimates that on average it will take ten minutes (0.17 hours) to complete the registration application.[167] Should the application for a *Special Registration* or the *State Telemedicine Registration* be completed at the same time, the extra cost would be minimal. However, erring on the side of caution, DEA has assumed applications will be done separately and therefore has not made such a reduction.

Typically, practitioners delegate the task of completing DEA registration applications to their medical office administration or secretarial staff, or they may opt to use a credentialing company. For this reason, DEA has used the BLS median hourly wages for Medical Secretaries and Administrative Assistants, occupational code 43–6013, of $19.54.[168] Additionally, BLS reports that average wages and salaries for civilians are 69 percent of total compensation. The 68.8 percent of total compensation equates to 45.3 percent (100 percent/68.8 percent—1) load on wages and salaries.[169] The load of 45.3 percent, or $8.85 ($0.453 \times \$19.54$), is added to the hourly rate to estimate the loaded hourly rates. As can be seen in Table 22, the loaded hourly wage for completing DEA registration applications is $28.39 ($19.54 + $8.85).

To calculate the labor cost of applying for either the *Special Registration* or the *State Telemedicine Registration,* DEA estimates that on average it will take ten minutes (0.17 hours) for an applicant to apply for any of them.[170] The estimated labor cost to complete the application is $4.83 ($\$28.39 \times 0.17$). These registrations are for three years, so the annualized labor cost of registration is $1.61 ($4.83/3). This calculation is shown in Table 22 below.

TABLE 22—PER APPLICATION COST

Occupation	Hourly wage ($)	Load for benefits ($)	Loaded hourly wage ($)	Application time (hours)	Cost per application ($)	Annualized cost per application ($)
Medical Secretaries and Administrative Assistants	19.54	8.85	28.39	0.17	4.83	1.61

[166] *Id.*

[167] This estimate is based on the time required to complete the new DEA Form 224S and DEA Form 224S–M, which will be used as the application for a Special Registration for Telemedicine and State Telemedicine Registration.

[168] Bureau of Labor Statistics, Occupational Employment and Wages, May 2023 National Occupational Employment and Wage Estimates, *https://www.bls.gov/oes/2023/may/oes_nat.htm.* (Accessed 10/18/2024).

[169] Bureau of Labor Statistics, Employer Costs for Employee Compensation –June 2024, *https://www.bls.gov/news.release/archives/ecec_09102024.pdf.* (accessed 10/18/2024).

[170] This estimate is based on the time required to complete DEA Form 224A, which would be modified to also be used as the application for the *Special Registration for Telemedicine* and *State Telemedicine Registration.*

C. Practitioner and MLP Cost to Report to DEA

The proposed rule requires special registrants to report to DEA, on an annual basis, the total number of new patients in each state treated under their *Special Registration for Telemedicine,* the total number of prescriptions for Schedule II controlled substances issued by the special registrant, and the total number of prescriptions for qualified Schedule III–V controlled substances issued by the special registrant for the preceding year. The special registrant would be required to electronically report this data through the DEA Office of Diversion Control's secure network application.

DEA believes the creation of this report by the registrant's electronic prescription controlled substance (EPCS) system will be a minimal one-time expense. EPCS systems already are required by CFR 1311.120(b)(27)(i) to track controlled substance transactions. The new piece of data that will be needed for this to be fully automated is tracking which patients fall under the proposed rule's telemedicine requirements. DEA believes this can be added to these existing systems during routine operation and maintenance and tracked with minimal cost and effort.

DEA believes the annual running of this report and submitting electronically to DEA can be done in six minutes (0.10 hours). Using the previously calculated loaded hourly wage for Medical Secretaries and Administrative Assistants of $28.39, the cost per report is $2.84 ($28.39 × 0.1), as can be seen in Table 23 below.

TABLE 23—PER REPORT COST

Occupation	Hourly wage ($)	Load for benefits ($)	Loaded hourly wage ($)	Reporting time (hours)	Cost per report ($)
Medical Secretaries and Administrative Assistants	19.54	8.85	28.39	0.10	2.84

D. Practitioner and MLP Cost to Check PDMP per Visit

The proposed rule immediately requires practitioners to complete a PDMP check of (1) the state/territory where the patient is located; (2) the state/territory where the practitioner is located; and (3) any state/territory with PDMP reciprocity agreements with either the state/territory where the patient is located or the state/territory where the practitioner is located. With a delayed effective date of three years, it requires a PDMP review of all 50 states and any U.S. districts and territories that maintain a PDMP prior to issuing a telemedicine prescription under the *Special Registration.* While a single comprehensive system that can check all 50 states and any U.S. districts and territories that maintain a PDMP is not currently available, once that system is in place, DEA believes it will perform similarly to existing PDMP checks. Based on a 2018 study, it takes a practitioner 27 seconds to log in and 37 seconds to retrieve a report once logged in.[171] The total time it takes to retrieve a PDMP report is roughly a minute (27 + 37 = 64 seconds) or 0.017 of an hour (1/60).

From BLS data, DEA used the weighted average of the mean hourly wages for Physicians (occupation code 29–1210) and Surgeons (occupation code 29–1240) to represent the wages for all practitioners. For Physicians, the mean hourly wage and employment are $126.85 and 716,950, and for Surgeons, the mean hourly wage and employment are $167.74 and 53,900; the weighted average of the median hourly wages is $129.71.[172] DEA also used the average of the median hourly wages for Physician Assistants (occupation code 29–1071) of $62.51 and Nurse Practitioners (occupation code 29–1171) of $60.70 to represent the hourly wages of MLPs. As calculated earlier, a load of 45.3 for benefits is added to these wages to calculate loaded wages. The loaded wages for physicians, PAs, and NPs are $188.47 ($129.71 × 1.453), $90.83 ($62.51 × 1.453), and $88.20 ($60.70 × 1.453), respectively. The estimated labor cost to complete the review for physicians is $3.20 ($188.47 × 0.017), for physician assistants is $1.54 ($90.83 × 0.017), and for nurse practitioners is $1.50 ($88.20 × 0.017).

TABLE 24—PDMP CHECK TIME COST

Occupation	Hourly wage ($)	Load for benefits ($)	Loaded hourly wage ($)	PDMP check time (hours)	Cost per PDMP check ($)
Physicians	129.71	58.76	188.47	0.017	3.20
Physician Assistants	62.51	28.32	90.83	0.017	1.54
Nurse Practitioners	60.70	27.50	88.20	0.017	1.50

For simplicity, DEA calculated a single cost of a PDMP check based on the weighted average of the three occupations. Using the 'Number of Registrants' from Table 17 to calculate weights, the weighted average of the PDMP check is $2.63.[173]

Recordkeeping and Infrastructure Costs. This proposed rule requires practitioners to maintain records relating to the *Special Registration for Telemedicine*. DEA believes that the recordkeeping requirements related to the *Special Registration for Telemedicine* will not impose major

[171] Bachhuber MA, Saloner B, LaRochelle M, Merlin JS, Maughan BC, Polsky D, Shaparin N, Murphy SM. Physician Time Burden Associated with Querying Prescription Drug Monitoring Programs. Pain Med. 2018 Oct.

[172] Bureau of Labor Statistics, Occupational Employment and Wages, May 2023 National Occupational Employment and Wage Estimates, *https://www.bls.gov/oes/2023/may/oes_nat.htm*. (accessed 10/18/2024). Employment figures for Physicians and Surgeons are 716,950 and 53,900, respectively, for a total of 770,850. Weighted average = $126.85 × (716,950/770,850) + $167.74 × (53,900/770,850) = $129.71.

[173] The number of physician, physician assistant, and nurse practitioner registrants are 1,122,940, 168,201, and 403,748, respectively, for a total of 1,694,889. The weighted average is $3.20 × (1,122,940/1,694,889) + $1.54 × (168,201/1,694,889) + $1.50 × (403,748/1,694,889) = $2.63.

additional costs on registrants. Practitioners who prescribe using a *Special Registration* would face additional recordkeeping requirements; but, given that the photographic record, *Special Registration* telemedicine encounter record, credential verification and conduct-related recordkeeping, and centralized recordkeeping required by proposed 21 CFR 1304.04(i)–(l) is not extensive, DEA does not anticipate it imposes a major burden on registrants. DEA also examined the cost of technology for telemedicine, both capital investment and operational expenses, in order to operate under the proposed *Special Registration for Telemedicine* framework. DEA believes that these initial investments have already been made by the practitioners most likely to apply for the *Special Registration for Telemedicine* and that there will be no additional technology or infrastructure cost to these practitioners to use the *Special Registration for Telemedicine*.

E. Practitioner and MLP Total Costs; Cost Savings

Total Cost. As mentioned previously, the three types of costs to practitioners are: (1) registration time costs, (2) reporting time costs, and (3) PDMP check costs. In summary, these costs are listed in Table 25 below.

TABLE 25—UNIT COST SUMMARY

	Unit costs
Registration application labor cost, annualized (applies to all registrations)	1.61
Reporting cost (applies to the number of primary special registration)	2.84
PDMP check cost (applies to all visit)	2.63

Unlike patient travel time and cost savings, since the PDMP check is required for all visits and not just first-time visits, there will not be a first-time visit adjustment. While PDMP checks will be required for all *special registration prescriptions* under this proposed rule, many practitioners already conduct PDMP checks. Due to a combination of the following factors, this would lower the additional burden imposed by this proposed rule:

(1) 45 out of 50 states require PDMP checks in some form,[174]

(2) Some states, such as California and New York, require PDMP checks for Schedule II–IV drugs (excluding Schedule V),[175]

(3) Other states have requirements that focus on the initial visit and do not always require checks for all follow-up visits.[176]

(4) Compliance with existing state laws is not 100 percent and the proposed rule may have an impact, but there will also be instances of non-compliance.[177]

However, to be conservative, DEA applied the full cost of $2.63 to all telemedicine visits leading to a *special registration prescription* by backing out the 0.1 factor applied for first-time visits in Table 8, in other words by multiplying the number of first-time telemedicine visits (Table 11) under the proposed rule with controlled substance prescriptions by 10. The proposed rule intends for there to be a nationwide PDMP that would allow for one PDMP check per visit. However, until such a system is put in place, for the first three years practitioners will only be required under the proposed rule to check the state location of the patient, the state location of the practitioner, and all states with reciprocity agreements with either of those two states. This could increase the number of checks per visit to two for some practitioners.

However, patients and practitioners may be in the same state. Also, based on a September 2023 analysis done by DEA of state PDMP participation, the average state, including the District of Columbia, only shares PDMP data with 30 other states.[178] Both factors could substantially reduce the number of PDMP checks from two to something much closer to one. For simplicity, DEA will assume there will be only one PDMP check required, in line with its long-term expectation.

Applying the annualized registration application labor cost of $1.61 to the number of registrations in Table 19, 20, and 21, the reporting cost of $2.84 to the number of primary (non-state) special registrations in Table 19, 20, and 21, and the PDMP check cost of $2.63 to all telemedicine visits that result in a controlled substances prescription (10 times the number of first-time visits from Table 15), the 10-year cost forecast is shown in Tables 26, 27, and 28 below for the low, moderate (primary), and high estimates.

TABLE 26—TOTAL PRACTITIONER AND MLP COST (LOW)

*Present value and annualized values are based on a two percent (2%) discount rate.

Cost Savings. The following sections summarize the expected cost savings related to the *Special Registration for Telemedicine* and *State Telemedicine Registration* that are realized by practitioners. As discussed in the healthcare system section, there may not be a cost savings on the healthcare system side based on an evaluation of health care systems.[179] While practitioners may be able to reduce travel to and from the office, this time savings is likely much less than patients since practitioners may still go to the office and may see many patients, each of whom would be saving travel time. Practitioners may also become more available to patients which may offset any travel time and cost savings. In line with this, DEA believes the net cost savings for practitioners will be $0.

F. Practitioner and MLP Transfers

The following sections summarize the changes in transfers related to the expected new conventional registrations, the *Special Registration for Telemedicine* (*Telemedicine Prescribing Registration,* the *Advanced Telemedicine Prescribing Registration* and *Telemedicine Platform Registration*) and the *State Telemedicine Registration* (*State Telemedicine for Individual Special Registrants* and *State Telemedicine for Platform Special Registrants*) realized by practitioners. As discussed earlier, registrations fees paid to DEA are considered to be ''transfers.''

DEA proposes to set Special Registration fees to recover the cost of administering the registrations and operating the diversion control aspect of the proposed new business activities. Due to a myriad of unknowns, DEA is unable to calculate a cost that would need to be recovered. Therefore, DEA proposed to set the *State Telemedicine*

[179] Snoswell CL, Taylor ML, Comans TA, Smith AC, Gray LC, Caffery LJ. *Determining if Telehealth Can Reduce Health System Costs: Scoping Review.* J Med internet Res. Oct 19, 2020.

for Individual Special Registration fee at $50 per three years and other *Special Registration* fees at the same rate as the ''dispensing or instructing'' business activity (currently $888 per three years) as discussed further below. 21 CFR 1301.13(e)(1)(iv). Other than the *State Telemedicine for Individual Special Registration,* the *Special Registration* provides authority to dispense controlled substances similar to the various registrants in the ''dispensing or instructing'' business activity. DEA's cost of administering the registrations and operating the diversion control aspect of the Special Registrations are expected to be similar to that of registrations in the ''dispensing or instructing'' business activity.

Conventional Registration Transfers. In order to prescribe controlled substances using a *Special Registration for Telemedicine,* practitioners generally must have three registrations. First, a practitioner must be registered under 21 U.S.C. 823(g), *i.e.* a conventional registration, unless exempt from requirement of registration pursuant to 21 CFR 1301.23(a). The fee for such 823(g) registrations, ''dispensing or instructing'' business activity, is currently $888 for a three-year cycle ($296/year) pursuant to 21 CFR 1301.13(e)(1)(iv), unless exempt from fees pursuant to 21 CFR 1301.21(a). Unless subject to an exemption, all *clinician practitioners* that prescribe or dispense controlled substances must have this registration; therefore, the proposed rule does not impact this registration category or fee for *clinician practitioners*.

Covered online telemedicine platforms must also be registered as practitioners. DEA applied the annualized registration fee calculated previously of $296 to the number of conventional registrations from Tables 19, 20, and 21 to estimate the conventional registration transfers for low, moderate (primary), and high estimates.

Special Registration Transfers. The proposed rule adds two new DEA registrations (and fees) that practitioners must obtain: a *Special Registration for Telemedicine* (either the *Telemedicine Prescribing Registration,* the *Advanced Telemedicine Prescribing Registration* and *Telemedicine Platform Registration*), and *State Telemedicine Registrations* (*State Telemedicine for Individual Special Registrants* and *State Telemedicine for Platform Special Registrants*).[180]

As discussed earlier, DEA proposes to set the fee for the individual *Special Registration for Telemedicine* (*Telemedicine Prescribing Registration* and *Advanced Telemedicine Prescribing Registration*) at the same fee as the ''dispensing or instructing'' business activity, currently $888 per three years pursuant to 21 CFR 1301.13(e)(1)(iv). For now, DEA proposes to set the registration fee for *Platform Special Registrants* at the same fee as the *Individual Special Registrants* and registrants under the conventional registration of institutions, such as hospitals and clinics. As DEA gathers more data (such as pharmacy and practitioner reports included in this proposed rule) on the burden DEA incurs from *Platform Special Registrants,* this fee will be reevaluated. DEA applied the annualized registration fee of $296 to the number of Special Registrations, labeled ''Telemedicine Prescribing-Individual'' (which includes ''Telemedicine Prescribing'' and ''Advanced Telemedicine Prescribing'' registrations) and ''Telemedicine Platform'' in Tables 19, 20, and 21, to estimate the primary special registration transfers for low, moderate (primary), and high estimates.

State Telemedicine Registration Transfers. It is also statutorily required that a practitioner ''is registered under section 823(g) of this title in the State in which the patient will be located when receiving the telemedicine treatment. . . .'' 21 U.S.C. 831(h)(B). Therefore, the proposed rule would create the *State Telemedicine Registration* (*State Telemedicine for Individual Special Registrants* and *State Telemedicine for Platform Special Registrants*) to satisfy this requirement.

Registration fees generally cover two primary costs: (1) costs associated with processing and administering registrations, and (2) costs associated with general oversight and enforcement of controlled substance laws and regulations. The *State Telemedicine for Individual Special Registration* is an ancillary registration to the Special Registration and DEA proposes to set the fee at a level to recover DEA's cost of processing and administering the registration only. Based on an internal DEA 2021 study, as can be seen in Table 29 below, the total annual registration cost to DEA was $28,930,063.[181] This equates to a registration cost per registration of $45.[182]

TABLE 29—HISTORICAL REGISTRATION COST OF CONVENTIONAL DEA REGISTRATION

Annual cost categories	Annual cost ($)	Registrations per year	Cost per registration ($)
Labor cost of processing registrations	17,107,968	645,734	26.49
Labor cost of pre-registration investigations	2,955,422	645,734	4.58
Cost to maintain the registration IT system	8,866,672	645,734	13.73
Total	28,930,062	.....	45

Adjusting the $45 cost for inflation, from 2020 to current (end of 2023) dollars, the current estimated cost to process and administer a registration is $50.[183] Since the registration is a three-year registration, the annualized registration fee is $17 ($50/3).

The cost to DEA of administering the platform *State Telemedicine Registration* (*State Telemedicine for Platform Special Registrants*) is not

[180] A non-VA practitioner would not be required to have a 21 U.S.C. 823(g)registration in his or her own State or a State Telemedicine Registration in the patient's state if exempt from registration in all States under DEA regulations. *See* 21 U.S.C. 831(h)(1)(B)(i), *proposed* 21 CFR 1301.61(b)(4).

[181] This includes the annual cost of labor to process registrations ($17,107,968), the annual cost of labor to conduct liability pre-registration investigations ($2,955,422), and the annual cost to maintain the registration IT system ($8,866,672). Figures are rounded as shown.

[182] Dividing the total annual cost of $28,930,063 by the average number of new registrations and registration renewals processed annually from FY2018 to FY2020 of 645,734 yields a per registration cost of $45 (rounded). Practitioners pay this registration fee on a triennial basis.

[183] Office of Management and Budget, Historical Tables, Table 10.1-Gross Domestic Product and Deflators Used in the Historical Tables: 1940–2029. *https://www.whitehouse.gov/omb/budget/historical-tables.* (*https://www.whitehouse.gov/wp-content/uploads/2024/03/hist10z1_fy2025.xlsx*). (Accessed November 1, 2024). Using the ''GDP (Chained) Price Index'' of 1.05547 for 2020 and 1.2207 for 2023, $45 in 2020 is adjusted for inflation to $52 ($45 × 1.2207/1.0547) in 2023. $52 is rounded down to $50.

limited to the marginal registration cost. An individual doctor's time is finite, whether they are serving patients in one state or multiple states. However, for a platform there can be a much greater number of patients, number of doctors, and risk of diversion given the broader scope of practice as compared to an individual practitioner. Each additional state creates access to a new pool of patients and a diversion risk that cannot be fully covered from the fees from the *Telemedicine Platform Registration* and other *State Telemedicine for Platform Special Registrations*. DEA is proposing a $888 platform *State Telemedicine Registration* (*State Telemedicine for Platform Special Registrants*) fee with an annual rate over three years of $296 (888/3). Three-year registration fees and annualized fees are summarized in Table 30 below.

TABLE 30—REGISTRATION FEES AND ANNUALIZED REGISTRATION FEES

	Registration fee/transfer ($)	Annualized registration fee/transfer ($)
Telemedicine Prescribing-Individual	888	296
State Telemedicine-Individual	50	17
Conventional-Platform	888	296
Telemedicine Platform	888	296
State Telemedicine-Platform	888	296

As with the *Telemedicine Platform Registration* fee, as DEA gathers more data (such as from pharmacy and practitioner reporting included in this proposed rule) on the burden from these registrants this fee may be adjusted in the future. DEA applied the annualized registration fee of $17 to the number of individual state registrations and the annualized registration fee of $296 to the number of platform state registrations from Tables 19, 20, and 21 to estimate the state registration transfers for low, moderate (primary), and high estimates.

Furthermore, based on review of DEA's registration data, approximately 8.2 percent of physicians, nurse practitioners, and physician assistants are exempt from paying registration fees. Therefore, a factor of 91.8 percent (100 − 8.2) was applied to the number of individual primary and state registrations to estimate the number of fee-paying registrations. The annualized fees and fee-paying percentages for the various registrations are summarized in Table 31 below.

TABLE 31—ANNUALIZED REGISTRATION FEES AND FEE-PAYING PERCENTAGES

	Annualized registration fee/transfer ($)	Fee paying
Telemedicine Prescribing-Individual	296	91.8%
State Telemedicine-Individual	17	91.8%
Conventional-Platform	296	100%
Telemedicine Platform	296	100%
State Telemedicine-Platform	296	100%

Summary of Practitioner Transfers. Applying the annualized registration fees and fee-paying percentages (Table 31) to the number of registrations from Table 19, 20, and 21, results in registration fee transfers as shown in Tables 32, 33, and 34 for low, moderate (primary), and high estimates respectively.

TABLE 32—TOTAL TRANSFER PAYMENTS BY REGISTRATION

IV. Pharmacy Costs

Under the proposed rule, pharmacies would be required to submit monthly reports in accordance with proposed § 1304.60. DEA assumes similar reports are already being submitted to state PDMPs electronically and pharmacies would be able to submit reports as required by § 1304.60 with minimal additional costs.

V. Healthcare System Costs and Cost Savings

Based on the available research, DEA anticipates that there will be no significant net economic impact on healthcare systems due to the proposed rule. According to one peer-reviewed medical journal article from 2020, telehealth is expected to reduce costs in health systems between 32 percent to 53 percent of the time. However, evidence suggests that it does not routinely reduce the cost of care delivery for the health system as a whole.[184] A more recent 2023 study, focused on payment analysis for telehealth and in-person care, comes to a similar conclusion, noting the lack of cost differential and concluding that the primary benefit of telehealth is increased access and convenience, not cost savings.[185]

VI. State Costs

The proposed rule immediately requires practitioners to complete a PDMP check of: (1) the state/territory where the patient is located; (2) the state/territory where the practitioner is located; and (3) any state/territory with PDMP reciprocity agreements with either the state/territory where the patient is located or the state/territory where the practitioner is located. However, three years after the proposed rule's effective date, in order for Schedule II prescribing to continue across state lines, DEA is requiring that practitioners conduct PDMP checks for patients in all 50 states and any U.S. districts and territories that maintain a PDMP. Based on a September 2023 analysis conducted by DEA of State PDMP participation, the average state, including the District of Columbia, only shares PDMP data with 30 other states, as can be seen in Table 36.[186] Based on that study, California was the only state that does not share data with any other state or a U.S. district and territory. However, California now does share PDMP data with Oregon. Guam and Northern Mariana Islands both share with Nebraska and each other. Puerto Rico shares with 30 states plus the District of Columbia.

TABLE 36—PDMP SHARING AMONG 50 STATES AND THE DISTRICT OF COLUMBIA

	Number of states sharing with
Minimum	1
Minimum*	10
Average	30
Median	32
Maximum	45

* Excluding California.

This is a significant improvement since practitioners first gained access to PDMPs in 1990 and electronic sharing of PDMP data was started in 2010.[187] Further, most states use the same PDMP interconnectivity hub, with the two primary ones being PMP InterConnect and RxCheck.[188] However, even with these improvements and similarities, ''there are some variances when it comes to data sharing and integration (*i.e.,* assigned user roles, patient matching methods, percentage of provider population integrated, retention of PDMP data or reports) that pose challenges'' according to a report by the Prescription Drug Monitoring Program Training and Technical Assistance Center.[189]

DEA does not have a basis to determine what the cost and coordination hurdles are in trying to implement 50-state sharing of PDMP data or how much more PDMP data sharing would have happened without this rule. Based on a 2016 study, there is evidence that states who have implemented PDMPs had a decline in the rate of opioid-related deaths in the year after their inauguration and that those declines were strongest in states whose PDMPs had the most comprehensive and efficient features, such as more frequently updated data.[190] DEA believes increased state sharing will produce similar results and that any costs associated with implementation will be surpassed by the benefit of lower opioid-related deaths.

From 2012 to 2016, SAMHSA funded projects across nine states to, among other things, increase PDMP access across states.[191] Based on a report from the CDC, these projects were successful in increasing interstate PDMP data sharing, and this sharing brought about a decrease in prescription opioid abuse. Accordingly, there is reason for optimism that states can implement sharing and that outside groups can have a positive impact as well. This proposed rule would not create any mandate for states. Any costs incurred in PDMP data sharing among states are incurred outside of this rule. Therefore, any cost to states as a result of this rule would be minimal.

VII. Diversion

Requiring an in-person medical evaluation serves as a safeguard against diversion, consistent with the *Ryan Haight Act*. Certain signs of diversion or misuse of controlled substances may go undetected without an in-person assessment, as some indicators are either essential to observe personally or are more reliably detected when face-to-face. Without this safeguard, new diversion paradigms have emerged in telemedicine.[192] Therefore, in the absence of an in-person medical evaluation requirement, DEA believes that other anti-diversion safeguards—such as those proposed in this NPRM—are necessary, beyond the measures that have been in place since March 2020, to address the ongoing risks of diversion.

Admittedly, there is little quantified data on diversion since the onset of the COVID–19 pandemic. However, the intentionally concealed and frequently underreported nature of drug diversion makes these illicit activities inherently difficult to track.[193] By design, illegal activities like diversion are meant to evade detection, which complicates the collection of comprehensive and reliable quantitative data. Furthermore, diversion of controlled substances can take on many forms, from theft and fraud to improper prescribing making it difficult to quantify in a standardized method. Arguably, data shedding more light on diversion rates could be pulled from state PDMPs; however, as discussed above, the fragmented nature of PDMPs across the states fails to provide a comprehensive set of standardized data.

Given the dearth of comprehensive standardized data on diversion, DEA has had to rely on qualitative information and insights, such as anecdotal information, expert testimony from industry, and the specialized experience and knowledge of DEA's diversion investigators to identify emerging trends and inform enforcement strategies. Under the proposed NPRM, DEA would be implementing a system requiring pharmacies to inform DEA monthly about practitioner *special registration prescriptions* in accordance with proposed § 1304.60, which will allow DEA to collect more uniform and comprehensive data in order to carry out more quantitative analyses to evaluate the diversion of controlled substances via telemedicine.

VIII. Summary of Economic Impact

DEA estimates a cost savings to patients of $38.46 per first-time telemedicine visit that results in a controlled substance prescription. DEA estimates an annualized cost to practitioners, MLPs, and platforms of $1.61 for the labor cost of a registration application. DEA estimates a cost to practitioners and MLPs of $2.84 for annual reporting. DEA estimates a cost to practitioners and MLPs of $2.63 for PDMP checks. These unit costs were applied to the 10-year forecast of visits and registrations to develop a 10-year forecast of the cost savings, costs, and transfers. Furthermore, the annualized registration fees (transfers) were applied to the 10-year forecast of registrations to develop a 10-year forecast of transfers. The resulting cost savings, costs, and transfers for low, moderate (primary), and high estimates are shown in Table 37 below.

[193] In some comments to the March 2023 NPRMs and during some of the presentations during the Telemedicine Listening Sessions, individuals cited studies demonstrating a lack of increased proportion of overdose deaths involving buprenorphine during the initial months of the pandemic, when the telemedicine flexibilities were first put in place, as evidence of a lack of diversion of controlled substances more generally. However, it is important to note that these studies focused solely on buprenorphine, and it would be inappropriate to extrapolate their findings to all controlled substances given the unique characteristics of buprenorphine, particularly the combination buprenorphine product (*Suboxone*), which adds naloxone designed to deter diversion and misuse. Consistent with this data, buprenorphine has been provided unique treatment under this proposed NPRM and under the separate *Expansion of Buprenorphine Treatment via Telemedicine Encounter* final rule (RIN 1117–AB78). *See, e.g.,* Tanz LJ, Jones CM, Davis NL, Compton WM, Baldwin GT, Han B, Volkow ND. *Trends and Characteristics of Buprenorphine-Involved Overdose Deaths Prior to and During the COVID–19 Pandemic.* JAMA Netw Open. 2023 Jan 3;6(1): e2251856. doi: 10.1001/jamanetworkopen.2022.51856. Registration fee (Transfers)	8.1	0.90	216	24	1,152	128

* Present value (PV) and annualized (A) values are based on a two percent (2%) discount rate.

While DEA believes that the benefits of increased availability for treatment outweigh the dangers of a potential increase in diversion—so long as prescribers using the *Special Registration for Telemedicine* adhere to the safeguards inherent in the requirements of the proposed rule—the data system DEA is implementing will allow DEA to monitor the actual impact of the rule and be able to proactively make any necessary changes, either on the enforcement side or the regulatory side.

Regulatory Flexibility Act

The Administrator, in accordance with the Regulatory Flexibility Act (5 U.S.C. 601–612) (''RFA''), has reviewed this proposed rule and by approving it certifies that it will not have a significant economic impact on a substantial number of small entities.

In accordance with the RFA, DEA evaluated the impact of this proposed rule on small entities. The proposed rule allows for DEA-registered physicians and MLPs, or practitioners, to apply for three types of *Special Registrations:* the (1) *Telemedicine Prescribing Registration* authorizing qualified practitioners to prescribe Schedule III–V controlled substances via telemedicine; (2) the *Advanced Telemedicine Prescribing Registration,* authorizing qualified specialized practitioners (*e.g.,* psychiatrists, *hospice care* physicians) to prescribe Schedule II–V controlled substances via telemedicine, and (3) a *Telemedicine Platform Registration,* authorizing *covered online telemedicine platforms,* in their capacity as *platform practitioners,* to dispense Schedule II–V controlled substances.

The proposed rule immediately requires practitioners to complete a PDMP check of (1) the state/territory where the patient is located; (2) the state/territory where the practitioner is located; and (3) any state/territory with PDMP reciprocity agreements with either the state/territory where the patient is located or the state/territory where the practitioner is located. With a delayed effective date of three years, it requires a PDMP review of all 50 states and any U.S. districts and territories that maintain a PDMP prior to issuing a telemedicine prescription under the *Special Registration.*

A significant number of physicians and MLPs work in offices and institutions that meet the RFA's definition of small entities. To estimate the number of affected entities, DEA first determined the North American Industry Classification System (''NAICS'') codes that most closely represent businesses that employ the potential applicants for the Special Registrations for Telemedicine. Then, DEA researched economic data for those codes. The source of the economic data is the Small Business Administration (''SBA''), Office of Advocacy, and is based on data provided by the U.S. Census Bureau, Statistics of U.S. Businesses (''SUSB'').[194] The following business NAICS codes are estimated to represent businesses that employ the affected persons (potential applicants):

- 621111—Offices of Physicians, Except Mental Health Specialists
- 621112—Offices of Physicians, Mental Health Specialists
- 621420—Outpatient Mental Health and Substance Abuse Centers
- 622210—Psychiatric and Substance Abuse Hospitals

SUSB data contains the number of firms by size ranges for each of the NAICS codes. For the purposes of this analysis, the term ''firm'' as defined in the SUSB is used interchangeably with ''entity'' as defined in the RFA.

To estimate the number of affected entities that are small entities, DEA compared the SUSB data for the number

[194] SUSB's employer data contain the number of firms, number of establishments, employment, and annual payroll for employment size of firm categories by location and industry. A ''firm'' is defined as an aggregation of all establishments owned by a parent company (within a geographic location and/or industry) with some annual payroll.

of firms in various firm size ranges with SBA size standards for each of the representative NAICS codes. The SBA size standard is the firm size based on the number of employees or annual receipts depending on industry. The SBA size standards for NAICS codes 621111, 621112, 621420, and 622210 are annual receipts of $16.0 million, $13.5 million, $19.0 million, and $47.0 million, respectively.[195]

The firms in each size range below the SBA size standard are small firms. The number of firms below the SBA size standard was added to determine the total number of small firms in each NAICS code. DEA estimates that a total of 175,503 entities are affected by this proposed rule, of which 172,436 (98.25 percent) are small entities. The analysis is summarized in Table 39 below.[196]

TABLE 39—NUMBER OF AFFECTED ENTITIES AND SMALL ENTITIES

NAICS Code	Number of firms	SBA size standard ($)	Number of small firms
621111—Offices of Physicians, Except Mental Health Specialists	161,286	16,000,000	157,563
621112—Offices of Physicians, Mental Health Specialists	10,561	13,500,000	10,400
621420—Outpatient Mental Health and Substance Abuse Centers	6,523	19,000,000	5,849
622210—Psychiatric and Substance Abuse Hospitals	396	47,000,000	200
Total	178,766		174,012
Percent of Total			97.3 percent

The cost of the proposed rule impacts the affected entities and small entities on a ''per person'' basis. Rather than estimating the number of physicians and MLPs per firm, then the cost per firm, then whether the cost is significant, DEA employed a more direct approach based on the following logic:

- In order to continue as a financially stable entity, the affected firms must generate enough revenue to pay the wages of physicians and MLPs, and other operating expenses.
- Therefore, revenue for firms must be greater than the wages paid to practitioners.
- Therefore, if the cost of the proposed rule is not economically significant when compared to individual wages for practitioners, the cost of the proposed rule is not economically significant when compared to the annual revenue of the firms.

In this analysis DEA has assumed a practitioner falls under the platform registration even though that registration is designed for telemedicine companies who are serving as intermediaries between patients and *clinician practitioners,* which is expected to exclude physician offices that have only one physician. If the cost is not burdensome for a single physician office, then it would not, presumably, be a burden for larger offices as well.

As covered above, DEA estimates the cost to apply at $4.83 per application and that each registrant would apply for 2.5 individual Special Registrations (1 initial and 1.5 state) and 3.5 platform registrations (1 conventional, 1 initial telemedicine, and 1.5 state) for a total of 6 (2.5 + 3.5), at an annual rate of 2 Special Registrations per year (6/3), giving a total cost of $9.66 ($4.83 × 2). This would also mean there would be fees of $888 for the platform conventional registration, $1,776 (888 × 2) for both the individual and platform initial *Special Registration* and $150 ($50 × 3) for 3 special state registrations, for a total of $2,814 ($888 + $1,776 + $150), or $938 per year ($2,814/3).

DEA estimates the cost for reporting to DEA would be $2.84 per report. With one report per year, that would be an annual cost of $2.84. DEA estimates the cost per PDMP check for physicians, physician assistants, and nurse practitioners is $3.20, $1.54, and $1.50, respectively. DEA estimates the number of new PDMP checks per year by taking the total number of new PDMP checks and dividing by the number of Special Registrations. For the high estimate, the number of new PDMP checks per year is 83 (63,172,320/761,781). Being conservative, DEA used the year 10 figures. The total annual cost of the new PDMP checks per year is $266 (84 × $3.20), $128 (83 × $1.54), and $125 (83 × 1.50), respectively for physicians, physician assistants, and nurse practitioners.

The average annual total economic impact for each registrant who prescribes under this proposed rule is then the combination of the PDMP check cost, registration time cost, reporting cost, and annualized registration fee. For physicians, physician assistants, and nurse practitioners, this is $1,210 ($266 + $3.22 + $2.84 + $938), $1,072 ($128 + $3.22 + $2.84 + $938), and $1,069 ($125 + $3.22 + $2.84 + $938), respectively.

The average annual total economic impacts are compared to the loaded annual mean wages for physicians and MLPs (physician assistants and nurse practitioners). Based on the Bureau of Labor Statistics' (BLS) Occupational Employment and Wages data, DEA estimates an annual mean wage of $263,840 for physicians (occupation code 29–1210),[197] $130,490 for physician assistants (occupation code 29–1071),[198] and $128,490 for nurse practitioners (occupation code 29–1171).[199] Based on the previously calculated load of 45.3 percent, the loaded annual mean wages are then $383,360 ($263,840 × 1.453), $189,602 ($130,490 × 1.453), and $186,696 ($128,490 × 1.453), respectively.

The total annual fees and costs are then 0.32 percent ($1,210/$383,360),

[195] U.S. Small Business Administration, Table of size standards, Effective March 17, 2023, *https://www.sba.gov/document/support-table-size-standards* (*https://www.sba.gov/sites/default/files/2023-06/Table%20of%20Size%20Standards_Effective%20March%2017%2C%202023_.xlsx*) (Accessed October 18, 2024).

[196] SUSB, 2017 SUSB Annual Data Tables by Establishment Industry, U.S., Data by Enterprise Receipts Size, 6-digit NAICS, *https://www.census.gov/data/tables/2017/econ/susb/2017-susb-annual.html* (*https://www2.census.gov/programs-surveys/susb/tables/2017/us_6digitnaics_rcptsize_2017.xlsx*) (Accessed October 20, 2024).

[197] Bureau of Labor Statistics, *Occupational Employment and Wages, May 2023* (29–1210 Physicians), annual mean wage, *https://www.bls.gov/oes/2023/may/oes_nat.htm* (Accessed 10/18/2024). While the weighted average of the 29–1210 Physicians and 29–1240 Surgeons is used to calculate costs earlier in the document, here, the total costs and fees is compared to the loaded median annual wages for 29–1210 Physicians only. 29–1210 is the large majority and this analysis examines the impact on this occupation with the lower wage.

[198] Bureau of Labor Statistics, *Occupational Employment and Wages, May 2023, 29–1071 Physician Assistants,* median hourly wage *https://www.bls.gov/oes/2023/may/oes_nat.htm.* (Accessed 10/18/2024).

[199] Bureau of Labor Statistics, *Occupational Employment and Wages, May 2023, 29–1171 Nurse Practitioners,* annual mean wage, *https://www.bls.gov/oes/2023/may/oes_nat.htm.* (Accessed 10/18/2024).

0.57 percent ($1,072/$189,602), and 0.57 percent ($1,069/$186,696) of loaded annual wages for physicians, physician assistants, and nurse practitioners, respectively. Table 40 presents the details of the calculation.

TABLE 40—COSTS AND FEES AS PERCENT OF WAGES

	Registration cost ($)	Reporting cost ($)	PDMP check cost ($)	Annualized registration fee cost ($)	Total cost and fees ($)	Loaded annual mean wage ($)	Costs and fees as percent of wage (percent)
Physicians	3.22	2.84	266	938	1,210	383,360	0.32
Physician Assistants	3.22	2.84	128	938	1,072	189,602	0.57
Nurse Practitioners	3.22	2.84	125	938	1,069	186,696	0.57

The economic impact of applying for the *Special Registration for Telemedicine* represents a small fraction (0.32 percent, 0.57 percent, and 0.57 percent) of annual wages. DEA estimates the proposed rule will not have a significant economic impact on individual physicians and MLPs. The small entities that employ the potentially affected physicians and MLPs are expected to generate enough revenue to pay their wages. Therefore, DEA concludes the proposed rule will not have a significant economic impact on a substantial number of small entities.

Executive Order 13175, Consultation and Coordination With Indian Tribal Governments

DEA has determined that this proposed rule may have Tribal implications, as defined by Executive Order 13175. The determination that this proposed rule will have Tribal implications is, in part, based off the several public comments made by Tribal organizations on the 2023 General Telemedicine NPRM and the Buprenorphine NPRM, stating that the requirements in those two proposed rules would have a substantial impact on Tribal communities. The most prominent concerns of the Tribal organizations involved the extreme remoteness and practitioner shortages faced by some Tribal communities. Specifically, as a result of these obstacles to care, the Tribal communities noted the challenges posed by, as proposed in the 2023 NPRMs, necessitating an in-person medical examination to obtain prescriptions for certain substances, as well as the 30-day telemedicine prescription supply limit. On June 13 and 27, 2024, OTJ and DEA hosted two Tribal consultations to have broad discussions regarding the practice of telemedicine with Tribal communities. Many of the Tribal organizations that participated in the two Tribal consultations reiterated their concerns about any telemedicine rule that would require an in-person medical examination to obtain prescriptions for certain substances and a 30-day telemedicine prescription supply limit.

After carefully considering the information and insights shared in the public comments to the two 2023 NPRMs, during the Telemedicine Listening Sessions, and during the June 2024 Tribal Consultations, DEA reevaluated its approach and determined that the best course of action was to proceed with the promulgation of a *Special Registration* rule. Notably, this proposed *Special Registration* rule no longer contains an in-person medical examination requirement for certain substances and no longer contains a 30-day telemedicine prescription supply limit requirement; DEA believes these changes have largely addressed the prominent concerns raised by Tribes. DEA encourages Tribal members and entities to submit public comments on this *Special Registration* NPRM. Furthermore, it intends to continue Tribal consultations on Telemedicine, including the proposed requirements of the *Special Registration* NPRM, to ensure meaningful collaboration with Tribal governments impacted by DEA's telemedicine policies.

Paperwork Reduction Act of 1995

This proposed rule would impose new collections and modify existing collections of information under the Paperwork Reduction Act (PRA), 44 U.S.C. 3501–3521. DEA has identified the following collection(s) of information related to this proposed rule. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a valid OMB control number. Copies of existing information collections approved by OMB may be obtained at *http://www.reginfo.gov/public/do/PRAMain.*

A. Collections of Information Associated With the Proposed Rule

1. Title: Application for Registration, Registration Renewal, *Special Registration for Telemedicine,* and Changes and Modifications to *Special Registration for Telemedicine,* Forms DEA–224/224A/224S/224S–M
OMB Control Number: 1117–0014
Form Number: DEA–224/DEA–224A/DEA–224S/224S–M

DEA is proposing to amend its regulations by creating two new forms for all *Special Registration* applicants to use when applying for or modifying a *Special Registration for Telemedicine* and a *State Telemedicine Registration.* DEA Form 224S (*Application for Special Registration for Telemedicine Under the Controlled Substances Act*) will allow *Special Registration* applicants to use one form to apply for the *Telemedicine Prescribing Registration* (CS III–V), the *Advanced Telemedicine Prescribing Registration* (CS II–V), the *Telemedicine Platform Registration* (CS II–V), and the *State Telemedicine Registration* for each state in which a patient will be located. *Special Registration* applicants will be required to provide one *Special Registered Location. Platform practitioners* will be required to disclose all employment, contractual relationships, or professional affiliations with any *clinician special registrant* and Online Pharmacy and their respective registration numbers. *Clinician practitioners* will be required to disclose all employment, contractual relationships, and professional affiliations, including with any *covered online telemedicine platforms* and the respective *covered online telemedicine platform's Telemedicine Platform Special Registration* number; their practice specialties; and attest to their ability and intention to check relevant state PDMPs prior to issuing a *special registration prescription.* All *Special Registration* applicants will also be required to attest to having devised, and committing to maintain, anti-diversion

policies and procedures and to the facts and circumstances that form the basis for their legitimate need for a *Special Registration for Telemedicine.* Additionally, those practitioners that are exempt from obtaining *State Telemedicine Registrations* will be required to identify all states in which patients will be located when being treated via telemedicine.

DEA Form 224S–M (*Application for Changes and Modifications to Special Registration*) provides *special registrants* with a means to comply with the proposed requirement of notifying DEA, within 14 business days, of any changes to the information provided in the *Special Registration* application (Form 224S); such changes include if a *clinician special registrant* becomes employed by, contracts with, or otherwise becomes professionally affiliated with a new DTC online telemedicine platform not previously disclosed on the original Form 224S or if any *clinician special registrant* or *platform special registrant* needs to make modifications to their *Special Registration.* The information submitted on these two forms will enhance transparency, patient safety, and anti-diversion efforts.

The below estimates are based on the ''moderate (primary)'' estimates made in the E.O. 12866 section above. DEA estimates the following number of respondents and burden associated with this collection of information:

- Number of respondents: 670,916
- Frequency of response: 1 per year
- Number of responses: 718,917
- Burden per response: 0.20 hours (calculated)
- Total annual hour burden: 144,200 hours

2. Title: Special Registration Recordkeeping and Prescribing Requirements

OMB Control Number: 1117–New

Form Number: N/A

Clinician special registrants will remain subject to existing recordkeeping and prescribing requirements. However, under this rule, DEA is proposing additional requirements under the *Special Registration* framework.

Clinician special registrants would be required to maintain all records arising from telemedicine encounters under the *Special Registration* framework at the *special registered location* for a minimum of two (2) years. The *clinician special registrant* will be required to maintain a record of the date and time of the telemedicine encounter, the address of the patient during the telemedicine encounter, and the home address of the patient. This proposed requirement enhances public safety by making detection of diversion patterns and illegitimate prescribing practices easier to spot during DEA investigations. It will also alleviate the practical burden for *special registrants* by centralizing recordkeeping at the *special registered location* rather than requiring *special registrants* to maintain records in every state where telemedicine patients are located. Additionally, this proposed rule will require, in addition to the requirements of a prescription found in 21 CFR 1306.05(a), two additional elements for *special registration prescriptions* to include: (1) the *Special Registration* numbers of the *clinician practitioner* and, if a *platform practitioner* facilitated the prescription, the *platform practitioner;* and (2) *State Telemedicine Registration* number of the *clinician practitioner* and, if a *platform practitioner* facilitated the prescription, the *platform practitioner.* If a *clinician special registrant* is exempt from obtaining a *State Telemedicine Registration,* the *clinician special registrant* will be required to instead provide a notation on the prescription identifying the state in which the patient is located. This information will provide the pharmacist with the necessary information to determine whether the *clinician practitioner* has the authority to prescribe, and the *platform practitioner* has the authority to dispense, Schedule II controlled substances, and provide the pharmacist with the information necessary to verify that *special registration prescriptions* are prescribed and dispensed by *special registrants* authorized within the appropriate state.

This proposed rule requires that *clinician special registrants,* or a delegated employee or contractor under the direct supervision of the *clinician special registrant,* verify the identity of patients seeking treatment via telemedicine by requiring that the patient present a state or federal government-issued photo identification card or acceptable alternative forms of identification through the camera of the *audio-video telecommunications system.* The *clinician special registrant* will be required to photograph the patient presenting their photo identification card or other acceptable documents during an initial telemedicine encounter or accept a copy of such identification card or document and will be required to maintain this photographic record for a minimum of two (2) years. The photographic records, or copies of such, will be securely stored in the patient's medical record or chart to ensure patient privacy. This requirement ensures that patients' identities are verified, and the photographic record establishes a clear link between the patient's identity and the *special registration prescription.*

Platform special registrants will be required to maintain certain *clinician special registrant* records insomuch as that *platform special registrant* has a *covered platform relationship* with the *clinician special registrant.* Such records include documents related to verification of the *clinical special registrant's* credentials; employment contracts and any other contract between the *platform special registrant* and *clinician special registrant;* and any disciplinary actions or sanctions, or documentation of complaints, disputes, or incidents involving the *practice of telemedicine.* The *platform special registrant* will be required to maintain and update the credential verification and conduct-related records for a minimum of two (2) years. This requirement will help to address any potential issues of diversion, misconduct, or inadequate screening procedures and provides additional regulatory oversight over remote prescribing.

This proposed rule will require, in addition to the requirements of a prescription found in 21 CFR 1306.05(a), two additional elements for *special registration prescriptions* to include: (1) the *Special Registration* numbers of the *clinician practitioner* and, if a *platform practitioner* facilitated the prescription, the *platform practitioner;* and (2) *State Telemedicine Registration* number of the *clinician practitioner* and, if a *platform practitioner* facilitated the prescription, the *platform practitioner.* If a *clinician special registrant* is exempt from obtaining a *State Telemedicine Registration,* the *clinician special registrant* will be required to instead provide a notation on the prescription identifying the state in which the patient is located. This information will provide the pharmacist with the necessary information to determine whether the *clinician practitioner* has the authority to prescribe, and the *platform practitioner* has the authority to dispense, Schedule II controlled substances, and provide the pharmacist with the information necessary to verify that *special registration prescriptions* are prescribed and dispensed by *special registrants* authorized within the appropriate state.

The below estimates are based on the ''moderate (primary)'' estimates made in the E.O. 12866 section above. DEA estimates the following number of

respondents and burden associated with this collection of information:

- Number of respondents: 57,552
- Frequency of response: 174.26562 (as needed, calculated)
- Number of responses: 10,029,335
- Burden per response: 0.0008602 (calculated)
- Total annual hour burden: 8,627 hours

3. Title: Special Registration Reporting Requirements
OMB Control Number: 1117-New
Form Number: N/A

This proposed rule will require both *individual special registrants* and *platform special registrants* to electronically report to DEA under 21 CFR 1304.61, on an annual basis, the total number of new patients in each state where at least one *special registration prescription* for a Schedule II controlled substance and certain Schedule III–V controlled substances, including Ketamine, Tramadol, and any depressant constituting a benzodiazepine, has been issued; the total number of *special registration prescriptions* for Schedule II controlled substances issued by the *special registrant* in aggregate and across all states; and the total number of *special registration prescriptions* for certain Schedule III–V controlled substances, including Ketamine, Tramadol, and any depressants constituting a benzodiazepines, which were issued by the *special registrant,* in aggregate and across all states. Amid the ongoing opioid epidemic, this vital information will provide DEA with accurate and up to date data on the prescribing of controlled substances via telemedicine.

This proposed rule will also require pharmacies to electronically report, within the first seven (7) days of the start of every month, aggregate data for the *special registration prescriptions* filled during the preceding month for each Schedule II controlled substance and certain Schedule III–V controlled substances, including Ketamine, Tramadol, and any depressant constituting a benzodiazepine. For each of these controlled substances, the pharmacy will be required to report the number of prescriptions filled, the volume of the controlled substance dispensed, and the number of patients prescribed the controlled substance. These requirements provide valuable oversight of telemedicine prescriptions under the *Special Registration,* enable the detection of irregularities or suspicious prescribing and dispensing practices, and will help DEA understand any shifts in demand for medications via telemedicine.

The below estimates are based on the ''moderate (primary)'' estimates made in the E.O. 12866 section above. DEA estimates the following number of respondents and burden associated with this collection of information:

- Number of respondents: 69,134
- Frequency of response: 6.950774 (calculated)
- Number of responses: 871,488
- Burden per response: 0.006863 hours (calculated)
- Total annual hour burden: 5,981 hours

B. Request for Comments Regarding the Proposed Collections of Information

Written comments and suggestions from the public and affected entities concerning the proposed collections of information are encouraged. Under the PRA, DEA is required to provide a notice regarding the proposed collections of information in the **Federal Register** with the notice of proposed rulemaking and solicit public comment. Pursuant to section 3506(c)(2) of the PRA (44 U.S.C. 3506(c)(2)), DEA solicits comment on the following issues:

- Whether the proposed collection of information is necessary for the proper performance of the functions of DEA, including whether the information will have practical utility.
- The accuracy of DEA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used.
- Recommendations to enhance the quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the burden of the collection of information on those who are to respond, including through the use of automated collection techniques or other forms of information technology.

All comments concerning collections of information under the Paperwork Reduction Act must be submitted to the Office of Information and Regulatory Affairs, OMB, Attention: Desk Officer for DOJ, Washington, DC 20503. Please state that your comments refer to RIN 1117–AB40/Docket No. DEA–407. All comments must be submitted to OMB on or before March 18, 2025. [''The final rule will respond to any OMB or public comments on the information collection requirements contained in this proposed rule.'']

If you need a copy of the proposed information collection instrument(s) with instructions or additional information, please contact the Regulatory Drafting and Policy Support Section (DPW), Diversion Control Division, Drug Enforcement Administration; Mailing Address: 8701 Morrissette Drive, Springfield, Virginia 22152; Telephone: (571) 776–3882.

Unfunded Mandates Reform Act of 1995

The estimated annual impact of this proposed rule is minimal. Thus, DEA has determined in accordance with the Unfunded Mandates Reform Act of 1995 (UMRA) (2 U.S.C. 1501 *et seq.*) that this action would not result in any federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more (adjusted for inflation) in any one year. Therefore, neither a Small Government Agency Plan nor any other action is required under provisions of UMRA.

List of Subjects

21 CFR Part 1300

Chemicals, Drug traffic control.

21 CFR Part 1301

Administrative practice and procedure, Drug traffic control, Exports, Imports, Prescription
drugs, Security measures.

21 CFR Part 1304

Drug traffic control, Reporting and recordkeeping requirements.

21 CFR Part 1306

Administrative practice and procedure, Drug traffic control, Prescription drugs, Reporting and recordkeeping requirements.

For the reasons set out above, the Drug Enforcement Administration proposes to amend 21 CFR parts 1300, 1301, 1304, and 1306 as follows:

PART 1300—DEFINITIONS

■ 1. Revise the authority citation for part 1300 to read as follows:

Authority: 21 U.S.C. 802, 821, 822, 829, 831(h), 871(b), 951, 958(f).

■ 2. In § 1300.01(b) the add the term ''Clinician practitioner'' and revise the term ''Institutional practitioner'' shall be revised, as follows:

§ 1300.01 Definitions related to controlled substances

* * * * *

Clinician practitioner is an individual practitioner who provides direct patient care or assesses, diagnoses, or treats medical conditions.

* * * * *

Institutional practitioner means a hospital or other person (other than an individual) licensed, registered, or otherwise permitted, by the United States or the jurisdiction in which it

practices, to dispense a controlled substance in the course of professional practice, but does not include a pharmacy or covered online telemedicine platform.

* * * * *

■ 3. Revise and republish § 1300.04 to read as follows:

§ 1300.04 Definitions relating to the dispensing of controlled substances by means of the internet.

Any term not defined in this part or elsewhere in this chapter shall have the definition set forth in sections 102 and 309 of the Act (21 U.S.C. 802, 829).

Advanced Telemedicine Prescribing Registration means a type of *Special Registration for Telemedicine* in which the registered practitioner is authorized to prescribe Schedules II through V controlled substances through the practice of telemedicine under 21 U.S.C. 802(54)(E).

Audio-video telecommunications system means the multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication between the patient and practitioner, mid-level practitioner, or pharmacist.

Clinician special registrant means a special registrant issued either the Telemedicine Prescribing Registration or the Advanced Telemedicine Prescribing Registration under 1301.11(c)(2) and (3) of this chapter, respectively.

Covered online telemedicine platform means an entity that facilitates connections between patients and clinician practitioners, via an *audio-video telecommunications system,* for the diagnosis and treatment of patients that may result in the prescription of controlled substances, but is not a hospital, clinic, local in-person medical practice, or insurance provider, and meets one or more of the following criteria:

(1) The entity explicitly promotes or advertises the prescribing of controlled substances through the platform;

(2) The entity has financial interests, whether direct incentives or otherwise, tied to the volume or types of controlled substance prescriptions issued through the platform, including but not limited to, ownership interest in pharmacies used to fill patients' prescriptions, or rebates from those pharmacies;

(3) The entity exerts control or influence on clinical decision-making processes or prescribing related to controlled substances, including, but not limited to: prescribing guidelines or protocols for clinician practitioners employed or contracted by the platform; consideration of clinician practitioner prescribing rates in the entity's hiring, retention, or compensation decisions; imposing explicit or de facto prescribing quotas; directing patients to preferred pharmacies; and/or

(4) The entity has control or custody of the prescriptions or medical records of patients who are prescribed controlled substances through the platform.

Covered platform relationship means the formal association between a covered online telemedicine platform and a clinician practitioner it directly employs, contracts with, or is otherwise professionally affiliated with to introduce or facilitate connections between patients seeking remote medical consultations and the individual practitioner, via an audio-video telecommunications system, for the diagnosis of patients and the treatment of those patients via prescription of controlled substances.

Covering practitioner means, with respect to a patient, a practitioner who conducts a medical evaluation (other than an in-person medical evaluation) at the request of a practitioner who:

(1) Has conducted at least one in-person medical evaluation of the patient or an evaluation of the patient through the practice of telemedicine, within the previous 24 months; and

(2) Is temporarily unavailable to conduct the evaluation of the patient.

Deliver, distribute, or dispense by means of the internet refers, respectively, to any delivery, distribution, or dispensing of a controlled substance that is caused or facilitated by means of the internet.

Filling new prescriptions for controlled substances in Schedule III, IV, or V means filling a prescription for an individual for a controlled substance in Schedule III, IV, or V, if:

(1) The pharmacy dispensing that prescription has previously dispensed to the patient a controlled substance other than by means of the internet and pursuant to the valid prescription of a practitioner that meets the applicable requirements of subsections (b) and (c) of section 309 of the Act (21 U.S.C. 829) and §§ 1306.21 and 1306.22 of this chapter (for purposes of this definition, such a prescription shall be referred to as the ''original prescription'');

(2) The pharmacy contacts the practitioner who issued the original prescription at the request of that individual to determine whether the practitioner will authorize the issuance of a new prescription for that individual for the controlled substance described in paragraph (d)(1) of this section (*i.e.,* the same controlled substance as described in paragraph (d)(1)); and

(3) The practitioner, acting in the usual course of professional practice, determines there is a legitimate medical purpose for the issuance of the new prescription.

Homepage means the opening or main page or screen of the website of an online pharmacy that is viewable on the internet.

Hospice care means a set of special services that are provided to individuals who are terminally ill. The focus is on comfort, not on curing an illness. Hospice programs can be delivered in a person's home or in a hospice center.

In-person medical evaluation means a medical evaluation that is conducted with the patient in the physical presence of the practitioner, without regard to whether portions of the evaluation are conducted by other health professionals. Nothing in this paragraph shall be construed to imply that one in-person medical evaluation demonstrates that a prescription has been issued for a legitimate medical purpose within the usual course of professional practice.

Internet means collectively the myriad of computer and telecommunications facilities, including equipment and operating software, which comprise the interconnected worldwide network of networks that employ the Transmission Control Protocol/internet Protocol, or any predecessor or successor protocol to such protocol, to communicate information of all kinds by wire or radio.

Local in-person medical practice means a medical practice where all its offices are within 100 miles of each other, and where less than 50 percent of the total prescriptions for controlled substances collectively issued by the practice's physicians and mid-level practitioners are issued via telemedicine, in any given calendar month, but is not a hospital, clinic, or insurance provider.

Online pharmacy means a person, entity, or internet site, whether in the United States or abroad, that knowingly or intentionally delivers, distributes, or dispenses, or offers or attempts to deliver, distribute, or dispense, a controlled substance by means of the internet. The term includes, but is not limited to, a pharmacy that has obtained a modification of its registration pursuant to §§ 1301.13 and 1301.19 of this chapter that currently authorizes it to dispense controlled substances by means of the internet, regardless of whether the pharmacy is currently dispensing controlled substances by

means of the internet. The term does not include:

(1) Manufacturers or distributors registered under subsection (a), (b), (d), or (e) of section 303 of the Act (21 U.S.C. 823(a), (b), (d), or (e)) (§ 1301.13 of this chapter) who do not dispense controlled substances to an unregistered individual or entity;

(2) Nonpharmacy practitioners who are registered under section 303(f) of the Act (21 U.S.C. 823(f)) (§ 1301.13 of this chapter) and whose activities are authorized by that registration;

(3) Any hospital or other medical facility that is operated by an agency of the United States (including the Armed Forces), provided such hospital or other facility is registered under section 303(f) of the Act (21 U.S.C. 823(f)) (§ 1301.13 of this chapter);

(4) A health care facility owned or operated by an Indian tribe or tribal organization, only to the extent such facility is carrying out a contract or compact under the Indian Self–Determination and Education Assistance Act;

(5) Any agent or employee of any hospital or facility referred to in paragraph (h)(3) or (h)(4) of this section, provided such agent or employee is lawfully acting in the usual course of business or employment, and within the scope of the official duties of such agent or employee, with such hospital or facility, and, with respect to agents or employees of health care facilities specified in paragraph (h)(4) of this section, only to the extent such individuals are furnishing services pursuant to the contracts or compacts described in such paragraph;

(6) Mere advertisements that do not attempt to facilitate an actual transaction involving a controlled substance;

(7) A person, entity, or internet site that is not in the United States and does not facilitate the delivery, distribution, or dispensing of a controlled substance by means of the internet to any person in the United States;

(8) A pharmacy registered under section 303(f) of the Act (21 U.S.C. 823(f)) (§ 1301.13 of this chapter) whose dispensing of controlled substances via the internet consists solely of:

(i) Refilling prescriptions for controlled substances in Schedule III, IV, or V, as defined in paragraph (k) of this section; or

(ii) Filling new prescriptions for controlled substances in Schedule III, IV, or V, as defined in paragraph (d) of this section;

(9)(i) Any registered pharmacy whose delivery, distribution, or dispensing of controlled substances by means of the internet consists solely of filling prescriptions that were electronically prescribed in a manner authorized by this chapter and otherwise in compliance with the Act.

(ii) A registered pharmacy will be deemed to meet this exception if, in view of all of its activities other than those referred to in paragraph (h)(9)(i) of this section, it would fall outside the definition of an online pharmacy;

(10)(i) Any registered pharmacy whose delivery, distribution, or dispensing of controlled substances by means of the internet consists solely of the transmission of prescription information between a pharmacy and an automated dispensing system located in a long term care facility when the registration of the automated dispensing system is held by that pharmacy as described in §§ 1301.17 and 1301.27 and the pharmacy is otherwise complying with this chapter.

(ii) A registered pharmacy will be deemed to meet this exception if, in view of all of its activities other than those referred to in paragraph (h)(10)(i) of this section, it would fall outside the definition of an online pharmacy; or

(11) A covered online telemedicine platform as defined in this section.

Palliative care means patient and family-centered care that optimizes quality of life by anticipating, preventing, and treating suffering. *Palliative care* throughout the continuum of illness involves addressing physical, intellectual, emotional, social, and spiritual needs and to facilitate patient autonomy, access to information, and choice.

Platform practitioner means a covered online telemedicine platform that dispenses controlled substances by virtue of its central involvement as an intermediary in the remote prescribing of controlled substances by an individual practitioner. Platform practitioners are subject to the requirements imposed upon non-pharmacist practitioners under the Controlled Substances Act, 21 U.S.C. 801–904, and its regulations.

Platform special registrant means a special registrant issued the Telemedicine Platform Registration under 1301.11(c)(4) of this chapter.

Practice of telemedicine means the practice of medicine in accordance with applicable federal and state laws by a practitioner (other than a pharmacist) who is at a location remote from the patient and is communicating with the patient, or health care professional who is treating the patient, using a telecommunications system defined in 42 CFR 410.78(a)(3), which practice falls within a category listed in paragraphs (1) through (7) of this definition:

(1) *Treatment in a hospital or clinic.* The practice of telemedicine is being conducted while the patient is being treated by, and physically located in, a hospital or clinic registered under section 303(f) of the Act (21 U.S.C. 823(f)) by a practitioner acting in the usual course of professional practice, who is acting in accordance with applicable State law, and who is registered under section 303(f) of the Act (21 U.S.C. 823(f)) in the State in which the patient is located, unless the practitioner:

(i) Is exempted from such registration in all States under section 302(d) of the Act (21 U.S.C. 822(d); or

(ii) Is an employee or contractor of the Department of Veterans Affairs who is acting in the scope of such employment or contract, and registered under section 303(f) of the Act (21 U.S.C. 823(f)) in any State or is utilizing the registration of a hospital or clinic operated by the Department of Veterans Affairs registered under section 303(f);

(2) *Treatment in the physical presence of a practitioner.* The practice of telemedicine is being conducted while the patient is being treated by, and in the physical presence of, a practitioner acting in the usual course of professional practice, who is acting in accordance with applicable State law, and who is registered under section 303(f) of the Act (21 U.S.C. 823(f)) in the State in which the patient is located, unless the practitioner:

(i) Is exempted from such registration in all States under section 302(d) of the Act (21 U.S.C. 822(d)); or

(ii) Is an employee or contractor of the Department of Veterans Affairs who is acting in the scope of such employment or contract, and registered under section 303(f) of the Act (21 U.S.C. 823(f)) in any State or is using the registration of a hospital or clinic operated by the Department of Veterans Affairs registered under section 303(f);

(3) *Indian Health Service or Tribal organization.* The practice of telemedicine is being conducted by a practitioner who is an employee or contractor of the Indian Health Service, or is working for an Indian Tribe or Tribal organization under its contract or compact with the Indian Health Service under the Indian Self-Determination and Education Assistance Act; who is acting within the scope of the employment, contract, or compact; and who is designated as an internet Eligible Controlled Substances Provider by the Secretary of Health and Human Services under section 311(g)(2) of the Act (21 U.S.C. 831(g)(2));

(4) *Public health emergency declared by the Secretary of Health and Human Services.* The practice of telemedicine is being conducted during a public health emergency declared by the Secretary of Health and Human Services under section 319 of the Public Health Service Act (42 U.S.C. 247d), and involves patients located in such areas, and such controlled substances, as the Secretary of Health and Human Services, with the concurrence of the Administrator, designates, provided that such designation shall not be subject to the procedures prescribed by the Administrative Procedure Act (5 U.S.C. 551–559 and 701–706);

(5) *Special registration.* The practice of telemedicine is being conducted by a practitioner who has obtained from the Administrator a special registration under section 311(h) of the Act (21 U.S.C. 831(h));

(6) *Department of Veterans Affairs medical emergency.* The practice of telemedicine is being conducted:

(i) In a medical emergency situation:

(A) That prevents the patient from being in the physical presence of a practitioner registered under section 303(f) of the Act (21 U.S.C. 823(f)) who is an employee or contractor of the Veterans Health Administration acting in the usual course of business and employment and within the scope of the official duties or contract of that employee or contractor;

(B) That prevents the patient from being physically present at a hospital or clinic operated by the Department of Veterans Affairs registered under section 303(f) of the Act (21 U.S.C. 823(f));

(C) During which the primary care practitioner of the patient or a practitioner otherwise practicing telemedicine within the meaning of this paragraph is unable to provide care or consultation; and

(D) That requires immediate intervention by a health care practitioner using controlled substances to prevent what the practitioner reasonably believes in good faith will be imminent and serious clinical consequences, such as further injury or death; and

(ii) By a practitioner that:

(A) Is an employee or contractor of the Veterans Health Administration acting within the scope of that employment or contract;

(B) Is registered under section 303(f) of the Act (21 U.S.C. 823(f)) in any State or is utilizing the registration of a hospital or clinic operated by the Department of Veterans Affairs registered under section 303(f); and

(C) Issues a controlled substance prescription in this emergency context that is limited to a maximum of a five-day supply which may not be extended or refilled; or

(7) *Other circumstances specified by regulation.* The practice of telemedicine is being conducted under any other circumstances that the Administrator and the Secretary of Health and Human Services have jointly, by regulation, determined to be consistent with effective controls against diversion and otherwise consistent with the public health and safety.

Refilling prescriptions for controlled substances in Schedule III, IV, or V: (1) Means the dispensing of a controlled substance in Schedule III, IV, or V in accordance with refill instructions issued by a practitioner as part of a valid prescription that meets the requirements of subsections (b) and (c) of section 309 of the Act (21 U.S.C. 829) and §§ 1306.21 and 1306.22 of this chapter, as appropriate; and

(2) Does not include the issuance of a new prescription to an individual for a controlled substance that individual was previously prescribed.

Special registered location means the physical address of record for a Special Registration for Telemedicine. The special registered location shall be the same address as one of the special registrant's 1301.13(e)(1)(iv) registered locations, unless exempted by § 1301.13(k)(1) of this chapter, in which case the *special registered location* shall be the physical address provided on the special registrant's Form 224S.

Special registrant means a practitioner who has been issued a Special Registration for Telemedicine (either a Telemedicine Prescribing Registration, an Advanced Telemedicine Prescribing Registration, or a Telemedicine Platform Registration).

Special Registration for Telemedicine means a registration issued by the Administrator pursuant to section 311(h) of the Act (21 U.S.C. 831(h)) to a practitioner who seeks to engage in the practice of telemedicine pursuant to section 102(54)(E) of the Act (21 U.S.C. 802(54)(E)) and 1300.04 of this chapter, which may be used to prescribe controlled substances by means of the internet (within the meaning of section 102(51) of the Act (21 U.S.C. 802(51)) without having first conducted an in-person medical evaluation with patients to whom such prescriptions are being issued. The three types of *Special Registration for Telemedicine* are the Telemedicine Prescribing Registration, the Advanced Telemedicine Prescribing Registration, and the Telemedicine Platform Registration.

Special registration prescription means a prescription, defined under § 1300.01 of this chapter, for controlled substances issued under a practitioner's Special Registration for Telemedicine for a legitimate medical purpose in the usual course of professional practice through the utilization of an audio-video telecommunications system defined in this section. A special registration prescription is facilitated if:

(1) The prescription is issued to a patient who was introduced to the prescribing practitioner through a covered platform relationship; or

(2) A covered online telemedicine platform facilitated the telemedicine encounter that resulted in the prescription, including by providing audio-visual communication services.

State Telemedicine Registration means a limited type of 21 U.S.C. 823(g) registration authorizing an individual special registrant to prescribe special registration prescriptions to patients located within the state or a platform special registrant to dispense Schedule II–V controlled substances to patients located within the state, as required by section 311(h)(1)(B) of the Act (21 U.S.C. 831(h)(1)(B)).

Telemedicine Platform Registration means a type of Special Registration for Telemedicine in which the registered covered online telemedicine platform is authorized to dispense Schedules II through V controlled substances through the practice of telemedicine under 21 U.S.C. 802(54)(E).

Telemedicine Prescribing Registration means a type of Special Registration for Telemedicine in which the registered practitioner is authorized to prescribe Schedules III through V controlled substances through the practice of telemedicine under 21 U.S.C. 802(54)(E).

Valid prescription means a prescription that is issued for a legitimate medical purpose in the usual course of professional practice by:

(1) A practitioner who has conducted at least one in-person medical evaluation of the patient; or

(2) A covering practitioner.

(3) The definition of *valid prescription* shall not be construed to imply that one in-person medical evaluation demonstrates that a prescription has been issued for a legitimate medical purpose within the usual course of professional practice.

PART 1301—REGISTRATION OF MANUFACTURERS, DISTRIBUTORS, AND DISPENSERS OF CONTROLLED SUBSTANCES

■ 4. The authority citation for part 1301 continues to read as follows:

Authority: 21 U.S.C. 821, 822, 823, 824, 831, 871(b), 875, 877, 886a, 951, 952, 956, 957, 958, 965 unless otherwise noted.

■ 5. In § 1301.11, revise the section heading and add paragraphs (c) and (d) to read as follows:

§ 1301.11 Persons required to register; requirement of modification of registration authorizing activity as an online pharmacy; Eligibility Requirements for Special Registration for Telemedicine; State Telemedicine Registrations.

* * * * *

(c) *Eligibility for Special Registration for Telemedicine.* Clinician practitioners and covered online telemedicine platforms are eligible for the Special Registration for Telemedicine under § 1300.04 of this chapter. Clinician practitioners are eligible for either the Telemedicine Prescribing Registration or Advanced Telemedicine Prescribing Registration, and platform practitioners are eligible for the Telemedicine Platform Registration pursuant to 21 U.S.C. 802(54)(E) and 21 U.S.C. 831(h) subject to the following:

(1) *In general.* (i) A clinician practitioner applicant or a covered online telemedicine platform applicant shall be required to hold one or more registrations under § 1301.13(e)(1)(iv) of this chapter in a state in which they are licensed, registered, or otherwise permitted to prescribe or dispense controlled substances through telemedicine. Clinician practitioners exempted from obtaining a State Telemedicine Registration for every state in which patients to whom they will issue special registration prescriptions are located under § 1301.11(d) of this chapter are exempted from this requirement.

(ii) Notwithstanding § 1301.23(a) of this chapter, all clinician practitioners must apply for and obtain a Telemedicine Prescribing Registration or Advanced Telemedicine Prescribing Registration before issuing special registration prescriptions.

(2) *Telemedicine Prescribing Registration (Schedules III–V).* If the condition required in paragraph (c)(1) of this section is satisfied, a Practitioner or Mid-Level Practitioner, as defined under § 1300.01(b) of this chapter, may have a legitimate need under 21 U.S.C. 831(h) for the Telemedicine Prescribing Registration and may apply for the registration to prescribe Schedules III–V controlled substances when they anticipate that they will be treating patients for whom requiring in-person medical evaluations could impose significant burdens on the patients to maintain a bona fide practitioner-patient relationships.

(3) *Advanced Telemedicine Prescribing Registration (Schedules II–V).* If the condition required in paragraph (c)(1) of this section is satisfied, a Practitioner or Mid-Level Practitioner may have a legitimate need under 21 U.S.C. 831(h) for the Advanced Telemedicine Prescribing Registration, and may apply for the registration to prescribe Schedules II–V controlled substances, when they anticipate that they will be treating patients for whom requiring in-person medical evaluations could impose significant burdens on the patient to maintain bona fide practitioner-patient relationships, and the practitioner or Mid-Level Practitioner is one or more of the following:

(i) The practitioner is a psychiatrist or is board certified in the treatment of psychiatric or psychological disorders;

(ii) The practitioner is a hospice care physician or is board certified in hospice care;

(iii) The practitioner is a palliative care physician or is board certified in palliative care;

(iv) The practitioner renders treatment at one or more long term care facilities;

(v) The practitioner is a pediatrician or is board certified in pediatric care; and/or

(vi) The practitioner is a neurologist or is board certified in the treatment of neurological disorders unrelated to the treatment and management of pain.

(4) *Telemedicine Platform Registration (Schedules II–V).* A covered online telemedicine platform, as defined under § 1300.04 of this chapter, may have a legitimate need under 21 U.S.C. 831(h) for the Telemedicine Platform Registration, and shall apply for the registration to dispense Schedules II–V controlled substances, when the covered online telemedicine platform:

(i) Anticipates being compensated for introducing or facilitating connections between patients seeking remote medical consultations and practitioners, via an audio-video telecommunications system, for the diagnosis of patients and the treatment of those patients via prescription of controlled substances;

(ii) Is compliant with federal and state regulations;

(iii) Provides oversight over *clinician practitioners'* prescribing practices; and

(iv) Takes measures to prioritize patient safety and prevent diversion, abuse, or misuse of controlled substances.

(d) *State Telemedicine Registrations.* Practitioners issued any of the three types of Special Registration for Telemedicine shall obtain a State Telemedicine Registration defined under § 1300.04 of this chapter, for every state in which patients to whom special registration prescriptions will be issued are located. As a limited type of 21 U.S.C. 823(g) registration, the Administrator shall issue the State Telemedicine Registration when it is consistent with the public interest pursuant 21 U.S.C. 823(g)(1). The following clinician practitioners are exempted from obtaining a State Telemedicine Registration for every state:

(1) Officials of the U.S. Army, Navy, Marine Corps, Air Force, Space Force, Coast Guard, Public Health Service, or Bureau of Prisons who are authorized to prescribe via telemedicine in the course of their official duties;

(2) Veterans Health Administration (VHA) covered health care professionals under 38 U.S.C. 1730C(b), acting within the scope of their employment who are utilizing the registration of a hospital or clinic operated by the VHA registered under 21 U.S.C. 823(g) after having obtained the approval of the Secretary of the Veterans Affairs (VA) to utilize the 823(g) registration of a VHA-operated hospital or clinic; and

(3) Health care professionals acting within the scope of their contract with VHA and who have access to, and chart patient records within, the VHA's electronic health records, are subject to all policies of the VHA, and are utilizing the registration of a hospital or clinic operated by the VHA registered under 21 U.S.C. 823(g) after having obtained the approval of the Secretary of the Veterans Affairs (VA) to utilize the 823(g) registration of a VA-operated hospital or clinic; and

(4) Any practitioner otherwise exempted from registration under 21 U.S.C. 822(d).

■ 6. In § 1301.13, add paragraphs (e)(1)(xi), (xii), (xiii), (xiv), and (xv), (k), (l) to read as follows:

§ 1301.13 Application for registration; time for application; expiration date; registration for independent activities; application forms, fees, contents and signature; coincident activities.

* * * * *

(e) * * *

(1)

Business activity	Controlled substances	DEA application forms	Application fees ($)	Registration period (years)	Coincident activities allowed
*	* *	*	*	*	*
(xi) Telemedicine Prescribing (Special Registration).	Schedules III–V	New—224S Renewal—224S Modification—224S(M).	888	3	
(xii) Advanced Telemedicine Prescribing (Special Registration).	Schedules II–V	New—224S Renewal—224S Modification—224S(M).	888	3	
(xiii) Telemedicine Platform (Special Registration).	Schedules II–V	New—224S Renewal—224S Modification—224S(M).	888	3	
(xiv) State Telemedicine for Individual Special Registrants (Ancillary Registration to a Special Registration).	(Determined by the Special Registration held).	New—224S Renewal—224S Modification—224S(M).	50	3	
(xv) State Telemedicine for Platform Special Registrants (Ancillary Registration to a Special Registration).	(Determined by the Special Registration held).	New—224S Renewal—224S Modification—224S(M).	888	3	

* * * * *

(k) *Special Registration application (Form 224S) requirements.* Form 224S will require the following:

(1) *Special registered location.* Special Registration applicants shall designate one of their existing registered locations under paragraph (e)(1)(iv) of this section as the registered location/physical address of their Special Registration. Special Registration applicants that would be exempted under § 1301.11(d) are exempted from this requirement however, such exempted persons shall be required to provide another physical address.

(2) *Required disclosures and attestations.* Special Registration applicants shall provide the following specific disclosures and attestations on the Form 224S:

(i) If the applicant is a platform practitioner applying for the Telemedicine Platform Registration, it shall disclose all employment, contractual relationships, or professional affiliations with any clinician special registrant and Online Pharmacy and their respective registration numbers.

(ii) If the applicant is a clinician practitioner applying for the Telemedicine Prescribing Registration or the Advanced Telemedicine Prescribing Registration, the applicant shall disclose all employment, contractual relationships, or professional affiliations, including with any covered online telemedicine platform and the respective covered online telemedicine platform's Telemedicine Platform Special Registration number, if applicable; and the applicant's practice specialties (*e.g.,* hospice care or palliative care);

(iii) The applicant for a Special Registration for Telemedicine, whether a clinician practitioner or a covered online telemedicine platform, shall attest that they have devised and are committed to maintaining anti-diversion policies and procedures;

(iv) The applicant for an Advanced Telemedicine Prescribing Registration shall disclose their practice specialties; and

(v) The applicant for any type of Special Registration for Telemedicine shall attest that they have a legitimate need for a Special Registration for Telemedicine and to the facts and circumstances that form the basis for their legitimate need.

(3) *State Telemedicine Registration-exempted practitioner disclosures.* Practitioners exempted from State Telemedicine Registration under § 1301.11(d) are required to identify all the states in which patients will be located when being treated via telemedicine on the practitioners' registration applications for the Telemedicine Prescribing Registration, the Advanced Telemedicine Prescribing Registration, and the Telemedicine Platform Registration.

(l) *Notification of application changes; Modifications (Form 224S–M).* The special registrant shall use Form 224S–M for the following purposes:

(1) To promptly notify DEA of any changes to the information provided on their Special Registration Application (Form 224S) within 14 business days on the Form 224S–M (*e.g.,* the special registrant becomes employed by, contracts with, or otherwise professionally affiliated with a new entity); and

(2) To make any modifications to their Special Registration (*e.g.,* applying for additional State Telemedicine Registrations to practice telemedicine in additional states).

■ 7. In § 1301.35, revise paragraph (a) and add paragraph (d) to read as follows:

§ 1301.35 Certificate of registration; denial of registration.

(a) The Administrator shall issue a Certificate of Registration (DEA Form 223) to an applicant under the applicable provisions of sections 102(54)(E) or 311(h) of the Act (21 U.S.C. 802(54)(E) and 831(h)) when:

(1) The applicant for the Special Registration for Telemedicine meets the eligibility requirements outlined in § 1301.11(c) of this subpart; and

(2) The Administrator has determined that the Special Registration is consistent with the public interest pursuant to the factors stipulated in 21 U.S.C. 823(g)(1).

* * * * *

(d) The Certificate of Registration (DEA Form 223) issued for a Special Registration shall contain the following information: name; Special Registered Location; Special Registration for Telemedicine (either a Telemedicine Prescribing Registration, Advanced Telemedicine Prescribing Registration, or Telemedicine Platform Registration), and State Telemedicine Registration(s);

the activity authorized by the Special Registration, the Schedules and/or Administration Controlled Substances Code Number (as set forth in part 1308 of this chapter) of the controlled substances which the registrant is authorized to handle; the amount of fee paid (or exemption) for each registration, and the expiration date of each registration. The special registrant shall maintain the Certificate of Registration at the Special Registered Location in a readily retrievable manner and shall permit inspection of the certificate by any official, agent or employee of the Administration or of any Federal, State, or local agency engaged in enforcement of laws relating to controlled substances.

■ 8. In § 1301.36:

■ a. Redesignate paragraphs (c) through (i) as paragraphs (d) through (j), respectively; and

■ b. Add paragraphs (c) and (k).

The additions read as follows:

§ 1301.36 Suspension or revocation of registration; suspension of registration pending final order; extension of registration pending final order.

* * * * *

(c) For any registration issued under sections 102(54)(E) or 311(h) of the Act (21 U.S.C. 802(54)(E) and 831(h)), the Administrator may:

(1) Suspend the registration under the grounds stipulated in section 304(a) of the Act (21 U.S.C. 824(a)) for any period of time; and

(2) Revoke the registration under the grounds stipulated in section 304(a) of the Act (21 U.S.C. 824(a)).

* * * * *

(k) The suspension or revocation of any registration issued under 21 U.S.C. 823(g) shall result in the automatic suspension or revocation of all registrations issued under 21 U.S.C. 831(h), including all Special Registrations for Telemedicine and State Telemedicine Registrations.

PART 1304—RECORDS AND REPORTS OF REGISTRANTS

■ 9. The authority citation for part 1304 continues to read as follows:

Authority: 21 U.S.C. 821, 827, 831, 871(b), 958(e)–(g), and 965, unless otherwise noted.

■ 10. In § 1304.04, add paragraphs (i), (j), (k), and (l) to read as follows:

§ 1304.04 Maintenance of records and inventories.

* * * * *

(i) For patient verification photographic records, an individual special registrant, with a Special Registration for Telemedicine pursuant to 1301.11(c)(2) or (3) of this chapter, or a delegated employee or contractor under the direct supervision of the individual special registrant, shall verify the identity of patients prior to issuing a special registration prescription via an audio-video telecommunications system, as defined under § 1300.04 of this chapter. At the first telemedicine encounter, the individual special registrant, or a delegated employee or contractor under the direct supervision of the individual special registrant, shall confirm the identity of the patient, and capture a photographic record of the patient presenting their federal or state-issued photo identification card or other acceptable documents as described in paragraph (i)(1) of this section; or verify, accept and maintain a copy of the patient's federal or state government-issued photo identification card or a document described in paragraph (i)(1) of this section provided by the patient. The photographic record shall be maintained by the individual special registrant and renewed a minimum of every two (2) years. After the first telemedicine encounter, the individual special registrant, or the individual special registrant's delegee, shall confirm the patient's identity against the initial or renewed photographic record at every telemedicine encounter that results in a special telemedicine prescription.

(1) If the individual special registrant or a delegated employee or contractor under the direct supervision of the individual special registrant reasonably determines that a patient lacks a federal or state-issued photo identification card, the individual special registrant or their delegee must verify the identity of the patients in the manner described in this paragraph (i) using other forms of documentation to verify the identity of the patient, and maintain a photographic record of what documents were used to verify the patient's identity.

(2) The photographic records must be securely stored within the patient's medical record or chart, separate from the special registration prescription data reported to DEA under § 1304.60 of this subpart to ensure that patient privacy is protected.

(j) For the purpose of maintaining special registration telemedicine encounter record, every telemedicine encounter that results in a special registration prescription, the prescribing individual special registrant shall maintain a record of the date and time of the telemedicine encounter, the address of the patient during the telemedicine encounter, and the home address of the patient. The individual special registrant must maintain the special registration telemedicine encounter record for a minimum of two (2) years from the date of the telemedicine encounter.

(k) For credential verification and conduct-related records, a platform special registrant, with a Special Registration for Telemedicine pursuant to 1301.11(c)(4) of this chapter, shall maintain the following records related to individual special registrants with whom they enter and maintain a covered platform relationship:

(1) Verification of the individual practitioner's credentials, including but not limited to records on education, training, board or specialty certifications;

(2) The employment contract and any other contract between the platform practitioner and the individual practitioner; and

(3) Any disciplinary actions or sanctions, or documentation of complaints, disputes, or incidents involving the practice of telemedicine engaged in by the individual practitioner. The platform practitioner must maintain and update the credential verification and conduct-related records for a minimum of two (2) years.

(l) For the purpose of maintaining centralized recordkeeping at the special registered location, a special registrant, with a Special Registration for Telemedicine pursuant to 1301.11(c)(2)–(4) shall maintain all records arising from telemedicine encounters at the special registrant's Special Registered Location.

■ 10. Add § 1304.60 under the undesignated center heading ''Prescription Reporting'' to read as follows:

§ 1304.60 Pharmacy reporting of special registration prescription data.

(a) A pharmacy shall, within seven (7) days of the start of every month, report aggregate data for the special registration prescriptions filled during the preceding month for each Schedule II controlled substance and each Schedule III–V controlled substance identified in paragraph (b). For each of these controlled substances, the pharmacy shall provide the following information, organized by the different State Telemedicine Registration numbers of the individual special registrants who prescribed the controlled substance, and organized by the National Drug Code (NDC) for each formulation of the controlled substance dispensed: the number of prescriptions filled, the volume of the controlled substance dispensed, and the number of

patients prescribed the controlled substance. If the individual special registrant is exempted from State Telemedicine Registration under § 1301.11(d) of this chapter, the pharmacy shall instead provide the Special Registration number for either the Telemedicine Prescribing Registration or Advanced Telemedicine Prescribing Registration of the individual special registrant in lieu of a State Telemedicine Registration number. The pharmacy shall electronically report this data through DEA Office of Diversion Control's secure network application.

(b) The Schedule III–V controlled substances subject to the reporting requirement in paragraph (a) of this section are:

(1) Ketamine, its salts, isomers, and salts of isomers (DEA Controlled Substances Code Number (CSCN) 7285);

(2) 2-[(dimethylamino)methyl]-1-(3-methoxyphenyl)cyclohexanol, its salts, optical and geometric isomers and salts of these isomers (including tramadol) (CSCN 9752); and

(3) The following depressants as described in 1308.14(c) of this chapter, and their salts, isomers, and salt of isomers: Alprazolam (CSCN 2882); Bromazepam (CSCN 2748); Camazepam (CSCN 2749; Chlordiazepxide (CSCN 2744); Clobazam (CSCN 2751); Clonazepam (CSCN 2737); Clorazepate (CSCN 2768); Clotiazepam (CSCN 2752); Cloxazolam (CSCN 2753); Delorazepam (CSCN 2754); Diazepam (CSCN 2765); Estazolam (CSCN 2756); Ethyl loflazepate (CSCN 2758); Fludiazepam (CSCN 2759); Flunitrazepam (CSCN 2763); Flurazepam (CSCN 2767); Halazepam (CSCN 2762); Haloxazolam (CSCN 2771); Ketazolam (CSCN 2772); Loprazolam (CSCN 2773); Lorazepam (CSCN 2885); Lormetazepam (CSCN 2774); Medazepam (CSCN 2836); Midazolam (CSCN 2884); Nimetazepam (CSCN 2837); Nitrazepam (CSCN 2834); Nordiazepam (CSCN 2838); Oxazepam (CSCN 2835); Oxazolam (CSCN 2839); Pinazepam (CSCN 2883); Prazepam (CSCN 2764); Quazepam (CSCN 2881); Remimazolam (CSCN 2846); Temazepam (CSCN 2925); Tetrazepam (CSCN 2886); and Triazolam (CSCN 2887).

■ 12. Add § 1304.61 to read as follows:

§ 1304.61 Special registrant reporting of special registration prescription data.

A special registrant, either an individual special registrant or a platform special registrant, shall report to DEA on an annual basis within the seven (7) days of the start of every year the following information for the preceding year: the total number of new patients in each state where at least one special registration prescription for a Schedule II controlled substance, or a Schedule III–V controlled substance identified in § 1304.60(b) has been issued; the total number of special registration prescriptions for Schedule II controlled substances issued by the special registrant, in aggregate and across all states; and the total number of special registration prescriptions for Schedule III–V controlled substances identified in § 1304.60(b) issued by the special registrant, in aggregate and across all states. The individual special registrant shall electronically report this data through DEA Office of Diversion Control's secure network application.

PART 1306—PRESCRIPTIONS AND DISPENSING

■ 14. The authority citation for part 1306 continues to read as follows:

Authority: 21 U.S.C. 821, 829, 831, 871(b), unless otherwise noted.

■ 15. Add an undesignated center heading ''Special Registration Prescriptions Prescribed by Individual Special Registrants'' and §§ 1306.41 through 1306.47 to read as follows:

Special Registration Prescriptions Prescribed by Individual Special Registrants

§ 1306.41 Prescription origination within the United States.

The individual special registrant shall be physically located within the United States when conducting a telemedicine encounter and issuing a special registration prescription; and have any necessary licensure and authorization within the U.S. state or territory where the practitioner is located when the telemedicine encounter takes place. For the purposes of this chapter, the United States shall mean the 50 states of the United States of America, the District of Columbia, the Commonwealth of Puerto Rico, Guam, the U.S. Virgin Islands, America Samoa, Wake Island, Midway Islands, Kingman Reef, Johnston Atoll, the Northern Mariana Islands, and any other trust territory or possession of the United States.

§ 1306.42 Electronic Prescribing for Controlled Substances (EPCS) of Special Registration Prescriptions.

The individual special registrant shall issue special registration prescriptions for controlled substances through Electronic Prescribing for Controlled Substances (EPCS).

§ 1306.43 Nationwide Prescription Drug Monitoring Program (PDMP) Check

(a) Effective immediately, on [EFFECTIVE DATE OF FINAL RULE], prior to issuing a special registration prescription for controlled substances, including Schedules II through V controlled substances, the individual special registrant shall perform a check of the state Prescription Drug Monitoring Program(s) (PDMPS) in:

(1) The state or territory where the patient is located;

(2) The state or territory where the individual special registrant is located; and

(3) Any state or territory with PDMP reciprocity agreements with either the state or territory where the patient is located or the state or territory where the individual special registrant is located, for data regarding any controlled substance prescriptions issued to the patient in the last year, or, if less than one year of data is available, in the entire available period, prior to issuing a special registration prescription for controlled substances.

(b) Effective three (3) years from [EFFECTIVE DATE OF FINAL RULE], the individual special registrant shall perform a comprehensive nationwide check of all 50 state Prescription Drug Monitoring Programs (PDMPs) and PDMPs in any U.S. district and territory that maintains its own PDMP for data regarding any controlled substance prescriptions issued to the patient in the last year, or, if less than one year of data is available, in the entire available period, prior to issuing a special registration prescription for controlled substances. If there is no means to perform this comprehensive nationwide check three (3) years from [the date of the promulgation of the final rule], then the individual special registrant shall continue to perform the PDMPs checks as described in paragraph (a) if this section, and special registration prescriptions for Schedule II controlled substances shall only be issued to patients located within the same state as the individual special registrant, *i.e.,* where there is an intra-state practitioner-patient relationship.

§ 1306.44 Required Use of Audio-Video Telecommunication System

(a) Every special registration prescription, as defined in § 1300.04 of this chapter, shall be issued through the use of an audio-video telecommunication system defined in § 1300.04 of this chapter.

(b) Notwithstanding paragraph (a) of this section and § 1300.04 of this chapter, special registrants may issue special registration prescriptions for

Schedule III–V narcotic controlled substances approved by the Food and Drug Administration for the treatment of Opioid Use Disorder through the use of an audio-only telecommunications system as described in 42 CFR 410.78(a)(3), provided that the treatment was initiated through the use of an audio-video telecommunications system as defined in § 1300.04 of this chapter, the practitioner has conducted at least one medical evaluation of the patient through the use of an audio-video telecommunication system defined in § 1300.04 of this chapter, and the prescription is being issued for the treatment of Opioid Use Disorder.

§ 1306.45 Requirements for Issuing a Special Registration Prescription for Schedule II Controlled Substances

(a) A special registration prescription may not be issued for a controlled substance listed in Schedule II unless the individual special registrant has an Advanced Telemedicine Prescribing Registration and the individual special registrant is: a psychiatrist or board certified in the treatment of psychiatric and psychological disorders, and issuing the prescription for the treatment of mental health; a hospice care physician or board certified in hospice care, and issuing the prescription for hospice care; a palliative care physician or board certified in palliative care, and issuing the prescription for palliative care; a physician rendering treatment to a patient who resides and is present in a long term care facility at the time the prescription is issued; a pediatrician or board certified in pediatric care, and is issuing the prescription to a patient under the age of 18 while the parent or guardian of the patient is present in the room with the patient at the time the prescription is issued; or a neurologist or board certified in the treatment of neurological disorders unrelated to the treatment and management of pain

(b) A special registration prescription may not be issued for a controlled substance listed in Schedule II unless the individual special registrant is physically located in the same state in which the patient was located at the time of the telemedicine encounter that resulted in the issuance of the prescription when issuing the prescription for the Schedule II controlled substance.

(c) The number of special registration prescriptions issued by the individual special registrant in a calendar month for Schedule II controlled substances shall constitute less than 50 percent of the total number of Schedule II prescriptions issued in that calendar month by the individual special registrant in their telemedicine and non-telemedicine practice. The average number of special registration prescriptions shall be calculated from the first day of the month through the last day of the month.

§ 1306.46 State Laws Applicable to Special Registration Prescriptions

When issuing a special registration prescription, a special registrant must comply with the laws and regulations of:

(a) The state in which the special registrant is located during the telemedicine encounter resulting in the special registration prescription;

(b) The state in which the patient is located during the telemedicine encounter resulting in the special registration prescription; and

(c) Any state or states in which the special registrant maintains a DEA registration to dispense controlled substances or a medical license, to the extent that the law or regulation applies to telemedicine encounters between practitioners and patients located in the states described in paragraphs (a) and (b) of this section.

§ 1306.47 Additional Elements on a Special Registration Prescription

(a) A special registration prescription shall contain: the individual special registrant's Special Registration for Telemedicine number and State Telemedicine Registration number, unless exempted from State Telemedicine Registration under § 1301.11(d) of this chapter; and, if the prescription is facilitated by a platform registrant, the covered online telemedicine platform's Special Registration for Telemedicine number and State Telemedicine Registration number. If exempted from State Telemedicine Registration, the special registrant shall notate on the prescription the state in which the patient was located at the time of the telemedicine encounter that resulted in the issuance of the prescription.

(b) A special registration prescription shall contain all the information required on a prescription under § 1306.05(a) of this chapter, with the exception that the number associated with a registration under 1301.13(e)(1)(iv) of this chapter shall not be required.

(c) A corresponding liability rests upon the pharmacist who fills a special registration prescription that is not prepared in the form required by this regulation.

Signing Authority

This document of the Drug Enforcement Administration was signed on January 13, 2025, by Administrator Anne Milgram. That document with the original signature and date is maintained by DEA. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DEA **Federal Register** Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of DEA. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Heather Achbach,

Federal Register Liaison Officer, Drug Enforcement Administration.

Milk in the Northeast and Other Marketing Areas; Uniform Pricing Formula Provisions; Final Rule

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Parts 1000, 1001, 1005, 1006, 1007, 1030, 1032, 1033, 1051, 1124, 1126, 1131, and 1170

[Doc. No. AMS–DA–23–0031]

Milk in the Northeast and Other Marketing Areas; Uniform Pricing Formula Provisions

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Final rule.

SUMMARY: This final rule amends the pricing provisions in the 11 Federal Milk Marketing Orders (FMMOs). Separate producer referenda held in each of the 11 FMMOs obtained the necessary two-thirds vote in favor of adoption of the amendments as proposed. Accordingly, the Agricultural Marketing Service (AMS) is issuing this final rule amending all 11 FMMOs in accordance with the Agricultural Marketing Agreement Act of 1937, as amended (AMAA).

DATES: This final rule is effective June 1, 2025, except for in amendatory instruction 3a (7 CFR 1000.50(f), (i), (k), and (q)(1) and (2)), which is effective December 1, 2025.

ADDRESSES: To review the hearing record or obtain information on the amendments, please see *https://www.ams.usda.gov/rules-regulations/moa/dairy/hearings/national-fmmo-pricing-hearing.*

FOR FURTHER INFORMATION CONTACT: Erin Taylor, USDA/AMS/Dairy Programs, Order Formulation and Enforcement Division, STOP 0231–Room 2530, 1400 Independence Avenue SW, Washington, DC 20250–0231, Telephone: (202) 720–4392, Email address: *Erin.Taylor@usda.gov.*

SUPPLEMENTARY INFORMATION: This rule, in accordance with 7 CFR 900.14(c), is the Secretary's final rule in this proceeding amending the pricing provisions applicable to milk regulated in the Northeast and other marketing areas as defined in 7 CFR 900.2(j) and issued under 7 CFR parts 1000, 1001, 1005, 1006, 1007, 1030, 1032, 1033, 1051, 1124, 1126, and 1131. This final rule adopts the amendments detailed in the proposed rule (89 FR 95466) (final decision), as follows:

1. *Milk Composition Factors.* FMMO milk prices are based on three primary components: protein, other solids, and nonfat solids. Skim milk composition factors in the current price formulas codified in the FMMO regulations were adopted in 2000: 3.1 percent protein, 5.9 percent other solids, and 9 percent nonfat solids. This final rule increases the milk composition factors to 3.3 percent protein, 6.0 percent other solids, and 9.3 percent nonfat solids. Actual component tests of skim milk have increased since 2000, with more significant increases beginning in 2016. The amendments will more accurately represent component levels in milk produced. In the final decision, AMS proposed a 6-month implementation lag for the amended composition factors. As such, the amendments to the regulations at 7 CFR 1000.50(f), (i), (k), (q)(1) and (2) relative to skim milk composition factors, will be implemented on December 1, 2025. See the subsequent implementation section for further detail.

2. *Surveyed Commodity Products.* Milk prices under FMMOs are related to wholesale prices for butter, cheese, nonfat dry milk, and dry whey. The formulas use U.S. Department of Agriculture (USDA)-surveyed average wholesale prices to calculate milk component prices (butterfat, protein, nonfat solids, and other solids) that are converted to Class III and IV milk prices. The protein value in cheese is a component of the Class III price. Currently, the prices of commodity cheddar cheese packaged in 40-lb blocks (''blocks'') and 500-lb barrels (''barrels'') are collected weekly by AMS through the Dairy Products Mandatory Reporting Program (DPMRP) survey. A monthly average of those prices is used to represent commodity cheese in the Class III price formula. The butterfat value in commodity salted butter is the driver of the butterfat price used in all classified prices. This final rule eliminates 500-lb barrels from the DPMRP survey. DPMRP will rely solely on the 40-pound block cheddar cheese price to determine the monthly average cheese price used in the formulas. The amendment will provide for more orderly marketing through a survey of only one product. These changes will be implemented on June 1, 2025.

3. *Class III and Class IV Formula Factors.* Make allowances are a factor in the FMMO pricing formulas representing the cost of converting raw milk into the four manufactured dairy products surveyed by the USDA (butter, cheese, nonfat dry milk (NFDM), and dry whey). Make allowances were last updated in 2008 following a rulemaking proceeding in 2007. This final rule updates the make allowances in the FMMO Class III and IV formulas as follows: $0.2519 for cheese; $0.2272 for butter; $0.2393 for NFDM; and $0.2668 for dry whey. This final rule also updates the butterfat recovery factor in the Class III formula to 91 percent. The amendments will update the formula factors to be more representative of current costs and butterfat recovery observed in dairy product manufacturing. These changes will be implemented on June 1, 2025.

4. *Base Class I Skim Milk Price (Class I mover).* The Class I mover is the base price for the skim milk portion of raw milk used in the production of Class I products. The Agriculture Improvement Act of 2018 (2018 Farm Bill) amended the Class I skim milk price mover from the ''higher of'' Class III or Class IV skim prices to a simple average of the two classes plus $0.74, referred to as the ''average of'' mover. This final rule returns the base Class I skim milk price calculation to the higher-of Class III or Class IV skim prices. This final rule also adopts a rolling monthly Class I ESL adjustment equating to a Class I price for all ESL products equal to the average-of the Class III and Class IV advance prices, plus a 24-month rolling average adjuster, with a 12-month lag. The monthly Class I ESL adjustment will be calculated as the average of the differences between the higher-of and the average-of calculations for the prior 13 to 36 months. The amendments will provide for more orderly marketing by returning to the higher-of mover; while the Class I ESL adjustment will provide better price equity for ESL products whose marketing characteristics are distinct from other Class I products. These changes will be implemented on June 1, 2025.

5. *Class I and Class II differentials.* FMMO Class I prices are calculated as the average of the advanced Class III and Class IV prices, plus $0.74, plus a location-specific differential referred to as a Class I differential. As the value of milk varies by location, Class I differentials have been determined for every county in the continental U.S. Current Class I differential levels were implemented January 1, 2000, with updates to the differentials in the three southeastern orders taking effect May 1, 2008. This final rule retains the $1.60 base differential and adopts modified location-specific Class I differential values. The amendments recognize the evolution of the dairy industry since 2000 and the increased cost of servicing the Class I market given current transportation costs and plant and producer locations. These changes will be implemented on June 1, 2025.

The amendments to the FMMOs are based on the record of a 49-day public hearing held August 23–October 11, 2023, November 27–December 8, 2023, January 16–19, 2024, and January 29–

31, 2024, in Carmel, Indiana. The hearing was held to receive evidence on 21 proposals in the 5 pricing subject areas submitted by dairy farmers, handlers, and other interested parties. Notice of this hearing was published in the **Federal Register** on July 24, 2023 (88 FR 47396), pursuant to the provisions of the AMAA and the applicable rules of practice and procedure (7 CFR part 900). Notices of the reconvened hearing were subsequently published on November 6, 2023 (88 FR 76143) and December 29, 2023 (88 FR 90134). During the hearing, AMS received testimony from a total of 165 witnesses. Witnesses provided an overview of the complexity of the U.S. dairy industry and submitted 511 exhibits containing supporting data, analyses, and historical information.

Considering record evidence, AMS published its recommended and final decisions in the **Federal Register** on the proposed amendments to the milk pricing formulas on July 15, 2024 (89 FR 57580) and December 2, 2024 (89 FR 95466), respectively. AMS also considered proposed findings submitted in post-hearing briefs, officially noticed documents, and comments and exceptions filed in response to the recommended decision when preparing its recommended and final decisions.

In conjunction with the final decision, AMS conducted a Regulatory Economic Impact Analysis to determine the potential impact of amending FMMO pricing formulas on producer revenue and marketwide pool values. The full Regulatory Economic Impact Analysis may be accessed at *https://www.regulations.gov* or *https://www.ams.usda.gov/rules-regulations/moa/dairy/hearings/national-fmmo-pricing-hearing*.

Following publication of the final decision, AMS conducted separate producer referenda in each of the 11 FMMOs to determine support for or opposition to the proposed amendments to the milk pricing formulas. The referendum period ending December 31, 2024, confirmed support for the proposed amendments in all 11 FMMOs. More specifically, all referenda resulted in the necessary two-thirds approval of eligible producers participating in the referendum. As explained in the final decision, eligible producers were those engaged in the production of milk for sale, as defined under the terms of the orders, within the marketing areas of the Northeast, Appalachian, Florida, Southeast, Upper Midwest, Central, Mideast, California, Pacific Northwest, Southwest, and Arizona FMMOs during January 2024, the representative period.

Prior Documents in This Proceeding

Notice of Hearing: Published July 24, 2023 (88 FR 47396).

Notice of Reconvened Hearing: Published November 6, 2023 (88 FR 76143).

Notice of Reconvened Hearing: Published December 29, 2023 (88 FR 90134).

Recommended Decision: Published July 15, 2024 (89 FR 57580).

Final Decision: Published December 2, 2024 (89 FR 95466).

This administrative action is governed by sections 556 and 557 of title 5 of the United States Code and, therefore, is excluded from the requirements of Executive Orders 12866, 13563, 13175, and 14094.

The amendments to the regulations adopted herein have also been reviewed under Executive Order 12988, Civil Justice Reform. They are not intended to have a retroactive effect. The amendments do not preempt any State or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rule.

The AMAA provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 608c(15)(A) of the AMAA, any handler subject to an order may request modification or exemption from such order by filing a petition with the USDA stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with the law. A handler is afforded the opportunity for a hearing on the petition. After a hearing, the USDA would rule on the petition. The AMAA provides that the district court of the United States in any district in which the handler is an inhabitant, or has its principal place of business, has jurisdiction in equity to review the USDA's ruling on the petition, provided a bill in equity is filed not later than 20 days after the date of the entry of the ruling.

Civil Rights Impact Analysis

AMS has reviewed this rulemaking in accordance with USDA Departmental Regulation 4300–004, Civil Rights Impact Analysis, to identify any major civil rights impacts the rule might have on FMMO participants on the basis of race, color, national origin, disability, sex, gender identity, political beliefs, age, marital, family/parental status, religion, sexual orientation, reprisal, or because an individual's income is derived from any public assistance program. Based on the review and analysis of the rule and all available data, issuance of this final rule is not likely to negatively impact low and moderate-income populations, minority populations, women, Tribes or persons with disabilities, by virtue of their age, race, color, national origin, sex, disability, or marital or familial status. No major civil rights impact is likely to result from this final rule.

Regulatory Flexibility Act and Paperwork Reduction Act

In accordance with the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*), the AMS has considered the economic impact of this action on small entities. Accordingly, AMS has prepared this final regulatory flexibility analysis. The purpose of the RFA is to fit regulatory actions to the scale of businesses subject to such actions so that small businesses will not be unduly or disproportionately burdened. Marketing orders and amendments thereto are unique in that they are normally brought about through group action of essentially small entities for their own benefit. A small dairy farm as defined by the Small Business Administration (SBA) (13 CFR 121.201) (NAICS Code 112120) is one that has an annual gross revenue of $3.75 million or less, and a small dairy products manufacturer is one that has no more than the number of employees listed in the chart below:

NAICS code	NAICS U.S. industry title	Size standards in number of employees
311511	Fluid Milk Manufacturing	1,150
311512	Creamery Butter Manufacturing	750
311513	Cheese Manufacturing	1,250
311514	Dry, Condensed, and Evaporated Dairy Product Manufacturing	1,000

To determine which dairy farms are ''small businesses,'' the $3.75 million per year income limit was used to establish an annual milk marketing threshold of 18.3 million pounds. Although this threshold does not factor in additional monies that may be received by dairy producers, it should be an accurate standard for most ''small'' dairy farmers. Based on the U.S. 2023 average yield per cow and 2023 National Agricultural Statistics Service (NASS) average All-Milk price, a dairy farm with approximately 780 cows or fewer meets the definition of small business. In 2022, the most recent year with statistics available, there were 24,470 dairy farms with milk sales, of which approximately 19,576 had milk regulated on an FMMO for at least one month of the year. Based on the 2022 Census of Agriculture, Milk Cow Herd Size by Inventory and Sales, an estimated 89 percent of operations with milk sales are likely to be small businesses.

To determine a handler's size, if the plant is part of a larger company operating multiple plants that collectively exceed the 750-employee limit for creamery butter manufacturing; the 1,000-employee limit for dry, condensed, and evaporated dairy product manufacturing; the 1,150-employee limit for fluid milk manufacturing; or the 1,250-employee limit for cheese manufacturing; the plant was considered a large business even if the local plant does not exceed the 750, 1,000, 1,150, or 1,250-employee limit, respectively.

In 2022, the following number of plants were regulated for at least one month of the year in each FMMO: 66 plants on the Northeast, 19 plants on the Appalachian, 9 plants on the Florida, 20 plants on the Southeast, 58 plants on the Upper Midwest, 32 plants on the Central, 43 plants on the Mideast, 24 plants on California, 17 plants on the Pacific Northwest, 26 plants on the Southwest, and 8 plants on Arizona. According to the 2022 Census of Agriculture, approximately 86 percent of fluid milk manufacturing plants, approximately 96 percent of cheese plants, approximately 82 percent of dry products plants, and approximately 78 percent of butter plants met the SBA definition of small businesses.

Impact on Small Businesses

An economic analysis was performed and issued in conjunction with the final decision on impacts the amendments will have on industry participants, including producers and handlers. It can be found on the AMS website at *https://www.ams.usda.gov/rules-regulations/moa/dairy/hearings/national-fmmo-pricing-hearing*. The amendments are applied identically to all proprietary and cooperative handlers regulated by FMMOs, regardless of their size. The amendments implement prices that more accurately reflect current market conditions, providing for more orderly marketing for both small and large producers and handlers.

AMS considered alternatives to each of the amendments. Over 49 days of hearing, dozens of witnesses from 9 industry stakeholder groups presented testimony and evidence on 21 proposals in the 5 pricing subject areas. AMS considered all evidence and testimony, including alternative proposals presented, in making its recommendations.

A review of reporting requirements was completed under the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35). It was determined that these amendments will have no impact on reporting, recordkeeping, or other compliance requirements because they will remain identical to the current requirements. No new forms are proposed, and no additional reporting requirements will be necessary.

This final rule does not require additional information collection that requires clearance by the Office of Management and Budget (OMB) beyond currently approved information collection. The primary sources of data used to complete the forms are routinely used in most business transactions. Forms require only a minimal amount of information which can be supplied without data processing equipment or a trained statistical staff. Thus, since the information is already provided, no new information collection requirements are needed, and the current information collection and reporting burden is relatively small. Requiring the same reports for all handlers does not significantly disadvantage any handler that is smaller than the industry average.

AMS is committed to complying with the E-Government Act, to promote the use of the internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

No other burdens are expected to fall on the dairy industry as a result of this rulemaking. This rulemaking does not duplicate, overlap, or conflict with any existing Federal rules.

Implementation

This final rule amends the 11 FMMOs with an implementation date of June 1, 2025, except for the amendments to skim milk composition factors, which have a later implementation date. Therefore, all milk marketed on or after the month of June 1, 2025, will reflect the amendments to surveyed commodity products, Class III and Class IV formula factors, base Class I Skim Milk Price, and Class I differentials in both the advanced prices and pricing factors released before the start of the month and the class and component prices announced after the close of the month. Advanced prices and pricing factors for the month of June 2025 will be announced on May 21, 2025, and class and component pricing for June 2025 will be announced on July 2, 2025.

The amendments to 7 CFR 1000.50(f), (i), (k), (q)(1) and (2) which pertain to skim milk composition factors have an implementation date of December 1, 2025. Therefore, as of December 1, 2025, all milk marketed on or after December 1, 2025, will reflect all the amendments made effective by this rule. Advanced prices and pricing factors for the month of December 2025 will be announced on November 19, 2025, and class and component prices for December 2025 will be announced on December 31, 2025. Additional information regarding implementation is available on the AMS website.

Findings and Determinations

The findings and determinations hereinafter set forth supplement those that were made when the FMMOs were first issued and when they have been amended. The previous findings and determinations are hereby ratified and confirmed, except where they may conflict with those set forth herein.

The following findings are hereby made with respect to the Northeast, Southeast, Appalachian, Florida, Upper Midwest, Central, Mideast, California, Southwest, Pacific Northwest, and Arizona FMMOs:

(a) *Findings upon the basis of the hearing record.*

A public hearing was held upon certain proposed amendments to the marketing agreements and to the orders regulating the handling of milk in the Northeast, Southeast, Appalachian, Florida, Upper Midwest, Central, Mideast, California, Southwest, Pacific Northwest, and Arizona marketing areas. The hearing was held pursuant to the provisions of the AMAA, as amended (7 U.S.C. 601–674), and the applicable rules of practice and procedure (7 CFR part 900).

Upon the basis of the evidence introduced at the hearing and the record thereof, it is found that:

(1) The said orders as hereby amended, and all of the terms and

conditions thereof, will tend to effectuate the declared policy of the AMAA;

(2) The parity prices of milk, as determined pursuant to section 2 of the AMAA, are not reasonable in view of the price of feeds, available supplies of feeds, and other economic conditions which affect market supply and demand for milk in the aforesaid marketing area. The minimum prices specified in the orders as hereby amended are such prices as will reflect the aforesaid factors, ensure a sufficient quantity of pure and wholesome milk, and be in the public interest; and

(3) The said orders, as hereby amended, regulate the handling of milk in the same manner as, and are applicable only to persons in the respective classes of industrial or commercial activity specified in, marketing agreements upon which a hearing has been held.

(b) *Additional Findings.* The amendments to these orders are known to handlers. The final decision containing the proposed amendments to this order was issued on November 12, 2024, and published in the **Federal Register** on December 2, 2024 (89 FR 95466).

(c) *Determinations.* It is hereby determined that:

(1) The refusal or failure of handlers (excluding cooperative association specific in section 8c(9) of the AMAA) of more than 50 percent of the milk marketed within the specified marketing areas, to sign a proposed marketing agreement, tends to prevent the effectuation of the declared policy of the AMAA;

(2) The issuance of this order amending the Northeast, Southeast, Appalachian, Florida, Upper Midwest, Central, Mideast, California, Southwest, Pacific Northwest, and Arizona FMMOs is the only practical means pursuant to the declared policy of the AMAA of advancing the interests of producers as defined in the orders as hereby amended; and

(3) The issuance of this order amending the Northeast, Southeast, Appalachian, Florida, Upper Midwest, Central, Mideast, California, Southwest, Pacific Northwest, and Arizona FMMOs is favored by at least two-thirds of the producers engaged in the production of milk for sale, as defined under the terms of the orders, within the aforementioned marketing areas during January 2024, the representative period.

Order Amending the Orders Regulating the Handling of Milk in the Northeast, Appalachian, Florida, Southeast, Upper Midwest, Central, Mideast, California, Pacific Northwest, Southwest, and Arizona Marketing Areas

List of Subjects in 7 CFR Part 1000

Milk marketing orders, Reporting and recordkeeping requirements.

List of Subjects in 7 CFR Parts 1001, 1005, 1006, 1007, 1030, 1032, 1033, 1051, 1124, 1126, and 1131

Milk marketing orders.

List of Subjects in 7 CFR Part 1170

Dairy products, Reporting and recordkeeping requirements.

Order Relative to Handling

It is therefore ordered, that on and after the effective date hereof, the handling of milk in the Northeast, Southeast, Appalachian, Florida, Upper Midwest, Central, Mideast, California, Southwest, Pacific Northwest, and Arizona marketing areas shall be in conformity to and in compliance with the terms and conditions of the orders, as amended, and as hereby amended, as follows:

PART 1000—GENERAL PROVISIONS OF FEDERAL MILK MARKETING ORDERS

■ 1. The authority citation for part 1000 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 2. Amend § 1000.43 by:
■ a. In paragraphs (a) and (b) introductory text, removing the text ''and § 1135.11 of this chapter''; and
■ b. In paragraph (b)(2) removing the words ''or § 1135.11 of this chapter''; and
■ c. Adding paragraph (e).

The addition reads as follows:

§ 1000.43 General classification rules.

* * * * *

(e) Any skim milk used in ultra-pasteurized or aseptically processed and packaged fluid milk products shall be allocated in combination with Class I milk and the quantity of producer milk eligible to be priced shall be limited to available Class I producer milk classified pursuant to § 1000.44(a).

■ 3. Revise and republish § 1000.50 to read as follows:

§ 1000.50 Class prices, component prices, and advanced pricing factors.

Class prices per hundredweight of milk containing 3.5 percent butterfat, component prices, and advanced pricing factors shall be as follows. The prices and pricing factors described in paragraphs (a) through (c), (e), (f), and (q) of this section shall be based on a weighted average of the most recent 2 weekly prices announced by the Agriculture Marketing Service (AMS) before the 24th day of the month. These prices shall be announced on or before the 23rd day of the month and shall apply to milk received during the following month. The prices described in paragraphs (g) through (p) of this section shall be based on a weighted average for the preceding month of weekly prices announced by AMS on or before the 5th day of the month and shall apply to milk received during the preceding month. The price described in paragraph (d) of this section shall be derived from the Class II skim milk price announced on or before the 23rd day of the month preceding the month to which it applies, and the butterfat price announced on or before the 5th day of the month following the month to which it applies.

(a) *Class I price.* The Class I price per hundredweight, rounded to the nearest cent, shall be 0.965 times the Class I skim milk price plus 3.5 times the Class I butterfat price.

(b) *Class I skim milk price.* The Class I skim milk price per hundredweight shall be the adjusted Class I differential specified in § 1000.52, plus the higher of the advanced pricing factors computed in paragraph (q)(1) or (2) of this section rounded to the nearest cent.

(c) *Class I butterfat price.* The Class I butterfat price per pound shall be the adjusted Class I differential specified in § 1000.52 divided by 100, plus the advanced butterfat price computed in paragraph (q)(3) of this section.

(d) *Class II price.* The Class II price per hundredweight, rounded to the nearest cent, shall be .965 times the Class II skim milk price plus 3.5 times the Class II butterfat price.

(e) *Class II skim milk price.* The Class II skim milk price per hundredweight shall be the advanced Class IV skim milk price computed in paragraph (q)(2) of this section plus 70 cents.

(f) *Class II nonfat solids price.* The Class II nonfat solids price per pound, rounded to the nearest one-hundredth cent, shall be the Class II skim milk price divided by 9.

(g) *Class II butterfat price.* The Class II butterfat price per pound shall be the butterfat price plus $0.007.

(h) *Class III price.* The Class III price per hundredweight, rounded to the nearest cent, shall be 0.965 times the Class III skim milk price plus 3.5 times the butterfat price.

(i) *Class III skim milk price.* The Class III skim milk price per hundredweight,

rounded to the nearest cent, shall be the protein price per pound times 3.1 plus the other solids price per pound times 5.9.

(j) *Class IV price.* The Class IV price per hundredweight, rounded to the nearest cent, shall be 0.965 times the Class IV skim milk price plus 3.5 times the butterfat price.

(k) *Class IV skim milk price.* The Class IV skim milk price per hundredweight, rounded to the nearest cent, shall be the nonfat solids price per pound times 9.

(l) *Butterfat price.* The butterfat price per pound, rounded to the nearest one-hundredth cent, shall be the U.S. average AMS AA Butter survey price reported by the Department for the month, less 22.72 cents, with the result multiplied by 1.211.

(m) *Nonfat solids price.* The nonfat solids price per pound, rounded to the nearest one-hundredth cent, shall be the U.S. average AMS nonfat dry milk survey price reported by the Department for the month, less 23.93 cents and multiplying the result by 0.99.

(n) *Protein price.* The protein price per pound, rounded to the nearest one-hundredth cent, shall be computed as follows:

(1) The U.S. average AMS survey price for 40-lb. block cheese reported by the Department for the month;

(2) Subtract 25.19 cents from the price computed pursuant to paragraph (n)(1) of this section and multiply the result by 1.383;

(3) Add to the amount computed pursuant to paragraph (n)(2) of this section an amount computed as follows:

(i) Subtract 25.19 cents from the price computed pursuant to paragraph (n)(1) of this section and multiply the result by 1.589; and

(ii) Subtract 0.91 times the butterfat price computed pursuant to paragraph (l) of this section from the amount computed pursuant to paragraph (n)(3)(i) of this section; and

(iii) Multiply the amount computed pursuant to paragraph (n)(3)(ii) of this section by 1.17.

(o) *Other solids price.* The other solids price per pound, rounded to the nearest one-hundredth cent, shall be the U.S. average AMS dry whey survey price reported by the Department for the month minus 26.68 cents, with the result multiplied by 1.03.

(p) *Somatic cell adjustment.* The somatic cell adjustment per hundredweight of milk shall be determined as follows:

(1) Multiply 0.0005 by the weighted average price computed pursuant to paragraph (n)(1) of this section and round to the 5th decimal place;

(2) Subtract the somatic cell count of the milk (reported in thousands) from 350; and

(3) Multiply the amount computed in paragraph (p)(1) of this section by the amount computed in paragraph (p)(2) of this section and round to the nearest full cent.

(q) *Advanced pricing factors.* For the purpose of computing the Class I skim milk price, the Class II skim milk price, the Class II nonfat solids price, and the Class I butterfat price for the following month, the following pricing factors shall be computed using the weighted average of the 2 most recent AMS U.S. average weekly survey prices announced before the 24th day of the month:

(1) An advanced Class III skim milk price per hundredweight, rounded to the nearest cent, shall be computed as follows:

(i) Following the procedure set forth in paragraphs (n) and (o) of this section, but using the weighted average of the 2 most recent NASS U.S. average weekly survey prices announced before the 24th day of the month, compute a protein price and an other solids price;

(ii) Multiply the protein price computed in paragraph (q)(1)(i) of this section by 3.1;

(iii) Multiply the other solids price per pound computed in paragraph (q)(1)(i) of this section by 5.9; and

(iv) Add the amounts computed in paragraphs (q)(1)(ii) and (iii) of this section.

(2) An advanced Class IV skim milk price per hundredweight, rounded to the nearest cent, shall be computed as follows:

(i) Following the procedure set forth in paragraph (m) of this section, but using the weighted average of the 2 most recent NASS U.S. average weekly survey prices announced before the 24th day of the month, compute a nonfat solids price; and

(ii) Multiply the nonfat solids price computed in paragraph (q)(2)(i) of this section by 9.

(3) An advanced butterfat price per pound rounded to the nearest one-hundredth cent, shall be calculated by computing a weighted average of the 2 most recent U.S. average AMS AA Butter survey prices announced before the 24th day of the month, subtracting 22.72 cents from this average, and multiplying the result by 1.211.

(r) *Class I Extended Shelf Life (ESL) adjustment.* The Class I ESL adjustment, whether positive or negative, rounded to the nearest cent, shall be computed as follows:

(1) Compute the simple average of the advanced pricing factors computed in paragraphs (q)(1) and (2) of this section;

(2) Add the following:

(i) Determine the higher of the advanced pricing factors computed in paragraphs (q)(1) and (2) of this section, for each of the preceding 13 to 36 months;

(ii) Calculate the average of the advanced pricing factors computed in paragraphs (q)(1) and (2) of this section, for each of the preceding 13 to 36 months;

(iii) For each of the preceding 13 to 36 months, subtract the amount computed in paragraph (r)(2)(ii) of this section from the amount computed in paragraph (r)(2)(i) of this section; and

(iv) Compute the average of the differences computed in paragraph (r)(2)(iii) of this section.

(3) Subtract the higher of the advanced pricing factors computed in paragraphs (q)(1) and (2) of this section.

3a. Effective December 1, 2025, amend § 1000.50 by revising paragraphs (f), (i), (k), and (q)(1) and (2) to read as follows:

§ 1000.50 Class prices, component prices, and advanced pricing factors.

* * * * *

(f) Class II nonfat solids price. The Class II nonfat solids price per pound, rounded to the nearest one-hundredth cent, shall be the Class II skim milk price divided by 9.3.

* * * * *

(i) Class III skim milk price. The Class III skim milk price per hundredweight, rounded to the nearest cent, shall be the protein price per pound times 3.30 plus the other solids price per pound times 6.00.

* * * * *

(k) Class IV skim milk price. The Class IV skim milk price per hundredweight, rounded to the nearest cent, shall be the nonfat solids price per pound times 9.30.

* * * * *

(q) * * *

(1) An advanced Class III skim milk price per hundredweight, rounded to the nearest cent, shall be computed as follows:

(i) Following the procedure set forth in paragraphs (n) and (o) of this section, but using the weighted average of the 2 most recent AMS U.S. average weekly survey prices announced before the 24th day of the month, compute a protein price and an other solids price;

(ii) Multiply the protein price computed in paragraph (q)(1)(i) of this section by 3.30;

(iii) Multiply the other solids price per pound computed in paragraph (q)(1)(i) of this section by 6.0; and

(iv) Add the amounts computed in paragraphs (q)(1)(ii) and (iii) of this section.

(2) An advanced Class IV skim milk price per hundredweight, rounded to the nearest cent, shall be computed as follows:

(i) Following the procedure set forth in paragraph (m) of this section, but using the weighted average of the 2 most recent AMS U.S. average weekly survey prices announced before the 24th day of the month, compute a nonfat solids price; and

(ii) Multiply the nonfat solids price computed in paragraph (q)(2)(i) of this section by 9.30.

■ 4. Revise and republish § 1000.52 to read as follows:

§ 1000.52 Adjusted Class I differentials.

The Class I differential adjusted for location to be used in § 1000.50(b) and (c) shall be as follows:

■ 5. Amend § 1000.76 by:
■ a. Removing the text ''and § 1135.11 of this chapter'' wherever it appears; and
■ b. Revising and republishing paragraphs (a)(2) through (4) and paragraph (c).

The revisions and republications read as follows:

§ 1000.76 Payments by a handler operating a partially regulated distributing plant.

* * * * *

(a) * * *

(2) For orders with multiple component pricing, compute a Class I differential price by subtracting Class III price from the current month's applicable Class I price. Multiply the pounds remaining after the computation in paragraph (a)(1)(iii) of this section by the amount by which the Class I differential price exceeds the producer price differential, both prices to be applicable at the location of the partially regulated distributing plant except that neither the adjusted Class I differential price nor the adjusted producer price differential shall be less than zero;

(3) For orders with skim milk and butterfat pricing, multiply the remaining pounds by the amount by which the applicable Class I price exceeds the uniform price, both prices to be applicable at the location of the partially regulated distributing plant except that neither the adjusted Class I price nor the adjusted uniform price differential shall be less than the lowest announced class price; and

(4) Unless the payment option described in paragraph (d) of this section is selected, add the amount obtained from multiplying the pounds of labeled reconstituted milk included in paragraph (a)(1)(iii) of this section by any positive difference between the applicable Class I price at the location of the partially regulated distributing plant (less $1.00 if the reconstituted milk is labeled as such) and the Class IV price.

* * * * *

(c) The operator of a partially regulated distributing plant that is subject to marketwide pooling of returns under a milk classification and pricing program that is imposed under the authority of a State government shall pay on or before the 25th day after the end of the month (except as provided in § 1000.90) to the market administrator for the producer-settlement fund an amount computed as follows: after completing the computations described in paragraphs (a)(1)(i) and (ii) of this section, determine the value of the remaining pounds of fluid milk products disposed of as route disposition in the marketing area by multiplying the hundredweight of such pounds by the amount, if greater than zero, that remains after subtracting the State program's class prices applicable to such products at the plant's location from the applicable Federal order Class I price at the location of the plant.

* * * * *

PART 1001—MILK IN THE NORTHEAST MARKETING AREA

■ 6. The authority citation for part 1001 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 7. Amend § 1001.60 by:
■ a. Revising the introductory text;
■ b. Redesignating paragraph (i) as paragraph (j); and
■ c. Adding new paragraph (i).

The revision and addition read as follows:

§ 1001.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) of this chapter with respect to milk that was not received at a pool plant by adding the amounts computed in paragraphs (a) through (i) of this section and subtracting from that total amount the value computed in paragraph (j) of this section. Unless otherwise specified, the skim milk, butterfat, and the combined pounds of skim milk and butterfat referred to in this section shall result from the steps set forth in § 1000.44(a) through (c) of this chapter, respectively, and the nonfat components of producer milk in each class shall be based upon the proportion of such components in producer skim milk. Receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(4) or (d) of this chapter shall be excluded from pricing under this section.

* * * * *

(i) Compute an adjustment for eligible Class I producer milk pursuant to § 1000.43(e) of this chapter by multiplying the Class I skim milk price adjuster computed in § 1000.50(r) of this chapter by the pounds of skim milk eligible in Class I.

* * * * *

PART 1005—MILK IN THE APPLACHIAN MARKETING AREA

■ 8. The authority citation for part 1005 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 9. Amend § 1005.51 by revising paragraph (a) and removing and reserving paragraph (b) to read as follows:

§ 1005.51 Class I differential, adjustments to Class I prices, and Class I price.

(a) The Class I differential shall be the differential established for Mecklenburg County, North Carolina, which is reported in § 1000.52 of this chapter. The Class I price shall be the price computed pursuant to § 1000.50(a) of this chapter for Mecklenburg County, North Carolina.

(b) [Reserved]

■ 10. Amend § 1005.60 by:
■ a. Revising the introductory text and paragraph (a);
■ b. Removing paragraph (g);
■ c. Redesignating paragraph (f) as paragraph (g); and
■ d. Adding new paragraph (f).

The revisions and addition read as follows:

§ 1005.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) of this chapter with respect to milk that was not received at a pool plant by adding the amounts computed in paragraphs (a) through (f) of this section and subtracting from that total amount the value computed in paragraph (g) of this section. Receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(4) or (d) of this chapter shall be excluded from pricing under this section.

(a) Multiply the pounds of skim milk and butterfat in producer milk that were classified in each class pursuant to § 1000.44(c) of this chapter by the applicable skim milk and butterfat prices, and add the resulting amounts;

* * * * *

(f) Compute an adjustment for eligible Class I producer milk pursuant to § 1000.43(e) of this chapter by multiplying the Class I skim milk price adjuster computed in § 1000.50(r) of this chapter by the pounds of skim milk eligible in Class I.

* * * * *

PART 1006—MILK IN THE FLORIDA MARKETING AREA

■ 11. The authority citation for part 1006 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 12. Amend § 1006.51 by revising paragraph (a), removing and reserving paragraph (b), and removing paragraph (c) to read as follows:

§ 1006.51 Class I differential, adjustments to Class I prices, and Class I price.

(a) The Class I differential shall be the differential established for Hillsborough County, Florida, which is reported in § 1000.52 of this chapter. The Class I price shall be the price computed pursuant to § 1000.50(a) of this chapter for Hillsborough County, Florida.

(b) [Reserved]

■ 13. Amend § 1006.60 by:
■ a. Revising the introductory text and paragraph (a);
■ b. Removing paragraphs (g) through (i);
■ c. Redesignating paragraph (f) as paragraph (g); and
■ d. Adding new paragraph (f).

The revisions and addition read as follows:

§ 1006.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) of this chapter with respect to milk that was not received at a pool plant by adding the amounts computed in paragraphs (a) through (f) of this section and subtracting from that total amount the value computed in paragraph (g) of this section. Receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(4) or (d) of this chapter shall be excluded from pricing under this section.

(a) Multiply the pounds of skim milk and butterfat in producer milk that were classified in each class pursuant to § 1000.44(c) of this chapter by the applicable skim milk and butterfat prices, and add the resulting amounts;

* * * * *

(f) Compute an adjustment for eligible Class I producer milk pursuant to § 1000.43(e) of this chapter by multiplying the Class I skim milk price adjuster computed in § 1000.50(r) of this chapter by the pounds of skim milk eligible in Class I.

* * * * *

PART 1007—MILK IN THE SOUTHEAST MARKETING AREA

■ 14. The authority citation for part 1007 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 15. Amend § 1007.51 by revising paragraph (a) and removing and reserving paragraph (b) to read as follows:

§ 1007.51 Class I differential, adjustments to Class I prices, and Class I price.

(a) The Class I differential shall be the differential established for Fulton County, Georgia, which is reported in § 1000.52 of this chapter. The Class I price shall be the price computed pursuant to § 1000.50(a) of this chapter for Fulton County, Georgia.

(b) [Reserved]

■ 16. Amend § 1007.60 by:
■ a. Revising the introductory text and paragraph (a);
■ b. Removing paragraph (g);
■ c. Redesignating paragraph (f) as paragraph (g); and
■ d. Adding new paragraph (f).

The revisions and addition read as follows:

§ 1007.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) of this chapter with respect to milk that was not received at a pool plant by adding the amounts computed in paragraphs (a) through (f) of this section and subtracting from that total amount the value computed in paragraph (g) of this section. Receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(4) or (d) of this chapter shall be excluded from pricing under this section.

(a) Multiply the pounds of skim milk and butterfat in producer milk that were classified in each class pursuant to § 1000.44(c) of this chapter by the applicable skim milk and butterfat prices, and add the resulting amounts;

* * * * *

(f) Compute an adjustment for eligible Class I producer milk pursuant to § 1000.43(e) of this chapter by multiplying the Class I skim milk price adjuster computed in § 1000.50(r) of this chapter by the pounds of skim milk eligible in Class I.

* * * * *

PART 1030—MILK IN THE UPPER MIDWEST MARKETING AREA

■ 17. The authority citation for part 1030 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 18. Amend § 1030.60 by:
■ a. Revising the introductory text;
■ b. Redesignating paragraphs (j) and (k) as paragraphs (k) and (l); and
■ c. Adding new paragraph (j).

The revision and addition read as follows:

§ 1030.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) of this chapter with respect to milk that was not received at a pool plant by adding the amounts computed in paragraphs (a) through (j) of this section and subtracting from that total amount the values computed in paragraphs (k) and (l) of this section. Unless otherwise specified, the skim milk, butterfat, and the combined pounds of skim milk and butterfat referred to in this section shall result from the steps set forth in § 1000.44(a) through (c) of this chapter, respectively, and the nonfat components of producer milk in each class shall be based upon the proportion of such components in producer skim milk. Receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(4) or (d) of this chapter shall be excluded from pricing under this section.

* * * * *

(j) Compute an adjustment for eligible Class I producer milk pursuant to § 1000.43(e) of this chapter by multiplying the Class I skim milk price adjuster computed in § 1000.50(r) of this chapter by the pounds of skim milk eligible in Class I.

* * * * *

PART 1032—MILK IN THE CENTRAL MARKETING AREA

■ 19. The authority citation for part 1032 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 20. Amend § 1032.60 by:
■ a. Revising the introductory text;
■ b. Redesignating paragraph (j) as paragraph (k); and
■ c. Adding new paragraph (j).

The revision and addition read as follows:

§ 1032.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) of this chapter with respect to milk that was not received at a pool plant by adding the amounts computed in paragraphs (a) through (j) of this section and subtracting from that total amount the value computed in paragraph (k) of this section. Unless otherwise specified, the skim milk, butterfat, and the combined pounds of skim milk and butterfat referred to in this section shall result from the steps set forth in § 1000.44(a) through (c) of this chapter, respectively, and the nonfat components of producer milk in each class shall be based upon the proportion of such components in producer skim milk. Receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(4) or (d) of this chapter shall be excluded from pricing under this section.

* * * * *

(j) Compute an adjustment for eligible Class I producer milk pursuant to § 1000.43(e) of this chapter by multiplying the Class I skim milk price adjuster computed in § 1000.50(r) of this chapter by the pounds of skim milk eligible in Class I.

* * * * *

PART 1033—MILK IN THE MIDEAST MARKETING AREA

■ 21. The authority citation for part 1033 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 22. Amend § 1033.60 by:
■ a. Revising the introductory text;
■ b. Redesignating paragraph (j) as paragraph (k); and
■ c. Adding new paragraph (j).

The revision and addition read as follows:

§ 1033.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) of this chapter with respect to milk that was not received at a pool plant by adding the amounts computed in paragraphs (a) through (j) of this section and subtracting from that total amount the value computed in paragraph (k) of this section. Unless otherwise specified, the skim milk, butterfat, and the combined pounds of skim milk and butterfat referred to in this section shall result from the steps set forth in § 1000.44(a) through (c) of this chapter, respectively, and the nonfat components of producer milk in each class shall be based upon the proportion of such components in producer skim milk. Receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(4) or (d) of this chapter shall be excluded from pricing under this section.

* * * * *

(j) Compute an adjustment for eligible Class I producer milk pursuant to § 1000.43(e) of this chapter by multiplying the Class I skim milk price adjuster computed in § 1000.50(r) of this chapter by the pounds of skim milk eligible in Class I.

* * * * *

PART 1051—MILK IN THE CALIFORNIA MARKETING AREA

■ 23. The authority citation for part 1051 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 24. Amend § 1051.60 by:
■ a. Revising the introductory text;
■ b. Redesignating paragraph (i) as paragraph (j); and
■ c. Adding new paragraph (i).

The revision and addition read as follows:

§ 1051.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) of this chapter with respect to milk that was not received at a pool plant by adding the amounts computed in paragraphs (a) through (i) of this section and subtracting from that total amount the value computed in paragraph (j) of this section. Unless otherwise specified, the skim milk, butterfat, and the combined pounds of skim milk and butterfat referred to in this section shall result from the steps set forth in § 1000.44(a) through (c) of this chapter, respectively, and the nonfat components of producer milk in each class shall be based upon the proportion of such components in producer skim milk. Receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(4) or (d) of this chapter shall be excluded from pricing under this section.

* * * * *

(i) Compute an adjustment for eligible Class I producer milk pursuant to § 1000.43(e) of this chapter by multiplying the Class I skim milk price adjuster computed in § 1000.50(r) of this chapter by the pounds of skim milk eligible in Class I.

* * * * *

PART 1124—MILK IN THE PACIFIC NORTWEST MARKETING AREA

■ 25. The authority citation for part 1124 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 26. Amend § 1124.60 by:
■ a. Revising the introductory text;
■ b. Redesignating paragraph (i) as paragraph (j); and
■ c. Adding new paragraph (i).

The revision and addition read as follows:

§ 1124.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) of this chapter with respect to milk that was not received at a pool plant by adding the amounts computed in paragraphs (a) through (i) of this section and subtracting from that total amount the value computed in paragraph (j) of this section. Unless otherwise specified, the skim milk, butterfat, and the combined pounds of skim milk and butterfat referred to in this section shall result from the steps set forth in § 1000.44(a) through (c) of this chapter, respectively, and the nonfat components of producer milk in each class shall be based upon the proportion of such components in producer skim milk. Receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(4) or (d) of this chapter shall be excluded from pricing under this section.

* * * * *

(i) Compute an adjustment for eligible Class I producer milk pursuant to § 1000.43(e) of this chapter by multiplying the Class I skim milk price adjuster computed in § 1000.50(r) of this

chapter by the pounds of skim milk eligible in Class I.

* * * * *

PART 1126—MILK IN THE SOUTHWEST MARKETING AREA

■ 27. The authority citation for part 1126 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 28. Amend § 1126.60 by:
■ a. Revising the introductory text;
■ b. Redesignating paragraph (j) as paragraph (k); and
■ c. Adding new paragraph (j).

The revision and addition read as follows:

§ 1126.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) of this chapter with respect to milk that was not received at a pool plant by adding the amounts computed in paragraphs (a) through (j) of this section and subtracting from that total amount the value computed in paragraph (k) of this section. Unless otherwise specified, the skim milk, butterfat, and the combined pounds of skim milk and butterfat referred to in this section shall result from the steps set forth in § 1000.44(a) through (c) of this chapter, respectively, and the nonfat components of producer milk in each class shall be based upon the proportion of such components in producer skim milk. Receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(4) or (d) of this chapter shall be excluded from pricing under this section.

* * * * *

(j) Compute an adjustment for eligible Class I producer milk pursuant to § 1000.43(e) of this chapter by multiplying the Class I skim milk price adjuster computed in § 1000.50(r) of this chapter by the pounds of skim milk eligible in Class I.

* * * * *

PART 1131—MILK IN THE ARIZONA MARKETING AREA

■ 29. The authority citation for part 1131 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 30. Amend § 1131.60 by:
■ a. Revising the introductory text;
■ b. Redesignating paragraph (f) as paragraph (g); and
■ c. Adding new paragraph (f).

The revision and addition read as follows:

§ 1131.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) of this chapter with respect to milk that was not received at a pool plant by adding the amounts computed in paragraphs (a) through (f) of this section and subtracting from that total amount the value computed in paragraph (g) of this section. Receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(4) or (d) of this chapter shall be excluded from pricing under this section.

* * * * *

(f) Compute an adjustment for eligible Class I producer milk pursuant to § 1000.43(e) of this chapter by multiplying the Class I skim milk price adjuster computed in § 1000.50(r) of this chapter by the pounds of skim milk eligible in Class I.

* * * * *

PART 1170—DAIRY PRODUCT MANDATORY REPORTING

■ 31. The authority citation for part 1170 continues to read as follows:

Authority: 7 U.S.C. 1637–1637b, as amended by Pub. L. 106–532, 114 Stat. 2541; Pub. L. 107–171, 116 Stat. 207; and Pub. L. 111–239, 124 Stat. 2501.

■ 32. Amend § 1170.8 by revising and republishing paragraph (a) to read as follows:

§ 1170.8 Price reporting specifications.

* * * * *

(a) Specifications for Cheddar Cheese Prices:

(1) *Variety:* Cheddar cheese.

(2) *Style:* 40-pound blocks.

(3) *Age:* Not less than 4 days or more than 30 days on date of sale. Exclude cheese that will be aged.

(4) *Grade:* Product meets Wisconsin State Brand or USDA Grade A or better standards.

(5) *Color:* Colored and within the color range of 6–8 on the National Cheese Institute color chart.

(6) *Packaging:* Price should reflect cheese wrapped in a sealed, airtight package in corrugated or solid fiberboard containers with a reinforcing inner liner or sleeve. Exclude all other packaging costs from the reported price.

(7) *Exclude:* Intra-company sales, resales of purchased cheese, forward pricing sales (sales in which the selling price was set [not adjusted] 30 or more days before the transaction was completed), cheese produced under faith-based close supervision and marketed at a higher price than the manufacturer's wholesale market price for the basic commodity (for example, kosher cheese produced with a rabbi on site who is actively involved in supervision of the production process), sales under the Dairy Export Incentive Program or other premium-assisted sales (for example, export assistance sales through the Cooperatives Working Together program), and cheese certified as organic by a USDA-accredited certifying agent.

Alcohol Facts Statements in the Labeling of Wines, Distilled Spirits, and Malt Beverages; Proposed Rule

DEPARTMENT OF THE TREASURY

Alcohol and Tobacco Tax and Trade Bureau

27 CFR Parts 4, 5, 7, 24, 25, and 27

[Docket No. TTB–2025–0002; Notice No. 237]

RIN 1513–AC93

Alcohol Facts Statements in the Labeling of Wines, Distilled Spirits, and Malt Beverages

AGENCY: Alcohol and Tobacco Tax and Trade Bureau, Treasury.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Alcohol and Tobacco Tax and Trade Bureau (TTB) proposes to require disclosure of per-serving alcohol, calorie, and nutrient content information in an ''Alcohol Facts'' statement on all alcohol beverage labels subject to TTB's regulatory authority under the Federal Alcohol Administration Act (FAA Act). This rulemaking responds to the Department of the Treasury's February 2022 report on ''Competition in the Markets for Beer, Wine, and Spirits,'' which recommended that TTB revive or initiate rulemaking on alcohol content, nutritional content, and appropriate serving sizes for alcohol beverage labels. Pursuant to its authorities under both the FAA Act and the Internal Revenue Code of 1986, TTB is also proposing mandatory alcohol content statements for certain types of malt beverages, beer, and wine that are not currently required to be labeled with an alcohol content statement. TTB proposes a compliance date of 5 years from the date that a final rule resulting from this proposal is published in the **Federal Register**.

DATES: Comments must be received on or before *April 17, 2025*.

ADDRESSES: You may electronically submit comments to TTB on this proposal, and view copies of this document, its supporting materials, and any comments TTB receives on it within Docket No. TTB–2025–0002 as posted at *https://www.regulations.gov*. A direct link to that docket is available on the TTB website at *https://www.ttb.gov/laws-and-regulations/all-rulemaking* under Notice No. 237. Alternatively, you may submit comments via postal mail to the Director, Regulations and Ruling Division, Alcohol and Tobacco Tax and Trade Bureau, 1310 G Street NW. Box 12, Washington, DC 20005. Please see the Public Participation section of this document for further information on the comments requested regarding this proposal and on the submission, confidentiality, and public disclosure of comments.

FOR FURTHER INFORMATION CONTACT: Curtis Eilers, Regulations and Rulings Division, Alcohol and Tobacco Tax and Trade Bureau, 1310 G Street NW, Box 12, Washington, DC 20005; telephone 202–453–1039, ext. 041.

SUPPLEMENTARY INFORMATION: In accordance with 5 U.S.C. 553(b)(4), a summary of this rule may be found at *https://www.regulations.gov/docket/TTB-2025-0002*.

I. Background

On July 31, 2007, TTB published Notice No. 73, a proposed rule entitled ''Labeling and Advertising of Wines, Distilled Spirits and Malt Beverages'' in the **Federal Register** (72 FR 41860). In that document, TTB proposed to amend the TTB regulations to set forth requirements for mandatory alcohol content labeling and for the presentation of certain calorie and nutrient information in a mandatory ''Serving Facts'' panel. The proposed Serving Facts panel would also have included information about the number of servings per container and the serving size. TTB did not finalize the rulemaking; however, on May 28, 2013, TTB published TTB Ruling 2013–2, Voluntary Nutrient Content Statements in the Labeling and Advertising of Wines, Distilled Spirits, and Malt Beverages. The ruling announced that alcohol beverage labels could include Serving Facts statements on a voluntary basis while the Bureau continued to consider the proposed rule. TTB withdrew the Serving Facts rulemaking from the Unified Agenda of Federal Regulatory and Deregulatory Actions in the fall of 2017.

In 2021, TTB received a letter, dated February 24, 2021, from several consumer groups and public health advocates, urging TTB to finalize the Serving Facts rulemaking. The letter was submitted on behalf of the Center for Science in the Public Interest (CSPI), Alcohol Justice, the American Institute for Cancer Research, Breast Cancer Prevention Partners, the Consumer Federation of America, the National Consumers League, and the U.S. Alcohol Policy Alliance. This rulemaking document will refer to the letter as the ''2021 CSPI letter.''

On February 9, 2022, the Department of the Treasury, in consultation with the Department of Justice and the Federal Trade Commission, released a report entitled ''Competition in the Markets for Beer, Wine, and Spirits'' (Competition Report). The Competition Report was requested by Executive Order 14036, ''Promoting Competition in the American Economy.'' One of the Competition Report's findings was that ''[r]egulatory proposals that could serve public health and foster competition by providing information to consumers, such as mandatory allergen, nutrition, and ingredient labeling proposals, have not been implemented.'' [1] The Competition Report contains several recommendations, including that ''TTB should revive or initiate rulemaking proposing ingredient labeling and mandatory information on alcohol content, nutritional content, and appropriate serving sizes.'' [2]

Consistent with the Competition Report's recommendations, and considering the February 2021 letter referenced above, TTB decided to revisit the issue of mandatory nutritional information and expanded alcohol content information for alcohol beverages. Because it has been almost 20 years since TTB solicited comments on this issue, TTB published Notice No. 232, which announced two virtual listening sessions, on February 28 and 29, 2024, and the opening of a docket to receive public input on labeling of wine, distilled spirits, and malt beverages with per-serving alcohol and nutritional information, major food allergens, and/or ingredients. TTB received over 5,000 written comments in response to Notice No. 232 and heard from 47 speakers during the listening sessions.

TTB is now publishing for public comment a new proposal that would require ''Alcohol Facts'' labeling for wines, distilled spirits, and malt beverages that provides alcohol and nutritional information, per serving, for these products on labels. TTB is addressing the Competition Report's recommendations and Notice No. 232 comments from the listening sessions on mandatory allergen and ingredient labeling in separate rulemaking projects.

II. TTB's Authority To Regulate Alcohol Beverage Labeling

As set forth below, TTB has broad authority to regulate the labeling of alcohol beverages under Chapter 51 of the Internal Revenue Code of 1986 (IRC) and under the labeling provisions of the Federal Alcohol Administration Act (FAA Act), 27 U.S.C. 205(e). TTB administers these IRC and FAA Act provisions pursuant to section 1111(d) of the Homeland Security Act of 2002, codified at 6 U.S.C. 531(d). In addition,

[1] See page 3 of the report, available at *https://home.treasury.gov/system/files/136/Competition-Report.pdf*.

[2] Id. at page 61.

the Secretary of the Treasury (the Secretary) has delegated certain administrative and enforcement authorities to TTB through Treasury Order 120–01.

A. TTB's Authority Under the IRC

Chapter 51 of the IRC (26 U.S.C. 5001 *et seq.*) imposes taxes on distilled spirits, wines, and beer, and provides the Secretary authority to regulate the marking and labeling of containers of these alcohol beverages, to protect the revenue associated with those taxes. The tax rates differ depending on the classification of the product, and the marking and labeling requirements support the proper determination of tax liability based on the identity of the product. Thus, this authority is based, in part, on the Secretary's responsibility to classify, and collect taxes on, alcohol beverages under the IRC.

For example, 26 U.S.C. 5301 authorizes the Secretary to regulate the branding and marking of distilled spirits containers whenever in his or her judgment such action is necessary to protect the revenue. Other provisions authorize the Secretary to regulate the marking, branding, and labeling of wine and beer. See 26 U.S.C. 5368 and 5412.

Section 5555 requires every person liable for any tax imposed by Chapter 51 of the IRC to comply with such rules and regulations as the Secretary may prescribe. Finally, 26 U.S.C. 7805(a) provides the Secretary with the authority to prescribe all needful rules and regulations for the enforcement of the IRC.

B. TTB's Authority Under the FAA Act

Section 105(e) of the FAA Act, 27 U.S.C. 205(e), sets forth standards for the regulation of the labeling of wine (containing at least 7 percent alcohol by volume), distilled spirits, and malt beverages that will be sold or otherwise introduced in interstate or foreign commerce. This document generally refers to these products as ''alcohol beverages'' or ''alcohol beverage products.''

This section gives the Secretary the authority to issue labeling regulations to prevent deception of the consumer, to provide the consumer with ''adequate information'' as to the identity, quality, and alcohol content of the product, and to prohibit false or misleading statements. Additionally, the FAA Act authorizes the Secretary to prohibit, irrespective of falsity, labeling statements relating to age, manufacturing processes, analyses, guarantees, and scientific or irrelevant matters that are likely to mislead the consumer. In the case of malt beverages, the labeling provisions of the FAA Act apply only if the laws or regulations of the State into which the malt beverages are to be shipped impose similar requirements.

The FAA Act generally requires bottlers and importers to obtain a certificate of label approval (COLA) from TTB prior to bottling wine, distilled spirits, or malt beverages for introduction into interstate commerce, or removing alcohol beverages from customs custody, in bottles, for sale or any other commercial purpose. The law provides that COLAs are to be issued in such manner and form as the Secretary shall prescribe by regulations.

C. Legislative History of the FAA Act

The legislative history of the FAA Act provides some insight concerning the general purpose of the FAA Act's labeling provisions. In hearings before the House Committee on Ways and Means in 1935, Joseph Choate from the Federal Alcohol Control Administration noted that the purpose of the bill was ''to provide such regulations, not laid down in statute, so as to be inflexible, but laid down under the guidance of Congress, under general principles, by a body which could change them as changes were found necessary.'' Mr. Choate also noted that those regulations were intended to ensure that

> the purchaser should get what he thought he was getting . . . . They should not be confined, as the pure-food regulations have been confined, to prohibitions of falsity, but they should also provide for the information of the consumer, that he should be told what was in the bottle, and *all the important factors which were of interest to him about what was in the bottle*. [Emphasis added.]

See Hearings on H.R. 8539 Before the H. Comm. on Ways and Means, 74th Cong., 1st Sess. 10 (1935) (statement of Joseph H. Choate, Jr., Federal Alcohol Control Administration).

D. Calorie and Nutrient Labeling

The FAA Act expressly conveys broad discretion to the agency and leaves it with the flexibility to prescribe such labeling regulations ''as will provide the consumer with adequate information'' as to, among other things, the products' ''identity and quality'' and ''net contents.'' 27 U.S.C. 205(e). In 1986, in the context of ingredient labeling, the D.C. Circuit recognized that the obligation under the FAA Act ''to ensure that disclosure is adequate squarely implicates discretionary judgment on the part of the Secretary.'' *Center for Science in the Public Interest* v. *Department of the Treasury,* 797 F.2d 995, 999 n.2 (D.C. Cir. 1986), citing *Wawszkiewicz* v. *Department of the Treasury,* 670 F.2d 296, 300 (D.C. Cir. 1981) (footnote omitted)).

Accordingly, the D.C. Circuit upheld the actions of TTB's predecessor, the Bureau of Alcohol, Tobacco and Firearms (ATF), in issuing a final rule, T.D. ATF–150 (48 FR 45549, October 6, 1983), which rescinded ingredient labeling regulations that had not yet taken effect. The court held that there was no ''plain meaning of the phrase 'adequate information' which indicates Congress' intent as to whether the FAA Act either requires or prohibits ingredient disclosure regulations.'' *Ctr. for Sci. in the Pub. Int.,* 797 F.2d at 999 n.2. The court upheld ATF's conclusion that the FAA Act ''vests it with a zone of discretion within which it can choose to require or not require ingredient disclosure, as necessary to provide consumers with adequate information.'' *Id.* It is TTB's view that rulemaking on calorie and nutrient labeling similarly falls within the Secretary's discretion to determine whether such information is necessary to provide consumers with ''adequate information'' about the product.

E. Alcohol Content Labeling

The statutory requirements with respect to disclosure of alcohol content on labels differ among the three alcohol beverage categories. The FAA Act authorizes the Secretary to issue regulations that require alcohol content statements on labels of distilled spirits products. 27 U.S.C. 205(e)(2). The FAA Act also authorizes the Secretary to require alcohol content statements only for wines with an alcohol content of over 14 percent alcohol by volume, leaving such statements optional for wines with an alcohol content at or below 14 percent. Finally, the FAA Act contains language that specifically prohibits placement of alcohol content statements on malt beverage labels, unless required by State law, but in 1995 the Supreme Court struck that ban on First Amendment grounds in *Rubin* v. *Coors Brewing Co.,* 514 U.S. 476 (1995).

F. Alcohol Beverages Subject to FDA Labeling Regulations

Alcohol beverages that fall under the definitions of distilled spirits, wine, or malt beverages in the FAA Act are not subject to the Nutrition Facts regulations promulgated by the U.S. Food and Drug Administration (FDA) under 21 U.S.C. 343(q). In 1987, TTB's predecessor agency, the Bureau of Alcohol, Tobacco, and Firearms (ATF), and the FDA entered into a Memorandum of Understanding (MOU), which continues in effect. See Notice

No. 648 (52 FR 45502, November 30, 1987). In the MOU, both agencies recognized that ''ATF will be responsible for the promulgation and enforcement of regulations with respect to the labeling of distilled spirits, wine, and malt beverages pursuant to the FAA Act.'' The MOU also stated that ''ATF and FDA will consult on a regular basis concerning the propriety of promulgating regulations concerning the labeling of other ingredients and substances for alcoholic beverages.''

Thus, alcohol beverages that are not distilled spirits, wines, or malt beverages, as defined in the FAA Act, 27 U.S.C. 211, are subject to the ingredient labeling, nutrition labeling, and allergen labeling regulations administered by the FDA. However, these products remain subject to the regulations enforced by TTB under the IRC.[3] Therefore, to the extent that this NPRM addresses the labeling regulations under the FAA Act, which are found in 27 CFR parts 4, 5, and 7, it does not apply to alcohol beverages subject to FDA labeling regulations. However, to the extent that this NPRM proposes to amend the IRC regulations regarding alcohol content statements for certain beers and wines, those amendments would also affect alcohol beverages subject to FDA labeling regulations.

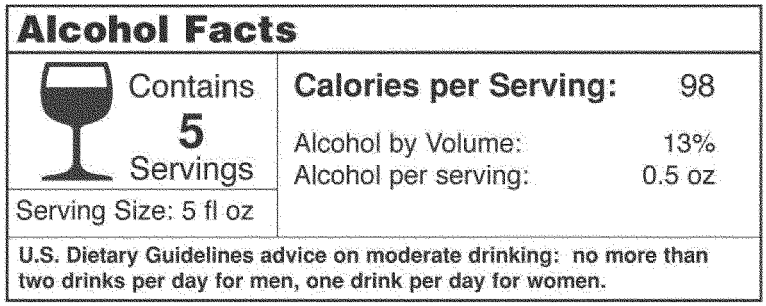
III. Background on ''Alcohol Facts'' Statements

A. 2003 Petition for Alcohol Facts Label and Ingredient Labeling

On December 16, 2003, CSPI, the National Consumers League, 67 other organizations, and 8 individuals, including 4 deans of schools of public health, filed a petition (the ''2003 petition'') requesting that TTB amend the alcohol beverage labeling regulations.[4] After receipt of the 2003 petition, additional individuals wrote to TTB requesting the addition of their names to the petition. The petition requested that TTB require that labels of all TTB-regulated alcohol beverages include the following information in a standardized format:

- The beverage's alcohol content expressed as a percentage of alcohol by volume;
- A standard serving size;
- The amount of alcohol (in fluid ounces) contained within each standard serving;
- The number of calories per standard serving;
- The ingredients (including additives);
- The number of standard drinks per container; and
- The current definitions of moderate drinking for men and women published in the *Dietary Guidelines for Americans,* issued jointly by the Department of Health and Human Services and the Department of Agriculture.

The petitioners proposed that all alcohol beverage containers bear this information on an ''Alcohol Facts'' panel. The petitioners provided the following example for a 750 mL bottle of wine:



The petition asked that the words ''Alcohol Facts'' be immediately followed by a declaration of the number of standard drinks (servings) per container. The petitioners asked, consistent with the then-current version of the *Dietary Guidelines for Americans,* that a serving should be defined as 12 fluid ounces of beer, 5 fluid ounces of wine, and 1.5 fluid ounces of 80-proof distilled spirits. The petitioners further recommended that for alcohol beverages not fitting into one of those standard categories (for example, a malt liquor containing eight percent alcohol by volume), a serving should be defined as an amount of fluid containing approximately 0.5 fluid ounces of ethyl alcohol. The petitioners recommended that a consistent graphic symbol (for example, a beer mug, wine glass, or shot glass) should appear first, followed by the number of drinks in the container (for example, ''Contains 5 Servings''). The petition proposed requiring this information on labels of all malt beverage, wine, and distilled spirits products under TTB jurisdiction, and that the graphics and type size for the Alcohol Facts label should follow the Nutrition Labeling and Education Act of 1990 standards set out in the FDA regulations at 21 CFR 101.9(d). Further, the petitioners stated that ingredient information should appear on the label immediately below, but segregated from, the Alcohol Facts panel, and that ingredient statements should include information about allergens.

According to the petitioners, current TTB regulatory requirements forced consumers to guess about the number of calories in alcohol beverages and their alcohol content. The petitioners summarized the results of a September 2003 telephone study of 600 Americans, ages 18 and older, which they stated was nationally representative.

[3] Alcohol beverages intended for human consumption that contain at least 0.5 percent alcohol by volume are also subject to the health warning statement requirements of the Alcoholic Beverage Labeling Act of 1988 (ABLA). See 27 U.S.C. 215. However, this document does not propose changes to the regulations implementing ABLA.

[4] ATF previously considered the issue of requiring calorie and nutrient information on alcohol beverage labels but did not implement rules on this issue. On August 10, 1993, ATF published an advance notice of proposed rulemaking (ANPRM) in the **Federal Register** soliciting comments from the public on whether the regulations should be amended to require nutrition labeling for alcohol beverages. See Notice No. 776 (58 FR 42517). The ANPRM was issued in response to a petition that cited, among other things, the Nutrition Labeling and Education Act of 1990, which mandates nutrition labeling for most FDA-regulated foods. For a detailed description of the rulemaking history concerning nutrition labeling on alcohol beverages, see TTB Notice No. 41, 70 FR 22274 (April 29, 2005).

According to the study, 91 percent of respondents supported requiring ingredient labeling on alcohol beverages; 94 percent supported requiring alcohol content on alcohol beverage labels; 89 percent supported requiring calorie content on alcohol beverage labels; and 84 percent supported requiring serving size information on alcohol beverage labels.

B. 2004 Informal Request for Comments

Following the 2003 petition, an alcohol beverage industry member contacted TTB about voluntarily labeling products with nutrient and other information on a ''Serving Facts'' panel. Subsequently, TTB received other requests from industry members to include similar information on product labels.

In response to these requests, in 2004, TTB twice posted on its website a request for comments on voluntary Serving Facts panels. In response to the two postings, TTB received several comments reflecting strong and varying opinions. A significant proportion of those who commented felt that the issue should be addressed in public notice and comment rulemaking rather than in a TTB ruling. Furthermore, many commenters believed that certain elements of a Serving Facts panel would tend to confuse or mislead consumers about alcohol beverage products. In light of the issues that the commenters raised, TTB decided to publish an advance notice of proposed rulemaking in 2005, as discussed further below.

C. Statements of Average Analysis (TTB Ruling 2004–1)

On April 7, 2004, TTB published guidance to the industry on ways that calorie and carbohydrate references could be provided in a non-misleading way in the labeling and advertising of alcohol beverages. Ruling 2004–1, Caloric and Carbohydrate Representations in the Labeling and Advertising of Wine, Distilled Spirits, and Malt Beverages clarified TTB's position with respect to statements about calorie and carbohydrate content on labels and in advertisements of wines, distilled spirits, and malt beverages and set forth TTB's policy on the use of truthful and non-misleading nutrient statements in the labeling and advertising of alcohol beverages.[5]

TTB Ruling 2004–1 provided, in part, that calorie or carbohydrate representations on product labels or in advertisements would be considered misleading unless they include a ''statement of average analysis'' that lists the number of calories and the number of grams of carbohydrates, protein, and fat contained in the product based on a single serving. In Frequently Asked Questions published on TTB's website shortly after the ruling, TTB clarified that this policy did not apply to advertisements where the only caloric or carbohydrate representation appearing in the advertising materials is a brand name incorporating the term ''light'' or ''lite.'' However, if the brand or product name, or the advertising material in general, included any additional caloric or carbohydrate representations such as ''low carb'' or ''low calorie,'' any specific calorie or carbohydrate claims, or similar representations, the provisions of the ruling regarding a statement of average analysis would apply.

For purposes of inclusion in the statement of average analysis, TTB Ruling 2004–1 defined a single serving as 12 fluid ounces for malt beverages, 5 fluid ounces for wine, and 1.5 fluid ounces for distilled spirits, regardless of the alcohol content of the product. The ruling allowed the statement of average analysis to be stated per container size only if the container is equal to or less than a single serving size. The ruling did not authorize the appearance of additional information in the statement of average analysis.

D. 2005 Advance Notice of Proposed Rulemaking

On April 29, 2005, TTB published an advance notice of proposed rulemaking, Notice No. 41, in the **Federal Register** (70 FR 22274), entitled ''Labeling and Advertising of Wines, Distilled Spirits, and Malt Beverages; Request for Public Comment.'' Notice No. 41 sought public comment on a wide range of alcohol beverage labeling and advertising issues to help TTB determine what regulatory changes in alcohol beverage labeling and advertising requirements, if any, TTB should propose in future rulemaking documents. Specifically, TTB sought comments on the 2003 petition's request for Alcohol Facts panels and ingredient labeling, the Serving Facts panel presented in TTB's informal request for comments, and each panel's elements. Additionally, TTB requested comments on allergen labeling and the labeling of calorie and carbohydrate claims, such as ''light'' and ''low-carbohydrate.''

TTB received more than 19,000 comments in response to Notice No. 41 from consumers, consumer advocacy groups, government officials, alcohol beverage industry members and associations, health organizations, and other concerned individuals. This included over 18,500 consumers who responded to Notice No. 41 indicating that they would like to see additional information on alcohol beverage labels.

IV. 2007 Notice of Proposed Rulemaking

Following a review of the comments submitted in response to Notice No. 41, TTB published Notice No. 73, a proposed rule entitled ''Labeling and Advertising of Wines, Distilled Spirits and Malt Beverages'' in the **Federal Register** (72 FR 41860) on July 31, 2007. TTB proposed to amend parts 4, 5, 7, and 24 of the TTB regulations to set forth requirements for mandatory alcohol content labeling and for the presentation of certain calorie and nutrient information in a mandatory Serving Facts panel. The proposed Serving Facts panel would have included information about the number of servings per container and the serving size as well as the number of calories and the number of grams of carbohydrate, fat, and protein per serving. It would also have allowed the mandatory alcohol content statements to appear in the panel as a percentage of alcohol by volume, with or without an additional statement of the fluid ounces of alcohol per serving.

TTB received more than 700 comments on the various issues presented in Notice No. 73. Commenters included consumers, consumer advocacy groups, health professionals, health organizations, State and Federal agencies, and industry members and associations. The comments on the proposals outlined in Notice No. 73 expressed various points of view. A number of comments opposed, or suggested modifications of, the various elements proposed to appear in the Serving Facts panels. TTB received several comments about the costs associated with the mandatory proposals, particularly with regard to mandatory nutrient labeling requirements. TTB also received several comments on regulatory amendments that were not specifically proposed in

[5] References to alcohol beverage products as being low in calories or carbohydrates were considered misleading by TTB's predecessor agency in 1955. See Revenue Ruling 55–404, 1955–1, C.B. 615. In the 1960s, after consultations with FDA, the Alcohol and Tobacco Tax Division determined that products labeled as low calorie or low carbohydrate could include statements of average analysis, as well as truthful comparisons between a low-calorie product and that of an equal volume of the brewer's regular beer. See ATF Ruling 76–1. In subsequent rulings, ATF modified certain policies with respect to malt beverage labeling statements and announced its intention to engage in rulemaking on the use of the terms ''light'' and ''lite'' on malt beverage labels. See ATF Ruling 79–17, ATF Q.B. 1979–3, 3, and ATF Ruling 80–3, ATF Q.B. 1980–2, 13.

that document, such as using the title ''Alcohol Facts'' instead of the title ''Serving Facts,'' and requiring a statement of fluid ounces of alcohol per serving as part of the mandatory alcohol content statement. TTB did not finalize the rulemaking and, following guidance in 2013 allowing voluntary depictions of Serving Facts information (discussed below), withdrew it from the Unified Agenda of Federal Regulatory and Deregulatory Actions in the fall of 2017.

V. TTB Public Guidance on Optional Serving Facts Statements

A. Optional Serving Facts Statements (TTB Ruling 2013–2)

On May 28, 2013, TTB issued Ruling 2013–2 to permit the use of Serving Facts statements on labels and in advertisements. The ruling provided that statements of average analysis that complied with the requirements of TTB Ruling 2004–1 may continue to be used on labels and in advertisements.

In TTB Ruling 2013–2, TTB further stated that it would allow the use of optional Serving Facts statements on labels and in advertisements on an interim basis pending the completion of rulemaking. TTB explained that it was making this change to allow industry members to provide truthful, accurate, and specific information to consumers about the nutrient content of their products on a per-serving basis. Although TTB already allowed nutrient content information to appear on labels and in advertisements in the form of a statement of average analysis, TTB was aware that some alcohol beverage industry members were interested in voluntarily labeling their products with this information in a Serving Facts statement such as the one proposed in Notice No. 73. TTB reminded industry members that the issuance of final regulations on Serving Facts statements might impact their labels.

TTB also noted that the serving sizes recognized by TTB Ruling 2004–1 for wines, distilled spirits, and malt beverages may not always be representative of how all products are typically consumed. For example, a 355 mL (12 fl oz) can containing a distilled spirits specialty product with 5 percent alcohol by volume would not generally be consumed in 1.5 fl oz servings. Although the serving size found in a nutrient content statement is not intended as a recommended serving amount, TTB believed it was appropriate to consider alternative serving sizes for products depending on their alcohol content. The serving size chart provided in the ruling (reproduced below) applies to all voluntary Serving Facts statements.

Serving size	Alcohol percent by volume		
	Wine	Distilled spirits	Malt beverages
1.5 fl oz (44 ml), or 50 ml for 50 ml containers of distilled spirits.	.....	Above 24%	Above 24%.
2.5 fl oz (74 ml)	Above 16 to 24%	Above 16 to 24%	Above 16 to 24%.
5 fl oz (148 ml)	7 to 16%	Above 7 to 16%	Above 7 to 16%.
12 fl oz (355 ml)	.....	Not more than 7%	Not more than 7%.

TTB Ruling 2013–2 reiterated that statements or representations of calorie or carbohydrate content that are made on labels or in advertisements must be truthful, accurate, specific, and non-misleading. TTB stated that such statements are misleading within the meaning of the applicable regulations when not accompanied by a statement of average analysis in accordance with Ruling 2004–1 or a Serving Facts statement in accordance with TTB Ruling 2013–2. The other elements of Ruling 2004–1 continued in force, and statements of average analysis without an accompanying Serving Facts statement may continue to be used.

TTB Ruling 2013–2 also permitted the listing of the number of U.S. fluid ounces of pure ethyl alcohol per serving as part of a Serving Facts statement, as long as the statement also includes the percentage of alcohol by volume. Under this guidance, industry members may also include a Serving Facts statement that provides no alcohol content information, or alcohol content only as a percentage of alcohol by volume. The ruling also noted that the distilled spirits regulations authorize the inclusion of an optional statement of alcohol content in degrees of proof if it appears in direct conjunction with the percent of alcohol by volume statement. As noted above, industry members may also continue to use a statement of average analysis, which does not contain any alcohol content information. Finally, industry members who do not make nutrient content claims on labels or in advertisements are not required to include a Serving Facts statement or a statement of average analysis.

Pursuant to TTB Ruling 2013–2, a Serving Facts statement appearing on a label or advertisement must be stated per serving and specify the serving size as part of the statement (unless the container is equal to or less than a single serving size, in which case the Serving Fact statement may be stated per container size). If a container holds more than a single serving size, the Serving Facts statement may appear in a dual-column format, which provides information both per serving and per container.

The ruling provided that certain Serving Facts statements would not require a new COLA application if the only label change was to provide the voluntary Serving Facts statement, and provided examples of formats for which that exception would apply. Additionally, the ruling did not specify required fonts or type sizes, although it did provide the following graphics to illustrate an acceptable panel display for a 750 mL bottle of wine containing 14 percent alcohol by volume, with and without optional alcohol content information.

Serving Facts	
Serving Size 5 fl oz (148 ml)Servings Per Container 5	
	Amount Per Serving
Alcohol by volume	14%
fl oz of alcohol	0.7
Calories	120
Carbohydrate	3g
Fat	0g
Protein	0g

Serving Facts	
Serving Size 5 fl oz (148 ml)Servings Per Container 5	
	Amount Per Serving
Calories	120
Carbohydrate	3g
Fat	0g
Protein	0g

The following Serving Facts statement is an example from TTB Ruling 2013–2 that illustrates an acceptable linear display for a 50 mL bottle of distilled spirits containing 40 percent alcohol by volume and includes all three optional alcohol content statements.

Serving Facts: Serving size: 1.7 fl oz (50 ml); Servings per container: 1; **Amount Per Serving:** Alcohol by volume: 40%; (80 proof); Fl oz of alcohol: 0.7; Calories: 131; Carbohydrates: 0g; Fat: 0g; Protein: 0g

The following graphic illustrates an acceptable Serving Facts statement for a 23.5 fluid ounce malt beverage can containing 12 percent alcohol by volume and includes the optional alcohol content statements.

Serving Facts	
Serving Size 5 fl oz (148 ml)Servings Per Container 4 3/4	
	Amount Per Serving
Alcohol by volume	12%
fl oz of alcohol	0.6
Calories	140
Carbohydrate	14g
Fat	0g
Protein	0g

Finally, the ruling provided the following panel to illustrate an acceptable dual-column display for a 24 fluid ounce malt beverage containing 12 percent alcohol by volume and including the optional percent-by-volume alcohol content declaration as well as the optional declaration of alcohol in fluid ounces.

Serving Facts		
Serving Size 5 fl oz (148 ml)Servings Per Container 4 3/4		
	Amt Per Serv.	**Amt Per Bottle**
Alcohol by volume	12%	12%
fl oz of alcohol	0.6	2.9
Calories	139	660
Carbohydrate	14g	67g
Fat	0g	0g
Protein	0g	0g

B. Frequently Asked Questions on TTB's Website

In Frequently Asked Questions (FAQs) published on the TTB website after publication of TTB Ruling 2013–2, TTB provided further guidance on acceptable formats for Serving Facts statements. Subsequently, TTB also issued FAQs that permitted the use of an optional ''Alcohol Facts'' statement for industry members who wish to provide per-serving alcohol content information without including any nutrient content statements or claims. The FAQs state that this information should be provided under the heading ''Alcohol Facts,'' to distinguish it from a ''Serving Facts'' statement, and must include the serving size (in accordance with TTB Ruling 2013–2), the number of servings per container, and the percentage of alcohol by volume together with a numerical statement of the number of fluid ounces of pure ethyl alcohol per serving (rounded to the nearest tenth). The FAQs note that industry members who wish to make any type of nutrient content statement or claim on the label or advertisement, along with optional per-serving alcohol content information, should use a Serving Facts statement in accordance with TTB Ruling 2013–2.

In 2014, TTB issued FAQs on the use of sugar content statements on labels. The FAQs set forth TTB's policy that truthful, accurate, and non-misleading numerical statements about the sugar content of a product are permitted on alcohol beverage labels and in advertisements.[6] Sugar is a type of carbohydrate; accordingly, a sugar content statement is not considered misleading if the label bears either a statement of average analysis in accordance with TTB Ruling 2004–1, or a Serving Facts statement in accordance with TTB Ruling 2013–2, and the serving size on which the sugar content statement is based is consistent with the applicable serving size under those rulings. If a serving contains less than 0.5 g of sugar, the label may include a claim such as ''Zero Sugar,'' ''No Sugar,'' or ''Sugar Free.''

C. Tolerances and Other Laboratory Procedures

1. TTB Procedure 2004–1

TTB Procedure 2004–1 set forth the methods that TTB used to test the calorie, carbohydrate, protein, and fat content of wine, distilled spirits, and malt beverages in order to verify labeling and advertising claims. This procedure also addressed tolerance ranges with regard to statements of calorie, carbohydrate, protein, and fat content. TTB Procedure 2004–1 applied to statements of average analysis, as well as Serving Facts statements. As described further below, this procedure was superseded by TTB Procedure 2020–1, which updated the lab testing methods as well as the tolerance for calorie statements.

2. 2020 Revisions of Tolerances

In 2020, TTB reviewed its calorie tolerance standards in response to a request from industry members. The industry members suggested that broader tolerances for calorie content would facilitate the increased use of voluntary nutrient content statements in the labeling and advertising of alcohol beverages, both by allowing for expanded variations in calorie content between batches of a product and by facilitating the use of databases and ''typical value'' charts in lieu of laboratory analysis as a basis for nutrient content statements.

TTB decided to expand the tolerances for calories to achieve greater consistency with FDA tolerances for calorie statements on food package labels under FDA's jurisdiction and to facilitate industry members' ability to provide truthful, accurate, and non-misleading voluntary nutrient content information to consumers. However, TTB noted that TTB tolerances and policies will still differ in some ways from FDA labeling regulations, as well as FDA's menu labeling requirements, due to differences in statutory and regulatory authorities.

Accordingly, TTB published TTB Ruling 2020–1 and TTB Procedure 2020–1 (which superseded TTB Procedure 2004–1 in its entirety). Under the new guidance, a calorie statement on a label or in an advertisement is acceptable as long as the calorie content, as determined by TTB analysis, is within a reasonable range below the labeled or advertised amount (within good manufacturing practice limitations) and not more than 20 percent above the labeled or advertised amount. For example, a labeling or advertising statement of 100 calories per serving will be considered an acceptable understatement if TTB analysis of the product shows a calorie content of not more than 120 calories per serving.

Industry members also asked if they may express calories to the nearest 10-calorie increment for per-serving amounts above 50 calories (and to the nearest 5-calorie increment for per-serving amounts up to and including 50 calories) to be more consistent with FDA requirements. In response to this request, TTB Ruling 2020–1 provides that calorie statements on labels and in advertisements may, but are not required to, be rounded to the nearest 10-calorie increment (for per-serving amounts above 50 calories) or the nearest 5-calorie increment (for per-serving amounts up to 50 calories), as long as the labeled or advertised calorie content falls within the tolerances described in this ruling. Thus, for example, regardless of whether the calories per serving for a particular product are expressed as 98 calories or 100 calories, the labeled or advertised calorie statement must be within the prescribed tolerance for the value that is expressed. TTB continued to allow

[6] See FAQs SUG1–SUG5, available at *www.ttb.faqs/alcohol.*

amounts less than 5 calories to be expressed as zero.

The 2020 guidance did not change the tolerances for other nutrients. Under TTB Procedure 2004–1, TTB already allowed a 20 percent tolerance for understatements of carbohydrate and fat content, and a 20 percent tolerance for overstatements of protein content. Overstatements of carbohydrate and fat content, and understatements of protein content, are acceptable as long as the actual content, as determined by TTB analysis, is within a reasonable range of the labeled or advertised amount (within good manufacturing practice limitations). TTB Procedure 2020–1 maintained those tolerances. Similarly, the 2020 update did not affect the regulatory tolerances for alcohol content statements, expressed as a percentage of alcohol by volume, which are set forth in the regulations at 27 CFR 4.36, 5.65, and 7.65.

TTB noted that the 2020 guidance would not require any changes to approved labels but would instead allow greater flexibility for industry members who choose to use voluntary nutrient content statements on labels or in advertisements.

At the time TTB was asked to review its calorie tolerance standard in 2020, industry members also asked TTB about the use of databases or typical value charts (rather than laboratory analysis) as a basis for nutrient content statements in the labeling and advertising of alcohol beverages. Although industry members may conduct laboratory analyses to determine nutrient content, they may also choose to rely on an appropriate combination of analyses and other sources to accurately label their products, including databases and typical value charts. TTB's regulations do not require industry members to analyze each batch of a product prior to making voluntary nutrient content statements. Regardless of what approach industry members take, it is their responsibility to ensure that the labeling and advertising statements are reliable and accurate and fall within the tolerances set forth in TTB guidance documents. TTB determines compliance with the tolerances as described in Procedure 2020–1.

VI. Other Developments Since Issuance of the 2007 NPRM

A. Voluntary Use of Serving Facts Statements

Since the issuance of the Serving Facts guidance, the optional use of such statements on labels has increased in the marketplace. For example, in 2016, the Beer Institute announced the Brewers' Voluntary Disclosure Initiative, a coordinated effort by the beer industry to meet consumer demand for increased nutritional transparency. In August 2021,[7] the Beer Institute released the results of an independent survey showing that 95 percent of the beer volume sold by Anheuser-Busch, Molson Coors Beverage Company, Constellation Brands Beer Division, HEINEKEN USA, and FIFCO USA now voluntarily provides nutritional information in the form of a Serving Facts statement. A press release by the Beer Institute also stated that according to July 2021 polling conducted by Quadrant Strategies, 75 percent of Americans aged 21 and older said they believe alcohol beverages should have nutrition labels.[8]

B. Dietary Guidelines for Americans, 2020–2025

Since 1990, the Secretaries of Agriculture and Health and Human Services have been required by law to publish the *Dietary Guidelines for Americans* every five years.[9] The most recent version is the *Dietary Guidelines for Americans, 2020–2025,* 9th Edition, published December 2020.[10] There have been some changes to the recommendations in the guidelines since CSPI submitted its petition in 2003, but the guidelines still provide general information relating to alcohol beverage consumption.

The *Dietary Guidelines* ''do[ ] not recommend that individuals who do not drink alcohol start drinking for any reason'' and note that there are some people who should not drink at all, such as those who are pregnant or under the legal age for drinking.[11] For individuals who do drink, the guidelines state that ''drinking less is better for health than drinking more.'' [12] The guidelines point to evidence that indicates higher average alcohol consumption is associated with an increased risk of death from all causes compared with lower alcohol consumption and state that ''[a]lcohol misuse or consuming alcohol in excess of recommendations increases risk for several other conditions such as liver disease, cardiovascular disease, injuries, and alcohol use disorders.'' [13]

For purposes of evaluating amounts of alcohol that may be consumed, the *Dietary Guidelines* define an ''alcoholic drink equivalent'' as containing 14 grams (0.6 fl oz) of pure alcohol and consider the following as one alcoholic drink equivalent: 12 fluid ounces of beer (at 5 percent alcohol), 5 fluid ounces of wine (at 12 percent alcohol), or 1.5 fluid ounces of distilled spirits (at 40 percent alcohol).

The *Dietary Guidelines* stated that adults of legal drinking age could choose not to drink or to drink in moderation by limiting consumption to two drinks or less per day for men and one drink or less in a day for women. These amounts were not intended to be an average over several days, but rather the amount consumed on any single day. The *Dietary Guidelines* also advised that binge drinking, defined as five or more drinks for the typical adult male or four or more drinks for the typical adult female consumed in about two hours, should be avoided.

The guidelines also note that, according to emerging evidence, even drinking within the limits recommended above may increase overall risk of death from various causes, including several types of cancer and cardiovascular disease. The guidelines state that alcohol has been found to increase the risk for cancer, and for some types of cancer, even low levels of alcohol consumption (less than 1 drink in a day) can increase the risk.

With regard to the calories that come from alcohol consumption, the *Dietary Guidelines* state that alcohol beverages supply calories but few nutrients, and calories from alcohol beverages should be counted for the purpose of keeping total calorie intake at an appropriate level. The guidelines note that alcohol beverages may contain calories from both alcohol and other ingredients, such as soda, juice, and added sugars, and it is important to consider ingredients and portion size.

The guidelines also state that approximately 60 percent of adults report consuming alcohol beverages in the past month, and on days when men and women consume alcohol, their consumption typically exceeds the guidance for daily alcohol consumption. The guidelines state that, among adults who drink, alcohol contributes on average approximately 9 percent of calories consumed. The guidelines stipulate that 85 percent of an individual's total calories per day are

[13] Id.

needed to meet food group recommendations healthfully with nutrient rich foods, and that the remaining calories are available for other uses (including added sugars, saturated fat, and alcohol). As such, among adults who drink, calories from alcohol account for most of the calories that remain after consuming recommended amounts of nutrient-dense foods in each recommended food group. Accordingly, the *Dietary Guidelines* recommend that ''[a]dults who choose to drink and are not among the individuals listed above who should not drink, are encouraged to limit daily intakes to align with the *Dietary Guidelines*—and to consider calories from alcoholic beverages so as not to exceed daily calorie limits.''

C. 2019 Comments in Response to Notice No. 176

On November 26, 2018, TTB published in the **Federal Register** Notice No. 176 (83 FR 60562), ''Modernization of the Labeling and Advertising Regulations for Wine, Distilled Spirits, and Malt Beverages.'' TTB explained that the proposed rule would not address Serving Facts statements, which would be addressed in separate rulemaking proceedings. Although one trade association supported TTB's decision to wait to address other complicated regulatory issues such as Serving Facts until the labeling modernization rule was finalized, TTB also received some comments critical of that decision. These commenters suggested that that the labeling modernization rulemaking focused on issues that were not of concern to consumers, while not addressing issues in which consumers were interested, such as Serving Facts.

CSPI, the Consumer Federation of America, and the National Consumers League commented on Notice No. 176 in a letter dated February 22, 2019, which was directed to the Secretary of the Treasury (the 2019 CSPI comment).[14] This comment stated that while the consumer organizations supported the modernization of the labeling regulations, Notice No. 176 ''falls dramatically short of what is needed to truly 'modernize' alcohol labeling by failing to require uniform disclosure of key information—alcohol content, serving size, calories, ingredients, and allergen information—that consumers need to make informed choices.'' The comment stated that the public had expressed ''an overwhelming interest in improved information on the labeling of alcoholic beverages,'' and that TTB should fulfill its statutory obligation under the FAA Act to ensure that labels and advertisements provide the consumer with ''adequate information as to the identity and quality of the products.''

The 2019 CSPI comment referenced the 2003 petition (discussed in Section III.A above) and suggested that the need for this information was even greater today. The comment noted that this ''information is now required on the vast majority of packaged foods and beverages'' and that, as of May 2018, ''calorie and key nutrition information also must be provided at chain restaurants, including for alcohol when it appears on the menu.'' The comment stated that the ''need to protect the public health from negative effects of consuming alcoholic beverages has never been more pressing'' and noted that 70 percent of American adults are now overweight or obese, and alcohol is a ''leading source of calories in the American diet.'' [Citations omitted.]

The 2019 CSPI comment stated that the optional nutrient content labeling allowed by TTB Ruling 2013–2 is ''inadequate'' because it ''fails to provide for uniform disclosures that will allow consumers to make informed choices between products.'' The comment urged the Secretary to instruct TTB to ''issue a new proposal providing a mandatory, standardized declaration covering alcohol content by percentage and amount, serving size, calories, ingredients, allergen information, and other information relevant to consumers.'' The comment suggested that the rule could be based on the prior regulatory dockets and would ''provide much-needed closure to those considerable efforts.'' The comment noted that ''[c]onsumers of alcoholic beverages deserve the clear, consistent labeling that has long been available on other beverages.''

In response to Notice No. 176, TTB also received some comments in favor of expanding mandatory alcohol content requirements. For example, the Wine Institute commented in favor of requiring a numerical alcohol content statement for wines containing up to 14 percent alcohol by volume in lieu of allowing such wines to be simply labeled as ''table wine.'' The Brewers Association commented in favor of requiring alcohol content statements on malt beverage labels, as long as the tolerance for such statements was increased to one percentage point, and a three-year implementation period is allowed.

D. Letter From Public Health Advocates (2021 CSPI Letter)

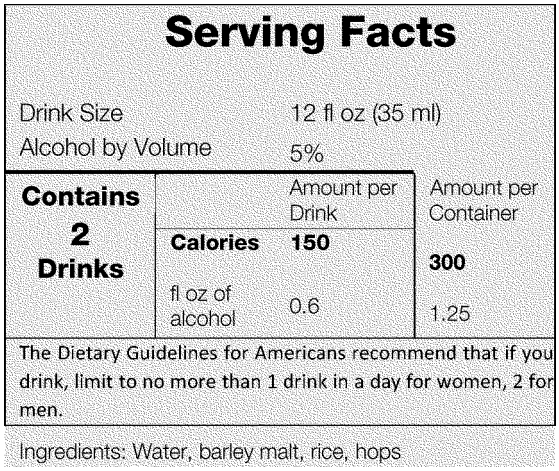
On February 24, 2021, a letter was submitted on behalf of CSPI, Alcohol Justice, the American Institute for Cancer Research, Breast Cancer Prevention Partners, the Consumer Federation of America, the National Consumers League, and the U.S. Alcohol Policy Alliance, urging the Secretary to adopt regulations to mandate alcohol content statements and a standardized Serving Facts label on all wine, distilled spirits, and malt beverage products regulated under the FAA Act. The letter stated that such labeling requirements fell under the Secretary's authority to ensure that labels provide consumers with adequate information on the identity, quality, and alcohol content of alcohol beverages.

The 2021 CSPI letter noted that in response to the 2003 petition on these issues, TTB had requested public comments, issued proposed regulations, and published a ruling on voluntary nutrition and calorie labeling. However, the 2021 CSPI letter stated that ''the draft specifications were never finalized, and most alcoholic beverages still are not labeled with critical information.'' Accordingly, the 2021 CSPI letter urged Treasury and TTB to issue a final rule mandating a standardized label that would include:

- Information about the ''Drink Size'' and alcohol by volume, as well as the number of ''drinks'' per container,
- The calories and fluid ounces of alcohol per drink,
- An ingredient declaration listing each ingredient by its common or usual name and identifying any major food allergens present in the product, and
- The *Dietary Guidelines for Americans'* advice on moderate drinking (to be updated based on any changes in the guidelines over time).

The letter also stated that TTB should include in its rule specific requirements for font, minimum size, and color contrast to ensure the readability of the label. The letter included the following example of a potential format for the standardized Serving Facts label:

[14] Available at *https://www.regulations.gov/comment/TTB-2018-0007-0074*.



Serving Facts

Drink Size	12 fl oz (35 ml)	
Alcohol by Volume	5%	
Contains 2 Drinks	Amount per Drink	Amount per Container
Calories	**150**	**300**
fl oz of alcohol	0.6	1.25

The Dietary Guidelines for Americans recommend that if you drink, limit to no more than 1 drink in a day for women, 2 for men.

Ingredients: Water, barley malt, rice, hops

E. Treasury Report on Competition in the Markets for Beer, Wine, and Spirits

On July 9, 2021, President Biden issued an Executive Order entitled ''Promoting Competition in the American Economy.'' See E.O. 14036 (86 FR 36987, July 14, 2021). Section 5(j) directed the Secretary, in consultation with the Attorney General and the Chair of the Federal Trade Commission (FTC), to submit a report ''assessing the current market structure and conditions of competition [for beer, wine, and spirits], including an assessment of any threats to competition and barriers to new entrants. . . .'' 86 FR at 36994. Among other things, the order provided that the report should address any ''unnecessary trade practice regulations of matters such as bottle sizes, permitting, or labeling'' that may unnecessarily inhibit competition by increasing costs without serving any public health, informational, or tax purpose. Id.

On July 28, 2021, the Department of the Treasury issued a Request for Information (RFI) soliciting input from the public, consumer groups, public interest groups, industry members, and other interested parties regarding the current market structure and conditions of competition in the American markets for beer, wine, and spirits, including an assessment of any threats to competition and barriers to new entrants. See Notice No. 204 (86 FR 40678, July 28, 2021).

Treasury received 827 public comments in response to this RFI. While the RFI did not specifically solicit comments on calorie or nutritional labeling, Treasury received over 100 comments stating that consumers are ''ill-served'' by the lack of ingredient, calorie, or nutritional labeling on alcohol beverages, and asking that the regulations be amended to require this information on alcohol beverage labels.

As noted above, on February 9, 2022, Treasury, in consultation with the Department of Justice and the FTC, released a report on competition in the markets for alcohol beverages. One of the Competition Report's findings was that ''[r]egulatory proposals that could serve public health and foster competition by providing information to consumers, such as mandatory allergen, nutrition, and ingredient labeling proposals, have not been implemented.'' [15] The Competition Report made some labeling recommendations, including a recommendation that TTB ''should revive or initiate rulemaking proposing ingredient labeling and mandatory information on alcohol content, nutritional content, and appropriate serving sizes.'' [16]

F. 2024 Virtual Public Listening Sessions

In light of the Competition Report, TTB announced in the Spring 2022 Unified Agenda of Federal Regulatory and Deregulatory Actions that it would publish an NPRM on possible changes to its regulations related to statements of alcohol and nutritional content. Executive Order 14094, ''Modernizing Regulatory Review,'' was subsequently published on April 6, 2023, directing agencies, to the extent practicable and consistent with applicable laws, to provide opportunities for public participation designed to promote equitable and meaningful participation by a range of interested or affected parties, to inform regulatory actions.

On January 31, 2024, TTB issued Notice No. 232, which announced two virtual listening sessions and the opening of a public docket to receive written comment on the labeling of alcohol beverages with per-serving alcohol and nutritional information, major food allergens, and/or ingredients. Consistent with Executive Order 14094, TTB sought input from a wide range of stakeholders, including those who may not usually comment on its proposals, to inform rulemaking, particularly given the broad implications of these issues. TTB posed the following questions in Notice No. 232:

1. Do consumers believe that they are adequately informed by the information currently provided on alcohol beverage labels?

2. Is alcohol content per serving, and nutritional information (such as calories, carbohydrates, protein, and fat) per serving important for consumers in deciding whether to purchase or consume a particular alcohol beverage? Would a full list of ingredients, and/or major food allergens, be important information for consumers in making their purchasing or consumption decisions? In what ways would this information be useful, and in what ways could it be misleading? Is some of this information more important than others?

3. What types of per-serving nutritional information, such as calories, carbohydrates, protein, and fat, should be included?

4. Would requiring this information on labels be expected to increase the cost of the products and, if so, by how much? To what extent are businesses already following voluntary guidelines for this information? Are there alternative ways of providing the information, for example by allowing information to be provided through a website using a quick response code (QR code) or website address on the label?

5. How would any new mandatory labeling requirements particularly affect

[15] See page 3 of the Competition Report, available at *https://home.treasury.gov/system/files/136/Competition-Report.pdf.*

[16] Id. at page 61.

small businesses and new businesses entering the marketplace?

The listening sessions, held on February 28 and 29, 2024, engaged consumers, public health stakeholders, and industry members representing businesses of different sizes. Approximately 700 registrants attended the two virtual sessions, including 47 different speakers. In addition to the oral comments received during the listening sessions, TTB received 5,159 written comments in response to Notice No. 232.

TTB has reviewed the comments that were submitted both orally and in writing on alcohol and nutritional content information disclosures and has used those comments to inform this proposed rule.

VII. New Proposed Rule

A. Reasons for Issuing a New Notice of Proposed Rulemaking

In this proposed rule, TTB is initiating new rulemaking on mandatory alcohol content and nutrient information in alcohol beverage labeling. More than 17 years have elapsed since the publication of Notice No. 73 in the **Federal Register**, and TTB believes that the comments received in response to that proposal may no longer fully and accurately reflect the opinions of consumers, public health advocates, industry members, trade associations, and other interested parties. TTB also received thousands of comments in response to Notice No. 232 that reflect new perspectives and provide updated information on the costs and benefits of mandatory alcohol content and nutrient information disclosure.

TTB thus believes it is appropriate to publish a new proposed rule on these issues, which takes into account interim changes in labeling policy, the comments on Notice No. 232, and the experience TTB and the regulated alcohol-beverage community have gained with optional statements of average analysis, Serving Facts statements, and Alcohol Facts statements, and which solicits current comments on the proposed regulatory changes. As was shown through comments on Notice No. 232, some industry members have new perspectives that reflect their own experience with voluntary labeling disclosures and the consumer reaction to labels that include per-serving nutrient or alcohol content information.

TTB received many comments about potential costs associated with the mandatory proposals set forth in Notice No. 73, particularly the nutrient labeling requirements. Many of those comments were echoed in comments on Notice No. 232, with a large number of commenters discussing the costs associated with testing product samples for nutritional information. In light of those comments, TTB conducted a more thorough cost analysis in this proposed rule (see Section IX, Cost Analysis, below) that addresses concerns that were raised in the comments on Notices No. 73 and 232. As described further below, TTB is seeking comment on this analysis as it considers adopting the mandatory labeling requirements proposed in this document as well as the length of the implementation period.

Furthermore, in response to Notice No. 73, TTB received several comments suggesting that TTB require alcohol content (as both a percentage of alcohol by volume and as fluid ounces of alcohol per serving) to appear in the mandatory labeling statement, and to use the title ''Alcohol Facts'' instead of the title ''Serving Facts.'' TTB has incorporated both of those suggestions into this proposed rule and is soliciting comment on whether this information would assist in ensuring that labels provide adequate information to consumers about the identity, quality, and alcohol content of the product.

On a related issue, as explained in more detail below in Section VII.B.4, TTB is proposing to require alcohol content labeling statements for all malt beverages under its FAA Act authority, and for all beers (whether regulated under the FAA Act or not) under its IRC authority. TTB is also proposing to rely on its authority under the IRC to propose mandatory numerical alcohol content statements for ''table wines'' (wines containing at least 7 percent and not more than 14 percent alcohol by volume), instead of allowing wines the option of being labeled as ''table wine'' without a numerical alcohol content statement on the label. TTB believes that mandatory alcohol content statements on labels for all beer and wines subject to tax under the IRC will assist in ensuring appropriate Federal excise tax payment and collection. TTB is seeking additional comments on these proposals in this notice of proposed rulemaking.

B. Summary and Solicitation of Comments on Proposal

TTB proposes to amend its regulations to require an Alcohol Facts statement on all alcohol beverage labels TTB regulates under the FAA Act. As proposed, the mandatory Alcohol Facts statement would include information about the alcohol content expressed both as a percentage of alcohol by volume and in fluid ounces of pure ethyl alcohol per serving, the number of calories, and the number, in grams, of carbohydrates, fat, and protein, per serving. The serving sizes are based on the amount of the beverage customarily consumed as a single serving, as explained in Section VII.B.9 below. The proposed Alcohol Facts statement may be presented in either a panel or a linear format.

1. Title of the Alcohol Beverage Information Statement

TTB is proposing ''Alcohol Facts'' as the title of the informational statement, instead of ''Serving Facts,'' which was proposed in 2007. While Notice No. 73 did not specifically solicit comments on alternative titles, TTB received comments that supported ''Alcohol Facts'' or titles other than ''Serving Facts'' for the information panel. Some commenters suggested that ''Serving Facts'' could confuse consumers because it is too similar to the ''Nutrition Facts'' title of panels for food products under FDA's labeling jurisdiction. Many commenters suggested alternative titles that they believed would help differentiate alcohol beverage products from other FDA-regulated products. Several commenters, including health professionals and organizations, consumers, and consumer advocacy groups, supported the title ''Alcohol Facts,'' as originally proposed by the petitioners in 2003.[17]

TTB finds merit in the argument that the title ''Alcohol Facts'' provides a better description of the information presented in the statement. This is especially true since TTB is now proposing to require alcohol content information as part of the information statement.

Under its current policy, TTB guidance allows for optional ''Alcohol Facts'' statements that contain only alcohol content information, while ''Serving Facts'' statements contain nutrient information and may contain alcohol content information as an option. In TTB's experience, relatively few industry members have chosen to label their products with an ''Alcohol Facts'' statement; thus, TTB does not believe the proposed change will cause consumer confusion.

Nonetheless, TTB is considering both ''Serving Facts'' and ''Alcohol Facts'' as options for the final rule, and thus seeks comments on both titles, as well as any

[17] TTB did not receive any comments on Notice 232 on what TTB should title the information statement. While a few commenters referred to the information statement as ''Serving Facts'' in their comments, none provided commentary supporting or opposing any particular title.

alternative titles that may be more informative. TTB specifically seeks comments on the following issues:

1. Which title, ''Serving Facts'' or ''Alcohol Facts,'' would be more informative to consumers? Does the title ''Alcohol Facts'' better describe the information provided in the proposed statement, which includes per-serving alcohol content information?

2. Would the use of the title ''Alcohol Facts'' affect compliance costs or regulatory burdens by requiring a title change for products already voluntarily labeled with a ''Serving Facts'' statement?

3. Are consumers accustomed to finding nutrient content information in a Serving Facts statement? Would changing the title to ''Alcohol Facts'' cause confusion?

4. Alternatively, does the title ''Alcohol Facts'' make it easier for consumers to readily distinguish alcohol beverages from other food items?

2. Mandatory Calorie and Nutrient Information

In Notice No. 232, TTB asked consumers if nutritional information (such as calories, carbohydrates, protein, and fat) per serving is important in deciding whether to purchase or consume a particular alcohol beverage, and what types of per-serving nutritional information should be included. TTB received well over 100 individual comments expressing a variety of viewpoints on nutritional labeling, and thousands of substantially identical comments from consumers expressing support for mandatory nutritional labeling, as well as other disclosures for alcohol content, allergens, and ingredients.

Commenters in favor of mandating nutritional labeling stated that this information is necessary for consumers to make informed purchasing and consumption decisions. Several commenters, including CSPI, cited to a March 2024 survey by Big Village, in which 78 percent of over 1,000 surveyed consumers stated that nutritional content was at least somewhat important in helping decide whether to purchase a particular alcoholic beverage.[18] Most commenters in favor of mandatory nutritional disclosures also discussed the health-related reasons why nutrient labeling is important to consumers. These reasons included the ability to monitor caloric intake and manage or prevent diet-related conditions.

The comments opposed to mandatory nutritional labeling largely came from industry members who identified themselves as small businesses. These commenters cited their perception of a lack of interest in nutritional information by their customers and their concern that the cost of nutritional labeling, due to redesigning existing labels and testing product samples, would place small businesses at a competitive disadvantage.

Several commenters stated that, while consumers may find nutritional information on the label to be useful, TTB should not mandate that the information appear on the label, since the government already provides nutritional information about alcohol beverages through USDA's FoodData Central website. As an example, Bozzo Family Vineyards stated that the nutritional information provided by USDA is ''representative of commercially available [alcohol beverages] and should permit consumers, who are interested in such information for purchase or consumption decisions, to make an informed choice of whether to buy or consume.''

Some commenters stated that producers should only be required to list calories, particularly for distilled spirits. The Distilled Spirits Council of the United States (DISCUS) commented that most distilled spirits do not contain any carbohydrates, fat, or proteins, and TTB should allow producers to list only calories, as calories are the only nutritional information pertinent to most distilled spirits consumers. The American Craft Spirits Association commented that nutrition labeling is inappropriate for distilled spirits products, which are non-nutritive, and that requiring nutritional labeling for distilled spirits products could mislead or confuse consumers by implying that distilled spirits have nutritive value. The Mexican Commission for the Wine and Liquor Industry expressed that nutritional information is not appropriate on alcohol beverage labels for the same reason.

After careful consideration of the diverging viewpoints provided by the commenters to Notice No. 232, TTB is proposing to mandate nutritional information on alcohol beverage labels. Comments revealed significant consumer interest in nutritional information on labels. While certain alcohol beverages are unlikely to contain certain nutrients, such as fat or protein, even the absence of these components provides information and may be of interest to consumers. Additionally, the USDA database cited above contains information on only a limited number of specific products, and other listings only represent general information about certain types of alcohol beverages. For these reasons, TTB is proposing nutritional requirements as described below and welcomes both general comments and feedback on each specific proposal.[19] In line with the nutritional elements allowed in current TTB guidance on voluntary label disclosures, TTB is proposing to require per-serving calorie, carbohydrate, fat, and protein content to be included on product labels.

TTB is also proposing to allow sugar content statements as an optional element in the Alcohol Facts statement. Under current policy, sugar content statements may appear on a label provided certain conditions are met, but they are not permitted in statements of average analysis or Serving Facts statements. TTB has received numerous requests from industry members to allow sugar content statements to appear in the optional Serving Facts statements for alcohol beverages in a manner that is consistent with the FDA Nutrition Facts Label. In addition, TTB received comments on Notice No. 232 from consumers and public health organizations stating that sugar content should appear on alcohol labels, including a joint comment from 27 public health groups and public health officials stating that ''[s]ugar-sweetened beverages contribute to weight gain, type 2 diabetes, and heart disease,[*] and sugary ready-to-drink cocktails are increasing in popularity.[*] '' [*Internal footnotes omitted.] Thus, based on industry interest and the support expressed in comments on Notice No. 232, TTB proposes to allow sugar content statements in the Alcohol Facts statement, which is the same place consumers are viewing other nutrient information.

TTB is also seeking comments on whether other elements of the Alcohol Facts statement should be optional rather than mandatory, and whether additional elements should be added to the statement on a mandatory or optional basis. TTB specifically seeks comments on whether TTB should

[18] According to CPSI's comment, CPSI commissioned Big Village to conduct the survey.

[19] TTB received many comments on the potential costs of mandatory calorie and nutrient information disclosure and suggestions for mitigating those costs. TTB addresses those comments, including comments requesting the option to electronically disclose Alcohol Facts information, in sections VII.A.3 and A.8 and in the cost analysis in Section IX. TTB is also soliciting further comments on the costs of this proposed rule, how those costs impact businesses, and how TTB might mitigate those impacts, particularly for small businesses.

harmonize its nutrient labeling requirements with regulations issued by FDA, as updated in 2016. The following graphic shows the current format for the FDA Nutrition Facts label.[20]

TTB is not currently proposing to allow other micronutrients, such as sodium, that appear on the FDA Nutrition Facts label as mandatory or optional elements of the Alcohol Facts statement. Several individual commenters to Notice No. 232, and thousands of substantially identical comments from submitters identifying themselves as consumers of alcohol beverages, stated that sodium should be a mandatory element of the Alcohol Facts statement. A few commenters stated that alcohol beverages should be labeled with all micronutrients required on food labels by the FDA. However, other commenters stated most alcohol beverages do not contain sufficient quantities of micronutrients to merit disclosure on the label, and some, including the Brewers Association, commented that requiring the disclosure of nutrients in line with FDA could confuse consumers into viewing alcohol beverages like any other food component when alcohol beverages are not, and should not, be positioned as dietary staples.

At this time, TTB does not believe most alcohol beverages contain sufficient quantities of sodium or other micronutrients to merit inclusion in the Alcohol Facts statement. However, TTB seeks further comments, and specifically comments with market data, on whether any micronutrients, such as sodium, are present in alcohol beverages in sufficient quantities that their disclosure would affect purchasing or consumption decisions, and if yes, whether TTB should require, or permit optional, inclusion of those nutrients on alcohol beverage labels.

TTB also seeks comments on whether certain nutrients should be listed only if present at specific levels. TTB is proposing to require the listing of calorie, carbohydrate, fat, and protein content on alcohol beverages, even if the product does not contain, or contains only a de minimis amount of, these components. However, TTB specifically seeks comments on whether fat and protein, which are not typically found in certain alcohol beverages, should be listed only if present at specific levels. If so, what levels should trigger these requirements? TTB also seek comments on whether any other nutrients, such as sodium, caffeine, or sugar, should be required to be listed if present at a specific level, even if they do not otherwise have to be disclosed.

In addition to the above, TTB is seeking comment on the following issues related to mandatory calorie and nutrient statements:

1. Should TTB's proposed nutrient content labeling statement be more consistent with the Nutrition Facts Label found on foods that are under FDA's labeling jurisdiction? Alternatively, do the differences between alcohol beverages and other foods make it unnecessary, or even misleading, to adopt the type of nutrient labeling required on food labels that are under FDA's labeling jurisdiction? For example, would information on the percentage of the daily value of the listed nutrients provided by alcohol beverages be useful information for consumers? Alternatively, could such statements mislead consumers by implying that they may rely on alcohol beverage consumption to satisfy part of their daily nutrient requirements?

2. For greater consistency with the FDA Nutrition Facts Label, should Alcohol Facts statements be allowed or required to include other elements (such as sodium and cholesterol) or a further breakdown of fat (to include saturated fat and trans-fat)?

3. Would the inclusion of elements not ordinarily expected to be found in alcohol beverages (such as trans-fat and dietary fiber) be useful or potentially misleading?

4. Should TTB allow numerical statements of the vitamin and mineral content of alcohol beverages, assuming the product contains vitamins or minerals, or could such a statement create an erroneous impression that consumption of the alcohol beverage has nutritional value or other health-related benefits?

5. How many industry members already provide nutrient content information on labels, in advertisements (such as websites), or upon request (for example, to consumers or restaurants)?

6. Do consumers want to see Alcohol Facts labeling on alcohol beverage products? How might consumers benefit from such a label? Do consumers have adequate information about the identity and quality of alcohol beverages if alcohol beverage containers do not

[20] Available at *https://www.fda.gov/food/food-labeling-nutrition/changes-nutrition-facts-label.*

include Alcohol Facts labeling? How do those benefits compare to the costs and regulatory burdens associated with such revisions?

7. How, if at all, would the new mandatory labeling requirements affect competition in the alcohol beverage market?

8. How would the new mandatory labeling requirements affect small businesses and, in particular, new businesses entering into the alcohol beverage marketplace?

9. How, if at all, would the new mandatory labeling requirements affect international trade of alcohol beverages? Is there any information that should, or should not, be included to align the proposed labeling requirements with those of other countries?

3. Calculating Panel Elements and Tolerance Levels

As previously noted in this document, TTB expanded the tolerance levels for calories in 2020, with the issuance of TTB Ruling 2020–1 and TTB Procedure 2020–1. TTB Procedure 2020–1 states that the calorie, carbohydrate, or fat content, as determined by TTB analysis, must be within a reasonable range below the labeled or advertised amount (within good manufacturing practice limitations), and the protein content must be within a reasonable range above the labeled amount (within good manufacturing practice limitations). TTB Ruling 2020–1 also permits industry members to rely on databases or ''typical value'' charts, rather than laboratory analysis, to determine nutrient content values for the labeling and advertising of alcohol beverages provided the values are within the ''reasonable range'' prescribed in Procedure 2020–1.

TTB is proposing to modify the tolerances set out in the 2020 guidance by eliminating references to ''reasonable ranges'' based on ''good manufacturing practice limitations.'' Instead, TTB is proposing an objective standard, which allows a tolerance of 20 percent either above or below the labeled amount for calories, carbohydrates, protein, and fat. TTB believes that this change would promote compliance by eliminating subjective standards. Importantly, the proposed revisions would facilitate the use of ''typical values'' charts and other methodologies to calculate the level of calories, carbohydrates, fat, and protein in alcohol beverage products. Because of variations between batches of the same alcohol beverage product, one purpose of the tolerances is to facilitate reliance on databases, such as the U.S. Department of Agriculture's FoodData Central, and other methodologies to calculate calorie and nutrient levels, without having to change the label for minor variations in those values.

In response to Notice No. 232, small businesses stated that broad tolerances that allow for the use of tables and other means to calculate calories and nutrient levels are important to reducing costs and maintaining their businesses' competitiveness in the market. These commenters were particularly concerned about any regulatory change that would require them to either buy expensive equipment to conduct in-house nutritional analysis testing or, more likely, send their products to third-party laboratories for analysis because they would not be able to afford the equipment to conduct in-house testing. Commenters stated that small producers often create small batches of products, and, as such, costs for testing cannot be easily absorbed over the sale of a large number of units. Other commenters expressed concern about the time third-party testing could add between the production of a product and its release to the market.

TTB seeks comments on whether the proposed tolerances are broad enough to facilitate reliance on databases for standard products, among other methods for calculating calorie and nutrient content, but still specific enough to provide accurate information to consumers. Specifically, TTB seeks comments on whether it should instead propose the same tolerances set forth in TTB Procedure 2020–1 or whether another approach should be considered.

4. Mandatory Listing of Alcohol by Volume on All Alcohol Beverage Products

Consistent with Notice No. 73, TTB is proposing to require an alcohol content statement, expressed as a percentage of alcohol by volume, on the labels of all alcohol beverage products. This would be a new requirement for table wines (wines containing at least 7 percent and no more than 14 percent alcohol by volume) and most malt beverages and beers. TTB believes that uniform labeling of alcohol content on all alcohol beverage products will assist taxpayers in complying with their obligations under the IRC and will assist TTB in identifying alcohol beverage products that pose compliance risks. TTB has authority under the IRC to require alcohol content statements on all wines and beer, pursuant to TTB's authority to classify, collect taxes on, and ensure the appropriate labeling of, such products. As noted in the preamble to Notice No. 73, TTB concluded that the alcohol content of a beverage is one of the most important pieces of information about that product.

Both the FAA Act and the IRC provide the Secretary of the Treasury with broad authority to regulate the labeling of alcohol beverages. The FAA Act and IRC, and their implementing regulations regarding the labeling of alcohol content, differ by commodity. For example, all distilled spirits must be labeled with alcohol content statements under the FAA Act, as well as under the implementing FAA Act and IRC regulations. See 27 U.S.C. 205(e) and 27 CFR 5.63, 5.65, 19.516, and 19.517. However, the FAA Act requires alcohol content for wines only if they contain more than 14 percent alcohol by volume. See 27 U.S.C. 205(e). Pursuant to TTB regulations, wines with an alcohol content of at least 7 percent but no more than 14 percent alcohol by volume may be labeled with the type designation ''table wine'' or ''light wine'' on the brand label in lieu of a percent-by-volume alcohol content declaration. Additionally, all wines may be labeled with a range of alcohol content levels. See 27 CFR 4.36.

The FAA Act, as enacted in 1935, also originally prohibited the placement of alcohol content statements on malt beverage labels, unless required by State law. However, the Supreme Court found this provision was unconstitutional in *Rubin* v. *Coors Brewing Co.,* 514 U.S. 476 (1995). As TTB explained in Notice No. 73, this decision leaves TTB with authority to either allow or require alcohol content statements on malt beverage labels.

With the exception of certain flavored malt beverages that contain alcohol derived from added nonbeverage flavors or other added nonbeverage ingredients (other than hops extract) containing alcohol (see 27 CFR 7.63(a)(3)), malt beverages are not currently required to bear an alcohol content statement. However, many consumers have become used to seeing optional alcohol content statements on many malt beverage labels, which are permitted under TTB regulations at 27 CFR 7.65 and may be required under State law.

a. Proposal To Require Alcohol Content Statements for Malt Beverages

In Notice No. 176, TTB did not propose mandatory alcohol content statements for malt beverages but did propose to increase the alcohol content tolerance for malt beverages from 0.3 percent to 1 percent above or below the labeled alcohol content. TTB made this proposal with the understanding that some brewers, especially small brewers, avoid putting optional alcohol content statements on malt beverage labels

because of the difficulty in maintaining precise alcohol content levels from batch to batch.

In response to Notice No. 176, the Beer Institute opposed the proposed increase of the alcohol content tolerance for malt beverages, stating that the increase could confuse, mislead, and possibly endanger consumers due to higher than labeled alcohol content. On the other hand, the Brewers Association supported mandatory alcohol content statements for malt beverages, if the tolerance was increased to one percentage point above or below the labeled amount, and if a three-year compliance period was provided to allow for label changes.[21] Because the issue of mandatory alcohol content statements for malt beverages was outside of the scope of that proposed rule, TTB did not adopt an increase in the tolerance for alcohol content statements in response to Notice No. 176; instead, TTB stated that it was treating the comment in favor of this amendment as a request for further rulemaking. TTB is now proposing both to require alcohol content statements for all malt beverages under the FAA Act and to increase the labeling tolerance to one percentage point above or below the stated amount. TTB is also proposing conforming amendments to the IRC labeling regulations, in parts 25 and 27, to cover domestic and imported beer.

For beers that are not defined as ''malt beverages'' under the FAA Act, TTB is proposing to mandate an alcohol content statement on the label of the products under TTB's IRC authority. However, these beers would not be subject to the proposed Alcohol Facts labeling requirements, including the requirement for a statement of the number of fluid ounces of pure ethyl alcohol per serving, because the Alcohol Facts labeling requirements are being proposed under TTB's FAA Act authority, which does not apply to these products. Instead, these products are subject to FDA labeling requirements. TTB believes that requiring an alcohol content statement on these products would facilitate revenue protection by, among other things, making it readily apparent that the products are subject to tax under the IRC. TTB seeks comments on this issue.

TTB also seeks comment on the proposal to increase the labeling tolerance to one percentage point above or below the stated amount for all malt beverages and beers. In response to Notice No. 232, brewers commented that the cost of the equipment needed to test for alcohol content to a sufficient degree of certainty to meet the current tolerance standards costs tens of thousands of dollars. Small brewers reported that this cost was unaffordable, would push them out of the market, and would discourage new entrants to market. Increasing the tolerance to one percentage point above or below the stated alcohol content would allow brewers to calculate the alcohol content through a formula based on hydrometer readings, which commenters to Notice No. 232 stated would drastically lower the costs of compliance. TTB seeks comment on whether increasing the tolerance for alcohol content to one percent would lower the cost of compliance for a mandatory alcohol content disclosure and thereby promote competition in the marketplace if such disclosure is required. TTB also seeks comment on whether consumers would receive adequate information about the alcohol content of malt beverages if the tolerance is increased.

Non-alcoholic malt beverages that are the product of alcoholic fermentation are subject to the labeling requirements of the FAA Act but are not subject to the health warning requirements of the Alcoholic Beverage Labeling Act of 1988 because their alcohol content is less than 0.5 percent alcohol by volume.[22] See 27 CFR 7.65(e), 16.10, and 16.21. The IRC regulations in 27 CFR 25.242 require marking such products as a ''cereal beverage,'' ''malt beverage,'' or ''near beer,'' along with a statement that the product is ''Nontaxable under section 5051 I.R.C.'' on bottles, kegs, and barrels.

TTB is proposing to require an Alcohol Facts statement for non-alcoholic malt beverages, but TTB does not see any reason to require a specific statement of the percentage of alcohol by volume, as long as the statement adequately informs the consumer that the product contains less than 0.5 percent alcohol by volume. TTB is thus proposing to allow the alcohol content statement for these products to be expressed either as a percentage of alcohol by volume or with the terms ''non-alcoholic'' or ''alcohol free,'' provided the product meets the current definitions of those terms in 27 CFR 7.65(e)–(f). The term ''non-alcoholic'' means the product contains less than one half of one percent alcohol by volume, while the term ''alcohol free'' is reserved for those products that contain no alcohol. Additionally, if the term ''non-alcoholic'' is used, the phrase ''contains less than 0.5 percent (or .5%) alcohol by volume'' must appear immediately adjacent to it, although it may be abbreviated as provided in proposed § 7.212(e)(1). Similarly, for non-alcoholic malt beverages, there is no need to specify the number of fluid ounces of alcohol per serving, given that, by definition, a serving size would be 12 fl oz, so the fluid ounces of alcohol per serving would be less than 0.06, which is one-tenth of an alcoholic drink equivalent as defined by the *Dietary Guidelines.*

TTB seeks comment on this issue, and specifically invites comments on whether an Alcohol Facts statement should be required for non-alcoholic malt beverages. TTB notes that other non-alcoholic products are not subject to the FAA Act's labeling requirements. For example, a non-alcoholic wine does not fall under the definition of a ''wine'' under the FAA Act because the minimum alcohol content for wine under that definition is 7 percent alcohol by volume. See 27 U.S.C. 211. Similarly, the definition of the term ''distilled spirits'' in 27 CFR 5.1 does not include products containing less than 0.5 percent alcohol by volume.

b. Proposal To Require Alcohol Content Statements for Wine

The current wine regulations under the IRC require alcohol content to be labeled on all containers, either as a percentage of alcohol by volume or in accordance with 27 CFR part 4. Accordingly, wines with less than 7 percent alcohol by volume must be labeled with a numerical statement of alcohol content. However, because the IRC regulations allow wines as defined under the FAA Act to be labeled with an alcohol content statement in accordance with the regulations in part 4, they do not require the listing of a percentage of alcohol by volume for wines with an alcohol content of at least 7 percent and up to 14 percent, which are instead entitled to the exemptions under part 4.[23] As previously noted, the regulations in section 4.36 do not require numerical alcohol content statements for wines labeled with the

[21] The Beer Institute and the Brewers Association made substantially similar comments in response to Notice No. 232.

[22] While this proposed rule would generally allow for a tolerance of one percentage point above or below the labeled alcohol content for malt beverages, for malt beverages containing less than 0.5 percent alcohol by volume, the actual alcohol content may be less than, but may not exceed, the labeled alcohol content.

[23] See 27 CFR 24.257(a)(3). The regulation incorporates the rules under part 4, which results in a somewhat inconsistent effect. The IRC regulations require wines under 7 percent alcohol by volume (which are not ''wines'' under the FAA Act and thus fall under FDA's labeling jurisdiction) to bear a percent-by-volume alcohol content statement; however, they do not require the same statement on wines with an alcohol content of 7 to 14 percent alcohol by volume.

designation ''table wine'' on the brand label.

As explained in Notice No. 73, TTB believes that the listing of alcohol content should be consistent for wines regardless of whether they contain more than 14 percent alcohol by volume. Accordingly, in that document, TTB proposed amending § 24.257(a)(3) to require alcohol content expressed in terms of a percentage of alcohol by volume on all wine labels. TTB stated that this amendment would serve an important revenue purpose, as the alcohol content of a wine is a key factor in determining its tax classification. See 26 U.S.C. 5041(b).

While there were many supportive comments on this issue in response to Notice No. 73, some wine industry members and associations opposed the proposed amendment, urging TTB to retain the provisions in the regulations that permit the use of the designation ''table wine'' or ''light wine'' for wines with alcohol content levels of at least 7 percent and no more than 14 percent alcohol by volume. On the other hand, as previously mentioned, the Wine Institute commented in response to Notice No. 176 in favor of requiring numerical alcohol content statements on the labels of all wines, including table wines. TTB recognizes the views of some industry members may have changed since Notice No. 73 was issued in 2007.

Thus, this proposed rule provides for mandatory alcohol content statements under the IRC regulations for all wines and removes the option for a ''table wine'' or ''light wine'' designation to be used in lieu of a numerical statement of alcohol content. See proposed §§ 4.36(b), 24.257(a)(3), and 27.59(a)(3). ''Table wine,'' ''light wine,'' and related terms may still be included as optional information under the definitions in § 4.21.

Wines subject to the FAA Act (*i.e.,* wines containing at least 7 percent alcohol by volume) would also be subject to the proposed rules in part 4 with regard to the formatting of alcohol content statements, as well as the inclusion of a statement of fluid ounces of alcohol per serving, under TTB's authority under the FAA Act to ensure consistency in the presentation of information on labels. See 27 U.S.C. 205(e).

The proposed rule also removes the option to list the alcohol content for wines in terms of ranges. Instead, TTB is proposing to require the proposed mandatory alcohol content statements to be within the tolerances set forth in current § 4.36 for wines with at least 7 percent alcohol by volume and within a tolerance of plus or minus 0.75 percentage points for wines with less than 7 percent alcohol by volume.

c. Comments Sought

TTB is soliciting comments on the proposed expansion of alcohol content labeling for malt beverages and wines, including on the below topics:

1. What are the potential benefits to consumers and industry members from a requirement for alcohol content statements, expressed as a percentage of alcohol by volume, on the labels of all alcohol beverage products?

2. Will the proposed requirement for alcohol content labeling for all beer and malt beverages result in additional costs and burdens for brewers and importers, particularly small businesses? Will the increase in alcohol content tolerances mitigate or reduce those costs and burdens?

3. Will the proposed increase in alcohol content tolerances for malt beverages mislead consumers? If so, does the same argument apply to wines, which currently have a 1.5 percentage point tolerance for wines up to 14 percent alcohol by volume, and a 1 percentage point tolerance for wines with an alcohol content of over 14 percent alcohol by volume?

4. Do the proposed labeling requirements for non-alcoholic malt beverages adequately advise the consumer that the products contain less than 0.5 percent alcohol by volume? Should non-alcoholic malt beverages be exempted from calorie and nutrient labeling requirements?

5. What, if any, additional costs or burdens would requiring numerical alcohol content statements for table wines impose on wineries and importers, particularly small businesses?

6. Would an alternative that allowed table wines to indicate alcohol content as a range (*e.g.,* 7–14 percent alcohol by volume) place less of a burden on small wineries and importers? Would this approach provide sufficient information to consumers?

5. Placement of Alcohol Content Statements as Part of the Alcohol Facts Statement

TTB is proposing to amend the FAA Act labeling regulations in parts 4, 5, and 7 to require that alcohol content statements that are already required under the FAA Act, or that are proposed in this document to be required under either the FAA Act (for malt beverages) or under the IRC (for table wines), be placed on the label as part of the mandatory Alcohol Facts statement. The alcohol content of an alcohol beverage is one of the most important pieces of information about the product for the consumer and thus should be highlighted and easy to locate on the label. TTB believes that providing this information as part of the panel facilitates consumers' evaluation of the alcohol content in context with the nutritional information.

Over the past 17 years, TTB has amended the regulations to remove the brand label concept for distilled spirits and malt beverages, which had required certain information to appear together, such as the brand name, class and type designation, and if applicable, the alcohol content. For distilled spirits, the mandatory alcohol content statement currently must appear in the same field of vision as the brand name and the class/type designation. See 27 CFR 5.63(a) and 7.63(a), as amended by T.D. TTB–158 and T.D. TTB–176. With regard to wine, it bears noting that the World Wine Trade Group (WWTG) Agreement on Requirements for Wine Labeling provides that wines may be imported bearing certain common mandatory information (CMI), including alcohol content, on any label on the wine container, and that this information may be placed within a single field of vision, meaning any part of the surface of the container, excluding its base and cap, that can be seen without having to turn the container. Under this Agreement, as long as all of the CMI elements are visible at the same time, they will meet the placement requirements (if any) of each member country. Accordingly, in 2013, TTB amended the wine labeling regulations to allow alcohol content to appear on labels other than the brand label. See T.D. TTB–114 (78 FR 34565, June 10, 2013). The 2013 amendment provided greater flexibility in wine labeling and conformed the TTB wine labeling regulations to the WWTG agreement.

Nothing in this proposal prevents an alcohol content statement from also appearing on the single field of vision label(s) with the other elements of CMI, provided that it is also included on the Alcohol Facts statement. Likewise, this proposal does not preclude the placement of the Alcohol Facts statement (as prescribed in this document) together with the other elements of CMI on the single field of vision label. TTB encourages U.S. trading partners, including other WWTG members, and all interested persons, to submit comments in response to this specific issue in the proposal.

Specifically, TTB seeks comments on the following questions:

1. Would it be easier for consumers to locate alcohol content information on a label if it is required to be included in the Alcohol Facts statement and if so, why?

2. Alternatively, should TTB allow alcohol content labeling as an optional element of the Alcohol Facts statement?

3. Does the placement of alcohol content information affect costs of compliance and regulatory burdens? If so, how?

4. Does the proposal to require alcohol content information as part of the Alcohol Facts statement affect competition or issues addressed by international trade agreements or international standards?

6. Mandatory Statement of Alcohol in Fluid Ounces of Pure Alcohol per Serving

TTB is proposing to require a statement of alcohol content in fluid ounces of pure alcohol per serving as part of the mandatory Alcohol Facts statement. TTB received numerous comments in response to Notice Nos. 73 and 232 stating that per-serving alcohol content is critically important information to consumers. Thousands of consumers commented on Notice No. 232 that per-serving alcohol content is important to help people understand how much alcohol they are consuming. The National Center for Health Research, a non-profit think tank focused on health issues, stated that alcohol beverage packaging should ''provide information on the total amount of alcohol in the container (not just alcohol by volume) so that consumers can make informed choices and avoid excessive consumption.'' The American Public Health Association, an advocacy organization for public health, commented that alcohol beverage containers should provide the ''total amount of alcohol in the container (not alcohol by volume)'' along with other information like nutrients and ingredients because ''[m]ost heavy drinkers are not alcohol dependent, and additional information . . . could influence individual decisions about alcohol use.'' Commenters also indicated that many governmental and health agencies provide consumption and moderation advice to consumers that is based on the amount of pure ethyl alcohol in each serving or drink, so information about the quantity of pure ethyl alcohol per serving is needed to allow consumers to follow this advice.

TTB believes that listing alcohol content in fluid ounces per serving on the alcohol beverage container could help consumers understand how much alcohol they are consuming and follow consumption and moderation advice from government and public health organizations, if they wish to do so. TTB further believes that requiring this information on labels would further its mandate to ensure that labels provide consumers with adequate information as to the alcohol content of the product.

Accordingly, TTB proposes to amend the regulations to require the listing of the number of U.S. fluid ounces of pure ethyl alcohol per serving, expressed to the nearest tenth of a fluid ounce, on the mandatory Alcohol Facts statement. In a panel, the information would be required to be indented under the alcohol-by-volume statement.

For wines with an alcohol content of no more than 14 percent alcohol by volume, TTB recognizes that the FAA Act does not require numerical alcohol content statements on labels. As explained earlier, however, TTB is proposing to amend the IRC regulations in parts 24 and 27 to require alcohol content statements on all wine labels. TTB believes its authority under the FAA Act extends to ensuring consistency in the format and presentation of all alcohol content statements appearing on wines subject to part 4, even if such statements are not required by the FAA Act. Accordingly, proposed § 4.36 provides that where an alcohol statement, as a percentage of alcohol by volume, appears on a wine label subject to the requirements of part 4, it must conform to the requirements of § 4.36 and must appear in an Alcohol Facts statement in accordance with the requirements of new subpart L of 27 CFR part 4.

This proposal includes all distilled spirits and includes malt beverages with at least one half of one percent alcohol by volume. However, as explained above in Section VII.B.4, for malt beverages with less than one half of one percent alcohol by volume, TTB believes that the designation ''non-alcoholic'' (along with the required statement that such products contain less than 0.5 percent alcohol by volume) or ''alcohol-free'' (for products containing no alcohol) is sufficient, and that there is no need to specify the percentage of alcohol by volume as part of the Alcohol Facts statement. Similarly, TTB is not proposing to require the disclosure of the number of fluid ounces of alcohol per serving for such products.

The 2003 petition from CSPI and other consumer organizations (discussed in Section III.A) proposed that, in addition to presenting pure ethyl alcohol content in fluid ounces per serving, Alcohol Facts labels should disclose the number of ''standard drinks'' per serving and per container.[24] CSPI proposed that a ''standard drink'' be defined identically to the *Dietary Guidelines for Americans* ''alcoholic drink equivalent'' as containing 14 grams, or .6 fluid ounces, of pure ethyl alcohol. CSPI further proposed that labels should include a statement that ''A standard drink contains .6 fl oz of pure alcohol'' and consumption advice provided by the *Dietary Guidelines for Americans.* In response to Notice No. 232, TTB received a large number of comments from consumers supporting CSPI's proposal to include ''standard drink'' information on alcohol beverage labels. The Centers for Disease Control also provided a comment that cited a study that found including the recommended alcohol guidelines as well as standard drink sizes were more effective than only including percent of alcohol by volume for improving estimates of alcohol consumption.[25]

TTB did not propose to define a ''standard drink'' or to mandate inclusion of the consumption advice provided by the *Dietary Guidelines for Americans* in the 2007 proposed rule, Notice No. 73. The preamble to Notice No. 73 presents, in detail, TTB's explanation for why it was not including those elements, and TTB believes that the rationale set forth in Notice No. 73 on these issues still applies.

Alcohol beverages are rarely packaged as products equaling a ''standard drink'' of exactly 0.6 fluid ounces of pure alcohol. Products will therefore almost always contain less than one standard drink or multiple standard drinks, potentially leading to consumer confusion. TTB believes that consumers would also be confused about the difference between the terms ''standard drink'' and ''serving size.'' Accordingly, TTB is not proposing to adopt CSPI's suggestions about use of the term ''standard drink'' or mandating inclusion of the *Dietary Guidelines for Americans'* advice on moderate drinking (which may be updated based on any changes in the guidelines over time).

TTB is soliciting comments from all interested persons on these issues.

[24] In their comment to Notice No. 232, CSPI stated that they are no longer calling for the pure alcohol content in fluid ounces per serving because they believe this would serve the same purpose as standard drink labeling and thus would be duplicative.

[25] Edmunds, C.E.R., Gold, N., Burton, R. et al., The effectiveness of alcohol label information for increasing knowledge and awareness: a rapid evidence review, BMC Public Health 23, 1458 (2023), available at *https://doi.org/10.1186/s12889-023-16327-x.*

Specifically, TTB solicits comments on the following:

1. Would including information about the fluid ounces of pure ethyl alcohol per serving in the proposed Alcohol Facts statement improve the ability of consumers to follow the consumption and moderation advice provided by governmental and health agencies, if they so choose?

2. Would requiring information about the fluid ounces of pure ethyl alcohol per serving in the proposed Alcohol Facts statement impose additional costs or burdens for alcohol beverage manufacturers and importers, particularly for small businesses?

3. Is there a better way of presenting the volume of alcohol content per serving? Specifically, should the term ''standard drink'' be defined and used in place of or in addition to fluid ounces of pure ethyl alcohol per serving?

4. TTB notes that the *Dietary Guidelines for Americans, 2020–2025,* use the terms ''drink,'' and ''alcoholic drink equivalent,'' and seeks comments on whether any of those terms should be used or defined for use on labels.

5. Should the proposed mandatory Alcohol Facts statement include a summary of the *Dietary Guidelines'* advice on moderate drinking (to be updated based on any changes in the guidelines over time)?

TTB also specifically seeks comments on whether these proposals would provide useful information to consumers or would instead be confusing or misleading, and whether inclusion of these elements would affect the costs of compliance and regulatory burdens.

7. Statements of Average Analysis and Serving Facts Statements

Under this proposed rule, the mandatory Alcohol Facts statement would replace the current voluntary statements of average analysis and Serving Facts statements on alcohol beverage labels. Thus, as of the compliance date, those statements would no longer satisfy the proposed mandatory Alcohol Facts labeling requirements.

8. Linear Display, Type Size, and Electronic Display of Alcohol Facts Information

a. Linear Display

TTB proposes to allow the option of a linear display placed on the container (including a keg), as long as it is set apart from other information and is placed inside a box with the title ''Alcohol Facts'' in bold-faced type. TTB received comments in response to Notice No. 232 expressing concern about label space on certain containers, such as 50 mL bottles, and/or whether new information requirements would require a back label, which would increase the cost of compliance. TTB believes the linear display will allow information to fit on labels of most containers without the need for a back label, while requiring the linear display to be in a box will make it more noticeable to consumers. TTB is also proposing to liberalize the format and size requirements for the panel display, as compared to the Notice No. 73 proposal, to encourage industry members to use the panel format rather than the linear format.

TTB believes that these changes would reduce the burden on industry members and are consistent with TTB's mandate to issue regulations to ensure that labels provide consumers with adequate information about the identity, quality, and alcohol content of alcohol beverages. Examples of Alcohol Facts panels in a linear display appear in the proposed regulations at §§ 4.112(h), 5.212(h) and 7.212(j).

b. Type Size

TTB is proposing that the minimum type size requirements for Alcohol Facts statements mirror existing type size requirements for mandatory information in the wine, distilled spirits, and malt beverage regulations in parts 4, 5, and 7, respectively. See 27 CFR 4.38, 5.53, and 7.53. TTB is also proposing to remove the existing maximum type size requirement for alcohol content statements appearing in the proposed mandatory Alcohol Facts statements for wine and malt beverages subject to the FAA Act. Currently, the maximum type size for alcohol content statements is 3 millimeters for all wine containers. See § 4.38(b)(3). For malt beverages, the limit is 3 millimeters for containers of 40 fluid ounces or less and 4 millimeters for containers of more than 40 fluid ounces. See § 7.53(b). TTB believes that the maximum type size requirement may no longer serve a purpose, and that a maximum type size requirement for any one element of an Alcohol Facts statement is likely to either lead to differences in type sizes among the elements or create a de facto limitation on the size of the overall panel, which might be unnecessarily limiting to industry members in designing their labels.

Regarding malt beverages, TTB is also seeking public comment on whether to remove the maximum type size for optional alcohol content statements. TTB received a comment requesting removal of this limitation in the context of its label modernization rulemaking. See T.D. TTB–176 (87 FR 7526, February 9, 2022). In response, TTB stated that such a regulatory change should not be adopted without providing more specific notice (and an opportunity to comment) to interested parties. TTB is now seeking public comment on this issue.

c. Electronic Display of Alcohol Facts Information

TTB considered, but is not proposing, to allow the proposed Alcohol Facts panel to be distributed by electronic means via a link, code, or other marking on the physical label rather than requiring the full panel to appear on the physical label itself. TTB believes that allowing mandatory information to appear somewhere other than the physical label would decrease consumer accessibility to information that to informs decisions about purchasing and consuming alcohol beverages. As detailed below, TTB seeks comment on this assumption.

TTB's current policy, articulated in Industry Circular 2022–2, ''Use of Social Media in the Advertising of Alcohol Beverages,'' allows the use of links, including QR codes, on labels, and treats the linked website as advertising material if such use falls within the FAA Act's definition of an advertisement. Thus, industry members may currently include QR codes that link to websites with additional information about their products, including optional calorie and nutrient information. However, TTB currently does not allow mandatory labeling requirements to be satisfied solely by including the information on a website with a link or code on the physical label; instead, the mandatory information must appear on the label itself.

In Notice No. 232, TTB asked if there are alternative ways of providing the Alcohol Facts information, for example, by allowing information to be provided through a website that could be accessed by consumers via a quick response code (QR code) or website address on the label. In response to this request, individual commenters and public health and consumer advocacy groups largely opposed the use of QR codes for mandatory label information. On the other hand, the vast majority of trade organizations representing industry members commented that they support disclosure via QR code for at least some of the information disclosures proposed in this rulemaking. However, there were exceptions. The Beer Institute commented that nutritional and alcohol

content information should appear on the physical label. TTB also received comments from small producers and a few consumers supporting the use of QR codes or websites to disclose nutritional information.

The comments supporting the use of disclosure via electronic means cited three primary points. First, web-based disclosure is a cost-efficient means to provide information to consumers that provides producers with flexibility and reduces time to market. Second, commenters cited to the broad implementation of digital labels in Europe and the benefits electronic information disclosure could have for international trade. Multiple commenters also touted the benefits of electronic disclosure for tailoring product information to country-specific regulations and providing information in a language appropriate to the point of sale. Finally, several commenters stated that web-based disclosure is consumer-friendly, particularly for products sold in smaller containers. These commenters argued that QR codes prevent labels from becoming cluttered, which can distract consumers from the most relevant information, make labels difficult to read, and contribute to consumer confusion.

These points were countered by comments from public health and consumer advocacy organizations, academics, and consumers. These commenters argued that disclosing the information electronically would create an unreasonable burden on consumers both because many consumers do not have access to a smart phone, or to the internet, as they shop for alcoholic beverages and because consumers do not want to have to go to a website to access the information.

CSPI commented that the barriers to information created by electronic disclosure would disproportionately affect consumers who are older or have lower incomes, and those living in rural areas and on tribal lands. CSPI cited a 2023 survey conducted by the Pew Research Center that found that 79 percent of adults with annual incomes less than $30,000 owned smartphones compared to 90–98 percent of higher income groups and found similar sized gaps by age, with only 76 percent of adults aged 65 and older owning smartphones compared with 89–97 percent of adults in younger age groups.[26] Data from the Federal Communications Commission also shows a rural-urban gap for access to high speed mobile 4G LTE and lower access to ''fixed terrestrial services'' (*i.e.,* satellite or wireless internet/broadband). The gap in access to high speed fixed terrestrial services is even larger between tribal lands and urban areas.[27]

Regarding consumer preferences on the location of information, several commenters cited a survey that found 76 percent of consumers would prefer to learn about alcohol and nutritional content of alcoholic beverages by reading the information on the label of the container, as opposed to scanning a QR code or visiting a website.[28] And the Consumer Federation of America cited a review of consumer behavior experiments by the European Union's Joint Research Centre that found ''the spontaneous use of QR codes by consumers is very low.'' [29]

TTB also received thousands of nearly identical comments from consumers that oppose QR codes as an alternative to on-container labeling. The commenters stated that ''[f]or nutrition and alcohol content to be accessible to all, it is vital that it be mandated to appear on each container.''

As previously stated, TTB currently requires all mandatory information disclosures to appear on the physical label of an alcohol beverage container. At this time, TTB has decided not to propose allowing this information to be disclosed electronically via a link or code on the physical label (*e.g.,* a QR code) rather than on the physical label itself. TTB is persuaded by the comments from public health and consumer advocacy organizations and consumers that allowing the disclosure of information via electronic means would create barriers for consumer access, particularly for consumers in certain demographics and those living in rural areas. However, TTB recognizes that access to technology and cultural norms surrounding the provision of information via electronic means are rapidly advancing and seeks comment on whether any final rule should allow the proposed Alcohol Facts information to be disclosed via electronic means.

TTB is soliciting comments from all interested persons on these issues, including on the following specific topics:

1. Would consumers have trouble locating Alcohol Facts information if that information is presented in a linear display?

2. Does the proposal to require the linear display to appear in a box with the title ''Alcohol Facts'' in bold-face type allow consumers to better locate the information? Alternatively, should industry members be allowed the flexibility to include a linear display that is not surrounded by a box?

3. Do consumers, industry members, or other interested parties have comments on the type size and general formatting requirements proposed for both linear displays and panels?

4. How would the proposed formatting requirements, including the linear display option, affect the costs and other regulatory burdens? What are the benefits of the proposed formatting requirements?

5. Should TTB remove the maximum type size limitation for mandatory statements of alcohol content for wine and malt beverages that appear in an Alcohol Facts statement? For malt beverages, should TTB remove the maximum type size limitation for alcohol content statements that may appear elsewhere on the label as well?

6. What alternatives exist to convey Alcohol Facts information to consumers? How, if it all, would the alternatives affect competition in the marketplace as compared to displaying the information as proposed on the physical label? What are the costs and benefits of aligning Alcohol Facts information to requirements of other countries?

7. If TTB adopts mandatory Alcohol Facts labeling for alcohol beverages, should it include the option of satisfying the requirement by making the information available electronically, for example by including a QR code or website address on the label to allow consumers to view mandatory Alcohol Facts statements on their mobile devices instead of on the product label? Would this option provide consumers with sufficient access to Alcohol Facts information at the retail store so that they can make informed decisions, given issues such as the need to use a smartphone, potential issues regarding the adequacy of cellular or Wi-Fi coverage at some retail stores, and other potential technological challenges? Would the provision of mandatory information disclosures via electronic

means create disproportional barriers to access for particular communities?

8. How would the option of disclosing the proposed Alcohol Facts information via electronic means affect the costs and other regulatory burdens? What are the benefits of disclosure via electronic means?

9. If TTB were to allow mandatory information to be disclosed electronically, should TTB allow all of the proposed Alcohol Facts information to be disclosed electronically or should some of the information be required to appear on the physical label?

10. If TTB allowed multiple options to convey Alcohol Facts information to consumers, could the lack of uniformity create consumer confusion?

9. Serving Size Reference Amounts

Consistent with the serving sizes found in TTB Ruling 2013–2, TTB proposes the following reference serving sizes in new §§ 4.111(b), 5.211(b), and 7.211(b), for wines, distilled spirits, and malt beverages, respectively:

Serving size	Alcohol percent by volume		
	Wine	Distilled spirits	Malt beverages
1.5 fl oz (44 mL), or 50 mL for 50 mL containers of distilled spirits.	.....	Above 24%	Above 24%.
2.5 fl oz (74 mL)	Above 16 to 24%	Above 16 to 24%	Above 16 to 24%.
5 fl oz (148 mL)	7 to 16%	Above 7 to 16%	Above 7 to 16%.
12 fl oz (355 mL)	.....	Not more than 7%	Not more than 7%.

TTB recognizes that these serving size reference amounts do not reflect the multiple servings that may be consumed on a single occasion. Serving size reference amounts are not intended as recommended consumption amounts but rather are intended to be used as a reference amount for the consumer to determine alcohol, nutrient, and calorie intake. TTB seeks comments on whether the proposed serving size reference amounts should be adopted, and if not, what other serving sizes should be used.

TTB specifically seeks comments on the following issues:

1. Are the proposed reference amounts a reasonably accurate representation of the amount of the product customarily consumed as a single serving? If not, what data or other information should TTB consider that would give a better estimate of the amount customarily consumed for a specific product category?

2. Are the proposed reference amounts more accurate than the serving sizes set forth in TTB Ruling 2004–1 (1.5 fl oz for distilled spirits, 5 fl oz for wines, and 12 fl oz for malt beverages, regardless of the alcohol content)? Why or why not?

3. Should TTB allow greater flexibility in serving sizes?

4. Should the serving size reference amounts be exactly equal to an alcoholic drink equivalent of 0.6 fluid ounces of alcohol, or would this mislead consumers by not recognizing the way in which alcohol beverages are typically consumed?

10. Dual-Column Alcohol Facts Panel Display

TTB proposes to allow for the optional presentation of Alcohol Facts panels in a dual-column format. The first column would provide the information for the standard reference serving size, while the second column would provide information about the contents of the entire container. TTB is proposing to allow the dual-column format on alcohol beverages sold in containers holding at least 200 percent and less than 500 percent of the serving size reference amount. See proposed §§ 4.112, 5.212, and 7.212 below. CSPI suggested that TTB could model its regulations after FDA's policy, which requires dual column nutrition labeling for products containing more than 2 and up to 3 servings per container. See 21 CFR 101.9(b)(12)(i). TTB, however, is proposing to allow dual-column labeling on containers up to 5 servings because TTB is aware of products in the marketplace that are sold in larger containers for which there may be a valid reason to include a dual-column label.

TTB is also proposing that alcohol beverages packaged and sold in containers with a net content of less than 200 percent of a single serving size reference amount must be labeled as containing a single serving, and a single serving size is the net content of the container. This means that, for example, a malt beverage sold in a can that contains 150 percent of a single serving size reference amount would be labeled with the entire net contents being considered as one serving.

TTB seeks comments on the following specific issues, and may consider different rules for dual-column labeling and single-serving containers based on the comments:

1. Does dual-column labeling create the impression that consumption of multiple servings of an alcohol beverage at one time is expected or recommended?

2. Should dual-column displays be limited to containers with three or fewer servings, consistent with the FDA regulations? Or is a limit of less than five servings better suited to the way in which alcohol beverages may be bottled and labeled?

3. Should dual-column displays be allowed on any container, regardless of the number of servings in that container, consistent with TTB Ruling 2013–2?

4. The proposed rule would require containers with a net content of more than 100 percent but less than 200 percent of a single serving size reference amount to be labeled as containing a single serving. TTB solicits comments on whether this is the best way to convey the alcohol and nutrient content of these products to consumers.

11. Implementation Period

TTB is proposing a compliance date of 5 years from the date that a final rule resulting from this document is published in the **Federal Register** to minimize the costs and burdens associated with the proposed new labeling information. TTB solicits comments on whether the proposed compliance date would suffice to limit the impact on small businesses and to reduce overall costs of compliance while ensuring that consumers are adequately informed.

TTB received a number of comments in response to Notice No. 232 requesting a sufficiently long transition period between publication of a final rule and implementation of the rule to allow businesses, and particularly small businesses, ample time to exhaust existing label stocks and to bring labels and websites into compliance with the new regulations. One commenter emphasized that a longer implementation period is needed to allow TTB time to educate regulated industry members on new requirements, create resources for small businesses, and publish clarifying guidance.

While most commenters did not suggest a specific time period, the Brewers Association recommended an implementation period of at least 3 years and the American Distilled Spirits Alliance requested at least 5 years. The Brewers Association said, ''a quicker implementation schedule would risk placing financial burdens on brewers and other producers, particularly small ones.'' CSPI recommended that, to minimize costs, TTB provide an implementation long enough that many producers would make updates to their labels even absent the regulation. CSPI cited to an FDA regulatory impact analysis for a food labeling rule that found food and beverage products tend to be voluntarily relabeled on a 2- to 5-year cycle.[30]

TTB believes that a 5-year period would provide both small and large industry members with sufficient time to phase in the requirements of the proposed mandatory Alcohol Facts labeling in a cost-effective manner. As discussed later in this document, TTB estimates that industry members change their labels at least once every 42 months; therefore, a 5-year compliance period would allow all affected industry members to make the changes required by this proposal at the same time as a regularly scheduled label change. See Section IX, Cost Analysis, below, for additional information on the estimated costs of this proposed rule, which are affected by the length of the implementation period and estimates of the frequency of changes to alcohol beverage labels.

Under this proposal, TTB will not require industry members to submit new COLA applications when the only change being made to a label is the inclusion, or alteration, of a required Alcohol Facts panel or statement containing alcohol content information. Therefore, this proposal would not require the submission of a new application for label approval simply to cover revisions to the calorie, nutrient, and alcohol content labeling of the product in accordance with the new requirements.

Under current guidance, industry members have been allowed to label their products voluntarily with either a statement of average analysis or a Serving Facts statement. See TTB Rulings 2004–1 and 2013–2. TTB has also allowed, via FAQs published on TTB's website, ''Alcohol Facts'' panels that contain information about alcohol content, but not nutrient content. All of these voluntary statements differ in several respects from the mandatory Alcohol Facts statement proposed in this document. During the implementation period, industry members may continue to use approved COLAs that contain these statements, as long as they comply with current guidance.

TTB further believes that consumers will begin to benefit from this rulemaking well in advance of the 5-year implementation date because TTB expects that many industry members will come into early compliance with the rule. As previously discussed, 95 percent of the beer volume sold by Anheuser-Busch, Molson Coors Beverage Company, Constellation Brands Beer Division, HEINEKEN USA, and FIFCO USA already contains nutritional information in the form of a voluntary Serving Facts Statement, and the Distilled Spirits Council of the United States (DISCUS) announced that all spirits products distributed in the United States by DISCUS Director Members will include nutrition information by June 2024.[31] Given rising industry participation in voluntary disclosure of nutrition information, TTB expects that if a final rule on Alcohol Facts is issued, many industry members will move to include Alcohol Facts statements on labels in advance of the 5-year implementation period.

Accordingly, effective after a 5-year implementation period, TTB proposes in amended §§ 4.32, 5.63 and 7.63 to mandate an Alcohol Facts labeling statement on all wines, distilled spirits, and malt beverages that contains both alcohol and nutrient content information, as described above. The implementation period does not appear in the proposed regulatory text but will be incorporated in any final rule resulting from this rulemaking.

TTB seeks comments on whether the length of the implementation period is adequate. In particular, TTB seeks comments on the following issues:

1. How frequently do bottlers and importers of alcohol beverages typically change labels?

2. How long do industry members need to comply with the requirements of the proposed rule?

3. Will 5 years provide enough time for small businesses to coordinate labeling changes required by regulatory changes with labeling changes that are planned in the ordinary course of business?

4. Is 5 years too long a compliance period? Should the compliance period instead be 2 years, 3 years, or another length of time?

5. If a final rule is issued, will industry members begin implementation of the labeling changes in advance of the compliance date?

VIII. Summary of Proposed Regulatory Changes

Based on the above, TTB proposes to amend parts 4, 5, 7, 24, 25, and 27 of the TTB regulations to set forth requirements for the presentation of certain alcohol content, calorie, and nutrient information in a mandatory Alcohol Facts statement. These proposed changes involve the addition of a new subpart L in each of parts 4, 5, and 7, as well as conforming changes elsewhere in parts 4, 5, and 7 of the TTB regulations. TTB also proposes amendments to parts 24, 25, and 27 of the TTB regulations with respect to the labeling of beers and wines under the IRC. The proposed regulatory amendments discussed in more detail earlier in this document are summarized below for ease of reading.

A. Mandatory Alcohol Facts Statement

TTB proposes a mandatory nutrient information statement on labels that must include the following information: the title ''Alcohol Facts''; the serving size; the number of servings per container; alcohol content as a percentage of alcohol by volume, the number of fluid ounces of pure ethyl alcohol per serving, the number of calories per serving; and the number, in grams per serving, of carbohydrates, fat, and protein.

1. Serving Size and Servings per Container

TTB proposes to define the term ''serving'' or ''serving size'' as the amount of the alcohol beverage customarily consumed as a single serving, expressed in both U.S. fluid ounces, and, in parentheses, in milliliters, for wines, distilled spirits, and malt beverages. In new §§ 4.111(b), 5.211(b), and 7.211(b), TTB proposes the use of serving size reference amounts, specific to each alcohol beverage category, which in each case most closely approximate the amount of the

[30] U.S. Food and Drug Administration, Regulatory Impact Analysis for Final Rules On: ''Food Labeling: Revision of the Nutrition and Supplement Facts Labels'' and ''Food Labeling: Serving Sizes of Foods That Can Reasonably Be Consumed at One Eating Occasion; Dual-Column Labeling; Updating, Modifying, and Establishing Certain Reference Amounts Customarily Consumed; Serving Size for Breath Mints; and Technical Amendments,'' 2016, available at *https://www.fda.gov/media/98712/download*.

[31] See September 28, 2022, statement by Distilled Spirits Council of the United States, available at *https://www.distilledspirits.org/news/distilled-spirits-council-director-members-to-provide-serving-facts-information-for-spirits-products-as-part-of-white-house-conference-on-hunger-nutrition-and-health/*.

product that a consumer customarily drinks as a single serving. This amount is specified as a reference amount, used only as a basis for the consumer to determine alcohol, calorie, and nutrient intake and not as a recommended consumption amount. These rules are intended to ensure as much uniformity as possible in labeling serving sizes within a product category. Consistent with the serving sizes in TTB Ruling 2013–2, TTB proposes the following serving size reference amounts for each category:

- *Wine:* For wines with an alcohol content of at least 7 percent and not more than 16 percent alcohol by volume, the serving size would be 5 fluid ounces (about 148 mL). For wines with an alcohol content of more than 16 percent alcohol by volume and not more than 24 percent alcohol by volume, the serving size would be 2.5 fluid ounces (about 74 mL).
- *Distilled spirits:* For distilled spirits products containing not more than 7 percent alcohol by volume, the serving size would be 12 fluid ounces (about 355 mL). For products containing over 7 percent and not more than 16 percent alcohol by volume, the serving size would be 5 fluid ounces (about 148 mL). For products containing over 16 percent and not more than 24 percent alcohol by volume, the serving size would be 2.5 fluid ounces (about 74 mL). For products containing over 24 percent alcohol by volume, the serving size would be 1.5 fluid ounces (about 44 mL) or 50 mL if bottled in a 50 mL container.
- *Malt beverages:* For malt beverages containing not more than 7 percent alcohol by volume, the serving size would be 12 fluid ounces (about 355 mL). For products containing over 7 percent and not more than 16 percent alcohol by volume, the serving size would be 5 fluid ounces (about 148 mL). For products containing over 16 percent and not more than 24 percent alcohol by volume, the serving size would be 2.5 fluid ounces (about 74 mL). For products containing over 24 percent alcohol by volume, the serving size would be 1.5 fluid ounces (about 44 mL).

Since wines and distilled spirits are subject to metric standards of fill under the TTB regulations, the serving sizes for these categories would be set forth in both fluid ounces and milliliters. TTB recognizes that consumers may use fluid ounces rather than milliliters when pouring a glass of wine or a shot glass of distilled spirits. For consistency purposes, TTB proposes to require serving sizes for malt beverages also to be set forth in both fluid ounces and milliliters.

2. Percentage of Alcohol by Volume

In new §§ 4.111(c), 5.211(c), and 7.211(c) for wines, distilled spirits, and malt beverages, respectively, TTB proposes to require alcohol content as a percentage of alcohol by volume to appear as part of the Alcohol Facts statement. TTB is also proposing to amend §§ 4.32, 5.63, and 7.63 to provide that alcohol content must appear as part of the mandatory Alcohol Facts statement, which may appear on any label affixed to the container. New § 5.211(c) also provides that an Alcohol Facts statement for distilled spirits may also bear an optional statement of alcohol content in degrees of proof. TTB is also proposing to make conforming changes to the alcohol content regulations in §§ 4.36, 5.65, and 7.65. TTB is not proposing to change any requirements related to additional statements of alcohol by volume that may appear outside of an Alcohol Facts statement.

TTB proposes to amend §§ 24.257(a)(3) and 27.59 to provide that alcohol content, expressed as a percentage of alcohol by volume, is required on labels for all wines subject to tax under the IRC. Additionally, TTB proposes to amend §§ 25.141(a), 25.142(a), and 27.60 to require an alcohol content statement on labels of all beer subject to tax under the IRC. TTB is also proposing to make conforming amendments to §§ 27.59 and 27.60 to require that imported wines and beers must be labeled with the same basic information applicable to domestic wines and beers under 27 CFR parts 24 and 25. Finally, the proposed rule also reorganizes §§ 27.59 and 27.60 for purposes of clarity.

3. Alcohol Expressed in Fluid Ounces

In new §§ 4.111(d), 5.211(d), and 7.211(d), TTB proposes to require the display of the number of U.S. fluid ounces of pure ethyl alcohol per serving on the mandatory Alcohol Facts statement.

4. Calories

In new §§ 4.111(e), 5.211(e), and 7.211(e), TTB proposes standards for expressing a statement of the calorie content per serving for wines, distilled spirits, and malt beverages, respectively.

5. Carbohydrates

In new §§ 4.111(f), 5.211(f), and 7.211(f), TTB proposes standards for expressing carbohydrate content per serving for wines, distilled spirits, and malt beverages, respectively. TTB also proposes to allow an optional statement of sugar content to appear in the Alcohol Facts statement.

6. Fat

In new §§ 4.111(g), 5.211(g), and 7.211(g), TTB proposes standards for expressing fat content per serving for wines, distilled spirits, and malt beverages, respectively.

7. Protein

In new §§ 4.111(h), 5.211(h), and 7.211(h), TTB proposes standards for expressing protein content per serving for wines, distilled spirits, and malt beverages, respectively.

B. Format and Placement of the Alcohol Facts Statement

New §§ 4.112, 5.212, and 7.212 set forth proposed formatting specifications for the Alcohol Facts Statement. TTB proposes to permit listing Alcohol Facts information in a linear fashion for all products. See these proposed sections for examples of linear displays. In addition, new §§ 4.113, 5.213, and 7.213 would permit the Alcohol Facts statement to appear in either a vertical or horizontal presentation.

C. Tolerance Levels

New §§ 4.114, 5.214, and 7.214 set forth proposed tolerance levels for all of the elements required to appear in the Alcohol Facts statement.

IX. Cost Analysis

A. Summary

Executive Order 12866 requires TTB to design regulations in the most cost-effective manner that will achieve the regulatory objective. Accordingly, TTB seeks to tailor its regulations to impose the least burden on individuals, businesses of differing sizes, and other entities, consistent with the regulatory objective.

In Notice No. 73, TTB solicited comments on the expected economic impact of the proposed rule on Serving Facts labeling, especially on small businesses. TTB asked commenters to provide specific cost data and asked the following question: How many small businesses would be impacted by the proposed rule, and what would be the economic impact of the proposal on these small businesses?

No final rule was issued in response to Notice No. 73. TTB has concluded that many of the larger issues raised by the comments in response to Notice No. 73 about costs and effects on small businesses are still valid concerns today. However, many of the comments, as well as the data that TTB previously relied upon for analyzing cost issues, are out-of-date.

TTB solicited new comments on the costs of requiring per-serving alcohol

and nutritional information on alcohol beverage labels in Notice No. 232. TTB asked if requiring this information on labels would be expected to increase the cost of products, and if so, by how much; to what extent businesses are already following voluntary guidelines for this information; and how any new mandatory labeling requirements would particularly affect small business and new businesses entering the marketplace.

TTB is now undertaking a new effort to estimate the costs of complying with the current proposed rule. This cost estimate takes into consideration the costs and concerns raised by commenters to Notice No. 73 along with the more recent comments and data received in response to Notice No. 232. TTB invites comments on this estimate.

To estimate the costs associated with this proposal, TTB utilized the 2014 FDA Labeling Cost Model,[32] adding its own data inputs, making various assumptions about the alcohol beverage industry, and adjusting costs to reflect inflation through January 2023. While FDA provided TTB with access to its model, TTB would like to emphasize that FDA is not responsible for the assumptions that TTB used in applying that model to the alcohol beverage market; nor is FDA responsible for the estimates set out in this analysis.

As set forth in more detail below, based on the available data, TTB estimates the one-time total labeling costs associated with this proposed rule under a 2-year compliance period to have a present discounted value (PDV) [33] of approximately $323.4 million (or approximately $161.7 million per year). If the compliance date is extended to 3 years, the total PDV would be approximately $258.5 million (or $86.5 million per year); for 42 months, the total PDV would be approximately $204.3 million (or $58.4 million per year). Finally, if the compliance period is extended to 5 years, the total PDV would be approximately $201.2 million (or $40.2 million per year).[34]

As detailed below, TTB also invites comments on whether analytical testing of product samples should be included as a recurring cost after the initial compliance period, and if so, whether industry members would in fact send product samples to independent laboratories for testing on an annual basis. Assuming that each industry member sends two samples of each unique product formulation to be tested by an independent laboratory each year, TTB estimates the recurring costs of the proposed rule to be $64 million. However, as explained later in this document, TTB believes that once initial testing of a product is completed, industry members may choose not to (and are not required to) send that same product formulation for testing every year. For some products, initial testing may not even be necessary.

TTB seeks comments on all aspects of its cost estimates. Given that the proposed changes would affect the labeling of virtually all alcohol beverages that fall under the definition of a wine, malt beverage, or distilled spirit under the FAA Act, and are for sale in interstate commerce, TTB believes that a compliance period of 5 years would minimize the regulatory burdens and economic costs associated with the proposal, while still ensuring that consumers receive adequate information about the alcohol beverages they are purchasing within a reasonable period of time. TTB also believes that many industry members, particularly large companies, are likely to start voluntary compliance with any final rule in advance of the compliance date, given that many industry members already include calorie and nutrient statements on their labels.

Finally, as noted elsewhere in this document, TTB also plans to seek comments in separate rulemaking projects on other labeling changes that would affect the industry, including mandatory ingredient and major food allergen labeling. TTB seeks comments on whether a single compliance date should be established for any changes resulting from these rulemaking projects.

B. Purpose of Proposed Amendments

As noted earlier in this document, the labeling provisions of the FAA Act, codified at 27 U.S.C. 205(e), provide the Secretary of the Treasury with authority to issue regulations to prevent deception of the consumer, to provide the consumer with ''adequate information'' as to the identity and quality of the product, to prohibit false or misleading statements, and to provide information as to the alcohol content of the product. Consistent with this authority, the proposed rule is intended to provide consumers with more information about the alcohol content, identity, and quality of alcohol beverages, including per-serving information about alcohol content, calories, and nutrient content. This information will in turn enable consumers to follow advice about moderate alcohol consumption, if they so choose, and will provide them with additional information about the calorie and nutrient content of the alcohol beverages they purchase and consume.

Current regulations do not require the labeling of alcohol beverages with calorie, carbohydrate, fat, and protein content, and some alcohol beverages are not even required to be labeled with alcohol content. Offering this basic information to consumers at the point of purchase, on the labels, will provide them with information to make more informed alcohol beverage choices. Providing this information in a consistent format on alcohol beverage containers will also help consumers understand the information and prevent inconsistent presentations that might be confusing.

Furthermore, the proposal to utilize TTB's authority under the IRC to issue regulations requiring alcohol content statements on all wines and beer would serve an important revenue protection purpose. TTB provided a more detailed discussion of the benefits associated with mandatory alcohol content labeling in the preamble of Notice No. 73 (72 FR 41860), and TTB notes that the new requirement would primarily affect malt beverage and table wine labels that do not already include numerical statements of alcohol content.

C. Costs

In the comments to Notice Nos. 73 and 232, manufacturers, importers, and bottlers were primarily concerned with the costs associated with three main categories: (1) New labeling equipment costs; (2) costs associated with label redesign, printing, and administrative costs; and (3) laboratory analysis/testing costs. As explained below, TTB does not believe that the proposed rule, if adopted, would impose new labeling equipment costs. The second category (label redesign, printing, and administrative costs) is estimated on a per-UPC (Universal Product Code) basis and is dependent on the length of the compliance period. The third category, laboratory analysis costs, could impact both initial costs and recurring annual costs. According to the FDA Labeling Cost Model, the initial laboratory analysis costs are affected by the percentage of labeling changes that

[32] FDA has periodically contracted with RTI International to provide a model to estimate the costs of various product labeling changes required by regulation. The most recent version is the ''2014 FDA Labeling Cost Model, Final Report, August 2015,'' available at *https://downloads.regulations.gov/FDA-2016-N-2527-2681/content.pdf.*

[33] Throughout this section, the present discounted value of monetary values is calculated using a 2 percent discount rate in accordance with OMB *Circular A–4 Chapter 12,* available at *https://www.whitehouse.gov/wp-content/uploads/2023/11/CircularA-4.pdf.*

[34] All costs in this proposal are provided in 2023 dollars.

cannot be coordinated with previously scheduled label changes. Separate and apart from the costs set forth in the model, TTB is also providing an estimate of laboratory analysis costs that may recur on an annual basis after the end of the compliance period.

1. New Labeling Equipment Costs

In Notice No. 73, TTB proposed a mandatory ''Serving Facts'' panel, with a linear display option for small containers. TTB solicited comments on whether a linear display option should be allowed for all containers irrespective of size. TTB also sought comments on whether allowing the linear display on all containers would reduce costs associated with compliance while providing consumers with adequate information about the products.

TTB received many comments from industry members and associations in favor of the linear display option. These commenters supported the use of this option for all containers, regardless of size. Some commenters assumed that a panel requirement would force industry members to use a back label and noted that not all bottlers have the necessary equipment to add a back label to their products. These commenters suggested that compliance with a panel requirement could mean that the bottler would have to purchase a new labeling machine, which would impose a significant burden on small producers and bottlers. The commenters indicated that if TTB were to permit a linear display, rather than require a panel display, the need for additional labeling equipment would be eliminated.

This proposed rule allows the mandatory Alcohol Facts information to appear either in a panel or in a linear display, regardless of the size of the container. Therefore, TTB has no reason to believe that the proposed rule would require industry members to purchase new labeling equipment to comply with its labeling requirements. TTB is inviting comments on this conclusion.

2. Costs Associated With Label Redesign, Printing, and Administrative Costs

To estimate the costs associated with label redesign, printing, and administrative costs, TTB utilized the 2014 FDA Labeling Cost Model, adding its own data inputs and in some cases making assumptions about the alcohol beverage industry.

a. FDA Labeling Cost Model

The FDA Labeling Cost Model estimates labeling costs for a broad range of FDA-regulated consumer products using current data. To utilize the model, the user specifies:

- the categories of products affected;
- the nature of the labeling change;
- the length of the compliance period; and
- additional inputs as specified.

Based on the user specifications, additional collected data, and FDA-provided data, the model generates an estimate of costs per UPC for the labeling change, total costs per product type, and an aggregate cost across all affected products. The model quantifies uncertainty or variability with high and low estimates constructed in a way that facilitates interpretation as bounds on 90 percent probability ranges. Because it is anticipated that labeling regulations would affect numerous products at the same time, the model estimates assume that manufacturers are implementing changes simultaneously across multiple products.[35]

i. Factors That Affect the Results of the FDA Labeling Cost Model

The following three factors affect the results of the FDA Labeling Cost Model:

- Whether the type of contemplated labeling change is ''minor,'' ''major,'' or ''extensive;''
- Data on the number of UPCs and total units that would be affected by the labeling change, including whether the products are ''branded'' or ''private label''; and
- The length of time the regulated industry will have to comply with the change.

aa. Types of labeling changes: The model allows for the three different types of labeling changes. Section 2.3 (page 2–9) of the model explains ''[t]he part of the label that is affected determines the number of plates (colors) that must be changed and thus the complexity of making a change.'' The three types of labeling changes are:

- *Minor change*—only one color is affected and the label does not need to be redesigned. Examples of this type of change include changing an ingredient list or adding a toll-free number.
- *Major change*—requires multiple color changes and label redesign. An example of a major change is adding a facts panel or modifying the front of a package.
- *Extensive change*—a major format change requiring a change to the product packaging to accommodate labeling information. An example of an extensive change is adding a peel-back label or otherwise increasing the package surface area.

For purposes of this analysis, TTB is assuming that the proposed rule will require a ''major change'' for all alcohol beverage containers currently in the marketplace that are subject to the labeling requirements of the FAA Act, *i.e.,* that fall under the definition of a wine, distilled spirit, or malt beverage under 27 U.S.C. 211 and that are sold or otherwise introduced into interstate commerce.[36] TTB invites comments on whether these assumptions are valid.

Finally, TTB notes that many alcohol beverages are already labeled with a ''Serving Facts'' statement or a statement of average analysis. As discussed in section VI.A, this category includes a significant number of malt beverage products.[37] For those products already labeled with a Serving Facts statement or statement of average analysis, it is arguable that any changes required by the proposed rule (changing the title of the statement, complying with the proposed formatting rules, and in some cases changing the appropriate serving size of the product) would be minor.[38] However, as noted above, TTB is assuming, for purposes of this analysis, that all covered labels will be required to undergo a major change. Under the proposed rule, many labels with Serving Facts statements would also have to be changed to place the alcohol content statement (as a percentage of alcohol by volume) and the statement of fluid ounces of pure ethyl alcohol per serving in the new statement.[39] TTB invites comments on this issue, and welcomes any available

[35] As previously noted, if TTB implements other new labeling requirements at the same time as the Alcohol Facts labeling requirements, these changes could be coordinated with use of a single compliance date.

[36] Because TTB does not have data to quantify the number of beer products reflected in the Nielsen data that would not fall under the FAA Act's definition of a ''malt beverage,'' TTB is not excluding any beer from this estimate. TTB is excluding wines under 7 percent by alcohol, to the extent such data is available.

[37] See, *e.g.,* statement by the Beer Institute that more than 95 percent of the beer volume sold by Anheuser-Busch, Molson Coors Beverage Company, Constellation Brands Beer Division, HEINEKEN USA, and FIFCO USA now voluntarily provides nutritional information. Available at *https://www.beerinstitute.org/press-releases/new-report-shows-beer-leads-all-alcohol-categories-in-providing-nutritional-information-to-consumers/.*

[38] As previously noted, there is a difference between the serving sizes authorized for statements of average analysis under TTB Ruling 2004–1 and the serving sizes authorized for Serving Facts statements under TTB Ruling 2013–2. This proposed rule would adopt the serving sizes set forth in TTB Ruling 2013–2.

[39] TTB Ruling 2013–2 permits alcohol content as a percentage of alcohol by volume, as well as alcohol content on a per-serving basis, to appear as part of a Serving Facts statement. However, many industry members choose to include the alcohol content, as a percentage of alcohol by volume, elsewhere on the label rather than including it as part of an optional Serving Facts statement.

data on how many industry members are currently including calorie and nutrient content statements on alcohol beverage labels.

bb. Data on the number of UPCs and total units that would be affected by the labeling change: Based on the FDA Labeling Cost Model, the administrative, redesign, and printing costs associated with making a labeling change are on a per-UPC basis rather than a formulation basis. Each individual product may have several UPCs associated with different sizes or types of packaging. For example, a malt beverage product with the same formulation may have several UPCs associated with that one product because it is sold in a multitude of package combinations (such as individual 12 fl oz and 24 fl oz bottles; or a 6-pack and a 12-pack of 12 fl oz cans), each of which has a separate UPC.

To determine the number of alcohol beverage UPCs in the marketplace, TTB contracted with NielsenIQ[40] to obtain a report, which consists of data for the period from September 9, 2021, through September 10, 2022,[41] for the following markets: Total U.S. all outlets combined,[42] liquor, and convenience stores.[43] At TTB's request, Nielsen reported the following data:

- Overall number of UPCs for beer, wine, and spirits;
- Overall number of brand extensions for beer, wine, and spirits;
- Number of private labels for beer, wine, and spirits;
- Number of units sold for beer, wine, and spirits for cans, bottles, and other packaging;
- Total dollars sold for beer, wine, and spirits;
- Overall number of UPCs for wine with less than 7 percent ABV; and
- Overall number of UPCs for malt beverage/beer in the flavored malt beverage category (broken down, as appropriate, by subcategories such as hard seltzer).

TTB made some changes to the NielsenIQ categorization of wine,[44] and beer/malt beverages[45] based on whether the products fall within the definitions of those terms set forth in the FAA Act, 27 U.S.C. 211.

Based on the data that Nielsen provided (including the changes to the data noted above), TTB estimates that industry members would have to modify labels for approximately 130,410 different alcohol beverage product UPCs to comply with the proposed Alcohol Facts disclosure. In Table 1, TTB has broken down this estimate into the total UPCs, brand extensions,[46] and total units for wines, distilled spirits, and malt beverages/beer. TTB invites comments on whether these estimates are valid.

TABLE 1—NUMBER OF UPCS, BRAND EXTENSIONS, AND TOTAL UNITS

	UPCs	Brand extensions	Total units
Wines	64,509	20,963	1,690,698,919
Distilled Spirits	32,775	16,447	1,741,901,217
Malt Beverages/Beer	33,126	22,364	5,823,640,369
Total	130,410	59,774	9,256,240,505

[40] Based in part on data reported by NielsenIQ through its MarketTrack Service for the Alcohol Beverage Category for the period from September 9, 2021, through September 10, 2022, for the Total US all outlets combined, liquor, and convenience stores market. Copyright © 2022 Nielsen Consumer LLC.

[41] TTB emphasizes that the analyses, calculations and conclusions in this document may have been informed in part by the NielsenIQ RMS data through NielsenIQ's Retail Measurement Service (RMS) for the beverage alcohol product categories for the reported time period for Total US expanded all outlets combined, liquor, and convenience stores. However, any such analyses, calculations and conclusions are those of TTB and do not reflect the views of NielsenIQ. NielsenIQ is not responsible for, had no role in, and was not involved in analyzing and preparing the results reported herein, or in developing, reviewing or confirming the research approaches used in connection with this document.

[42] NielsenIQ's xAOC market includes retailers in its Food, Drug, Mass, Walmart, Club, Dollar, and Military channels. Nielsen defines those channels as follows:

—Food is inclusive of all grocery stores with greater than $2MM in annual ACV, including smaller chains and independents, and large players such as Whole Foods.

—Drug is inclusive of all chains and independents with greater than $1MM in annual ACV.

—Select Mass includes Target, K-Mart, and ShopKo.

—Walmart includes Walmart Division 1 + Supercenter's + Neighborhood Markets.

—Select Club is inclusive of Sam's Club and BJ's. Costco does not participate in market measurement with any data provider.

—Select Dollar is inclusive of Dollar General, Family Dollar, and Fred's Dollar.

—Military is inclusive of military commissary stores.

[43] Nielsen states that its Convenience channel includes ''major chains as census cooperators, and is projected to represent all chains and independents.''

[44] While the Nielsen data separated out ''wine'' based on whether the alcohol content was at least 7 percent, it separated out ''cider'' products based on whether the alcohol content was over 6 percent alcohol by volume or 6 percent and under. As previously noted, the definition of wine under the FAA Act (but not the IRC) covers only wine that contains at least 7 percent alcohol by volume. Thus, TTB excluded wines with an alcohol content of under 7 percent and excluded ciders with an alcohol content of 6 percent and under. This meant that ciders were included if they contained over 6 percent alcohol by volume. TTB recognizes that this number is overly inclusive, because it includes some wines with an alcohol content of over 6 but under 7 percent alcohol by volume, even though those wines are not subject to the labeling requirements of the FAA Act.

[45] As previously noted, the FAA Act's definition of ''malt beverages'' does not include beer made without both malted barley and hops. Thus, for example, while Nielsen included ''cider'' products in ''Total Beer/FMB/Cider'' category, TTB moved the cider products to the ''wine'' category instead, as cider products (*i.e.,* products predominantly derived from the fermentation of apples) would be classified as wines under TTB regulations implementing both the IRC and the FAA Act. While it is possible that some of these products are in fact beer or malt beverages, TTB regulations do not provide for the labeling of malt beverages as ''cider.'' Similarly, NielsenIQ also has a subcategory of beer entitled ''hard seltzer.'' While some of these products may not be malt beverages under the FAA Act, some hard seltzer products are in fact made with both malted barley and hops, and are thus classified as malt beverages within the meaning of the FAA Act. Because TTB did not have a basis to distinguish those hard seltzers that are ''malt beverages'' under the FAA Act from those that are not, the entire hard seltzer subcategory is included in the overall category of malt beverages. TTB notes that this approach may overstate the number of malt beverages (within the meaning of the FAA Act) in the marketplace.

[46] For purposes of this analysis, TTB used the Nielsen ''brand extensions'' as a proxy for formulas.

cc. Private label products: Private-label alcohol beverages are traditionally brands created for a company (often a retailer or restaurant), which sell exclusively via one sales channel. At TTB's request, NielsenIQ provided data on the number of private labels in the marketplace, but noted that its methodology meant that individual UPCs for private labels would be masked and displayed as a ''pseudo UPC.'' Nielsen's data reflected that private label UPCs made up less than one percent of each category (wine, distilled spirits, and malt beverages). However, based on Nielsen's explanation of its methodology, as well as the publicly available data on the number of private labels in the alcohol beverage market, TTB views the number of private labels reported in the data as being underinclusive.[47]

The FDA Labeling Cost Model treats ''private labels'' differently from branded labels and assumes that labeling changes for private labels require additional time for coordination with regulatory changes. TTB believes that the model's treatment of private labels makes the private label category a useful proxy for the percentage of UPCs that might require additional time for coordinating regulatory labeling changes with regularly scheduled labeling changes, due to the size of the company.

After reviewing the available data on private labels, as well as the available data on the size of businesses in the wine, distilled spirits, and malt beverage industries, TTB is estimating that 10 percent of the alcohol beverage products requiring labeling changes as a result of this proposed rule may require additional time to coordinate regulatory labeling changes with labeling changes made in the ordinary course of business, in the same way that ''private label'' products require additional time under the FDA Labeling Cost Model. For the sole purpose of estimating costs under different compliance periods, TTB is treating those products as affecting the costs in a manner that is functionally equivalent to the role that private labels play in the FDA Labeling Cost Model.[48] Accordingly, TTB estimates that approximately 13,041 UPCs (10 percent of the total 130,410 UPCs) fall into the private label category for the purposes of the model.

dd. Length of compliance period: The FDA Labeling Cost Model assumes that the costs of a new labeling requirement fall significantly as the time allowed for compliance increases because affected industry members can better coordinate new labeling requirements with scheduled labeling changes. Section 3 of the model explains that product manufacturers ''often update their labeling information for marketing purposes, because of a change in packaging, or for other reasons,'' and that ''when manufacturers update labels for nonregulatory reasons, they can often incorporate a change required by a regulation at minimal additional costs.'' Thus, the model accounts for these nonregulatory labeling changes when estimating the costs of regulatory labeling changes to avoid overstating the costs of compliance.

The model further explains that ''[i]t is likely that a regulation affecting labeling will cause affected firms to incur some level of costs, regardless of how well coordinated the regulatory labeling change is with nonregulatory labeling changes.'' See FDA Labeling Cost Model Section 3.1. The model, therefore, assumes that a regulation affecting labeling will cause affected entities to incur some costs even when a regulatory labeling change is coordinated with nonregulatory labeling changes, and it accounts for the incremental costs associated with the regulation, ''such as staff time for reviewing the regulatory requirements, determining options for complying with the regulatory requirements, and coordinating the required change with a scheduled change.'' Id.

The FDA Labeling Cost Model explains that most food manufacturers that provided estimates to FDA indicated that some 20–50 percent of products are relabeled in any given year, indicating a 2–5 year cycle for relabeling all products. Furthermore, interview respondents for the FDA Labeling Cost Model noted that private label products were less likely to be relabeled in any given year. (See Section 3.2.1, page 3–7).

TTB does not have specific data on the frequency of scheduled label changes for the alcohol beverage industry but believes it would be similar in many respects to the FDA-regulated food industry. Table 3–1 of the FDA Labeling Cost Model presents the FDA's assumptions about the proportion of UPCs that could be changed together with a scheduled label change, based on the length of the compliance period. The model assumes that 100 percent of brand name products can coordinate a regulatory label change with a regularly scheduled label change within two years.[49]

Private label products, however, do not change their labels as often. Accordingly, a longer compliance period is necessary to coordinate a regulatory change with a regularly scheduled change for all private label products. For private label products, the percentage of changes that can be coordinated with a regularly scheduled change is only 26 percent at 2 years (as compared to 100 percent for branded products), and 57 percent at 3 years. A 42-month compliance period is required to coordinate 100 percent of changes to private label products with regularly scheduled label changes.[50]

TTB applied the FDA's assumptions about the proportion of UPCs that could be changed together with a scheduled label change, based on the length of the compliance period, to the approximately 130,410 different alcohol beverage product UPCs. Table 2 shows the number of coordinated changes and uncoordinated changes to the alcohol beverage UPCs for a compliance period of 2, 3, 3.5, and 5 years, broken down by wines, distilled spirits, and malt beverages/beer. Because the FDA model assumes that 100 percent of branded product label changes can be coordinated within a 2-year compliance period, the number of uncoordinated changes is solely driven by private labels. With a 3.5-year compliance period or longer, the model assumes that all label changes, whether branded or private label, can be coordinated with a regularly-scheduled change, and that, therefore, there are no uncoordinated changes.

[47] See, *e.g.,* Catherine Douglas Moran, ''Untapped: How grocers are growing their private label alcohol assortment,'' Grocery Dive, available at *www.grocerydive.com/news/untapped-how-grocers-are-growing-their-private-label-alcohol-assortment/592081/;* and Hannah Wallace, ''*Private Label Wines: A Peek Behind the Label,*'' SevenFifty Daily, available at *https://daily.sevenfifty.com/private-label-wines-a-peek-behind-the-label/.*

[48] For example, TTB notes that under data from the North American Industry Classification System (NAICS), as adjusted for inflation, the category of brewers, wineries, and distillers that have fewer than 20 employees account for just under 10 percent of the annual revenues of those businesses. See Section XI.E.2. For wineries, businesses with fewer than 20 employees account for 11.7 percent of the annual revenues; for brewers, the figure is 9.2 percent, and for distillers, the figure is 7.3 percent.

[49] This data point is limited to the products that TTB selected from the FDA Labeling Cost Model to use as analogs for the relevant alcohol products and does not necessarily apply to all food and drink products.

[50] TTB notes that even if the alcohol beverage industry differs from the food industry with regard to the frequency with which label changes are made for private labels, as discussed previously, the private label category is a useful proxy for the percentage of labels that may not be changed as frequently as other labels are.

TABLE 2—NUMBER OF UNCOORDINATED/COORDINATED CHANGES BY UPC

	Wines	Distilled spirits	Malt beverages
24 months:			
Uncoordinated	4,774	2,425	2,451
Coordinated	59,735	30,350	30,675
36 months:			
Uncoordinated	2,774	1,409	1,424
Coordinated	61,735	31,366	31,702
42 months:			
Uncoordinated	0	0	0
Coordinated	64,509	32,775	33,126
60 months:			
Uncoordinated	0	0	0
Coordinated	64,509	32,775	33,126

ii. Qualifications to TTB's Application of Model to Alcohol Beverages

As previously noted, the data available to TTB did not always match up with the categories reflected in the FDA Labeling Cost Model. Accordingly, TTB had to make some assumptions in applying the model to its data. TTB invites comments on the validity of those assumptions and welcomes data on any of these issues.

- The FDA Labeling Cost Model does not include alcohol beverage product categories. TTB, therefore, had to use proxy categories for wine, spirits, and malt beverages. The categories in the model reflect different packaging types, material costs, and inventory costs that apply to that category. The variability in costs between different food categories in the model is primarily driven by the print labeling costs (material) and inventory-related costs (discarding of labels or packages) for different packaging and label types. Accordingly, TTB chose food categories as proxies for the three alcohol beverage categories based on similar packaging types and labels. Nielsen provided estimates of the ratio of packaging types (*e.g.,* cans, bottles) for each alcohol beverage commodity. TTB chose the model category ''non-alcoholic wine'' as a proxy for all wine and spirits because the costs for the ''non-alcoholic wine'' category are associated with ''paper labels,'' such as those attached to glass bottles, and the Nielsen data showed that the vast majority of wine and spirits are packaged in bottles. The Nielsen data showed that approximately 70 percent of malt beverages are packaged in aluminum cans and the remaining 30 percent are primarily in glass bottles. TTB, therefore, chose the food category of ''coffee- liquid,'' which reflects costs associated with packaging in aluminum cans, as a proxy for 70 percent of the malt beverages and used the ''non-alcoholic wine'' category as a proxy for malt beverages in glass bottles.[51]
- TTB applied FDA Labeling Cost Model input costs for labor, materials, analytical costs, marketing, inventory, and recordkeeping, based on its conclusion that this model is a reasonable proxy given the similarities in packaging foods and alcohol beverages.
- The FDA Labeling Cost Model was developed based on 2014 wage rates and allows for adjustments for inflation. Accordingly, TTB used Bureau of Labor Statistics data to apply an inflation adjustment of 25.5 percent, based on the estimated aggregate Consumer Price Index inflation rate between the start of 2014 and January 2023.[52]
- TTB input data that is specific to alcohol beverages. However, the data also reflects some working assumptions:
  - For the reasons explained earlier in this section, TTB assumed that the share of labels where changes could not easily be coordinated with regulatory changes was 10 percent. In the FDA Labeling Cost Model, these calculations are based on the number of ''private labels.'' However, for the alcohol beverage category, TTB estimated that whether an alcohol beverage product is a ''private label'' product or not, the 10 percent figure is a reasonable proxy for those businesses that make regularly scheduled labeling changes on a less frequent basis.[53] TTB invites comments on this assumption. TTB also notes that with a proposed 5-year compliance period, the exact percentage of private label products, or private label equivalents, is not as important, because the model estimates that 100 percent of private label changes will be ''coordinated'' labeling changes as of 42 months.
  - For purposes of calculating the costs of analytical testing *(i.e.,* laboratory analysis), TTB used Nielsen-provided data on the number of ''brand extensions'' as a proxy for the number of formulations.
  - The data in question does not cover the entire market; however, TTB has tentatively concluded that the data likely included unique products that represent close to 100 percent of all the UPCs that are available throughout the United States. TTB seeks comments on the validity of this conclusion.

b. Costs of Proposed Labeling Changes

i. Cost per UPC

Using the model with the described data inputs and qualifications, the mean labeling cost per UPC for coordinated labeling changes (changes that can be coordinated with scheduled changes) is unaffected by length of the compliance period. Regardless of whether the compliance period is 2 years, 5 years, or somewhere in between, the costs per UPC for a coordinated labeling change is $1,636.52 for wines, distilled spirits, and malt beverages.

For changes that cannot be coordinated, the mean labeling cost per UPC varies based on the compliance period, as is illustrated in Table 3. The cost per UPC for uncoordinated changes (changes that cannot be coordinated with scheduled changes) is driven upward by both greater-per-unit labor, material, and recordkeeping costs, and the presence of inventory and analytical costs, which are not applicable to coordinated labeling changes.

[51] These costs may not be a perfect proxy for those that would be incurred in the printing of alcohol beverage labels, but it was the best proxy available to TTB.

[52] Consumer Price Index (January 2023), U.S. Bureau of Labor Statistics, available at *https://www.bls.gov/cpi/.*

[53] See discussion in Section IX.C.2.a.i.cc.

TABLE 3—MEAN COST PER UPC FOR UNCOORDINATED CHANGE [54]

	Wines	Distilled spirits	Malt beverages
24 months	$11,856.67	$12,992.46	$19,352.27
36 months	11,264.61	11,791.86	12,572.01
42 months	10,427.36	10,427.36	9,445.05
60 months	10,427.36	10,427.36	9,445.05

ii. Initial Cost of Compliance

Table 4 sets out the overall initial cost of compliance with the proposed regulation based on four different compliance periods (2 years, 3 years, 42 months and 5 years), applying a 25.5 percent inflation rate as of January 2023.[55] TTB estimates the one-time total relabeling costs associated with this proposed rule to be approximately $333 million assuming a compliance date of 2 years (or approximately $167 million per year). If the compliance date is extended to 3 years, the total costs would be approximately $270 million (or $90 million per year); for 3.5 years, the total costs would be approximately $214 million (or $61 million per year), and if the compliance date is extended to 5 years, the total costs would be approximately $214 million (or $43 million per year).

TABLE 4—TOTAL COST BASED ON LABELING COMPLIANCE PERIOD

	Wine (million)	Distilled spirits (million)	Malt beverages (million)	Total (million)	Average annual cost (million)
24 months	$154	$81	$98	$333	$167
36 months	132	68	70	270	90
42 months	106	54	54	214	61
60 months	106	54	54	214	43

Table 5 sets out the same overall estimated cost of compliance based on the four different compliance periods but with a 2 percent discount rate. TTB estimates the one-time total relabeling costs associated with this proposed rule at a 2 percent discount rate to be approximately $323.4 million assuming a compliance date of 2 years (or approximately $161.7 million per year). If the compliance date is extended to 3 years, the estimated total costs with a 2 percent discount rate would be approximately $259.5 million (or $86.5 million per year); for 3.5 years, the estimated total costs with a 2 percent discount rate would be approximately $204.3 million (or $58.4 million per year), and if the compliance date is extended to 5 years, the estimated total costs with a 2 percent discount rate would be approximately $201.2 million (or $40.2 million per year).

TABLE 5—TOTAL COSTS WITH 2 PERCENT DISCOUNT RATE

	Undiscounted (million)	2% Discount rate (million)	Undiscounted average annual cost (million)	2% Discount average annual cost (million)
24 months	$333	$323.4	$167	$161.7
36 months	270	259.5	90	86.5
42 months	214	204.3	61	58.4
60 months	214	201.2	43	40.2

The overall cost of compliance goes down as the compliance period gets longer due to the higher number of coordinated changes in the longer compliance periods.[56] Costs for shorter compliance periods are far greater due to the greater number of uncoordinated changes, which drive up per-unit labor and recordkeeping costs and create inventory and analytical costs that do not apply to coordinated labeling changes.

As previously noted, TTB estimates that approximately 13,041 UPCs (10 percent of the total 130,410 UPCs) fall into the category of products for which the label is less likely to be modified on a regular basis, thus making them roughly equivalent to FDA's private label category. While the model assumes that 100 percent of brand labels will be able to coordinate regulatory changes with regularly scheduled labeling changes with a compliance period of at least 2 years, this is not true of private labels until the compliance period reaches 42 months. Thus, the difference in the total labeling costs under the FDA Labeling Cost Model between a 2-year, a 3-year, a 42-month, and a 5-year compliance period is driven by assumptions about private labels.

c. Proposed Compliance Period

Based on its analysis of the cost data described in this section, TTB proposes to adopt a 5-year implementation

[54] It should be noted that under the model, there are no uncoordinated labeling changes for compliance periods of at least 42 months. See Table 2.

[55] The figures in Table 4 were calculated using the FDA Labeling Cost Model, which only includes initial costs. The model does not calculate any recurring costs that may accrue following the initial compliance period.

[56] The overall cost is the same for the 42-month and 60-month compliance periods because the FDA Model assumes that at 42 months all labeling changes will be coordinated.

period. TTB believes that the proposed compliance period will reduce the costs and burdens associated with the proposed new labeling requirements. According to the FDA Labeling Cost Model, 100 percent of industry members will be able to coordinate their labeling changes as a result of the proposed regulatory requirements with their scheduled labeling changes within the proposed 5-year implementation period. This will allow affected industry members to use up existing label stocks and coordinate the redesign of their labels with an already planned label redesign.[57]

TTB is further proposing to reduce the costs associated with new labeling information by permitting linear displays and not requiring industry members to submit new applications for label approval when the only change being made to the label is the inclusion of a new Alcohol Facts statement, or the replacement of an already approved Serving Facts statement or statement of average analysis, with a new Alcohol Facts statement.

TTB invites comments on this data, the proposed compliance period, and any other options available to reduce regulatory burdens and economic costs while still providing the consumer with adequate information about the products in question.

3. Recurring Analytical Testing Costs

In response to Notice No. 73, many commenters raised the issue of the cost of conducting analytical testing of their products. Comments on Notice No. 232 demonstrate that the costs of conducting analytical testing of products continue to be a concern for small producers. But the comments also showed that in the time since Notice No. 73 was published, many industry members have begun testing their products for purposes of listing calorie and nutrient information on labels and websites, or in some cases, so that restaurants may comply with the menu labeling regulations administered by FDA.[58] The Beer Institute commented that, as of 2021, 95 percent of the malt beverages produced by Anheuser-Busch, Molson Coors, Constellation Brands, HEINEKEN USA, and FIFCO USA already include nutrient information,[59] and DISCUS commented that by June 2024, all DISCUS Director Members[60] will provide per-serving alcohol and nutritional information on the labels of all spirits products they sell in the United States.

The FDA Labeling Cost Model estimates a cost of $1,060 per product formulation for a laboratory analysis of non-alcoholic wines that includes two samples, as well as the cost of preparing and submitting samples to a laboratory.[61] However, the model applies the cost for laboratory analysis only with regard to changes that cannot be coordinated with regularly scheduled labeling changes.

TTB compared the FDA figures with quotations for calorie and nutrient testing for alcohol beverages on the publicly available websites of three randomly selected laboratories, and determined that the estimates, per sample, ranged from a low of $160 to a high of $435. Some testing laboratories charged different amounts depending on the type of alcohol beverage.[62]

TTB also received comments in response to Notice No. 232 that included data on testing costs. Commenters quoted testing costs ranging from $170-$800 per product. The range in testing costs seemed to be related to the number of nutrients the commenter assumed would need to be included in the test. One commenter stated that the testing necessary for all nutrients that appear in the FDA's Nutrition Facts Label would cost $500, but that the test for calories, carbohydrates, protein, and fat (the nutrients proposed for Alcohol Facts panels) would cost only $170.

For purposes of this analysis, TTB is including an estimate of the recurring costs of analytical testing for calorie and nutrient content for alcohol beverages. Using an estimate of approximately 60,000 brand extensions, or different formulations, per year, with a cost of $1,060 for testing two samples of each formulation, the ongoing annualized cost of the proposed rule would be approximately $64 million. TTB invites comments on whether industry members would in fact plan to conduct analytical testing of their products if the proposed rule is adopted, and if so, how frequently such testing would occur. In particular, TTB seeks comments on whether the reasons outlined below might result in a lower cost for, and frequency of, testing:

- *Differences between TTB's proposed rule and FDA's nutrient labeling regulations.* The FDA Nutrition Facts label includes many more nutrients than the proposed TTB Alcohol Facts label, which may impact the cost of testing.[63]
- *The proposed rule allows industry members to rely on databases rather than analytical testing.* The proposed rule would not require industry members to send each batch of a product to a laboratory for analysis prior to labeling the product; nor would it require any testing at all. Industry members may choose to rely on analytical testing, published databases, mathematical calculations based on alcohol content (for certain products), or an appropriate blend of these methods to accurately label their products. The frequency with which producers will conduct analytical testing on products will vary from product to product. It is up to the bottler or importer to accurately label the product; however, the proposed regulations do not prescribe a particular methodology.
- *Proposed tolerances facilitate the use of typical values charts and other methodologies to determine calorie and nutrient content.* As previously noted, in 2020, TTB issued public guidance to broaden the tolerance levels for calorie statements on labels and in advertisements. See TTB Ruling 2020–1 and TTB Procedure 2020–1. In this proposed rule, TTB has included this expanded tolerance level for calories, and is adopting an objective standard for the three nutrients required to be disclosed, allowing a tolerance of 20 percent above or below the labeled amount. TTB believes that these proposed changes will facilitate the use of ''typical values'' charts and other methodologies to calculate the calories, carbohydrates, fat, and protein content of an alcohol beverage product. TTB is also proposing to expand the alcohol content tolerance for malt beverage

[57] While this proposal will allow all industry members five years to implement required changes, TTB believes that many industry members, particularly large companies, are likely to start voluntary compliance with any final rule in advance of the compliance date given that many industry members already include calorie and nutrient statements on their labels.

[58] See FDA final rule, ''Food Labeling; Nutrition Labeling of Standard Menu Items in Restaurants and Similar Retail Food Establishments,'' which includes alcohol beverages, available at *https://www.federalregister.gov/documents/2014/12/01/2014-27833/food-labeling-nutrition-labeling-of-standard-menu-items-in-restaurants-and-similar-retail-food.*

[59] Beer Institute statement, supra note 8.

[60] As of May 9, 2024, DISCUS Director Members included Bacardi, Brown-Forman, Constellation Brands, and Remy Cointreau among others. DISCUS lists the Director Members on its website at *https://www.distilledspirits.org/director-members/.*

[61] This estimated laboratory analysis cost includes the adjustments for inflation discussed above.

[62] These estimates usually covered testing that would provide results for alcohol content, calories, carbohydrates, and protein. The laboratories generally advised that fat was not expected to be found in alcohol beverages, and that analytical testing for fat content would be an extra cost.

[63] TTB notes that while the proposed rule would require disclosure of the calorie content and three macronutrients (carbohydrates, fat, and protein), FDA Nutrition Facts labels also require the disclosure of sodium, fiber, and certain vitamins and minerals.

labeling statements. This means bottlers would be less likely to have to change labels due to minor variations in alcohol content among different batches.

• *Availability of calculations based on alcohol content.* For many products, there will be no need to test at all. For example, a company producing an 80-proof vodka will know from standard databases what the calorie content of the product is. The product will not have any carbohydrate, fat, or protein content. Furthermore, the tolerances adopted by the proposed rule facilitate the use of non-analytical methods to determine calories and carbohydrates for many alcohol beverages after the alcohol content of the product is determined.

• *Industry members are already testing their products in the absence of a regulatory requirement.* TTB seeks comments on the extent to which industry members are already conducting analytical testing in the absence of regulations that mandate this type of disclosure on labels.

TTB tentatively concludes it is likely that a significant number of products will either not need to be tested on an annual basis or are already being tested. TTB is nonetheless including these products in the estimates, and believes it is reasonable to estimate costs based on the assumption that, on average, each company will conduct one analytical test per year, consisting of two samples, of each formulation.[64] If a 5-year compliance period is adopted, TTB has estimated that the initial compliance costs of the proposed rule would amount to approximately $201.2 million in 2023 dollars (or $40.2 million per year). If TTB assumes that industry members will continue to send each product formulation for analytical testing each year, the ongoing annualized cost of the proposed rule would be approximately $64 million.[65]

TTB invites comments from the public and the industry with regard to this estimate. In particular, we are interested in receiving comments on how many industry members, particularly small businesses, would send their products for analytical testing on an annual basis as a result of the proposed rule, as well as the number that would have no need to do this because:

• They already know the calorie and nutrient values of their products;

• They would conduct analytical testing even in the absence of a regulatory requirement;

• They feel comfortable relying upon databases for this information, or

• The nature of their product is such that the relevant information can be accurately calculated based simply on the alcohol content of the product.

X. Public Participation

A. Comments Sought

TTB requests comments from the public and all interested parties on the regulatory proposals contained in this document. TTB requests general comments from anyone interested in the regulatory proposals outlined in this document. TTB seeks comments on the proposed rule as well as other approaches also discussed in this document. TTB has posed specific questions on various issues throughout this preamble, and it seeks comments in response to those questions. In developing the final rule, TTB will carefully evaluate the proposed regulations in light of all comments and suggested alternative approaches, and it will adopt the most appropriate approach. Where TTB has specifically solicited comments on alternatives to proposed amendments, it may consider adopting such alternatives in lieu of the proposed amendments based on its review of the comments.

TTB is particularly interested in comments that address whether the proposed revisions to the labeling regulations will provide the consumer with adequate information about the identity, quality, and alcohol content of the product. Where TTB proposes substantive changes, TTB seeks comments on the proposals for further appropriate changes.

TTB also seeks comments on the impact that the proposed changes will have on industry members and any suggestions as to how to minimize any costs or regulatory burdens associated with the proposed regulations, including the following issues:

1. Does the proposed compliance date suffice to limit the negative impact on small businesses and reduce overall costs of compliance while ensuring that consumers receive adequate information about the identity, quality, and alcohol content of the alcohol beverage products they are purchasing and consuming?

2. Is there a shorter compliance period that would provide more benefits to consumers while still limiting costs and potential negative impacts on small businesses? Specifically, would a 2-, 3-, or 3.5-year compliance period suffice?

3. How many small businesses would be impacted by the proposed rule, and what would be the economic impact of the proposal on these small businesses? How, if at all, does the length of the compliance period affect the impact on small businesses? Please explain in detail and provide specific cost data.

4. Are the tolerances for nutrient labeling sufficiently broad to facilitate reliance on typical value charts and databases but still specific enough to provide accurate information to consumers? How, if at all, would the use of typical value charts and databases reduce the costs of the proposed rule, particularly for small businesses? Please explain in detail and provide specific cost data.

We welcome comments on all other issues presented in this notice of proposed rulemaking.

B. Submitting Comments

You may submit comments on this proposal as an individual or on behalf of a business or other organization via the *Regulations.gov* website or via postal mail, as described in the **ADDRESSES** section of this document. Your comment must reference Notice No. 237 and must be submitted or postmarked by the closing date shown in the **DATES** section of this document. You may upload or include attachments with your comment. You also may submit a comment requesting a public hearing on this proposal. The TTB Administrator reserves the right to determine whether to hold a public hearing. If TTB schedules a public hearing, it will publish a notice of the date, time, and place for the hearing in the **Federal Register**.

C. Confidentiality and Disclosure of Comments

All submitted comments and attachments are part of the rulemaking

[64] See FDA Labeling Cost Model, Section 3.1.2 ''Analytical Testing.'' (''To conduct analytical testing, a manufacturer will usually prepare a composite sample made up of several samples of the product. Based on information provided by the manufacturers we contacted, they usually test one composite sample but may test up to three samples. Many manufacturers already have some idea of the levels of the particular substance in their product from their routine quality control checks. In particular, some manufacturers told us they test products approximately every 2 years to verify initial test results. However, even if the manufacturer has data on a particular substance, if a regulation involves that substance, the manufacturer would generally retest to confirm their data.'')

[65] The FDA Model assumes that there are no analytical testing costs for coordinated labeling changes; therefore, the initial compliance cost of $201.2 million in 2023 dollars (or $40.2 million per year) does not include analytical testing because the model assumes there will be no need for analytical testing for coordinated labeling changes. If, instead, the initial compliance cost included the recurring cost of analytical testing, an additional $64 million would be added to those implementation costs, which, if prorated over 5 years, would amount to an additional $13 million per year during the implementation period, for a total cost of $53.2 million per year.

record and are subject to public disclosure. Do not enclose any material in your comments that you consider confidential or that is inappropriate for disclosure.

TTB will post, and you may view, copies of this document, its supporting materials, and any comments TTB receives about this proposal within the related *Regulations.gov* docket. In general, TTB will post comments as submitted, and it will not redact any identifying or contact information from the body of a comment or attachment.

Please contact TTB's Regulations and Rulings division by email using the web form available at *https://www.ttb.gov/contact-rrd,* or by telephone at 202–453–2265, if you have any questions regarding comments on this proposal or to request copies of this document, its supporting materials, or the comments received in response.

XI. Regulatory Analyses and Notices

The impacts of this proposed rule have been examined in accordance with Executive Order 12866, as supplemented by Executive Order 13563 and amended by Executive Order 14094, and the Regulatory Flexibility Act (5 U.S.C. 601–612).

A. Purpose of the Rule

The overall purpose of the proposed rule is to provide consumers with more information about the identity, quality, and alcohol content of alcohol beverages. Since the effective date of the Nutrition Labeling and Education Act of 1990, nutrition labeling has been required for foods subject to the labeling regulations of the FDA (subject to certain exceptions), and the Department of Agriculture has similarly adopted regulations for foods subject to its labeling regulations. This leaves alcohol beverages subject to the labeling regulations of the FAA Act as the only type of packaged beverage category without any requirement for calorie or nutrient labeling.

Current TTB policy is that claims about reduced calorie and carbohydrate levels are misleading in the absence of a more complete statement regarding the per-serving levels of calories, carbohydrates, protein, and fat. These statements may be presented in the form of a Serving Facts statement or a statement of average analysis, each of which has different serving sizes. TTB is inviting comments on whether the current lack of uniformity with regard to calorie and nutrient labeling is confusing to consumers, and whether consumers would benefit from readily accessible information in the form of an easily understood labeling statement in a consistent format on alcohol beverage containers.

Accordingly, TTB proposes to require the disclosure of alcohol content expressed as a percentage of alcohol by volume on all alcohol beverage labels and to require the disclosure of calories, certain nutrients, and fluid ounces of pure ethyl alcohol per serving in an Alcohol Facts statement on all alcohol beverage labels subject to the FAA Act.[66] TTB believes this proposal would provide consumers with the information they need to follow advice from the U.S. Government, public health organizations, and their own doctors about alcohol consumption, if they so choose.

Additionally, TTB has determined that mandatory alcohol content statements on labels for all beer and wines subject to tax under the IRC will assist in protection of the revenue.

B. Benefits

TTB does not have data to quantify the monetary benefits of the proposed rule, but as stated previously, the overall purpose of the proposed rule is to provide consumers with more information about the identity, quality, and alcohol content of alcohol beverages. This information will in turn enable consumers to follow advice about moderate alcohol consumption and will provide them with additional information about the calorie and macronutrient content of alcohol beverages. Currently, alcohol beverage products are the only beverage products on the market that are not required to provide labeling information concerning calorie, carbohydrate, fat, and protein content. Additionally, most malt beverage products and some wines are not required to disclose the alcohol content on their labels. TTB believes offering this information to consumers on product labels at the point of purchase will provide consumers with adequate information to make more informed alcohol beverage choices.

The health risks associated with alcohol consumption and alcohol abuse remain clear. According to *Alcohol Facts and Statistics,* a publication of the National Institute on Alcohol Abuse and Alcoholism (NIAAA), an estimated 178,000 people in the United States died from alcohol-related causes from 2020–2021.[67] The Centers for Disease Control estimates that excessive alcohol consumption costs $249 billion annually in the United States, approximately $807 per person annually, or $2.05 per drink sold. These costs are based on lost workplace productivity, healthcare expenses, law enforcement and criminal justice expenses, and losses from motor vehicle crashes.[68]

The *2023 National Survey on Drug Use and Health,* conducted annually by the Substance Abuse and Mental Health Services Administration, states that 28.1 million adults ages 18 and older had Alcohol Use Disorder (AUD).[69] According to NIAAA, ''[AUD] is a medical condition that doctors diagnose when a patient's drinking causes distress or harm'' and includes both alcohol abuse and alcohol dependence.[70] Furthermore, ''NIAAA defines binge drinking as a pattern of drinking that brings blood alcohol concentration (BAC) levels to 0.08g/dl. This typically occurs after 4 drinks for women and 5 drinks for men—in about 2 hours.'' [71]

The *Scientific Report of the 2020 Dietary Guidelines Advisory Committee* states that ''[b]inge drinking itself has increased, including among middle- and older-aged adults, as has mortality from fully alcohol-attributable causes of death, including alcoholic liver disease.'' [72] The Scientific Report notes that excessive drinking accounted for 1 in 10 deaths among working age adults, with each death representing an average of 30 years of potential life lost. The report states that approximately 20 percent of people who begin drinking will develop AUD at some point during their lives. However, only a minority of people who drink excessively or who binge drink have an alcohol use disorder. As such, excessive drinking and alcohol-related problems are prevalent, and are not restricted to those with an alcohol use disorder. At all

[66] Further information on the specifics of TTB's proposal and its authority to implement the proposal are in Section VII.

[72] Chapter 11, Part D, *Scientific Report of the 2020 Dietary Guidelines Advisory Committee: Advisory Report to the Secretary of Agriculture and the Secretary of Health and Human Services,* Department of Agriculture, Agricultural Research Service, Washington, DC, available at *https://www.dietaryguidelines.gov/2020-advisory-committee-report.*

levels, and particularly for high per occasion alcohol consumption and resulting blood alcohol concentrations, alcohol is associated with an increase in intentional injuries, such as suicide and homicide, and unintentional injuries, such as motor vehicle accidents and drownings.[73]

With regard to health effects, the *Dietary Guidelines for Americans* note that ''among those who drink, higher average alcohol consumption is associated with an increased risk of death from all causes compared with lower average alcohol consumption.'' [74] NIAAA and other authorities state that alcohol is also associated with increased risk of certain types of cancer (head and neck, esophageal, liver, colorectal, and breast cancer in women).[75] The Scientific Report states that high average alcohol consumption and binge drinking are associated with an increased risk of coronary heart disease, stroke, congestive heart failure, atrial fibrillation, and hypertension.[76] The report also identifies alcohol as a risk factor for several gastrointestinal health outcomes, including chronic liver disease.

The Scientific Report also notes that alcohol is an important risk factor or contributor to many social and mental health problems, including depression, child abuse and neglect, fetal alcohol spectrum disorder, domestic violence, and sexual assault.[77] Additionally, according to the Centers for Disease Control (CDC), nearly 4,000 alcohol-attributable deaths occur annually among persons under 21 years of age, either due to underage drinking or to effects from others' drinking.[78] Finally, the *Dietary Guidelines for Americans* note that alcohol beverages provide calories but few nutrients.[79] The guidelines state that among U.S. adults who drink, alcohol accounts for approximately 9 percent of energy intake, making it more difficult to meet dietary recommendations.[80] For those who consume excessively, the number of calories from alcohol may be considerably higher, and binge drinking is associated with obesity.[81]

Given these risks, it is clearly important that alcohol beverage consumers can easily access information about the most important factors associated with these products. Consumers cannot follow governmental and medical advice about moderate consumption without knowing, at a minimum, the alcohol content of the product. Labels that provide basic information about the calories of the product, on a per-serving basis, provide consumers with the knowledge needed to understand how many discretionary calories may come from alcohol consumption. Finally, information about carbohydrate, fat, and protein content provides a basic overview of the macronutrients in an alcohol beverage.

In response to Notice No. 232, the CDC commented that per-serving alcohol and nutritional information would provide consumers with ''the necessary information to manage their caloric intake and to make better informed decisions about alcoholic beverages consumption.'' The CDC said that ''[p]roviding nutrition labels that include carbohydrate, fat, and protein per serving is especially crucial for certain groups of people, such as people who have diabetes, who need to closely monitor their carbohydrate intake.'' The CDC further stated that calorie content was important to consumers because it ''could remind consumers that alcoholic drinks contain calories, and potentially influence their decisions to not purchase or consume as much alcohol to meet existing goals or intentions (*i.e.,* weight loss, diabetes management).''

Thus, this proposed regulation could, if implemented, result in a range of benefits stemming from providing additional information to consumers. Being able to view the alcohol content and amount of alcohol per serving in an easily understood labeling statement will help consumers better understand the amount of alcohol they are consuming. This information, along with the macronutrient disclosures in an Alcohol Facts statement, will help consumers follow advice from the U.S. Government, public health organizations, and their own doctors regarding calorie and alcohol consumption levels. While TTB is unable to quantify these potential benefits, we welcome public comments with relevant information on this issue.

C. Costs of Compliance

As set forth in Section IX of this preamble, based on its use of the FDA Labeling Cost Model, and assuming a 5-year compliance period, TTB estimates initial implementation costs of approximately $201.2 million in 2023 dollars (or $40.2 million per year). Assuming that laboratory analysis is conducted for two samples of each brand extension per year (which may be an overestimate), and using the FDA estimates for the cost of such a laboratory analysis, the recurring annual costs would be approximately $64 million.

D. Executive Orders 12866, 13563, and 14094

This proposed rule is a ''significant regulatory action'' for purposes of Executive Order 12866, as supplemented by Executive Order 13563 and amended by Executive Order 14094, and has been reviewed by the Office of Management and Budget.

E. Regulatory Flexibility Act

Pursuant to the requirements of the Regulatory Flexibility Act (5 U.S.C. 601–612), TTB has analyzed the potential economic effects of this action on small entities. In lieu of the initial regulatory flexibility analysis required to accompany proposed rules under 5 U.S.C. 603, section 605 allows the head of an agency to certify that a rule will not, if promulgated, have a significant economic impact on a substantial number of small entities.

TTB certifies that this proposed rule, if adopted, would not have a significant economic impact on a substantial number of small entities. The proposed rule will not impose, or otherwise cause, a significant increase in reporting, recordkeeping, or other compliance burdens on a substantial number of small entities. The proposed rule is not expected to have significant secondary or incidental effects on a substantial number of small entities. Accordingly, a regulatory flexibility analysis is not required. Pursuant to 26 U.S.C. 7805(f), TTB will submit the proposed regulations to the Chief Counsel for Advocacy of the Small Business Administration (SBA) for comment on the impact of the proposed regulations on small businesses.

The following analysis provides the factual basis for TTB's certification under section 605.

[80] Id.

[81] *Scientific Report of the 2020 Dietary Guidelines Advisory Committee,* supra note 72.

1. Overview of the Alcohol Beverage Industry

In FY 2022, TTB collected $8.3 billion in taxes from the alcohol industry.[82] With regard to the total number of authorized producers of alcohol beverages, there are 17,649 wineries and bonded wine cellars; 14,185 brewers; and 4,494 distillers.[83]

However, the number of authorized producers and importers who obtain certificates of label approval (COLAs) in any given year is much lower. In FY 2022, TTB received 192,954 label applications and 26,922 formula applications for alcohol beverages.[84] Internal data from TTB's COLAs Online system shows that fewer than 12,000 permittees or brewers applied for label approval in each of Fiscal Years 2020–2022, and that for that overall 3-year time period, fewer than 18,000 permittees or brewers applied for label approval.

The value of the U.S. import trade in alcohol beverages in 2021 totaled $23.9 billion.[85] According to data published on the website of the Distilled Spirits Council of the United States,[86] the total economic contribution of the alcohol beverage industry to the U.S. economy in 2019 included 2,514,000 ''direct'' jobs and 5,630,000 ''total'' jobs; $67.9 billion in direct wages and $160.3 billion in total wages; and $242.6 billion in direct economic activity and $572.3 billion in total economic activity.

2. Small Businesses in the Alcohol Beverage Industry

TTB recognizes that the vast majority of producers, bottlers, and importers of alcohol beverages are small entities. The SBA sets out size standards based on the North American Industry Classification System (NAICS), under which an entity can be considered small for the purposes of Regulatory Flexibility Act analysis.[87] Breweries are considered small if they have fewer than 1,250 employees; wineries are considered small if they have fewer than 1,000 employees; and distilleries are considered small if they have fewer than 1,100 employees.[88]

The U.S. Census Bureau's Statistics of U.S. Businesses (SUSB) data include information on employment among establishments within NAICS codes. The most recent data are from 2019.[89] The SUSB data did not include employment at the 1,000, 1,100, or 1,250 employee threshold; however, it does include the number of firms within each NAICS code that have at least 500 employees. Based on those numbers, approximately 99 percent of the firms in these three NAICS codes are small entities. The percentage may be greater, depending on how many firms have at least 500 employees and fewer than 1,000 employees (for wineries), 1,100 employees (for distilleries), or 1,250 employees (for breweries). There is no NAICS code for importers of alcohol beverages.

TABLE 6—NUMBER OF FIRMS WITH AT LEAST 500 EMPLOYEES

Small-entity size standards for potentially affected industries and number of firms with at least 500 employees

Industry (NAICS code)	Small-entity size standard	Total number of firms	Number of firms with at least 500 employees	Total employment
Breweries (NAICS 312120)	Fewer than 1,250 employees	4,217	23 (approximately 0.5 percent)	84,503
Wineries (NAICS 312130)	Fewer than 1,000 employees	3,944	19 (approximately 0.48 percent)	59,587
Distilleries (NAICS 312140) ...	Fewer than 1,100 employees	1,004	10 (approximately 1%)	16,828

Data on revenues by firm size and industry are also available in the SUSB but are published less frequently. The most recent data available is from 2017.[90] Based on this data, with the revenues adjusted for inflation, 2,609 of the total number of firms (3,214) listed as breweries under NAICS Code 312120 have fewer than 20 employees.[91] This category accounts for $3,314,362,000 of the total inflation-adjusted receipts of $36,032,713,000, or roughly 9.2 percent of the total receipts. With regard to wineries, 2,975 of the 3,576 firms under NAICS Code 31230 have fewer than 20 employees. This category accounts for $2,907,606,000 of the total inflation-adjusted receipts of $24,891,833,000, or roughly 12 percent of the total receipts. With regard to distilleries, 659 of the 760 firms under NAICS Code 31240 have fewer than 20 employees. This category accounts for $1,060,898,000 of the total inflation-adjusted receipts of $14,590,615,000 or roughly 7 percent of the total receipts.

3. Effect of the Proposed Rule

The vast majority of businesses subject to the proposed rule are small businesses, but the changes proposed in this document will not have a significant impact on those small

[82] Alcohol and Tobacco Tax and Trade Bureau Annual Report Fiscal Year 2022 (FY 2022 TTB Annual Report), available at *https://www.ttb.gov/images/pdfs/ttbar2022.pdf,* page 5.

[83] Id. at page 10.

[84] Id. at page 16. It should be noted that the number of label applications does not necessarily correlate to the number of brands and UPCs in the marketplace, for several reasons. TTB cannot determine whether approved labels actually appear in the marketplace, or how long those labels may remain in use. For example, there may be malt beverage labels authorized for a particular sporting event that are no longer found in the marketplace a few months after the event has taken place. On the other hand, some labels may be revised to reflect different net contents or alcohol content statements without submission of a new label to TTB. Industry members may decide not to use labels for which they have obtained approval. Thus, TTB does not use the number of COLA applications as an estimate of how many brands or UPCs are in the marketplace at any given time.

[90] This data is only available from Economic Census years (years ending in 2 and 7). See 2017 SUSB Annual Data Tables by Establishment Industry, U.S. Census Bureau, available at *https://www.census.gov/data/tables/2017/econ/susb/2017-susb-annual.html.*

[91] A recent study estimates that 28.3 percent of brewing facilities are brewpubs, with 66.7 percent of brewing facilities categorized as ''micro'' breweries. The study explains that brewpubs and small micro-brewers ''produce beer for a limited market—sometimes only for their own restaurant or retail establishment.'' See Beer Serves America—A Study of the U.S. Beer Industry's Economic Contribution in 2022,'' prepared for the Beer Institute and National Beer Wholesalers Association, which is available *at https://beerservesamerica.org/wp-content/uploads/2023/05/2022-Beer-Serves-America-Report.pdf.*

entities. The production, bottling, importation, and distribution of alcohol beverages is an industry subject to extensive Federal, State, and local regulation. The labeling and advertising regulations under the FAA Act have been in place since 1936. Adding more elements of mandatory information to the label will not have a significant impact on the regulated industry.

TTB cannot estimate the exact cost per small entity because we do not know how many product brands (covered by different UPCs) on average are owned by small entities as defined by the SBA. However, TTB estimates that the initial costs of complying with a final rule resulting from this proposal would be roughly $1,636 per UPC. Therefore, a small entity owning one to ten UPCs would incur a cost of between roughly $1,636 to $16,636 over the proposed 5-year implementation period.

In response to its 2007 proposed rule on mandatory Serving Facts information, TTB received many comments from small businesses who were concerned that the new labeling requirements would negatively affect their market share, and who pointed out that larger competitors could more easily absorb the costs associated with the new labeling requirements. Many of the small businesses assumed that they would be required to run laboratory analyses for every batch they produced. These concerns were repeated in comments on Notice No. 232. Small businesses commented that laboratory analysis would be costly, extend the time to bring a product to market, and affect small producers' ability to compete in the marketplace.

As described in the next section, TTB has tailored this proposal to avoid many costs associated with labeling changes, including providing for an extended compliance period, allowing smaller linear displays, increasing tolerances to avoid the need for analytical testing in many cases, and not requiring new COLA submissions.

4. Alternative Options Considered by TTB

TTB has considered several options to reduce the regulatory burdens and economic costs imposed by the proposed rule on small businesses, as described below:

a. Exemption for Small Businesses

TTB received over a dozen comments proposing a small business exemption to any new labeling requirements, mostly from small producers or their trade associations. Many commenters specifically proposed that TTB provide an exemption similar to the small business exemptions to FDA's nutrition labeling requirements provided for in section 403(q) of the Federal Food, Drug, and Cosmetic Act. Not all commenters, however, favored a small business exemption. The American Beverage Licensees and the Beer Institute commented against exemptions for small producers.

TTB considered the comments requesting a small business exemption from the requirements of the proposed rule; however, this proposal does not include this option. One of the primary purposes of this proposed rule is to provide additional information to consumers. This purpose would be weakened by a permanent exemption for small businesses. There is no reason to believe that consumers of alcohol beverages produced by small producers are less interested in obtaining information about the alcohol, calorie, and nutrient content of the beverages they consume. Moreover, TTB questions whether a permanent exemption from mandatory labeling requirements would be consistent with the FAA Act mandate to ensure that labels provide consumers with adequate information about the identity, quality, and alcohol content of the product. TTB notes that there is no specific statutory authority for exempting small businesses from the requirements of the FAA Act as there is under the Federal Food, Drug, and Cosmetic Act for nutritional labeling regulated by the FDA.

b. Extended Compliance Period for Small Businesses

TTB considered the option of proposing an extended compliance period only for small businesses. However, this would present significant logistical difficulties for TTB and impose a new information reporting burden on industry members. When reviewing applications for label approval, TTB employees do not have access to the number of people employed by each company, and thus it would not be practical to base compliance status on the SBA standards for small businesses. Additionally, reporting such information to TTB with each label application would impose a new burden on all industry members that would be subject to this proposed rule. Instead, TTB is proposing a compliance period of 5 years for all industry members, and is assuming that many industry members, particularly large businesses who are already likely to be using this information in their labeling and marketing, will start using Alcohol Facts labels after publication of a final rule, in advance of the compliance date.

As previously noted, the label redesign, printing, and administrative costs associated with making a labeling change are on a per-UPC basis. Under the FDA Labeling Cost Model, the longer the compliance period, the more likely it is that affected industry members can coordinate new labeling requirements with scheduled labeling changes, so cost estimates fall significantly as the time allowed for the new labeling requirements increases. In other words, the longer the period of time industry is given to comply with the new labeling requirements, the lower the costs. According to the FDA Labeling Cost Model, with a compliance period of 5 years, 100 percent of the labeling changes resulting from a regulatory change can be coordinated with a regularly scheduled labeling change, thus significantly reducing the estimated costs and burdens for small businesses that are subject to the proposed rule. Five years is also the longest implementation date recommended by a commenter to Notice No. 232.

c. Linear Display

In response to Notice No. 73, many small businesses objected to TTB's proposal to require a Serving Facts panel with a linear format option available only for small containers. Many commenters suggested that small businesses would have no choice but to place the panel on a back label, and noted that some small businesses lacked the equipment necessary to place a back label on their container.

Taking into account the points made by those commenters, the current proposed rule will allow the option of a linear display for all products, regardless of the size of the container. TTB believes that this will significantly reduce the costs of compliance with the new regulations, while still providing consumers with a clear statement of alcohol content and calorie and nutrient content. TTB believes that the potential benefits of having a larger and more readily noticeable display would not outweigh the costs of compliance with such a requirement. The linear display will provide additional flexibility to small businesses, while still ensuring that labels provide consumers with the required information. Industry members may still opt to use the panel display.

d. Electronic Disclosure

TTB considered, but is not proposing, the option to allow disclosure of the proposed Alcohol Facts information via electronic means. Several commenters to Notice No. 232 stated that this option would reduce the burden of this

proposed rulemaking because small businesses would not need to change label designs as frequently as they would if the Alcohol Facts information appeared on the physical label. For the reasons previously discussed in Section VII.B.8.c, TTB believes electronic disclosure would create undue barriers to access the information by consumers so is not proposing it in this rulemaking.

e. Broadened Tolerance Levels

As previously noted in Section VII.B.3, TTB is proposing broader tolerance levels to facilitate the use of ''typical values'' charts, formulas, and other methodologies to calculate the alcohol, calories, carbohydrate, fat, and protein content of an alcohol beverage product without the need to conduct laboratory analyses for each batch. In response to Notice No. 232, many commenters expressed concern that laboratory analysis would place undue burden on small businesses and affect their competitiveness in the market. The commenters stated, and TTB agrees, that the ability to use charts and methodologies that do not require third-party testing should reduce costs and regulatory burdens on small businesses.

f. Allowing Labeling Changes Without a New COLA

TTB is proposing to further reduce the costs associated with the label redesign by not requiring industry members to submit new applications for label approval when the only change being made to the label is the inclusion of a new Alcohol Facts statement, or the replacement of an already approved Serving Facts statement or statement of average analysis with a new Alcohol Facts statement.

g. Solicitation of Comments

TTB solicits comments on all of the options discussed in this section, on any costs, burdens, and benefits associated with the proposed rule, and on any impact on small businesses. TTB welcomes data on all of these issues.

F. Paperwork Reduction Act

Fourteen of the regulatory sections addressed in this notice of proposed rulemaking contain collections of information that have been previously reviewed and approved by the Office of Management and Budget (OMB) in accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3507). Those regulatory sections are 27 CFR 4.32, 4.36, 4.38, 5.52, 5.63, 5.65, 7.52, 7.63, 7.65, 24.257, 25.141, 25.142, 27.59, and 27.60, and they contain existing information collections assigned OMB control numbers 1513–0086, 1513–0087, and 1513–0092. OMB No. 1513–0086 concerns marks and labels on beer containers required under the authority of the Internal Revenue Code (IRC), OMB No. 1513–0087 concerns alcohol beverage labeling requirements under the Federal Alcohol Administration Act (FAA Act), and 1513–0092 concerns marks and labels on wine containers required under the authority of the IRC.

In this proposed rule, under its IRC authorities, TTB is revising the information collections approved under OMB Nos. 1513–0086 and 1513–0092 by requiring alcohol content statements on all domestic and imported consumer containers of beer and wine. In addition, under its FAA authority, TTB is revising the information collection currently approved under OMB No. 1513–0087 to add a new information collection that generally requires an Alcohol Facts statement to appear on alcohol beverage labels for domestic and imported products subject to the jurisdictional requirements of the FAA Act. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid control number assigned by OMB.

The regulatory sections in this proposed rule that contain new information collection requirements for an Alcohol Facts statement are in proposed regulatory sections §§ 4.111–4.114 for wine labels, §§ 5.211–5.214 for distilled spirits labels, and §§ 7.211–7.214 for malt beverage labels. In addition, references to the new requirements for an Alcohol Facts statement will appear in §§ 4.32, 4.36, 4.38, 5.52, 5.63, 5.65, 7.52, 7.63, and 7.65. This new collection of information will be mandatory, and the likely respondents are for-profit businesses, including corporations, partnerships, and small businesses.

Specifically, the new information collection would require alcohol beverage bottlers and importers to disclose per-serving alcohol, calorie, and nutrient content information in an Alcohol Facts statement as the proposed regulations will require that statement on all domestic and imported alcohol beverage labels subject to the FAA Act. The Alcohol Facts statement would include information about the alcohol content of the product expressed as a percentage of alcohol by volume and in fluid ounces of pure ethyl alcohol per serving, as well as information about the number of calories and the amount, in grams, of carbohydrates, fat, and protein per serving. Bottlers and importers could present the Alcohol Facts statement in either a panel or a linear format.

The FDA Labeling Cost Model projects a ''mean'' internal recordkeeping burden of 1 hour per UPC for labeling changes that are coordinated, and 2 hours per UPC for labeling changes that are not coordinated. TTB is proposing a 5-year compliance date, which means that 100 percent of the labeling changes will be ''coordinated.'' Furthermore, TTB does not propose to require industry members to submit new COLA applications for the sole purpose of adding, or revising, an Alcohol Facts label statement. Thus, the proposed rule would not increase recordkeeping requirements under the COLA requirement, which is covered by OMB Control Number 1513–0020.

TTB believes that a significant proportion of the alcohol beverage industry already collects and maintains information regarding the nutrient content of their products, and that they do so in the usual course of business. Furthermore, domestic producers of wines, distilled spirits, and malt beverages are already required to determine and keep records of the alcohol content of their products pursuant to existing regulations under the IRC.

Accordingly, TTB is estimating an annual burden of one hour per respondent for the new Alcohol Facts proposal under the FAA Act labeling regulations. TTB estimates its annual burden as follows:

- *Number of Respondents:* 13,000.
- *Number of Responses:* 13,000 (1 response per respondent).
- *Average per-response Burden:* 1 hour per respondent.
- *Total Annual Burden:* 13,000 hours.

In addition, under its IRC authorities in 26 U.S.C. Chapter 51, TTB is proposing to expand existing requirements for alcohol content statements as a percentage of alcohol by volume to beers and wines that were not subject to mandatory alcohol content labeling under the FAA Act. TTB has determined that mandatory alcohol content statements on labels for all beer and wines subject to tax under the IRC will assist in protection of the revenue. TTB will account for these new IRC-based information collection requirements under the existing information collections approved under OMB No. 1513–0086 for beer labels and OMB No. 1513–0092 for wine labels. The specific proposed regulatory sections that include those expanded IRC-based alcohol content labeling requirements are §§ 24.257(a)(3), 25.141, 25.142, 27.59, and 27.60.

Currently, TTB considers the IRC-based labeling requirements for beer and

wine, approved under OMB Nos. 1513–0086 and 1513–0092, respectively, to require only the display of usual and customary label information, which, under OMB regulations, imposes no additional burden on respondents under the Paperwork Reduction Act. TTB believes that responses to the expanded requirements to display alcohol content on labels of beer and wine that were not previously subject to such a requirement will not require more than 1 hour annually per respondent. TTB believes that the great majority of beer and wine bottlers and importers either already label their products with an alcohol content statement or have ready access to such information for quality control purposes (or under IRC regulations, for domestic products) even if they do not display that information on their product labels. In addition, given the proposed compliance period of 5 years, TTB believes that all alcohol beverage bottlers and importers will be able to coordinate any required labeling changes with their usual and customary scheduled labeling changes.

For the revised IRC-based beer labeling information collection, approved under OMB No. 1513–0086, TTB estimates the revised annual burden for that collection as follows:

- *Number of Respondents:* 10,000.
- *Number of Responses:* 10,000 (1 per respondent).
- *Average per-response Burden:* 1 hour.
- *Total Annual Burden:* 10,000 hours.

For the revised IRC-based wine labeling information collection, approved under OMB No. 1513–0092, TTB estimates the revised annual burden for that collection as follows:

- *Number of Respondents:* 14,300.
- *Number of Responses:* 14,300 (1 per respondent).
- *Average per-response Burden:* 1 hour.
- *Total Annual Burden:* 14,300 hours.

TTB has submitted the new Alcohol Facts statement information collection requirements and the revised collection requirements under the FAA Act and the IRC to the OMB for review. Please send any comments on these new and revised collection requirements to OMB at Office of Management and Budget, Attention: Desk Officer for the Department of the Treasury, Office of Information and Regulatory Affairs, Washington, DC 20503, or by email to *OIRA_submissions@omb.eop.gov.* Please also send a copy of any such comments to TTB by any of the comment submission methods described in the **ADDRESSES** section of this document. Comments should be submitted no later than April 17, 2025.

TTB specifically requests comments concerning:

- The accuracy of the estimated burden associated with the proposed collections of information (see below);
- Whether a unified compliance date for labeling changes that may arise from this rulemaking, along with separate rulemakings on ingredient labeling and allergen labeling, would result in lowering the combined burden hours for the three rulemakings;
- Whether the proposed labeling requirements are necessary in order to provide consumers with adequate information as to the identity, quality, and alcohol content of alcohol beverage products, including whether the information will have practical utility;
- How to enhance the quality, utility, and clarity of the information to be collected;
- How to minimize the burden of complying with the collections of information; and;
- Estimates of capital and start-up costs and costs of operation, maintenance, and purchase of services to maintain records and substantiate label claim.

XII. Severability

For the reasons described in Section II, *TTB's Authority to Regulate Alcohol Beverage Labeling,* TTB believes that its authority to implement all provisions of the proposed regulation is well-supported in law and should be upheld in any legal challenge. TTB also believes that its exercise of its authority reflects sound policy. However, in the event that any portion of the proposed rule is declared invalid, TTB intends that the labeling provisions proposed under TTB's FAA Act authority be severable from those proposed under TTB's IRC authority. For example, if a provision of the rule promulgated under TTB's FAA Act authority is invalidated, the provisions of this rule promulgated under TTB's IRC authority should remain valid. TTB intends these provisions to be severable because TTB is of the view that the set of provisions proposed under the FAA Act and the set of provisions proposed under the IRC would each still function sensibly even if the other, as finalized, was found unlawful.

List of Subjects

27 CFR Part 4

Advertising, Alcohol and alcoholic beverages, Customs duties and inspection, Imports, Labeling, Packaging and containers, Reporting and recordkeeping requirements, Surety bonds, Trade practices, Treaties, Wine.

27 CFR Part 5

Advertising, Alcohol and alcoholic beverages, Customs duties and inspection, Distilled spirits, Food additives, Grains, Imports, International agreements, Labeling, Liquors, Packaging and containers, Reporting and recordkeeping requirements, Trade practices.

27 CFR Part 7

Advertising, Alcohol and alcoholic beverages, Beer, Customs duties and inspection, Food additives, Imports, Labeling, Malt Beverages, Packaging and containers, Reporting and recordkeeping requirements, Trade practices.

27 CFR Part 24

Administrative practice and procedure, Claims, Electronic funds transfers, Excise taxes, Exports, Food additives, Fruit juices, Labeling, Liquors, Packaging and containers, Reporting and recordkeeping requirements, Research, Scientific equipment, Spices and flavorings, Surety bonds, Vinegar, Warehouses, Wine.

27 CFR Part 25

Administrative practice and procedure, Beer, Claims, Electronic funds transfers, Excise taxes, Exports, Labeling, Packaging and containers, Reporting and recordkeeping requirements, Research, Surety bonds.

27 CFR Part 27

Alcohol and alcoholic beverages, Beer, Cosmetics, Customs duties and inspection, Electronic funds transfers, Excise taxes, Exports, Freight, Imports, Labeling, Liquors, Packaging and containers, Reporting and recordkeeping requirements, Surety bonds, Wine.

Amendments to the Regulations

For the reasons discussed in the preamble, TTB is proposing to amend 27 CFR parts 4, 5, 7, 24, 25, and 27, as set forth below:

PART 4—LABELING AND ADVERTISING OF WINE

■ 1. The authority citation for part 4 continues to read as follows:

Authority: 27 U.S.C. 205, unless otherwise noted.

■ 2. In § 4.32, revise paragraph (b)(3) and add paragraph (b)(4) to read as follows:

§ 4.32 Mandatory label information.

* * * * *

(b) * * *

(3) Alcohol content, in accordance with § 4.36 and subpart L of this part.

(4) An Alcohol Facts statement, in accordance with subpart L of this part.

* * * * *

■ 3. Revise § 4.36 to read as follows:

§ 4.36 Alcohol content.

(a) *Wines containing more than 14 percent alcohol by volume.* An alcohol content statement, expressed in terms of a percentage of alcohol by volume, is required under this section for any wine containing more than 14 percent of alcohol by volume. Such a statement must appear in an Alcohol Facts statement in accordance with the requirements of subpart L of this part.

(b) *Wines containing not more than 14 percent alcohol by volume.* Part 24 of this chapter (setting forth the requirements under the Internal Revenue Code for domestic wines) and part 27 of this chapter (setting forth the requirements under the Internal Revenue Code for imported wines) require alcohol content statements, expressed in terms of a percentage of alcohol by volume, for all wines, including wines not exceeding 14 percent of alcohol by volume, if those wines are subject to the tax imposed by 26 U.S.C. 5041. Where such a statement appears on a wine label subject to the requirements of this part, it must conform to the requirements of this section, and it must appear in an Alcohol Facts statement in accordance with the requirements of subpart L of this part.

(c) *Additional alcohol content statements elsewhere on the label*—(1) *General.* Any additional statement of alcohol content must be expressed in terms of a percentage of alcohol by volume, and may appear on any label affixed to the container, in one of the following formats:

(i) ''Alcohol ____ percent by volume'';

(ii) ''____ percent alcohol by volume''; or

(iii) ''Alcohol by volume: ____ percent''.

(2) *Formatting rules.* Any of the words or symbols may be enclosed in parentheses and authorized abbreviations may be used with or without a period. The alcohol content statement does not have to appear with quotation marks.

(3) *Optional abbreviations.* The statements listed in paragraph (c)(1) of this section must appear as shown, except that the following abbreviations may be used: Alcohol may be abbreviated as ''alc''; percent may be represented by the percent symbol ''%''; alcohol and volume may be separated by a slash ''/'' in lieu of the word ''by''; and volume may be abbreviated as ''vol''.

(d) *Tolerance levels for optional or mandatory alcohol content statements.* Except as otherwise provided in paragraph (e) of this section, a tolerance of 1 percentage point in the case of wines containing more than 14 percent of alcohol by volume, and of 1.5 percentage points in the case of wines containing not more than 14 percent alcohol by volume, will be permitted either above or below the stated percentage.

(e) *Exceptions to the tolerance provisions.* Regardless of the tolerances specified in paragraph (d) of this section, any optional or mandatory alcohol content statement shall definitively and correctly indicate the class, type, and taxable grade of the wine so labeled, and nothing in this section shall be construed as authorizing the appearance upon the labels of any wine of an alcohol content statement that indicates that the alcohol content of the wine is within the prescribed limitation on the alcohol content of any class, type, or taxable grade of wine, when in fact it is not.

■ 4. In § 4.38, revise paragraph (b)(3) and add paragraph (i) to read as follows:

§ 4.38 General requirements.

* * * * *

(b) * * *

(3) Alcohol content statements (other than those appearing in an Alcohol Facts statement required by subpart L of this part) may not appear in script, type, or printing larger or more conspicuous than 3 millimeters nor smaller than 1 millimeter on labels of containers having a capacity of 5 liters or less and shall not be set off with a border or otherwise accentuated.

* * * * *

(i) *Alcohol Facts statements.* See subpart L of this part for more specific requirements that apply to Alcohol Facts statements.

■ 5. Add subpart L to read as follows:

Subpart L—Alcohol Facts Statement

Sec.

4.111 Alcohol Facts statement.
4.112 Format for the Alcohol Facts statement.
4.113 Placement of the Alcohol Facts statement.
4.114 Tolerance levels.

Subpart L—Alcohol Facts statement

§ 4.111 Alcohol Facts statement.

(a) *General.* The Alcohol Facts statement required under § 4.32(b)(4) must include the following information, and may not include additional information, except as provided in this section:

(1) The single serving size, as defined in paragraph (b) of this section;

(2) The number of servings per container;

(3) Alcohol content as a percentage of alcohol by volume;

(4) The number of fluid ounces of pure ethyl alcohol per serving;

(5) The number of calories per serving; and

(6) The number, in grams per serving, of carbohydrates, fat, and protein.

(b) *Single serving size and servings per container*—(1) *Definition.* The term ''single serving size'' or ''serving size'' means an amount of the wine customarily consumed as a single serving, expressed in U.S. fluid ounces and, in parentheses, in milliliters (mL) to the nearest whole number. This amount is not a recommended amount, but rather is only a reference amount to help consumers determine nutrient, alcohol, and calorie intake. The single serving size reference amounts for wines are:

TABLE 1 TO PARAGRAPH (b)(1)

For products containing:	a single serving size is:
At least 7% and not more than 16% alc/vol.	5 fluid ounces (148 mL).
Over 16% and not more than 24% alc/vol.	2.5 fluid ounces (74 mL).

(2) *Single-serving containers.* Wines packaged and sold in containers with a net content of less than 200 percent of a single serving size reference amount described in this section must be labeled as containing a single serving, and a single serving size is the net content of the container.

(3) *Multi-serving containers.* Products packaged and sold in containers with a net content of 200 percent or more of the applicable single serving size reference amount described in this section will be considered to be in multi-serving containers, and the number of servings per container must be labeled to the nearest one-quarter serving.

(c) *Percentage of alcohol by volume.* The Alcohol Facts statement must express the alcohol content as a percentage of alcohol by volume to the nearest tenth of a percent, subject to the tolerances set forth in § 4.36.

(d) *Alcohol expressed in fluid ounces.* The Alcohol Facts statement must express the number of U.S. fluid ounces of pure ethyl alcohol per serving to the nearest tenth of an ounce. The declaration of alcohol in fluid ounces per serving is calculated from the

percent-by-volume alcohol content declaration. For example, 5 fl oz of a beverage with 12 percent alcohol by volume would have 0.6 fl oz of pure ethyl alcohol, while 5 fl oz of a beverage with 14 percent alcohol by volume would have 0.7 fl oz of pure ethyl alcohol.

(e) *Calories.* Calorie statements may be expressed to the nearest calorie, or may be rounded to the nearest 10-calorie increment (for per-serving amounts above 50 calories) or the nearest 5-calorie increment (for per-serving amounts up to 50 calories), subject to the tolerances set forth in § 4.114. An amount less than 5 calories may be expressed as zero.

(f) *Carbohydrate.* (1) The Alcohol Facts statement must express the number of grams of total carbohydrates in a serving to the nearest gram, except that if a serving contains less than 1 gram, the statement ''less than 1 gram'' may be used as an alternative, and if the serving contains less than 0.5 gram, the content may be expressed as zero.

(2) The Alcohol Facts statement may optionally express the number of grams of total sugars in a serving to the nearest gram, except that if a serving contains less than 1 gram, the statement ''less than 1 gram'' may be used as an alternative, and if the serving contains less than 0.5 g of sugar, the content may be expressed as zero.

(g) *Fat.* The Alcohol Facts statement must express the number of grams of total fat in a serving (with total fat defined as total lipid fatty acids and expressed as triglycerides) to the nearest 0.5 (½) gram increment below 5 grams and to the nearest gram increment at or above 5 grams. If the serving contains less than 0.5 gram, the content may be expressed as zero.

(h) *Protein.* The Alcohol Facts statement must express protein content in grams per serving to the nearest gram, except that if a serving contains less than 1 gram, the statement ''Contains less than 1 gram'' or ''less than 1 gram'' may be used as an alternative, and if the serving contains less than 0.5 gram, the protein content may be expressed as zero.

§ 4.112 Format for the Alcohol Facts statement.

The Alcohol Facts statement must be presented in either a panel or a linear format, and the presentation must conform to the formatting specifications in this section. For wine containers with a net content of at least 200 percent and less than 500 percent of the applicable single serving size reference amount described in § 4.111, as an option, the Alcohol Facts statement may be presented in a dual-column panel format, which sets forth the required information per serving and per container, as illustrated by paragraph (j) of this section.

(a) The panel or linear display must be set off within a box by use of hairlines with all black or one color type, printed on a contrasting background.

(b) All information within the box must appear in a single, easy-to-read type style using both upper case and lower case letters. The box must be separate and apart from any additional information and the information must be readily legible to potential consumers under ordinary conditions. The type or printing must be at least 1 millimeter in height for containers of 187 mL or less and at least 2 millimeters in height for containers of more than 187 mL.

(c) Bold face is required for the title ''Alcohol Facts'' and for the heading ''Amount Per Serving'' and is optional for the headings ''Alcohol by volume,'' ''Calories,'' ''Carbohydrate,'' ''Sugar'' (if used), ''Fat,'' and ''Protein.''

(d) The Alcohol Facts statement must appear in the panel or linear format in the following order:

(1) Serving size;

(2) Servings per container;

(3) Percentage of alcohol by volume;

(4) U.S. fluid ounces of pure ethyl alcohol per serving. If a panel format is used, the U.S. fluid ounces of pure ethyl alcohol per serving must be indented directly under the percent-by-volume alcohol content declaration (see the example in paragraph (g) of this section);

(5) Calories;

(6) Carbohydrate;

(7) Sugar (if used);

(7) Fat; and

(8) Protein.

(e) The following abbreviations or shortened expressions may be used, with or without a period:

(1) For percentage of alcohol by volume, the percent symbol ''%'', ''Alcohol by volume'', ''Alc/vol'' or ''Alc by vol'';

(2) For U.S. fluid ounces, ''fl oz'';

(3) For grams, ''g'';

(4) For carbohydrate, ''Carb'';

(5) For serving, ''Serv.'';

(6) For milliliter, ''mL''; and

(7) For amount, ''Amt.''.

(f) The expression of decimal amounts less than 1 must include a zero prior to the decimal point (for example, 0.5 fl oz).

(g) The following Alcohol Facts statement illustrates an acceptable panel display for a 750 mL bottle of wine containing 14 percent alcohol by volume.

Figure 1 to Paragraph (g)

Alcohol Facts

Serving Size	5 fl oz (148 mL)
Servings Per Container	5
	Amount Per Serving
Alcohol by volume	14%
fl oz of alcohol	0.7
Calories	120
Carbohydrate	3g
Fat	0g
Protein	0g

(h) The following Alcohol Facts statement illustrates an acceptable linear display for a 750 mL bottle of wine containing 14 percent alcohol by volume.

Figure 2 to Paragraph (h)

Alcohol Facts: Serving size: 5 fl oz (148 mL); Servings per container: 5; **Amount Per Serving:** Alcohol by volume: 14%; fl oz of alcohol: 0.7; Calories: 120; Carbohydrate: 3g; Fat: 0g; Protein: 0g

(i) The following Alcohol Facts statement illustrates an acceptable panel display for a 100 mL bottle of wine containing 17 percent alcohol by volume. The container has a net content of less than 200 percent of a single serving size reference amount and thus is labeled as containing a single serving.

Figure 3 to Paragraph (i)

Alcohol Facts	
Serving Size	3.4 fl oz (100 mL)
Servings Per Container	1
	Amount Per Serving
Alcohol by volume	17%
fl oz of alcohol	0.6
Calories	100
Carbohydrate	2g
Fat	0g
Protein	0g

(j) The following Alcohol Facts statement illustrates an acceptable dual-column panel display for a 375 mL bottle of wine containing 14 percentalcohol by volume.

Figure 4 to Paragraph (j)

Alcohol Facts		
Serving Size	5 fl oz (148 mL)	
Servings Per Container	2 ½	
	Amt Per Serv.	Amt Per Bottle
Alcohol by volume	14%	14%
fl oz of alcohol	0.7	1.8
Calories	120	300
Carbohydrate	3g	8g
Fat	0g	0g
Protein	0g	0g

§ 4.113 Placement of the Alcohol Facts statement.

The Alcohol Facts statement may be presented in either a horizontal or vertical orientation.

§ 4.114 Tolerance levels.

(a) *General.* The following tolerance levels apply to labeling statements of calorie, carbohydrate (including sugar), protein, fat, and alcohol content for wines:

(1) *Calorie content.* A tolerance of 20 percent either above or below the stated calorie content is permitted. For example, a label showing 100 calories per serving is acceptable if the product has a calorie content of between 80 and 120 calories per serving.

(2) *Carbohydrate (including sugar) and protein content.* A tolerance of 20 percent either above or below the stated carbohydrate, sugar, and protein content is permitted. For example, a label showing 7 grams of carbohydrates per serving is acceptable if the product has a carbohydrate content of between 5.6 and 8.4 grams per serving.

(3) *Fat content.* A tolerance of 20 percent either above or below the stated fat content is permitted. For example, a label showing 7 grams of fat per serving is acceptable if the product has a fat content of between 5.6 and 8.4 grams per serving.

(4) *Alcohol content.* The tolerances for alcohol content specified in § 4.36 apply. The declaration of alcohol in fluid ounces per serving is calculated from the percent-by-volume alcohol content declaration.

(b) *Publication of analytical methods.* TTB will maintain on its website (*https://www.ttb.gov*) information regarding the methods it uses to validate calorie, carbohydrate, protein, fat, and alcohol content statements.

PART 5—LABELING AND ADVERTISING OF DISTILLED SPIRITS

■ 6. The authority citation for part 5 continues to read as follows:

Authority: 26 U.S.C. 5301, 7805, 27 U.S.C. 205 and 207.

■ 7. In § 5.52, add paragraph (e) to read as follows:

§ 5.52 Legibility and other requirements for mandatory information on labels.

* * * * *

(e) *Alcohol Facts statements.* See subpart L of this part for more specific requirements that apply to Alcohol Facts statements.

■ 8. In § 5.63, revise paragraphs (a)(1) and (2), remove paragraph (a)(3), revise paragraphs (b)(1) and (2), and add paragraphs (b)(3) and (4) to read as follows:

§ 5.63 Mandatory label information.

(a) * * *

(1) Brand name, in accordance with § 5.64; and

(2) Class, type, or other designation, in accordance with subpart I of this part.

(b) * * *

(1) Name and address of the bottler or distiller, in accordance with § 5.66, or the importer, in accordance with § 5.67 or § 5.68, as applicable;

(2) Net contents (which may be blown, embossed, or molded into the container as part of the process of manufacturing the container), in accordance with § 5.70;

(3) Alcohol content, in accordance with § 5.65 and subpart L of this part; and

(4) An Alcohol Facts statement, in accordance with subpart L of this part.

* * * * *

■ 9. In § 5.65, revise paragraph (a) and paragraph (b) introductory text to read as follows:

§ 5.65 Alcohol content

(a) *General.* The alcohol content for distilled spirits must be stated as a percentage of alcohol by volume and must appear in an Alcohol Facts statement in accordance with the requirements of subpart L of this part. Products that contain a significant amount of material, such as solid fruit, that may absorb spirits after bottling must state the alcohol content at the time of bottling as follows: ''Bottled at ____percent alcohol by volume.'' An additional statement of alcohol content as a percentage of alcohol by volume may appear on any label affixed to the container.

(b) *How the alcohol content must be expressed.* The following rules apply to additional statements of alcohol content that appear on the label, other than the required statement in an Alcohol Facts statement:

* * * * *

■ 10. Add subpart L to read as follows:

Subpart L—Alcohol Facts Statement

Sec.

5.211 Alcohol Facts statement.
5.212 Format for the Alcohol Facts statement.
5.213 Placement of the Alcohol Facts statement.
5.214 Tolerance levels.

Subpart L—Alcohol Facts Statement

§ 5.211 Alcohol Facts statement.

(a) *General.* The Alcohol Facts statement required under § 5.63(b)(4) must include the following information, and may not include additional information, except as provided in this section:

(1) The single serving size, as defined in paragraph (b) of this section;

(2) The number of servings per container;

(3) Alcohol content as a percentage of alcohol by volume;

(4) The number of fluid ounces of pure ethyl alcohol per serving;

(5) The number of calories per serving; and

(6) The number, in grams per serving, of carbohydrates, fat, and protein.

(b) *Single serving size and servings per container*—(1) *Definition.* The term ''single serving size'' or ''serving size'' means an amount of the distilled spirits customarily consumed as a single serving, expressed in U.S. fluid ounces and, in parentheses, in milliliters (mL), to the nearest whole number. This amount is not a recommended amount, but rather is only a reference amount to help consumers determine nutrient, alcohol, and calorie intake. The single serving size reference amounts for distilled spirits are:

TABLE 1 TO PARAGRAPH (b)(1)

For products containing:	a single serving size is:
Not more than 7% alc/vol.	12 fluid ounces (355 mL).
Over 7% and not more than 16% alc/vol.	5 fluid ounces (148 mL).
Over 16% and not more than 24% alc/vol.	2.5 fluid ounces (74 mL).
Over 24% alc/vol	1.5 fluid ounces (44 mL) or 50 mL for a 50 mL container.

(2) *Single-serving containers.* Distilled spirits packaged and sold in containers with a net content of less than 200 percent of a single serving size reference amount described in this section must be labeled as containing a single serving, and a single serving size is the net content of the container.

(3) *Multi-serving containers.* Products packaged and sold in containers with a net content of 200 percent or more of the applicable single serving size reference amount described in this section will be considered to be in multi-serving containers, and the number of servings per container must be labeled to the nearest one-quarter serving.

(c) *Percentage of alcohol by volume.* The Alcohol Facts statement must express the alcohol content as a percentage of alcohol by volume to the nearest tenth of a percent, subject to the tolerances set forth in § 5.65(c). Products that contain a significant amount of material, such as solid fruit, that may absorb spirits after bottling must state the alcohol content at the time of bottling as follows: ''Bottled at ____percent alcohol by volume.'' An optional statement of proof may also be included, as set forth in § 5.212(d)(4), but only if it is immediately adjacent to the percent-by-volume alcohol content declaration.

(d) *Alcohol expressed in fluid ounces.* The Alcohol Facts statement must express the number of U.S. fluid ounces of pure ethyl alcohol per serving to the nearest tenth of an ounce. The declaration of alcohol in fluid ounces per serving is calculated from the percent-by-volume alcohol content declaration. For example, 5 fl oz of a beverage with 12 percent alcohol by volume would have 0.6 fl oz of pure ethyl alcohol, while 5 fl oz of a beverage with 14 percent alcohol by volume would have 0.7 fl oz of pure ethyl alcohol.

(e) *Calories.* Calorie statements may be expressed to the nearest calorie, or may be rounded to the nearest 10-calorie increment (for per-serving amounts above 50 calories) or the nearest 5-calorie increment (for per-serving amounts up to 50 calories), subject to the tolerances set forth in § 5.214. An amount less than 5 calories may be expressed as zero.

(f) *Carbohydrate.* (1) The Alcohol Facts statement must express the number of grams of total carbohydrates in a serving to the nearest gram, except that if a serving contains less than 1 gram, the statement ''less than 1 gram'' may be used as an alternative, and if the serving contains less than 0.5 gram, the content may be expressed as zero.

(2) The Alcohol Facts statement may optionally express the number of grams of total sugars in a serving to the nearest gram, except that if a serving contains less than 1 gram, the statement ''less than 1 gram'' may be used as an alternative, and if the serving contains less than 0.5 g of sugar, the content may be expressed as zero.

(g) *Fat.* The Alcohol Facts statement must express the number of grams of total fat in a serving (with total fat defined as total lipid fatty acids and expressed as triglycerides) to the nearest 0.5 (½) gram increment below 5 grams and to the nearest gram increment at or above 5 grams. If the serving contains less than 0.5 gram, the content may be expressed as zero.

(h) *Protein.* The Alcohol Facts statement must express protein content in grams per serving to the nearest gram, except that if a serving contains less than 1 gram, the statement ''Contains less than 1 gram'' or ''less than 1 gram'' may be used as an alternative, and if the serving contains less than 0.5 gram, the protein content may be expressed as zero.

§ 5.212 Format for the Alcohol Facts statement.

The Alcohol Facts statement must be presented in either a panel or a linear format, and the presentation must conform to the formatting specifications in this section. For distilled spirits containers with a net content of at least 200 percent and less than 500 percent of the applicable single serving size reference amount described in § 5.211, as an option, the Alcohol Facts statement may be presented in a dual-column panel which sets forth the required information per serving and per container, as illustrated by paragraph (i) of this section.

(a) The panel or linear display must be set off within a box by use of hairlines with all black or one color type, printed on a contrasting background.

(b) All information within the box must appear in a single, easy-to-read type style using both upper case and lower case letters. The type or printing must be at least 1 millimeter in height for containers of 200 mL or less and at least 2 millimeters in height for containers of more than 200 mL.

(c) Bold face is required for the title ''Alcohol Facts'' and for the heading ''Amount Per Serving,'' and is optional for the headings ''Alcohol by volume,'' ''Calories,'' ''Carbohydrate,'' ''Sugar'' (if used), ''Fat,'' and ''Protein.''

(d) The Alcohol Facts statement must appear in the panel or linear format in the following order:

(1) Serving size;

(2) Servings per container;

(3) Percentage of alcohol by volume;

(4) Optional statement of alcohol content in degrees of proof, which may only be presented in parentheses following the percentage of alcohol by volume declaration in the Alcohol Facts statement when displayed in a linear format. If a panel format is used, the statement of proof must be indented directly under the percent-by-volume alcohol content declaration (see the example in paragraph (g) of this section);

(5) U.S. fluid ounces of pure ethyl alcohol per serving. If a panel format is used, the U.S. fluid ounces of pure ethyl alcohol per serving must be indented directly under the percent-by-volume alcohol content declaration, or under the optional proof statement if that is used (see the example in paragraph (g) of this section);

(6) Calories;

(7) Carbohydrate;

(8) Sugar (if used);

(9) Fat; and

(10) Protein.

(e) The following abbreviations or shortened expressions may be used, with or without a period:

(1) For percentage of alcohol by volume, the percent symbol ''%'', ''Alcohol by volume'', ''Alc/vol'' or ''Alc by vol'';

(2) For U.S. fluid ounces, ''fl oz'';

(3) For grams, ''g'';

(4) For carbohydrate, ''Carb'';

(5) For serving, ''Serv.'';

(6) For milliliter, ''mL''; and

(7) For amount, ''Amt.''.

(f) The expression of decimal amounts less than 1 must include a zero prior to the decimal point (for example, 0.5 fl oz).

(g) The following Alcohol Facts statement illustrates an acceptable panel display for a 750 mL bottle of distilled spirits containing 40 percent alcohol by volume, and includes the optional statement of proof.

Figure 1 to Paragraph (g)

Alcohol Facts

Serving Size	1.5 fl oz (44 mL)
Servings Per Container	17
	Amount Per Serving
Alcohol by volume	40%
Proof	80
fl oz of alcohol	0.6
Calories	116
Carbohydrate	0g
Fat	0g
Protein	0g

(h) The following Alcohol Facts statement illustrates an acceptable linear display for a 50 mL bottle of distilled spirits containing 40 percent alcohol by volume and includes the optional statement of proof.

Figure 2 to Paragraph (h)

Alcohol Facts: Serving size: 1.7 fl oz (50 mL); Servings per container: 1; **Amount Per Serving:** Alcohol by volume: 40%; (80 proof); Fl oz of alcohol: 0.7; Calories: 131; Carbohydrate: 0g; Fat: 0g; Protein: 0g

(i) The following Alcohol Facts statement illustrates an acceptable dual-column panel display for a 100 mL bottle of distilled spirits containing 40 percent alcohol by volume.

Figure 3 to Paragraph (i)

Alcohol Facts		
Serving Size	1.5 fl oz (44 mL)	
Servings Per Container	2 1/4	
	Amt Per Serv.	Amt Per Bottle
Alcohol by volume	40%	40%
fl oz of alcohol	0.6	1.4
Calories	116	261
Carbohydrate	0g	0g
Fat	0g	0g
Protein	0g	0g

§ 5.213 Placement of the Alcohol Facts statement.

The Alcohol Facts statement may be presented in either a horizontal or vertical orientation.

§ 5.214 Tolerance levels.

(a) *General.* The following tolerance levels apply to labeling statements of calorie, carbohydrate (including sugar), protein, fat, and alcohol content for distilled spirits:

(1) *Calorie content.* A tolerance of 20 percent either above or below the stated calorie content is permitted. For example, a label showing 100 calories per serving is acceptable if the product has a calorie content of between 80 and 120 calories per serving.

(2) *Carbohydrate (including sugar) and protein content.* A tolerance of 20 percent either above or below the stated carbohydrate, sugar, and protein content is permitted. For example, a label showing 7 grams of carbohydrates per serving is acceptable if the product has a carbohydrate content of between 5.6 and 8.4 grams per serving.

(3) *Fat content.* A tolerance of 20 percent either above or below the stated fat content is permitted. For example, a label showing 7 grams of fat per serving is acceptable if the product has a fat content of between 5.6 and 8.4 grams per serving.

(4) *Alcohol content.* The tolerances for alcohol content specified in § 5.65(c) apply. The declaration of alcohol in fluid ounces per serving is calculated from the percent-by-volume alcohol content declaration.

(b) *Publication of analytical methods.* TTB will maintain on its website (*https://www.ttb.gov*) information regarding the methods it uses to validate calorie, carbohydrate, protein, fat, and alcohol content statements.

PART 7—LABELING AND ADVERTISING OF MALT BEVERAGES

■ 11. The authority citation for part 7 continues to read as follows:

Authority: 27 U.S.C. 205 and 207.

■ 12. In § 7.52, add paragraph (e) to read as follows:

§ 7.52 Legibility and other requirements for mandatory information on labels.

* * * * *

(e) *Alcohol Facts statements.* See subpart L of this part for more specific requirements that apply to Alcohol Facts statements.

■ 13. In § 7.53, revise paragraph (b) to read as follows:

§ 7.53 Type size of mandatory information and alcohol content statements.

* * * * *

(b) *Maximum type size optional alcohol content statements.* (1) Containers of more than 40 fluid ounces. An alcohol content statement (other than one required to appear in an Alcohol Facts statement under subpart L of this part) may not appear in script, type, or printing that is more than four millimeters in height on containers of malt beverages of more than 40 fluid ounces.

(2) Containers of 40 fluid ounces or less. An alcohol content statement (other than one required to appear in an Alcohol Facts statement under subpart L of this part) may not appear in script, type, or printing that is more than three millimeters in height on containers of malt beverages of 40 fluid ounces or less.

■ 14. In § 7.63, revise paragraphs (a)(3) through (5) and add paragraph (a)(6) to read as follows:

§ 7.63 Mandatory label information.

(a) * * *

(3) Alcohol content, in accordance with § 7.65 and subpart L of this part;

(4) Name and address of the bottler or importer (which may be blown, embossed, or molded into the container as part of the process of manufacturing the container), in accordance with § 7.66, § 7.67, or § 7.68, as applicable;

(5) Net contents (which may be blown, embossed, or molded into the container as part of the process of manufacturing the container), in accordance with § 7.70; and

(6) An Alcohol Facts statement, in accordance with subpart L of this part.

* * * * *

■ 15. Revise § 7.65 to read as follows:

§ 7.65 Alcohol content

(a) *Alcohol content in Alcohol Facts statement.* An alcohol content statement must appear in an Alcohol Facts statement in accordance with the requirements of subpart L of this part, unless prohibited by State law.

(b) *Additional alcohol content statements elsewhere on the label.* The following rules apply to additional statements of alcohol content that appear on the label, other than the required statement in an Alcohol Facts statement.

(1) *General.* An additional statement of alcohol content must be expressed as a percentage of alcohol by volume and may appear on any label affixed to the container. Other truthful, accurate, and specific factual representations of alcohol content, such as alcohol by weight, may also be made, as long as they appear together with, and as part of, a statement of alcohol content as a percentage of alcohol by volume.

(i) The alcohol content statement must be expressed in one of the following formats:

(A) ''Alcohol ____percent by volume'';

(B) ''____percent alcohol by volume''; or

(C) ''Alcohol by volume: ____percent.''

(ii) Any of the words or symbols may be enclosed in parentheses and authorized abbreviations may be used with or without a period. The alcohol content statement does not have to appear with quotation marks.

(2) *Optional abbreviations.* The statements listed in paragraph (b)(1) of this section must appear as shown, except that the following abbreviations may be used: Alcohol may be abbreviated as ''alc''; percent may be represented by the percent symbol ''%''; alcohol and volume may be separated by a slash ''/'' in lieu of the word ''by''; and volume may be abbreviated as ''vol''.

(3) *Examples.* The following are examples of alcohol content statements that comply with the requirements of paragraph (b) of this part:

(i) ''4.2% alc/vol'';

(ii) ''Alc. 4.0 percent by vol.'';

(iii) ''Alc 4% by vol''; and

(iv) ''5.9% Alcohol by Volume.''

(c) *Tolerance levels.* A tolerance of one percentage point is permitted, either above or below the stated alcohol content, for malt beverages containing 0.5 percent or more alcohol by volume. However, any malt beverage that is labeled as containing 0.5 percent or more alcohol by volume may not contain less than 0.5 percent alcohol by volume, regardless of any tolerance. The tolerance provided by this paragraph does not apply in determining compliance with the provisions of § 7.5 regarding the percentage of alcohol derived from added nonbeverage flavors and other nonbeverage ingredients containing alcohol. For malt beverages containing less than 0.5 percent alcohol by volume, the actual alcohol content may be less than, but may not exceed, the labeled alcohol content.

(d) *Low alcohol and reduced alcohol.* The terms ''low alcohol'' and ''reduced alcohol'' may be used only on malt beverages containing less than 2.5 percent alcohol by volume.

(e) *Non-alcoholic.* The term ''non-alcoholic'' may be used on malt beverages, provided the statement ''contains less than 0.5 percent (or .5%) alcohol by volume'' appears immediately adjacent to it, in readily legible printing and on a completely contrasting background.

(f) *Alcohol free.* A malt beverage may not be labeled with an alcohol content of 0.0 percent alcohol by volume, unless it is also labeled as ''alcohol free'' and contains no alcohol. The term ''alcohol free'' may be used only on malt beverages containing no alcohol. No tolerances are permitted for ''alcohol free'' malt beverages.

■ 16. Add subpart L to read as follows:

Subpart L—Alcohol Facts Statement

Sec.

7.211 Alcohol Facts statement.
7.212 Format for the Alcohol Facts statement.
7.213 Placement of the Alcohol Facts statement.
7.214 Tolerance levels.

Subpart L—Alcohol Facts Statement

§ 7.211 Alcohol Facts statement.

(a) *General.* The Alcohol Facts statement required under § 7.63(b)(6) must include the following information, and may not include additional information, except as provided in this section:

(1) The single serving size, as defined in paragraph (b) of this section;

(2) The number of servings per container;

(3) The alcohol content, under the conditions of paragraph (c) of this section;

(4) The number of fluid ounces of pure ethyl alcohol per serving, when required by paragraph (d) of this section;

(5) The number of calories per serving; and

(6) The number, in grams per serving, of carbohydrates, fat, and protein.

(b) *Single serving size and servings per container*—(1) *Definition.* The term ''single serving size'' or ''serving size'' means an amount of the malt beverage customarily consumed as a single serving, expressed in U.S. fluid ounces and, in parentheses, in milliliters (mL), to the nearest whole number. This amount is not a recommended amount, but rather is only a reference amount to help consumers determine nutrient, alcohol, and calorie intake. The single serving size reference amounts for malt beverages are:

TABLE 1 TO PARAGRAPH(b)(1)

For products containing:	a single serving size is:
Not more than 7% alc/vol.	12 fluid ounces (355 mL).
Over 7% and not more than 16% alc/vol.	5 fluid ounces (148 mL).
Over 16% and not more than 24% alc/vol.	2.5 fluid ounces (74 mL).
Over 24% alc/vol	1.5 fluid ounces (44 mL).

(2) *Single-serving containers.* Malt beverages packaged and sold in containers with a net content of less than 200 percent of a single serving size reference amount described in this section must be labeled as containing a single serving, and a single serving size is the net content of the container.

(3) *Multi-serving containers.* Products packaged and sold in containers with a net content of 200 percent or more of the applicable single serving size reference amount described in this section will be considered to be in multi-serving containers, and the number of servings per container must be labeled to the nearest one-quarter serving.

(c) *Alcohol content.* For malt beverages with an alcohol content of at least 0.5 percent alcohol by volume, the Alcohol Facts statement must include the alcohol content as a percentage of alcohol by volume rounded to the nearest tenth of a percent, subject to the tolerances set forth in § 7.65(c). For malt beverages containing less than 0.5 percent alcohol by volume, alcohol content may be expressed in the Alcohol Facts statement either as a percentage of alcohol by volume, or by use of the designation ''non-alcoholic'' or ''alcohol free'' in accordance with the tolerances and other conditions set forth in § 7.65(c), (e), and (f).

(d) *Alcohol expressed in fluid ounces.* For malt beverages with an alcohol content of at least 0.5 percent alcohol by volume, the Alcohol Facts statement must express the number of U.S. fluid ounces of pure ethyl alcohol per serving to the nearest tenth of an ounce. The declaration of alcohol in fluid ounces per serving is calculated from the percent-by-volume alcohol content declaration. For example, 5 fl oz of a beverage with 12 percent alcohol by volume would have 0.6 fl oz of pure ethyl alcohol, while 5 fl oz of a beverage with 14 percent alcohol by volume would have 0.7 fl oz of pure ethyl alcohol.

(e) *Calories.* Calorie statements may be expressed to the nearest calorie, or may be rounded to the nearest 10-calorie increment (for per-serving amounts above 50 calories) or the nearest 5-calorie increment (for per-serving amounts up to 50 calories), subject to the tolerances set forth in § 7.214. An amount less than 5 calories may be expressed as zero.

(f) *Carbohydrate.* (1) The Alcohol Facts statement must express the number of grams of total carbohydrates in a serving to the nearest gram, except that if a serving contains less than 1 gram, the statement ''less than 1 gram'' may be used as an alternative, and if the serving contains less than 0.5 gram, the content may be expressed as zero.

(2) The Alcohol Facts statement may optionally express the number of grams of total sugars in a serving to the nearest gram, except that if a serving contains less than 1 gram, the statement ''less than 1 gram'' may be used as an alternative, and if the serving contains less than 0.5 g of sugar, the content may be expressed as zero.

(g) *Fat.* The Alcohol Facts statement must express the number of grams of total fat in a serving (with total fat defined as total lipid fatty acids and expressed as triglycerides) to the nearest 0.5 (½) gram increment below 5 grams and to the nearest gram increment at or above 5 grams. If the serving contains less than 0.5 gram, the content may be expressed as zero.

(h) *Protein.* The Alcohol Facts statement must express protein content in grams per serving to the nearest gram, except that if a serving contains less than 1 gram, the statement ''Contains less than 1 gram'' or ''less than 1 gram'' may be used as an alternative, and if the serving contains less than 0.5 gram, the protein content may be expressed as zero.

§ 7.212 Format for the Alcohol Facts statement.

The Alcohol Facts statement must be presented in either a panel or a linear format, and the presentation must conform to the formatting specifications in this section. For malt beverage containers with a net content of at least 200 percent and less than 500 percent of the applicable single serving size reference amount described in § 7.211, as an option, the Alcohol Facts statement may be presented in a dual-column panel which sets forth the required information per serving and per container, as illustrated by paragraph (k) of this section.

(a) The panel or linear display must be set off within a box by use of hairlines with all black or one color type, printed on a contrasting background.

(b) All information within the box must appear in a single, easy-to-read type style using both upper case and lower case letters. The type or printing must be at least 1 millimeter in height for containers of ½ pint (8 U.S. fluid ounces or 237 mL) or less and no smaller than 2 millimeters in height for containers of more than ½ pint (8 U.S. fluid ounces or 237 mL).

(c) Bold face is required for the title ''Alcohol Facts'' and for the heading ''Amount Per Serving'' and is optional for the headings ''Alcohol by volume,'' ''Calories,'' ''Carbohydrate,'' ''Sugar'' (if used), ''Fat,'' and ''Protein.''

(d) The Alcohol Facts statement must appear in the panel or linear format in the following order:

(1) Serving size;

(2) Servings per container;

(3) Percentage of alcohol by volume;

(4) U.S. fluid ounces of pure ethyl alcohol per serving. If a panel format is used, the U.S. fluid ounces of pure ethyl alcohol per serving must be indented directly under the percent-by-volume alcohol content declaration (see the example in paragraph (g) of this section);

(5) Calories;

(6) Carbohydrate;

(7) Sugar (if used);

(8) Fat; and

(9) Protein.

(e) The following abbreviations or shortened expressions may be used, with or without a period:

(1) For percentage of alcohol by volume, the percent symbol ''%'', ''Alcohol by volume'', ''Alc/vol'' or ''Alc by vol'';

(2) For U.S. fluid ounces, ''fl oz'';

(3) For grams, ''g'';

(4) For carbohydrate, ''Carb'';

(5) For serving, ''Serv.'';

(6) For milliliter, ''mL''; and

(7) For amount, ''Amt.''.

(f) The expression of decimal amounts less than 1 must include a zero prior to the decimal point (for example, 0.5 fl oz).

(g) The following Alcohol Facts statement illustrates an acceptable panel display for a 24 fluid ounce bottle of a malt beverage containing 5 percent alcohol by volume.

Figure 1 to Paragraph (g)

Alcohol Facts	
Serving Size	12 fl oz (355 mL)
Servings Per Container	2
	Amount Per Serving
Alcohol by volume	5%
fl oz of alcohol	0.6
Calories	90
Carbohydrate	2g
Fat	0g
Protein	1g

(h) The following Alcohol Facts statement illustrates an acceptable panel display for a 12 fluid ounce bottle of a non-alcoholic malt beverage containing less than 0.5 percent alcohol by volume.

Figure 2 to Paragraph (h)

Alcohol Facts	
Serving Size	12 fl oz (355 mL)
Servings Per Container	1
	Amount Per Serving
Alcohol by volume	Non-alcoholic (contains less than 0.5% alc/vol)
Calories	90
Carbohydrate	2g
Fat	0g
Protein	1g

(i) The following Alcohol Facts statement illustrates an acceptable panel display for an 18 fluid ounce bottle of a malt beverage containing 5 percent alcohol by volume. The container has a net content of less than 200 percent of a single serving size reference amount and thus is labeled as containing a single serving.

Figure 3 to Paragraph (i)

Alcohol Facts	
Serving Size	18 fl oz (532mL)
Servings Per Container	1
	Amount Per Serving
Alcohol by volume	5%
fl oz of alcohol	0.9
Calories	135
Carbohydrate	3g
Fat	0g
Protein	1g

(j) The following Alcohol Facts statement illustrates an acceptable linear display for a 12 fluid ounce can of a malt beverage containing 4 percent alcohol by volume.

Figure 4 to Paragraph (j)

Alcohol Facts: Serving size: 12 fl oz (355 mL); Servings per container: 1; **Amount Per Serving:** Alcohol by volume: 4%; Fl oz of alcohol: 0.5; Calories: 90; Carbohydrate: 2g; Fat: 0g; Protein: 1g

(k) The following Alcohol Facts statement illustrates an acceptable dual-column panel display for a 24 fluid ounce can of a malt beverage containing 12 percent alcohol by volume.

Figure 5 to Paragraph (k)

Alcohol Facts		
Serving Size	5 fl oz (355 mL)	
Servings Per Container	4 ¾	
	Amt Per Serv.	Amt Per Bottle
Alcohol by volume	12%	12%
fl oz of alcohol	0.6	2.9
Calories	139	660
Carbohydrate	14g	67g
Fat	0g	0g
Protein	0g	0g

§ 7.213 Placement of the Alcohol Facts statement.

The Alcohol Facts statement may be presented in either a horizontal or vertical orientation.

§ 7.214 Tolerance levels.

(a) *General.* The following tolerance levels apply to labeling statements of calorie, carbohydrate (including sugar), protein, fat, and alcohol content for malt beverages:

(1) *Calorie content.* A tolerance of 20 percent either above or below the stated calorie content is permitted. For example, a label showing 100 calories per serving is acceptable if the product has a calorie content of between 80 and 120 calories per serving.

(2) *Carbohydrate (including sugar) and protein content.* A tolerance of 20 percent either above or below the stated carbohydrate, sugar, and protein content is permitted. For example, a label showing 7 grams of carbohydrates per serving is acceptable if the product has a carbohydrate content of between 5.6 and 8.4 grams per serving.

(3) *Fat content.* A tolerance of 20 percent either above or below the stated fat content is permitted. For example, a label showing 7 grams of fat per serving is acceptable if the product has a fat content of between 5.6 and 8.4 grams per serving.

(4) *Alcohol content.* The tolerances for alcohol content specified in § 7.65 apply. The declaration of alcohol in fluid ounces per serving is calculated from the percent-by-volume alcohol content declaration.

(b) *Publication of analytical methods.* TTB will maintain on its website (*https://www.ttb.gov*) information regarding the methods it uses to validate calorie, carbohydrate, protein, fat, and alcohol content statements.

PART 24—WINE

■ 17. The authority citation for part 24 continues to read as follows:

Authority: 5 U.S.C. 552(a); 26 U.S.C. 5001, 5008, 5041, 5042, 5044, 5061, 5062, 5121, 5122–5124, 5173, 5206, 5214, 5215, 5351, 5353, 5354, 5356, 5357, 5361, 5362, 5364–5373, 5381–5388, 5391, 5392, 5511, 5551, 5552, 5661, 5662, 5684, 6065, 6091, 6109, 6301, 6302, 6311, 6651, 6676, 7302, 7342, 7502, 7503, 7606, 7805, 7851; 31 U.S.C. 9301, 9303, 9304, 9306.

■ 18. In § 24.257, revise paragraph (a)(3) to read as follows:

§ 24.257 Labeling wine containers.

(a) * * *

(3) The alcohol content as a percentage of alcohol by volume. For wines with 7 percent or more alcohol by volume, the tolerance levels set forth in § 4.36 of this chapter apply. For wines with less than 7 percent alcohol by volume stated on the label, an alcohol content tolerance of plus or minus 0.75 percentage points is allowed; and

PART 25—BEER

■ 19. The authority citation for part 25 continues to read as follows:

Authority: 19 U.S.C. 81c; 26 U.S.C. 5002, 5051–5054, 5056, 5061, 5121, 5122–5124, 5222, 5401–5403, 5411–5417, 5551, 5552, 5555, 5556, 5671, 5673, 5684, 6011, 6061, 6065, 6091, 6109, 6151, 6301, 6302, 6311, 6313, 6402, 6651, 6656, 6676, 6806, 7342, 7606, 7805; 31 U.S.C. 9301, 9303–9308.

■ 20. In § 25.141, amend paragraph (a) by adding two sentences prior to the last sentence to read as follows:

§ 25.141 Barrels and kegs.

(a) * * * The barrel or keg must also show by label the alcohol content expressed as a percentage of alcohol by volume, rounded to the nearest tenth of a percentage point. A tolerance of one percentage point is permitted, either above or below the stated percentage of alcohol by volume, except that neither the labeled or actual alcohol content may be less than 0.5 percent alcohol by volume, regardless of any tolerance. * * *

* * * * *

■ 21. In § 25.142, amend paragraph (a) by adding two sentences prior to the last sentence to read as follows:

§ 25.142 Bottles.

(a) * * * The bottle must also show by label the alcohol content expressed as a percentage of alcohol by volume, rounded to the nearest tenth of a percentage point. A tolerance of one percentage point is permitted, either above or below the stated percentage of alcohol by volume; except that neither the labeled or actual alcohol content may be less than 0.5 percent alcohol by volume, regardless of any tolerance. * * *

* * * * *

PART 27—IMPORTATION OF DISTILLED SPIRITS, WINES, AND BEER

■ 22. The authority citation for part 27 continues to read as follows:

Authority: 5 U.S.C. 552(a), 19 U.S.C. 81c, 1202; 26 U.S.C. 5001, 5007, 5008, 5010, 5041, 5051, 5054, 5061, 5121, 5122–5124, 5201, 5205, 5207, 5232, 5273, 5301, 5313, 5382, 5555, 6038E, 6065, 6109, 6302, 7805.

■ 23. In § 27.59, remove paragraph (a), redesignate paragraph (b) as paragraph (d), add new paragraphs (a) and (b), and add paragraph (c) to read as follows:

§ 27.59 Wines.

(a) *Label requirements.* Each container of imported wine shall be marked or labeled with the following information:

(1) The name and address of the importer;

(2) The brand name, if different from above;

(3) The alcohol content expressed as a percentage of alcohol by volume. For wines with 7 percent or more alcohol by volume, the tolerance levels set forth in § 4.36 of this chapter apply. For imported wines with less than 7 percent alcohol by volume, an alcohol content tolerance of plus or minus 0.75 percentage points is allowed;

(4) The kind of wine, in accordance with the standards set forth in § 24.257 of this chapter; and

(5) The net contents of the container, unless the net content is permanently marked on the container as provided in 27 CFR part 4.

(b) *Federal Alcohol Administration Act requirements.* All imported wines containing not less than 7 percent and not more than 24 percent of alcohol by volume are required to be packaged, marked, branded, and labeled in conformity with the Federal Alcohol Administration Act (FAA Act) and regulations promulgated thereunder (27 CFR part 4), prior to their removal from customs custody. Containers of imported wine bottled or packaged after tax payment and withdrawal from customs custody are required to be covered by a certificate of label approval or a certificate of exemption from label approval on TTB Form 5100.31 issued pursuant to the FAA Act and regulations promulgated thereunder (27 CFR part 4).

(c) *Customs requirements.* Imported containers of wine are required also to be marked, branded and labeled in accordance with customs regulations (19 CFR parts 11 and 12).

* * * * *

■ 24. Revise § 27.60 to read as follows:

§ 27.60 Beer.

(a) *Label requirements.* Each container of beer shall be marked or labeled with the following information: the name and address of the importer, the net contents of the container, the nature of the product (such as beer, ale, porter, or stout), and the alcohol content, expressed as a percentage of alcohol by volume.

(b) *Federal Alcohol Administration Act requirements.* All imported malt beverages are required to be released from customs custody in conformity with the Federal Alcohol Administration Act (FAA Act) and regulations thereunder. The regulations under the FAA Act on the labeling and advertising of malt beverages may be found in 27 CFR part 7.

(c) *Customs requirements.* Imported containers of beer are required to be marked and labeled in accordance with customs regulations (19 CFR parts 11 and 12).

Signed: January 10, 2025.

Mary G. Ryan,

Administrator.

Approved: January 10, 2025.

Aviva Aron-Dine,

Deputy Assistant Secretary (Tax Policy).

Title 3—

The President

Executive Order 14142 of January 15, 2025

Taking Additional Steps With Respect to the Situation in Syria

By the authority vested in me as President by the Constitution and the laws of the United States of America, including the International Emergency Economic Powers Act (50 U.S.C. 1701 *et seq.*), the National Emergencies Act (50 U.S.C. 1601 *et seq.*), section 212(f) of the Immigration and Nationality Act of 1952 (8 U.S.C. 1182(f)), and section 301 of title 3, United States Code,

I, JOSEPH R. BIDEN JR., President of the United States of America, in view of changing circumstances on the ground in Syria and in order to take additional steps with respect to the national emergency declared in Executive Order 13894 of October 14, 2019 (Blocking Property and Suspending Entry of Certain Persons Contributing to the Situation in Syria), hereby order:

Section 1. *Amendments to Executive Order 13894.* Executive Order 13894 is hereby amended by:

(a) striking from the second paragraph the phrase ‘‘, and in particular the recent actions by the Government of Turkey to conduct a military offensive into northeast Syria,’’;

(b) striking subsections (1)(a)(i)(B)–(F) and inserting, in lieu thereof, the following:

‘‘(B) to have materially assisted, sponsored, or provided financial, material, or technological support for, or goods or services to or in support of, any person whose property and interests in property are blocked pursuant to this order; or

(C) to be owned or controlled by, or to have acted or purported to act for or on behalf of, directly or indirectly, any person whose property and interests in property are blocked pursuant to this order.’’; and

(c) striking subsection 8(f).

Sec. 2. *General Provisions.* (a) Nothing in this order shall be construed to impair or otherwise affect:

(i) the authority granted by law to an executive department or agency, or the head thereof; or

(ii) the functions of the Director of the Office of Management and Budget relating to budgetary, administrative, or legislative proposals.

(b) This order shall be implemented consistent with applicable law and subject to the availability of appropriations.

(c) This order is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other persons.

Presidential Documents

Notice of January 15, 2025

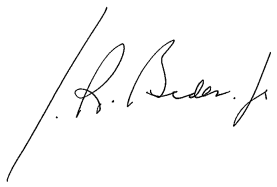
Continuation of the National Emergency With Respect to the Widespread Humanitarian Crisis in Afghanistan and the Potential for a Deepening Economic Collapse in Afghanistan

On February 11, 2022, by Executive Order 14064, I declared a national emergency pursuant to the International Emergency Economic Powers Act (50 U.S.C. 1701 *et seq.*) to deal with the unusual and extraordinary threat to the national security and foreign policy of the United States constituted by the widespread humanitarian crisis in Afghanistan and the potential for a deepening economic collapse in Afghanistan.

The widespread humanitarian crisis in Afghanistan—including the urgent needs of the people of Afghanistan for food security, livelihoods support, water, sanitation, health, hygiene, and shelter and settlement assistance, among other basic human needs—and the potential for a deepening economic collapse in Afghanistan continue to pose an unusual and extraordinary threat to the national security and foreign policy of the United States. In addition, the preservation of certain property of Da Afghanistan Bank (DAB) held in the United States by United States financial institutions is of the utmost importance to addressing this national emergency and the welfare of the people of Afghanistan. Various parties, including representatives of victims of terrorism, have asserted legal claims against certain property of DAB or indicated in public court filings an intent to make such claims. This property is blocked under Executive Order 14064.

For these reasons, the national emergency declared in Executive Order 14064 of February 11, 2022, must continue in effect beyond February 11, 2024. Therefore, in accordance with section 202(d) of the National Emergencies Act (50 U.S.C. 1622(d)), I am continuing for 1 year the national emergency declared in Executive Order 14064 with respect to the widespread humanitarian crisis in Afghanistan and the potential for a deepening economic collapse in Afghanistan.

This notice shall be published in the *Federal Register* and transmitted to the Congress.



THE WHITE HOUSE,
January 15, 2025.

Title 3—

The President

Proclamation 10881 of January 14, 2025

Establishment of the Chuckwalla National Monument

By the President of the United States of America

A Proclamation

In southeastern California, where the Mojave and Colorado Deserts intersect, ancient trails weave through a land of canyon-carved mountain ranges bound together by radiating alluvial bajadas and dark tendrils of dry wash woodlands. Sharing a name with the wide-bodied lizard that is commonly found here and derived from the Cahuilla word ''čáxwal,'' the Chuckwalla region is a place of wonder that lies within the traditional homelands of the Iviatim (Cahuilla), Nüwü (Chemehuevi), Pipa Aha Macav (Mojave), Kwatsáan (Quechan), Maara'yam and Marringayam (Serrano), and other Indigenous peoples. It is imbued with religious, spiritual, historic, and cultural significance for Tribal Nations that trace their origins to these lands. The area contains an abundance of artifacts attesting to its connection to diverse human communities over thousands of years. The region's mosaic of habitats is also home to a remarkable array of plant and animal species. The dramatic contortions of its mountain ranges embody a fundamental story about the shaping of our world that scientists are still learning to decipher. The cultural, geologic, and ecological resources on Federal lands in the Chuckwalla region will continue to inspire and fascinate people and provide a scientific research trove for generations to come.

The Chuckwalla region comprises five geographically discrete areas located between Joshua Tree National Park and the Palen/McCoy Wilderness to the north, California State Route 78 to the east, the Chocolate Mountain Aerial Gunnery Range to the south, and the western boundary of the Mecca Hills Wilderness to the west. Woven together by the physical threads of Indigenous trails that radiate outward connecting peoples and places throughout the Southwest, the region carries significant cultural and sacred meaning for many Tribal Nations. The southern area is a vast and intact expanse of austere, beautiful mountain ranges and desert valleys stretching from the Mecca Hills and Orocopia Mountains in the northwest, to the Mule and Palo Verde Mountains in the northeast, and to the mesquite-studded draws of the Milpitas Wash in the southeast. The other four areas, which lie in the transition zone between the Mojave and Colorado deserts, are located at the base of the Cottonwood, Eagle, Coxcomb, and Palen Mountains.

The imprints of generations of Indigenous peoples are found throughout the region in the trails, tools, habitation sites, and spectacular petroglyphs and pictographs they left behind. The Chuckwalla region has also been marked by the passage of people on the major prehistoric and historic travel corridors that connected the region to the Pacific coast and the interior southwest. While only a small fraction of the region has been formally inventoried, myriad cultural resources have been documented, and there are likely similar historic sites and objects yet to be discovered. A few sites are well-known and easily accessible to the public; many others are concealed in labyrinths of rugged canyons and have not yet been formally studied.

Trails within the area helped to link important resources and people across the Indigenous homelands of the Chuckwalla region. For centuries, they facilitated trade and cultural exchange between peoples throughout the

Southwest. Weaving through canyons, the trails connected indispensable water and other resources throughout the area. They were, and are, essential to the people who trace their origins to these lands, and provide a sense of connection between generations and between the physical and spiritual worlds.

In some places, the footfalls of past generations have etched these trails into the region's surface, wearing a clear path into desert pavement. Ceramics and lithic scatter are also commonly found along trail routes within the Chuckwalla region. The endless shifting of sand and alluvium have likely obscured artifacts in some locations. A prehistoric travel route ran through the core of the northern area between the Eagle and Coxcomb Mountains, connecting the Pinto Basin, where some of California's oldest artifacts have been found, and the Chuckwalla Valley. The relatively narrow gap between the Eagle and Coxcomb Mountains traversed by the corridor also creates the conditions for flash floods; as a result, artifacts are likely to be found below the surface of the wash rather than on its surface.

At least two trails that traverse the Chuckwalla region are sacred to Tribal Nations and bind their members to the land and to generations past. These trails, of which physical traces remain, are both ancient and modern, tangible places and passages that Tribes and Indigenous peoples evoke and visit through songs and dreams. Two versions of the Salt Song Trail pass through the region, connecting it to Tribal communities and sacred sites throughout the Southwest physically and through songs describing corridors, viewsheds, and the related geography and resources. While the Salt Song Trail can be traveled by foot, traditional singers also travel this trail by voice through songs passed down across generations and that Tribes and Indigenous peoples believe assist the transport of the spirits of the recently deceased.

The Xam Kwatchan Trail, which parallels the Colorado River in the vicinity of the Mule and Palo Verde Mountains along the eastern edge of the southern area, is maintained by the Quechan people and recognized by many other Tribes of the Lower Colorado River. Portions of the Xam Kwatchan Trail are still visible and may be traveled physically as the trail weaves through the area and links together three sacred peaks of the Southwest: Avi Kwa Ame to the north of the Chuckwalla region near Lake Mead, Palo Verde Peak within the southern Chuckwalla region and overlooking the Colorado River, and Pilot Knob to the south of the Chuckwalla region near Yuma, Arizona. It is a belief of the Quechan people that they also travel this trail through dreams to transport the living and deceased, and to tie them to these lands and to their origin at Avi Kwa Ame. The Palo Verde and Mule Mountains encompass sites of particular significance along this trail. The eastern side of the Palo Verde Mountains is particularly dense with evidence of human habitation, including trails, camp spots, and ceremonial fire hearths.

The Chuckwalla region has no perennial streams or lakes, but hidden within the southern area's mountain ranges are springs and natural seasonal water catchments (often referred to as tanks). Knowledge of these water sources has allowed Indigenous people to survive within this arid environment for thousands of years. The locations surrounding these springs and tanks are replete with artifacts, including stone tools, ceramics, remnants of habitations, and a dazzling array of petroglyphs and pictographs. In some places, the patina of naturally created desert pavement has been scraped away to form circles and images known as geoglyphs.

In a wide canyon at the heart of the Chuckwalla Mountains lies Corn Springs, a well-known cultural site. Amid the mountain range's rugged peaks and dry washes, the oasis at Corn Springs, which supports a stand of more than 60 California fan palms, has long been a beacon to the area's human occupants. Corn Springs contains extensive petroglyphs encompassing a diverse array of elements and representing contributions by many people over thousands of years. These petroglyphs, which are listed on the National

Register of Historic Places, are carved into flat planes on the golden rocks found near Corn Springs.

Jutting from the desert floor north of Corn Springs, in an area just south of the community of Desert Center, sits Alligator Rock. A salient ridge containing dikes of aplite, Alligator Rock was both a milestone on the major Indigenous travel and trade route that passed through Chuckwalla Valley and an important prehistoric source of lithic materials. Flakes and tools crafted from the area's distinctive speckled stone have been documented in sites throughout Chuckwalla Valley.

In the eastern area, northeast of Alligator Rock and Corn Springs and north of the Little Chuckwalla Mountain Wilderness, Ford Dry Lake is now a sparsely vegetated playa in the Chuckwalla Valley at the base of the Palen and McCoy Mountains. Dense cultural sites have been documented along the lake's ancient shorelines, attesting to its use by generations of Indigenous peoples. Artifacts uncovered here include a variety of stone tools, ceramics, and other evidence of Indigenous habitation sites.

While seemingly inhospitable to humans, the Chuckwalla region has provided sustenance and material resources to the Indigenous peoples who have inhabited and traversed it for generations. Many of the region's native plants were gathered for food, including mesquite and ironwood seeds, wild grasses, and cacti. Mesquite, which thrives in the dry washes of the southern area between the Chocolate and Palo Verde Mountains, was a particularly important source of sustenance. Large quantities of the beans were collected in the summer and stored for use throughout the year. In 1972, a large ceramic olla (an earthenware vessel) containing mesquite beans was discovered in a rock shelter in the canyon-striated Mecca Hills of the far western corner of the southern area.

By the mid-1800s, the Chuckwalla region had caught the attention of non-Indigenous Americans seeking wealth in the underbelly of its mountains. In the 1860s, the Mule Mountains—near the California-Arizona border—were the site of one of the first discoveries of gold in Riverside County. Two decades later, the largest gold rush in Riverside County's history occurred when gold and silver were discovered in the Chuckwalla Mountains. Relics of historic mines, including shafts, trenches, equipment, and remnants of buildings, are present throughout the region's mountain ranges. A mining shaft, conveyor, and loading dock associated with the Model Mine, which operated around the turn of the last century, are located in the western foothills of the Chuckwalla Mountains.

In 1862, as gold seekers spread throughout the region, a miner named William Bradshaw sought to develop a route to connect the Coachella Valley with expanding mines on the east side of the Colorado River. A Cahuilla leader and another Indigenous trail runner provided Bradshaw with a map of existing Indigenous routes linking springs and tanks along the southern edge of the Orocopia, Chuckwalla, and Little Chuckwalla Mountains. He used the knowledge shared with him of these existing Indigenous trails to identify what became known as the ''Bradshaw Trail,'' an overland route that traverses the Chuckwalla Bench through the heart of the southern area. Some of the springs and tanks, which had long been used by Indigenous peoples, became stagecoach stations associated with the Bradshaw Trail. Intrepid visitors can still drive the unpaved Bradshaw Trail, which the Bureau of Land Management (BLM) designated as a National Backcountry Byway in 1992.

In 1942, shortly after the United States entered World War II, the Department of the Army established a presence in the Chuckwalla region, reminders of which can still be seen across the terrain. In March of 1942, Major General George Patton selected a large swath of desert in California and Nevada, including a substantial amount of land in the Chuckwalla Valley, for a Desert Training Center to prepare United States Army units for desert combat. By the end of World War II, over a million soldiers had been trained at the facility. Small unit training exercises were held in Chuckwalla

Valley, which the Army believed provided the best approximation of terrain they might face in parts of North Africa. The scars of tank tracks across the southern area's desert pavement can still be seen today, along with berms, trenches, and foxholes.

The Chuckwalla region includes the footprint of Camp Young, the Desert Training Center's first camp and its administrative core. Camp Young was primarily located south of present-day Joshua Tree National Park and north of Interstate 10 in the western area. While none remain standing, Camp Young boasted almost 100 administrative buildings, two hospitals, 50 warehouses, a theater, an officers' club, and a post office. Traces of the soldiers' lives at Camp Young can still be seen here, including rock-lined walkways and remnants of concrete foundations.

During his tenure at the Desert Training Center, General Patton lived at Camp Young but was in the field on a daily basis, including to review small unit training exercises in the Chuckwalla Valley. He would often shout orders into a radio while observing tank maneuvers from a hill overlooking the valley between the Orocopia and Chuckwalla Mountains, in the center of the Chuckwalla region's southern area. The road bulldozed for Patton's use to the top of this hill, known as ''The King's Throne,'' remains clearly visible.

Against this backdrop of human history, the Chuckwalla region's many and varied plant and animal inhabitants have continued to persevere in the harsh desert environment. The region provides a refuge for more than 50 rare plants and animals, as well as 21 vulnerable vegetation communities. The diversity of biota has attracted numerous scientists over many decades who have conducted research into topics as varied as testing translocation methods for bighorn sheep, studying ant colony forming behavior, and documenting the demographic patterns of the Orocopia sage, a shrub with delicate lavender flowers that is only known to grow in the Mecca Hills and Orocopia and Chocolate Mountains.

The broad bajadas of the southern area radiate out from a series of small mountain ranges, whose sinuous canyons and ragged peaks provide habitat to a variety of species. The washes and sandy slopes of the Orocopia Mountains are home to Orocopia sage. The Mecca aster is endemic to only a small area, with more than half of its known occurrences located in the Mecca Hills. Mountain areas in the Chuckwalla region are also the only known locations of the recently described Chuckwalla cholla, a relatively low-lying cactus with reddish flowers.

Desert bighorn sheep, a sensitive species with declining numbers, live year-round on the craggy slopes of the Orocopia and Chuckwalla Mountains and are occasionally glimpsed in the Palo Verde and Little Chuckwalla Mountains. The broad, sandy washes that connect the mountains—unbroken by paved roads or large developments—provide the habitat connectivity necessary to preserve genetic diversity among bighorn sheep populations.

The region's expanse of gently sloping shrubby terrain is also vital to the survival of the threatened Agassiz's desert tortoise, encompassing key components of an essential corridor connecting the tortoise's Chuckwalla and Chemehuevi populations. Much of the region is critical habitat for this charismatic desert dweller.

Located in the southern area of the Chuckwalla region, the Chuckwalla Bench is an elevated area of alluvial fans that provided a setting for extensive study and monitoring of desert tortoises for decades. It is also home to over 150 native plant species. The specific species present change with elevation as the bench's slopes climb to an 80,000-acre expanse that rises to approximately 2,000 feet in elevation, resulting in an environment that is notably cooler and wetter than is typical for the Sonoran Desert. At the higher elevations, Mojave yucca and cholla become increasingly common. The Munz's cholla, a species endemic to the Chuckwalla Bench whose spiny, branching arms often reach a height of six feet, grows here.

In part because of the relative availability of forage and water, the Chuckwalla Bench is included in the United States Fish and Wildlife Service's primary area of interest for Sonoran Desert pronghorn reintroduction in California. In 1941, around the time that the United States Army began desert training in the area, the endangered Sonoran Desert pronghorn was last observed in the Colorado Desert in the vicinity of Salt Creek Wash, which runs between the Orocopia and Chocolate Mountains.

Dry washes in the Chuckwalla region are threaded with populations of desert trees including ironwood, blue palo verde, smoketree, and mesquite. These are known as microphyll woodlands, and they provide migration corridors for desert wildlife, as well as crucial habitat for migratory birds. Milpitas Wash, located south of the Palo Verde Mountains in the southern area near the Arizona border, is one of the largest remaining microphyll woodlands in the Colorado Desert. It is identified as a component of the National Audubon Society's Colorado Desert Microphyll Woodlands Important Bird Area. Old-growth blue palo verde trees in Milpitas Wash provide nesting cavities for an important population of Gila woodpeckers, which are listed as endangered under the California Endangered Species Act. Rare long-eared owls, Crissal thrashers, and black-tailed gnatcatchers also nest in Milpitas Wash.

Dense pockets of palo verde microphyll woodland occur in the northeast portion of the southern Chuckwalla region and are reported to have the highest winter bird densities in the California Desert. Sand dunes have dammed several small washes in the area, creating relatively wet conditions that are conducive to dense vegetative growth. These sand dunes in Chuckwalla Valley are fed by aeolian (windblown) sand transport corridors. In addition to the rich cultural sites associated with Ford Dry Lake, the portion of the Chuckwalla Valley in the eastern Chuckwalla region protects part of these sand transport corridors. The dunes in this area also provide habitat for the rare Mojave fringe-toed lizard.

Nightfall reveals another dimension of the Chuckwalla region. Kit foxes and sensitive species such as burrowing owls and elf owls emerge from dens, while a variety of rare bats including the California leaf-nosed bat, the western mastiff bat, and the western yellow bat dart through the desert sky. Mountain lions are also known to prowl the Chuckwalla region at night. A population of mountain lions in southern California and the central coast of California, which includes those in the Chuckwalla region, is currently a candidate species under consideration for listing under the California Endangered Species Act.

The Chuckwalla region encompasses striking geologic diversity, which both underpins the rich ecological and cultural values and is itself the focus of extensive research. In the far western reach of the southern area of this region, the Mecca Hills, shaped by the unquiet presence of the San Andreas Fault, attract not only hikers eager to explore their intricate canyons but a long line of geologists seeking to better understand fault dynamics. There is an exposure of Pliocene-Pleistocene terrestrial sedimentary rocks along the fault, and recent uplift and erosion have allowed the opportunity for its detailed analysis. Researchers have analyzed the Painted Canyon Fault, which lies within the San Andreas strike-slip fault zone in the Mecca Hills, to better understand tectonic processes along faults as far away as Denmark.

Just to the east of the Mecca Hills, the Orocopia Mountains have been the site of extensive study of the geologic mechanisms that shape the earth, including deposition, metamorphism, uplift, and exposure. In the late 1960s and early 1970s, the Orocopia Mountains were the site of field training for the Apollo 13 and 15 crews, preparing them to observe and document lunar geology.

In 1986, scientists documented five new species of mollusks from the Eocene epoch that were found in samples taken from the Orocopia Mountains, which helped clarify scientists' understanding of the timing of the westward

migration of Eurasian mollusk species during the early Eocene and late Paleocene epochs. In the Palo Verde Mountains, at the southeastern edge of the Chuckwalla region, outcroppings of the Bouse Formation are helping scientists unlock mysteries around the formation of the Colorado River.

Protecting the Chuckwalla region will preserve an important spiritual, cultural, prehistoric, and historic legacy and protect places inscribed with history for future generations; maintain a diverse array of natural and scientific resources; and help ensure that the prehistoric, historic, and scientific resources and values of the region endure for the benefit of all Americans. As described above, the region contains numerous objects of historic and scientific interest, and it provides exceptional outdoor recreational opportunities, including hiking, camping, backpacking, rockhounding, sightseeing, nature study, birding, horseback riding, hunting, climbing, mountain biking, and motorized recreation, all of which are important to the travel- and tourism-based economy of the region.

WHEREAS, section 320301 of title 54, United States Code (the ''Antiquities Act''), authorizes the President, in the President's discretion, to declare by public proclamation historic landmarks, historic and prehistoric structures, and other objects of historic or scientific interest that are situated upon the lands owned or controlled by the Federal Government to be national monuments, and to reserve as a part thereof parcels of land, the limits of which shall be confined to the smallest area compatible with the proper care and management of the objects to be protected; and

WHEREAS, the Chuckwalla region has been profoundly sacred to Tribal Nations and Indigenous peoples with ties to the Colorado and Mojave Deserts since time immemorial; and

WHEREAS, it is in the public interest both to ensure the preservation, restoration, and protection of the objects of scientific and historic interest identified above and to advance renewable energy in Development Focus Areas (DFAs) that were identified by the Desert Renewable Energy Conservation Plan (DRECP) as of the date of this proclamation; and

WHEREAS, I find that all the objects identified above, and objects of the type identified above within the area described herein, are objects of historic or scientific interest in need of protection under section 320301 of title 54, United States Code, regardless of whether they are expressly identified as objects of historic or scientific interest in the text of this proclamation; and

WHEREAS, I find that there are threats to the objects identified in this proclamation, and, in the absence of a reservation under the Antiquities Act, the objects identified in this proclamation are not adequately protected by applicable law or administrative designations, thus making a national monument designation and reservation necessary to protect the objects of historic and scientific interest identified above for current and future generations; and

WHEREAS, I find that the boundaries of the monument reserved by this proclamation represent the smallest area compatible with the proper care and management of the objects of historic or scientific interest identified above, as required by the Antiquities Act; and

WHEREAS, it is in the public interest to ensure the preservation, restoration, and protection of the objects of historic and scientific interest identified above;

NOW, THEREFORE, I, JOSEPH R. BIDEN JR., President of the United States of America, by the authority vested in me by section 320301 of title 54, United States Code, hereby proclaim the objects identified above that are situated upon lands and interests in lands owned or controlled by the Federal Government to be the Chuckwalla National Monument (monument) and, for the purpose of protecting those objects, reserve as part thereof all lands and interests in lands that are owned or controlled by the Federal

Government within the boundaries described on the accompanying map, which is attached hereto and forms a part of this proclamation. These reserved Federal lands and interests in lands encompass approximately 624,270 acres. As a result of the distribution of the objects across the Chuckwalla region, the boundaries described on the accompanying map are confined to the smallest area compatible with the proper care and management of the objects of historic or scientific interest identified above.

All Federal lands and interests in lands within the boundaries of the monument are hereby appropriated and withdrawn from all forms of entry, location, selection, sale, or other disposition under the public land laws, other than by exchange that furthers the protective purposes of the monument or that facilitates the remediation, monitoring, or reclamation of historic mining operations on public or private land within the monument boundary; from location, entry, and patent under the mining laws; and from disposition under all laws relating to mineral and geothermal leasing.

The establishment of the monument is subject to valid existing rights. If the Federal Government subsequently acquires any lands or interests in lands not currently owned or controlled by the Federal Government within the boundaries described on the accompanying map, such lands and interests in lands shall be reserved as a part of the monument, and objects of the type identified above that are situated upon those lands and interests in lands shall be part of the monument, upon acquisition of ownership or control by the Federal Government.

Nothing in this proclamation shall be construed to alter the valid existing water rights of any party, including the United States, or to alter or affect agreements governing the management and administration of the Colorado River, including any existing interstate water compact. This proclamation does not reserve water as a matter of Federal law.

The Secretary of the Interior (Secretary), through the BLM, shall manage the monument pursuant to applicable legal authorities, as a unit of the National Landscape Conservation System, and in accordance with the terms, conditions, and management direction provided by this proclamation.

For purposes of protecting and restoring the objects identified above, the Secretary shall within 3 years from the date of this proclamation prepare a management plan for the monument and shall promulgate such rules and regulations for the management of the monument as deemed appropriate. The Secretary, through the BLM, shall consult with other Federal land management agencies or agency components in the local area, including the Bureau of Reclamation, Department of Defense, and National Park Service, in developing the management plan.

The Secretary shall provide for maximum public involvement in the development of the management plan, as well as consultation with Tribal Nations affiliated culturally or historically with the Chuckwalla Region and conferral with State and local governments. In preparing the management plan, the Secretary shall take into account, to the maximum extent practicable, maintaining the undeveloped character of the lands within the monument; minimizing impacts from surface-disturbing activities; providing appropriate and, where consistent with the proper care and management of the objects of historic or scientific interest identified above, improving access for recreation, hunting, dispersed camping, wildlife management, scientific research, and the permissible casual collection of rocks; and emphasizing the retention of natural quiet, dark night skies, and scenic attributes of the region.

The Secretary shall consider appropriate mechanisms to provide for temporary closures to the general public of specific portions of the monument to protect the privacy of cultural, religious, and gathering activities of members of Tribal Nations.

The Secretary, through the BLM, shall establish an advisory committee under chapter 10 of title 5, United States Code (commonly known as the Federal Advisory Committee Act), to provide advice or recommendations regarding

the development of the management plan and, as appropriate, management of the monument. The advisory committee shall consist of a fair and balanced representation of interested stakeholders, including State agencies and local governments; Tribal Nations; recreational users; conservation organizations; the scientific community; the renewable energy and electric utility industry; and the general public in the region.

In recognition of the value of collaboration with Tribal Nations for the proper care and management of the objects identified above and to ensure that management of the monument is informed by, integrates, and reflects Tribal expertise and Indigenous Knowledge, as appropriate, the Secretary shall meaningfully engage with Tribal Nations with cultural or historical affiliation to the Chuckwalla region, including by seeking opportunities for co-stewardship of the monument.

If Tribal Nations with cultural or historical affiliation to the Chuckwalla region independently establish a commission or other similar entity (commission) comprised of elected officers or official designees from each participating Tribal Nation to engage in co-stewardship of the monument with the Federal Government through shared responsibilities or administration, then the Secretary shall meaningfully engage the commission in the development, revision, or amendment of the management plan and the management of the monument, including by considering and, as appropriate, integrating the Indigenous Knowledge and special expertise of the members of the commission in the planning and management of the monument. The management plan for the monument shall also set forth parameters for continued meaningful engagement with the commission, if established, in the implementation of the management plan and, as appropriate, incorporate public education on and interpretation of traditional place names and the cultural significance of land within the monument. The Secretary shall explore opportunities to provide support to the commission, if established, to enable participation in the planning and management of the monument.

The Secretary shall also explore entering into cooperative agreements or contracts, pursuant to the Indian Self-Determination and Education Assistance Act, 25 U.S.C. 5301 *et seq.* or other applicable authorities, with Tribes or Tribal organizations to perform administrative or management functions within the monument and providing technical and financial assistance to improve the capacity of Tribal Nations to develop, enter into, and carry out activities under such cooperative agreements or contracts. The Secretary also shall explore opportunities for funding agreements with Tribal Nations relating to the management and protection of traditional cultural properties and other culturally significant programming associated with the monument.

Nothing in this proclamation shall be deemed to alter, modify, abrogate, enlarge, or diminish the rights or jurisdiction of any Tribal Nation, including off-reservation reserved rights. The Secretary shall, to the maximum extent permitted by law and in consultation with Tribal Nations, ensure the protection of sacred sites and cultural properties and sites in the monument and shall provide access to Tribal members for traditional cultural, spiritual, and customary uses, consistent with the American Indian Religious Freedom Act (42 U.S.C. 1996), the Religious Freedom Restoration Act (42 U.S.C. 2000bb *et seq.*), Executive Order 13007 of May 24, 1996 (Indian Sacred Sites), and the November 10, 2021, Memorandum of Understanding Regarding Interagency Coordination and Collaboration for the Protection of Indigenous Sacred Sites. Such uses shall include, but are not limited to, the collection of medicines, berries, plants, and other vegetation for cradle boards and other purposes, and firewood for ceremonial practices and personal noncommercial use, so long as each use is carried out consistent with applicable law and in a manner consistent with the proper care and management of the objects identified above. The Secretary shall endeavor to prepare an ethnographic study and cultural resources survey of the monument to assess the importance of the land to Tribal Nations affiliated culturally

or historically with the Chuckwalla Region and the religious, spiritual, and cultural practices of culturally affiliated Tribal Nations.

The Secretary shall explore mechanisms, consistent with applicable law, to enable the protection of Indigenous Knowledge or other information relating to the nature and specific location of cultural resources within the monument and, to the extent practicable, shall explain to the holders of such knowledge or information any limitations on the ability to protect such information from disclosure before it is shared with the BLM.

Nothing in this proclamation shall be construed to preclude the renewal or assignment of, or interfere with the operation, maintenance, replacement, modification, upgrade, or access to, existing or previously approved flood control, utility, pipeline, and telecommunications sites or facilities; roads or highway corridors; seismic monitoring facilities; wildlife management structures installed by the BLM or the State of California; or water infrastructure, including wildlife water developments or water district facilities, within the boundaries of existing or previously approved authorizations within the monument. Existing or previously approved flood control, utility (including electric transmission and distribution), pipeline, telecommunications, and seismic monitoring facilities; roads or highway corridors; wildlife management structures installed by the BLM or the State of California; and water infrastructure, including wildlife water developments or water district facilities, may be expanded, and new facilities of such kind may be constructed, to the extent consistent with the proper care and management of the objects identified above and subject to the Secretary's authorities, other applicable law, and the provisions of this proclamation related to roads and trails.

For purposes of protecting and restoring the objects identified above, the Secretary shall prepare a transportation plan that designates the roads and trails on which motorized and non-motorized mechanized vehicle use will be allowed. The transportation plan shall include management decisions necessary to protect the objects identified in this proclamation. Except for emergency purposes and authorized administrative purposes, including management activities by appropriate California State agencies to maintain, enhance, or restore fish and wildlife populations and habitats, which are otherwise consistent with applicable law, motorized vehicle use in the monument may be permitted only on roads and trails documented as existing in BLM route inventories that exist as of the date of this proclamation. Any additional roads or trails designated for motorized vehicle use by the general public must be designated only for public safety needs or if necessary for the protection of the objects identified above.

Livestock grazing has not been permitted in the monument area since 2002, and the Secretary shall not issue any new grazing permits or leases on such lands.

Nothing in this proclamation shall affect the BLM's ability to authorize access to and remediation or monitoring of contaminated lands within the monument, including for remediation of unexploded ordnance and mine, mill, or tailing sites or for the restoration of natural resources.

Nothing in this proclamation shall preclude low-level overflights of military aircraft, the landing of military aircraft in accordance with aviation safety regulations in landing zones that have been or are designated in the future, military flight testing or evaluation, the designation of new units of special use airspace, the use of existing or the establishment of new military flight training routes, or low-level overflights and landings of aircraft by the BLM or its contractors for scientific or resource management purposes. Nothing in this proclamation shall preclude the use of land within the monument for military training, or preclude air or ground access to existing or new electronic tracking or communications sites associated with special use airspace and military flight training routes, after appropriate coordination between the Department of Defense and the Department of the Interior.

As this monument is located near DFAs identified by the DRECP and is consistent with the goals of that plan, nothing in this proclamation shall be interpreted to require denial of proposals for renewable energy projects that are in DFAs identified by the DRECP and that comply with all applicable legal requirements.

Nothing in this proclamation shall be deemed to enlarge or diminish the jurisdiction or authority of the State of California with respect to fish and wildlife management, including hunting and fishing, on the lands reserved by this proclamation. The Secretary shall seek to develop and implement science-based habitat and ecological restoration projects within the monument and shall seek to collaborate with the State of California on wildlife management within the monument, including through the development of new, or the continuation of existing, agreements with the California Department of Fish and Wildlife.

The Secretary shall evaluate opportunities to enter into one or more agreements with governments, including State, local, and Tribal, regarding the protection of the objects identified above during wildland fire prevention and response efforts. Nothing in this proclamation shall be construed to alter the authority or responsibility of any party with respect to emergency response activities within the monument, including wildland fire response.

Nothing in this proclamation shall be deemed to limit the authority of the Secretary, consistent with applicable law, to undertake or authorize activities for the purpose of ensuring safe and continued recreational access to canyons in the Mecca Hills Wilderness.

Nothing in this proclamation shall be deemed to revoke any existing withdrawal, reservation, or appropriation; however, the monument shall be the dominant reservation.

Warning is hereby given to all unauthorized persons not to appropriate, injure, destroy, or remove any feature of the monument and not to locate or settle upon any of the lands thereof.

If any provision of this proclamation, including its application to a particular parcel of land, is held to be invalid, the remainder of this proclamation and its application to other parcels of land shall not be affected thereby.

IN WITNESS WHEREOF, I have hereunto set my hand this fourteenth day of January, in the year of our Lord two thousand twenty-five, and of the Independence of the United States of America the two hundred and forty-ninth.

Proclamation 10882 of January 14, 2025

Establishment of the Sáttítla Highlands National Monument

By the President of the United States of America

A Proclamation

In northern California, the awe-inspiring geological wonders collectively described here as the Sáttítla Highlands have framed the homelands of Indigenous communities and cultures for millennia, and today this area continues to cradle historic and scientific treasures of our Nation. At this area's core rests a sleeping giant: the Medicine Lake Volcano. This massive volcano—one of the two largest volcanos in the Cascades Volcanic Arc—covers an expanse roughly 10 times that of Mount St. Helens, Washington. ''Medicine Lake,'' as labeled in English on some maps since approximately 1890, is found within the summit caldera of the volcano for which it is named. Far earlier and through the present day, however, these stunning and unusual lands have been known as ''Sáttítla'' in the Ajumawi language, which translates to ''obsidian place.'' Sáttítla's obsidian deposits formed by the volcano have long been important to Indigenous peoples, as shown by obsidian tools and sites they left here from their lives and travels. The Sáttítla Highlands area as described here includes parts of the Modoc, Shasta-Trinity, and Klamath National Forests, and stretches from Sharp Mountain, Wild Horse Mountain, and Little Horse Peak in the west, to Cougar Butte, Glass Mountain, and Border Mountain in the east, and to encompass the cinder cones known as Porcupine Butte, Timber Hill, Snag Hill, and Powder Hill in the south.

Sáttítla includes portions of the ancestral homelands of the Pit River (Ajumawi—Atsugewi) and Modoc Peoples (Mo Wat Knii—Mo Docknii). For them and many other Indigenous peoples—including the Karuk, Klamath, Shasta, Siletz, Wintu, and Yana and individual Tribes that are members of these groups—the volcanic landscape holds and reflects exceptional power and is central to their spiritual beliefs and cultural practices. The Modoc believe Medicine Lake is a place of healing and have referred to the lake and its banks as ''Lani'shwi.'' Plants and animals found within Sáttítla's habitats include many that are rare or vulnerable and have long been important to the Indigenous peoples of the area for food, medicine, and ceremonies. Sáttítla's remarkable geologic formations and the ecosystems cultivated within and around them have shaped the history and cultures of generations of Indigenous peoples.

This area contains evidence of human occupancy dating back at least 5,000 years. For members of the Pit River Tribe, Sáttítla, as part of the broader landscape within which it sits, is central to their creation stories and core to their physical, mental, spiritual, and cultural health. Their cultural and spiritual connections to Sáttítla reach across time and space, linking a web of heritage sites near and far and underscoring the importance of this land to the Indigenous people who have lived here throughout history. They believe that the people and the land are one in the same, not only that one cannot be separated from the other, but that one cannot exist without the other. Sáttítla's deep silence, local plants and animals, unobstructed views across the landscape, and pure water sources are necessary to carry out customs, traditions, and ceremonies of the Indigenous peoples connected to this area. This area has long provided a place for vision quests, gathering of medicinal plants, spiritual training and purification ceremonies, obsidian

gathering, and religious activities that demand privacy, solitude, and unobscured access to both day and night skies. The night skies of Sáttítla, where distant galaxies and stars are visible, are renowned for being among the darkest in the United States.

Located at the southern reaches of the Modoc Peoples' ancestral homelands, Sáttítla could be seen from across Modoc territory. The volcano and surrounding highlands were central to ceremonial life of the Modoc, and the area is an enduring place of historic and cultural significance. The area continues to serve as a place of gathering, healing, and spiritual importance for surrounding Indigenous peoples—including the Karuk, Klamath, Shasta, Siletz, Wintu, and Yana. Tribal Nations collaborate in some of these activities, including ceremonies in and around Medicine Lake.

At least 85 plant species found in Sáttítla are used by Indigenous peoples for healing, medicine, food, tools, building materials, and as ceremonial objects and are considered to have powerful medicinal and ceremonial uses. For example, Indigenous people used lichen from this area to dye materials used to adorn clothes and ornaments.

Evidence of Indigenous peoples can be found throughout Sáttítla. Sites in various parts of the area exhibit evidence of obsidian quarrying and use by Indigenous peoples, with some containing unique assemblages of flaked stone and obsidian tools, waste materials from tool manufacture, and blades and cutting implements. Larger obsidian blades, including those quarried and found in Sáttítla, were highly prized as items of wealth and prestige in Indigenous cultures throughout the region. Obsidian quarried within Sáttítla was an important resource in a broad Indigenous trade network throughout northern California and the California Coast, and within southern Oregon. The Indigenous peoples of the region believe that distinct sources of Sáttítla obsidian—such as obsidian deposits in the central part of this area—retain special roles and significance in different uses. In various locations, evidence of precontact hunting blinds and groundstone implements also highlight that Indigenous peoples have lived and hunted across Sáttítla.

In view of the importance of these lands to Indigenous peoples and the rich cultural resources found here, in 1999, the National Register of Historic Places determined approximately 33,000 acres of the Sáttítla area centered on Medicine Lake to be eligible as a Traditional Cultural Property District. Further, in 2007, the U.S. Forest Service and the Bureau of Land Management developed the Medicine Lake Highlands Historic Property Management Program, which extended this district to encompass approximately 73,000 acres.

Indigenous peoples would likely have witnessed some of the more recent eruptions of the Medicine Lake Volcano—which have occurred multiple times in the past 12,500 years and as recently as 950 years ago—reshaping their sacred lands as they watched, and creating geologic formations and other objects still visible today. Future volcanic activity will likely continue to shape these highlands. As a result of its dynamic geology and millennia of human occupation, Sáttítla contains numerous objects of historic and scientific interest—some formed by the volcano and surrounding ecosystems and others, like obsidian tools and ceremonial sites, created by Indigenous peoples—and is integrally connected to the Indigenous Knowledge amassed by the Tribal Nations and Indigenous peoples in the area over countless generations. Some of the objects in this area are sacred to Tribal Nations, are sensitive, rare, or vulnerable to vandalism and theft, or are unsafe to visit. Therefore, revealing their specific names or locations could pose a danger to the objects or to the public.

The lava flows emanating off the flanks of Medicine Lake Volcano extend in every direction for more than 30 miles, through and, in some places, even beyond Sáttítla. Eons of historic geological activity provide visitors with vast panoramas of stark, unvegetated lava fields exemplified by the Burnt Lava Flow Geologic Special Interest Area in the southeast and the Callahan Flow in the north, and extending into Lava Beds National Monument along the northeast corner. The area's concentration of lava flows

that are fewer than 13,000 years old makes Sáttítla one of the premier places to view geologically young lava flows in California—and in the United States.

In addition to volcanologists who have come to Sáttítla to study and understand the depths of the earth's core, astronauts have also learned from the area. Between 1965 and 1967, the area's Pumice Crater—located in the central portion of Sáttítla—was used by the National Aeronautics and Space Administration for Apollo program astronauts who trained in the collection and identification of lunar-like geologic features to be prepared for observation and sampling on the moon. Multiple groups of astronauts traveled to the Pumice Crater area, and four of those astronauts flew Apollo missions, making this crater an important piece of space exploration history.

Many of the lava flows within Sáttítla created islands of remnant forests that were elevated enough to escape the deluge of lava. In the north central area of Sáttítla, one such island is Black Lava Butte, which is dominated by shrubs, grasses, and old-growth ponderosa pine. Isolated from historical logging and development, these islands of forest provide valuable laboratories for future study of enduring and unaltered ecosystems.

The southern portion of Sáttítla is home to miniature volcanoes known as spatter cones, a well-preserved and accessible handful of which appear adjacent to the Giant Crater Lava Flow located in the south-central portion of the area. Sáttítla's more than 100 cinder cones—which are formed when lava cools mid-air and falls as fragments creating mounds, including Pumice Stone Mountain, Paint Pot Crater, and Porcupine Butte—are intact, making them of particular scientific interest.

The Fourmile Hill Tree Molds Geologic Area, situated on the north flank of the Medicine Lake volcano, contains dozens of molds formed over 12,000 years ago when molten lava flowed through a conifer forest leaving behind casts of the ancient tree trunks. These trace fossils can help improve scientists' understanding of the complex geologic history of the region.

Sáttítla also contains hundreds of cave-like lava tubes, which were formed over time when molten basaltic lava flows cooled. Many of these formations are relatively unexplored, with more likely yet to be discovered through future scientific inquiry. The Giant Crater lava tube originates just south of Medicine Lake, extends southward within Sáttítla, and ultimately forms the longest known lava tube system in the world.

Sáttítla is nearly devoid of surface water drainages, but its surface waters only hint at what is stored underground, as most of the precipitation that falls in this area filters down through the porous volcanic rock filling underground aquifers. These aquifers supply water to spring systems in northern California—and ultimately to the Sacramento River to the south and the Lower Klamath and Tule Lake National Wildlife Refuges to the north.

The first known Euro-American reports of Sáttítla emerged in 1826–27, with settler-driven development appearing in the region in the 1870s. The Tickner Road, constructed in 1871, served as one of the earliest routes across Siskiyou County, and remnants of two tracks are still visible in isolated sections in the northeast portion of the area.

As Euro-Americans settled in the traditional homelands of the area's Indigenous peoples, many Tribal Nations suffered dispossession and, often, forced removal. The brutalities against them by Euro-Americans were systemic, as evidenced by California's first Governor declaring a ''war of extermination'' against the Indigenous peoples, and the California State Legislature appropriating a half-million dollars to pay for militia campaigns to kill them. By 1872, hostilities between the U.S. Army and the Modoc Peoples exploded into the Modoc War. Tickner Road was used by the U.S. military during the Modoc War as a supply route, and its remnants serve as a physical marker of this war. While battles took place in lava fields outside and to the north of the area, some Modoc people sought refuge in Sáttítla, where they successfully avoided relocation after the war and ultimately

integrated with the Klamath Tribes. For these members of the Modoc, their connection to and knowledge of the Sáttítla area proved life-saving. Other members were less fortunate; following the war several Modoc leaders were captured and hanged, and the remaining approximately 150 survivors were forcibly relocated to Oklahoma. In view of these atrocities and the resulting loss of homelands, Sáttítla and the objects it contains remain particularly significant both to the Modoc and to our Nation's history.

The area's verdant forests and exceptional geology together have supported and still illustrate important parts of the region's history. For example, Sáttítla's high quality and accessible stands of ponderosa pine attracted the development of railroad logging operations, which came to this area at the end of the 19th century. Today, within the western and northern part of this area, visitors can see the remains of hundreds of miles of railroad grades, relics of logging camps, maintenance stations, loading and switchyards, and other traces from the railroad logging era.

Near the center of Sáttítla, Little Mt. Hoffman Lookout Tower provides panoramic views across and outside of the area to distant Mt. Shasta, Mt. Lassen, and the Tule Lake Basin. Constructed in the 1920s, and eligible for listing on the National Register of Historic Places, the tower was actively used as a wildfire lookout until 1978 and today it provides a chance to see much of the Sáttítla Highlands from the edge of the volcano's caldera.

Sáttítla's exceptionally varied habitats also support high levels of biodiversity, including a variety of sensitive and endemic species. For example, the Federally listed northern spotted owl relies on mature forest habitat, which is scattered throughout the southern and western portions of Sáttítla. The area also partially overlaps the historic range of the Federally listed Franklin's bumblebee, which has one of the most limited geographic distributions of any bumblebee in the world. The Townsend's big-eared bat, a State of California Species of Concern, uses the region's lava tube caves for roosting. The Swainson's hawk returns from South America in the spring to breed in the low-elevation juniper forests, sagebrush, and bitterbrush habitats found along the northwestern edge of area. In the northern portion of Sáttítla, the Three Sisters Bald Eagle Winter Roost Area provides habitat for bald eagles, endangered in California. Scattered aquatic and riparian habitats in the western portion of the area support two State of California Species of Special Concern, the Cascades frog and long-toed salamander. Other species known to be north and south of Sáttítla, such as the Federally listed gray wolf, likely migrate through this area, with Sáttítla providing transitory habitat.

Sáttítla supports the survival of at least 16 plants considered threatened, endangered, or rare in California, including the Federally listed whitebark pine growing near Garner Mountain in the western portion of the area, as well as a diverse community of fungi, with 20 species considered rare or sparsely distributed. Amongst host trees is the Pacific fuzzwort, a rare liverwort that is at the southern end of its habitat in northern California, and the sugarstick, a parasitic plant associated with the roots of old-growth conifers. As the climate continues to warm, high-elevation habitats within Sáttítla will remain critical refugia for species including the gray-headed pika and the Sierra Nevada red fox, a State of California threatened species.

Sáttítla continues to provide traditional cultural resources used by Tribal and Indigenous communities, including food staples like sugar pine seeds and berries from gooseberry, currant, and manzanita, as well as plants collected for their medicinal properties, such as bitter cherry and Prince's pine. Various plants found in Sáttítla were historically used by Indigenous peoples for hunting, such as the blue elderberry whose pithy stem-wood was fashioned into elk whistles and is still collected today.

Sáttítla's soils, formed from lava over time, are home to several sensitive plants, including the sensitive talus collomia, the snow fleabane daisy, little hulsea, and pyrola-leaved buckwheat, all of which are restricted to fewer than four counties in Northern California.

At the lower elevations along the northwestern portion of Sáttítla, western juniper and ponderosa pine occur above a collection of Great Basin-type shrubs, including curl-leaf mountain-mahogany, bitterbrush, rubber rabbitbrush, and big sage. The leaves, bark, flowers, and seeds from these shrubs were used by Indigenous peoples to make dye and medicines, and the dense wood of mountain-mahogany was used to make digging sticks, fire drills, bows, arrow shafts, and throwing sticks. Two species uncommon in California are found in the dry, volcanic soils near the northern boundary of Sáttítla: the tiny annual doublet and the cushion-like squarestem phlox.

Wet meadows and fens are infrequent within the landscape, but where they occur, they provide habitat for wetland plant species such as the California-endangered Boggs Lake hedge-hyssop and the three-ranked hump moss. Traditional cultural plants found in these wetter habitats, including clover, yarrow, mountain strawberry, Baltic rush, and several grasses, were historically gathered for food, basket materials, and for their medicinal properties. Further, sensitive vernal pools are situated southeast of Medicine Lake, supporting species including Oregon sedge.

Protection of Sáttítla will conserve the diverse array of cultural, precontact, historic, natural, and scientific resources—that the volcano at its core has shaped—for the benefit of all Americans. It is vital to preserve this unique geologic landscape that holds sites and objects of historical, traditional, cultural, and spiritual significance for Tribal Nations and Indigenous peoples who have gathered Indigenous Knowledge and practiced and shaped their cultures linked integrally to this area over countless generations. In addition to containing numerous objects of historic and scientific interest as described above, this area also provides exceptional outdoor recreational opportunities, including hiking, biking, snowmobiling, camping, hunting, scenic driving, and canoeing.

WHEREAS, section 320301 of title 54, United States Code (the ''Antiquities Act''), authorizes the President, in the President's discretion, to declare by public proclamation historic landmarks, historic and prehistoric structures, and other objects of historic or scientific interest that are situated upon the lands owned or controlled by the Federal Government to be national monuments, and to reserve as a part thereof parcels of land, the limits of which shall be confined to the smallest area compatible with the proper care and management of the objects to be protected; and

WHEREAS, Sáttítla has long been profoundly sacred to Tribal Nations and Indigenous peoples with ties to these highlands; and

WHEREAS, I find that all the objects identified above, and objects of the type identified above within the area described herein, are objects of historic or scientific interest in need of protection under section 320301 of title 54, United States Code, regardless of whether they are expressly identified as objects of historic or scientific interest in the text of this proclamation; and

WHEREAS, I find that there are threats to the objects identified in this proclamation, and in the absence of a reservation under the Antiquities Act, these objects are not adequately protected by applicable law or administrative designations, thus making a national monument designation and reservation necessary to protect the objects of historic and scientific interest identified above for current and future generations; and

WHEREAS, I find that the boundaries of the monument reserved by this proclamation represent the smallest area compatible with the proper care and management of the objects of scientific or historic interest identified above, as required by the Antiquities Act; and

WHEREAS, it is in the public interest to ensure the preservation, restoration, and protection of the objects of scientific and historic interest identified above;

NOW, THEREFORE, I, JOSEPH R. BIDEN JR., President of the United States of America, by the authority vested in me by section 320301 of title 54,

United States Code, hereby proclaim the objects identified above that are situated upon lands and interests in lands owned or controlled by the Federal Government to be the Sáttítla Highlands National Monument (monument) and, for the purpose of protecting those objects, reserve as part thereof all lands and interests in lands that are owned or controlled by the Federal Government within the boundaries described on the accompanying map, which is attached hereto and forms a part of this proclamation. These reserved Federal lands and interests in lands encompass approximately 224,676 acres. As a result of the distribution of the objects across the Sáttítla Highlands, the boundaries described on the accompanying map are confined to the smallest area compatible with the proper care and management of the objects of historic or scientific interest identified above.

All Federal lands and interests in lands within the boundaries described of the monument are hereby appropriated and withdrawn from all forms of entry, location, selection, sale, or other disposition under the public land laws or laws applicable to the Forest Service other than by exchange that furthers the protective purposes of the monument; from location, entry, and patent under the mining laws; and from disposition under all laws relating to mineral and geothermal leasing.

The establishment of the monument is subject to valid existing rights. If the Federal Government subsequently acquires any lands or interests in lands not currently owned or controlled by the Federal Government within the boundaries described on the accompanying map, such lands and interests in lands shall be reserved as a part of the monument, and objects of the type identified above that are situated upon those lands and interests in lands shall be part of the monument, upon acquisition of ownership or control by the Federal Government.

Nothing in this proclamation shall be construed to alter the valid existing water rights of any party, including the United States. This proclamation does not reserve water as a matter of Federal law.

The Secretary of Agriculture (Secretary), through the Forest Service, shall manage the monument pursuant to applicable legal authorities, as part of the Modoc, Shasta-Trinity, and Klamath National Forests, and in accordance with the terms, conditions, and management direction provided by this proclamation.

For purposes of protecting and restoring the objects identified above, the Secretary shall prepare, in consultation with the Secretary of the Interior, within 3 years from the date of this proclamation, a management plan for the monument, which shall include provisions for continuing outdoor recreational opportunities consistent with the proper care and management of the objects identified above, and shall promulgate such rules and regulations for the management of the monument as the Secretary shall deem appropriate. The Secretary, through the Forest Service, shall consult with other Federal land management agencies or agency components in the local area, including the Bureau of Land Management, the Fish and Wildlife Service, the Department of Defense, and the National Park Service, in developing the management plan.

The Secretary shall provide for maximum public involvement in the development of the management plan, as well as consultation with federally recognized Tribal Nations with cultural or historical connections to the monument, and conferral with State and local governments. In preparing the management plan, the Secretary shall take into account, to the maximum extent practicable, maintaining the undeveloped character of the lands within the monument; minimizing impacts from surface-disturbing activities; providing appropriate and, where consistent with the proper care and management of the objects of historic or scientific interest identified above, improving access for recreation, hunting, fishing, wildfire risk reduction, wildlife management, and scientific research; and emphasizing the retention of natural quiet, dark night skies, and scenic values. In the development and implementation

of the management plan, the Secretary shall maximize opportunities, pursuant to applicable legal authorities, for shared resources, operational efficiency, and cooperation, and shall, to the maximum extent practicable, provide for the careful and full incorporation of the Indigenous Knowledge and special expertise of Tribal Nations.

The Secretary shall consider appropriate mechanisms to provide for temporary closures to the general public of specific portions of the monument to protect the privacy of cultural, religious, and gathering activities by members of Tribal Nations.

The Secretary, through the Forest Service, shall establish an advisory committee under chapter 10 of title 5, United States Code (commonly known as the Federal Advisory Committee Act), to provide advice or recommendations regarding the development of the management plan and, as appropriate, management of the monument. The advisory committee shall consist of a fair and balanced representation of interested stakeholders, including State agencies and local governments; Tribal Nations; recreational users; conservation organizations; wildlife, hunting and fishing organizations; the scientific community; business owners; the forestry community; and the general public in the region.

In recognition of the value of collaboration with Tribal Nations for the proper care and management of the objects identified above, and to ensure that management of the monument is informed by, integrates, and reflects Tribal expertise and Indigenous Knowledge (including in regard to the practice of cultural burning), as appropriate, the Secretary shall meaningfully engage with Tribal Nations with cultural or historic affiliation to the Sáttítla region including by seeking opportunities for co-stewardship of the monument.

If Tribal Nations with cultural or historic affiliation to the Sáttítla region independently establish a commission or other similar entity (commission) comprised of elected officers or official designees from each participating Tribal Nation to engage in co-stewardship of the monument with the Federal Government through shared responsibilities or administration, then the Secretary shall meaningfully engage the commission in the development, revision, or amendment of the management plan and the management of the monument, including by considering and, as appropriate, integrating the Indigenous Knowledge and special expertise of the members of the commission in the planning and management of the monument. The management plan for the monument shall also set forth parameters for continued meaningful engagement with the commission, if established, in the implementation of the management plan and, as appropriate, incorporate public education on and interpretation of traditional place names and the cultural significance of land within the monument into the management plan. The Secretary shall explore opportunities to provide support to the commission, if established, to enable participation in the planning and management of the monument.

The Secretary shall also explore entering into cooperative agreements or contracts, pursuant to the Indian Self-Determination and Education Assistance Act, 25 U.S.C. 5301 *et seq.,* or other applicable authorities, with Tribes or Tribal organizations to perform administrative or management functions within the monument and providing technical and financial assistance to improve the capacity of Tribal Nations to develop, enter into, and carry out activities under such cooperative agreements or contracts. The Secretary also shall explore opportunities for funding agreements with Tribal Nations relating to the management and protection of traditional cultural properties and other culturally significant programming associated with the monument.

Nothing in this proclamation shall be deemed to alter, modify, abrogate, enlarge, or diminish the rights or jurisdiction of any Tribal Nation, including off-reservation reserved rights. The Secretary shall, to the maximum extent permitted by law and in consultation with Tribal Nations, ensure the protection of sacred sites and cultural properties and sites in the monument

and shall provide access to Tribal members for traditional cultural, spiritual, and customary uses, consistent with the American Indian Religious Freedom Act (42 U.S.C. 1996), the Religious Freedom Restoration Act (42 U.S.C. 2000bb *et seq.*), Executive Order 13007 of May 24, 1996 (Indian Sacred Sites), and the November 10, 2021, Memorandum of Understanding Regarding Interagency Coordination and Collaboration for the Protection of Indigenous Sacred Sites. Such uses shall include but are not limited to, traditional hunting activities and the traditional collection of waters, medicines, berries and other vegetation, obsidian and other mineral products, forest products, and firewood for ceremonial practices, so long as each use is carried out consistent with applicable law and in a manner consistent with the proper care and management of the objects identified above.

The Secretary shall explore mechanisms, consistent with applicable law, to enable the protection of Indigenous Knowledge or other information relating to the nature and specific location of cultural resources within the monument and, to the extent practicable, shall explain to the holders of such knowledge or information any limitations on the ability to protect such information from disclosure before it is shared with the Department.

Consistent with the care and management of the objects identified above, the Secretary shall manage livestock grazing as authorized under existing permits and allotments, and subject to appropriate terms and conditions in accordance with existing laws and regulations. The Secretary shall not issue new grazing permits and shall not designate new allotments on Federal lands within the monument where livestock grazing is not currently allowed.

Nothing in this proclamation shall be construed to preclude the renewal or assignment of, or interfere with the operation, maintenance, replacement, modification, upgrade, or access to, existing or previously approved flood control, utility, pipeline, and telecommunications sites or facilities; roads or highway corridors; seismic monitoring facilities; or water infrastructure, including wildlife water developments or water district facilities, within the boundaries of existing or previously approved authorizations within the monument. Existing or previously approved flood control, utility, pipeline, telecommunications, and seismic monitoring facilities, roads or highway corridors, and water infrastructure, including wildlife water developments or water district facilities, may be expanded, and new facilities of such kind may be constructed, to the extent consistent with the proper care and management of the objects identified above and subject to the Secretary's authorities and other applicable law.

For purposes of protecting and restoring the objects identified above, the Secretary shall prepare a transportation plan that designates the roads and trails on which motorized and non-motorized mechanized vehicle use will be allowed. The transportation plan shall include management decisions, including road closures and travel restrictions, necessary to protect the objects identified in this proclamation. Except for emergency purposes and authorized administrative purposes, motorized vehicle use in the monument may be permitted only on roads and trails documented as existing in USDA Forest Service route inventories that exist as of the date of this proclamation. Any additional roads or trails designated for motorized vehicle use by the general public must be designated only for the purposes of public safety needs or if necessary for the protection of the objects identified above.

Nothing in this proclamation shall affect the ability of the Forest Service or the Bureau of Land Management, after consultation with the Forest Service, to provide access to or to remediate or monitor contaminated lands within the monument, including to provide ancillary road and utility access or water control developments, or access for remediation of geothermal, mine, mill, or tailing sites, for the restoration of natural resources, or for the plugging and abandonment of wells.

Nothing in this proclamation shall preclude low-level overflights of military aircraft, military flight testing or evaluation, the designation of new units of special use airspace, or the use or establishment of military flight training

routes after appropriate coordination between the Department of Defense and the Department of Agriculture.

Nothing in this proclamation shall be deemed to enlarge or diminish the jurisdiction of the State of California with respect to fish and wildlife management, including hunting and fishing, on the lands reserved by this proclamation.

The Secretary may carry out vegetative management treatments within the monument to the extent consistent with the proper care and management of the objects identified above, including addressing ecological restoration, wildlife connectivity or the risk of wildfire, insect infestation, or disease that would endanger the objects identified in this proclamation or imperil public safety. Nothing in this proclamation shall be deemed to affect the use of prescribed fire within the monument. The Secretary shall evaluate opportunities to enter into one or more agreements with governments, including State, local, and Tribal, regarding the protection of the objects identified above during wildland fire prevention and response efforts.

Nothing in this proclamation shall be construed to alter the authority or responsibility of any party with respect to emergency response activities within the monument, including wildland fire response and search and rescue.

Nothing in this proclamation shall be deemed to revoke any existing withdrawal, reservation, or appropriation; however, the monument shall be the dominant reservation.

Warning is hereby given to all unauthorized persons not to appropriate, injure, destroy, or remove any feature of the monument and not to locate or settle upon any of the lands thereof.

If any provision of this proclamation, including its application to a particular parcel of land, is held to be invalid, the remainder of this proclamation and its application to other parcels of land shall not be affected thereby.

IN WITNESS WHEREOF, I have hereunto set my hand this fourteenth day of January, in the year of our Lord two thousand twenty-five, and of the Independence of the United States of America the two hundred and forty-ninth.

Title 3—

The President

Memorandum of January 6, 2025

Withdrawal of Certain Areas of the United States Outer Continental Shelf From Oil or Natural Gas Leasing

Memorandum for the Secretary of the Interior

Consistent with principles of responsible public stewardship, and with due consideration of the irreplaceable marine and coastal environments, including wildlife and wildlife habitat, of the Bering Sea; and independently with due consideration of the vulnerability of these ecosystems and coastal communities, where limited or no oil and natural gas development has yet occurred, to oil spills; and independently with due consideration of the national need to curtail, mitigate, build resilience against, and adapt to the devastating and irreversible consequences of climate change for the human environment and for the marine and coastal environments, I hereby direct as follows:

Under the authority granted to me in section 12(a) of the Outer Continental Shelf Lands Act, 43 U.S.C. 1341(a), I hereby withdraw from disposition by oil or natural gas leasing for a time period without specific expiration the remaining areas that are part of the Northern Bering Sea Climate Resilience Area, designated in Executive Order 13754 of December 9, 2016 (Northern Bering Sea Climate Resilience), and that are not currently withdrawn from disposition by leasing. The Northern Bering Sea Climate Resilience Area includes waters within the United States Exclusive Economic Zone bounded to the north by the seaward boundary of the Bering Straits Native Corporation established pursuant to the Alaska Native Claims Settlement Act (43 U.S.C. 1601 *et seq.*); to the south by the southern boundaries of the Northern Bering Sea Research Area, the St. Matthew Habitat Conservation Area, and the Nunivak-Kuskokwim Habitat Conservation Area; and to the west by the maritime boundary delimited by the Agreement Between the United States of America and the Union of Soviet Socialist Republics on the Maritime Boundary, signed at Washington, June 1, 1990. This withdrawal does not affect the prior withdrawal made in the Norton Basin Planning Area by Executive Order 13754, or the withdrawal of the North Aleutian Planning Area by the Presidential Memorandum of December 16, 2014 (Withdrawal of Certain Areas of the United States Outer Continental Shelf from Leasing Disposition).

The boundaries of the withdrawn areas are more specifically delineated in the attached map. The map forms a part of this memorandum. The withdrawal directed by this memorandum prevents consideration of the withdrawn areas for any future oil or natural gas leasing for purposes of exploration, development, or production.

Nothing in this withdrawal affects rights under existing leases in the withdrawn areas.

Memorandum of January 6, 2025

Withdrawal of Certain Areas of the United States Outer Continental Shelf From Oil and Natural Gas Leasing

Memorandum for the Secretary of the Interior

Consistent with principles of responsible public stewardship, and with due consideration of the irreplaceable marine and coastal environments, including wildlife and wildlife habitat, of the Gulf of Mexico, Atlantic, and Pacific areas of the Outer Continental Shelf; and independently with due consideration of the vulnerability of these ecosystems and coastal communities, where limited or no oil and natural gas development has yet occurred, to oil spills; and independently with due consideration of the benefits of expeditious and orderly development of the vital renewable energy resources of the Gulf of Mexico, Atlantic, and Pacific areas of the Outer Continental Shelf; and independently with due consideration of the national need to curtail, mitigate, build resilience against, and adapt to the devastating and irreversible consequences of climate change for the human environment and for the marine and coastal environments, I hereby direct as follows:

Under the authority granted to me in section 12(a) of the Outer Continental Shelf Lands Act, 43 U.S.C. 1341(a), I hereby withdraw from disposition by oil or natural gas leasing for a time period without specific expiration:

(a) the areas designated by the Bureau of Ocean Energy Management as the North Atlantic, Mid-Atlantic, South Atlantic, and Straits of Florida Planning Areas of the Outer Continental Shelf;

(b) the areas of the Outer Continental Shelf designated by section 104(a) of the Gulf of Mexico Energy Security Act of 2006 (Public Law 109–432); and

(c) the areas designated by the Bureau of Ocean Energy Management as the Washington/Oregon, Northern California, Central California, and Southern California Planning Areas of the Outer Continental Shelf.

The boundaries of the withdrawn areas are more specifically delineated in the attached map. The map forms a part of this memorandum. The withdrawal directed by this memorandum prevents consideration of withdrawn areas for any future oil or natural gas leasing for purposes of exploration, development, or production.

Nothing in this withdrawal affects rights under existing leases in the withdrawn areas.

Proclamation 10883 of January 15, 2025

Religious Freedom Day, 2025

By the President of the United States of America

A Proclamation

Faith sustains many of us across our Nation, sharpening our sense of purpose, uniting us in shared belief, and reminding us of our obligations to each other. Whether you worship in a church, synagogue, temple, or mosque, the Constitution of the United States protects every American's right to practice their faith freely or to practice no faith at all. Today, we celebrate our constitutional right to religious freedom which makes us a beacon of liberty and recommit to protecting that right, both here at home and around the world.

We are all blessed to live in a Nation that is home to people of many faiths. However, even in our land of liberty, too many people are afraid that practicing their faith will bring fear, violence, and intimidation. Over the past year, we have seen a shocking rise in antisemitism in the wake of Hamas's terrorist attack against Israel and a disturbing rise in Islamophobia. Hate has no safe harbor here in America. And around the world, minority communities continue to live in fear of violence and are denied equal protections under the law, including Christians in some countries.

My Administration is committed to ensuring that people of every faith and belief can live out their deepest conviction freely, peacefully, and safely. Working with the Congress, my Administration secured the largest ever increase in funding for the physical security of non-profit organizations, including places of worship. Through that program and many related efforts, we continue to work across government to ensure that all religious communities are able to practice their faith without fear. Additionally, I created the inter-agency group to counter Antisemitism, Islamophobia, and Related Forms of Bias and Discrimination within the United States. We released the first-ever United States National Strategy to Counter Antisemitism, which works to counter antisemitism and protect Jewish communities. We also released the first-ever National Strategy to Counter Islamophobia and Anti-Arab Hate, which works to combat these forms of hate and safeguard Muslim and Arab Americans. Both strategies seek to strengthen coalitions across religious communities to bring an end to hate.

We are also working to promote and protect religious freedom worldwide, because it is not only an American constitutional right—it is a human right, enshrined in the Universal Declaration of Human Rights. And so, around the globe, we are working with governments and organizations to end discrimination against religious groups. My Administration has provided $100 million to promote religious freedom worldwide. We have also provided hundreds of millions more to support victims fleeing religious repression. And we have been cracking down on forced labor, which is often connected to the targeting of religious minorities. My Administration sanctioned more than 240 individuals and entities for serious human rights abuses under the Global Magnitsky Sanctions Program. The Office of the Special Envoy to Monitor and Combat Antisemitism at the Department of State promoted the United States–led ''Global Guidelines for Countering Antisemitism,'' a set of international best practices for effective public policy against antisemitism, which more than 40 countries and entities have endorsed. My

Administration also ended the discriminatory travel ban that prevented individuals from several Muslim-majority and African countries from entering the United States. And the Department of State conducted a review of visa applications and took various corrective actions to process applications that were impacted by that ban, including reconsidering previously denied applications.

Today, we recognize how religious freedom is at the core of who we are as a Nation. It is central to the freedom we offer all Americans. And it is threaded throughout all our work to advance human freedom and dignity in the world. The task for all of us is to defend and protect religious liberty for everyone, to build a world where no one is endangered for what they believe, and to see one another as neighbors.

NOW, THEREFORE, I, JOSEPH R. BIDEN JR., President of the United States of America, by virtue of the authority vested in me by the Constitution and laws of the United States, do hereby proclaim January 16, 2025, as Religious Freedom Day.

IN WITNESS WHEREOF, I have hereunto set my hand this fifteenth day of January, in the year of our Lord two thousand twenty-five, and of the Independence of the United States of America the two hundred and forty-ninth.

Memorandum of January 15, 2025

Extending and Expanding Eligibility for Deferred Enforced Departure for Certain Hong Kong Residents

Memorandum for the Secretary of State [and] the Secretary of Homeland Security

The United States supports the human rights and fundamental freedoms of the residents of Hong Kong. The People's Republic of China (PRC) has continued to significantly erode those rights and freedoms. I am therefore directing an extension and expansion of the deferral of removal of certain Hong Kong residents, regardless of country of birth, who are present in the United States.

By unilaterally imposing on Hong Kong the Law of the People's Republic of China on Safeguarding National Security in the Hong Kong Special Administrative Region (NSL) in June 2020, the PRC has undermined the enjoyment of rights and freedoms in Hong Kong, including those protected under the Basic Law and the Sino-British Joint Declaration. Following the NSL's enactment, the PRC has continued its assault on Hong Kong's autonomy, undermining its remaining democratic processes and institutions, imposing limits on academic freedom, and cracking down on freedom of the press. Since June 2020, at least 200 opposition politicians, activists, and protesters have been taken into custody on politically motivated NSL-related charges including secession, subversion, terrorist activities, and collusion with a foreign country or external elements. On November 19, 2024, Hong Kong authorities also sentenced 45 pro-democracy advocates to prison for their peaceful participation in political activities protected under the Basic Law of Hong Kong.

There are compelling foreign policy reasons to extend Deferred Enforced Departure (DED) for an additional period for those residents of Hong Kong presently residing in the United States who were under a grant of DED until February 5, 2025, as well as to defer enforced departure for other Hong Kong residents who arrived in the United States subsequent to the initial grant of DED. The United States is committed to a foreign policy that unites our democratic values with our foreign policy goals, which is centered on the defense of democracy and the promotion of human rights around the world. Offering safe haven for Hong Kong residents who have been deprived of their guaranteed freedoms in Hong Kong furthers United States interests in the region. The United States will continue to stand firm in our support of the people in Hong Kong.

Pursuant to my constitutional authority to conduct the foreign relations of the United States, I have determined that it is in the foreign policy interest of the United States to defer for 24 months the removal of any Hong Kong resident, regardless of country of birth, who is present in the United States on the date of this memorandum, except for those:

(1) who have voluntarily returned to Hong Kong or the PRC after the date of this memorandum;

(2) who have not continuously resided in the United States since the date of this memorandum;

(3) who are inadmissible under section 212(a)(3) of the Immigration and Nationality Act (INA) (8 U.S.C. 1182(a)(3)) or deportable under section 237(a)(4) of the INA (8 U.S.C. 1227(a)(4));

(4) who have been convicted of any felony or two or more misdemeanors committed in the United States, or who meet any of the criteria set forth in section 208(b)(2)(A) of the INA (8 U.S.C. 1158(b)(2)(A));

(5) who are subject to extradition;

(6) whose presence in the United States the Secretary of Homeland Security has determined is not in the interest of the United States or presents a danger to public safety; or

(7) whose presence in the United States the Secretary of State has reasonable grounds to believe would have potentially serious adverse foreign policy consequences for the United States.

I further direct the Secretary of Homeland Security to take appropriate measures to authorize employment for noncitizens whose removal has been deferred, as provided by this memorandum, for the duration of such deferral, including by extending through February 5, 2027, employment authorization for individuals with current employment authorization under prior grants of DED for certain Hong Kong residents, and to consider suspending regulatory requirements with respect to F–1 nonimmigrant students who are Hong Kong residents as the Secretary of Homeland Security determines to be appropriate. The Secretary of Homeland Security shall also provide for the prompt issuance of new or replacement documents in appropriate cases.

The Secretary of Homeland Security is authorized and directed to publish this memorandum in the *Federal Register*.

Executive Order 14143 of January 16, 2025

Providing for the Appointment of Alumni of AmeriCorps to the Competitive Service

By the authority vested in me as President by the Constitution and the laws of the United States of America, including sections 3301 and 3302 of title 5, United States Code, and section 301 of title 3, United States Code, it is hereby ordered as follows:

Section 1. *Policy.* The Federal Government benefits from a workforce that can be recruited from the broadest and deepest pools of qualified candidates for merit-based positions. The issuance of an order granting Non-Competitive Eligibility to certain alumni of programs administered by the Corporation for National and Community Service (operating as AmeriCorps) would be in the best interest of the Federal Government. AmeriCorps alumni have demonstrated a sustained commitment to public service, have received extensive training and hands-on experience, and have developed leadership, communication, and technical skills that are aligned with the missions of many federal agencies and departments. It is in the interest of the Federal Government to retain the services of these highly skilled individuals, particularly given that the Federal Government aided them in the acquisition of their skills.

Accordingly, pursuant to my authority under 5 U.S.C. 3302(1), and in order to achieve a workforce that is drawn from all segments of society as provided in 5 U.S.C. 2301(b)(1), I find that conditions of good administration make necessary an exception to the competitive hiring rules for certain positions in the Federal civil service.

Sec. 2. *Establishment.* The head of any executive department or agency may appoint noncompetitively any individual who is certified under section 3 of this order to a position in the competitive service for which the individual is qualified.

Sec. 3. *Certifications.* (a) The Chief Executive Officer (CEO) of AmeriCorps, or the CEO's designee, shall issue certificates to persons whom the CEO or designee deems to have satisfactorily completed:

(i) a full-time term of national service of at least 1,700 hours as a Team Leader or Member, as specified in section 155(b)(1) or 155(b)(4) of the National and Community Service Act of 1990 (42 U.S.C. 12615(b)(1), 12615(b)(4)), or in the AmeriCorps National Civilian Community Corps program component specified in section 153 of that Act (42 U.S.C. 12613); or

(ii) one or more terms of service that total at least 1,700 hours under section 139(b)(1) of that Act (42 U.S.C. 12593(b)(1)) as an AmeriCorps State and National participant under section 137 of that Act (42 U.S.C. 12591).

(b) This order does not alter or otherwise affect the Non-Competitive Eligibility status for AmeriCorps Volunteers in Service to America participants, commonly known as VISTA members, who successfully complete their service, as described in section 415(d) of the Domestic Volunteer Service Act of 1973, as amended (42 U.S.C. 5055(d)).

(c) In making any certification under this section, the CEO, or the CEO's designee, may rely on a confirmation made by the entity that selected the individual for, and supervised the individual in, the approved national

service position in which such individual successfully completed a term of service, as specified in this section. If AmeriCorps determines that the certification is incorrect, the Corporation shall, after considering the full facts and circumstances surrounding the incorrect certification, take appropriate action.

(d) Any appointment under this order shall be effected within 1 year after completion of the appointee's most recent term of service in the programs described in subsections (a)(i)–(ii) of this section. Such period may be extended to not more than 3 years for persons who, following participation in the programs described in subsections (a)(i)–(ii) of this section, are engaged in an additional term of AmeriCorps service, in military service, in the pursuit of studies at an institution of higher learning, or in other activities that, in the view of the appointing authority, warrant an extension of such period. Such period may also be extended to permit the adjudication of a background investigation.

(e) Any law, Executive Order, or regulation that would disqualify an applicant for appointment in the competitive service shall also disqualify an applicant for appointment under this order. Examples of disqualifying criteria include restrictions on employing persons who are not United States citizens or nationals; who have violated 5 U.S.C. 2302(b)(7) and 3310 (the anti-nepotism provisions of the Civil Service Reform Act of 1978); who have knowingly and willfully failed to register for Selective Service when required to do so, 5 U.S.C. 3328(a)(2); who do not meet occupational qualifying standards prescribed by the Office of Personnel Management (OPM); or who do not meet suitability factors prescribed by OPM.

Sec. 4. *Regulations.* The Director of OPM is authorized to issue such additional regulations as may be necessary to implement this order. Any individual who meets the terms of this order, however, is eligible for noncompetitive hiring with or without additional regulations.

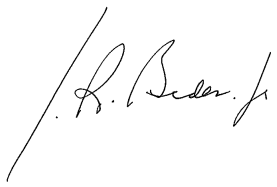
Sec. 5. *General Provisions.* (a) Nothing in this order shall be construed to impair or otherwise affect:

(i) the authority granted by law to an executive department or agency, or the head thereof; or

(ii) the functions of the Director of the Office of Management and Budget relating to budgetary, administrative, or legislative proposals.

(b) This order shall be implemented consistent with applicable law and subject to the availability of appropriations.

(c) This order is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.



THE WHITE HOUSE,
January 16, 2025.

Presidential Documents

Executive Order 14144 of January 16, 2025

Strengthening and Promoting Innovation in the Nation's Cybersecurity

By the authority vested in me as President by the Constitution and the laws of the United States of America, including the International Emergency Economic Powers Act (50 U.S.C. 1701 *et seq.*), the National Emergencies Act (50 U.S.C. 1601 *et seq.*), section 212(f) of the Immigration and Nationality Act of 1952 (8 U.S.C. 1182(f)), and section 301 of title 3, United States Code, it is hereby ordered as follows:

Section 1. *Policy.* Adversarial countries and criminals continue to conduct cyber campaigns targeting the United States and Americans, with the People's Republic of China presenting the most active and persistent cyber threat to United States Government, private sector, and critical infrastructure networks. These campaigns disrupt the delivery of critical services across the Nation, cost billions of dollars, and undermine Americans' security and privacy. More must be done to improve the Nation's cybersecurity against these threats.

Building on the foundational steps I directed in Executive Order 14028 of May 12, 2021 (Improving the Nation's Cybersecurity), and the initiatives detailed in the National Cybersecurity Strategy, I am ordering additional actions to improve our Nation's cybersecurity, focusing on defending our digital infrastructure, securing the services and capabilities most vital to the digital domain, and building our capability to address key threats, including those from the People's Republic of China. Improving accountability for software and cloud service providers, strengthening the security of Federal communications and identity management systems, and promoting innovative developments and the use of emerging technologies for cybersecurity across executive departments and agencies (agencies) and with the private sector are especially critical to improvement of the Nation's cybersecurity.

Sec. 2. *Operationalizing Transparency and Security in Third-Party Software Supply Chains.* (a) The Federal Government and our Nation's critical infrastructure rely on software providers. Yet insecure software remains a challenge for both providers and users and makes Federal Government and critical infrastructure systems vulnerable to malicious cyber incidents. The Federal Government must continue to adopt secure software acquisition practices and take steps so that software providers use secure software development practices to reduce the number and severity of vulnerabilities in software they produce.

(b) Executive Order 14028 directed actions to improve the security and integrity of software critical to the Federal Government's ability to function. Executive Order 14028 directed the development of guidance on secure software development practices and on generating and providing evidence in the form of artifacts—computer records or data that are generated manually or by automated means—that demonstrate compliance with those practices. Additionally, it directed the Director of the Office of Management and Budget (OMB) to require agencies to use only software from providers that attest to using those secure software development practices. In some instances, providers of software to the Federal Government commit to following cybersecurity practices, yet do not fix well-known exploitable vulnerabilities in their software, which puts the Government at risk of compromise. The

Federal Government needs to adopt more rigorous third-party risk management practices and greater assurance that software providers that support critical Government services are following the practices to which they attest.

(i) Within 30 days of the date of this order, the Director of OMB, in consultation with the Secretary of Commerce, acting through the Director of the National Institute of Standards and Technology (NIST), and the Secretary of Homeland Security, acting through the Director of the Cybersecurity and Infrastructure Security Agency (CISA), shall recommend to the Federal Acquisition Regulatory Council (FAR Council) contract language requiring software providers to submit to CISA through CISA's Repository for Software Attestation and Artifacts (RSAA):

(A) machine-readable secure software development attestations;

(B) high-level artifacts to validate those attestations; and

(C) a list of the providers' Federal Civilian Executive Branch (FCEB) agency software customers.

(ii) Within 120 days of the receipt of the recommendations described in subsection (b)(i) of this section, the FAR Council shall review the recommendations and, as appropriate and consistent with applicable law, the Secretary of Defense, the Administrator of General Services, and the Administrator of the National Aeronautics and Space Administration (the agency members of the FAR Council) shall jointly take steps to amend the Federal Acquisition Regulation (FAR) to implement those recommendations. The agency members of the FAR Council are strongly encouraged to consider issuing an interim final rule, as appropriate and consistent with applicable law.

(iii) Within 60 days of the date of the issuance of the recommendations described in subsection (b)(i) of this section, the Secretary of Homeland Security, acting through the Director of CISA, shall evaluate emerging methods of generating, receiving, and verifying machine-readable secure software development attestations and artifacts and, as appropriate, shall provide guidance for software providers on submitting them to CISA's RSAA website, including a common data schema and format.

(iv) Within 30 days of the date of any amendments to the FAR described in subsection (b)(ii) of this section, the Secretary of Homeland Security, acting through the Director of CISA, shall develop a program to centrally verify the completeness of all attestation forms. CISA shall continuously validate a sample of the complete attestations using high-level artifacts in the RSAA.

(v) If CISA finds that attestations are incomplete or artifacts are insufficient for validating the attestations, the Director of CISA shall notify the software provider and the contracting agency. The Director of CISA shall provide a process for the software provider to respond to CISA's initial determination and shall duly consider the response.

(vi) For attestations that undergo validation, the Director of CISA shall inform the National Cyber Director, who shall publicly post the results, identifying the software providers and software version. The National Cyber Director is encouraged to refer attestations that fail validation to the Attorney General for action as appropriate.

(c) Secure software development practices are not sufficient to address the potential for cyber incidents from resourced and determined nation-state actors. To mitigate the risk of such incidents occurring, software providers must also address how software is delivered and the security of the software itself. The Federal Government must identify a coordinated set of practical and effective security practices to require when it procures software.

(i) Within 60 days of the date of this order, the Secretary of Commerce, acting through the Director of NIST, shall establish a consortium with industry at the National Cybersecurity Center of Excellence to develop

guidance, informed by the consortium as appropriate, that demonstrates the implementation of secure software development, security, and operations practices based on NIST Special Publication 800–218 (*Secure Software Development Framework* (SSDF)).

(ii) Within 90 days of the date of this order, the Secretary of Commerce, acting through the Director of NIST, shall update NIST Special Publication 800–53 (*Security and Privacy Controls for Information Systems and Organizations*) to provide guidance on how to securely and reliably deploy patches and updates.

(iii) Within 180 days of the date of this order, the Secretary of Commerce, acting through the Director of NIST, in consultation with the heads of such agencies as the Director of NIST deems appropriate, shall develop and publish a preliminary update to the SSDF. This update shall include practices, procedures, controls, and implementation examples regarding the secure and reliable development and delivery of software as well as the security of the software itself. Within 120 days of publishing the preliminary update, the Secretary of Commerce, acting through the Director of NIST, shall publish a final version of the updated SSDF.

(iv) Within 120 days of the final update to the SSDF described in subsection (c)(iii) of this section, the Director of OMB shall incorporate select practices for the secure development and delivery of software contained in NIST's updated SSDF into the requirements of OMB Memorandum M–22–18 (*Enhancing the Security of the Software Supply Chain through Secure Software Development Practices*) or related requirements.

(v) Within 30 days of the issuance of OMB's updated requirements described in subsection (c)(iv) of this section, the Director of CISA shall prepare any revisions to CISA's common form for Secure Software Development Attestation to conform to OMB's requirements and shall initiate any process required to obtain clearance of the revised form under the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.*

(d) As agencies have improved their cyber defenses, adversaries have targeted the weak links in agency supply chains and the products and services upon which the Federal Government relies. Agencies need to integrate cybersecurity supply chain risk management programs into enterprise-wide risk management activities. Within 90 days of the date of this order, the Director of OMB, in coordination with the Secretary of Commerce, acting through the Director of NIST, the Administrator of General Services, and the Federal Acquisition Security Council (FASC), shall take steps to require, as the Director deems appropriate, that agencies comply with the guidance in NIST Special Publication 800–161 (*Cybersecurity Supply Chain Risk Management Practices for Systems and Organizations* (SP 800–161 Revision 1)). OMB shall require agencies to provide annual updates to OMB as they complete implementation. Consistent with SP 800–161 Revision 1, OMB's requirements shall address the integration of cybersecurity into the acquisition lifecycle through acquisition planning, source selection, responsibility determination, security compliance evaluation, contract administration, and performance evaluation.

(e) Open source software plays a critical role in Federal information systems. To help the Federal Government continue to reap the innovation and cost benefits of open source software and contribute to the cybersecurity of the open source software ecosystem, agencies must better manage their use of open source software. Within 120 days of the date of this order, the Secretary of Homeland Security, acting through the Director of CISA, and the Director of OMB, in consultation with the Administrator of General Services and the heads of other agencies as appropriate, shall jointly issue recommendations to agencies on the use of security assessments and patching of open source software and best practices for contributing to open source software projects.

Sec. 3. *Improving the Cybersecurity of Federal Systems.* (a) The Federal Government must adopt proven security practices from industry—to include

in identity and access management—in order to improve visibility of security threats across networks and strengthen cloud security.

(b) To prioritize investments in the innovative identity technologies and processes of the future and phishing-resistant authentication options, FCEB agencies shall begin using, in pilot deployments or in larger deployments as appropriate, commercial phishing-resistant standards such as WebAuthn, building on the deployments that OMB and CISA have developed and established since the issuance of Executive Order 14028. These pilot deployments shall be used to inform future directions for Federal identity, credentialing, and access management strategies.

(c) The Federal Government must maintain the ability to rapidly and effectively identify threats across the Federal enterprise. In Executive Order 14028, I directed the Secretary of Defense and the Secretary of Homeland Security to establish procedures to immediately share threat information to strengthen the collective defense of Department of Defense and civilian networks. To enable identification of threat activity, CISA's capability to hunt for and identify threats across FCEB agencies under 44 U.S.C. 3553(b)(7) must be strengthened.

(i) The Secretary of Homeland Security, acting through the Director of CISA, in coordination with the Federal Chief Information Officer (CIO) Council and Federal Chief Information Security Officer (CISO) Council, shall develop the technical capability to gain timely access to required data from FCEB agency endpoint detection and response (EDR) solutions and from FCEB agency security operation centers to enable:

(A) timely hunting and identification of novel cyber threats and vulnerabilities across the Federal civilian enterprise;

(B) identification of coordinated cyber campaigns that simultaneously target multiple agencies and move laterally across the Federal enterprise; and

(C) coordination of Government-wide efforts on information security policies and practices, including compilation and analysis of information about incidents that threaten information security.

(ii) Within 180 days of the date of this order, the Secretary of Homeland Security, acting through the Director of CISA, in coordination with the Federal CIO and CISO Councils, shall develop and release a concept of operations that enables CISA to gain timely access to required data to achieve the objectives described in subsection (c)(i) of this section. The Director of OMB shall oversee the development of this concept of operations to account for agency perspectives and the objectives outlined in this section and shall approve the final concept of operations. This concept of operations shall include:

(A) requirements for FCEB agencies to provide CISA with data of sufficient completeness and on the timeline required to enable CISA to achieve the objectives described in subsection (c)(i) of this section;

(B) requirements for CISA to provide FCEB agencies with advanced notification when CISA directly accesses agency EDR solutions to obtain required telemetry;

(C) specific use cases for which agencies may provide telemetry data subject to the requirements in subsection (c)(ii)(A) of this section as opposed to direct access to EDR solutions by CISA;

(D) high-level technical and policy control requirements to govern CISA access to agency EDR solutions that conform with widely accepted cybersecurity principles, including role-based access controls, ''least privilege,'' and separation of duties;

(E) specific protections for highly sensitive agency data that is subject to statutory, regulatory, or judicial restrictions to protect confidentiality or integrity; and

(F) an appendix to the concept of operations that identifies and addresses certain types of specific use cases under subsection (c)(ii)(C) of this section that apply to the Department of Justice, including certain categories of information described in subsections (c)(vi) and (c)(vii) of this section, and requires the Department of Justice's concurrence on the terms of the appendix prior to implementation of the concept of operations on the Department of Justice's or its subcomponents' networks.

(iii) In undertaking the activities described in subsection (c) of this section, the Secretary of Homeland Security, acting through the Director of CISA, shall only make a change to an agency network, system, or data when such change is required for threat hunting by CISA, including access to the EDR tools described in subsection (c)(ii) of this section, or in furtherance of its authority to conduct threat hunting as authorized under 44 U.S.C. 3553(b)(7), unless otherwise authorized by the agency.

(iv) Within 30 days of the release of the concept of operations described in subsection (c)(ii) of this section, the Secretary of Homeland Security, acting through the Director of CISA, shall establish working groups, open to all agencies, to develop and release specific technical controls that achieve the objectives set forth in subsection (c)(ii) of this section and to work with EDR solution providers to implement those controls in FCEB agency deployments of EDR solutions. The Secretary of Homeland Security, acting through the Director of CISA, shall, at a minimum, establish a working group for each EDR solution authorized by CISA for use in the CISA Continuous Diagnostic and Mitigation Program. Each working group shall be open to all agencies and include at least one representative from an FCEB agency employing the designated EDR solution.

(v) Within 180 days of the release of the technical controls described in subsection (c)(iv) of this section, the heads of FCEB agencies shall enroll endpoints using an EDR solution covered by those controls in the CISA Persistent Access Capability program.

(vi) Within 90 days of the date of this order, and periodically thereafter as needed, the heads of FCEB agencies shall provide to CISA a list of systems, endpoints, and data sets that require additional controls or periods of non-disruption to ensure that CISA's threat-hunting activities do not disrupt mission-critical operations, along with an explanation of those operations.

(vii) In cases in which agency data is subject to statutory, regulatory, or judicial access restrictions, the Director of CISA shall comply with agency processes and procedures required to access such data or work with the agency to develop an appropriate administrative accommodation consistent with any such restrictions so that the data is not subject to unauthorized access or use.

(viii) Nothing in this order requires an agency to provide access to information that is protected from non-disclosure by court order or otherwise required to be kept confidential in connection with a judicial proceeding.

(d) The security of Federal information systems relies on the security of the Government's cloud services. Within 90 days of the date of this order, the Administrator of General Services, acting through the Director of the Federal Risk and Authorization Management Program (FedRAMP), in coordination with the Secretary of Commerce, acting through the Director of NIST, and the Secretary of Homeland Security, acting through the Director of CISA, shall develop FedRAMP policies and practices to incentivize or require cloud service providers in the FedRAMP Marketplace to produce baselines with specifications and recommendations for agency configuration of agency cloud-based systems in order to secure Federal data based on agency requirements.

(e) As cybersecurity threats to space systems increase, these systems and their supporting digital infrastructure must be designed to adapt to evolving cybersecurity threats and operate in contested environments. In light of

the pivotal role space systems play in global critical infrastructure and communications resilience, and to further protect space systems and the supporting digital infrastructure vital to our national security, including our economic security, agencies shall take steps to continually verify that Federal space systems have the requisite cybersecurity capabilities through actions including continuous assessments, testing, exercises, and modeling and simulation.

(i) Within 180 days of the date of this order, the Secretary of the Interior, acting through the Director of the United States Geological Survey; the Secretary of Commerce, acting through the Under Secretary of Commerce for Oceans and Atmosphere and the Administrator of the National Oceanic and Atmospheric Administration; and the Administrator of the National Aeronautics and Space Administration shall each review the civil space contract requirements in the FAR and recommend to the FAR Council and other appropriate agencies updates to civil space cybersecurity requirements and relevant contract language. The recommended cybersecurity requirements and contract language shall use a risk-based, tiered approach for all new civil space systems. Such requirements shall be designed to apply at minimum to the civil space systems' on-orbit segments and link segments. The requirements shall address the following elements for the highest-risk tier and, as appropriate, other tiers:

(A) protection of command and control of the civil space system, including backup or failover systems, by:

(1) encrypting commands to protect the confidentiality of communications;

(2) ensuring commands are not modified in transit;

(3) ensuring an authorized party is the source of commands; and

(4) rejecting unauthorized command and control attempts;

(B) establishment of methods to detect, report, and recover from anomalous network or system activity; and

(C) use of secure software and hardware development practices, consistent with the NIST SSDF or any successor documents.

(ii) Within 180 days of receiving the recommended contract language described in subsection (e)(i) of this section, the FAR Council shall review the proposal and, as appropriate and consistent with applicable law, the agency members of the FAR Council shall jointly take steps to amend the FAR.

(iii) Within 120 days of the date of this order, the National Cyber Director shall submit to OMB a study of space ground systems owned, managed, or operated by FCEB agencies. This study shall include:

(A) an inventory of space ground systems;

(B) whether each space ground system is classified as a major information system under 44 U.S.C. 3505(c), labeled ''Inventory of major information systems''; and

(C) recommendations to improve the cyber defenses and oversight of such space ground systems.

(iv) Within 90 days of the submission of the study described in subsection (e)(iii) of this section, the Director of OMB shall take appropriate steps to help ensure that space ground systems owned, managed, or operated by FCEB agencies comply with relevant cybersecurity requirements issued by OMB.

Sec. 4. *Securing Federal Communications.* (a) To improve the security of Federal Government communications against adversarial nations and criminals, the Federal Government must implement, to the extent practicable and consistent with mission needs, strong identity authentication and encryption using modern, standardized, and commercially available algorithms and protocols.

(b) The security of internet traffic depends on data being correctly routed and delivered to the intended recipient network. Routing information originated and propagated across the internet, utilizing the Border Gateway Protocol (BGP), is vulnerable to attack and misconfiguration.

(i) Within 90 days of the date of this order, FCEB agencies shall take steps to ensure that all of their assigned internet number resources (internet Protocol (IP) address blocks and Autonomous System Numbers) are covered by a Registration Services Agreement with the American Registry for internet Numbers or another appropriate regional internet registry. Thereafter, FCEB agencies shall annually review and update in their regional internet registry accounts organizational identifiers related to assigned number resources such as organization names, points of contact, and associated email addresses.

(ii) Within 120 days of the date of this order, all FCEB agencies that hold IP address blocks shall create and publish Route Origin Authorizations in the public Resource Public Key Infrastructure repository hosted or delegated by the American Registry for internet Numbers or the appropriate regional internet registry for the IP address blocks they hold.

(iii) Within 120 days of the date of this order, the National Cyber Director, in coordination with the heads of other agencies as appropriate, shall recommend contract language to the FAR Council to require contracted providers of internet services to agencies to adopt and deploy internet routing security technologies, including publishing Route Origin Authorizations and performing Route Origin Validation filtering. The recommended language shall include requirements or exceptions, as appropriate, for agency contracts regarding overseas operations and overseas local service providers. Within 270 days of receiving these recommendations, the FAR Council shall review the recommended contract language and, as appropriate and consistent with applicable law, the agency members of the FAR Council shall jointly take steps to amend the FAR. Pending any such amendments to the FAR, individual agencies are encouraged to include such requirements in future contracts, consistent with applicable law.

(iv) Within 180 days of the date of this order, the Secretary of Commerce, acting through the Director of NIST, shall publish updated guidance to agencies on deployment of current, operationally viable BGP security methods for Federal Government networks and service providers. The Secretary of Commerce, acting through the Director of NIST, shall also provide updated guidance on other emerging technologies to improve internet routing security and resilience, such as route leak mitigation and source address validation.

(c) Encrypting Domain Name System (DNS) traffic in transit is a critical step to protecting both the confidentiality of the information being transmitted to, and the integrity of the communication with, the DNS resolver.

(i) Within 90 days of the date of this order, the Secretary of Homeland Security, acting through the Director of CISA, shall publish template contract language requiring that any product that acts as a DNS resolver (whether client or server) for the Federal Government support encrypted DNS and shall recommend that language to the FAR Council. Within 120 days of receiving the recommended language, the FAR Council shall review it, and, as appropriate and consistent with applicable law, the agency members of the FAR Council shall jointly take steps to amend the FAR.

(ii) Within 180 days of the date of this order, FCEB agencies shall enable encrypted DNS protocols wherever their existing clients and servers support those protocols. FCEB agencies shall also enable such protocols within 180 days of any additional clients and servers supporting such protocols.

(d) The Federal Government must encrypt email messages in transport and, where practical, use end-to-end encryption in order to protect messages from compromise.

(i) Within 120 days of the date of this order, each FCEB agency shall technically enforce encrypted and authenticated transport for all connections between the agency's email clients and their associated email servers.

(ii) Within 180 days of the date of this order, the Director of OMB shall establish a requirement for expanded use of authenticated transport-layer encryption between email servers used by FCEB agencies to send and receive email.

(iii) Within 90 days of the establishment of the requirement described in subsection (d)(ii) of this section, the Secretary of Homeland Security, acting through the Director of CISA, shall take appropriate steps to assist agencies in meeting that requirement, including by issuing implementing directives, as well as technical guidance to address any identified capability gaps.

(e) Modern communications such as voice and video conferencing and instant messaging are usually encrypted at the link level but often are not encrypted end-to-end. Within 180 days of the date of this order, to advance the security of internet-based voice and video conferencing and instant messaging, the Director of OMB, in coordination with the Secretary of Homeland Security, acting through the Director of CISA; the Secretary of Defense, acting through the Director of the National Security Agency (NSA); the Secretary of Commerce, acting through the Director of NIST; the Archivist of the United States, acting through the Chief Records Officer for the United States Government; and the Administrator of General Services shall take appropriate steps to require agencies to:

(i) enable transport encryption by default; and

(ii) where technically supported, use end-to-end encryption by default while maintaining logging and archival capabilities that allow agencies to fulfill records management and accountability requirements.

(f) Alongside their benefits, quantum computers pose significant risk to the national security, including the economic security, of the United States. Most notably, a quantum computer of sufficient size and sophistication—also known as a cryptanalytically relevant quantum computer (CRQC)—will be capable of breaking much of the public-key cryptography used on digital systems across the United States and around the world. In National Security Memorandum 10 of May 4, 2022 (Promoting United States Leadership in Quantum Computing While Mitigating Risks to Vulnerable Cryptographic Systems), I directed the Federal Government to prepare for a transition to cryptographic algorithms that would not be vulnerable to a CRQC.

(i) Within 180 days of the date of this order, the Secretary of Homeland Security, acting through the Director of CISA, shall release and thereafter regularly update a list of product categories in which products that support post-quantum cryptography (PQC) are widely available.

(ii) Within 90 days of a product category being placed on the list described in subsection (f)(i) of this section, agencies shall take steps to include in any solicitations for products in that category a requirement that products support PQC.

(iii) Agencies shall implement PQC key establishment or hybrid key establishment including a PQC algorithm as soon as practicable upon support being provided by network security products and services already deployed in their network architectures.

(iv) Within 90 days of the date of this order, the Secretary of State and the Secretary of Commerce, acting through the Director of NIST and the Under Secretary for International Trade, shall identify and engage foreign governments and industry groups in key countries to encourage their transition to PQC algorithms standardized by NIST.

(v) Within 180 days of the date of this order, to prepare for transition to PQC, the Secretary of Defense with respect to National Security Systems (NSS), and the Director of OMB with respect to non-NSS, shall each

issue requirements for agencies to support, as soon as practicable, but not later than January 2, 2030, Transport Layer Security protocol version 1.3 or a successor version.

(g) The Federal Government should take advantage of commercial security technologies and architectures, such as hardware security modules, trusted execution environments, and other isolation technologies, to protect and audit access to cryptographic keys with extended lifecycles.

(i) Within 270 days of the date of this order, the Secretary of Commerce, acting through the Director of NIST, in consultation with the Secretary of Homeland Security, acting through the Director of CISA, and the Administrator of General Services shall develop guidelines for the secure management of access tokens and cryptographic keys used by cloud service providers.

(ii) Within 60 days of the publication of the guidelines described in subsection (g)(i) of this section, the Administrator of General Services, acting through the FedRAMP Director, in consultation with the Secretary of Commerce, acting through the Director of NIST, and the Secretary of Homeland Security, acting through the Director of CISA, shall develop updated FedRAMP requirements, incorporating the guidelines described in subsection (g)(i) of this section, as appropriate and consistent with guidance issued by the Director of OMB, concerning cryptographic key management security practices.

(iii) Within 60 days of the publication of the guidelines described in subsection (g)(i) of this section, the Director of OMB, in consultation with the Secretary of Commerce, acting through the Director of NIST; the Secretary of Homeland Security, acting through the Director of CISA; and the Administrator of General Services shall take appropriate steps to require FCEB agencies to follow best practices concerning the protection and management of hardware security modules, trusted execution environments, or other isolation technologies for access tokens and cryptographic keys used by cloud service providers in the provision of services to agencies.

Sec. 5. *Solutions to Combat Cybercrime and Fraud.* (a) The use of stolen and synthetic identities by criminal syndicates to systemically defraud public benefits programs costs taxpayers and wastes Federal Government funds. To help address these crimes it is the policy of the executive branch to strongly encourage the acceptance of digital identity documents to access public benefits programs that require identity verification, so long as it is done in a manner that preserves broad program access for vulnerable populations and supports the principles of privacy, data minimization, and interoperability.

(i) Within 90 days of the date of this order, agencies with grantmaking authority are encouraged to consider, in coordination with OMB and the National Security Council staff, whether Federal grant funding is available to assist States in developing and issuing mobile driver's licenses that achieve the policies and principles described in this section.

(ii) Within 270 days of the date of this order, the Secretary of Commerce, acting through the Director of NIST, shall issue practical implementation guidance, in collaboration with relevant agencies and other stakeholders through the National Cybersecurity Center of Excellence, to support remote digital identity verification using digital identity documents that will help issuers and verifiers of digital identity documents advance the policies and principles described in this section.

(iii) Agencies should consider accepting digital identity documents as digital identity verification evidence to access public benefits programs, but only if the use of these documents is consistent with the policies and principles described in this section.

(iv) Agencies should, consistent with applicable law, seek to ensure that digital identity documents accepted as digital identity verification evidence to access public benefits programs:

(A) are interoperable with relevant standards and trust frameworks, so that the public can use any standards-compliant hardware or software containing an official Government-issued digital identity document, regardless of manufacturer or developer;

(B) do not enable authorities that issue digital identity documents, device manufacturers, or any other third party to surveil or track presentation of the digital identity document, including user device location at the time of presentation; and

(C) support user privacy and data minimization by ensuring only the minimum information required for a transaction—often a ''yes'' or ''no'' response to a question, such as whether an individual is older than a specific age—is requested from the holder of the digital identity document.

(b) The use of ''Yes/No'' validation services, also referred to as attribute validation services, can enable more privacy-preserving means to reduce identity fraud. These services allow programs to confirm, via a privacy-preserving ''yes'' or ''no'' response, that applicant-provided identity information is consistent with information already contained in official records, without needing to share the contents of those official records. To support the use of such services, the Commissioner of Social Security, and the head of any other agency designated by the Director of OMB, shall, as appropriate and consistent with applicable law, consider taking steps to develop or modify services—including through, as appropriate, the initiation of a proposed rulemaking or the publication of a notice of a new or significantly modified routine use of records—related to Government-operated identity verification systems and public benefits programs, with consideration given to having such systems and programs submit applicant-provided identity information to the agency providing the service and receive a ''yes'' or ''no'' response as to whether the applicant-provided identity information is consistent with the information on file with the agency providing the service. In doing so, the heads of these agencies shall specifically consider seeking to ensure, consistent with applicable law, that:

(i) any applicant-provided identity information submitted to the services and any ''yes'' or ''no'' response provided by the services are used only to assist with identity verification, program administration, anti-fraud operations, or investigation and prosecution of fraud related to the public benefits program for which the identity information was submitted;

(ii) the services are made available, to the maximum extent permissible and as appropriate, to public benefits programs; Government-operated identity verification systems, including shared-service providers; payment integrity programs; and United States-regulated financial institutions; and

(iii) the agencies, public benefits programs, or institutions using the services provide reimbursement to appropriately cover costs and support the ongoing maintenance, improvement, and broad accessibility of the services.

(c) The Secretary of the Treasury, in consultation with the Administrator of General Services, shall research, develop, and conduct a pilot program for technology that notifies individuals and entities when their identity information is used to request a payment from a public benefits program, gives individuals and entities the option to stop potentially fraudulent transactions before they occur, and reports fraudulent transactions to law enforcement entities.

Sec. 6. *Promoting Security with and in Artificial Intelligence.* Artificial intelligence (AI) has the potential to transform cyber defense by rapidly identifying new vulnerabilities, increasing the scale of threat detection techniques, and automating cyber defense. The Federal Government must accelerate the development and deployment of AI, explore ways to improve the cybersecurity of critical infrastructure using AI, and accelerate research at the intersection of AI and cybersecurity.

(a) Within 180 days of the date of the completion of the Defense Advanced Research Projects Agency's 2025 Artificial Intelligence Cyber Challenge, the Secretary of Energy, in coordination with the Secretary of Defense, acting

through the Director of the Defense Advanced Research Projects Agency, and the Secretary of Homeland Security, shall launch a pilot program, involving collaboration with private sector critical infrastructure entities as appropriate and consistent with applicable law, on the use of AI to enhance cyber defense of critical infrastructure in the energy sector, and conduct an assessment of the pilot program upon its completion. This pilot program, and accompanying assessment, may include vulnerability detection, automatic patch management, and the identification and categorization of anomalous and malicious activity across information technology (IT) or operational technology systems.

(b) Within 270 days of the date of this order, the Secretary of Defense shall establish a program to use advanced AI models for cyber defense.

(c) Within 150 days of the date of this order, the Secretary of Commerce, acting through the Director of NIST; the Secretary of Energy; the Secretary of Homeland Security, acting through the Under Secretary for Science and Technology; and the Director of the National Science Foundation (NSF) shall each prioritize funding for their respective programs that encourage the development of large-scale, labeled datasets needed to make progress on cyber defense research, and ensure that existing datasets for cyber defense research have been made accessible to the broader academic research community (either securely or publicly) to the maximum extent feasible, in consideration of business confidentiality and national security.

(d) Within 150 days of the date of this order, the Secretary of Commerce, acting through the Director of NIST; the Secretary of Energy; the Secretary of Homeland Security, acting through the Under Secretary for Science and Technology; and the Director of the NSF shall prioritize research on the following topics:

(i) human-AI interaction methods to assist defensive cyber analysis;

(ii) security of AI coding assistance, including security of AI-generated code;

(iii) methods for designing secure AI systems; and

(iv) methods for prevention, response, remediation, and recovery of cyber incidents involving AI systems.

(e) Within 150 days of the date of this order, the Secretary of Defense, the Secretary of Homeland Security, and the Director of National Intelligence, in coordination with the Director of OMB, shall incorporate management of AI software vulnerabilities and compromises into their respective agencies' existing processes and interagency coordination mechanisms for vulnerability management, including through incident tracking, response, and reporting, and by sharing indicators of compromise for AI systems.

Sec. 7. *Aligning Policy to Practice.* (a) IT infrastructure and networks that support agencies' critical missions need to be modernized. Agencies' policies must align investments and priorities to improve network visibility and security controls to reduce cyber risks.

(i) Within 3 years of the date of this order, the Director of OMB shall issue guidance, including any necessary revision to OMB Circular A–130, to address critical risks and adapt modern practices and architectures across Federal information systems and networks. This guidance shall, at a minimum:

(A) outline expectations for agency cybersecurity information sharing and exchange, enterprise visibility, and accountability for enterprise-wide cybersecurity programs by agency CISOs;

(B) revise OMB Circular A–130 to be less technically prescriptive in key areas, where appropriate, to more clearly promote the adoption of evolving cybersecurity best practices across Federal systems, and to include migration to zero trust architectures and implementation of critical elements such as EDR capabilities, encryption, network segmentation, and phishing-resistant multi-factor authentication; and

(C) address how agencies should identify, assess, respond to, and mitigate risks to mission essential functions presented by concentration of IT vendors and services.

(ii) The Secretary of Commerce, acting through the Director of NIST; the Secretary of Homeland Security, acting through the Director of CISA; and the Director of OMB shall establish a pilot program of a rules-as-code approach for machine-readable versions of policy and guidance that OMB, NIST, and CISA publish and manage regarding cybersecurity.

(b) Managing cybersecurity risks is now a part of everyday industry practice and should be expected for all types of businesses. Minimum cybersecurity requirements can make it costlier and harder for threat actors to compromise networks. Within 240 days of the date of this order, the Secretary of Commerce, acting through the Director of NIST, shall evaluate common cybersecurity practices and security control outcomes that are commonly used or recommended across industry sectors, international standards bodies, and other risk management programs, and based on that evaluation issue guidance identifying minimum cybersecurity practices. In developing this guidance, the Secretary of Commerce, acting through the Director of NIST, shall solicit input from the Federal Government, the private sector, academia, and other appropriate actors.

(c) Agencies face multiple cybersecurity risks when purchasing products and services. While agencies have already made significant advances to improve their supply chain risk management, additional actions are needed to keep pace with the evolving threat landscape. Within 180 days of the issuance of the guidance described in subsection (b) of this section, the FAR Council shall review the guidance and, as appropriate and consistent with applicable law, the agency members of the FAR Council shall jointly take steps to amend the FAR to:

(i) require that contractors with the Federal Government follow applicable minimum cybersecurity practices identified in NIST's guidance pursuant to subsection (b) of this section with respect to work performed under agency contracts or when developing, maintaining, or supporting IT services or products that are provided to the Federal Government; and

(ii) adopt requirements for agencies to, by January 4, 2027, require vendors to the Federal Government of consumer internet-of-Things products, as defined by 47 CFR 8.203(b), to carry United States Cyber Trust Mark labeling for those products.

Sec. 8. *National Security Systems and Debilitating Impact Systems.* (a) Except as specifically provided for in section 4(f)(v) of this order, sections 1 through 7 of this order shall not apply to Federal information systems that are NSS or are otherwise identified by the Department of Defense or the Intelligence Community as debilitating impact systems.

(b) Within 90 days of the date of this order, to help ensure that NSS and debilitating impact systems are protected with the most advanced security measures, the Secretary of Defense, acting through the Director of NSA as the National Manager for National Security Systems (National Manager), in coordination with the Director of National Intelligence and the Committee on National Security Systems (CNSS), and in consultation with the Director of OMB and the Assistant to the President for National Security Affairs (APNSA), shall develop requirements for NSS and debilitating impact systems that are consistent with the requirements set forth in this order, as appropriate and consistent with applicable law. The Secretary of Defense may grant exceptions to such requirements in circumstances necessitated by unique mission needs. Such requirements shall be incorporated into a proposed National Security Memorandum, to be submitted to the President through the APNSA.

(c) To help protect space NSS with cybersecurity measures that keep pace with emerging threats, within 210 days of the date of this order, the CNSS shall review and update, as appropriate, relevant policies and guidance regarding space system cybersecurity. In addition to appropriate

updates, the CNSS shall identify and address appropriate requirements to implement cyber defenses on Federal Government-procured space NSS in the areas of intrusion detection, use of hardware roots of trust for secure booting, and development and deployment of security patches.

(d) To enhance the effective governance and oversight of Federal information systems, within 90 days of the date of this order, the Director of OMB shall issue guidance as appropriate requiring agencies to inventory all major information systems and provide the inventory to CISA, the Department of Defense, or the National Manager, as applicable, which shall each maintain a registry of agency inventories within their purview. CISA, the Department of Defense CIO, and the National Manager will share their inventories as appropriate to identify gaps or overlaps in oversight coverage. This guidance shall not apply to elements of the Intelligence Community.

(e) Nothing in this order alters the authorities and responsibilities granted in law or policy to the Director of National Intelligence, the Secretary of Defense, and the National Manager over applicable systems pursuant to the National Security Act of 1947 (Public Law 80–253), the Federal Information Security Modernization Act of 2014 (Public Law 113–283), National Security Directive 42 of July 5, 1990 (National Policy for the Security of National Security Telecommunications and Information Systems), or National Security Memorandum 8 of January 19, 2022 (Improving the Cybersecurity of National Security, Department of Defense, and Intelligence Community Systems).

Sec. 9. *Additional Steps to Combat Significant Malicious Cyber-Enabled Activities.* Because I find that additional steps must be taken to deal with the national emergency with respect to significant malicious cyber-enabled activities declared in Executive Order 13694 of April 1, 2015 (Blocking the Property of Certain Persons Engaging in Significant Malicious Cyber-Enabled Activities), as amended by Executive Order 13757 of December 28, 2016 (Taking Additional Steps to Address the National Emergency With Respect to Significant Malicious Cyber-Enabled Activities), and further amended by Executive Order 13984 of January 19, 2021 (Taking Additional Steps to Address the National Emergency With Respect to Significant Malicious Cyber-Enabled Activities), to protect against the growing and evolving threat of malicious cyber-enabled activities against the United States and United States allies and partners, including the increasing threats by foreign actors of unauthorized access to critical infrastructure, ransomware, and cyber-enabled intrusions and sanctions evasion, I hereby order that section 1(a) of Executive Order 13694 is further amended to read as follows:

''**Section 1**. (a) All property and interests in property that are in the United States, that hereafter come within the United States, or that are or hereafter come within the possession or control of any United States person of the following persons are blocked and may not be transferred, paid, exported, withdrawn, or otherwise dealt in:

(i) the persons listed in the Annex to this order;

(ii) any person determined by the Secretary of the Treasury, in consultation with the Attorney General and the Secretary of State, to be responsible for or complicit in, or to have engaged in, directly or indirectly, cyber-enabled activities originating from, or directed by persons located, in whole or in substantial part, outside the United States that are reasonably likely to result in, or have materially contributed to, a threat to the national security, foreign policy, or economic health or financial stability of the United States, and that have the purpose of or involve:

(A) harming, or otherwise compromising the provision of services by, a computer or network of computers that support one or more entities in a critical infrastructure sector;

(B) compromising the provision of services by one or more entities in a critical infrastructure sector;

(C) causing a disruption to the availability of a computer or network of computers or compromising the integrity of the information stored on a computer or network of computers;

(D) causing a misappropriation of funds or economic resources, intellectual property, proprietary or business confidential information, personal identifiers, or financial information for commercial or competitive advantage or private financial gain;

(E) tampering with, altering, or causing a misappropriation of information with the purpose of or that involves interfering with or undermining election processes or institutions; or

(F) engaging in a ransomware attack, such as extortion through malicious use of code, encryption, or other activity to affect the confidentiality, integrity, or availability of data or a computer or network of computers, against a United States person, the United States, a United States ally or partner or a citizen, national, or entity organized under the laws thereof; or

(iii) any person determined by the Secretary of the Treasury, in consultation with the Attorney General and the Secretary of State:

(A) to be responsible for or complicit in, or to have engaged in, directly or indirectly, the receipt or use for commercial or competitive advantage or private financial gain, or by a commercial entity, outside the United States of funds or economic resources, intellectual property, proprietary or business confidential information, personal identifiers, or financial information misappropriated through cyber-enabled means, knowing they have been misappropriated, where the misappropriation of such funds or economic resources, intellectual property, proprietary or business confidential information, personal identifiers, or financial information is reasonably likely to result in, or has materially contributed to, a threat to the national security, foreign policy, or economic health or financial stability of the United States;

(B) to be responsible for or complicit in, or to have engaged in, directly or indirectly, activities related to gaining or attempting to gain unauthorized access to a computer or network of computers of a United States person, the United States, a United States ally or partner or a citizen, national, or entity organized under the laws thereof, where such efforts originate from or are directed by persons located, in whole or substantial part, outside the United States and are reasonably likely to result in, or have materially contributed to, a significant threat to the national security, foreign policy, or economic health or financial stability of the United States;

(C) to have materially assisted, sponsored, or provided financial, material, or technological support for, or goods or services to or in support of, any activity described in subsections (a)(ii) or (a)(iii)(A) or (B) of this section or any person whose property and interests in property are blocked pursuant to this order;

(D) to be owned or controlled by, or to have acted or purported to act for or on behalf of, directly or indirectly, any person whose property and interests in property are blocked pursuant to this order or that has engaged in any activity described in subsections (a)(ii) or (a)(iii)(A)–(C) of this section;

(E) to have attempted to engage in any of the activities described in subsections (a)(ii) and (a)(iii)(A)–(D) of this section; or

(F) to be or have been a leader, official, senior executive officer, or member of the board of directors of any person whose property and interests in property are blocked pursuant to this order or that has engaged in any activity described in subsections (a)(ii) or (a)(iii)(A) – (E) of this section.''

Sec. 10. *Definitions.* For purposes of this order:

(a) The term ''agency'' has the meaning ascribed to it under 44 U.S.C. 3502(1), except for the independent regulatory agencies described in 44 U.S.C. 3502(5).

(b) The term ''artifact'' means a record or data that is generated manually or by automated means and may be used to demonstrate compliance with defined practices, including for secure software development.

(c) The term ''artificial intelligence'' or ''AI'' has the meaning set forth in 15 U.S.C. 9401(3).

(d) The term ''AI system'' means any data system, software, hardware, application, tool, or utility that operates in whole or in part using AI.

(e) The term ''authentication'' means the process of determining the validity of one or more authenticators, such as a password, used to claim a digital identity.

(f) The term ''Border Gateway Protocol'' or ''BGP'' means the control protocol used to distribute and compute paths between the tens of thousands of autonomous networks that constitute the internet.

(g) The term ''consumer internet-of-Things products'' means internet-of-Things products intended primarily for consumer use, rather than enterprise or industrial use. Consumer internet-of-Things products do not include medical devices regulated by the United States Food and Drug Administration or motor vehicles and motor vehicle equipment regulated by the National Highway Traffic Safety Administration.

(h) The term ''cyber incident'' has the meaning given to the term ''incident'' under 44 U.S.C. 3552(b)(2).

(i) The term ''debilitating impact systems'' means systems as described by 44 U.S.C. 3553(e)(2) and 3553(e)(3) for Department of Defense and Intelligence Community purposes, respectively.

(j) The term ''digital identity document'' means an electronic, reusable, cryptographically verifiable identity credential issued by a Government source, such as a State-issued mobile driver's license or an electronic passport.

(k) The term ''digital identity verification'' means identity verification that a user performs online.

(l) The term ''endpoint'' means any device that can be connected to a computer network creating an entry or exit point for data communications. Examples of endpoints include desktop and laptop computers, smartphones, tablets, servers, workstations, virtual machines, and consumer internet-of-Things products.

(m) The term ''endpoint detection and response'' means cybersecurity tools and capabilities that combine real-time continuous monitoring and collection of endpoint data (for example, networked computing device such as workstations, mobile phones, servers) with rules-based automated response and analysis capabilities.

(n) The term ''Federal Civilian Executive Branch agencies'' or ''FCEB agencies'' includes all agencies except for the agencies and other components in the Department of Defense and agencies in the Intelligence Community.

(o) The term ''Federal information system'' means an information system used or operated by an agency, a contractor of an agency, or another organization on behalf of an agency.

(p) The term ''Government-operated identity verification system'' means a system owned and operated by a Federal, State, local, Tribal, or territorial Government entity that performs identity verification, including single-agency systems and shared services that provide service to multiple agencies.

(q) The term ''hardware root of trust'' means an inherently trusted combination of hardware and firmware that helps to maintain the integrity of information.

(r) The term ''hybrid key establishment'' means a key establishment scheme that is a combination of two or more components that are themselves cryptographic key-establishment schemes.

(s) The term ''identity verification'' means the process of collecting identity information or evidence, validating its legitimacy, and confirming that it is associated with the real person providing it.

(t) The term ''Intelligence Community'' has the meaning given to it under 50 U.S.C. 3003(4).

(u) The term ''key establishment'' means the process by which a cryptographic key is securely shared between two or more entities.

(v) The term ''least privilege'' means the principle that a security architecture is designed so that each entity is granted the minimum system resources and authorizations that the entity needs to perform its function.

(w) The term ''machine-readable'' means that the product output is in a structured format that can be consumed by another program using consistent processing logic.

(x) The term ''national security systems'' or ''NSS'' has the meaning given to it under 44 U.S.C. 3552(b)(6).

(y) The term ''patch'' means a software component that, when installed, directly modifies files or device settings related to a different software component without changing the version number or release details for the related software component.

(z) The term ''rules-as-code approach'' means a coded version of rules (for example, those contained in legislation, regulation, or policy) that can be understood and used by a computer.

(aa) The term ''secure booting'' means a security feature that prevents malicious software from running when a computer system starts up. The security feature performs a series of checks during the boot sequence that helps ensure only trusted software is loaded.

(bb) The term ''security control outcome'' means the results of the performance or non-performance of safeguards or countermeasures prescribed for an information system or an organization to protect the confidentiality, integrity, and availability of the system and its information.

(cc) The term ''zero trust architecture'' has the meaning given to it in Executive Order 14028.

Sec. 11. *General Provisions.* (a) Nothing in this order shall be construed to impair or otherwise affect:

(i) the authority granted by law to an executive department or agency, or the head thereof; or

(ii) the functions of the Director of the Office of Management and Budget relating to budgetary, administrative, or legislative proposals.

(b) This order shall be implemented in a manner consistent with applicable law and subject to the availability of appropriations.

(c) This order is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

Presidential Documents

Memorandum of January 16, 2025

Orderly Implementation of the Air Toxics Standards for Ethylene Oxide Commercial Sterilizers

Memorandum for the Administrator of the Environmental Protection Agency and the Secretary of Health and Human Services

By the authority vested in me as President by the Constitution and the laws of the United States of America, it is hereby ordered as follows:

Section 1. *Policy.* The strengthened and updated Clean Air Act standards for ethylene oxide (EtO) emitted into the air from commercial sterilizing facilities issued by the Environmental Protection Agency (EPA) on April 5, 2024, *National Emission Standards for Hazardous Air Pollutants: Ethylene Oxide Emissions Standards for Sterilization Facilities Residual Risk and Technology Review, Final Rule,* 89 FR 24,090 (Apr. 5, 2024) (''EtO Rule''), achieved a new milestone in my Administration's efforts to protect public health for all Americans and to advance the objective of my Administration's Cancer Moonshot initiative to prevent cancer before it starts. EtO has been associated with elevated cancer risks in communities around the United States and can be particularly harmful to children. The loss of loved ones from environmentally related cancer is a tragedy that the Nation can and must work together to end, once and for all.

The EtO Rule was issued after careful consideration of public comments and public hearings. In this rule, EPA set standards under section 112 of the Clean Air Act, as amended (the ''Act'') (42 U.S.C. 7401 *et seq.*), to control emissions from commercial sterilizers through the use of demonstrated and achievable pollution control technologies and practices. These standards will significantly reduce emissions of the toxic air pollutant EtO.

The EtO Rule applies to facilities that sterilize medical products, including medical devices and pharmaceuticals. Sterilization is critical to maintaining a safe supply of medical devices for patients and hospitals and providing health care to millions of Americans to help them stay healthy and fight diseases, including cancer. Consequently, EPA worked closely with the Department of Health and Human Services, including the Food and Drug Administration, to develop a final rule that protects communities exposed to pollution from sterilization facilities while also mitigating and managing the potential risk of any medical device supply disruptions.

EPA concluded that sterilization facilities will be able to install the appropriate technology to meet the standards of the EtO Rule before the compliance deadlines mandated by the Act. The EtO Rule also recognized that the President's authority under section 112(i)(4) of the Clean Air Act, 42 U.S.C. 7412(i)(4), to exempt individual facilities from compliance for a set period of time may provide an important mechanism to address the possibility that a facility may be unable to install all appropriate technology before the compliance deadline. 89 FR at 24,103. It is of vital national importance to ensure the reduction of EtO emissions to the level that EPA determined is required to protect public health pursuant to the Clean Air Act, while also avoiding the national security and public health effects that could result from a significant disruption to the medical device supply chain.

It is the policy of my Administration to safeguard the reliability of our Nation's supply of safe medical products. To advance orderly implementation of the EtO Rule, I am therefore establishing a process, provided below,

for considering requests for Presidential exemptions, the duration of which shall be as short as possible and no longer than two years. This process will ensure consideration of such requests in the exceptional circumstances in which a commercial sterilizer can demonstrate that, notwithstanding due diligence and best efforts, it will be unable to meet a covered standard or limitation required by the EtO Rule before the compliance deadline due to the unavailability of control technology for the facility, leading to likely shutdown of the facility, and the best available information demonstrates that the shutdown of the facility will likely lead to a serious disruption to the supply of medical products, such as medical devices and pharmaceuticals, necessary for America's national security and public health.

To achieve the EtO Rule's critical health protections as soon as practicable, while safeguarding the supply of safe medical products from disruption that would compromise the health and welfare of the American people, I direct you to take the following actions:

Sec. 2. *Implementation of a Process for Considering Presidential Exemptions.* The Administrator of the EPA (Administrator) shall receive requests for a Presidential exemption from a standard or limitation in the EtO Rule under section 112(i)(4) of the Act (42 U.S.C. 7412(i)(4)), review them, and advise the President regarding whether to grant them through the following process:

(a) Any commercial sterilizer seeking such an exemption shall submit a request to the Administrator no earlier than 12 months and no later than 4 months before the compliance deadline for which an exemption is sought. The request shall include:

(i) specific information of sufficient detail to enable verification of the reason or reasons that the technology to implement the applicable standard or limitation is unavailable for installation and that, notwithstanding its due diligence and best efforts, the facility cannot be brought into compliance before the compliance deadline for the covered standard or limitation (e.g., contracts, documentation of communication with vendors or suppliers);

(ii) a plan for procuring, installing, and operating the technology as soon as feasible in order to achieve compliance with the EtO Rule, and an assurance as described in subsection (h)(ii) of this section;

(iii) a list of all available practicable measures (i.e., technological and operational) that have already been taken or that are planned to advance compliance and additional measures, if any, that will be implemented to reduce the emissions of EtO and resulting risks during the exemption period;

(iv) a list of any alternative steps available, in progress, or already taken to try to avoid the need for additional time for compliance;

(v) the type or types of products sterilized at the facility, the volume of products sterilized at the facility, and the facility's annual sterilization capacity; and

(vi) the name, title, and signature of the responsible official who is certifying the accuracy of the request.

(b) In reviewing an exemption request, and the information provided pursuant to this section, the Administrator, in consultation with the Secretary of Health and Human Services (Secretary), shall consider:

(i) whether the technology to implement a covered standard or limitation will be unavailable in time for installation and operation of the technology at a specific facility before the compliance deadline for such standard or limitation, due, for example, to shortages of labor, parts, control technology supply, supply-chain disruption, or other factors out of the facility's control;

(ii) the amount of time needed for installation and operation to occur in order to achieve compliance with the EtO Rule;

(iii) the risk of a serious disruption to the supply of medical products (including pharmaceuticals and medical devices) should the facility be required to temporarily pause sterilization activities or reduce capacity until installation and operation can occur (including any potential alternatives to assure a sufficient supply of sterilization and sterilized medical products);

(iv) the potential effect of any such disruption on public health and welfare, and any other information that may be relevant to an evaluation of whether granting an exemption is in the national security interests of the United States; and

(vi) any other information that the Administrator, in consultation with the Secretary, deems relevant.

(c) No later than 30 days after receiving a request pursuant to subsection (a) of this section, the Administrator shall confirm receipt of the request, notify the requester of any additional information needed to evaluate the request, set a deadline of no later than 15 days for the requester to provide the requested information, and provide public notification that the request was submitted (including the name of, the location of, and any other information regarding the facility requesting the exemption that the Administrator, in consultation with the Secretary, deems relevant and appropriate to publish).

(d) As soon as practicable and no later than 30 days after receiving all necessary information to evaluate a request pursuant to this section, the Administrator, in consultation with the Secretary, shall provide the Chairman of the Council on Environmental Quality (CEQ) with the request and accompanying information from the requester, any additional information that the Administrator deems relevant, and a recommendation regarding whether an exemption is warranted, including the basis for the recommendation, and if recommending that the President grant an exemption: the recommended duration, and any other accompanying terms or conditions (such as a schedule for status reports regarding planned steps and progress to achieve compliance with the EtO Rule).

(e) As soon as practicable and generally within 45 days after receiving a recommendation from the Administrator pursuant to subsection (d) of this section, the Chairman of CEQ, in consultation with the Assistant to the President for National Security Affairs, the Assistant to the President for Economic Policy, the Assistant to the President for Domestic Policy, the Director of the Office of Pandemic Preparedness and Response Policy, and the Director of the Office of Science and Technology Policy, shall advise the President concerning the request for an exemption.

(f) As expeditiously as practicable after the grant or denial of any exemption by the President under this process, and no later than 10 days after such a grant or denial, the Administrator shall notify the applicant.

(g) Within 60 days of the grant of any exemption by the President under this process, the Administrator shall make publicly available online the name of, location of, and any other appropriate and relevant information regarding the facility receiving the exemption and the duration of any exemption, and shall submit to Congress the report required by section 112(i)(4) of the Act (42 U.S.C. 7412(i)(4)) on behalf of the President.

(h) The Administrator shall, as appropriate:

(i) provide technical assistance to any facility that receives an exemption to promote compliance with the EtO Rule;

(ii) seek information and assurance from any facility that requests an exemption that the facility will use its best efforts and will take reasonable and appropriate steps to demonstrate diligent action to install and operate necessary technology as expeditiously as practicable (including to fulfill any accompanying terms or conditions) to achieve compliance with the EtO Rule; and

(iii) inform the Chairman of CEQ when installation of such technology is complete.

Sec. 3. *Federal Coordination.* The Secretary, in consultation with the Administrator, shall consider taking additional steps, as appropriate, to further advance the goal of protecting the public from cancer and other harms from EtO exposure, including spurring innovation to reduce exposure to EtO and other carcinogenic air pollutants and to expand access to safe, effective, and reliable alternative methods for sterilization of medical equipment and pharmaceuticals that do not depend on EtO, and continuing to strengthen the resilience of our Nation's medical supply chain. Within 2 years of the date of this memorandum, the Secretary shall provide a report to the Chairman of CEQ regarding progress toward this directive and any steps taken or planned.

Sec. 4. *General Provisions.* (a) Nothing in this memorandum shall be construed to impair or otherwise affect:

(i) the authority granted by law to an executive department or agency, or the head thereof; or

(ii) the functions of the Director of the Office of Management and Budget relating to budgetary, administrative, or legislative proposals.

(b) This memorandum shall be implemented consistent with applicable law and subject to the availability of appropriations.

(c) This memorandum is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

(d) The Administrator is authorized and directed to publish this memorandum in the *Federal Register*.

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws**.

Last List January 14, 2025

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly enacted public laws. To subscribe, go to *https://portalguard.gsa.gov/__*layouts/PG/register.aspx.

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
