FEDERAL REGISTER

Vol. 90 Friday,

No. 11 January 17, 2025

Pages 5469–6776

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 90 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Title 3—

The President

Executive Order 14141 of January 14, 2025

Advancing United States Leadership in Artificial Intelligence Infrastructure

By the authority vested in me as President by the Constitution and the laws of the United States of America, it is hereby ordered as follows:

Section 1. *Purpose*. Artificial intelligence (AI) is a defining technology of our era. Recent advancements in AI demonstrate its rapidly growing relevance to national security, including with respect to logistics, military capabilities, intelligence analysis, and cybersecurity. Building AI in the United States will help prevent adversaries from gaining access to, and using, powerful future systems to the detriment of our military and national security. It will also enable the United States Government to continue harnessing AI in service of national-security missions while preventing the United States from becoming dependent on other countries' infrastructure to develop and operate powerful AI tools.

Advances at the frontier of AI will also have significant implications for United States economic competitiveness. These imperatives require building AI infrastructure in the United States on the time frame needed to ensure United States leadership over competitors who, already, are racing to take the lead in AI development and adoption. Building AI in the United States requires enormous private-sector investments in infrastructure, especially for the advanced computing clusters needed to train AI models and the energy infrastructure needed to power this work. Already, AI's electricity and computational needs are vast, and they are set to surge in the years ahead. This work also requires secure, reliable supply chains for critical components needed to build AI infrastructure, from construction materials to advanced electronics.

This order sets our Nation on the path to ensure that future frontier AI can, and will, continue to be built here in the United States. In building domestic AI infrastructure, our Nation will also advance its leadership in the clean energy technologies needed to power the future economy, including geothermal, solar, wind, and nuclear energy; foster a vibrant, competitive, and open technology ecosystem in the United States, in which small companies can compete alongside large ones; maintain low consumer electricity prices; and help ensure that the development of AI infrastructure benefits the workers building it and communities near it.

With this order, I provide a plan for protecting national security, preserving our economic competitiveness, revitalizing our energy infrastructure, and ensuring United States leadership in AI.

Sec. 2. *Policy*. It is the policy of the United States to enable the development and operation of AI infrastructure, including data centers, in the United States in accordance with five guiding principles. When undertaking the actions set forth in this order, executive departments and agencies (agencies) shall adhere to these principles, as appropriate and consistent with applicable law:

(a) The development of AI infrastructure should advance United States national security and leadership in AI. Meeting this goal will require steps by the Federal Government, in collaboration with the private sector, to advance AI development and use AI for future national-security missions, including through the work described in National Security Memorandum 25 of October 24, 2024 (Advancing the United States' Leadership in Artificial

Intelligence; Harnessing Artificial Intelligence to Fulfill National Security Objectives; and Fostering the Safety, Security, and Trustworthiness of Artificial Intelligence) (NSM–25). It will also require the use of safeguards to improve the cyber, supply-chain, and physical security of the laboratories at which powerful AI is developed, stored, and used. Additionally, protecting United States national security will require further work to evaluate and manage risks related to the powerful capabilities that future frontier AI may possess.

(b) The development of AI infrastructure should advance United States economic competitiveness, including by fostering a vibrant technology ecosystem. Already, AI is creating new jobs and industries, and its effects are being felt in sectors across the economy. The Federal Government must ensure that the United States remains competitive in the global economy, including through harnessing the benefits of this technology for all Americans. It must also promote a fair, open, and competitive AI ecosystem so that small developers and entrepreneurs can continue to drive innovation—a priority highlighted in both Executive Order 14110 of October 30, 2023 (Safe, Secure, and Trustworthy Development and Use of Artificial Intelligence), and NSM–25—as well as to support secure, reliable supply-chain infrastructure for AI activities.

(c) The United States can and should lead the world in operating the next generation of AI data centers with clean power. Meeting this goal will require building on recent successes to modernize our Nation's energy infrastructure; improve permitting processes; and support investments in, and expeditious development of, both currently available and emerging clean energy technologies, such as geothermal energy, nuclear energy, and long-duration energy storage used to store clean energy, as well as relevant supply chains. The United States must not be surpassed in its support for the development, commercialization, and operation of clean energy technologies at home and abroad, and the rapid buildout of AI infrastructure offers another vital opportunity to accelerate and deploy these energy technologies. To help ensure that new data center electricity demand does not take clean power away from other end users, result in resource adequacy issues, or increase grid emissions, the construction of AI infrastructure must be matched with new, clean electricity generation resources.

(d) The development of AI infrastructure should proceed without raising energy costs for American consumers and businesses, and it should have strong community support. The companies developing, commercializing, and deploying AI must finance the cost of building the infrastructure needed for AI operations, including the development of next-generation power infrastructure built for these operations.

(e) The development of AI infrastructure should benefit those working to build it. Meeting this goal will require high labor standards and safeguards for the buildout of AI infrastructure, consultation and close collaboration with communities affected by this infrastructure's development and operation, and continuous work to mitigate risks and potential harms. The American people more broadly must safely enjoy the gains and opportunities from technological innovation in the AI ecosystem.

Sec. 3. *Definitions*. For purposes of this order:

(a) The term ''agency'' means each agency described in 44 U.S.C. 3502(1), except for the independent regulatory agencies described in 44 U.S.C. 3502(5).

(b) The term ''AI data center'' means a data center used primarily with respect to developing or operating AI.

(c) The term ''AI infrastructure'' refers collectively to AI data centers, generation and storage resources procured to deliver electrical energy to data centers, and transmission facilities developed or upgraded for the same purpose.

(d) The term ''AI model'' means a component of an information system that implements AI technology and uses computational, statistical, or machine-learning techniques to produce outputs from a given set of inputs.

(e) The term ''clean energy'' or ''clean energy generation resources'' means generation resources that produce few or no emissions of carbon dioxide during operation, including when paired with clean storage technologies. This term includes geothermal, nuclear fission, nuclear fusion, solar, wind, hydroelectric, hydrokinetic (including tidal, wave, and current), and marine energy; and carbon capture, utilization, and storage technologies (for which the carbon capture equipment meets the definition set forth in 26 C.F.R. 1.45Q–2(c)) that operate with fossil fuel generation resources, that achieve carbon dioxide capture rates of 90 percent or higher on an annual basis, and that permanently sequester the captured carbon dioxide.

(f) The term ''clean power'' means electricity generated by the generation resources described in subsection (e) of this section.

(g) The term ''clean repowering'' means the practice of siting new clean generation sources at a site with an existing point of interconnection and generation sources operating with fossil fuels, such that some output or capacity from existing generation sources is replaced by the new clean generation sources.

(h) The term ''critical electric infrastructure information'' has the same meaning as set forth in 18 C.F.R. 388.113(c).

(i) The term ''data center'' means a facility used to store, manage, process, and disseminate electronic information for a computer network, and it includes any facility that is composed of one or more permanent or semi-permanent structures, or that is a dedicated space within such structure, and operates persistently in a fixed location; that is used for the housing of information technology equipment, including servers, mainframe computers, high-performance computing devices, or data-storage devices; and that is actively used for the hosting of information and information systems that are accessed by other systems or by users on other devices.

(j) The term ''distributed energy resource'' has the same meaning as set forth in 18 C.F.R. 35.28(b)(10).

(k) The term ''Federal Permitting Agencies'' refers to the agency members of the Federal Permitting Improvement Steering Council (Permitting Council) established under section 41002 of the Fixing America's Surface Transportation (FAST) Act, 42 U.S.C. 4370m–1, as well as any other agency with authority to issue a Federal permit or approval required for the development or operation of AI infrastructure.

(l) The term ''Federal Risk and Authorization Management Program'' refers to the program established to provide an approach for the adoption and use of cloud services by the Federal Government, as codified in 44 U.S.C. 3607–3616 (as enacted by the FedRAMP Authorization Act, section 5921 of Public Law 117–263).

(m) The term ''frontier AI data center'' means an AI data center capable of being used to develop, within a reasonable time frame, an AI model with characteristics related either to performance or to the computational resources used in its development that approximately match or surpass the state of the art at the time of the AI model's development.

(n) The term ''frontier AI infrastructure'' means AI infrastructure for which the relevant data center is a frontier AI data center.

(o) The term ''frontier AI training'' refers to the act of developing an AI model with characteristics related either to performance or to the computational resources used in its development that approximately match or surpass the state of the art at the time of the AI model's development.

(p) The term ''generation resource'' means a facility that produces electricity.

(q) The terms ''interconnection,'' ''interconnection facilities,'' and ''point of interconnection'' refer to facilities and equipment that physically and electrically connect generation resources or electrical load to the electric grid for the purpose of the delivery of electricity, for which grid operators have granted all appropriate approvals required for those facilities and equipment to operate.

(r) The term ''lab-security measures'' refers to steps to detect, prevent, or mitigate physical, cyber, or other threats to the operation of a data center, to the integrity of information or other assets stored within it, or of unauthorized access to such information or assets.

(s) The term ''leading-edge logic semiconductors'' refers to semiconductors produced at high volumes using extreme ultraviolet lithography tools as defined by the CHIPS Incentives Program Notice of Funding Opportunity, 2023–NIST–CHIPS–CFF–01.

(t) The term ''model weight'' means a numerical parameter within an AI model that helps determine the model's outputs in response to inputs.

(u) The term ''new source review'' refers to the permitting program with this name in 40 C.F.R. parts 51 or 52.

(v) The term ''non-Federal parties'' refers to private-sector entities that enter into a contract with the Department of Defense or the Department of Energy pursuant to section 4(g) of this order.

(w) The term ''priority geothermal zone'' refers to lands with high potential for the development of geothermal power generation resources, as designated by the Secretary of the Interior, including pursuant to section 4(c) of this order.

(x) The term ''project labor agreement'' means a pre-hire collective bargaining agreement that establishes the terms and conditions of a construction project.

(y) The term ''surplus interconnection service'' has the same meaning as set forth in Federal Energy Regulatory Commission Order No. 845.

(z) The terms ''transmission facilities'' and ''transmission infrastructure'' mean equipment or structures, including transmission lines and related facilities, used for the purpose of delivering electricity.

(aa) The term ''transmission organization'' refers to a Regional Transmission Organization or an Independent System Operator.

(bb) The term ''transmission provider'' means an entity that manages or operates transmission facilities for the delivery of electric energy used primarily by the public and that is not a transmission organization.

(cc) The term ''waters of the United States'' has the same meaning as set forth in 33 C.F.R. 328.3(a).

Sec. 4. *Establishing Federal Sites for AI Infrastructure*. (a) By February 28, 2025, the Secretary of Defense and the Secretary of Energy shall, if possible, each identify a minimum of 3 sites on Federal land managed by their respective agencies that may be suitable for the agencies to lease to non-Federal entities for the construction and operation of a frontier AI data center, as well as for the construction and operation of clean energy facilities to serve the data center, by the end of 2027. In identifying these sites, each Secretary shall, as feasible and appropriate, seek to prioritize sites that possess the following characteristics, as consistent with the objective of fully permitting and approving work to construct a frontier AI data center at each site by the end of 2025:

(i) inclusion of sufficient terrain with appropriate land gradients, soil durability, and other topographical characteristics for frontier AI data centers;

(ii) minimized adverse effects from AI infrastructure development or operation on local communities' health, wellbeing, and resource access; natural

or cultural resources; threatened or endangered species; and harbors or river improvements not associated with hydropower generation resources;

(iii) proximity to any communities seeking to host AI infrastructure, including for reasons related to local workers' access to jobs involved in designing, building, maintaining, and operating data centers;

(iv) ready access and proximity to high-voltage transmission infrastructure that minimizes the scale of, cost of, and timeline to develop any transmission upgrades or development needed to interconnect AI infrastructure, in consideration of access and proximity to:

(A) high-capacity transmission infrastructure with unused capacity, as identified by collection activities described in section 6 of this order;
(B) any planned generation facilities that can enable delivery of electricity to an AI data center on the site managed by each Secretary's respective agency, that possess an executed interconnection agreement with a transmission provider, that do not possess an executed power purchase agreement, and for which construction has not yet begun;
(C) any lands that the Secretary of the Interior identifies pursuant to subsection (c) of this section; and
(D) any power generation facilities with high clean repowering potential;

(v) location within geographic areas that are not at risk of persistently failing to attain National Ambient Air Quality Standards, and where the total cancer risk from air pollution is at or below the national average according to the Environmental Protection Agency's (EPA's) 2020 AirToxScreen;

(vi) lack of proximity to waters of the United States for purposes of permitting requirements;

(vii) lack of extensive restrictions on land uses associated with constructing and operating AI infrastructure or on access to necessary rights-of-way for such activities;

(viii) ready access to high-capacity telecommunications networks;

(ix) suitability for the development of access roads or other temporary infrastructure necessary for the construction of AI infrastructure; and

(x) absence of other characteristics that would, if the site was used or repurposed for AI infrastructure, compromise a competing national security concern as determined by the relevant Secretary in consultation with the Assistant to the President for National Security Affairs.

(b) By March 15, 2025, the Secretary of the Interior, acting through the Director of the Bureau of Land Management (BLM), in consultation with the Secretary of Defense, the Secretary of Energy, and the Chair of the Federal Energy Regulatory Commission, shall identify sites managed by BLM that the Secretary of the Interior, acting through the Director of BLM, deems may be suitable for granting or issuing rights of way to private-sector entities to construct and operate additional clean energy facilities that are being or may be built as components of frontier AI infrastructure developed pursuant to this section. In performing this work, the Secretary of the Interior, in consultation with the Secretary of Defense and the Secretary of Energy, shall take steps to ensure where feasible and appropriate that any such sites identified under this subsection include sufficient acreage for developing clean generation resources that can deliver sufficient electricity to each site identified under subsection (a) of this section for matching the capacity needs of frontier AI data centers on the latter sites. The sites identified under this subsection shall include any land managed by the Department of the Interior that is within a region designated by the Secretary of the Interior under subsection (c) of this section, or a region preliminarily identified as a candidate for such designation. In determining the suitability of sites, the Secretary of the Interior, acting through the Director of BLM, shall prioritize identification of sites that:

(i) contain completed, permitted, or planned clean generation projects that can enable delivery of electricity as described in this subsection and possess an executed interconnection agreement with a transmission provider;

(ii) have been allocated as available for solar applications in the *Final Programmatic Environmental Impact Statement and Proposed Resource Management Plan Amendments for Utility-Scale Solar Energy Development*, published by BLM, or that have otherwise been allocated as available for clean-energy applications in a BLM resource management plan;

(iii) have reasonable access to and are located nearby existing high-voltage transmission lines that have at least one gigawatt of additional capacity available, or for which such capacity can be reasonably developed through reconductoring, grid-enhancing technologies, or transmission upgrades;

(iv) possess the characteristics described in subsections (a)(i)–(x) of this section, in a manner that is consistent with the objective of fully permitting and approving work to construct utility-scale power facilities on a timeline that allows for the operation of those facilities by the end of 2027 or as soon as feasible thereafter; and

(v) possess other characteristics conducive to enabling new clean power development at such sites to contribute to lower regional electricity prices or to bring other community benefits.

(c) By March 15, 2025, the Secretary of the Interior, acting through the Director of BLM and in consultation with the Secretary of Energy, shall, if possible, designate at least five regions composed of lands or subsurface areas managed by the Department of the Interior as Priority Geothermal Zones (PGZs). The Secretary of the Interior shall designate those regions based on their potential for geothermal power generation resources, including hydrothermal and next-generation geothermal power and thermal storage; diversity of geological characteristics; and possession of the characteristics described in subsections (a)(i)–(x) and (b)(i)–(v) of this section.

(d) The Secretary of Defense, the Secretary of Energy, and the Secretary of the Interior shall each make a legal determination as to whether each site identified pursuant to subsections (a) and (b) of this section is available for lease or for the issuance of a right of way, as appropriate, pursuant to the authority of the Secretary that made the identification, and as to whether the Secretary has the legal authority to lease or grant a right of way over or upon each site identified for the construction of frontier AI infrastructure. For purposes of this order, a site shall be considered ''cleared'' under this subsection if the relevant Secretary has determined that the site is available for lease and the Secretary concerned has the authority to lease it.

(e) By March 31, 2025, the Secretary of Defense and the Secretary of Energy, in coordination with the heads of any other agencies that either Secretary deems appropriate, shall coordinate to design, launch, and administer competitive public solicitations of proposals from non-Federal entities to lease Federal land to construct frontier AI infrastructure, including frontier AI data centers, on sites identified under subsection (a) of this section and cleared under subsection (d) of this section, if any. When issuing the solicitations, the Secretaries shall announce the sites identified under subsection (a) of this section and cleared under subsection (d) of this section, if any, and additional relevant information including the sites' geographic coordinates, technical characteristics, proximity to sites identified consistent with subsection (b) of this section and cleared under subsection (d) of this section, if any, and other relevant information. The solicitations shall, to the extent consistent with applicable law and to the extent the Secretaries agree that such requirements promote national defense, national security, or the public interest, as appropriate, require applicants to identify particular sites on which they propose to construct and operate frontier AI infrastructure; submit a detailed plan specifying proposed timelines, financing methods, and technical construction plans associated with such construction

work, including a contingency plan for decommissioning infrastructure on Federal sites; submit a plan that describes proposed frontier AI training work to occur at the site once operational; submit a plan for detailing the extent of the use of high labor and construction standards as described in subsection (g)(viii) of this section; and submit a plan with proposed lab-security measures, including personnel and material access requirements, that could be associated with the operation of frontier AI infrastructure. These requirements should be designed to ensure adequate collection of information from applicants regarding the criteria in subsections (g)(i)–(xvi) of this section. The solicitations shall close within 30 days of their issuance.

(f) By March 31, 2025, the Secretary of the Interior, in consultation with the Secretary of Defense and the Secretary of Energy, shall publicize the sites identified under subsection (b) of this section and cleared under subsection (d) of this section, if any, and additional relevant information including the sites' geographic coordinates, technical characteristics, proximity to sites identified consistent with subsection (a) of this section and cleared under subsection (d) of this section, if any, and other relevant information.

(g) By June 30, 2025, the Secretary of Defense and the Secretary of Energy shall announce any winning proposals identified through solicitations described in subsection (e) of this section. In selecting any winning proposals, the Secretary of Defense and the Secretary of Energy shall, in consultation with each other, assign winners the opportunity to apply for any Federal permits needed to build and operate frontier AI infrastructure pursuant to the frameworks described in subsection (h) of this section on any sites included in the solicitations issued under subsection (e) of this section, as the Secretaries deem appropriate. The Secretaries shall consult with the Attorney General on the implications of selections on the competition and market-structure characteristics of the broader AI ecosystem. The Chair of the Federal Trade Commission is encouraged to participate in these consultations. The Secretaries shall, to the extent consistent with applicable law and to the extent that the Secretaries assess that the requirement promotes national defense, national security, or the public interest, as appropriate, select at least one proposal developed and submitted jointly by a consortium of two or more small- or medium-sized organizations—as determined by those organizations' market capitalization, revenues, or similar characteristics—provided that the Secretaries receive at least one such proposal that meets the appropriate qualifications. The Secretaries shall provide technical assistance, as appropriate, to small- or medium-sized organizations seeking to submit proposals. The criteria for selecting winning proposals shall include, at a minimum, consideration of the following characteristics of the applicants and any identified partner organizations, to the extent consistent with applicable law and to the extent that the Secretaries agree that the listed characteristics promote national defense, national security, or the public interest, as appropriate:

(i) proposed financing mechanisms and sources of funds secured or likely to be secured for work to be performed at the site;

(ii) plans for ensuring high-quality AI training operations to be executed at the site by the applicant or third-party partners;

(iii) plans for maximizing energy, water, and other resource efficiency, including waste-heat utilization in constructing and operating the AI data center at the site, the strength of the proposed energy master plan for the site, and the quality of analysis of potential strains on local communities;

(iv) safety and security measures, including cybersecurity measures, proposed to be implemented at the site, and capabilities for such implementation;

(v) capabilities and acumen of applicable AI scientists, engineers, and other workforce essential to the operation of AI infrastructure;

(vi) plans for commercializing or otherwise deploying or advancing deployment of appropriate intellectual property, including AI model weights, developed at the site, as well as plans for commercializing or otherwise deploying or advancing deployment of innovations related to power generation and transmission infrastructure developed in the course of building or operating AI infrastructure;

(vii) plans to help ensure that the construction and operation of AI infrastructure does not increase electricity costs to other ratepayers or water costs to consumers, including, as appropriate, through appropriate proposed or recommended future engagement with any applicable regulatory authorities and State, Tribal, or local governments;

(viii) plans to use high labor standards that help ensure continuous and high-quality work performed on the site, such as paying prevailing wages; hiring registered apprentices; promoting positive labor-management relations through a project labor agreement; and otherwise adopting high job quality and labor standards for the construction and operations workforce as set forth in Executive Order 14126 of September 6, 2024 (Investing in America and Investing in American Workers), and a plan to address labor-related risks associated with the development and use of AI;

(ix) design features and operational controls and plans that mitigate potential environmental effects and implement strong community health, public safety, and environmental protection measures;

(x) other benefits to the community and electric grid infrastructure surrounding the site;

(xi) experience completing comparable construction projects;

(xii) experience in compliance with Federal, State, and local permits and environmental reviews relevant to construction and operation of AI infrastructure or, in the alternative, other evidence of an ability to obtain and comply with such permits or reviews in an efficient manner;

(xiii) the presence of organizational and management structures to help ensure sound governance of work performed at the site;

(xiv) the effect of the selection of an applicant on the emergence of an interoperable, competitive AI ecosystem;

(xv) whether an applicant has already been assigned an opportunity, or is being assigned another opportunity, to build a frontier AI data center on a Federal site through the solicitation process described in this section; and

(xvi) other considerations of national defense, national security, or the public interest, including economic security, as the Secretary of Defense and the Secretary of Energy deem appropriate.

(h) By June 30, 2025, the Secretary of Defense and the Secretary of Energy, in consultation with the Secretary of the Interior, shall each develop a framework through which any winning applicants selected under subsection (g) of this section may apply to lease sites respectively identified under subsection (a) of this section, and cleared under subsection (d) of this section, to construct and operate AI infrastructure, and by which the applicants may own the AI infrastructure facilities on those sites, subject to the conditions described in subsections (i)–(x) of this subsection. To the extent that the Secretaries assess that it is consistent with national defense, national security, or the public interest, as appropriate, these frameworks shall allow for winning applicants to cooperate with other appropriate private-sector entities on construction and operation activities, including through contracting and subcontracting relationships, and the frameworks shall not require that parties proposing to own AI infrastructure be identical to those proposing to operate the infrastructure or perform work at the sites on which the infrastructure is located. Actions taken by Federal entities pursuant to the frameworks shall conform to any applicable requirements of Appendix B of Office of Management and Budget (OMB) Circular A–

11 and any other appropriate budget-scoring practices; applicable in-kind consideration shall be taken into account in calculating the cost to lessees of any such leases. As part of the foregoing work, the Secretary of Defense and the Secretary of Energy shall, to the extent consistent with their respective authorities and with national defense, national security, or the public interest, as appropriate, require lease or contract terms that accomplish the following:

(i) establish a target of the applicant's beginning construction of a frontier AI data center by January 1, 2026, and commencing full-capacity operation of the AI infrastructure by December 31, 2027, subject to fulfillment of relevant statutory and regulatory requirements, and in a manner consistent with opportunities to operate the infrastructure at or below full capacity at an earlier date;

(ii) require that, concurrent with operating a frontier AI data center on a Federal site, non-Federal parties constructing, owning, or operating AI infrastructure have procured sufficient new clean power generation resources with capacity value to meet the frontier AI data center's planned electricity needs, including by providing power that matches the data center's timing of electricity use on an hourly basis and is deliverable to the data center;

(iii) clarify that non-Federal parties bear all responsibility for paying any costs that parties to the frameworks described in subsection (h) of this section, as well as transmission providers or transmission organizations or other entities not party to the contract, incur from work pursuant to it, including costs of work performed by agencies to complete necessary environmental reviews, any costs related to the procurement of clean power generation resources and capacity in accordance with subsection (g)(ii) of this section, any costs of decommissioning AI infrastructure on Federal sites, any costs of developing transmission infrastructure needed to serve a frontier AI data center on a Federal site, and the fair market value of leasing and using applicable Federal lands;

(iv) require adherence to technical standards and guidelines for cyber, supply-chain, and physical security for protecting and controlling any facilities, equipment, devices, systems, data, and other property, including AI model weights, that are developed, acquired, modified, used, or stored at the site or in the course of work performed on the site. The Secretary of Commerce, acting through the Director of the National Institute of Standards and Technology (NIST) and the Director of the AI Safety Institute (AISI) at NIST, in consultation with the Secretary of Defense, the Secretary of Energy, and the Director of National Intelligence, shall identify available standards and guidelines to which adherence shall be required under this subsection. The identified standards should reflect and incorporate guidelines and best practices developed by the Secretary of Commerce, acting through the Director of NIST, pursuant to Executive Order 14028 of May 12, 2021 (Enhancing United States Cybersecurity), and Executive Order 14110 of November 1, 2023 (Safe, Secure, and Trustworthy Development and Use of Artificial Intelligence). The Secretary of Commerce, acting through the Director of AISI at NIST, shall support the ongoing improvement of the framework described in this subsection by developing security guidelines for frontier AI training and operation and, as part of this work, shall comprehensively evaluate the security implications of publicly available AI models that the Secretary of Commerce, acting through the Director of AISI at NIST, deems globally significant;

(v) require that non-Federal parties owning or operating frontier AI data centers sign a memorandum of understanding with the Secretary of Commerce, acting through the Director of AISI at NIST, to facilitate collaborative research and evaluations on AI models developed, acquired, modified, run, or stored at the site or in the course of work performed on the site, for the purpose of assessing the national-security or other significant risks of those models;

(vi) require non-Federal parties to report information about investments or financial capital from any person used or involved in the development (including construction), ownership, or operation of AI infrastructure on the site and in the development, operation, or use of AI models operating in such AI infrastructure, as appropriate to evaluate risks to national security; and require non-Federal parties to limit the involvement in any such activities of, or the use or involvement in any such activities of investments or financial capital from, any person whom the Secretaries of Defense or Energy deem appropriate on national security grounds;

(vii) require non-Federal parties owning or operating AI data centers on Federal sites to take appropriate steps to advance the objective of harnessing AI, with appropriate safeguards, for purposes of national security, military preparedness, and intelligence operations, including with respect to the objectives and work outlined in NSM–25. Such steps shall, as consistent with applicable legal authorities, include collaborating with the Federal Government on regularly recurring assessments of the national-security implications of AI models developed on Federal sites, as appropriate. In addition, as appropriate and consistent with any relevant Federal procurement laws and regulations, the non-Federal parties shall be required to commit to providing access to such models, and critical resources derivative of such models, to the Federal Government for national-security applications at terms at least no less favorable than current market rates, consistent with NSM–25 and the associated Framework to Advance AI Governance and Risk Management in National Security. To the extent feasible, AI models and resources derived from them shall be developed and provided to the Federal Government in a manner that prevents vendor lock-in and supports interoperability, including as consistent with the measures in section 5 of OMB Memorandum M–24–18;

(viii) require that non-Federal parties owning or operating frontier AI data centers on Federal sites develop plans to make available computational resources that are not dedicated to supporting frontier AI training, or otherwise allocated under another provision, for commercial use by startups and small firms on nondiscriminatory terms and in a manner that minimizes barriers to interoperability, entry, or exit for users;

(ix) require non-Federal parties owning or operating AI infrastructure on Federal sites to explore the availability of clean energy resources—such as geothermal power generation resources and thermal storage, long-duration storage paired with clean energy, and carbon capture and sequestration as described in section 3(e) of this order, as well as beneficial uses of waste heat—at any appropriate sites that those parties lease for purposes of constructing frontier AI data centers on Federal sites or procuring power generation capacity to serve these data centers; and

(x) require AI developers owning and operating frontier AI data centers on Federal sites either to procure, for use in the development of their data centers, an appropriate share (as measured by monetary value) of leading-edge logic semiconductors fabricated in the United States to the maximum extent practicable; or to develop and implement a plan, subject to the respective approval of the Secretary of Defense or the Secretary of Energy, to qualify leading-edge logic semiconductors fabricated in the United States for use in the developer's data centers as soon as practicable. The Secretary of Defense and the Secretary of Energy shall develop any such requirements—including any determinations about amounts of leading-edge logic semiconductors that may be considered ''appropriate''—in consultation with the Secretary of Commerce.

(i) Within 1 year of the date of this order and consistent with applicable law, the Secretary of Defense, in consultation with the Secretary of Commerce, the Secretary of Energy, the Secretary of Homeland Security, the Director of National Intelligence, and the Assistant to the President for National Security Affairs, shall issue regulations that prescribe heightened safeguards to protect computing hardware acquired, developed, stored, or

used on any sites on which frontier AI infrastructure is located and that are managed by the Department of Defense, as needed to implement or build upon the objectives of, or the requirements established pursuant to, subsection 4(g)(iv). The regulations shall include requirements to conform with appropriate high-impact level standards identified through the Federal Risk and Authorization Management Program, and they shall further provide for appropriate penalties consistent with applicable authorities. No less than annually the Secretary of Defense, in consultation with the aforementioned individuals, shall review the need for updates to the regulations, and promulgate any necessary revisions. The Secretary of Energy shall impose substantively the same requirements with respect to frontier AI infrastructure on sites managed by the Department of Energy, to the extent authorized by law.

(j) To enable the use—for advancing geothermal power development, including the development of thermal storage—of Federal lands already subject to leases:

(i) Within 180 days of the date of this order, the Secretary of the Interior shall establish a program with personnel dedicated to providing technical assistance for, streamlining, and otherwise advancing direct-use leasing of geothermal projects on BLM lands, including as consistent with the policies set forth in 43 C.F.R. subpart 3205, and leases of geothermal projects on lands subject to mining claims or under an oil and gas lease.

(ii) When issuing leases and related authorizations for geothermal projects, the Secretary of the Interior shall consider the extent to which the requirements of the National Environmental Policy Act (NEPA), 42 U.S.C. 4321 *et seq.*, the Endangered Species Act, 16 U.S.C. 1531 *et seq.*, and other appropriate statutes have been satisfied by prior analyses of the lease area.

(k) In performing the work described in section 4 of this order, including as related to the selection and management of sites, the head of each respective Federal agency shall:

(i) consult, as appropriate and consistent with applicable law, Executive Order 13175 of November 6, 2000 (Consultation and Coordination with Indian Tribal Governments), and the Presidential Memorandum of November 30, 2022 (Uniform Standards for Tribal Consultation), with Tribal Nations for which such work may have implications or who otherwise request such consultation;

(ii) seek input from, as appropriate and consistent with applicable law and Administration policies, with State and local governments and other stakeholders and communities for which such work may have implications; and

(iii) consider taking actions that present the greatest opportunities to support the goals described in *Safely and Responsibly Expanding U.S. Nuclear Energy: Deployment Targets and A Framework for Action* (November 2024).

Sec. 5. *Protecting American Consumers and Communities*. (a) Within 180 days of the date of this order, the Secretary of Energy, in consultation with the Chair of the Council of Economic Advisors and the heads of other agencies that the Secretary deems appropriate, shall submit a report to the President on the potential effects of AI data centers on electricity prices for consumers and businesses. This report shall include electricity-rate-structure best practices for appropriate Federal agencies, State regulators, and transmission providers and transmission organizations to promote procurement of clean energy generation resources as components of AI infrastructure without increasing costs for other customers through cost-allocation processes or other mechanisms—particularly in regions that have or are expected to have high concentrations of AI infrastructure—as well as regional analyses of key data center hubs. The report shall further account for any existing approaches developed by Federal agencies to engage transmission providers and State regulators regarding electricity prices. After submitting the report, the Secretary of Energy shall engage appropriate private-sector

entities, to include the winning applicants selected under subsection 4(g) of this order, on the report's findings and recommendations.

(b) The Secretary of Energy shall provide technical assistance to State public utility commissions to consider rate structures, including clean transition tariffs and any other appropriate structures identified under subsection (a) of this section, to enable new AI infrastructure to use clean energy without causing unnecessary increases in electricity or water prices.

(c) The Secretary of Energy and the heads of other appropriate agencies as the Secretary of Energy deems appropriate, shall coordinate to expand research-and-development efforts related to AI data center efficiency. Supported research and development shall cover, as appropriate, efficiency considerations associated with data center buildings, including the data center shell; electrical systems; heating, ventilation, and cooling infrastructure; software; and beneficial use cases for wastewater heat from data center operations. As part of this work, the Secretary of Commerce and the Secretary of Energy shall submit a report to the President identifying appropriate ways that agencies can advance industry-wide data center energy efficiency through research and development, including server consolidation; hardware efficiency; virtualization; optimized cooling and airflow management; and power management, monitoring, and capacity planning.

(d) In implementing this order with respect to AI infrastructure on Federal sites, the heads of relevant agencies shall prioritize taking appropriate measures to keep electricity costs low for households, consumers, and businesses.

(e) Within 180 days of the date of this order, the Director of OMB, in consultation with the Chair of the Council on Environmental Quality (CEQ), shall evaluate best practices for public participation and governmental engagement in the development of potential siting and energy-related infrastructure for data centers, to include practices for seeking input on potential health, safety, and environmental impacts and mitigation measures for nearby communities. The Director shall present recommendations to the Secretary of Defense and the Secretary of Energy, who shall—as feasible and appropriate, and to advance the goals of assuring effective governmental engagement and meaningful public participation—implement and incorporate these recommendations into their siting and related decision-making processes regarding AI infrastructure.

Sec. 6. *Facilitating Electric Grid Interconnections for Federal Sites*. (a) Within 60 days of the date of this order, for the purpose of supporting any winning applicants of the solicitations described in subsection 4(e) of this order, the Secretary of Energy shall establish requirements for transmission providers and transmission organizations to report to the Secretary information regarding surplus interconnection service; available transmission capacity for interconnecting generators; opportunities for clean repowering; and proposed, planned, or initiated projects to build clean power generation capacity for which construction is not complete, but which have executed generation interconnection agreements. Information requested regarding these proposed, planned, or initiated projects shall include the size, location, and generation technology for each such clean power generation project, as well as the status and estimated cost of any transmission upgrades necessary to enable that project's interconnection consistent with the interconnection agreement. The Secretary shall facilitate communication, as appropriate, among the owners of such surplus interconnection service, facilities with opportunities for clean repowering, or clean power generator projects and winning applicants to the solicitations described in subsection 4(e) of this order. The Secretary shall further establish appropriate requirements for transmission providers and transmission organizations to continue reporting information described in this subsection on an ongoing basis, and in any event no less than annually.

(b) Within 120 days of the date of this order, the Secretary of Energy shall identify and communicate, as appropriate, a prioritized list of underutilized points of interconnection that are relevant to AI infrastructure on Federal sites and that demonstrate the highest potential for uses associated

with AI infrastructure. In developing this list, the Secretary shall direct transmission providers and transmission organizations to identify areas of the transmission network best suited to serve as points of interconnection for either data centers or other AI infrastructure that will use electricity from the transmission system—and locations best suited for interconnection of clean generators to serve such data centers—considering criteria such as minimizing the need for transmission upgrades necessary to accommodate such interconnection and access to clean energy generation resources.

(c) By June 30, 2025, the Secretary of Energy, in coordination with the Secretary of Defense and in consultation, as appropriate, with the Secretary of the Interior and the Secretary of Agriculture, shall engage with transmission providers and transmission organizations owning, operating, or maintaining transmission infrastructure located near Federal sites selected for AI infrastructure to identify any grid upgrades, deployment of advanced transmission technologies such as high-performance conductors or grid-enhancing technologies, operational changes, or other steps expected to be required for extending interconnection services to AI infrastructure by the end of 2027. Such engagements shall continue as the parties deem appropriate, and they shall prioritize, as appropriate, efforts to enable use of surplus interconnection services, clean repowering, and other methods of accelerated shifts toward clean power and beneficial use of waste heat. The engagements shall also include consideration of ways that the performance of such work as described in this subsection can most contribute to lower regional electricity prices.

(d) The Secretary of Energy shall conduct an analysis of currently available transmission infrastructure serving potential sites, and the likely cost and feasibility of, and timeline for, developing additional such infrastructure needed for constructing and operating a frontier AI data center on sites identified under subsection 4(a) of this order, and cleared under subsection 4(d) of this order, including by providing the frontier AI data center with clean energy and capacity. The Secretary shall identify and collect from transmission providers and transmission organizations information that the Secretary deems necessary for the analysis required under this subsection. The Secretary shall, as appropriate, treat such information as critical electric infrastructure information.

Sec. 7. *Expeditiously Processing Permits for Federal Sites*. (a) The heads of Federal Permitting Agencies shall prioritize work and exercise all applicable authorities, as appropriate, to expedite the processing of permits and approvals required for the construction and operation of AI infrastructure on Federal sites, with the goal of issuing all permits and approvals required for construction by the end of 2025 or as soon as they can be completed consistent with applicable law. As part of this work, the Permitting Council may provide coordination of permitting for AI infrastructure on Federal sites, as appropriate and to the extent that the relevant developers of AI infrastructure submit a notice of the initiation of a proposed covered project under 42 U.S.C. 4370m–2 and the project is determined to be such a covered project by the Permitting Council.

(b) To facilitate expeditious implementation of the requirements under NEPA with respect to Federal sites:

(i) The Secretary of Defense, the Secretary of the Interior, and the Secretary of Energy shall identify, within their respective agencies, personnel dedicated to performing NEPA reviews of projects to construct and operate AI infrastructure on Federal sites.

(ii) The Secretary of Defense, in consultation with the Secretary of the Interior, the Secretary of Agriculture, the Secretary of Commerce, and the Secretary of Energy, shall undertake a programmatic environmental review, on a thematic basis, of the environmental effects—and opportunities to mitigate those effects—involved with the construction and operation of AI data centers, as well as of other components of AI infrastructure as the Secretary of Defense deems appropriate. The review shall conclude, with all appropriate documents published, on the date of the close of

the solicitations described in subsection 4(e) of this order, or as soon thereafter as possible. The review shall, as applicable, incorporate by reference previously developed environmental studies, surveys, and impact analyses, including the analysis described in subsection 4(b)(ii) of this order.

(iii) After the conclusion of the programmatic review described in subsection (b)(ii) of this section, the Secretary of Defense, the Secretary of the Interior, the Secretary of Energy, and the heads of other relevant agencies, as appropriate, shall commence any further environmental reviews that are required under NEPA for the construction and operation of AI infrastructure on Federal sites, including by applying any available categorical exclusions. Such reviews shall, as appropriate, build on or incorporate by reference the programmatic environmental review conducted under subsection (b)(ii) of this section, as well as any other studies, surveys, and impact analyses that the Secretaries deem appropriate.

(c) To advance expeditious preconstruction permitting and ensure full compliance with air-quality permit requirements for AI infrastructure, the Administrator of the EPA, in consultation with the Secretary of Defense and the Secretary of Energy, shall:

(i) within 30 days of the selection of winning applications under subsection 4(g) of this order, engage State and local permitting authorities with jurisdiction over sites selected for AI infrastructure, as appropriate, to enhance relevant authorities' understanding of the technical characteristics of AI infrastructure projects as relevant to new source reviews under the Clean Air Act, 42 U.S.C. 7401 *et seq.*, and to enhance the public's understanding of the same, as well as to facilitate the acquisition of information by AI developers operating on Federal sites regarding best practices for expeditiously obtaining air-quality permits;

(ii) continue engagements with State and local permitting authorities, and provide technical assistance to AI developers operating on Federal sites, on an ongoing basis and as appropriate, to help advance expeditious conclusion of, and compliance with, new source reviews; and

(iii) following the acquisition of all preconstruction air-quality permits by developers, take steps to ensure, on an ongoing basis and as appropriate, that AI developers operating on Federal sites adhere to all requirements of operational air-quality permits applicable to their respective projects; that information needed to demonstrate compliance, possibly including air-monitoring data, is made publicly available and regularly updated; and that best practices are identified for air-emissions reduction and air-quality monitoring regarding AI infrastructure on Federal sites.

(d) To help ensure expeditious permitting or permission processes related to waters of the United States and harbor and river improvements, the Secretary of Defense shall prioritize work, as appropriate, to process applications for permits administered by the United States Army Corps of Engineers (USACE) under the Clean Water Act, 33 U.S.C. 1251 *et seq.*, and to process applications for permission for appropriate projects under section 14 of the Act of March 3, 1899 (33 U.S.C. 408), as consistent with the statutes' requirements, in order to render determinations on any such permits or permissions associated with AI infrastructure on Federal sites by the end of 2025, or as soon as feasible consistent with statutory requirements. The Secretary shall, consistent with applicable law, prioritize allocation of resources toward USACE district offices, and direct the allocation of resources within such offices, as needed to comply with this directive. The Secretary shall further apply all general permits applicable to AI infrastructure where appropriate to promote expeditious permitting on such Federal sites.

(e) Within 30 days of the selection of any winning applications under subsection 4(g) of this order, the Secretary of Defense and the Secretary of Energy shall initiate Tribal consultations as applicable and appropriate based on the sites selected. Upon receipt of sufficient project information, the Secretary of Defense and the Secretary of Energy shall further initiate

consultations with the Secretary of the Interior, acting through the Director of the United States Fish and Wildlife Service (USFWS), to ensure that the construction and operation of AI infrastructure on each site that is identified under subsection 4(a) of this order, cleared under subsection 4(d) of this order, and subsequently chosen as the location for the construction and operation of AI infrastructure pursuant to a winning application under subsection 4(g) of this order are not likely to jeopardize the continued existence of any endangered species or threatened species or result in the destruction or adverse modification of a critical habitat of such species. The Secretary of Defense and the Secretary of Energy shall conclude such consultations with USFWS, to the maximum extent practicable, within 90 days of the initiation of such consultations when feasible and consistent with statutory requirements.

(f) To advance the development of geothermal energy production and thermal storage, including in support of AI infrastructure on Federal sites:

(i) Within 60 days of the date of this order, the Secretary of the Interior shall undertake a programmatic environmental review, on a thematic basis, of the environmental impacts and associated mitigations involved with the construction and operation of a geothermal power plant.

(ii) By the date on which the review described in subsection (f)(i) of this section is completed, the Secretary of the Interior shall establish a target cumulative capacity of permitted or operational geothermal projects by a year that the Secretary shall designate.

(iii) Within 60 days of the date of this order, the Secretary of the Interior shall assess existing categorical exclusions that are listed in the NEPA procedures of other agencies and could apply to actions taken in connection with geothermal energy development. The Secretary shall propose adopting such categorical exclusions as the Secretary, after consultation with the heads of agencies whose NEPA procedures list the categorical exclusions, deems appropriate, and, after considering all comments received through applicable public comment processes, take any actions to adopt categorical exclusions that are appropriate given the received comments, as consistent with the requirements of NEPA and 40 C.F.R. parts 1500–1508. The Secretary shall prioritize the expeditious permitting of geothermal projects, including the application of any appropriate categorical exclusions adopted under this subsection, on PGZs. The Secretary shall prioritize work to expeditiously permit geothermal projects on PGZs above the work described in subsection (f)(i) of this section.

(iv) When issuing leases and related authorizations for geothermal projects on PGZs, the Secretary of the Interior shall fulfill the requirements of NEPA and the Endangered Species Act in a manner that allows for the earliest possible operation of geothermal power plants consistent with applicable law.

(v) The Secretary of Defense, the Secretary of the Interior, and the Secretary of Energy shall, as appropriate, coordinate to determine and clarify appropriate procedures for the execution of leases or subleases for developing or expanding clean energy generation resources, including geothermal energy generation resources, on withdrawn lands subject to the jurisdiction of the Department of Defense or the Department of Energy.

Sec. 8. *Ensuring Adequate Transmission Infrastructure for Federal Sites*. (a) The Secretary of Energy, in consultation with the Secretary of Defense and the Secretary of the Interior, shall take steps to enable AI infrastructure on Federal sites to have reliable access to transmission facilities adequate for the operation of frontier AI data centers by the end of 2027.

(b) To promote any needed upgrades and development of transmission infrastructure that is located on or that is necessary to support Federal sites with AI infrastructure, the Secretary of Energy, in consultation with the Secretary of the Interior, acting through the Director of BLM and the Director of USFWS, shall:

(i) by September 30, 2025, identify and initiate use of all appropriate authorities to construct, finance, facilitate, and plan such upgrades and development, including through the Transmission Infrastructure Program administered by the Western Area Power Administration; and

(ii) prioritize the allocation of staff and resources for developing transmission infrastructure needed to support AI infrastructure on Federal sites—and in doing so, as appropriate, allocate relevant staff and resources from any component within the Department of Energy for this purpose—consistent with the requirements and objectives of this order and applicable law.

(c) Because of the importance of frontier AI infrastructure, including transmission capacity, to the defense industrial base, critical infrastructure, and military preparedness:

(i) The Secretary of Energy shall consider expected use of frontier AI data centers on Federal sites as part of the Secretary's triennial study of electric transmission capacity constraints and congestion under section 216(a)(1) of the Federal Power Act (16 U.S.C. 824p(a)(1)).

(ii) Consistent with the requirements of section 216(a)(2) of the Federal Power Act (16 U.S.C. 824p(a)(2)), and based on any findings made in future studies of electric transmission capacity constraints and congestion as described in subsection (c)(i) of this section, the Secretary shall consider whether to designate geographic areas around frontier AI infrastructure on Federal sites as national interest electric transmission corridors.

(d) The Secretary of Energy shall, as appropriate, help ensure that transmission facilities upgraded or developed to support AI data centers on Federal sites:

(i) are designed to support all reasonably foreseeable electric loads, including through the deployment of grid-enhancing technologies, high-performance conductors, and other advanced transmission technologies, including those described in the Department of Energy's *Innovative Grid Deployment* Liftoff report, that will increase the capabilities of the transmission facilities on a timely and cost-effective basis; and

(ii) conform to conductor efficiency standards or other technical standards or criteria that the Secretary determines will optimize facilities' performance and cost-effectiveness.

(e) To improve the timely availability of critical grid equipment for frontier AI infrastructure, such as electrical transformers, circuit breakers, switchgears, and cables, and to protect electricity consumers from exposure to rising equipment prices:

(i) Within 90 days of the date of this order, the Secretary of Defense, the Secretary of Commerce, and the Secretary of Energy shall jointly consult with domestic suppliers of such technologies on the expected needs of AI infrastructure on Federal sites, suppliers' current production plans, and opportunities for Government support in helping suppliers meet market demands.

(ii) Within 180 days of the date of this order, the Secretary of Energy shall facilitate industry-led convenings on transformers and other critical grid components, which shall include appropriate representatives from agencies, transmission providers and transmission organizations, domestic suppliers of transformers, data center developers, and other private-sector organizations. On an ongoing basis, the Secretary, after consulting with participants in the industry-led convenings, shall:

(A) on at least an annual basis, develop and publish supply and demand forecasts for transformers, including forecasts for different transformer variants and analyses of supply and demand trends under different future scenarios, which shall include scenarios for growth in electricity demand from AI infrastructure and other sources of demand; and

(B) consider and, as appropriate, execute purchases of transformers and other critical grid components in order to provide demand certainty for domestic manufacturers to invest in capacity for meeting the needs of AI infrastructure. Any decision to execute such purchases shall be based on economic or other industry data, including the capacity utilization of domestic suppliers of transformers or other components, that the Secretary deems relevant to evaluating the status of the domestic industry. The Secretary shall subsequently execute sales of any purchased transformers or other critical grid components at times that the Secretary deems appropriate based on such data.

(f) Within 180 days of the date of this order, the Secretary of Energy shall establish requirements for transmission providers and transmission organizations to report to the Secretary transmission-related information to assist in siting and accelerating the interconnection of generation resources to serve frontier AI data centers on sites identified under section 4(a) of this order and cleared under subsection 4(d) of this order. Such information may include data on transmission congestion to help identify where additional transmission investments could enable the development of additional transmission capacity to serve such AI data centers.

(g) Within 180 days of the date of this order, the heads of agencies that possess loan or loan-guarantee authorities shall evaluate whether any such authorities could be used to support the development of AI infrastructure on Federal sites—including the production of critical grid equipment as described in subsection (e) of this section, or other actions to strengthen the AI infrastructure supply chain. In cases in which any authorities are available and appropriate for this purpose, the heads of relevant agencies shall provide that information to developers of AI infrastructure on Federal sites or other appropriate private-sector entities.

Sec. 9. *Additional Efforts to Improve Permitting and Power Procurement Nationwide*. (a) The heads of Federal Permitting Agencies shall designate, with respect to each of their component agencies, dedicated staff to handle all matters related to permits and approvals for AI infrastructure. Such designations shall include personnel dedicated to coordinating with and addressing the needs of applicants for permits under the respective agency's purview. In designating such personnel, the heads of Federal Permitting Agencies shall, as appropriate, implement staffing arrangements and other mechanisms that accelerate permitting for AI infrastructure to the maximum extent possible.

(b) To improve review practices pursuant to NEPA:

(i) Within 60 days of the date of this order, the heads of Federal Permitting Agencies, in coordination with the Chair of CEQ, shall assess existing categorical exclusions and identify opportunities to establish new categorical exclusions to support AI infrastructure on Federal sites, consistent with the requirements of NEPA and 40 C.F.R. parts 1500–1508. The heads of agencies whose NEPA regulations include categorical exclusions related to fiber-optic cables are encouraged, in undertaking these assessments, to evaluate whether such categorical exclusions may be applied to the development of fiber-optic cables as used for AI infrastructure.

(ii) Within 120 days of the date of this order, the heads of Federal Permitting Agencies shall, as appropriate and consistent with applicable law, propose any new categorical exclusions and, after considering all comments received through applicable public comment processes, take any actions to establish categorical exclusions that are appropriate given the received comments.

(iii) Within 120 days of the date of this order, and consistent with the directives described in section 7 of this order, the Secretary of Defense, the Secretary of the Interior, the Secretary of Agriculture, and the Secretary of Energy shall identify any existing categorical exclusions that are listed in the NEPA procedures of other agencies and that are relevant to the development of clean energy, electric transmission, or AI data centers

and take any appropriate steps to adopt such categorical exclusions where appropriate and consistent with the requirements of NEPA and 40 C.F.R. parts 1500–1508. The Secretary of Defense, the Secretary of the Interior, the Secretary of Agriculture, and the Secretary of Energy shall take any appropriate steps to adopt and apply such categorical exclusions to AI infrastructure on Federal sites where consistent with the requirements of NEPA and 40 C.F.R. parts 1500–1508.

(c) Within 180 days of the date of this order, the Secretary of Energy shall issue a request for information on opportunities for accelerated interconnection at existing power plants, including as related to surplus interconnection service and clean repowering. The request shall seek details on the ownership of such plants with surplus interconnection service and the plants' suitability for colocation of new clean power generation resources with shared grid access.

(d) Within 90 days of the date of this order, the Secretary of Energy shall issue a request for information from private-sector entities including transmission providers, transmission organizations, and clean energy developers regarding load interconnection processes. The Secretary shall subsequently engage with transmission providers and transmission organizations regarding best practices to improve the transparency and efficiency of such processes, including through adopting new technologies, software, and procedures. The Secretary shall provide technical assistance and financial assistance to facilitate such adoption, as appropriate. The Secretary shall publish a report describing the results of this work within 1 year of the date of this order.

(e) To promote the expeditious, responsible development of nuclear power generation resources, the Secretary of Defense and the Secretary of Energy shall:

(i) seek to facilitate the deployment of additional nuclear power and, as relevant, supply-chain services on lands owned by, respectively, the Department of Defense and the Department of Energy—including Department of Defense installations and sites owned or managed by the Department of Energy National Laboratories—by, as appropriate and consistent with applicable law, identifying opportunities for such deployment on specific lands to the extent such opportunities exist and, in the case of the Secretary of Energy only, by evaluating whether financial support for such deployment is appropriate;

(ii) within 180 days of the date of this order, coordinate to publish a joint list of ten high-priority sites—or, if fewer than ten appropriate sites exist, as many sites as possible—which may overlap with sites identified and cleared under section 4 of this order, that are most conducive to expeditious, safe, and responsible deployment of additional nuclear power capacity readily available to serve AI data center electricity demand by December 31, 2035, taking into account factors including Federal, State, Tribal, and local ordinances; permitting and other regulatory requirements; water access; climate resilience and natural-hazard risks; and transmission and interconnection dynamics; and

(iii) within 1 year of the date of this order, publish either a joint plan or their own respective plans describing how each Secretary will facilitate deployment of additional nuclear power capacity as described in this subsection on any such sites. Any such plan shall address selection of appropriate nuclear reactor technologies; the licensing and permitting of relevant technologies or facilities; the approach that each Secretary would take to ensure the safe and responsible transportation of uranium and any other radioactive material to the site; the approach that each Secretary would take to ensure the safe and responsible storage or disposal of any spent nuclear fuel; remediation of the site after the plant ceases operation as needed; and any other steps necessary to ensure the deployment will protect public health, safety, and the environment, consistent with all applicable legal requirements and the principles of the document

entitled *Safely and Responsibly Expanding U.S. Nuclear Energy: Deployment Targets and a Framework for Action* (November 2024); and

(iv) when carrying out actions under this subsection, comply with the directives of section 4(k) of this order.

(f) Within 180 days of the date of this order, the Secretary of Commerce, in consultation with the Secretary of Defense, the Secretary of Energy, and the White House Council on Supply Chain Resilience, shall submit a report to the President on supply chain risks applicable to the United States data center industry. The report shall include analysis of supply chain risks associated with the materials used to construct and maintain data centers, the electronics necessary to operate a data center, and emerging data center technologies, as well as recommended steps for the Federal Government to take to address identified risks. The report shall also include analysis on supply chain risks applicable to the generation and transmission infrastructure needed to power AI data centers. On an ongoing basis, as appropriate, the Secretary of Commerce shall engage with the private sector to identify emerging supply chain risks that have the potential to undermine the success of the United States AI infrastructure industry—with such success defined to include the industry's commercialization of emerging technologies—and to recommend policy solutions to address identified risks.

(g) Within 180 days of the date of this order, to promote the expeditious, responsible development and deployment of distributed energy solutions that support the development and operation of AI infrastructure, the Secretary of Energy shall develop model contracts for using distributed energy resources (DERs) to increase the local grid's capacity to support AI infrastructure. In developing such contracts, the Secretary shall consider options for cost-effective uses of DERs, including distribution-sited generation resources, energy storage assets, and opportunities for flexible management of electricity demand. The model contracts shall, as appropriate, include clauses providing for the owners of data centers to finance costs incurred by other entities in developing, installing, and operating DERs, consistent with the objective of utilities accounting for these financing activities when processing data center owners' interconnection applications.

(h) By July 31, 2025, the Permitting Council shall engage with developers of AI infrastructure to advance their understanding of resources available under title 41 of the Fixing America's Surface Transportation Act (Public Law 114–94) to accelerate permitting processes and reviews for clean energy projects that are part of AI infrastructure on Federal sites. As part of this work, the Permitting Council, in consultation with the White House Task Force on AI Datacenter Infrastructure announced on October 29, 2024, shall endeavor to engage small developers of AI infrastructure.

(i) Within 180 days of the date of this order, the Secretary of the Army, acting through the Chief of Engineers and Commanding General of the USACE, shall, consistent with applicable law, assess existing nationwide permits (NWPs) to determine how they may be applied to facilitate the construction of AI data centers and develop and publish a list of NWPs that could facilitate such construction. The Secretary of the Army, acting through the Chief of Engineers and Commanding General of the USACE, shall, as appropriate and consistent with applicable law, subsequently establish such new NWPs as expediently as possible.

(j) Within 60 days of the date of this order, the Secretary of Energy shall release for public comment draft reporting requirements for AI data centers covering all phases of AI data centers' development and operation—including material extraction, component fabrication, transportation, construction, operation, recycling, and retirement —regarding embodied greenhouse gas emissions, water usage, and excess heat or energy expenditures, as distinct from operational intensity of greenhouse gas emissions.

(k) Within 60 days of the date of this order, the Secretary of Energy, in coordination with the Administrator of the EPA and the Chair of CEQ,

shall establish a grand challenge, serving as a call to voluntary action for appropriate private-sector and other stakeholders, for the purpose of:

(i) setting targets for minimizing the power usage effectiveness ratio and water usage effectiveness ratio of AI data centers, with a goal of bringing the power usage effectiveness ratio of AI data centers on Federal sites below 1.1;

(ii) promoting best practices for the beneficial use of waste heat and other efforts to maximize efficiency;

(iii) promoting best practices for data center energy management and sustainable design and operational practices for data centers that avoid or reduce adverse effects on natural and cultural resources and communities, and that protect public health and the environment;

(iv) raising AI developer and user awareness regarding the comparative energy intensities of different computational tasks; and

(v) developing best practices and standards for software and algorithmic efficiency.

Sec. 10. *Engagement Abroad*. (a) Within 90 days of the date of this order, the Secretary of State, in consultation with the Secretary of Defense, the Secretary of Commerce, the Secretary of Energy, the Administrator of the United States Agency for International Development, the Assistant to the President for National Security Affairs, and the heads of other relevant agencies as the Secretary of State may deem appropriate, shall develop a plan for engaging allies and partners on accelerating the buildout of trusted AI infrastructure around the world. Such a plan shall include measures to advance collaboration on the global buildout of trusted AI infrastructure; mitigate and prevent harms to local and affected communities; engage the private sector and investor community to identify and mitigate barriers to AI infrastructure investments; support the deployment of commercially available reliable clean power sources and the development and commercialization of emerging clean energy technologies, such as small modular nuclear reactors; exchange best practices for permitting, power procurement, and cultivating talent to build, operate, and maintain trusted AI infrastructure; and strengthen cyber, physical, and supply chain security safeguards related to AI infrastructure. Within 1 year of the date of this order, the Secretary of State shall submit to the Assistant to the President for National Security Affairs a report on actions taken pursuant to this plan.

(b) Within 120 days of the date of this order, the Assistant to the President for National Security Affairs shall convene heads of appropriate agencies, to include the Secretary of State, the Secretary of the Treasury, the Secretary of Commerce, the Secretary of Energy, the Chief Executive Officer of the United States International Development Finance Corporation, and the President of the Export-Import Bank of the United States, to identify and implement actions to facilitate United States exports and engagements abroad related to advanced nuclear technologies and relevant supply-chain services.

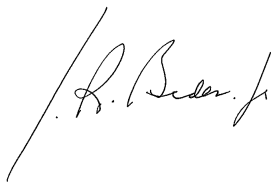
Sec. 11. *General Provisions*. (a) Nothing in this order shall be construed to impair or otherwise affect:

(i) the authority granted by law to an executive department or agency, or the head thereof; or

(ii) the functions of the Director of the Office of Management and Budget relating to budgetary, administrative, or legislative proposals.

(b) This order shall be implemented consistent with applicable law and subject to the availability of appropriations.

(c) This order is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.



THE WHITE HOUSE,

Federal Register
Vol. 90, No. 11
Friday, January 17, 2025

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

DEPARTMENT OF HOMELAND SECURITY

6 CFR Chapter I

49 CFR Chapter XII

Ratification of Security Directives

AGENCY: Office of Strategy, Policy, and Plans, Department of Homeland Security (DHS).

ACTION: Notice of ratification of security directives.

SUMMARY: The Department of Homeland Security (DHS) is publishing official notice that the Transportation Security Oversight Board (TSOB) ratified Transportation Security Administration (TSA) Security Directive Pipeline-2021–01D and Security Directive Pipeline-2021–02E, applicable to owners and operators of critical hazardous liquid and natural gas pipeline infrastructure (owner/operators). Security Directive Pipeline-2021–01D, issued on May 29, 2024, extended the requirements of the Security Directive Pipeline-2021–01 series for an additional year, with minor revisions. Security Directive Pipeline-2021–02E, issued on July 26, 2024, extended the requirements of the Security Directive Pipeline-2021–02 series for an additional year, with amendments to strengthen their effectiveness and provide additional clarity.

DATES: The TSOB ratified Security Directive Pipeline-2021–01D on June 28, 2024 and Security Directive Pipeline-2021–02E on August 23, 2024.

FOR FURTHER INFORMATION CONTACT: Thomas McDermott, Deputy Assistant Secretary for Cyber, Infrastructure, Risk and Resilience Policy, at 202–834–5803 or *thomas.mcdermott@hq.dhs.gov*.

SUPPLEMENTARY INFORMATION:

I. Background

A. Cybersecurity Threat

The cyber threat to the country's critical infrastructure has only increased in the time since TSA issued its initial cybersecurity-related security directives to pipeline entities in 2021 in response to the Colonial Pipeline incident. Cyber threats to surface transportation systems, including hazardous liquid and natural gas pipelines and facilities, continue to proliferate, as both nation-states and criminal cyber groups target critical infrastructure in order to cause operational disruption and economic harm.[1] In addition to the Colonial Pipeline incident, cyber attackers have maliciously targeted surface transportation modes in the United States, including freight railroads, passenger railroads, and rail transit systems, with multiple cyberattack and cyber espionage campaigns.[2] Cyber incidents, particularly ransomware attacks, are likely to increase in the near and long term, due in part to vulnerabilities identified by threat actors in U.S. networks.[3] Especially in light of the ongoing Russia-Ukraine conflict,[4] these threats remain elevated and pose a risk to the national and economic security of the United States.

In its 2023 annual assessment, the Intelligence Community noted that ''China almost certainly is capable of launching cyber attacks that could disrupt critical infrastructure services within the United States, including against oil and gas pipelines, and rail systems.'' [5] And the 2024 annual assessment notes that, ''[i]f Beijing believed that a major conflict with the United States were imminent, it would consider aggressive cyber operations against U.S. critical infrastructure and military assets. Such a strike would be designed to deter U.S. military action by impeding U.S. decision-making, inducing societal panic, and interfering with the deployment of U.S. forces.'' [6] In addition, ''Russia maintains its ability to target critical infrastructure . . . in the United States as well as in allied and partner countries'' and ''Tehran's opportunistic approach to cyber-attacks puts U.S. infrastructure at risk for being targeted.'' [7] Furthermore, ''malicious cyber actors have begun testing the capabilities of AI-developed malware and AI-assisted software development—technologies that have the potential to enable larger scale, faster, efficient, and more evasive cyber-attacks—against targets, including pipelines, railways, and other U.S. critical infrastructure.'' [8]

B. Regulatory History

Following the Colonial Pipeline incident in May 2021, TSA issued two security directives requiring owners and operators of critical hazardous liquid and natural gas pipelines or liquefied natural gas facilities (owner/operators) to implement cybersecurity measures necessary to prevent disruption and degradation to their critical infrastructure. On May 27, 2021, TSA issued the first directive (Security Directive Pipeline-2021–01), which required covered owner/operators to: (1) report cybersecurity incidents to CISA; (2) designate a cybersecurity coordinator to be available 24/7 to coordinate with TSA and CISA; and (3) conduct a vulnerability assessment of cybersecurity practices, identify any

[1] Annual Threat Assessment of the U.S. Intelligence Community, Office of the Director of National Intelligence (2024 Intelligence Community Assessment), 11, 16 (dated Feb. 5, 2024) (last accessed July 23, 2024, at *https://www.dni.gov/files/ODNI/documents/assessments/ATA-2024-Unclassified-Report.pdf*).

[2] These activities include the January 2023 breach of the Washington Metropolitan Area Transit Authority; the January 2023 breach of San Francisco's Bay Area Rapid Transit System; and the April 2021 breach of New York City's Metropolitan Transportation Authority (the nation's largest mass transit agency) by hackers linked to the Chinese government. This threat is ongoing: on February 7, 2024, CISA published an advisory warning of the threat posed by PRC state-sponsored actors. *See* Cybersecurity Advisory (AA24–038A), *PRC State-Sponsored Actors Compromise and Maintain Persistent Access to U.S. Critical Infrastructure.*

gaps, and develop a plan and timeline for remediation. TSA issued the second directive (Security Directive Pipeline-2021–02) on July 19, 2021, which required owner/operators to implement additional specific cybersecurity measures to prevent disruption and degradation to their infrastructure.

Due to the continuing cyber threat to pipeline infrastructure, the requirements of both Security Directive Pipeline-2021–01 and Security Directive Pipeline-2021–02 have been renewed and extended beyond their original expiration dates by subsequent directives, creating two security directive ''series'' (the Security Directive Pipeline-2021–01 series and the Security Directive Pipeline-2021–02 series). In several instances, as TSA renewed each of these security directive series, TSA also amended their requirements to strengthen their effectiveness and address emerging cyber threats. Most significantly, TSA transitioned the requirements of the Security Directive Pipeline-2021–02 series to be more performance-based and less prescriptive. The performance-based approach enhances security by mandating that critical security outcomes are achieved while allowing owner/operators to choose the most appropriate security measures for their specific systems and operations. Under the performance-based framework of the Security Directive Pipeline-2021–02 series, TSA identified critical security outcomes that covered parties must achieve. To ensure that these outcomes are met, the directives in this series now require owner/operators to:

- Establish and implement a TSA-approved Cybersecurity Implementation Plan (CIP) that describes the specific cybersecurity measures employed and the schedule for achieving the security outcomes identified;
- Develop and maintain an up-to-date Cybersecurity Incident Response Plan (CIRP) to reduce the risk of operational disruption, or the risk of other significant impacts on business critical functions, as defined in the directive, should the Information and/or Operational Technology systems of a gas or liquid pipeline be affected by a cybersecurity incident; and
- Establish a Cybersecurity Assessment Program (CAP) and submit an annual plan that describes how the owner/operator will proactively and regularly assess the effectiveness of cybersecurity measures and identify and resolve device, network, and/or system vulnerabilities.

The table below provides a list of each the security directives issued within the Security Directive Pipeline-2021–01 and Security Directive Pipeline-2021–02 series. All of the security directives in both series are available online in TSA's Surface Transportation Cybersecurity Toolkit.[9]

TABLE 1—TSA SECURITY DIRECTIVES APPLICABLE TO CRITICAL PIPELINE SYSTEMS

Pipeline-2021–02D	Jul. 26, 2023	Jul. 27, 2023	Aug. 24, 2023	Jul. 27, 2024	89 FR 28570.
Pipeline-2021–02E	Jul. 26, 2024	Jul. 27, 2024	Aug. 23, 2024	Jul. 27, 2025	*Current.

C. Security Directive Pipeline-2021–01D

In light of the continuing threat, TSA determined that the cybersecurity measures required by the Security Directive Pipeline-2021–01 series, as amended and extended, remain necessary to protect the Nation's critical pipeline infrastructure beyond Security Directive Pipeline-2021–01C's expiration date of May 29, 2024. On May 29, 2024, TSA issued Security Directive Pipeline-2021–01D to extend the requirements of Security Directive Pipeline-2021–01 series for an additional year. Security Directive Pipeline-2021–01D became effective May 29, 2024, and expires on May 29, 2025. Security Directive Pipeline-2021–01D contains minor revisions refining existing requirements to clarify applicability, compliance timelines, and reporting requirements, as well as updated definitions to ensure standardization across TSA's cybersecurity requirements applicable to different transportation modes.

D. Security Directive Pipeline-2021–02E

Considering the continuing threat, TSA also determined that the measures required by the Security Directive Pipeline-2021–02 series, as amended and extended, remain necessary to protect the Nation's critical pipeline infrastructure beyond Security Directive Pipeline-2021–02D's expiration date of July 27, 2024. On July 26, 2024, TSA issued Security Directive Pipeline-2021–02E to extend the requirements of Security Directive Pipeline-2021–02 series for an additional year. Security Directive Pipeline-2021–02E became effective July 27, 2024, and expires on July 27, 2025.

In addition to extending the existing requirements, Security Directive Pipeline-2022–02E contains several amendments to strengthen the effectiveness of certain requirements and provide further clarity. The revisions include new and modified definitions clarifying certain terms and harmonizing terminology across TSA's cybersecurity requirements applicable to different transportation modes; clarifying when responsibility for compliance with the directive's requirements is shared between an owner/operator and a third party; and clarifying requirements regarding submission of CAP and related annual reports.

II. TSOB Ratification

TSA has broad statutory responsibility and authority to safeguard

[9] TSA Surface Transportation Cybersecurity Toolkit, *available at https://www.tsa.gov/for-industry/surface-transportation-cybersecurity-toolkit.*

[10] Security Directive Pipeline-2021–01B also extended the deadline by which cybersecurity incidents must be reported to CISA from 12 hours to 24 hours after an incident is identified. This change aligned the reporting timeline for critical pipeline entities to mirror the reporting requirements applicable to other surface transportation entities and aviation entities.

the nation's transportation system.[11] The TSOB—a body consisting of the Secretary of Homeland Security, the Secretary of Transportation, the Attorney General, the Secretary of Defense, the Secretary of the Treasury, the Director of National Intelligence, or their designees, and a representative of the National Security Council—reviews certain TSA regulations and security directives as consistent with law.[12] TSA issued Security Directive Pipeline-2021–01D and Security Directive Pipeline-2021–02E under 49 U.S.C. 114(*l*)(2)(A), which authorizes TSA to issue emergency regulations or security directives without providing notice or the opportunity for public comment where ''the Administrator determines that a regulation or security directive must be issued immediately in order to protect transportation security . . . .'' Security directives issued pursuant to the procedures in 49 U.S.C. 114(*l*)(2) ''shall remain effective for a period not to exceed 90 days unless ratified or disapproved by the Board or rescinded by the Administrator.'' [13]

Following the issuance of Security Directive Pipeline-2021–01D on May 29, 2024, and Security Directive Pipeline-2021–02E on July 26, 2024, the chair of the TSOB convened the board to review the directives.[14] In reviewing each Security Directive, the TSOB reviewed the required measures extended and amended by the directives and the continuing need for TSA to maintain these requirements pursuant to its emergency authority under 49 U.S.C. 114(*l*)(2) to prevent the disruption and degradation of the country's critical transportation infrastructure. The TSOB also considered whether to authorize TSA to extend each security directive beyond their current expiration dates subject to certain conditions, should the TSA Administrator believe such an extension is necessary to address the evolving threat that may continue beyond the original expiration date.

Following its review, the TSOB ratified Security Directive Pipeline-2021–01D on June 28, 2024, and Security Directive Pipeline-2021–02E on August 23, 2024. The TSOB also authorized TSA to extend each of the security directives beyond their current expiration dates, should the TSA Administrator determine such an extension is necessary to address the evolving threat that may continue beyond the original expiration date. Such an extension is subject to the following conditions: (1) there are no changes to the security directive other than an extended expiration date; (2) the TSA Administrator makes an affirmative determination that conditions warrant the extension of the directive's requirements; and (3) the TSA Administrator documents such a determination and notifies the TSOB.

Kristie Canegallo,

Senior Official Performing the Duties of the Deputy Secretary of Homeland Security & Chairman of the Transportation Security Oversight Board.

DEPARTMENT OF AGRICULTURE

Commodity Credit Corporation

7 CFR Part 1416

[Docket ID: CCC–2024–0003]

RIN 0560–AI68

Supplemental Agricultural Assistance Programs

AGENCY: Commodity Credit Corporation (CCC) and Farm Service Agency (FSA), Department of Agriculture (USDA).

ACTION: Final rule.

SUMMARY: This rule makes discretionary changes to simplify and streamline deadlines for the Emergency Assistance for Livestock, Honeybees, and Farm-Raised Fish Program (ELAP), the Livestock Forage Disaster Program (LFP), and the Livestock Indemnity Program (LIP). It also makes changes to clarify ELAP provisions for assistance for transportation of livestock feed.

DATES: *Effective* January 17, 2025.

FOR FURTHER INFORMATION CONTACT: For ELAP: Seth Cross; telephone: (402) 309–3338; email: *seth.cross@usda.gov.* For LFP and LIP: Kelly Breinig; telephone: (202) 720–1603; email: *kelly.breinig@usda.gov.* Individuals who require alternative means for communication should contact the USDA Target Center at (202) 720–2600 (voice and text telephone (TTY)) or dial 711 for Telecommunications Relay service (both voice and text telephone users can initiate this call from any telephone).

SUPPLEMENTARY INFORMATION:

Background

ELAP, LFP, and LIP use CCC funds to provide emergency relief to eligible producers (7 U.S.C. 9081). FSA administers ELAP, LFP and LIP on behalf of CCC. ELAP provides assistance to producers of livestock, honeybees, and farm-raised fish to aid in the reduction of losses due to disease, adverse weather, or other conditions, such as blizzards and wildfires, as determined by the Secretary, that are not covered by LIP or LFP.[1] LFP provides assistance to livestock producers who suffer eligible grazing losses on land physically located in a county experiencing a qualifying drought during the normal grazing period for the county or are prohibited by a Federal agency from grazing the normal permitted livestock on managed rangeland due to a qualifying fire.[2] LIP provides assistance for livestock deaths in excess of normal mortality caused by adverse weather or by attacks by animals reintroduced into the wild by the Federal Government.[3]

This rule makes discretionary changes to simplify and streamline the deadlines for ELAP, LFP, and LIP. It also makes discretionary changes to the ELAP regulations for assistance for transportation of livestock feed.

Deadlines for ELAP, LFP, and LIP

This rule amends the regulations for ELAP, LFP, and LIP to have a single deadline across all three programs for filing a notice of loss (required for ELAP [4] and LIP [5]), an application for payment, and other required documentation. Previously, each of the three programs had multiple deadlines and time frames for submitting required forms and documentation, and those deadlines also varied among the three programs. These changes are intended to improve efficiencies for producers and FSA staff, provide clarity regarding program timelines, and give FSA staff sufficient time to deliver support to producers who have suffered eligible losses due to disaster events.

This rule changes the deadlines in §§ 1416.107, 1416.202, and 1416.305 to specify that the deadline to file a notice of loss, an application for payment, and required documentation for each program is March 1 following the end of the applicable program year, which is based on the calendar year for the three

[1] More information on ELAP is available at *https://www.fsa.usda.gov/programs-and-services/disaster-assistance-program/emergency-assist-for-livestock-honey-bees-fish/index.*

[2] More information on LFP is available at *https://www.fsa.usda.gov/programs-and-services/disaster-assistance-program/livestock-forage/index.*

[3] More information about LIP is available at *https://www.fsa.usda.gov/programs-and-services/disaster-assistance-program/livestock-indemnity/index.*

[4] See 7 CFR 1416.107(a).

[5] See 7 CFR 1416.305(b).

programs. The deadline changes are effective beginning with the 2024 program year, which began on January 1, 2024. Producers who suffered eligible losses for the 2024 program year prior to the publication of this rule may submit documents or make changes to previously filed documents for these programs by the new deadline of March 1, 2025, even if the previous deadline had passed.

ELAP Assistance for Feed Transportation

Under ELAP, in addition to the purposes described in 7 U.S.C. 9081(d)(1), the CCC funds are authorized to be used to reduce losses caused by feed or water shortages, disease, or other factors as determined by the Secretary, including inspections of cattle tick fever (7 U.S.C. 9081(d)(2)). Feed transportation was added as an eligible loss for ELAP in a final rule published on April 6, 2022 (87 FR 19783–19786), to provide assistance to livestock producers in areas suffering from eligible adverse weather, an eligible loss condition, or eligible drought, who incur additional hauling costs because they are forced to transport feed from unaffected areas. To be eligible for ELAP assistance for feed transportation, producers must have a loss resulting from the additional cost to transport livestock feed to eligible livestock for additional mileage above normal, due to eligible adverse weather, an eligible loss condition, or eligible drought.[6] Payments are calculated by multiplying a national payment rate by the national average price per mile to transport a truckload of livestock feed, multiplied by the actual number of additional miles the feed was transported by the producer in excess of 25 miles per truckload of livestock feed and for no more than 1,000 miles per truckload of feed during the program year.[7] This rule makes several changes to the ELAP regulations to clarify the feed transportation eligibility and documentation requirements and ensure that ELAP assistance for feed transportation is provided only for eligible losses as authorized and described in the April 2022 final rule.

The first of those changes adds provisions to the ELAP regulations in § 1416.103(d)(6) to specify that an eligible loss from the additional cost to transport livestock feed is limited to the cost to transport feed to meet the feed needs for eligible livestock during the program year in which the eligible adverse weather, eligible loss condition, or eligible drought occurred. The provisions also clarify that the cost to transport livestock feed is not an eligible loss if the feed is purchased or obtained:

- in excess of the amount needed for the program year in which the eligible adverse weather, eligible loss condition, or eligible drought occurred, which will be determined as described below in the changes to § 1416.110(q);
- to sell to another producer;
- for another producer's livestock; or
- for ineligible livestock.

This rule also amends provisions in § 1416.106(c)(5) regarding documentation to specify that a participant must provide verifiable or reliable records, as defined in § 1416.102, that show the additional livestock feed was only purchased or obtained to sustain eligible livestock during an eligible adverse weather or loss condition. The provisions also specify that handwritten receipts are not considered eligible documentation for feed transportation without accompanying truck logs or other documentation to verify the cost of transportation, and payments in cash must have a verifiable record to verify that the transaction was made between two parties. These changes allow FSA to confirm that losses claimed for feed transportation are eligible losses as described above.

To prevent payments for ineligible feed transportation costs, this rule also adds provisions in § 1416.110(q) that limit the amount of an ELAP payment for feed transportation based on the expected feed need of a producer's eligible animals.

First, FSA will convert the number of eligible livestock identified on the application to an animal unit basis, using the same methodology used for ELAP assistance for water transportation and grazing losses.[8] As provided in 7 CFR 1416.110(i)(1), FSA determined that the corn need for an adult cow, which is equal to 1 animal unit, is 15.7 pounds per day. Forage or hay requirements for an adult beef cow are approximately 24 pounds of dry hay matter per day, or approximately 26 pounds of hay with 8 percent moisture.[9] To allow for a reasonable variation in the amount of feed consumed by eligible livestock, FSA will multiply the number of animal units by 24 pounds of corn or corn equivalent (equal to 15.7 pounds multiplied by 150 percent, rounded up to the nearest pound) or 39 pounds of hay or forage (equal to 26 pounds of hay multiplied by 150 percent). FSA will multiply the result of that calculation by the number of calendar days in the time period from the beginning date of the eligible drought or other eligible loss condition until the end of the program year to determine the maximum amount of feed for which transportation assistance will be provided. Any loads hauled in excess of that amount during the program year are not eligible for assistance.

Notice and Comment, Effective Date, and Exemptions

The Administrative Procedure Act (5 U.S.C. 553) provides that the notice and comment and 30-day delay in the effective date provisions do not apply when the rule involves a matter relating to agency management or personnel, or to public property, loans, grants, benefits, or contracts. This rule involves programs for payments to certain agricultural commodity producers and thus falls within the exemption for rules related to benefits. Further, as specified in 7 U.S.C. 9091(c)(2), the regulations to implement ELAP, LFP, and LIP are:

- Exempt from the notice and comment provisions of 5 U.S.C. 553; and
- Exempt from the Paperwork Reduction Act (44 U.S.C. chapter 35).

In addition, 7 U.S.C. 9091(c)(3) directs the Secretary to use the authority provided in 5 U.S.C. 808 (part of the Congressional Review Act), which provides that when an agency finds there is good cause that notice and public procedure are impracticable, unnecessary, or contrary to the public interest, the rule may take effect at such time as the agency determines. The beneficiaries of this rule have been impacted by eligible disaster events, which have resulted in economic losses, and the changes made by this rule simplify and streamline the delivery of assistance and ensure assistance is directed to eligible losses. FSA finds that a delay in the effective date of the rule is contrary to the public interest and therefore this rule is effective upon publication in the **Federal Register**.

This rule is exempt from the regulatory analysis requirements of the Regulatory Flexibility Act (5 U.S.C. 601–612), as amended by the Small Business Regulatory Enforcement Fairness Act of 1996.

Subtitle E of the Small Business Regulatory Enforcement Fairness Act of 1996 (also known as the Congressional Review Act) requires a delay in the effective date for 60 days from the date

[6] See 7 CFR 1416.103(d)(6).

[7] See 7 CFR 1416.110(n).

[8] One animal unit is equal to one adult beef, buffalo, or beefalo adult cow or bull. FSA has determined animal unit equivalents for other eligible livestock types. For example, FSA has determined that one adult dairy cow is equal to 2.6 animal units.

[9] See *https://u.osu.edu/beef/2015/11/18/how-much-hay-will-a-cow-consume.*

of publication to allow for Congressional review of rules that meet the criteria specified in 5 U.S.C. 804(2). The Office of Information and Regulatory Affairs has determined that this rule meets the criteria in 5 U.S.C. 804(2). As discussed above, FSA finds that a delay in the effective date of the rule is contrary to the public interest and therefore this rule is effective upon publication in the **Federal Register**.

Executive Orders 12866, 13563, and 14094

Executive Order 12866, ''Regulatory Planning and Review,'' was amended by Executive Order 13563, ''Improving Regulation and Regulatory Review,'' and Executive Order 14094, ''Modernizing Regulatory Review.'' Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. The assessment should include potential economic, environmental, public health and safety effects, distributive impacts, and equity. Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. The requirements in Executive Orders 12866 and 13563 for the analysis of costs and benefits apply to rules that are determined to be significant.

Executive Order 14094 requires Federal agencies to increase and improve public participation in the regulatory process. The Executive order's objective is to improve public trust in the regulatory process by reducing the risk or appearance of unequal or unfair influence in regulatory development.

The Office of Management and Budget (OMB) designated this rule as not significant under Executive Order 12866, and therefore, OMB has not reviewed this rule and an analysis of costs and benefits is not required under either Executive Order 12866 or 13563.

Environmental Review

The environmental impacts of this final rule have been considered in a manner consistent with the provisions of the National Environmental Policy Act (NEPA, 42 U.S.C. 4321–4347), the regulations of the Council on Environmental Quality (40 CFR parts 1500 through 1508), the USDA regulation for compliance with NEPA (7 CFR part 1b), and because FSA will be making the payments to producers, the FSA regulation for compliance with NEPA (7 CFR part 799).

This rule makes discretionary, administrative changes to ELAP, LFP, and LIP. The discretionary aspects are to improve administration of these programs and clarify existing program requirements. FSA is providing the disaster assistance under ELAP, LFP, and LIP to eligible producers. The discretionary, administrative provisions would not alter any environmental impacts resulting from implementing the mandatory changes to ELAP, LFP, and LIP. Accordingly, these discretionary, administrative aspects are covered by the following Categorical Exclusion in 7 CFR 799.31(b)(6)(vi) safety net programs administrated by FSA.

Through this review, FSA determined that the proposed discretionary changes in this rule fit within the categorical exclusions listed above. Categorical exclusions apply when no extraordinary circumstances (§ 799.33) exist. This rule presents only discretionary amendments that will not have an impact on the human environment, individually or cumulatively. Therefore, FSA will not prepare an environmental assessment or environmental impact statement for this rule. This rule serves as documentation of the environmental compliance decision for this Federal action.

Executive Order 12988

This rule has been reviewed under Executive Order 12988, ''Civil Justice Reform.'' This rule will not preempt State or local laws, regulations, or policies unless they represent an irreconcilable conflict with this rule. The changes made by this rule will be effective retroactively for the 2024 program year, as discussed above. Before any judicial actions may be brought regarding the provisions of this rule, the administrative appeal provisions of 7 CFR parts 11 and 780 are to be exhausted.

Executive Order 13175

This rule has been reviewed in accordance with the requirements of Executive Order 13175, ''Consultation and Coordination with Indian Tribal Governments.'' Executive Order 13175 requires Federal agencies to consult and coordinate with Tribes on a government-to-government basis on policies that have Tribal implications, including regulations, legislative comments, or proposed legislation, and other policy statements or actions that have substantial direct effects on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes.

FSA has assessed the impact of this rule on Indian Tribes and determined that this rule does not, to our knowledge, have significant Tribal implications that require ongoing adherence to Executive Order 13175 at this time. If a Tribe requests consultation, the USDA Office of Tribal Relations will ensure meaningful consultation is provided where changes, additions, and modifications are not expressly mandated by law.

The Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA, Pub. L. 104–4) requires Federal agencies to assess the effects of their regulatory actions on State, local, and Tribal governments or the private sector. Agencies generally must prepare a written statement, including a cost benefit analysis, for proposed and final rules with Federal mandates that may result in expenditures of $100 million or more in any 1 year for State, local, or Tribal governments, in the aggregate, or to the private sector. UMRA generally requires agencies to consider alternatives and adopt the more cost effective or least burdensome alternative that achieves the objectives of the rule. This rule contains no Federal mandates, as defined in Title II of UMRA, for State, local, and Tribal governments, or the private sector. Therefore, this rule is not subject to the requirements of sections 202 and 205 of UMRA.

Federal Assistance

The title and number of the Federal assistance programs, as found in the Assistance Listing [10] to which this rule applies are:

10.088—Livestock Indemnity Program;

10.089—Livestock Forage Disaster Program; and

10.091—Emergency Assistance for Livestock, Honeybees, and Farm-Raised Fish Program.

USDA Non-Discrimination Policy

In accordance with Federal civil rights law and U.S. Department of Agriculture (USDA) civil rights regulations and policies, USDA, its Agencies, offices, and employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family or parental status, income derived from a

[10] See *https://sam.gov/content/assistance-listings.*

public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Individuals who require alternative means of communication for program information (for example, braille, large print, audiotape, American Sign Language) should contact the responsible Agency or USDA TARGET Center at (202) 720–2600 (voice and text telephone (TTY)) or dial 711 for Telecommunications Relay Service (both voice and text telephone users can initiate this call from any telephone). Additionally, program information may be made available in languages other than English.

To file a program discrimination complaint, complete the USDA Program Discrimination Complaint Form, AD–3027, found online at *https://www.usda.gov/oascr/how-to-file-a-program-discrimination-complaint* and at any USDA office or write a letter addressed to USDA and provide in the letter all the information requested in the form. To request a copy of the complaint form, call (866) 632–9992. Submit your completed form or letter to USDA by: (1) mail to: U.S. Department of Agriculture, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue SW, Washington, DC 20250–9410; (2) fax: (202) 690–7442; or (3) email: *program.intake@usda.gov.*

USDA is an equal opportunity provider, employer, and lender.

List of Subjects in 7 CFR Part 1416

Administrative practice and procedure, Agriculture, Bees, Dairy products, Disaster assistance, Fruits, Livestock, Nursery stock, Reporting and recordkeeping requirements, Seafood.

For the reasons discussed above, Commodity Credit Corporation amends 7 CFR part 1416 as follows:

PART 1416—EMERGENCY AGRICULTURAL DISASTER ASSISTANCE PROGRAMS

■ 1. The authority citation for part 1416 continues to read as follows:

Authority: Title I, Pub. L. 113–79, 128 Stat. 649; Title I, Pub. L. 115–123; Title VII, Pub. L. 115–141; and Title I, Pub. L. 116–20.

Subpart B—Emergency Assistance for Livestock, Honeybees, and Farm-Raised Fish Program

■ 2. In § 1416.103, revise paragraph (d)(6) to read as follows.

§ 1416.103 Eligible losses, adverse weather, and other loss conditions.

* * * * *

(d) * * *

(6) A loss resulting from the additional cost incurred on or after January 1, 2021, to transport eligible livestock to feed or livestock feed to eligible livestock for additional mileage above normal, due to eligible adverse weather, an eligible loss condition, or eligible drought, as determined by the Deputy Administrator, including costs associated with treating livestock feed to prevent the spread of invasive pests. The cost of the feed is not eligible for payment. Negligence, mismanagement, or wrongdoing by the producer is not considered an eligible loss condition for livestock or feed transportation costs. To be eligible for a loss under this paragraph (d)(6), the livestock must be livestock that would normally have been on eligible grazing lands physically located in the county where the eligible adverse weather, eligible loss condition, or eligible drought, as determined by the Deputy Administrator, occurred. The eligible loss from the additional cost to transport livestock feed is limited to the cost to transport feed to meet the feed needs of eligible livestock for the program year in which the eligible adverse weather, eligible loss condition, or eligible drought occurred. The cost to transport livestock feed is not an eligible loss if the feed is purchased or obtained:

(i) In excess of the amount needed for the program year in which eligible adverse weather, eligible loss condition, or eligible drought occurred, as determined according to § 1416.110(q);

(ii) To sell to another producer;

(iii) For another producer's livestock; or

(iv) For ineligible livestock.

* * * * *

■ 3. In § 1416.106, revise paragraph (c)(5) to read as follows.

§ 1416.106 Notice of loss and application process.

* * * * *

(c) * * *

(5) Additional cost incurred to transport eligible livestock to feed or livestock feed to eligible livestock for additional mileage above normal, due to an eligible adverse weather, an eligible loss condition, or eligible drought, as determined by the Deputy Administrator, including costs associated with treating livestock feed to prevent the spread of invasive pests. Verifiable or reliable records include, but are not limited to, commercial receipts, contemporaneous records, and invoices. Handwritten receipts are not acceptable without accompanying truck logs or other documentation to verify the cost of transportation. Cash payments must be supported by a verifiable record indicating that the transaction was made between two parties. Records must clearly indicate the dates on which livestock or feed was transported and the total mileage transported. A participant must provide verifiable records or reliable records that show additional livestock feed was only purchased or obtained to sustain eligible livestock during eligible adverse weather, an eligible loss condition, or eligible drought.

* * * * *

■ 4. Revise § 1416.107 to read as follows.

§ 1416.107 Notice of loss and application period.

(a) To receive an ELAP payment, the participant must submit the following to the FSA county office by March 1 after the end of the applicable program year:

(1) A notice of loss;

(2) A complete application for payment; and

(3) Any other documentation required by this subpart.

(b) [Reserved]

■ 5. In § 1416.110:

■ a. Redesignate paragraph (q) as paragraph (r); and

■ b. Add new paragraph (q).

The addition reads as follows.

§ 1416.110 Livestock payment calculations.

* * * * *

(q) For the purpose of payments under paragraph (n) of this section, losses resulting from the additional cost of transporting livestock feed to eligible livestock are limited to the additional cost of transportation of feed to satisfy the feed needs of the eligible livestock identified on the application during the program year in which the eligible drought or other eligible loss condition occurred. Therefore, FSA will:

(1) Convert the number of eligible livestock identified on the application to an animal unit basis;

(2) Multiply the animal units determined in paragraph (q)(1) of this section by 24 pounds of corn or corn equivalent or 39 pounds of hay or forage;

(3) Multiply the result of paragraph (q)(2) of this section by the number of calendar days in the time period from the beginning date of the eligible drought or other eligible loss condition until the end of the program year; and

(4) Limit the truckloads used in the calculation to the total pounds calculated in paragraph (q)(3) of this

section. Any loads hauled in excess of that amount during the program year are not eligible for assistance.

* * * * *

Subpart C—Livestock Forage Disaster Program

§ 1416.206 [Amended]

■ 6. In § 1416.206, in paragraph (a), remove the words ''30 calendar days'' and add ''March 1'' in their place.

Subpart D—Livestock Indemnity Program

■ 7. In § 1416.305:
■ a. Revise paragraph (b)(1);
■ b. In paragraph (c), remove the year ''2019'' and add ''2024'' in its place, and remove the words ''60 calendar days'' and add ''March 1'' in its place; and
■ c. In paragraph (i)(1), remove the words ''60 calendar days'' and add ''March 1'' in their place.

The revision reads as follows.

§ 1416.305 Application process.

* * * * *

(b) * * *

(1) Provide a notice of loss, by livestock unit, to FSA by March 1 after the end of the calendar year in which the eligible loss occurred.

* * * * *

Steven Peterson,

Acting Executive Vice President, Commodity Credit Corporation, and Acting Administrator, Farm Service Agency.

BILLING CODE 3411–EB–P

DEPARTMENT OF AGRICULTURE

7 CFR Part 2100

RIN 0503–AA82

[Docket No. USDA–2024–0003]

Technical Guidelines for Climate-Smart Agriculture Crops Used as Biofuel Feedstocks

AGENCY: Office of the Chief Economist (OCE), U.S. Department of Agriculture (USDA).

ACTION: Interim rule.

SUMMARY: This interim rule with request for comment establishes technical guidelines for quantifying, reporting, and verifying the greenhouse gas (GHG) emissions associated with agricultural production of biofuel feedstock commodity crops grown in the United States in the context of environmental service markets. Specifically, the rule establishes guidelines for the reporting and verification of practices and technologies used in the production of certain commodity crops that result in lower greenhouse gas emissions or increases in carbon storage. These practices are referred to in the context of this rule as climate-smart agriculture (CSA) practices. The guidelines established through this rule articulate an approach for farm producers to quantify the GHG emissions associated with crops produced using one or more CSA practices. The guidelines also articulate a framework for how information regarding GHG emissions, resulting from the production of biofuel feedstock commodity crops, could be reported and tracked throughout the supply chain.

DATES:

Effective: January 17, 2025.

Comment Date: We will consider comments that we receive by March 18, 2025.

ADDRESSES: We invite you to submit comments on this rule. You may submit comments through the:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov* and search for Docket ID USDA–2024–0003. Follow the online instructions for submitting comments.

Comments will be available for viewing online at *www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: William Hohenstein, Director of the Office of Energy and Environmental Policy, (202) 720–0450, *william.hohenstein@usda.gov.* Individuals who require alternative means for communication should contact the USDA TARGET Center at (202) 720–2600 (voice and text telephone (TTY)) or dial 711 for Telecommunications Relay Service (both voice and text telephone users can initiate this call from any telephone).

SUPPLEMENTARY INFORMATION:

Background

This rule establishes new technical guidelines for crop commodities that are used as biofuel feedstocks. USDA is issuing this rule to establish guidelines for the quantification, reporting, and verification of GHG reduction benefits resulting from implementation of CSA practices in the production of commodities that are used as biofuel feedstocks in the context of environmental services markets. CSA practices are agricultural management practices, systems, and technologies that have been demonstrated to generally reduce GHG emissions or increase soil carbon sequestration. Greater adoption of CSA practices could lower overall GHG emissions associated with biofuel production and provide other environmental benefits, such as improved water quality and soil health.

These technical guidelines are intended for the purpose of biofuels production. USDA's authority allows for the establishment of guidelines related to emerging environmental services markets. At this time, the biofuel market represents a clear market opportunity for climate-smart feedstocks. Producing a carbon offset is a different policy context that would require a different set of standards. These guidelines do not constitute a carbon offset protocol.

The net GHG emissions associated with a defined set of CSA practices will be quantified as explained below in the Methodology for Calculating Carbon Intensities used in USDA Feedstock Carbon Intensity Calculator (USDA FD–CIC) section, once USDA FD–CIC is finalized. USDA will shortly publish USDA FD–CIC on its website at *https://www.usda.gov/usda-fdcic* for peer-review purposes, beta testing, and to obtain public feedback.

Crop production generates GHG emissions, including from soil carbon released during tillage and nitrous oxide emissions resulting from fertilizer use, among other sources. When such crops are used as feedstocks to produce biofuels, the GHG emissions associated with their production contribute a significant percentage of the overall GHG emissions associated with crop-based biofuel production. For instance, feedstock emissions account for approximately 56 percent and 55 percent of the direct emissions from producing corn ethanol and soybean biodiesel, respectively. The GHG emissions associated with feedstock crop production can be reduced through CSA practices, in turn reducing the lifecycle GHG emissions of a biofuel. To date, most existing programs have relied on assumptions about average or typical farming practices to estimate emissions associated with biofuel feedstock production. To improve the empirical basis and verifiability of the effects of CSA practices on net GHG emissions, and to quantify net GHG emissions reductions specifically attributed to those feedstocks grown with climate-smart practices, USDA developed this rule to establish technical guidelines for CSA crops used as biofuel feedstocks. This interim rule allows for the differentiation and quantification of carbon intensities associated with the production of CSA crops used as biofuel feedstocks, through USDA FD–CIC, upon its finalization.

This interim rule is authorized by the Food, Conservation, and Energy Act of 2008 (2008 Farm Bill (Pub. L. 110–246)),

§ 2709, (16 U.S.C. 3845), which authorizes the Secretary of Agriculture to establish technical guidelines that outline science-based methods to measure the environmental services benefits from conservation and land management activities in order to facilitate the participation of farm producers, ranchers, and forest landowners in emerging environmental services markets and to give priority to the establishment of guidelines related to farmer, rancher, and forest landowner participation in carbon markets. It further directs the Secretary to establish verification guidelines, including the role of third parties in conducting independent verification of benefits produced for environmental services markets and other functions.

Regulations to implement the programs of Chapter 58 of Title 16 of the U.S. Code, as specified in 16 U.S.C. 3846, and the administration of those programs are to be made as an interim rule effective on publication, with an opportunity for notice and comment. Here, the guidelines relate to the administration of a program for participation in environmental markets. Accordingly, USDA is issuing this interim rule effective on publication with request for comment. This interim rule will facilitate farm producers' ability to participate in environmental service markets associated with biofuel production by establishing guidelines for quantification, reporting, and verification of GHG emissions resulting from the production of agricultural crops grown using CSA practices. It also establishes verification guidelines to increase certainty that the practices claimed are implemented according to the standards established by this rule. While USDA is not creating an environmental service market through this rule, USDA is making these guidelines available for consideration in international, national, or state clean transportation fuel policies in accordance with 16 U.S.C. 3845, as described above.

Currently, very few U.S.-based clean transportation fuel programs or policies (including private and government programs) have standards or guidelines for climate-smart agricultural practices, such as those described in this rule, to account for the emissions reductions they generate.

Those policies or programs that contain some or all of the elements of the standards in this rule (including CSA practice standards, recordkeeping, quantification, reporting and verification of emissions reductions of such practices) are smaller in scale or were only recently developed and at the pilot stage. For example, the U.S. Department of the Treasury (Treasury) 40B Sustainable Aviation Fuel (SAF) tax credit provides one example of a biofuel policy that incorporated emissions reductions for crops produced using CSA practices. This tax credit provided per gallon credits for the sale or use of SAF defined as achieving a life cycle GHG emissions reduction of at least 50 percent as compared to petroleum-based jet fuel. Treasury and Internal Revenue Service (IRS) guidance for the tax credit included a safe harbor for the USDA CSA Pilot Program, making SAF produced using soybeans or corn employing a bundle of CSA practices eligible for a higher tax credit than SAF produced using crops produced without the bundle of CSA practices. For the purpose of the SAF tax credit, the CSA practice standards, quantification, reporting and verification requirements only pertained to the one bundle of CSA practices eligible under the guidance so are not broadly applicable. As the guidance stated, Treasury and IRS established the CSA safe harbor on a pilot basis to advance the development of CSA verification mechanisms, recognizing the potential emissions reduction benefits of CSA and also the limitations of currently available verification mechanisms, empirical data, and modeling.

California's Low Carbon Fuel Standard (LCFS) and the Carbon Offsetting and Reduction Scheme for International Aviation (CORSIA) incentivize transportation fuels that have lower GHG emissions, but they do not have standards for the production of biofuel feedstocks or standards that would credit farm producers for the use of CSA practices. The American Ethanol Council through a USDA Regional Conservation Partnership Program grant is working with state partners in several Midwestern states to increase adoption of CSA practices and quantify emissions reductions associated with the use of these practices by paying farmers a premium for adoption of conservation practices that have demonstrated emission benefits including no-till/strip till, cover crops, and nutrient management practices. However, while the program has practice adoption standards it does not provide a whole system for the quantification, recordkeeping, and verification of emissions benefits through the biofuel supply chain.

Given that no comprehensive standards for CSA practice adoption, quantification of emissions benefits, recordkeeping, verification and reporting of emissions benefits currently exist in the U.S. for biofuels markets, USDA is issuing this rule to establish guidelines for the quantification, reporting, and verification of GHG reduction benefits resulting from implementation of CSA practices in the production of commodities that are used as biofuel feedstocks.

This rule specifies technical guidelines to establish a method of calculating the climate benefits of certain agricultural practices. However, other programs, including federal programs such as tax credits, may require additional or different verification or other procedures in order to effectively administer the requirements of their statutes. Accordingly, while these guidelines may inform the subsequent development of requirements for other programs, such requirements will be established through rulemaking or guidance by the relevant agencies or organizations, taking into account specific statutory requirements, program features, and/or administrative feasibility and constraints.

Should any provision of this rule be deemed invalid, USDA intends that the remaining provisions continue with full effect in order to effectuate the purposes of the statute.

Methodology for Calculating Carbon Intensities Used in USDA FD–CIC

This section explains the methodology that was used to calculate values included in USDA FD–CIC. Over the past year, USDA has worked with academic institutions and experts to develop USDA FD–CIC, which, once finalized, would provide users with a crop-specific, per-bushel carbon intensity associated with biofuel feedstock crops using one or more CSA practices. Net emissions are expressed as a carbon intensity (CI), which is a measure of the total carbon dioxide equivalent (CO2-eq) emissions per unit of crop produced (that is, per bushel).

In general, USDA FD–CIC quantifies the CI (in GHG emissions per bushel) of three domestic feedstock crops (field corn, soybeans, and sorghum) produced using one or more specified CSA practices. The USDA FD–CIC model is separate and distinct from models specific to other programs or incentives, for example, 40BSAF–GREET, and the values calculated by USDA FD–CIC may not be representative of values generated by or applicable to other program or incentive-specific models. The USDA FD–CIC feedstock CI estimates reflect the use of specified CSA practices. CSA practices may lead to changes in:

- soil organic carbon (SOC) storage,

• direct and indirect nitrous oxide emissions (N_2O),
• upstream emissions from fertilizer production, and
• carbon dioxide (CO_2) emissions from on-farm energy consumption.

The effectiveness of CSA practices in reducing the CI of feedstocks varies by region. The USDA FD–CIC model contains feedstock CI estimates for each CSA practice and combination of practices for each county.

The underlying models used to generate values in USDA FD–CIC have undergone extensive peer-review. Further, under USDA's authorities in section 2709 of the 2008 Farm Bill, in April 2024, USDA published Quantifying Greenhouse Gas Fluxes in Agriculture and Forestry: Methods for Entity Scale Inventory.[1] The publication of these methods adhered to the U.S. Office of Management and Budget (OMB) guidelines ''Final Information Quality bulletin for Peer Review,'' which was published on January 14, 2005 (70 FR 2664–2677), and this document has been designated by OMB as a highly influential scientific assessment. The method recommended for quantifying changes in soil carbon stocks and nitrous oxide emissions from agricultural soils refers to the DAYCENT ecosystem model, which is used as described in the USDA FD–CIC documentation.

USDA will shortly publish USDA FD–CIC on its website at *https://www.usda.gov/usda-fdcic* for peer-review purposes, beta testing, and to obtain public feedback. As part of this process of testing and feedback prior to finalization, the public will have the opportunity to examine and download USDA FD–CIC to experience how it would operate. Additional details documenting USDA FD–CIC will be available at *https://www.usda.gov/usda-fdcic.* USDA will evaluate and respond to the public feedback and peer-review provided on USDA FD–CIC, after which USDA will take final action to establish an operative version. Before such final action is taken, users should consider values from USDA FD–CIC as preliminary and should not rely upon them.

Definitions

This rule establishes definitions in 7 CFR 2100.002 for terms that are relevant to biofuel feedstock production; agricultural practices; the biofuels supply chain; processing crops in the biofuel supply chain; and recordkeeping and verification.

The rule defines the following terms relevant to biofuel feedstock production: ''farm producer,'' ''biofuel,'' ''biomass,'' ''feedstock,'' ''biofuel feedstock crop,'' ''carbon intensity,'' ''conventional crop,'' ''climate-smart agriculture (CSA) crop,'' and ''reduced-carbon intensity (reduced-CI) crop.'' In the context of this rule, ''carbon intensity (CI),'' ''climate-smart agriculture (CSA) crop,'' and ''reduced carbon intensity (reduced-CI) crop'' are relevant to biofuel feedstock production in that the rule contains guidance for on-farm CSA practices that can lead to reduced-CI biofuel feedstocks. The definitions of ''agricultural expert,'' ''farm,'' ''farm producer,'' ''biofuel,'' ''biomass,'' ''feedstock,'' and ''biofuel feedstock crop'' align with existing USDA definitions. The definition for ''carbon intensity'' also aligns with language used by California's LCFS.

The rule defines the following terms relevant to agricultural practices: ''climate-smart agriculture (CSA) practices,'' ''cover crop,'' ''intensive tillage,'' ''leguminous cover crop,'' ''no-till,'' ''crop interval,'' ''nutrient management,'' ''planting green,'' ''reduced till,'' and ''soil tillage intensity rating (STIR).'' This rule defines these terms based on existing USDA definitions, relying heavily on USDA's Natural Resource Conservation Service (NRCS) practice definitions used in existing conservation programs. These definitions provide the necessary context for subpart F of 7 CFR part 2100, which lays out the parameters for CSA practices that farm producers can implement to produce CSA crops.

The rule defines the following terms relevant to the biofuels supply chain: ''farm,'' ''first point of aggregation,'' ''intermediary entity,'' and ''biofuel refiner.'' These terms distinguish the various entities in the biofuels supply chain referred to in this rule. As outlined in subparts D and E of 7 CFR part 2100, recordkeeping and verification standards differ among farms, first points of aggregation, intermediary entities, and refiners. This approach was informed by the International Sustainability and Carbon Certification (ISCC) standards for verifying entities within the SAF production supply chain for the Carbon Offsetting Reduction Scheme for International Aviation (CORSIA).

The rule defines the following terms relevant to processing crops in the biofuel supply chain: ''process,'' ''crushing yield,'' ''input product,'' ''processed product,'' and ''reduced-CI processed product.'' These terms are defined for the purpose of this rule to clarify how reduced-CI biofuel feedstocks pass through the supply chain and are processed into new material forms, including ''reduced-CI processed products.'' The ''crushing yield'' is referenced in subpart D of 7 CFR part 2100 as both a recordkeeping requirement and a component of the mass balance equation. Similarly, the terms ''process,'' ''input product,'' and ''processed product'' are used to describe the activities of various entities in the supply chain and the recordkeeping standards for the inputs and outputs they handle. As noted in subpart D in § 2100.033, there are additional recordkeeping standards for entities that process, sell, or purchase reduced-CI processed products.

This rule defines the following terms relevant to recordkeeping and verification: ''accreditation,'' ''audit,'' ''biofuel feedstock report,'' ''farm producer attestation,'' ''mass balance system,'' ''operational control,'' ''third party verifier,'' ''field,'' and ''management unit.'' These terms are used primarily in subpart D of 7 CFR part 2100, which describes the chain of custody standards for 7 CFR part 2100, and Subpart E, which describes the auditing and verification process. The ''mass balance system'' definition aligns with ISO 22095:2020, which establishes international standards for chain of custody systems used in certification and compliance schemes. The terms ''field,'' ''management unit,'' ''operational control,'' ''biofuel feedstock report,'' and ''farm producer attestation'' are used in describing the practice and recordkeeping standards for farm producers for 7 CFR part 2100. These terms reflect definitions used in the implementation of USDA farm-level programs. Broadly, definitions in this section reflect industry standards around auditing and verification within chain of custody systems.

Applicability

Under authorities in section 2709 of the 2008 Farm Bill, this rule establishes 7 CFR 2100.001 through 2100.053 to define and explain technical guidelines for quantifying, reporting, and verifying the GHG emissions associated with production of biofuel feedstock commodity crops using CSA practices and grown in the United States. The primary purpose of this rule is to establish a system for tracking information relevant to environmental service markets, namely the CI of crops grown with CSA practices that are ultimately used as biofuel feedstock.

[1] See *https://www.usda.gov/about-usda/general-information/staff-offices/office-chief-economist/office-energy-and-environmental-policy/climate-change/greenhouse-gas-inventory-and-assessment-program/quantifying-greenhouse-gas-fluxes-methods-entity-scale-inventory.*

This rule specifies domestic biofuel feedstock crops, which include field corn, soybeans, and sorghum, as defined in subpart B in § 2100.011 for which a reduced-CI could be quantified using USDA FD–CIC, upon finalization. These domestic crops were included because they account for the majority of biomass feedstock crops used to produce transportation biofuels in the United States. Furthermore, there is modeling and data available to support the quantification of carbon intensity for these feedstock crops. Grain from field corn or sorghum is used to produce ethanol, while vegetable oils, predominately from soybeans, are used for the production of biodiesel, renewable diesel, and SAF. Intermediate oilseeds (for example, camelina, carinata and pennycress) and canola were excluded from this rule given their current limited use in domestic biofuel production and because there is insufficient data on how CSA practices affect the GHG emissions associated with their production.

Crops produced using certain CSA practices are referred to as CSA crops and are defined in § 2100.011. Crops produced without the use of CSA practices are referred to as conventional crops. CSA crops generally have a reduced CI compared to a conventional crop of the same type and produced in the same location. Depending on the specific crop being produced, CSA crops defined in this rule are grown using one or more of the following practices: no-till, reduced till, cover crops, nitrification inhibitors, split in-season nitrogen application, and no fall nitrogen application. These practices were chosen because they can be used in the production of field corn, soybeans, or sorghum and because scientific evidence demonstrates their effectiveness at reducing GHG emissions or sequestering additional carbon. This rule only includes practices which are used on-field and excludes those practices that occur on field edges or farm borders, in order to associate emissions reductions with the production of commodities on a per acre or per output (for example, bushels) basis.

CSA crops and conventional crops may be physically commingled beginning at the farm if both are being produced. This rule allows for mixing of CSA and conventional crops because segregating crops after harvest and throughout the supply chain is infeasible at farms and entities receiving the crops, especially where farms or other entities lack facilities to physically separate and store crops. Commingling of crops produced using different management techniques is standard practice. Crops that are sold with an associated reduced-CI are referred to as reduced-CI crops and may be composed of solely CSA crops or a combination of CSA crops and conventional crops. If CSA crops and conventional crops are produced at the same farm, the commingled reduced-CI crops must have an associated CI calculated using a weighted average approach, as specified in § 2100.020, Quantification of CI.

This rule can be applied to entities involved in the supply chain for biofuel feedstocks, which spans from the farm to the biofuel refiner. This includes entities that may be producing, storing, processing, or more generally, taking ownership of reduced-CI crops or reduced-CI processed products (that is, a product derived from reduced-CI crops, such as soybean oil) in the supply chain. These entities may include grain elevators or other intermediary storage facilities, processing facilities, and biofuel refiners. Entities that produce or take ownership of reduced-CI crops or reduced-CI processed products are subject to recordkeeping and verification standards.

The scope of this rule extends to the purchase of reduced-CI crops or reduced-CI processed products up to the point of a biofuel refiner. The production and carbon intensity of biofuels, such as ethanol or biodiesel made with reduced-CI crops or processed products, is not covered under this rule.

Quantification of Farm-Level Crop-Specific Carbon Intensities

Under USDA's authorities in the 2008 Farm Bill in section 2709, this rule establishes technical guidelines for use in developing a procedure to measure environmental services benefits. Environmental service benefits are estimated as a reduction in net GHG emissions resulting from crop production with CSA practices compared to a national average baseline. Net emissions are expressed as CI, which is a measure of the total CO_2-eq emissions per unit of crop produced (that is, per bushel). Generally, the use of CSA practices lowers the CI per bushel and results in environmental service benefits relative to a national average baseline CI.

In Subpart C, this rule establishes voluntary technical guidelines for the quantification of CI. CIs are quantified for a specific crop at the farm-level (that is, they account for a farm's total volume of production of a specific crop) on an annual basis, derived from field or management unit-level CIs that depend on the CSA practices used on those fields. For example, a farm that produces field corn in 2025 and both field corn and soybeans in 2026 would have a 2025 field corn CI, a 2026 corn CI, and a 2026 soybean CI.

Consider a farm that uses different production practices for soybeans on different fields or management units: a portion of the fields or management units use conventional production methods (typically highest CI), a portion use cover crops (typically lower CI), and a portion use both cover crops and no-till (typically lowest CI). The farm-level CI for soybeans is a weighted average of the three CI values. The weighted average CI accounts for the relative production of soybeans under conventional, cover crop, and cover crop plus no-till management.

This rule outlines the steps to quantify a farm-level crop-specific CI. CI would be quantified using the USDA FD–CIC, upon its finalization. To quantify CI under this rule, a farm producer would input field-level management information into USDA FD–CIC. Input information would include farm location (county and state), crop type produced, total field or management unit acres, and use of CSA practices, such as no-till or reduced till; use of a cover crop; timing of nitrogen fertilizer application; and nitrification inhibitor usage. USDA FD–CIC output would include a field-level CI for the crop produced using the specified practices at the farm location. This step would be repeated for all fields or management units within a farm on which the crop is grown. In addition to CI for each field or management unit, USDA FD–CIC could also calculate a weighted farm-level average across fields growing the same crop. Farm producers would also need to input information on the fields and management units growing crops without CSA practices. USDA FD–CIC would assign crops on these fields the default national average CI. These calculations would generate a farm-level, crop-specific CI. Further information on USDA FD–CIC, information requirements and how it is used can be found here: *https://www.usda.gov/usda-fdcic.*

Chain of Custody and Verification

As described in subpart D, every entity in the supply chain producing or taking ownership of reduced-CI crops or reduced-CI processed products covered by this rule must have a system for maintaining records. All first points of aggregation, intermediary entities, and biofuel refiners must also be audited annually by an accredited third-party

verifier. Crucially, accredited third-party verifiers ensure the veracity of the underlying crop production practices and estimated emissions reduction benefits associated with the production of CSA crops by auditing a sample of the farms supplying reduced-CI crops to first points of aggregation, as described in subpart E of this rule. This review is necessary for establishing effective environmental service markets, as described in section 2709 of the 2008 Farm Bill. In the case of markets for transportation biofuel feedstocks, this traceability and verification system could allow for entities such as farm producers, elevators, other intermediary storage facilities, and biorefineries to sell products with environmental attributes such as reduced emissions. In some cases, selling a product with an environmental attribute could enable these entities to earn a premium price for growing, handling, and otherwise helping to move reduced-CI biofuel feedstock through the supply chain.

Recordkeeping and Reporting Standards

As described above, the supply chain for agricultural feedstocks used in biofuel production begins at a farm and ends at a biofuel refiner. The first entity to take ownership of reduced-CI feedstock after the farm is referred to as the first point of aggregation and may include, but is not limited to, elevators; processors (for example, crushers); and biofuel refiners. Intermediary entities take ownership of reduced-CI feedstock or reduced-CI processed product between the first point of aggregation and biofuel refiner. The biofuel refiner is the last entity in the supply chain covered by this rule. If a biofuel refiner sources any reduced-CI crop directly from farms, it is the first point of aggregation for the quantity of crop coming directly from farms and is subject to recordkeeping and audit standards applicable to the first point of aggregation. This rule reflects that biofuel feedstock supply chains can include different numbers and types of entities. A biofuel refiner sourcing feedstocks directly from farms represents a simple supply chain. A more complex supply chain may involve crop that is purchased by an elevator, subsequently purchased by crusher for processing, and finally purchased as processed product by a biofuel refiner.

USDA's authorities in section 2709 of the 2008 Farm Bill direct the Secretary to establish technical guidelines for use in developing a protocol to report environmental services benefits and a registry to collect, record and maintain the benefits measured. The recordkeeping standards in this rule establish voluntary guidelines for documenting CI information associated with reduced-CI crops and reduced-CI processed products at individual entities. Additionally, this rule establishes voluntary guidelines for reporting CI information between entities in the supply chain. The recordkeeping standards further require entities to use a mass balance accounting system, which constitutes an internal registry system for each entity to record and maintain the CI associated with reduced-CI crops and the volumes of those crops used in reduced-CI processed products.

This rule specifies general recordkeeping standards applicable to all entities as well as specific standards for farms, first points of aggregation, intermediary entities, and biofuel refiners. All records must be maintained for 5 years. Recordkeeping standards enable third-party verification to ensure that entities follow the applicable standards in this rule.

Recordkeeping and Reporting Standards for Farms

The primary purpose of recordkeeping standards at the farm is to provide evidence of CSA practices and sale of reduced-CI crops. Farm producers are required to keep records demonstrating the following:

- implementation of CSA practices in accordance with the standards in this rule (described further in the CSA Practice Standards: Recordkeeping section below);
- evidence of sales of reduced-CI feedstocks; and
- documentation of CI calculations completed in USDA FD–CIC, once finalized.

For reporting purposes, farm producers are required to prepare a Biofuel Feedstock Report for each crop sold as a reduced-CI crop. The Biofuel Feedstock Report includes a Farm Producer Attestation and documentation showing quantification of the farm-level crop-specific CI. The Farm Producer Attestation is a document attesting that the crop was produced in accordance with practice standards specified in this rule and that the farm producer had operational control of fields or management units where CSA practices were used. The Farm Producer Attestation also states the total number of bushels of crop produced and the associated farm-level CI. The Biofuel Feedstock Report also includes the USDA FD–CIC inputs (that is, CSA practices used) and output (that is, CI) for each field or management unit on which the crop was produced, as well as the calculation of the field-level and farm-level crop-specific CI. When reduced-CI crop is sold, the farm producer must provide a copy of the Biofuel Feedstock Report to the first point of aggregation.

Recordkeeping and Reporting Standards for First Points of Aggregation and Intermediary Entities

First points of aggregation and intermediary entities purchase and sell reduced-CI crops. They may also process reduced-CI crops, and purchase or sell reduced-CI processed products. The primary purpose of recordkeeping standards at these entities is to track the amount of reduced-CI crops and reduced-CI processed products that are purchased or sold. Additionally, the rule specifies that first points of aggregation and intermediary entities must report the volume sold, associated CI, and provide evidence of third-party verification to the purchasing entity.

To track the amount of incoming and outgoing reduced-CI crops or reduced-CI processed products, first points of aggregation and intermediary entities must operate a mass balance system. Mass balance is a method of accounting used to track the weight or volume of products moving through an entity without product segregation. The weight or volume of reduced-CI crops that is sold should not exceed the amount purchased. Similarly, the weight or volume of reduced-CI processed product sold should not exceed the weight or volume purchased or processed on site from reduced-CI crops. This system allows for reduced-CI crops to be physically mixed with conventional crops, and for reduced-CI processed products to be physically mixed with processed products derived from conventional crops.

This rule requires entities to maintain records that demonstrate the amounts of reduced-CI crops and reduced-CI processed products, and associated CIs, moving into and out of the entity. These records constitute mass balance accounting, in that they can be used to demonstrate that the amount of reduced-CI crops or processed products sold from an entity does not exceed the amount that was produced or purchased. These records also enable a third-party verifier to audit an entity's mass balance system.

The mass balance can be represented by an equation, which requires that incoming and outgoing feedstocks must be equivalent over a pre-defined mass balance time period, for which the outgoing reduced-CI crops or processed products, with specific CIs, must be

balanced with the incoming crop or processed product with respective CIs. Mass balance time periods are continuous so that no gaps between mass balance periods occur, and each time period may not exceed three months. Each entity should document the mass balance time period, complete mass balance calculations for each mass balance time period, and document results. If reduced-CI crops or processed product is remaining at the end of a mass balance time period, it is accounted for as ''ending stored feedstock.'' This product is included as ''beginning stored feedstock'' in the calculation for the next mass balance time period. Documentation of the mass balance calculation for each time period must be provided to the entity's third-party verifier during the audit. The third-party verifier may request additional records to verify mass balance calculations during the audit. The following equation illustrates the mass balance calculation:

$$\text{incoming feedstock}_{i,c,m} + \text{beginning stored feedstock}_{i,c,m} = \text{outgoing feedstock}_{i,c,m} + \text{ending stored feedstock}_{i,c,m}$$

Feedstocks (incoming, stored, and outgoing) for entity *i* are identified by their carbon intensity, *c,* and the pre-defined mass balance time period, *m.* Incoming feedstocks include those purchased by entity *i* in time period *m.* Outgoing feedstocks must include both sold and discarded or wasted feedstocks in time period *m.* Stores of feedstocks are those maintained by the entity during time period *m* and must be accounted for in the mass balance. Entities should record and account for the quantity of stored feedstock at the start and end of time period *m.*

First points of aggregation and intermediary entities that process, sell, or purchase reduced-CI processed product are subject to additional recordkeeping standards. In some instances, reduced-CI crop may be processed before being sold to a biofuel refiner (for example, soybeans processed into soybean oil). Entities that process reduced-CI crop are required to track the amount of reduced-CI crop used in processing, the corresponding amount of reduced-CI processed product, and the crushing yield. These values must align such that reduced-CI processed product amount equals the crushing yield multiplied by the reduced-CI crop amount. These recordkeeping standards provide a mechanism to continue tracking the original reduced-CI crop amount and associated CI throughout the supply chain.

Incoming, stored, or outgoing feedstock can include reduced-CI crops or reduced-CI processed products. To ensure that the mass balance accounting for entity *i* appropriately accounts for different forms of reduced-CI processed products (that is, oils), the entity's crushing yield must be used to convert reduced-CI processed products back to their crop volume or weight equivalents using the following equation:

$$\text{processed feedstock crop equivalent} = (\text{processed feedstock})/(\text{crushing yield})$$

Recordkeeping Standards for Biofuel Refiners

Biofuel refiners are the last entity in the supply chain covered by the recordkeeping standards of this rule. The primary purpose of recordkeeping standards at biofuel refiners is to track the incoming amount of reduced-CI crops or reduced-CI processed products. Biofuel refiners must establish a system to track incoming reduced-CI crops or reduced-CI processed products and associated CIs. If a biofuel refiner purchases any reduced-CI crop directly from farm producers, it is also subject to the recordkeeping standards for a first point of aggregation.

Verification

Third-party verification by accredited verifiers provides assurances that entities follow the standards specified in this rule. All entities from the first point of aggregation to the biofuel refiner must hire a third-party verifier to conduct an audit annually. Evidence of verification is passed throughout the supply chain. Beginning with the first point of aggregation, each entity must provide proof of third-party verification to all subsequent entities to whom they sell reduced-CI feedstock or reduced-CI processed products.

Farms receive audits as suppliers of the first point of aggregation, and a sample of farms supplying reduced-CI crops must be audited by a third-party verifier each year. Per the recordkeeping and reporting standards in this rule, farm producers must provide the first point of aggregation with a copy of the Biofuel Feedstock Report which provides attestation of CSA practices and documents the quantification of farm-level crop-specific CI. This document can be used by the first point of aggregation's third-party verifier to collect farm information and aide in selecting the farm audit sample.

Audits at the first point of aggregation include two parts: an audit of the first point of aggregation's processes, and audits at a sample of farms supplying the first point of aggregation with reduced-CI crop.

In auditing the first point of aggregation's processes, a third-party verifier must verify that the first point of aggregation is operating a mass balance system in accordance with the standards in this rule and has correctly recorded the CI associated with reduced-CI crops delivered from each farm.

The first point of aggregation must provide its third-party verifier with information enabling the third-party verifier to select a random sample of farms to audit. The sample of farms must be selected by the third-party verifier and the sample size must be at least the square root of the total number of farms supplying the first point of aggregation with reduced-CI crop. For example, if a first point of aggregation purchases reduced-CI crop from 51 farms, the farm audit sample must include at least 8 farms (the square root of 51 is 7.14 which is rounded up to 8). Taking a square root of suppliers to determine the minimum sample size aligns with industry accepted standards in current use, such as the ISCC CORSIA certification program for SAF. The sample must be selected in a way that is representative of the supplying farms' characteristics, including types of supplied feedstock, size of farm, geographic location, and risk of non-conformity or fraud. Additionally, third-party verifiers should vary the farms included in a first point of aggregation's audit sample from year to year.

For farms that are selected for an audit by the first point of aggregation, the third-party verifier must verify that the CSA practices and recordkeeping are conducted as specified in this rule. Additionally, the third-party verifier must verify that the weighted average calculation of the farm-level crop-specific CI is done correctly.

If a farm is selected as part of the audit sample for the first point of aggregation, the farm may be considered exempt from an additional audit if a third-party verifier previously audited the farm according to the standards established in this rule for the applicable year. Farm producers can elect to proactively retain a third-party verifier, accredited to ISO 14065, to complete an audit at their farm. This approach allows flexibility for farm producers who may wish to hire their own third-party verifier, while also maintaining integrity and upholding standards for third-party verifiers established by this rule. Farm producers may choose this option to coordinate with already scheduled audits, or for other reasons. To be considered exempt

from an additional audit, the farm producer must provide results of the completed audit to the first point of aggregation's third-party verifier. It is up to the discretion of the third-party verifier to determine whether the farm is exempt from an additional audit, or whether a full or partial audit is necessary.

As defined by this rule, an intermediary entity does not source reduced-CI crops directly from farm producers. The audit standards for intermediary entities include third-party verification of the mass balance system and recordkeeping related to reduced-CI crops or reduced-CI processed product purchased or sold.

The audit standards for biofuel refiners include verification that the biofuel refiner operated a system to correctly record the CI associated with reduced-CI feedstock or reduced-CI processed product. Additionally, biofuel refiners that are acting as a first point of aggregation must also follow the audit standards for first points of aggregation.

Any entity that processes reduced-CI feedstock must comply with additional audit standards to ensure that the amount of reduced-CI processed product is calculated correctly, using the facility-level crushing yield, and that records support mass balance of the product.

All third-party verifiers hired to conduct audits as specified in this rule must be accredited to ISO 14065: General principles and standards for bodies validating and verifying environmental information by a member of the International Accreditation Forum.

CSA Practice Standards: Implementation

This rule establishes implementation standards for specific CSA practices: reduced till, no-till, cover crops, and specified nutrient management practices, such as nitrification inhibitors, no fall application of nitrogen, and split in-season application of nitrogen. These practices are identified by NRCS as CSA and Forestry (CSAF) Mitigation Activities and represent a subset of existing NRCS-approved conservation practices for working lands.[2] Practices included in this rule do not include all NRCS CSAF practices. This rule only includes practices that are relevant to the production of field corn, soybeans, or sorghum and have appropriate data and quantification methodologies needed to estimate the associated net emissions. Additionally, some NRCS CSAF practices were excluded because they only generate net emissions benefits on land that is not growing crops, such as field edges or borders. Emissions benefits from such off-field practices cannot directly be tied to the production of a biofuel feedstock, making it difficult to assign emissions benefits to the biofuel feedstock crop and subsequently produced biofuels.

The practices included in this rule have demonstrated emissions benefits that are directly associated with in-field crop production, as indicated in the NRCS CSAF Mitigation Activity List documentation and based on the latest data and quantification methodologies available to USDA.

Reduced Till

The practice of reduced till manages the amount, orientation, and distribution of crop and other plant residue on the soil surface year-round while reducing the frequency and intensity of soil disturbing activities used to grow and harvest crops in systems where the field surface is tilled prior to planting. The practice of reduced till increases soil organic carbon (SOC) as a result of decreased soil disturbance and decreases N_2O emissions due to changes in the soil environment, when compared to intensive till.[3]

To qualify as reduced tillage under this rule, field(s) or management unit(s) are permitted to use tillage methods where the entire soil surface is disturbed by tillage operations such as chisel plowing, field cultivating, tandem disking, vertical tillage, or ridge tillage, provided that the STIR value is no greater than 80. STIR[4] is a numerical value that measures the severity and type of soil disturbance caused by tillage operations. STIR values range from 0 to 200, with higher values indicating more soil disturbance. The STIR rating applies to the entire tillage system used in producing a crop. The components of the rating include tillage type, recommended equipment operating speed, recommended tillage depth, and surface area disturbed. The STIR value must include all field operations that are performed during the crop interval (that is, from the time immediately following harvest or termination of one cash crop through harvest or termination of the next cash crop in the rotation, including fallow periods). Permitted methods are also commonly referred to as mulch tillage, conservation tillage, or ridge till. Primary inversion tillage implements (for example, moldboard plow) must not be used, and residues may not be burned. However, removing residue from the crop planting row area prior to or as part of the planting operation is allowed.

No-Till

The residue and tillage management practice of no-till limits soil disturbance to manage the amount, orientation and distribution of crop and plant residue on the soil surface year-round. The practice of no-till increases SOC as a result of decreased soil disturbance and decreases N_2O emissions due to changes in the soil environment when compared to both reduced till and conventional till.[5]

To be considered as no-till under this rule, full-width soil disturbance must not be performed, from the time immediately following harvest or termination of one cash crop through harvest or termination of the next cash crop in the rotation, regardless of the depth of the tillage operation. Strip tillage and fertilizer injection are permitted, provided that the STIR value is no greater than 20. Residues may not be burned. However, removing residue from directly within the seeding, planting, or transplanting area prior to or as part of the planting operation is allowed.

Cover Crops

A cover crop may include one or more species of grasses, legumes, or forbs planted for seasonal protection and soil improvement. Increased above and below-ground biomass from cover crops can increase SOC, while N_2O may, in

[2] See USDA NRCS, Climate-Smart Agriculture and Forestry (CSAF) Mitigation Activities List for FY2025, August 2024, *https://www.nrcs.usda.gov/sites/default/files/2023-10/NRCS-CSAF-Mitigation-Activities-List.pdf.*

certain contexts, increase slightly from plant decomposition.[6] Under this rule, if legumes are used alone or within a cover crop mix, the producer should account for nitrogen supplied by the cover crop when determining nitrogen application rates for the following crop in order to minimize the risk of increasing direct and indirect N_2O emissions that may result from excess nitrogen. Cover crops that can be considered under this rule must be seeded in the fall, and interseeding into a commodity crop is allowed. Cover crops should be seeded as early as possible and terminated as late as practical (late vegetative growth stage or later) with termination timing established to minimize the risk of yield loss and soil moisture depletion.[7] To qualify under this rule, cover crops cannot be fertilized.

Cover crop biomass must not be mechanically harvested or grazed. Residues must remain on the surface following termination and may not be burned. Cover crops may be terminated via winter kill, using herbicide, or by non-soil disturbing mechanical methods (for example, roller crimper, mowing) in the spring. Planting green, where the commodity crop is seeded directly into the standing cover crop in the spring, is allowed.

Nutrient Management

Nutrient management practices included in this rule are:

(1) use of nitrification inhibitors;
(2) no fall application of nitrogen; and
(3) in-season split application of nitrogen.

These practices help to reduce direct and indirect N_2O emissions from biofuel feedstock production, thereby reducing GHG emissions. To implement any of these nutrient management practices, the farm producer must develop and document a planned nutrient budget, yield goal, and applications of, at a minimum, nitrogen, phosphorus, and potassium (N–P–K) in pounds per acre prior to implementation. The nutrient budget must account for all known measurable sources and removals of N–P–K. The farm producer must base the nutrient budget on current soil test results or the professional opinion of an agricultural expert who is employed by the Cooperative Extension System or the agricultural departments of universities, or other persons approved by the Federal Crop Insurance Corporation (FCIC), whose research or occupation is related to the specific crop or practice for which such expertise is sought.

Nitrification Inhibitor Practice Standards

A nitrification inhibitor is a chemical compound that slows down the conversion of ammonia to nitrate in soil, a process called nitrification. Nitrification inhibitors are added to fertilizers and can help reduce N_2O emissions.[8] To qualify for the nitrification inhibitor practice under this rule, the producer must apply a nitrification inhibitor with all synthetic nitrogen (synthetic N) applications, including any pre-emergent applications, to the field(s) or management unit(s). Nitrification inhibitors must be defined by the Association of American Plant Food Control Officers (AAPFCO) and be accepted for use by the State fertilizer control official, or similar authority, with responsibility for verification of product guarantees, ingredients (by AAPFCO definition) and label claims.

No Fall Application Practice Standards

Applying fertilizer in the spring at the time of planting results in improved nutrient availability and can reduce overall fertilizer needs compared to fall application, also reducing N_2O losses.[9] To qualify for the no fall application practice under this rule, field(s) or management unit(s) must be managed according to a nutrient budget, the first nitrogen application must occur within 30 days prior to or at the time of planting and no nitrogen fertilizer may be applied in the fall of the previous year.

Split In-Season Application Standards

Split in-season fertilizer application refers to fertilizer that is applied with a minimum of two applications—an initial application at the time of planting with the remainder applied in one or more applications during the growing season. Split in-season application increases nitrogen use efficiency by applying fertilizer according to plant needs, and can also reduce overall fertilizer needs, which also reduces N_2O losses.[10] To qualify for the split in-season application practice under this rule, field(s) or management unit(s) must be managed according to a nutrient budget. At least 75 percent of total crop nitrogen needs, as defined by the state LGU, must be applied after crop emergence. Post emergent nitrogen may be reduced based on crop scouting, in-season soil sampling or analysis, or plant tissue sampling or analysis. Nutrient availability should be timed to crop uptake.

CSA Practice Standards: Recordkeeping

In addition to specifying the implementation standards for each CSA practice, as described above, this rule also establishes recordkeeping standards for each CSA practice. Required records are necessary to provide evidence that farm producers implemented CSA practices according to the rule. Records must be retained for 5 years and made available to third-party verifiers to conduct audits. The rule does not specify the type or origin of required records; instead, the rule lists examples of record types such as physical documentation (for example, paper forms, invoices, receipts, seed tags), digital files (including from farm management software), data generated by farm equipment (for example, precision agriculture equipment), remote sensing data, georeferenced and timestamped photographs, and data and records used for participation in USDA government programs. The range of allowable record options is designed to increase flexibility and minimize burden for farm producers, who may already maintain various types of records depending on their preferences, participation in government or private programs, or previous CSA practice implementation. However, the records must be sufficient for the third-party verifier to verify compliance with the

relevant practice standard for the specified time period.

Across all CSA practices, farm producers must maintain records demonstrating the location and acreage of any field or management unit where the CSA practice was implemented, as well as the total bushels of crop harvested from those fields or management units. These are basic parameters required for calculating the carbon intensity of the resulting crop. Farm producers with multiple fields or management units must keep their records separately for each of these fields or management units to ensure accurate accounting.

For farm producers implementing no-till or reduced till, the following practice-specific records must be maintained:

- a list of all field operations that may cause surface disturbance, including tillage, fertilizing, planting, controlling pests, seeding, and harvesting;
- data on these operations, including the depth and width of disturbance and average speed of operation;
- equipment used; and
- dates that each operation occurred.

These records are necessary for calculating and verifying the STIR value, a quantitative measure of soil disturbance. Calculation of the STIR value on each field or unit provides a consistent way for farm producers and third-party verifiers to evaluate whether a soil management system qualifies as no-till or reduced till.

For farm producers implementing cover crops, the following practice-specific records must be maintained:

- documentation that cover crop seeds were purchased and received in sufficient quantities for the designated field(s) or unit(s);
- the date, method, and rate of seeding;
- the total acreage seeded across each field or unit; and
- time-stamped and georeferenced photographic evidence of establishment.

Records of cover crop purchase and seeding alone is not sufficient to verify that a GHG benefit occurred, because the GHG benefits of cover crops result from biomass accumulation due to plant growth. Time-stamped and georeferenced photographic evidence of establishment is also necessary to ensure that the CSA practice, and associated GHG benefits, can be verified.

For farm producers implementing nutrient management practices, the following practice-specific records must be maintained:

- details on the source and type of nutrients applied;
- date, method, and location of nutrient applications;
- planting-seeding date for the field or unit where the practice was implemented; and
- the total acreage within each field or unit where the nutrient management practice was applied.

Additionally, the producer must provide a nutrient budget that demonstrates all crop nutrient needs for N–P–K, as well as a soil test dated within 2 years of the development of the nutrient budget. Because nutrient needs vary greatly across crops, fields, and management units, a tailored nutrient budget is necessary to assess the nutrient needs of each crop. Evaluation of the nutrient budget can inform the crop-specific and geography-specific rates and types of nutrient management that may result in a GHG benefit.

USDA Request for Information and Public Consultation Sessions

On June 27, 2024, USDA published a Request for Information (RFI) requesting public input on Procedures for Quantification, Reporting, and Verification of Greenhouse Gas Emissions Associated with the Production of Domestic Agricultural Commodities Used as Biofuel Feedstocks (89 FR 53585–53587). The RFI indicated that USDA was considering a rule to establish voluntary standards for quantifying, reporting, and verifying GHG outcomes for domestic agricultural commodities used as biofuel feedstocks and grown with practices that mitigate GHG emissions or sequester soil carbon. USDA requested public input on several topics that are addressed in this rule. Specifically, the RFI asked for input on qualifying practices, quantification approaches for CSA practices, soil carbon, verification and recordkeeping, and verifier qualifications and accreditation requirements. A total of 256 unique comments were posted to *regulations.gov* in response to the RFI. The top sources of comments were from individuals (45 comments), industry trade groups (33), biofuel groups (29), agriculture industry and technology groups (28), and crop commodity groups (26). Other groups submitting comments included environmental advocacy groups, organizations involved in carbon markets, farm groups, state and local government agencies, and farm bureaus.

Approximately 52 comments were supportive of USDA's efforts to facilitate quantifying, reporting, and verifying emissions benefits associated with CSA practices for biofuel feedstocks. Broadly, these commenters recognized the potential benefits and opportunities associated with using CSA practices in biofuel feedstock production, including market opportunities and the enhanced sustainability of agricultural systems. These commenters agreed with the need for more accurate accounting of emissions benefits associated with using CSA practices and supported the establishment of guidance in this area. In addition, supportive comments from farm producers, agricultural groups, and industry representatives emphasized the opportunity to establish a simple and inclusive program which facilitates the participation of many different types of farm producers in CSA markets.

Approximately 11 comments were generally opposed to the production of biofuels as a means to reduce GHG emissions and were therefore opposed to any potential USDA rule efforts on this topic. Some opposing comments argued that expanding crop-based biofuel production will lead to greater GHG emissions and additional environmental harms such as air and water pollution. Commenters argued that alternatives such as electrification would be more effective for reducing GHG emissions from the transportation sector. Some opposing comments also expressed concerns with the validity of GHG reductions from CSA practices, pointing out that there is a risk of double-counting benefits from these practices and that incentives for CSA practices may fail to meet ''additionality'' requirements.

Approximately 193 comments maintained neutral or mixed positions on a rule. Comments spanned many perspectives on the purpose, scope, and ideal execution of a rule. Flexibility and inclusivity were widely shared themes, with commenters asking for inclusion of a wide range of crops, a wide range of CSA practices, and the inclusion of early CSA practice adopters. However, commenters differed on a number of issues, including verification requirements, chain of custody models, and specific crops and practices that should be considered. Commenter perspectives on these topics are described in the sections below.

In addition to publishing the June 2024 RFI, in October 2024, USDA hosted three stakeholder consultation sessions over Zoom in accordance with requirements in 16 U.S.C. 3845, which directs the Secretary of Agriculture to consult with the public when establishing technical guidelines for measuring environmental services benefits from conservation and land management activities. Specifically, section 3845 requires consultation with the following groups:

(1) Federal and State government agencies;
(2) Nongovernmental interests, including:
(A) farm, ranch, and forestry producers,
(B) financial institutions involved in environmental services trading,
(C) institutions of higher education with relevant expertise or experience,
(D) nongovernmental organizations with relevant expertise or experience, and
(E) private sector representatives with relevant expertise or experience; and
(3) Other interested persons, as determined by the Secretary.

USDA invited groups from each of these specified categories and posted public information and registration links for the consultation sessions to the Office of Energy and Environmental Policy website. A total of 203 individuals registered for the Zoom calls, with 201 individuals joining at least one of the three consultation sessions. Attendees included private citizens such as farmers, industry representatives, and representatives from farm and environmental groups. A total of 74 individuals elected to speak during the calls to offer their perspectives.

Insights shared in the public consultation sessions echoed comments received in response to the RFI. Some speakers directly echoed portions of their RFI comments, while others shared personal experiences with CSA and biofuels production. Multiple speakers asked for the inclusion of intermediate cover crops and oilseed crops. Parallel to a request for more flexibility was an opposition to ''bundling,'' rules that would require farm producers to simultaneously implement a specified group of CSA practices. Many speakers emphasized that a bundling approach limits farmer participation; instead, they favored the use of a more flexible approach to CSA practices, as well as a quantification system that reflects the impact of individual CSA practices.

Speakers also frequently highlighted their perspectives on traceability systems throughout the consultation calls. Many speakers expressed support for either book and claim or mass balance systems. Supporters of book and claim underscored the benefits of decoupling carbon intensities from bushels of feedstock, giving farmers greater market flexibility and increasing farmer participation and eligibility across a broader geography. Others were in favor of a mass balance system which would align with ISCC traceability programs, simplify the chain of custody, and maintain the participation of grain elevators.

USDA completed an analysis of comments submitted through the RFI and documented viewpoints shared during the public consultation sessions. Both the RFI and the consultation sessions provided valuable insights into the preferences, perspectives, and concerns of groups potentially impacted by the USDA rule. Insights gained from these public engagements were informative to the drafting of the rule.

RFI Comments Regarding Biofuel Crops

In response to which crops should be considered for inclusion in a USDA policy on biofuel feedstock crop production, RFI commenters primarily and widely supported the inclusion of traditional row crops. Field corn was the most frequently mentioned, as it currently represents 98 percent of U.S. ethanol industry feedstock production. Soybeans, sorghum, and spring canola were also frequently endorsed as major biofuel feedstocks, reflecting their established role in current U.S. biofuel production. These mainstream feedstocks were often recommended due to their existing infrastructure, and well-understood production practices. Many commenters emphasized the importance of maintaining these established feedstocks while gradually expanding options to ensure market stability and reliable supply chains.

Many commenters also recommended including winter oilseed crops, with particular emphasis on brassica carinata, camelina, pennycress, and winter canola. These crops were highlighted for their potential to provide soil health benefits, offer crop diversification advantages, and generate additional farm income through double-cropping systems. Notably, commenters pointed out that winter canola has 20 to 30 percent greater yield potential than spring canola, and several organizations detailed their ongoing research and development efforts with these winter oilseed varieties, particularly in regions like the Northern Great Plains.

Commenters also recommended a diverse array of alternative feedstocks for consideration, ranging from perennial grasses like switchgrass and miscanthus to woody crops such as hybrid poplar and shrub willow. Agricultural residues and byproducts, including corn stover, wheat straw, and sugar beet processing remnants, were frequently mentioned as potential feedstock sources. Several commenters advocated for the inclusion of emerging options like Kernza (an intermediate wheatgrass), various biowaste streams, and crop residues, emphasizing the importance of maintaining flexibility to incorporate new feedstock sources as technology and research advance. Many stressed the value of a diverse feedstock portfolio to mitigate risks associated with market fluctuations, crop failures, and regional variations.

RFI Comments Regarding CSA Practices

RFI commenters overwhelmingly emphasized the importance of soil management practices, particularly conservation tillage and no-till operations, as foundational CSA practices. These practices received strong support due to their well-documented benefits in reducing soil disturbance and enhancing carbon sequestration, though several commenters noted the need for regional flexibility in implementation. To support the argument for including these practices, some commenters referenced extensive research demonstrating their effectiveness, though some stakeholders raised important considerations about the permanence of carbon sequestration benefits and suggested the need for monitoring practice duration and potential reversals. Many recommended using existing NRCS standards to define specific parameters for these practices, ensuring consistent implementation and reliable GHG emissions quantification.

Many commenters advocated for the inclusion of nitrogen management practices and presented evidence for including a range of approaches from enhanced efficiency fertilizers to precise application timing and placement. Arguments for these practices emphasized their direct impact on reducing N_2O emissions, a potent GHG. Many commenters emphasized the importance of the ''4R'' approach (right source, right rate, right time, and right place) and provided specific examples of how technologies like variable rate application and nitrogen stabilizers can significantly reduce emissions while maintaining crop yields. The recommended inclusion of these practices was further supported by their potential to reduce both direct field emissions and indirect emissions associated with fertilizer production and transport.

Integrated systems practices, including cover cropping, buffer strips, and crop rotations, were strongly recommended based on their multiple environmental benefits and GHG reduction potential. Stakeholders presented evidence that these practices could sequester carbon and also improve soil health, reduce erosion, enhance biodiversity, and create more resilient agricultural systems. However, commenters emphasized the need for flexible implementation frameworks that allow farmers to adapt practices to their specific contexts while

maintaining measurable GHG benefits. Many suggested using established NRCS conservation practice standards as a foundation while incorporating new technologies and emerging practices as they are validated.

Some commenters also recommended the inclusion of water conservation practices, based on evidence of both direct and indirect GHG reduction benefits. Stakeholders detailed how improved irrigation efficiency, precision irrigation systems, and soil moisture monitoring can significantly reduce energy usage associated with water transportation and irrigation operations. Several commenters provided specific examples of technologies, such as subsurface drip irrigation-effluent systems, that demonstrate measurable GHG reductions while delivering co-benefits like improved nutrient management and water quality. Proponents of including water conservation practices also pointed to regional variations in water availability and the increasing importance of water efficiency in agricultural sustainability.

RFI Comments Regarding Quantification Approaches: Data and Modeling

RFI commenters strongly emphasized the critical importance of utilizing robust scientific data and empirical evidence to accurately quantify GHG emissions and carbon sequestration from agricultural practices. Many commenters advocated for a multi-model ensemble approach that would combine outputs from different models and compare them with empirical data, suggesting the use of the lower bound of the 95 percent confidence interval for crediting purposes. A fundamental tension emerged between the scientific rigor of complex biogeochemical modeling and the practical needs of implementation, with some stakeholders favoring a more straightforward practice-based approach using lookup tables and simple regressions. Many commenters supported regional and county-level modeling as a means to account for variations in soil types, weather conditions, and management practices. Several commenters highlighted specific models and tools for consideration, including DAYCENT, COMET, and Field to Market's Sustainability Metrics, while emphasizing the importance of regular updates to incorporate new data and technologies.

RFI commenters identified an extensive array of existing data sources and tools that could be leveraged for quantifying GHG emissions from agricultural practices. Frameworks including the R&D GREET model, CORSIA protocol, and Intergovernmental Panel on Climate Change guidelines were frequently cited as established frameworks that could inform a policy approach. Federal programs and databases, including the Agricultural Resource Management Survey, the USDA the Agricultural Resource Management Survey, and the USDA Greenhouse gas Reduction through Agricultural Carbon Enhancement network, were highlighted as valuable resources that already contain relevant data for emissions quantification. Private sector contributions, including data from carbon markets and third-party verification entities, were identified as important complementary sources to public datasets. The integration of academic research, particularly from LGUs and research institutions, was consistently emphasized as crucial for building a comprehensive understanding of agricultural GHG emissions and mitigation potential.

RFI commenters proposed a range of quantification approaches, reflecting the complexity of measuring agricultural GHG emissions. Process-based models like the Soil and Water Assessment Tool+ model, DAYCENT, and DeNitrification-DeComposition model were suggested alongside empirical approaches using emission factors and direct measurements. A key debate emerged between supporters of regional-scale quantification using standardized factors and advocates for more granular field-level measurements. Stakeholders emphasized the importance of standardized protocols and verification processes to ensure consistency and comparability across different approaches. The need to consider full life cycle impacts, including upstream emissions and indirect land-use changes, was highlighted as crucial for comprehensive emissions accounting. Many commenters recommended aligning with established international standards while maintaining flexibility to accommodate regional variations in agricultural practices.

Data gaps in current empirical research emerged as a significant concern among some commenters, particularly regarding the quantification of GHG emissions from various agricultural practices. Commenters expressed concerns about limitations in data availability for specific practices such as cover crops, nutrient management, and residue management, with commenters noting that most agricultural research has only recently begun focusing on climate mitigation potential. Geographic and regional data limitations were highlighted, with stakeholders cautioning against over-reliance on broad-scale data that might miss important local variations. The lack of consistent historical baseline data was identified as a key challenge, especially for early adopters of climate-smart practices.

RFI Comments Regarding Quantification Approaches: Geographic Scale

RFI commenters emphasized that geographic variability significantly influences the effectiveness and outcomes of CSA practices, necessitating careful consideration in any quantification framework. Many commenters advocated for a regional approach that could effectively balance accuracy with scalability, with several specifically recommending USDA's Farm Resource Regions as an appropriate foundation for regional quantification. The complexity of geographic considerations was highlighted by concerns about potentially creating ''winners and losers'' based on regional differences, which could inadvertently shift production patterns and impact farm incomes in certain areas. Some stakeholders suggested that while geographic variability must be acknowledged, the quantification system should strive to maintain relative parity in potential benefits across regions to ensure equitable program implementation.

The debate over appropriate geographic scale for GHG emissions quantification revealed a tension between precision and practicality. While many commenters supported farm or field-level quantification for its accuracy and ability to capture site-specific variations, others advocated for district, county, or state-level approaches that could better balance precision with administrative feasibility. Several commenters argued that county-level quantification aligns well with existing USDA survey capabilities and the R&D GREET Feedstock Calculator methodology. A notable suggestion emerged for a hybrid approach that would use field-level data where available while maintaining broader-scale defaults as a ''safety valve'' to ensure program inclusivity and account for unique circumstances.

The importance of addressing local and regional conditions in GHG emissions quantification was consistently emphasized across stakeholder comments. Variations in soil types, climate, topography, precipitation, and growing season length were identified as critical factors

affecting practice effectiveness and GHG benefits. Several commenters recommended leveraging existing resources such as LGUs and extension services to better understand and account for local variations. Some stakeholders specifically suggested using established regional classifications like NRCS MLRAs or crop reporting districts to group areas with similar conditions, while others advocated for investment in enhanced monitoring technologies like Eddy flux towers to better quantify regional differences in GHG emissions and sequestration potential.

RFI Comments Regarding Verification and Recordkeeping

RFI commenters emphasized the importance of balancing robust verification standards with the need to minimize administrative burdens on farm producers. Many suggested that existing USDA conservation program data and third-party tools could effectively streamline documentation processes. Some commenters were concerned about the potential for CSA opportunities to become a vehicle for collecting excessive farm data, with several commenters noting that only 3 percent of eligible producers currently participate in carbon markets due to high transaction costs and administrative burdens. While accurate documentation was broadly acknowledged as crucial for transparency and long-term impact assessment, stakeholders emphasized that standards should remain practical and cost-effective.

RFI commenters provided extensive recommendations for specific recordkeeping approaches, emphasizing the need for practical documentation that builds upon existing farm management practices. Key recommended records included field boundary maps, crop types, planting and harvest dates, fertilizer and chemical application records, waste-management practices, tillage documentation, cover crop information, yield data, and equipment usage metrics, with many commenters noting these records are typically already maintained for USDA programs. Integration with established frameworks like USDA organic certification processes, the USDA CSA pilot program referenced in Treasury and IRS's guidance on the Section 40B SAF credit, and USDA's Conservation Evaluation and Monitoring Activity was recommended to avoid creating entirely new documentation systems. The importance of allowing flexibility in record formats was emphasized to accommodate diverse farming operations and technological capabilities, with particular consideration for smaller farms and operations with limited resources. Commenters also stressed the value of accepting attestations from farmers and third-party service providers like agricultural retailers, cooperatives, and independent crop consultants, particularly during the initial implementation phase.

Remote sensing and emerging technologies received significant attention from commenters as potential tools for streamlining verification processes while maintaining program integrity. Many commenters highlighted how satellite imagery, drone technology, and precision agriculture data could effectively verify practices like cover crops, tillage patterns, and buffer strip implementation, with some noting that technologies like Sentinel-2 imagery can identify buffer strips with over 80 percent accuracy. However, several stakeholders cautioned that remote sensing technologies have limitations, particularly in measuring three-dimensional stored carbon or verifying practices not visible from above, suggesting these tools should complement rather than replace traditional verification methods. The integration of these technologies with farm management software, Internet of Things devices, and blockchain was recommended to enhance data collection and verification efficiency, though commenters emphasized the need for standardized processes and algorithms to ensure consistency and reliability across different regions and farming operations.

Most RFI commenters advocated for limited on-site audits to maintain cost-effectiveness and practicality. They recommended following established verification frameworks like those used by the California LCFS and the ISCC Program, which typically require annual verification through a combination of on-site visits and remote monitoring. Commenters suggested giving farmers a presumption of compliance, with auditing practices kept to a reasonable minimum while still deterring non-compliance. Recommendations for audit frequency ranged from annual reviews for high-risk operations to every 2 to 3 years for compliant operations.

RFI commenters recommended sampling methodologies as a means to balance verification rigor with practical implementation. Commenters recommended approaches like stratified random sampling based on geography, crop type, and farm size, following protocols like the square root method used by ISCC CORSIA. Risk-based sampling was a preferred approach, prioritizing farms with higher non-compliance risk based on factors like operation size, practice complexity, and past audit performance. Commenters consistently highlighted the need for sampling approaches tailored to regional and operational differences while maintaining statistical validity and cost-effectiveness.

RFI Comments Regarding a Chain of Custody Approach

Commenters expressed diverse views on the use of mass balance and book-and-claim systems for tracing CSA feedstocks through supply chains. Many commenters supported the use of a book-and-claim system, arguing that it provides flexibility, reduces compliance costs, and aligns better with the intended outcomes compared to mass balance or identity preservation systems. These commenters emphasized the need for minimal and flexible data collection requirements for farmers, suggesting the use of digital solutions, farm equipment data, satellite imagery, and remote sensing to reduce administrative burdens and align with existing programs like NRCS and ISCC.

On the other hand, some commenters supported the current traceability definition used in the USDA CSA Pilot Program in the Treasury and IRS guidance on the section 40B SAF tax credit which relies on a mass balance approach. They argued that mass balance is an indispensable tool for incentivizing the development of renewable natural gas (RNG) production and that programs should be modified to allow RNG to be used as a feedstock for SAF and renewable diesel without limitations like region or first use criteria. One commenter noted that a mass balance approach would make it more difficult to track actual bushels leaving the field where the CI-lowering practices were completed; however, another stated that mass balance could reduce the risk of fraudulent claims regarding production practices and chain of custody claims.

A few commenters proposed the use of blockchain technology, token-based systems, or digital ledger platforms for tracing and verifying CSA attributes and feedstock movements, providing transparency, auditability, and reduced risk of double-counting or over-allocating attributes. One commenter described a pilot program using blockchain for tracking sustainable soybean oil attributes.

In summary, commenters were split between supporting mass balance and book-and-claim systems for tracing CSA

feedstocks. While book and claim was recommended for its flexibility and reduced compliance costs, mass balance was seen as the best approach for aligning with existing traceability systems.

USDA Response and Request for Additional Public Comment

USDA considered public comments when preparing this interim rule. USDA considered multiple crops for inclusion in this rule, including canola and intermediate oilseeds. The crops included in this rule were selected based on their prevalence of use as a biofuel feedstock, as well as the availability of data to quantify the impact of CSA practices on their production. When assessing different chain of custody approaches, USDA considered both mass balance and book and claim. While USDA recognizes the potential merits of a book and claim system, as outlined by commenters, the infrastructure needed to support a book and claim system does not exist at scale at this time. As detailed by other commenters, mass balance systems are already in use for tracking commodity crops and associated environmental attributes throughout supply chains.

USDA is requesting public comment on this interim rule and welcomes feedback on any aspect of this rule. In particular, USDA is considering the inclusion of additional crops and CSA practices in the final rule and is seeking input on the following questions.

1. USDA is considering the inclusion of spring canola in the final rule. What data and research exist on the current adoption rates and GHG impacts of CSA practices, defined in this rule, on spring canola production?

2. USDA is considering the inclusion of winter canola in the final rule. What CSA practice(s) are applicable to winter canola? What data and research exist on the GHG impacts of the practices used in winter canola production?

3. What records or information could be used to verify that a crop is winter canola or spring canola?

4. USDA is considering the inclusion of intermediate oilseed crops in the final rule. What CSA practices are applicable to intermediate oilseeds? What data and research exist on the GHG impacts of these CSA practices used in intermediate oilseed production?

5. USDA is considering including ''conservation crop rotation'' as a CSA practice in the final rule. Conservation crop rotation is the practice of growing a planned sequence of crops on the same ground over a period of time. Conservation crop rotation is similar to the cover crop practice in that living crops provide cover year-round; however, unlike cover crops, all crops in a conservation crop rotation may be harvested.

a. What data and research exist on the GHG impacts of conservation crop rotation?

b. If conservation crop rotation is included as a CSA practice, how should USDA proportion the GHG impacts when multiple biofuel feedstock crops are grown in the rotation? For example, if an intermediate oilseed crop and corn are grown in the rotation, which crop should receive a GHG reduction for the conservation crop rotation practice?

6. USDA is considering the inclusion of additional Enhanced Efficiency Fertilizer (EEF) products, such as controlled release fertilizers, in the final rule. What data and research exist on the GHG impacts of EEF products when used on the crops defined in this rule?

7. USDA is considering the inclusion of plant biostimulant products in the final rule. There is no universally accepted definition of plant biostimulants in the United States. However, the 2018 Farm Bill directed USDA to submit a report on plant biostimulants to the President and Congress.[11] For the purposes of the report, the 2018 Farm Bill considered a plant biostimulant to be ''a substance or micro-organism that, when applied to seeds, plants, or the rhizosphere, stimulates natural processes to enhance or benefit nutrient uptake, nutrient efficiency, tolerance to abiotic stress, or crop quality and yield'' and allowed USDA to modify the definition, as appropriate.

a. What definition(s) of plant biostimulant products should USDA consider for the purpose of this rule?

b. Which biostimulant product categories should be considered for inclusion in the final rule?

c. What data and research exist on the GHG impacts of biostimulant products?

d. What implementation standards would be necessary to ensure a net GHG reduction from plant biostimulant products?

e. How can the appropriate use of plant biostimulant products be verified?

8. USDA is considering including ''reduced nitrogen application rate'' as a CSA practice in the final rule.

a. What implementation standards would be necessary to ensure a net GHG reduction from a ''reduced nitrogen application rate'' practice?

b. What records and information would be necessary to verify a ''reduced nitrogen application rate'' practice?

9. USDA recognizes that the practice implementation standards in this interim rule are different than requirements for some USDA programs (for example, the cover crop termination methods and timing in this rule are more specific than practices allowed under crop insurance). How might the guidelines included in this interim rule impact farmers' ability to participate in USDA policies and programs (for example, crop insurance)?

10. What refinements to the USDA FD–CIC tool should USDA consider?

11. Should USDA consider transitioning to a book-and-claim traceability approach? If so, how could USDA facilitate that transition?

12. USDA is requesting comment on potential improvements to the verification, recordkeeping, and reporting standards and whether the standards appropriately balance verification rigor with burden of implementation.

13. The Regulatory Impact Analysis (RIA) for this rule estimates the expected costs associated with this rule which are primarily attributable to costs to conform with recordkeeping and verification standards necessary to trace reduced-CI biofuel feedstock through the biofuel supply chain. These costs are estimated on a per entity basis (farm producer, first point aggregator, other intermediary entities, and biofuel refiner). The rule's primary benefits, which are described qualitatively in the RIA, are due to the efficiencies achieved through more standardized guidelines for quantification, recordkeeping, and verification of reduced-CI biofuel feedstocks through the supply chain this rule provides. USDA requests public comment, including any data or information, that will lead to a better understanding of this rule's costs and benefits.

Notice and Comment, Effective Date, and Exemptions

The promulgation of regulations to implement the programs of Chapter 58 of Title 16 of the U.S. Code, as specified in 16 U.S.C. 3846, and the administration of those programs, are:

- To be made as an interim rule effective on publication, with an opportunity for notice and comment,
- Exempt from the Paperwork Reduction Act (44 U.S.C. chapter 35), and

[11] See USDA, *Report to the President of the United States and United States Congress on Plant Biostimulants Submitted by the United States Department of Agriculture (USDA) in Consultation with the Environmental Protection Agency (EPA) on December 20, 2019,* December 2019, *https://agriculture.house.gov/uploadedfiles/usda_report_on_plant_biostimulants_12.20.2019.pdf.*

• To use the authority in 5 U.S.C. 808 related to Congressional review and any potential delay in the effective date.

Per Subtitle E of the Small Business Regulatory Enforcement Fairness Act of 1996, also known as the Congressional Review Act (5 U.S.C. 801—808), the Office of Information and Regulatory Affairs has determined that this rule does not meet the criteria specified in 5 U.S.C. 804(2), so the Congressional Review Act's 60-day effective date delay requirement for rules does not apply. Even if this rule did meet the criteria specified in 5 U.S.C. 804(2), the 2018 Farm Bill directs the Secretary to use the authority in 5 U.S.C. 808 to specify this rule's effective date. Therefore, this rule is effective on the date of publication in the **Federal Register**.

In addition, this rule is exempt from the regulatory analysis requirements of the Regulatory Flexibility Act (5 U.S.C. 601–612), as amended by the Small Business Regulatory Enforcement Fairness Act of 1996. The Regulatory Flexibility Act generally requires an agency to prepare a regulatory analysis of any rule whenever an agency is required by the Administrative Procedure Act or any other law to publish a proposed rule, unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. This rule is not subject to the Regulatory Flexibility Act because OCE is not required by the Administrative Procedure Act or any law to publish a proposed rule for this rule.

Executive Orders 12866, 13563, and 14904

Executive Order 12866 (as amended by Executive Order 14904), ''Regulatory Planning and Review,'' and Executive Order 13563, ''Improving Regulation and Regulatory Review,'' direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasized the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility.

The Office of Management and Budget (OMB) designated this rule as significant under Executive Order 12866, ''Regulatory Planning and Review,'' and therefore, OMB has reviewed this rule. The analysis of costs and benefits of this rule is summarized below.

Regulatory Impact Analysis Summary

Section 2709 of the 2008 Farm Bill (16 U.S.C. 3845) directs the Secretary to establish technical guidelines that outline science-based methods to measure the environmental services benefits from conservation and land management activities to facilitate the participation of farmers, ranchers, and forest landowners in emerging environmental services markets. It also directs the Secretary to give priority to the establishment of guidelines related to farmer, rancher, and forest landowner participation in carbon markets. It further directs the Secretary to establish verification guidelines, including the role of third parties in conducting independent verification of benefits produced for environmental services markets and other functions.

Under these authorities, this rule facilitates recognition of crops grown with CSA practices in biofuel markets and provides farm producers with opportunities to market biofuel crops based on their lower net GHG emissions. It also provides standardized guidelines for entities in the biofuel supply chain (including first point aggregators, intermediary entities, and biofuel refiners) to quantify, verify, and trace reduced-CI feedstocks (that is, those crops grown with CSA practices) through the biofuel supply chain, from farm to biofuel refiner. The rule achieves these outcomes by providing quantification, recordkeeping, chain of custody, and verification standards that:

(1) decrease information asymmetries between biofuel supply chain entities with respect to the carbon intensity of biofuel feedstocks, and

(2) reduce transaction costs and increase efficiencies in existing systems that quantify, trace, and verify emissions benefits associated with biofuel feedstocks produced with CSA practices.

The Regulatory Impact Analysis estimates the expected costs of this rule quantitatively and discusses the expected benefits qualitatively.

To estimate the expected costs of the rule, USDA created a model that quantifies the total per entity annual costs (in hours and dollars) of quantification, recordkeeping, and verification processes conforming to the rule standards for each entity type in the biofuel supply chain including farm producers, first point aggregators, intermediary entities, and biofuel refiners. Model inputs were derived from multiple sources, including:

• USDA program office data on the hours required of producers to record and verify information about the adoption of conservation practices (including CSA practices in this rule) for existing USDA programs, such as the Environmental Quality Incentives Program;

• internal USDA data on the time costs (hours) associated with third party verification of reduced-CI feedstocks;

• Bureau of Labor Statistics wage rates applicable to labor used by each entity type to conduct quantification, recordkeeping or verification;

• latest USDA data on estimated acres and bushels of biofuel feedstock production with CSA practices; and

• annual volume throughput of biofuel feedstocks for each entity type in the biofuel supply chain calculated using internal USDA data and data from the U.S. Energy Information Agency.

Aggregate costs of the rule for all entities in the biofuel supply chain are not estimated in the RIA because they depend on the level of participation among biofuel supply entities in policies or programs that adopt the rule's standards. Additional details about the RIA assumptions, model inputs, methodology, and limitations are described in the RIA.

Summary of Costs and Benefits

Costs

The costs of this rule include costs associated with collection of information, the maintenance of such information in records, and the exchange of these records between entities in the biofuel supply chain. Under this rule's standards, information collection and the maintenance and exchange of records occurs between private entities. The federal government does not collect, maintain, or exchange any information or records as part of the rule standards. The regulatory impact analysis calculates the costs of this rule in burden hours and dollars on a per entity basis (for each entity type including farm producers, first point aggregators, intermediary entities, and biofuel refiners) and on a per bushel basis for each entity type.

USDA estimates of the per entity level of effort (LOE) per entity type (farm producers, first point aggregators, intermediary entities, and biofuel refiners) are summarized in Tables 1 and 2 below.

LOEs for farm producers are estimated to be between 5 to 7 hours per year and were scaled based on the number of CSA practices adopted which assumes that additional practices require additional recordkeeping time. The LOE estimates for producers are inclusive of quantification of carbon intensity of the crop and recordkeeping time costs. LOE

for farm producer audits is estimated separately because not all farm producers in a given year will be selected for auditing by a third-party verifier.

LOE for first point aggregators are estimated to be between 48 and 286 hours per entity per year, depending on the size (measured in throughout of biofuel feedstock) of the entity. The LOE estimates for First Point Aggregator verification does not include verification fees; these fees however are included in the per entity costs estimated, as summarized in Table 2.

LOE for intermediary entities is estimated to be 143 hours per entity per year. These LOE estimates also do not include any verification fees (see Table 2).

LOE for biofuel refiners is estimated to be 673 hours per entity per year. These LOE estimates also do not include any verification fees (those are included in Table 2).

TABLE 1—ESTIMATED LEVEL OF EFFORT (LOE) PER ENTITY PER YEAR

Category	LOE (hours per year)
Producers (1 CSA practice)	5
Producers (2 CSA practices)	6
Producers (3 CSA practices)	7
Producers (Audits only, if selected)*	8
First Point Aggregators (small)**	48
First Point Aggregators (medium)**	143
First Point Aggregators (large)**	286
Intermediary Entities**	143
Biofuel Refiners**	673

Notes:

**Farms selected for audits will have 8 extra hours of LOE. Not all farms are selected for audits in a given year.*

***LOE hours do not include verification fees.*

Table 2 summarizes the annual per entity costs (in 2023 dollars) per entity type. For farm producers, depending on the number of CSA practices adopted, the annual costs range from $380 to $490, which include costs associated with quantification of the carbon intensity of the crop and recordkeeping time costs and a lawyer fee for completing the farm attestation, with an addition $470 annually per entity in the event that a farm producer is audited. The verification and recordkeeping costs for First Point Aggregators is estimated to be between $3,400 to $19,400 per year per entity, depending on the size of the aggregator. These costs include any verification fees incurred for their audits and the audits of the farm producers. The verification and recordkeeping cost for intermediary entities are estimated to be $9,400 per entity per year. Finally, recordkeeping and verification costs for biofuel refiners are estimated to be $72,500 per entity per year.

TABLE 2—ESTIMATED COST PER ENTITY TYPE PER YEAR

[in 2023 dollars]

Category	Cost
Producer (1 practice)	$380
Producer (2 practices)	440
Producer (3 practices)	490
Producer Audits	470
First Point Aggregators (small)	3,400
First Point Aggregators (medium)	9,900
First Point Aggregators (large)	19,400
Intermediary Entities	9,400
Biofuel Refiners	72,500

Additional details about these estimates are described in the RIA.

While this RIA quantifies the paperwork burden associated with the rule, this rule's information collection requirements and associated burden hours (that is, level of effort estimates) are exempt from Paperwork Reduction Act of 1995 review and approval by the Office of Information Affairs within the Office of Management and Budget, as indicated by 16 U.S.C. 3846, as noted above.

Benefits

The benefits of this rule include the reduction in transaction costs and efficiency gains associated with the rule's framework for the quantification, reporting, and verification of reduced-CI biofuel feedstocks grown with CSA practices. USDA believes the framework specified in this rule provides a more standardized set of guidelines for the quantification, reporting, and verification of reduced-CI biofuel feedstocks grown with CSA practices. With this more standardized framework, USDA expects that the transaction costs incurred by entities for the quantification, reporting, and verification of reduced-CI feedstocks will be reduced. This standardization is expected to improve the efficiency of quantifying, reporting, tracing, and verifying reduced-CI feedstocks. USDA expects these improvements could facilitate participation in clean fuels policies and programs, should these policies and programs incorporate a reduced-CI for crops produced using CSA practices. Increased adoption of CSA practices in the production of biofuel feedstock crops will also generate environmental co-benefits such as improved water and air quality. Because insufficient data is available to quantify these benefits, the cost benefit analysis only qualitatively discusses them.

Clarity of the Regulation

Executive Order 12866, as supplemented by Executive Order 13563, requires each agency to write all rules in plain language. Executive Order 14094 requires Federal agencies to increase and improve public participation in the regulatory process. The Executive Order's objective is to improve public trust in the regulatory process by reducing the risk or appearance of unequal or unfair influence in regulatory development. Under Executive Order 14904, agencies must, to the extent they can under law, seek out, assist with, and include public input in the regulatory process. We welcome comments from public (State, local, Tribal, and territorial) and private sector regulated entities; members of underserved communities; consumers; workers and labor organizations; businesses; and program beneficiaries, among others. In addition to substantive comments on this rule, we invite comments on how to make the rule easier to understand. For example:

- Are the standards in the rule clearly stated? Are the scope and intent of the rule clear?
- Does the rule contain technical language or jargon that is not clear?
- Is the material logically organized?
- Would changing the grouping or order of sections or adding headings make the rule easier to understand?
- Could we improve clarity by adding tables, lists, or diagrams?
- Would more, but shorter, sections be better? Are there specific sections that are too long or confusing?
- What else could we do to make the rule easier to understand?

Environmental Review

This rule qualifies as an activity under USDA categorical exclusion 7 CFR 1b.3(a)(6): ''Activities which are advisory and consultative to other agencies and public and private entities, such as legal counselling and representation.'' As such, it is excluded from the requirements of an environmental assessment or environmental impact statement under the National Environmental Policy Act (42 U.S.C. 4321–4347) and its implementing procedures. The rule contains voluntary technical guidance in the form of quantification, reporting, and verification standards that may or may not be adopted in future policies at various levels of government to incentivize the adoption of CSA practices for biofuel feedstock

production, or may or may not be adopted by proponents of potential future actions that require measurement of GHG emissions. Making voluntary technical guidance available to a variety of users is advisory and consultative in nature. The rule also qualifies as ''Educational and informational programs and activities'' under 7 CFR 1b.3(a)(4) because technical guidance is educational and informative in nature. The rule does not authorize or fund any policy or action. If the standard is used in any future federal actions, a project specific analysis may be warranted at that time.

The Office of Energy and Environmental Policy has found that there are no extraordinary circumstances indicating that further NEPA analysis would be necessary or informative in promulgating this technical assistance; nor has it found any extraordinary circumstances indicating that providing this voluntary technical guidance may have significant effects on the quality of the human environment, individually or cumulatively. The Office of Energy and Environmental Policy has determined, therefore, that the rule does not constitute a major Federal action that would significantly affect the quality of the human environment. This notice serves as the documentation of this determination.

Executive Order 12372

Executive Order 12372, ''Intergovernmental Review of Federal Programs,'' requires consultation with State and local officials that would be directly affected by proposed Federal financial assistance. The objectives of the Executive Order are to foster an intergovernmental partnership and a strengthened Federalism, by relying on State and local processes for State and local government coordination and review of proposed Federal Financial assistance and direct Federal development. This rule does not provide Federal financial assistance to State and local governments. Therefore, consultation is not required.

Executive Order 12988

This rule has been reviewed in accordance with Executive Order 12988, ''Civil Justice Reform.'' This rule will not preempt State or local laws, regulations, or policies unless they represent an irreconcilable conflict with this rule. Before any judicial actions may be brought regarding the provisions of this rule the administrative appeal provisions of 7 CFR part 11 and 2100 are to be exhausted.

Executive Order 13132

This rule has been reviewed under Executive Order 13132, ''Federalism.'' The policies contained in this rule do not have any substantial direct effect on States, on the relationship between the Federal government and the States, or the distribution of power and responsibilities among the various levels of government, except as required by law. Nor does this rule impose substantial direct compliance costs on State and local governments. Therefore, consultation with the States is not required.

Executive Order 13175

The agency has determined that the rule may have Tribal implications. Tribal consultation will occur simultaneously with the public comment period. Notice for Tribal consultation will be sent on January 17, 2025. Consultation will be held virtually and written comments will be received until 60 days from the publication of this interim rule.

The Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), Public Law 104–4, requires Federal agencies to assess the effects of their regulatory actions on State, local, and Tribal governments or the private sector. Agencies generally must prepare a written statement, including a cost benefit analysis, for proposed and final rules with Federal mandates that may result in expenditures of $100 million or more in any 1 year for State, local, or Tribal governments, in the aggregate, or to the private sector. UMRA generally requires agencies to consider alternatives and adopt the more cost effective or least burdensome alternative that achieves the objectives of the rule. This rule contains no Federal mandates, as defined in Title II of UMRA for State, local, or Tribal governments, or the private sector. Therefore, this rule is not subject to the requirements of sections 202 and 205 of UMRA.

USDA Non-Discrimination Policy

In accordance with Federal civil rights law and USDA civil rights regulations and policies, USDA, its Agencies, offices, and employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family or parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Individuals who require alternative means of communication for program information (for example, braille, large print, audiotape, American Sign Language, etc.) should contact the responsible Agency or the USDA TARGET Center at (202) 720–2600 (voice and text telephone (TTY)) or dial 711 for Telecommunications Relay Service (both voice and text telephone users can initiate this call from any telephone). Additionally, program information may be made available in languages other than English.

To file a program discrimination complaint, complete the USDA Program Discrimination Complaint Form, AD–3027, found online at *https://www.usda.gov/oascr/how-to-file-a-program-discrimination-complaint* and at any USDA office or write a letter addressed to USDA and provide in the letter all the information requested in the form. To request a copy of the complaint form, call (866) 632–9992. Submit your completed form or letter to USDA by: (1) mail to: U.S. Department of Agriculture, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue SW, Washington, DC 20250–9410; (2) fax: (202) 690–7442; or (3) email: *program.intake@usda.gov.*

USDA is an equal opportunity provider, employer, and lender.

List of Subjects in 7 CFR Part 2100

Alternative fuels, Agriculture, Environmental protection, Fuel economy, Greenhouse gases, Natural resources, Reporting and recordkeeping requirements.

■ For the reasons discussed above, and under the authority of the Food, Conservation, and Energy Act of 2008 (2008 Farm Bill (Pub. L. 110–246)), section 2709, (16 U.S.C. 3845), OCE amends title 7 of the CFR by adding Chapter XXI consisting of part 2100 to read as follows:

CHAPTER XXI—OFFICE OF ENERGY AND ENVIRONMENTAL POLICY, DEPARTMENT OF AGRICULTURE

PART 2100—Technical Guidelines for Climate-Smart Agriculture Crops Used as Biofuel Feedstocks

Subpart A—General Provisions

Sec.

2100.001 Purpose.
2100.002 Definitions.

Subpart B—Applicability

2100.010 Entities in the biofuel supply chain.
2100.011 Biofuel feedstock crops.
2100.012 CSA practices to produce CSA crops.

Subpart C—Quantification of Farm-level Crop-specific Carbon Intensity

2100.020 Quantification of CI.

Subpart D—Chain of Custody Standards

2100.030 General recordkeeping and reporting standards.
2100.031 Farm recordkeeping and reporting standards.
2100.032 First point of aggregation and intermediary entity recordkeeping and reporting standards.
2100.033 Additional recordkeeping standards for entities that process, sell, or purchase processed product derived from reduced-CI crops.
2100.034 Mass balance recordkeeping standards.
2100.035 Biofuel refiner recordkeeping standards.

Subpart E—Audits and Verification

2100.040 Third-party audits.
2100.041 Accreditation of third-party verifiers.

Subpart F—Climate-Smart Agriculture (CSA) Practice Standards

2100.050 General.
2100.051 Tillage management.
2100.052 Cover crop management.
2100.053 Nutrient management.

Authority: 16 U.S.C. 3845–3846.

Subpart A—General Provisions

§ 2100.001 Purpose.

The purpose of this rule is to establish technical guidelines for quantifying, reporting, and verifying the greenhouse gas (GHG) emissions associated with agricultural production of biofuel feedstock commodity crops grown in the United States.

§ 2100.002 Definitions.

Accreditation means a formal recognition by an authorized body that a third-party verifier operates according to a set of standards.

Agricultural expert means persons who are employed by the Cooperative Extension System or the agricultural departments of universities, or other persons approved by Federal Crop Insurance Corporation, whose research or occupation is related to the specific crop or practice for which such expertise is sought.

Audit means a process for obtaining relevant information about an entity's practices or processes, recordkeeping, and management and evaluating it objectively.

Biofuel means a liquid or gaseous fuels and fuel blending components produced from biomass feedstock.

Biofuel feedstock crop means a crop that can be used as raw material for biofuel production.

Biofuel Feedstock Report means a report generated by a farm producer that includes documentation of carbon intensity calculations and the Farm Producer Attestation.

Biofuel refiner means an entity that refines biomass feedstocks into a biofuel.

Biomass means any organic material other than oil and natural gas (or any product thereof), and coal (including lignite) or any product thereof.

Carbon intensity (CI) means a measure of GHG performance reflecting the estimated quantity of GHG emissions associated with one unit of production. For biofuel feedstock crops, carbon intensity is expressed as grams of carbon dioxide equivalent (CO_2-eq) per bushel of produced crop (g CO_2-eq/bushel).

Climate-smart agriculture (CSA) crop means a crop that is produced with CSA practices according to subparts A through F of this part.

Climate-smart agriculture (CSA) practices means agricultural management, practices, systems, and technologies that have been demonstrated to generally reduce GHG emissions or increase soil carbon sequestration.

Conventional crop means a crop that is produced without the use of CSA practices according to this part.

Cover crop means grasses, legumes, and forbs planted for seasonal vegetative cover, and not intended for harvest, between harvested production crops in rotation.

Crop interval means the time immediately following harvest or termination of one cash crop through harvest or termination of the next cash crop in the rotation, including fallow periods.

Crushing yield means a number representing the amount of oilseed produced from crushing one bushel of seed oil crop. Crushing yield is usually expressed in pounds per bushel (lbs/bu).

Farm means a business entity that produces (that is, grows and harvests) biofuel feedstock crops.

Farm producer means a person who is involved in making decisions for the farm operation. These decisions may include planting, harvesting, management, and marketing. The farm producer may be the owner, a member of the owner's household, a hired manager, a tenant, a renter, or a sharecropper. If a person rents land to others or has land worked on shares, they are considered the farm producer only for the land retained for their own operation.

Farm Producer Attestation means a document generated by the farm producer, who has operational control, that provides assurance that the farm producer followed standards in this part. The Farm Producer Attestation is included in the Biofuel Feedstock Report.

Feedstock means raw material that is converted into fuels and coproducts during the fuel production process.

Field means a part of a farm that is separated from the balance of the farm by permanent boundaries, such as fences, permanent waterways, woodlands, roads, croplines, or other similar features. In addition to a permanent, contiguous boundary, a field has common land cover and management.

First point of aggregation means the entity that purchases crops directly from the farm. Entities serving as the first point of aggregation distribute, trade, or further process these feedstocks.

Intensive tillage means a tillage operation that involves full width soil disturbance and multiple operations with implements such as moldboard, disk, or chisel plow. Intensive tillage does not meet the standards of reduced till or no-till in this part.

Intermediary entity means any entity in the biofuel supply chain that falls between the first point of aggregation and the biofuel refiner. Intermediary entities may include crushers, processors, storage facilities, or other entities.

Leguminous cover crop means a cover crop that fixes atmospheric nitrogen and are planted for seasonal vegetative cover, and not intended for harvest, between harvested production crops in rotation.

Management unit means field, group of fields, or other land units of the same land use and having similar treatment needs and planned management.

Mass balance system means a system in which materials or products with specified characteristics are mixed with materials or products without some or all of these characteristics, resulting in a claim on a part of the output, proportional to the input.

No-till means a practice that limits soil disturbance to manage the amount, orientation, and distribution of crop and plant residue on the soil surface year-round.

Nutrient management means the practice of managing the rate, source, placement, and timing of plant nutrients

and soil amendments to optimize their economic benefits while minimizing environmental impacts.

Operational control means authority possessed by the person who runs the farm, making day-to-day management decisions. A person with operational control could be an owner, hired manager, cash tenant, share tenant, or a partner. If land is rented or worked on shares, the tenant or renter has operational control.

Planting green means a system where a cover crop is left in place and a production crop is planted into the cover crop without prior termination.

Process means any mechanical operation that transforms the physical properties of a product. Processing includes extracting oil from seed oil crops (for example, soybeans).

Reduced-carbon intensity (reduced-CI) crop means a crop that is produced by a farm that employs CSA practices on some or all of the fields or management units used for that crop's production. A farm that does not employ any CSA practices does not have crop that is considered reduced-CI crop.

Reduced-carbon intensity processed product (Reduced-CI processed product means a product derived from reduced-CI crops.

Reduced till means the practice of managing the amount, orientation, and distribution of crop and other plant residue on the soil surface year-round while limiting soil-disturbing activities used to grow and harvest crops in systems where the field surface is tilled prior to planting.

Soil Tillage Intensity Rating (STIR) means a numerical value that measures the severity and type of soil disturbance caused by tillage operations. STIR values range from 0 to 200, with higher values indicating more soil disturbance. The STIR rating applies to the entire tillage system used in producing a crop. The components of the rating include tillage type, recommended equipment operating speed, recommended tillage depth, and surface area disturbed.

Third-party verifier means an accredited person or organization independent of the verified entity that performs a verification activity or audit.

Subpart B—Applicability

§ 2100.010 Entities in the biofuel supply chain.

The supply chain for feedstock crops used in biofuel production begins at a farm and ends at a biofuel refiner. Any entity within this supply chain that produces, processes, or takes ownership of reduced-CI crop or reduced-CI processed product must meet all applicable standards of this part. These entities include farms, first points of aggregation, intermediary entities, and biofuel refiners. If a biofuel refiner sources directly from a farm, the biofuel refiner is the first point of aggregation.

§ 2100.011 Biofuel feedstock crops.

Crops produced using one or more CSA practices, in accordance with subpart F of this part, are referred to as CSA crops. Crops produced without the use of CSA practices are referred to as conventional crops. A farm producer may produce both CSA crops and conventional crops. CSA crops and conventional crops can be physically mixed. Crops that are sold with an associated reduced-CI, as compared to the national average CI, are referred to as reduced-CI crops. Reduced-CI crops may be composed of solely CSA crops or a combination of CSA crops and conventional crops. If CSA crops and conventional crops are produced at the same farm, the commingled crop must have an associated CI that reflects the proportion of CSA crops, quantified in accordance with subpart C of this part. Crops for which a reduced-CI may be quantified include:

(a) Field corn;

(b) Soybeans; and

(c) Sorghum.

§ 2100.012 CSA practices to produce CSA crops.

CSA crops must be produced using one or more CSA practices:

(a) Field corn produced using no-till, reduced till, cover crops, nitrification inhibitors, split in-season nitrogen application, or no fall nitrogen application;

(b) Soybeans produced using no-till, reduced till, cover crops, or nitrification inhibitors; or

(c) Sorghum produced using no-till, reduced till, cover crops, nitrificiation inhibitors, or split in-season nitrogen application.

Subpart C—Quantification of Farm-level Crop-specific Carbon Intensity

§ 2100.020 Quantification of CI.

Any farm producing and selling reduced-CI crops must calculate a farm-level CI for each crop type (field corn, soybeans, or sorghum). The farm-level crop-specific CI represents the carbon emissions resulting from production of one bushel of that crop. The farm-level crop-specific CI applies to the year in which the crop was harvested, and the total amount of a crop harvested in a given year must be included in the calculation. Once a farm-level CI is calculated for a specific crop, the total amount of that crop is assigned the farm-level crop-specific CI and may be sold as reduced-CI crop. To calculate the farm-level CI for each crop:

(a) Farm producers must calculate the CI for each field or management unit on which CSA practice(s) were implemented, in accordance with subpart F of this part, using the U.S. Department of Agriculture (USDA) Feedstock Carbon Intensity Calculator (FD–CIC). This step must be repeated for every field or management unit producing CSA crops. To calculate a field or management unit-level CI in USDA FD–CIC, farm producers must input data on:

(1) farm location (county and state);

(2) crop type produced;

(3) crop yield;

(4) field or management unit acres;

(5) use of no-till or reduced till;

(6) use of a cover crop;

(7) timing of nitrogen fertilizer application; and

(8) nitrification inhibitor usage.

(b) For any conventional crop, farm producers must input crop and yield (excluding yield of crop produced using CSA practices) into USDA FD–CIC. USDA FD–CIC will assign these crops the default national value CI.

(c) USDA FD–CIC will use the farm producer inputs from paragraphs (a) and (b) of this section to calculate a weighted average, which is the farm-level crop-specific CI.

(d) Farm producers must repeat paragraphs (a) through (c) of this section for each crop type that is sold as reduced-CI.

Subpart D—Chain of Custody standards

§ 2100.030 General recordkeeping and reporting standards.

(a) The total amount of reduced-CI crop and associated CI must be maintained and tracked from the farm to the biofuel refiner using records and mass balance accounting.

(b) Crops with different CIs can be physically mixed at any entity along the supply-chain.

(c) Processed products derived from crops (for example, seed oils) can be produced using crops with different CIs.

(d) All entities specified in § 2100.010 must maintain required documentation for 5 years from when reduced-CI crops or processed products are sold, including documentation of previous verification activities and audits conducted as required by this part. Documentation must be readily available to accredited third-party verifiers and provided upon request during an audit.

§ 2100.031 Farm recordkeeping and reporting standards.

(a) Farm producers must keep records demonstrating implementation of the CSA practices used in calculation of a CI.

(1) For reduced till or no-till, see § 2100.051(c), titled Tillage management recordkeeping standards.

(2) For cover crops, see § 2100.052(b), titled Cover crop recordkeeping standards.

(3) For nutrient management, see § 2100.053(g), titled Nutrient management recordkeeping standards.

(b) Farm producers must keep records demonstrating all sales of crop as a reduced-CI crop. These records must indicate the total amount sold, the purchasing entity, and the date of the transaction.

(c) For each crop that is sold as a reduced-CI crop, farm producers must prepare and maintain a Biofuel Feedstock Report. Farm producers must provide the Biofuel Feedstock Report to any entity purchasing reduced-CI crop. The Biofuel Feedstock Report must:

(1) State the farm name, farm producer name, and farm location (county and state);

(2) Demonstrate the quantification of the farm-level crop-specific CI, including:

(i) Documentation of USDA FD–CIC calculation for each field or management unit (for example, screenshots or printouts from the USDA FD–CIC excel tool, or similar documentation showing USDA FD–CIC inputs and outputs including CI for each field or management unit) including a unique identifier for each field or management unit; and

(ii) Calculation of the farm-level crop-specific CI for each crop; and

(3) Include a Farm Producer Attestation declaring that the farm producer:

(i) Has operational control over all fields using CSA practices and has decision-making authority to manage fields as specified for practice standards in subpart F of this part;

(ii) Implemented CSA practice(s) that were used in calculation of the CI according to the implementation standards in subpart F of this part;

(iii) Calculated the farm-level CI as specified in subpart C of this part;

(iv) Will retain required records for 5 years and make records available upon request to accredited third-party verifier;

(v) Will not double sell greenhouse gas benefits resulting from CSA practice(s) that are used in calculation of the CI (that is, will not sell the CI information, attributes, or greenhouse gas benefits associated with CSA crops in more than one market);

(vi) When implementing no-till, will continue no-till for a minimum of four out of every five years; and

(vii) Did not convert the land used to produce CSA biofuel feedstock crops into crop production after the date that this rule was published.

§ 2100.032 First point of aggregation and intermediary entity recordkeeping and reporting standards.

(a) The first point of aggregation and intermediary entities must establish and maintain a reporting system to ensure a clear link between reduced-CI crops and documentation at all times. The first point of aggregation and intermediary entities must have a documented system in place to prevent the double sale of crops associated with a CI. At minimum, the entity must keep:

(1) Records of incoming and outgoing reduced-CI crop, including:

(i) the total amount of reduced-CI crop purchased, sold, or both;

(ii) the entity from and to which the crop was purchased, sold, or both;

(iii) the associated CI; and

(iv) the date of the transaction;

(2) List of and contracts with all suppliers and recipients of reduced-CI crop; and

(3) List of and contracts with subcontractors and service providers who have a direct role in data management, accounting, processing, or other activities that involve the receipt, storage, sale, or tracking of reduced-CI crop.

(b) In addition to the standards in paragraph (a) of this chapter, the first point of aggregation and intermediary entities must maintain some documentation from the previous entity in the supply chain:

(1) The first point of aggregation must maintain the Biofuel Feedstock Report from each farm supplying reduced-CI crops; and

(2) Intermediary entities must maintain documentation showing that entities supplying reduced-CI crops or reduced-CI processed products received accredited third-party verification under this part.

(c) When a first point of aggregation or intermediary entity sells reduced-CI crops or reduced-CI processed products, the entity must provide the following documentation to the purchasing entity:

(1) documentation that the selling entity received third-party verification in accordance with this part;

(2) total amount of reduced-CI crop or reduced-CI processed product sold; and

(3) CI(s) associated with the amount of reduced-CI crop or reduced-CI processed product sold.

§ 2100.033 Additional recordkeeping standards for entities that process reduced-CI crops, or sell or purchase reduced-CI processed product.

(a) Any entity that processes product using reduced-CI crops is subject to additional recordkeeping standards. Processing includes extracting oil from seed oil crops (for example, soybeans). Entities that process reduced-CI crops must:

(1) Keep records on processing of reduced-CI crops, including the entity's crushing yield, the amount of reduced-CI crop used in processing, and the corresponding amount of reduced-CI processed product; and

(2) Demonstrate calculation of the amount of reduced-CI processed product corresponding to the amount of reduced-CI crop, using the entity specific crushing yield and the following equation:

$$\text{reduced CI processed product} = \text{crushing yield} \times \text{reduced CI crop}$$

(b) Any entity that sells or purchases reduced-CI processed product must keep records demonstrating:

(1) The amount of reduced-CI crop used as an input for reduced-CI processed product sold or purchased;

(2) The CI associated with reduced-CI crop used as an input for reduced-CI processed product sold or purchased; and

(3) The amount of reduced-CI processed product sold or purchased.

§ 2100.034 Mass balance recordkeeping standards.

(a) First points of aggregation and intermediary entities must calculate and record the mass balance of incoming and outgoing reduced-CI crops, such that the incoming and outcoming amounts of reduced-CI crops with a specific CI are equal over a defined period of time. If an entity processes, purchases, or sells reduced-CI processed product, the mass balance accounting must document the amount of reduced-CI crop that was used in the reduced-CI processed product.

(b) To complete mass balance calculations, entities must define mass balance time periods such that mass balance time periods are continuous (that is, no gaps between mass balance periods occur). Each mass balance time period may not exceed three months. Entities must document the mass balance time period used for the mass balance calculation.

(c) Entities must provide documentation of the mass balance calculation for each time period to the third-party verifier during audits.

(d) For any given CI, records must indicate that incoming and outgoing

crops and processed products are balanced according to the equation:

incoming feedstock$_{i,c,m}$ + beginning stored feedstock $_{i,c,m}$ = outgoing feedstock$_{i,c,m}$ + ending stored feedstock $_{i,c,m}$

(1) Where feedstocks (incoming, stored, and outgoing) for entity *i* are identified by their carbon intensity, *c,* and the pre-defined mass balance accounting time period, *m.*

(i) Incoming feedstocks include those purchased by entity *i* in time period *m.*

(ii) Outgoing feedstocks must include both sold and discarded or wasted feedstocks in time period *m.*

(iii) Stored feedstocks are those maintained by the entity during time period *m* and must be accounted for in the mass balance accounting.

(iv) If reduced-CI crops or processed product is remaining at the end of a mass balance time period *m,* it is accounted for as ending stored feedstock for that time period and as beginning stored feedstock for the subsequent time period.

(2) To ensure that the mass balance accounting for entity *i* appropriately accounts for different forms of reduced-CI processed products (that is, oils), the entity's crushing yield must be used to convert reduced-CI processed products back to their crop volume or weight equivalents using the following equation:

processed feedstock crop equivalent = (processed feedstock)/(crushing yield)

§ 2100.035 Biofuel refiner recordkeeping standards.

(a) For reduced-CI crop that a biofuel refiner sources directly from a farm, the biofuel refiner is acting as a first point of aggregation and must follow the standards in § 2100.032.

(b) For reduced-CI crops and reduced-CI processed products that are sourced from a first point of aggregation or intermediary entity, a biofuel refiner must keep:

(1) Records of incoming reduced-CI crops or reduced-CI processed products, which, at a minimum this includes records of incoming reduced-CI crop or reduced-CI processed products, including the total amount of reduced-CI crop or reduced-CI processed product purchased, the entity from which the crop or processed product was purchased, the associated CI, and the date of the transaction; and

(2) Documentation that the entity supplying reduced-CI crop or reduced-CI processed product has undergone third-party verification by an accredited third-party verifier and met the standards of this part.

(c) For all reduced-CI crops, a biofuel refiner must establish a system to track all incoming reduced-CI crops and the associated CI.

Subpart E—Audits and Verification

§ 2100.040 Third-party audits.

(a) *Audit standards for first point of aggregation.* Each audit for a first point of aggregation must meet the following standards.

(1) First points of aggregation must hire a third-party verifier to conduct an audit annually;

(2) An audit, conducted by a third-party verifier, must verify that the first point of aggregation:

(i) Operates a mass balance system as specified in § 2100.034; and

(ii) Correctly recorded the CI associated with reduced-CI crops delivered from each farm; and

(3) The first point of aggregation must include supplying farms in its audit scope. The first point of aggregation and third-party verifier must adhere to the following standards when selecting the audit sample.

(i) The first point of aggregation must provide farm producer information to enable the third-party verifier to select a sample of supplying farms for verification. Farm producer information must include the total number of farms supplying reduced-CI crops, geographic location of each farm, type and amount of crop supplied by each farm, and CI associated with the crop from each farm;

(ii) The third-party verifier will determine the total number of farms to be included in the audit sample. The third-party verifier must determine the minimum size of the farm audit sample by taking the square root, rounded up to the nearest whole number, of the total number of farms supplying the first aggregation point with reduced-CI crops; and

(iii) The third-party verifier must select the individual farms to be included in the sample for verification. The third-party verifier should select the sample in a way that is representative of supplying farms' characteristics including types of supplied reduced-CI crop, size of farm, geographic location, and risk of non-conformity or fraud. If an audit occurs at the same first aggregation point in subsequent years, the sample of farms should avoid selecting those audited in prior years.

(b) *Audit standards for farms.* Each audit for a farm must meet the following standards.

(1) Farms that supply reduced-CI crops to a first point of aggregation may be selected for an audit by the first point of aggregation's third-party verifier;

(2) If the farm is selected as part of the audit sample as the first point of aggregation, the farm may be considered for exemption from an additional audit when an audit was previously completed for the applicable year. Farm producers can elect to proactively retain an accredited third-party verifier to complete an audit at their farm per the standards of paragraph (b)(3) of this section. To be considered for exemption from an additional audit, the farm producer must provide results of the completed audit. It is up to the discretion of the third-party verifier to determine whether the farm is exempt from an additional audit or if a full or partial audit is necessary; and

(3) For farms that are audited individually or included in an audit sample:

(i) The third-party verifier must verify that CSA practices and practice recordkeeping is in accordance with the standards in subpart F of this part;

(ii) The third-party verifier must verify that the weighted average CI for each crop is calculated correctly in accordance with subpart C; and

(iii) Records from relevant sub-contractors or service providers must be made available during the farm audit at the request of the third-party verifier if necessary to audit practice standards.

(c) *Audit standards for intermediary entities.* Each audit for an intermediary entity must meet the following standards.

(1) Intermediary entities must hire a third-party verifier to conduct an audit annually; and

(2) An audit, conducted by a third-party verifier, must verify that the intermediary entity:

(i) Operates a mass balance system as specified in § 2100.034; and

(ii) Correctly recorded the CI associated with reduced-CI crops or reduced-CI processed product delivered to the intermediary entity.

(d) *Additional audit standards for entities that process, sell, or purchase reduced-CI processed product.* Each audit for a first point of aggregation or intermediary entity that processes, sells, or purchases reduced-CI processed products must meet the following standards.

(1) For entities that process, sell, or purchase reduced-CI processed products, an audit, conducted by a third-party verifier, must verify that the entity implemented recordkeeping standards specified in § 2100.033.

(2) [Reserved]

(e) *Additional audit standards for entities that process reduced-CI crop.* Each audit for a first point of aggregation or intermediary entity that

processes reduced-CI processed products must meet the following standards.

(1) For entities that process reduced-CI crop, the third-party verifier must verify that internal records support the calculation and application of the entity's crushing yield used to:

(i) Determine the amount of reduced-CI processed product derived from the amount of inputs; and

(ii) Perform the mass balance calculation.

(2) [Reserved]

(f) *Audit standards for biofuel refiners.* Each audit for a biofuel refiner must meet the following standards.

(1) Biofuel refiners must hire a third-party verifier to conduct an audit annually; and

(2) An audit, conducted by a third-party verifier, must verify that the biofuel refiner:

(i) Operates a system to correctly record the CI associated with reduced-CI crop or reduced-CI processed product as specified in § 2100.035(c); and

(ii) Followed the standards in paragraph (a) of this section, if the biofuel refiner acted as a first point of aggregation for any reduced-CI crop.

§ 2100.041 Accreditation of third-party verifiers.

Third-party verifiers that conduct audits in accordance with this part must be accredited to ISO 14065: General principles and requirements for bodies validating and verifying environmental information by a member of the International Accreditation Forum.

Subpart F—Climate-Smart Agriculture (CSA) Practice Standards

§ 2100.050 General.

CSA practices may be implemented individually or in combination on a field or management unit.

§ 2100.051 Tillage management.

(a) *Reduced till standards.* To qualify as reduced till under this part, field(s) or management unit(s) must be managed according to the following standards:

(1) Tillage methods where the entire soil surface is disturbed by tillage operations such as chisel plowing, field cultivating, tandem disking, vertical tillage, or ridge tillage are permitted, provided that the STIR value is no greater than 80. The STIR value must include all field operations that are performed during the crop interval (that is, from the time immediately following harvest or termination of one cash crop through harvest or termination of the next cash crop in the rotation, including fallow periods). Permitted methods are also commonly referred to as mulch tillage, conservation tillage, or ridge till;

(2) Primary inversion tillage implements (for example, moldboard plow) must not be used;

(3) Residue must not be burned; and

(4) Removing residue from the crop planting row area prior to or as part of the planting operation is allowed.

(b) *No-till standards.* To qualify as no-till under this part, field(s) or management unit(s) must be managed according to the following standards:

(1) Full-width soil disturbance must not be performed, from the time immediately following harvest or termination of one cash crop through harvest or termination of the next cash crop in the rotation, regardless of the depth of the tillage operation. Strip tillage and fertilizer injection are permitted, provided that the STIR value is no greater than 20. The STIR value must include all field operations that are performed during the crop interval (that is, from the time immediately following harvest or termination of one cash crop through harvest or termination of the next cash crop in the rotation, including fallow periods);

(2) Residue must not be burned; and

(3) Removing residue from directly within the seeding, planting, or transplanting area prior to or as part of the planting operation is allowed.

(c) *Tillage management recordkeeping standards.* Farm producers must maintain records for 5 years demonstrating required implementation of the reduced till or no-till practice. Records must contain sufficient detail to be readily understood and auditable. Records may be of varying types and origins including, but not limited to, physical documentation (for example, paper forms, invoices, receipts, seed tags), digital files (including from farm management software), data generated by farm equipment (for example, precision agriculture equipment), remotely sensed data, georeferenced and timestamped photographs, or data and records used for participation in USDA programs. Records must demonstrate:

(1) Field(s) or management unit(s) where the practice is implemented, including location and acreage;

(2) All field operations including tillage and all other operations (including fertilizing, planting, controlling pests, seeding, harvesting) that may cause surface disturbance;

(3) Type of field operation including depth and width of disturbance and average speed of operation;

(4) Equipment used;

(5) Date(s) that each operation occurred; and

(6) Total bushels of the harvested production crop harvested from field(s) or management unit(s) where the practice was implemented. If the farm producer uses both reduced till and no-till on different fields, records must indicate the total bushels produced using each CSA practice.

(d) *Tillage management verification.* When auditing the reduced till or no-till practice, third-party verifiers must review documentation demonstrating all field operations including the type of operation, equipment used, and timing of operation. Using these records, third-party verifiers must verify the correct calculation (or perform the calculation) of a crop interval STIR value and verify that the value meets the standards of the reduced till or no-till practice.

§ 2100.052 Cover crop management.

(a) *Cover crop standards.* To qualify for the cover crop practice under this part, field(s) or management unit(s) must be managed according to the following standards:

(1) Cover crop species selection, seedbed preparation, seeding rate(s), seeding date, seeding depth, and seeding method must be consistent with applicable soil and site conditions;

(2) When a leguminous cover crop is used individually or as part of a mix, the farm producer must develop a nutrient budget which demonstrates:

(i) The available nitrogen resulting from the cover crop; and

(ii) An adjustment in total planned nitrogen application to the harvested production crop following the cover crop;

(3) Cover crops must be seeded in the fall. Cover crop may be interseeded into an existing or established crop. Cover crop species and seeding dates should not adversely affect crop yield or interfere with the maintenance and harvest process;

(4) Cover crops should be seeded as early as possible and terminated as late as practical (late vegetative stage or later), with termination timing established to minimize the risk of yield loss and soil moisture depletion;

(5) Cover crops must be terminated via winter kill or using herbicide or non-soil disturbing mechanical methods (that is, roller crimper, mowing) in the spring;

(6) Planting green is permitted;

(7) Cover crop biomass must not be mechanically harvested or grazed. Residues must remain on the surface following termination and may not be burned; and

(8) Cover crops may not be fertilized.

(b) *Cover crop recordkeeping standards.* Farm producers must

maintain records for 5 years demonstrating required implementation of the cover crop practice. Records must contain sufficient detail to be readily understood and auditable. Records may be of varying types and origins including, but not limited to, physical documentation (for example, paper forms, invoices, receipts, seed tags), digital files (including from farm management software), data generated by farm equipment (for example, precision agriculture equipment), remotely sensed data, georeferenced and timestamped photographs, or data and records used for participation in USDA programs. Records must demonstrate:

(1) Purchase and receipt of cover crop seed in sufficient quantities to cover the area seeded;

(2) Field(s) or management unit(s) where cover crop practice is implemented, including location and acreage;

(3) Cover crop seeding date, method, and seeding rate;

(4) Total acreage seeded in cover crop across the operation;

(5) Photographic evidence of cover crop establishment;

(6) Cover crop termination date and method; and

(7) Total bushels of the crop harvested from field(s) or management unit(s) where the cover crop practice was implemented immediately prior to seeding or planting the harvested production crop.

(c) *Cover crop verification.* When auditing the cover crop practice, third-party verifiers must review documentation demonstrating cover crop species selection, seeding date, seeding method, seeding rate, total seeded acreage, termination date, and termination method. Through an on-site visit, remote video conferencing, remote sensing data, or georeferenced and timestamped photographs, third-party verifiers must verify the establishment of cover crops.

§ 2100.053 Nutrient management.

(a) *Nutrient management standards.* To qualify for any nutrient management practice (nitrification inhibitors, controlled release fertilizers, no fall application, split in-season application) under this part, field(s) or management unit(s) must be managed according to the following standards:

(1) Prior to implementation, the farm producer must develop and document a planned nutrient budget, yield goal, and applications of at a minimum, nitrogen, phosphorous, and potassium (N–P–K) in pounds per acre. The nutrient budget must account for all known measurable nutrient sources and removals. Sources of nitrogen may include, but are not limited to, commercial fertilizers (including starter and in-furrow starter or pop-up fertilizer), animal manures, legume crops, green manures, plant or crop residues, compost, organic by-products, municipal and industrial biosolids, wastewater, organic materials, estimated plant available soil nutrients, and irrigation water; and

(2) The farm producer must base the nutrient budget on current soil test results or the professional opinion of an agricultural expert who is employed by the Cooperative Extension System or the agricultural departments of universities, or other persons approved by the Federal Crop Insurance Corporation (FCIC), whose research or occupation is related to the specific crop or practice for which such expertise is sought. Soil test must be no older than 2 years. Tissue testing may be used for monitoring or adjusting the nutrient management plan in accordance with the state LGU guidance, or industry practice recognized by the state LGU.

(b) *Nitrification inhibitor standards.* To qualify for the practice under this part, field(s) or management unit(s) must be managed in accordance with paragraph (a) of this section and with the following standards:

(1) The farm producer must apply an inhibitor with all synthetic nitrogen (synthetic N) applications, including any pre-emergent applications. Inhibitors must be defined by the Association of American Plant Food Control Officers (AAPFCO) and be accepted for use by the State fertilizer control official, or similar authority, with responsibility for verification of product guarantees, ingredients (by AAPFCO definition), and label claims.

(2) [Reserved]

(c) *No fall application standards.* To qualify for the no fall application practice under this part, field(s) or management unit(s) must be managed as specified in paragraph (a) of this section and with the following standards:

(1) The first synthetic N application must occur within 30 days prior to or at the time of planting; and

(2) The farm producer must not apply synthetic N in the fall on fallow fields or fields in cover crop. This includes any synthetic N included in phosphorus fertilizers.

(d) *Split in-season application standards.* To qualify for the split in-season application practice under this part, field(s) or management unit(s) must be managed accordingly in accordance with paragraph (a) of this section and with the following standards:

(1) Farm Producer must apply at least 75 percent of total crop synthetic N needs after crop emergence. Post emergent synthetic N may be reduced based on crop scouting, in-season soil sampling or analysis, or plant tissue sampling or analysis. Nutrient availability should be timed to crop uptake.

(2) [Reserved]

(e) *Nutrient management recordkeeping standards.* Farm producers must maintain records demonstrating correct implementation of the nutrient management practice(s) for 5 years. Records must contain sufficient detail to be readily understood and auditable. Records may be of varying types and origins, including, but not limited to, physical documentation (for example, paper forms, invoices, receipts, seed tags), digital files (including from farm management software), data generated by farm equipment (for example, precision agriculture equipment), remotely sensed data, georeferenced and timestamped photographs, or data and records used for participation in USDA programs. Records must demonstrate:

(1) Development of a nutrient budget that accounts for realistic yield goal and all known and measurable sources of N–P–K;

(2) Soil test results, soil test methods, laboratory where soil test was conducted, and date of the soil test within 2 years of the development of the nutrient budget. In-season soil samples or tissue samples results for N analysis should be provided along with methods, laboratory, and date sampled;

(3) Date(s), method(s), location(s) of all nutrient applications in pounds per acre for N–P–K;

(4) The source and type of nutrients supplied, including nutrient content;

(5) Field(s) or management unit(s) where nutrient management practice(s) is implemented, including location and acreage;

(6) Planting or seeding date for field(s) and management unit(s) where nutrient management practice(s) is implemented;

(7) Total acreage using each nutrient management practice across the operation; and

(8) Total bushels of the crop harvested from field(s) or management unit(s) where each nutrient management practice was implemented.

(f) *Nutrient management verification.* When auditing nutrient management practice(s), the third-party verifier must verify development of a nutrient management budget that accounts for all known and measurable sources of nutrients (that is, N–P–K). For nitrification inhibitors, the third-party

verifier must verify that inhibitors were used with 100 percent of synthetic N application on all field(s) or management unit(s) where the practice was implemented. For timing practices (no fall application or split in-season application), the third-party verifier must verify application timing through management records.

William Hohenstein,

Director, Office of Energy and Environmental Policy, Office of the Chief Economist.

BILLING CODE 3410–GL–P

DEPARTMENT OF HOMELAND SECURITY

8 CFR Part 106

[CIS No. 2801–25; DHS Docket No. USCIS 2021–0010]

RIN 1615–AC68

U.S. Citizenship and Immigration Services Fee Schedule and Changes to Certain Other Immigration Benefit Request Requirements; Second Correction

AGENCY: U.S. Citizenship and Immigration Services (USCIS), Department of Homeland Security (DHS).

ACTION: Correcting amendment.

SUMMARY: On January 31, 2024, the Department of Homeland Security (DHS) published a final rule to adjust certain immigration and naturalization benefit request fees charged by USCIS, add fee exemptions, and make changes to certain other immigration benefit request requirements. The rule took effect on April 1, 2024. In this notice, we are correcting a technical error made in that rule.

DATES: This correcting amendment is effective January 17, 2025.

FOR FURTHER INFORMATION CONTACT: Carol Cribbs, Deputy Chief Financial Officer, U.S. Citizenship and Immigration Services, Department of Homeland Security, 5900 Capital Gateway Dr., Camp Springs, MD 20746; telephone 240–721–3000 (this is not a toll-free number).

SUPPLEMENTARY INFORMATION:

Background

On January 31, 2024, the Department of Homeland Security (DHS) published a final rule in the **Federal Register** at 89 FR 6194 changing immigration and naturalization benefit request fees charged by U.S. Citizenship and Immigration Services (USCIS), fee exemptions and fee waiver requirements, premium processing time limits, and intercountry adoption processing. DHS published a correction to the final rule at 89 FR 20101 on March 24, 2024. DHS has identified an error in the regulatory text.

Need for Correction

As codified by DHS in the final rule, 8 CFR 106.3(a)(3)(ii)(A) erroneously associates the E–2C classification with Form I–129CW. Petitioners for E–2C classification do not submit Form I–129CW. Form I–129CW petitioners may request a fee waiver when petitioning for a CW–1, CNMI-only transitional worker (see 8 CFR 214.2(w)), but the fee waiver provision as codified does not include a CW–1, CNMI-only transitional worker. Therefore, this notice corrects that error by removing ''E–2 CNMI investor'' and replacing it with ''CW–1, CNMI-only transitional worker'' in the first sentence of 8 CFR 106.3(a)(3)(ii)(A) to include the correct nonimmigrant classification. DHS is correcting the second sentence of 8 CFR 106.3(a)(3)(ii)(A) by removing ''a E–2 CNMI investor'' and replacing it with ''an employer petitioning for a CW–1, CNMI-only transitional worker,'' to clarify that the employer petitioning for a CW–1, CNMI-only transitional worker must pay any fees in 8 CFR 106.2(c) that may apply, not an E–2 CNMI investor.

List of Subjects in 8 CFR Part 106

Citizenship and naturalization, Fees, Immigration.

Correction

Accordingly, for the reasons set out in the preamble, chapter I of title 8 of the Code of Federal Regulations is corrected by making the following correcting amendment:

PART 106—USCIS FEE SCHEDULE

■ 1. The authority citation for part 106 continues to read as follows:

Authority: 8 U.S.C. 1101, 1103, 1254a, 1254b, 1304, 1356; Pub. L. 107–609; 48 U.S.C. 1806; Pub. L. 107–296, 116 Stat. 2135 (6 U.S.C. 101 note); Pub. L. 115–218, 132 Stat. 1547; Pub. L. 116–159, 134 Stat. 709.

■ 2. Section 106.3 is amended by revising paragraph (a)(3)(ii)(A) to read as follows:

§ 106.3 Fee waivers and exemptions.

(a) * * *

(3) * * *

(ii) * * *

(A) Petition for a CNMI-Only Nonimmigrant Transitional Worker (Form I–129CW) for a CW–1, CNMI-only transitional worker. Waiver of the fee for Form I–129CW does not waive the requirement for an employer petitioning for a CW–1, CNMI-only transitional worker to pay any fees in § 106.2(c) that may apply.

[EERE–2024–BT–TP–0009]

RIN 1904–AF68

Energy Conservation Program: Test Procedures for Residential and Commercial Clothes Washers and Consumer Clothes Dryers

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Final rule.

SUMMARY: In this final rule, the U.S. Department of Energy (''DOE'') is amending the test procedures for residential and commercial clothes washers and consumer clothes dryers to update the test cloth specifications. DOE is also reorganizing the test procedures for improved readability. DOE is conducting this rulemaking to address specific issues and to make minor corrections to the current test procedures. This rulemaking does not satisfy the statutory requirement that, at least once every 7 years, DOE review the test procedures for clothes washers and consumer clothes dryers.

DATES: The effective date of this rule is February 18, 2025. The amendments will be mandatory for product testing starting July 16, 2025. The incorporation by reference of certain material listed in the rule was approved by the Director of the Federal Register as of July 1, 2022.

ADDRESSES: The docket, which includes **Federal Register** notices, comments, and other supporting documents/materials, is available for review at *www.regulations.gov*. All documents in the docket are listed in the *www.regulations.gov* index. However, not all documents listed in the index may be publicly available, such as those containing information that is exempt from public disclosure.

A link to the docket web page can be found at *www.regulations.gov/docket/EERE-2024-BT-TP-0009*. The docket web page contains instructions on how

to access all documents, including public comments, in the docket.

For further information on how to review the docket contact the Appliance and Equipment Standards Program staff at (202) 287–1445 or by email: *ApplianceStandardsQuestions@ee.doe.gov.*

I. Authority and Background

Consumer (residential) clothes washers (''RCWs''), commercial clothes washers (''CCWs''), and consumer clothes dryers are included in the list of ''covered products/equipment'' for which DOE is authorized to establish and amend energy conservation standards and test procedures. (42 U.S.C. 6292(a)(7)–(8); 42 U.S.C. 6311(1)(H)) DOE's test procedures for RCWs are currently prescribed in the Code of Federal Regulations (''CFR'') at 10 CFR 430.23(j) and at 10 CFR part 430, subpart B, appendices J (''appendix J'') and J2 (''appendix J2''). The test procedures for CCWs must be the same as those established for RCWs. (42 U.S.C. 6314(a)(8)) DOE's test procedures for consumer clothes dryers are currently prescribed at 10 CFR 430.23(d) and at 10 CFR part 430, subpart B, appendices D1 (''appendix D1'') and D2 (''appendix D2''). DOE also prescribes specifications for the test cloth to be used for testing clothes washers at appendix J3 to subpart B (''appendix J3''). The following sections discuss DOE's authority to establish and amend test procedures for RCWs, CCWs, and consumer clothes dryers and relevant background information regarding DOE's consideration of test procedures for these products.

A. Authority

The Energy Policy and Conservation Act, Public Law 94–163, as amended (''EPCA''),[1] authorizes DOE to regulate the energy efficiency of a number of consumer products and certain industrial equipment. (42 U.S.C. 6291–6317, as codified) Title III, Part B of EPCA [2] established the Energy Conservation Program for Consumer Products Other Than Automobiles, which sets forth a variety of provisions designed to improve energy efficiency. These products include RCWs and consumer clothes dryers. (42 U.S.C. 6292(a)(7)–(8)) Title III, Part C of EPCA,[3] added by Public Law 95–619, Title IV, section 441(a), established the Energy Conservation Program for Certain Industrial Equipment which sets forth a variety of provisions designed to improve energy efficiency. This equipment includes CCWs. (42 U.S.C. 6311(1)(H)) RCWs, CCWs, and consumer clothes dryers are the subject of this document.

The energy conservation program under EPCA consists essentially of four parts: (1) testing, (2) labeling, (3) Federal energy conservation standards, and (4) certification and enforcement procedures. Relevant provisions of EPCA specifically include definitions (42 U.S.C. 6291; 42 U.S.C. 6311), test procedures (42 U.S.C. 6293; 42 U.S.C. 6314), labeling provisions (42 U.S.C. 6294; 42 U.S.C. 6315), energy conservation standards (42 U.S.C. 6295; 42 U.S.C. 6313), and the authority to require information and reports from manufacturers (42 U.S.C. 6296; 42 U.S.C. 6316).

The Federal testing requirements consist of test procedures that manufacturers of covered products/equipment must use as the basis for: (1) certifying to DOE that their products comply with the applicable energy conservation standards adopted under EPCA (42 U.S.C. 6295(s); 42 U.S.C. 6316(a)), and (2) making other representations about the efficiency of those products/equipment (42 U.S.C. 6293(c); 42 U.S.C. 6314(d)). Similarly, DOE must use these test procedures to determine whether the products comply with any relevant standards promulgated under EPCA. (42 U.S.C. 6295(s); 42 U.S.C. 6316(a)).

Federal energy efficiency requirements for covered products and equipment established under EPCA generally supersede State laws and regulations concerning energy conservation testing, labeling, and standards. (42 U.S.C. 6297; 42 U.S.C. 6316(a) and (b)) DOE may, however, grant waivers of Federal preemption for particular State laws or regulations, in accordance with the procedures and other provisions of EPCA. (42 U.S.C. 6297(d); 42 U.S.C. 6316(a)).

Under 42 U.S.C. 6293 and 42 U.S.C. 6314, EPCA sets forth the criteria and procedures DOE must follow when prescribing or amending test procedures for covered products/equipment. EPCA requires that any test procedures prescribed or amended under this section shall be reasonably designed to produce test results which measure energy efficiency, energy use or estimated annual operating cost of a covered product during a representative average use cycle (as determined by the Secretary) or period of use and shall not be unduly burdensome to conduct. (42 U.S.C. 6293(b)(3); 42 U.S.C. 6314(a)(2)).

[1] All references to EPCA in this document refer to the statute as amended through the Energy Act of 2020, Public Law 116–260 (Dec. 27, 2020), which reflect the last statutory amendments that impact Parts A and A–1 of EPCA.

[2] For editorial reasons, upon codification in the U.S. Code, Part B was redesignated Part A.

[3] For editorial reasons, upon codification in the U.S. Code, Part C was redesignated Part A–1.

EPCA also requires that, at least once every 7 years, DOE evaluate test procedures for each type of covered product and equipment, including RCWs, CCWs and consumer clothes dryers, to determine whether amended test procedures would more accurately or fully comply with the requirements for the test procedures to not be unduly burdensome to conduct and be reasonably designed to produce test results that reflect energy efficiency, energy use, and estimated operating costs during a representative average use cycle or period of use. (42 U.S.C. 6293(b)(1)(A); 6314(a)(1)).

If the Secretary determines, on his or her own behalf or in response to a petition by any interested person, that a test procedure should be prescribed or amended, the Secretary shall promptly publish in the **Federal Register** proposed test procedures and afford interested persons an opportunity to present oral and written data, views, and arguments with respect to such procedures. The comment period on a proposed rule to amend a test procedure shall be at least 60 days and may not exceed 270 days. In prescribing or amending a test procedure, the Secretary shall take into account such information as the Secretary determines relevant to such procedure, including technological developments relating to energy use or energy efficiency of the type (or class) of covered products involved. (42 U.S.C. 6293(b)(2)).[4] If DOE determines that test procedure revisions are not appropriate, DOE must publish its determination not to amend the test procedures.

In addition, EPCA requires that DOE amend its test procedures for all covered products to integrate measures of standby mode and off mode energy consumption into the overall energy efficiency, energy consumption, or other energy descriptor, unless the current test procedure already incorporates the standby mode and off mode energy consumption, or if such integration is technically infeasible. (42 U.S.C. 6295(gg)(2)(A)(i)–(ii)) [5] If an integrated test procedure is technically infeasible, DOE must prescribe separate standby mode and off mode energy use test procedures for the covered product, if a separate test is technically feasible. (42 U.S.C. 6295(gg)(2)(A)(ii)) Any such amendment must consider the most current versions of the International Electrotechnical Commission (IEC) Standard 62301 [6] and IEC Standard 62087 [7] as applicable. (42 U.S.C. 6295(gg)(2)(A)).

EPCA requires the test procedures for CCWs to be the same as the test procedures established for RCWs. (42 U.S.C. 6314(a)(8)) As with the test procedures for RCWs, EPCA requires that DOE evaluate, at least once every 7 years, the test procedures for CCWs to determine whether amended test procedures would more accurately or fully comply with the requirements for the test procedures to not be unduly burdensome to conduct and be reasonably designed to produce test results that reflect energy efficiency, energy use, and estimated operating costs during a representative average use cycle. (42 U.S.C. 6314(a)(1)).

DOE is publishing this final rule to address specific issues and to make minor corrections to the current test procedures that are required for certification of compliance with applicable energy conservation standards. As DOE has not conducted a comprehensive review of the current test procedures, this rulemaking does not satisfy the EPCA requirement that, at least once every 7 years, DOE review the test procedures for RCWs, CCWs, and consumer clothes dryers. (42 U.S.C. 6293(b)(1)(A); 6314(a)(1)(A)).

B. Background

As discussed, DOE's existing test procedures for clothes washers are prescribed at appendix J and appendix J2,[8] and DOE's existing test procedures for consumer clothes dryers are prescribed at appendix D1 and appendix D2.[9]

Additionally, DOE's existing test procedure at appendix J3 provides specifications for the test cloth to be used for testing clothes washers; procedures for pre-conditioning new test cloth; procedures for verifying that new lots [10] of test cloth meet the defined material specifications; and procedures for developing a set of correction coefficients that correlate the measured remaining moisture content (''RMC'') values of each new test cloth lot with a set of standard RMC values established as a historical reference point. These correction coefficients are applied to the RMC measurements performed during testing according to appendix J or appendix J2, ensuring consistency in the final corrected RMC measurement across different test cloth lots used for testing.

Although the test cloth specifications and qualification procedures in appendix J3 are nominally applicable to clothes washer testing, DOE understands that manufacturers and test laboratories use the same test cloth for testing clothes dryers as well. As discussed further in section III.B of this document, the test cloth specifications for clothes washer testing and clothes dryer testing have historically been aligned. Furthermore, as discussed further in section III.D.3 of this document, test cloth that satisfies the requirements of appendix J3 for clothes washer testing also satisfies the requirements codified in appendices D1 and D2 for clothes dryer testing.

The Association of Home Appliance Manufacturers (''AHAM'') has established a Test Cloth Task Force (''AHAM task force'') that, among other responsibilities, reviews and recommends new lots of test cloth for industry use; identifies and secures suppliers for manufacturing test cloth; conducts research and investigations to recommend continuous improvements to the test cloth specifications and qualification procedures; and addresses any industry-wide concerns that may arise regarding the test cloth. DOE representatives participate in the AHAM task force.

On May 31, 2024, DOE received a letter from AHAM (''May 2024 AHAM Letter'') urging DOE to allow the use of alternate test cloth material for clothes washer and clothes dryer testing.[11] The May 2024 AHAM Letter also made further requests for DOE to amend certain test cloth specifications based on

[4] For commercial equipment, if the Secretary determines that a test procedure amendment is warranted, the Secretary must publish proposed test procedures in the **Federal Register**, and afford interested persons an opportunity (of not less than 45 days' duration) to present oral and written data, views, and arguments on the proposed test procedures. (42 U.S.C. 6314(b)).

[5] EPCA does not contain an analogous provision for commercial equipment.

[6] IEC 62301, *Household electrical appliances—Measurement of standby power* (Edition 2.0, 2011–01).

[7] IEC 62087, *Audio, video and related equipment—Methods of measurement for power consumption* (Edition 1.0, Parts 1–6: 2015, Part 7: 2018).

[8] Manufacturers must use the results of testing under appendix J2 to determine compliance with the current relevant standards for RCWs at 10 CFR 430.32(g)(1) and for CCWs at 10 CFR 431.156(b). Manufacturers must use the results of testing under appendix J to determine compliance with the relevant standards for RCWs manufactured on or after March 1, 2028, specified at 10 CFR 430.32(g)(2) and with any amended standards for CCWs provided in 10 CFR 431.156 that are published after January 1, 2022.

[9] The test procedures in appendix D1 or appendix D2 must be used to determine compliance with the current relevant standards for consumer clothes dryers at 10 CFR 430.32(h)(3). Manufacturers must use the test procedure in appendix D2 to determine compliance with the relevant standards for consumer clothes dryers manufactured on or after March 1, 2028, specified at 10 CFR 430.32(h)(4).

[10] The term ''lot'' refers to a quantity of cloth that has been manufactured with the same batches of cotton and polyester during one continuous process. Section 2 of appendix J3.

[11] Document available at *www.regulations.gov/document/EERE-2024-BT-TP-0009-0001*.

the results of recent investigations by the AHAM task force. (*Id.*)

DOE published a notice of proposed rulemaking (''NOPR'') on November 5, 2024 (''November 2024 NOPR''), presenting DOE's proposals to amend the test procedures for residential and commercial clothes washers and consumer clothes dryers to update the test cloth specifications. 89 FR 87803.

DOE received comments in response to the November 2024 NOPR from the interested parties listed in Table I.1.[12]

TABLE I.1—LIST OF COMMENTERS WITH WRITTEN SUBMISSIONS IN RESPONSE TO THE NOVEMBER 2024 NOPR

Commenter(s)	Reference in this final rule	Comment No. in the docket	Commenter type
Michael Ravnitzky	Ravnitzky	5	Individual.
Anonymous	Anonymous	6	Individual.
Northwest Energy Efficiency Alliance	NEEA	8	Advocacy Organization.
Association of Home Appliance Manufacturers	AHAM	10	Trade Organization.

Ravnitzky, NEEA, and AHAM submitted comments generally supportive of DOE's proposals in the November 2024 NOPR. (Ravnitzky, No. 5 at p. 1; NEEA, No. 8 at pp. 1–2; AHAM, No. 10 at p. 1) An anonymous commenter expressed support for test cloth specifications in order to achieve results that identify the most efficient clothes washers. (Anonymous, No 6 at p. 1) Comments from these stakeholders regarding specific topics addressed in the November 2024 NOPR are discussed in the relevant sections of this document.

A parenthetical reference at the end of a comment quotation or paraphrase provides the location of the item in the public record.[13]

C. Deviation From Process Rule

In accordance with section 3(a) of 10 CFR part 430, subpart C, appendix A (''Process Rule''), DOE noted in the November 2024 NOPR that it was deviating from section 8(b)(2) of the Process Rule, which states that there will be not less than 60 days for public comment on the NOPR, with at least one public hearing or workshop. As stated in the November 2024 NOPR, DOE found it appropriate to forgo a public hearing given the limited scope of issues addressed in the proposal, but also stated that DOE would hold a public meeting on the November 2024 NOPR if one was requested. DOE did not receive any comments requesting a public meeting. DOE also determined in the November 2024 NOPR that 30 days was an appropriate period for providing comments, given the limited scope of issues addressed in the proposal. 89 FR 87803, 87806.

II. Synopsis of the Final Rule

In this final rule, DOE amends its test cloth specifications as follows:

(1) Specify that fabric weight and thread count must be measured on finished goods prior to pre-conditioning,

(2) Clarify that the test cloth be made with a ''granite,'' ''momie,'' or ''crepe'' weave,

(3) Allow the use of an alternate test cloth,

(4) Amend the statistical criteria for a new test cloth lot to be considered acceptable for use,

(5) Restructure and renumber certain sections of appendix J3 for clarity, and

(6) Harmonize the test cloth specifications for clothes washers and clothes dryers.

The adopted amendments are summarized in Table II.1 compared to the test procedure provisions prior to the amendments, as well as the reason for the adopted changes.

TABLE II.1—SUMMARY OF CHANGES IN THE AMENDED TEST PROCEDURE

DOE test procedure prior to amendment	Amended test procedure	Attribution
Does not specify at which stage of the process the fabric weight and thread count of test cloth are applicable.	Specifies that fabric weight and thread count must be measured on finished goods prior to pre-conditioning.	Industry request; improve reproducibility of test results.
Specifies the use of ''granite or momie'' weave.	Specifies the use of ''granite, momie, or crepe'' weave	Industry request; clarification of existing requirement.
Specifies one type of allowable test cloth.	Specifies two types of allowable test cloth	Industry request; reduce test burden while maintaining reproducibility and representativeness.
Specifies that the coefficient of variation across nine RMC values must be less than or equal to 1 percent.	Specifies that the coefficient of variation across nine RMC values must be less than or equal to 1.5 percent.	Reduce test burden while maintaining reproducibility and representativeness.
Specifies that the P-value of the RMC correction curve must be greater than or equal to 0.1.	Specifies that the root-mean-square error of the RMC correction curve must be less than or equal to 0.012.	Reduce test burden while maintaining reproducibility and representativeness.
Appendix J3 test cloth specifications currently apply only to clothes washers.	Harmonizes test cloth requirements across both clothes washers and clothes dryers and extends applicability of appendix J3 test cloth specifications to both clothes washers and clothes dryers.	Industry request; clarify existing requirements consistent with industry practice.

[12] Table I.1 excludes one comment not applicable to this rulemaking.

[13] The parenthetical reference provides a reference for information located in the docket of DOE's rulemaking to develop test procedures for insert product. (Docket No. EERE–2024–BT–TP–0009, which is maintained at: *www.regulations.gov*). The references are arranged as follows: (commenter name, comment docket ID number at page of that document).

DOE has determined that the amendments described in section III and adopted in this document will not alter the measured efficiency of RCWs, CCWs, or consumer clothes dryers, or require retesting or recertification solely as a result of DOE's adoption of the amendments to the test procedures. Additionally, DOE has determined that the amendments will not increase the cost of testing. Discussion of DOE's actions are addressed in detail in section III of this document.

The effective date for the amended test procedures adopted in this final rule is 30 days after publication of this document in the **Federal Register**. Representations of energy use or energy efficiency must be based on testing in accordance with the amended test procedures beginning 180 days after the publication of this final rule.

III. Discussion

In the following sections, DOE discusses certain amendments to its test procedures for RCWs, CCWs, and consumer clothes dryers. For each amendment, DOE provides relevant background information, explains why the amendment merits consideration, discusses relevant public comments, and its final approach.

A. Scope of Applicability

This rulemaking applies to clothes washers (both RCWs and CCWs, which use the same test procedures) [14] and consumer clothes dryers.

DOE has defined a clothes washer as a consumer product designed to clean clothes, utilizing a water solution of soap and/or detergent and mechanical agitation or other movement, that must be one of the following classes: automatic clothes washers,[15] semi-automatic clothes washers,[16] and other clothes washers.[17] 10 CFR 430.2.

DOE regulations also define ''electric clothes dryer'' and ''gas clothes dryer'' similarly as a cabinet-like appliance designed to dry fabrics in a tumble-type drum with forced air circulation, with blower(s) driven by an electric motor(s) and either electricity or gas, respectively, as the heat source. *See,* 10 CFR 430.2. DOE's clothes dryer test procedures are applicable to both electric and gas clothes dryers.

A commercial clothes washer is defined as a soft-mount front-loading or soft-mount top-loading clothes washer that—

(A) Has a clothes container compartment that–

(i) For horizontal-axis clothes washers, is not more than 3.5 cubic feet; and

(ii) For vertical-axis clothes washers, is not more than 4.0 cubic feet; and

(B) Is designed for use in–

(i) Applications in which the occupants of more than one household will be using the clothes washer, such as multi-family housing common areas and coin laundries; or

(ii) Other commercial applications.

(42 U.S.C. 6311(21); 10 CFR 431.452)

DOE is not changing the scope of the RCW, CCW, or consumer clothes dryer test procedures, or the relevant definitions, in this final rule.

B. Relevant Historical Background

This section summarizes the historical background of test cloth specifications in DOE's clothes washer and clothes dryer test procedures that is relevant to topics discussed in this final rule.

DOE first introduced the use of test cloth into the original clothes dryer test procedure established by the final rule published September 14, 1977 (''September 1977 Clothes Dryer Final Rule''). 42 FR 46145. The test cloth specifications were a 50-percent cotton and 50-percent polyester blended material, representative of the range of fabrics comprising consumer wash loads. *Id.* at 42 FR 46146. The September 1977 Clothes Dryer Final Rule also established a maximum use of 25 clothes dryer test cycles for each piece of test cloth to reduce potential variability in the test results that may occur from any change in the composition of the test cloth due to continued drying of the same test cloth. *Id.*

DOE introduced the use of test cloth into the original clothes washer test procedure established by the final rule published September 28, 1977 (''September 1977 Clothes Washer Final Rule''). 42 FR 49802. As discussed in the September 1977 Clothes Washer Final Rule, the size and composition of the test load was chosen to be identical to the test load that had been specified for clothes dryers in the September 1977 Clothes Dryer Final Rule. *Id.* at 49 FR 49805. The number of test runs for each piece of test cloth was limited to no more than 25 clothes washer test cycles. *Id.* at 49 FR 49808.

Since introducing the use of test cloth into the originally established clothes dryer and clothes washer test procedures, DOE has periodically updated the test cloth specifications and requirements. The following paragraphs summarize some of these changes to test cloth specifications and requirements that are relevant to the amendments in this document.

In a final rule published May 19, 1981 (''May 1981 Final Rule''), DOE amended the clothes dryer test procedure to, among other changes, establish test cloth pre-conditioning requirements to improve test repeatability by ensuring that the test cloth not contain any water-soluble sizing or finishing agents that could affect the moisture performance of test cloth. 46 FR 27324. The May 1981 Final Rule also established a weight tolerance on the test cloth. *Id.*

In a final rule published August 27, 1997, DOE amended its test cloth requirements in the clothes washer test procedure by adding a new requirement to prewash (*i.e.,* pre-condition) new test cloth prior to first use for energy consumption testing. 62 FR 45484.

DOE published a final rule on January 12, 2001 (''January 2001 Final Rule'') that, among other changes to the clothes washer test procedure, introduced the modified energy factor descriptor, which incorporated an estimate of clothes drying energy into the clothes washer efficiency descriptor through consideration of the RMC of the clothes leaving the clothes washer. 66 FR 3314. As discussed in the January 2001 Final Rule, it had been discovered that the test cloth to be used for determining the RMC was giving inconsistent results. *Id.* at 66 FR 3317. DOE investigated possible causes for the inconsistent test results and summarized the results in a report published in May 2000 titled *Development of a Standardized Energy Test Cloth for Measuring Remaining Moisture Content in a Residential Clothes Washer* (''May 2000 Test Cloth Report'').[18]

In particular, relevant to topics discussed in this final rule, the May 2000 Test Cloth Report documented the difficulty of relating specifiable test

[14] The test procedures for CCWs must be the same as those established for RCWs. (42 U.S.C. 6314(a)(8)).

[15] An ''automatic clothes washer'' is a class of clothes washer that has a control system that is capable of scheduling a preselected combination of operations, such as regulation of water temperature, regulation of the water fill level, and performance of wash, rinse, drain, and spin functions without the need for user intervention subsequent to the initiation of machine operation. Some models may require user intervention to initiate these different segments of the cycle after the machine has begun operation, but they do not require the user to intervene to regulate the water temperature by adjusting the external water faucet valves. 10 CFR 430.2

[16] A ''semi-automatic clothes washer'' is a class of clothes washer that is the same as an automatic clothes washer except that user intervention is required to regulate the water temperature by adjusting the external water faucet valves. *Id.*

[17] ''Other clothes washer'' means a class of clothes washer that is not an automatic or semi-automatic clothes washer. *Id.*

[18] The May 2000 Test Cloth Report is available at *www.regulations.gov/document/EERE-2006-STD-0064-0277.*

cloth characteristics—fiber content, weight, *etc.*—to RMC measurements. (*See* section 4 of May 2000 Test Cloth Report). On this basis, DOE concluded that tighter test cloth specifications alone would not necessarily lead to comparably consistent RMC measurements. To provide more consistent RMC measurements from lot to lot, the May 2000 Test Cloth Report proposed a new method for developing a ''correction factor'' for each new lot of test cloth. The correction factor would be applied to the RMC measurement to normalize the RMC results to match the RMC performance of a designated ''standard lot.''

The May 2000 Test Cloth Report also concluded that a viable approach to minimize the effects of test cloth variation on RMC would be to consistently specify a single type of fabric that is produced frequently by one mill to a consistent set of specifications. The report recommended the use of a 50-percent cotton/50-percent polyester momie weave fabric from one particular mill as a suitable choice, noting that this cloth (at the time) was produced in high volume, had been produced to a consistent specification for many years, and was likely to continue to be produced on this basis for the foreseeable future. (*See* section 6 of May 2000 Test Cloth Report).

The May 2000 Test Cloth Report recommended a set of test cloth specifications and an RMC correction factor approach that could be adopted into the DOE test procedure. The January 2001 Final Rule incorporated into the clothes washer test procedures many of the recommendations of the May 2000 Test Cloth Report, including the recommended updates to the test cloth specifications and the RMC correction factor procedure. The January 2001 Final Rule also increased the number of allowable test runs for each piece of test cloth to no more than 60 clothes washer test cycles (from 25 previously). 66 FR 3314, 3320.

DOE published a direct final rule on October 31, 2003 (''October 2003 Final Rule'') that, among other changes to the clothes washer test procedure, added as a testing requirement the use of a statistical analysis approach to qualify any interactive effect between different lots of test cloth and spin speeds to further improve consistency of the RMC measurement. 68 FR 62198.

On March 7, 2012, DOE published a final rule (''March 2012 Final Rule'') that, among other changes, updated certain test cloth specifications for clothes washer testing based on recommendations provided by AHAM. 77 FR 13888, 13920–13921. Specifically, the March 2012 Final Rule adopted definitions for cloth ''lot'' and ''roll'' and established test cloth weight tolerances. *Id.* at 77 FR 13921–13922. The March 2012 Final Rule also updated pre-conditioning wash requirements and incorporated American Association of Textile Chemists and Colorists (''AATCC'') test methods for verifying the absence of water-repellent finishes on the test cloth. *Id.* at 77 FR 13922.

In a final rule published on August 5, 2015 (''August 2015 Final Rule''), DOE moved the standard extractor RMC procedure for developing the correction factors for each new test cloth lot from appendix J2 to the newly created appendix J3. 80 FR 46730.

In a final rule published on June 1, 2022 (''June 2022 Final Rule''), among other changes, DOE further consolidated clothes washer test cloth-related provisions into appendix J3 (from appendix J2) to improve the overall logical flow of both test procedures. *Id.* at 87 FR 33367. DOE additionally codified in appendix J3 a test cloth material verification procedure that had historically been used by the AHAM task force when evaluating new lots of test cloth. *Id.* at 87 FR 33368.

C. Test Cloth Specifications and Requirements

In this final rule, DOE is updating its test cloth specifications and requirements to (1) further improve consistency in test results across different lots of test cloth, (2) clarify certain requirements consistent with textile industry nomenclature, (3) allow the use of an alternate type of test cloth that has been shown to exhibit performance consistent with the current test cloth, and (4) re-define appropriate thresholds for certain statistical requirements specified for new lots of test cloth.

Each of the changes are in line with DOE's historical practice of regularly updating its test cloth specifications to improve the consistency of test results and adapt to changes in material specifications and availability of commercially available textiles.

In this section, DOE addresses clothes washer specifications in appendix J3 specifically. As discussed in section III.C.3 of this document, DOE is harmonizing the clothes washer and clothes dryer test cloth specifications such that the edits in this section apply to both product types.

1. Cut Orientation

Section 3.1 of appendix J3 specifies that the test cloth material should come from a roll of material with a width of approximately 63 inches, although other sizes may be used if the test cloth material meets the specifications listed in sections 3.2 through 3.6 of appendix J3. Section 3.7.1 of appendix J3 specifies the dimensions of the individual energy test cloths—nominally 24 inches by 36 inches prior to hemming.[19] Furthermore, section 5 of appendix J3 specifies that the maximum shrinkage requirements for the energy test cloth after pre-conditioning[20] must not be more than 5 percent of the length and width.

Appendix J3 does not specify the orientation of the rectangular dimensions (*i.e.,* lengthwise versus widthwise) for cutting individual energy test cloths from the roll of fabric. As such, the cut orientation of the rectangular energy test cloths can be optimized to minimize wasted fabric (*e.g.,* a lengthwise cut of 36 inches adjacent to a widthwise cut of 24 inches could be patterned on a 63-inch width roll of material with minimal waste).

The May 2024 AHAM Letter recommended that appendix J3 specify that the energy test cloth be cut in a specific orientation relative to the fabric roll. Specifically, the May 2024 AHAM Letter suggested that the 24-inch dimension be cut from the lengthwise (*i.e.,* ''warp'') direction of the roll and the 36-inch dimension be cut from the widthwise (*i.e.,* ''weft'') direction of the roll, as depicted in Figure III.1.

[19] Section 3.7.2 of appendix J3 specifies dimensions of smaller energy ''stuffer'' cloths, which are nominally 12 inches by 12 inches prior to hemming. Since the energy stuffer cloths are square, the consideration of cut orientation in this section of the document pertains only to the rectangular energy test cloths.

[20] The pre-conditioning process is specified in section 5 of appendix J3 and consists of five wash-rinse-spin cycles, with the load bone-dried between each of the five cycles.

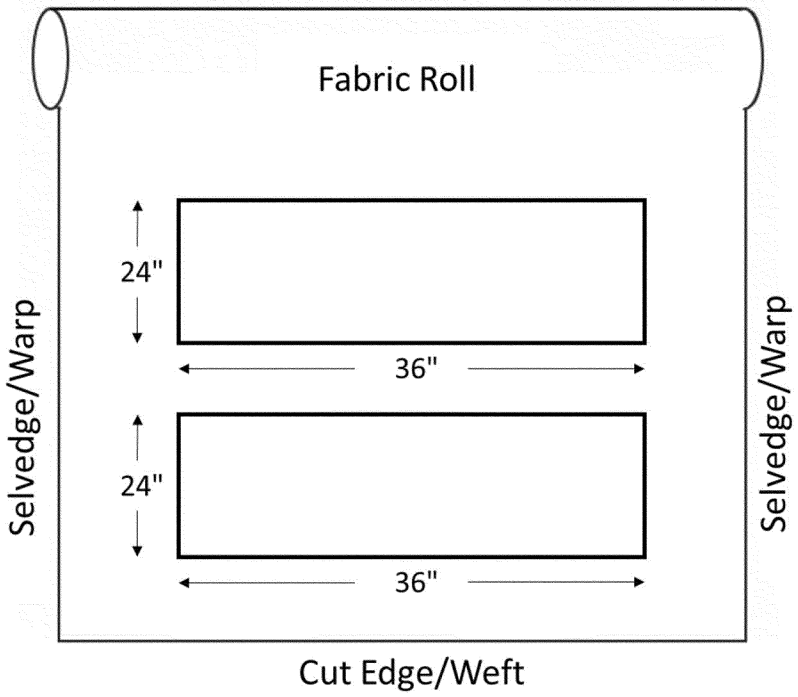

Figure III.1 Energy Test Cloth Cut Orientation Diagram Adapted from the May 2024 AHAM Letter

In the November 2024 NOPR, DOE discussed that differences in cut orientation can impact the relative shrinking of cloth in each direction after repeated wash and dry cycles, which could potentially affect its water absorption and retention properties—characteristics that are particularly relevant to the RMC measurement.[21] 89 FR 87803, 87809. The May 2024 AHAM Letter did not, however, provide any data or quantitative evaluation of whether, or to what extent, the direction of cut orientation could affect the shrinkage of the energy test cloth, or the RMC measurement in the clothes washer test procedure. In the November 2024 NOPR, DOE noted that even if the cut orientation could impact the relative shrinkage of the length and width of the energy test cloth, section 5 of appendix J3 already specifies a maximum allowable shrinkage of 5 percent in each direction. *Id.* DOE added that it had no information to suggest that any variation in shrinkage within this 5 percent tolerance would have a substantive impact on the resulting RMC measurement in the clothes washer test procedure. *Id.*

In the November 2024 NOPR, DOE further raised concerns about potential unintended consequences of requiring a specific cut orientation for each energy test cloth. *Id.* DOE noted that depending on the width of the fabric roll, specifying a cut orientation as suggested in the May 2024 AHAM Letter could prevent the optimization of cut patterns as described previously (*i.e.,* a 36-inch lengthwise cut adjacent to a 24-inch widthwise cut on a 63-inch width roll of material), resulting in increased fabric waste and a corresponding increase in material cost. *Id.* For instance, a 63-inch-wide roll as specified by section 3.1 of appendix J3 would be able to accommodate only a single 36-inch wide cut as suggested by AHAM, resulting in nearly 40 percent of the roll material being wasted. And although section 3.1 of appendix J3 permits the use of other size rolls, DOE noted that textiles are typically woven in standardized widths and expressed concern that fabricating rolls with a custom width for DOE test cloth could increase the material cost. *Id.*

In summary, in the November 2024 NOPR, DOE expressed uncertainty as to whether, or to what extent, the energy test cloth cut orientation could impact the RMC measurement in the clothes washer test procedure, and whether specifying a particular cut orientation could result in fabric waste that would lead to an increase in material cost. *Id.*

Irrespective of its determination regarding the specification of a cut orientation requirement, in the November 2024 NOPR, DOE tentatively determined that section 3.1 of appendix J3 is superfluous,[22] given that the suggested parameters regarding the width and length dimensions of the roll (*i.e.,* a roll width of approximately 63 inches and approximately 500 yards per roll) are rendered moot by the accompanying provision allowing for rolls of other sizes to be used. *Id.* at 89 FR 87810. As such, in the November 2024 NOPR, DOE proposed removing section 3.1 of appendix J3 and renumbering the subsequent sections accordingly. *Id.*

In the November 2024 NOPR, DOE requested comment on the roll dimensions and cut orientations that are currently used to fabricate DOE test cloth. *Id.* DOE also requested comment as to whether, or to what extent, the energy test cloth cut orientation could impact the RMC measurement in the clothes washer test procedure. *Id.*

[21] As discussed, RMC is a measure of the remaining water content of the clothes washer load at the end of the wash cycle and is used to incorporate an estimate of clothes drying energy into the clothes washer efficiency descriptor.

[22] Section 3.1 of appendix J3 specifies that the test cloth material should come from a roll of material with a width of approximately 63 inches and approximately 500 yards per roll. However, other sizes may be used if the test cloth material meets the specifications listed in sections 3.2 through 3.6 of appendix J3.

DOE further requested comment on its concern that establishing a cut orientation requirement could lead to fabric waste, depending on the dimensions of the fabric roll. *Id.* DOE also requested comment on its tentative determination not to specify a cut orientation requirement, and whether it should adopt the cut orientation requirement specified by AHAM or any other cut orientation requirement. *Id.* DOE requested comment on its tentative determination that section 3.1 of appendix J3 is superfluous and its proposal to remove the requirements in section 3.1 of appendix J3. *Id.*

AHAM commented that it specifically supports the roll dimension and cut orientation amendments to appendix J3 proposed in the November 2024 NOPR. (AHAM, No. 10 at p. 1)

Ravnitzky commented that allowing flexibility in test cloth specifications, such as adjustments in cut orientations and fabric dimensions, would help reduce fabric waste and lower material costs without compromising test integrity. Ravnitzky added that this practical approach would benefit both the industry and sustainability efforts. (Ravnitzky, No. 5 at p. 1)

For the reasons discussed in this final rule and in the November 2024 NOPR, DOE is finalizing its proposal, consistent with the November 2024 NOPR, to not specify a cut orientation requirement and to remove the requirements in section 3.1 of appendix J3.

2. Fabric Weight and Thread Count

Section 3.3 of appendix J3 specifies that the fabric weight of the test cloth must be 5.60 ± 0.25 ounces per square yard, but it does not currently specify at what point in the fabrication process this specification applies. Similarly, section 3.4 of appendix J3 specifies that the thread count of the test cloth must be 65 x 57 threads per inch ± 2 percent, but it does not currently specify at what point in the fabrication process this specification applies. The May 2024 AHAM Letter requested that DOE amend these specifications to clarify that fabric weight and thread count specifications apply to ''finished goods'' test cloth prior to pre-conditioning. In the November 2024 NOPR, DOE noted the term ''finished goods'' means after the cloth has been hemmed into energy test cloth and energy stuffer cloths, but prior to any pre-conditioning. 89 FR 87803, 87810.

In the November 2024 NOPR, DOE further noted that specifying that these requirements apply to finished goods (as opposed to prior to the cloth having been processed, de-starched, and hemmed), but prior to any pre-conditioning, is the most appropriate point in the cloth fabrication process because these dimensional properties can change during certain stages of the cloth fabrication process. *Id.* In the November 2024 NOPR, DOE stated that applying these specifications to finished goods therefore ensures the consistency of each test cloth lot at the state in which the test cloth is purchased by a manufacturer or test laboratory. *Id.*

In the November 2024 NOPR, DOE proposed to specify within section 3 of appendix J3 that fabric weight and thread count specifications apply to finished goods prior to pre-conditioning, and requested feedback on this proposal. *Id.*

NEEA commented that it supports specifying a point in the manufacturing and preconditioning process at which the fabric weight and thread count are measured. (NEEA, No. 8 at p. 2)

For the reasons discussed in this final rule and in the November 2024 NOPR, DOE is finalizing its proposal, consistent with the November 2024 NOPR, to specify in section 3 of appendix J3 that fabric weight and thread count specifications apply to finished goods prior to pre-conditioning.

3. Granite Weave

Section 3.2 of appendix J3 currently states that the test cloth used for clothes washer testing must be a pure finished bleached cloth, made with a momie or granite weave. As discussed in the May 2024 AHAM Letter, recent lots 25A and 25B [23] were woven with a different type of granite weave—a ''crepe'' weave—than the ''momie'' type of granite weave that has historically been used for DOE test cloth.

To evaluate whether using a crepe weave would impact test results compared to the historical momie weave, DOE conducted comparative testing of RCWs and consumer clothes dryers using Lot 25A (made with a crepe weave) and previous test cloth Lot 23 (made with a momie weave). 89 FR 87803, 87810. The results of DOE's testing are presented in a Technical Appendix published in the docket for this rulemaking.[24] The testing presented in the November 2024 NOPR showed no substantive variation in RMC, integrated modified energy factor (''IMEF''), or integrated water factor—the reported metrics for RCWs—or in combined energy factor—the reported metric for consumer clothes dryers—between the different granite weave types (*i.e.,* traditional momie versus crepe weave). *Id.* Although DOE's test sample in the November 2024 NOPR did not include any CCWs, DOE noted that it expects that the trends in RMC values, energy use, and water use that it observed in RCWs would apply to CCWs, given that RCWs and CCWs are designed and operate similarly and are tested using the same test procedure. *Id.*

In the November 2024 NOPR, DOE noted that through its participation in discussions with the AHAM task force it understands that very few textile mills maintain the capability to fabricate cloth using the type of momie weave that has traditionally been used to produce DOE test cloth. *Id.* DOE noted that, instead, the type of crepe weave used for Lot 25A is expected to be more readily available going forward. *Id.*

Appendix J3 currently does not define the terms ''momie'' or ''granite'' weave. In the May 2024 AHAM Letter, AHAM suggested that DOE establish definitions for these terms in appendix J3.[25] In the November 2024 NOPR, DOE noted that momie, granite, and crepe weave types are generally understood terms of art within the textile industry, but there is not a definitive source for definitions of these terms. *Id.* In the November 2024 NOPR, DOE expressed concerns that creating its own definitions for these terms could inadvertently conflict with the range of weave styles that are generally understood by the textile industry to be granite weaves. *Id.* Therefore, in the November 2024 NOPR, DOE tentatively determined not to establish a definition for these terms within the appendix J3 test procedure. *Id.*

In the November 2024 NOPR, DOE requested feedback on its proposal to add the term ''crepe'' to the list of allowable weaves in appendix J3. *Id.* DOE further requested feedback on its tentative determination not to establish definitions for ''crepe,'' ''granite,'' or ''momie'' weave in appendix J3. *Id.*

Aside from the generally supportive comments discussed previously, DOE received no comments in response to

[23] The AHAM task force designated the two most recent lots of test cloth ''25A'' and ''25B'' to reflect that these two lots were manufactured at the same time using the same continuous weaving process, although they were finished in separate batch processes.

[24] The Technical Appendix can be found at *https://www.regulations.gov/document/EERE-2024-BT-TP-0009-0003.*

[25] AHAM suggested defining ''granite weave'' as a broad classification of weave producing a small, irregular, pebbled surface similar to crepe fabrics; fabrics made with a granite weave are generally interlaced tightly, and warp and filling yarns appear on the face. AHAM suggested defining ''momie/granite weave fabric'' as test cloth made with granite weave fabric as specified in the suggested definition of granite weave.

the November 2024 NOPR specifically regarding its proposal to add the term ''crepe'' to the list of allowable weaves in appendix J3, or its tentative determination not to establish definitions for ''crepe,'' ''granite,'' or ''momie'' weave in appendix J3.

For the reasons discussed in this final rule and in the November 2024 NOPR, DOE is finalizing its proposal, consistent with the November 2024 NOPR, to add the term ''crepe'' to the list of allowable weaves in appendix J3, and to not establish definitions for ''crepe,'' ''granite,'' or ''momie'' weave in appendix J3.

4. Alternate Test Cloth

DOE is required to ensure that the test procedure is reasonably designed to produce test results that measure energy efficiency, energy use, water use, or estimated annual operating cost of a covered product/equipment during a representative average use cycle or period of use and is not unduly burdensome to conduct. (42 U.S.C. 6293(b)(3); 42 U.S.C. 6314(a)(2)) In establishing the current test cloth specifications, DOE considered the representativeness of the range of fabrics comprising consumer wash loads, the manufacturability of the fabric, the consistency in test cloth production, and the consistency in test results from the fabric. 66 FR 3314, 3318 (Jan. 12, 2001).

As discussed, the current test cloth specifications were recommended by the May 2000 Test Cloth Report, which noted that this cloth (at the time) was produced in high volume, had been produced to a consistent specification for many years, and was likely to continue to be produced on this basis for the foreseeable future. (*See* section 6 of May 2000 Test Cloth Report.) The May 2000 Test Cloth Report also highlighted the benefits of specifying a single type of fabric that is produced frequently by one mill to a consistent set of specifications.

However, while the test cloth specified in appendix J3 continues to be produced by a single supplier, DOE noted in the November 2024 NOPR that it now understands through its participation in the AHAM task force that this cloth is produced exclusively for use in conducting the DOE test procedure (*i.e.,* this specific cloth is not used to any significant extent by any other industry bodies or for any other regulatory or research and development purposes). 89 FR 87803, 87811. As such, it is no longer the case that this cloth is produced in high volume (beyond the volume needed for DOE testing purposes), leading to uncertainty as to whether this cloth is likely to remain readily available on a consistent basis for the foreseeable future. *Id.*

As discussed in the November 2024 NOPR, during the COVID–19 pandemic, the laundry industry experienced shortages in DOE test cloth supply.[26] *Id.* The specialized nature of the DOE test cloth (*i.e.,* the fact the cloth is unique to DOE testing needs and produced in relatively low volumes) inhibited the ability to identify alternate sources of supply for the test cloth. *Id.* To mitigate this shortage, AHAM requested that DOE use its enforcement discretion to allow extended use of test cloth beyond the currently defined cycle limits.[27] On September 28, 2023, DOE issued a statement [28] that it would exercise its enforcement discretion and not impose civil penalties on a clothes washer, commercial clothes washer, or clothes dryer manufacturer for certifying compliance with DOE's energy conservation standards based on testing that exceeds the maximum test cloth run provision set forth in the DOE test procedures. Instead, DOE allowed for usage of test cloth for twice the number of runs allowed in the relevant test procedures.

In an effort to further alleviate any test cloth supply constraints that could limit energy testing activities for clothes washers and clothes dryers, the AHAM task force evaluated the potential merits of specifying an alternate test cloth that could be used for DOE testing, as discussed in the May 2024 AHAM Letter.

In the November 2024 NOPR, DOE noted that the AHAM task force identified a commercially available standardized fabric as a possible alternative to the current test cloth specification. *Id.* This fabric is used as ''ballast'' for testing specific material attributes (such as colorfastness) of textiles and, according to the May 2024 AHAM Letter, has been used by the textile industry for over 80 years. Specifically, the fabric meets the specifications of Laundering Ballast Type 3 cloth specified by industry standard AATCC LP1–2021, *Laboratory Procedure for Home Laundering: Machine Washing.*[29] The specifications for Laundering Ballast Type 3 cloth are provided in Table III.1.

TABLE III.1—SPECIFICATIONS FOR LAUNDERING BALLAST TYPE 3 CLOTH FROM AATCC LP1–2021

Characteristic	Specification
Fiber Content	50% cotton/50% polyester ± 3%.
Greige Fabric Yarns	16/1 or 30/2 ring spun.
Greige Fabric Construction	52 × 48 ± 5 yarns per inch, plain weave.
Finished Fabric Weight	155 ± 10 grams per square meter (4.57 ± 0.29 ounces per square yard).
Edges	All edges hemmed or over-edged.
Finished Piece Size	920 × 920 ± 30 millimeters (36.0 × 36.0 ± 1 inch).
Finished Piece Weight	130 ± 10 grams (4.59 ± 0.35 ounces).

As part of an AHAM task force investigation, DOE and AHAM members conducted comparative testing of Laundering Ballast Type 3 cloth [30] to evaluate whether this cloth could be used to conduct the DOE test procedures and whether doing so would produce test results comparable to the currently specified test cloth. *Id.* The

[26] AHAM informed DOE on March 3, 2022 that there were significant issues with the quality and availability of the required test cloth material for the applicable energy tests for clothes washers and clothes dryers.

[27] On August 7, 2023, AHAM informed DOE that test cloth shortages were persisting and that this supply shortage could also eventually impact DOE's ability to conduct assessment, enforcement, or other testing.

[28] Available at *www.energy.gov/sites/default/files/2023–09/Test%20Cloth%20Policy%20for%20Clothes%20Washers%20and%20Clothes%20Dryers%20Enforcement%20Policy.pdf.*

[29] Table VII of AATCC LP1–2021 provides specifications for various types of cloth, one of which is designated as Laundering Ballast Type 3.

[30] The tested cloth used 16/1 fabric yarns and was sized to match the DOE energy test cloth and energy stuffer cloth dimensions and hemming instructions (as currently specified in section 3.7.1 and 3.7.2 of appendix J3, respectively) instead of the finished piece dimensions specified in Table VII of AATCC LP1–2021.

results of DOE's testing are presented in the Technical Appendix published in the docket for this rulemaking.[31]

Specifically, as discussed in the November 2024 NOPR, DOE tested six RCWs and eight consumer clothes dryers, representing eight manufacturers and all major product classes; AHAM members additionally conducted testing of eight RCWs and six consumer clothes dryers, representing all major product classes. *Id.* These products were tested to their rated appendix (D1, D2, or J2) using both the current DOE test cloth and the Laundering Ballast Type 3 cloth. *Id.*

As discussed in the November 2024 NOPR, DOE's testing demonstrated no substantive difference in measured efficiency compared with historical lots used for RCW and consumer clothes dryer testing. *Id.* In particular for clothes washers, the Laundering Ballast Type 3 produced RMC results comparable to existing DOE test cloth using the currently specified correction factor approach. *Id.* In the November 2024 NOPR, DOE discussed that although its test sample did not include any CCWs, DOE expects that the trends in RMC values, energy use, and water use that it observed in RCWs would apply to CCWs, given that RCWs and CCWs are designed and operate similarly and are tested using the same test procedure. *Id.* at 89 FR 87811–87812.

In addition, AHAM presented the results of its members' testing in appendix A to the May 2024 AHAM Letter. As discussed in the November 2024 NOPR, this testing also demonstrated no substantive difference in measured efficiency compared with historical lots used for RCW and consumer clothes dryer testing. *Id.* at 89 FR 87812.

Based on these data, DOE tentatively determined in the November 2024 NOPR that the AATCC Laundering Ballast Type 3 cloth provides results that are equally as representative as results obtained using the currently specified test cloth. *Id.* On this basis, in the November 2024 NOPR, DOE proposed, consistent with the recommendations from the May 2024 AHAM Letter, to amend appendix J3 to allow for the use of AATCC Laundering Ballast Type 3 cloth, with a specific yarn size, and cut and hemmed to the DOE energy test cloth dimensions. *Id.*

Specifically, DOE proposed in the November 2024 NOPR to incorporate by reference AATCC LP1–2021 into appendix J3 and to allow the use of test cloth meeting the specifications of Laundering Ballast Type 3, as specified in Table VII of AATCC LP1–2021, with the following additional specifications and substitutions:

- Greige Fabric Yarns: Type 16/1 only[32]
- Edges: All edges hemmed only[33]
- Finished Piece Size: Dimensions in accordance with sections 3.7.1 and 3.7.2 of appendix J3 for energy test cloths and energy stuffer cloths, respectively.[34]
- Finished Piece Weight: Disregard.[35]

Id.

Furthermore, and consistent with the discussion in section III.C.3 of this document, DOE considered in the November 2024 NOPR whether to propose a definition for ''plain weave'' as specified in Table VII of AATCC LP1–2021. *Id.* In the November 2024 NOPR, DOE noted the term ''plain weave'' to be a well-understood term of art and therefore tentatively determined that adding a definition of ''plain weave'' to appendix J3 was not warranted. *Id.*

In the November 2024 NOPR, DOE requested comment on its proposal to allow the use of Laundering Ballast Type 3 cloth specified in AATCC LP1–2021 (with certain additional specifications) as an alternate test cloth for conducting clothes washer and clothes dryer testing. *Id.* DOE also requested feedback on its tentative determination not to establish a definition for ''plain weave'' in appendix J3. *Id.*

NEEA commented that it specifically supports allowing the use of the Laundering Ballast Type 3 cloth specified in AATCC LP1–2021 (with certain additional specifications) as an alternate test cloth for conducting clothes washer and clothes dryer testing. (NEEA, No. 8 at p. 2)

Ravnitzky commented in support of the alternate test cloth proposed in the November 2024 NOPR to address potential supply shortages and ensure consistent and reliable results, based on thorough testing. (Ravnitzky, No. 5 at p. 1)

AHAM commented that it supports DOE's proposal in the November 2024 NOPR to not establish a definition for ''plain weave'' in appendix J3. (AHAM, No. 10 at p. 1)

For the reasons discussed in this final rule and in the November 2024 NOPR, DOE is finalizing its proposal, consistent with the November 2024 NOPR, to allow the use of test cloth corresponding to the Laundering Ballast Type 3 cloth specified in AATCC LP1–2021 (with certain additional specifications) as an alternate test cloth for conducting clothes washer and clothes dryer testing, and to not establish a definition for ''plain weave'' in appendix J3. In this final rule, DOE is implementing this in appendix J3 by directly codifying each of the cloth specifications within appendix J3, rather than incorporating by reference Table VII of AATCC LP1–2021 with modifications (as was proposed in the November 2024 NOPR). As discussed in section III.D.3 of this document, as a result of the amendments in this final rule, the specifications in appendix J3 apply to both clothes washers and clothes dryers.

In response to the November 2024 NOPR, AHAM commented that section 3.1.2.3 of appendix J3 as proposed in the November 2024 NOPR[36] should reference section 3.3 instead of section 3.7.1 and 3.7.2. (AHAM, No. 10 at p. 5)

DOE agrees with AHAM's assessment of the incorrect cross-references in the proposed amendments to section 3.1.2.3 of appendix J3. However, these proposed cross-references are rendered moot by the approach taken in this final rule to directly codify each of the test cloth specifications within appendix J3.

5. Uniformity Criteria

In the June 2022 Final Rule, DOE codified a prequalification procedure to be performed on each new lot of test cloth to verify the uniformity of the test cloth throughout the beginning, middle, and end of the lot. 87 FR 33316. As discussed in the June 2022 Final Rule,

[31] The Technical Appendix can be found at *https://www.regulations.gov/document/EERE-2024-BT-TP-0009-0003.*

[32] As discussed previously, comparative testing was conducted only on fabric with 16/1 yarn type, which is a single-string yarn similar in thickness to the 15/1 yarn type currently specified in section 3.5 of appendix J3. No testing was conducted on fabric with 30/2 yarn type—the other fabric yarn option specified in Table VII of AATCC LP1–2021—which is a two-string version of yarn with each string roughly half the diameter of the single-string version.

[33] As discussed previously, comparative testing was conducted only on fabric matching the hemming instructions currently specified in sections 3.7.1 and 3.7.2 of appendix J3. No testing was conducted on over-edged pieces of test cloth (*i.e.,* the other edging option specified in Table VII of AATCC LP1–2021).

[34] As discussed previously, comparative testing was conducted only on fabric matching the dimensions currently specified in sections 3.7.1 and 3.7.2 of appendix J3. No testing was conducted on fabric pieces matching the dimensions as specified in Table VII of AATCC LP1–2021.

[35] The Finished Piece Weight specified in Table VII of AATCC LP1–2021 corresponds to the Finished Piece Size specified in the same table; as such, this specification does not apply to fabric pieces matching the proposed finished piece dimensions.

[36] Section 3.1.2.3 of the proposed regulatory text in the November 2024 NOPR specified the following: *Finished piece size.* Dimensions in accordance with sections 3.7.1 and 3.7.2 of [appendix J3] for energy test cloths and energy stuffer cloths, respectively.

DOE had received a request from members of the AHAM task force to add to appendix J3 additional steps to the qualification procedure that have historically been performed on each new lot of test cloth to ensure uniformity of RMC test results on test cloths from the beginning, middle, and end of each new lot. *Id.* at 87 FR 33368. Industry practice has been to perform this ''uniformity check'' before conducting the procedure to develop the RMC correction factors currently specified in appendix J3. *Id.* Specifically, the uniformity check involves performing an RMC measurement on nine bundles of sample test cloth representing the beginning, middle, and end locations of the first, middle, and last rolls of test cloth in a new lot. *Id.* In the historical procedure provided by the AHAM task force, the coefficient of variation (''CV'') across the nine RMC values must be less than or equal to 1 percent for the test cloth lot to be considered acceptable for use. *Id.* The amendments codified by the June 2022 Final Rule included the suggested requirement for the CV of the ''uniformity check'' procedure to be less than or equal to 1 percent. *Id.* at 87 FR 33369.

Shortly after the publication of the June 2022 Final Rule establishing the requirement for the CV to be less than or equal to 1 percent—but prior to its effective date—Lot 24D was produced by the test cloth supplier and was measured to have a CV of 1.6 percent. As discussed in the November 2024 NOPR, AHAM developed correction factors for this lot of test cloth despite its CV over 1 percent, on the basis that the new CV requirement had not yet become effective, and that the industry was facing a test cloth shortage. 89 FR 87803, 87812.

Since the effective date of the CV requirement, the AHAM task force has developed correction factors for test cloth lots 25A and 25B [37]—both with CV values of 1.1 percent. AHAM stated in letters to DOE that it based its recommendations to proceed with these test cloth lots on the ongoing test cloth shortages, DOE's historical acceptance of lots with CVs exceeding 1 percent, and the extensive testing that DOE performed of Lot 25A, as described in section III.C.3 of this document.

In the November 2024 NOPR, DOE noted that the 1-percent threshold was originally recommended by AHAM during a previous test procedure rulemaking. *Id.* citing 87 FR 33316, 33368 (Jun. 1, 2022). DOE further noted that prior to the codification of the pre-qualification procedure, the AHAM task force used its discretion to evaluate the uniformity of each new test cloth lot. 89 FR 87803, 87812. DOE noted that it understood the repeatable performance of test cloth lots with a CV slightly higher than 1 percent—as shown by the testing of Lot 25A described in section III.C.3 of this document—to be an indication that the 1-percent threshold may be unnecessarily stringent (*i.e.,* too low). *Id.* In the November 2024 NOPR, DOE proposed to amend appendix J3 by increasing the allowable CV threshold to 2 percent. *Id.*

In the November 2024 NOPR, DOE requested feedback on its proposal to amend the CV threshold requirement in appendix J3 from 1 percent to 2 percent. Specifically, DOE requested comment on whether another threshold would be more appropriate. *Id.*

NEEA commented that it supports increasing the CV of the ''uniformity check'' from 1 percent to 2 percent. (NEEA, No. 8 at p. 2) NEEA noted that it has extensive experience testing laundry products with common and emerging technologies using a variety of textiles. (*Id.* at p. 1)

AHAM commented that it agrees with DOE's statement in the November 2024 NOPR that repeatable performance of test cloth lots with a CV slightly higher than 1 percent is an indication that the threshold may be unnecessarily stringent. However, AHAM expressed reluctance with a 2-percent threshold, stating that a CV threshold of 2 percent would result in a within-lot variation of up to 1 RMC percentage point, and instead suggested a CV limit of 1.5 percent. AHAM commented that this threshold would exclude lots 19, 24B, and 24D, which AHAM characterized as highly variable and problematic lots. (AHAM, No. 10 at pp. 3–4)

As discussed, EPCA requires that any test procedures be reasonably designed to produce test results which measure energy efficiency, energy use or estimated annual operating cost of a covered product during a representative average use cycle (as determined by the Secretary) or period of use and shall not be unduly burdensome to conduct. (42 U.S.C. 6293(b)(3); 42 U.S.C. 6314(a)(2)) DOE tentatively determined in the November 2024 NOPR that increasing the allowable CV threshold to 2 percent would reduce test burden while maintaining reproducibility and representativeness [38] of test results. DOE understands that the cost of the test cloth factors in the cost of pre-qualification testing as specified in appendix J3. If the pre-qualification test must be repeated, either on subdivided portions of the test cloth lot or on a different test cloth lot, in order to achieve an allowable CV value, the cost of the qualified test cloth and thus test burden for clothes washer and clothes dryer manufacturers may increase.

Based on the comments received from NEEA and AHAM, both of which have extensive experience testing clothes washers and clothes dryers, DOE understands that there is general support to increase the threshold to 1.5 percent, but only mixed support to increase the threshold to 2 percent. DOE understands AHAM's comment as indicating that, despite historical test cloth lots with CV values greater than 1.5 percent having been qualified for use, manufacturers would currently find an allowable CV threshold of 1.5 percent to reflect the appropriate balance between representativeness and test burden. DOE recognizes that manufacturers (as represented by AHAM) have extensive experience in dealing with differences between test cloth lots, and likewise recognizes manufacturers' interest in ensuring repeatable and reproducible test results—as the basis for producing *representative* test results—for the purposes of certifying compliance with the applicable standards. In consideration of the above, in this final rule, DOE is amending the CV threshold requirement in section 7.2.5 of appendix J3 from 1 percent to 1.5 percent. DOE further specifies that this requirement applies to test cloth lots qualified after February 18, 2025.

6. Variance P-Value Threshold and Root-Mean-Square Error

In the October 2003 Final Rule, DOE adopted a statistical procedure, called ''analysis of variance'' (or ''ANOVA''), as the lot-to-lot interactive-effect statistical test for screening out lots of test cloth whose RMC behavior is inconsistent with the baseline lot. 68 FR 62198, 62201. The ANOVA statistical test measures the extent of the deviation of the shape of the RMC compared to the g-curve for a given lot of the test cloth from the shape of the RMC compared to the g-curve for the baseline lot. *Id.* In the October 2003 Final Rule, DOE explained that it believed that the test would catch any unanticipated deviation in RMC in future lots. *Id.*

Section 8.8 of appendix J3 specifies performing the analysis of variance with replication test using two factors, spin speed and lot, to determine whether the interaction of speed and lot is

[37] *See* letters received by DOE on December 13, 2023 and May 24, 2024.

[38] *See* Table II.1—Summary of Changes in Proposed Test Procedures Relative to Current Test Procedures in the November 2024 NOPR.

significant. If the interaction is not significant (as calculated by the ''P-value'' of the F-statistic being greater than 0.1), then the lot is considered acceptable. If the P-value is less than 0.1, the test cloth is deemed unacceptable. The P-value provides an indication of any interactive effect between lots and spin speeds. The lower the P-value, the stronger the evidence of such an interaction.

On March 29, 2010, AHAM sent DOE a letter (''March 2010 AHAM Letter'') noting that Lot 17 was measured to have a P-value that was less than 0.1.[39] AHAM requested that DOE approve Lot 17 for use on the basis that the root-mean-square error (''RMSE'') was less than 2 percent, the P-value of the test cloth excluding the 100g test condition was greater than 0.1, and test cloth supply shortage issues.

The more recent lot of AATCC test cloth evaluated by DOE and AHAM, as described in section III.C.4 of this document, had a P-value of 0.072, which would not meet the requirements of section 8.8 of appendix J3. However, the testing conducted by DOE and AHAM[40] suggests that, despite the low P-value, the application of the test cloth correction factors produces corrected RMC values that are comparable (*i.e.,* less than 1 RMC percentage point difference on average) to the standard RMC values for each tested extractor condition. For this reason, in the November 2024 NOPR, DOE tentatively determined that a low P-value is not necessarily indicative of a test cloth lot not being acceptable for use in the clothes washer test procedures. 89 FR 87803, 87813. DOE further tentatively determined that a different statistical measure can provide a better measure of the acceptability of a new test cloth lot. *Id.*

Specifically, in the November 2024 NOPR, DOE evaluated the usefulness of the RMSE between the corrected RMC values and the standard RMC values for the same test conditions as a potentially more relevant statistical measure to evaluate a new test cloth lot. *Id.* Conceptually, this RMSE value represents the closeness of fit of the corrected RMC values to the standard RMC values. A smaller RMSE value indicates a better closeness of fit. Recognizing that the *corrected* RMC value is used to calculate IMEF, DOE tentatively determined in the November 2024 NOPR that RMSE—which evaluates corrected RMC values—would provide a better measure of acceptability than P-value, which evaluates uncorrected RMC values. *Id.*

In the November 2024 NOPR DOE presented RMSE values of the historical test cloth lots posted to DOE's website[41] that fell within a range of 0.004 to 0.014. *Id.* Additionally, DOE stated that the AATCC lot of test cloth evaluated by DOE and AHAM, as described in section III.C.4 of this document, has an RMSE of 0.009. *Id.*

Based on the historical record and its testing, DOE tentatively determined in the November 2024 NOPR that an RMSE-based threshold for new test cloth lots would provide a better measure of the acceptability of a new test cloth lot, and therefore proposed to replace the P-value evaluation in section 8.8 of appendix J3 with a calculation of RMSE and a requirement that the RMSE be below 0.015, which represents a threshold slightly higher than the maximum RMSE value of 0.014 observed among historical test cloth lots. *Id.*

In the November 2024 NOPR, DOE requested comment on its proposal to replace the P-value test in appendix J3 with a root-mean-square error test, and on its proposal to specify 0.015 as an acceptability threshold for the RMSE value. *Id.*

Ravnitzky commented in support of the proposed shift from the P-value test to the RMSE threshold, stating that the proposed RMSE threshold of 0.015, based on historical data, provides a more accurate measure of test cloth performance and ensures that new test cloth lots produce consistent RMC measurements, improving the robustness of the testing protocol. (Ravnitzky, No. 5 at p. 1)

AHAM commented that it does not necessarily oppose DOE's tentative determination that an RMSE-based threshold for new test cloth lots would provide a better measure of acceptability than the P-value evaluation, but suggested certain improvements to the approach. (AHAM, No. 10 at p. 4)

Specifically, AHAM recommended that the RMSE calculation reflect the ''N–2'' approach[42] that has historically been used in the test cloth evaluations and is used in the appendix J3 test report template today.[43] AHAM commented that this would change the denominator in equation proposed in section 8.9 of draft appendix J3 from 20 to 18. (*Id.* at p. 5)

DOE notes that in addition to being used in the appendix J3 test report (as described by AHAM), the ''N–2'' approach was also used in the RMSE calculation previously specified in appendices J1 and J2 as codified by the January 2001 Final Rule. *See* 66 FR 3314, 3332. DOE did not intend to change its approach to calculating RMSE compared to the approach used in the appendix J3 test report and previously specified in appendices J1 and J2.[44] For this final rule, DOE re-calculated the historical test cloth lot RMSE values that were presented in the November 2024 NOPR using the ''N–2'' approach.[45]

AHAM further noted that as presented in the November 2024 NOPR, the highest RMSE value of 0.014 is for Lot 6, which included testing at the 50g force instead of the 100g force testing that has been required since the introduction of Lot 7.[46] AHAM suggested that Lot 6 be excluded from the evaluation. (AHAM, No. 10 at p. 4)

DOE notes that Lot 5 was also tested using the 50g test point instead of the 100g test point. Due to the lack of repeatability and consistency of the previous 50g data point, DOE agrees with AHAM's suggestion to exclude Lot 6—as well as Lot 5—from consideration in determining an appropriate RMSE threshold.

---

[39] The March 2010 AHAM Letter is available at *www.regulations.gov/document/EERE–2024–BT–TP–0009–0002*.

[40] *See* the Technical Appendix available at *www.regulations.gov/document/EERE–2024–BT–TP–0009–0003*.

[41] DOE maintains a historical record of the standard extractor test data and final correction curve coefficients for each approved lot of energy test cloth at *www.energy.gov/eere/buildings/articles/clothes-washer-test-cloth-correction-factor-information*.

[42] The RMSE, as proposed in the November 2024 NOPR, is equal to the square root of the ratio of the sum of the squared errors across the test sample divided by the number of values in the test sample (N). The ''N–2'' approach refers to a different formula for RMSE wherein the denominator of the equation is N–2 instead of N, as proposed in the November 2024 NOPR.

[43] The appendix J3 test report referenced by AHAM is available at *www.energy.gov/eere/buildings/standardized-templates-reporting-test-results*. DOE develops standardized data templates for reporting the results of tests conducted in accordance with current DOE test procedures. Templates may be used by third-party laboratories under contract with DOE that conduct testing in support of ENERGY STAR verification, DOE rulemakings, and enforcement of the federal energy conservation standards.

[44] The appendix J3 test report uses the STEYX() function in Microsoft Excel to calculate RMSE. This function uses N–2 as the denominator. In its analysis conducted for the November 2024 NOPR, DOE inadvertently used a different formula for calculating RMSE that uses N as the denominator.

[45] The RMSE values presented in this final rule were calculated using the N–2 approach consistent with the formula in section 8.9 of appendix J3, as amended in this final rule, using all available tested runs. For lots of test cloth prior to Lot 16, where the 500g and 650g tests were not performed, the N–2=18 value in the denominator of the RMSE formula was updated to N–2=10 to correspond to the number of tested runs for these lots of test cloth.

[46] In the October 2003 Final Rule, the 50g test point resulted in inconsistent corrected RMC results. DOE acknowledged a basic lack of repeatability of the 50g spin tests and replaced these test points with 100g test points. 68 FR 62198, 62200–62201.

The updated RMSE values used for this final rule analysis are presented in Table III.2 of this document. These values reflect use of the ''N–2'' approach and exclude Lot 5 and Lot 6.

TABLE III.2—HISTORICAL TEST CLOTH LOT RMSE VALUES FOR LOT 7 THROUGH LOT 25B

[Calculated using ''N–2'' approach]

Lot	RMSE
7	0.007
8	0.006
9	0.006
10	0.008
11	0.009
12	0.010
13	0.010
14	0.008
15	0.005
16	0.010
17	0.011
18	0.010
19	0.010
20	0.009
21	0.010
22	0.010
23	0.010
24A	0.010
24B	0.008
24D	0.011
25A	0.008
25B	0.010

The updated RMSE values fall within a range of 0.004 to 0.011, compared to a range of 0.004 to 0.014 as presented in the November 2024 NOPR. Additionally, the AATCC lot of test cloth evaluated by DOE and AHAM, as described in section III.C.4 of this document, has an updated RMSE value of 0.010, compared to a value of 0.009 as presented in the November 2024 NOPR. Accordingly, DOE determines that a threshold RMSE value of 0.012, as suggested by AHAM, is appropriate.

Lastly, AHAM requested that the P-value calculation remain in the test cloth test report (without an acceptability threshold) so that the metric can be monitored and ensure that the change does not have unintended consequences. (AHAM, No. 10 at p. 4)

DOE recognizes the benefits to maintaining the P-value calculation in the appendix J3 test report, even if no longer used as acceptability criteria, and will consider AHAM's suggestion at such time DOE updates its appendix J3 test report.

In summary, in this final rule, DOE is finalizing its proposal to replace the P-value test in appendix J3 with an RMSE test. DOE is establishing the RMSE threshold requirement in section 8.9 of appendix J3 at 0.012, as calculated using the ''N–2'' approach. DOE further specifies that this requirement applies to test cloth lots qualified after February 18, 2025.

D. Other Clarifying and Restructuring Edits

1. Introductory Paragraph

Appendix J3 includes test cloth specifications, procedures for pre-conditioning test cloth, procedures for verifying that new lots of test cloth meet the defined material specifications, and procedures for developing RMC correction factors. Appendix J3 contains an introductory section titled ''Objective'' that summarizes the key objectives of the procedure. This paragraph currently does not reference the pre-conditioning of test cloth as one of the key objectives.

In the November 2024 NOPR, DOE proposed to update the heading to appendix J3 and its objective paragraph to explicitly include pre-conditioning of test cloth as one of the key objectives. 89 FR 87803, 87813.In the November 2024 NOPR, DOE requested feedback on its proposal to update appendix J3 to explicitly mention pre-conditioning of test cloth. *Id.*

DOE did not receive any specific comments on this topic and is finalizing its proposal, consistent with the November 2024 NOPR, to update appendix J3 to explicitly include pre-conditioning of test cloth as one of the key objectives.

2. Pre-Conditioning Instructions

Section 5 of appendix J3 provides the test cloth pre-conditioning instructions. Currently, this section is organized as a single paragraph detailing the entire procedure, whereas other sections of appendix J3 are organized with subsections that provide a clearer step-by-step sequence of instructions.

In the November 2024 NOPR, DOE proposed to restructure section 5 of appendix J3 to read as a sequence of instructions rather than a single paragraph, for greater clarity and ease of use. 89 FR 87803, 87813.

DOE did not receive any specific comments on this topic and is finalizing its proposal, consistent with the November 2024 NOPR, to restructure section 5 of appendix J3 to read as a sequence of instructions rather than a single paragraph, for greater clarity and ease of use.

3. Harmonizing Clothes Washer and Clothes Dryer Test Procedures

As previously discussed, in the August 2015 Final Rule, DOE moved the test cloth qualification procedures from appendix J2 to a newly created appendix J3. Appendix J3 is currently referenced by only the clothes washer test procedure. Section 2.7 of appendices J and J2 reference appendix J3 generally for test cloth specifications and section 5 of appendix J3 for test cloth pre-conditioning instructions. Whereas, for clothes dryers, section 2.6 of appendices D1 and D2 list each of the test cloth specifications and detail the test cloth pre-conditioning requirements.

As discussed in the November 2024 NOPR, historically, manufacturers and test laboratories have used the same test cloth for both clothes washers and clothes dryers. 89 FR 87803, 87813. The May 2024 AHAM Letter requested that DOE harmonize specifically the pre-conditioning procedure for clothes washers and clothes dryers. *Id.* In line with this recommendation, in the November 2024 NOPR, DOE tentatively determined that all aspects of the test cloth specifications can be harmonized between clothes washers and clothes dryers (*i.e.,* not just the pre-conditioning requirements). *Id.* at 89 FR 87814.

In the November 2024 NOPR, DOE proposed to harmonize test cloth specifications between appendices J, J2, D1, and D2 by replacing existing test cloth specifications in appendices D1 and D2 with references to the analogous specifications in appendix J3. *Id.*

Specifically, DOE proposed to replace the entirety of section 2.6 in both appendices D1 and D2 with a paragraph specifically referencing sections 3 (Test Cloth Specifications) and 7 (Test Cloth Material Verification Procedure) of appendix J3. DOE also proposed to update section 2.7 of appendices J and J2 to specifically reference sections 3 (Test Cloth Specifications), 7 (Test Cloth Material Verification Procedure), and 8 (RMC Correction Curve Procedure) of appendix J3. *Id.*

DOE further proposed to remove section 3.8 of appendix J3, which currently specifies that the test cloth must be clean, may not be used for more than 60 clothes washer runs, must be permanently marked, and may not be used in mixed lots. *Id.* DOE proposed that these specifications—which are specific to clothes washers and do not apply to clothes dryers—be included in section 2.7 of appendices J and J2. *Id.* DOE also proposed that appendices D1 and D2 retain the existing requirement that for clothes dryers the test cloth must not be used for more than 25 runs, although this requirement will be relocated to section 2.6 (from 2.6.1(c) currently). *Id.*

Finally, DOE proposed to update the objective statement and section 5 of appendix J3 to explicitly reference

clothes dryers alongside clothes washers. *Id.*

In the November 2024 NOPR, DOE requested comment on its proposal to harmonize test cloth specifications for clothes washers and clothes dryers. *Id.*

AHAM commented that it supports DOE's proposal in the November 2024 NOPR to harmonize test cloth specifications for clothes washers and clothes dryers. (AHAM, No. 10 at p. 1)

Ravnitzky commented in support of harmonizing the test cloth specifications between clothes washers and clothes dryers to simplify compliance, enhance the consistency of test results, reduce complexity for manufacturers, and support standardized testing practices. (Ravnitzky, No. 5 at p. 1)

For the reasons discussed in this final rule and in the November 2024 NOPR, DOE is finalizing its proposal, consistent with the November 2024 NOPR, to harmonize test cloth specifications for clothes washers and clothes dryers.

4. Restructuring Appendix J3

Section 3.2 of appendix J3 specifies the ''nominal fabric type'' for the test cloth as pure finished bleached cloth made with a momie or granite weave, which is nominally 50 percent cotton and 50 percent polyester. Section 3.5 of appendix J3 contains a duplicative (although more specific) requirement specifying a fiber content of 50 percent ± 4 percent cotton, with the balance being polyester. In the November 2024 NOPR, DOE proposed to remove the less-specific nominal fiber content specification from section 3.2 of appendix J3. 89 FR 87803, 87814. Accordingly, DOE further proposed to update the name of section 3.2 of appendix J3 from ''nominal fabric type'' to ''fabric type.'' *Id.*

Within section 3 of appendix J3, which lists the specifications for the test cloth, subsections 3.2 through 3.5 are currently organized as follows: section 3.2 specifies the nominal fabric type, section 3.3 specifies the fabric weight, section 3.4 specifies the thread count, and section 3.5 specifies the fiber content of the yarn. This order does not match the order in which these material properties are considered throughout the test cloth fabrication process. Specifically, the weaving process starts with spinning yarn of a specific fiber content, then a specific number of yarn strands (corresponding to thread count) are woven into a roll of fabric, resulting in a specific material density (*i.e.,* fabric weight). To better match the order in which these material properties are considered throughout the test cloth fabrication process, DOE proposed in the November 2024 NOPR to reorder these subsections to provide the fiber content specification first, followed by thread count specification, followed by the fabric weight specification. *Id.*

Section 3.7 of appendix J3 currently includes dimensions for the energy test cloth and energy stuffer cloth [47] and specifies that the dimensions apply ''before washing.'' DOE is aware that this terminology may lead to confusion, as it is inconsistent with other parts of the test procedure that use the term ''pre-conditioning'' rather than ''washing'' to refer to the process by which test cloth is washed before its first use. In the November 2024 NOPR, DOE proposed, consistent with the recommendations in the May 2023 AHAM Letter, to clarify this wording and to specify that the dimensions listed in section 3.7 apply before pre-conditioning of the test cloth. *Id.*

Appendices D1, D2, J, J2, and J3 currently use inconsistent hyphenation of the word pre-conditioning, using ''pre-conditioning'' in some cases and ''preconditioning'' in others. The May 2024 AHAM Letter requested that DOE standardize the hyphenation of ''pre-conditioning'' throughout the appendix. *Id.* In the November 2024 NOPR, DOE proposed to standardize the hyphenation of ''pre-conditioning'' across all five appendices. *Id.*

The June 2022 Final Rule re-numbered certain sections of appendix J3 and implemented in section 8.5 of appendix J3 references to ''sections 8.3.3 and 8.3.4 of this appendix.'' 87 FR 33316, 33405. These cross-references should instead reference sections 8.3 and 8.4 of appendix J3. In the November 2024 NOPR, DOE proposed to correct this typographical error by updating section 8.5 of appendix J3 to correctly reference sections 8.3 and 8.4, in place of sections 8.3.3 and 8.3.4. 89 FR 87803, 87814.

In the November 2024 NOPR, DOE requested feedback on its proposal to clarify and restructure appendix J3. *Id.*

Ravnitzky commented that the proposed reorganization of the test procedures for improved readability and simplicity is a significant improvement, stating that clearer procedural instructions make it easier for manufacturers and testing laboratories to accurately follow the guidelines, enhancing overall compliance, and that simplifying the test procedures helps manufacturers to meet important energy efficiency requirements for major appliances such as clothes washers and clothes dryers, supporting broader energy conservation goals. (Ravnitzky, No. 5 at p. 1)

For the reasons discussed in this final rule and in the November 2024 NOPR, DOE is finalizing its proposal, consistent with the November 2024 NOPR, to clarify and restructure appendix J3.

E. Test Procedure Costs

EPCA requires that test procedures amended by DOE not be unduly burdensome to conduct. (42 U.S.C. 6293(b)(3); 6314(a)(2)) DOE does not anticipate that the amendments in this final rule will impact testing costs or the burden of conducting the test procedure.

In the November 2024 NOPR, DOE presented market research indicating that the alternate test cloth proposed for use has approximately the same cost per pound as the current test cloth—approximately $40–50 per pound of unconditioned test cloth.[48] 89 FR 87803, 87814. Therefore, DOE tentatively determined that using the alternate test cloth would not impact clothes washer or clothes dryer testing costs. *Id.*

Based on an analysis of the test results presented in the Technical Appendix, in the November 2024 NOPR, DOE tentatively determined that manufacturers would be able to rely on data generated under the current test procedures for the newly finalized amendments. *Id.*

In the November 2024 NOPR, DOE requested comment on its tentative determination that that the amendments proposed in this NOPR would not impact testing costs or the burden of conducting the test procedure. *Id.*

DOE received no comments in response to the November 2024 NOPR regarding the impact of testing costs or the burden of conducting the test procedure.

For the reasons discussed in this final rule and in the November 2024 NOPR, DOE has determined that the amendments adopted in this final rule will not impact testing costs or the burden of conducting the test procedure.

F. Effective and Compliance Dates

The effective date for the adopted test procedure amendment will be 30 days after publication of this final rule in the **Federal Register**. EPCA prescribes that all representations of energy efficiency

[47] An energy stuffer cloth is made from the same material as an energy test cloth but is cut to a smaller size. Test loads must consist of energy test cloths and no more than five energy stuffer cloths per load to achieve the specified weight.

[48] These cost estimates are based on DOE's most recent purchases of test cloth in relatively small quantities.

and energy use, including those made on marketing materials and product labels, must be made in accordance with an amended test procedure, beginning 180 days after publication of the final rule in the **Federal Register**. (42 U.S.C. 6293(c)(2); 42 U.S.C. 6314(d)(1)) EPCA provides an allowance for individual manufacturers to petition DOE for an extension of the 180-day period if the manufacturer may experience undue hardship in meeting the deadline. (42 U.S.C. 6293(c)(3); 42 U.S.C. 6314(d)(2)) To receive such an extension, petitions must be filed with DOE no later than 60 days before the end of the 180-day period and must detail how the manufacturer will experience undue hardship. (*Id.*)

As discussed, on September 28, 2023, DOE issued a statement stating that DOE would exercise its enforcement discretion and not impose civil penalties on a clothes washer, commercial clothes washer, or clothes dryer manufacturer for certifying compliance with DOE's energy conservation standards based on testing that exceeds the maximum test cloth run provision set forth in the DOE test procedures. Instead, DOE allowed for usage of test cloth for twice the number of runs allowed in the relevant test procedures.

In the May 2024 AHAM Letter, AHAM requested that DOE maintain its enforcement discretion policy to allow twice the number of test runs than is currently specified for test cloth meeting the current specifications, but not for any of the alternate test cloth, noting that it did not have any test data to support an extended number of cycles on the new test cloth at the time. 89 FR 87803, 87815.

In the November 2024 NOPR, DOE tentatively determined that the updated test cloth provisions would alleviate any test cloth shortages that were the impetus for the enforcement discretion policy, and that at the time of compliance of the amended test procedure, no need for such a policy would remain. *Id.* Therefore, in the November 2024 NOPR, DOE tentatively determined that upon the compliance date of test procedure provisions of an amended test procedure (*i.e.,* 180 days after publication of a test procedure final rule), the enforcement discretion policy would be withdrawn. *Id.*

In the May 2024 AHAM Letter, AHAM further requested that DOE consider allowing immediate use of the alternate test cloth as a relief to manufacturers facing test cloth shortages, rather than waiting for the completion of the rulemaking. *Id.*

In the November 2024 NOPR, DOE recognized the concern of test cloth availability. *Id.* As noted, DOE tentatively determined that it would maintain the current enforcement policy allowing for the extended lifetime of the current test cloth until 180 days after publication of a test procedure final rule and noted that the amendments could be used as early as their effective date (*i.e.,* 30 days after publication of the final rule DOE published regarding these amendments). *Id.*

In the November 2024 NOPR, DOE requested comments on its tentative determination that the enforcement discretion policy allowing twice the number of test cloth runs would be withdrawn 180 days after publication of a test procedure final rule. *Id.*

DOE did not receive any specific comments on this topic and is finalizing its proposal, consistent with the November 2024 NOPR, that the enforcement discretion policy allowing twice the number of test cloth runs will be withdrawn 180 days after publication of this final rule.

IV. Procedural Issues and Regulatory Review

A. Review Under Executive Orders 12866, 13563, and 14094

Executive Order (''E.O.'') 12866, ''Regulatory Planning and Review,'' as supplemented and reaffirmed by E.O. 13563, ''Improving Regulation and Regulatory Review,'' 76 FR 3821 (Jan. 21, 2011) and E.O. 14094, ''Modernizing Regulatory Review,'' 88 FR 21879 (April 11, 2023), requires agencies, to the extent permitted by law, to: (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity); (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public. DOE emphasizes as well that E.O. 13563 requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. In its guidance, the Office of Information and Regulatory Affairs (''OIRA'') in the Office of Management and Budget (''OMB'') has emphasized that such techniques may include identifying changing future compliance costs that might result from technological innovation or anticipated behavioral changes. For the reasons stated in the preamble, this final regulatory action is consistent with these principles.

Section 6(a) of E.O. 12866 also requires agencies to submit ''significant regulatory actions'' to OIRA for review. OIRA has determined that this final regulatory action does not constitute a ''significant regulatory action'' under section 3(f) of E.O. 12866. Accordingly, this action was not submitted to OIRA for review under E.O. 12866.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of a final regulatory flexibility analysis (''FRFA'') for any final rule where the agency was first required by law to publish a proposed rule for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. As required by Executive Order 13272, ''Proper Consideration of Small Entities in Agency Rulemaking,'' 67 FR 53461 (August 16, 2002), DOE published procedures and policies on February 19, 2003, to ensure that the potential impacts of its rules on small entities are properly considered during the DOE rulemaking process. 68 FR 7990. DOE has made its procedures and policies available on the Office of the General Counsel's website: *www.energy.gov/gc/office-general-counsel.* DOE reviewed this final rule under the provisions of the Regulatory Flexibility Act and the procedures and policies published on February 19, 2003.

DOE has recently conducted a focused inquiry into small business manufacturers of the RCWs, CCWs, and consumer clothes dryers covered by this rulemaking. DOE used available public information to identify potential small manufacturers. DOE accessed the

Compliance Certification Database [49] to create a list of companies that import or otherwise manufacture the RCWs, CCWs, and consumer clothes dryers covered by this final rule. Of the domestic original equipment manufacturers (''OEM'') that manufacture the RCWs, CCWs, and consumer clothes dryers covered by this final rule, DOE has identified one domestic RCW OEM that qualifies as a small business.

As detailed in section III.C.4 of this document, DOE is establishing an additional type of test cloth be permitted for testing. This alternate test cloth (and updated test cloth provisions) will alleviate any test cloth shortages currently experienced by manufacturers. This alternate test cloth is approximately the same cost as the existing test cloth and has not demonstrated any substantive differences in measured efficiency compared with historical lots used to RCW and consumer clothes dryer testing. As a result, DOE does not expect any increased cost or burdens to manufacturers from this final rule.

Therefore, DOE concludes that the final rule would not have a ''significant economic impact on a substantial number of small entities,'' and that the preparation of a FRFA is not warranted. DOE has submitted a certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act of 1995

Manufacturers of RCWs, CCWs, and consumer clothes dryers must certify to DOE that their products comply with any applicable energy conservation standards. To certify compliance, manufacturers must first obtain test data for their products according to the DOE test procedures, including any amendments adopted for those test procedures. DOE has established regulations for the certification and recordkeeping requirements for all covered consumer products and commercial equipment, including RCWs, CCWs, and consumer clothes dryers. (*See generally* 10 CFR part 429.) The collection-of-information requirement for the certification and recordkeeping is subject to review and approval by OMB under the Paperwork Reduction Act (''PRA''). This requirement has been approved by OMB under OMB control number 1910–1400. Public reporting burden for the certification is estimated to average 35 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

DOE is not amending the certification or reporting requirements for RCWs, CCWs, and consumer clothes dryers in this final rule.

Notwithstanding any other provision of the law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with, a collection of information subject to the requirements of the PRA, unless that collection of information displays a currently valid OMB Control Number.

D. Review Under the National Environmental Policy Act of 1969

In this final rule, DOE establishes test procedure amendments for measuring the energy efficiency of RCWs, CCWs, and consumer clothes dryers. DOE has determined that this rule falls into a class of actions that are categorically excluded from review under the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*) and DOE's implementing regulations at 10 CFR part 1021. Specifically, DOE has determined that adopting test procedures for measuring energy efficiency of consumer products and industrial equipment is consistent with activities identified in 10 CFR part 1021, appendix A to subpart D, A5 and A6. Accordingly, neither an environmental assessment nor an environmental impact statement is required.

E. Review Under Executive Order 13132

Executive Order 13132, ''Federalism,'' 64 FR 43255 (August 4, 1999), imposes certain requirements on agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The Executive order requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The Executive order also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications. On March 14, 2000, DOE published a statement of policy describing the intergovernmental consultation process it will follow in the development of such regulations. 65 FR 13735. DOE examined this final rule and determined that it will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. EPCA governs and prescribes Federal preemption of State regulations as to energy conservation for the products that are the subject of this final rule. States can petition DOE for exemption from such preemption to the extent, and based on criteria, set forth in EPCA. (42 U.S.C. 6297(d)) No further action is required by Executive Order 13132.

F. Review Under Executive Order 12988

Regarding the review of existing regulations and the promulgation of new regulations, section 3(a) of Executive Order 12988, ''Civil Justice Reform,'' 61 FR 4729 (February 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity, (2) write regulations to minimize litigation, (3) provide a clear legal standard for affected conduct rather than a general standard, and (4) promote simplification and burden reduction. Section 3(b) of Executive Order 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General. Section 3(c) of Executive Order 12988 requires Executive agencies to review regulations in light of applicable standards in sections 3(a) and 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. DOE has completed the required review and determined that, to the extent permitted by law, this final rule meets the relevant standards of Executive Order 12988.

G. Review Under the Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act of 1995 (''UMRA'') requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action resulting in a rule that

[49] U.S. Department of Energy Compliance Certification Database, available at: *www.regulations.doe.gov/certification-data/products.html.*

may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of $100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a)–(b)) The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a proposed ''significant intergovernmental mandate,'' and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect small governments. On March 18, 1997, DOE published a statement of policy on its process for intergovernmental consultation under UMRA. 62 FR 12820; also available at *www.energy.gov/gc/office-general-counsel.* DOE examined this final rule according to UMRA and its statement of policy and determined that the rule contains neither an intergovernmental mandate, nor a mandate that may result in the expenditure of $100 million or more in any year, so these requirements do not apply.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any proposed rule or policy that may affect family well-being. When developing a Family Policymaking Assessment, agencies must assess whether: (1) the action strengthens or erodes the stability or safety of the family and, particularly, the marital commitment; (2) the action strengthens or erodes the authority and rights of parents in the education, nurture, and supervision of their children; (3) the action helps the family perform its functions, or substitutes governmental activity for the function; (4) the action increases or decreases disposable income or poverty of families and children; (5) the benefits of the action justify the financial impact on the family; (6) the action may be carried out by State or local government or by the family; and whether (7) the action establishes an implicit or explicit policy concerning the relationship between the behavior and personal responsibility of youth, and the norms of society. In evaluating the above factors, DOE has concluded that it is not necessary to prepare a Family Policymaking Assessment as none of the above factors are implicated. Further, this determination would not have any financial impact on families nor any impact on the autonomy or integrity of the family as an institution.

I. Review Under Executive Order 12630

DOE has determined, under Executive Order 12630, ''Governmental Actions and Interference with Constitutionally Protected Property Rights'' 53 FR 8859 (March 18, 1988), that this regulation will not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516 note) provides for agencies to review most disseminations of information to the public under guidelines established by each agency pursuant to general guidelines issued by OMB. OMB's guidelines were published at 67 FR 8452 (Feb. 22, 2002), and DOE's guidelines were published at 67 FR 62446 (Oct. 7, 2002). Pursuant to OMB Memorandum M–19–15, Improving Implementation of the Information Quality Act (April 24, 2019), DOE published updated guidelines which are available at *www.energy.gov/sites/prod/files/2019/12/f70/DOE%20Final%20Updated%20IQA%20Guidelines%20Dec%202019.pdf.* DOE has reviewed this final rule under the OMB and DOE guidelines and has concluded that it is consistent with applicable policies in those guidelines.

K. Review Under Executive Order 13211

Executive Order 13211, ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use,'' 66 FR 28355 (May 22, 2001), requires Federal agencies to prepare and submit to OMB, a Statement of Energy Effects for any significant energy action. A ''significant energy action'' is defined as any action by an agency that promulgates or is expected to lead to promulgation of a final rule, and that: (1) is a significant regulatory action under Executive Order 12866, or any successor order, and is likely to have a significant adverse effect on the supply, distribution, or use of energy; or (2) is designated by the Administrator of OIRA as a significant energy action. For any significant energy action, the agency must give a detailed statement of any adverse effects on energy supply, distribution, or use if the regulation is implemented, and of reasonable alternatives to the action and their expected benefits on energy supply, distribution, and use.

This regulatory action is not a significant regulatory action under Executive Order 12866. Moreover, it would not have a significant adverse effect on the supply, distribution, or use of energy, nor has it been designated as a significant energy action by the Administrator of OIRA. Therefore, it is not a significant energy action, and, accordingly, DOE has not prepared a Statement of Energy Effects.

L. Review Under Section 32 of the Federal Energy Administration Act of 1974

Under section 301 of the Department of Energy Organization Act (Pub. L. 95–91; 42 U.S.C. 7101), DOE must comply with section 32 of the Federal Energy Administration Act of 1974, as amended by the Federal Energy Administration Authorization Act of 1977. (15 U.S.C. 788; ''FEAA'') Section 32 essentially provides in relevant part that, where a proposed rule authorizes or requires use of commercial standards, the notice of proposed rulemaking must inform the public of the use and background of such standards. In addition, section 32(c) requires DOE to consult with the Attorney General and the Chairman of the Federal Trade Commission (''FTC'') concerning the impact of the commercial or industry standards on competition.

The modifications to the test procedures for RCWs, CCWs, and consumer clothes dryers adopted in this final rule do not incorporate any new commercial standards or test procedures that are not already incorporated by reference at 10 CFR 430.3 and therefore DOE has not re-assessed such standards as part of this final rule.

M. Description of Materials Incorporated by Reference

AATCC Test Method 135–2010 is referenced in the amendatory text of this document but has already been approved for the sections where it appears. No changes are being made to the IBR material.

N. Congressional Notification

As required by 5 U.S.C. 801, DOE will report to Congress on the promulgation of this rule before its effective date. The report will state that it has been determined that the rule is not a ''major rule'' as defined by 5 U.S.C. 804(2).

V. Approval of the Office of the Secretary

The Secretary of Energy has approved publication of this final rule.

List of Subjects in 10 CFR Part 430

Administrative practice and procedure, Confidential business information, Energy conservation, Household appliances, Imports, Incorporation by reference, Intergovernmental relations, Small businesses.

Signing Authority

This document of the Department of Energy was signed on January 10, 2025, by Jeffrey Marootian, Principal Deputy Assistant Secretary for Energy Efficiency and Renewable Energy, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE **Federal Register** Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on January 13, 2025.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

For the reasons stated in the preamble, DOE amends part 430 of Chapter II of Title 10, Code of Federal Regulations as set forth below:

PART 430—ENERGY CONSERVATION PROGRAM FOR CONSUMER PRODUCTS

■ 1. The authority citation for part 430 continues to read as follows:

Authority: 42 U.S.C. 6291–6309; 28 U.S.C. 2461 note.

■ 2. Amend appendix D1 to subpart B of part 430 by:

■ a. Revising sections 2.6, 2.6.1, 2.6.2, and 2.6.3;

■ b. Adding sections 2.6.4 and 2.6.5; and

■ c. Revising the heading for section 2.8.

The revisions and additions read as follows:

Appendix D1 to Subpart B of Part 430—Uniform Test Method for Measuring the Energy Consumption of Clothes Dryers

* * * * *

2. Testing Conditions

* * * * *

2.6 *Test cloths.*

2.6.1 *Material Specifications.* The energy test cloth and energy stuffer cloth material and dimensions must conform to the specifications in section 3 of appendix J3 to this subpart.

2.6.2 *Material Verification.* The test cloth lot used to fabricate each piece of test cloth must conform with the material verification procedures specified in section 7 of appendix J3 to this subpart.

2.6.3 *Lot Identification.* Each piece of test cloth must be clean and permanently marked identifying the lot number of the material. Mixed lots of material must not be used for testing a clothes dryer.

2.6.4 *Pre-Conditioning.* The test cloth must be pre-conditioned prior to first use as specified in section 5 of appendix J3 to this subpart.

2.6.5 *Lifetime.* Each piece of test cloth must not be used for more than 25 test runs (after pre-conditioning).

* * * * *

2.8 *Clothes dryer pre-conditioning.*

* * * * *

■ 3. Amend appendix D2 to subpart B of part 430 by:

■ a. Revising sections 2.6, 2.6.1, 2.6.2, and 2.6.3;

■ b. Adding sections 2.6.4 and 2.6.5; and

■ c. Revising the heading for section 2.8.

The revisions and additions read as follows:

Appendix D2 to Subpart B of Part 430—Uniform Test Method for Measuring the Energy Consumption of Clothes Dryers

* * * * *

2. Testing Conditions

* * * * *

2.6 *Test cloths.*

2.6.1 *Material Specifications.* The energy test cloth and energy stuffer cloth material and dimensions must conform to the specifications in section 3 of appendix J3 to this subpart.

2.6.2 *Material Verification.* The test cloth lot used to fabricate each piece of test cloth must conform with the material verification procedures specified in section 7 of appendix J3 to this subpart.

2.6.3 *Lot Identification.* Each piece of test cloth must be clean and permanently marked identifying the lot number of the material. Mixed lots of material must not be used for testing a clothes dryer.

2.6.4 *Pre-Conditioning.* The test cloth must be pre-conditioned prior to first use as specified in section 5 of appendix J3 to this subpart.

2.6.5 *Lifetime.* Each piece of test cloth must not be used for more than 25 test runs (after pre-conditioning).

* * * * *

2.8 *Clothes dryer pre-conditioning.*

* * * * *

■ 4. Amend appendix J to subpart B of part 430 by revising section 2.7 to read as follows:

Appendix J to Subpart B of Part 430—Uniform Test Method for Measuring the Energy Consumption of Automatic and Semi-Automatic Clothes Washers

* * * * *

2. Testing Conditions and Instrumentation

* * * * *

2.7 *Test cloths.*

2.7.1 *Material Specifications.* The energy test cloth and energy stuffer cloth material and dimensions must conform to the specifications in section 3 of appendix J3 to this subpart.

2.7.2 *Material Verification.* The test cloth lot used to fabricate each piece of test cloth must conform with the material verification procedures specified in section 7 of appendix J3 to this subpart.

2.7.3 *RMC Correction Curve.* The test cloth lot used for testing must have a remaining moisture content (RMC) correction curve determined, according to section 8 of appendix J3 to this subpart.

2.7.4 *Lot Identification.* Each piece of test cloth must be clean and permanently marked identifying the lot number of the material. Mixed lots of material must not be used for testing a clothes washer.

2.7.5 *Pre-Conditioning.* The test cloth must be pre-conditioned prior to first use as specified in section 5 of appendix J3 to this subpart.

2.7.6 *Lifetime.* Each piece of test cloth must not be used for more than 60 test runs (after pre-conditioning).

* * * * *

■ 5. Amend appendix J2 to subpart B of part 430 by revising section 2.7 to read as follows:

Appendix J2 to Subpart B of Part 430—Uniform Test Method for Measuring the Energy Consumption of Automatic and Semi-Automatic Clothes Washers

* * * * *

2. Testing Conditions and Instrumentation

* * * * *

2.7 *Test cloths.*

2.7.1 *Material Specifications.* The energy test cloth and energy stuffer cloth material and dimensions must conform to the specifications in section 3 of appendix J3 to this subpart.

2.7.2 *Material Verification.* The test cloth lot used to fabricate each piece of test cloth must conform with the material verification procedures specified in section 7 of appendix J3 to this subpart.

2.7.3 *RMC Correction Curve.* The test cloth lot used for testing must have a remaining moisture content (RMC) correction curve determined, according to section 8 of appendix J3 to this subpart.

2.7.4 *Lot Identification.* Each piece of test cloth must be clean and permanently marked identifying the lot number of the material. Mixed lots of material must not be used for testing a clothes washer.

2.7.5 *Pre-Conditioning.* The test cloth must be pre-conditioned prior to first use as specified in section 5 of appendix J3 to this subpart.

2.7.6 *Lifetime.* Each piece of test cloth must not be used for more than 60 test runs (after pre-conditioning).

■ 6. Amend appendix J3 to subpart B of part 430 by:
■ a. Revising the heading for appendix J3;
■ b. Revising section 1;
■ c. Revising section 3;
■ d. Revising section 5;
■ e. Revising sections 7.1.1 and 7.2.5;
■ f. Revising sections 8.5 through 8.8; and
■ g. Adding section 8.9.

The revisions and additions read as follows:

Appendix J3 to Subpart B of Part 430—Test Cloth Specifications and Procedures for Pre-Conditioning and Determining Correction Coefficients of New Test Cloth Lots

* * * * *

1. Objective

This appendix includes the following: (1) Specifications for the test cloth to be used for testing clothes washers and clothes dryers; (2) procedures for pre-conditioning the test cloth for use in testing clothes washers and clothes dryers; (3) procedures for verifying that new lots of test cloth meet the defined material specifications; and (4) procedures for developing a set of correction coefficients that correlate the measured remaining moisture content (RMC) values of each new test cloth lot with a set of standard RMC values established as an historical reference point. These correction coefficients are applied to the RMC measurements performed during testing according to appendix J or appendix J2 to this subpart, ensuring that the final corrected RMC measurement for a clothes washer remains independent of the test cloth lot used for testing.

* * * * *

3. Test Cloth Specifications

The energy test cloths and energy stuffer cloths must meet the following specifications:

3.1 The test cloth material must be one of the following two types:

3.1.1 *Legacy Momie Cloth.* Test cloth meeting all of the specifications in sections 3.1.1.1 through 3.1.1.4 of this appendix.

3.1.1.1 *Fabric type.* Pure finished bleached cloth made with a momie, granite, or crepe weave.

3.1.1.2 *Fiber content of warp and filling yarn.* 50% ± 4% cotton, with the balance being polyester, open end spun, 15/1 ± 5% cotton count blended yarn.

3.1.1.3 *Thread count.* 65 x 57 per inch (warp × fill), ± 2%. Thread count is measured on the finished good, prior to pre-conditioning.

3.1.1.4 *Fabric weight.* 5.60 ± 0.25 ounces per square yard (190.0 ± 8.4 g/m^2). Fabric weight is measured on the finished good, prior to pre-conditioning.

3.1.2 *Modified AATCC Laundering Ballast Type 3.* Test cloth meeting the specifications in sections 3.1.2.1 through 3.1.2.4 of this appendix.

3.1.2.1 *Fabric Type.* Plain weave.

3.1.2.2 *Fiber content of warp and filling yarn.* 50% cotton/50% polyester ± 3%, 16/1 ring spun.

3.1.2.3 *Thread count.* 52 x 48 ± 5 yarns per inch. Thread count is measured on the finished good, prior to pre-conditioning.

3.1.2.4 *Fabric weight.* 4.57 ± 0.29 ounces per square yard (155 ± 10 g/m^2). Fabric weight is measured on the finished good, prior to pre-conditioning.

3.2 Water repellent finishes, such as fluoropolymer stain resistant finishes, must not be applied to the test cloth.

3.3. *Test cloth dimensions.*

3.3.1 *Energy test cloth.* The energy test cloth must be made from test cloth material that is cut to 24 ± ½ inches by 36 ± ½ inches (61.0 ± 1.3 cm by 91.4 ± 1.3 cm), and hemmed to 22 ± ½ inches by 34 ± ½ inches (55.9 ± 1.3 cm by 86.4 ± 1.3 cm) before pre-conditioning.

3.3.2 *Energy stuffer cloth.* The energy stuffer cloth must be made from the same test cloth material as the energy test cloth, cut to 12 ± ¼ inches by 12 ± ¼ inches (30.5 ± 0.6 cm by 30.5 ± 0.6 cm), and hemmed to 10 ± ¼ inches by 10 ± ¼ inches (25.4 ± 0.6 cm by 25.4 ± 0.6 cm) before pre-conditioning.

* * * * *

5. Test Cloth Pre-Conditioning Instructions

Use the following instructions for performing pre-conditioning of new energy test cloths and energy stuffer cloths as specified throughout section 7 and section 8 of this appendix, before any clothes washer testing using appendix J or appendix J2 to this subpart, and before any clothes dryer testing using appendix D1 or appendix D2 to this subpart.

5.1 Perform five complete wash-rinse-spin cycles, the first two with current AHAM Standard detergent Formula 3 and the last three without detergent. Place the test cloth in a clothes washer set at the maximum water level. Wash the load for ten minutes in soft water (17 ppm hardness or less) using 27.0 grams + 4.0 grams per pound of cloth load of AHAM Standard detergent Formula 3. The wash temperature is to be controlled to 135 °F ± 5 °F (57.2 °C ± 2.8 °C) and the rinse temperature is to be controlled to 60 °F ± 5 °F (15.6 °C ± 2.8 °C).

5.2 Dry the load to bone-dry between each of the five wash-rinse-spin cycles.

5.3 The maximum shrinkage after pre-conditioning must not be more than 5 percent of the length and width. Measure per AATCC Test Method 135–2010 (incorporated by reference; see § 430.3).

* * * * *

7. Test Cloth Material Verification Procedure

* * * * *

7.1.1 *Dimensions.* Each hemmed energy test cloth must meet the size specifications in section 3.3.1 of this appendix. Each hemmed energy stuffer cloth must meet the size specifications in section 3.3.2 of this appendix.

* * * * *

7.2 *Uniformity Verification.*

* * * * *

7.2.5 Calculate the coefficient of variation (CV) of the nine average RMC values from each sample load. For test cloth lots qualified after February 18, 2025, the CV must be less than or equal to 1.5% for the test cloth lot to be considered acceptable and to perform the standard extractor RMC testing.

8. RMC Correction Curve Procedure

* * * * *

8.5 Repeat sections 8.3 and 8.4 of this appendix an additional two times, so that three replications at each extractor condition are performed. When this procedure is performed in its entirety, a total of 60 extractor RMC test runs are required.

8.6 Calculate $RMC_{cloth\text{-}avg}$ for each extractor test condition by averaging the values of the 3 replications performed specified in sections 8.3 and 8.4 of this appendix.

8.7 Perform a linear least-squares fit to determine coefficients A and B such that the standard RMC values shown in Table 8.7 of this appendix ($RMC_{standard}$) are linearly related to the $RMC_{cloth\text{-}avg}$ values calculated in section 8.6 of this appendix:

$$RMC_{standard} \sim A \times RMC_{cloth\text{-}avg} + B$$

where A and B are coefficients of the linear least-squares fit.

TABLE 8.7—STANDARD RMC VALUES

"g Force"	RMC percentage			
	Warm soak		Cold soak	
	15 min. spin (percent)	4 min. spin (percent)	15 min. spin (percent)	4 min. spin (percent)
100	45.9	49.9	49.7	52.8
200	35.7	40.4	37.9	43.1
350	29.6	33.1	30.7	35.8
500	24.2	28.7	25.5	30.0

TABLE 8.7—STANDARD RMC VALUES—Continued

"g Force"	RMC percentage			
	Warm soak		Cold soak	
	15 min. spin (percent)	4 min. spin (percent)	15 min. spin (percent)	4 min. spin (percent)
650	23.0	26.4	24.1	28.0

8.8 Calculate the corrected RMC value for each extractor test condition, $RMC_{cloth\text{-}corr}$ as follows:

$RMC_{cloth\text{-}corr} = A \times RMC_{cloth\text{-}avg} + B$

Where:

$RMC_{cloth\text{-}avg}$ = the average RMC value, as calculated in section 8.6 of this appendix for each extractor test condition, expressed as a decimal, and

A and B are the coefficients of the linear least squares fit as determined in section 8.7 of this appendix.

8.9 Calculate the root mean square error of the linear fit, RMSE. For test cloth lots qualified after February 18, 2025, the RMSE must be less than or equal to 0.012 for the test cloth lot to be considered acceptable. The RMSE is calculated as follows:

$$RMSE = \sqrt{\sum_{i=1}^{N} \frac{\left(RMC_{standard_i} - RMC_{cloth-corr_i}\right)^2}{N-2}}$$

Where:

$RMC_{standard_i}$ = the $RMC_{standard}$ value in Table 8.7 of this appendix for the ith extractor test condition, expressed as a decimal,

$RMC_{cloth\text{-}corr_i}$ = the corrected RMC value, as calculated in section 8.8 of this appendix for the ith extractor test condition, expressed as a decimal, and

N = the number of extractor test conditions listed in Table 8.7 of this appendix = 20.

[FR Doc. 2025–00986 Filed 1–16–25; 8:45 am]

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

10 CFR Part 431

[EERE–2022–BT–TP–0019]

RIN 1904–AF08

Energy Conservation Program: Test Procedure for Compressors

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Final rule.

SUMMARY: The U.S. Department of Energy ("DOE") is amending the test procedure for compressors to correct an error and to ensure that pressure ratio is expressed in terms of absolute pressure. DOE is also correcting the formula for isentropic efficiency and specific energy consumption of the packaged compressor by incorporating a K_6 correction factor to correct for differences in pressure ratio when testing at differing elevations. Finally, DOE is amending the definition of "air compressor" to include a minor clarification and revise a typographical error.

DATES: The effective date of this rule is April 2, 2025. The amendments will be mandatory for product testing starting July 16, 2025.

The incorporation by reference of certain publications listed in the rule is approved by the Director of the Federal Register on April 2, 2025.

ADDRESSES: The docket, which includes **Federal Register** notices, public meeting attendee lists and transcripts, comments, and other supporting documents/materials, is available for review at *www.regulations.gov.* All documents in the docket are listed in the *www.regulations.gov* index. However, not all documents listed in the index may be publicly available, such as those containing information that is exempt from public disclosure.

A link to the docket web page can be found at *www.regulations.gov/docket/EERE-2022-BT-TP-0019.* The docket web page contains instructions on how to access all documents, including public comments, in the docket.

For further information on how to review the docket contact the Appliance and Equipment Standards Program staff at (202) 287–1445 or by email: *ApplianceStandardsQuestions@ee.doe.gov.*

FOR FURTHER INFORMATION CONTACT:

Mr. Jeremy Dommu, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies Office, EE–2J, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (202) 586–9870. Email: *ApplianceStandardsQuestions@ee.doe.gov.*

Mr. Pete Cochran, U.S. Department of Energy, Office of the General Counsel, GC–33, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (202) 586–9496. Email: *Peter.Cochran@hq.doe.gov.*

SUPPLEMENTARY INFORMATION:

DOE incorporates by reference the following industry standards into title 10 of the Code of Federal Regulation ("CFR") part 431:

IEC 60584–1:2013, *Thermocouples—Part 1: EMF specifications and tolerances,* edition 3.0, August 2013 ("IEC 60584–1:2013").

IEC 60584–3:2021, Thermocouples—*Part 3: Extension and compensating cables—Tolerances and identification system,* edition 3.0, February 2021 ("IEC 60584–3:2021").

Copies of IEC 60584–1:2013 and IEC 60584–3:2021 may be purchased from International Electrotechnical Commission ("IEC") Central Office, 3, rue de Varembé, Case Postale 131, CH–1211, Geneva, Switzerland +41 22 919 02 11, or by going to *webstore.iec.ch.*

ISO 1217:2009(E), *Displacement compressors—Acceptance tests,* fourth edition, July 1, 2009 ("ISO 1217:2009(E)").

ISO 1217:2009/Amd.1:2016(E), *Displacement compressors—Acceptance tests* (fourth edition, July 1, 2009), AMENDMENT 1: Calculation of isentropic efficiency and relationship with specific energy, April 15, 2016 ("ISO 1217:2009/Amd.1:2016(E)").

ISO 5167–1:2022(E), *Measurement of fluid flow by means of pressure*

differential devices inserted in circular cross-section conduits running full—Part 1: General principles and requirements, third edition, June 2022 (''ISO 5167–1:2022(E)'').

ISO 9300:2022(E), *Measurement of gas flow by means of critical flow nozzles,* third edition, June 2022 (''ISO 9300:2022(E)'').

Copies of ISO 1217:2009(E), ISO 1217:2009/Amendment 1:2016(E), ISO 5167–1:2022(E), and ISO 9300:2022(E) may be purchased from International Organization for Standardization (''ISO'') at Chemin de Blandonnet 8, CP 401, 1214 Vernier, Geneva, Switzerland +41 22 749 01 11, or by going to *www.iso.org.*

See section IV.N of this document for further discussion of these standards.

K. Review Under Executive Order 13211
L. Review Under Section 32 of the Federal Energy Administration Act of 1974
M. Congressional Notification
N. Description of Materials Incorporated by Reference
V. Approval of the Office of the Secretary

I. Authority and Background

Compressors are included in the list of ''covered equipment'' (via the clause classifying certain types of ''industrial equipment'' as ''covered equipment'') for which the U.S. Department of Energy (''DOE'') is authorized to establish and amend energy conservation standards and test procedures. (42 U.S.C. 6311(1)(L), 6311(2)(B)(i), and 6312(b)). DOE's test procedures for compressors are currently prescribed at subpart T of part 431 of title 10 of the Code of Federal Regulations (10 CFR part 431). The following sections discuss DOE's authority to establish and amend test procedures for compressors and relevant background information regarding DOE's consideration of test procedures for this equipment.

A. Authority

The Energy Policy and Conservation Act, Public Law 94–163, as amended (''EPCA''),[1] authorizes DOE to regulate the energy efficiency of a number of consumer products and certain industrial equipment. (42 U.S.C. 6291–6317, as codified) Title III, Part C of EPCA,[2] added by Public Law 95–619, Title IV, section 441(a), established the Energy Conservation Program for Certain Industrial Equipment, which sets forth a variety of provisions designed to improve energy efficiency. This equipment includes compressors, the subject of this document. Under EPCA, DOE may include a type of industrial equipment, including compressors, as covered equipment if it determines that doing so is necessary to carry out the purposes of Part A–1. (42 U.S.C. 6311(1)(L), 6311(2)(B)(i), and 6312(b)). The purpose of Part A–1 is to improve the efficiency of electric motors and pumps and certain other industrial equipment to conserve the energy resources of the Nation. (42 U.S.C. 6312(a)). On November 15, 2016, DOE published a final rule, which determined that coverage for compressors is necessary to carry out the purposes of Part A–1 of Title III of EPCA. 81 FR 79991. (42 U.S.C. 6311(1)(L); 42 U.S.C. 6311 (2)(A); 42 U.S.C. 6311 (2)(B)(i))

The energy conservation program under EPCA consists essentially of four parts: (1) testing, (2) labeling, (3) Federal energy conservation standards, and (4) certification and enforcement procedures. Relevant provisions of EPCA include definitions (42 U.S.C. 6311), test procedures (42 U.S.C. 6314), labeling provisions (42 U.S.C. 6315), energy conservation standards (42 U.S.C. 6313), and the authority to require information and reports from manufacturers (42 U.S.C. 6316; 42 U.S.C. 6296).

The Federal testing requirements consist of test procedures that manufacturers of covered equipment must use as the basis for: (1) certifying to DOE that their equipment complies with the applicable energy conservation standards adopted pursuant to EPCA (42 U.S.C. 6316(a); 42 U.S.C. 6295(s)), and (2) making other representations about the efficiency of that equipment (42 U.S.C. 6314(d)). Similarly, DOE must use these test procedures to determine whether the equipment complies with relevant standards promulgated under EPCA. (42 U.S.C. 6316(a); 42 U.S.C. 6295(s))

Federal energy efficiency requirements for covered equipment established under EPCA generally supersede State laws and regulations concerning energy conservation testing, labeling, and standards. (42 U.S.C. 6316(a) and 42 U.S.C. 6316(b); 42 U.S.C. 6297). DOE may, however, grant waivers of Federal preemption for particular State laws or regulations, in accordance with the procedures and other provisions of EPCA. 42 U.S.C. 6316(b)(2)(D).

Under 42 U.S.C. 6314, EPCA sets forth the criteria and procedures DOE must follow when prescribing or amending test procedures for covered equipment. EPCA requires that any test procedures prescribed or amended under this section must be reasonably designed to produce test results that reflect energy efficiency, energy use, or estimated annual operating cost of a given type of covered equipment during a

[1] All references to EPCA in this document refer to the statute as amended through the Energy Act of 2020, Public Law 116–260 (Dec. 27, 2020), which reflect the last statutory amendments that impact Parts A and A–1 of EPCA.

[2] For editorial reasons, upon codification in the U.S. Code, Part C was redesignated Part A–1.

representative average use cycle (as determined by the Secretary) and requires that test procedures not be unduly burdensome to conduct. (42 U.S.C. 6314(a)(2))

EPCA also requires that, at least once every 7 years, DOE evaluate test procedures for each type of covered equipment, including compressors, to determine whether amended test procedures would more accurately or fully comply with the requirements for the test procedures to not be unduly burdensome to conduct and be reasonably designed to produce test results that reflect energy efficiency, energy use, and estimated operating costs during a representative average use cycle. (42 U.S.C. 6314(a)(1))

In addition, if the Secretary determines that a test procedure amendment is warranted, the Secretary must publish proposed test procedures in the **Federal Register** and afford interested persons an opportunity (of not less than 45 days' duration) to present oral and written data, views, and arguments on the proposed test procedures. (42 U.S.C. 6314(b)) If DOE determines that test procedure revisions are not appropriate, DOE must publish its determination not to amend the test procedures. (42 U.S.C. 6314(a)(1)(A)(ii))

DOE is publishing this final rule in satisfaction of the 7-year review requirement specified in EPCA. (42 U.S.C. 6314(b)(1))

B. Background

DOE's existing test procedure for compressors appears at title 10 of the Code of Federal Regulations (CFR) part 431, subpart T, appendix A—Uniform Test Method for Certain Air Compressors (hereafter ''appendix A'').

As stated, DOE published a final rule on November 15, 2016, in which DOE determined that coverage of compressors is necessary to carry out the purposes of Part A–1 of Title III of EPCA. 81 FR 79991. DOE's test procedure for determining compressor energy efficiency of certain varieties of compressors was established in a final rule published on January 4, 2017 (hereafter, the ''January 2017 Final Rule''). 82 FR 1052.

On May 17, 2019, DOE published a notice of petition for rulemaking and request for comment regarding the test procedure for compressors in response to a petition from Atlas Copco North America (''Atlas Copco''). 84 FR 22395. Atlas Copco's petition was received on April 17, 2019. Atlas Copco requested that DOE amend the compressors test procedure to specify that manufacturers could satisfy the test procedure requirements by using the industry test method for rotary air compressor energy efficiency, ISO 1217:2009(E) ''Displacement compressors—Acceptance tests''. In the notice of petition for rulemaking, DOE sought comment as to whether to proceed with the petition, but took no position at the time regarding the merits of the suggested rulemaking or the assertions made by Atlas Copco. 84 FR 22395.[3]

On January 10, 2020, DOE published a final rule for energy conservation standards for air compressors (hereafter, the ''January 2020 ECS Final Rule''). 85 FR 1504. Compliance with the energy conservation standards established in the January 2020 ECS Final Rule is required for compressors manufactured starting on January 10, 2025. 10 CFR 431.345.

On May 6, 2022, DOE issued a Request for Information (''RFI'') for a test procedure for compressors to consider whether to amend DOE's test procedure for compressors (hereafter, the ''May 2022 RFI''). 87 FR 27025. To inform interested parties and to facilitate this process, DOE identified certain issues associated with the currently applicable test procedure on which DOE is interested in receiving comment. On June 6, 2022, DOE granted a 14-day extension to the public comment period, allowing comments to be submitted until June 20, 2022. 87 FR 34220.

In general, representations of compressor performance must be in accordance with the DOE test procedure. (42 U.S.C. 6314(d)). However, DOE guidance (issued Dec. 6, 2017; revised Jun. 8, 2018) stated that it would discretionarily not enforce this requirement until compliance with a standard is required or a labeling requirement is established. On May 2, 2022, DOE announced that it was suspending the enforcement policy regarding the test procedure for air compressors and removed the policy from the DOE enforcement website.

Following retraction of the enforcement policy and to aid manufacturers in understanding DOE's regulatory requirements regarding the test procedure and forthcoming energy conservation standards, DOE held a ''Compressors Regulations 101'' webinar on May 24, 2022. The webinar reviewed testing, rating, certification, and compliance responsibilities.[4]

On February 13, 2023, DOE published a notice of proposed rulemaking and announcement of public meeting for test procedures for compressors (hereafter, the ''February 2023 NOPR''). 88 FR 9199. To inform interested parties and to facilitate this process, DOE identified certain issues associated with the currently applicable test procedure on which DOE is interested in receiving comment. On March 22, 2023, DOE held a public meeting (hereafter, the ''March 2023 Public Meeting'') to obtain stakeholder input regarding the issues and proposed amendments raised by the February 2023 NOPR.

DOE received comments in response to the February 2023 NOPR from the interested parties listed in table I.1.

TABLE I.1—LIST OF COMMENTERS WITH WRITTEN SUBMISSIONS IN RESPONSE TO THE FEBRUARY 2023 NOPR

Commenter(s)	Reference in this final rule	Comment No. in the docket	Commenter type
Compressed Air & Gas Institute	CAGI	21	Trade Association.
Saylor-Beall Air Compressors	Saylor-Beall	22	Manufacturer.
Sullivan-Palatek, Inc	Sullivan-Palatek	23	Manufacturer.
Kaeser Compressors	Kaeser Compressors	24	Manufacturer.
Ingersoll Rand	Ingersoll Rand	25	Manufacturer.
Northwest Energy Efficiency Alliance, and Northwest Power and Conservation Council.	NEEA & NPCC	26	Efficiency Organizations.

Commenter(s)	Reference in this final rule	Comment No. in the docket	Commenter type
Appliance Standard Awareness Project, American Council for an Energy-Efficient Economy, and Natural Resources Defense Council.	ASAP, ACEEE, & NRDC	28	Efficiency Organizations.

A parenthetical reference at the end of a comment quotation or paraphrase provides the location of the item in the public record.[5] To the extent that interested parties have provided written comments that are substantively consistent with any oral comments provided during the March 2023 Public Meeting, DOE cites the written comments throughout this final rule. DOE did not identify any oral comments provided during the March 2023 Public Meeting that are not substantively addressed by written comments.

II. Synopsis of the Final Rule

In this final rule, DOE is amending subpart T of title 10 of the Code of Federal Regulations, part 431 (10 CFR part 431), which contains definitions, materials incorporated by reference, and the test procedure for determining the energy efficiency of certain varieties of compressors, as follows:

(1) Correct the formula for calculating isentropic efficiency and specific energy consumption of the packaged compressor by incorporating a K6 correction factor to correct for the change in pressure ratio when testing at differing elevations;

(2) Revise the formula for pressure ratio at full-load operating pressure currently in 10 CFR part 431, subpart T to correct a typographical error, and to calculate pressure ratio using terms expressed in absolute pressure; and

(3) Modify the current definition of ''air compressor'' to clarify that compressors with more than one compression element are still within the scope of this test procedure, and to revise the typographical error of ''compressor element'' to ''compression elements.''

DOE's actions are summarized in table II.1 compared to the current test procedure as well as the reason for the proposed change.

TABLE II.1—SUMMARY OF CHANGES IN AMENDED TEST PROCEDURE

DOE test procedure prior to amendment	Amended test procedure	Attribution
References ISO 1217:2009(E) Annex C (excluding sections C.1.2, C.2.1, C.3, C.4.2.2, C.4.3.1, and C.4.5) for calculating isentropic efficiency and specific energy consumption of the packaged compressor.	Adds the K_6 correction factor in the formula calculating isentropic efficiency and specific energy consumption of the packaged compressor in order to correct for the change in pressure ratio when testing at differing elevations. Incorporates by reference Annex B, section B.4.5 of ISO 1217:2009(E).	Error correction.
Pressure ratio at full-load operating pressure formula in 10 CFR part 431, subpart T contains an error, as the wrong formula is presented.	Corrects the pressure ratio at full-load operating pressure formula in 10 CFR part 431, subpart T.	Error correction.
Air Compressor Definition: A compressor designed to compress air that has an inlet open to the atmosphere or other source of air, and is made up of a compression element (bare compressor), driver(s), mechanical equipment to drive the compressor element, and any ancillary equipment.	Air Compressor Definition: A compressor designed to compress air that has an inlet open to the atmosphere or other source of air, and is made up of one or more compression elements (bare compressors), driver(s), mechanical equipment to drive the compression elements, and any ancillary equipment.	Clarification.

DOE has determined that the amendments described in section III and adopted in this document will more accurately comply with the requirements that test procedures be reasonably designed to produce test results that reflect energy use during a representative average use cycle and are not unduly burdensome to conduct. (42 U.S.C. 6314(a)(2)) The amendments adopted in this final rule will ensure that any test for isentropic efficiency and specific energy consumption of a packaged compressor performed at any elevation other than 364 ft, or during low- or high-pressure weather events, will be correct. As such, these amendments will ensure accurate measured/calculated efficiency of compressors. DOE has also determined that these amendments will not require retesting or recertification solely as a result of DOE's adoption of the amendments to the test procedures since the amendment aligns the test procedure with existing industry practice. Additionally, DOE has determined that the amendments will not increase the cost of testing. Discussion of DOE's actions are addressed in detail in section III of this document.

The effective date for the amended test procedures adopted in this final rule is 75 days after publication of this document in the **Federal Register**. Representations of energy use or energy efficiency must be based on testing in accordance with the amended test procedures beginning 180 days after the publication of this final rule.

III. Discussion

In the following sections, DOE adopts certain amendments to its test procedure for compressors. For each amendment, DOE provides relevant background information, explains why

[5] The parenthetical reference provides a reference for information located in the docket of DOE's rulemaking to develop test procedures for compressors. (Docket No. EERE–2022–BT–TP–0019, which is maintained at *www.regulations.gov*). The references are arranged as follows: (commenter name, comment docket ID number, page of that document).

the amendment merits consideration, discusses relevant public comments, and adopts an approach.

A. Scope of Applicability

DOE's test procedure applies to a compressor that meets all of the following criteria: is an air compressor; is a rotary compressor; is not a liquid ring compressor; is driven by a brushless electric motor; is a lubricated compressor; has a full-load operating pressure of 75–200 pounds per square inch gauge (psig); is not designed and tested to the requirements of the American Petroleum Institute Standard 619; has full-load actual volume flow rate greater than or equal to 35 cubic feet per minute (cfm), or is distributed in commerce with a compressor motor nominal horsepower greater than or equal to 10 horsepower (hp); and has a full-load actual volume flow rate less than or equal to 1,250 cfm, or is distributed in commerce with a compressor motor nominal horsepower less than or equal to 200 hp. 10 CFR 431.344.

DOE received comments both supporting and opposing scope changes. CAGI, supported by Kaeser Compressors, Ingersoll Rand, Saylor-Beall, and Sullivan-Palatek, stated that they support DOE's proposal to maintain the current scope of the test procedure. (CAGI, No. 21 at pp. 1–3; Kaeser Compressors, No. 24 at pp. 3–5; Ingersoll Rand, No. 25 at pp. 1–3; Saylor-Beall, No. 22 at p. 1; Sullivan-Palatek, No. 23 at p. 1) On the other hand, NEEA & NPCC, CA IOUs, and ASAP, ACEEE, & NRDC encouraged DOE to consider expanding the scope of the test procedure to include additional air compressor types. (NEEA & NPCC, No. 26 at pp. 2–4; CA IOUs, No. 27 at pp. 2–9; ASAP, ACEEE, & NRDC, No. 28 at pp. 1–3)

As discussed in more detail in the following sections, DOE is not amending the scope of the test procedure at this time. DOE may consider test procedure scope expansion, including related comments discussed in this final rule, in a future test procedure rulemaking.

DOE responds to specific scope expansion topics in sections III.A.1 through III.A.7 of this final rule.

1. Reciprocating Compressors

As stated in section III.A of this document, the current test procedure for compressors applies to rotary compressors (and, therefore, does not apply to reciprocating compressors). 10 CFR 431.344. In the February 2023 NOPR, DOE proposed to continue excluding reciprocating compressors from the scope of the test procedure. 88 FR 9199, 9203. DOE stated that it will continue reviewing potential test procedures for reciprocating compressors, including existing test methods, and may consider expanding the scope of the test procedure to include these compressors in a future test procedure rulemaking. *Id.* DOE also asked for comment regarding its proposal to not include reciprocating compressors within the scope of test procedure applicability. *Id.*

In response to the February 2023 NOPR, CAGI, Kaeser Compressors, Ingersoll Rand, Saylor-Beall, and Sullivan-Palatek all expressed support for the DOE proposal to exclude reciprocating compressors from the scope of test procedure applicability. (CAGI, No. 21 at p. 1; Kaeser Compressors, No. 24 at p. 3; Ingersoll Rand, No. 25 at p. 1; Saylor-Beall, No. 22 at p. 1; Sullivan-Palatek, No. 23 at p. 1)

However, in response to the request for comment, NEEA & NPCC recommended that DOE modify the proposed test procedure or develop a new test procedure for testing both one- and three-phase reciprocating compressors because ISO 1217:2009(E) contains a commonly used test procedure for rating reciprocating compressors among manufacturers. However, NEEA & NPCC commented that the reasons discussed in the February 2023 NOPR (88 FR 9199, 9202) for DOE not using ISO 1217:2009(E), as currently written, as the test method for reciprocating compressors are reasonable. NEEA & NPCC also stated that, by establishing a test procedure for reciprocating compressors, DOE is ensuring consistent representation of efficiency in this market and creating a path for industry stakeholders to gather data on this equipment type that would better inform future rulemakings. (NEEA & NPCC, No. 26 at pp. 2–3) ASAP, ACEEE, & NRDC agreed with this point and added that, given the significant potential energy savings for reciprocating compressors, DOE should consider the inclusion of reciprocating compressors within the test procedure scope. ASAP, ACEEE, & NRDC also stated that this would make it easier for DOE to pursue future energy conservation standards for reciprocating compressors and could provide helpful efficiency data to support voluntary programs. (ASAP, ACEEE, & NRDC, No. 28 at pp. 2–3)

DOE agrees that there could be benefits to including reciprocating compressors within the scope of the test procedure. DOE also agrees that the test method in ISO 1217:2009(E) might be appropriate for some reciprocating compressors but inappropriate for others, as there are a wide range of intended duty cycles for reciprocating compressors.

DOE is continuing to exclude reciprocating compressors from the scope of the compressors test procedure. DOE will continue reviewing potential test procedures for reciprocating compressors, including existing test methods, and may consider expanding the scope of the test procedure to include reciprocating compressors in a future test procedure rulemaking.

2. Centrifugal Compressors

As stated in section III.A of this document, the current test procedure for compressors applies to rotary positive displacement compressors (and therefore does not apply to centrifugal air compressors). 10 CFR 431.344. In the February 2023 NOPR, DOE proposed to continue excluding centrifugal compressors from the scope of the test procedure. 88 FR 9199, 9203. DOE stated that it will continue to review and consider potential test methods for centrifugal compressors and may consider developing test procedures for centrifugal compressors as a part of a future rulemaking process. *Id.* DOE also asked for comment regarding its proposal to not include centrifugal compressors within the scope of test procedure applicability and regarding whether dynamic compressor varieties other than centrifugal compete with the air compressor categories discussed in the February 2023 NOPR. *Id.*

In response to the request for comment in the February 2023 NOPR, CAGI, Kaeser Compressors, Ingersoll Rand, Saylor-Beall, and Sullivan-Palatek all expressed support for DOE's proposal to exclude centrifugal compressors from the scope of test procedure applicability. (CAGI, No. 21 at p. 2; Kaeser Compressors, No. 24 at p. 3; Ingersoll Rand, No. 25 at p. 1; Saylor-Beall, No. 22 at p. 1; Sullivan-Palatek, No. 23 at p. 1) Additionally, in response to the request for comment regarding clarification on ''dynamic'' versus ''centrifugal'' compressors, CAGI, Kaeser Compressors, Ingersoll Rand, Saylor-Beall, and Sullivan-Palatek all supported the position that centrifugal compressors are the only form of dynamic compressor that competes with the air compressor categories discussed in the February 2023 NOPR. (CAGI, No. 21 at p. 2; Kaeser Compressors, No. 24 at p. 3; Ingersoll Rand, No. 25 at p. 2; Saylor-Beall, No. 22 at p. 1; Sullivan-Palatek, No. 23 at p. 1)

NEEA & NPCC also recommended that DOE consider a separate future test

procedure rulemaking for centrifugal compressors, which would create a path for expanding the current test procedure scope to rotary compressors up to 500 hp. NEEA & NPCC commented that centrifugal compressors make up a small market share but represent 18 percent of annual energy consumption for industrial compressors, and are typically above 200 hp. NEEA & NPCC also stated that rotary and centrifugal compressors from 200 hp to 500 hp represent 25 percent of total commercial and industrial compressor energy consumption. NEEA & NPCC stated that ISO 5389 is an industry-accepted test procedure for centrifugal compressors and recommended this as an option for a future centrifugal compressor test procedure rulemaking. NEEA & NPCC also stated that there is little overlap in the applications that would use a centrifugal compressor instead of a rotary compressor because centrifugal compressors are more expensive and are used for specific applications that require clean air. (NEEA & NPCC, No. 26 at pp. 3–4)

CA IOUs recommended DOE expand the scope of this test procedure to cover centrifugal compressors. CA IOUs stated that dynamic air compressors account for approximately 18 percent of total industrial air compressor national energy consumption. CA IOUs also stated that the inclusion of dynamic compressors would give end users more data to compare with and that these compressors provide oil- and particulate-free air, which would allow them to compete with regulated and large positive displacement rotary compressors in certain applications. (CA IOUs, No. 27 at pp. 7–9) ASAP, ACEEE, & NRDC also encouraged DOE to include centrifugal compressors in the scope of this test procedure final rule due to the significance of their energy usage and the fact that centrifugal compressors may compete with large rotary positive displacement compressors. ASAP, ACEEE, & NRDC added that ISO 5389, the industry test procedure for dynamic compressors, could potentially serve as the basis of the test procedure. (ASAP, ACEEE, & NRDC, No. 28 at p. 3)

It is true that centrifugal compressors can compete with large rotary positive displacement compressors, as stated by commenters. (CA IOUs, No. 27 at pp. 8–9; ASAP, ACEEE, & NRDC, No. 28 at p. 3) DOE discussed the potential for competition between these categories in the January 2017 Final Rule. 82 FR 1052, 1061–1063. Competition between these categories is considerable above 200 hp, and this reasoning was used to set the upper bound of the compressor test procedure motor nominal horsepower at 200 hp. 82 FR 1052, 1062. As discussed in section III.A.3 of this final rule, DOE is maintaining this upper bound on compressor motor nominal horsepower in the test procedure. This ensures that there is not considerable competition between unregulated centrifugal compressors and regulated positive displacement rotary compressors within the scope of the DOE compressors test procedure.

DOE has not yet determined a test procedure for centrifugal compressors that would produce test results that reflect efficiency during a representative average use cycle and that would not be unduly burdensome to conduct. (42 U.S.C. 6314(a)(2)) Due to the reasons discussed in the February 2023 NOPR and previous paragraphs, DOE is not expanding the scope of this test procedure to include centrifugal compressors. DOE continues to review and consider potential methods for centrifugal compressors and may consider developing test procedures for centrifugal compressors as part of a future rulemaking process.

3. Compressor Motor Nominal Horsepower

As stated in section III.A of this document, the current test procedure for compressors applies to compressors that have a full-load operating pressure of 75 to 200 psig (inclusive) and either (1) a full-load actual volume flow rate of 35 to 1,250 cfm (inclusive) or (2) compressor motor nominal horsepower of 10 to 200 hp (inclusive). 10 CFR 431.344. In the February 2023 NOPR, DOE tentatively determined that the same burden concerns as discussed in the January 2017 Final Rule would continue to exist for the current compressor market. 88 FR 9199, 9203. These include a small number of shipments of units greater than 200 hp and the potential for competitive disadvantage for rotary positive displacement compressors that compete with centrifugal compressors. *Id.* Therefore, DOE did not propose any changes to the current horsepower range of 10 to 200 hp for the existing test procedure in the February 2023 NOPR. *Id.* DOE asked for comment regarding the determination to not include compressors with a horsepower rating above 200 hp within the scope of test procedure applicability. *Id.*

In response to the February 2023 NOPR, CAGI, Kaeser Compressors, Ingersoll Rand, Saylor-Beall, and Sullivan-Palatek all expressed support for the DOE proposal to not include compressors with a horsepower rating above 200 hp within the scope of test procedure applicability. (CAGI, No. 21 at p. 2; Kaeser Compressors, No. 24 at pp. 3–4; Ingersoll Rand, No. 25 at p. 2; Saylor-Beall, No. 22 at p. 1; Sullivan-Palatek, No. 23 at p. 1)

Kaeser Compressors encouraged DOE to investigate increasing the maximum horsepower above 200 hp to 500 hp in a future rulemaking. (Kaeser Compressors, No. 24 at p. 2) NEEA & NPCC recommended that DOE consider a separate future test procedure rulemaking for centrifugal compressors, which would create a path for expanding the current test procedure scope to rotary compressors up to 500 hp. NEEA & NPCC also stated that rotary and centrifugal compressors from 200 hp to 500 hp represent 25 percent of total commercial and industrial compressor energy consumption. (NEEA & NPCC, No. 26 at pp. 3–4)

CA IOUs recommended that DOE expand the scope of the test procedure to cover large (201–500 hp) rotary positive displacement air compressors. CA IOUs stated that all compressor types in this size range consume 29 percent of total industrial air compressor energy, and that increasing the scope of the test procedure would support the goal of fully evaluating the cost-effectiveness, technological feasibility, and economically justified savings opportunities for end users. CA IOUs also stated that air compressor manufacturers voluntarily provide CAGI data sheets for large and oil-free rotary positive displacement air compressors, therefore the additional test burden of covering compressors with motors operating at 201–500 hp is limited. CA IOUs provided data showing that there is a wide range of isentropic efficiencies for rotary positive displacement compressors with motor nominal power greater than 200 hp. Finally, CA IOUs provided data indicating that centrifugal compressors likely compete with fixed-speed rotary positive displacement compressors to provide baseload, but they do not likely compete with variable-speed rotary positive displacement compressors providing low part load. (CA IOUs, No. 27 at pp. 2–7)

ASAP, ACEEE, & NRDC also encouraged DOE to expand the scope of the test procedure to cover rotary positive displacement air compressors greater than 200 hp. ASAP, ACEEE, & NRDC disagreed with DOE's rationale for excluding rotary compressors greater than 200 hp for several reasons. First, ASAP, ACEEE, & NRDC indicated that CAGI performance data is already available for many of these larger models. Second, ASAP, ACEEE, & NRDC acknowledged that larger

compressors have lower shipment numbers, but they indicated that DOE has recently expanded the scope of the electric motors test procedure to 750 hp and stated that very large electric motors are also often low-volume, custom products. Third, ASAP, ACEEE, & NRDC stated that most compressor manufacturers make both in-scope rotary compressors and out-of-scope compressors, so it is unclear whether certain manufacturers would be disadvantaged by inclusion of larger rotary compressors. Finally, ASAP, ACEEE, & NRDC stated that DOE should consider expanding the test procedure scope to currently out-of-scope compressor types, such as centrifugal compressors, as this would mitigate concerns over disadvantaging certain manufacturers or pushing the market towards out-of-scope substitutions. (ASAP, ACEEE, & NRDC, No. 28 at pp. 1–2)

DOE recognizes that a considerable amount of the market for compressors greater than 200 hp is served by centrifugal compressors. As discussed in the January 2017 Final Rule, the inclusion of rotary compressors greater than 200 hp could create a competitive disadvantage for manufacturers of these compressors, as centrifugal compressors of the same horsepower do not have the same testing and representation requirements. 82 FR 1052, 1061–1062. DOE concluded at the time that this competitive advantage could incentivize users to switch from regulated rotary compressors to unregulated centrifugal compressors, thus creating a competitive advantage for manufacturers of unregulated centrifugal compressors. *Id.* Although commenters have indicated that these categories compete in only a subset of the market and that some manufacturers make both regulated and unregulated compressors, the same competitive issues still largely exist today.

Although ASAP, ACEEE, & NRDC have suggested that DOE can mitigate the concerns over competition by covering both rotary positive displacement and centrifugal compressors over 200 hp in the test procedure scope (ASAP, ACEEE, & NRDC, No. 28 at pp. 1–2), section III.A.2 of this final rule discusses that DOE is continuing to exclude centrifugal compressors from the scope of the test procedure at this time. As a result, in order to ensure that there is not considerable competition between unregulated centrifugal compressors and regulated positive displacement rotary compressors, DOE is also continuing to exclude rotary positive displacement compressors over 200 hp from the scope of the test procedure at this time.

For the reasons discussed in the February 2023 NOPR and the previous paragraphs, DOE is maintaining the current horsepower range of 10 to 200 hp for this test procedure final rule. DOE continues to review and consider potential methods for testing positive displacement rotary compressors with nominal motor horsepower greater than and less than the current scope and may consider developing test procedures for these compressors as part of a future rulemaking process.

4. Lubricant-Free Compressors

As stated in section III.A of this document, the current test procedure for compressors applies to lubricated compressors (and therefore does not apply to lubricant-free compressors). 10 CFR 431.344. In the February 2023 NOPR, DOE proposed to not expand the scope of the test procedure to include lubricant-free compressors. 88 FR 9199, 9203–9204. DOE stated that it may evaluate the justification for developing test procedures for lubricant-free compressors as part of a future rulemaking process. DOE also asked for comment regarding its proposal to not include lubricant-free compressors within the scope of test procedure applicability.

In response to the request for comment, CAGI, Kaeser Compressors, Ingersoll Rand, Saylor-Beall, and Sullivan-Palatek all responded in agreement with DOE's proposal to not include lubricant-free compressors within the scope of test procedure applicability. (CAGI, No. 21 at p. 2; Kaeser Compressors, No. 24 at p. 4; Ingersoll Rand, No. 25 at p. 2; Saylor-Beall, No. 22 at p. 1; Sullivan-Palatek, No. 23 at p. 1)

Kaeser Compressors encouraged DOE to evaluate recently added/verified test standards for oil-free compressors and blowers for potential incorporation in a future rulemaking. Kaeser Compressors also added that, since there are many different compressor and blower technologies in the oil-free category, they may require different ways to develop efficiency and test standards. (Kaeser Compressors, No. 24 at p. 2)

ASAP, ACEEE, & NRDC recommended DOE expand the scope of this test procedure to cover lubricant-free compressors, because including lubricant-free compressors would mitigate the risk of unregulated product substitutions, which was a concern in the January 2017 Final Rule. (ASAP, ACEEE, & NRDC, No. 28 at p. 3)

DOE discussed lubricant-free compressors in both the January 2017 Final Rule (82 FR 1052, 1063) and the January 2020 ECS Final Rule (85 FR 1504, 1519–1520), concluding that justification did not exist at the time to support extending the scope of test procedures or energy conservation standards to apply to lubricant-free compressors. DOE has determined that the conclusion made in the 2017 and 2020 final rules still applies for lubricant-free compressors.

ASAP, ACEEE, & NRDC recommended that DOE mitigate the risk of unregulated product substitutions by expanding the scope of the test procedure to cover lubricant-free compressors and other categories of compressors, such as centrifugal and scroll compressors, instead of excluding lubricant-free compressors. (ASAP, ACEEE, & NRDC, No. 28 at p. 3) Section III.A.2 of this final rule, however, discusses that DOE is continuing to exclude centrifugal compressors from the scope of the test procedure at this time. As a result, in order to ensure that there is not competition between unregulated centrifugal compressors and regulated lubricant-free positive displacement rotary compressors, DOE is also excluding lubricant-free rotary positive displacement compressors from the scope of the test procedure at this time.

For the reasons discussed in the previous paragraphs, at this time, DOE is not expanding the scope of the test procedure to include lubricant-free compressors. DOE may evaluate the justification for developing test procedures for lubricant-free compressors as part of a future rulemaking process.

5. Brushed Motors

As stated in section III.A, the current test procedure for compressors applies only to compressors with brushless motors. 10 CFR 431.344. In the February 2023 NOPR, DOE proposed to not expand the scope of the test procedure to include compressors with brushed motors. 88 FR 9199, 9204. DOE stated that it may evaluate the justification for developing test procedures for compressors with brushed motors as part of a future rulemaking process. DOE also asked for comment regarding its proposal to not include compressors with brushed motors within the scope of test procedure applicability.

In response to the request for comment, CAGI, Kaeser Compressors, Ingersoll Rand, Saylor-Beall, and Sullivan-Palatek all responded in agreement with DOE's proposal to exclude compressors with brushed motors from the scope of test procedure applicability. (CAGI, No. 21 at p. 2;

Kaeser Compressors, No. 24 at p. 4; Ingersoll Rand, No. 25 at p. 2; Saylor-Beall, No. 22 at p. 1; Sullivan-Palatek, No. 23 at p. 1)

ASAP, ACEEE, & NRDC encouraged DOE to include compressors with brushed motors in the test procedure scope. (ASAP, ACEEE, & NRDC, No. 28 at p. 1) ASAP, ACEEE, & NRDC commented that they were concerned that manufacturers could consider replacing brushless motors with less efficient brushed motors to avoid compressor regulations. (ASAP, ACEEE, & NRDC, No. 28 at p. 3)

DOE discussed compressors with brushed motors in both the January 2017 Final Rule (82 FR 1052, 1060) and the January 2020 ECS Final Rule (85 FR 1504, 1515), concluding that the burden associated with establishing testing requirements for brushed motor compressors outweighed the associated benefits. This was because, although there were potential benefits to expanding scope to include these models, brushed motors are uncommon in compressors with significant operating hours, and most brushed motor compressors are not tested for efficiency. 82 FR 1052, 1060. In addition, DOE stated that brushed motors are uncommon in compressors with significant potential energy savings (*i.e.,* high operating hours) due to higher maintenance costs, short operating lives, significant acoustic noise, and electrical arcing. *Id.* For these reasons, DOE concluded that brushed motors are not a viable substitution risk for compressors within the scope of the DOE compressor test procedure. *Id.*

DOE has determined that the conclusions made in the January 2017 Final Rule still apply for compressors with brushed motors. Due to this reasoning, at this time, DOE is not expanding the scope of the test procedure to include compressors with brushed motors. DOE may evaluate the inclusion of compressors with brushed motors as part of a future rulemaking.

6. Output Pressure Less Than 75 psig

As stated in section III.A, the current test procedure for compressors applies only to compressors that have a full-load operating pressure greater than or equal to 75 psig and less than or equal to 200 psig. 10 CFR 431.344. In the February 2023 NOPR, DOE proposed to not include equipment for compressed air applications for pressures under 75 psig within the scope of test procedure applicability. 88 FR 9199, 9204. DOE stated that it may evaluate the justification for developing test procedures for compressors with output pressure of less than 75 psig as part of a future rulemaking process. *Id.* DOE also asked for comment regarding its proposal to not include equipment for compressed air applications for pressures under 75 psig within the scope of test procedure applicability. *Id.*

In response to the request for comment, CAGI, Kaeser Compressors, Ingersoll Rand, Saylor-Beall, and Sullivan-Palatek all commented in agreement with DOE's proposal to not include compressors with output pressure less than 75 psig. (CAGI, No. 21 at p. 2; Kaeser Compressors, No. 24 at p. 4; Ingersoll Rand, No. 25 at p. 2; Saylor-Beall, No. 22 at p. 1; Sullivan-Palatek, No. 23 at p. 1)

Kaeser Compressors encouraged DOE to evaluate recently added/verified test standards for oil-free compressors and blowers for potential incorporation in a future rulemaking, which would include pressure ranges of 50–160 psig. Kaeser Compressors added that 1–30 psig is also a large area of energy consumption, which includes wastewater treatment and other aeration and conveying applications that include 24/7 operation. (Kaeser Compressors, No. 24 at p. 2)

At this time, DOE is not expanding the scope of the test procedure to include compressors with output pressure of less than 75 psig. DOE discussed compressors with output pressure of less than 75 psig in both the January 2017 Final Rule (82 FR 1052, 1062–1063) and the January 2020 ECS Final Rule (85 FR 1504,1519), concluding that justification did not exist at the time to support extending the scope of either test procedures or energy conservation standards to apply to compressors with output pressure of less than 75 psig. DOE has determined that the conclusion made in the January 2017 Final Rule and the January 2020 ECS Final Rule still applies for compressors with output pressure of less than 75 psig. DOE may evaluate the justification for developing test procedures for compressors with output pressure of less than 75 psig as part of a future rulemaking process.

7. Integrated Dryers

In response to the February 2023 NOPR, Kaeser Compressors commented that, while integrated dryers inside a compressor package are not listed in the DOE procedure, it might be necessary to specifically exclude them from this test procedure. (Kaeser Compressors, No. 24 at p. 8)

Section 2.2.4 of appendix A contains tables 1 and 2, which specify the compressor components and ancillary equipment that must be present and installed when testing an air compressor. These tables were discussed in the January 2017 Final Rule. 82 FR 1052, 1055–1057, 1080–1082. Table 1 to appendix A contains the equipment that must be present and installed for all tests. If the compressor is distributed in commerce without an item from table 1 to appendix A, the manufacturer must provide an appropriate item to be installed for the test. If any of the equipment listed in table 2 to appendix A is distributed in commerce with units of the compressor basic model, it must be present and installed for all tests specified in appendix A. Additional ancillary equipment beyond the items listed in tables 1 and 2 to appendix A may be installed for the test, if distributed in commerce with the compressor, but this additional ancillary equipment is not required.

Neither table 1 nor table 2 to appendix A specify an integrated dryer, or any type of dryer, as a piece of equipment that must be installed for testing. Table 1 to appendix A specifies a moisture separator and drain, but this is different from a dryer, in that a moisture separator removes liquid water from the air, whereas a dryer removes water vapor from the air. As a result, an integrated dryer is not required to be present and installed for the tests specified in the compressors test procedure. A manufacturer may install an integrated dryer for the tests if the integrated dryer is distributed in commerce with the compressor, but the integrated dryer is not required.

Although Kaeser Compressors suggested that it might be necessary to specifically exclude integrated dryers from the test procedure, DOE is not doing that in this final rule. As discussed in the previous paragraphs, a manufacturer is not required to install an integrated dryer for testing, but the manufacturer may install an integrated dryer if they wish to represent the performance of their compressor with an integrated dryer installed. This flexibility is indicated by the text of section 2.2.4 of appendix A and tables 1 and 2 to appendix A, and no changes are required at this time to clarify this flexibility.

B. Updates to Industry Standards

1. ISO 1217:2009(E) as the Basis for This Test Procedure

DOE's current test procedure incorporates by reference certain sections of ISO 1217:2009(E) as amended through Amendment 1:2016 for test methods and acceptance tests regarding volume rate of flow and power requirements of displacement

compressors, in addition to the operating and testing conditions that apply when a full performance test is specified. In the February 2023 NOPR, DOE did not propose amendments to the existing reference to ISO 1217:2009(E) as amended through Amendment 1:2016 as the basis for the compressors test procedure. 88 FR 9199, 9204–9205. DOE also asked for comment regarding its initial determination to continue to use ISO 1217:2009(E) as amended through Amendment 1:2016 as the basis for the compressors test procedure.

In response to the request for comment, CAGI, Kaeser Compressors, Ingersoll Rand, Saylor-Beall, and Sullivan-Palatek all commented in agreement with DOE's proposal to continue to use ISO 1217:2009(E) as amended through Amendment 1:2016 as the basis for the compressors test procedure. (CAGI, No. 21 at p. 3; Kaeser Compressors, No. 24 at p. 4; Ingersoll Rand, No. 25 at p. 2; Saylor-Beall, No. 22 at p. 1; Sullivan-Palatek, No. 23 at p. 1)

DOE agrees with the comments received and is continuing to incorporate by reference certain sections of ISO 1217:2009(E) as amended through Amendment 1:2016 in the compressors test procedure at 10 CFR 431.343. As discussed in section III.E.1, DOE is revising 10 CFR 431.343 to add section B.4.5 of Annex B of ISO 1217:2009(E) to the list of sections that DOE is incorporating by reference in the compressors test procedure. *See* section III.E.1 for a full discussion of this revision.

2. Ambient Temperature Range Requirement

DOE adopted the ambient temperature range for testing of 68 to 90 °F in the January 2017 Final Rule partially in response to concern that creating a climate-controlled space for testing compressors could be a significant burden on small businesses. DOE stated that this temperature range provides representative measurements without unduly burdening manufacturers. 82 FR 1052, 1079–1080. In the February 2023 NOPR, DOE proposed to maintain the current ambient temperature range requirement of 68 to 90 °F for testing air compressors. 88 FR 9199, 9205. DOE also asked for comment regarding its proposal to maintain the current ambient temperature range requirement.

In response to the request for comment, CAGI, Kaeser Compressors, Ingersoll Rand, Saylor-Beall, and Sullivan-Palatek all commented in agreement with DOE's proposal to maintain the current ambient temperature range requirement of 68 to 90 °F for testing air compressors. (CAGI, No. 21 at p. 3; Kaeser Compressors, No. 24 at p. 5; Ingersoll Rand, No. 25 at p. 2; Saylor-Beall, No. 22 at p. 1; Sullivan-Palatek, No. 23 at p. 1) They added that narrowing the range or specifying specific requirements would add burden to the industry without providing any advantages to consumers. (*Id.)*

For the reasons discussed in the February 2023 NOPR and the previous paragraphs, DOE is not amending the current ambient temperature range requirement of 68 to 90 °F for testing air compressors in this final rule.

C. Definitions

1. Multi-Element Air Compressors

Air compressors may include multiple compression elements to increase compression efficiency or to generate a greater pressure increase than would be possible with a single compression element. The current definition of ''air compressor'' specifies inclusion of a compression element but does not exclude air compressors that include more than one compression element. DOE discussed the current definition of ''air compressor'' as applying to multi-element air compressors in both the January 2017 Final Rule (82 FR 1052, 1068) and the January 2020 ECS Final Rule, in which multi-staging was identified as a technology option for improving the energy efficiency of compressors. 85 FR 1504, 1537.

In the February 2023 NOPR, DOE tentatively determined that revising the definition of ''air compressor'' to explicitly include air compressors with more than one compression element would reduce the probability that the definition is misinterpreted to exclude air compressors with more than one compression element. 88 FR 9199, 9205–9206. DOE proposed to amend the definition of ''air compressor'' such that ''compression element (bare compressor)'' is replaced by ''one or more compression elements (bare compressors).'' *Id.* Additionally, DOE proposed to change ''compressor element'' to ''compression elements'' to correct a typographical error. *Id.* DOE also issued a request for comment in the February 2023 NOPR regarding its proposed amendment of the definition of ''air compressor.'' 88 FR 9199, 9206.

In response to the request for comment, CAGI, Kaeser Compressors, Ingersoll Rand, Saylor-Beall, Sullivan-Palatek, and CA IOUs all expressed support for DOE's proposed amendment to the definition of ''air compressor.'' (CAGI, No. 21 at p. 2; Kaeser Compressors, No. 24 at p. 4; Ingersoll Rand, No. 25 at p. 2; Saylor-Beall, No. 22 at p. 1; Sullivan-Palatek, No. 23 at p. 1; CA IOUs, No. 27 at p. 1)

The current formulation of the definition of ''air compressor'' does not exclude air compressors with more than one compression element; nonetheless, stating expressly that multi-element compressors meet the definition of ''air compressor'' limits the potential for misinterpretation.

For the reasons discussed in the February 2023 NOPR and the preceding paragraphs, DOE is amending the definition of ''air compressor'' to be ''a compressor designed to compress air that has an inlet open to the atmosphere or other source of air, and is made up of one or more compression elements (bare compressors), driver(s), mechanical equipment to drive the compression elements, and any ancillary equipment.''

D. Efficiency Metrics

1. Load Point for Fixed-Speed Compressors

The current efficiency metric for fixed-speed compressors, full-load package isentropic efficiency, uses a single load point at 100 percent of full-load actual volume flow rate. In the February 2023 NOPR, DOE proposed to maintain the requirement to measure the performance of fixed-speed compressors at full load, or more specifically, full-load actual volume flow rate at full-load operating pressure, as described in paragraph 3.3.1 of appendix A. 88 FR 9199, 9209. DOE also asked for comment on whether the test procedure reflects actual operating costs for compressors based on their realistic average use cycles. *Id.*

In response to the February 2023 NOPR, CAGI, Kaeser Compressors, Ingersoll Rand, Saylor-Beall, and Sullivan-Palatek all expressed support for the provision that the test procedure can be considered reflective of realistic average use cycles. They commented that, in practical terms, no one compressor installation will have identical or predictable use cycles, and that the current regulatory provision to certify fixed-speed machines based on their performance at 100 percent flow rate and for variable-speed machines based on a weighted average for flow conditions provides a realistic, representative framework for testing, certifying, and presenting meaningful and consistent data to customers. (CAGI, No. 21 at p. 5; Kaeser Compressors, No. 24 at p. 8; Ingersoll Rand, No. 25 at p. 4; Saylor-Beall, No. 22 at p. 1; Sullivan-Palatek, No. 23 at p. 1)

For the reasons discussed in the February 2023 NOPR and preceding paragraphs, DOE is not proposing to alter the current metric for fixed-speed compressors in this test procedure final rule.

2. Load Points for Variable-Speed Compressors

The part-load package isentropic efficiency metric for variable-speed air compressors uses three load points: 40, 70, and 100 percent of full-load actual volume flow rate. In the February 2023 NOPR, DOE proposed to continue using those load points. 88 FR 9199, 9208–9209. DOE requested comment on its proposal to maintain the number of load points for variable-speed air compressors and to not include points with greater than 100 percent of full-load actual volume flow rate. *Id.*

In response to the request for comment in the February 2023 NOPR, CAGI, Kaeser Compressors, Ingersoll Rand, Saylor-Beall, and Sullivan-Palatek all expressed support for the DOE proposal to maintain the number of test points and to not include points with greater than 100-percent load.

For the reasons discussed in the February 2023 NOPR and the previous paragraphs, in this final rule, DOE is maintaining the load points for the part-load package isentropic efficiency metric for variable-speed air compressors at 100 percent, 70 percent, and 40 percent of full-load actual volume flow rate.

3. Inclusion of Unloaded Operation for Fixed-Speed Compressors

The isentropic efficiency metric for fixed-speed compressors currently includes performance at full-load operation only. No measure of performance is included from unloaded operation. In the February 2023 NOPR, DOE proposed to maintain this exclusion of unloaded operation from the isentropic efficiency metric. 88 FR 9199, 9208.

ASAP, ACEEE, & NRDC encouraged DOE to explore how unloaded power measurements could be incorporated into the test procedure. ASAP, ACEEE, & NRDC stated that fixed-speed air compressors are tested and evaluated only at full load. However, they elaborated that fixed-speed compressors often include controls such as ''load/unload'' or ''start/stop'' and commented that testing and evaluating fixed-speed compressor efficiency at both fully loaded and fully unloaded (*i.e.,* zero flow) conditions would be more representative of typical usage. ASAP, ACEEE, & NRDC further stated that the CAGI Performance Verification Program already specifies testing at a fully unloaded test point, and that capturing differences in unloaded power usage will become increasingly important as compressor efficiencies improve. (ASAP, ACEEE, & NRDC, No. 28 at p. 3)

NEEA & NPCC recommended that DOE include a no-load power measurement in the test procedure for fixed-speed compressors that use start/stop and load/unload control strategies. NEEA & NPCC stated that unlike variable-airflow controls, fixed-speed air compressors that use start/stop and load/unload control strategies operate at either fully loaded or fully unloaded states, and testing units that have start/stop or load/unload control strategies at fully loaded and fully unloaded states would be more representative of typical usage. NEEA & NPCC commented that the January 2020 ECS Final Rule indicates that a significant portion of annual energy consumption is spent in a no-load or fully unloaded state for fixed-speed compressors with unload strategies. NEEA & NPCC further stated that, because the metric does not currently account for a no-load power, DOE can't consider technologies that reduce no-load power consumption in its standard analysis; manufacturers that develop products that use less energy in no-load are not given credit in their regulated ratings; and the DOE test procedure assumption for non-operating hours is zero, which is not in agreement with the analysis performed in the January 2020 ECS Final Rule and does not align with the typical usage of compressors. NEEA & NPCC also stated that standby mode and off mode energy consumption measurements are required for all consumer products' test procedures, and that including a no-load power measurement for industrial equipment that consumes power in a no-load state, such as start/stop and load/unload compressors, ensures consistency in test procedure requirements across industrial and consumer products. (NEEA & NPCC, No. 26 at pp. 5–6)

NEEA & NPCC disagreed with DOE's statement in the February 2023 NOPR that testing at a no-load state is not an essential output of the test procedure and, therefore, would cause unneeded incremental burden on testing and reporting requirements. NEEA & NPCC stated that DOE requiring testing at a no-load state is the necessary step for no-load power measurement to be an essential output of the test procedure. NEEA & NPCC also stated that the incremental burden of testing a unit at a no-load state is minimal, as units under test are already set up for testing at specified load points and the CAGI data sheets already specify tolerances for testing at a fully unloaded test point. (NEEA & NPCC, No. 26 at p. 6)

DOE agrees that information describing unloaded states of operation could be useful to the end user. This subject was discussed in the January 2017 Final Rule. 82 FR 1052, 1068–1070. This included mention of possible methods to include loaded and unloaded points in a representative manner, including, potentially, the energy required during the transient periods between loaded and unloaded operation. *Id.* At the time, it was noted that there were no methods that had been developed and accepted by industry consensus, although Atlas Copco did provide an example of a cycle energy requirement approach to consider the energy during loaded operation, unloaded operation, and the transient periods between loaded and unloaded operation. *Id.* At the time, DOE did not include unloaded performance in its isentropic efficiency metric because there was no accepted industry test method. *Id.* DOE indicated at the time that DOE may consider incorporating such a method in future rulemakings if the metric gains acceptance in the industry and the test method can be formalized and validated beyond a case study. 82 FR 1052, 1069. DOE also stated that manufacturers may measure and advertise unloaded power, but it would not require measurement of unloaded performance as part of the test procedure. 82 FR 1052, 1070.

At the current time, DOE is not aware that an industry standard test method has been developed to provide a representative measure of performance across loaded and unloaded operation. In a comment in response to the February 2023 NOPR, Kaeser Compressors indicated that DOE could consider new industrial standards for a future rulemaking, including ISO 4376, Cycle energy requirement.[6] This standard is described on the ISO website as measuring the additional energy required for a single cycle caused by transient conditions, which sounds similar to the method from Atlas Copco that was discussed in the January 2017 Final Rule. The standard is currently listed as ''under development'' on the ISO website, and DOE is not aware of any compressors that are currently rated using this standard. As a result, it appears that this standard is not currently being used widely by industry. DOE is also not aware of any other industry consensus method to

[6] Available at *iso.org/standard/85352.html.*

combine loaded and unloaded performance.

The concerns that existed in the January 2017 Final Rule regarding the lack of an accepted industry test method to combine loaded and unloaded performance still exist. As a result, DOE is not including any measure of unloaded performance in the metrics of the compressors test procedure at this time, although manufacturers may measure and advertise unloaded power. DOE may consider including unloaded performance in the metrics of the compressors test procedures as part of a future rulemaking process.

4. Part-Load Performance of Fixed-Speed Compressors With Variable-Airflow Controls

The isentropic efficiency metric for fixed-speed compressors includes performance at full-load operation only. No measure of performance is included from part-load operation. In the February 2023 NOPR, DOE proposed to maintain this exclusion of part-load operation from the isentropic efficiency metric for fixed-speed compressors. 88 FR 9199, 9208.

ASAP, ACEEE, & NRDC encouraged DOE to include voluntary testing and reporting of part-load performance of fixed-speed compressors with variable-airflow controls. ASAP, ACEEE, & NRDC stated that fixed-speed compressors sold with variable-airflow controls, such as ''variable displacement'' or ''inlet modulation,'' can provide similar utility as variable-speed compressors. Thus, ASAP, ACEEE, & NRDC stated that DOE should provide specific voluntary provisions to test and rate compressors with variable-airflow controls (*e.g.,* using the variable-speed compressor test points at 40, 70, and 100 percent of full load). ASAP, ACEEE, & NRDC further stated that part-load testing of fixed-speed compressors with airflow controls would facilitate comparison of part-load efficiency among variable-airflow compressors as well as between variable-airflow and variable-speed compressors. Finally, ASAP, ACEEE, & NRDC indicated that these provisions would also ensure that any manufacturer representations of variable-airflow compressor part-load performance are consistent across the industry. (ASAP, ACEEE, & NRDC, No. 28 at pp. 3–4)

NEEA & NPCC recommended DOE coordinate with CAGI in rating fixed-speed rotary compressors with variable-airflow controls at variable load points to align with variable-speed compressors. NEEA & NPCC stated that many fixed-speed rotary compressors have variable-airflow controls and non-flat load profiles. Fixed-speed compressors that use variable-airflow controls, such as inlet valve modulation and variable displacement, provide the same function as variable-speed compressors; however, these compressors are tested only at full-load operation currently. Testing fixed-speed rotary compressors with variable-airflow controls at variable load points would be more representative of typical usage and produce a more representative isentropic efficiency. Furthermore, NEEA & NPCC stated that by not testing compressors with variable-airflow controls at part-load set points, consumers cannot compare and select the most efficient air compressors for part-load operations. (NEEA & NPCC, No. 26 at p. 4)

NEEA & NPCC disagreed with DOE's reasoning in the February 2023 NOPR that because fixed-speed rotary compressors in the CAGI data sheets are rated at only full-load isentropic efficiency, establishing part-load isentropic efficiencies for compressors with variable-airflow controls in the test procedure is not warranted at this time. NEEA & NPCC stated that DOE should consider improvements to the testing of variable-airflow compressors for several reasons. First, NEEA & NPCC stated that DOE is not limited to CAGI's performance verification program or the information on CAGI data sheets in their test procedure, and that DOE should fully consider the burden and value of changes to the testing of fixed-speed variable-airflow compressors. Second, NEEA & NPCC commented that the January 2020 ECS Final Rule indicated that about 37 percent of fixed-speed industrial air compressors use inlet valve modulation or variable displacement with high, low, or even load profiles, indicating that a significant portion of fixed-speed air compressors are tested in conditions at which they rarely or never operate. Finally, NEEA & NPCC commented that there may be a significant savings opportunity for fixed-speed rotary compressors with variable-airflow controls, and that DOE should investigate the savings opportunity by testing these compressors the same as variable-speed compressors. NEEA & NPCC stated that if significant savings potential is noted, DOE should update testing to better reflect the energy consumption and potential for savings in this equipment. In addition, NEEA & NPCC stated that DOE could also coordinate with CAGI on how to include these reporting requirements in their data sheets so that both continue to align, should DOE make changes. (NEEA & NPCC, No. 26 at p. 6)

DOE agrees that a part-load package isentropic efficiency metric for fixed-speed variable-airflow compressors could acceptably represent the typical energy use of fixed-speed compressors with variable-airflow controls. This subject was discussed in the January 2017 Final Rule. 82 FR 1052, 1072–1073. At the time, it was noted that CAGI was doing preliminary work on developing a method for one of these control methods (variable displacement), but that there was not yet an industry consensus method for measuring the part-load performance of variable-airflow fixed-speed compressors. *Id.* at 82 FR 1073. The lack of an accepted test method was one of the reasons that DOE did not include a part-load package isentropic efficiency metric for fixed-speed variable-airflow compressors in the test procedure. The other reasons included the lack of historical part-load performance data for these compressors and the approach taken by CAGI and the EU Lot 31 draft standard. *Id.* DOE also acknowledged in the January 2017 Final Rule that part-load performance information for these varieties of compressors can provide valuable information for the end user, and that manufacturers of fixed-speed compressors may continue making graphical or numerical representations of package isentropic efficiency and package specific power as functions of flow rate or rotational speed. *Id.*

At the current time, DOE is not aware of an industry consensus method for measuring part-load package isentropic efficiency for fixed-speed variable-airflow compressors, nor is DOE aware of this metric being used widely for this category of compressors. As a result, the concerns that existed in the January 2017 Final Rule regarding the lack of an accepted industry test method still exist. Therefore, DOE is not including any measure of part-load package isentropic efficiency for fixed-speed variable-airflow compressors in the compressors test procedure at this time. DOE may consider part-load package isentropic efficiency for fixed-speed variable-airflow compressors as part of a future rulemaking process.

E. Test Method

1. K6 Correction Factor

ISO 1217:2009(E) contains several correction factors that correct for variables of the environment, process gas, and compressor operation. The K_6 correction factor in ISO 1217:2009(E) is labeled in section 4.1 of ISO 1217:2009(E) as the correction factor for

the isentropic exponent. The DOE test procedure uses only a subset of the correction factors in ISO 1217:2009(E), and it does not use the K_6 correction factor. The DOE test procedure specifies in sections 3.3.2.2, 3.4.3.2, 3.4.4.2, and 3.5 of appendix A to multiply measured power by the K_5 correction factor, which is labeled in section 4.1 of ISO 1217:2009(E) as the correction factor for the inlet pressure, polytropic exponent, and pressure ratio.

In response to the May 2022 RFI, DOE received comments about potentially needing to use the K_6 correction factor in certain situations. CAGI, supported by Kaeser Compressors, commented that if testing is conducted at sites significantly above sea level, use of the K_6 correction factor may be necessary to obtain accurate representative results. (CAGI, No. 11 at p. 2; Kaeser Compressors, No. 17 at p. 1)

In the February 2023 NOPR, DOE explained that DOE had deliberately omitted the K_6 correction factor during the January 2017 Final Rule. 82 FR 1052, 1084; 88 FR 9199, 9206. As listed in the footnotes of the January 2017 Final Rule, the isentropic exponent of air has some limited variability with atmospheric conditions, and DOE adopted a fixed value of 1.400 to align with the EU Lot 31 draft standard's metric calculations. *Id.* As such, DOE did not propose to amend the current fixed value of 1.400 for the isentropic exponent in the February 2023 NOPR. 88 FR 9199, 9206. DOE also asked for comment regarding its initial determination to continue to use a fixed value of 1.400 for the isentropic exponent, as opposed to incorporating a K_6 correction factor. *Id.*

In response to the request for comment, CAGI, supported by Kaeser Compressors, Ingersoll Rand, Saylor-Beall, and Sullivan-Palatek, commented in support of DOE's initial determination to continue to use a fixed value of 1.400 for the isentropic exponent of air. However, they added that to ensure results derived from testing at elevation are accurate, the K_6 correction factor is necessary to incorporate both isentropic exponent and pressure ratio. They indicated that is necessary to correct the measured power with both the K_5 and K_6 correction factors in order to correct for inlet pressure and pressure ratio. The DOE test procedure directs that performance be normalized to a reference ambient inlet pressure of 100 kPa, approximately corresponding to an altitude of 364 ft above sea level. CAGI presented a table illustrating that calculated results are incorrect at elevations greater than and less than 364 ft if K_6 is not used. (CAGI, No. 21 at pp. 3–5; Kaeser Compressors, No. 24 at p. 6; Ingersoll Rand, No. 25 at p. 3; Saylor-Beall, No. 22 at p. 1; Sullivan-Palatek, No. 23 at p. 1) The commenters also indicated that correcting the DOE test procedure to include K_6 will reduce burdens and potential burdens for the industry, because currently the DOE test method and its correction deviates from the national consensus standard. They also stated that correcting the procedure will not result in a need to retest and recertify but will ensure that any verification/certification performed at any elevation other than 364 ft or during low- or high-pressure weather events will be correct. (CAGI, No. 21 at pp. 4–5; Kaeser Compressors, No. 24 at pp. 8–9; Ingersoll Rand, No. 25 at pp. 4–5; Saylor-Beall, No. 22 at p. 1; Sullivan-Palatek, No. 23 at p. 1)

After reviewing CAGI's comments and the content of ISO 1217:2009(E), DOE now understands that K_6 is required to calculate package isentropic efficiency and specific power accurately in the DOE test procedure. Although K_5 is labeled as ''correction factor for inlet pressure, polytropic exponent and pressure ratio'' and K_6 is labeled as ''correction factor for isentropic exponent'' in section 4.1 of ISO 1217:2009(E), which appears to be inaccurate. K_5, as determined in section C.4.3.2 of Annex C to ISO 1217:2009(E), appears to correct only for inlet pressure, because it is a ratio of inlet pressures. K_6, as determined in section B.4.5 of Annex B to ISO 1217:2009(E), appears to correct for both the isentropic exponent and pressure ratio, because it contains ratios of isentropic exponents and pressure ratios. In the case of the DOE test procedure, for which a fixed value of 1.400 is used for the isentropic exponent, K_6 will correct for only pressure ratio. For the packaged compressors covered by the DOE test procedure, both inlet pressure and pressure ratio change with elevation and weather conditions. By including the K_5 correction factor but excluding the K_6 correction factor, the DOE test procedure currently corrects for variations in inlet pressure but does not correct for variations in pressure ratio. By including K_6 as well, the DOE test procedure will correct for variations in both inlet pressure and pressure ratio, thereby resulting in more accurate measurements of isentropic efficiency and specific power.

To incorporate the K_6 correction factor, DOE is making the following changes in the DOE test procedure. First, DOE is incorporating by reference section B.4.5 of ISO 1217:2009(E) into subpart T of 10 CFR part 431, which includes equations to calculate the K_6 correction factor: equation B.9 for single-stage displacement compressors with or without cooling and multi-stage compressors without intercooling, and equation B.10 for multi-stage displacement compressors with intercoolers. Second, DOE is revising sections 3.3.2.2, 3.4.3.2, 3.4.4.2, and 3.5 of appendix A to multiply measured power by both K_5 and K_6, instead of only multiplying measured power by K_5.

As indicated by commenters, these changes will make the results of the DOE test procedure more accurate, reduce burden by making the DOE test procedure consistent with the industry test method, and not require any retesting or recertifying.

2. Correction of Pressure Ratio at Full-Load Operating Pressure Formula

Section 3.6 of appendix A specifies a formula for pressure ratio at full-load operating pressure, which is used to classify whether a machine or apparatus qualifies as a compressor, as the definition of ''compressor'' stated in 10 CFR 431.342 states that the machine or apparatus must have a pressure ratio at full-load operating pressure greater than 1.3. Pressure ratio at full-load operating pressure does not factor directly into the measured values of compressor performance.

In response to the May 2022 RFI, DOE received comments noting that there is an apparent error in the formula for pressure ratio. In the February 2023 NOPR, DOE concurred with the commenters that the current formula contains an error, as it both does not match the discussion in the preamble of the January 2017 Final Rule and does not contain terms related to the calculation of pressure ratio at full-load operating pressure. 88 FR 9199, 9207.

The current formula for pressure ratio at full-load operating pressure inadvertently duplicates a formula used in a calculation related to determining a represented value of performance for a compressor basic model from a tested sample of units. Specifically, the current formula of pressure ratio at full-load operating pressure exactly matches the formula for the lower 95-percent confidence limit (''LCL'') of the true test mean divided by 0.95. In the February 2023 NOPR, DOE proposed to change the formula for pressure ratio at full-load operating pressure in section 3.6 of appendix A to rectify this error and reflect the proper pressure ratio at full-load operating pressure equation that will be utilized in the test procedure. The numerator of this proposed formula for pressure ratio incorporated full-load

operating pressure, determined in section 4.3.4 of appendix A (Pa gauge), while the denominator was standard atmospheric pressure, 100 kPa. 88 FR 9199, 9207.

DOE requested comment in the February 2023 NOPR regarding its proposal to correct the equation for pressure ratio at full-load operating pressure. In response, CAGI, supported by Kaeser Compressors, Ingersoll Rand, Saylor-Beall, and Sullivan-Palatek, commented in support of DOE's proposal to correct the equation for pressure ratio at full-load operating pressure to amend a previous typographical error. In addition, the commenters noted that pressure ratio must always be calculated in terms of absolute pressure and recommended the addition of 100 kPa to the numerator of the equation to achieve this. (CAGI, No. 21 at p. 4; Kaeser Compressors, No. 24 at p. 7; Ingersoll Rand, No. 25 at p. 4; Saylor-Beall, No. 22 at p. 1; Sullivan-Palatek, No. 23 at p. 1)

DOE evaluated the stakeholders' recommendation to express pressure ratio in terms of absolute pressure and agrees with the proposed solution. ''Absolute pressure'' is defined as pressure relative to a perfect vacuum. In the correction proposed in the February 2023 NOPR, the equation for pressure ratio expresses pressure in terms of gauge pressure in the numerator and absolute pressure in the denominator. 88 FR 9199, 9207. ''Gauge pressure'' is defined as the pressure above atmospheric pressure and has a different reference pressure compared to absolute pressure. For the calculated pressure ratio to be accurate, both the numerator and denominator must be expressed in terms of absolute pressure.

As a result, in this test procedure final rule, DOE is amending the formula for pressure ratio at full-load operating pressure in section 3.6 of appendix A to rectify the typographical error and to adjust the proposed equation so that pressure ratio is calculated in terms of absolute pressure by adding atmospheric pressure of 100 kPa to the numerator. The amended calculation for pressure ratio at full-load operating pressure is shown below in equation 1:

$$PR = \frac{(P_1 + P_{FL})}{P_1}$$

Eq. 1

Where:

PR = pressure ratio at full-load operating pressure;
P_1 = 100 kPa; and
P_{FL} = full-load operating pressure, determined in section 4.3.4 of appendix A to subpart T of part 431 (Pa gauge).

This change has no effect on the scope of compressors subject to the test procedure and does not increase the associated testing burden on manufacturers.

3. Tolerances for Measured Energy Efficiency Values

DOE adopted the tolerances specified in table 1 of ISO 1217:2009(E) in the January 2017 Final Rule in order to align with ISO 1217:2009(E), as amended, to reduce the burden and cost to manufacturers. DOE stated that most manufacturers currently use ISO 1217:2009(E), and with the modifications adopted in the January 2017 Final Rule, the test methods established for compressors are intended to produce results equivalent to those produced historically under ISO 1217:2009(E). 82 FR 1052, 1076. In the February 2023 NOPR, DOE proposed to continue to use the tolerances for measured energy efficiency values specified in ISO 1217:2009(E) and asked for comment regarding this proposal. 88 FR 9199, 9205.

In response to the request for comment, CAGI, Kaeser Compressors, Ingersoll Rand, Saylor-Beall, and Sullivan-Palatek all commented in support of DOE's proposal to continue to use the tolerances for measured energy efficiency values specified in ISO 1217:2009(E). (CAGI, No. 21 at p. 3; Kaeser Compressors, No. 24 at p. 5; Ingersoll Rand, No. 25 at p. 2; Saylor-Beall, No. 22 at p. 1; Sullivan-Palatek, No. 23 at p. 1) CAGI stated that uncertainty of measurement and variation in performance as a result of variation in manufacturing needs to be reflected in data presented to consumers, and that tolerances defined in Annex C of ISO 1217:2019 relate only to the verification of the measured parameters by a practical test. *Id.*

For the reasons discussed in the previous paragraphs, DOE is not amending the tolerances for measured energy efficiency values specified in ISO 1217:2009(E).

F. Reporting

Manufacturers, including importers, must use product-specific certification templates to certify compliance to DOE. For compressors, the certification template reflects the general certification requirements specified at 10 CFR 429.12 and the product-specific requirements specified at 10 CFR 429.63. DOE is not amending the product-specific certification requirements for these products at this time.

G. Test Procedure Costs and Harmonization

EPCA requires that test procedures established by DOE not be unduly burdensome to conduct. (42 U.S.C. 6293(b)(3)) The following sections discuss DOE's evaluation of estimated costs associated with the amendments included in this final rule.

In this final rule, DOE is amending the test procedure for compressors by: (1) correcting the formula for calculating isentropic efficiency and specific energy consumption of the packaged compressor to the specified pressure ratio by incorporating a K_6 correction factor, (2) updating the formula for pressure ratio at full-load operating pressure currently presented in appendix A to rectify a previous error, and (3) modifying the current definition of ''air compressor'' to clarify that compressors with more than one compression element are still within the scope of this test procedure, and to revise the typographical error of ''compressor element'' to ''compression element.''

1. Amendment To Incorporate K6 Correction Factor

In the February 2023 NOPR, DOE issued a request for comment on the benefits and burdens of the proposed updates to the test procedure for compressors. 88 FR 9199, 9210. In response to DOE's request for comment, regarding DOE's amendment to include a K_6 correction factor, DOE received comments from CAGI, supported by Kaeser Compressors, Ingersoll Rand, Saylor-Beall, and Sullivan-Palatek, stating that this correction will reduce potential burdens for the industry. These commenters commented that,

currently, the DOE test method and its correction deviate from the national consensus standard. These commenters believe this deviation was not intentional, as it provides no benefit and reduces test accuracy. These commenters further stated that the error and deviation are more significant the farther the elevation is from 364 ft. These commenters also stated that error can occur during atmospheric weather events leading to extreme low or high pressure, and that testing that is not performed at the exact rated full-load operating pressure is incorrectly converted to efficiency and specific power in the current DOE test procedure. CAGI elaborated that 100 kPa represents the mean ambient pressure at 111 m (364 ft), and that if lab elevation differs significantly from this level, measurements deriving efficiency will deviate when using the DOE test method. CAGI stated that, using the industry standard correction, the efficiency as measured (with no corrections) is the same exact value as applying K_5 and K_6 factors to correct specific power consumption and deriving isentropic efficiency at the conclusion (as presented in Annex C and Annex H of ISO 1217:2009). CAGI concluded that correcting the test procedure using their recommendations will not result in a need to retest and recertify, but will ensure that any verification/certification performed at any elevation other than 364 ft or during low- or high-pressure events will be correct. (CAGI, No. 21 at pp. 5–6; Kaeser Compressors, No. 24 at pp. 8–9; Ingersoll Rand, No. 25 at pp. 4–5; Saylor-Beall, No. 22 at p. 1; Sullivan-Palatek, No. 23 at p. 1)

DOE agrees with the stakeholder comments that the incorporation of the K_6 correction factor will not add any test burden or associated costs and will only increase the accuracy of efficiency representations in this test procedure. DOE has also determined that this amendment will not require retesting or recertification solely as a result of DOE's adoption of the amendment to the test procedures, since the amendment aligns the test procedure with existing industry practice. Current industry practice is to use the K_6 correction factor to correct for error introduced by non-standard ambient pressures when testing at elevations above or below 364 ft. As such, although the newly incorporated correction factor would alter the final efficiency output of the DOE test procedure for compressors tested at non-standard ambient pressures as compared to the incorrect calculation in the current test procedure, this correction will not result in a need for manufacturers to retest or to update the isentropic efficiency ratings of their compressors because the industry already uses the appropriate correction factor consistent with the existing industry test procedure. This amendment serves to harmonize the DOE test procedure with the existing industry practice for testing compressor efficiency.

DOE does not anticipate any added test burden or associated costs from the amendment incorporating the K_6 correction factor, as: (1) the test method follows accepted industry practice, and (2) representations of compressor efficiency would not need to be updated, since the amendment DOE is adopting in this final rule will align DOE's test procedure with current industry testing practice, making it so manufacturers do not need to retest their models. As any representations are voluntary prior to the compliance date of any energy conservation standards for compressors, there is no direct burden associated with any of the testing requirements adopted in this final rule.

2. Amendment To Update Formula for Pressure Ratio at Full-Load Operating Pressure

The amendment regarding updating the formula for pressure ratio at full-load operating pressure will not impact the representations of compressor energy efficiency/energy use. The definition of a compressor is ''a machine or apparatus that converts different types of energy into the potential energy of gas pressure for displacement and compression of gaseous media to any higher-pressure values above atmospheric pressure and has a pressure ratio at full-load operating pressure greater than 1.3,'' as stated in 10 CFR 431.342. In the test procedure for compressors, the calculation of pressure ratio at full-load operating pressure is only used to determine if a compressor meets the statutory definition of ''compressor'' by ensuring that the pressure ratio at full-load operating pressure is greater than 1.3. As such, this amendment does not impact representations of energy efficiency/energy use, and DOE does not anticipate any added test burden or associated costs for manufacturers stemming from this correction to the compressors test procedure.

3. Amendment To Update Definition of ''Air Compressor''

DOE does not anticipate any added test burden or associated costs from the amendment updating the definition of ''air compressor.'' This amendment serves to clarify that compressors with more than one compression element are still within the scope of this test procedure, and to revise the typographical error of ''compressor element'' to ''compression elements.'' As such, DOE does not anticipate any added test burden or associated costs for compressor manufacturers due to this amendment.

4. Harmonization With Industry Standards

DOE's established practice is to adopt relevant industry standards as DOE test procedures, unless such methodology would be unduly burdensome to conduct or would not produce test results that reflect the energy efficiency, energy use, water use (as specified in EPCA), or estimated operating costs of that product during a representative average use cycle. 10 CFR 431.4; section 8(c) of appendix A of 10 CFR part 430 subpart C. In cases where the industry standard does not meet EPCA statutory criteria for test procedures, DOE will make modifications through the rulemaking process to these standards as the DOE test procedure.

The test procedure for compressors at appendix A is based on, and incorporates by reference, much of ISO 1217:2009(E), ''Displacement compressors—Acceptance tests,'' as amended through Amendment 1:2016. In this final rule, DOE will incorporate by reference section B.4.5 of Annex B of ISO 1217:2009(E) via amendment. The industry standards DOE has incorporated by reference for the test procedure for compressors are located in 10 CFR 431.343.

H. Effective and Compliance Dates

The effective date for the adopted test procedure amendment will be 75 days after publication of this final rule in the **Federal Register**. EPCA prescribes that all representations of energy efficiency and energy use, including those made on marketing materials and product labels, must be made in accordance with an amended test procedure, beginning 180 days after publication of the final rule in the **Federal Register**. (42 U.S.C. 6314(d)(1)) EPCA provides an allowance for individual manufacturers to petition DOE for an extension of the 180-day period if the manufacturer may experience undue hardship in meeting the deadline. (42 U.S.C. 6314(d)(2)) To receive such an extension, petitions must be filed with DOE no later than 60 days before the end of the 180-day period and must detail how the manufacturer will experience undue hardship. (*Id.*)

I. Renumbering of Appendix A

Currently, appendix A is organized using a hierarchy that uses Roman numerals (*i.e.,* ''I, II, III, IV . . .'') for first-level headings, Latin capital letters for second-level headings (*i.e.,* ''A, B, C, D . . .''), and Arabic numerals (*i.e.,* 1, 2, 3 . . .'') for third-level headings.

In this final rule, DOE is revising the numbering hierarchy of appendix A to use only Arabic numerals, consistent with the numbering hierarchy that DOE uses across test procedures for consumer products at 10 CFR part 430, subpart B and for commercial and industrial equipment generally at 10 CFR part 431. For example, the current heading ''I.B.2'' of appendix A is renumbered to ''2.2.2'' (also reflecting the addition of a new section at the beginning of appendix A). This renumbering is for consistency purposes only and does not result in any substantive changes solely as a result of the renumbering.

IV. Procedural Issues and Regulatory Review

A. Review Under Executive Orders 12866, 13563, and 14094

Executive Order (''E.O.'') 12866, ''Regulatory Planning and Review,'' as supplemented and reaffirmed by E.O. 13563, ''Improving Regulation and Regulatory Review,'' 76 FR 3821 (Jan. 21, 2011) and E.O. 14094, ''Modernizing Regulatory Review,'' 88 FR 21879 (April 11, 2023), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity); (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public. DOE emphasizes as well that E.O. 13563 requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. In its guidance, the Office of Information and Regulatory Affairs (''OIRA'') in the Office of Management and Budget (''OMB'') has emphasized that such techniques may include identifying changing future compliance costs that might result from technological innovation or anticipated behavioral changes. For the reasons stated in this preamble, this final regulatory action is consistent with these principles.

Section 6(a) of E.O. 12866 also requires agencies to submit ''significant regulatory actions'' to OIRA for review. OIRA has determined that this final regulatory action does not constitute a ''significant regulatory action'' under section 3(f) of E.O. 12866. Accordingly, this action was not submitted to OIRA for review under E.O. 12866.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of a final regulatory flexibility analysis (FRFA) for any final rule where the agency was first required by law to publish a proposed rule for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. As required by Executive Order 13272, ''Proper Consideration of Small Entities in Agency Rulemaking,'' 67 FR 53461 (August 16, 2002), DOE published procedures and policies on February 19, 2003 to ensure that the potential impacts of its rules on small entities are properly considered during the DOE rulemaking process. 68 FR 7990. DOE has made its procedures and policies available on the Office of the General Counsel's website: *www.energy.gov/gc/office-general-counsel.* DOE reviewed this final rule under the provisions of the Regulatory Flexibility Act and the procedures and policies published on February 19, 2003.

For manufacturers of compressors, the Small Business Administration (''SBA'') has set a size threshold, which defines those entities classified as ''small businesses'' for the purposes of the statute. DOE used the SBA's small business size standards to determine whether any small entities would be subject to the requirements of the rule. 13 CFR part 121. The size standards are listed by North American Industry Classification System (''NAICS'') code and industry description and are available at *www.sba.gov/document/support-table-size-standards.* Compressor manufacturing is classified under NAICS 333912, ''air and gas compressor manufacturing.'' The SBA sets a threshold of 1,000 employees or less for an entity to be considered a small business in this category. This employment figure is enterprise-wide, encompassing employees at all parent, subsidiary, and sister corporations.

To identify and estimate the number of small business manufacturers of equipment within the scope of this rulemaking, DOE conducted a market survey using available public information. DOE's research involved industry trade association membership directories (including CAGI), individual company and online retailer websites, and market research tools (*e.g.,* Hoovers reports) to create a list of companies that manufacture equipment covered by this rulemaking. DOE additionally reviewed publicly available data, data available through market research tools, and contacted select companies on its list, as necessary, to determine whether they met the SBA's definition of a small business manufacturer. DOE screened out companies that do not offer equipment within the scope of this rulemaking, do not meet the definition of a ''small business,'' or are foreign owned and operated.

DOE identified a total of 12 domestic small businesses manufacturing compressors. However, as previously stated, the amendments adopted in this final rule revise certain definitions and formulas to ensure the clarity and accuracy of existing requirements and procedures, and the amendments harmonize the DOE test procedure with existing industry practices, without requiring manufacturers to retest their compressors. DOE has determined that the adopted test procedure amendments would not impact testing costs otherwise experienced by manufacturers.

Therefore, DOE concludes that the cost effects accruing from the final rule would not have a ''significant economic impact on a substantial number of small entities,'' and that the preparation of a FRFA is not warranted. DOE has submitted a certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act of 1995

Manufacturers of compressors must certify to DOE that their products comply with any applicable energy conservation standards. To certify compliance, manufacturers must first

obtain test data for their products according to the DOE test procedures, including any amendments adopted for those test procedures. DOE has established regulations for the certification and recordkeeping requirements for all covered consumer products and commercial equipment, including compressors. (*See generally* 10 CFR part 429.) The collection-of-information requirement for the certification and recordkeeping is subject to review and approval by OMB under the Paperwork Reduction Act (PRA). This requirement has been approved by OMB under OMB control number 1910–1400. Public reporting burden for the certification is estimated to average 35 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

DOE is not amending the certification or reporting requirements for compressors in this final rule. Instead, DOE may consider proposals to amend the certification requirements and reporting for compressors under a separate rulemaking regarding appliance and equipment certification. DOE will address changes to OMB Control Number 1910–1400 at that time, as necessary.

Notwithstanding any other provision of the law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with, a collection of information subject to the requirements of the PRA, unless that collection of information displays a currently valid OMB Control Number.

D. Review Under the National Environmental Policy Act of 1969

In this final rule, DOE establishes test procedure amendments that it expects will be used to develop and implement future energy conservation standards for compressors. DOE has determined that this rule falls into a class of actions that are categorically excluded from review under the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*) and DOE's implementing regulations at 10 CFR part 1021. Specifically, DOE has determined that adopting test procedures for measuring energy efficiency of consumer products and industrial equipment is consistent with activities identified in 10 CFR part 1021, appendix A to subpart D, A5 and A6. Accordingly, neither an environmental assessment nor an environmental impact statement is required.

E. Review Under Executive Order 13132

Executive Order 13132, ''Federalism,'' 64 FR 43255 (August 4, 1999), imposes certain requirements on agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The Executive order requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The Executive order also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications. On March 14, 2000, DOE published a statement of policy describing the intergovernmental consultation process it will follow in the development of such regulations. 65 FR 13735. DOE examined this final rule and determined that it will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. EPCA governs and prescribes Federal preemption of State regulations as to energy conservation for the products that are the subject of this final rule. States can petition DOE for exemption from such preemption to the extent, and based on criteria, set forth in EPCA. (42 U.S.C. 6297(d)) No further action is required by Executive Order 13132.

F. Review Under Executive Order 12988

Regarding the review of existing regulations and the promulgation of new regulations, section 3(a) of Executive Order 12988, ''Civil Justice Reform,'' 61 FR 4729 (Feb. 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. Section 3(b) of Executive Order 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General. Section 3(c) of Executive Order 12988 requires Executive agencies to review regulations in light of applicable standards in sections 3(a) and 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. DOE has completed the required review and determined that, to the extent permitted by law, this final rule meets the relevant standards of Executive Order 12988.

G. Review Under the Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act of 1995 (''UMRA'') requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action resulting in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of $100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)) The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a proposed ''significant intergovernmental mandate,'' and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect small governments. On March 18, 1997, DOE published a statement of policy on its process for intergovernmental consultation under UMRA. 62 FR 12820; also available at *www.energy.gov/gc/office-general-counsel.* DOE examined this final rule according to UMRA and its statement of policy and determined that the rule contains neither an intergovernmental mandate, nor a mandate that may result in the expenditure of $100 million or more in any year, so these requirements do not apply.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any

proposed rule or policy that may affect family well-being. When developing a Family Policymaking Assessment, agencies must assess whether: (1) the action strengthens or erodes the stability or safety of the family and, particularly, the marital commitment; (2) the action strengthens or erodes the authority and rights of parents in the education, nurture, and supervision of their children; (3) the action helps the family perform its functions, or substitutes governmental activity for the function; (4) the action increases or decreases disposable income or poverty of families and children; (5) the proposed benefits of the action justify the financial impact on the family; (6) the action may be carried out by State or local government or by the family; and whether (7) the action establishes an implicit or explicit policy concerning the relationship between the behavior and personal responsibility of youth, and the norms of society. In evaluating the above factors, DOE has concluded that it is not necessary to prepare a Family Policymaking Assessment as none of the above factors are implicated. Further, this proposed determination would not have any financial impact on families nor any impact on the autonomy or integrity of the family as an institution.

I. Review Under Executive Order 12630

DOE has determined, under Executive Order 12630, ''Governmental Actions and Interference with Constitutionally Protected Property Rights'' 53 FR 8859 (March 18, 1988), that this regulation will not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516 note) provides for agencies to review most disseminations of information to the public under guidelines established by each agency pursuant to general guidelines issued by OMB. OMB's guidelines were published at 67 FR 8452 (Feb. 22, 2002), and DOE's guidelines were published at 67 FR 62446 (Oct. 7, 2002). Pursuant to OMB Memorandum M–19–15, Improving Implementation of the Information Quality Act (April 24, 2019), DOE published updated guidelines which are available at *www.energy.gov/sites/prod/files/2019/12/f70/DOE%20Final%20Updated%20IQA%20Guidelines%20Dec%202019.pdf.* DOE has reviewed this final rule under the OMB and DOE guidelines and has concluded that it is consistent with applicable policies in those guidelines.

K. Review Under Executive Order 13211

Executive Order 13211, ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use,'' 66 FR 28355 (May 22, 2001), requires Federal agencies to prepare and submit to OMB, a Statement of Energy Effects for any significant energy action. A ''significant energy action'' is defined as any action by an agency that promulgates or is expected to lead to promulgation of a final rule, and that: (1) is a significant regulatory action under Executive Order 12866, or any successor order, and is likely to have a significant adverse effect on the supply, distribution, or use of energy; or (2) is designated by the Administrator of OIRA as a significant energy action. For any significant energy action, the agency must give a detailed statement of any adverse effects on energy supply, distribution, or use if the regulation is implemented, and of reasonable alternatives to the action and their expected benefits on energy supply, distribution, and use.

This regulatory action is not a significant regulatory action under Executive Order 12866. Moreover, it would not have a significant adverse effect on the supply, distribution, or use of energy, nor has it been designated as a significant energy action by the Administrator of OIRA. Therefore, it is not a significant energy action, and, accordingly, DOE has not prepared a Statement of Energy Effects.

L. Review Under Section 32 of the Federal Energy Administration Act of 1974

Under section 301 of the Department of Energy Organization Act (Pub. L. 95–91; 42 U.S.C. 7101), DOE must comply with section 32 of the Federal Energy Administration Act of 1974, as amended by the Federal Energy Administration Authorization Act of 1977. (15 U.S.C. 788; ''FEAA'') Section 32 essentially provides in relevant part that, where a proposed rule authorizes or requires use of commercial standards, the notice of proposed rulemaking must inform the public of the use and background of such standards. In addition, section 32(c) requires DOE to consult with the Attorney General and the Chairman of the Federal Trade Commission (''FTC'') concerning the impact of the commercial or industry standards on competition.

The modifications to the test procedure for compressors adopted in this final rule incorporate testing methods contained in certain sections of the following commercial standards: ISO 1217:2009(E), as amended through ISO 1217:2009(E)/Amd.1:2016. While this test procedure is not exclusively based on this industry testing standard, some components of the DOE test procedure adopt definitions, test parameters, measurement techniques, and additional calculations from them without amendment. DOE has evaluated these standards and is unable to conclude whether it fully complies with the requirements of section 32(b) of the FEAA (*i.e.,* whether it was developed in a manner that fully provides for public participation, comment, and review.) In the January 2017 Final Rule, DOE consulted with both the Attorney General and the Chairman of the FTC about the impact on competition of using the methods contained in these standards and received no comments objecting to their use. 82 FR 1052, 1099.

M. Congressional Notification

As required by 5 U.S.C. 801, DOE will report to Congress on the promulgation of this rule before its effective date. The report will state that it has been determined that the rule is not a ''major rule'' as defined by 5 U.S.C. 804(2).

N. Description of Materials Incorporated by Reference

The following standards have not previously been approved for incorporation by reference in subpart T, appendix A, but are incorporated by reference in this final rule on the basis that they are referenced by other standards which had been previously and remain incorporated by reference in subpart T, appendix A.

ISO 1217:2009(E), ''Displacement compressors—Acceptance tests,'' fourth edition, July 1, 2009. ISO 1217:2009(E) specifies methods for acceptance tests regarding volume rate of flow and power requirements of displacement compressors. It also specifies methods for testing liquid-ring type compressors and the operating and testing conditions which apply when a full performance test is specified.

ISO 1217:2009/Amd.1:2016(E), Displacement compressors—Acceptance tests (fourth edition, July 1, 2009), AMENDMENT 1: Calculation of isentropic efficiency and relationship with specific energy, April 15, 2016. ISO 1217:2009/Amd.1.:2016(E) provides a method for the calculation of isentropic efficiency and relationship with specific energy.

ISO 5167–1:2022(E), Measurement of fluid flow by means of pressure differential devices inserted in circular cross-section conduits running full—Part 1: General principles and

requirements, third edition, June 2022. ISO 5167–1:2022(E) defines terms and symbols and establishes the general principles for methods of measurement and computation of the flow rate of fluid flowing in a conduit by means of pressure differential devices (orifice plates, nozzles, Venturi tubes, cone meters, and wedge meters) when they are inserted into a circular cross-section conduit running full. The standard also specifies the general requirements for methods of measurement, installation and determination of the uncertainty of the measurement of flow rate.

ISO 9300:2022(E), Measurement of gas flow by means of critical flow nozzles, third editions, June 2022. ISO 9300:2022(E) specifies the geometry and method of use (installation in a system and operating conditions) of critical flow nozzles used to determine the mass flow rate of a gas flowing through a system basically without the need to calibrate the critical flow nozzle. It also gives the information necessary for calculating the flow rate and its associated uncertainty.

IEC 60584–1:2013, Thermocouples—Part 1: EMF specifications and tolerances, edition 3.0, August 2013. IEC 60584–1:2013 specifies reference functions and tolerances for letter-designated thermocouples.

IEC 60584–3:2021, Thermocouples—Part 3: Extension and compensating cables—Tolerances and identification system, edition 3.0, February 2021. IEC 60584–3:2021 provides tolerances and an identification system necessary for the measurement of thermocouple circuits.

In this final rule, DOE includes revisions to the regulatory text that contained references to section B.4.5 of Annex B of ISO 1217:2009(E), which was not specifically incorporated by reference before this test procedure final rule.

See **SUPPLEMENTARY INFORMATION** section of this document for availability information of this material.

V. Approval of the Office of the Secretary

The Secretary of Energy has approved publication of this final rule.

List of Subjects in 10 CFR Part 431

Administrative practice and procedure, Confidential business information, Energy conservation test procedures, Incorporation by reference, Reporting and recordkeeping requirements.

Signing Authority

This document of the Department of Energy was signed on January 10, 2025, by Jeffrey Marootian, Principal Deputy Assistant Secretary for Energy Efficiency and Renewable Energy, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on January 13, 2025.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

For the reasons stated in the preamble, DOE amends part 431 of chapter II of title 10 of the Code of Federal Regulations as set forth below:

PART 431—ENERGY EFFICIENCY PROGRAM FOR CERTAIN COMMERCIAL AND INDUSTRIAL EQUIPMENT

■ 1. The authority citation for part 431 continues to read as follows:

Authority: 42 U.S.C. 6291–6317; 28 U.S.C. 2461 note.

■ 2. Amend § 431.342 by revising the definition of ''Air compressor'' to read as follows:

§ 431.342 Definitions concerning compressors.

* * * * *

Air compressor means a compressor designed to compress air that has an inlet open to the atmosphere or other source of air, and is made up of one or more compression elements (bare compressors), driver(s), mechanical equipment to drive the compression elements, and any ancillary equipment.

* * * * *

■ 3. Revise § 431.343 to read as follows:

§ 431.343 Materials incorporated by reference.

(a) Certain material is incorporated by reference into this subpart with the approval of the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. To enforce any edition other than that specified in this section, the DOE must publish a document in the **Federal Register** and the material must be available to the public. All approved incorporation by reference (IBR) material is available for inspection at DOE and at the National Archives and Records Administration (NARA). Contact DOE at: the U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies Program, 1000 Independence Avenue SW, EE–5B, Washington, DC 20024, (202) 586–9127, *Buildings@ee.doe.gov, www.energy.gov/eere/buildings/building-technologies-office.* For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations.html* or email: *fr.inspection@nara.gov.* The material may be obtained from the sources in paragraphs (b) and (c) of this section:

(b) *IEC.* International Electrotechnical Commission Central Office, 3, rue de Varembé, Case Postale 131, CH–1211 GENEVA 20, Switzerland; + 41 22 919 02 11; *webstore.iec.ch.*

(1) IEC 60584–1:2013, *Thermocouples—Part 1: EMF specifications and tolerances,* editions 3.0, August 2013; IBR approved for appendix A to this subpart.

(2) IEC 60584–3:2021, *Thermocouples—Part 3: Extension and compensating cables—Tolerances and identification system,* edition 3.0, February 2021; IBR approved for appendix A to this subpart.

(c) *ISO.* International Organization for Standardization, Chemin de Blandonnet 8, CP 401, 1214 Vernier, Geneva, Switzerland +41 22 749 01 11, *www.iso.org.*

(1) ISO 1217:2009(E), *Displacement compressors—Acceptance tests,* fourth edition, July 1, 2009; IBR approved for appendix A to this subpart.

(2) ISO 1217:2009/Amd.1:2016(E), *Displacement compressors—Acceptance tests* (fourth edition, July 1, 2009), AMENDMENT 1: *Calculation of isentropic efficiency and relationship with specific energy,* April 15, 2016; IBR approved for appendix A to this subpart.

(3) ISO 5167–1:2022(E), *Measurement of fluid flow by means of pressure differential devices inserted in circular cross-section conduits running full—* Part 1: General principles and requirements, third edition, June 2022; IBR approved for appendix A to this subpart.

(4) ISO 9300:2022(E), *Measurement of gas flow by means of critical flow nozzles,* third edition, June 2022; IBR approved for appendix A to this subpart.

■ 4. Revise appendix A to subpart T to read as follows:

Appendix A to Subpart T of Part 431—Uniform Test Method for Certain Air Compressors.

Note: Prior to July 16, 2025, any representations made with respect to the energy use or efficiency of compressors must be based on testing conducted in accordance with:

(a) The applicable provisions of this appendix as they appeared in this subpart T of part 431 as of January 1, 2023; or

(b) This appendix.

Beginning July 16, 2025, representations with respect to energy use or efficiency of compressors, including compliance certifications, must be based on testing conducted in accordance with this appendix.

1. Incorporation by Reference

DOE incorporated by reference in § 431.343, the entire standard for: IEC 60584–1:2013, IEC 60584–3:2021, ISO 1217:2009(E), ISO 1217:2009/Amd.1:2016(E), ISO 5167–1:2022, and ISO 9300:2022; however, only enumerated provisions of ISO 1217:2009(E) and ISO 1217:2009/Amd.1:2016(E) are applicable to this appendix as listed in section 1. To the extent there is a conflict between the terms or provisions of a referenced industry standard and the CFR, the CFR provisions control.

1.1 ISO 1217:2009(E)

1.1.1 Section 2, Normative references;

1.1.2 Section 3, Terms and definitions;

1.1.3 Section 4, Symbols;

1.1.4 Section 5, Measuring equipment, methods and accuracy (excluding 5.1, 5.5, 5.7, and 5.8);

1.1.5 Section 6, Test procedures: the introductory text to Section 6.2, Test arrangements, paragraphs 6.2(g) and 6.2(h), and Table 1—Maximum deviations from specified values and fluctuations from average readings of this appendix;

1.1.6 Annex B (normative), Simplified acceptance test for bare displacement compressors, Section B.4.5 Comparison with specified values;

1.1.7 Annex C (normative), Simplified acceptance test for electrically driven packaged displacement compressors (excluding C.1.2, C.2.1, C.3, C.4.2.2, C.4.3.1, and C.4.5).

1.2 ISO 1217:2009/Amd.1:2016(E)

1.2.1 Section 3.5.1: isentropic power;

1.2.2 Section 3.6.1: isentropic efficiency;

1.2.3 Annex H (informative), Isentropic efficiency and its relation to specific energy requirement, sections H.2, Symbols and subscripts, and H.3, Derivation of isentropic power.

2. Measurements, Test Conditions, and Equipment Configuration

2.1. Measurement Equipment.

2.1.1. For the purposes of measuring air compressor performance, the equipment necessary to measure volume flow rate, inlet and discharge pressure, temperature, condensate, and packaged compressor power input must comply with the equipment and accuracy requirements specified in sections 5.2, 5.3, 5.4, 5.6, and 5.9 of ISO 1217:2009(E), (including the applicable provisions of IEC 60584–1 and IEC 60584–3, as referenced in section 5.3 of ISO 1217:2009(E) and the applicable provisions of ISO 5167–1 and ISO 9300, as referenced in section 5.6 of ISO 1217:2009(E)) and sections C.2.3 and C.2.4 of Annex C to ISO 1217:2009(E).

2.1.2. Electrical measurement equipment must be capable of measuring true root mean square (RMS) current, true RMS voltage, and real power up to the 40th harmonic of fundamental supply source frequency.

2.1.3. Any instruments used to measure a particular parameter specified in section 2.1.1 of this appendix must have a combined accuracy of ±2.0 percent of the measured value at the fundamental supply source frequency, where combined accuracy is the square root of the sum of the squares of individual instrument accuracies.

2.1.4. Any instruments used to directly measure the density of air must have an accuracy of ±1.0 percent of the measured value.

2.1.5. Any pressure measurement equipment used in a calculation of another variable (*e.g.,*actual volume flow rate) must also meet all accuracy and measurement requirements of section 5.2 of ISO 1217:2009(E).

2.1.6. Any temperature measurement equipment used in a calculation of another variable (*e.g.,*actual volume flow rate) must also meet all accuracy and measurement requirements of section 5.3 of ISO 1217:2009(E).

2.1.7. Where ISO 1217:2009(E) refers to ''corrected volume flow rate,'' the term is deemed synonymous with the term ''actual volume flow rate,'' as defined in section 3.4.1 of ISO 1217:2009(E).

2.2. Test Conditions and Configuration of Unit Under Test

2.2.1. For both fixed-speed and variable-speed compressors, conduct testing in accordance with the test conditions, unit configuration, and specifications of section 6.2 paragraphs (g) and (h) of ISO 1217:2009(E) and sections C.1.1, C.2.2, C.2.3, C.2.4, C.4.1, C.4.2.1, C.4.2.3, and C.4.3.2 of Annex C to ISO 1217:2009(E).

2.2.2. The power supply must:

(a) Maintain the voltage greater than or equal to 95 percent and less than or equal to 110 percent of the rated value of the motor,

(b) Maintain the frequency within ±5 percent of the rated value of the motor,

(c) Maintain the voltage unbalance of the power supply within ±3 percent of the rated values of the motor, and

(d) Maintain total harmonic distortion below 12 percent throughout the test.

2.2.3. Ambient Conditions. The ambient air temperature must be greater than or equal to 68 °F and less than or equal to 90 °F for the duration of testing. There are no ambient condition requirements for inlet pressure or relative humidity.

2.2.4. All equipment indicated in table 1 of this appendix must be present and installed for all tests specified in this appendix. If the compressor is distributed in commerce without an item from table 1 of this appendix, the manufacturer must provide an appropriate item to be installed for the test. Additional ancillary equipment may be installed for the test, if distributed in commerce with the compressor, but this additional ancillary equipment is not required. If any of the equipment listed in table 2 of this appendix is distributed in commerce with units of the compressor basic model, it must be present and installed for all tests specified in this appendix.

TABLE 1—EQUIPMENT REQUIRED DURING TEST

Equipment	Fixed-speed rotary air compressors	Variable-speed rotary air compressors
Driver	Yes	Yes.
Bare compressors	Yes	Yes.
Inlet filter	Yes	Yes.
Inlet valve	Yes	Yes.
Minimum pressure check valve/backflow check valve	Yes	Yes.
Lubricant separator	Yes	Yes.
Air piping	Yes	Yes.
Lubricant piping	Yes	Yes.
Lubricant filter	Yes	Yes.
Lubricant cooler	Yes	Yes.
Thermostatic valve	Yes	Yes.
Electrical switchgear or frequency converter for the driver	Yes	Not applicable.*
Device to control the speed of the driver (*e.g.,* variable speed drive)	Not applicable **	Yes.
Compressed air cooler(s)	Yes	Yes.
Pressure switch, pressure transducer, or similar pressure control device	Yes	Yes.

TABLE 1—EQUIPMENT REQUIRED DURING TEST—Continued

Equipment	Fixed-speed rotary air compressors	Variable-speed rotary air compressors
Moisture separator and drain	Yes	Yes.

* This category is not applicable to variable-speed rotary air compressors.
** This category is not applicable to fixed-speed rotary air compressors.

TABLE 2—EQUIPMENT REQUIRED DURING TEST, IF DISTRIBUTED IN COMMERCE WITH THE BASIC MODEL

Equipment	Fixed-speed rotary air compressors	Variable-speed rotary air compressors
Cooling fan(s) and motors	Yes	Yes.
Mechanical equipment	Yes	Yes.
Lubricant pump	Yes	Yes.
Interstage cooler	Yes	Yes.
Electronic or electrical controls and user interface	Yes	Yes.
All protective and safety devices	Yes	Yes.

2.2.5. The inlet of the compressor under test must be open to the atmosphere and take in ambient air for all tests specified in this appendix.

2.2.6. The compressor under test must be set up according to all manufacturer instructions for normal operation (*e.g.,* verify lubricant level, connect all loose electrical connections, close off bottom of unit to floor, cover forklift holes).

2.2.7. The piping connected to the discharge orifice of the compressor must be of a diameter at least equal to that of the compressor discharge orifice to which it is connected. The piping must be straight with a length of at least 6 inches.

2.2.8. Transducers used to record compressor discharge pressure must be located on the discharge piping between 2 inches and 6 inches, inclusive, from the discharge orifice of the compressor. The pressure tap for transducers must be located at the highest point of the pipe's cross section.

3. Determination of Package Isentropic Efficiency, Package Specific Power, and Pressure Ratio at Full-Load Operating Pressure

3.1 Data Collection and Analysis.

3.1.1. Stabilization. Record data at each load point under steady-state conditions. Steady-state conditions are achieved when a set of two consecutive readings taken at least 10 seconds apart and no more than 60 seconds apart are within the maximum permissible fluctuation from the average (of the two consecutive readings), as specified in table 1 of ISO 1217:2009(E) for—

(a) Discharge pressure;

(b) Temperature at the nozzle or orifice plate, measured per section 5.3 of ISO 1217:2009(E); and

(c) Differential pressure over the nozzle or orifice plate, measured per section 5.2 of ISO 1217:2009(E).

3.1.2. Data Sampling and Frequency. At each load point, record a minimum set of 16 unique readings, collected over a minimum time of 15 minutes. Each consecutive reading must be no more than 60 seconds apart, and not less than 10 seconds apart. All readings at each load point must be within the maximum permissible fluctuation from average specified in table 1 of ISO 1217:2009(E) for—

(a) Discharge pressure;

(b) Temperature at the nozzle or orifice plate, measured per section 5.3 of ISO 1217:2009(E); and

(c) Differential pressure over the nozzle or orifice plate, measured per section 5.2 of ISO 1217:2009(E).

If one or more readings do not meet the requirements, then all previous readings must be disregarded and a new set of at least 16 new unique readings must be collected over a minimum time of 15 minutes. Average the readings to determine the value of each parameter to be used in subsequent calculations.

3.1.3. Calculations and Rounding. Perform all calculations using raw measured values. Round the final result for package isentropic efficiency to the thousandth (*i.e.,* 0.001), for package specific power in kilowatts per 100 cubic feet per minute to the nearest hundredth (*i.e.,* 0.01), for pressure ratio at full-load operating pressure to the nearest tenth (*i.e.,* 0.1), for full-load actual volume flow rate in cubic feet per minute to the nearest tenth (*i.e.,* 0.1), and for full-load operating pressure in pounds per square inch gauge (psig) to the nearest integer (*i.e.,* 1). All terms and quantities refer to values determined in accordance with the procedures set forth in this appendix for the tested unit.

3.2. Full-Load Operating Pressure and Full-Load Actual Volume Flow Rate

Determine the full-load operating pressure and full-load actual volume flow rate (referenced throughout this appendix) in accordance with the procedures prescribed in section 4 of this appendix.

3.3. Full-Load Package Isentropic Efficiency for Fixed- and Variable-Speed Air Compressors

Use this test method to test fixed-speed air compressors and variable-speed air compressors.

3.3.1. Test unit at full-load operating pressure and full-load volume flow rate according to the requirements established in sections 2, 3.1, and 3.2 of this appendix. Measure volume flow rate and calculate actual volume flow rate in accordance with section C.4.2.1 of Annex C to ISO 1217:2009(E) with no corrections made for shaft speed. Measure discharge gauge pressure and packaged compressor power input. Measured discharge gauge pressure and calculated actual volume flow rate must be within the deviation limits for discharge pressure and volume flow rate specified in tables C.1 and C.2 of Annex C to ISO 1217:2009(E), where full-load operating pressure and full-load actual volume flow rate (as determined in section 4 of this appendix) are the targeted values.

3.3.2. Calculate the package isentropic efficiency at full-load operating pressure and full-load actual volume flow rate (full-load package isentropic efficiency, $\eta_{isen,FL}$) using the equation for isentropic efficiency in section 3.6.1 of ISO 1217:2009(E) as modified by ISO 1217:2009/Amd.1:2016(E). For $P_{isen,}$ use the isentropic power required for compression at full-load operating pressure and full-load actual volume flow rate, as determined in section 3.3.2.1 of this appendix. For $P_{real,}$ use the real packaged compressor power input at full-load operating pressure and full-load actual volume flow rate, as determined in section 3.3.2.2 of this appendix.

3.3.2.1. Calculate the isentropic power required for compression at full-load operating pressure and full-load actual volume flow rate using equation (H.6) of Annex H to ISO 1217:2009/Amd.1:2016(E). For $q_{V1,}$ use the actual volume flow rate (cubic meters per second) calculated in section 3.3.1 of this appendix. For $p_{1,}$ use 100 kPa. For $p_{2,}$ use the sum of

(a) 100 kPa, and

(b) The measured discharge gauge pressure (Pa) from section 3.3.1 of this appendix. For *K,* use the isentropic exponent (ratio of specific heats) of air, which, for the purposes of this test procedure, is 1.400.

3.3.2.2. Calculate real packaged compressor power input at full-load operating pressure and full-load actual volume flow rate using the following equation:

$$P_{real,100\%} = K_5 \cdot K_6 \cdot P_{PR,100\%}$$

Where:

K_5 = correction factor for inlet pressure, as determined in section C.4.3.2 of Annex C to ISO 1217:2009(E). For calculations of this variable use a value of 100 kPa for contractual inlet pressure;

K_6 = correction factor for pressure ratio, as determined in section B.4.5 of Annex B to ISO 1217:2009(E). For calculations of this variable use a value of 1.400 for isentropic exponent, and for contractual pressure ratio, use the ratio of (a) The sum of 100 kPa and the measured discharge gauge pressure (kPa) from section 3.3.1 of this appendix, to

(b) 100 kPa; and

$P_{PR,100\%}$ = packaged compressor power input reading at full-load operating pressure and full-load actual volume flow rate measured in section 3.3.1 of this appendix (W).

3.4. Part-Load Package Isentropic Efficiency for Variable-Speed Air Compressors

Use this test method to test variable-speed air compressors.

3.4.1. Test unit at two load points:

(a) Full-load operating pressure and 70 percent of full-load actual volume flow rate and

(b) Full-load operating pressure and 40 percent of full-load actual volume flow rate, according to the requirements established in sections 2, 3.1, and 3.2 of this appendix. To reach each specified load point, adjust the speed of the driver and the backpressure of the system. For each load point, measure volume flow rate and calculate actual volume flow rate in accordance with section C.4.2.1 of Annex C to ISO 1217:2009(E), with no corrections made for shaft speed. For each load point, measure discharge gauge pressure and packaged compressor power input. Measured discharge gauge pressure and calculated actual volume flow rate must be within the deviation limits for discharge pressure and volume flow rate specified in tables C.1 and C.2 of Annex C to ISO 1217:2009(E).

3.4.2. For variable-speed compressors, calculate the part-load package isentropic efficiency using the following equation:

$$\eta_{isen,PL} = \omega_{40\%} \times \eta_{isen,40\%} + \omega_{70\%} \times \eta_{isen,70\%} + \omega_{100\%} \times \eta_{isen,100\%}$$

Where:

$\eta_{isen,PL}$ = part-load package isentropic efficiency for a variable-speed compressor;

$\eta_{isen,100\%}$ = package isentropic efficiency at full-load operating pressure and 100 percent of full-load actual volume flow rate, as determined in section 3.3.2 of this appendix;

$\eta_{isen,70\%}$ = package isentropic efficiency at full-load operating pressure and 70 percent of full-load actual volume flow rate, as determined in section 3.4.3 of this appendix;

$\eta_{isen,40\%}$ = package isentropic efficiency at full-load operating pressure and 40 percent of full-load actual volume flow rate, as determined in section 3.4.4 of this appendix;

$\omega_{40\%}$ = weighting at 40 percent of full-load actual volume flow rate and is 0.25;

$\omega_{70\%}$ = weighting at 70 percent of full-load actual volume flow rate and is 0.50; and

$\omega_{100\%}$ = weighting at 100 percent of full-load actual volume flow rate and is 0.25.

3.4.3. Calculate package isentropic efficiency at full-load operating pressure and 70 percent of full-load actual volume flow rate using the equation for isentropic efficiency in section 3.6.1 of ISO 1217:2009(E) as modified by ISO 1217:2009/Amd.1:2016(E). For $P_{isen,}$ use the isentropic power required for compression at full-load operating pressure and 70 percent of full-load actual volume flow rate, as determined in section 3.4.3.1 of this appendix. For $P_{real,}$ use the real packaged compressor power input at full-load operating pressure and 70 percent of full-load actual volume flow rate, as determined in section 3.4.3.2 of this appendix.

3.4.3.1. Calculate the isentropic power required for compression at full-load operating pressure and 70 percent of full-load actual volume flow rate using equation (H.6) of Annex H to ISO 1217:2009/Amd.1:2016(E). For $q_{V1,}$ use actual volume flow rate (cubic meters per second) at full-load operating pressure and 70 percent of full-load actual volume flow rate, as calculated in section 3.4.1 of this appendix. For $p_{1,}$ use 100 kPa. For $p_{2,}$ use the sum of

(a) 100 kPa, and

(b) Discharge gauge pressure (Pa) at full-load operating pressure and 70 percent of full-load actual volume flow rate, as calculated in section 3.4.1 of this appendix. For *K,* use the isentropic exponent (ratio of specific heats) of air, which, for the purposes of this test procedure, is 1.400.

3.4.3.2. Calculate real packaged compressor power input at full-load operating pressure and 70 percent of full-load actual volume flow rate using the following equation:

$$P_{real,70\%} = K_5 \cdot K_6 \cdot P_{PR,70\%}$$

Where:

K_5 = correction factor for inlet pressure, as determined in section C.4.3.2 of Annex C to ISO 1217:2009(E). For calculations of this variable use a value of 100 kPa for contractual inlet pressure;

K_6 = correction factor for pressure ratio, as determined in section B.4.5 of Annex B to ISO 1217:2009(E). For calculations of this variable use a value of 1.400 for isentropic exponent, and for contractual pressure ratio, use the ratio of

(a) The sum of 100 kPa and the measured discharge gauge pressure (kPa) from the test at 70 percent of full-load actual volume flow rate in section 3.4.1 of this appendix, to

(b) 100 kPa; and

$P_{PR,70\%}$ = packaged compressor power input reading at full-load operating pressure and 70 percent of full-load actual volume flow rate, as measured in section 3.4.1 of this appendix (W).

3.4.4. Calculate package isentropic efficiency at full-load operating pressure and 40 percent of full-load actual volume flow rate using the equation for isentropic efficiency in section 3.6.1 of ISO 1217:2009(E) as modified by ISO 1217:2009/Amd.1:2016(E). For $P_{isen,}$ use the isentropic power required for compression at full-load operating pressure and 40 percent of full-load actual volume flow rate, as determined in section 3.4.4.1 of this appendix. For $P_{real,}$ use the real packaged compressor power input at full-load operating pressure and 40 percent of full-load actual volume flow rate, as determined in section 3.4.4.2 of this appendix.

3.4.4.1. Calculate the isentropic power required for compression at full-load operating pressure and 40 percent of full-load actual volume flow rate using equation (H.6) of Annex H to ISO 1217:2009/Amd.1:2016(E). For $q_{V1,}$ use actual volume flow rate (cubic meters per second) at full-load operating pressure and 40 percent of full-load actual volume flow rate, as calculated in section 3.4.1 of this appendix. For $p_{1,}$ use 100 kPa. For $p_{2,}$ use the sum of

(a) 100 kPa, and

(b) Discharge gauge pressure (Pa) at full-load operating pressure and 40 percent of full-load actual volume flow rate, as calculated in section 3.4.1 of this appendix. For *K,* use the isentropic exponent (ratio of specific heats) of air, which, for the purposes of this test procedure, is 1.400.

3.4.4.2. Calculate real packaged compressor power input at full-load operating pressure and 40 percent of full-load actual volume flow rate using the following equation:

$$P_{real,40\%} = K_5 \cdot K_6 \cdot P_{PR,40\%}$$

Where:

K_5 = correction factor for inlet pressure, as determined in section C.4.3.2 of Annex C to ISO 1217:2009(E). For calculations of this variable use a value of 100 kPa for contractual inlet pressure;

K_6 = correction factor for pressure ratio, as determined in section B.4.5 of Annex B to ISO 1217:2009(E). For calculations of this variable use a value of 1.400 for isentropic exponent, and for contractual pressure ratio, use the ratio of

(a) The sum of 100 kPa and the measured discharge gauge pressure (kPa) from the test at 40 percent of full-load actual volume flow rate in section 3.4.1 of this appendix, to

(b) 100 kPa; and

$P_{PR,40\%}$ = packaged compressor power input reading at full-load operating pressure and 40 percent of full-load actual volume

flow rate, as measured in section 3.4.1 of this appendix (W).

3.5. Determination of Package Specific Power

For both fixed and variable-speed air compressors, determine the package specific power, at any load point, using the equation for specific energy consumption in section C.4.4 of Annex C to ISO 1217:2009(E) and other values measured pursuant to this appendix, with no correction for shaft speed. Calculate P_{Pcorr} in section C.4.4 of Annex C to ISO 1217:2009(E) using the following equation:

$P_{Pcorr} = K_5 \cdot K_6 \cdot P_{PR}$

Where:

K_5 = correction factor for inlet pressure, as determined in section C.4.3.2 of Annex C to ISO 1217:2009(E). For calculations of this variable use a value of 100 kPa for contractual inlet pressure;

K_6 = correction factor for pressure ratio, as determined in section B.4.5 of Annex B to ISO 1217:2009(E). For calculations of this variable use a value of 1.400 for isentropic exponent, and for contractual pressure ratio, use the ratio of

(a) The sum of 100 kPa and the measured discharge gauge pressure (kPa) from the test used to determine the package specific power, to

(b) 100 kPa; and

P_{PR} = packaged compressor power input reading (W), as determined in section C.2.4 of Annex C to ISO 1217:2009(E).

3.6. Determination of Pressure Ratio at Full-Load Operating Pressure

Pressure ratio at full-load operating pressure, as defined in § 431.342, is calculated using the following equation:

$$PR = \frac{(P_1 + P_{FL})}{P_1}$$

Where:

PR = pressure ratio at full-load operating pressure;

P_1 = 100 kPa; and

P_{FL} = full-load operating pressure, determined in section 4.3.4 of this appendix (Pa gauge).

4. Method To Determine Maximum Full-Flow Operating Pressure, Full-Load Operating Pressure, and Full-Load Actual Volume Flow Rate

4.1. Principal Strategy

The principal strategy of this method is to incrementally increase discharge pressure by 2 psig relative to a starting point, and identify the maximum full-flow operating pressure at which the compressor is capable of operating. The maximum discharge pressure achieved is the maximum full-flow operating pressure. The full-load operating pressure and full-load actual volume flow rate are determined based on the maximum full-flow operating pressure.

4.2. Pre-test Instructions

4.2.1. Safety. For the method presented in section 4.3.1 of this appendix, only test discharge pressure within the safe operating range of the compressor, as specified by the manufacturer in the installation and operation manual shipped with the unit. Make no changes to safety limits or equipment. Do not violate any manufacturer-provided motor operational guidelines for normal use, including any restriction on instantaneous and continuous input power draw and output shaft power (*e.g.,* electrical rating and service factor limits).

4.2.2. Adjustment of Discharge Pressure

4.2.2.1. If the air compressor is not equipped, as distributed in commerce by the manufacturer, with any mechanism to adjust the maximum discharge pressure output limit, proceed to section 4.2.3 of this appendix.

4.2.2.2. If the air compressor is equipped, as distributed in commerce by the manufacturer, with any mechanism to adjust the maximum discharge pressure output limit, then adjust this mechanism to the maximum pressure allowed, according to the manufacturer's operating instructions for these mechanisms. Mechanisms to adjust discharge pressure may include, but are not limited to, onboard digital or analog controls, and user-adjustable inlet valves.

4.2.3. Driver speed. If the unit under test is a variable-speed compressor, maintain maximum driver speed throughout the test. If the unit under test is a fixed-speed compressor with a multi-speed driver, maintain driver speed at the maximum speed throughout the test.

4.2.4. Measurements and Tolerances

4.2.4.1. Recording. Record data by electronic means such that the requirements of section 4.2.4.5 of this appendix are met.

4.2.4.2. Discharge Pressure. Measure discharge pressure in accordance with section 5.2 of ISO 1217:2009(E). Express compressor discharge pressure in psig in reference to ambient conditions, and record it to the nearest integer. Specify targeted discharge pressure points in integer values only. The maximum allowable measured deviation from the targeted discharge pressure at each tested point is ±1 psig.

4.2.4.3. Actual Volume Flow Rate. Measure actual volume flow rate in accordance with section C.4.2.1 of Annex C to ISO 1217:2009(E) (where it is called ''corrected volume flow rate'') with no corrections made for shaft speed. Express compressor actual volume flow rate in cubic feet per minute at inlet conditions (cfm).

4.2.4.4. Stabilization. Record data at each tested load point under steady-state conditions, as determined in section 3.1.1 of this appendix.

4.2.4.5. Data Sampling and Frequency. At each load point, record a set of at least two readings, collected at a minimum of 10 seconds apart. All readings at each load point must be within the maximum permissible fluctuation from the average (of the two consecutive readings), as specified in 3.1.2 of this appendix. Average the measurements to determine the value of each parameter to be used in subsequent calculations.

4.2.5 Adjusting System Backpressure. Set up the unit under test so that backpressure on the unit can be adjusted (*e.g.,* by valves) incrementally, causing the measured discharge pressure to change, until the compressor is in an unloaded condition.

4.2.6 Unloaded Condition. A unit is considered to be in an unloaded condition if capacity controls on the unit automatically reduce the actual volume flow rate from the compressor (*e.g.,* shutting the motor off, or unloading by adjusting valves).

4.3. Test Instructions

4.3.1. Adjust the backpressure of the system so the measured discharge pressure is 90 percent of the expected maximum full-flow operating pressure, rounded to the nearest integer, in psig. If the expected maximum full-flow operating pressure is not known, then adjust the backpressure of the system so that the measured discharge pressure is 65 psig. Allow the unit to remain at this setting for 15 minutes to allow the unit to thermally stabilize. Then measure and record discharge pressure and actual volume flow rate at the starting pressure.

4.3.2. Adjust the backpressure of the system to increase the discharge pressure by 2 psig from the previous value, allow the unit to remain at this setting for a minimum of 2 minutes, and proceed to section 4.3.3 of this appendix.

4.3.3. If the unit is now in an unloaded condition, end the test and proceed to section 4.3.4 of this appendix. If the unit is not in an unloaded condition, measure discharge pressure and actual volume flow rate, and repeat section 4.3.2 of this appendix.

4.3.4. Of the discharge pressures recorded under stabilized conditions in sections 4.3.1 through 4.3.3 of this appendix, identify the largest. This is the maximum full-flow operating pressure. Determine the full-load operating pressure as a self-declared value greater than or equal to the lesser of (A) 90 percent of the maximum full-flow operating pressure, or (B) 10 psig less than the maximum full-flow operating pressure.

4.3.5 The full-load actual volume flow rate is the actual volume flow rate measured at the full-load operating pressure. If the self-declared full-load operating pressure falls on a previously tested value of discharge pressure, then use the previously measured actual volume flow rate as the full-load actual volume flow rate. If the self-declared full-load operating pressure does not fall on a previously tested value of discharge pressure, then adjust the backpressure of the system to the self-declared full-load operating pressure and allow the unit to remain at this setting for a minimum of 2 minutes. The measured actual volume flow rate at this setting is the full-load actual volume flow rate.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

10 CFR Part 431

[EERE–2024–BT–DET–0012]

RIN 1904–AE57

Energy Conservation Program: Commercial Warm Air Furnaces; Final Determination

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Final determination.

SUMMARY: On June 2, 2023, the U.S. Department of Energy (''DOE'' or the ''Department'') published a test procedure final rule which established test procedures for commercial warm air furnaces (''CWAFs''). On August 1, 2023, the Air-Conditioning, Heating, and Refrigeration Institute (''AHRI'') filed a petition for review of the final rule in the United States Court of Appeals for the Fourth Circuit. In a February 6, 2024, order, the Fourth Circuit granted a voluntary remand of the final rule to the Department of Energy (''DOE'') to determine whether establishment of the test procedure for the thermal efficiency two (''TE2'') metric is supported by the specific provisions applicable to CWAFs under the Energy Policy and Conservation Act (''EPCA''). More specifically, DOE agreed in this voluntary remand to not enforce the TE2 test procedure unless and until the Department determines that the TE2 test procedure is consistent with the amended industry test procedure, or determines, supported by clear and convincing evidence, that the amended industry test procedure fails to satisfy the statutory requirements. This document provides DOE's determination that the amended industry test procedure fails to satisfy EPCA's statutory requirements.

DATES: The effective date of July 3, 2023, for the TE2 test procedure is confirmed.

ADDRESSES: The docket for this activity, which includes **Federal Register** notices, comments, and other supporting documents/materials, is available for review at *www.regulations.gov.* All documents in the docket are listed in the *www.regulations.gov* index. However, not all documents listed in the index may be publicly available, such as information that is exempt from public disclosure.

The docket web page can be found at *www.regulations.gov/docket/EERE-2024-BT-DET-0012.* The docket web page contains instructions on how to access all documents, including public comments, in the docket.

For further information on how to review the docket, contact the Appliance and Equipment Standards Program staff at (202) 287–1445 or by email: *ApplianceStandardsQuestions@ee.doe.gov.*

FOR FURTHER INFORMATION CONTACT: Ms. Julia Hegarty, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies Office, EE–5B, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (240) 597–6737. Email: *ApplianceStandardsQuestions@ee.doe.gov.*

Mr. Pete Cochran, U.S. Department of Energy, Office of the General Counsel, GC–33, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (202) 586–4798. Email: *Peter.Cochran@hq.doe.gov.*

I. Introduction

A. Authority

The Energy Policy and Conservation Act, Public Law 94–163, as amended (''EPCA''),[1] authorizes DOE to regulate the energy efficiency of a number of consumer products and certain industrial equipment. (42 U.S.C. 6291–6317, as codified) Title III, Part C of EPCA, added by Public Law 95–619, title IV, sec. 441(a), established the Energy Conservation Program for Certain Industrial Equipment, which sets forth a variety of provisions designed to improve energy efficiency. This equipment includes CWAFs, the subject of this document. (42 U.S.C. 6311(1)(J)).

The energy conservation program under EPCA consists essentially of four parts: (1) testing, (2) labeling, (3) Federal energy conservation standards, and (4) certification and enforcement procedures. Relevant provisions of EPCA include definitions (42 U.S.C. 6311), test procedures (42 U.S.C. 6314), labeling provisions (42 U.S.C. 6315), energy conservation standards (42 U.S.C. 6313), and the authority to require information and reports from manufacturers (42 U.S.C. 6316; 42 U.S.C. 6296).

The Federal testing requirements consist of test procedures that manufacturers of covered equipment must use as the basis for: (1) certifying to DOE that their equipment complies with the applicable energy conservation standards adopted pursuant to EPCA (42 U.S.C. 6316(b); 42 U.S.C. 6296), and (2) making other representations about the efficiency of that equipment (42 U.S.C. 6314(d)). Similarly, DOE uses these test procedures to determine whether the equipment complies with relevant standards promulgated under EPCA. DOE's test procedures for CWAFs are currently prescribed at subpart D of part 431 of title 10 of the Code of Federal Regulations (''CFR'').

Federal energy efficiency requirements for covered equipment established under EPCA generally supersede state laws and regulations concerning energy conservation testing, labeling, and standards. (42 U.S.C. 6316(a) and 42 U.S.C. 6316(b); 42 U.S.C.

[1] All references to EPCA in this document refer to the statute as amended through the Energy Act of 2020, Public Law 116–260 (Dec. 27, 2020), which reflect the last statutory amendments that impact Parts A and A–1 of EPCA.

6297) DOE may, however, grant waivers of Federal preemption for particular state laws or regulations, in accordance with the procedures and other provisions of EPCA. (42 U.S.C. 6316(b)(2)(D)).

Under 42 U.S.C. 6314, EPCA sets forth the criteria and procedures DOE must follow when prescribing or amending test procedures for covered equipment. EPCA requires that any test procedures prescribed or amended under this section must be reasonably designed to produce test results that reflect energy efficiency, energy use, or estimated annual operating cost of a given type of covered equipment during a representative average use cycle (as determined by DOE) and requires that test procedures not be unduly burdensome to conduct. (42 U.S.C. 6314(a)(2)).

EPCA generally requires that, at least once every seven years, DOE evaluate test procedures for each type of covered equipment, including CWAFs, to determine whether amended test procedures would more accurately or fully comply with the requirements for the test procedures to not be unduly burdensome to conduct and be reasonably designed to produce test results that reflect energy efficiency, energy use, and estimated operating costs during a representative average use cycle. (42 U.S.C. 6314(a)(1)–(3)) DOE refers to these provisions as the ''lookback'' provisions and rulemakings conducted under these provisions as ''lookback'' rulemakings.

Specific to certain commercial equipment, including CWAFs, EPCA required that the initial test procedures for this equipment be those generally accepted industry testing procedures or rating procedures developed or recognized by AHRI or ASHRAE, as referenced in ASHRAE Standard 90.1, ''Energy Standard for Buildings Except Low-Rise Residential Buildings'' (''ASHRAE Standard 90.1''), that were in effect on June 30, 1992. (42 U.S.C. 6314(a)(4)(A)) Further, if such an industry test procedure is amended, DOE must update its test procedure to be consistent with the amended industry test procedure unless DOE determines, by rule published in the **Federal Register** and supported by clear and convincing evidence, that the amended test procedure would not meet the requirements in 42 U.S.C. 6314(a)(2) and (3), in which case DOE may establish an amended test procedure that does satisfy those statutory provisions. (42 U.S.C. 6314(a)(4)(B) and (C)) DOE refers to these provisions as the ''ASHRAE trigger'' provisions and rulemakings conducted under these provisions as ''ASHRAE trigger'' rulemakings.

Whether pursuant to the lookback provision or the ASHRAE trigger provision, if DOE determines that a test procedure amendment is warranted, EPCA requires that the Department publish proposed test procedures in the **Federal Register** and afford interested persons an opportunity (of not less than 45 days duration) to present oral and written data, views, and arguments on the proposed test procedures. (42 U.S.C. 6314(b)).

B. Energy Conservation Standards Rulemaking Process Under EPCA

The purpose of energy conservation standards issued under EPCA is to reduce energy use by improving the energy efficiency of covered products and equipment. (*See* 42 U.S.C. 6312(a)). The first step in establishing new or amended energy conservation standards for any covered product or equipment is to determine what energy use by a covered product or equipment will be within the scope of the energy conservation standard, *i.e.,* what is the representative average use cycle for the covered product or equipment. For example, prior to the Energy Independence and Security Act of 2007 (''EISA 2007''), the representative average use cycle for many covered products only included active mode energy use, *i.e.,* energy used while the product was performing its main function. As such, the representative use cycle did not include any energy used while the product was in a standby or off mode. Thus, manufacturers had little incentive to reduce standby or off mode energy use as it had no effect on whether a covered product complied with the applicable energy conservation standards. But in EISA 2007, Congress required DOE to include standby and off mode energy use as part of the representative average use cycle for any energy conservation standard adopted after July 1, 2010. (42 U.S.C. 6295(gg)(3)).

Representative average use cycles for covered products and equipment can also change over time as DOE's understanding of how the product or equipment is used in the field improves, consumer habits change, or technologies improve. Of particular importance here is the introduction of variable-speed compressors in the heating, ventilation, and air conditioning (HVAC) market. Variable-speed technology allows compressors used in HVAC equipment to run at part-load values in response to different operating conditions in the field. For example, if a room temperature is only 2 or 3 degrees warmer than the set temperature, an HVAC unit with variable-speed technology could run at partial capacity, *e.g.,* 40% capacity, to cool the room to the setpoint. This saves energy as the HVAC unit uses less energy running at a lower speed. And variable-speed HVAC units still maintain the capability of operating at 100% capacity when needed, *e.g.,* cooling down a home after a homeowner returns from vacation. As HVAC units with variable-speed technology have become more prevalent in the market, the representative average use cycle for this equipment has changed. HVAC units with variable-speed technology run for longer periods of time at slower speeds that single-speed HVAC units. As a result, DOE amends the test procedures for specific HVAC equipment to ensure the representative average use cycle reflects manufacturer innovation and how models with this technology will operate in the field. For example, DOE recently issued an amended test procedure for air-cooled commercial package air conditioners and heat pumps that, among other things, has provisions for measuring part-load energy use because of the presence of variable-speed technology in the market. 89 FR 43986 (May 20, 2024). DOE adopted this new test procedure for air-cooled commercial air conditioners and heat pumps with the support of a cross-section of stakeholders, including the heating and cooling industry, who recommended the details of the new test procedure to DOE as part of a negotiated consensus recommendation. *Id.* at 89 FR 43991. In fact, every type of HVAC consumer product or covered equipment regulated by DOE that has an energy conservation standard that accounts for part-load operation, *e.g.,* residential central air conditioners and heat pumps and variable refrigerant flow air conditioners and heat pumps has an associated test procedure that has provisions for measuring energy use during part-load operation.

Having determined a representative average use cycle for a covered product or equipment, the next step in EPCA's energy conservation standards rulemaking process is to prescribe a test procedure that is reasonably designed to produce test results that measure energy use of the covered product or equipment for that representative average use cycle and that is not unduly burdensome to conduct. (42 U.S.C. 6293(b)(3); 42 U.S.C. 6314(a)(2)). For example, when Congress required DOE to include standby and off mode energy use in standards for covered products, it first directed DOE to amend test procedures

for all covered products to include provisions for measuring standby and off mode energy use. (42 U.S.C. 6295(gg)(2)(A)). Congress then directed DOE to use these amended test procedures when prescribing new or amended standards that incorporate standby and off mode energy use. (42 U.S.C. 6295(gg)(3)(A)). As the new standards would be based on a different representative use cycle, *i.e.,* one that includes active mode, standby mode, and off mode, Congress clarified that the amended test procedures ''shall not be used to determine compliance with product standards established prior to the adoption of the amended test procedures.'' (42 U.S.C. 6295(gg)(2)(C)). It would have made little sense for Congress to require manufacturers to use test procedures that measure active, standby, and off mode energy when determining compliance with an energy conservation standard that is only based on active mode energy use. DOE takes the same approach when prescribing an amended test procedure for use in evaluating new or amended energy conservation standards that are based on an updated representative average use cycle. Use of the amended test procedure is only required upon the compliance date of the new or amended energy conservation standards. *See* section 8(f) of appendix A to subpart C of 10 CFR part 430.

C. Background

Under EPCA's lookback provision, DOE initiated a test procedure rulemaking for CWAFs by publishing a request for information (''RFI'') in the **Federal Register** on May 5, 2020 (''May 2020 RFI''). 85 FR 26626. The current energy conservation standards for CWAFs are based on a representative average use cycle that assumes CWAFs always operate at 100 percent capacity in the field and that the only energy losses are from flue exhaust gases. The May 2020 RFI solicited public comments, data, and information on aspects of the existing DOE test procedure for CWAFs at 10 CFR part 431, subpart D, appendix A (''appendix A''), which measures Thermal Efficiency (''TE'') and is used for determining compliance with the current energy conservation standards for CWAFs, including whether there were any issues with the existing test procedure at that time and whether it was in need of updates or revisions. *Id.*

DOE subsequently published a notice of proposed rulemaking (''NOPR'') for the CWAFs test procedure in the **Federal Register** on February 25, 2022, which proposed amendments to the existing test procedure for TE as well as a new test procedure based on DOE's tentative determination that the representative average use cycle for CWAFs should include jacket losses and part-load operation. 87 FR 10726 (''February 2022 NOPR''). DOE noted that CWAFs are typically installed outdoors and, as a result, jacket losses can be a significant source of energy loss. 87 FR 10726, 10735. DOE also noted that many CWAFs now have multiple heating stages and performance for these CWAFs can vary at different heating loads. *Id.* As a result, DOE proposed that any new or amended energy conservation standards for CWAFs should be based on a representative average use cycle that includes jacket losses and part-load operation, and proposed a new metric, TE2, that captured those aspects of CWAF energy use. DOE proposed a new test procedure in 10 CFR part 431, subpart D, appendix B (''appendix B''), to measure energy efficiency under the TE2 metric. DOE tentatively determined that the appendix B test procedure met the statutory criteria in 42 U.S.C. 6314(a)(2) and (3). 87 FR 10726, 10737–10738. The February 2022 NOPR had a 60-day comment period and DOE held a webinar public meeting on March 29, 2022.

Following publication of the February 2022 NOPR, the latest update to ASHRAE Standard 90.1 was released in January 2023 (''ASHRAE Standard 90.1–2022''). ASHRAE Standard 90.1–2022 references CSA/ANSI Z21.47–2021, *Gas-fired central furnaces* (''ANSI Z21.47–2021''), as the test method for gas-fired CWAFs and Underwriters Laboratories (''UL'') standard UL 727–2018, ''Standard for Safety Oil-Fired Central Furnaces'' (''UL 727–2018''), as the test method for oil-fired CWAFs.

On June 2, 2023, DOE published a test procedure final rule for CWAFs. 88 FR 36217 (''June 2023 Final Rule''). In the June 2023 Final Rule, DOE amended the current test procedure for TE in appendix A and incorporated by reference the latest industry test procedures referenced in ASHRAE Standard 90.1–2022. The amendments to the industry test procedure were relatively minor and not based on any updates to the representative average use cycle for CWAFs. Rather, they were clarifications to the existing test procedure intended to improve clarity and help with the execution of the current test procedure. DOE also finalized the proposed appendix B test procedure that is based on an updated representative average use cycle that includes jacket losses and part-load operation. Similar to other rulemakings where DOE has determined that the representative average use cycle should be updated, *e.g.,* air-cooled commercial air conditioners and heat pumps, the June 2023 Final Rule states that use of the appendix B test procedure would not be required until such time as compliance is required with amended energy conservation standards based on the new metric, should DOE adopt such standards.

On August 1, 2023, following publication of the June 2023 Final Rule, the Air-Conditioning, Heating, and Refrigeration Institute (''AHRI'') filed a petition for review of the final rule in the United States Court of Appeals for the Fourth Circuit. In its opening brief, AHRI argued that DOE failed to provide notice and an opportunity for comment after being triggered by the ASHRAE Standard 90.1–2022 publication prior to publishing the June 2023 Final Rule; that DOE did not undertake the required analysis under 42 U.S.C. 6314(a)(4)(B); and that if DOE had conducted the correct analysis under that provision, it would necessarily have concluded that it lacked clear and convincing evidence that the industry test procedure did not meet the statutory requirements. *See Air-Conditioning, Heating, and Refrigeration Institute* v. *United States Department of Energy,* No. 23–1793 (4th Cir. Oct. 23, 2023), 15–1.

On February 6, 2024, the Fourth Circuit granted the Department's motion for voluntary remand. In its order, the Court granted DOE's motion for voluntary remand to clarify that, in this particular circumstance, where ASHRAE published an amended industry test procedure during the pendency of a rulemaking under the 7-year lookback provision, the Department will solicit public comment prior to making: (1) a final determination that the test procedure in appendix B for the TE2 metric is consistent with the amended industry test procedure; or (2) a final determination, supported by clear and convincing evidence, that the industry test procedure fails to satisfy the statutory requirements. *See Air-Conditioning, Heating, and Refrigeration Institute* v. *United States Department of Energy,* No. 23–1793 (4th Cir. Feb. 6, 2024), 22–1 (hereafter ''Remand Order''). The Remand Order did not vacate the June 2023 Final Rule; the challenged failure to solicit public comment (and other related claims brought in the petition for review) applied only to the determination that the industry test procedure did not meet the applicable statutory requirements and not DOE's determination that the appendix B test procedure satisfied the applicable statutory criteria. But, per the Remand Order, DOE will not enforce the

appendix B test procedure until the Department determines that the appendix B test procedure is consistent with the amended industry test procedure or DOE determines, supported by clear and convincing evidence, that the amended industry test procedure fails to satisfy the statutory requirements in 42 U.S.C. 6314(a)(2) and (3). *See* Remand Order at 2.

In accordance with the Remand Order from the Fourth Circuit, on December 26, 2024, DOE published a notification of tentative determination and request for comment (''December 2024 NOTD''), which tentatively determined, supported by clear and convincing evidence, that the industry test procedure is not reasonably designed to produce test results that reflect energy efficiency during a representative average use cycle that, as determined by DOE, includes jacket losses and part-load operation. 89 FR 104859. The December 2024 NOTD sought comment on DOE's proposed determination that the amended industry test procedure, which does not have provisions for measuring energy loss to the ambient environment (jacket losses) and energy use during part-load operation, is not reasonably designed to produce test results that reflect energy efficiency during a representative average use cycle that, as determined by DOE, includes jacket losses and part-load operation.

DOE received comments in response to the December 2024 NOTD from the interested parties listed in table I.1.

TABLE I.1—LIST OF COMMENTERS WITH WRITTEN SUBMISSIONS IN RESPONSE TO THE DECEMBER 2024 NOTD

Commenter(s)	Abbreviation	Comment No. in the docket	Commenter type
Michael Ravnitzky	Ravnitzky	2	Individual.
Air-Conditioning, Heating, and Refrigeration Institute	AHRI	6	Trade Association.
Appliance Standards Awareness Project and Northwest Energy Efficiency Alliance (Joint Commenters).	ASAP and NEEA	7	Efficiency Organization.
Trane Technologies	Trane	8	Manufacturer.
Johnson Controls	JCI	9	Manufacturer.
Daikin Applied Americas Inc	Daikin	10	Manufacturer.

A parenthetical reference at the end of a comment quotation or paraphrase provides the location of the item in the public record.[2]

II. Discussion

As discussed in the December 2024 NOTD, EPCA requires that if the industry test procedure for CWAFs is amended, DOE must update its test procedure to be consistent with the amended industry test procedure unless DOE determines, by rule published in the **Federal Register** and supported by clear and convincing evidence, that the amended test procedure would not meet the requirements in 42 U.S.C. 6314(a)(2) and (3), in which case DOE may establish an amended test procedure that does satisfy those statutory provisions. (42 U.S.C. 6314(a)(4)(B) and (C)) The publication of ASHRAE Standard 90.1–2022 represented an ASHRAE trigger for CWAFs.

However, due to the timing of the ASHRAE trigger, which occurred after DOE had published the February 2022 NOPR, but prior to the June 2023 Final Rule, DOE had not sought comment in the February 2022 NOPR on whether the amended industry test procedure met the applicable statutory requirements for measuring energy use for the TE2 metric, which is based on a representative average use cycle that includes jacket losses and part-load operation in the field. DOE also did not initiate a separate process to determine whether the amended industry test procedure satisfied the applicable statutory criteria. DOE did, on the other hand, follow all of the procedural requirements in 42 U.S.C. 6314(b) for prescribing the appendix B test procedure. DOE published the proposed appendix B test procedure in the **Federal Register**, provided a comment period of not less than 45 days (*i.e.,* 60 days), and held a public webinar meeting on March 29, 2022. *See* 42 U.S.C. 6314(b)(1)–(2). As a result, in accordance with the Remand Order, DOE is addressing only the challenged failure to determine, after notice and comment, whether the amended industry test procedure is consistent with the appendix B test procedure, or whether, as supported by clear and convincing evidence, the amended industry test procedure fails to satisfy the statutory requirements. Remand Order p. 2.

In the December 2024 NOTD, DOE tentatively determined, supported by clear and convincing evidence,[3] that the amended industry test procedure is not reasonably designed to produce test results that reflect energy efficiency during a representative average use cycle that, as determined by DOE, includes jacket losses and part-load operation. In making that tentative determination, DOE noted that a CWAF with a TE of 81 percent as measured by the amended industry test procedure could, depending on jacket losses and part-load operation, have an actual range of efficiencies from 77.5 to 82 percent using the appendix B test procedure for TE2. 89 FR 104859, 104864. DOE found that to be a significant difference that would impact both consumers and manufacturers. The following sections discuss comments received in response to the December 2024 NOTD and DOE's decision to finalize its determination that the amended industry test procedure is not reasonably designed to produce test results that reflect energy efficiency during a representative average use cycle that, as determined by DOE, includes jacket losses and part-load operation.

A. Appendix B Test Procedure for TE2

DOE received several comments that focused on the appendix B test procedure. For example, both Trane and JCI stated that DOE had not shown that the appendix B test procedure met the statutory requirement of not being unduly burdensome to conduct. (Trane, No. 8, p. 3; JCI, No. 9, pp. 1–2) Similarly, AHRI commented on the representativeness, burden, and costs of the appendix B test procedure and attached comments that were previously

[2] The parenthetical reference provides a reference for information located in the docket. (Docket No. EERE–2024–BT–DET–0012–0001, which is maintained at *www.regulations.gov.*) The references are arranged as follows: (commenter name, comment docket ID number, page of that document).

[3] ''[C]lear and convincing evidence requires a factfinder . . . to have an 'abiding conviction' that her findings . . . are 'highly probable' to be true.'' *Am. Pub. Gas Ass'n* v. *United States Dep't of Energy,* 22 F.4th 1018, 1025 (D.C. Cir. 2022) (quoting *Colorado* v. *New Mexico,* 467 U.S. 310, 316 (1984)).

submitted in response to the February 2022 NOPR. (AHRI, No. 6, pp. 6–9).

In response to these and similar comments, DOE reiterates that the scope of this rulemaking process, as laid out in the Remand Order, is to determine whether the amended industry test procedure is consistent with the appendix B test procedure for TE2, or whether the amended industry test procedure fails to satisfy the applicable requirements in 42 U.S.C. 6314(a)(2) and (3). In accordance with the Remand Order, DOE issued the December 2024 NOTD, which tentatively determined, supported by clear and convincing evidence, that the amended industry test procedure was not reasonably designed to produce test results that reflect energy efficiency during a representative average use cycle that, as determined by DOE, includes jacket losses and part-load operation. DOE sought comment on this tentative determination. In the December 2024 NOTD, DOE specifically noted that the remand order did not vacate the June 2023 Final Rule, nor did it require DOE to revisit its determination that the appendix B test procedure meets the statutory requirements at 42 U.S.C. 6314(a)(2) and (3). 89 FR 104859, 104862. As such, DOE will not address comments on whether the appendix B test procedure meets the statutory requirements in 42 U.S.C. 6314(a)(2) and (3). Instead, DOE invites stakeholders to review the June 2023 Final Rule where these same comments regarding representativeness, burden, and cost of the appendix B test procedure were fully addressed.

B. Comment Period Length

Several commenters expressed concerns about the length of the comment period provided in the December 2024 NOTD. (Daiken, No. 10, p. 2; JCI, No. 9, p. 1; AHRI, No. 6, pp. 2–4) More specifically, JCI commented that there was not sufficient time to complete a notable research effort including the necessary internal reviews and approvals. (JCI, No. 9, p. 1) JCI also expressed concern that the shortened comment period could set a dangerous precedent for future rulemakings. *Id.* AHRI stated that the comment period fell short of the minimum 45-day comment period required for proposed test procedures under 42 U.S.C. 6314(b).

In response to these comments, DOE first notes, as AHRI correctly pointed out, that prior to prescribing a final test procedure DOE is required to publish the proposed test procedure in the **Federal Register** and provide at least a 45-day comment period. (42 U.S.C. 6314(b)) But, as clearly stated in the Remand Order, the December 2024 NOTD, and throughout this document, the court did not vacate the June 2023 Final Rule, nor did it require DOE to revisit its determination that the appendix B test procedure meets the statutory requirements at 42 U.S.C. 6314(a)(2) and (3), which remains in effect. Hence, this is not a rulemaking to prescribe a final test procedure to which the 45-day comment period would apply. Instead, DOE is determining, ''by rule, published in the **Federal Register** and supported by clear and convincing evidence,'' that the amended industry test procedure does not meet the applicable statutory criteria in EPCA. (42 U.S.C. 6314(a)(4)(B)) There is no minimum comment period specified in EPCA for this type of determination. In some cases, DOE may choose to conduct one rulemaking to make this determination and propose an amended test procedure (*see* 42 U.S.C. 6314(a)(4)(C)), which would require a 45-day comment period. But in other cases, DOE may issue a rule that only makes a determination, supported by clear and convincing evidence, that the amended industry test procedure does not satisfy the requirements in 42 U.S.C. 6314(a)(2) and (3). For example, if the current DOE test procedure satisfies the requirements in 42 U.S.C. 6314(a)(2) and (3) and DOE determines that the amended industry test procedure does not satisfy the requirements in 42 U.S.C. 6314(a)(2) and (3), there would be no need for DOE to propose an amended test procedure. As another example, if the ASHRAE trigger occurs after DOE has already proposed an amended test procedure under the 7-year lookback provision (as was the case here), DOE would conduct a separate rulemaking to make the required ASHRAE determination under 42 U.S.C. 6314(a)(4)(B).

Under the Administrative Procedure Act (APA), an agency engaged in rulemaking must: (1) publish a general notice of proposed rulemaking in the **Federal Register** that includes the terms or substance of the proposed rule or a description of the subjects and issues involved; (2) give interested persons an opportunity to participate in the rule making through submission of written data, views, or arguments; and (3) after consideration of the relevant matter presented incorporate in the rules adopted a concise general statement of their basis and purpose. *See* 5 U.S.C. 553(b) and (c). Taken together, Courts have typically understood these provisions to require Federal agencies to provide the public with a ''meaningful opportunity'' to comment. *See N. Carolina Growers' Ass'n, Inc.* v. *United Farm Workers,* 702 F.3d 755, 763 (4th Cir. 2012). Daiken, JCI, and AHRI take issue with the length of time provided to stakeholders to review the December 2024 NOTD and develop comments.

In response, DOE first notes that the Administrative Procedure Act does not provide for a minimum comment period (*see* 5 U.S.C. 553) and rules proposed by Federal agencies run the gamut from the incredibly complex to the relatively simple. In other words, the length of time required to give the public a meaningful opportunity to comment will vary based on the content of the proposed rule. For example, the National Highway Traffic Safety Administration typically used a 60-day comment period when it proposed new fuel economy standards for passenger cars and light trucks. 88 FR 56128 (Aug. 17, 2023). This proposed rule was over 260 pages and used complex analytical methods to propose new fuel economy standards.

In contrast, the 7-page December 2024 NOTD simply sought comment on DOE's tentative determination that an amended industry test procedure that does not have provisions for measuring two sources of energy consumption, jacket losses and part-load operation, which can account for an over 4 percent difference in overall measured efficiency, is not reasonably designed to measure energy efficiency during a representative average use cycle that, as determined by DOE for the TE2 metric, includes jacket losses and part-load operation. It should be emphasized that DOE was not seeking comment on methodologies for calculating jacket losses and energy use in part-load operation for a CWAF, which would have warranted a longer comment period to give stakeholders time to evaluate those testing provisions. Instead, DOE sought comment on whether—as opposed to every other type of HVAC equipment where DOE determined that part-load operation was part of the representative average use cycle—an amended industry test procedure for CWAFs that does not have provisions for measuring jacket losses and energy use during part-load operation of a CWAF is reasonably designed to measure energy efficiency during a representative average use cycle that, as determined by DOE, includes jacket losses and part-load operation.

DOE posted the signed, pre-publication copy of the December 2024 NOTD on the DOE website on December 13, 2024. That same day DOE sent an email to stakeholders, including AHRI, Daiken, and JCI, announcing the public

availability of the document and providing stakeholders with a website link to the document. The document was then published in the **Federal Register** on December 26, 2024, with a 14-day comment period that ended on January 8, 2025. In total, stakeholders like AHRI, Daiken, and JCI had 4 weeks to review the document and provide comments. As such, this proceeding provided stakeholders with sufficient time to review the December 2024 NOTD and develop any comments on why an amended industry test procedure that does not have provisions for measuring jacket losses and energy use during part-load operation still gives reasonable results when used to measure CWAF energy use in the field that includes jacket losses and part-load operation.

C. Application of the ASHRAE Trigger Provision in 42 U.S.C. 6314(a)(4)(B)

In the December 2024 NOTD, DOE evaluated the amended industry test procedure in the context of the ASHRAE trigger provision and presented DOE's tentative determination, supported by clear and convincing evidence, that the amended industry test procedure is not reasonably designed to produce test results which reflect energy efficiency during a representative average use cycle that, as determined by DOE, includes jacket losses and part-load operation. As support for this tentative determination, DOE estimated that the amended industry test procedure could not account for as much as a 4.5 percent difference in efficiency between a CWAF model with high jacket losses and poor part-load performance and a model with negligible jacket losses and good part-load performance. DOE noted that this variation in efficiency was significant. For example, when DOE last amended the standards for gas-fired CWAFs, the minimum required efficiency went from 80 to 81 percent, which DOE determined would result in significant additional conservation of energy. 81 FR 2420, 2430. Further, the average life-cycle cost savings to a consumer from that 1 percent increase in efficiency was $284. *Id.* at 81 FR 2423. Those already significant impacts are only magnified when larger differences in measured efficiency are considered. Therefore, DOE tentatively determined, supported by clear and convincing evidence, that the amended industry test procedures referenced in ASHRAE Standard 90.1–2022 are not reasonably designed to produce test results which reflect energy efficiency during a representative average use cycle that, as determined by DOE for the TE2 metric, includes jacket losses and part-load operation.

In response to the December 2024 NOTD, the Joint Commenters stated that the potential 4.5 percent difference in energy efficiency corresponds to a significant difference in energy consumption and that the amended industry test procedure would likely result in an inaccurate ranking of equipment in the market in terms of energy use and operating cost. (Joint Commenters, No. 7, p. 1) As such, the Joint Commenters agreed with DOE's tentative determination that the amended industry test procedure is not reasonably designed to measure energy efficiency during a representative average use cycle. *Id.*

Daiken, on the other hand, stated that DOE did not provide any data to support its assertion that the industry test procedure is not representative but has stated that clear and convincing evidence is present. (Daiken, No. 9, p. 3) DOE strongly disagrees with this statement. As discussed previously, DOE provided estimates that jacket losses and part-load operation could account for as much as a 4.5 percent difference in efficiency. And DOE noted that even a 1 percent increase in efficiency corresponded to average life-cycle cost savings of $284.

AHRI asserted that DOE cannot satisfy the clear-and-convincing evidence requirements because AHRI believes the record did not demonstrate the test procedures referenced in Standard 90.1 would fail to meet the requirements of sections 6314(a)(2) and (a)(3). More specifically, AHRI commented that the range of efficiencies that would result from the inclusion of part-load operation is narrower than for other air-conditioning products. AHRI pointed to an example of a furnace in a large commercial unit in a milder climate primarily operating at night or during morning warm up to demonstrate its belief that CWAFs are basically on-off, *i.e.,* do not spend a significant amount of time operating at part-load. (AHRI, No. 6 at p. 7)

In the June 2023 Final Rule, after considering comments and input from stakeholders, DOE determined that the representative average use cycle for the TE2 metric should include part-load operation and adopted the 50 percent weighting at full load and part load. 88 FR 36217, 36226. In making that determination, DOE reviewed modeling submitted by NEEA that showed a range of times for CWAF operation at full and part loads, from operating as much as 70 percent of the time at full load (and 30 percent of the time at part load) to operating as little as 25 percent of the time at full load (and 75 percent at part load). DOE also observed that in the modeling certain building types (warehouses) were modeled to operate at full load over 50 percent of the time, while other buildings (retail) were modeled to operate at full load less than 50 percent of the time. DOE acknowledges that the time a CWAF operates at full load and part load could vary based on the climate region, building type and load, and CWAF sizing. But based on the available data, it is clear that CWAFs in the field spend a significant amount of time operating at part-load.

Even if AHRI were correct and part-load operation is less of a contributor to the overall energy efficiency of a CWAF, DOE notes that none of the commenters argued that jacket losses are not important to the overall efficiency of a CWAF. In fact, AHRI points out its importance by citing to the relevant provisions in ASHRAE 90.1 showing that CWAFs installed in buildings where ASHRAE 90.1–2022 building code requirements apply (*e.g.,* newly constructed commercial equipment where a jurisdiction has adopted the ASHRAE Standard 90.1–2022 building energy codes) must meet certain jacket loss provisions. This position highlights the importance of including jacket losses in the representative average use cycle for any future standards, which as DOE noted in the December 2024 NOTD could account for as much as a 2.5 percent difference in efficiency. 89 FR 104859, 104863.

III. Conclusion

The potential difference in CWAF efficiency measured under the industry test procedure and the appendix B test procedure is an excellent example of why Congress updated representative use cycles for covered products to include standby and off mode energy use in new or amended energy conservation standards and why stakeholders, including manufacturers, asked DOE to update the representative average use cycle for air-cooled commercial air conditioners and heat pumps—consumers and manufacturers are both better off when DOE test procedures and energy conservation standards capture more energy use in the field. For example, as discussed previously, a CWAF with a TE of 81 percent as measured by the industry test procedure could, depending on jacket losses and part-load operation, have an actual range of efficiencies from 77.5 to 82 percent using the appendix B test procedure for TE2. That is a significant difference in efficiency and corresponds to a significant difference in fuel costs

over the lifetime of the CWAF, which is important information for consumers. The industry test procedure also does not allow manufacturers to fully differentiate their products in the market. For example, under the industry test procedure, a manufacturer with a line of CWAF models with well-insulated jackets has no way to advertise their improved efficiency in the market. Under the industry test procedure, these models will have the same advertised efficiency as similar models that lack insulation and have higher jacket losses.

Having determined that any future, amended standards for CWAFs should be based on a representative average use cycle that includes jacket losses and part-load operation, DOE adopted the appendix B test procedure in the June 2023 Final Rule. The appendix B test procedure contains specific provisions for measuring jacket losses and energy use during part-load operation and will be used by DOE to evaluate potential amended standards for CWAFs. Use of the appendix B test procedure by manufacturers would not be required until such time as compliance is required with amended energy conservation standards based on the new representative average use cycle, should DOE adopt such standards.

For this final determination, as was done initially in the December 2024 NOTD, DOE evaluated whether the industry test procedure is reasonably designed to produce test results which reflect energy use during a representative average use cycle that, as determined by DOE, includes jacket losses and part-load operation. Unlike the appendix B test procedure, the industry test procedure does not have provisions for calculating jacket losses and changes in energy efficiency due to part-load operation. As discussed previously, this results in the industry test procedure producing test results that do not account for significant variations in energy use across different CWAF models. As a result, DOE has determined, supported by clear and convincing evidence, that the industry test procedure is not reasonably designed to produce test results which reflect energy efficiency during a representative average use cycle that, as determined by DOE, includes jacket losses and part-load operation for the TE2 metric.

IV. Procedural Issues and Regulatory Review

DOE has concluded that the determinations made pursuant to the various procedural requirements applicable to the June 2023 Final Rule remain unchanged for this notification of final determination. These determinations are set forth in the June 2023 Final Rule. 88 FR 36217, 36230–36233. DOE is publishing this document to present its final determination, supported by clear and convincing evidence, that the industry test procedure would not provide test results that are representative of an average use cycle for the TE2 metric.

V. Approval of the Office of the Secretary

The Secretary of Energy has approved publication of this final determination.

Signing Authority

This document of the Department of Energy was signed on January 13, 2025, by Jeffrey Marootian, Principal Deputy Assistant Secretary for Energy Efficiency and Renewable Energy, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on January 13, 2025.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

[FR Doc. 2025–01082 Filed 1–16–25; 8:45 am]

BILLING CODE 6450–01–P

FEDERAL ELECTION COMMISSION

11 CFR Part 111

[Notice 2024–30]

Statement of Policy Regarding the Notification of Respondents in Matters Under Review Remanded From a Challenge Pursuant to 52 U.S.C. 30109(a)(8)

AGENCY: Federal Election Commission.

ACTION: Statement of Policy.

SUMMARY: The Federal Election Commission (''Commission'' or ''FEC'') is issuing a Policy Statement to explain that, if the Commission receives a remand in litigation instituted pursuant to 52 U.S.C. 30109(a)(8), it will notify the respondents in the Matter Under Review (''MUR'') of the relevant court decision(s) and provide an opportunity to file supplemental responses.

DATES: The effective date of this Statement of Policy is February 18, 2025.

FOR FURTHER INFORMATION CONTACT: Claudio J. Pavia, Assistant General Counsel, Enforcement Division, 1050 First Street NE, Washington, DC 20463, (202) 694–1650.

SUPPLEMENTARY INFORMATION: The Federal Election Campaign Act of 1971, as amended, (''Act'') 52 U.S.C. 30101–30145, provides for enforcement based upon complaints filed by the public. Such complaints are filed with the FEC, which notifies each individual or organization accused of wrongdoing (''Respondents'') and provides an opportunity to respond to the allegations of the complaint.

''Any party aggrieved by an order of the Commission dismissing a complaint filed by such party . . . or by a failure of the Commission to act on such complaint during the 120-day period beginning on the date the complaint is filed, may file a petition with the United States District Court for the District of Columbia.'' 52 U.S.C. 30109(a)(8)(A). ''[I]n any proceeding'' brought under 52 U.S.C. 30109(a)(8) ''the court may declare that the dismissal of the complaint or the failure to act is contrary to law and may direct the Commission to conform with such declaration within 30 days, failing which the complainant may bring, in the name of such complainant, a civil action to remedy the violation involved in the original complaint.'' 52 U.S.C. 30108(a)(8)(C).

Because lawsuits filed under 52 U.S.C. 30108(a)(8) are brought by Complainants against the Commission, Respondents may not be aware of actions taken in these cases. Respondents' interests are implicated, however, where a MUR is remanded to the Commission for further action. In particular, because the Commission will generally be ordered to conform to a particular judicial opinion, and because the facts and circumstances of a MUR may have changed with the passage of time, any response previously provided by a Respondent may be stale. *See* 52 U.S.C. 30109(a)(1) (''Before the Commission conducts any vote on the complaint, other than a vote to dismiss, any person so notified shall have the opportunity to demonstrate, in writing, to the Commission within 15 days after notification that no action should be taken against such person on the basis of the complaint'').

Accordingly, the Commission is issuing this Policy Statement to announce that whenever a remand is ordered by final judgment or appellate decision in a case brought pursuant to 52 U.S.C. 30109(a)(8)(C), the FEC will provide notice of that decision by letter within 48 hours to both the email and physical address on file. This letter will be drafted by the Office of General Counsel's Litigation Division, in consultation with the Enforcement Division, and will enclose the relevant opinion and order. Further, the letter will note any deadline for Commission action and advise that the Commission will consider any supplemental response or material the Respondent may wish to provide for the purpose of the remand.

This policy describes how the Commission will provide notice to Respondents of opinions and orders that result in a remand in cases brought pursuant to 52 U.S.C. 30109(a)(8). The policy does not confer any rights on any person and does not in any way limit the right of the Commission to evaluate every MUR based upon its particular facts and circumstances.

This document represents a general statement of policy announcing the general course of action that the Commission intends to follow. This policy statement does not constitute an agency regulation requiring notice of proposed rulemaking, opportunities for public participation, prior publication, and delay effective under 5 U.S.C. 553 of the Administrative Procedure Act (''APA''). As such, it does not bind the Commission or any member of the general public. The provisions of the Regulatory Flexibility Act, 5 U.S.C. 605(b), which apply when notice and comment are required by the APA or other relevant statute, are not applicable.

Dated: December 19, 2024.

On behalf of the Commission,

Sean J. Cooksey,

Chairman, Federal Election Commission.

[FR Doc. 2024–31124 Filed 1–16–25; 8:45 am]

BILLING CODE 6715–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 47

[Docket No.: FAA–2024–2765; Amdt. No. 47–36]

RIN 2120–AM08

Electronic Issuance of Aircraft Registration and Dealer Certificates

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: This rulemaking amends FAA regulations pertaining to aircraft registration and dealer's registration certificates to facilitate the electronic issuance of these certificates. Electronic issuance of the certificates is more efficient and cost effective than the traditional agency procedure of printing paper registration certificates and mailing them to aircraft owners and dealers.

DATES: Effective January 17, 2025.

FOR FURTHER INFORMATION CONTACT: Wendolynn Hendrick, Aircraft Registration Branch, Federal Aviation Administration, 6500 S MacArthur Blvd., Bldg 29, Oklahoma City, OK 73169; telephone (405) 954–3131; email *Wendolynn.R.Hedrick@faa.gov.*

SUPPLEMENTARY INFORMATION:

I. Authority for This Rulemaking

The FAA's authority to issue rules on aviation safety is found in Title 49 of the United States Code (49 U.S.C.). Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the FAA's authority. This rulemaking is promulgated under the authority described in 49 U.S.C. 106(f), which establishes the authority of the Administrator to promulgate regulations and rules; and 49 U.S.C. 44701(a)(5), which requires the Administrator to promote safe flight of civil aircraft in air commerce by prescribing regulations and setting minimum standards for other practices, methods, and procedures necessary for safety in air commerce and national security.

This rulemaking is also promulgated pursuant to 49 U.S.C. 44101–44106 and 44110–44113, which require aircraft to be registered as a condition of operation and establish the requirements for registration and registration processes. The FAA Civil Aviation Registry is responsible for the registration and recordation of civil aircraft.

The regulations in this rule are within the scope of that authority because they provide for the electronic issuance of aircraft registration and dealer's registration certificates.

II. Immediate Adoption of Final Rule

The notice and comment procedures required under section 553(b) of the Administrative Procedure Act (APA) (5 U.S.C. 553) do not apply to rules of ''agency organization, procedure, or practice.'' Under this section, an agency may issue a final rule without seeking comment prior to the rulemaking. This rulemaking updates the regulations for aircraft registration and recordation in part 47 of title 14 of the Code of Federal Regulations (14 CFR) to provide for the electronic issuance of aircraft registration and dealer's registration certificates. This rule does not alter the substantive rights or obligations of persons applying for aircraft registration or dealer's certificates, only the procedures by which the FAA issues such certificates. Therefore, the FAA has determined that this rulemaking is a rule of agency procedure or practice for which notice and public comment are not required.

Accordingly, because this is a rule of agency practice or procedure for which notice and public comment is not required, the FAA also finds good cause to waive the delay of the effective date as set forth in 5 U.S.C. 553(d). This rule will be immediately effective upon publication.

III. Background

A. Background and Current Processes

The Civil Aviation Registry, FAA Aircraft Registration Branch (Registry) is responsible for developing, maintaining, and operating the Federal registration and recordation system for United States civil aircraft. Within these functions is the statutory requirement for issuance of aircraft registration and dealer's registration certificates. Currently, the Registry issues certificates in the physical form of a 4'' x 9'' document printed on card stock. The Registry delivers both aircraft registration certificates and aircraft dealer certificates in paper form. The Registry issues over 5,000 of these certificates per month. These certificates are then delivered as bulk mail to registrants in approximately 7–10 business days.

Due to the long delivery time required by using regular mail, the Registry has had to create special priority processes to meet the demands of a changing fast-paced environment of the aviation industry. Costs involved in this process

include printing, supplies, mailing, and manpower needed for sorting and distribution.

B. Developing the CARES System

Section 546 of the FAA Reauthorization Act of 2018 (Pub. L. 115–254) [1] requires that the FAA complete covered upgrades of the Civil Aviation Registry. The required upgrades include digitization of Registry functions and business operations ''by leveraging digital technologies and a broader use of digitized data,'' as well as expansion of electronic and remote access to the Registry by members of the public.

Following this Congressional direction, the Registry began exploring alternatives to the legacy system and developed a modernization plan. As of 2022, the Aircraft Registration Branch started implementing a new system of registration and recordation called the Civil Aviation Registry Electronic Services, or ''CARES.'' The project implements a web-based electronic system that allows the aviation community to securely submit applications, upload documentation, and provide the data necessary for the Registry to perform aircraft registration and airman certification services. For registrants using the system, CARES allows more comprehensive functionality, including a personal portal for users to view their submissions, pay fees online, and digitally sign their applications. Full implementation of the CARES system is expected by late 2025. Ultimately, CARES will become the central and legal repository of all aircraft registration and will fully replace the existing service.

IV. Discussion of the Final Rule

A. Electronic Issuance of Aircraft Registration and Dealer Certificates

The federal statutes that authorize the FAA to issue aircraft registration and dealer's registration certificates do not prescribe the manner in which the certificates are to be issued.[2] As discussed, the FAA has traditionally issued aircraft registration and dealer's registration certificates, including replacement certificates, in paper form by mail. This process results in costs to the FAA to print the certificates, for supplies and associated labor hours, and for postage costs required to deliver the certificates by mail, which takes approximately 7 to 10 business days to arrive. With the capability to utilize electronic delivery means, such as email, and the future implementation of the CARES system, the FAA has determined that the traditional agency procedure of printing and mailing aircraft registration and dealer's registration certificates should be replaced with the electronic issuance of these certificates.

A feature of CARES will allow the Registry to electronically issue and deliver a registration certificate, enabling almost instant delivery of the certificate to the registrant without the normal 7–10 business day wait time for regular mail delivery. Regardless of the timeline of CARES implementation, the Registry will still be able to send electronic certificates by email either through the legacy registration system or through alternate means.

Electronic delivery of certificates will provide a streamlined and expedited delivery service while also reducing the cost and labor burden of mailing for the Registry. However, if a traditional paper certificate is still desired, an applicant may request a paper certificate be issued instead of an electronic certificate.

This final rule effectuates this change in the FAA's procedures for the issuance of aircraft registration and dealer's registration certificates, from traditional paper form to electronic issuance as the primary delivery method.

The FAA emphasizes, however, that the issuance of a registration certificate in electronic form does not, in any way, obviate or affect the need to comply with statutory, regulatory, or other requirements involving aircraft registration or dealer's registration certificates. Notably, in general, a Certificate of Aircraft Registration must still be carried on the aircraft.[3]

B. Discussion of Affected Regulations

For the reasons discussed in the preceding section, in this final rule the FAA is making several additions and revisions to the regulations in 14 CFR part 47. These amendments are designed to enable and facilitate the FAA's electronic issuance of aircraft registration and dealer's registration certificates. Applicants for these certificates will continue to be able to receive paper certificates upon request.

The FAA is adding language to the end of § 47.1, which sets forth the applicability of part 47. The additional regulatory language expressly provides that part 47 applies to the issuance of a Certificate of Aircraft Registration or a Dealer's Registration Certificate, whether by mail, electronic, or other means.

The FAA is revising § 47.41(b) to address the return or destruction (in the case of § 47.41(b)(3)) of aircraft registration certificates that are issued in electronic form. Currently, § 47.41(b) requires an aircraft registration certificate be returned to the Registry within specified timeframes under the circumstances set forth in paragraphs (b)(1) through (4). For paper certificates, the holder of the certificate must notify the FAA of the reasons for a change in status by completing the reverse side of the certificate and returning it.

The FAA has determined that it is unnecessary and impractical to require the ''return'' of an electronically issued aircraft registration certificate. The FAA does not expect certificate holders to have to permanently delete the originating email sent by the FAA, or other electronic or digital method used by the FAA, that transmitted the registration certificate. This rule amends § 47.41(b) to maintain only the requirement that the holder of an electronically issued certificate notify the FAA by email or other acceptable means within the existing timeframes, in lieu of completing the reverse side of a paper certificate, when any of the changes specified in § 47.41(a) occurs, regarding the status of the registered aircraft or registered owner. The revised language of § 47.41(b) provides flexibility for holders of electronically issued certificates to notify the FAA of a change in status in the most practicable manner.

This rule also clarifies that only the paper or printed copies of the aircraft registration certificate need to be destroyed when required under § 47.41(b)(3). A requirement to ''destroy'' an electronic certificate is impractical because the certificate, even if no longer effective, can be repeatedly printed, copied, and electronically duplicated. However, even though an electronic certificate may potentially exist in electronic form indefinitely, the use of an invalid or ineffective certificate remains unlawful. The registration status of civil aircraft is publicly available online and searchable by N-number for those persons who may need to ascertain the aircraft's current registration status.[4]

The FAA is also amending § 47.43(b), which currently requires that the holder

[1] 132 Stat. 3376 (Oct. 5, 2018).

[2] *See* 49 U.S.C. 44103(a) and 44104.

[3] *See* 49 U.S.C. 44103(d); Article 29 of the Convention on International Civil Aviation (the ''Chicago Convention''); and 14 CFR part 91, § 91.203(a)(2). The FAA anticipates that the Certificate of Aircraft Registration will be permitted to be carried in electronic or digital format on the aircraft, subject to implementation of security and authentication features within CARES and international standards.

[4] *https://registry.faa.gov/aircraftinquiry/.*

of an invalid aircraft registration return the registration certificate to the Registry as soon as possible, to clarify that only a certificate issued in paper form must be returned.

Similarly, the FAA is amending § 47.49, which prescribes the procedures for requesting a replacement aircraft registration certificate, to enable the Registry to send replacement certificates electronically.

Finally, the FAA is revising several regulations in part 47 to remove the references to FAA form numbers ''AC Form 8050–3'' and ''AC Form 8050–6,'' which are the form numbers designated by the FAA for the Certificate of Aircraft Registration and the Dealer's Aircraft Registration Certificate, respectively. The affected sections of part 47 include the following: §§ 47.1; 47.5(c); 47.7(d); 47.8(c); 47.11(e); 47.13(b) 47.15(a), (f), and (i); 47.16(a); 47.31(a); 47.39; 47.40(b); 47.41(a), and (b); 47.43(b); 47.45; 47.47(a); 47.49(a); 47.61(a); 47.63; 47.65; 47.67; 47.69, and 47.71. These form numbers are associated with the issuance of traditional paper certificates. Removing the form numbers from the regulations will reduce the need to amend the regulations should new aircraft registration forms be introduced in the future. The FAA will benefit from the administrative flexibility provided to more efficiently implement the digitization requirements contained in section 546 of the FAA Reauthorization Act of 2018, among other purposes. In addition, some regulations in part 47 include the form numbers when referring to the registration certificates, while other regulations do not. Removing the form numbers will maintain consistency in the regulatory language used throughout part 47.

V. Regulatory Notices and Analyses

A. Regulatory Evaluation

Executive Orders 12866 (''Regulatory Planning and Review'') and 13563 (''Improving Regulation and Regulatory Review'') require agencies to regulate in the ''most cost-effective manner'' to make a ''reasoned determination that the benefits of the intended regulation justify its costs,'' and to develop regulations that ''impose the least burden on society.'' The Office of Management and Budget has determined that this final rule is not a significant regulatory action as defined in section (3)(f)(1) of Executive Order 12866, as amended by Executive Order 14094, ''Modernizing Regulatory Review.''

The rule enables the FAA to distribute registration certificates electronically. It also amends language to ensure that such electronic certificates may be used in a similar fashion to printed certificates. Paper certificates may still be issued upon request. The FAA does not know or estimate how many registrants will opt for a paper certificate.

Prior to this rulemaking, the Registry's practice had been to mail out paper copies of the certificates. The legacy registration system is scheduled to be replaced by the newer CARES system separate from this rulemaking, and the CARES system has the capability to distribute such certificates electronically. However, without this rule, the FAA would continue distributing paper certificates.

The FAA estimates that registrants using the new system will receive their certificates 7 to 10 business days sooner on average under this rule.

The rule will have minimal to no costs, as the infrastructure is scheduled to be deployed with or without the rulemaking. Furthermore, the rule is expected to result in cost savings for the FAA by reducing the postage and printing costs associated with mailing a paper certificate. It may also result in reduced costs for the FAA by reducing the time employees spend handling paper documents and preparing them to mail.

The FAA distributes an average of 60,324 certificates each year. These are printed on card stock and sent out via bulk mail. The FAA estimates the unit cost of printing and mailing each certificate is $0.971.[5] Therefore, if all future registrants use electronically issued certificates, the cost savings to the FAA may be about $58,575 per year (60,324 certificates multiplied by $0.971).

B. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA), in 5 U.S.C. 603, requires an agency to prepare an initial regulatory flexibility analysis describing impacts on small entities whenever 5 U.S.C. 553 or any other law requires an agency to publish a general notice of proposed rulemaking for any proposed rule. Similarly, 5 U.S.C. 604 requires an agency to prepare a final regulatory flexibility analysis when an agency issues a final rule under 5 U.S.C. 553 after that section or any other law requires publication of a general notice of proposed rulemaking. The FAA concludes that this is a rule of agency procedure or practice for which notice and comment are not required. As 5 U.S.C. 553 does not require notice and comment in this situation, 5 U.S.C. 603 and 604 similarly do not require regulatory flexibility analyses.

C. International Trade Impact Assessment

The Trade Agreements Act of 1979 (Pub. L. 96–39), as amended by the Uruguay Round Agreements Act (Pub. L. 103–465), prohibits Federal agencies from establishing standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the United States. Pursuant to these Acts, the establishment of standards is not considered an unnecessary obstacle to the foreign commerce of the United States, so long as the standard has a legitimate domestic objective, such as the protection of safety, and does not operate in a manner that excludes imports that meet this objective. The statute also requires consideration of international standards and, where appropriate, that they be the basis for U.S. standards. The FAA has assessed the potential effect of this rule and determined that it ensures the safety of the American public and does not exclude imports that meet this objective. As a result, the FAA does not consider this rule as creating an unnecessary obstacle to foreign commerce.

D. Unfunded Mandates Assessment

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) governs the issuance of Federal regulations that require unfunded mandates. An unfunded mandate is a regulation that requires a State, local, or Tribal government or the private sector to incur direct costs without the Federal Government having first provided the funds to pay those costs. The FAA determined that this final rule will not result in the expenditure of $183 million or more by State, local, or Tribal governments, in the aggregate, or the private sector, in any one year.

E. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)) requires that the FAA consider the impact of paperwork and other information collection burdens imposed on the public. The information collection for aircraft registration and recordation is approved under OMB Control Number 2120–0042. The FAA has determined that there will be no new requirement for information

[5] Assumes rate for marketing mail flats (bulk). See USPS Price List, Notice 123, effective October 6, 2024: *https://pe.usps.com/text/dmm300/Notice123.htm?_gl=1*1e8cdrr*_gcl_au*NDY1OTc0MzQwLjE3MzA4MTUxMjQ.*_ga*MTc5MTgzMzg5Ni4xNzMwODE1MTI0*_ga_3NXP3C8S9V*MTczMTA3NTA3NC4yLjAuMTczMTA3NTA3NC4wLjAuMA..#_c119,* accessed on November 6, 2024.

collection associated with this final rule.

F. International Compatibility

In keeping with U.S. obligations under the Convention on International Civil Aviation, it is FAA policy to conform to International Civil Aviation Organization (ICAO) Standards and Recommended Practices to the maximum extent practicable. The FAA has determined that these regulations, as amended, do not conflict with the ICAO Standards and Recommended Practices pertaining to the issuance of a certificate of registration.

G. Environmental Analysis

FAA Order 1050.1F identifies FAA actions that are categorically excluded from preparation of an environmental assessment or environmental impact statement under the National Environmental Policy Act (NEPA) in the absence of extraordinary circumstances. The FAA has determined this rulemaking action qualifies for the categorical exclusion identified in paragraph 5–6.6f for regulations and involves no extraordinary circumstances.

VI. Executive Order Determinations

A. Executive Order 13132, Federalism

The FAA has analyzed this final rule under the principles and criteria of Executive Order 13132, Federalism. The FAA has determined that this action will not have a substantial direct effect on the States, or the relationship between the Federal Government and the States, or on the distribution of power and responsibilities among the various levels of government, and, therefore, will not have federalism implications.

B. Executive Order 13175, Consultation and Coordination With Indian Tribal Governments

Consistent with Executive Order 13175, Consultation and Coordination with Indian Tribal Governments,[6] and FAA Order 1210.20, American Indian and Alaska Native Tribal Consultation Policy and Procedures,[7] the FAA ensures that Federally Recognized Tribes (Tribes) are given the opportunity to provide meaningful and timely input regarding proposed Federal actions that have the potential to have substantial direct effects on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes; or to affect uniquely or significantly their respective Tribes. At this point, the FAA has not identified any unique or significant effects, environmental or otherwise, on Tribes resulting from this final rule.

C. Executive Order 13211, Regulations That Significantly Affect Energy Supply, Distribution, or Use

The FAA analyzed this final rule under Executive Order 13211, Actions Concerning Regulations that Significantly Affect Energy Supply, Distribution, or Use. The FAA has determined that it is not a ''significant energy action'' under the Executive order and is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

D. Executive Order 13609, Promoting International Regulatory Cooperation

Executive Order 13609, Promoting International Regulatory Cooperation, promotes international regulatory cooperation to meet shared challenges involving health, safety, labor, security, environmental, and other issues and to reduce, eliminate, or prevent unnecessary differences in regulatory requirements. The FAA has analyzed this action under the policies and agency responsibilities of Executive Order 13609 and has determined that this action will have no effect on international regulatory cooperation.

VII. Additional Information

A. Electronic Access and Filing

A copy of this final rule and all background material may be viewed online at *www.regulations.gov* using the docket number listed above. Electronic retrieval help and guidelines are available on the website. It is available 24 hours each day, 365 days each year. An electronic copy of this document may also be downloaded from the Office of the Federal Register's website at *www.federalregister.gov* and the Government Publishing Office's website at *www.govinfo.gov.* A copy may also be found on the FAA's Regulations and Policies website at *www.faa.gov/regulations_policies.*

Copies may also be obtained by sending a request to the Federal Aviation Administration, Office of Rulemaking, ARM–1, 800 Independence Avenue SW, Washington, DC 20591, or by calling (202) 267–9677. Requesters must identify the docket or notice number of this rulemaking.

All documents the FAA considered in developing this final rule, including economic analyses and technical reports, may be accessed in the electronic docket for this rulemaking.

B. Small Business Regulatory Enforcement Fairness Act

The Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996 requires the FAA to comply with small entity requests for information or advice about compliance with statutes and regulations within its jurisdiction. A small entity with questions regarding this document may contact its local FAA official or the person listed under the **FOR FURTHER INFORMATION CONTACT** heading at the beginning of the preamble. To find out more about SBREFA on the internet, visit *www.faa.gov/regulations_policies/rulemaking/sbre_act/.*

List of Subjects in 14 CFR Part 47

Aircraft, Reporting and Recordkeeping Requirements.

The Amendment

For the reasons discussed in the preamble, the Federal Aviation Administration amends chapter I of title 14, Code of Federal Regulations, as follows:

PART 47—Aircraft Registration

■ 1. The authority citation for part 47 continues to read as follows:

Authority: 4 U.S.T. 1830; Public Law 115–254, Public Law 108–297, 118 Stat. 1095 (49 U.S.C. 40101 note, 49 U.S.C. 44101 note); 49 U.S.C. 106(f), 40113–40114, 44101–44108, 44110–44113, 44701, 44703–44704, 44713, 45302, 46104, 46301.

■ 2. Revise § 47.1 to read as follows:

§ 47.1 Applicability.

This part prescribes the requirements for registering aircraft under 49 U.S.C. 44101–44104. Subpart B applies to each applicant for, and holder of, a Certificate of Aircraft Registration. Subpart C applies to each applicant for, and holder of, a Dealer's Aircraft Registration Certificate. This part applies to the issuance by the FAA of such certificates, whether by mail, electronic, or other means.

■ 3. Amend § 47.5 by revising paragraph (c) to read as follows:

§ 47.5 Applicants.

* * * * *

(c) 49 U.S.C. 44103(c) provides that registration is not evidence of ownership of aircraft in any proceeding in which ownership by a particular person is in issue. The FAA does not issue any certificate of ownership or endorse any information with respect to ownership on a Certificate of Aircraft

[6] 65 FR 67249 (Nov. 6, 2000).

[7] FAA Order No. 1210.20 (Jan. 28, 2004), available at *www.faa.gov/documentLibrary/media/1210.pdf.*

Registration. The FAA issues a Certificate of Aircraft Registration to the person who appears to be the owner on the basis of the evidence of ownership submitted pursuant to § 47.11 with the Aircraft Registration Application, or recorded at the Registry.

* * * * *

■ 4. Amend § 47.7 by revising paragraph (d) introductory text to read as follows:

§ 47.7 United States citizens and resident aliens.

* * * * *

(d) *Partnerships.* A partnership may apply for a Certificate of Aircraft Registration under 49 U.S.C. 44102 only if each partner, whether a general or limited partner, is an individual who is a citizen of the United States. Nothing in this section makes ineligible for registration an aircraft that is not owned as a partnership asset but is co-owned by—

* * * * *

■ 5. Amend § 47.8 by revising paragraph (c) to read as follows:

§ 47.8 Voting trusts.

* * * * *

(c) If the voting trust terminates or is modified, and the result is less than 75 percent control of the voting interest in the corporation by citizens of the United States, a loss of citizenship of the holder of the Certificate of Aircraft Registration occurs, and § 47.41(a)(3) of this part applies.

* * * * *

■ 6. Amend § 47.11 by revising paragraphs (e) and (f) to read as follows:

§ 47.11 Evidence of ownership.

* * * * *

(e) The executor or administrator of the estate of the deceased former owner of an aircraft must submit a certified copy of the letters testamentary or letters of administration appointing him executor or administrator. The Certificate of Aircraft Registration is issued to the applicant as executor or administrator.

(f) The buyer of an aircraft from the estate of a deceased former owner must submit both a bill of sale, signed for the estate by the executor or administrator, and a certified copy of the letters testamentary or letters of administration. When no executor or administrator has been or is to be appointed, the applicant must submit both a bill of sale, signed by the heir-at-law of the deceased former owner, and an affidavit of the heir-at-law stating that no application for appointment of an executor or administrator has been made, that so far as he can determine none will be made, and that he is the person entitled to, or having the right to dispose of, the aircraft under applicable local law.

* * * * *

■ 7. Amend § 47.13 by revising paragraph (b) to read as follows:

§ 47.13 Signatures and instruments made by representatives.

* * * * *

(b) When one or more persons doing business under a trade name submits an Aircraft Registration Application, a document submitted as supporting evidence under this part, or a request for cancellation of a Certificate of Aircraft Registration, the application, document, or request must be signed by, or on behalf of, each person who shares title to the aircraft.

* * * * *

■ 8. Amend § 47.15 by revising paragraph (a) introductory text, paragraph (f), and paragraph (i)(2) to read as follows:

§ 47.15 Registration number.

(a) *Number required.* An applicant for aircraft registration must place a U.S. registration number (registration mark) on the Aircraft Registration Application, AC Form 8050–1, and on any evidence submitted with the application. There is no charge for the assignment of numbers provided in this paragraph. This paragraph does not apply to an aircraft manufacturer who applies for a group of U.S. registration numbers under paragraph (c) of this section; a person who applies for a special registration number under paragraphs (d) through (f) of this section; or a holder of a Dealer's Aircraft Registration Certificate who applies for a temporary registration number under § 47.16.

* * * * *

(f) The Registry authorizes a special registration number change on the Assignment of Special Registration Numbers, AC Form 8050–64. The authorization expires one year from the date the Registry issues an Assignment of Special Registration Numbers unless the special registration number is permanently placed on the aircraft. Within five days after the special registration number is placed on the aircraft, the owner must complete and sign the Assignment of Special Registration Numbers, state the date the number was placed on the aircraft, and return the original form to the Registry. The duplicate of the Assignment of Special Registration Numbers and the present Certificate of Aircraft Registration must be carried in the aircraft as temporary authority to operate it. This temporary authority is valid until the date the owner receives the revised Certificate of Aircraft Registration showing the new registration number, but in no case is it valid for more than 120 days from the date the number is placed on the aircraft.

* * * * *

(i) * * *

(2) Following the expiration date shown on the Dealer's Aircraft Registration Certificate, for any aircraft registered under Subpart C of this part, when the certificate has not been renewed, and the owner has not applied for registration in accordance with § 47.31; or

* * * * *

■ 9. Amend § 47.16 by revising paragraph (a) to read as follows:

§ 47.16 Temporary registration numbers.

(a) Temporary registration numbers are issued by the FAA to manufacturers, distributors, and dealers who are holders of Dealer's Aircraft Registration Certificates for temporary display on aircraft during flight allowed under Subpart C of this part.

* * * * *

■ 10. Amend § 47.31 by revising paragraph (a) introductory text to read as follows:

§ 47.31 Application.

(a) Each applicant for a Certificate of Aircraft Registration must submit the following to the Registry—

* * * * *

■ 11. Revise § 47.39 to read as follows:

§ 47.39 Effective date of registration.

An aircraft is registered on the date the Registry determines that the submissions meet the requirements of this part. The effective date of registration is shown as the date of issue on the Certificate of Aircraft Registration.

■ 12. Amend § 47.40 by revising paragraph (b) to read as follows:

§ 47.40 Registration expiration and renewal.

* * * * *

(b) *Renewal.* Each holder of a Certificate of Aircraft Registration containing an expiration date may apply for renewal of a Certificate of Aircraft Registration by submitting an Aircraft Registration Renewal Application, AC Form 8050–1B, and the fee required by § 47.17 during the six months preceding the expiration date for the Certificate of Aircraft Registration.

* * * * *

■ 13. Amend § 47.41 by revising paragraph (a) introductory text, paragraph (b) introductory text, and paragraph (b)(3) to read as follows:

§ 47.41 Duration and return of certificate.

(a) Each Certificate of Aircraft Registration issued by the FAA under this subpart is effective, unless registration has ended by reason of having been revoked, canceled, expired, or the ownership is transferred, until the date upon which one of the following events occurs:

* * * * *

(b) The FAA must be given notice of, and the reason(s) for, any change in status of the registered aircraft or registered owner specified under paragraph (a) of this section. In the case of an electronically issued Certificate of Aircraft Registration, notice must be provided by email or other means acceptable to the Administrator, and, in the case of a certificate issued in paper form, the certificate, with the reverse side completed, must be returned to the Registry—

* * * * *

(3) Within 21 days of the termination of the registration, by the holder of the Certificate of Aircraft Registration in all other cases mentioned in paragraph (a) of this section, except in the case of expired certificates, the holder must destroy the expired certificate, if in paper or printed form.

* * * * *

■ 14. Amend § 47.43 by revising paragraph (b) to read as follows:

§ 47.43 Invalid registration.

* * * * *

(b) If the registration of an aircraft is invalid under paragraph (a) of this section, the holder of the invalid Certificate of Aircraft Registration, if issued in paper form, must return it as soon as possible to the Registry.

■ 15. Revise § 47.45 to read as follows:

§ 47.45 Change of address.

Within 30 days after any change in a registered owner's mailing address, the registered owner must notify the Registry in writing of the change of address. If a post office box or mailing drop is used for mailing purposes, the registered owner also must provide that owner's physical address or location. Upon acceptance, the Registry will issue, without charge, a revised Certificate of Aircraft Registration reflecting the new mailing address. When a post office box or mailing drop is used for mailing purposes, and the registered owner's physical address or location changes, the registered owner must notify the Registry in writing of the new address or location within 30 days.

■ 16. Amend § 47.47 by revising paragraph (a) introductory text to read as follows:

§ 47.47 Cancellation of Certificate for export purpose.

(a) The holder of a Certificate of Aircraft Registration or the holder of an irrevocable deregistration and export request authorization recognized under the Cape Town Treaty and filed with the FAA who wishes to cancel the Certificate of Aircraft Registration for the purpose of export must submit to the Registry—

* * * * *

■ 17. Revise § 47.49 to read as follows:

§ 47.49 Replacement of Certificate.

(a) If the original Certificate of Aircraft Registration is lost, stolen, or mutilated, the registered owner may submit to the Registry a written request that states the reason a replacement certificate is needed and the fee required by § 47.17. The Registry will send a replacement certificate to the registered owner by email or other electronic or digital means, or, if such means are unavailable, to the registered owner's mailing address or to another mailing address if requested in writing by the registered owner.

(b) The registered owner may request a temporary Certificate of Aircraft Registration pending receipt of a replacement certificate. The Registry issues a temporary Certificate of Aircraft Registration that must be carried in the aircraft until receipt of the replacement certificate.

■ 18. Amend § 47.61 by revising paragraph (a) introductory text to read as follows:

§ 47.61 Dealer's Aircraft Registration Certificates.

(a) The FAA issues a Dealer's Aircraft Registration Certificate to U.S. manufacturers and dealers to—

* * * * *

■ 19. Amend § 47.63 by revising paragraph (a) introductory text to read as follows:

§ 47.63 Application.

(a) A manufacturer or dealer that wishes to obtain a Dealer's Aircraft Registration Certificate must submit—

* * * * *

■ 20. Revise § 47.65 to read as follows:

§ 47.65 Eligibility.

To be eligible for a Dealer's Aircraft Registration Certificate, the applicant must have an established place of business in the United States, must be substantially engaged in manufacturing or selling aircraft, and must be a citizen of the United States, as defined by 49 U.S.C. 40102 (a)(15).

■ 21. Revise § 47.67 to read as follows:

§ 47.67 Evidence of ownership.

Before using a Dealer's Aircraft Registration Certificate for operating the aircraft, the holder of the certificate (other than a manufacturer) must send to the Registry evidence of ownership under § 47.11. An Aircraft Bill of Sale, AC Form 8050–2, or its equivalent, may be used as evidence of ownership. There is no recording fee.

■ 22. Amend § 47.69 by revising the introductory text to read as follows:

§ 47.69 Limitations.

A Dealer's Aircraft Registration Certificate is valid only in connection with use of aircraft—

* * * * *

■ 23. Amend § 47.71 by revising paragraph (a) to read as follows:

§ 47.71 Duration of Certificate; change of status.

(a) A Dealer's Aircraft Registration Certificate expires 1 year after the date it is issued. Each additional certificate expires on the date the original certificate expires.

* * * * *

Issued under authority provided by 49 U.S.C. 106(f), 44701(a), and 44101–44106 in Washington, DC

Michael Gordon Whitaker,

Administrator.

RIN 2120–AM07

Aircraft Registration and Recordation Procedural Updates: Original Documents and Stamping

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is updating certain procedural regulations relating to civil aircraft registration and recordation to provide administrative relief from the requirements for submitting original

documents and to sunset the FAA's practice of stamping documents. Amending these regulations will reduce administrative burdens and enable the FAA to better utilize the capabilities of the Civil Aviation Registry Electronic Services (CARES) system for civil aircraft registration and recordation.

DATES: Effective January 17, 2025.

FOR FURTHER INFORMATION CONTACT: Craig Whitbeck, Registry Services and Information Management Branch, Federal Aviation Administration, 6500 S MacArthur Blvd., Bldg 29, Oklahoma City, OK 73169; telephone (405) 954–3131; email *Craig.Whitbeck@faa.gov*.

SUPPLEMENTARY INFORMATION:

I. Authority for This Rulemaking

The FAA's authority to issue rules on aviation safety is found in Title 49 of the United States Code (49 U.S.C.). Subtitle I, section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the FAA's authority. This rulemaking is promulgated under the authority described in 49 U.S.C. 106(f), which establishes the authority of the Administrator to promulgate regulations and rules; and 49 U.S.C. 44701(a)(5), which requires the Administrator to promote safe flight of civil aircraft in air commerce by prescribing regulations and setting minimum standards for other practices, methods, and procedures necessary for safety in air commerce and national security.

This rulemaking is also promulgated pursuant to 49 U.S.C. 44101–44108 and 44110–44113, which require aircraft to be registered as a condition of operation and establish the requirements for registration, registration processes, and the recordation of conveyances, leases, and security instruments. The FAA Civil Aviation Registry is responsible for the registration and recordation of civil aircraft and conveyances.

The regulations in this rule are within the scope of the above authorities because they prescribe the form and means by which aircraft registration applications, conveyances, and related documents and materials are to be submitted to the Registry, and the procedures for the Registry to process such documents.

II. Immediate Adoption of Final Rule

The notice and comment procedures required under section 553(b) of the Administrative Procedure Act (APA) (5 U.S.C. 553) do not apply to rules of ''agency organization, procedure, or practice.'' Under this section, an agency may issue a final rule without seeking comment prior to the rulemaking. This rulemaking updates certain procedural regulations for aircraft registration and recordation in parts 47 and 49 of Title 14 of the Code of Federal Regulations (14 CFR) to provide the FAA with flexibility in accepting non-original documents and to sunset the FAA's practice of date stamping incoming documents. This rule does not alter the substantive rights or obligations of persons applying for aircraft registration or submitting conveyances for recordation. Rather, the rule allows such persons the option of submitting non-original documents electronically while retaining the existing option of submitting original documents if a person prefers. The rule also amends the internal FAA processing of submissions, which does not affect the rights or interests of regulated parties. With these inefficiencies removed, the use of modern technology will enable greater flexibility for the public and the Registry, will reduce document rejection rates, and improve the aircraft registration process. Therefore, the FAA has determined that this rulemaking is a rule of agency procedure or practice for which notice and public comment are not required.

Accordingly, because this is a rule of agency practice or procedure for which notice and public comment is not required, the FAA also finds good cause to waive the delay of effective date as set forth in 5 U.S.C. 553(d). This rule will be immediately effective upon publication.

III. Background

The Civil Aviation Registry, FAA Aircraft Registration Branch (Registry) is responsible for developing, maintaining, and operating the Federal registration and recordation system for United States aircraft. The Registry's legacy information technology infrastructure, Registry Modernization Services (RMS), last updated in 2008, has been used to ensure aircraft and security conveyances are properly registered and recorded. RMS was implemented on a mainframe environment that is costly to operate and difficult to support.

In addition, section 546 of the FAA Reauthorization Act of 2018 (Pub. L. 115–254) [1] requires that the FAA complete covered upgrades of the Civil Aviation Registry. The term ''covered upgrades'' includes the digitization of nondigital Registry information, the digitization of manual and paper-based processes, the implementation of electronic or remote methods for the public to submit their information, and the provision of more efficient, broader, and remote access to the Registry.

Following this Congressional direction, the Registry began exploring alternatives to the legacy system and developed a modernization plan. As of 2022, the Aircraft Registration Branch started implementing a new system of registration and recordation called the Civil Aviation Registry Electronic Services, or ''CARES.'' The project implements a web-based electronic system that allows the aviation community to securely submit applications, upload documentation, and provide the data necessary for the Registry to perform aircraft registration and airman certification services. For registrants using the system, CARES allows more comprehensive functionality, including a personal portal for users to view their submissions, pay fees online, and digitally sign their applications. Full implementation of the CARES system is expected by late 2025. Ultimately, CARES will become the central and legal repository of all aircraft registration and airman certification records and will fully replace the existing service.

While CARES is equipped with features for online document submission, including the automated recordation of the date and time of submission, a number of regulations in 14 CFR parts 47 and 49 continue to require the submission of original documents, which occurs by mail, and also include references in various sections to the Registry's procedures for the date stamping of documents.

IV. Discussion of the Final Rule

A. Document Stamping

Historically and to this day, the Registry stamps the date and time of receipt and processing on many of the forms and documents submitted in accordance with parts 47 and 49, such as aircraft registration applications, conveyances for recordation, and supporting documentation. This agency practice is referenced in two of the regulations at issue in this final rule.

The FAA has determined that its procedures for the stamping of documents submitted to the Registry are no longer necessary. As discussed, the Registry is in the process of replacing the legacy RMS system with the cloud-based CARES system. Document stamps helped RMS users track the date and time documents were received and processed by the Registry. The CARES system will maintain digital document records that replace the need for document stamps.

[1] 132 Stat. 3376 (Oct. 5, 2018).

Accordingly, in this rule the FAA is amending §§ 47.39 and 49.21, both of which refer to the stamping of documents. With respect to § 47.39, which concerns the effective date of aircraft registration, the FAA is removing language that refers to the effective date of registration being shown by a date stamp on the application for aircraft registration. Similarly, § 49.21 is being revised to delete the reference to stamping. Section 49.21 is also being revised because of the procedures for returning original documents and is discussed further in the section that follows.

B. Submission of Original Documents

A few procedural regulations in parts 47 and 49 require the submission of original documents, which results in inefficiencies with the CARES online submission capability. The CARES system provides a free online, self-guided aircraft registration application (Form 8050–1) with an FAA approved digital signature feature, online payment, and electronic submission to the Registry. Other required forms and supporting documents, as well as conveyances for recording, may be uploaded to CARES for submission to the Registry.

However, uploaded copies of ink signed documents are currently rejected because they are not original documents. Digitally signed original documents are also not permitted to be uploaded; they must be printed and mailed to meet the regulatory requirements for submission of original documents. The procedural requirements to submit the originals of certain documents, such as an original Aircraft Bill of Sale in support of an application for aircraft registration (§ 47.31(a)(2)), are unnecessary barriers to the FAA's ability to fully utilize the functionalities of CARES or other modern technologies.

Moreover, in accordance with the procedures in current § 49.21, the FAA is obligated to return a submitted original document when the person making the submission sends a true copy with the original. This procedural requirement is another administrative burden on the FAA that can be ameliorated if the regulations no longer mandate the submission of original documents.

To address these inefficiencies, in this rule the FAA is amending the procedural regulations at issue to relieve registrants, and others who submit conveyances and supporting materials for recordation, from the requirements to submit original documents. While the Registry will still accept original documents and materials, the preferred approach is now to submit non-original documents in a form and by a means acceptable to the FAA. For some documents and materials, a photocopy or digital image may be acceptable; for others, a true or certified copy may be required (see, *e.g.,* §§ 47.8(a)(1), 47.11(b)(2), 49.31(a), and 49.33(c), as amended). The regulatory relief provided will enable persons to upload copies of ink signed documents and digitally signed original documents for submission via CARES and a successor system.

Accordingly, to provide this relief, the FAA is removing the term ''original'' in §§ 47.31(a)(2) and 49.21. In § 49.17(d)(3), the FAA is replacing the term ''original agreement'' with ''originating agreement'' to avoid confusion. And in § 49.33(c)—which requires, for the types of conveyances specified in § 49.31(a), an original document, or a duplicate original document, or if neither is available, a true copy—the FAA is re-ordering the regulatory text such that the true copy is listed first, as the preferred form for submission.

The FAA is also revising §§ 47.19 and 49.11 to provide for needed administrative flexibility in determining the acceptability of non-original documents now that original documents are no longer mandated (*e.g.,* if a true or certified copy will be required for authentication). Sections 47.19 and 49.11 already require applications, conveyances, requests, notifications, and other communications to be delivered to the FAA by a means acceptable to the Administrator. To clarify that any document or other material submitted in support of an application under part 47 is also covered, the FAA is adding the term ''submission'' to the regulatory text in § 47.19. In addition, this rule revises §§ 47.19 and 49.11 to clarify that any submission or communication must also be delivered in a form acceptable to the Administrator, and it adds descriptive language specifying that acceptable forms and means include electronic or digital forms and means compatible with systems used by the Registry.[2] These clarifications to §§ 47.19 and 49.11 will enable the FAA to accept non-original documents in an acceptable form and manner, to include electronic or digital means compatible with CARES, or a successor system.

Finally, the FAA is revising § 49.21 which currently prescribes the procedural requirement for the FAA to return an original conveyance if the person submitting the conveyance wants it returned and submits a true copy with the original. Now that original documents are no longer mandatory, the requirement for the FAA to return original documents is no longer necessary when non-original documents are submitted. However, the current procedure for processing original paper documents remains in place; original documents filed with a certified true copy will still be returned upon request. Therefore, the FAA is replacing the regulatory requirement with language expressly permitting a person to submit a true copy of a conveyance in lieu of submitting the original (except when specifically required to submit an original document by law, regulation, or other authority). The FAA is also making conforming and clarifying changes to the last sentence of § 49.21, which establishes the requirements for a copy to qualify as a ''true'' copy. Instead of the current requirement that the copy be imprinted on paper permanent in nature, including dates and signatures, the FAA is now requiring only that the true copy be in a form and manner acceptable to the Administrator. This change will allow acceptance of true copies that are in electronic or digital form. With regard to the requirement that a certificate stating that the copy has been compared with the original and that it is a true copy be attached with the submission, the FAA is adding language to clarify that the required certificate could take the form of some other type of acceptable attestation. This addition serves only to clarify that, for purposes of § 49.21, a statement attesting to the trueness of a copy is functionally and legally equivalent to a statement certifying the trueness of a copy.

V. Regulatory Notices and Analyses

A. Regulatory Evaluation

Executive Orders 12866 (''Regulatory Planning and Review'') and 13563 (''Improving Regulation and Regulatory Review'') require agencies to regulate in the ''most cost-effective manner,'' to make a ''reasoned determination that the benefits of the intended regulation justify its costs,'' and to develop regulations that ''impose the least burden on society.'' The Office of Management and Budget has determined that this rule is not a significant regulatory action as defined in section 3(f)(1) of Executive Order 12866, as amended by Executive Order.

[2] The FAA provides additional instructions and information regarding submitting documents and information electronically at: *https://www.faa.gov/licenses_certificates/aircraft_certification/aircraft_registry.*

14094, ''Modernizing Regulatory Review.''

The rule enables the FAA to accept non-original documents and removes the requirement to stamp documents. Historically, stamping was used to track the date and time documents were received and processed by the Registry. This functionality is already built into the existing RMS and upcoming CARES system. The FAA has also determined that requiring original documents is unnecessary in many cases and restricts the efficiency gains from electronic systems such as CARES. Prior to this rulemaking, the Registry required original copies of certain documents, and ink signed copies uploaded to CARES would be rejected. Similarly, prior to this rulemaking, the FAA would mail back any received original documents.

The FAA receives original documents in registration applications, as well as other documents for recordation. The FAA receives 76,440 applications per year. This includes 60,324 approved applications and 16,116 rejected applications. The FAA also receives roughly 25,000 conveyances for recordation each year. This rule may generate cost savings including saved postage costs for registrants and other users from not having to mail in original copies. The FAA assumes all such documents are mailed together and that such applications and conveyances could be completed entirely electronically and would not require documents to be mailed under this rule. The USPS charges $1.50 to mail a flat envelope,[3] which the FAA assumes is sufficient to contain all application and recordation materials. If all Registry users submitted electronically, the rule could result in $152,160 of cost savings per year (76,440 applications plus 25,000 conveyances multiplied by $1.50).

The rule will reduce the wait time for an application by reducing the delay between an applicant submitting materials and the FAA receiving the materials. It also may reduce printing costs by allowing documents to be submitted electronically rather than requiring them to be printed or copied.

The rule will have minimal to no costs, as the infrastructure is scheduled to be deployed with or without the rulemaking. Furthermore, the rule is expected to result in cost savings for the FAA by reducing the postage costs associated with mailing back original documents. It may also result in reduced costs for the FAA by reducing the time employees spend handling and stamping paper documents and preparing them to mail.

The FAA assumes that only the 60,324 annual successful applications include original documents, and that all conveyance submissions include original documents. These are sent out via bulk mail. The FAA estimates the unit cost of mailing the original documents from each application is $0.971.[4] If all future customers use electronic document submission, the cost savings to FAA may be up to $82,849 per year (60,324 applications plus 25,000 conveyances multiplied by $0.971).

B. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA), in 5 U.S.C. 603, requires an agency to prepare an initial regulatory flexibility analysis describing impacts on small entities whenever 5 U.S.C. 553 or any other law requires an agency to publish a general notice of proposed rulemaking for any proposed rule. Similarly, 5 U.S.C. 604 requires an agency to prepare a final regulatory flexibility analysis when an agency issues a final rule under 5 U.S.C. 553 after that section or any other law requires publication of a general notice of proposed rulemaking. The FAA concludes that this is a rule of agency procedure or practice for which notice and comment are not required. As 5 U.S.C. 553 does not require notice and comment in this situation, 5 U.S.C. 603 and 604 similarly do not require regulatory flexibility analyses.

C. International Trade Impact Assessment

The Trade Agreements Act of 1979 (Pub. L. 96–39), as amended by the Uruguay Round Agreements Act (Pub. L. 103–465), prohibits Federal agencies from establishing standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the United States. Pursuant to these Acts, the establishment of standards is not considered an unnecessary obstacle to the foreign commerce of the United States, so long as the standard has a legitimate domestic objective, such as the protection of safety and does not operate in a manner that excludes imports that meet this objective. The statute also requires consideration of international standards and, where appropriate, that they be the basis for U.S. standards.

The FAA has assessed the potential effect of this rule and determined that it ensures the safety of the American public and does not exclude imports that meet this objective. As a result, the FAA does not consider this rule as creating an unnecessary obstacle to foreign commerce.

D. Unfunded Mandates Assessment

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) governs the issuance of Federal regulations that require unfunded mandates. An unfunded mandate is a regulation that requires a State, local, or Tribal government or the private sector to incur direct costs without the Federal government having first provided the funds to pay those costs. The FAA determined that the immediately adopted final rule will not result in the expenditure of $183,000,000 or more by State, local, or Tribal governments, in the aggregate, or the private sector, in any one year.

E. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)) requires that the FAA consider the impact of paperwork and other information collection burdens imposed on the public. The information collection for aircraft registration and recordation is approved under OMB control number 2120–0042. The FAA has determined that there will be no new requirement for information collection associated with this final rule.

F. International Compatibility

In keeping with U.S. obligations under the Convention on International Civil Aviation, it is FAA policy to conform to International Civil Aviation Organization (ICAO) Standards and Recommended Practices to the maximum extent practicable. The FAA has determined that there are no ICAO Standards and Recommended Practices that correspond to these regulations.

G. Environmental Analysis

FAA Order 1050.1F identifies FAA actions that are categorically excluded from preparation of an environmental assessment or environmental impact statement under the National Environmental Policy Act (NEPA) in the absence of extraordinary circumstances. The FAA has determined this rulemaking action qualifies for the categorical exclusion identified in paragraph 5–6.6f for regulations and

[3] *https://www.usps.com/ship/first-class-mail.htm,* last accessed November 6, 2024.

[4] Assumes rate for bulk marketing mail flats (bulk). See USPS Price List, effective October 4, 2024: *https://pe.usps.com/text/dmm300/Notice123.htm?_gl=1*1e8cdrr*_gcl_au*NDY1OTc0MzQwLjE3MzA4MTUxMjQ.*_ga*MTc5MTgzMzg5Ni4xNzMwODE1MTI0*_ga_3NXP3C8S9V*MTczMTA3NTA3NC4yLjAuMTczMTA3NTA3NC4wLjAuMA..#_c119,* accessed on November 6, 2024.

involves no extraordinary circumstances.

VI. Executive Order Determinations

A. Executive Order 13132, Federalism

The FAA has analyzed this final rule under the principles and criteria of Executive Order 13132, Federalism. The FAA has determined that this action will not have a substantial direct effect on the States, or the relationship between the Federal Government and the States, or on the distribution of power and responsibilities among the various levels of government, and, therefore, will not have federalism implications.

B. Executive Order 13175, Consultation and Coordination With Indian Tribal Governments

Consistent with Executive Order 13175, Consultation and Coordination with Indian Tribal Governments,[5] and FAA Order 1210.20, American Indian and Alaska Native Tribal Consultation Policy and Procedures,[6] the FAA ensures that Federally Recognized Tribes (Tribes) are given the opportunity to provide meaningful and timely input regarding proposed Federal actions that have the potential to have substantial direct effects on one or more Indian Tribes, on the relationship between the Federal government and Indian Tribes, or on the distribution of power and responsibilities between the Federal government and Indian Tribes; or to affect uniquely or significantly their respective Tribes. At this point, the FAA has not identified any unique or significant effects, environmental or otherwise, on Tribes resulting from this final rule.

C. Executive Order 13211, Regulations That Significantly Affect Energy Supply, Distribution, or Use

The FAA analyzed this final rule under Executive Order 13211, Actions Concerning Regulations that Significantly Affect Energy Supply, Distribution, or Use. The FAA has determined that it will not be a ''significant energy action'' under the executive order and is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

D. Executive Order 13609, Promoting International Regulatory Cooperation

Executive Order 13609, Promoting International Regulatory Cooperation, promotes international regulatory cooperation to meet shared challenges involving health, safety, labor, security, environmental, and other issues and to reduce, eliminate, or prevent unnecessary differences in regulatory requirements. The FAA has analyzed this action under the policies and agency responsibilities of Executive Order 13609 and has determined that this action will have no effect on international regulatory cooperation.

VII. Additional Information

A. Electronic Access and Filing

A copy of this final rule and all background material may be viewed online at *www.regulations.gov* using the docket number listed above. Electronic retrieval help and guidelines are available on the website. It is available 24 hours each day, 365 days each year. An electronic copy of this document may also be downloaded from the Office of the Federal Register's website at *www.federalregister.gov* and the Government Publishing Office's website at *www.govinfo.gov*. A copy may also be found at the FAA's Regulations and Policies website at *www.faa.gov/regulations_policies*.

Copies may also be obtained by sending a request to the Federal Aviation Administration, Office of Rulemaking, ARM–1, 800 Independence Avenue SW, Washington, DC 20591, or by calling (202) 267–9677. Requesters must identify the docket or notice number of this rulemaking.

All documents the FAA considered in developing this final rule, including economic analyses and technical reports, may be accessed in the electronic docket for this rulemaking.

B. Small Business Regulatory Enforcement Fairness Act

The Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996 requires the FAA to comply with small entity requests for information or advice about compliance with statutes and regulations within its jurisdiction. A small entity with questions regarding this document may contact its local FAA official or the person listed under the **FOR FURTHER INFORMATION CONTACT** heading at the beginning of the preamble. To find out more about SBREFA on the internet, visit *www.faa.gov/regulations_policies/rulemaking/sbre_act/*.

14 CFR Part 49

Aircraft, Reporting and recordkeeping requirements.

The Amendment

For the reasons discussed in the preamble, the Federal Aviation Administration amends chapter I of title 14, Code of Federal Regulations as follows:

PART 47—AIRCRAFT REGISTRATION

■ 1. The authority citation for part 47 is revised to read as follows:

Authority: 4 U.S.T. 1830; Pub. L. 115–254, Pub. L. 108–297, 118 Stat. 1095 (49 U.S.C. 40101 note, 49 U.S.C. 44101 note); 49 U.S.C. 106(f), 40113–40114, 44101–44108, 44110–44113, 44701, 44703–44704, 44713, 45302, 46104, 46301.

■ 2. Revise § 47.19 to read as follows:

§ 47.19 Registry.

Each application, submission, request, notification, or other communication sent to the Administrator under this part must be delivered to the Registry by a means and in a form acceptable to the Administrator, to include electronic or digital forms and means compatible with systems of the Registry.

■ 3. Amend § 47.31 by revising paragraph (a)(2) to read as follows:

§ 47.31 Application.

* * * * *

(a) * * *

(2) The Aircraft Bill of Sale, AC Form 8050–2, or other evidence of ownership authorized by § 47.33, § 47.35, or § 47.37 (unless already recorded at the Registry); and

* * * * *

■ 4. Revise § 47.39 to read as follows:

§ 47.39 Effective date of registration.

An aircraft is registered on the date the Registry determines that the submissions meet the requirements of this part. The effective date of registration is shown as the date of issue on the Certificate of Aircraft Registration.

PART 49—RECORDING OF AIRCRAFT TITLES AND SECURITY DOCUMENTS

■ 5. The authority citation for part 49 is revised to read as follows:

Authority: 4 U.S.T. 1830; Pub. L. 108–297, 118 Stat. 1095 (49 U.S.C. 40101 note, 49 U.S.C. 44101 note); 49 U.S.C. 106(f), 40113–40114, 44101–44108, 44110–44113, 44701, 44704, 44713, 45302, 46104, 46301.

■ 6. Revise § 49.11 to read as follows:

§ 49.11 FAA Aircraft Registry.

To be eligible for recording, a conveyance must be delivered to the

[5] 65 FR 67249 (Nov. 6, 2000).

[6] FAA Order No. 1210.20 (Jan. 28, 2004), available at *https://www.faa.gov/documentLibrary/media/1210.pdf*.

Registry by a means and in a form acceptable to the Administrator, to include electronic or digital forms and means compatible with systems of the Registry.

■ 7. Amend § 49.17 by revising paragraph (d)(3) to read as follows:

§ 49.17 Conveyances recorded.

* * * * *

(d) * * *

(3) An assignment of an interest in a security agreement must be signed by the assignor and, unless it is attached to and is a part of the originating agreement, must describe the agreement in sufficient detail to identify it, including its date, the names of the parties, the date of FAA recording, and the recorded conveyance number.

* * * * *

■ 8. Revise § 49.21 to read as follows:

§ 49.21 True copy of original conveyance.

A person submitting a conveyance for recording may submit a true copy in lieu of the original, except where an original is specifically required. The true copy must be in a form and manner acceptable to the Administrator, to which is attached a certificate, or other acceptable attestation, of the person submitting the conveyance stating that the copy has been compared with the original and that it is a true copy.

■ 9. Amend § 49.33 by revising paragraph (c) to read as follows:

§ 49.33 Eligibility for recording: general requirements.

* * * * *

(c) It is a true copy of an original document, certified under § 49.21, or an original document or a duplicate original document;

* * * * *

Issued under authority provided by 49 U.S.C. 106(f), 44701(a), and 44101–44108 in Washington, DC.

Michael Gordon Whitaker,

Administrator.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 97

[Docket No. 31585; Amdt. No. 4148]

Standard Instrument Approach Procedures, and Takeoff Minimums and Obstacle Departure Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This rule amends, suspends, or removes Standard Instrument Approach Procedures (SIAPs) and associated Takeoff Minimums and Obstacle Departure Procedures for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, adding new obstacles, or changing air traffic requirements. These changes are designed to provide for the safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: This rule is effective January 17, 2025. The compliance date for each SIAP, associated Takeoff Minimums, and ODP is specified in the amendatory provisions.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of January 17, 2025.

ADDRESSES: Availability of matter incorporated by reference in the amendment is as follows:

For Examination

1. U.S. Department of Transportation, Docket Ops-M30, 1200 New Jersey Avenue SE, West Bldg., Ground Floor, Washington, DC 20590–0001;

2. The FAA Air Traffic Organization Service Area in which the affected airport is located;

3. The office of Aeronautical Information Services, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 or,

4. The National Archives and Records Administration (NARA).

For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.*

Availability

All SIAPs and Takeoff Minimums and ODPs are available online free of charge. Visit the National Flight Data Center online at *nfdc.faa.gov* to register. Additionally, individual SIAP and Takeoff Minimums and ODP copies may be obtained from the FAA Air Traffic Organization Service Area in which the affected airport is located.

FOR FURTHER INFORMATION CONTACT: Thomas J. Nichols, Standards Section Manager, Flight Procedures and Airspace Group, Flight Technologies and Procedures Division, Office of Safety Standards, Flight Standards Service, Aviation Safety, Federal Aviation Administration. Mailing Address: FAA Mike Monroney Aeronautical Center, Flight Procedures and Airspace Group, 6500 South MacArthur Blvd., STB Annex, Bldg 26, Room 217, Oklahoma City, OK 73099. Telephone: (405) 954–1139.

SUPPLEMENTARY INFORMATION: This rule amends 14 CFR part 97 by amending the referenced SIAPs. The complete regulatory description of each SIAP is listed on the appropriate FAA Form 8260, as modified by the National Flight Data Center (NFDC)/Permanent Notice to Air Missions (P–NOTAM), and is incorporated by reference under 5 U.S.C. 552(a), 1 CFR part 51, and 14 CFR 97.20. The large number of SIAPs, their complex nature, and the need for a special format make their verbatim publication in the **Federal Register** expensive and impractical. Further, pilots do not use the regulatory text of the SIAPs, but refer to their graphic depiction on charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP contained on FAA form documents is unnecessary. This amendment provides the affected CFR sections, and specifies the SIAPs and Takeoff Minimums and ODPs with their applicable effective dates. This amendment also identifies the airport and its location, the procedure and the amendment number.

Availability and Summary of Material Incorporated by Reference

The material incorporated by reference is publicly available as listed in the **ADDRESSES** section.

The material incorporated by reference describes SIAPs, Takeoff Minimums and ODPs as identified in the amendatory language for part 97 of this final rule.

The Rule

This amendment to 14 CFR part 97 is effective upon publication of each separate SIAP and Takeoff Minimums and ODP as amended in the transmittal. For safety and timeliness of change considerations, this amendment incorporates only specific changes contained for each SIAP and Takeoff Minimums and ODP as modified by FDC permanent NOTAMs.

The SIAPs and Takeoff Minimums and ODPs, as modified by FDC permanent NOTAM, and contained in this amendment are based on criteria contained in the U.S. Standard for Terminal Instrument Procedures

(TERPS). In developing these changes to SIAPs and Takeoff Minimums and ODPs, the TERPS criteria were applied only to specific conditions existing at the affected airports. All SIAP amendments in this rule have been previously issued by the FAA in a FDC NOTAM as an emergency action of immediate flight safety relating directly to published aeronautical charts.

The circumstances that created the need for these SIAP and Takeoff Minimums and ODP amendments require making them effective in less than 30 days.

Because of the close and immediate relationship between these SIAPs, Takeoff Minimums and ODPs, and safety in air commerce, I find that notice and public procedure under 5 U.S.C. 553(b) are impracticable and contrary to the public interest and, where applicable, under 5 U.S.C. 553(d), good cause exists for making these SIAPs effective in less than 30 days.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 97

Air Traffic Control, Airports, Incorporation by reference, Navigation (Air).

Issued in Washington, DC on January 3, 2025.

Thomas J. Nichols,

Standards Section Manager, Flight Procedures and Airspace Group, Flight Technologies and Procedures Division, Office of Safety Standards, Flight Standards Service, Aviation Safety, Federal Aviation Administration.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, 14 CFR part 97 is amended by amending Standard Instrument Approach Procedures and Takeoff Minimums and ODPs, effective at 0901 UTC on the dates specified, as follows:

PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES

■ 1. The authority citation for part 97 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g), 40103, 40106, 40113, 40114, 40120, 44502, 44514, 44701, 44719, 44721–44722.

■ 2. Part 97 is amended to read as follows:

By amending: § 97.23 VOR, VOR/DME, VOR or TACAN, and VOR/DME or TACAN; § 97.25 LOC, LOC/DME, LDA, LDA/DME, SDF, SDF/DME; § 97.27 NDB, NDB/DME; § 97.29 ILS, ILS/DME, MLS, MLS/DME, MLS/RNAV; § 97.31 RADAR SIAPs; § 97.33 RNAV SIAPs; and § 97.35 COPTER SIAPs,

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 97

[Docket No. 31584; Amdt. No. 4147]

Standard Instrument Approach Procedures, and Takeoff Minimums and Obstacle Departure Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This rule establishes, amends, suspends, or removes Standard Instrument Approach Procedures (SIAPS) and associated Takeoff Minimums and Obstacle Departure procedures (ODPs) for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, adding new obstacles, or changing air traffic requirements. These changes are designed to provide safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: This rule is effective January 17, 2025. The compliance date for each SIAP, associated Takeoff Minimums, and ODP is specified in the amendatory provisions.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of January 17, 2025.

ADDRESSES: Availability of matters incorporated by reference in the amendment is as follows:

For Examination

1. U.S. Department of Transportation, Docket Ops-M30. 1200 New Jersey Avenue SE, West Bldg., Ground Floor, Washington, DC 20590–0001.

2. The FAA Air Traffic Organization Service Area in which the affected airport is located;

3. The office of Aeronautical Information Services, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 or,

4. The National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.*

Availability

All SIAPs and Takeoff Minimums and ODPs are available online free of charge. Visit the National Flight Data Center at *nfdc.faa.gov* to register. Additionally, individual SIAP and Takeoff Minimums and ODP copies may be obtained from the FAA Air Traffic Organization Service Area in which the affected airport is located.

FOR FURTHER INFORMATION CONTACT: Thomas J. Nichols, Standards Section Manager, Flight Procedures and Airspace Group, Flight Technologies and Procedures Division, Office of Safety Standards, Flight Standards Service, Aviation Safety, Federal Aviation Administration. Mailing Address: FAA Mike Monroney Aeronautical Center, Flight Procedures and Airspace Group, 6500 South MacArthur Blvd., STB Annex, Bldg 26, Room 217, Oklahoma City, OK 73099. Telephone (405) 954–1139.

SUPPLEMENTARY INFORMATION: This rule amends 14 CFR part 97 by establishing, amending, suspending, or removes SIAPS, Takeoff Minimums and/or ODPS. The complete regulatory description of each SIAP and its associated Takeoff Minimums or ODP for an identified airport is listed on FAA form documents which are incorporated by reference in this amendment under 5 U.S.C. 552(a), 1 CFR part 51, and 14 CFR 97.20. The applicable FAA Forms are 8260–3, 8260–4, 8260–5, 8260–15A, 8260–15B, when required by an entry on 8260–15A, and 8260–15C.

The large number of SIAPs, Takeoff Minimums and ODPs, their complex nature, and the need for a special format make publication in the **Federal Register** expensive and impractical. Further, pilots do not use the regulatory text of the SIAPs, Takeoff Minimums or ODPs, but instead refer to their graphic depiction on charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP, Takeoff Minimums and ODP listed on FAA form documents is unnecessary. This amendment provides the affected CFR sections and specifies the types of SIAPS, Takeoff Minimums and ODPs with their applicable effective dates. This amendment also identifies the airport and its location, the procedure, and the amendment number.

Availability and Summary of Material Incorporated by Reference

The material incorporated by reference is publicly available as listed in the **ADDRESSES** section.

The material incorporated by reference describes SIAPS, Takeoff Minimums and/or ODPs as identified in the amendatory language for part 97 of this final rule.

The Rule

This amendment to 14 CFR part 97 is effective upon publication of each separate SIAP, Takeoff Minimums and ODP as amended in the transmittal. Some SIAP and Takeoff Minimums and textual ODP amendments may have been issued previously by the FAA in a Flight Data Center (FDC) Notice to Air Missions (NOTAM) as an emergency action of immediate flights safety relating directly to published aeronautical charts.

The circumstances that created the need for some SIAP and Takeoff Minimums and ODP amendments may require making them effective in less than 30 days. For the remaining SIAPs and Takeoff Minimums and ODPs, an effective date at least 30 days after publication is provided.

Further, the SIAPs and Takeoff Minimums and ODPs contained in this amendment are based on the criteria contained in the U.S. Standard for Terminal Instrument Procedures (TERPS). In developing these SIAPs and Takeoff Minimums and ODPs, the TERPS criteria were applied to the conditions existing or anticipated at the affected airports. Because of the close and immediate relationship between these SIAPs, Takeoff Minimums and ODPs, and safety in air commerce, I find that notice and public procedure under 5 U.S.C. 553(b) are impracticable and contrary to the public interest and, where applicable, under 5 U.S.C. 553(d), good cause exists for making some SIAPs effective in less than 30 days.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore-(1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

BILLING CODE 4910–13–P

FEDERAL TRADE COMMISSION

16 CFR Part 1

Adjustments to Civil Penalty Amounts

AGENCY: Federal Trade Commission.

ACTION: Final rule.

SUMMARY: The Federal Trade Commission (''FTC'' or ''Commission'') is implementing adjustments to the civil penalty amounts within its jurisdiction to account for inflation, as required by law.

DATES: Effective January 17, 2025.

FOR FURTHER INFORMATION CONTACT: Marie Choi, Attorney (202–326–3368), Office of the General Counsel, Federal Trade Commission, 600 Pennsylvania Avenue NW, Washington, DC 20580.

SUPPLEMENTARY INFORMATION: The Federal Civil Penalties Inflation Adjustment Act Improvements Act (''FCPIAA'') of 2015 [1] directs agencies to adjust the civil penalty maximums under their jurisdiction for inflation every January. Accordingly, the Commission issues annual adjustments to the maximum civil penalty amounts under its jurisdiction.[2]

Commission Rule 1.98 sets forth the applicable civil penalty amounts for violations of certain laws enforced by the Commission.[3] As directed by the FCPIAA, the Commission is issuing adjustments to increase these maximum civil penalty amounts to address inflation since its prior 2024 adjustment. The following adjusted amounts will take effect on January 17, 2025:

- Section 7A(g)(1) of the Clayton Act, 15 U.S.C. 18a(g)(1) (premerger filing notification violations under the Hart-Scott-Rodino Improvements Act)—Increase from $51,744 to $53,088;
- Section 11(*l*) of the Clayton Act, 15 U.S.C. 21(*l*) (violations of cease and desist orders issued under Clayton Act section 11(b))—Increase from $27,491 to $28,205;
- Section 5(*l*) of the FTC Act, 15 U.S.C. 45(*l*) (violation of final Commission order)—Increase from $51,744 to $53,088;
- Section 5(m)(1)(A) of the FTC Act, 15 U.S.C. 45(m)(1)(A) (knowing violation of rule respecting unfair or deceptive acts or practices)—Increase from $51,744 to $53,088;
- Section 5(m)(1)(B) of the FTC Act, 15 U.S.C. 45(m)(1)(B) (knowing violation of cease and desist order respecting unfair or deceptive acts or practices)—Increase from $51,744 to $53,088;
- Section 10 of the FTC Act, 15 U.S.C. 50 (failure to file required reports)—Increase from $680 to $698;
- Section 5 of the Webb-Pomerene (Export Trade) Act, 15 U.S.C. 65 (failure by associations engaged solely in export trade to file required statements)—Increase from $680 to $698;
- Section 6(b) of the Wool Products Labeling Act, 15 U.S.C. 68d(b) (failure by wool manufacturers to maintain required records)—Increase from $680 to $698;
- Section 3(e) of the Fur Products Labeling Act, 15 U.S.C. 69a(e) (failure to maintain required records regarding fur products)—Increase from $680 to $698;
- Section 8(d)(2) of the Fur Products Labeling Act, 15 U.S.C. 69f(d)(2) (failure to maintain required records regarding fur products)—Increase from $680 to $698;
- Section 333(a) of the Energy Policy and Conservation Act, 42 U.S.C. 6303(a) (knowing violations of EPCA § 332, including labeling violations)—Increase from $560 to $575;
- Section 525(a) of the Energy Policy and Conservation Act, 42 U.S.C. 6395(a) (recycled oil labeling violations)—Increase from $27,491 to $28,205;
- Section 525(b) of the Energy Policy and Conservation Act, 42 U.S.C. 6395(b) (willful violations of recycled oil labeling requirements)—Increase from to $51,744 to $53,088;
- Section 621(a)(2) of the Fair Credit Reporting Act, 15 U.S.C. 1681s(a)(2) (knowing violations of the Fair Credit Reporting Act)—Increase from $4,857 to $4,983;

[1] Public Law 114–74, 701, 129 Stat. 599 (2015). The Act amends the Federal Civil Penalties Inflation Adjustment Act, Public Law 101–410, 104 Stat. 890 (codified at 28 U.S.C. 2461 note).

[2] 81 FR 42476 (2016); 82 FR 8135 (2017); 83 FR 2902 (2018); 84 FR 3980 (2019), 85 FR 2014 (2020); 86 FR 2539 (2021); 87 FR 1070 (2022); 88 FR 1499 (2023); 89 FR 1445 (2024).

[3] 16 CFR 1.98.

• Section 1115(a) of the Medicare Prescription Drug Improvement and Modernization Act of 2003, Public Law 108–173, as amended by Public Law 115–263, 21 U.S.C. 355 note (failure to comply with filing requirements)—Increase from $18,293 to $18,768; and

• Section 814(a) of the Energy Independence and Security Act of 2007, 42 U.S.C. 17304 (violations of prohibitions on market manipulation and provision of false information to federal agencies)—Increase from $1,472,546 to $1,510,803.

Calculation of Inflation Adjustments

The FCPIAA, as amended, directs federal agencies to adjust each civil monetary penalty under their jurisdiction for inflation in January of each year pursuant to a cost-of-living adjustment.[4] The cost-of-living adjustment is based on the percent change between the U.S. Department of Labor's Consumer Price Index for all-urban consumers (''CPI–U'') for the month of October preceding the date of the adjustment, and the CPI–U for October of the prior year.[5] Based on that formula, the cost-of-living adjustment multiplier for 2025 is 1.02598. The FCPIAA also directs that these penalty level adjustments should be rounded to the nearest dollar. Agencies do not have discretion over whether to adjust a maximum civil penalty, or the method used to determine the adjustment.

The following chart illustrates the application of these adjustments to the civil monetary penalties under the Commission's jurisdiction.

CALCULATION OF ADJUSTMENTS TO MAXIMUM CIVIL MONETARY PENALTIES

Citation	Description	2024 Penalty level	Adjustment multiplier	2025 Penalty level (rounded to the nearest dollar)
16 CFR 1.98(a): 15 U.S.C. 18a(g)(1)	Premerger filing notification violations	$51,744	1.02598	$53,088
16 CFR 1.98(b): 15 U.S.C. 21(*l*)	Violations of cease and desist orders	27,491	1.02598	28,205
16 CFR 1.98(c): 15 U.S.C. 45(*l*)	Violations of final Commission orders	51,744	1.02598	53,088
16 CFR 1.98(d): 15 U.S.C. 45(m)(1)(A)	Knowing violations of rules respecting unfair or deceptive acts or practices.	51,744	1.02598	53,088
16 CFR 1.98(e): 15 U.S.C. 45(m)(1)(B)	Knowing violations of cease and desist orders respecting unfair or deceptive acts or practices.	51,744	1.02598	53,088
16 CFR 1.98(f): 15 U.S.C. 50	Failure to file required reports	680	1.02598	698
16 CFR 1.98(g): 15 U.S.C. 65	Failure to file required statements	680	1.02598	698
16 CFR 1.98(h): 15 U.S.C. 68d(b)	Failure to maintain required records	680	1.02598	698

16 CFR 1.98(j): 15 U.S.C. 69f(d)(2)	Failure to maintain required records	680	1.02598	698
16 CFR 1.98(k): 42 U.S.C. 6303(a)	Knowing violations of the Energy Policy and Conservation Act.	560	1.02598	575
16 CFR 1.98(*l*): 42 U.S.C. 6395(a)	Recycled oil labeling violations	27,491	1.02598	28,205
16 CFR 1.98(*l*): 42 U.S.C. 6395(b)	Willful recycled oil labeling violations	51,744	1.02598	53,088
16 CFR 1.98(m): 15 U.S.C. 1681s(a)(2)	Knowing violations of the Fair Credit Reporting Act.	4,857	1.02598	4,983
16 CFR 1.98(n): 21 U.S.C. 355 note	Non-compliance with filing requirements	18,293	1.02598	18,768
16 CFR 1.98(o): 42 U.S.C. 17304	Market manipulation or provision of false information to federal agencies.	1,472,546	1.02598	1,510,803

Effective Dates of New Penalties

These new penalty levels apply to civil penalties assessed after the effective date of the applicable adjustment, including civil penalties whose associated violation predated the effective date.[6] These adjustments do not retrospectively change previously assessed or enforced civil penalties that the FTC is actively collecting or has collected.

Procedural Requirements

The FCPIAA, as amended, directs agencies to adjust civil monetary penalties through rulemaking and to publish the required inflation adjustments in the **Federal Register**, notwithstanding section 553 of title 5 in the United States Code. Pursuant to this congressional mandate, prior public notice and comment under the APA and a delayed effective date are not required. For this reason, the requirements of the Regulatory Flexibility Act (''RFA'') also do not apply.[7] Further, this rule does not contain any collection of information requirements as defined by the Paperwork Reduction Act of 1995 as amended. 44 U.S.C. 3501 *et seq.*

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), the Office of Information and Regulatory Affairs designated this rule as not a ''major rule,'' as defined by 5 U.S.C. 804(2).

List of Subjects for 16 CFR Part 1

Administrative practice and procedure, Penalties, Trade practices.

Text of Amendments

For the reasons set forth in the preamble, the Federal Trade Commission amends title 16, chapter I, subchapter A, of the Code of Federal Regulations, as follows:

PART 1—GENERAL PROCEDURES

Subpart L—Civil Penalty Adjustments Under the Federal Civil Penalties Inflation Adjustment Act of 1990, as Amended

■ 1. The authority citation for subpart L continues to read as follows:

Authority: 28 U.S.C. 2461 note.

■ 2. Revise § 1.98 to read as follows:

[4] 28 U.S.C. 2461 note at (4).

[5] *Id.* (3), (5)(b); Office of Management and Budget, Memorandum M–25–02, *Implementation of Penalty Inflation Adjustments for 2025 Pursuant to the Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015* (December 17, 2024), available at: *https://www.whitehouse.gov/wp-content/uploads/2024/12/M-25-02.pdf.*

[6] 28 U.S.C. 2461 note at (6).

[7] A regulatory flexibility analysis under the RFA is required only when an agency must publish a notice of proposed rulemaking for comment. *See* 5 U.S.C. 603.

§ 1.98 Adjustment of civil monetary penalty amounts.

This section makes inflation adjustments in the dollar amounts of civil monetary penalties provided by law within the Commission's jurisdiction. The following maximum civil penalty amounts apply only to penalties assessed after January 17, 2025, including those penalties whose associated violation predated January 17, 2025.

(a) Section 7A(g)(1) of the Clayton Act, 15 U.S.C. 18a(g)(1)—$53,088;

(b) Section 11(*l*) of the Clayton Act, 15 U.S.C. 21(*l*)—$28,205;

(c) Section 5(*l*) of the FTC Act, 15 U.S.C. 45(*l*)—$53,088;

(d) Section 5(m)(1)(A) of the FTC Act, 15 U.S.C. 45(m)(1)(A)—$53,088;

(e) Section 5(m)(1)(B) of the FTC Act, 15 U.S.C. 45(m)(1)(B)—$53,088;

(f) Section 10 of the FTC Act, 15 U.S.C. 50—$698;

(g) Section 5 of the Webb-Pomerene (Export Trade) Act, 15 U.S.C. 65—$698;

(h) Section 6(b) of the Wool Products Labeling Act, 15 U.S.C. 68d(b)—$698;

(i) Section 3(e) of the Fur Products Labeling Act, 15 U.S.C. 69a(e)—$698;

(j) Section 8(d)(2) of the Fur Products Labeling Act, 15 U.S.C. 69f(d)(2)—$698;

(k) Section 333(a) of the Energy Policy and Conservation Act, 42 U.S.C. 6303(a)—$575;

(l) Sections 525(a) and (b) of the Energy Policy and Conservation Act, 42 U.S.C. 6395(a) and (b), respectively—$28,205 and $53,088, respectively;

(m) Section 621(a)(2) of the Fair Credit Reporting Act, 15 U.S.C. 1681s(a)(2)—$4,983;

(n) Section 1115(a) of the Medicare Prescription Drug Improvement and Modernization Act of 2003, Public Law 108–173, as amended by Public Law 115–263, 21 U.S.C. 355 note—$18,768;

(o) Section 814(a) of the Energy Independence and Security Act of 2007, 42 U.S.C. 17304—$1,510,803; and

(p) Civil monetary penalties authorized by reference to the Federal Trade Commission Act under any other provision of law within the jurisdiction of the Commission—refer to the amounts set forth in paragraphs (c), (d), (e) and (f) of this section, as applicable.

By direction of the Commission.

April J. Tabor,

Secretary.

[Docket No. SSA–2024–0056]

RIN 0960–AI93

Further Extension of the Flexibility in Evaluating ''Close Proximity of Time'' To Evaluate Ongoing Changes in Healthcare

AGENCY: Social Security Administration.

ACTION: Temporary final rule with request for comments.

SUMMARY: We are extending the flexibility in the ''close proximity of time'' standard, as defined in two prior temporary final rules (TFR), through May 11, 2029. We issued a TFR providing the ''close proximity of time'' flexibility on July 23, 2021, because the COVID–19 national public health emergency (PHE) caused many individuals to experience barriers that prevented them from timely accessing in-person healthcare. On September 29, 2023, we extended the flexibility to evaluate evolving healthcare practices and consumption in a post-PHE environment. We determined that we need additional time to fully evaluate still-evolving healthcare practices after the PHE. We are therefore issuing this TFR to extend the ''close proximity of time'' flexibility until May 11, 2029, so we can continue to evaluate changes in healthcare practices and determine the proper ''close proximity of time'' standard for the musculoskeletal disorders listings.

DATES:

Effective date: This TFR is effective on February 18, 2025.

Comment date: We invite written comments. Comments must be submitted no later than March 18, 2025.

Expiration date: Unless we extend the provisions of this TFR by a final rule published in the **Federal Register**, it will cease to be effective on May 11, 2029.

ADDRESSES: You may submit comments by any one of three methods—internet, fax, or mail. Do not submit the same comment(s) multiple times or by more than one method. Regardless of which method you choose, please state that your comment(s) refer to Docket No. SSA–2024–0056 so that we may associate your comment(s) with the correct rule.

Caution: You should be careful to include in your comment(s) only information that you wish to make publicly available. We strongly urge you not to include any personal information in your comment(s), such as Social Security numbers or medical information.

1. *Internet:* We strongly recommend that you submit your comment(s) via the internet. Please visit the Federal eRulemaking portal at *https://www.regulations.gov.* Use the ''search'' function to find docket number SSA–2024–0056. The system will issue a tracking number to confirm your submission. You will not be able to view your comment(s) immediately because we must post each comment manually. It may take up to one week for your comment(s) to be viewable.

2. *Fax:* Fax comments to 1–833–410–1631.

3. *Mail:* Mail your comments to the Office of Legislation and Congressional Affairs Regulations and Reports Clearance Staff, Mail Stop 3253, Altmeyer, 6401 Security Blvd., Baltimore, MD 21235–6401.

Comments are available for public viewing on the Federal eRulemaking portal at *https://www.regulations.gov* or in person, during regular business hours, by arranging with the contact person identified below.

FOR FURTHER INFORMATION CONTACT: Michael J. Goldstein, Office of Disability Policy, Social Security Administration, 6401 Security Boulevard, Baltimore, MD 21235–6401, (410) 965–1020.

Background

On December 3, 2020, we published the final rule, *Revised Medical Criteria for Evaluating Musculoskeletal Disorders* (final rule),[1] which became effective on April 2, 2021. This final rule revised the criteria in the listings that we use to evaluate disability claims involving musculoskeletal disorders in adults and children at the third step of our sequential evaluation process under titles II and XVI of the Social Security Act (Act).[2] The final rule, among other

[1] 85 FR 78164 (2020).

[2] For adults, the listings describe, for each of the major body systems, impairments that we consider to be severe enough to prevent an individual from doing any gainful activity regardless of his or her age, education, or work experience. 20 CFR 404.1525(a) and 416.925(a). For children, the listings describe impairments we consider severe enough to cause marked and severe functional limitations. 20 CFR 416.925(a). We use the listings at step 3 of the sequential evaluation process to identify claims in which the individual is clearly disabled under our rules. 20 CFR 404.1520, 416.920, and 416.924). We do not deny a claim when a person's medical impairment(s) does not satisfy the criteria of a listing. Instead, we continue

things, revised the listings in response to the decision in *Radford* v. *Colvin,*[3] which interpreted former listing 1.04A to require a disability claimant to show only ''that each of the symptoms are present, and that the claimant has suffered or can be expected to suffer from [the condition] continuously for at least 12 months.'' [4] Under the court's interpretation of the former listing, a claimant did not need to show that each necessary criterion was present simultaneously or in particularly close proximity, as required by our interpretation of that listing.[5] The final rule clarified that, for the purposes of applying certain musculoskeletal disorders listings,[6] all of the required medical criteria must be present simultaneously, or within a close proximity of time, to satisfy the level of severity needed for the impairment to meet the listing. The final rule further defined the phrase ''within a close proximity of time'' to mean ''that *all* of the relevant criteria must appear in the medical record within a consecutive 4-month period'' (emphasis in original).[7] We also provided that ''[w]hen the criterion is imaging, we mean that we could reasonably expect the findings on imaging to have been present at the date of impairment or date of onset.'' [8]

We established the consecutive 4-month period as a criterion to meet the level of severity in some of the musculoskeletal disorders listings based on our research of then relevant medical literature and clinical guidelines.[9] When we proposed this requirement as part of a notice of proposed rulemaking (NPRM),[10] we specifically asked interested members of the public to comment on this issue and provide us with any studies and data that supported their comments for a different standard.[11] In response, a number of commenters raised concerns regarding barriers to accessing medical providers or documenting medical listing criterion.[12] However, none of the commenters submitted studies or data. In the final rule, we concluded that the consecutive 4-month period was consistent with the timeframe medical providers were generally trained to use for scheduling their patients,[13] the general standard of care,[14] and the frequency of healthcare visits by individuals with musculoskeletal conditions.[15] At the same time, the consecutive 4-month period provided some leeway for claimants, because the standard for patient revisits was once every 3 months.[16]

Onset of COVID–19

In 2020, the COVID–19 virus began to spread throughout the country, prompting the Secretary of Health and Human Services (HHS) to declare a national PHE on January 31, 2020.[17] With the outbreak of COVID–19, access to and the provision of healthcare changed significantly. Throughout the PHE, individuals across the country—including those with musculoskeletal disorders—altered their frequency and manner of seeking access to healthcare. This was due in part to healthcare organizations and government agencies such as the Centers for Medicare & Medicaid Services (CMS) [18] prioritizing the most urgent services and encouraging patients to delay other procedures during the PHE. Likewise, many individuals delayed or deferred important treatments due to closures of medical offices, fears of contracting COVID–19 infection (including fear of exposing high-risk individuals living in their household to infection), and other challenges created or exacerbated by the pandemic, such as difficulty accessing transportation.

In July 2021, we published a TFR entitled *Flexibility in Evaluating ''Close Proximity of Time'' Due to COVID–19 Related Barriers to Healthcare* [19] (2021 TFR). We acknowledged at that time that the response to the COVID–19 pandemic dramatically changed the provision of, and access to, healthcare services throughout the country, and we cited evidence showing that significant numbers of people had foregone or delayed care, or replaced in-person medical visits with telehealth visits.[20] Therefore, we concluded that individuals with musculoskeletal impairments who, before the pandemic, would have sought and received healthcare at a frequency consistent with the standards in our final rule, might have become unable to seek, or might have chosen not to seek, care for their condition in the same manner and frequency. Affected individuals whose impairments might have previously met the applicable listing requirements might have subsequently failed to meet the ''close proximity of time'' standard because of the changes in the provision of healthcare resulting from COVID–19. We therefore extended the timeframe for an individual's record to demonstrate the necessary listing criteria throughout the pandemic period.

The 2021 TFR defined the ''pandemic period'' for the purposes of our regulations and provided that during the ''pandemic period,'' the phrase ''within a close proximity of time'' meant that *all* of the relevant criteria must appear in the medical record within a consecutive 12-month period.'' [21] We further defined the ''pandemic period'' as beginning on April 2, 2021 and ending 6 months after the Secretary of HHS determined that the COVID–19 national PHE no longer existed. We extended the ''pandemic period'' for 6 months after the end of the COVID–19 national PHE to allow time for healthcare access and provision to normalize and return to pre-pandemic period levels as well as to account for potential backlogs in medical care that may have continued to interfere with

the sequential evaluation process. 20 CFR 404.1520(a)(4) and 416.920(a)(4).

[21] 86 FR at 38925.

access to the relevant care and documentation needed to satisfy the listing criteria. We also indicated that we would study the application of ''close proximity of time'' flexibility on our programs.[22]

When we published the 2021 TFR in the **Federal Register**, we provided the public with a 60-day comment period, which ended on September 21, 2021. We specifically contemplated the possibility of extending the flexibility and we invited comments on all aspects of the rule, including the definition of ''pandemic period'' and the expiration date. We received one comment from the National Organization of Social Security Claimants' Representatives (NOSSCR) [23] that encouraged us to make the temporary 12-month standard permanent. The commenter also recommended, if we chose not to make the 12-month standard permanent, that we extend the period to one year after the end of the PHE. They argued that access to care issues exist regardless of the pandemic and that it would take longer than 6 months for healthcare delivery to normalize after the end of the PHE.

Issuance of the 2023 TFR Extending the 12-Month Standard

The 2021 TFR was effective until six months after the effective date of a determination by the Secretary of HHS that a PHE resulting from the COVID–19 pandemic ended. The Secretary of HHS made that determination on May 11, 2023.[24] Consequently, the 2021 TFR was set to expire in November 2023.

On September 29, 2023, we extended the ''close proximity of time'' flexibility through May 11, 2025.[25] We explained at the time that we intended the extension to allow for time to study changes in healthcare access and provision, and to account for the ongoing increased use of telehealth services following the PHE. We further explained that we would continue to evaluate these evolving practices and their effects to determine the appropriate ''close proximity of time'' standard to include in the musculoskeletal disorders listings going forward.[26]

In issuing the extension, we also discussed the public comment we received from NOSSCR about the 2021 TFR, encouraging us to make the 12-month standard permanent or extend it to apply for one year after the end of the PHE. We explained that by May 2025, we expected to determine whether we should extend the TFR again, make the flexibility in the TFR permanent, as the commenter recommended, propose a different standard, or let the TFR expire and revert to the 4-month ''close proximity of time'' standard. Additionally, we noted that while the commenter raised issues regarding general barriers to accessing care that disability benefit applicants may be disproportionally likely to experience, we considered the comment outside the scope of the second TFR and committed to addressing these comments in a future venue.

Public Comment on the 2023 TFR

When we extended the flexibility again in 2023, we received one comment, from The Connected Health Initiative. The commenter was supportive of us extending the flexibility provided in the TFR and our commitment to continuing to study the appropriate time period for ''close proximity of findings,'' noting that ''data indicates that, going forward, telehealth will likely replace some in-person visits for some people with musculoskeletal disorders post-PHE, which could lead to extended revisit intervals between thorough examinations.'' [27] We appreciate this commenter's feedback and, consistent with the comment, intend to continue studying these impacts.

Rationale for This Rule

We are extending the ''close proximity of time'' flexibility through May 11, 2029, to allow for additional time to study changes in healthcare access and provision, and to account for the ongoing increased use of telehealth services following the PHE. We will evaluate these evolving practices and their effects to determine the appropriate time standard to include in the musculoskeletal disorders listings going forward.

The PHE caused changes in healthcare provision and access, which led to a decrease in health care use and a shift from in-person healthcare to telehealth (phone or video). In response, we published the 2021 TFR, which temporarily amended the introductory text of the musculoskeletal disorders listings to define the ''close proximity of time'' standard as presence of the required findings in the record within a consecutive 12-month period. This flexibility was limited to the ''pandemic period,'' originally defined as the period beginning April 2, 2021, until 6 months after the end of the COVID–19 national PHE, November 11, 2023. Due to the ongoing increased use of telehealth services following the PHE and the many changes to healthcare rules and legislation that were set to be phased out over a two-year period, we concluded that healthcare would be in a state of rapid change in the period immediately following the PHE, so we would need to study the changes in healthcare provision before defining the appropriate ''close proximity of time'' interval going forward. We thus published an extension of the flexibility provided in the TFR by redefining the ''pandemic period'' to end on May 11, 2025, two years after the end of the PHE.

After studying the available data regarding the changes in healthcare immediately following the PHE, we have concluded that a further extension is necessary because healthcare access and provision remains different from what it was prior to the PHE and we are continuing to evaluate whether the 4-month period is supported. There is still uncertainty and change in the medical and legal framework regarding telehealth, and the limited data available about telehealth use immediately after the PHE shows ongoing increased telehealth use compared to the period prior to the PHE. For example, Medicare data shows that telehealth usage across all medical specialties increased significantly during the pandemic, and while telehealth usage gradually declined from its peak, it has not returned to pre-pandemic levels.[28]

Telehealth examinations may provide continuity of care, but they generally cannot provide all the medical findings required under the musculoskeletal disorders listings. Additionally, anecdotal evidence from after the PHE suggests that healthcare costs and workforce shortages, which were exacerbated by the pandemic, have led

to deferment of care and long wait times to see providers. These issues are projected to get worse over the next decade,[29] which could result in further delays in accessing in-person examinations, which provide the evidence we need to evaluate musculoskeletal disorders. We need further data to establish a permanent definition for ''close proximity of time.''

Available research and data on post-PHE healthcare provides an uncertain picture of the long-term impact of the COVID–19 pandemic. Although the PHE ended on May 11, 2023, several flexibilities provided during the PHE to increase telehealth access have been extended through March 31, 2025 (*e.g.,* Medicare coverage of audio-only telehealth, telehealth originating at a patient's home, and telerehabilitation).[30] Additionally, Congress is considering permanent changes to provide additional flexibilities for telehealth.[31] In addition to the evolving nature of telehealth, there are also significant delays in care provision due to healthcare workforce shortages and access issues that have persisted and, in many cases, worsened after the PHE.

Although the research is still developing and most professional organizations still have yet to update their clinical practice guidelines for post-pandemic healthcare, the emerging research and data suggest that the increased use of telehealth (including in place of some in-person visits) is generally appreciated by patients and providers and expected to continue for some time, but at a lower level than at the height of the pandemic.[32] This appears true for both audio-only and audio-visual telehealth modalities, and for specialties that previously only sparingly used telehealth, such as orthopedic surgery, spine surgery, and rehabilitation.[33] In the field of rehabilitation, the American Physical Therapy Association recently published clinical practice guidelines supporting telerehabilitation as a mode of delivering physical therapist services to patients who would benefit from services and whose barriers can be accommodated. At the same time, they noted that additional telerehabilitation research is needed for all ages, digital health applications, physical therapist measures, and interventions.[34] Nevertheless, there is a yearslong research lag that limits availability of post-PHE data, making it difficult to fully quantify the post-PHE utilization of telehealth and in-person care in practice.[35]

The initial data from CMS and the Department of Veterans Affairs (VA) appears to show that rates of telehealth use for the first few months after the end of the PHE remained steady and generally consistent with utilization rates in late 2021 and 2022.[36] VA data showed an overall increase in the proportion of telehealth visits from 20 percent prior to the pandemic to about 35 percent leading up to and for the first few months after the end of the PHE. Researchers analyzing the VA data through August 2023 indicated that telehealth rates stabilized around May 2021 and that ''although primary care and subspecialty telemedicine is often limited by the need for in-person evaluations (for example, physical examinations), about 10% of in-person primary and subspecialty care has converted to telemedicine.'' [37] Additionally, Medicare data trends through the second quarter of 2024 showed rates of telehealth stabilizing between 12 and 15 percent of Medicare users in 2022 through June 2024, compared to 7 percent of users prior to the pandemic. They also showed differences in telehealth use by race, ethnicity, age, disability status, and dual enrollment status with Medicaid. The data shows that Medicare users who were disabled or who were dually eligible for Medicare and Medicaid tended to use telehealth more both during and after the PHE.[38]

Anecdotal evidence supports that telehealth is still being used at higher rates than prior to the pandemic, but that additional research is needed to describe the role of telehealth in healthcare after the PHE. At their presentation to the National Academies of Science, Engineering, and Medicine (NASEM) Standing Committee of Medical and Vocational Experts for the Social Security Administration's Disability Programs, two experts in musculoskeletal care affirmed that although telehealth is more common now than prior to the pandemic and provides benefits for those who use it, there is no currently available data that provides a picture of telehealth use following the PHE. They concluded that there is not an industry standard for telehealth utilization at this time, with more research, consensus, and standardization needed in the field.[39]

Continued

The conclusions of the experts are supported by a report from the Outcomes Planning Committee of the VHA Office of Health Services Research and Development's State-of-the-Art Conference on Virtual Care. The report concluded that there is a need for additional research to identify the specific scenarios in which virtual care can be leveraged to improve patient outcomes, and that additional research regarding the use of hybrid models ''will be critical in determining whether virtual visits should function primarily as periodic check-ins before patients can receive certain examinations or procedures in-person, or whether virtual care can fully replace in-person care in specific clinical scenarios.'' [40]

Although many individuals access telehealth visits successfully, the clinical signs and findings required by some of the musculoskeletal disorders listings may not be present in the telehealth record due to the limitations of telemedicine. While testing by the patient is possible through telehealth, there are limits in provocative testing (testing that manipulates the areas where an individual has pain in order to reproduce the pain), discrete palpation (a technique that uses targeted pressure to identify and quantify the abnormalities of the musculoskeletal system, such as warmth, swelling, pain, tenderness, and trigger points), and strength or stability testing.[41] During the beginning of the COVID–19 pandemic, orthopedists created guidelines for virtual examinations of patients through telemedicine, and found that while the patient could perform many tests, there are inherent limitations to testing in this manner. For example, the authors recommend using another person to hold the camera during gait examination to get a better view of the patient's gait mechanics, which is not always possible.[42] Further, the VHA has found that although patients appreciate telehealth, many are unable to complete exams that require precise measurements, such as range of motion or reflexes.[43] While it appears that since the end of the PHE there have been some post-surgical innovations to conduct follow-up spine care virtually, such as applications that can be used on a smartphone,[44] a recent survey of orthopedic trauma care providers shows that concerns still exist about the generalizability of telemedicine to the field of orthopedic trauma care, as a majority of orthopedic physicians felt that virtual physical examinations allowed for only limited information.[45] Thus, the utility of telehealth examination in the specific context of surgical and/or orthopedic trauma care remains uncertain.

Additionally, an increasing number of people are unable to access needed healthcare due to cost as the PHE flexibilities are phased out. Medicaid redeterminations restarted at the end of the PHE, leading to an increase in the uninsured, and the enhanced health insurance marketplace subsidies will expire in 2025.[46] According to data from the Kaiser Family Foundation (KFF), over 25 million people have been disenrolled from Medicaid since April 2023, when the ''unwinding'' of the continuous enrollment provision began, leading to an increase in the uninsured population.[47]

The Congressional Budget Office predicts an increase in the share and number of people without insurance over the next decade, with a predicted increase in the uninsured population from 24 million in 2023 to 32 million in 2027, primarily driven by changes in Medicaid and Children's Health Insurance Program (CHIP) enrollment over the next few years resulting from the expiration of PHE-era programs.[48] National surveys from KFF and the Federal Reserve in 2022 and 2023 showed that a large percentage of people (25 to 28 percent) postponed or went without needed medical care due to cost regardless of insurance status, and that the uninsured population was significantly more likely to forego or postpone care (42 to 60 percent) than the insured population.[49]

The Commonwealth Fund's 2024 report, which compared the performance of health systems of 10 high-income countries using data from 2020 or later and is the first such report to account for the effects of the COVID–19 pandemic, found that the United States ranked last on several measures, including access to care, and this was attributed largely to cost-related barriers, such as the percentage of uninsured residents as well as inadequate coverage and high deductibles and copayments.[50] The Commonwealth Fund's 2023 survey noted that nearly half of adults with lower or average incomes in the U.S., and nearly one of three with higher incomes, reported at least one cost-related problem accessing health care in the prior year. The problems included

having a medical issue but not visiting a doctor, skipping a medical test, treatment, or follow-up that was recommended by a doctor, not filling a prescription, or skipping medication doses.[51] Given the projected increases in the uninsured population and the impact of cost and insurance status on access to care, postponed and foregone health care is expected to remain an issue for the foreseeable future, potentially limiting the frequency of visits.

Additional research suggests that certain individuals, such as those who are uninsured or low-income, may face barriers to regular or recommended health care treatment, and that these barriers appear to have increased after the pandemic, which may warrant a longer standard to allow for developing the necessary evidence. In a separate publication, summarizing recent research, KFF notes that studies repeatedly demonstrate that uninsured individuals are less likely than those with insurance to receive preventive care and services for major health conditions and chronic diseases.[52] For example, a 2023 KFF survey found that 61 percent of uninsured adults skipped or postponed getting treatment due to cost compared to 21 percent for insured adults.[53] Similarly, a 2019 National Center for Health Statistics survey found that 36.5 percent of uninsured adults delayed or did not receive needed medical care due to cost as compared to eight percent of insured individuals.[54] That same study found that over 20 percent of individuals living at or below 200 percent of the federal poverty threshold delayed or did not receive medical care due to cost as compared to 8.5 percent of all individuals. Notably, the 2019 study showed fewer people missing care than the 2023 KFF survey, again suggesting that problems accessing care have been exacerbated by the pandemic. Given that individuals who apply for disability benefits are disproportionately uninsured [55] or low-income, a standard which helps to accommodate cost barriers to healthcare access may be appropriate.

Healthcare workforce analyses have also shown significant healthcare workforce shortages and delays in care, exacerbated by the pandemic, and have projected ongoing healthcare workforce shortages for at least a decade, further impacting access to care, with disparate access to care for different communities.[56] Preliminary data from the pandemic shows that stress during the pandemic led to burnout and retirement earlier than projected for many physicians and nurses, exacerbating workforce shortages that were already increasing due to an aging healthcare workforce.[57] At the same time, healthcare demand has increased and is expected to continue to increase due to population growth, the increase in individuals with multiple chronic conditions, and the aging population.[58] Experts in musculoskeletal care presenting to the NASEM Standing Committee reported significant persisting delays in specialty care appointments compared to pre-pandemic norms.[59] The Commonwealth Fund's 2024 report also noted that timely access to care in the United States is limited by a worsening shortage of primary care clinicians and the time spent by healthcare providers on administrative issues related to billing.[60]

The Health Resources and Services Administration (HRSA) reported in November 2023 that approximately 102 million Americans live in a primary care health professional shortage area and that maldistribution of the healthcare workforce results in severe shortages in rural communities.[61] Additionally, a 2024 HRSA report projects average physician shortages of 56 percent in non-metro areas by 2036.[62] Similarly, the Association of American Medical Colleges recently projected a shortage of up to 139,000 physicians by 2033 and concluded that if communities historically underserved by our health care system had fewer access barriers and comparable access was provided for all, the shortfall would be three to six times the magnitude of current estimates.[63]

Any ongoing decrease in the frequency of, or increase in wait times for, in-person medical visits could lead to additional barriers or delays in documenting certain findings in the medical record that are needed to meet or equal the musculoskeletal disorders listings. This is true even if the decrease in in-person visits is offset with telehealth visits that make healthcare more accessible for some, because telehealth visits cannot reliably provide all the findings provided during in-person visits. The anecdotal evidence we have suggests the possibility of ongoing changes in healthcare related to the pandemic, including significant post-PHE delays in in-person care and ongoing telehealth utilization at a higher rate than prior to the pandemic. Although this evidence may support additional flexibility in the proximity standard, there is also an overall lack of published and available data on healthcare access and utilization following the PHE on which to rely. Therefore, an extension until May 11,

2029, is necessary to ensure a sufficient research base for a permanent standard.

We are extending the flexibility until May 11, 2029, to provide time for published research to demonstrate utilization data after the PHE. Experts in musculoskeletal care presenting to the NASEM Standing Committee in June 2024 noted that there was almost no published research about musculoskeletal health care utilization in 2022 and beyond. One expert explained that this is largely due to the logistics of scientific research, where data is collected in large databases on a delay, and researchers must obtain funding and access to the database, analyze the data, and seek peer review and publication, which typically takes several years.[64] Therefore, in order to provide time for development of the evidence base and for full notice-and-comment rulemaking, we are extending the flexibility in the proximity standard until May 11, 2029. However, we will begin the rulemaking process for a permanent proximity standard as soon as the evidence base is available.

Evidence to Review

We will continue to use the extension period to study the changes in healthcare access and provision after the expiration of the PHE. During the extension period, we will also continue to review information about disparities in access to care or modalities of care. We expect this additional period will allow us to consider whether we should revert to the 4-month ''close proximity of time'' standard, adopt a permanent change to the consecutive 12-month ''close proximity of time'' period, or use a different timeframe, to account for ongoing changes in healthcare access and delivery.

We will also continue to study the application of the ''close proximity of time'' rule in our programs. In addition, we will continue to monitor the quality of our determinations and decisions to inform our policy decision and ensure the appropriate adjudication of claims for people with musculoskeletal disorders.

Solicitation for Public Comment

Although we are publishing a temporary final rule, we invite public comment on all aspects of the rule, including:

- The appropriate standard for ''close proximity of time'' to account for barriers to access to care or changes in healthcare delivery, and the justification or evidence for the standard the commenter identifies as appropriate;
- Research, evidence, or information about barriers to access to care, changes in healthcare delivery, and disproportionate burdens faced by any subset of the population and how that impacts an individual's ability to provide the required evidence for a medical listing; and
- The expiration date of this rule.

Please share any supporting information that you might have. We will consider any substantive comments we receive within 60 days of the publication of this TFR.

Summary of the Changes

This rule revises sections 1.00C7a and 101.00C7a of the musculoskeletal disorders listings to define a new term, ''post-pandemic evaluation period,'' to mean ''the period beginning on May 12, 2025, and ending on May 11, 2029.'' We are adding this new term because we are extending the more flexible ''close proximity of time'' standard to six years after the end of the PHE. This rule also revises sections 1.00C7c and 101.00C7c to indicate that, for claims determined or decided during the pandemic period or the post-pandemic evaluation period, ''within a close proximity of time'' means that all the relevant criteria must appear in the medical record within a consecutive 12-month period.

We are making changes based on the Commissioner of Social Security's rulemaking authority specified in sections 205(a), 702(a)(5), 1631(d)(1), 1631(e)(1)(A), and 1633(a) of the Social Security Act. Under those sections, the Commissioner may adopt rules regarding, among other things, the nature and extent of evidence needed to establish benefit eligibility, as well as methods of taking and furnishing such evidence.

Justification for Foregoing Notice and Comment Rulemaking

We follow the Administrative Procedure Act's (APA) rulemaking procedures specified in 5 U.S.C. 553 when we develop regulations. Generally, the APA requires that an agency provide prior notice and opportunity for public comment before issuing a final rule. However, the APA provides exceptions to its notice and public comment procedures when an agency finds there is good cause for dispensing with such procedures because they are impracticable, unnecessary, or contrary to the public interest (5 U.S.C. 553(b)(B)).

We find that there is good cause to issue this TFR without prior notice and public comment.[65] We have been following the more flexible 12-month ''close proximity of time'' standard for over three years, and it would be impracticable and contrary to the public interest to disrupt our claims adjudications by delaying implementation of this TFR. Delayed implementation of this TFR would require us to either delay adjudicating affected claims, potentially resulting in delayed benefits to vulnerable individuals,[66] or apply the 4-month ''close proximity of time'' standard, which does not consider changes in healthcare access and delivery related to the PHE, as discussed in the preamble. If we applied the 4-month standard, individuals might be unable to show that they meet a listing under the 4-month ''close proximity of time'' standard merely due to changes in how the healthcare system works. Implementing this TFR, without prior notice and public comment, will allow us to maintain this more flexible standard while we review and adapt to new clinical practices and healthcare data that emerge in a post-PHE landscape.

Delay in implementing this TFR would be impracticable and contrary to the public interest because it may cause some applicants to experience immediate and severe financial hardship, placing them at risk of losing their homes, means of transportation, access to health care, and other important resources, in addition to experiencing increased stress as they await the outcome of their case and their award of benefits. This is particularly true for the population that is eligible for Supplemental Security Income (SSI), which has, by definition, severely limited income and financial resources.[67] An unnecessary delay

[64] Standaert, Christopher, M.D. COVID Disruptions and their Impact on Musculoskeletal Care. Presentation to the Standing Committee of the National Academies of Science and Medicine Health and Medicine Division, on June 20, 2024.

[65] In our first TFR, we provided notice that we would consider extending the expiration date of the rule, and we invited public comments on the expiration date. 86 FR at 38920, 38924. As discussed above, we received a public comment from NOSSCR that encouraged us to make the temporary 12-month standard permanent or, if we chose not to make the 12-month standard permanent, to extend the period covered by the first TFR to one year after the end of the PHE. Similarly, in our second TFR we provided notice that we would consider extending the expiration date of the rule, and we invited public comments on the expiration date. 88 FR at 67081, 67088. As discussed above, we received a public comment from The Connected Health Initiative which supported our decision to extend the original TFR to continue to study the impacts of the PHE and barriers to healthcare.

[66] Individuals who are eligible for disability benefits are, by definition, not able to engage in substantial gainful activity, which means they may experience immediate and severe financial hardship.

[67] 42 U.S.C. 1382(a); 20 CFR 416.202.

would cause significant harm and detract substantially from the effectiveness of the disability program in providing meaningful economic relief for disabled individuals. Even if affected claimants received the same benefits at a later date, these individuals may suffer from long term or permanent consequences of the lost income during the period of delay.

Delaying implementation of this final rule to provide an opportunity for prior notice and public comment is also unnecessary. As noted above, we have applied the more flexible 12-month ''close proximity of time'' standard for over three years, and its effects have been negligible, merely resulting in more streamlined, faster disability determinations for a very small number of claimants.

Moreover, we have given interested parties an opportunity to provide public comment on the 12-month standard—including soliciting comments about a possible extension—on two prior occasions: first when we published the 2021 TFR and then, when we extended the flexibility in September 2023. Altogether, we received two public comments. The first commenter supported making the 12-month standard permanent or, alternatively, extending it, and the second commenter supported an extension of the 12-month standard. Accordingly, delaying implementation of this rule to obtain further public comment is unnecessary.

For good cause shown, to avoid delaying benefits to vulnerable individuals while providing appropriate flexibility to account for COVID–19-related healthcare changes, we are dispensing with prior notice and public comment on this rule pursuant to 5 U.S.C. 553(b)(B).

Regulatory Procedures

Clarity of This Rule

Executive Order 12866, as supplemented by Executive Orders 13563 and 14094, requires each agency to write all rules in plain language. In addition to your substantive comments on this rule, we invite your comments on how to make the rule easier to understand.

For example:

- Would more, but shorter, sections be better?
- Are the requirements in the rule clearly stated?
- Have we organized the material to suit your needs?
- Could we improve clarity by adding tables, lists, or diagrams?
- What else could we do to make the rule easier to understand?
- Does the rule contain technical language or jargon that is not clear?
- Would a different format make the rule easier to understand, *e.g.,* grouping and order of sections, use of headings, paragraphing?

Executive Order 12866, as Supplemented by Executive Orders 13563 and 14094

We consulted with the Office of Management and Budget (OMB) and determined that this rule is a non-significant regulatory action under Executive Order 12866, as supplemented by Executive Orders 13563 and 14094.

Anticipated Transfers to Our Program

Our Office of the Chief Actuary estimates that implementation of this temporary final rule would result in negligible changes (*i.e.,* less than $500,000) in scheduled Old-Age, Survivors, and Disability Insurance benefits and Federal SSI payments.

Anticipated Administrative Cost-Savings to the Social Security Administration

The Office of Budget, Finance, and Management expects the extension provided by the TFR will have a minimal administrative effect on the agency.

Anticipated Time-Savings and Qualitative Benefits

We anticipate the following qualitative benefits generated from this policy:

- Providing a more flexible 12-month ''close proximity of time'' standard in the musculoskeletal disorders listings will potentially result in streamlined, faster disability determinations for a small number of claimants. Absent this policy, a small number of determinations might be delayed due to a need for additional medical or vocational development.

Anticipated Costs

We do not believe there are more than de minimis costs to the public associated with this rule. The requirements in this rule will not impose new additional costs outside of the normal course of business for applicants or change how the public interacts with our disability programs.

Congressional Review Act

This final rule is not a major rule as defined by the Congressional Review Act.[68]

[68] 5 U.S.C. 801 *et seq.*

Executive Order 13132 (Federalism)

We analyzed this temporary final rule in accordance with the principles and criteria established by Executive Order 13132 and determined that the rule will not have sufficient Federalism implications to warrant the preparation of a Federalism assessment. We also determined that this rule will not preempt any State law or State regulation or affect the States' abilities to discharge traditional State governmental functions.

Regulatory Flexibility Act

We certify that this temporary final rule will not have a significant economic impact on a substantial number of small entities because it affects individuals only. Therefore, a regulatory flexibility analysis is not required under the Regulatory Flexibility Act, as amended.

Paperwork Reduction Act

These rules do not create any new or affect any existing collections and, therefore, do not require Office of Management and Budget approval under the Paperwork Reduction Act.

(Catalog of Federal Domestic Assistance Program Nos. 96.001, Social Security—Disability Insurance; 96.002, Social Security—Retirement Insurance; 96.004, Social Security—Survivors Insurance; and 96.006, Supplemental Security Income)

List of Subjects

20 CFR Part 404

Administrative practice and procedure; Blind, Disability benefits; Old-age, survivors, and disability insurance; Reporting and recordkeeping requirements; Social Security.

20 CFR Part 416

Administrative practice and procedure; Aged, Blind, Disability cash payments; Public assistance programs; Reporting and recordkeeping requirements; Supplemental Security Income (SSI).

The Acting Commissioner of Social Security, Carolyn W. Colvin, having reviewed and approved this document, is delegating the authority to electronically sign this document to Erik Hansen, who is a Federal Register Liaison for the Social Security Administration, for purposes of publication in the **Federal Register**.

Erik Hansen,

Associate Commissioner, Office of Legislative Development and Operations, Social Security Administration.

For the reasons stated in the preamble, we are amending subpart P of

part 404 of chapter III of title 20 of the Code of Federal Regulations as set forth below:

PART 404—FEDERAL OLD-AGE, SURVIVORS AND DISABILITY INSURANCE (1950–)

Subpart P—Determining Disability and Blindness

■ 1. The authority citation for subpart P of part 404 continues to read as follows:

Authority: 42 U.S.C. 402, 405(a)–(b) and (d)–(h), 416(i), 421(a) and (h)–(j), 422(c), 423, 425, and 902(a)(5)); sec. 211(b), Pub. L. 104–193, 110 Stat. 2105, 2189; sec. 202, Pub. L. 108–203, 118 Stat. 509 (42 U.S.C. 902 note).

■ 2. In appendix 1 to subpart P of part 404:

■ a. In part A, amend section 1.00C7 by revising paragraphs a and c; and

■ b. In part B, amend section 101.00C7 by revising paragraphs a and c.

The revisions read as follows:

Appendix 1 to Subpart P of Part 404—Listing of Impairments

* * * * *

Part A

* * * * *

1.00 Musculoskeletal Disorders

* * * * *

C. * * *

7. * * *

a. The term *pandemic period* as used in 1.00C7c means the period beginning on April 2, 2021, and ending on May 11, 2025. The term *post-pandemic evaluation period* as used in 1.00C7c means the period beginning on May 12, 2025, and ending on May 11, 2029.

* * * * *

c. For 1.15, 1.16, 1.17, 1.18, 1.20C, 1.20D, 1.22, and 1.23, all of the required criteria must be present simultaneously, or within a close proximity of time, to satisfy the level of severity needed to meet the listing. The phrase ''within a close proximity of time'' means that all of the relevant criteria must appear in the medical record within a consecutive 4-month period, except for claims determined or decided during the pandemic period or post-pandemic evaluation period. For claims determined or decided during the pandemic period or post-pandemic evaluation period, all of the relevant criteria must appear in the medical record within a consecutive 12-month period. When the criterion is imaging, we mean that we could reasonably expect the findings on imaging to have been present at the date of impairment or date of onset. For listings that use the word ''and'' to link the elements of the required criteria, the medical record must establish the simultaneous presence, or presence within a close proximity of time, of all the required medical criteria. Once this level of severity is established, the medical record must also show that this level of severity has continued, or is expected to continue, for a continuous period of at least 12 months.

* * * * *

Part B

* * * * *

101.00 Musculoskeletal Disorders.

* * * * *

C. * * *

7. * * *

a. The term *pandemic period* as used in 101.00C7c means the period beginning on April 2, 2021, and ending on May 11, 2025. The term *post-pandemic evaluation period* as used in 101.00C7c means the period beginning on May 12, 2025, and ending on May 11, 2029.

* * * * *

c. For 101.15, 101.16, 101.17, 101.18, 101.20C, 101.20D, 101.22, and 101.23, all of the required criteria must be present simultaneously, or within a close proximity of time, to satisfy the level of severity needed to meet the listing. The phrase ''within a close proximity of time'' means that all of the relevant criteria must appear in the medical record within a consecutive 4-month period, except for claims determined or decided during the pandemic period or post-pandemic evaluation period. For claims determined or decided during the pandemic period or post-pandemic evaluation period, all of the relevant criteria must appear in the medical record within a consecutive 12-month period. When the criterion is imaging, we mean that we could reasonably expect the findings on imaging to have been present at the date of impairment or date of onset. For listings that use the word ''and'' to link the elements of the required criteria, the medical record must establish the simultaneous presence, or presence within a close proximity of time, of all the required medical criteria. Once this level of severity is established, the medical record must also show that this level of severity has continued, or is expected to continue, for a continuous period of at least 12 months.

BILLING CODE 4191–02–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 16

[Docket No. FDA–2024–N–3654]

RIN 0910–AI97

Regulatory Hearing Before the Food and Drug Administration; General Provisions; Amendments; Withdrawal

AGENCY: Food and Drug Administration, HHS.

ACTION: Direct final rule; withdrawal.

SUMMARY: The Food and Drug Administration (FDA or Agency) published in the **Federal Register** of September 20, 2024, a direct final rule amending the Scope section of our regulation that provides for a regulatory hearing before the Agency. The comment period closed December 4, 2024. FDA is withdrawing the direct final rule because the Agency received significant adverse comment.

DATES: The direct final rule published at September 20, 2024, 89 FR 77019, is withdrawn effective January 17, 2025.

FOR FURTHER INFORMATION CONTACT: Robert Schwartz, Center for Tobacco Products, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20993–0002, 1–877–287–1373, *CTPRegulations@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Therefore, under the Federal Food, Drug, and Cosmetic Act, and under authority delegated to the Commissioner of Food and Drugs, the direct final rule published on September 20, 2024, 89 FR 77019 is withdrawn.

Dated: January 13, 2025.

P. Ritu Nalubola,

Associate Commissioner for Policy.

[FR Doc. 2025–01145 Filed 1–16–25; 8:45 am]

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 73

[Docket No. FDA–2022–C–0098]

Listing of Color Additives Exempt From Certification; Myoglobin

AGENCY: Food and Drug Administration, HHS.

ACTION: Final amendment; order.

SUMMARY: The Food and Drug Administration (FDA or we) is amending the color additive regulations to provide for the safe use of myoglobin as a color additive in ground meat and ground poultry analogue products. We are taking this action in response to a color additive petition (CAP) submitted by Motif FoodWorks, Inc. (Motif FoodWorks or petitioner).

DATES: This order is effective February 19, 2025. See section X for further information on the filing of objections. Either electronic or written objections and requests for a hearing on the order must be submitted by February 18, 2025.

ADDRESSES: You may submit objections and requests for a hearing as follows.

Please note that late, untimely filed objections will not be considered. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of February 18, 2025. Objections received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are received on or before that date.

Electronic Submissions

Submit electronic objections in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Objections submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your objection will be made public, you are solely responsible for ensuring that your objection does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your objection, that information will be posted on *https://www.regulations.gov.*
- If you want to submit an objection with confidential information that you do not wish to be made available to the public, submit the objection as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper objections submitted to the Dockets Management Staff, FDA will post your objection, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2022–C–0098 for ''Listing of Color Additives Exempt From Certification; Myoglobin.'' Received objections, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or with the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit an objection with confidential information that you do not wish to be made publicly available, submit your objections only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Ellen Anderson, Office of Pre-market Additive Safety, Human Foods Program, Food and Drug Administration, 5001 Campus Dr., College Park, MD 20740–3835, 240–402–1309 or Keronica Richardson, Office of Policy, Regulations, and Information, Human Foods Program, Food and Drug Administration, 5001 Campus Dr., College Park, MD 20740, 240–402–1262.

SUPPLEMENTARY INFORMATION:

I. Introduction

In a document published in the **Federal Register** of February 14, 2022 (87 FR 8222), we announced that FDA filed a color additive petition (CAP 2C0322) submitted by Motif FoodWorks, Inc., 27 Drydock Ave., 2nd Floor, Boston, MA 02210. The petition proposed to amend the color additive regulations in part 73 (21 CFR part 73), ''Listing of Color Additives Exempt from Certification'' to provide for the safe use of myoglobin as a color additive in ground meat and ground poultry analogue products where the amount of myoglobin protein does not exceed 2 percent by weight of the uncooked analogue product.

The petition used the terms ''analogue'' and ''alternative'' interchangeably to describe the type of food products in which the color additive is intended for use. This order will use the phrase ''ground meat and ground poultry analogue products,'' which refers to plant-based ground meat- and poultry-like food products, such as patties, sausages, links, and nuggets, subject to FDA regulation. (The petitioned use of this color additive does not include use in cell-cultured meat and poultry products under regulatory authority of the United States Department of Agriculture.)

The petition described myoglobin protein as the characterizing coloring component of a stabilized liquid mixture that imparts a red to pink coloration in uncooked ground meat and ground poultry analogue products to give an appearance similar to raw meat and poultry. The petition referred to the color additive as ''myoglobin'' or ''myoglobin preparation.'' For the purposes of this order, we refer to ''myoglobin preparation'' as the stabilized liquid mixture that contains myoglobin protein and note that ''myoglobin'' and ''myoglobin preparation'' are used interchangeably to refer to this color additive. We are establishing ''myoglobin'' as the common or usual name for this color additive.

II. Background

The color additive that is the subject of this petition is the stabilized product of controlled fermentation of a non-pathogenic and non-toxicogenic strain of the yeast, *Komagataella phaffii* (*K. phaffii*), genetically engineered to express myoglobin protein, the principal coloring component. Although the organism is referred to as *Pichia pastoris* (*P. pastoris*) throughout the petition, we note that the nomenclature for *P. pastoris* was reassigned based on genetic typing to *Komagataella phaffii.* (Ref. 1). We are referring to the organism hereafter as *K. phaffii* to reflect the current taxonomic identity.

The color additive is manufactured by the following steps: (1) construction of the *K. phaffii* production strain that is

genetically engineered to express a synthetic myoglobin gene from *Bos taurus;* (2) expression of myoglobin protein via submerged fed-batch fermentation by the *K. phaffii* production strain; (3) disruption of the *K. phaffii* cells by mechanical shearing to release myoglobin protein and removal of the *K. phaffii* cells by washing, lysing, centrifugation, and microfiltration; (4) ultrafiltration to concentrate the myoglobin protein; and (5) stabilization of the expressed protein as a liquid preparation. The gene that is inserted into the *K. phaffii* is generated by DNA synthesis and is not obtained directly from the DNA of *Bos taurus.* The amino acid sequence of the expressed myoglobin protein is identical to bovine myoglobin protein that has a history of being safely consumed.

Based on information in the petition, the myoglobin preparation has a moisture content of ≥92.5 percent, a myoglobin protein content of ≥3 percent, and may contain stabilizers, preservatives, and antimicrobial agents such as sodium phosphate, sodium ascorbate, and sodium chloride. The color additive is stored as a frozen liquid. FDA concurs with the petitioner that the genetic modifications made to generate the non-toxigenic and non-pathogenic production strain are well-characterized and the production process conforms to good manufacturing practice (Ref. 2). We are requiring a specification for the minimum purity of myoglobin protein as a percent of the total protein in the color additive and a specification limit for lead. The petitioner provided analytical data from the analyses of five lots of myoglobin preparation showing that the color additive can be manufactured to meet these specifications.

We have previously considered the safety of myoglobin preparation based on a submission from Motif FoodWorks, to which we had no questions, that the use of myoglobin preparation to impart flavor and aroma in ground meat and poultry analogue products is generally recognized as safe (GRAS). Under section 201(s) of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C. 321(s)), a substance is GRAS if it is generally recognized, among experts qualified by scientific training and experience to evaluate its safety, as having been adequately shown through scientific procedures (or, in the case of a substance used in food before January 1, 1958, through either scientific procedures or experience based on common use in food) to be safe under the conditions of its intended use. Under section 201(s) of the FD&C Act, a substance that is GRAS for a particular use in food is not a food additive and may lawfully be utilized for that use without our review and approval. There is no GRAS exemption, however, to the definition of a color additive in section 201(t) of the FD&C Act. Therefore, we must approve the use of a color additive in food before it is marketed; otherwise, the food containing the color additive is adulterated under section 402(c) of the FD&C Act (21 U.S.C. 342(c)).

A firm may voluntarily submit to FDA information supporting the firm's conclusion that a substance is GRAS for its intended use in food through our GRAS Notification Program (see 81 FR 54960, August 17, 2016). Through this program, a GRAS conclusion was submitted by Motif FoodWorks and filed on June 28, 2021, as GRAS Notice 001001(GRN 001001). This GRN informed FDA that Motif FoodWorks concluded that the use of myoglobin preparation at levels providing up to 2 percent myoglobin protein to impart flavor and aroma in ground meat and poultry analogue products was GRAS. Based on our evaluation of the information provided in GRN 001001, as well as other available information, we issued a response letter on December 3, 2021, to Motif FoodWorks stating that we had no questions regarding its conclusion that myoglobin preparation is GRAS for its intended conditions of use. In our response letter to Motif FoodWorks, we stated that because myoglobin preparation imparts a red coloration when exposed to oxygen in some food applications, its use may constitute a color additive use under section 201(t)(1) of the FD&C Act and FDA regulations in 21 CFR part 70. The specific use of myoglobin preparation to impart a reddish, meat-like color to ready-to-cook meat and poultry analogue products is important to the appearance and marketability of the analogue products. As such, this use of myoglobin preparation requires premarket approval as a color additive (see § 70.3(g) (21 CFR 70.3(g))).

III. Safety Evaluation

Under section 721(b)(4) of the FD&C Act (21 U.S.C. 379e(b)(4)), a color additive may not be listed for a proposed use unless the data and information available to FDA establish that the color additive is safe for that use. Our color additive regulations at § 70.3(i) define ''safe'' to mean that there is convincing evidence establishing with reasonable certainty that no harm will result from the intended use of the color additive.

As part of our safety evaluation to establish with reasonable certainty that a color additive is not harmful under its intended conditions of use, we consider the additive's manufacturing and stability, the projected human dietary exposure to the additive and any impurities resulting from the petitioned use of the additive, the additive's toxicological data, and other relevant information (such as published literature) available to us.

IV. Safety of Petitioned Use of the Color Additive

A. Dietary Exposure Estimate

Myoglobin preparation is composed mainly of water, myoglobin protein, minor quantities of *K. phaffii* proteins, ash, fat, carbohydrates, and stabilizers and preservatives such as sodium phosphate, sodium ascorbate, and/or sodium chloride. During our safety review of this color additive petition, we evaluated the dietary exposure estimates for the myoglobin preparation, the myoglobin protein component, and selected nutrients of the preparation. The petitioner provided two sets of dietary exposure estimates. For one set of estimates, the petitioner used U.S. food consumption for meat and poultry analogue products (*e.g.,* soy burgers, vegetarian hot dogs) from the combined 2013 to 2018 National Health and Nutrition Examination Survey (NHANES) and assumed these products contained myoglobin preparation at use levels that would result in myoglobin protein concentrations of 1 percent, 1.5 percent, and 2 percent in the food. The petitioner noted that typical use levels of myoglobin protein are expected to be 1 to 1.25 percent for most food categories. The petitioner estimated the eaters-only dietary exposure to myoglobin preparation at the maximum use level of 2 percent myoglobin protein for the U.S. population aged 2 years and older to be 43.7 grams/person/day (g/p/d) at the mean and 97.6 g/p/d at the 90th percentile. For the myoglobin protein, the eaters-only dietary exposure for the U.S. population aged 2 years and older was estimated to be 1.3 g/p/d at the mean and 2.9 g/p/d at the 90th percentile.

The petitioner provided a second set of dietary exposure estimates based on a use level of 1 percent myoglobin protein and food consumption data for conventional ground meat and ground poultry products assuming a 1:1 substitution for ground meat and ground poultry analogue products. For these estimates, the petitioner selected NHANES food codes that represented the most common food applications in which myoglobin preparation is expected to be used (*i.e.,* ground patties,

crumbles, links, bacon, sausage, and meatballs from beef, pork, or poultry). The petitioner estimated the mean and 90th percentile eaters-only dietary exposures to myoglobin protein for the U.S. population aged 2 years and older to be 0.7 g/p/d and 1.5 g/p/d, respectively, and for ages 2 to 5 years to be 0.3 g/p/d and 0.7 g/p/d, respectively.

FDA replicated and confirmed the petitioner's two sets of estimates of dietary exposure to myoglobin protein and myoglobin preparation. We also conducted a third analysis using 2021 *per capita* food availability data for retail beef and poultry in the United States (USDA Economic Research Service), the assumption of a 1:1 substitution with meat and poultry alternative products, and a use level that provides 2 percent myoglobin protein in the food. FDA estimated the dietary exposure to myoglobin protein and myoglobin preparation for U.S. consumers to be 3.9 g/p/d and 129 g/p/d, respectively. We note that dietary exposures based on availability data typically overestimate *per capita* consumption because the data do not consider food loss and wastage (Ref. 2).

The petitioner also estimated dietary exposures to iron from the petitioned use of the color additive using the first two methods described above. Based on NHANES consumption data for ground meat and ground poultry analogue products and the maximum intended use level of 2 percent myoglobin protein, the petitioner estimated the mean and 90th percentile eaters-only dietary exposures to iron for the U.S. population aged 2 years and older to be 2.0 and 4.5 mg/p/d, respectively. Based on a use level of 1 percent myoglobin protein and food consumption data for conventional ground meat and ground poultry products assuming a 1:1 substitution for ground meat and ground poultry analogue products, the petitioner estimated the mean and 90th percentile eaters-only dietary exposures to iron for the U.S. population aged 2 years and older to be 1.0 and 2.0 mg/p/d, respectively, and for ages 2 to 5 years to be 0.5 and 1.0 mg/p/d, respectively.

B. Toxicological Considerations

To establish that myoglobin preparation is safe for use as a color additive that provides up to 2 percent myoglobin protein in ground meat and ground poultry analogue products, the petitioner used a weight-of-evidence approach based on the following: (1) the history of widespread and safe consumption of bovine myoglobin protein; (2) the safety of *K. phaffii* as a production organism; and (3) an allergenicity assessment of myoglobin and *K. phaffii* proteins.

Based on our review of this petition (CAP 2C0322), we conclude that the proteins in the myoglobin preparation are well defined, nontoxic, and not likely to cause an allergenic response when consumed (Ref. 3). Because the myoglobin protein expressed in *K. phaffii* is 100 percent identical in amino acid sequence to bovine myoglobin protein, we conclude that the history of safe consumption of bovine myoglobin protein from ingestion of meat in the diet can be extended to the safety of Motif FoodWorks' myoglobin protein. Regarding the *K. phaffii* strain developed by the petitioner for the production of myoglobin preparation, we conclude that it is non-toxicogenic and non-pathogenic.

We agree that the petitioned uses of the color additive are not expected to increase the dietary exposure to myoglobin protein and iron in the U.S. population, as the consumption of ground meat and poultry analogue products are substitutional for conventional ground meat and poultry products (Ref. 2). Furthermore, we note that the estimated 90th percentile eaters-only dietary exposures to *K. phaffii*-expressed myoglobin protein and iron are well below the Institute of Medicine's recommended dietary reference intakes for protein and iron for all age groups considered (Ref. 3).

In its assessment of the allergenicity of myoglobin preparation, the petitioner examined the incidence of beef allergy in consumers and bioinformatic analyses to determine if the myoglobin and *K. phaffii* proteins found in the myoglobin preparation share significant sequence identity to known allergens. We agree that the weight of evidence demonstrates the safety of myoglobin protein consumption based on the absence of beef allergy case reports since 2004; the lack of the native *Bos taurus* glycosylation pattern in Motif FoodWorks's myoglobin protein, which makes the color additive less likely to trigger an allergic reaction; and a lack of immunologically meaningful sequence identity similarities between the myoglobin preparation proteins and known allergenic proteins. Furthermore, we conclude that myoglobin and *K. phaffii* proteins in the color additive are readily digested at acidic pH conditions found in the stomach and denatured at normal cooking temperatures. Therefore, FDA agrees with the conclusion that myoglobin protein produced in *K. phaffii* is not likely to pose a risk of allergenicity or toxicity upon consumption (Ref. 3).

V. Conclusion

Based on the data and information in the petition and other available relevant information, we conclude that the petitioned use of myoglobin preparation as a color additive in ground meat and ground poultry analogue products is safe, provided the amount of myoglobin protein does not exceed 2 percent by weight of the uncooked product. We further conclude that this color additive will achieve its intended technical effect and is suitable for the petitioned use. Therefore, we are amending the color additive regulations in part 73 to provide for the safe use of myoglobin, the established common or usual name for this color additive, as set forth in this document. In addition, based on the factors in 21 CFR 71.20(b), we conclude that batch certification of myoglobin is not necessary to protect the public health.

VI. Public Disclosure

In accordance with § 71.15(a) (21 CFR 71.15(a)), the petition and the documents that we considered and relied upon in reaching our decision to approve the petition will be made available for public disclosure (see **FOR FURTHER INFORMATION CONTACT**). As provided in § 71.15(b), we will delete from the documents any materials that are not available for public disclosure.

VII. Analysis of Environmental Impact

We have determined under 21 CFR 25.32(r) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

VIII. Paperwork Reduction Act of 1995

This order contains no collection of information. Therefore, clearance by the Office of Management and Budget under the Paperwork Reduction Act of 1995 is not required.

IX. Section 301(ll) of the FD&C Act

Our review of this petition was limited to section 721 of the FD&C Act. This order is not a statement regarding compliance with other sections of the FD&C Act. For example, section 301(ll) of the FD&C Act (21 U.S.C. 331(ll)) prohibits the introduction or delivery for introduction into interstate commerce of any food that contains a drug approved under section 505 of the FD&C Act (21 U.S.C. 355), a biological product licensed under section 351 of the Public Health Service Act (42 U.S.C. 262), or a drug or biological product for which substantial clinical investigations

have been instituted and their existence has been made public, unless one of the exemptions in section 301(ll)(1) to (4) of the FD&C Act applies. In our review of this petition, we did not consider whether section 301(ll) of the FD&C Act or any of its exemptions apply to food containing this color additive. Accordingly, this order should not be construed to be a statement that a food containing this color additive, if introduced or delivered for introduction into interstate commerce, would not violate section 301(ll) of the FD&C Act. Furthermore, this language is included in all color additive orders that pertain to food and therefore should not be construed to be a statement of the likelihood that section 301(ll) of the FD&C Act applies.

X. Objections

This order is effective as shown in the **DATES** section, except as to any provisions that may be stayed by the filing of proper objections. If you will be adversely affected by one or more provisions of this regulation, you may file with the Dockets Management Staff (see **ADDRESSES**) either electronic or written objections. You must separately number each objection, and within each numbered objection you must specify with particularity the provision(s) to which you object, and the grounds for your objection. Within each numbered objection, you must specifically state whether you are requesting a hearing on the particular provision that you specify in that numbered objection. If you do not request a hearing for any particular objection, you waive the right to a hearing on that objection. If you request a hearing, your objection must include a detailed description and analysis of the specific factual information you intend to present in support of the objection in the event that a hearing is held. If you do not include such a description and analysis for any particular objection, you waive the right to a hearing on the objection.

Any objections received in response to the regulation may be seen in the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, and will be posted to the docket at *https://www.regulations.gov.* We will publish notice of the objections that we have received or lack thereof in the **Federal Register**.

XI. References

The following references are on display at the Dockets Management Staff (see **ADDRESSES**) and are available for viewing by interested persons between 9 a.m. and 4 p.m., Monday through Friday; they are also available electronically at *https://www.regulations.gov.* Although FDA verified the website addresses in this document, please note that websites are subject to change over time.

List of Subjects in 21 CFR Part 73

Color additives, Cosmetics, Drugs, Foods, Medical devices.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under the authority delegated to the Commissioner of Food and Drugs, 21 CFR part 73 is amended as follows:

PART 73—LISTING OF COLOR ADDITIVES EXEMPT FROM CERTIFICATION

■ 1. The authority citation for part 73 continues to read as follows:

Authority: 21 U.S.C. 321, 341, 342, 343, 348, 351, 352, 355, 361, 362, 371, 379e.

■ 2. Add § 73.297 to subpart A to read as follows:

§ 73.297 Myoglobin.

(a) *Identity.* (1) The color additive myoglobin is a stabilized product of controlled fermentation of a non-pathogenic and non-toxicogenic strain of the yeast, *Komagataella phaffii,* genetically engineered to express the myoglobin protein from *Bos taurus.* Myoglobin protein is the principal coloring component of the color additive and imparts a red color.

(2) Color additive mixtures made with myoglobin may contain only those diluents that are suitable and are listed in this subpart as safe for use in color additive mixtures for coloring foods.

(b) *Specifications.* Myoglobin must conform to the following specifications and must be free from impurities, other than those named, to the extent that such impurities may be avoided by good manufacturing practice:

(1) Myoglobin protein purity on protein basis (weight/weight), not less than 85 percent.

(2) Lead, not more than 0.01 milligrams per kilogram (0.01 parts per million).

(c) *Uses and restrictions.* Myoglobin may be safely used in ground meat and ground poultry analogue products (*i.e.,* plant-based ground meat- and poultry-like food products subject to FDA regulation) where the amount of myoglobin protein does not exceed 2 percent by weight of the uncooked analogue product.

(d) *Labeling.* The label of the color additive and of any mixture prepared therefrom intended solely or in part for coloring purposes must conform to § 70.25 of this chapter.

(e) *Exemption from certification.* Certification of this color additive is not necessary for the protection of the public health, and therefore, batches thereof are exempt from the certification requirements of section 721(c) of the Federal Food, Drug, and Cosmetic Act.

Dated: January 14, 2025.

P. Ritu Nalubola,

Associate Commissioner for Policy.

[FR Doc. 2025–01239 Filed 1–16–25; 8:45 am]

BILLING CODE 4164–01–P

DEPARTMENT OF STATE

22 CFR Part 121

[Public Notice: 12441]

RIN 1400–AF42

International Traffic in Arms Regulations: U.S. Munitions List Targeted Revisions

AGENCY: Department of State.

ACTION: Interim final rule; request for comments.

SUMMARY: The Department of State (the Department) amends the International Traffic in Arms Regulations (ITAR) to remove from the U.S. Munitions List (USML) items that no longer warrant inclusion, add to the USML items that warrant inclusion, and clarify certain entries. With these amendments, the Department also supersedes and thus terminates the temporary modification to USML Category VIII that was published on December 4, 2023, and extended on November 26, 2024.

DATES:

Effective date: September 15, 2025.

Comment due date: Send comments by March 18, 2025.

ADDRESSES: Interested parties may submit comments to the Department of State by any of the following methods:

- *Visit the Regulations.gov website at: https://www.regulations.gov* and search for the docket number DOS–2024–0047.

• *Email: DDTCPublicComments@state.gov.* Commenting parties must include RIN 1400–AF42 in the subject line of the email message.

See **SUPPLEMENTARY INFORMATION** for other information about electronic filing.

FOR FURTHER INFORMATION CONTACT: Mr. Robert Rasmussen, Office of Defense Trade Controls Policy, Department of State, telephone (202) 663–2217; email *DDTCCustomerService@state.gov* SUBJECT: ITAR Amendment—USML Targeted Revisions (RIN 1400–AF42).

SUPPLEMENTARY INFORMATION: The Department of State's Directorate of Defense Trade Controls (DDTC) administers the ITAR (22 CFR parts 120 through 130) to, among other things, regulate the export, reexport, retransfer, and temporary import of the defense articles and defense services identified on the USML at ITAR § 121.1. Items not subject to the ITAR or to the exclusive licensing jurisdiction of any other department or agency of the U.S. Government are subject to the Export Administration Regulations (EAR, 15 CFR parts 730 through 774, which includes the Commerce Control List (CCL) in Supplement No. 1 to part 774). The EAR is administered by the Bureau of Industry and Security (BIS), U.S. Department of Commerce. This rule does not modify the list of defense articles and defense services controlled for purposes of permanent import by the Attorney General, as enumerated on the U.S. Munitions Import List (USMIL) at 27 CFR 447.21.

Section 38 of the Arms Export Control Act (AECA) (22 U.S.C. 2778), the authority from which the ITAR is derived, requires periodic review to determine what articles and services, if any, no longer warrant designation on the U.S. Munitions List at 22 CFR 121.1. In maintaining the USML, DDTC's Office of Defense Trade Controls Policy (DTCP) identifies articles and services for review through a variety of methods, including informal public and interagency comment, commodity jurisdiction reviews, advisory opinions, and technology monitoring. The Department maintains the USML such that it comprises those defense articles or defense services that provide a critical military or intelligence advantage or, in the case of firearms, have an inherently military function. The Department, informed by consultations with its interagency partners, determined that the additional defense articles this rule designates on the USML warrant ITAR control and those articles it removes from the USML no longer do. This rule also amends certain language that describes items on the USML to provide additional clarity to the regulatory language.

22 CFR 121.0

The Department incorporates definitional language and abbreviations currently found in various notes in the USML into 22 CFR 121.0, *United States Munitions List descriptions and definitions.* Section 121.0 is amended to remove the structure of paragraphs (a) and (b) and to add definitions to the USML in an alphabetical list. The definition previously at § 121.0(b) is now listed in its alphabetical order in § 121.0. Current § 121.0(a) is moved to the introductory text of § 121.0.

USML Category II

In USML Category II, Note 2 to paragraph (a)(5) is revised to correct a typographical error.

USML Category IV

USML Category IV paragraph (c) is revised and paragraphs (c)(1) and (2) are added to more clearly describe the equipment controlled therein, and to differentiate between equipment specially designed for commodities enumerated in paragraphs (a) or (b) of Category IV under the new paragraph (c)(1), and equipment specially designed for improvised explosive devices (IEDs) under the new paragraph (c)(2), similar to how they are differentiated in paragraph 4.b of the Wassenaar Arrangement Munitions List. This amendment also replaces the undefined term ''apparatus and devices'' with the § 120.40 defined term ''equipment.''

USML Category V

USML Category V paragraph (c)(2) is revised to add the CAS Registry Number for pentaborane and to replace the comma after ''pentaborane'' with a semicolon, in order to clarify this paragraph describes derivatives of carboranes, decaboranes, and pentaborane. Paragraph (f)(4)(x) is revised to correct the CAS Registry Number. Paragraphs (e)(10), (f)(19), and (g)(4) are revised to correct typographical errors.

USML Category VII

Note 3 to USML Category VII is revised to further clarify the universe of ground vehicles described, with no change to the scope of controls. Specifically, the types of vehicular control and locomotion employed are irrelevant when evaluating a vehicle against the control criteria. The Department affirms that although some unmanned ground vehicles, based on their method of control or locomotion, may be referred to by the public colloquially as ''robots,'' they must still be evaluated against the criteria in USML Category VII.

USML Category VIII

USML Category VIII(h)(1) is revised to clarify which commodities are described therein by incorporating relevant portions of the existing note to paragraph (h)(1). This revision also serves to facilitate reference to the included list of aircraft by other USML paragraphs, and to better align controls with the Department's intent around U.S. Government technology demonstrators. Additionally, it precludes release of commodities from paragraph (h)(1) based solely on their subsequent use in aircraft included in USML Category XXI (pursuant to the procedures therein) or in foreign advanced military aircraft. Foreign advanced military aircraft, as newly defined in § 121.0, include non-U.S. origin aircraft and foreign derivatives of U.S. origin aircraft, either in development or entering production after 2023, with one or more of the following advanced military capabilities: Active Electronically Scanned Array (AESA) fire control radar, integrated signature management, electronic warfare systems, or the ability to engage targets beyond visual range (BVR). The Department further highlights the use of the term ''AESA *fire control* radar'' to ensure that AESA weather radars commonly used in civil aviation are clearly excluded from this list of advanced military capabilities. The year 2023 was chosen as the production year in this definition to ensure alignment with the temporary modification to the USML issued on December 4, 2023 (88 FR 84072), and extended on November 26, 2024 (89 FR 93170), which states that parts used in or with the KF–21 continue to be described on the USML.

As practitioners have confused the F–15SE (Silent Eagle) with the F–15E (Strike Eagle), the F–15SE nomenclature is also clarified. Further, the ''B1B'' is replaced by ''B–1.'' As the B–1A never entered into production, this change does not change the export classification of existing items. The Department makes this change consistent with the majority of aircraft listed in the paragraph and its intent to include future variants of those aircraft. The Department notes the only aircraft listed with series letters (F–15SE, F/A–18E/F, and EA–18G) in this paragraph intentionally exclude earlier variants (for example, the control does not include the F–15A, which is an F–15 variant developed before the F–15SE).

Additionally, the Department adds the MQ–25 and the RQ–170 to the list of aircraft in paragraph (h)(1)(i). The MQ–25 provides a critical military advantage in its ability to support the future Navy carrier air wing and is central to the Navy's strategic Unmanned Campaign Framework. The RQ–170 is a high-altitude, long-endurance, low-observable unmanned aerial vehicle that provides a critical military and intelligence advantage in its ability to perform key intelligence, surveillance, reconnaissance, target acquisition, and electronic warfare functions. Paragraph (h)(1) describes articles used in some of the most advanced U.S. military aircraft. The changes to paragraph (h)(1) ensure those specially designed articles are not released from this entry based on their subsequent use in USML Category XXI aircraft, foreign advanced military aircraft, or U.S. Government (USG) technology demonstrator aircraft.

Ensuring those elements are not released from paragraph (h)(1) based on subsequent use in foreign advanced military aircraft is consistent with the language of § 120.3(a)(2). With this change, the Department treats use of these commodities in foreign advanced military aircraft as it has in their use in advanced U.S. military aircraft. This addition facilitates opportunities for reuse and commonality with partner aircraft by enabling U.S. content to be utilized in those platforms without unnecessary redesigns or unmerited removal from the USML.

The Department further considered amending the language to remove commodities designed exclusively for non-Department of Defense (DoD) USG technology demonstrators from paragraph (h)(1). The Department declines to do so, as such commodities are generally not currently described in paragraph (h)(1). Specifically, USG technology demonstrators are unique among the aircraft listed in paragraph (h)(1), as some technology demonstrators are described on the USML, while others are not. The Department notes commodities used in technology demonstrators are often developed exclusively for those demonstrators or repurposed from other USML or CCL platforms for time and cost savings; those commodities must be reviewed on a case-by-case basis for proper export classification. Specifically, *for USG technology demonstrators that are themselves not described on the USML (''these aircraft''),* it is generally the case that:

—Articles designed for and used only in other aircraft listed in paragraph (h)(1) before and during subsequent unmodified use in *these aircraft* generally remain described in paragraph (h)(1), as explained by the following analysis:

—In the context of paragraph (h)(1), such articles meet the criteria in, and thus are caught by, § 120.41(a)(1) as having properties peculiarly responsible for the controlled characteristic (*i.e.,* their use in the listed aircraft), and (a)(2) for their use in or with the other listed aircraft.

—In the context of paragraph (h)(1), such articles are not released by § 120.41(b)(3), (4), or (5), as they were originally developed for aircraft described in either USML Category VIII or XXI, and the USG technology demonstrator does not enter production as defined in § 120.43.

—Articles designed for, and used in, aircraft subject to the EAR prior to unmodified use in *these aircraft* are not described in paragraph (h)(1) but may be described elsewhere on the USML, as explained by the following analysis:

—In the context of paragraph (h)(1), there are circumstances wherein such articles would be released by § 120.41(b)(3), regardless of meeting the criteria in § 120.41(a).

—With contemporaneous documentation, there are circumstances in which the articles would also be released by paragraph (b)(4) or (5).

—Articles designed for, and only used in, *these aircraft* are not described in paragraph (h)(1), but may be described elsewhere on the USML, as explained by the following analysis:

—In the context of paragraph (h)(1), such articles meet the criteria in § 120.41(a)(1) as having properties peculiarly responsible for the controlled characteristic (*i.e.,* their use in the listed aircraft), but not (a)(2) unless they are used in or with a defense article.

—In the context of paragraph (h)(1), such articles are not released by § 120.41(b)(3), as the USG technology demonstrator does not enter production. However, they could be released by paragraph (b)(4), as they were developed with the knowledge they would be used in *these aircraft,* often in a system that is subject to the EAR.

—In contrast, articles designed for, and only used in, USG technology demonstrators described on the USML are described in paragraph (h)(1), as explained in the following analysis:

—In the context of paragraph (h)(1), such articles meet the criteria in § 120.41(a)(1) as having properties peculiarly responsible for the controlled characteristic (*i.e.,* their use in the listed aircraft), and (a)(2) for their use in or with aircraft described in USML Category VIII.

In the context of paragraph (h)(1), such articles are not released by § 120.41(b)(3), (4), or (5), as they were originally developed for an aircraft described in USML Category VIII. The Department is also amending the text of the current ''Note to paragraph (h)(1),'' redesignating it as ''Note 1 to paragraph to (h)(1),'' and adding ''Note 2 to paragraph (h)(1).'' The addition of ''Note 2 to paragraph (h)(1)'' outlines an example of the scope of paragraph (h)(1) for articles used in USG technology demonstrators.

With these revisions to paragraph (h)(1) and the notes to paragraph (h)(1), the Department also terminates the temporary modification to Category VIII of the USML that was issued on December 4, 2023 (88 FR 84072) and extended on November 26, 2024 (89 FR 93170).

The Department notes certain commodities designed exclusively for DoD-funded developmental aircraft, including aircraft jointly funded by DoD and another agency, remain defense articles described in paragraph (f) of USML Category VIII.

Paragraph (h)(29) of USML Category VIII is revised to clarify the commodities described therein include both those designed for the aircraft listed and the defense articles described in paragraph (h)(1), with a change in control via the removal of commodities specially designed for USG technology demonstrators.

The note located at the end of USML Category VIII is moved to follow USML Category VIII paragraph (h), renamed ''Note 1 to paragraph (h),'' and revised for clarity, with no change in scope.

USML Category IX

USML Category IX(e)(2) is placed in reserve to eliminate redundancy. Technical data directly related to the software and databases enumerated in paragraph (b)(4) is already described in paragraph (e)(1).

USML Category X

Developmental exoskeletons have been identified as a technology warranting ITAR control due to the critical military advantage they provide. Thus, Category X is amended by removing paragraph (b) from reserve and adding a new paragraph (b) to describe exoskeletons under development for DoD, along with standard exclusions applied to other developmental articles to provide advance notice to industry and to avoid

controlling those that do not provide a critical military advantage.

The Department also amends Category X to align body armor protection levels with the most recent NIJ standard, 0123.00, ''Specification for NIJ Ballistic Protection Levels and Associated Test Threats.'' All references to ''NIJ Type IV'' have been updated to NIJ RF3. ''Note 1 to paragraph (a)(1)'' and ''Note to paragraphs (a) and (d)'' have also been updated to reference the new standard. ''Note to paragraphs (a) and (d)'' is redesignated as ''Note 1 to paragraphs (a) and (d).''

USML Category XI

USML Category XI paragraphs (c)(10)(i) and (ii) are revised to reflect that certain anti-jam antennas no longer provide a critical military advantage, with increasing commercial utilization applicable to civil GPS resiliency. Following consultations with DoD, the beam switching speed criterion in paragraph (c)(10)(i) is revised from 50 milliseconds down to one millisecond, and the convergence time criterion in paragraph (c)(10)(ii) is revised from one second down to one millisecond, as the Department seeks to control only the most sensitive and effective anti-jam antennas in USML Category XI(c)(10)(i) and (ii). The Department further intends to exclude Controlled Reception Pattern Antennas (CRPAs) for Position, Navigation, and Timing (PNT) from paragraph (c)(10). To implement this, the Department is removing all CRPAs from paragraphs (c)(10)(i) and (ii) and adding paragraphs (c)(10)(v) and (vi) to describe the CRPAs for non-PNT applications that meet the updated criteria used in paragraphs (c)(10)(i) and (ii) the CRPA antennas were moved from. In removing CRPAs for PNT, the Department intends to facilitate civil global navigation system resiliency. CRPAs use multiple elements and advanced signal processing techniques to dynamically control their reception pattern, thereby enhancing signal reception from desired directions and suppressing interference from undesired directions. Generally, in comparing CRPAs to the antennas that remain described in paragraphs (c)(10)(i) and (ii), CRPAs are more optimized to control the reception pattern instead of the transmission beam steering or switching. This is in line with the Position, Navigation, and Timing, Advisory Board's (PNTAB) recommendation to remove CRPAs from the USML. The antennas removed from the USML by these changes are neither subject to multilateral controls nor controlled as munitions in other countries that produce them. Once removed from the USML, these anti-jam antennas will become subject to the EAR under the jurisdiction of the Department of Commerce.

USML Category XII

USML Category XII paragraph (d)(2)(ii) is revised to update the language to reflect the current description of Positioning Service from Precise Positioning Service to Protected Positioning Service (PPS). In the 2021 Federal Radionavigation Plan published by the Departments of Defense, Transportation, and Homeland Security (available at *https://rosap.ntl.bts.gov/view/dot/63024*), PPS has been updated to ''Protected'' Positioning Service from the former ''Precise'' Positioning Service. This change accurately reflects the technology's ability to operate in degraded environments as opposed to legacy encryption abilities that facilitate greater position precision and no longer provide a critical military advantage.

USML Category XIII

USML Category XIII paragraph (b)(4) is revised to update the name of the Unified Cross Domain Management Office (UCDMO) to the National Cross Domain Strategy and Management Office (NCDSMO).

The Department further amends Category XIII to align armor protection levels with the most recent NIJ standard, 0123.00, ''Specification for NIJ Ballistic Protection Levels and Associated Test Threats.'' All references to ''NIJ Level III'' are updated to NIJ RF1. As the new RF1 standard corresponds to the previous Type III standard, this is not a significant change in control. The reference in paragraph (m)(10) is also updated to reference the new standard.

Additionally, paragraph (e)(2) is revised for clarification and to add paragraphs (e)(2)(i) and (ii). Category XIII is further revised to add specific fluids to the USML in paragraph (j)(3). Each of these fluids was developed for one or more critical military applications for which existing fluids were unsuitable; by including a specially designed criterion, general-purpose fluids subsequently selected for use in a military application are not described by this control. Lastly, paragraph (m)(9) is amended to clarify the definitions of variables in the equation for E_m.

USML Category XIV

Additional nerve agents and a defoliant are added to USML Category XIV in paragraphs (a)(1)(iv) through (viii) and (j), and controls on Chemical Agent Resistive Coatings (CARC) are clarified in paragraph (f)(7). The nerve agent additions are made pursuant to changes to Schedule 1 of the Chemical Weapons Convention, while the defoliant addition is a constituent of Agent Orange, for which the Department is unaware of current commercial applications.

The clarification of CARC controls in paragraph (f)(7) is made consistent with longstanding policy published on DDTC's website. As CARC is controlled only through the point of application and curing, export applications for CARC must specify the proposed end-users and end-uses, and export licenses for CARC impose limitations on the same. Of note, the control release for CARC that has been applied and cured only applies to USML Category XIV(f)(7); this release does not apply to coatings or materials described elsewhere on the USML. For example, when a USML Category XIII(j)(2) coating is applied to an item subject to the EAR, a DDTC license or other approval continues to be required for the coating, when the item to which the coating was applied is exported, reexported, or retransferred.

USML Category XIX

USML Category XIX paragraphs (d) and (f)(1) are amended to add specific DoD-funded aircraft engines in development that provide a critical military or intelligence advantage, as well as their specially designed parts, components, accessories, and attachments. Specifically, paragraph (d) is split into two parts, paragraphs (d)(1) and (2), and amended to include the XT900, which is a developmental engine resulting from the enumerated HPW3000 technology demonstrator.

The note to paragraph (d) is redesignated as the note to paragraph (d)(1), to continue its applicability to the engines in former paragraph (d) following their movement to paragraph (d)(1), with no change in scope. Paragraph (f)(1) is amended to include specially designed parts, components, accessories, and attachments for the engine now described in paragraph (d)(2), and to incorporate a portion of the note to paragraph (f)(1). The remainder of the note to paragraph (f)(1) is redesignated as ''Note 1 to paragraph (f)(1)'' and revised for clarity. Paragraph (f)(1) is further amended to clarify that parts, components, accessories, and attachments are not released if common only to a listed engine and an engine designated in USML Category XXI(a), and to add a catch-all control for XA100, XA101, XA102, XA103, and T901 engine hardware. The XA-series engines represent a substantial leap in propulsion capability. Items specially

designed for these engines provides a critical military or intelligence advantage in enabling the engines to provide improved thrust-to-weight capability while addressing fuel efficiency, affordability, and sustainment for warfighter operational readiness. The T901 powers the Future Vertical Lift platform and provides 33% more thrust than, but retains the same size as, its predecessor.

Paragraph (f)(2) is amended to clarify the items described in paragraph (f)(2) by replacing a term of art (''hot section components'') with defined regulatory terms (hot section ''parts'' and ''components''), with no change in scope, and to add related cooled structures for combustion chambers and liners. Punctuation is also updated with no change in scope.

USML Category XX

USML Category XX is amended to add paragraphs (a)(9) and (10) to control two new classes of uncrewed, untethered vessels and vehicles that provide a critical military advantage: specifically, those equipped with anti-recovery features, and larger systems with significant range or endurance. Paragraph (a)(10) includes criteria to avoid control of systems below certain weight and performance thresholds the Department assesses are best suited for scientific research or commercial applications. Tethered systems are similarly excluded from both paragraphs (a)(9) and (10).

USML Category XX(b)(2) is revised for clarity, with no change to the scope of the control.

USML Category XXI

USML Category XXI is amended to move the second sentence of paragraph (a) into a new note, and to further clarify the considerations when designating an article in USML Category XXI.

Effective Date and Updating of Licenses and Agreements

The Department notes it previously provided a 180-day transition period between the publication of the final rule for reviews of entire USML categories revised under Export Control Reform and the effective date of the transition of items to updated classifications. *See* 78 FR 22740, 22747 (Apr. 16, 2013). While the Department has also recently issued rules with shorter transition periods, the Department provides a 240-day delayed effective date for this rule. Consistent with prior revisions of USML categories, additional guidance that addresses specific licensing scenarios will be provided on DDTC's website.

Timeline for Applications, Amendments, and Grandfathering

Items Transitioning Jurisdiction From the ITAR to the EAR

Items removed from a USML paragraph by this rule may still be described in other USML paragraphs or may become subject to the export licensing jurisdiction of the Department of Commerce pursuant to the EAR. Exporters should evaluate the control status of their item using the orders of review in the ITAR and the EAR and may submit a commodity jurisdiction request to DDTC for assistance or—if there is no doubt it is subject to the EAR—a commodity classification request to BIS. Licensing requirements under the EAR are determined by the reasons for control applicable to the item, the destination, the end use, and the end user. General Order No. 5 in supplement no. 1 to part 736 of the EAR describes the transition process for items moving from the USML to the CCL upon the publication of the pertinent final rules. The general order describes the grandfathering of DDTC licenses and agreements, the use of BIS authorizations, and the submission of disclosures to BIS and DDTC related to the transition of items from the USML to the CCL.

For those wishing to export under the authority of the EAR as soon as possible for items moving from the USML to the CCL, applicants may submit license applications immediately after the publication of the BIS final rule adding such items to the CCL. Thus, applicants may, in effect, pre-position license applications early to facilitate processing of the license application. Such a pre-positioned license application will be processed in accordance with § 750.4 of the EAR, but if BIS completes processing the application prior to the effective date of the applicable final rule, BIS will hold the application without action (HWA), until the effective date of that final rule. Applications for transitioned items received after the effective date of the final rule will be processed as described in § 750.4 of the EAR.

Existing holders of DDTC licenses, agreements, or other approvals, may maintain existing authorizations or obtain new authorizations for items moving from the USML to the CCL. Questions regarding the continued use of DDTC licenses, agreements, or other approvals should be directed to DDTC.

Acceptance of Licenses

During the transition period, license applications will be accepted by both DDTC and BIS for items moving from the USML to the CCL. BIS will not issue approved licenses for such items until on or after the effective date of this rule.

DSP–5 Licenses: Licenses for items transitioning to the CCL that are issued prior to the effective date of the final rule and do not include items remaining on the USML will remain valid until expired, returned by the license holder, or for a period of three years from the effective date of the final rule, whichever occurs first, unless otherwise revoked, suspended, or terminated. Licenses containing both transitioning and non-transitioning items (mixed authorizations) will remain valid until expired or returned by the license holder, unless otherwise revoked, suspended, or terminated. Any limitation, proviso, or other requirement required by the DDTC authorization remains in effect if the DDTC authorization is relied upon for export, re-export, or re-transfer. License amendment requests received by DDTC prior to the effective date of the rule will be adjudicated on a case-by-case basis up until the effective date of the rule.

DSP–61 and DSP–73 Licenses: All temporary licenses that are issued in the period prior to the effective date of the rule will remain valid until expired or returned by the license holder, unless otherwise revoked, suspended, or terminated. Any limitation, proviso, or other requirement imposed on the DDTC authorization will remain in effect if the DDTC authorization is relied upon for export. License amendment requests received by DDTC before the effective date of the rule will be adjudicated on a case-by-case basis until the effective date of the rule. All license applications, including amendments, received after the effective date for items that are transitioning to the CCL that are not identified in an (x) paragraph entry will be Returned Without Action (RWA) with instructions to contact the Department of Commerce.

Technical Assistance Agreements, Manufacturing License Agreements, Distribution Agreements, and Related Reporting Requirements: Agreements and amendments containing both USML and CCL items will be adjudicated up to the effective date of the final rule. Agreements containing transitioning and non-transitioning items that are issued prior to the effective date of the final rule will remain valid until expired, unless they require an amendment, or for a period of three years from the effective date of the final rule, whichever occurs first, unless otherwise revoked, suspended, or terminated. In order for an agreement to remain valid beyond three years, an amendment must be submitted to

authorize the CCL items using the new (x) paragraph from the relevant USML category. Any activity conducted under an agreement will remain subject to all limitations, provisos, and other requirements stipulated in the agreement.

Agreements containing solely transitioning items issued prior to the effective date of the final rule will remain valid for a period of three years from the effective date of the rule, unless revoked, suspended, or terminated. After the three-year period ends, any ongoing activity must be conducted under the appropriate Department of Commerce authorization. Agreements and agreement amendments solely for items moving to the CCL which are received after the effective date of the rule will be Returned Without Action (RWA) with instructions to contact the Department of Commerce.

All reporting requirements for Manufacturing License Agreements and Distribution Agreements must be complied with and such reports must be submitted to the Department of State while the agreement is relied upon as an export authorization by the exporter.

Reexport/Retransfer of USML Items That Have Transitioned to the CCL: Foreign persons or U.S. persons abroad that have USML items in their inventory at the effective date of transition should review both the USML and the CCL to determine the proper export jurisdiction of those items. If the item is controlled by the Department of Commerce, any reexport or retransfer must comply with the requirements of the EAR. If doubt exists on the jurisdiction of the items, the foreign person should contact the original exporter or manufacturer. In instances when those parties are unavailable, the foreign person should review the DDTC or BIS website for guidance and support options.

Following the effective date, foreign persons (including end-users, consignees, and intermediate consignees) who receive, via a Department of State authorization, an item they are certain has transitioned to the CCL (*e.g.,* confirmed in writing by manufacturer or supplier), should treat the item as such and submit requests for post-transition reexports or retransfers to the Department of Commerce, as may be required by the EAR. If reexport or retransfer was previously authorized under an MLA or WDA that continues to provide the export authority or any stand-alone reexport/retransfer authorization received pursuant to ITAR § 123.9, such authorizations remain valid.

Items Transitioning to the USML

For those wishing to export under the authority of the ITAR as soon as possible for items moving onto the USML, applicants may submit license applications as soon as this rule is published in the **Federal Register**.

Submission of Voluntary Self-Disclosures

In reviewing the clarifications provided by this rule, if you identify a potential violation of the ITAR, you are encouraged to submit a voluntary disclosure to DDTC, consistent with the procedures outlined in § 127.12. For potential violations of the EAR, persons are encouraged to submit voluntary self-disclosures to BIS. For potential violations of both the EAR and the ITAR, persons are encouraged to submit disclosures to both agencies.

Request for Comments

Consistent with its ongoing USML review process, the Department is requesting public comments on the revisions described in this rulemaking. The Department encourages the public to provide comments directly related to this rule and responsive to the questions described below. To facilitate timely review and assessment, comments should be provided in a concise sentence or paragraph, followed by supporting explanatory paragraphs and examples, with each distinct comment treated separately (as opposed to multiple comments in one paragraph or section). The Department requests comments focused on the following questions:

1. How much would practitioners benefit from the Department defining the term ''Controlled Reception Pattern Antennas (CRPAs)'' as used in USML Category XI(c)(10)? Are there criteria, other than those described in the preamble of this rule, that may help better distinguish between CRPAs described in paragraph (c)(10)(v) and antennas described in paragraph (c)(10)(i)?

2. The addition of paragraph (h)(1)(iii) to USML Category VIII ensures that parts, components, accessories, and attachments specially designed for aircraft listed in paragraphs (h)(1)(i) and (ii) are not released from paragraph (h)(1) due to their use in foreign advanced military aircraft described in paragraphs (a)(1) and (2) of USML Category VIII.

a. The Department requests comment on its consideration of adding to paragraph (h)(1) a new paragraph (h)(1)(iv), to retain parts used in paragraphs (h)(1)(i) or (ii) aircraft even when they are used in ''aircraft described in paragraph (a)(3) of USML Category VIII,'' as the Department assesses that training aircraft described in paragraph (a)(3) often serve as proving grounds for future paragraph (a)(1) or (2) aircraft.

b. The Department requests comment on its consideration of expanding paragraph (h)(1) to add parts, components, accessories, and attachments specially designed for the foreign advanced military aircraft listed in paragraph (h)(1)(iii), even if they are not utilized in an aircraft listed in paragraph (h)(1)(i) or (ii), commensurate with the Department's regulation of similar items for the advanced U.S. aircraft described in paragraphs (h)(1)(i) and (ii). For example, what effect would describing these foreign articles in paragraph (h)(1) have on existing international defense industrial cooperation and supply chains?

3. With this rule, the Department changes paragraph (d) of USML Category XIX to read ''The following engines:'' and then describes specific aircraft engines in paragraphs (d)(1) and (2). The Department requests comment on its consideration of changing that language to ''The following engine series:'' in order to more completely describe engines that provide a critical military or intelligence advantage.

4. Paragraphs (d)(1) and (2) of USML Category XIX describe specific aircraft engines. The Department requests comment on its consideration of expanding that scope to include ''military variants'' of those engines, similar to its regulation of certain gas turbine engine parts in paragraph (f)(1)(i) of USML Category XIX for military variants of the listed engines.

5. Are there commodities, services, or technical data closely related to these revisions that warrant ITAR control, but are currently either not described on the USML, or not described with sufficient clarity? If so, please provide examples and a concise explanation.

6. Are there specific commodities, services, or technical data described on the USML following these revisions that are, or have previously been, in normal commercial use, that were previously transitioned to another agency's jurisdiction, or that were previously determined not to be subject to the ITAR via a Commodity Jurisdiction determination? If so, please include supporting documentation.

7. Are there specific commodities, services, or technical data described on the USML following these revisions for which civil use is proposed, intended, or anticipated in the next five years? Please include supporting

documentation and a point of contact familiar with the details.

8. Are there specific functions, performance levels, or characteristics related to these revisions that could better:

a. Distinguish between the commodities that do, and do not, warrant ITAR control;

b. Delineate the criteria for control, in lieu of using the term 'specially designed'; or

c. Align with the constructions or language used in other USML entries?

9. Can any of these revisions be more concisely stated?

Comment Submissions

Instructions

Include the Regulatory Information Number (RIN) (1400–AF42) for all submissions related to this rule. Parties who wish to comment anonymously may do so by submitting their comments via *www.regulations.gov,* leaving the fields that would identify the commenter blank and including no identifying information in the comment itself. Commenters are cautioned not to include proprietary, export-controlled, personal, or other sensitive information in their comments that they would not want to be made public. If such information would provide useful insight to the comment: (1) assemble that information in a separate document with proprietary markings; (2) include ''Proprietary supplement on file with: [provide POC]'' as the first line in the body of the email submission; (3) submit the public portion of the comment via email; and (4) call DDTC at (202) 663–1282 to coordinate submission of the proprietary supplement.

Regulatory Analysis and Notices

Administrative Procedure Act

This rulemaking is exempt from the rulemaking requirements of section 553 of the Administrative Procedure Act (APA) pursuant to section 553(a)(1) as a military or foreign affairs function of the United States. Although the Department has elected to publish this interim final rule with a concurrent 30-day request for public comment and a 240-day delayed effective date, it does so without prejudice to its determination that controlling the export, reexport, retransfer, and temporary import of defense articles and defense services is a military or foreign affairs function.

Regulatory Flexibility Act

Since this rule is exempt from the notice-and-comment rulemaking provisions of 5 U.S.C. 553, it does not require analysis under the Regulatory Flexibility Act.

Unfunded Mandates Reform Act of 1995

This rulemaking does not involve a mandate that will result in the expenditure by state, local, and tribal governments, in the aggregate, or by the private sector of $100 million or more in any year and it will not significantly or uniquely affect small governments. Therefore, no actions are deemed necessary under the provisions of the Unfunded Mandates Reform Act of 1995.

Congressional Review Act

This rule does not meet the criteria of 5 U.S.C. 804(2).

Executive Orders 12372 and 13132

This rulemaking does not have sufficient federalism implications to require consultations or warrant the preparation of a federalism summary impact statement. The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities do not apply to this rulemaking.

Executive Orders 12866, 13563, and 14094

Executive Order 12866, as amended by Executive Orders 13563 and 14094, direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributed impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. After review by the Office of Management and Budget (OMB), this rule has been deemed a ''significant regulatory action.'' This rule was undertaken pursuant to a statutory directive to periodically review the items on the USML. The Department generally determines which items warrant addition to, or removal from, the USML by assessing whether each provides a critical military or intelligence advantage based on national security and foreign policy considerations. Because the costs and benefits of changing what is controlled focus on the effect or utility of the item or service, rather than its market prevalence or economic value, quantitative analyses cannot be usefully estimated and are not available, particularly since the global prevalence or availability of the item or service are not known. Moreover, the Department does not have useful estimates or models to predict whether or how frequently the items added to the USML by this rule will be applied for export or to which countries, or for temporary import and from which countries. Qualitatively, the rule was assessed for costs and benefits. Because listing individual items or model numbers would necessarily lead to incomplete controls when an item is renamed or slightly modified, the USML contains many descriptive controls that are based on broader characteristics, including form, fit, function, and performance capability. To more accurately describe only what the Department intends to control, and to provide companies and individuals with better certainty, some USML revisions made by this rule are aimed to improve and clarify various entries and to more precisely focus controls. These revisions are also informed by confidential commodity jurisdiction determination and advisory opinion requests, submitted by industry. The Department takes into account common questions and strives to streamline and simplify USML entries based on how it understands industry experience with certain parts of the USML. Finally, when a complete redundancy is identified, as in one revision made by this rule, it is removed so that exporters, brokers, and temporary importers may better rely on a single entry, which can help to reduce compliance costs and increase the accuracy of relevant metrics. One alternative to this is inaction or delay. The Department could have waited to amend larger parts of the USML at once or continued to gather data to evaluate the controls affected by this rule. These alternatives were rejected. Statutory requirements, including section 38(f) of the Arms Export Control Act (22 U.S.C. 2778(f)), and section 1345 of the National Defense Authorization Act for Fiscal Year 2024, require a periodic review of the USML for edits like those made by this rule. While the Department continuously reviews the entire USML, it aims to focus on particular USML categories for targeted revisions in cycles, as it has done in implementing this rule.

Executive Order 12988

The Department of State has reviewed this rulemaking in light of sections 3(a) and 3(b)(2) of Executive Order 12988 to eliminate ambiguity, minimize litigation, establish clear legal standards, and reduce burden.

Executive Order 13175

The Department of State has determined that this rulemaking will not have tribal implications, will not impose substantial direct compliance costs on Indian tribal governments, and will not preempt tribal law. Accordingly, the requirements of Executive Order 13175 do not apply to this rulemaking.

Paperwork Reduction Act

This rulemaking does not impose or revise any information collections subject to 44 U.S.C. chapter 35.

Signing Authority

Assistant Secretary C.S. Eliot Kang, having reviewed and approved this document, has delegated the authority to electronically sign this document to Stanley L. Brown, Acting Assistant Secretary, Bureau of Political-Military Affairs, for purposes of publication in the **Federal Register**.

List of Subjects in 22 CFR Part 121

Arms and munitions, Classified information, Exports.

For reasons stated in the preamble, the Department of State amends 22 CFR part 121, the United States Munitions List, as follows:

PART 121—THE UNITED STATES MUNITIONS LIST

■ 1. The authority citation for part 121 continues to read as follows:

Authority: 22 U.S.C. 2752, 2778, 2797; 22 U.S.C. 2651a; Sec. 1514, Pub. L. 105–261, 112 Stat. 2175; E.O. 13637, 78 FR 16129, 3 CFR, 2013 Comp., p. 223.

■ 2. Revise § 121.0 to read as follows:

§ 121.0 United States Munitions List description and definitions.

For a description of the U.S. Munitions List and its designations, including the use of asterisks and the parenthetical ''(MT)'', see § 120.10 of this subchapter. Within this part, the following definitions apply:

CCL. See Commerce Control List.

Commerce Control List means Commerce Control List in 15 CFR part 774, supplement no. 1.

Department of Defense means U.S. Department of Defense.

DoD. See Department of Defense.

EAR means Export Administration Regulations in 15 CFR parts 730 through 774.

ECCN means Export Control Classification Number, the alphanumeric designation used on the CCL. See definition at 15 CFR part 772.

Foreign advanced military aircraft means non-U.S.-origin aircraft, including foreign derivatives of U.S.-origin aircraft, in development, or entering production, after 2023 with one or more of the following advanced military capabilities: an Active Electronically Scanned Array (AESA) fire control radar, integrated signature management or electronic warfare systems, or the ability to engage targets beyond visual range (BVR).

■ 3. Amend § 121.1 as follows:
■ a. In Category II, revise Note 2 to paragraph (a)(5);
■ b. In Category IV, revise paragraph (c);
■ c. In Category V, revise paragraphs (c)(2), (e)(10), (f)(4)(x), (f)(19), and (g)(4);
■ d. In Category VII, revise Note 3 to Category VII;
■ e. In Category VIII:
■ i. Revise paragraphs (h)(1) and (29);
■ ii. Add Note 1 to paragraph (h); and
■ iii. Remove the Note at the end of the category.
■ f. In Category IX:
■ i. Revise paragraph (e)(1); and
■ ii. Remove and reserve paragraph (e)(2);
■ g. In Category X:
■ i. Revise paragraphs (a)(1) and (6);
■ ii. Add paragraph (b);
■ iii. Revise paragraph (d)(1); and
■ iv. Redesignate the Note to paragraphs (a) and (d) as Note 1 to paragraphs (a) and (d) and revise newly redesignated Note 1 to paragraphs (a) and (d).
■ h. In Category XI, revise paragraph (c)(10).
■ i. In Category XII, revise paragraph (d)(2)(ii).
■ j. In Category XIII:
■ i. Revise paragraphs (b)(4) and (d)(1) and (2);
■ ii. Redesignate Note to paragraph (d) as Note 1 to paragraph (d);
■ iii. Remove the Note to paragraph (d)(2) following newly redesignated Note 1 to paragraph (d); and
■ iv. Revise paragraphs (e)(1), (2), (5), and (6), (j), and (m)(9) and (10).
■ k. In Category XIV:
■ i. Revise paragraph (a)(1)(ii);
■ ii. Add paragraphs (a)(1)(iv) through (viii);
■ iii. Revise paragraph (f)(7); and
■ iv. Add paragraph (j).
■ l. In Category XIX, revise paragraphs (d) and (f)(1) and (2).
■ m. In Category XX:
■ i. Revise paragraphs (a)(7) and (8);
■ ii. Add paragraphs (a)(9) and (10); and
■ iii. Revise paragraph (b)(2).
■ n. In Category XXI, revise paragraph (a) and add Note 1 to Category XXI.

The revisions and additions read as follows:

§ 121.1 The United States Munitions List.

* * * * *

Category II—Guns and Armament

(a) * * *

Note 2 to paragraph (a)(5): Note 1 to paragraph (a)(5) does not apply to defense articles enumerated on the U.S. Munitions List, whether in production or development.

* * * * *

Category IV—Launch Vehicles, Guided Missiles, Ballistic Missiles, Rockets, Torpedoes, Bombs, and Mines

* * * * *

(c) Equipment specially designed for the handling, control, activation, monitoring, detection, protection, discharge, or detonation of any of the following:

(1) A commodity enumerated in paragraphs (a) or (b) of this category (MT for those systems enumerated in paragraph (a)(1) or (2) or (b)(1) of this category); or

(2) Improvised Explosive Devices (IEDs).

Note 1 to paragraph (c): This paragraph (c) includes specialized handling equipment (*e.g.,* transporters, cranes, and lifts) specially designed to handle articles enumerated in paragraphs (a) and (b) of this category for preparation and launch from fixed and mobile sites. The equipment in this paragraph (c) also includes specially designed robots, robot controllers, and robot end-effectors, and liquid propellant tanks specially designed for the storage or handling of the propellants controlled in USML Category V, CCL ECCNs 1C011, 1C111, and 1C608, or other liquid propellants used in the systems enumerated in paragraph (a)(1), (2), or (5) of this category.

Note 2 to paragraph (c): Aircraft Missile Protection Systems (AMPS) are controlled in USML Category XI.

* * * * *

Category V—Explosives and Energetic Materials, Propellants, Incendiary Agents, and Their Constituents

* * * * *

(c) * * *

(2) Carboranes; decaborane (CAS 17702–41–9); pentaborane (CAS 19624–22–7); and derivatives thereof (MT);

* * * * *

(e) * * *

(10) Poly-NIMMO (poly nitratomethylmethyoxetane, poly-NMMO, (poly[3-nitratomethyl-3-methyl oxetane])) (CAS 84051–81–0);

* * * * *

(f) * * *

(4) * * *

(x) Diethylferrocene (CAS 1273–97–8);

* * * * *

(19) TEPANOL (HX-878) (tetraethylenepen taamineacrylonitrileglycidol) (CAS 68412–46–4); cyanoethylated polyamines adducted with glycidol and their salts (MT for TEPANOL (HX-878));

* * * * *

(g) * * *

(4) CL-20 precursors (any molecule containing hexaazaisowurtzitane) (*e.g.,* HBIW (hexabenzylhexaazaiso wurtzitane), TAIW (tetraacetyldibenzylhexa azaisowurtzitane));

* * * * *

Category VII—Ground Vehicles

* * * * *

Note 3 to Category VII: Ground vehicles include any vehicle meeting the control parameters, regardless of: the surface upon which the vehicle is designed to operate (*e.g.,* highway, off-road, amphibious, or rail); the manner of control of the vehicle (*e.g.,* manual, remote, or autonomous); or the mode of locomotion of the vehicle (*e.g.,* wheeled, tracked, or multi-pedal).

* * * * *

Category VIII—Aircraft and Related Articles

* * * * *

(h) * * *

(1) Parts, components, accessories, and attachments specially designed for aircraft listed within paragraphs (h)(1)(i) through (ii) of this category, excluding those common to aircraft that are or were in production and are not listed within paragraphs (h)(1)(i) through (iv), as follows:

(i) B–1, B–2, B–21, F–15SE (Silent Eagle), F/A–18E/F, EA–18G, MQ–25, F–22, F–35, F–117, RQ–170, or future variants thereof;

(ii) U.S. Government technology demonstrators;

(iii) Foreign advanced military aircraft described in paragraph (a)(1), (2), or (3) of USML Category VIII; or

(iv) Aircraft included in a USML Category XXI(a) determination;

Note 1 to paragraph (h)(1): The following is an example of the scope of this paragraph (h)(1) for an article common to multiple aircraft: A part common to the F–16 (not listed within paragraphs (h)(1)(i) through (iv) of this category) and F–35 (listed) is not described in this paragraph (h)(1), while a part common only to the F–22 and F–35 (both listed) is described in this paragraph (h)(1), subject to a specially designed analysis as set forth in § 120.41 of this subchapter.

Note 2 to paragraph (h)(1): The following is an example of the scope of this paragraph (h)(1) for articles used in U.S. Government (USG) technology demonstrators: A part used only in a USG technology demonstrator, where the USG technology demonstrator is otherwise subject to the EAR, is not described in this paragraph (h)(1) (see § 120.41(b)(4)), while a part common only to the EA–18G (listed in paragraph (h)(1)(i) of this category) and a USG technology demonstrator is described in this paragraph (h)(1), subject to the analysis set forth in § 120.41 of this subchapter.

* * * * *

(29) Any of the following equipment if specially designed for defense articles described in this paragraph (h)(1) or aircraft listed in paragraph (h)(1)(i), (ii), or (iii) of this category or developmental aircraft described in paragraph (f) of this category:

(i) Scale test models;

(ii) Full scale iron bird ground rigs used to test major aircraft systems; or

(iii) Jigs, locating fixtures, templates, gauges, molds, dies, or caul plates.

Note 1 to paragraph (h): Parts, components, accessories, and attachments in paragraphs (h)(3) through (5) or paragraph (h)(7), (14), (17), or (19) of this category are licensed by the Department of Commerce when incorporated in an aircraft subject to the EAR and classified under ECCN 9A610. Replacement parts, components, accessories, and attachments remain subject to the ITAR.

* * * * *

Category IX—Military Training Equipment and Training

* * * * *

(e) * * *

(1) Directly related to the defense articles enumerated in paragraphs (a) and (b) of this category; or

* * * * *

Category X—Personal Protective Equipment

(a) * * *

(1) Body armor providing a protection level equal to or greater than NIJ RF3;

Note 1 to paragraph (a)(1): For body armor providing a level of protection of NIJ HG1, NIJ HG2, NIJ RF1, or NIJ RF2, see ECCNs 1A005 and 1A613.

Note 2 to paragraph (a)(1): See USML Category XIII(e) for controls on related materials.

* * * * *

(6) Helmets and helmet shells providing a protection level equal to or greater than NIJ RF3;

* * * * *

(b) Developmental exoskeletons funded by the U.S. Department of Defense via contract, or other funding authorization, dated after January 20, 2026; and specially designed parts, components, accessories, and attachments therefor; excluding those that are:

(1) Enumerated elsewhere on the USML;

(2) In production;

(3) Documented as subject to the EAR via a commodity jurisdiction determination (see § 120.4 of this subchapter); or

(4) Identified in the relevant DoD contract or other funding authorization as being developed for both civil and military applications.

* * * * *

(d) * * *

(1) Ceramic or composite plates that provide protection equal to or greater than NIJ RF3;

* * * * *

Note 1 to paragraphs (a) and (d): See National Institute of Justice Classification, NIJ Standard 0123.00, or national equivalents, for a description of level of protection for armor.

* * * * *

Category XI—Military Electronics

* * * * *

(c) * * *

(10) Antennas, and specially designed parts and components therefor, other than Traffic Collision Avoidance Systems (TCAS) equipment conforming to FAA TSO C–119c, as follows:

(i) Antennas, other than Controlled Reception Pattern Antennas (CRPAs), that employ four or more elements, electronically steer angular beams, independently steer angular nulls, create angular nulls with a null depth greater than 20 dB, and achieve a beam switching speed faster than 1 millisecond;

(ii) Antennas, other than CRPAs, that form adaptive null attenuation greater than 35 dB with convergence time less than 1 millisecond;

(iii) Antennas that detect signals across multiple RF bands with matched left hand and right hand spiral antenna elements for determination of signal polarization;

(iv) Antennas that determine signal angle of arrival with an accuracy better than (less than) two degrees (*e.g.,* interferometer antenna);

(v) CRPAs specially designed for functions other than Position, Navigation, and Timing (PNT), that employ four or more elements, electronically steer angular beams, independently steer angular nulls, create angular nulls with a null depth greater than 20 dB, and achieve a beam switching speed faster than 1 millisecond; or

(vi) CRPAs specially designed for functions other than PNT, that form adaptive null attenuation greater than 35 dB with convergence time less than 1 millisecond;

* * * * *

Category XII—Fire Control, Laser, Imaging, and Guidance Equipment

* * * * *

(d) * * *

(2) * * *

(ii) Global Positioning System (GPS) receiving equipment specially designed for encryption or decryption (*e.g.,* Y-Code, M-Code) of GPS protected positioning service (PPS) signals (MT if designed or modified for airborne applications);

* * * * *

Category XIII—Materials and Miscellaneous Articles

* * * * *

(b) * * *

(4) Military or intelligence systems, equipment, assemblies, modules, integrated circuits, components, or software (including all previous or derived versions) authorized to control access to or transfer data between different security domains as listed on the National Cross Domain Strategy and Management Office (NCDSMO) Control List (UCL); or

* * * * *

(d) * * *

* (1) Ablative materials fabricated or semi-fabricated from advanced composites (*e.g.,* silica, graphite, carbon, carbon/carbon, and boron filaments) specially designed for the articles in USML Category IV or XV (MT if usable for nozzles, re-entry vehicles, nose tips, or nozzle flaps usable in rockets, space launch vehicles (SLVs), or missiles capable of achieving a range greater than or equal to 300 km); or

(2) Carbon/carbon billets and preforms that are reinforced with continuous unidirectional fibers, tows, tapes, or woven cloths in three or more dimensional planes (MT if designed for rocket, SLV, or missile systems and usable in rockets, SLVs, or missiles capable of achieving a range greater than or equal to 300 km).

Note 1 to paragraph (d)(2): This paragraph (d)(2) does not control carbon/carbon billets and preforms where reinforcement in the third dimension is limited to interlocking of adjacent layers only.

* * * * *

(e) * * *

(1) Spaced armor with E_m greater than 1.4 and meeting NIJ RF1 or better;

(2) Transparent armor with areal density less than or equal to 40 pounds per square foot (≤40 lb/ft^2), having either:

(i) E_m greater than or equal to 1.3 (E_m ≥1.3); or

(ii) E_m less than 1.3 (E_m <1.3) and meeting or exceeding NIJ RF1 standards;

* * * * *

(5) Composite armor with E_m greater than 1.4 and meeting or exceeding NIJ RF1;

(6) Metal laminate armor with E_m greater than 1.4 and meeting or exceeding NIJ RF1; or

* * * * *

(j) Equipment, materials, coatings, treatments, and fluids not elsewhere specified in this section, as follows:

(1) Specially treated or formulated dyes, coatings, and fabrics used in the design, manufacture, or production of personnel protective clothing, equipment, or face paints designed to protect against or reduce detection by radar, infrared, or other sensors at wavelengths greater than 900 nanometers (see USML Category X(a)(2));

* (2) Equipment, materials, coatings, and treatments that are specially designed to modify the electro-optical, radiofrequency, infrared, electric, laser, magnetic, electromagnetic, acoustic, electro-static, or wake signatures of defense articles or 600 series items subject to the EAR through control of absorption, reflection, or emission to reduce detectability or observability (MT for applications usable for rockets, SLVs, missiles, drones, or UAVs capable of achieving a range greater than or equal to 300 km, and their subsystems. See note to paragraph (d) of this category); or

(3) Fluids, including greases, specially designed for any of the following:

(i) Aircraft listed in USML Category VIII(h)(1)(i), (ii), or (iii);

(ii) Coatings described in USML Category XIV(f)(7);

(iii) Engines listed in USML Category XIX(f)(1)(i) or (ii); or

(iv) Articles described in USML Categories XVIII (Directed Energy Weapons) or XX (Submersible Vessels and Related Articles).

* * * * *

(m) * * *

(9) E_m is the line-of-sight target mass effectiveness ratio and provides a measure of the tested armor's performance to that of rolled homogenous armor, where E_m is defined as follows:

$$E_m = \frac{(P_o - P_r)\rho_{RHA}}{AD_{Target}}$$

Where:

= density of MIL–A–12560 RHA, (7.85 g/cm^3)

P_o = Baseline Penetration of RHA

P_r = Residual Line of Sight Penetration, either positive or negative (RHA equivalent)

AD_{RHA} = Line-of-Sight Areal Density of RHA

AD_{TARGET} = Line-of-Sight Areal Density of Target

If witness plate is penetrated, P_r is the distance from the projectile to the front edge of the witness plate. If the target armor has no measurable penetration, $P_r = 0$, and the E_m equation reduces to a ratio of AD_{RHA}/AD_{TARGET}.

(10) NIJ is the National Institute of Justice and RF1 refers to the requirements specified in NIJ standard 0123.00, Specification for NIJ Ballistic Protection Levels and Associated Test Threats.

* * * * *

Category XIV—Toxicological Agents, Including Chemical Agents, Biological Agents, and Associated Equipment

* (a) * * *

(1) * * *

(ii) O-Alkyl (equal to or less than C_{10}, including cycloalkyl) N,N-dialkyl (Methyl, Ethyl, n-Propyl or Isopropyl) phosphoramidocyanidates, such as: Tabun (GA): O-Ethyl N, N-dimethylphosphoramidocyanidate (CAS 77–81–6) (CWC Schedule 1A);

* * * * *

(iv) P-alkyl (H or equal to or less than C_{10}, including cycloalkyl) N-(1-(dialkyl (equal to or less than C_{10}, including cycloalkyl) amino)) alkylidene (H or equal to or less than C_{10}, including cycloalkyl) phosphonamidic fluorides and corresponding alkylated or protonated salts; *e.g.,* N-(1-(di-n-decylamino)-n-decylidene)-P-decylphosphonamidic fluoride (CAS 2387495–99–8) and Methyl-(1-(diethylamino) ethylidene) phosphonamidofluoridate (CAS 2387496–12–8) (CWC Schedule 1A);

(v) O-alkyl (H or equal to or less than C_{10}, including cycloalkyl) N-(1-(dialkyl (equal to or less than C_{10}, including cycloalkyl) amino)) alkylidene (H or equal to or less than C_{10}, including cycloalkyl) phosphoramidofluoridates and corresponding alkylated or protonated salts; *e.g.,* O-n-Decyl N-(1-(di-n-decylamino)-n-decylidene) phosphoramidofluoridate (CAS 2387496–00–4), Methyl (1-(diethylamino) ethylidene) phosphoramidofluoridate (CAS 2387496–04–8), and Ethyl (1-(diethylamino) ethylidene) phosphoramidofluoridate (CAS 2387496–06–0) (CWC Schedule 1A);

(vi) Methyl-(bis (diethylamino) methylene) phosphonamidofluoridate (CAS 2387496–14–0) (CWC Schedule 1A);

(vii) Quaternaries of dimethylcarbamoyloxypyridines: 1-[N,N-dialkyl (equal to or less than C_{10})-N-(n-(hydroxyl, cyano, acetoxy) alkyl (equal to or less than C_{10})) ammonio]-n-[N-(3-dimethylcarbamoxy-α-picolinyl)-N,N-dialkyl (equal to or less than C_{10})

ammonio] decane dibromide (n=1–8); *e.g.,* 1-[N,N-dimethyl-N-(2-hydroxy) ethylammonio]-10-[N-(3-dimethylcarbamoxy-α-picolinyl)-N,N-dimethylammonio] decane dibromide (CAS 77104–62–2) (CWC Schedule 1A); or

(viii) Bisquaternaries of dimethylcarbamoyloxypyridines: 1,n-Bis[N-(3-dimethylcarbamoxy-α-picolyl)-N,N-dialkyl (equal to or less than C_{10}) ammonio]-alkane-(2,(n-1)-dione) dibromide (n=2–12); *e.g.,* 1,10-Bis[N-(3-dimethylcarbamoxy-α-picolyl)-N-ethyl-N-methylammonio] decane-2,9-dione dibromide(CAS 77104–00–8) (CWC Schedule 1A);

* * * * *

* (f) * * *

(7) Chemical Agent Resistant Coatings (CARC), prior to the application and curing thereof, that have been qualified to military specifications (MIL–PRF–32348, MIL–DTL–64159, MIL–C–46168, or MIL–DTL–53039); or

* * * * *

(j) Constituent elements of defoliants, as follows: 2,4,5-Trichlorophenoxyacetic acid (CAS 93–76–5).

* * * * *

Category XIX—Gas Turbine Engines and Associated Equipment

* * * * *

* (d) The following engines:

(1) AGT1500, CTS800, GE38, GE3000, HPW3000, MT7, T55, T408, or T700; or

Note 1 to paragraph (d)(1): Engines subject to the control of this paragraph (d)(1) are licensed by the Department of Commerce when incorporated in an aircraft subject to the EAR and controlled under ECCN 9A610. Such engines are subject to the controls of the ITAR in all other circumstances.

(2) XT900.

* * * * *

(f) * * *

(1) Parts, components, accessories, and attachments specially designed for the engines listed within paragraph (f)(1)(i) or (ii) of this category, excluding those common to engines that are or were in production that are not listed within paragraphs (f)(1)(i) through (iii) of this category, as follows:

(i) F101, F107, F112, F118, F119, F120, F135, F136, F414, F415, J402, T901, XA100, XA101, XA102, and XA103; and military variants thereof;

(ii) Engines described in paragraph (d)(2) of this category; or

(iii) Engines included in a USML Category XXI(a) determination.

Note 1 to paragraph (f)(1): For example, a part common to the F110 (not listed within paragraphs (f)(1)(i) through (iii) of this category) and F136 (listed) engines is not described in this paragraph (f)(1), while a part common only to the F119 and F135 (both listed) is described in this paragraph, subject to a specially designed analysis using § 120.41 of this subchapter.

* (2) Hot section parts and components (*i.e.,* combustion chambers and liners, and related cooled structures; high pressure turbine blades, vanes, disks, and related cooled structures; cooled intermediate pressure turbine blades, vanes, disks, and related cooled structures; cooled low pressure turbine blades, vanes, disks, and related cooled structures; cooled shaft-driving power turbine blades, vanes, disks, and related cooled structures; cooled augmenters; and cooled nozzles) specially designed for gas turbine engines controlled in this category;

* * * * *

Category XX—Submersible Vessels and Related Articles

(a) * * *

(7) Equipped with any mission systems controlled under this subchapter;

Note 1 to paragraph (a)(7): ''Mission system'' is defined as a ''system'' (see § 120.40(h) of this subchapter) that are defense articles that perform specific military functions such as by providing military communication, electronic warfare, target designation, surveillance, target detection, or sensor capabilities.

(8) Developmental vessels funded by the Department of Defense via contract or other funding authorization;

Note 1 to paragraph (a)(8): This paragraph (a)(8) does not control vessels, and specially designed parts, components, accessories, attachments, and associated equipment therefor, in production, determined to be subject to the EAR via a commodity jurisdiction determination, or identified in the relevant Department of Defense contract or other funding authorization as being developed for both civil and military applications.

Note 2 to paragraph (a)(8): Note 1 to this paragraph (a)(8) does not apply to defense articles enumerated on the U.S. Munitions List, whether in production or development.

Note 3 to paragraph (a)(8): This paragraph (a)(8) is applicable to those contracts and funding authorizations that are dated July 8, 2014, or later.

(9) Uncrewed, untethered vessels (and vehicles) that have an anti-recovery (*e.g.,* scuttle or self-destruct) feature; or

(10) Uncrewed, untethered vessels (and vehicles) with a gross weight rating exceeding three-thousand pounds (3,000 lb), that are designed to operate without human interaction for longer than 24 hours or for more than seventy nautical miles (70 nmi).

Note 1 to paragraph (a)(10): ''Gross weight rating'' in this paragraph (a)(10) means the maximum operating weight, or displacement, of the conveyance, including the fully configured weight of all fuel, fluids (excluding wet ballast open to the operating environment), payloads, other deployables or expendables (*e.g.,* countermeasures, other autonomous commodities, and torpedoes), and cargo.

* (b) * * *

(2) Electric motors specially designed for submarines that have a power output of more than 0.75 MW (1,000 hp), and are all of the following:

(i) Quick reversing;

(ii) Liquid cooled; and

(iii) Totally enclosed.

* * * * *

Category XXI—Articles, Technical Data, and Defense Services Not Otherwise Enumerated

* (a) Any article not enumerated on the U.S. Munitions List may be included in this category until such time as the appropriate U.S. Munitions List category is amended to describe the article.

* * * * *

Note 1 to Category XXI: The decision to designate an article in this category, whether to designate a catch-all control for that article, the Significant Military Equipment designation of those articles, and any exclusion of those articles from eligibility for specific licensing exemptions, shall be made by the Director, Office of Defense Trade Controls Policy.

Stanley L. Brown,

Acting Assistant Secretary, Political-Military Affairs, U.S. Department of State.

[Docket No. FR–5593–N–05]

RIN 2577–AD01

Strengthening the Section 184 Indian Housing Loan Guarantee Program; Extension of Compliance Date

AGENCY: Office of the Assistant Secretary for Public and Indian Housing, HUD.

ACTION: Final rule; extension of compliance date.

SUMMARY: This document extends the compliance date for HUD's final rule entitled ''Strengthening the Section 184 Indian Housing Loan Guarantee Program'' (the final rule). HUD is

extending the compliance date from March 1, 2025, to December 31, 2025 to provide additional time for HUD to develop and implement a comprehensive handbook, to prepare new forms, and to allow Tribes, lenders, servicers, and other participants time to conform their policies, procedures, and systems to comply with the final rule.

DATES: The compliance date announced on June 14, 2024, at 89 FR 20032, is extended from March 1, 2025, to December 31, 2025.

FOR FURTHER INFORMATION CONTACT: Chung-Yiu ''Andrew'' Lee, Senior Native American Policy Advisor, Office of Loan Guarantee, Office of Native American Programs, Office of Public and Indian Housing, Department of Housing and Urban Development, 451 7th Street SW, Room 4108, Washington, DC 20410; email at *Section184comments@hud.gov* or telephone number 202–402–6190 (this is not a toll-free number). HUD welcomes and is prepared to receive calls from individuals who are deaf or hard of hearing, as well as individuals with speech or communication disabilities. To learn more about how to make an accessible telephone call, please visit *https://www.fcc.gov/consumers/guides/telecommunications-relay-service-trs.*

SUPPLEMENTARY INFORMATION:

I. Background

On March 20, 2024, HUD published the final rule (89 FR 20032), which amended the regulations to the Section 184 Indian Housing Loan Guarantee Program (Section 184 Program). Since its inception, the Section 184 Program has experienced an increase in demand. As a result, the final rule updated program regulations to minimize potential risk and increase program participation by financial institutions, and added eligibility and participation requirements for Lender Applicants, Direct Guarantee Lenders, Non-Direct Guarantee Lenders, Holders and Servicers and other Section 184 Program participants. The final rule also clarified the rules governing Tribal participation in the program, established underwriting requirements, specifies rules on the closing and endorsement process, established stronger and clearer servicing requirements, established program rules governing claims submitted by servicers and paid by HUD, and added standards governing monitoring, reporting, sanctions, and appeals. Lastly, the final rule added new definitions and makes statutory conforming amendments, including the categorical exclusion of the Section 184 Program in HUD's environmental review regulations.

On June 14, 2024, HUD published a document in the **Federal Register** (89 FR 50523) announcing that the final rule's effective date would be delayed from June 18, 2024, to December 31, 2024, with a compliance date of March 1, 2025.

II. Delay of Compliance Date

HUD is currently drafting a handbook to implement the final rule. The handbook will provide comprehensive guidance and clarification for all stakeholders to fully understand and implement the final rule. Given the size of the handbook, its accompanying forms, and level of additional consultation with stakeholders needed to complete the handbook, HUD has determined that it needs additional time to draft this document. Further, HUD has heard from Tribes, lenders, servicers, and other participants that additional time is needed after the publication of the handbook for these stakeholders to conform their policies, procedures, and systems to comply with handbook and the final rule. As a result of these factors, HUD is extending the compliance date of March 1, 2025, established at 89 FR 50523, to December 31, 2025.

Dominique Blom,

General Deputy Assistant, Secretary for Public and Indian Housing.

BILLING CODE 4210–67–P

DEPARTMENT OF THE INTERIOR

National Indian Gaming Commission

25 CFR Part 575

Annual Adjustment of Civil Monetary Penalty To Reflect Inflation

AGENCY: National Indian Gaming Commission.

ACTION: Final rule.

SUMMARY: In compliance with the Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015 (the Act) and Office of Management and Budget (OMB) guidance, the National Indian Gaming Commission (NIGC or Commission) is amending its civil monetary penalty rule to reflect an annual adjustment for inflation in order to improve the penalty's effectiveness and maintain its deterrent effect. The Act provides that the new penalty level must apply to penalties assessed after the effective date of the increase, including when the penalties whose associated violation predate the increase.

DATES: This rule is applicable beginning on January 15, 2025.

FOR FURTHER INFORMATION CONTACT: Armando J. Acosta, Senior Attorney, Office of General Counsel, National Indian Gaming Commission, at (202) 632–7003; fax (202) 632–7066 (not toll-free numbers).

SUPPLEMENTARY INFORMATION:

I. Background

On November 2, 2015, the President signed into law the Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015 (Sec. 701 of Pub. L. 114–74). Beginning in 2017, the Act requires agencies to make annual inflationary adjustments to their civil monetary penalties by January 15th of each year, in accordance with annual OMB guidance.

II. Calculation of Annual Adjustment

In December of every year, OMB issues guidance to agencies to calculate the annual adjustment. According to OMB, the cost-of-living adjustment multiplier for fiscal year 2025 is 1.02598, based on the Consumer Price Index for the month of October 2024, not seasonally adjusted.

Pursuant to this guidance, the Commission has calculated the annual adjustment level of the civil monetary penalty contained in 25 CFR 575.4 (''The Chairman may assess a civil fine, not to exceed $63,992 per violation, against a tribe, management contractor, or individual operating Indian gaming for each notice of violation . . .''). The 2025 adjusted level of the civil monetary penalty is $65,655 ($63,992 × 1.02598 = $65,654.51).

III. Regulatory Matters

Regulatory Planning and Review

This final rule is not a significant rule under Executive Order 12866.

(1) This rule will not have an effect of $100 million or more on the economy or will not adversely affect, in a material way, the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities.

(2) This rule will not create a serious inconsistency or otherwise interfere with an action taken or planned by another agency.

(3) This rule does not involve entitlements, grants, user fees, or loan programs or the rights or obligations of recipients.

(4) This regulatory change does not raise novel legal or policy issues.

Regulatory Flexibility Act

The Commission certifies that this rule will not have a significant economic effect on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) because the rule makes annual adjustments for inflation.

Small Business Regulatory Enforcement Fairness Act

This final rule is not a major rule under 5 U.S.C. 804(2), the Small Business Regulatory Enforcement Fairness Act. It will not result in the expenditure by state, local, or tribal governments, in the aggregate, or by the private sector of $100 million or more in any one year. The rule will not result in a major increase in costs or prices for consumers, individual industries, federal, state, or local government agencies, or geographic regions. Nor will this rule have significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of the U.S.-based enterprises to compete with foreign-based enterprises.

Unfunded Mandates Reform Act

This final rule does not impose an unfunded mandate of more than $100 million per year on state, local, or tribal governments or the private sector. The rule also does not have a significant or unique effect on state, local, or tribal governments or the private sector. Therefore, a statement containing the information required by the Unfunded Mandates Reform Act (2 U.S.C. 1531 *et seq.*) is not required.

Takings

Under the criteria in Executive Order 12630, this final rule does not affect individual property rights protected by the Fifth Amendment nor does it involve a compensable ''taking.'' Thus, a takings implication assessment is not required.

Federalism

Under the criteria in Executive Order 13132, this final rule has no substantial direct effect on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

Civil Justice Reform

This final rule complies with the requirements of Executive Order 12988. Specifically, this rule has been reviewed to eliminate errors and ambiguity and written to minimize litigation. It is written in clear language and contains clear legal standards.

Consultation With Indian Tribes

In accordance with the President's memorandum of April 29, 1994, *Government-to-Government Relations with Native American Tribal Governments,* Executive Order 13175 (59 FR 22951, November 6, 2000), the Commission has determined that consultations with Indian gaming tribes is not practicable, as Congress has mandated that annual civil penalty adjustments in the Act be implemented no later than January 15th of each year.

Paperwork Reduction Act

This final rule does not affect any information collections under the Paperwork Reduction Act.

National Environmental Policy Act

This final rule does not constitute a major federal action significantly affecting the quality of the human environment.

Information Quality Act

In developing this final rule, the Commission did not conduct or use a study, experiment, or survey requiring peer review under the Information Quality Act (Pub. L. 106–554).

Effects on the Energy Supply

This final rule is not a significant energy action under the definition in Executive Order 13211. A Statement of Energy Effects is not required.

Clarity of this Regulation

The Commission is required by Executive Orders 12866 and 12988 and by the Presidential Memorandum of June 1, 1998, to write all rules in plain language. This means that each rule that the Commission publishes must:

(a) be logically organized;

(b) use the active voice to address readers directly;

(c) use clear language rather than jargon;

(d) be divided into short sections and sentences; and

(e) use lists and tables wherever possible.

Required Determinations Under the Administrative Procedure Act

In accordance with the Act, agencies are to annually adjust civil monetary penalties without providing an opportunity for notice and comment, and without a delay in its effective date. Therefore, the Commission is not required to complete a notice and comment process prior to promulgation.

List of Subjects in 25 CFR Part 575

Administrative practice and procedure, Gaming, Indians-lands, Penalties.

For the reasons set forth in the preamble, the Commission amends 25 CFR part 575 as follows:

PART 575—CIVIL FINES

■ 1. The authority citation for part 575 continues to read as follows:

Authority: 25 U.S.C. 2705(a), 2706, 2713, 2715; and Sec. 701, Pub. L. 114–74, 129 Stat. 599.

§ 575.4 [Amended]

■ 2. Amend § 575.4, in the introductory text, by removing ''$63,992'' and adding in its place ''$65,655''.

Dated: January 13, 2025.

Sharon M. Avery,

Chair (Acting).

Jean C. Hovland,

Vice Chair.

BILLING CODE 7565–01–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

26 CFR Part 1

[TD 10016]

RIN 1545–BO07

Taxable Income or Loss and Currency Gain or Loss With Respect to a Qualified Business Unit; Correction

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Final rule; correction and correcting amendments.

SUMMARY: This document includes corrections to a final regulation (Treasury Decision 10016) published in the **Federal Register** on Wednesday, December 11, 2024. Treasury Decision 10016 contained final regulations relating to the determination of taxable income or loss and foreign currency gain or loss with the respect to a qualified business unit.

DATES: These corrections are effective on January 17, 2025. For dates of applicability, see § 1.987–15.

FOR FURTHER INFORMATION CONTACT: Concerning the final regulations generally, Adam G. Province at (865) 329–4546; concerning the character and source of section 987 gain or loss, Larry Pounders at (202) 317–5465; concerning consolidated groups, Jeremy Aron-Dine

at (202) 317–6847 (not toll-free numbers).

SUPPLEMENTARY INFORMATION:

Background

The final regulations (TD 10016) that are the subject of this correction are under sections 861, 985 through 989, and 1502 of the Internal Revenue Code.

Corrections to Publication

Accordingly, FR Doc. 2024–28372 (TD 10016) appearing on page 100138 in the **Federal Register** on Wednesday, December 11, 2024, is corrected as follows:

1. On page 100155, in the third column, under the caption ''A. Loss Suspension Rule 1. In General'', the second line of the third full paragraph is corrected to read ''proposed § 1.987–11(c)''.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Correction to the Regulations

Accordingly, 26 CFR part 1 is corrected by making the following correcting amendments:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

■ **Par. 2.** Section 1.987–1 is amended by revising the first sentence of paragraph (b)(3)(ii)(A) to read as follows:

§ 1.987–1 Scope, definitions, and special rules.

* * * * *

(b) * * *

(3) * * *

(ii) * * *

(A) * * * Solely for purposes of section 987, an owner may elect to treat all section 987 QBUs with the same functional currency as a single section 987 QBU except to the extent provided in paragraph (b)(3)(ii)(B) of this section. * * *

* * * * *

■ **Par. 3.** Section 1.987–2 is amended by revising the second sentence of paragraph (c)(10)(xviii)(B)(*2*) to read as follows:

§ 1.987–2 Attribution of items to eligible QBUs; definition of a transfer and related rules.

* * * * *

(c) * * *

(10) * * *

(xviii) * * *

(B) * * *

(*2*) * * * Under § 1.987–5(c)(4) and § 1.987–8(e), a termination of a section 987 QBU is treated as a remittance of all the gross assets of the section 987 QBU to the owner on the date of the termination. * * *

* * * * *

§ 1.1502–13 [Amended]

■ **Par. 4.** Section 1.1502–13 is amended by redesignating the second occurrence of paragraph (j)(10)(vi) as (j)(10)(vii).

Regina L. Johnson,

Federal Register Liaison, Publications and Regulations Section, Associate Chief Counsel (Procedure and Administration).

28 CFR Part 0

[Docket No. OAG 172; AG Order No. 6146–2025]

Office of Legal Policy

AGENCY: Department of Justice.

ACTION: Final rule.

SUMMARY: This rule amends the Code of Federal Regulations to update the organizational description of the Office of Legal Policy to reflect current practice.

DATES: This rule is effective January 17, 2025.

FOR FURTHER INFORMATION CONTACT: Robert Hinchman, Senior Counsel, Office of Legal Policy, U.S. Department of Justice, RFK Main Justice Building, 950 Pennsylvania Avenue NW, Room 4252, Washington, DC 20530. Telephone: (202) 514–8059.

SUPPLEMENTARY INFORMATION:

I. Background

In the Department of Justice's organizational regulations, 28 CFR 0.23 describes the ''General Functions'' of the Office of Legal Policy (''OLP''), but some of those provisions are out of date. For that reason, this final rule revises § 0.23 to better reflect OLP's current structure and functions. The final rule also removes two other regulatory provisions—28 CFR 0.23b and 0.15(f)—because they reference a former OLP entity that no longer exists.

II. Administrative Procedure Act

This rule is a rule of agency organization and procedure, and relates to the internal management of the Department of Justice. It is therefore exempt from the requirements of notice and comment and a delayed effective date. 5 U.S.C. 553(b), (d).

III. Regulatory Requirements

A. Regulatory Flexibility Act

A Regulatory Flexibility Analysis is not required to be prepared for this final rule since the Department was not required to publish a general notice of proposed rulemaking for this matter. *See* 5 U.S.C. 604(a).

B. Executive Orders 12866, 13563, and 14094: Regulatory Planning and Review

This final rule has been drafted and reviewed in accordance with Executive Order 12866 (Regulatory Planning and Review), Executive Order 13563 (Improving Regulation and Regulatory Review), and Executive Order 14094 (Modernizing Regulatory Review). This action is limited to agency organization, management, and personnel matters and therefore is not a ''regulation'' or ''rule'' under Executive Order 12866, section 3(d)(3). Accordingly, this action has not been reviewed by the Office of Management and Budget.

C. Executive Order 13132: Federalism

This rule will not have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with section 6 of Executive Order 13132, the Department has determined that this rule does not have federalism implications warranting the preparation of a federalism summary impact statement.

D. Executive Order 12988: Civil Justice Reform

This rule meets the applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988.

E. Unfunded Mandates Reform Act of 1995

This rule will not result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more in any one year (adjusted for inflation), and it does not establish requirements that might significantly or uniquely affect small governments. Therefore, no actions were deemed necessary under the provisions of the Unfunded Mandates Reform Act of 1995.

F. Congressional Review Act

This action pertains to agency management, personnel, and

organization and does not substantially affect the rights or obligations of non-agency parties and, accordingly, is not a ''rule'' as that term is used by the Congressional Review Act. *See* 5 U.S.C. 804(3)(B), (C). Therefore, the reporting requirement of 5 U.S.C. 801 does not apply.

List of Subjects in 28 CFR Part 0

Authority delegation (Government agencies), Government employees, Organization and functions (Government agencies), Privacy, Reporting and recordkeeping requirements, Whistleblowing.

Accordingly, by virtue of the authority vested in me as Attorney General, including 5 U.S.C. 301 and 28 U.S.C. 509, 510, part 0 of title 28 of the Code of Federal Regulations is amended as follows:

PART 0—ORGANIZATION OF THE DEPARTMENT OF JUSTICE

■ 1. The authority citation for part 0 continues to read as follows:

Authority: 5 U.S.C. 301; 28 U.S.C. 509, 510, 515–519.

§ 0.15 [Amended]

■ 2. Remove and reserve § 0.15(f).

■ 3. Revise § 0.23 to read as follows:

§ 0.23 General functions.

The Office of Legal Policy shall be headed by an Assistant Attorney General. The principal responsibilities of the Office shall be to plan, develop, and coordinate the implementation of major policy initiatives of high priority to the Department and to the Administration. In addition, the Assistant Attorney General, Office of Legal Policy, shall:

(a) Examine and study legislation and other policy proposals and coordinate Departmental efforts to secure enactment of those of special interest to the Department and the Administration.

(1) Assist in reviewing and coordinating draft regulatory actions, notices, and significant guidance documents prepared by Department components, including by coordinating with the Office of Management and Budget (''OMB'') on regulatory actions subject to OMB review under Executive Order 12866 and related directives, and supporting the Department's review of draft documents prepared by other agencies that are referred to the Department by OMB or other agencies as part of interagency regulatory review processes.

(2) Advise and assist the Attorney General and the Deputy Attorney General regarding the selection and appointment of Federal judges.

(3) Represent the Department on the Administrative Conference of the United States and, as appropriate, on regulatory reform bodies.

(4) Participate, as appropriate, in internal budget meetings of the Department with regard to policy implications of resource allocations and resource implications of major policy initiatives; and advise the Assistant Attorney General for Administration with regard to information requirements for Departmental policy formulation.

(5) Advise appropriate Departmental officials, from time to time, on investigation, litigation, negotiation, penal, or correctional policies to ensure the compatibility of those policies with overall Departmental goals.

(6) Perform such other duties and functions as may be specially assigned by the Attorney General and the Deputy Attorney General.

(b) In carrying out the responsibilities under this section, the Assistant Attorney General, Office of Legal Policy, shall have the right to call upon the relevant Departmental units for personnel and other assistance.

§ 0.23b [Removed]

■ 4. Remove § 0.23b.

Date: January 14, 2025

Merrick B. Garland,

Attorney General.

[FR Doc. 2025–01339 Filed 1–16–25; 8:45 am]

BILLING CODE 4410–BB–P

DEPARTMENT OF JUSTICE

Office of the Attorney General

28 CFR Part 0

[Docket No. JMD 163; AG Order No. 6145–2025]

Office of the Executive Secretariat

AGENCY: Department of Justice.

ACTION: Final rule.

SUMMARY: This rule amends the Department's organizational regulations to establish the functions of the Office of the Executive Secretariat.

DATES: Effective January 17, 2025.

FOR FURTHER INFORMATION CONTACT: Adam Kirschner, Chief of Staff and Senior Counsel, Office of the Executive Secretariat, *adam.kirschner@usdoj.gov* or *DOJExecSec@usdoj.gov,* (202) 514–2063.

SUPPLEMENTARY INFORMATION:

I. Summary

The Office of the Executive Secretariat (OES), headed by the Executive Secretary, was established as a separate component of the Department of Justice on August 17, 2023. OES's functions were previously performed by a staff within the Justice Management Division. As a standalone component, OES's functions, which broadly relate to managing the review and approval of official Department of Justice leadership documents and correspondence, are set forth in this regulation. This rule also revises 28 CFR 0.1 to add the Office of the Executive Secretariat to the list of Department components.

II. Administrative Procedure Act

This rule is a rule of agency organization, procedure, and practice and is limited to matters of agency management and personnel, and it is not a substantive rule. Therefore, this rule is exempt from the requirements of prior notice and comment and a 30-day delay in the effective date. *See* 5 U.S.C. 553(a)(2), (b)(A), (d).

III. Regulatory Analyses

In developing this final rule, the Department considered numerous statutes and executive orders applicable to the rulemaking process. The Department's analysis of the applicability of those statutes and Executive orders to this rule is summarized below.

A. Executive Order 12866 (Regulatory Planning and Review), Executive Order 13563 (Improving Regulation and Regulatory Review), and Executive Order 14094 (Modernizing Regulatory Review)

This final rule is not a significant regulatory action under section 3(f) of Executive Order 12866, as supplemented by Executive Order 13563 and amended by Executive Order 14094. This rule is limited to agency organization, management, and personnel as described by Executive Order 12866, section 3(d)(3), and therefore is not a ''regulation'' or ''rule'' as defined by that Executive order. Accordingly, this action has not been reviewed by the Office of Management and Budget.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–12, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and

operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. 5 U.S.C. 601.

A Regulatory Flexibility Analysis was not required to be prepared for this final rule because the Department was not required to publish a general notice of proposed rulemaking for this matter. 5 U.S.C. 603–604.

C. Paperwork Reduction Act

This final rule does not call for a new or revised collection of information under the Paperwork Reduction Act of 1995, 44 U.S.C. 3501–3521.

D. Executive Order 13132 (Federalism)

A rule has federalism implications under Executive Order 13132 if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. E.O. 13132, sec. 1(a). The Department has analyzed this final rule under that order and determined that this rule does not have federalism implications.

E. Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act of 1995, 2 U.S.C. 1531–1538, requires Federal agencies to determine whether a rule, if promulgated, will result in the expenditure by State, local, or Tribal governments, in the aggregate, or by the private sector, of $100 million (adjusted annually for inflation) or more in any one year. 2 U.S.C. 1532(a). This final rule does not require or result in expenditures by any of the above-named entities.

F. Executive Order 12988 (Civil Justice Reform), Plain Language

This final rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988.

G. Executive Order 13175 (Consultation and Coordination With Indian Tribal Governments)

This final rule does not have Tribal implications under Executive Order 13175 because it would not have a substantial direct effect on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes.

H. Congressional Review Act

This rule relates to agency management, personnel, and organization, and does not substantially affect the rights or obligations of non-agency parties. 5 U.S.C. 804(3)(B), (C). This action is accordingly not a ''rule'' as that term is used in the Congressional Review Act, *see* 5 U.S.C. 804(3), and the reporting requirement of 5 U.S.C. 801 does not apply.

List of Subjects for 28 CFR Part 0

Authority delegations (Government agencies), Government employees, Organization and functions (Government agencies).

Authority and Issuance

For the reasons stated above, the Department of Justice amends 28 CFR part 0 as follows:

PART 0—ORGANIZATION OF THE DEPARTMENT OF JUSTICE

■ 1. The authority citation for part 0 continues to read as follows:

Authority: 5 U.S.C. 301; 28 U.S.C. 509, 510, 515–519.

■ 2. Revise § 0.1 to read as follows:

§ 0.1 Organizational units.

The Department of Justice shall consist of the following principal organizational units:

TABLE 1 TO § 0.1

Offices:
- Office of the Attorney General.
- Office of the Deputy Attorney General.
- Office of the Associate Attorney General.
- Office of the Solicitor General.
- Office of Legal Counsel.
- Office of Legislative Affairs.
- Office of Professional Responsibility.
- Office of Legal Policy.
- Office of Public Affairs.
- Office of the Pardon Attorney.
- Office of Special Counsel for Immigration Related Unfair Employment Practices.
- Community Relations Service.
- Executive Office for Immigration Review.
- Executive Office for United States Attorneys.
- Executive Office for United States Trustees.
- INTERPOL—United States National Central Bureau.
- Office of International Programs.
- Office of Community Oriented Policing Services.
- Office on Violence Against Women.
- Office of the Federal Detention Trustee.
- Professional Responsibility Advisory Office.
- Office of Tribal Justice.
- Office for Access to Justice.
- Office of the Executive Secretariat.

Divisions:
- Antitrust Division.
- Civil Division.
- Civil Rights Division.
- Criminal Division.
- Environment and Natural Resources Division.
- National Security Division.
- Tax Division.
- Justice Management Division.

TABLE 1 TO § 0.1—Continued

Bureaus:
Federal Bureau of Investigation.
Bureau of Prisons.
Drug Enforcement Administration.
Office of Justice Programs (and related agencies).
United States Marshals Service.
Bureau of Alcohol, Tobacco, Firearms, and Explosives.
Boards:
Board of Immigration Appeals.
U.S. Parole Commission.
Foreign Claims Settlement Commission.

■ 3. Add subpart O–1, consisting of § 0.81, to read as follows:

Subpart O–1—Office of the Executive Secretariat

§ 0.81 Office of the Executive Secretariat.

(a) The Office of the Executive Secretariat is headed by an Executive Secretary. The Executive Secretary is appointed by the Attorney General and reports to the Deputy Attorney General.

(b) The Office of the Executive Secretariat shall:

(1) Ensure that official documents requiring the review, approval, or signature by the Attorney General, Deputy Attorney General, or Associate Attorney General are assigned, tracked, and cleared within the Department of Justice, as appropriate.

(2) Manage select correspondence within the Department of Justice. Correspondence refers to written communication from Department stakeholders addressed to the Attorney General, Deputy Attorney General, or the Associate Attorney General, or, as appropriate, other leadership within the Department of Justice.

(3) Manage select interagency requests for official approval or concurrence by the Attorney General, Deputy Attorney General, or Associate Attorney General; Departmental clearances; and submissions from other agencies for review within the Department of Justice.

(4) Ensure that records maintained by the Office of the Executive Secretariat are managed and preserved in accordance with applicable statutes, regulations, and policies, including but not limited to the Federal Records Act, Privacy Act of 1974, Freedom of Information Act, and U.S. National Archives and Records Administration-approved records schedules.

(5) Perform such other duties and assignments as directed by the Attorney General or the Deputy Attorney General.

Dated: January 14, 2025.

Merrick B. Garland,

Attorney General.

[FR Doc. 2025–01338 Filed 1–16–25; 8:45 am]

BILLING CODE 4410–PR–P

FEDERAL MINE SAFETY AND HEALTH REVIEW COMMISSION

29 CFR Part 2700

Procedural Rules

AGENCY: Federal Mine Safety and Health Review Commission.

ACTION: Final rule.

SUMMARY: The Federal Mine Safety and Health Review Commission (the ''Commission'') is an independent adjudicatory agency that provides trials and appellate review of cases arising under the Federal Mine Safety and Health Act of 1977 (the ''Mine Act''). Trials are held before the Commission's Administrative Law Judges, and appellate review is provided by a five-member Review Commission appointed by the President and confirmed by the Senate. This rule makes final revisions to many of the Commission's procedural rules. The Commission makes these changes in a continued effort to ensure the just, speedy, and inexpensive determination of all proceedings before the Commission.

DATES: These final rules are effective on March 3, 2025. The Commission will accept written and electronic comments received on or before February 18, 2025.

ADDRESSES: Written comments should be mailed to Michael A. McCord, General Counsel, Office of the General Counsel, Federal Mine Safety and Health Review Commission, 1331 Pennsylvania Ave. NW, Suite 520N, Washington, DC 20004–1710. Electronic comments should state ''Comments on Procedural Rules'' in the subject line and be sent to *RulesComments@fmshrc.gov.*

FOR FURTHER INFORMATION CONTACT: Sarah Stewart, Deputy General Counsel, Office of the General Counsel, Federal Mine Safety and Health Review Commission, at (202) 434–9935.

SUPPLEMENTARY INFORMATION: The final rules will apply to cases initiated after the rules take effect. The final rules also will apply to further proceedings in cases pending on the effective date, except to the extent that such application would be infeasible or unfair, in which event the former procedural rules would continue to apply.

I. Background

In October 2020, the Commission published a Notice of Proposed Rulemaking (''NPRM''). 85 FR 63,047 (Oct. 6, 2020). In the notice, the Commission explained that it proposed both new rules and revisions to its current rules that reflect the Commission's practices. The Commission proposed adding new Commission Procedural Rule 32 which pertained to motions to reopen orders that have become final as the result of a failure to make a timely filing. The Commission also proposed new Commission Procedural Rule 72 which described the method by which the Commission empanels Commissioners, as authorized by section 113(c) of the Mine Act, 30 U.S.C. 823(c). The Commission proposed adding provisions to § 2700.5(e) for protecting sensitive commercial information, and for placing sensitive documents under Commission seal. In addition, the Commission proposed numerous changes with respect to § 2700.80, which more fully describe the Commission's process for investigating and making determinations in disciplinary proceedings. Finally, the Commission proposed more technical changes, including those necessitated by the evolution of the Commission's electronic management of its dockets, as well as other corrections and stylistic changes.

Although the proposed rules were procedural in nature and did not require notice and comment publication under

the Administrative Procedure Act (''APA''), 5 U.S.C. 551, 553(b)(3)(A), the Commission invited comment from the interested public until December 7, 2020. The Commission received comments from the Secretary of Labor through the U.S. Department of Labor's Office of the Solicitor (''the Secretary''), the United Mine Workers of America (''the UMWA''), and another member of the mining bar who practices before the Commission. As discussed in the section-by-section analysis below, some changes have been made in response to the comments received.

II. Section-By-Section Analysis

Set forth below is an analysis of the comments received on the Commission's proposed rules and the final actions taken.

A. Changes Related to the Commission's Paperless Docketing System

In 2014, the Commission began using an electronic case management system (''eCMS'') in order to more efficiently manage its caseload. In late 2013, the Commission published interim rules permitting parties to file and serve documents electronically. 78 FR 77354 (Dec. 23, 2013). The Commission later adopted those interim rules as final rules. 84 FR 59931 (Nov. 7, 2019). Although parties may continue to file documents non-electronically with the Commission as they have in the past, unless otherwise directed by the Commission in response to emergencies and special circumstances such as the COVID–19 considerations, experience has shown that a vast majority of documents are filed electronically through eCMS.

The Commission proposed changes to its procedural rules in recognition that most documents are filed electronically and that eCMS will likely evolve. For instance, it is likely that in the future, eCMS will allow parties to serve documents electronically through the system. Currently, parties may serve documents electronically only through the use of email. The Commission proposed changing its service requirements to allow parties to serve documents electronically by other means in addition to email in anticipation of such changes to eCMS. These proposed changes appear identically in §§ 2700.7(c) (general service requirements); 2700.9(a) (motions for extensions of time); 2700.24(d) (filing and service of documents in emergency response plan dispute proceedings; 2700.45(a) and 2700.45(f) (service in temporary reinstatement proceedings); 2700.46(d) (service of documents in temporary relief proceedings); 2700.70(f) (motions for leave to exceed page limit relating to petitions for discretionary review); and 2700.75(f) (motions for leave to exceed page limit relating to briefs).

In addition, documents issued by the Commission may be offered in electronic format rather than in paper format to parties. Consequently, the Commission proposed deleting provisions in §§ 2700.4(b)(1), 2700.24(f)(1), 2700.45(e)(3), 2700.54, 2700.66(a) that specify a method of postal mail for the issuance of documents by the Commission under those provisions. Although the Mine Act does not specify the method by which the Commission must distribute its issuances, the Commission intends to use the most expeditious means reasonably available which is appropriate under the circumstances. Because Commission Procedural Rules 24 (emergency response plan dispute proceedings) and 45 (temporary reinstatement proceedings) deal with expedited proceedings, they shall retain their current language stating that the parties shall be notified of the Judge's decision or determination by the ''most expeditious means reasonably available.'' The Commission proposed adding similar language to Commission Procedural Rule 66 (summary disposition of proceedings) in paragraph (a) stating that the order to show cause shall be provided to the party who has failed to comply by ''the most expeditious means reasonably available.''

The Commission received no comments regarding these proposed changes and adopts them as proposed.

B. Gender-Specific Pronouns

The masculine gender is currently used throughout the Commission's Procedural Rules. The Commission proposed changing the gender-specific pronouns in its rules to more gender-neutral language. Conforming changes were proposed for §§ 2700.4(a); 2700.6(a)(1), (a)(2)(ii) and (b); 2700.8 (Example 2); 2700.20(d); 2700.24(e)(2)(i) and (ii); 2700.25; 2700.26; 2700.27; 2700.41(a); 2700.45(b), (c), (d) and (g); 2700.55(h); 2700.56(c); 2700.58(c); 2700.61; 2700.62; 2700.63(b); 2700.68(a) and (b); 2700.69(a), (b) and (c); 2700.73(b); 2700.75(a)(1) and (e); and 2700.76(a)(1)(i); 2700.81(a) and (c). The Commission also proposed deleting the provision in Procedural Rule 1(c) that currently states that ''[w]herever the masculine gender is used in these rules, the feminine gender is also implied.'' 29 CFR 2700.1(c). In addition, the Commission proposed revising references in § 2700.83 from ''Chairman'' to ''Chair.''

The Commission received no comments regarding these proposed changes and adopts them as proposed.

C. Consistency in Use of Language

1. References to Pleadings

The term ''pleading'' generally refers to those documents filed in the beginning stage of proceedings in which parties formally submit their claims and defenses (*i.e.,* petitions, answers). The Commission's rules sometimes erroneously use the term ''pleading,'' when the use of a more generic term, such as ''document'' or ''filing'' is intended. The Commission proposed changing the term ''pleading'' to the term ''document'' or ''filing'' when the more generic term is intended in §§ 2700.4(c), 2700.5(h), 2700.8(b) and Example 2, 2700.10(b), 2700.11, 2700.24(d), 2700.45(a) and (f), 2700.46(d), and 2700.53(a)(4).

The Commission received no comments regarding these proposed changes and adopts them as proposed.

2. References to Website

The Commission proposed changing all references from ''website'' to ''website,'' in keeping with current accepted usage. Such changes are proposed with respect to §§ 2700.1(a)(1), and 2700.5(b), (c)(1), (f)(1), and (j).

The Commission received no comments regarding these proposed changes and adopts them as proposed.

3. References to Judge and Secretary of Labor

The Commission proposed capitalizing the word ''Judge'' wherever it appears in the Commission's Procedural Rules. Such changes were proposed with respect to §§ 2700.24(f)(2) and 2700.67(e).

The Commission also proposed making changes to references to the Secretary of Labor, noting that the rules variously refer to the Secretary of Labor as ''Secretary'' and ''Secretary of Labor.'' The Commission proposed that the first reference in the text of a rule would be to the ''Secretary of Labor,'' with a parenthetical indicating that subsequent references would be to the ''Secretary.''

The Commission received one comment regarding these proposed changes. The Secretary suggested that in order to streamline the rules, the Commission could explain the shortened reference to the Secretary in just one rule, for example, in Commission Procedural Rule 1. In addition, the Secretary commented that the word ''Judge'' should be replaced by

''ALJ'' or ''administrative law judge'' in order to distinguish between the Commission's administrative law judges and federal district court judges.

The Commission agrees with the Secretary that the rules should explain the shortened reference to the Secretary in just one rule. The Commission believes that the explanation is more appropriately made in Rule 2, which pertains to ''Definitions,'' rather than in Rule 1. Accordingly, in Rule 2, the Commission clarifies that references to the ''Secretary'' are to ''the Secretary of Labor'' or the ''Acting Secretary of Labor.'' This change affects § 2700.8, Example 3.

In addition, the Commission has revised Rule 2 to clarify that a Commission Administrative Law Judge shall be referred to as an ''ALJ'' throughout the Commission's rules. This change affects §§ 2700.1, 2700.3, 2700.4, 2700.5, 2700.8, 2700.11, 2700.12, 2700.24, 2700.30, 2700.31, 2700.44, 2700.45, 2700.47, 2700.50, 2700.51, 2700.53, 2700.55, 2700.56, 2700.57, 2700.58, 2700.59, 2700.60, 2700.61, 2700.62, 2700.64, 2700.65, 2700.66, 2700.67, 2700.68, 2700.69, 2700.70, 2700.71, 2700.73, 2700.75, 2700.76, 2700.80, 2700.81, and 2700.82.

4. References to Discrimination

The Commission did not propose any changes to references to discrimination in the NPRM.

The Secretary commented that references to ''discrimination'' that appear in the rules should also be to ''interference.''

Section 105(c) of the Mine Act, 30 U.S.C. 815(c), refers to both discrimination and interference. The Commission recognizes that proceedings involving alleged discrimination, interference, or both are processed in an identical manner procedurally. The Commission agrees that references to ''discrimination'' in the Commission's Procedural Rules should also be to ''interference.'' This change impacts Rules 7(a); 40(a) and (b); 41(a) and (b); 42, 43, 44(a) and (b); and 45(b).

D. Subpart A—General Provisions

§ 2700.3 Who May Practice

The Commission proposed revising Commission Procedural Rule 3 to clarify who may appear before the Commission as a representative of a party, and the conduct required of, and actions prohibited by, those who appear before the Commission. The proposed revisions set forth the requirements for making an appearance and listed those persons who may represent a party or subpoenaed witness. The proposed revisions further provided that all individuals authorized to practice before the Commission, including attorney representatives and other non-attorney persons, shall be subject to the standards of conduct and disciplinary proceedings set forth in 29 CFR 2700.80. As discussed below, the Commission proposed revising Commission Procedural Rule 80(a) to state in part that the American Bar Association's Model Rules of Professional Conduct shall be considered in the Commission's disciplinary proceedings.

The Commission received only one comment regarding the proposed changes. The Secretary agreed with proposed paragraph (b)(4), which states in part that an employee of a governmental agency need not seek the presiding Judge's approval before representing a party before the Commission. The Secretary further commented that, consistent with proposed paragraph (b)(4), because Conference and Litigation Representatives (''CLRs'') need not get prior approval before representing a party, conforming changes should be made to Rule 31(c)(2). The Secretary noted that § 2700.31(c)(2) currently requires CLRs to include language in proposed settlement orders stating that the Judge accepts the CLR to represent the Secretary.

Upon further consideration, the Commission found unnecessary proposed paragraph (e) specifying actions prohibited by representatives. The Commission believes that the standard of conduct required of representatives is adequately addressed by the changes to Rule 80. Accordingly, the Commission is withdrawing proposed paragraph (e) pertaining to prohibited actions. The Commission otherwise adopts Rule 3 as proposed. In addition, the Commission agrees with the Secretary's comment and has made conforming changes to Rule 31.

§ 2700.4 Parties, Intervenors, and Amici Curiae

Current Commission Procedural Rule 5, 29 CFR 2700.5, provides that parties may file documents by electronic means and non-electronic means and provides instructions for doing so. The Commission proposed revising § 2700.4(b) to state that notices of intervention shall be filed in accordance with the filing requirements set forth in Commission Procedural Rule 5. In addition, as noted with respect to changes related to the Commission's paperless docketing system, the Commission proposed deleting the reference in current § 2700.4(b)(1) that appears to recognize that copies of a notice of intervention may be provided by the Commission only by postal mail.

The Commission received no comments regarding these proposed changes and adopts them as proposed.

§ 2700.5 General Requirements for Pleadings and Other Documents; Status or Informational Requests

The Commission proposed inserting ''filing requirements'' in the title of Rule 5 in recognition that a large part of Rule 5 pertains to filing requirements. The Commission received no comments regarding this proposed change and adopts it as proposed.

The Commission also proposed revising paragraph (a) to replace an erroneous citation of ''30 U.S.C. 820(c)'' with the correct citation of ''30 U.S.C. 820.'' The Commission received no comments regarding this proposed change and adopts it as proposed.

Paragraph (c)(2) of Rule 5 (§ 2700.5(c)(2)) provides instructions for filing documents by non-electronic means. The Commission proposed two changes with respect to this paragraph. First, the Commission proposed amending paragraph (c)(2)(i) of Rule 5 to require that filings submitted by a means other than electronic transmission should be sent to the Commission's Docket Office rather than to the Commission's Executive Director. The Commission's Executive Director plays no role with respect to filings, and the proposed change reflects the Commission's actual practice. The Commission proposed a conforming change to Rule 4(b)(1) (§ 2700.4(b)(1)). The Commission received no comments regarding these proposed changes and adopts them as proposed.

Second, the Commission proposed deleting paragraph (c)(2)(iii) as superfluous and possibly confusing. Paragraph (2)(c) sets forth filing instructions pertaining to the following specific timeframes: (i) before a Judge has been assigned; (ii) after a Judge has been assigned; (iii) interlocutory review; and (iv) after a Judge has issued a final decision. Section 2700.5(c)(2)(iii) relating to documents filed in connection with interlocutory review is unnecessary and possibly confusing because such documents also fall under § 2700.5(c)(2)(ii) (after a Judge has been assigned). In addition, § 2700.5(c)(2)(iii) refers the reader to § 2700.76, which does not provide detailed information about how to file documents non-electronically. The Commission received no comments regarding this proposed change and adopts it as proposed.

The Commission proposed revising paragraph (e) of Commission Procedural Rule 5 in order to address various privacy considerations. Parties sometimes provide confidential commercial information to the Commission. Further, a party may request documents from an opposing party that contain such information. The Commission proposed adding paragraph (5) to § 2700.5(e) in order to include a requirement that parties take steps to protect their confidential commercial information. In addition, while the Commission's Judges already consider and decide motions to place records under seal, currently there is no Commission rule that specifically addresses the Commission's procedure for doing so. The Commission proposed adding paragraph (6) to § 2700.5(e) in order to expressly address the procedures for placing documents under Commission seal.

The Commission received two comments regarding the proposed changes to § 2700.5(e). The Secretary commented that proposed § 2700.5(e)(6) should be revised to permit in camera review in appropriate cases. The UMWA commented that the Commission should clarify what constitutes ''sensitive commercial information.''

The Commission recognizes that Judges already order in-camera review in appropriate circumstances. The Commission has added language to Rule 5(e)(6) to permit in-camera review in order to clarify and codify the Commission's practice.

Regarding the UMWA's comment that the Commission should clarify what constitutes ''sensitive commercial information,'' the Commission notes that such language appears only in the preamble of the NPRM, rather than in Rule 5. Proposed § 2700.5(e) referred to ''confidential commercial information.'' The Commission added language to § 2700.5(e) clarifying that ''confidential commercial information'' is defined in 29 CFR 2702.6(a)(1).

Paragraph (j) of Rule 5 sets forth the manner in which status or informational requests shall be made. It provides that such requests may be satisfied by accessing the Commission's website or by directing the request to the address of the Docket Office. The Commission proposed revising the rule to include a telephone number for contacting the Docket Office for those who need to contact the Docket Office in an expeditious manner but who do not have access to a computer. The Commission received no comments regarding this proposed change and adopts it as proposed.

Finally, the Commission deleted the option to file documents by facsimile transmission from §§ 2700.5(b), 2700.5(c)(2)(i), and 2700.5(f)(2) in recognition that the Commission no longer has the capability of receiving facsimile transmissions. Conforming changes have also been made to §§ 2700.7(c)(1), 2700.7(c)(2), 2700.8(d), 2700.9(a), 2700.24(d), 2700.45(a), 2700.45(f), and 2700.70(f).

§ 2700.6 Signing of Documents

Although Commission Procedural Rule 6 states how and by whom documents filed with the Commission must be signed, there is no specific requirement that all such documents shall be signed. The Commission proposed adding a requirement that all documents filed with the Commission must be signed.

The Commission received no comments regarding this proposed change and adopts it as proposed.

§ 2700.8 Computation of Time

Section 2700.8(b) currently provides that five additional days are added to the due date for responding to a pleading served by a method of delivery resulting in other than same-day service. As noted above with respect to references to pleadings, the Commission proposed changing the term ''pleading'' to ''filing'' since the Commission intends for the provision to apply to more documents than just those filed with the Commission during the initial stage of proceedings that set forth a party's claims and defenses.

The Commission also proposed adding a clarification to Rule 8(b) that the five extra days are not added for a response to a proposed penalty assessment because a proposed penalty assessment is not a filing with the Commission. Rather, a proposed penalty assessment is a notification sent by the Secretary to the operator or any other person against whom a civil penalty is proposed.

The Commission received no comments regarding these proposed changes and adopts them as proposed.

§ 2700.10 Motions

Commission Procedural Rule 10, which addresses motions, currently provides that oral motions may be made during a hearing or a conference. However, the rule does not require that any proceedings on such oral motions shall be on the record. A lack of such record makes review of proceedings on oral motions difficult. The Commission proposed adding a provision requiring that proceedings on any motion made at hearing or during a conference shall be on the record. The Commission also proposed making a conforming revision to § 2700.53(a) recognizing that a Judge has the discretion to record any in-person or telephonic conference.

The Commission received two comments on these proposed changes. The Secretary agreed with the proposed changes to Rule 10. With respect to the proposed changes to Rule 53, the Secretary commented that transcripts should be made available upon request and that ''reasonable'' should be deleted from the phrase, ''a transcript should be made available upon reasonable request'' since transcripts should be readily accessible and because ''reasonable'' is not defined. In addition, the Secretary suggested that Rule 53 should clarify that the Judge will notify the parties when a Judge records a conference.

A member of the mining bar commented that the recording of all in-person or telephonic motions should be mandatory rather than within the Judge's discretion unless the conference is purely non-substantive in nature.

The Commission modified the proposed language of Rule 10(a) to specify that proceedings on any motion made at a hearing or during a conference shall be ''recorded'' rather than stating that such proceedings shall be ''on the record.'' The Commission found the phrase ''on the record'' to be somewhat vague and colloquial and potentially confusing.

Upon further consideration of the proposed changes to Rule 53(a), the Commission included language clarifying that any in-person or telephonic conference shall be recorded at a party's request in addition to being recorded within the Judge's discretion. If the conference concerns a settlement discussion or mediation, the parties may request that the matter not be recorded. The Commission deleted the proposed change pertaining to transcript requests as unnecessary.

E. Subpart C—Contests of Proposed Penalties

§ 2700.25 Proposed Penalty Assessment

The Commission received a suggestion that the service requirements in a regulation promulgated by the Department of Labor's Mine Safety and Health Administration (''MSHA'') at 30 CFR 100.8(a) are inconsistent with the service requirements in § 2700.25, and that changes should be made to Commission Procedural Rule 25.

Section 2700.25 requires that the Secretary shall send a notice of a proposed civil penalty to an operator or

any other person against whom a penalty is proposed by ''certified mail.'' The requirements of Commission Procedural Rule 25 are taken directly from the language of § 105(a) of the Mine Act, 30 U.S.C. 815(a), which authorizes notification of a proposed penalty by ''certified mail'' only.

In contrast, § 100.8 states that proposed penalty assessments shall be ''delivered'' to an operator's name and address of record. Section 100.8 sets forth what constitutes a proper service address but does not state how service to that address should be made. The Commission declined proposing changes to Commission Procedural Rule 25 since the rule is wholly consistent with the Mine Act. There were no comments on the Commission's determination that changes should not be proposed.

§ 2700.28 Filing of Petition for Assessment of Penalty With the Commission

The Commission proposed two changes to Rule 28. First, the Commission proposed adding a provision to § 2700.28(b)(1) indicating that no more than 20 citations or orders may be the subject of a petition for assessment of penalty. The Commission recognized that past practice has demonstrated that more than 20 citations or orders make a docket too large and unwieldy for the Commission to efficiently manage.

The Commission received one comment on this proposed change. The Secretary commented that the current system results in penalty petitions containing more than 20 violations only on rare occasions. The Secretary urged the Commission not to adopt the proposed change, citing the Commission's ability to manually split dockets as one of several reasons why the practical need for this rule change was not clear. The Secretary also cited logistical confusion, inefficiency, and unintended substantive consequences, particularly when multiple dockets contain citations and orders involving the same inspection, inspector, and mine personnel.

The Commission has determined that it shall adopt this change as proposed. The Commission's Docket Office currently is required to manually split dockets containing more than 20 citations and orders. This approach is not sustainable in light of anticipated increasing numbers of large dockets and the Commission's limited resources. As to the Secretary's other concerns, the Commission may address such concerns on a case-by-case basis, including by consolidating proceedings as appropriate pursuant to 29 CFR 2700.12.

Second, the Commission proposed making a correction to 29 CFR 2700.28(b)(2). Current Commission Procedural Rule 28(b)(2) mistakenly refers to a ''single penalty assessment [that] has been proposed under 30 CFR 100.4.'' The Commission proposed deleting the reference to single penalty assessments in recognition that single penalty assessments have been subsumed by regular assessments.

The Commission received no comments regarding this proposed change and adopts it as proposed.

§ 2700.31 Penalty Settlement

The Commission proposed three changes with respect to Rule 31. First, the Commission proposed making a correction to § 2700.31(a). Paragraph (a) of § 2700.31 currently provides that ''in all penalty proceedings, except for discrimination proceedings arising under section 105(c) of the Mine Act,'' a settlement motion must be accompanied by a proposed order approving settlement. In ''discrimination proceedings, a party need not file a proposed order.'' 29 CFR 2700.31(a). The Commission proposed deleting the reference to discrimination proceedings because the reference appears to erroneously include discrimination proceedings arising under section 105(c) of the Act as a subcategory of ''all penalty proceedings.''

For purposes of concision, the Commission is further revising this proposed change to delete the reference to ''all penalty proceedings.'' Although the Commission has deleted this language, the remaining language of Rule 31 provides the necessary context clarifying that parties are required to file proposed orders approving settlement in all penalty proceedings, including penalty proceedings associated with a discrimination proceeding.

Second, the Commission proposed deleting unnecessary filing requirements. Section 2700.31(d) currently sets forth requirements for electronically filing proposed settlement documents under the rule. Paragraph (d) was added to Rule 31 prior to the development of e-CMS. After the development of e-CMS, the Commission promulgated rule changes for the electronic filing and service of documents, which are now final rules and include all documents filed in accordance with Rule 31. *See, e.g.,* 29 CFR 2700.5, 2700.7. The Commission proposed deleting references to electronic filing appearing in Rule 31 as superfluous and potentially confusing.

The Commission received no comments regarding this proposed change and adopts it as proposed.

The Commission also proposed deleting references that appear in Rule 31 regarding forms for approved orders approving settlement. The Commission prefers exercising flexibility regarding whether it shall provide sample forms for proposed orders approving settlement on its website.

The Commission received no comments regarding this proposed change and adopts it as proposed.

§ 2700.32 Motions To Reopen

The Commission receives requests to reopen final orders that generally fall into two categories. Requests in the first category involve circumstances in which a party has failed to file a timely contest of a proposed penalty assessment and the proposed penalty thereby becomes a final order of the Commission by operation of section 105(a) of the Mine Act, 30 U.S.C. 815(a). *See* 29 CFR 2700.27. Requests in the second category involve circumstances in which a Commission Administrative Law Judge issues a default order because a party has failed to file an answer to a petition for assessment of penalty filed by the Secretary. *See* 29 CFR 2700.28 and 2700.29.

The Commission proposed a new rule setting forth procedures for motions to reopen drawn from the Commission's experience in receiving and disposing of such motions. The Secretary commented on the proposed rule and suggested wording changes.

Upon further consideration, the Commission is withdrawing the proposed rule at this time. The Commission recognizes that the creation of a rule may not necessarily increase the efficiency of the Commission's processing of motions to reopen or reduce the instances in which a party seeks relief. The Commission may revisit the issue of promulgating a new rule in the future. In the meantime, the Commission will continue to provide guidance concerning motions to reopen in its case law and in informal guidance available on the Commission's website.

F. Subpart E—Complaints of Discharge, Discrimination or Interference

§ 2700.44 Petition for Assessment of Penalty in Discrimination Cases

The Commission proposed revisions to Commission Procedural Rule 44 so that cases brought under 30 U.S.C. 815(c)(3) could be treated in a manner similar to those brought under 30 U.S.C. 815(c)(2) in terms of when a decision becomes ripe for review. In addition, in

recognition of the Mine Act's requirement that proceedings under section 105(c) ''shall be expedited by the Secretary and the Commission,'' the Commission proposed changes to § 2700.44 that permitted expedition and eliminated unnecessary delay. 30 U.S.C. 815(c)(3).

The Commission also proposed adding a new paragraph (c) to 29 CFR 2700.41, stating that proceedings under subpart E of the part 2700, which pertain to complaints of discharge, discrimination or interference, are to be expedited.

The Commission further proposed making a conforming change to § 2700.69(a) to explicitly require that any decision of a Judge that is not final shall be denoted as an ''interim decision.''

The Commission received two comments regarding these changes. The Secretary suggested wording changes to proposed Rule 44. The UMWA and the Secretary expressed concern about the impact that proposed Rule 41(c) would have upon adequate case preparation.

Upon further consideration, the Commission withdraws these proposed revisions. The Commission recognizes that the proposed changes may create confusion rather than clarity and efficiency. The Commission may revisit these proposed changes in future rulemakings.

§ 2700.45 Temporary Reinstatement Proceedings

The Commission did not propose any changes to 29 CFR 2700.45 in the NPRM. However, a member of the mining bar commented that a provision should be added to Rule 45 requiring that a Complainant's counsel or representative must be notified if the operator requests a hearing regarding the Secretary's application for temporary reinstatement. The rule currently provides that such notice must be provided only to the Chief Administrative Law Judge and the Secretary.

The Commission agrees with the commenter that the rule should be changed. The Commission has revised §§ 2700.45(a) and 2700.45(c) to make explicit who must receive hearing requests, as well as documents, in a temporary reinstatement proceeding.

G. Subpart G—Hearings

§ 2700.64 Retention of Exhibits

Commission Procedural Rule 64 pertains generally to exhibits which are made part of the official record. The Commission proposed revising the title of the rule to more generally refer to ''exhibits,'' rather than ''retention of exhibits'' since the rule encompasses more than the retention of exhibits. In addition, the Commission proposed changing the rule to reflect that exhibits shall be ''deemed part of'' the official record, rather than ''retained with'' the official record. The Commission's official record is electronic and some physical exhibits will be deemed to be part of the official record although they may not be retained in a digital format with the other parts of the official record.

The Commission received no comments on these proposed changes and adopts them as proposed.

H. Subpart H—Review by the Commission

§ 2700.72 Commission Panels

Rule 72 is currently reserved. In order to promote transparency as to its functioning, the Commission proposed creating a new Procedural Rule 72 which would explain the Commission's process for empaneling Commissioners. Section 113(c) of the Mine Act, 30 U.S.C. 823(c), provides in part that the Commission is authorized ''to delegate to any group of three or more members any or all of the powers of the Commission.'' Proposed Rule 72 provided that the Commission may empanel a group of three or more members to hear any pending matter, and that a Commissioner's assignment to such a panel may be made by a random method agreed upon by a majority of Commissioners.

The Commission received two comments regarding proposed Rule 72. The UMWA commented that Rule 72 should specify that the parties should be informed about the ''random method'' used to determine the Commission panel so that parties could object if they believed the method used was not truly random. Another commenter questioned the need for 3-member panels given that the Commission's caseload is not extensive. The commenter stated that if the Commission decides to keep the rule, Rule 72 should be revised to include a provision whereby the losing side in a 2–1 decision issued by a panel has the right to petition the full Commission to re-hear the matter.

Upon further consideration, the Commission withdraws proposed Rule 72. The Commission believes that section 113(c) of the Mine Act provides sufficient information about the Commission's empanelment authority.

§ 2700.75 Briefs

The Commission did not propose any changes to its rules in the NPRM regarding briefs on appeal before the Commission.

The Secretary, however, commented that the Commission should revise its rules to set the required length of appellate briefs based on word count rather than page count. The Secretary explained that such a change would conform the Commission's rules to the approach that Federal Courts of Appeals have taken. In addition, the Secretary states the change would also eliminate the differing number of pages that result from setting the same text in different typefaces or from manipulating type.

The Commission has determined that it shall not make the suggested change at this time. Some documents filed with the Commission do not use word processing programs and are hand-written. In addition, § 2700.5 has procedural requirements in place that prohibit a filer from using word processing features to avoid page limits.

§ 2700.76 Interlocutory Review

The Commission proposed no changes to 29 CFR 2700.76 in the NPRM.

A member of the mining bar commented that the Commission should revise Rule 76 to establish a time limit for Judges to make a determination on a motion to certify a matter for interlocutory review. The commenter expressed a concern that a Judge could fail to act on a motion for certification until the issue became moot.

The Commission has determined that it will not make this change at this time. However, the Commission will consider this suggestion in future rulemakings.

§ 2700.78 Reconsideration

The Commission proposed revising Commission Procedural Rule 78 in order to clarify when a motion for reconsideration must be filed. Rule 78 currently provides that a petition for reconsideration must be filed with the Commission within 10 days after a decision or order. The proposed revision clarified that the ten-day period is counted from the issuance of the decision or order.

The Commission received no comments on the proposed change and adopts it as proposed.

I. Subpart I—Miscellaneous

§ 2700.80 Standards of Conduct; Disciplinary Proceedings

The Commission proposed making changes to Commission Procedural Rule 80 that would clarify the Commission's procedure in disciplinary proceedings and the standards applicable in such proceedings.

Rule 80(a) currently provides that individuals practicing before the Commission or its Judges shall conform to the standards of ethical conduct required of practitioners in the courts of the United States. The Commission proposed revising Rule 80(a) to state that the American Bar Association's Model Rules of Professional Conduct shall be considered in the Commission's disciplinary proceedings.

The Commission also proposed revising § 2700.80(c) to provide appropriate notice to the person named in a disciplinary referral, and to permit the person an opportunity for response. Proposed paragraph (c)(1) of Rule 80 required the Commission to provide written notice to the person named in a disciplinary referral of the initiation of an investigation. The Commission proposed revising paragraph (c)(2) of rule 80 to provide that after the Commission has determined that a hearing is warranted on the matter described in the disciplinary referral, the Commission shall specify the disciplinary issues to be resolved through hearing.

Proposed paragraph (c)(3) permitted the respondent named in the disciplinary proceeding an opportunity to file a response. In addition, proposed paragraph (c)(3) provided that the Chief Administrative Law Judge may assign the proceeding to a Commission Administrative Law Judge or to a non-Commission Administrative Law Judge. Proposed paragraph (c)(3) clarified that subpart G of part 2700, pertaining to hearings before the Commission's Administrative Law Judges, also applies as appropriate to all Commission disciplinary proceedings.

The Commission received one comment on the proposed changes. The Secretary commented on a typographical error in the proposed changes to Rule 80, noting that the word ''Model'' had been omitted in identifying the ABA Rules in § 2700.80(a). The Secretary further commented that to the extent an attorney may be a member of a state bar with any rule that may conflict in any way with the ABA Model Rules, the Commission should exercise discretion in favor of the attorney's state bar rules.

The Commission has made the correction noted by the Secretary but has determined that it will not accept the Secretary's suggestion to apply state ethics laws in Rule 80 proceedings. Practitioners appearing before the Commission live, work, and appear in various locations, making a number of jurisdictions' rules of conduct potentially applicable. The Commission believes it is more equitable to apply the same standards of conduct to all individuals appearing before the Commission. The Commission adopted all other changes as proposed.

§ 2700.82 Ex Parte Communications

Commission Procedural Rule 5(j) sets forth requirements regarding the manner in which status or informational requests shall be made. Section 2700.82(d) sets forth slightly different requirements for making status or informational requests. In keeping with the Commission's actual practice, the Commission proposed making changes to § 2700.82(d) so that it conforms with the provisions of § 2700.5(j).

The Commission received no comments regarding the proposed change and adopts it as proposed.

§ 2700.83 Authority To Sign Orders

Currently under § 2700.83, the Chairman or other designated Commissioner is authorized to sign an order on behalf of the other Commissioners disposing of certain procedural motions. The motions subject to Commission Procedural Rule 83 are non-substantive and involve minor procedural issues such as motions for extensions of time. The vast majority of those motions are unopposed.

The Commission proposed three changes to 29 CFR 2700.83. First, the Commission proposed adding a provision to § 2700.83 clarifying that in the absence of a quorum, the remaining Commissioner or Commissioners may dispose of the procedural motions subject to the rule.

The Commission received one comment on this proposed change. The Secretary commented that although the proposed change was practical, the Mine Act does not appear to permit a single Commissioner to act alone.

The Commission is withdrawing this proposed change at this time.

Second, the Commission proposed deleting the provision in Procedural Rule 83 stating that a person aggrieved by an order signed by the Chairman or designated Commissioner under the rule may request that the order be signed by the participating Commissioners. The Commission has not received such a request and, given the unopposed nature of the motions at issue, considers it unlikely that it would receive such a request in the future.

The Commission received no comments regarding this proposed change and adopts it as proposed.

Third, consistent with changing gender-specific pronouns to more gender-neutral language throughout its rules, the Commission proposed changing references from ''Chairman'' to ''Chair.''

The Commission received no comments regarding this proposed change and adopts it as proposed.

III. Notice and Public Procedure

A. Executive Orders

The Commission is an independent regulatory agency under section 3(b) of Executive Order (''E.O.'') 12866 (Sept. 30, 1993), 58 FR 51735 (Oct. 4, 1993); E.O. 13563 (Jan. 18, 2011), 76 FR 3821 (Jan. 21, 2011); E.O. 13771 (Jan. 30, 2017), 82 FR 9339 (Feb. 3, 2017), *repealed by* E.O. 13992 (Jan. 20, 2021), 86 FR 7049 (Jan. 25, 2021); E.O. 13777 (Feb. 24, 2017), 82 FR 12285 (Mar. 1, 2017), *repealed by* E.O. 13992 (Jan. 20, 2021), 86 FR 7049 (Jan. 25, 2021); and E.O. 13132 (Aug. 4, 1999), 64 FR 43255 (Aug. 10, 1999).

The Commission has determined that this rulemaking does not have ''takings implications'' under E.O. 12630 (Mar. 15. 1988), 53 FR 8859 (Mar. 18, 1988).

The Commission has determined that these regulations meet all applicable standards set forth in E.O. 12988 (Feb. 5, 1996), 61 FR 4729 (Feb. 7, 1996).

B. Statutory Requirements

Although notice-and-comment rulemaking requirements under the Administrative Procedure Act (''APA'') do not apply to rules of agency procedure (5 U.S.C. 553(b)(4)(A)), the Commission invites members of the interested public to submit comments on this final rule. The Commission will accept public comment until February 18, 2025.

The Commission has determined that this rulemaking is exempt from the requirements of the Regulatory Flexibility Act (''RFA'') (5 U.S.C. 601 *et seq.*), because the proposed rule would not have a significant economic impact on a substantial number of small entities.

The Commission has determined that this rule is not a ''major rule'' under the Small Business Regulatory Enforcement Fairness Act (''SBREFA'') (5 U.S.C. 804(2)).

The Commission has determined that the Paperwork Reduction Act (''PRA'') (44 U.S.C. 3501 *et seq.*) does not apply because these rules do not contain any information collection requirements that require the approval of the OMB.

The Commission has determined that the Congressional Review Act (''CRA'') (5 U.S.C. 801 *et seq.*) does not apply because, pursuant to 5 U.S.C. 804(3)(C), these rules are rules of agency procedure or practice that do not substantially affect the rights or obligations of non-agency parties.

The Commission has determined that this rulemaking is not a major Federal action significantly affecting the quality of the human environment requiring an environmental assessment under the National Environmental Policy Act (''NEPA'') (42 U.S.C. 4321 *et seq.*).

The Commission is an independent regulatory agency, and as such, is not subject to the requirements of the Unfunded Mandates Reform Act (''UMRA'') (2 U.S.C. 1532 *et seq.*).

List of Subjects in 29 CFR Part 2700

Administrative practice and procedure, Confidential business information, Mine safety and health, Penalties, Whistleblowing.

For the reasons stated in the preamble, the Commission amends 29 CFR part 2700 as follows:

PART 2700—PROCEDURAL RULES

■ 1. The authority citation for part 2700 is revised to read as follows:

Authority: 30 U.S.C. 815, 820, and 823.

Subpart A—General Provisions

■ 2. Revise § 2700.1 to read as follows:

§ 2700.1 Scope; applicability of other rules; construction.

(a) *Scope.* (1) This part sets forth rules applicable to proceedings before the Federal Mine Safety and Health Review Commission (''the Commission'') and its Administrative Law Judges (''ALJs''). The Commission is an adjudicative agency that provides administrative trial and appellate review of legal disputes arising under the Federal Mine Safety and Health Act of 1977, 30 U.S.C. 801 *et seq.* (''the Act''). The Commission is an independent agency, not a part of nor affiliated in any way with the U.S. Department of Labor or its Mine Safety and Health Administration (''MSHA''). The location of the Commission's headquarters is at 1331 Pennsylvania Avenue NW, Suite 520N, Washington, DC 20004–1710; and its primary phone number is 202–434–9900. The Commission maintains a website at *http://www.fmshrc.gov* where these rules, recent and many past decisions of the Commission and its ALJs, and other information regarding the Commission, can be accessed.

(2) Unless the Commission provides otherwise, amendments to these rules are effective 60 days following publication in the **Federal Register** and apply to cases initiated after they take effect. They also apply to further proceedings in cases pending on the effective date, except to the extent that application of the amended rules would not be feasible, or would work injustice, in which event the former rules of procedure would continue to apply.

(b) *Applicability of other rules.* On any procedural question not regulated by the Act, these Procedural Rules, or the Administrative Procedure Act (particularly 5 U.S.C. 554 and 556), the Commission and its ALJs shall be guided so far as practicable by the Federal Rules of Civil Procedure and the Federal Rules of Appellate Procedure.

(c) *Construction.* These rules shall be construed to secure the just, speedy and inexpensive determination of all proceedings, and to encourage the participation of miners and their representatives.

■ 3. Revise § 2700.2 to read as follows:

§ 2700.2 Definitions.

For purposes of this part, the definitions contained in section 3 of the Act, 30 U.S.C. 802, apply. For ease of reference throughout this part, the ''Secretary of Labor'' or ''Acting Secretary of Labor'' shall be referred to as the ''Secretary.'' Similarly, a Commission Administrative Law Judge shall be referred to as an ''ALJ.''

■ 4. Revise § 2700.3 to read as follows:

§ 2700.3 Who may appear before the Commission as a representative of a party.

(a) *Notice of appearance.* When first making an appearance, each representative of a party must file a notice of appearance that indicates on whose behalf the appearance is made and the proceeding name and docket number.

(b) *Who may appear.* Persons who may represent a party or subpoenaed witness before an ALJ or the Commission include:

(1) An attorney who is a member of a bar in good standing of the highest court of a State, Commonwealth, or Territory of the United States, or the District of Columbia where the attorney has been licensed to practice law, who will promptly disclose to the ALJ any action suspending, enjoining, restraining, disbarring, or otherwise currently restricting the attorney in the practice of law in any jurisdiction where the attorney is licensed to practice law;

(2) A party;

(3) A representative of miners;

(4) An owner, partner, officer or employee of a party when the party is a labor organization, an association, a partnership, a corporation, a governmental agency, other business entity, or a political subdivision; or

(5) Any other person with the permission of the presiding ALJ or the Commission.

(c) *Entry of appearance.* A representative of a party shall enter an appearance in a proceeding under the Act or these procedural rules by signing the first document filed on behalf of the party with the Commission or ALJ in accordance with § 2700.6; filing a written entry of appearance with the Commission or ALJ; or, if the Commission or ALJ permits, by orally entering an appearance in open hearing.

(d) *Duties.* All representatives authorized to appear before the Commission shall be subject to § 2700.80 (Standards of conduct; disciplinary proceedings). A representative must be diligent, prompt, and forthright when dealing with parties, other representatives and the ALJ, and act in a manner that furthers the fair and orderly conduct of the proceeding.

(e) *Withdrawal of appearance.* A representative who desires to withdraw after filing a notice of appearance, or a party desiring to withdraw the appearance of a representative, must file a motion with the Commission or ALJ. The motion must state that a notice of the withdrawal has been provided to all parties. The Commission or ALJ may deny a representative's motion to withdraw when necessary to avoid undue delay or prejudice to the rights of a party.

■ 5. Revise § 2700.4 to read as follows:

§ 2700.4 Parties, intervenors, and amici curiae.

(a) *Party status.* A person, including the Secretary or an operator, who is named as a party or who is permitted to intervene, is a party. In a proceeding instituted by the Secretary under section 105(c)(2) of the Act, 30 U.S.C. 815(c)(2), the complainant on whose behalf the Secretary has filed the complaint is a party and may present additional evidence. A miner, applicant for employment, or representative of a miner who has filed a complaint with the Commission under section 105(c)(3) or 111 of the Act, 30 U.S.C. 815(c)(3) and 821, and an affected miner or the miner's representative who has become a party in accordance with paragraph (b) of this section, are parties.

(b) *Intervention*—(1) *Intervention by affected miners and their representatives.* Before a case has been assigned to an ALJ, affected miners or their representatives shall be permitted to intervene upon filing a written notice of intervention with the Commission. If the case has been assigned to an ALJ, the notice of intervention shall be filed with the ALJ. Notices of intervention shall be filed with the Commission or ALJ in accordance with § 2700.5(c). The

Commission or the ALJ shall provide forthwith a copy of the notice to all parties. After the start of the hearing, affected miners or their representatives may intervene upon just terms and for good cause shown.

(2) *Intervention by other persons.* (i) Motions by other persons for leave to intervene shall be filed before the start of a hearing on the merits unless the ALJ, for good cause shown, allows a later filing. The motion shall set forth:

(A) The interest of the movant relating to the property or events that are the subject of the proceeding;

(B) The reasons why such interest is not otherwise adequately represented by the parties already involved in the proceeding; and

(C) A showing that intervention will not unduly delay or prejudice the adjudication of the issues.

(ii) Such intervention is not a matter of right but of the sound discretion of the ALJ. In denying a motion to intervene, the ALJ may alternatively permit the movant to participate in the proceeding as amicus curiae.

(c) *Procedure for participation as amicus curiae.* Any person may move to participate as amicus curiae in a proceeding before an ALJ. Such participation as amicus curiae shall not be a matter of right but of the sound discretion of the ALJ. A motion for participation as amicus curiae shall set forth the interest of the movant and show that the granting of the motion will not unduly delay or prejudice the adjudication of the issues. If the ALJ permits amicus curiae participation, the ALJ's order shall specify the time within which such amicus curiae memorandum, brief, or other filing must be filed and the time within which a reply may be made. The movant may conditionally attach its memorandum, brief, or other filing to its motion for participation as amicus curiae.

■ 6. Revise § 2700.5 to read as follows:

§ 2700.5 General requirements for pleadings and other documents; filing requirements; status or informational requests.

(a) *Jurisdiction.* A proposal for a penalty under section 110, 30 U.S.C. 820; an answer to a notice of contest of a citation or withdrawal order issued under section 104, 30 U.S.C. 814; an answer to a notice of contest of an order issued under section 107, 30 U.S.C. 817; a complaint issued under section 105(c) or 111, 30 U.S.C. 815(c) and 821; and an application for temporary reinstatement under section 105(c)(2), 30 U.S.C. 815(c)(2), shall allege that the violation or imminent danger took place in or involves a mine that has products which enter commerce or has operations or products that affect commerce. Jurisdictional facts that are alleged are deemed admitted unless specifically denied in a responsive pleading.

(b) *How to file.* Unless otherwise provided for in the Act, these rules, or by order, filing may be accomplished in person, by U.S. Postal Service, by third-party commercial carrier, or by electronic transmission. Instructions for electronic filing may be accessed on the Commission's website (*http://www.fmshrc.gov*).

(c) *Where to file.* Unless otherwise provided for in the Act, these rules, or by order:

(1) *Filing by electronic transmission.* A document may be filed by electronic transmission with the Commission and its ALJs. Instructions for electronic filing may be accessed on the Commission's website (*http://www.fmshrc.gov*).

(2) *Filing in person, by U.S. Postal Service, or by third-party commercial carrier*—(i) *Before an ALJ has been assigned.* Before an ALJ has been assigned to a case, all documents shall be filed with the Commission. Documents filed with the Commission shall be addressed to the Docket Office, Federal Mine Safety and Health Review Commission, 1331 Pennsylvania Avenue NW, Suite 520N, Washington, DC 20004–1710.

(ii) *After an ALJ has been assigned.* After an ALJ has been assigned, and before a decision has been issued, documents shall be filed with the ALJ at the address set forth on the notice of the assignment.

(iii) *After an ALJ has issued a final decision.* After the ALJ has issued a final decision, documents shall be filed with the Commission as described in paragraph (c)(2)(i) of this section.

(d) *Necessary information.* All documents shall be legible and shall clearly identify on the cover page the filing party by name. All documents shall be dated and shall include the assigned docket number, page numbers, and the filing person's address, business telephone number, cellular telephone number if available, and email address if available. Written notice of any change in contact information shall be given promptly to the Commission or the ALJ and all other parties.

(e) *Privacy considerations.* Persons submitting information to the Commission shall protect information that tends to identify certain individuals, constitute an unwarranted intrusion of personal privacy, or disclose confidential commercial information as defined by 29 CFR 2702.6(a)(1) in the following manner:

(1) Social security numbers, financial account numbers, driver's license numbers, or other personal identifying numbers, shall be redacted or excluded;

(2) Minor children shall be identified only by initials;

(3) If dates of birth must be included, only the year shall be used;

(4) Parties shall exercise caution when filing medical records, medical treatment records, medical diagnosis records, employment history, and individual financial information, and shall redact or exclude materials unnecessary to a disposition of the case, provided the party gives notice to other parties and the ALJ of the types of material redacted and the reason for such redactions.

(5) Parties shall, consistent with 29 CFR 2702.6, exercise caution when providing corporate or commercial information and, with the permission of the ALJ, shall redact or exclude any portion of its filing unnecessary to a disposition of the case or shall designate by appropriate markings any portion that it considers to be confidential.

(6) The Commission may order, sua sponte or pursuant to a party's motion, that a filing be submitted for in-camera review or placed under seal. The Commission may subsequently unseal the filing or order the person who made the submission to substitute a redacted version in the record. Prior to unsealing a filing, the Commission shall provide the party that submitted the filing a reasonable opportunity to object to the sealing or to withdraw the filing. If no response is received, the Commission will take appropriate action at its discretion. No placements under seal, redactions or withdrawals shall be permitted during the pendency of a subpoena duces tecum validly issued to the Commission or a valid request pursuant to 29 CFR part 2702 related to the filing.

(f) *Effective date of filing.* Unless otherwise provided for in the Act, these rules, or by order:

(1) *Filing by electronic transmission.* When filing is by electronic transmission, filing is effective upon successful receipt by the Commission. The electronic transmission shall be in the manner specified by the Commission's website (*http://www.fmshrc.gov*).

(2) *Filing in person, by U.S. Postal Service, or by third-party commercial carrier.* When filing is by U.S. Postal Service, filing is effective upon mailing, except that the filing of a motion for extension of time, any document in an emergency response plan dispute proceeding, a petition for review of a temporary reinstatement order, a motion

for summary decision, a petition for discretionary review, and a motion to exceed page limit is effective only upon receipt. *See* §§ 2700.9(a), 2700.24(d), 2700.45(f), 2700.67(a), 2700.70(a), (f), and 2700.75(f). When filing is in person or by third-party commercial carrier, filing is effective upon successful receipt by the Commission.

(g) *Number of copies.* Unless otherwise ordered or stated in this part, only the original of a document shall be filed.

(h) *Form of filings.* All documents, including those filed electronically, shall appear in at least 12-point type on paper 8½ by 11 inches in size, with margins of at least 1 inch on all four sides. Text and footnotes shall appear in the same size type. Text shall be double spaced. Headings and footnotes may be single spaced. Quotations of 50 words or more may be single spaced and indented left and right. Excessive footnotes are prohibited. The failure to comply with the requirements of this paragraph (h) or the use of compacted or otherwise compressed printing features may be grounds for rejection of a filing.

(i) *Citation to a decision of an ALJ.* Each citation to a decision of an ALJ should include ''(ALJ)'' at the end of the citation.

(j) *Status or informational requests.* Information concerning filing requirements, the status of cases, or docket information may be accessed through the Commission's website (*http://www.fmshrc.gov*). In the event such information is unavailable through the Commission's website or the requesting party does not have access to the website, such status or informational requests must be directed to the Docket Office of the Federal Mine Safety and Health Review Commission, 1331 Pennsylvania Avenue NW, Suite 520N, Washington, DC 20004–1710; 202–434–9950.

■ 7. Revise § 2700.6 to read as follows:

§ 2700.6 Signing of documents.

(a) *Signature.* All documents filed with the Commission must be signed by a party or representative of the party.

(1) *Documents not filed by electronic transmission.* A party or representative of the party shall sign a document by handwritten signature.

(2) *Documents filed by electronic transmission.* (i) A party or representative of the party may sign a document by including the notation ''/s/'' followed by the typewritten name of the party or representative of the party filing the document.

(ii) A party or representative of the party may sign a document by including a graphical duplicate of the handwritten signature.

(b) *Meaning of signature.* A document or signature may not be denied legal effect or enforceability solely because it is in electronic form. When a party or representative of the party signs a document in the manner described in paragraph (a) of this section, that person's signature shall constitute a certification:

(1) That under the provisions of the law, including these rules and all federal conflict of interest statutes, the person is authorized and qualified to represent the particular party in the matter; and

(2) That the person has read the document; that based on knowledge, information, and belief formed after reasonable inquiry it is well grounded in fact and is warranted by existing law or a good faith argument for extension, modification, or reversal of existing law; and that it is not interposed for any improper purpose, such as to harass or to cause unnecessary delay or needless increase in the cost of litigation.

■ 8. In § 2700.7, revise paragraphs (a) and (c)(1) and (2) to read as follows:

§ 2700.7 Service.

(a) *Generally.* A copy of each document filed with the Commission shall be served on all parties. Whenever a party is represented by an attorney or other authorized representative who has entered an appearance on behalf of such party pursuant to § 2700.3, service thereafter shall be made upon the attorney or other authorized representative. In addition, a copy of a notice of contest of a citation or order, a petition for assessment of penalty, a discrimination or interference complaint, a complaint for compensation, and an application for temporary relief shall be served upon the representative of miners, if known.

* * * * *

(c) * * *

(1) *Methods of service.* Documents may be served in person, by U.S. Postal Service, by third-party commercial carrier, or by email or other electronic transmission. For documents filed pursuant to §§ 2700.9(a), 2700.24, 2700.45, 2700.70(f), 2700.75(f), and subpart F (applications for temporary relief), the method of service used must be no less expeditious than that used for filing, except that if service by email or other electronic transmission is impossible, the filing party must serve in person, or by third-party commercial carrier, resulting in same-day delivery.

(2) *Effective date of service.* When service is by U.S. Postal service, service is effective upon mailing. When service is in person, by third-party commercial carrier, or by email or other electronic transmission, service is effective upon successful receipt by the party intended to be served.

* * * * *

■ 9. In § 2700.8:

■ a. Revise the introductory text and paragraphs (b) and (d);

■ b. Remove examples 1, 2, and 3 from the end of the section; and

■ c. Add paragraph (e).

The revisions and additions read as follows:

§ 2700.8 Computation of time.

Unless otherwise provided for in the Act, these rules, or by order, the due date for a filing or other deadline for party or Commission action (hereinafter ''due date'') is determined sequentially as follows:

* * * * *

(b) When a party serves a filing by a method of delivery resulting in other than same-day service, the due date for party action in response is extended 5 additional calendar days beyond the date otherwise prescribed, after consideration of paragraph (a) of this section where applicable. (n.b. A proposed penalty assessment is not a filing with the Commission and additional days are not added to the time for responding to a proposed assessment.)

* * * * *

(d) The time of filing with the Commission shall be determined using Washington, DC, local time. For filing by electronic means, the due date ends at midnight Washington, DC, local time. For filing by other means, the due date ends at 5:00 p.m. Washington, DC, local time.

(e)(1) *Example 1.* A motion is filed with the Commission on Tuesday, July 2, 2025. Under § 2700.10(d), other parties in the proceeding have 8 days in which to respond to the motion. Because the response period is less than 11 days, intervening weekends and holidays, such as Friday, July 4, 2025, are excluded in determining the due date. A response is thus due by Tuesday, July 15, 2025. In addition, those parties not served with the motion on the day it was filed have 5 additional calendar days in which to respond, or until Monday, July 21, 2025.

(2) *Example 2.* An ALJ issues a final decision in a case on Friday, July 11, 2025. Under § 2700.70(a), parties have until August 11, 2025, to file with the Commission a petition for discretionary review of the ALJ's decision. Even though the decision was mailed, 5

additional calendar days are not added, because paragraph (b) of this section only applies to actions in response to parties' filings. However, because August 10, 2025, is a Sunday, the actual due date for the petition is Monday, August 11, 2025.

(3) *Example 3.* Pursuant to § 2700.24(a), the Secretary files a referral of a citation arising out of a dispute over the content of an operator's emergency response plan. Certain subsequent deadlines in such cases are specifically established by reference to calendar days, and thus paragraph (a) of this section would not necessarily apply in determining due dates. For instance, if the referral was filed on Thursday, July 10, 2025, the short and plain statement the operator must file in response within 5 calendar days would be due Tuesday, July 15, 2025, because the intervening weekend days would not be excluded in determining the due date. If the fifth calendar day were to fall on a weekend, holiday, or other day on which the Commission is not open however, the terms of paragraph (c) of this section would apply and the due date would be the next day the Commission is open.

■ 10. In § 2700.9, revise paragraph (a) to read as follows:

§ 2700.9 Extensions of time.

(a) The time for filing or serving any document may be extended for good cause shown. Filing of a motion requesting an extension of time is effective upon receipt. A motion requesting an extension of time shall be received no later than 3 days prior to the expiration of the time allowed for the filing or serving of the document, and shall comply with § 2700.10. The motion and any statement in opposition shall include proof of service on all parties by a means of delivery no less expeditious than that used for filing the motion, except that if service by email or other electronic transmission is impossible, the filing party must serve in person, or by third-party commercial carrier, resulting in same-day delivery.

* * * * *

■ 11. In § 2700.10, revise paragraphs (a) and (b) to read as follows:

§ 2700.10 Motions.

(a) An application for an order shall be by motion which, unless made during a hearing or a conference, shall be made in writing and shall set forth the relief or order sought. Proceedings on any motion made at a hearing or during a conference shall be recorded.

(b) Written motions shall be set forth in a document separate from other filings.

* * * * *

■ 12. Revise § 2700.11 to read as follows:

§ 2700.11 Withdrawal of filing.

A party may withdraw a filing at any stage of a proceeding with the approval of the ALJ or the Commission.

■ 13. Revise § 2700.12 to read as follows:

§ 2700.12 Consolidation of proceedings.

The Commission and its ALJs may at any time, upon their own motion or a party's motion, order the consolidation of proceedings that involve similar issues.

Subpart B—Contests of Citations and Orders

■ 14. In § 2700.20, revise paragraphs (b) and (d) to read as follows:

§ 2700.20 Notice of contest of a citation or order issued under § 104 of the Act.

* * * * *

(b) *Time to contest.* Contests filed by an operator pursuant to paragraph (a)(1) of this section shall be filed with the Secretary at the appropriate Regional Solicitor's Office or at the Solicitor's Office, Mine Safety and Health Division, Washington, DC, within 30 days of receipt by the operator of the contested citation, order, or modification. Contests filed by a miner or representative of miners pursuant to paragraph (a)(2) of this section shall be filed in the same manner within 30 days of receipt by the miner or representative of miners of the contested order, modification, or termination.

* * * * *

(d) *Copy to Commission.* The contesting party shall also file a copy of the notice of contest with the Commission at the time the party files with the Secretary.

* * * * *

■ 15. In § 2700.24, revise paragraphs (d), (e), (f), and (g) to read as follows:

§ 2700.24 Emergency response plan dispute proceedings.

* * * * *

(d) *Filing and service of documents.* The filing with the Commission of any document in an emergency response plan dispute proceeding, including the referral, is effective upon receipt. A copy of each document filed with the Commission in such a proceeding shall be served on all parties and on any miner or miners' representative who has participated in the emergency response plan review process by a method of service no less expeditious than that used for filing, except that if service by email or other electronic transmission is impossible, the filing party must serve in person, or by third-party commercial carrier, resulting in same-day delivery.

(e) *Proceedings before the ALJ*—(1) *Submission of materials.* Within 15 calendar days of the referral, the parties shall submit to the ALJ assigned to the matter all relevant materials regarding the dispute. Such submissions shall include a request for any relief sought and may include proposed findings of fact and conclusions of law. Such materials may be supported by affidavits or other verified documents, and shall specify the grounds upon which the party seeks relief. Supporting affidavits shall be made on personal knowledge and shall show affirmatively that the affiant is competent to testify to the matters stated.

(2) *Hearing.* (i) Within 5 calendar days following the filing of the Secretary's referral, any party may request a hearing and shall so advise the Commission's Chief ALJ or designee, and simultaneously notify the other parties.

(ii) Within 10 calendar days following the filing of the Secretary's referral, the Commission's Chief ALJ or designee may issue an order scheduling a hearing on the ALJ's own motion, and must immediately so notify the parties.

(iii) If a hearing is ordered under paragraph (e)(2)(i) or (ii) of this section, the hearing shall be held within 15 calendar days of the filing of the referral. The scope of such a hearing is limited to the disputed plan provision or provisions. If no hearing is held, the ALJ assigned to the matter shall review the materials submitted by the parties pursuant to paragraph (e)(1) of this section, and shall issue a decision pursuant to paragraph (f) of this section.

(f) *Disposition*—(1) *Decision of the ALJ.* Within 15 calendar days following receipt by the ALJ of all submissions and testimony made pursuant to paragraph (e) of this section, the ALJ shall issue a decision that constitutes the ALJ's final disposition of the proceedings. The decision shall be in writing and shall include all findings of fact and conclusions of law, and the reasons or bases for them, on all the material issues of fact, law or discretion presented by the record, and an order. The parties shall be notified of the ALJ's decision by the most expeditious means reasonably available.

(2) *Stay of plan provision.* Notwithstanding § 2700.69(b), an ALJ shall retain jurisdiction over a request for a stay in an emergency response plan dispute proceeding. Within two

business days following service of the decision, the operator may file with the ALJ a request to stay the inclusion of the disputed provision in the plan during the pendency of an appeal to the Commission pursuant to paragraph (g) of this section. The Secretary shall respond to the operator's motion within two business days following service of the motion. The ALJ shall issue an order granting or denying the relief sought within two business days after the filing of the Secretary's response.

(g) *Review of decision.* Any party may seek review of an ALJ's decision, including the ALJ's order granting or denying a stay, by filing with the Commission a petition for discretionary review pursuant to § 2700.70. Neither an operator's request for a stay nor the issuance of an order addressing the stay request affects the time limits for filing a petition for discretionary review of an ALJ's decision with the Commission under this paragraph (g). The Commission shall act upon a petition on an expedited basis. If review is granted, the Commission shall issue a briefing order. Except as otherwise ordered or provided for herein, the provisions of § 2700.75 apply. The Commission will not grant motions for extension of time for filing briefs, except under extraordinary circumstances.

Subpart C—Contests of Proposed Penalties

■ 16. Revise § 2700.25 to read as follows:

§ 2700.25 Proposed penalty assessment.

The Secretary, by certified mail, shall notify the operator or any other person against whom a penalty is proposed of the violation alleged, the amount of the proposed penalty assessment, and that such person shall have 30 days to notify the Secretary of the intent to contest the proposed penalty assessment.

■ 17. Revise § 2700.26 to read as follows:

§ 2700.26 Notice of contest of proposed penalty assessment.

A person has 30 days after receipt of the proposed penalty assessment within which to notify the Secretary of the contest of the proposed penalty assessment. A person who wishes to contest a proposed penalty assessment must provide such notification regardless of whether the person has previously contested the underlying citation or order pursuant to § 2700.20. The Secretary shall immediately transmit to the Commission any notice of contest of a proposed penalty assessment.

■ 18. Revise § 2700.27 to read as follows:

§ 2700.27 Effect of failure to contest proposed penalty assessment.

If, within 30 days from the receipt of the proposed penalty assessment, the operator or other person fails to notify the Secretary of the contest of the proposed penalty, the Secretary's proposed penalty assessment shall be deemed to be a final order of the Commission not subject to review by any court or agency.

■ 19. In § 2700.28, revise paragraphs (b)(1) and (2) to read as follows:

§ 2700.28 Filing of petition for assessment of penalty with the Commission.

* * * * *

(b) * * *

(1) List the alleged violations and the proposed penalties. Each violation shall be identified by the number and date of the citation or order and the section of the Act or regulations alleged to be violated. The list shall include no more than 20 citations or orders which are the subject of the petition for assessment of penalty.

(2) Include a short and plain statement of supporting reasons based on the criteria for penalty assessment set forth in section 110(i) of the Act, 30 U.S.C. 820(i).

* * * * *

■ 20. Revise § 2700.30 to read as follows:

§ 2700.30 Assessment of penalty.

(a) In assessing a penalty the ALJ shall determine the amount of penalty in accordance with the six statutory criteria contained in section 110(i) of the Act, 30 U.S.C. 820(i), and incorporate such determination in a written decision. The decision shall contain findings of fact and conclusions of law on each of the statutory criteria and an order requiring that the penalty be paid.

(b) In determining the amount of penalty, neither the ALJ nor the Commission shall be bound by a penalty proposed by the Secretary or by any offer of settlement made by a party.

■ 21. Revise § 2700.31 to read as follows:

§ 2700.31 Penalty settlement.

(a) *General.* A proposed penalty that has been contested before the Commission may be settled only with the approval of the Commission upon motion. A settlement motion must be accompanied by a proposed order approving settlement.

(b) *Content of motion*—(1) *Factual support.* A motion to approve a penalty settlement shall include for each violation the amount of the penalty proposed by the Secretary, the amount of the penalty agreed to in settlement, and facts in support of the penalty agreed to by the parties.

(2) *Certification.* The party filing a motion must certify that the opposing party has authorized the filing party to represent that the opposing party consents to the granting of the motion and the entry of the proposed order approving settlement.

(c) *Content of proposed order.* A proposed order approving a penalty settlement shall include for each violation the amount of the penalty proposed by the Secretary, the amount of the penalty agreed to in settlement, and facts in support of the penalty agreed to by the parties. Proposed orders shall not be submitted in PDF format.

(d) *Filing of motion and proposed order prior to filing of petition.* If a motion to approve settlement and proposed order is filed with the Commission before the Secretary has filed a petition for assessment of penalty, the filing party must also submit as attachments, electronic copies of the proposed penalty assessment and citations and orders at issue. If such attachments are filed, the Secretary need not file a petition for assessment of penalty.

(e) *Final order.* Any order by the ALJ approving a settlement shall set forth the reasons for approval and shall be supported by the record. Such order shall become the final order of the Commission 40 days after issuance unless the Commission has directed that the order be reviewed. An ALJ may correct clerical errors in an order approving settlement in accordance with the provisions of § 2700.69(c).

Subpart E—Complaints of Discharge, Discrimination or Interference

■ 22. Revise § 2700.40 to read as follows:

§ 2700.40 Who may file.

(a) *The Secretary.* A discrimination or interference complaint under section 105(c)(2) of the Act, 30 U.S.C. 815(c)(2), shall be filed by the Secretary if, after an investigation conducted pursuant to section 105(c)(2), the Secretary determines that a violation of section 105(c)(1), 30 U.S.C. 815(c)(1), has occurred.

(b) *Miner, representative of miners, or applicant for employment.* A discrimination or interference complaint under section 105(c)(3) of the Act, 30 U.S.C. 815(c)(3), may be filed by the complaining miner, representative

of miners, or applicant for employment if the Secretary, after investigation, has determined that the provisions of section 105(c)(1) of the Act, 30 U.S.C. 815(c)(1), have not been violated.

■ 23. Revise § 2700.41 to read as follows:

§ 2700.41 Time to file.

(a) *The Secretary.* A discrimination or interference complaint shall be filed by the Secretary within 30 days after the Secretary's written determination that a violation has occurred.

(b) *Miner, representative of miners, or applicant for employment.* A discrimination or interference complaint may be filed by a complaining miner, representative of miners, or applicant for employment within 30 days after receipt of a written determination by the Secretary that no violation has occurred.

■ 24. Revise § 2700.42 to read as follows:

§ 2700.42 Contents of complaint.

A discrimination or interference complaint shall include a short and plain statement of the facts, setting forth the alleged discharge, discrimination or interference, and a statement of the relief requested.

■ 25. Revise § 2700.43 to read as follows:

§ 2700.43 Answer.

Within 30 days after service of a discrimination or interference complaint, the respondent shall file an answer responding to each allegation of the complaint.

■ 26. Revise § 2700.44 to read as follows:

§ 2700.44 Petition for assessment of penalty in discrimination or interference cases.

(a) *Petition for assessment of penalty in Secretary's complaint.* A discrimination or interference complaint filed by the Secretary shall propose a civil penalty of a specific amount for the alleged violation of section 105(c) of the Act, 30 U.S.C. 815(c). The petition for assessment of penalty shall include a short and plain statement of supporting reasons based on the criteria for penalty assessment set forth in section 110(i) of the Act, 30 U.S.C. 820(i).

(b) *Petition for assessment of penalty after sustaining of complaint by miner, representative of miners, or applicant for employment.* Immediately upon issuance of a decision by an ALJ sustaining a discrimination or interference complaint brought pursuant to section 105(c)(3), 30 U.S.C. 815(c)(3), the ALJ shall notify the Secretary in writing of such determination. The Secretary file with the Commission a petition for assessment of civil penalty within 45 days of receipt of such notice.

■ 27. Revise § 2700.45 to read as follows:

§ 2700.45 Temporary reinstatement proceedings.

(a) *Service of documents.* A copy of each document filed with the Commission in a temporary reinstatement proceeding shall be served on all parties, the miner (in cases where the miner is without representation), and also on any representative of the complainant miner so identified in the miner's complaint to the Secretary or identified in subsequent filings, by a method of service as expeditious as that used for filing, except that, if service by email or other electronic transmission is impossible, the filing party must serve in person, or by third-party commercial carrier, resulting in same-day delivery.

(b) *Contents of application.* An application for temporary reinstatement shall state the Secretary's finding that the miner's discrimination or interference complaint was not frivolously brought and shall be accompanied by an affidavit setting forth the Secretary's reasons supporting this finding. The application also shall include a copy of the miner's complaint to the Secretary and proof of notice to and service on the person against whom relief is sought by the most expeditious method of notice and delivery reasonably available.

(c) *Request for hearing.* Within 10 calendar days following receipt of the Secretary's application for temporary reinstatement, the person against whom relief is sought shall advise the Commission's Chief ALJ or designee, and simultaneously notify the Secretary, the miner (in cases where the miner is without representation), and any miner's representative who is due service under paragraph (a) of this section, whether a hearing on the application is requested. If no hearing is requested, the ALJ assigned to the matter shall immediately review the Secretary's application and, if based on the contents thereof the ALJ determines that the miner's complaint was not frivolously brought, the ALJ shall immediately issue a written order of temporary reinstatement. If a hearing on the application is requested, the hearing shall be held within 10 calendar days following receipt of the request for hearing by the Commission's Chief ALJ or designee, unless compelling reasons are shown in an accompanying request for an extension of time.

(d) *Hearing.* The scope of a hearing on an application for temporary reinstatement is limited to a determination as to whether the miner's complaint was frivolously brought. The burden of proof shall be upon the Secretary to establish that the complaint was not frivolously brought. In support of the application for temporary reinstatement, the Secretary may limit presentation to the testimony of the complainant. The respondent shall have an opportunity to cross-examine any witnesses called by the Secretary and may present testimony and documentary evidence in support of its position that the complaint was frivolously brought.

(e) *Order on application.* (1) Within 7 calendar days following the close of a hearing on an application for temporary reinstatement, the ALJ shall issue a written order granting or denying the application. However, in extraordinary circumstances, the ALJ's time for issuing an order may be extended as deemed necessary by the ALJ.

(2) The ALJ's order shall include findings and conclusions supporting the determination as to whether the miner's complaint has been frivolously brought.

(3) The parties shall be notified of the ALJ's determination by the most expeditious means reasonably available.

(4) An ALJ's order temporarily reinstating a miner is not a final decision within the meaning of § 2700.69, and except during appellate review of such order by the Commission or courts, the ALJ shall retain jurisdiction over the temporary reinstatement proceeding.

(f) *Review of order.* Review by the Commission of an ALJ's written order granting or denying an application for temporary reinstatement may be sought by filing with the Commission a petition, which shall be captioned ''Petition for Review of Temporary Reinstatement Order,'' with supporting arguments, within 5 business days following receipt of the ALJ's written order. The filing of any such petition is effective upon receipt. The filing of a petition shall not stay the effect of the ALJ's order unless the Commission so directs; a motion for such a stay will be granted only under extraordinary circumstances. Any response shall be filed within 5 business days following service of a petition. Filings under this rule shall include proof of service on all parties by a means of delivery no less expeditious than that used for filing, except that if service by email or other electronic transmission is impossible, the filing party must serve in person, or

by third-party commercial carrier, resulting in same-day delivery. The Commission's ruling on a petition shall be made on the basis of the petition and any response (any further briefs will be entertained only at the express direction of the Commission), and shall be rendered within 10 calendar days following receipt of any response or the expiration of the period for filing such response. In extraordinary circumstances, the Commission's time for decision may be extended.

(g) *Dissolution of order.* If, following an order of temporary reinstatement, the Secretary determines that the provisions of section 105(c)(1), 30 U.S.C. 815(c)(1), have not been violated, the ALJ shall be so notified. An order dissolving the order of reinstatement shall not bar the filing of an action by the miner on the miner's own behalf under section 105(c)(3) of the Act, 30 U.S.C. 815(c)(3), and § 2700.40(b).

Subpart F—Applications for Temporary Relief

■ 28. In § 2700.46, revise paragraph (d) to read as follows:

§ 2700.46 Procedure.

* * * * *

(d) *Service of documents.* A copy of each document filed with the Commission under subpart F of this part must be served on all parties by a means of delivery no less expeditious than that used for filing, except that if service by email or other electronic transmission is impossible, the filing party must serve in person, or by third-party commercial carrier, resulting in same-day delivery.

■ 29. In § 2700.47, revise paragraph (a) to read as follows:

§ 2700.47 Contents of application.

(a) An application for temporary relief shall contain:

(1) A showing of substantial likelihood that the findings and decision of the ALJ or the Commission will be favorable to the applicant;

(2) A statement of the specific relief requested; and

(3) A showing that such relief will not adversely affect the health and safety of miners in the affected mine.

* * * * *

Subpart G—Hearings

■ 30. Revise § 2700.50 to read as follows:

§ 2700.50 Assignment of ALJs.

ALJs shall be assigned cases in rotation as far as practicable.

■ 31. Revise § 2700.51 to read as follows:

§ 2700.51 Hearing dates and sites.

All cases will be assigned a hearing date and site by order of the ALJ. In fixing the time and place of the hearing, the ALJ shall give due regard to the convenience and necessity of the parties or their representatives and witnesses, the availability of suitable hearing facilities, and other relevant factors.

■ 32. Revise § 2700.53 to read as follows:

§ 2700.53 Prehearing conferences and statements.

(a) The ALJ may require the parties to participate in a prehearing conference, either in person or by telephone or other video/audio teleconferencing. Notwithstanding the mandatory recordings of motions on the record in accordance with § 2700.10(a), any in-person or telephonic conference shall be recorded at a party's request or within the ALJ's discretion. The participants at any such conference may consider and take action with respect to:

(1) The formulation and simplification of the issues;

(2) The possibility of obtaining stipulations, admissions of fact and of documents that will avoid unnecessary proof and advance rulings from the ALJ on the admissibility of evidence;

(3) The exchange of exhibits and the names of witnesses and a synopsis of the testimony expected from each witness;

(4) The necessity or desirability of amendments to the filings and the joinder of parties;

(5) The possibility of agreement disposing of any or all of the issues in dispute;

(6) Such other matters as may aid in the expedition of the hearing or the disposition of the case.

(b) The ALJ may also require the parties to submit prehearing statements addressing one or more of the matters set forth in paragraph (a) of this section.

■ 33. Revise § 2700.54 to read as follows:

§ 2700.54 Notice of hearing.

Except in expedited proceedings, written notice of the time, place, and nature of the hearing, the legal authority under which the hearing is to be held, and the matters of fact and law asserted shall be given to all parties at least 20 days before the date set for hearing.

■ 34. Revise § 2700.55 to read as follows:

§ 2700.55 Powers of ALJs.

Subject to these rules, an ALJ is empowered to:

(a) Administer oaths and affirmations;

(b) Issue subpoenas authorized by law;

(c) Rule on offers of proof and receive relevant evidence;

(d) Order depositions to be taken;

(e) Regulate the course of the hearing;

(f) Hold conferences for the settlement or simplification of the issues;

(g) Dispose of procedural requests or similar matters;

(h) Make decisions in the proceedings, provided that the ALJ shall not be assigned to make a recommended decision; and

(i) Take other action authorized by these rules, by 5 U.S.C. 556, or by the Act.

■ 35. In § 2700.56, revise paragraphs (c) and (e) to read as follows:

§ 2700.56 Discovery; general.

* * * * *

(c) *Limitation of discovery.* Upon motion by a party or by the person from whom discovery is sought or upon the ALJ's own motion, an ALJ may, for good cause shown, limit discovery to prevent undue delay or to protect a party or person from oppression or undue burden or expense.

* * * * *

(e) *Completion of discovery.* Discovery shall not unduly delay or otherwise impede disposition of the case, and must be completed at least 20 days prior to the scheduled hearing date. For good cause shown, the ALJ may extend or shorten the time for discovery.

■ 36. Revise § 2700.57 to read as follows:

§ 2700.57 Depositions.

(a) *Generally.* Any party, without leave of the ALJ, may take the testimony of any person, including a party, by deposition upon oral examination or written interrogatories.

(b) *Orders for deposition.* If the parties are unable to agree, the time, place, and manner of taking depositions shall be governed by order of the *ALJ.*

■ 37. Revise § 2700.58 to read as follows:

§ 2700.58 Interrogatories, requests for admissions and requests for production of documents.

(a) *Interrogatories.* Any party, without leave of the ALJ, may serve written interrogatories upon another party. A party served with interrogatories shall answer each interrogatory separately and fully in writing under oath within 25 days of service unless the proponent of the interrogatories agrees to a longer time. The ALJ may order a shorter or longer time period for responding. A party objecting to an interrogatory shall state the basis for the objection in its answer.

(b) *Requests for admissions.* Any party, without leave of the ALJ, may serve on another party a written request for admissions. A party served with a request for admissions shall respond to each request separately and fully in writing within 25 days of service, unless the party making the request agrees to a longer time. The ALJ may order a shorter or longer time period for responding. A party objecting to a request for admissions shall state the basis for the objection in its response. Any matter admitted under this rule is conclusively established for the purpose of the pending proceeding unless the ALJ, on motion, permits withdrawal or amendment of the admission.

(c) *Request for production, entry or inspection.* Any party, without leave of the ALJ, may serve on another party a written request to produce and permit inspection, copying or photocopying of designated documents or objects, or to permit a party or its agent to enter upon designated property to inspect and gather information. A party served with such a request shall respond in writing within 25 days of service unless the party making the request agrees to a longer time. The ALJ may order a shorter or longer period for responding. A party objecting to a request for production, entry or inspection shall state the basis for the objection in its response.

■ 38. Revise § 2700.59 to read as follows:

§ 2700.59 Failure to cooperate in discovery; sanctions.

Upon the failure of any person, including a party, to respond to a discovery request or upon an objection to such a request, the party seeking discovery may file a motion with the ALJ requesting an order compelling discovery. If any person, including a party, fails to comply with an order compelling discovery, the ALJ may make such orders with regard to the failure as are just and appropriate, including deeming as established the matters sought to be discovered or dismissing the proceeding in favor of the party seeking discovery. For good cause shown the ALJ may excuse an objecting party from complying with the request.

■ 39. Revise § 2700.60 to read as follows:

§ 2700.60 Subpoenas.

(a) *Compulsory attendance of witnesses and production of documents.* The Commission and its ALJs are authorized to issue subpoenas, on their own motion or on the oral or written application of a party, requiring the attendance of witnesses and the production of documents or physical evidence. A subpoena may be served by any person who is at least 18 years of age. A subpoena may also be served by registered or certified mail, return receipt requested, but, in such case, any risk of delivery is on the serving party. A copy of the subpoena bearing a certificate of service shall be filed with the Commission or the ALJ.

(b) *Fees payable to witnesses.* Subpoenaed witnesses shall be paid the same fees and mileage as are paid in the district courts of the United States. The witness fees and mileage shall be paid by the party at whose request the witness appears, or by the Commission if a witness is subpoenaed on the motion of the Commission or an ALJ. This paragraph does not apply to Government employees who are called as witnesses by the Government.

(c) *Motions to revoke or modify subpoenas.* Any person served with a subpoena may move within 5 days of service or at the hearing, whichever is sooner, to revoke or modify the subpoena. The Commission or the ALJ, as appropriate, shall revoke or modify the subpoena if it seeks information outside the proper scope of discovery as set forth in § 2700.56(b); or if it does not describe with sufficient particularity the evidence required to be produced; or if for any other reason it is found to be invalid or unreasonable. The Commission or the ALJ shall set forth a concise statement of the grounds for such ruling.

(d) *Availability of transcript.* Persons compelled to submit evidence at a public proceeding are entitled to obtain, on payment of prescribed costs, a transcript of that part of the proceeding that sets forth their testimony or refers to their production of evidence.

(e) *Failure to comply.* Upon the failure of any person to comply with an order to testify or with a subpoena issued by the Commission or the ALJ, the ALJ or the Commission's General Counsel, at the request of the ALJ or at the direction of the Commission, may undertake to initiate proceedings in the appropriate district court of the United States for the enforcement of the subpoena.

■ 40. Revise § 2700.61 to read as follows:

§ 2700.61 Name of miner informant.

An ALJ shall not, except in extraordinary circumstances, disclose or order a person to disclose to an operator or its agent the name of an informant who is a miner.

■ 41. Revise § 2700.62 to read as follows:

§ 2700.62 Name of miner witness.

An ALJ shall not, until 2 days before a hearing, disclose or order a person to disclose to an operator or its agent the name of a miner who is expected by the ALJ to testify or whom a party expects to summon or call as a witness.

■ 42. In § 2700.63, revise paragraph (b) to read as follows:

§ 2700.63 Evidence; presentation of case.

* * * * *

(b) The proponent of an order has the burden of proof. A party shall have the right to present a case or defense by oral or documentary evidence, to submit rebuttal evidence, and to conduct such cross-examination as may be required for a full and true disclosure of the facts.

■ 43. Revise § 2700.64 to read as follows:

§ 2700.64 Exhibits.

All exhibits received in evidence in a hearing or submitted for the record in any proceeding before the Commission shall be deemed part of the official record of the proceeding. The withdrawal of original exhibits may be permitted by the Commission or the ALJ, upon request and after notice to the other parties, if true copies are substituted, where practical, for the originals.

■ 44. Revise § 2700.65 to read as follows:

§ 2700.65 Proposed findings, conclusions and orders.

The ALJ may require the submission of proposed findings of fact, conclusions of law, and orders, together with supporting briefs. The proposals shall be served upon all parties, and shall contain adequate references to the record and authorities.

■ 45. Revise § 2700.66 to read as follows:

§ 2700.66 Summary disposition of proceedings.

(a) *Generally.* When a party fails to comply with an order of an ALJ or these rules, except as provided in paragraph (b) of this section, an order to show cause shall be directed to the party before the entry of any order of default or dismissal. The order shall be provided to the party by the most expeditious means reasonably available.

(b) *Failure to attend hearing.* If a party fails to attend a scheduled hearing, the ALJ, where appropriate, may find the party in default or dismiss the proceeding without issuing an order to show cause.

(c) *Penalty proceedings.* When the ALJ finds a party in default in a civil penalty proceeding, the ALJ shall also

enter an order assessing appropriate penalties and directing that such penalties be paid.

■ 46. In § 2700.67, revise paragraphs (a), (e), and (f) to read as follows:

§ 2700.67 Summary decision of the ALJ.

(a) *Filing of motion for summary decision.* At any time after commencement of a proceeding and no later than 25 days before the date fixed for the hearing on the merits, a party may move the ALJ to render summary decision disposing of all or part of the proceeding. Filing of a summary decision motion and an opposition thereto shall be effective upon receipt.

* * * * *

(e) *Affidavits.* Supporting and opposing affidavits shall be made on personal knowledge and shall show affirmatively that the affiant is competent to testify to the matters stated. Sworn or certified copies of all papers or parts of papers referred to in an affidavit shall be attached to the affidavit or be incorporated by reference if not otherwise a matter of record. The ALJ shall permit affidavits to be supplemented or opposed by depositions, answers to interrogatories, admissions, or further affidavits.

(f) *Case not fully adjudicated on motion.* If a motion for summary decision is denied in whole or in part, the ALJ shall ascertain what material facts are controverted and shall issue an order directing further proceedings as appropriate.

■ 47. Revise § 2700.68 to read as follows:

§ 2700.68 Substitution of the ALJ.

(a) *Generally.* Should an ALJ become unavailable to the Commission, the proceedings assigned to that ALJ shall be reassigned to a substitute ALJ.

(b) *Substitution following a hearing.* The substitute ALJ may render a decision based upon the existing record, provided the parties are notified of the ALJ's intent and they are given an opportunity to object. An objection to the ALJ rendering a decision based upon the existing record shall be filed within 10 days following receipt of the ALJ's notice, or the objection shall be deemed to be waived. An objection shall be founded upon a showing of a need for the resolution of conflicting material testimony requiring credibility determinations. Upon good cause shown the ALJ may order a further hearing on the merits, which shall be limited, so far as practicable, to the testimony in dispute.

■ 48. Revise § 2700.69 to read as follows:

§ 2700.69 Decision of the ALJ.

(a) *Form and content of the ALJ's decision.* The ALJ shall make a decision that constitutes a final disposition of the proceedings. The decision shall be in writing and shall include all findings of fact and conclusions of law, and the reasons or bases for them, on all the material issues of fact, law or discretion presented by the record, and an order. If a decision is announced orally from the bench, it shall be reduced to writing after the filing of the transcript. An order by an ALJ approving a settlement proposal is a decision of the ALJ.

(b) *Termination of the ALJ's jurisdiction.* Except to the extent otherwise provided herein, the jurisdiction of the ALJ terminates when the ALJ's decision has been issued.

(c) *Correction of clerical errors.* At any time before the Commission has directed that an ALJ's decision be reviewed, and on the ALJ's own motion or the motion of a party, the ALJ may correct clerical errors in decisions, orders, or other parts of the record. After the Commission has directed that an ALJ's decision be reviewed, the ALJ may correct such errors with the leave of the Commission. If an ALJ's decision has become the final order of the Commission, the ALJ may correct such errors with the leave of the Commission. Neither the filing of a motion to correct a clerical error, nor the issuance of an order or amended decision correcting a clerical error, shall toll the time for filing a petition for discretionary review of the ALJ's decision on the merits.

(d) *Effect of decision of the ALJ.* A decision of an ALJ is not a precedent binding upon the Commission.

Subpart H—Review by the Commission

■ 49. Revise § 2700.70 to read as follows:

§ 2700.70 Petitions for discretionary review.

(a) *Procedure.* Any person adversely affected or aggrieved by an ALJ's decision or order may file with the Commission a petition for discretionary review within 30 days after issuance of the decision or order. Filing of a petition for discretionary review is effective upon receipt. Two or more parties may join in the same petition; the Commission may consolidate related petitions. Procedures governing petitions for review of temporary reinstatement orders are found at § 2700.45(f).

(b) *Review discretionary.* Review by the Commission shall not be a matter of right but of the sound discretion of the Commission. Review by the Commission shall be granted only by affirmative vote of at least two of the Commissioners present and voting.

(c) *Grounds.* Petitions for discretionary review shall be filed only upon one or more of the following grounds:

(1) A finding or conclusion of material fact is not supported by substantial evidence;

(2) A necessary legal conclusion is erroneous;

(3) The decision is contrary to law or to the duly promulgated rules or decisions of the Commission;

(4) A substantial question of law, policy, or discretion is involved; or

(5) A prejudicial error of procedure was committed.

(d) *Requirements.* Each issue shall be separately numbered and plainly and concisely stated, and shall be supported by detailed citations to the record, when assignments of error are based on the record, and by statutes, regulations, or other principal authorities relied upon. Except by permission of the Commission and for good cause shown, petitions for discretionary review shall not exceed 35 pages. Except for good cause shown, no assignment of error by any party shall rely on any question of fact or law upon which the ALJ had not been afforded an opportunity to pass.

(e) *Statement in opposition to petition.* A statement in opposition to a petition for discretionary review may be filed, but the opportunity for such filing shall not require the Commission to delay its action on the petition.

(f) *Motion for leave to exceed page limit.* A motion requesting leave to exceed the page limit shall be received not less than 3 days prior to the date the petition for discretionary review is due to be filed, shall state the total number of pages proposed, and shall comply with § 2700.10. Filing of a motion requesting an extension of page limit is effective upon receipt. The motion and any statement in opposition shall include proof of service on all parties by a means of delivery no less expeditious than that used for filing the motion, except that if service by email or other electronic transmission is impossible, the filing party must serve in person, or by third-party commercial carrier, resulting in same-day delivery.

(g) *Scope of review.* If a petition is granted, review shall be limited to the issues raised by the petition, unless the Commission directs review of additional issues pursuant to § 2700.71.

(h) *Denial of petition.* A petition not granted within 40 days after the issuance of the ALJ's decision is deemed denied.

■ 50. Revise § 2700.71 to read as follows:

§ 2700.71 Review by the Commission on its own motion.

At any time within 30 days after the issuance of an ALJ's decision, the Commission may, by the affirmative vote of at least two of the Commissioners present and voting, direct the case for review on its own motion. Review shall be directed only upon the ground that the decision may be contrary to law or Commission policy or that a novel question of policy has been presented. The Commission shall state in such direction for review the specific issue of law, Commission policy, or novel question of policy to be reviewed. Review shall be limited to the issues specified in such direction for review.

■ 51. In § 2700.73, revise paragraphs (b) and (d) to read as follows:

§ 2700.73 Procedure for intervention.

* * * * *

(b) A showing that the disposition of the proceeding may impair or impede the movant's ability to protect that interest;

* * * * *

(d) The reasons why the movant should be excused for failing to file for intervention before the ALJ. A motion for intervention shall also show that the granting of the motion will not unduly delay the proceeding or prejudice any party and shall explain why the movant's participation as an amicus curiae would be inadequate. If the Commission permits intervention, the Commission's order shall specify the time within which the intervenor's brief and any response or reply may be filed. In denying a motion to intervene, the Commission may alternatively permit the movant to participate in the proceeding as amicus curiae.

■ 52. In § 2700.75, revise paragraphs (a)(1), (c), (e), and (f) to read as follows:

§ 2700.75 Briefs.

(a) * * *

(1) *Opening and response briefs.* Within 30 days after the Commission grants a petition for discretionary review, the petitioner shall file an opening brief. The petitioner may notify the Commission and all other parties within the 30-day period that the petition and any supporting memorandum are to constitute the opening brief. Other parties may file response briefs within 30 days after the petitioner's brief is served. If the Commission directs review on its own motion, all parties shall file any opening briefs within 30 days of the direction for review. In such cases, a party may file a response brief within 20 days after service of the opposing party's opening brief.

* * * * *

(c) *Length of brief.* Except by permission of the Commission and for good cause shown, opening and response briefs shall not exceed 35 pages, and reply briefs shall not exceed 15 pages. A brief of an amicus curiae shall not exceed 25 pages. A brief of an intervenor shall not exceed the page limitation applicable to the party whose position it supports in affirming or reversing the ALJ, or if a different position is taken, such brief shall not exceed 25 pages. Tables of contents or authorities shall not be counted against the length of a brief.

* * * * *

(e) *Consequences of petitioner's failure to file brief.* If a petitioner fails to timely file a brief or to designate the petition as the opening brief, the direction for review may be vacated.

(f) *Motion for leave to exceed page limit.* A motion requesting leave to exceed the page limit for a brief shall be received not less than 3 days prior to the date the brief is due to be filed, shall state the total number of pages proposed, and shall comply with § 2700.10. Filing of a motion requesting an extension of page limit is effective upon receipt. The motion and any statement in opposition shall include proof of service on all parties by a means of delivery no less expeditious than that used for filing the motion, except that if service by email or other electronic transmission is impossible, the filing party must serve in person, or by third-party commercial carrier, resulting in same-day delivery.

* * * * *

■ 53. Revise § 2700.76 to read as follows:

§ 2700.76 Interlocutory review.

(a) *Procedure.* Interlocutory review by the Commission shall not be a matter of right but of the sound discretion of the Commission. Procedures governing petitions for review of temporary reinstatement orders are found at § 2700.45(f).

(1) Review cannot be granted unless:

(i) The ALJ has certified, upon the ALJ's own motion or the motion of a party, that an interlocutory ruling involves a controlling question of law and that in the ALJ's opinion immediate review will materially advance the final disposition of the proceeding; or

(ii) The ALJ has denied a party's motion for certification of the interlocutory ruling to the Commission, and the party files with the Commission a petition for interlocutory review within 30 days of the ALJ's denial of such motion for certification.

(2) In the case of either paragraph (a)(1)(i) or (ii) of this section, the Commission, by a majority vote of the full Commission or a majority vote of a duly constituted panel of the Commission, may grant interlocutory review upon a determination that the ALJ's interlocutory ruling involves a controlling question of law and that immediate review may materially advance the final disposition of the proceeding. Interlocutory review by the Commission shall not operate to suspend the hearing unless otherwise ordered by the Commission. Any grant or denial of interlocutory review shall be by written order of the Commission.

(b) *Petitions for interlocutory review.* Where the ALJ denies a party's motion for certification of an interlocutory ruling and the party seeks interlocutory review, a petition for interlocutory review shall be in writing and shall not exceed 15 pages. A copy of the ALJ's interlocutory ruling sought to be reviewed and of the ALJ's order denying the petitioner's motion for certification shall be attached to the petition.

(c) *Briefs.* When the Commission grants interlocutory review, it shall also issue an order which addresses page limits on briefs and the sequence and schedule for filing of initial briefs, and, if permitted by the order, reply briefs.

(d) *Scope of review.* Unless otherwise specified in the Commission's order granting interlocutory review, review shall be confined to the issues raised in the ALJ's certification or to the issues raised in the petition for interlocutory review.

■ 54. In § 2700.78, revise paragraph (a) to read as follows:

§ 2700.78 Reconsideration.

(a) A petition for reconsideration must be filed with the Commission within 10 days after the issuance of a decision or order of the Commission. Any response must be filed with the Commission within 10 days of service of the petition.

* * * * *

Subpart I—Miscellaneous

■ 55. Revise § 2700.80 to read as follows:

§ 2700.80 Standards of conduct; disciplinary proceedings.

(a) *Standards of conduct.* Representatives appearing before the Commission or before Commission ALJs pursuant to § 2700.3(b) shall conform to the standards of ethical conduct

required of practitioners under the American Bar Association's Model Rules of Professional Conduct (''ABA's Model Rules''). The Commission shall apply the ABA's Model rules as far as practicable.

(b) *Grounds.* Disciplinary proceedings may be instituted against anyone who is appearing or has appeared before the Commission on grounds that such person has engaged in unethical or unprofessional conduct; has failed to comply with these rules or an order of the Commission or its ALJs; has been disbarred or suspended by a court or administrative agency; or has been disciplined by an ALJ under paragraph (e) of this section.

(c) *Procedure.* Disciplinary proceedings shall be subject to the following procedure:

(1) *Disciplinary referral.* Except as provided in paragraph (e) of this section, an ALJ or other person having knowledge of circumstances that may warrant disciplinary proceedings against a representative who is appearing or has appeared before the Commission shall forward to the Commission for action such information in the form of a written disciplinary referral. Whenever the Commission receives a disciplinary referral, the matter shall be assigned a docket number and a notice will be issued to the individual named in the referral of the initiation of an investigation.

(2) *Inquiry and preliminary determination by the Commission.* The Commission shall conduct an inquiry concerning a disciplinary referral and shall determine whether disciplinary proceedings are warranted. The Commission may require persons to submit affidavits setting forth their knowledge of relevant circumstances.

(i) *Termination of referral.* If the Commission determines that disciplinary proceedings are not warranted, it shall issue an order terminating the referral.

(ii) *Further disciplinary proceedings.* Whenever, as a result of its inquiry, the Commission, by a majority vote of the full Commission or a majority vote of a duly constituted panel of the Commission, determines that the circumstances warrant a hearing, the Commission shall issue an order specifying the disciplinary issues to be resolved through hearing and order the Commission's Chief ALJ to assign the matter to an ALJ, from within or outside of the Commission, other than the referring ALJ, for hearing and decision. The Commission may designate counsel from within or outside of the Commission to prosecute the matter before the ALJ.

(3) *Hearing before an ALJ*—(i) *Assignment.* Upon the Commission's order determining that further proceedings are warranted, the Commission's Chief ALJ shall select a Commission ALJ, or select a non-Commission ALJ, and issue an order of assignment for hearing. The order of assignment shall advise the respondent that the respondent may file a statement in accordance with paragraph (c)(3)(ii) of this section.

(ii) *Response.* The respondent named in the disciplinary proceeding may file a statement responding to the Commission's decision within 30 days after service of the order of assignment.

(iii) *Evidence and applicability of hearing rules.* The parties shall have the opportunity to present evidence and cross-examine witnesses. Subpart G of this part, governing Commission hearings before ALJs shall apply as appropriate to all Commission disciplinary proceedings.

(iv) *ALJ's decision.* The ALJ's decision shall include findings of fact and conclusions of law and either an order dismissing the proceedings or an appropriate disciplinary order, which may include reprimand, suspension, or prohibition from appearing before the Commission.

(d) *Appeal from ALJ's decision.* Any person adversely affected or aggrieved by the ALJ's decision is entitled to review by the Commission. A person seeking such review shall file a notice of appeal with the Commission within 30 days after the issuance of the ALJ's decision.

(e) *Misconduct before an ALJ.* An ALJ may order the removal of any person, including a representative of a party, who engages in disruptive conduct in the ALJ's presence. If a representative is ordered removed, the ALJ shall allow the party represented by the person a reasonable time to engage another representative. In all instances of removal of a person for disruptive conduct, the ALJ shall place in the record a written statement on the matter. A party aggrieved by an ALJ's order of removal may appeal by requesting interlocutory review pursuant to § 2700.76 or, alternatively, may assign the ALJ's ruling as error in a petition for discretionary review.

■ 56. Revise § 2700.81 to read as follows:

§ 2700.81 Recusal and disqualification.

(a) *Recusal.* Whenever a Commissioner or an ALJ deems appropriate, the Commissioner or ALJ may choose to be recused from a proceeding.

(b) *Request to withdraw.* A party may request a Commissioner or an ALJ to withdraw on grounds of personal bias or other disqualification. A party shall make such a request by promptly filing an affidavit setting forth in detail the matters alleged to constitute personal bias or other grounds for disqualification.

(c) *Procedure if Commissioner or ALJ does not withdraw.* If, upon being requested to withdraw pursuant to paragraph (b) of this section, the Commissioner or the ALJ does not withdraw from the proceeding, the Commissioner or ALJ shall so rule upon the record, stating the grounds for such ruling. If the ALJ does not withdraw, the ALJ shall proceed with the hearing, or, if the hearing has been completed, the ALJ shall proceed with the issuance of a decision, unless the Commission stays the hearing or further proceedings upon the granting of a petition for interlocutory review of the ALJ's decision not to withdraw.

■ 57. In § 2700.82, revise paragraphs (b), (c), and (d) to read as follows:

§ 2700.82 Ex parte communications.

* * * * *

(b) *Prohibited ex parte communication.* There shall be no ex parte communication with respect to the merits of a case not concluded, between the Commission, including any member, ALJ, officer, or agent of the Commission who is employed in the decisional process, and any of the parties, intervenors, representatives, amici, or other interested persons.

(c) *Procedure in case of violation.* (1) In the event a prohibited ex parte communication occurs, the Commission or the ALJ may make such orders or take such action to remedy the effect of the ex parte communication as circumstances require. Upon notice and hearing, the Commission may take disciplinary action against any person who knowingly and willfully makes or causes to be made a prohibited ex parte communication.

(2) A memorandum setting forth all ex parte communications, whether prohibited or not, shall be placed on the public record of the proceeding.

(d) *Status or informational requests.* Information concerning filing requirements, the status of cases, or docket information may be accessed through the Commission's website (*http://www.fmshrc.gov*). In the event such information is unavailable through the Commission's website, such status or informational requests must be directed to the Docket Office of the Federal Mine Safety and Health Review Commission, 1331 Pennsylvania

Avenue NW, Suite 520N, Washington, DC 20004–1710; 202–434–9950.

■ 58. Revise § 2700.83 to read as follows:

§ 2700.83 Authority to sign orders.

The Chair or other designated Commissioner is authorized to sign on behalf of a quorum of the Commission, orders disposing of the following procedural motions: motions for extensions of time, motions for permission to file briefs in excess of page limits, motions to accept late filed briefs, motions to consolidate, motions to expedite proceedings, motions for oral argument, and similar procedural motions. In the absence of a designated Chair or Acting Chair, Commissioners continue to be authorized to sign orders disposing of procedural motions as identified above.

Dated: January 8, 2025.

Mary Lu Jordan,

Chair, Federal Mine Safety and Health Review Commission.

[FR Doc. 2025–00703 Filed 1–16–25; 8:45 am]

BILLING CODE 6735–01–P

DEPARTMENT OF THE INTERIOR

Office of Surface Mining Reclamation and Enforcement

30 CFR Part 948

[SATS No. WV–118–FOR (partial); Docket ID: OSM–2011–0009; SATS No. WV–126–FOR; Docket ID: OSM–2019–0012 S1D1S SS08011000 SX064A000 240S180110; S2D2S SS08011000 SX064A000 245XS501520]

West Virginia Regulatory Program; Correction

AGENCY: Office of Surface Mining Reclamation and Enforcement, Interior.

ACTION: Final rule; correction.

SUMMARY: We, the Office of Surface Mining Reclamation and Enforcement (OSMRE), published a document in the **Federal Register** on March 18, 2024, approving in part, and not approving in part, amendments to the West Virginia regulatory program (the West Virginia program) under the Surface Mining Control and Reclamation Act of 1977 (SMCRA or the Act). We made an error in the document by overwriting a provision that should not have been removed; instead, we should have added a new paragraph under the not approved section. Additionally, we did not include a provision in the table where our approvals were listed. We published a correction to the March 18, 2024, **Federal Register** document on August 28, 2024, but because the March 18 revisions had already become effective, the amendatory instructions became erroneous and the August 28, 2024, corrections could not be incorporated into the Code of Federal Regulations. This document corrects the final regulations.

DATES: This correction is effective January 17, 2025.

FOR FURTHER INFORMATION CONTACT: Mr. Justin Adams, Director, Charleston Field Office, Telephone: (304) 977–7177. Email: *osm-chfo@osmre.gov.*

SUPPLEMENTARY INFORMATION: This is a summary of errata from our final rule published March 18, 2024 (89 FR 19262), FR Doc. 2024–05682, on page 19273, columns 2 and 3. We are correcting 30 CFR 948.12 (State statutory, regulatory, and proposed program amendment provisions not approved) to re-letter subsection (k) as subsection (l), and reinstate the version of subsection (k) that existed in the CFR prior to the publication of the March 18, 2024 **Federal Register** document. *See also* 89 FR 2133 (Jan. 12, 2024). We are also adding subsection 38–2–12.5.d of West Virginia's regulations to the table at 30 CFR 948.15 (Approval of West Virginia regulatory program amendments). We had approved its deletion from West Virginia's regulations in the March 18, 2024, **Federal Register**, but it was omitted from the table.

List of Subjects in 30 CFR Part 948

Intergovernmental relations, Surface mining, Underground mining.

Accordingly, 30 CFR part 948 is amended by making the following correcting amendments:

PART 948—WEST VIRGINIA

■ 1. The authority citation for part 948 continues to read as follows:

Authority: 30 U.S.C. 1201 *et seq.*

■ 2. In § 948.12, revise paragraph (k) and add paragraph (l) to read as follows:

§ 948.12 State statutory, regulatory, and proposed program amendment provisions not approved.

* * * * *

(k) We are not approving the following portions of provisions of the proposed program amendment that West Virginia submitted on May 15, 2017:

(1) We are deferring our decision on the deletion of provisions from W.Va. Code 22–3–11(g)(2) regarding the development of a long-range planning process for the selection and prioritization of sites to be reclaimed. We defer our decision until we make a determination on West Virginia's related amendment docketed as WV–128–FOR, which relates to the complete and accurate listing of all outstanding reclamation obligations (including water treatment) on active permits in the State.

(2) [Reserved]

(l) We are not approving the following provisions of the proposed West Virginia program amendments dated May 2, 2018:

(1) At W.Va. Code 22–3–9, revisions substituting notice by newspaper with notice in a form and manner determined by the Secretary which may be electronic.

(2) At W.Va. Code 22–3–20, revisions substituting notice by newspaper with notice in a form and manner determined by the Secretary which may be electronic.

(3) At CSR 38–2–2.37, the removal of the definition ''completion of reclamation''.

(4) At CSR 38–2–12.2.d., the elimination to the existing prohibition on bond release for any site specific bonding (*i.e.,* open-acre bonding) until all coal extraction is completed and the disturbed area is completely backfilled and regraded.

(5) At CSR 38–2–12.2.e., to restructure and revise existing approved language in this section and move it to CSR 38–2–12.2.a.4.

(6) At CSR 38–2–12.2.f., to move, unchanged, this existing language to CSR 38–2–12.2.d.

(7) At CSR 38–2–12.2.g., to move, unchanged, this existing language to CSR 38–2–12.2.f.

(8) At CSR 38–2–12.2.h., to renumber existing CSR 38–2–12.2.h to 12.2.i. and to insert it as a new CSR 38–2–12.2.h.

(9) At CSR 38–2–12.4.c., to eliminate an existing 180 day window for initiating reclamation operations to reclaim the site in accordance with the approved reclamation plan or modification thereof.

(10) At CSR 38–2–12.5., to delete subsection 12.5 of the West Virginia regulations, which directs WVDEP's collection, analysis and reporting on sites where bond has been forfeited including, in particular, data relating to the water quality of water being discharged from forfeited sites.

■ 3. In § 948.15, revise the table entry ''April 25, 2011, May 8, 2018'' to read as follows:

§ 948.15 Approval of West Virginia regulatory program amendments.

* * * * *

Original amendment submission dates	Date of publication of final rule	Citation/description of approved provisions
* * * * * * *		
April 25, 2011, May 8, 2018	March 18, 2024	CSR 38–2–2.6; 9.3.d; 11.3.f; 11.4; 11.6; 12.2.a, 12.5.b, c and d; 12.4.a.2.B, 12.4.b, 4.b.1 and 4.b.2; 12.4.d; 14.5.b.

BILLING CODE 4310–05–P

DEPARTMENT OF THE TREASURY

Financial Crimes Enforcement Network

31 CFR Part 1010

Financial Crimes Enforcement Network; Inflation Adjustment of Civil Monetary Penalties

AGENCY: Financial Crimes Enforcement Network (FinCEN), Treasury.

ACTION: Final rule.

SUMMARY: FinCEN is publishing this final rule to reflect inflation adjustments to its civil monetary penalties as mandated by the Federal Civil Penalties Inflation Adjustment Act of 1990, as amended. This rule adjusts certain maximum civil monetary penalties within the jurisdiction of FinCEN to the amounts required by that Act.

DATES: Effective January 17, 2025.

FOR FURTHER INFORMATION CONTACT: FinCEN's Regulatory Support Section by submitting an inquiry at *www.fincen.gov/contact.*

SUPPLEMENTARY INFORMATION:

I. Background

To improve the effectiveness of civil monetary penalties (CMPs) and to maintain their deterrent effect, the Federal Civil Penalties Inflation Adjustment Act of 1990 (the ''Act'') [1] requires Federal agencies to adjust for inflation each CMP provided by law within the jurisdiction of the agency. Under the Act, agencies are required to adjust CMPs annually and publish these adjustments in the **Federal Register**.[2] Agencies are to make the adjustments without engaging in notice-and-comment rulemaking, and these adjustments may be immediately effective upon publication.[3] The Act provides that any increase in a CMP shall apply to CMPs that are assessed after the date the increase takes effect, regardless of whether the underlying violation predated such increase.[4] FinCEN publishes CMP inflation adjustments in its regulations at 31 CFR 1010.821.

II. Method of Calculation

The method of calculating CMP adjustments applied in this final rule is determined by the Act. Under the Act and Office of Management and Budget (OMB) guidance, annual inflation adjustments are to be based on the percent change between the Consumer Price Index for all Urban Consumers (CPI–U) for the October preceding the date of the adjustment and the prior year's October CPI–U.[5] As set forth in OMB Memorandum M–25–02 of December 17, 2024, the adjustment multiplier for 2025 is 1.02598. To complete the 2025 annual adjustment, each current FinCEN CMP is multiplied by the 2025 adjustment multiplier. Under the Act, any increase in CMP must be rounded to the nearest multiple of $1.[6]

Procedural Matters

1. Administrative Procedure Act

Section 4(b) of the Act requires agencies, beginning in 2017, to make annual adjustments for inflation to CMPs notwithstanding the rulemaking requirements of 5 U.S.C. 553. Additionally, the methodology used for adjusting CMPs for inflation is provided by statute, with no discretion provided to agencies regarding the substance of the adjustments for inflation to CMPs. Accordingly, prior public notice and an opportunity for public comment and a delayed effective date are not required for this rule.

2. Regulatory Flexibility Act

Because no notice of proposed rulemaking is required, the provisions of the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) do not apply.

3. Executive Order 12866

This rule is not a significant regulatory action as defined in section 3(f) of Executive Order 12866, as amended.

4. Paperwork Reduction Act

The provisions of the Paperwork Reduction Act of 1995, Public Law 104–13, 44 U.S.C. chapter 35, and its implementing regulations, 5 CFR part 1320, do not apply to this rule because there are no new or revised recordkeeping or reporting requirements.

List of Subjects in 31 CFR Part 1010

Administrative practice and procedure, Aliens, Authority delegations (Government agencies), Banks, banking, Brokers, Business and industry, Citizenship and naturalization, Commodity futures, Currency, Electronic filing, Federal savings associations, Federal-States relations, Foreign persons, Holding companies, Indians, Indians—law, Indians—tribal government, Insurance companies, Investigations, Investment advisers, Investment companies, Law enforcement, Penalties, Reporting and

[1] Federal Civil Penalties Inflation Adjustment Act of 1990 (the ''Act''), Public Law 101–410, 104 Stat. 890 (Oct. 5, 1990), as amended by the Debt Collection Improvement Act of 1996, Public Law 104–134, 110 Stat. 1321–373 (Apr. 26, 1996); the Federal Reports Elimination Act of 1998, Public Law 105–362, 112 Stat. 3293 (Nov. 10, 1998); and the Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015, Public Law 114–74, 129 Stat. 599 (Nov. 2, 2015), codified as a statutory note to 28 U.S.C. 2461.

[2] Act, sec. 4(a).

[3] Act, sec. 4(b)(2) (adjustments are to be made ''notwithstanding'' the rulemaking requirements of 5 U.S.C. 553 of the Administrative Procedure Act).

[4] The increased CMPs, however, apply only with respect to underlying violations occurring after November 2, 2015, the date of enactment of the most recent amendment to the Act. Act, sec. 6.

[5] Act, sec. 5; OMB Mem. M–25–02, Implementation of Penalty Inflation Adjustments for 2025, Pursuant to the Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015 (Dec. 17, 2024), available at *https://www.whitehouse.gov/wp-content/uploads/2024/12/M-25-02.pdf.*

[6] Act, sec. 5(a). FinCEN previously applied a catch-up adjustment for each penalty subject to the Act in 2016 based on the year and corresponding amount(s) for which the maximum penalty or range of minimum and maximum penalties was established or last adjusted, whichever is later. *See* FinCEN, Civil Monetary Penalty Adjustment and Table, 81 FR 42503, 42504 (June 30, 2016). Because the year of establishment or last adjustment is different for different penalties, penalties that were of the same size when each was promulgated can have different values today if promulgated at different times.

recordkeeping requirements, Small businesses, Securities, Terrorism, Time.

Authority and Issuance

For the reasons set forth in the preamble, part 1010 of chapter X of title 31 of the Code of Federal Regulations is amended as follows:

PART 1010—GENERAL PROVISIONS

■ 1. The authority citation for part 1010 continues to read as follows:

Authority: 12 U.S.C. 1829b and 1951–1959; 31 U.S.C. 5311–5314, 5316–5336; title III, sec. 314 Pub. L. 107–56, 115 Stat. 307; sec. 2006, Pub. L. 114–41, 129 Stat. 457; sec. 701 Pub. L. 114–74, 129 Stat. 599; sec. 6403, Pub. L. 116–283, 134 Stat. 3388.

■ 2. Amend § 1010.821 by revising table 1 to paragraph (b) to read as follows:

§ 1010.821 Penalty adjustment and table.

* * * * *

(b) * * *

TABLE 1 TO § 1010.821—PENALTY ADJUSTMENT TABLE

U.S. Code citation	Civil monetary penalty description	Penalties as last amended by statute	Maximum penalty amounts or range of minimum and maximum penalty amounts for penalties assessed on or after January 17, 2025
12 U.S.C. 1829b(j)	Relating to Recordkeeping Violations for Funds Transfers.	$10,000	$26,262
12 U.S.C. 1955	Willful or Grossly Negligent Recordkeeping Violations.	10,000	26,262

BILLING CODE 4810–02–P

DEPARTMENT OF DEFENSE

Office of the Secretary

32 CFR Part 199

[Docket ID: DoD–2024–HA–0119]

RIN 0720–AB91

Special Supplemental Food Program for Women, Infants, and Children (WIC) Overseas: Revision to Definition of Drafts

AGENCY: Defense Health Agency, Assistant Secretary of Defense for Health Affairs (ASD(HA)), Department of Defense (DoD).

ACTION: Final rule.

SUMMARY: The ASD(HA) is issuing this final rule to revise the definition of drafts, currently defined as paper instruments, within the regulation governing the WIC Overseas Program. This final rule modernizes the definition of drafts to include not only paper instruments but also other methods and processes, including electronic benefit transfers. The rule is being published as a final rule as the change to the definition of drafts involve only a minor, technical amendment to the existing regulation. The Department has determined that notice and comment would be unnecessary and contrary to public interest.

DATES: This rule is effective January 17, 2025.

FOR FURTHER INFORMATION CONTACT: Kimberly Stakes, 703–275–6055, *kimberly.l.stakes.civ@health.mil.*

SUPPLEMENTARY INFORMATION:

I. Background

A. Statement of Need for This Rule

The WIC Overseas Program is a DoD nutrition education and supplemental food program, similar to the United States (U.S.) Department of Agriculture's WIC program in the United States, for U.S. active-duty military personnel and other support staff stationed overseas and their dependents. The program provides multiple benefits such as food vouchers (or drafts), nutrition education and health screenings to help families save money and lead healthier lives. Providing WIC Overseas participants a specific prescription of supplemental nutritious foods based on their nutritional needs is a cornerstone of WIC's mission. Counselors provide participants with an approved food list and redeemable food checks called ''drafts,'' which participants exchange for specific foods and quantities in overseas commissaries and Navy Exchange Markets (NEXMARTs). Currently, WIC Overseas participants receive drafts, paper food instruments that contain their food prescription. The drafts are then transacted at participating overseas commissaries and NEXMARTs enabling the participant to receive their WIC Overseas Program food benefits.

Modernizing the definition of drafts in § 199.23 of title 32 of the Code of Federal Regulations (CFR) will provide the DoD with additional flexibility, similar to what already exists under the WIC program in the U.S., to issue drafts in the form of electronic benefit cards or other approved access devices or methods. For example, modernizing the definition of drafts in 32 CFR 199.23 could permit enrollees to use electronic benefit transactions, similar to a debit card, or other non-paper methods and processes, to purchase their authorized supplemental food items at their convenience and through multiple trips if desired or if required when items are temporarily out of stock. Existing paper instruments do not provide this level of flexibility as enrollees must use their monthly paper drafts in totality in a single shopping trip, regardless of whether they receive all the allotted foods authorized on the monthly paper draft. Expanding the definition of draft in the WIC Overseas Program allows both the WIC Overseas Program and its participants to use advanced technologies in the delivery of benefits and helps support the WIC Overseas Program's goal to improve client services through increased convenience, efficiency, and flexibility in how and when participants may purchase the authorized food items. The DoD also anticipates that the use of advanced technologies will provide opportunities for increased data analysis and feedback on the type, brand, and cost of each food item to better control food cost and help manage the WIC Overseas Program more efficiently. Additionally, the use of advanced technologies will likely reduce the risk of fraud and abuse within the program.

Generally, the Administrative Procedure Act (APA) requires a Federal agency to provide the public with notice and an opportunity to comment on agency rulemaking. The APA, however, creates an exception in cases where an agency for good cause determines that notice and public procedures are impracticable, unnecessary, or contrary to public interest. The rule is being published as a final rule as the change to the definition of drafts involve only a minor, technical amendment to the existing regulation. The Department has good cause to determine that notice and comment would be unnecessary and contrary to public interest.

Furthermore, the APA generally provides that a final rule may not become effective until at least 30 days after its publication in the **Federal Register** unless the agency determines that good cause exists to dispense with this requirement. As noted above, given that the rule does not impose new requirements and the change to the definition of drafts involve only a minor, technical amendment to the existing regulation, the Department finds sufficient good cause exists to dispense with the 30-day effective date requirement. The rule will be effective immediately upon publication.

B. Legal Authority

The legal authority for this final rule resides in chapter 53 of title 10, United States Code (U.S.C.). Within 10 U.S.C. chapter 53, section 1060a gives the Secretary of Defense the authority and responsibility to administer the Special Supplemental Food Program, known as the WIC Overseas Program, to provide supplemental foods and nutrition education to members of the armed forces on duty at stations outside the United States (and its territories and possessions) and to eligible civilians serving with, employed by, or accompanying the armed forces outside the United States (and its territories and possessions). The text of 10 U.S.C. chapter 53 can be found at *https://uscode.house.gov/view.xhtml?req=(title:%20section:1060a%20edition:prelim)%20OR%20(granuleid:U.S.C.-prelim-title-section1060a)&f=treesort&edition=prelim&num=0&jumpTo=true.*

C. Applicability

This rule will modernize the definition of drafts under the DoD's WIC Overseas Program. It is anticipated that the Department's use of the additional flexibility provided by a modernized definition of drafts will have a positive impact on eligible participants living overseas as it will give them more flexibility to purchase WIC Overseas approved foods.

D. Regulatory History

Section 199.23 was added to 32 CFR part 199 when the final rule published on March 26, 2004 (69 FR 15678) and has not been revised since. The only change being made in this final rule is to revise the definition of drafts in § 199.23.

II. Impact of This Regulation

There is no direct monetary impact to modernizing the definition of drafts in § 199.23 to provide greater flexibility in the future method(s) of issuing benefits for supplemental food prescribed under the program. It is anticipated that use of this flexibility will result in greater participant convenience and flexibility for the approximately 10,000 participants enrolled in the WIC Overseas Program.

III. Regulatory Compliance Analysis

A. Executive Order 12866, ''Regulatory Planning and Review,'' as Amended by Executive Order 14094, ''Modernizing Regulatory Review'' and Executive Order 13563, ''Improving Regulation and Regulatory Review''

Executive Orders 12866 (as amended by Executive Order 14094) and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health, and safety effects; distribution of impacts; and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This rule has been designated not significant, under section 3(f) of Executive Order 12866, as amended by Executive Order 14094.

B. Congressional Review Act (5 U.S.C. 801 et seq.)

Pursuant to the Congressional Review Act, this rule has not been designated a major rule, as defined by 5 U.S.C. 804(2).

C. Public Law 96–354, ''Regulatory Flexibility Act'' (5 U.S.C. 601)

The ASD(HA) certified that this rule is not subject to the Regulatory Flexibility Act (5 U.S.C. 601) because it would not, if promulgated, have a significant economic impact on a substantial number of small entities. Therefore, the Regulatory Flexibility Act, as amended, does not require us to prepare a regulatory flexibility analysis.

D. Sec. 202, Public Law 104–4, ''Unfunded Mandates Reform Act''

Section 202 of the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1532) requires agencies to assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. This rule will not mandate any requirements for State, local, or tribal governments, and will not affect private sector costs.

E. Public Law 96–511, ''Paperwork Reduction Act'' (44 U.S.C. Chapter 35)

It has been determined that this rule does not impose any new reporting or recordkeeping requirements under the Paperwork Reduction Act of 1995. The existing WIC Overseas Program information collection has been reviewed and approved by the Office of Management and Budget (OMB) under OMB Control Number 0720–0030, ''Women, Infants, and Children Overseas–Eligibility Determination.''

F. Executive Order 13132, ''Federalism''

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a rule that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has federalism implications. This rule will not have a substantial effect on State and local governments.

G. Executive Order 13175, ''Consultation and Coordination With Indian Tribal Governments''

Executive Order 13175 establishes certain requirements that an agency must meet when it promulgates a rule that imposes substantial direct compliance costs on one or more Indian tribes, preempts tribal law, or effects the distribution of power and responsibilities between the Federal Government and Indian tribes. This rule will not have a substantial effect on Indian tribal governments.

List of Subjects in 32 CFR Part 199

Administrative practice and procedure, Claims, Dental health, Fraud, Health care, Health insurance, Individuals with disabilities, Mental health programs, Military personnel.

Accordingly, the Department of Defense amends 32 CFR part 199 as follows:

PART 199—CIVILIAN HEALTH AND MEDICAL PROGRAM OF THE UNIFORMED SERVICES (CHAMPUS)

■ 1. The authority citation for part 199 continues to read as follows:

Authority: 5 U.S.C. 301; 10 U.S.C. chapter 55.

■ 2. Amend § 199.23 by revising the first sentence of paragraph (b)(10) to read as follows:

§ 199.23 Special Supplemental Food Program.

* * * * *

(b) * * *

(10) *Drafts.* Food instruments, similar to a voucher (whether paper, card or other approved access device or method), issued in the WIC Overseas offices to program participants. * * * * * * * * *

Dated: January 14, 2025.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG–2023–0969]

RIN 1625–AA09

Drawbridge Operation Regulation; Umpqua River, Reedsport, OR

AGENCY: Coast Guard, DHS.

ACTION: Final rule.

SUMMARY: The Coast Guard is changing the name and operating schedule that governs the Central Oregon and Pacific railroad bridge across the Umpqua River, mile 11.5, at Reedsport, OR. This rule changes the name of the Central Oregon and Pacific railroad bridge; allows that bridge to be maintained in the closed to navigation position, removes the requirement for fog signals for that bridge and changes the name of the US 101 Bridge that crosses the side channel of the Umpqua River.

DATES: This rule is effective February 18, 2025.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov.* Type the docket number (USCG–2023–0969) in the ''SEARCH'' box and click ''SEARCH''. In the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email Danny McReynolds, Bridge Management Specialist, Thirteenth Coast Guard District Bridge Office; telephone 206–220–7234, email *d13-smb-d13-bridges@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CBRL Coos Bay Rail Line

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
OMB Office of Management and Budget
NPRM Notice of Proposed Rulemaking (Advance, Supplemental)
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

On April 10, 2024, the Coast Guard published an NPRM titled ''Drawbridge Operation Regulation; Umpqua River, Reedsport, OR,'' in the **Federal Register** (89 FR 25198), to seek your comments on whether the Coast Guard should consider changing the name of the Central Oregon and Pacific railroad bridge, modifying the current operating schedule of the bridge, and removing the fog signal from the bridge. During the comment period that ended on May 28, 2024, the Coast Guard received zero comments. The subject bridge has had many owners in the past years and Coos Bay Rail Line (CBRL) has asked to change the bridge name to a local name vice a company name. The new name for the Central Oregon and Pacific railroad bridge is the Umpqua River railroad bridge.

The Umpqua River railroad bridge is currently maintained in the open to navigation position. This rule will allow the bridge to be maintained in the closed to navigation position and requires the bridge to open for marine vessels with a minimum of two-hours' advance notice. The subject bridge provides 15 feet of vertical clearance above high water in the closed position, which allows most mariners clearance to navigate under the bridge. The Umpqua River has experienced a reduction in marine traffic using the waterway while CBRL has experienced an increase in rail traffic that requires the draw to be placed in the closed position. Vessels that regularly request draw openings are two fishing vessels. These vessels transit upriver to a repair facility, and after repairs, the vessels transit down river to their normal moorings. Bridge opening notices may be made via the phone number posted on the bridge and in the CFR. Fog signals will not be required to warn vessels when the bridge is cycled open during reduced visibility.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority 33 U.S.C. 499. The Umpqua River railroad bridge across the Umpqua River, mile 11.5, at Reedsport, OR operates in accordance with 33 CFR 117.893(b). Bridge logs have shown a significant reduction in bridge opening requests for five years and the bridge is mostly cycled for maintenance. This rule is necessary to balance the needs of the railroad by reducing the need to frequently cycle the draw closed for rail traffic and back open for marine traffic while maintaining the reasonable needs of navigation.

This regulatory action is based on the ability for the Umpqua River railroad bridge to open on signal after the CBRL has received at least two-hours' notice by telephone. This rule allows any vessel that needs a draw opening to transit through the Umpqua River railroad bridge with the proper advance notice during clear visibility or reduced visibility.

IV. Discussion of Comments, Changes and the Final Rule

The Coast Guard provided a comment period of 38 days, and no comments were received. No changes were made to the content of the rule since publication of the NPRM.

This rule amends the operating schedule of the Umpqua River railroad bridge by allowing the bridge to remain closed to navigation and requiring a two-hours' advance notice for all draw openings. The rule will balance the needs to accommodate frequent rail traffic and limited marine traffic and allow the Umpqua River railroad bridge to operate with the same notice requirements as the US 101 Bridge (33 CFR 117.893(a)).

In addition to the changes proposed in the NPRM, we are making two additional non-substantive changes to the regulatory text. First, given the close physical proximity of the Umpqua River railroad bridge to the US 101 Bridge, the Coast Guard will remove paragraph (b) from the 33 CFR 117.893 and add the Umpqua River railroad bridge to paragraph (a). Mariners should not experience delays with both bridges opening their draws simultaneously. CBRL states that draw tenders live within two-hours of the subject bridge, and most draw request are submitted 24-hours in advance. With paragraph (b) combining with paragraph (a), paragraph (c) will become paragraph (b). Second, the bridge name in paragraph (c) (US 101 Bridge) is incorrect. The bridge is known as the Lower Smith River Road bridge and crosses the side channel of the Umpqua River. The Coast Guard will be correcting the name in this rule.

Currently the bridge operates fog signals to warn vessels when the bridge is cycled closed and open during reduced visibility. This rule change requires the bridge to open on signal from mariners, and therefore, the mariner would know the bridge is open and have no need to be warned of the position of the draw during fog or any reduced visibility type of weather.

We have not identified any impacts on marine navigation with this rule.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive Orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive Orders.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a ''significant regulatory action,'' under section 3(f) of Executive Order 12866, as amended by Executive Order 14094 (Modernizing Regulatory Review). Accordingly, it has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the ability for the draw to open on signal after receiving at least two-hours advanced notice, and not delay passage of any mariner. Vessels not requiring an opening may pass under the bridge at any time.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601–612, as amended, requires federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard received zero comments from the Small Business Administration on this rule. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the bridge may be small entities, for the reasons stated in section V. A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental

jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule calls for no new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Government

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. There were zero comments received on the NPRM.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble. There were zero comments received on the NPRM.

F. Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023–01, Rev.1, associated implementing instructions, and Environmental Planning Policy COMDTINST 5090.1 (series) which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA)(42 U.S.C. 4321–4370f). The Coast Guard has determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule promulgates the operating regulations or procedures for drawbridges and is categorically excluded from further review, under paragraph L49, of Chapter 3, Table 3–1 of the U.S. Coast Guard Environmental Planning Implementation Procedures.

Neither a Record of Environmental Consideration nor a Memorandum for the Record are required for this rule.

List of Subjects in 33 CFR Part 117

Bridges.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 117 as follows:

PART 117—DRAWBRIDGE OPERATION REGULATIONS

■ 1. The authority citation for part 117 continues to read as follows:

Authority: 33 U.S.C. 499; 33 CFR 1.05–1; and Department of Homeland Security Delegation No. 00170.1. Revision No. 01.3

■ 2. Revise § 117.893 to read as follows:

§ 117.893 Umpqua River.

(a) The draws of the US 101 Bridge, mile 11.1, (541) 888–4340, and the Umpqua River railroad bridge, mile 11.5, (877) 928–5924, at Reedsport, Oregon, shall open on signal if at least two hours' notice is given via telephone.

(b) The draw of the Lower Smith River Road bridge across the side channel of the Umpqua River, mile 11.1 near Reedsport, need not be opened for the passage of vessels.

Dated: 11 December 2024.

Charles E. Fosse,

Rear Admiral, U. S. Coast Guard, Commander, Thirteenth Coast Guard District.

BILLING CODE 9110–04–P

DEPARTMENT OF EDUCATION

34 CFR Part 263

RIN 1810–AB70

[Docket ID ED–2024–OESE–0008]

Indian Education Discretionary Grant Programs; Professional Development Program

AGENCY: Office of Elementary and Secondary Education, Department of Education.

ACTION: Final regulations.

SUMMARY: The Department of Education (Department) amends the regulations that govern the Professional Development (PD) program, authorized under the Elementary and Secondary Education Act of 1965, as amended (ESEA), to establish priorities, requirements, and a definition for the program, including a priority for educator retention projects.

DATES: These regulations are effective February 18, 2025.

FOR FURTHER INFORMATION CONTACT: Linda Brake, U.S. Department of Education, 400 Maryland Avenue SW, Washington, DC 20202. Telephone: (202) 987–0796. Email: *linda.brake@ed.gov.*

If you are deaf, hard of hearing, or have a speech disability and wish to access telecommunications relay services, please dial 7–1–1.

A summary of the rule is available at *https://www.regulations.gov/document/ED-2024-OESE-0008-0001.*

SUPPLEMENTARY INFORMATION:

Purpose of this Regulatory Action: Under ESEA section 6122(a)(4), one of the purposes of the PD program is to develop and implement initiatives to promote the retention of effective teachers, principals, and school leaders who have a record of success in helping low-achieving Indian students improve their academic achievement, outcomes, and preparation for postsecondary education or employment. The Department amends the program regulations to support implementation of this aspect of the program purpose.

Assistance Listing Number (ALN): 84.299B.

Background

Through this regulatory action, we amend part 263 of title 34 of the Code of Federal Regulations. We published a notice of proposed rulemaking (NPRM) for this program on July 29, 2024 (89 FR 60844). In the preamble of the NPRM, we discussed the major changes proposed in that document. In these final regulations, in addition to the

changes proposed in the NPRM, we are making the following revisions to ensure consistency throughout the regulations:

- In the NPRM, we proposed updates to the regulations to include part-time participants (89 FR 60844, 60847), but inadvertently did not make the updates in all places where it was necessary. We are making those related changes in §§ 263.3 (definition of ''stipend'') and 263.11(a), and we are removing the definition of ''full-time student,'' as it is no longer necessary.
- In § 263.5(a)(2), consistent with the other application requirements in paragraph (a), we are adding ''as applicable'' to reflect that PD program competitions may focus on a subset of the allowable activities, such as retention.
- We are revising § 263.10(b)(3) to confirm that, consistent with § 263.10(f), the deferred payback option is available for eligible full-time volunteer work ''up to a period of 36 months.''

Public Comment: In response to our invitation in the NPRM, we did not receive any substantive and/or relevant comments on the proposed regulations. Except for minor technical revisions and the conforming changes summarized above, there are no differences between the proposed regulations and these final regulations.

Executive Orders 12866, 13563, and 14094

Regulatory Impact Analysis

Under Executive Order 12866, OMB must determine whether this regulatory action is ''significant'' and, therefore, subject to the requirements of the Executive Order and subject to review by OMB. Section 3(f) of Executive Order 12866, as amended by Executive Order 14094, defines a ''significant regulatory action'' as an action likely to result in a rule that may—

(1) Have an annual effect on the economy of $200 million or more (as of 2022 but adjusted every 3 years by the Administrator of the Office of Information and Regulatory Affairs (OIRA) of OMB for changes in gross domestic product), or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, territorial, or Tribal governments;

(2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) Materially alter the budgetary impacts of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or

(4) Raise legal or policy issues for which centralized review would meaningfully further the President's priorities, or the principles stated in the Executive order, as specifically authorized in a timely manner by the Administrator of OIRA in each case.

This regulatory action is not a significant regulatory action subject to review by OMB under section 3(f)(4) of Executive Order 12866, as amended by Executive Order 14094.

We have also reviewed these regulations under Executive Order 13563, which supplements and explicitly reaffirms the principles, structures, and definitions governing regulatory review established in Executive Order 12866. To the extent permitted by law, Executive Order 13563 requires that an agency—

(1) Propose or adopt regulations only on a reasoned determination that their benefits justify their costs (recognizing that some benefits and costs are difficult to quantify);

(2) Tailor its regulations to impose the least burden on society, consistent with obtaining regulatory objectives and taking into account—among other things and to the extent practicable—the costs of cumulative regulations;

(3) In choosing among alternative regulatory approaches, select those approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity);

(4) To the extent feasible, specify performance objectives, rather than the behavior or manner of compliance a regulated entity must adopt; and

(5) Identify and assess available alternatives to direct regulation, including economic incentives—such as user fees or marketable permits—to encourage the desired behavior, or provide information that enables the public to make choices.

Executive Order 13563 also requires an agency ''to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible.'' OIRA has emphasized that these techniques may include ''identifying changing future compliance costs that might result from technological innovation or anticipated behavioral changes.''

We are issuing these regulations only on a reasoned determination that their benefits justify their costs. In choosing among alternative regulatory approaches, we selected those approaches that maximize net benefits. Based on an analysis of anticipated costs and benefits, we believe that these regulations are consistent with the principles in Executive Order 13563.

We also have determined that this regulatory action will not unduly interfere with State, local, territorial, and Tribal governments in the exercise of their governmental functions.

In accordance with these Executive orders, the Department has assessed the potential costs and benefits, both quantitative and qualitative, of this regulatory action. The potential costs associated with this regulatory action are those resulting from statutory requirements and those we have determined as necessary for administering the Department's programs and activities.

Costs and Benefits

We believe that the potential costs associated with the regulatory changes will be minimal, and the benefits will exceed these costs.

For Professional Development grants, there will be no additional time or cost for applicants developing an application under the new priorities and application requirements. The benefits include allowing the program to better meet its mission of recruiting and retaining qualified Indian individuals to become educators. We do not anticipate grantees needing additional time to report full-time participant payback information in the Professional Development Program Data Collection System (PDPDCS). The costs of carrying out these activities would continue to be paid for with program funds.

The benefits also include enhancing project design and quality of services to better meet the objectives of the program and the needs of potential grantees with more educators remaining in their current positions and increasing their impact on Indian students and communities, as well as more accurately calculating the length of payback for participants in part-time training. We added payback deferral options for participants who serve as full-time volunteers with Indian Tribes, because it will provide them with opportunities to better understand the educational needs of Indian students, while helping to build the capacity of Tribes, and for participants who experience a temporary disability that affects the participant's ability to complete their payback obligations. These deferral pathways will provide participants more flexibility and help them obtain experience that fulfills their service obligation and provides relief to Tribal communities.

Elsewhere in this section under *Paperwork Reduction Act of 1995,* we identify and explain burdens

specifically associated with information collection requirements.

Regulatory Flexibility Act Certification

The Department certifies that these regulations will not have a substantial economic impact on a substantial number of small entities. The U.S. Small Business Administration Size Standards define proprietary institutions as small businesses if they are independently owned and operated, are not dominant in their field of operation, and have total annual revenue below $7,000,000. Nonprofit institutions are defined as small entities if they are independently owned and operated and not dominant in their field of operation. Public institutions are defined as small organizations if they are operated by a government overseeing a population below 50,000.

The small entities that will be affected by these regulations are LEAs, IHEs, Tribal Colleges and Universities, Tribes, and Tribally operated schools receiving Federal funds under this program. The regulations will not have a significant economic impact on the small entities affected because the regulations do not impose excessive regulatory burdens or require unnecessary Federal supervision. Of the impacts we estimate accruing to grantees or eligible entities, all are voluntary and relate mostly to an increase in the number of applications prepared and submitted annually for competitive grant competitions. Therefore, we do not believe that these regulations present any significant impact on small entities beyond the potential for increasing the likelihood of their applying for, and receiving, competitive grants from the Department.

Paperwork Reduction Act

These regulations do not create any new information collection requirements under OMB Control number 1810–0722 and therefore do not change the related information collection.

Intergovernmental Review

This program is subject to Executive Order 12372 and the regulations in 34 CFR part 79. One of the objectives of the Executive order is to foster an intergovernmental partnership and a strengthened federalism. The Executive order relies on processes developed by State and local governments for coordination and review of proposed Federal financial assistance.

This document provides early notification of our specific plans and actions for this program.

Accessible Format: On request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT**, individuals with disabilities can obtain this document in an accessible format. The Department will provide the requestor with an accessible format that may include Rich Text Format (RTF) or text format (txt), a thumb drive, an MP3 file, braille, large print, audiotape, compact disc, or other accessible format.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. You may access the official edition of the **Federal Register** and the Code of Federal Regulations at *www.govinfo.gov.* At this site, you can view this document, as well as all other Department documents published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF, you must have Adobe Acrobat Reader, which is available free at the site.

You may also access Department documents published in the **Federal Register** by using the article search feature at *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

List of Subjects in 34 CFR Part 263

Business and industry, College and universities, Elementary and secondary education, Grant programs—education, Grant programs—Indians, Indians—education, Reporting and recordkeeping requirements, Scholarships and fellowships.

Adam Schott,

Principal Deputy Assistant Secretary, Delegated the Authority to Perform the Functions and Duties of the Assistant Secretary, Office of Elementary and Secondary Education.

For the reasons discussed in the preamble, the Department amends part 263 of title 34 of the Code of Federal Regulations as follows:

PART 263—INDIAN EDUCATION PROFESSIONAL DEVELOPMENT PROGRAM

■ 1. The authority citation continues to read as follows:

Authority: 20 U.S.C. 7441, unless otherwise noted.

■ 2. Amend § 263.3 by:
■ a. Adding in alphabetical order a definition for ''educator''.
■ b. Removing the definition of ''full-time student''.
■ c. Revising the definition of ''stipend''.

The addition and revision read as follows:

§ 263.3 What definitions apply to the Professional Development program?

* * * * *

Educator means an individual who is one or more of—

(1) A teacher (including an early education teacher);

(2) A principal or other school leader;

(3) An administrator;

(4) Specialized instructional personnel (*e.g.,* school psychologist, school counselor, school social worker, school nurse, librarian, early intervention service personnel);

(5) A paraprofessional; or

(6) Faculty.

* * * * *

Stipend means that portion of an award that is used for room, board, and personal living expenses for participants in pre-service training who are living at or near the institution providing the training.

* * * * *

■ 3. Revise § 263.5 to read as follows:

§ 263.5 What are the application requirements?

An applicant must—

(a) Describe how it will—

(1) Recruit qualified Indian individuals, such as students who may not be of traditional college age, to become teachers, principals, or school leaders, if applicable;

(2) Use funds made available under the grant to support the recruitment, preparation, retention, and professional development of Indian teachers or principals in LEAs that serve a high proportion of Indian students, as applicable; and

(3) Assist participants who receive pre-service training in meeting the payback requirements under § 263.9(b), if applicable;

(b) If required by the Secretary through a notice inviting applications published in the **Federal Register**, submit one or more letters of support from LEAs that serve a high proportion of Indian students. Each letter must include—

(1) A statement that the LEA agrees to consider program graduates for employment;

(2) Evidence that the LEA meets the definition of ''LEA that serves a high proportion of Indian students''; and

(3) The signature of an authorized representative of the LEA;

(c) If applying as an Indian organization, demonstrate that the entity meets the definition of ''Indian organization'';

(d) If it is an affected LEA that is subject to the requirements of section 8358 of the Elementary and Secondary

Education Act of 1965, as amended (ESEA), consult with appropriate officials from Tribe(s) or Tribal organizations approved by the Tribes located in the area served by the LEA prior to its submission of an application, as required under ESEA section 8538; and

(e) Comply with any other requirements in the application package.

■ 4. Amend § 263.6 by adding paragraphs (b)(5) and (6) to read as follows:

§ 263.6 What priority is given to certain projects and applicants?

* * * * *

(b) * * *

(5) *Indian educator retention.* The Secretary establishes a priority for projects that—

(i) Propose an educator retention initiative to help address the shortage of fully certified Indian educators to help ensure that Indian students gain knowledge and understanding of Native communities, languages, histories, traditions, and cultures, and expand their impact on Indian students' education; or

(ii) Support compensated educator leadership models designed to increase the retention of effective, experienced Indian educators who take on additional leadership and peer support responsibilities such that Indian teachers have the opportunity to advance in their careers and earn additional compensation.

(6) *State or local educational agencies or Bureau of Indian Education school lead applicants.* The Secretary establishes a priority for applications that are submitted by one or more of the below types of applicants, in consortium with an institution of higher education, which could include a Tribal college or university:

(i) State educational agency.

(ii) Local educational agency.

(iii) Bureau of Indian Education school.

* * * * *

■ 5. Amend § 263.9 by:

■ a. Revising paragraph (a) introductory text and paragraph (b)(2).

■ b. Adding paragraph (b)(5).

■ c. Removing paragraph (c)(4) and redesignating paragraph (c)(5) as paragraph (c)(4).

■ d. Revising the newly redesignated paragraph (c)(4) and the note to § 263.9.

The revisions and addition read as follows:

§ 263.9 What are the payback requirements?

(a) *General.* All participants who receive pre-service training must—

* * * * *

(b) * * *

(2) The period of time required for a work-related payback is determined as follows:

(i) If a participant was a full-time student in a pre-service training program, the work-related payback period is equivalent to the total period of time for which pre-service training under the Professional Development program was actually received on a month-for-month basis.

(ii) If a participant was a part-time student in a pre-service training program, the work-related payback period is proportional to the accumulated academic years for which pre-service training under the Professional Development program was actually received on a month-for-month basis, taking into consideration the typical academic calendar of the institution where the training was received.

(iii) If a participant received pre-service training as a full-time student for a portion of the program and as a part-time student for another portion of the program, the period of work-related payback is prorated accordingly.

* * * * *

(5) The work-related payback period for an individual supported under the Professional Development program may extend beyond the end of the performance period of the Professional Development grant.

(c) * * *

(4) Notwithstanding paragraph (c)(1) of this section, participants who exited or completed a grant-funded pre-service training program in Federal fiscal year 2020 (October 1, 2019–September 30, 2020) who did not submit employment verification within 24 months of program exit or completion, and participants with qualifying employment during Federal fiscal year 2020 who did not submit employment verification for a 24-month period, will automatically be referred for a cash payback unless the participant qualifies for a deferral as described in § 263.10.

Note to § 263.9: For grants that provide pre-service administrator training, a participant who has received administrator training and subsequently works for a Tribal education agency that provides administrative control or direction of public schools (*e.g.,* BIE-funded schools or charter schools) satisfies the requirements of paragraph (b)(1) of this section.

■ 6. Revise § 263.10 to read as follows:

§ 263.10 What are the exceptions to payback requirements and requirements for payback deferral?

(a) *Exceptions to payback.* Based upon sufficient evidence to substantiate the grounds, the Secretary may grant, in whole or in part, an exception to the repayment requirement in § 263.9 as follows:

(1) Repayment is not required if the participant—

(i) Is unable to continue the course of study or perform the service obligation because of a permanent disability that—

(A) Had not been diagnosed at the time the participant executed the initial agreement; or

(B) Did not originally prevent the participant from performing the requirements of the course of study or the service obligation at the time the participant signed the agreement but subsequently worsened; or

(ii) Has died.

(2) To request an exception to payback under paragraph (a)(1) of this section for oneself or on behalf of another individual, a requestor must submit an explanation of the reason for the exception along with substantiating evidence to the Secretary through the program officer.

(b) *Deferral of payback.* Subject to meeting the requirements of this section, the Secretary may defer payback requirements during the time the participant is—

(1) Continuing education after completing or exiting the Professional Development program, in a full- or part-time course of study without interruption, in a program leading to a degree at an accredited institution of higher education;

(2) Serving on active duty as a member of the Armed Forces of the United States;

(3) Serving as a full-time volunteer for an Indian Tribe, for a period not to exceed 36 months;

(4) Experiencing a temporary disability that affects the participant's ability to continue the course of study or perform the work obligation, for a period not to exceed thirty-six months.

(c) *Secretarial exceptions.* Under limited circumstances as determined by the Secretary and based upon evidence submitted by the participant, the Secretary may grant an exception to, or deferral of, the payback requirement under circumstances not specified in this section. These circumstances may include, but are not limited to, the need to care for a disabled spouse, partner, or child, or to accompany a spouse or partner on active duty in the Armed Forces or Bureau of Indian Affairs law enforcement.

(d) *Requesting payback deferral for continuing education.* (1) To receive a payback deferral under paragraph (b)(1) of this section, a participant must submit a request to the Secretary through the program officer that includes—

(i) The name of the accredited institution the student will be attending;

(ii) A copy of the letter of admission from the institution;

(iii) The degree being sought; and

(iv) The projected date of completion.

(2) If the Secretary approves the deferral of the payback requirement under paragraph (b)(1) of this section, the participant must submit to the Secretary through the program officer a status report from an academic advisor or other authorized representative of the institution of higher education, showing verification of enrollment and status, after every grading period.

(e) *Requesting payback deferral for active duty in the Armed Forces.* If a participant exits the Professional Development program because the participant is called or ordered to active duty status in connection with a war, military operation, or national emergency for more than 30 days as a member of a reserve component of the Armed Forces named in 10 U.S.C. 10101, or as a member of the National Guard on full-time National Guard duty, as defined in 10 U.S.C. 101(d)(5), the Secretary may defer the payback requirement until the participant has completed the military service. Requests for deferral must be submitted to the Secretary through the program officer within 30 days of the earlier of receiving the call to military service or completing or exiting the Professional Development program, and must include—

(1) A written statement from the participant's commanding or personnel officer certifying—

(i) That the participant is on active duty in the Armed Forces of the United States;

(ii) The date on which the participant's service began; and

(iii) The date on which the participant's service is expected to end; or

(2)(i) A true certified copy of the participant's official military orders; and

(ii) A copy of the participant's military identification.

(f) *Requesting payback deferral for volunteer work.* (1) To receive a payback deferral related to qualifying volunteer work under paragraph (b)(3) of this section, the participant must submit a request to the Secretary through the program officer that includes—

(i) The name of the Indian Tribe at which the participant will be volunteering;

(ii) A copy of the letter appointing the participant as a full-time volunteer at the Indian Tribe;

(iii) A statement of volunteer work to be performed; and

(iv) The projected date of completion.

(2) If the Secretary approves payback deferral under this paragraph (f), the participant must submit to the Secretary through the program officer a status report from an authorized representative from the entity with which the participant is volunteering, showing verification of continued engagement every 12 months. The Secretary may defer the payback requirement until the participant has completed his or her qualifying volunteer work, for a period not to exceed 36 months.

(g) *Requesting payback deferral for temporary disability.* To receive a payback deferral under paragraph (b)(4) of this section, the participant must submit a request to the Secretary through the program officer that includes—

(1) An explanation of the reason for the deferral;

(2) An indication of the length of time for which they are requesting deferral; and

(3) Substantiating evidence.

§ 263.11 [Amended]

■ 7. Amend § 263.11 in paragraph (a) by removing the phrase ''as a full-time student''.

■ 8. Revise § 263.12 to read as follows:

§ 263.12 What are the post-award requirements for grantees providing pre-service training?

(a) *Requirement for payback meeting.* Prior to providing funds or services to a participant, the grantee must conduct a payback meeting with the participant to explain the costs of training and payback responsibilities following training.

(b) *Requirement for payback agreement.* (1) Prior to providing funds or services to a participant, and for each subsequent year that training funds are disbursed, the grantee must enter into a written agreement with each participant in which the participant agrees to the terms and conditions required by this section.

(2) The payback agreement must explain the Secretary's authority to grant deferrals and exceptions to the service obligation pursuant to § 263.10 and include—

(i) The current Department address for purposes of the participant's compliance with § 263.11, or any other purpose under this part, and other Office of Indian Education contact information;

(ii) The estimated length of training;

(iii) The total training costs;

(iv) The total amount of assistance accrued year-to-date;

(v) The total number of months in the service obligation year-to-date;

(vi) A statement explaining that work must be in an ''LEA that serves a high proportion of Indian students,'' and the regulatory definition of that phrase; and

(vii) Information documenting that the grantee held a payback meeting with the participant that meets the requirements of this section.

(3) The grantee must submit a signed payback agreement to the Department within 30 days of the date on which the payback agreement is fully executed by the grantee and participant. The grantee must provide a copy of the payback agreement to the participant upon execution.

(c) *Exit certification.* At the time of exit from the program, the grantee must provide the below information to the participant. Upon receipt of this information from the grantee, the participant must provide written certification to the grantee that this information is correct:

(1) The name of the institution where the participant received pre-service training and the award number of the Federal grant that provided the scholarship.

(2) The number of months the participant needs to work in an LEA that serves a high proportion of Indian students to satisfy the payback requirements in § 263.9.

(3) The total amount of financial assistance received.

(4) The participant's field of study and the obligation of the participant to perform the service obligation with employment that meets the requirements in § 263.9(b).

(d) *Career preparation.* During the grant period, a grantee must conduct activities to assist participants in identifying qualified employment opportunities following completion of the program.

(e) *Information and annual reporting.* The grantee must report to the Secretary all participant training and payback information in a manner specified by the Secretary as well as any other information that is necessary to carry out the Secretary's functions under section 6122 of the ESEA and this part. Each grantee will make annual reports to the Secretary, unless more frequent reporting is required by the Secretary, that are necessary to carry out the Secretary's functions under this part.

(f) *Standards for satisfactory progress.* The grantee must establish, publish, notify participants of, and apply reasonable standards for measuring whether a participant is making satisfactory progress in the training program. The Secretary considers an institution's standards to be reasonable if the standards—

(1) Are the same as the institution's standards for a student enrolled in the same academic program who is not receiving assistance under this program; and

(2) Include the following elements:

(i) Grades, work projects completed, including performance tasks, or comparable factors that are measurable against a norm and are aligned with demonstrating effective practice.

(ii) A maximum timeframe in which the participant must complete the participant's educational objective, degree, or certificate.

(iii) Consistent application of standards to all participants within categories of students, (*e.g.,* full-time, part-time, undergraduate students, and graduate students).

(iv) Specific policies defining the effect of course incompletes, withdrawals, repetitions, and noncredit remedial courses on satisfactory progress.

(v) Specific procedures for appeal of a determination that a participant is not making satisfactory progress and for reinstatement of aid.

(g) *Requirement for Indian preference.* (1) Under section 7(b) of the Indian Self-Determination and Education Assistance Act (Pub. L. 93–638), to the greatest extent feasible, a grantee must—

(i) Give to Indians preferences and opportunities for training and employment in connection with the administration of the grant; and

(ii) Give to Indian organizations and to Indian-owned economic enterprises, as defined in section 3 of the Indian Financing Act of 1974 (25 U.S.C. 1452(e), preference in the award of contracts in connection with the administration of the grant.

(2) For the purposes of this paragraph (g), an Indian is a member of any federally recognized Indian Tribe.

Visitor Experience Improvements Authority Contracts

AGENCY: National Park Service, Interior.

ACTION: Final rule.

SUMMARY: This rule implements the Visitor Experience Improvements Authority given to the National Park Service by Congress in Title VII of the National Park Service Centennial Act. This authority allows the National Park Service to award and administer commercial services contracts and related professional services contracts for the operation and expansion of commercial visitor facilities and visitor services programs in units of the National Park System.

DATES: This rule is effective February 18, 2025.

Information collection requirements: If you wish to comment on the information collection requirements in this final rule, please note that the Office of Management and Budget (OMB) is required to make a decision concerning the collection of information contained in this final rule between 30 and 60 days after publication of this final rule in the **Federal Register**. Therefore, comments should be submitted to OMB by February 18, 2025.

ADDRESSES:

Docket: The comments received on the proposed rule and a related economic analysis are available in the docket for this rulemaking. Visit *https://www.regulations.gov/* and search for Docket ID: NPS–2022–0003.

Information Collection Requirements: Written comments and suggestions on the information collection requirements should be submitted by the date specified above in **DATES** to *https://www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under Review—Open for Public Comments'' or by using the search function. Please provide a copy of your comments to the NPS Information Collection Clearance Officer (ADIR–ICCO), 13461 Sunrise Valley Drive, (MS–244) Herndon, VA 20171 (mail); or *phadrea_ponds@nps.gov* (email). Please include ''1024–AE47'' in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: Kurt Rausch, Chief of Commercial Services Program, National Park Service; (202) 513–7202; *kurt_rausch@nps.gov.* For questions regarding the NPS's information collection request contact *phadrea_ponds@nps.gov.*

SUPPLEMENTARY INFORMATION:

Background

NPS Authorities To Contract for Commercial Visitor Services

The National Park Service (NPS) enters into concession contracts with persons and entities to provide commercial visitor services in over 100 units of the National Park System. Examples of such services include lodging, food, retail, marinas, transportation, and recreational activities. NPS concession contracts generate approximately $1.8 billion per year in gross receipts, while returning approximately $180 million in franchise fees to the NPS. What was commonly known as the National Park Service Concession Policies Act of 1965 (1965 Act), Public Law 89–249, provided the first comprehensive statutory authority for the NPS to issue concession contracts. Since the repeal of the 1965 Act, concession contracts have been awarded under the National Park Service Concessions Management Improvement Act of 1998 (1998 Act), 54 U.S.C. 101911–101926. NPS regulations in 36 CFR part 51 govern the solicitation and award of concession contracts issued under the 1998 Act and the administration of concession contracts issued under the 1965 and 1998 Acts.

The National Park Service Centennial Act (Centennial Act), 54 U.S.C. 101931–101938, established the Visitor Experience Improvements Authority (VEIA) allowing the NPS to solicit, award, and administer commercial services contracts for the operation and expansion of commercial visitor facilities and visitor services programs in units of the National Park System. The VEIA supplements, but does not replace, the existing authority granted to the NPS in the 1998 Act to enter into concession contracts, or any other existing NPS authorities to provide commercial visitor services in units of the National Park System. The VEIA is also separate from authorities granted under the Office of Federal Procurement Policy Act and Federal Acquisition Regulations.

The VEIA established a revolving fund that the NPS can use for expenses necessary for the management, improvement, enhancement, operation, construction, and maintenance of commercial visitor services and

facilities within the National Park System; and for the payment of possessory interest and leasehold surrender interest for concession contracts. Funds collected pursuant to contracts awarded under the VEIA will be credited to the revolving fund, and the NPS is authorized to transfer to the revolving fund, without reimbursement, any additional funds or revenue in connection with the functions carried out under the VEIA.

Differences Between VEIA and the Concession Contracts Authority

The VEIA is intended to provide additional tools to expand, modernize, and improve the condition of commercial facilities and visitor services using contracting models that differ from and are in addition to the concession contracts used under the 1998 Act. These models include management agreements and percentage lease agreements found in the private hospitality industry, as well as other contract models that are consistent with the VEIA. There are differences in the revenue management and fee structure for contract models that may be used under the VEIA, as discussed below. These models may be used to provide a variety of commercial visitor services such as lodging, food, retail, marinas, transportation, camping, and recreational activities. The use of industry-standard models and industry-aligned contract terms may allow and encourage additional companies to bid on hospitality business opportunities in System units, thereby enhancing the visitor experience both at the particular System unit and across the System.

Under a management agreement, the NPS would own the assets and proceeds of the business. The operator would provide staff and expertise to run the business in exchange for the NPS paying the operator a base fee plus an incentive fee. The NPS would authorize the operator to use available funds and revenue for operations (*e.g.,* property maintenance, the purchase of supplies, furniture, and other personal property) and improvements (*e.g.,* facility upgrades and repairs). Any financial return beyond what is needed for the business would be credited to the revolving fund.

Under a percentage lease agreement, the operator would retain the revenue and pay a fee to the NPS. This would be similar to the concession contract model, although the fee structure under a percentage lease agreement would include payment of a base fee plus a percentage of revenue. Fees collected would be credited to the revolving fund.

The VEIA also provides flexibility in the solicitation process. For example, the 1998 Act requires the NPS to consider specific evaluation factors, while the VEIA does not dictate any specific evaluation factors. This flexibility may allow businesses to more effectively respond to and be evaluated on how they will meet visitor needs for the services being offered. The flexibility of the VEIA also provides the potential to streamline the solicitation process to reduce the burden on businesses submitting proposals, including the ability to negotiate on the terms of the contract and greater ability to modify or adjust operations under existing contracts to reflect changes at the System unit or different visitor expectations during the contract term.

In addition to commercial services contracts, the VEIA authorizes the NPS to enter into professional services contracts related to those commercial services contracts. These may include consulting contracts with hospitality and asset management experts for services such as developing requests for proposals, condition assessments, and operational and financial analysis.

Implementation of the VEIA

The Centennial Act requires the NPS to promulgate regulations appropriate for implementation of the VEIA. 54 U.S.C. 101936. The Centennial Act also states that the VEIA expires seven years after the enactment of the law. 54 U.S.C. 101938. The Consolidated Appropriations Act, 2023 (Pub. L. 117–328) extended the expiration of the VEIA by an additional two years until December 16, 2025. The NPS has consulted with hospitality industry experts, including academic leaders, hospitality asset management companies, hotel owners and operators, and State agencies to assess current visitor service contract models and best practices in the hospitality industry. The NPS engaged a nationally recognized hospitality management consulting and asset management firm to assist the NPS with developing contracts, requests for qualifications and proposals, and solicitation, contract management, and accounting practices.

The NPS has evaluated certain visitor services currently provided under concession contracts that may be suitable for commercial services contracts under the VEIA. The NPS used various criteria during this evaluation, including:

- Whether the services may be authorized under a commercial services contract under the VEIA (*i.e.,* they may not be for the provision of outfitter and guide services, or for the provision of services for which the NPS has granted to an existing concessioner a preferential right of renewal under the 1998 Act);
- Whether the contract is necessary and appropriate for public use and enjoyment of the System unit where the services will be provided and can be executed in a manner that is consistent with the preservation and conservation of the resources and values of the unit;
- Whether the operator can provide the visitor services in a manner that will expand, modernize, and improve the condition of commercial visitor facilities and the services provided to visitors;
- Whether the contract would be suitable considering the type, size, and complexity of the services to be provided;
- Whether the NPS can solicit the contract before the VEIA expires; and
- Whether the level of capital investment needed makes a commercial services contract under the VEIA feasible. For example, if significant capital improvements are needed for which Federal funds would be unavailable, it may be more appropriate for the NPS to use a concession contract that allows operators to make investments in exchange for leasehold surrender interest and can have a term that is longer than ten years. These characteristics of concession contracts allow the operator to recoup some value of their investment and have more time to generate a return on their investment.

During the public comment period for the proposed rule, the NPS received specific recommendations about how the VEIA should be used to expand, modernize, and improve commercial facilities and visitor services. Some commenters discussed the use of sustainable business practices related to renewable energy, water usage, and organic food sourcing. Other commenters made specific recommendations for updating campgrounds with modern, full-service amenities such as:

- Bathing facilities with hot showers, sinks, and flush toilets;
- Access to wi-fi throughout campsites;
- Outfitting campsites with site-specific hookups for EVs and electrical, water, and sewer services, as well as modern dump stations;
- Developing wider, longer campsites for modern RVs; and
- Developing more RV-accessible campsites to accommodate growing demand.

The NPS appreciates all the feedback it received about how it can implement the VEIA for the benefit of visitors. The

NPS will look for opportunities to use the VEIA in a manner that enhances the visitor experience. This might include upgrades to campsites or other facilities such as marinas, hotels, restaurants, and retail stores. The NPS will provide information about implementation of the VEIA on the website for the NPS Commercial Services Program at *https://www.nps.gov/orgs/csp/index.htm.*

Final Rule

The final rule includes requirements and limitations applicable to the VEIA that are directed by the Centennial Act. These requirements and limitations are promulgated in new 36 CFR part 52 and are explained below.

The NPS may only issue a commercial services contract under the VEIA if the Secretary of the Interior, acting through the NPS, determines that the contract will support expansion, modernization, and improvement of the condition of commercial visitor facilities and the services provided to visitors. Commercial services contracts issued by the NPS under the VEIA must meet two additional criteria. First, the contract must be necessary and appropriate for public use and enjoyment of the National Park System unit where it is located. Second, the contract must be consistent with the preservation and conservation of the resources and values of the unit. These two criteria also must be met for concession contracts.

The NPS may not award contracts under the VEIA for the provision of outfitter and guide services (as described in the 1998 Act), or to authorize the provision of facilities or services for which it has granted an existing concessioner a preferential right of renewal under the 1998 Act. The NPS may award commercial services contracts under the VEIA without regard to Federal laws and regulations governing procurement by Federal agencies, except for those laws and regulations related to Federal Government contracts that govern working conditions and wage rates and any civil rights provisions otherwise applicable thereto.

The NPS must award VEIA commercial services contracts through a competitive selection process and must publicly solicit proposals for each contract before award. The NPS must prepare a request for proposals and publish notice of its availability. The NPS may not award a commercial services contract under the VEIA for a term greater than 10 years. The person or entity awarded a commercial services contract under the VEIA will not receive leasehold surrender interest in capital improvements (as those terms are defined by the 1998 Act at 54 U.S.C. 101915) completed during the term of the contract.

Other than these basic requirements, the VEIA authorizes the NPS to design a flexible process for the solicitation and evaluation of proposals. The NPS will adjust this process to reflect standard practices in hospitality and related industries, accounting for any necessary NPS-specific conditions. In addition to restating the statutory requirements governing the VEIA, the rule includes defined terms and other provisions that will govern the administration of contracts under the VEIA. These provisions explain solicitation, selection, and award procedures, including information about how the Director will publicly solicit proposals for a commercial services contract and how the Director will evaluate proposals. Other provisions govern the terms of the contracts themselves, including provisions related to termination, rate approval, assignments of contracts, and the management of funds. The final rule also addresses access to information and records held by operators related to their performance under commercial services contracts and by contractors related to their performance under professional services contracts.

Summary of Public Comments

The NPS published a proposed rule in the **Federal Register** on January 25, 2022 (87 FR 3729). The NPS accepted public comments on the proposed rule through March 28, 2022, via the mail, hand delivery, and the Federal eRulemaking Portal at *https://www.regulations.gov.* The NPS received 14 comments on the proposed rule from individuals and organizations.

The concessioner community supported the general purpose of the VEIA and this rule, but raised questions about how the NPS will use the VEIA to complement rather than replace the existing concession contracting authority and asked for more details about implementation. Several commenters predicted that the use of contract models commonly used in the hospitality industry will generate substantial interest because they require less capital investment for operators, are familiar to operators, and provide greater flexibility. These commenters predicted that this will result in more competition and better visitor services. After considering public comments and additional review, the NPS made several substantive changes to the rule. First, the NPS added a new paragraph to § 52.4 restating the statutory limitations of the VEIA that it cannot be used for outfitter and guide services, or for the provision of facilities or services for which the NPS has granted to an existing concessioner a preferential right of renewal under the 1998 Act. Similarly, the NPS added language to § 52.14 restating several other statutory criteria which apply to VEIA contracts. Second, the NPS removed paragraph (a)(1) from § 52.30. This paragraph explained a funding structure for commercial services contracts that was under consideration when the NPS published the proposed rule. The NPS has determined, however that this structure is not allowed under Federal law because it would give a private party direct access to funds in an account owned by the Federal Government. Third, § 52.41 has been updated to reflect the extended expiration date for the VEIA provided by Congress in the Consolidated Appropriations Act, 2023 (Public Law 117–328). The NPS also added language to this section addressing the possibility that Congress will further extend the expiration date and clarifying that contracts awarded under the VEIA may continue beyond the VEIA expiration date, subject to the terms of the particular contract. Additionally, the NPS corrected a reference to the Comptroller General of the United States in § 52.36 and made several minor editorial changes to improve the clarity of the regulation and ensure consistency in terminology.

A summary of the pertinent issues raised in the comments and NPS responses are provided below.

1. Comment: Several commenters stated that commercial visitor services degrade the visitor experience and therefore should be prohibited in the National Park System.

NPS Response: The NPS has several statutory authorities to allow for commercial visitor services within System units, including the VEIA. Commercial visitor services that degrade the visitor experience are not authorized by the VEIA. Commercial services contracts must be necessary and appropriate for public use and enjoyment of the System unit, and consistent with the preservation and conservation of the resources and values of the System unit. The NPS will adhere to these requirements in the planning, solicitation, award, and management of commercial service contracts under the VEIA. Moreover, the VEIA revolving fund monies cannot be used to decrease the availability of services and programs to the public.

2. Comment: One commenter stated that the NPS should not use taxpayer

funds to pay operators of businesses that provide visitor services in System units.

NPS Response: The VEIA authorizes the use of Federal taxpayer funds in furthering the VEIA's purposes, 54 U.S.C. 101935, but the NPS expects to rely primarily on proceeds from the provision of visitor services to accomplish VEIA's purposes. The NPS will conduct a detailed analysis before awarding a commercial visitor service contract under the VEIA to ensure that there is a reasonable business opportunity considering revenue, expenses, and other factors. In most cases, rates charged to visitors for services will result in net positive cash flow over the term of the contract to cover operating expenses with no need for the NPS to use funds from other sources. In some circumstances, however, the NPS may need to transfer funds to the operator from the revolving fund to cover business expenses that are not adequately covered by the cash flow of the business. For example, under the management agreement model, the NPS may need to transfer funds to the operator so that it can purchase supplies and equipment to allow the business to begin and continue operations before adequate cash flows exist to cover such expenses. As another example, under both the management agreement and percentage lease agreement models, the NPS may need to transfer funds to the operator to pay for large capital improvements to or the rehabilitation of the federally-owned buildings or other assets the NPS has assigned for use by the operator. Examples of such needs are a roof replacement or repairing a building foundation. These needs may be identified prior to issuance of the contract through a condition assessment or may be unexpected and identified during the contract term. The NPS could directly fund and contract for such projects without involving the operator. In some circumstances, however, funding such projects through the operator is beneficial because the operator can more expediently and effectively coordinate projects around visitor service operations thereby reducing impacts to the visitor experience. In either case, it would be appropriate for the NPS to pay for these projects because it would be investing in Federal facilities that the Federal Government owns.

Under any of the circumstances described above, the funds provided to the operator could be paid from taxpayer or non-taxpayer revenue sources. One example of a non-taxpayer revenue source is concession franchise fees transferred to the revolving fund established under the VEIA.

3. Comment: One commenter suggested that the NPS not use the term ''commercial services contract'' when implementing the VEIA to avoid confusion with the terms ''concession contract'' and ''commercial use authorization'' that are used under separate authorities.

NPS Response: The NPS uses the term ''commercial services contract'' because that is the term used in the authorizing statute. See for example 54 U.S.C. 101931(a). Commercial services contracts awarded under the VEIA will clearly identify the statutory authority being used to award the contract to avoid confusion with other written instruments such as concession contracts or commercial use authorizations. The contracts themselves will be titled according to the appliable contract model, such as a management agreement or a percentage lease agreement. This will further distinguish commercial services contracts issued under the VEIA from concession contracts and commercial use authorizations.

4. Comment: One commenter expressed concern that under the VEIA the NPS might deposit Federal funds into a private bank account for use by the operator, potentially leading to misuse of those funds.

NPS Response: Under the management agreement model, the NPS may make transfers of funds from the Federal revolving fund to private bank accounts established and owned by the operator that the operator will use to run the business. These accounts may include an operating account and a capital improvement account. The NPS will take numerous measures to minimize the risk of fraud, waste, and abuse of Federal funds in this process, and ensure compliance with all applicable laws pertaining to the use of Federal funds. The terms of the management agreement will require that private accounts used by the operator are insured by the Federal Deposit Insurance Corporation, that the NPS holds a first lien on account balances, and that account funds will not be commingled with other funds of the operator. Operating and capital budgets will be established and approved by the NPS. Expenses beyond approved operating and capital budgets will require written approval from NPS. Financial risk will be reduced further through monthly reporting requirements, NPS review of the operating and financial results of the business, independent annual audits of the operator's financial statements and controls, and (in some cases) ongoing review and support of business operations provided by a hospitality asset manager on behalf of the NPS.

5. Comment: One commenter noted that the rule does not state whether a percentage of the deposits in the revolving fund will be retained in the System unit where the visitor services are provided for the purposes of managing the commercial services contract and protecting visitors and resources.

NPS Response: Unlike the 1998 Act, which allows System units to retain up to 80% of franchise fees generated from concession contracts, the VEIA does not establish any specific allocations for funds collected under commercial services contracts. The NPS can use funds in the revolving fund for any expenses necessary for the management, improvement, enhancement, operation, construction, and maintenance of commercial visitor services and facilities that exist across the National Park System. The NPS will conduct annual planning to determine the appropriate level of funding that should be retained at the System unit where the funds were generated. Regardless of what percentage of funds are retained at the respective System unit, the NPS can take other actions to ensure that the operator's business activities are consistent with visitor and resource protection goals. When the NPS uses a management agreement model, it may award a related asset management contract. This contract would provide professional hospitality support services to help the NPS oversee the operator's performance, including ensuring the business activities are consistent with visitor and resource protection in the System unit.

6. Comment: One commenter recommended that the NPS address intellectual property associated with commercial operations authorized by the VEIA to protect the NPS from trademark disputes upon the expiration or termination of a contract.

NPS Response: To avoid disputes and protect NPS intellectual property, commercial service contracts will include provisions about rights to intellectual property, including trademarks, that are used by commercial service providers during the term of the contract. This will include provisions about the names of facilities used by operators.

7. Comment: One commenter stated the rule creates uncertainty for existing and potential commercial visitor service providers, as well as other stakeholders, in several areas, including the solicitation process and how the NPS will use funds in the revolving account. In general, these commenters asked the

NPS to provide more detail about how it will implement the VEIA.

NPS Response: This rule omits details about implementation, such as solicitation and financial processes, in order to give the NPS flexibility as it develops and tests new contracting models that meet the goals of the VEIA. To the extent possible, the NPS will be consistent with hospitality industry contracting practices as it tests these models. For this reason, the solicitation processes and the structures and terms of the contracts should be familiar to most hospitality service providers. The NPS will issue requests for proposals that include a clear and complete description of the solicitation process and selection criteria. The request for proposal package will include the draft contract to eliminate uncertainty for those interested in submitting proposals and operating under that contract. The NPS will develop clear, internal operating procedures and manuals addressing various topics, including accounting and financial management practices. The NPS will make these publicly available as appropriate and allowed under applicable law.

8. Comment: Several commenters asked the NPS to explain when it will use the VEIA instead of authorities to issue concession contracts, commercial use authorizations, and leases. One commenter stated that the NPS should not use the VEIA to replace the existing concession contract authority, and should use it only in unique and limited circumstances where concession contracts are not viable or do not give the respondent a chance to make a reasonable profit. Another commenter suggested that the NPS should use the VEIA only if there is no demonstrated interest from potential operators in entering into a concession contract or a commercial use authorization.

NPS Response: The statutes authorizing the NPS to enter into concession contracts and commercial use authorizations (54 U.S.C. 101911–101926), and authorizing the NPS to enter into leases (*e.g.,* 54 U.S.C. 102102, 306121), establish requirements the NPS must meet in order to use those authorities. The NPS also must follow applicable regulations and policies it has established for the use of those authorities. See, for example, 36 CFR part 51—Concession Contracts; 36 CFR part 18—Leasing of Properties in Park Areas; and Policy Memorandum 07–01 (Authorizing activities through leases versus concession contracts or commercial use authorizations). The VEIA specifically states that nothing in the statute modifies the terms and conditions of any awarded concession contract or the NPS's ability to enter into concession contracts under the 1998 Act. 54 U.S.C. 101937. This is restated for emphasis in § 52.40 of this rule. The NPS declines to impose limitations in this rule on its use of the VEIA that do not exist in the statute. As a practical matter, existing statutory limitations on the use of the VEIA could make a concession contract more appropriate in certain circumstances. Commercial services contracts awarded under the VEIA cannot exceed ten years and operators cannot receive leasehold surrender interest. As a result, a concession contract may be more appropriate if a significant capital improvement is needed to provide the visitor services. The NPS may want to leverage private investment to fund those improvements and a concession contract would allow for a longer term and an opportunity for the operator to receive leasehold surrender interest for investments made during the term of the contract. In other cases, the ability to use VEIA contract models and practices more common in the hospitality industry may result in benefits such as cost savings, greater efficiency, increased competition, and greater return to the government. The NPS will evaluate opportunities to provide commercial visitor services on a case-by-case basis to determine which authority is the most appropriate.

9. Comment: One commenter recommended that the rule explain how necessary capital improvements would be funded under commercial services contracts given the prohibition on paying leasehold surrender interest.

NPS Response: The rule does not specifically address how necessary capital improvements will be funded under commercial services contracts because it may vary from contract to contract. In some cases, operators will conduct capital improvement projects using money from operating and capital improvement accounts that are funded from business revenues or deposits from the NPS that are transferred from the revolving fund. In other cases, the NPS will directly fund and contract for such projects without the involvement of the operator.

10. Comment: One commenter asked the NPS to state in § 52.4 of the rule that the NPS may not issue commercial services contracts under the VEIA for guide and outfitter services or contracts for which there is a current preferential right of renewal under the 1998 Act.

NPS Response: The NPS has added a new paragraph to § 52.4 of the rule to include these statements.

11. Comment: Several commenters asked the NPS to include more detail in the rule about the bid process, in particular about how potential bidders and existing operators may suggest new and additional visitor services, and how the NPS will consider those suggestions during the competitive selection process and during the term of a contract.

NPS Response: The NPS often requests ideas for new and additional services as a selection factor in prospectuses issued for concession contracts under the 1998 Act. The NPS may do the same when soliciting proposals for commercial services contracts under the VEIA if the NPS determines that is appropriate. The NPS will explain the details of such requests when they occur. The contracts will specify how the operator can propose new and additional services during the term of the contract. The NPS will not consider new or additional services that would result in a material change to the services authorized by the contract and described in the request for proposals. This will ensure that those who compete for the contract are treated fairly and that this process is consistent with how the NPS manages concession contracts. Defining the processes for proposing new and additional services in requests for proposals and contracts, on a case-by-case basis, gives the NPS more flexibility to tailor those processes to the unique circumstances of each situation.

12. Comment: One commenter questioned whether the NPS will meaningfully consider information presented by respondents during request for qualifications, interview, and negotiation phases when § 52.14 of the rule allows, but does not require, the NPS to do so.

NPS Response: The rule states that NPS may (rather than must) consider such information because some of the information presented may be irrelevant to the selection process or, due to the nature of the contract, one or more of those phases might not be necessary for the evaluation process for the award of that contract. To the extent that a respondent presents relevant information in a phase that is needed for the selection process, the NPS will consider such information in a meaningful way.

13. Comment: One commenter asked the NPS to add language to the rule that protects confidential, proprietary, or other information provided by respondents to the NPS during the solicitation process. This commenter asked the NPS to include a provision similar to 36 CFR 51.100 that applies to concession contracts, which states that the NPS will not make proposals publicly available until a concession

contract is awarded, and then may make proposals and other documents publicly available in accordance with applicable law. This commenter also stated that paragraph (b) in § 52.16 does not prevent the NPS from reviewing a bid developed at substantial expense by one respondent that includes information about its technical and management approach, rejecting that bid, and then sharing and using that information in negotiations with a competing bidder.

NPS Response: As it does for concession contracts, before the commercial service contract is awarded, the NPS will consider information in proposals submitted in response to a prospectus as protected from disclosure under the Freedom of Information Act (FOIA), which establishes exemptions for information subject to deliberative process privilege and for trade secrets and commercial or financial information that is confidential or privileged. 5 U.S.C. 552(b)(4)–(5). After the contract has been awarded, the NPS may or will make the proposals and documents publicly available in accordance with applicable law. The NPS does not believe it is necessary to make these statements in the rule because determinations about whether information must be disclosed or not are governed by the FOIA, the Department's FOIA regulations (beginning at 43 CFR 2.1), and other applicable laws. The NPS will use all relevant information in proposals to make award decisions. The NPS must comply with these legal requirements in responding to a request under the FOIA, whether submitted by a respondent or another member of the public.

14. Comment: One commenter recommended that the rule require the NPS to publish notices of availability of a request for proposals on the NPS commercial services program website and on the website for the System unit or units where the services would be provided.

NPS Response: Paragraph (a) of § 52.11 of the rule states that, in addition to publication in the System for Award Management or similar publication, the NPS also may publish notices of availability electronically on websites, including social media, and in local or national newspapers or trade magazines. For concession contracts, the NPS publishes notices of availability on the websites mentioned by the commenter in accordance with internal policy and procedures. The NPS expects to do the same for commercial services contracts. Rather than make this a regulatory requirement, however, the NPS prefers to maintain the flexibility to publish notifications in a manner that is most appropriate for each request.

15. Comment: One commenter recommended that the rule provide more detail about the two potential contracting models identified by the NPS (management agreements and percentage lease agreements) and explain how those models will be used to promote investments that are necessary to expand, modernize, and improve the visitor services and facilities.

NPS Response: The management agreement and percentage lease agreement models are explained above in more detail than they were in the preamble of the proposed rule and are explained further in the cost-benefit and initial regulatory flexibility analysis that is available in the docket for this rulemaking. The details of how the NPS will use those agreement models to further the goals of the statute will be determined during implementation of the VEIA. The NPS will provide information about implementation of the VEIA on the website for the NPS Commercial Services Program at *https://www.nps.gov/orgs/csp/index.htm.*

16. Comment: One commenter encouraged the NPS to use the services of the Youth Conservation Corps for projects related to commercial visitor services provided under the VEIA and asked the NPS to consider a respondent's proposal to use the Youth Conservation Corps as a positive factor in the proposal selection process.

NPS Response: The NPS appreciates the skill and experience that the Youth Conservation Corps brings to projects throughout the National Park System and will consider using Corps members for capital improvement projects under the VEIA that are directly funded by the NPS. Rather than establish specific selection factors in this rule, the NPS prefers to maintain flexibility to establish selection factors that are tailored to the specific contracting model being used and the specific objectives of the request. The NPS may identify the use of Corps members as a positive selection factor, if appropriate, and give weight to such commitments as well as other factors as it deems appropriate.

17. Comment: One commenter expressed concern that the rule would increase costs to the public by allowing concessioners to set prices for visitor services that do not account for visitors that have a variety of income levels.

NPS Response: The NPS is sensitive to the issue of reasonableness and appropriateness of rates and charges for commercial visitor services provided in System units recognizing that it is often more expensive to provide those services in System units compared to other locations outside the System. The NPS will oversee the operations of such businesses to ensure that charges for commercial visitor services are reasonable and appropriate. As described in § 52.28 of the rule, generally, the NPS will accomplish this by approving rates for services provided to visitors based upon market demand, but the Director may specify rates or rate methods for particular services based on factors other than market demand, such as to ensure affordability to a broad segment of visitors.

Compliance With Other Laws, Executive Orders, and Department Policy

Regulatory Planning and Review (Executive Orders 12866 and 13563 and 14094)

Executive Order (E.O.) 14094 amends E.O. 12866 and reaffirms the principles of E.O. 12866 and E.O. 13563 and states that regulatory analysis should facilitate agency efforts to develop regulations that serve the public interest, advance statutory objectives, and are consistent with E.O. 12866 and E.O. 13563. Regulatory analysis, as practicable and appropriate, shall recognize distributive impacts and equity, to the extent permitted by law. E.O. 13563 emphasizes further that regulations must be based on the best available science and that the rulemaking process must allow for public participation and an open exchange of ideas. We developed this rule in a manner consistent with these requirements.

E.O. 12866, as reaffirmed by E.O. 13563 and amended and reaffirmed by E.O. 14094, provides that the Office of Information and Regulatory Affairs (OIRA) in the Office of Management and Budget (OMB) will review all significant rules. OIRA determined that this final rule is not significant.

Regulatory Flexibility Act (RFA) (5 U.S.C. 601 et seq.)

This rule will not have a significant economic effect on a substantial number of small entities under the RFA (5 U.S.C. 601 *et seq.*). This certification is based on the cost-benefit and initial regulatory flexibility analysis for the proposed rule found in the report entitled ''Visitor Experience Improvements Authority (VEIA) Proposed Rule Regulatory Assessment (RA) and Initial Regulatory Flexibility Analysis (IRFA),'' which can be viewed on *https://www.regulations.gov* in Docket ID: NPS–2022–0003. The certification in that report remains valid

for the final rule due to the limited changes in this rule from the proposed version.

Congressional Review Act (CRA)

This rule is not a major rule under 5 U.S.C. 804(2), the CRA. This rule:

(a) Will not have an annual effect on the economy of $100 million or more;

(b) Will not cause a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; and

(c) Will not have significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises.

Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 et seq.)

This rule does not impose an unfunded mandate on State, local, or Tribal governments or the private sector of more than $100 million per year. The rule does not have a significant or unique effect on State, local or Tribal governments or the private sector. This rule establishes administrative procedures for the NPS and does not impose requirements on other agencies or governments. A statement containing the information required by the UMRA (2 U.S.C. 1531 *et seq.*) is not required.

Takings (E.O. 12630)

This rule does not effect a taking of private property or otherwise have takings implications under E.O. 12630. A takings implication assessment is not required.

Federalism (E.O. 13132)

Under the criteria in section 1 of E.O. 13132, the rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement. This rule only affects visitor services provided on NPS-administered lands and waters. A federalism summary impact statement is not required.

Civil Justice Reform (E.O. 12988)

This rule complies with the requirements of E.O. 12988. This rule:

(a) Meets the criteria of section 3(a) requiring agencies to review all regulations to eliminate errors and ambiguity and write them to minimize litigation; and

(b) Meets the criteria of section 3(b)(2) requiring agencies to write all regulations in clear language and contain clear legal standards.

Consultation With Indian Tribes (E.O. 13175 and Department Policy)

The Department of the Interior strives to strengthen its government-to-government relationship with Indian Tribes through a commitment to consultation with Indian Tribes and recognition of their right to self-governance and Tribal sovereignty. The NPS has evaluated this proposed rule under the criteria in E.O. 13175 and under the Department's Tribal consultation policy and has determined that Tribal consultation is not required because the proposed rule will have no substantial direct effect on federally recognized Indian Tribes.

Paperwork Reduction Act of 1995 (PRA; 44 U.S.C. 3501 et seq.)

This rule contains new information collections. All information collections require approval under the PRA. The NPS may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid OMB control number. OMB must approve the new reporting and recordkeeping requirements identified below:

(1) Solicitation of Proposals—The VEIA requires that the NPS solicit proposals for commercial services contracts through a competitive process. The NPS may also award and administer related professional services contracts. The solicitation process may include one or more phases such as a request for qualifications followed by or in concert with a request for more detailed information through a request for proposals. The process could also include interviews with respondents and a negotiation phase. The NPS will use the information collected to evaluate and select the best operator to provide the contracted services. Information submitted in response to a solicitation may include, as applicable to the specific project, types of information similar to the following:

- Information concerning the respondent's ability to comply with the commercial service contract terms and conditions;
- Information that demonstrates that the respondent is a qualified entity;
- Information that demonstrates the respondent's experience and prior performance in operating similar facilities and providing similar services;
- Information concerning the respondent's financial capability;
- Information concerning the respondent's proposed approach and methodology to deliver the services specified; and
- Information that the respondent provides in response to other factors identified in the request for proposals.

(2) Reporting Requirements

(A) Commercial Services Operators—In order to monitor their performance and make appropriate NPS management decisions, the NPS will require operators providing commercial services under a VEIA contract to provide information to the NPS through reports and plans such as the following:

- Annual Plan that includes information summarizing prior year operating activities, capital projects and facility condition assessment, and financial performance, and outlining projected annual operating and capital budgets, projected annual operating plans, capital project plans and designs, and staffing and marketing plans;
- Monthly Performance Reports that include monthly financial performance statements, capital project and operating performance information; and
- Ad hoc Reports such as environmental or safety incidents reports.

The above types of plans and reports to owners (*e.g.,* NPS) are standard for those providing commercial services in the hospitality industry in the private and public sector. The NPS requires financial data be submitted in accordance with Generally Accepted Accounting Principles (GAAP); however, no standardized form or format is defined for any plans or reports at this time. The NPS expects this to evolve during its implementation of the VEIA and may have forms and formats at a later time. The NPS will obtain OMB approval for any changes in reporting and/or recordkeeping requirements as they are developed.

(B) Professional Services Providers—Professional services providers will be required to provide information to the NPS through deliverables, reports, and plans such as the following:

- Operator Annual Plan Review Report analyzing operator prior year performance and operational, capital project, and financial plans for the upcoming year;
- Monthly Asset Manager Reports analyzing operator operational, capital project, and financial performance; and
- Commercial Services Contract Solicitation Support Deliverables such as financial and business opportunity analysis reports, condition assessment reports, and draft Request for Qualifications/Request for Proposals documents for commercial services contracts.

There is no standard format or form associated with these information requests.

(3) Recordkeeping Requirements—Operators under commercial services contracts and contractors under professional services contracts must keep any records that the Director of the NPS may require for the term of the contract and for five calendar years after the termination or expiration of the contract to enable the Director to determine that all terms of the contract are or were faithfully performed. The Director, for the purpose of audit and examination, must have access to and the right to examine all pertinent records, books, documents, and papers of the operator, contractor, subcontractor, and any parent or affiliate of the operator or contractor (but with respect to parents and affiliates, only to the extent necessary to confirm the validity and performance of any representations or commitments made to the Director by a parent or affiliate of the operator or contractor).

Title of Collection: Administration of Visitor Experience Improvements Authority, 54 U.S.C. 101936.

OMB Control Number: 1024–New.

Form Number: None.

Type of Review: New.

Respondents/Affected Public: Business entities desiring to enter VEIA-authorized contracts with the National Park Service.

Total Estimated Number of Annual Respondents: 46 (Commercial Services Operators: 18; Professional Services Providers: 28).

*Total Estimated Number of Annual Responses:*100 (Commercial Services Operators: 50; Professional Services Providers: 50).

Estimated Completion Time per Response: Average time (Varies from 24 hours to 800 hours, depending on respondent and/or activity).

Total Estimated Number of Annual Burden Hours: 7,016 hours.

Respondent's Obligation: Required to Obtain or Retain a Benefit.

Frequency of Collection: On occasion.

Total Estimated Annual Nonhour Burden Cost: $112,900 (for costs associated with solicitations, start-up costs, and recordkeeping requirements).

As part of our continuing effort to reduce paperwork and respondent burdens, we invite the public and other Federal agencies to comment on any aspect of this information collection, including:

(1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility;

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) How the agency might minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of response.

Written comments and suggestions on the information collection requirements should be submitted by the date specified above in **DATES** to *https://www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under Review—Open for Public Comments'' or by using the search function. Please provide a copy of your comments to the NPS Information Collection Clearance Officer at the address specified above in **ADDRESSES**. Please include ''1024–AE47'' in the subject line of your comments.

National Environmental Policy Act (NEPA)

This rule does not constitute a major Federal action significantly affecting the quality of the human environment. A detailed statement under NEPA is not required. The NPS has determined the rule is categorically excluded under 43 CFR 46.210(i) because it is administrative, financial, legal, and technical in nature. In addition, the environmental effects of this rule are too speculative to lend themselves to meaningful analysis. NPS decisions to enter into contracts under the VEIA will be subject to compliance with NEPA at the time the contracts are executed. The NPS has determined the rule does not involve any of the extraordinary circumstances listed in 43 CFR 46.215 that would require further analysis under NEPA.

Effects on the Energy Supply (E.O. 13211)

This rule is not a significant energy action under the definition in E.O. 13211; the proposed rule is not likely to have a significant adverse effect on the supply, distribution, or use of energy, and the rule has not otherwise been designated by the Administrator of Office of Information and Regulatory Affairs as a significant energy action. A statement of energy effects is not required.

List of Subjects in 36 CFR Part 52

Commercial services, Government contracts, National parks, Visitor services.

In consideration of the foregoing, the National Park Service is adding part 52 to title 36 of the Code of Federal Regulations to read as follows:

PART 52—VISITOR EXPERIENCE IMPROVEMENTS AUTHORITY CONTRACTS

Subpart A—Authority and Purpose

Sec.

52.1 What does this part cover?
52.2 What is the purpose of a commercial services contract?
52.3 How are terms defined in this part?
52.4 What types of commercial services contracts may the Director issue?
52.5 What types of professional services contracts may the Director issue?

Subpart B—Solicitation, Selection, and Award Procedures

52.10 How will the Director solicit responses for the award of a commercial services contract?
52.11 Where will the Director publish notice of the availability of a request for proposals?
52.12 How long will respondents have to submit a response?
52.13 How will the Director share information with potential respondents after issuing the request for proposals?
52.14 How will the Director evaluate responses and select the best one?
52.15 When will the Director reject a response?
52.16 What options does the Director have in accepting or rejecting a response?
52.17 Does this part limit the authority of the Director?
52.18 When must the selected respondent execute the contract?
52.19 When may the Director award the commercial services contract?
52.20 How will the Director solicit and award professional services contracts?

Subpart C—Contract Provisions

52.25 What is the term of a commercial services contract?
52.26 When may the Director terminate a contract?
52.27 May an operator or professional services provider receive leasehold surrender interest in capital improvements?
52.28 Are operator rates subject to approval by the Director?
52.29 May operators assign or encumber commercial services contracts?
52.30 How may commercial services contracts be funded?

Subpart D—Information and Access to Information

52.35 What records must the operator and professional services provider keep and what access does the Director have to records?

52.36 What access does the Comptroller General have to records kept by operators and professional services providers?

Subpart E—Miscellaneous

52.40 Does this part affect concession contracts under part 51 of this chapter?
52.41 Does the VEIA expire?
52.42 Severability.

Authority: 54 U.S.C. 101931–101938.

Subpart A—Authority and Purpose

§ 52.1 What does this part cover?

This part covers the solicitation, award, and administration of commercial services contracts and related professional services contracts. The Director solicits, awards, and administers these contracts on behalf of the Secretary of the Department of the Interior under the authority of the Act of August 25, 1916, as amended and supplemented, 54 U.S.C. 100101 *et seq.,* and title VII of the National Park Service Centennial Act, 54 U.S.C. 101931–101938. All commercial services contracts and related professional services contracts must be consistent with the requirements of this part. These contracts will contain such terms and conditions as required by this part or law and as otherwise appropriate in furtherance of the purposes of this part and the Visitor Experience Improvements Authority (VEIA).

§ 52.2 What is the purpose of a commercial services contract?

The National Park Service (NPS) will use commercial services contracts to expand, modernize, and improve the condition of commercial facilities and commercial services provided to visitors in a park area. Commercial services contracts are limited to those that are necessary and appropriate for public use and enjoyment of the park area in which they are located and consistent with the preservation and conservation of the resources and values of the park area.

§ 52.3 How are terms defined in this part?

Award occurs when the Director and a selected respondent execute a commercial services contract or related professional services contract that creates legally binding obligations on the parties to the contract.

Commercial services contract means a binding written agreement between the Director and an operator awarded under the authority of this part that authorizes the operator to provide services to visitors within a park area under specified terms and conditions.

Contract means either a commercial services contract or a related professional services contract issued under the authority of this part. The Director may award contracts without regard to Federal laws and regulations governing procurement by Federal agencies, with the exception of laws and regulations related to Federal Government contracts governing working conditions and wage rates, including the Alaska National Interest Lands Conservation Act (16 U.S.C. 3101 *et seq.*), 40 U.S.C. 3141–3144, 3146, and 3147 (commonly known as the ''Davis-Bacon Act''), and any civil rights provisions otherwise applicable thereto. Contracts as defined in this section are not contracts within the meaning of 41 U.S.C. 601 *et seq.* (the Contract Disputes Act) and are not service or procurement contracts within the meaning of statutes, regulations, or policies that apply only to Federal service contracts or other types of Federal procurement actions.

Director means the Director of the National Park Service (acting on behalf of the Secretary), or an authorized representative of the Director, except where a particular official is specifically identified in this part.

Operator means an individual, corporation, or other legally recognized entity that duly holds a commercial services contract.

Professional services contract means a binding written agreement between the Director and a professional service provider awarded under the authority of this part that authorizes the service provider to provide hospitality consulting or other services to the National Park Service related to commercial services contracts.

Professional services provider means an individual, corporation, or other legally recognized entity that duly holds a professional services contract.

Qualified entity means an individual, corporation, or other legally recognized entity that the Director determines has the experience and financial ability to carry out the terms of a commercial services contract or professional services contract.

Respondent means an individual, corporation, or other legally recognized entity that submits a response for a commercial services contract.

Response means the information an individual, corporation, or other legally recognized entity provides to the National Park Service in response to a request for proposals.

VEIA means the authority granted to the Director under title VII of Public Law 114–289 entitled ''Visitor Experience Improvements Authority'' and codified at 54 U.S.C. 101931–101938.

Visitor services means accommodations, facilities, and other services determined by the Director as necessary and appropriate for public use and enjoyment of a park area provided to park area visitors for a fee or charge by an individual or entity other than the Director. Visitor services may include, but are not limited to, lodging, campgrounds, food service, merchandising, tours, recreational activities, guiding, transportation, and equipment rental. Visitor services also include the sale of interpretive materials or the conduct of interpretive programs for a fee or charge to visitors.

§ 52.4 What types of commercial services contracts may the Director issue?

(a) Except as stated in paragraph (b) of this section, the Director may issue commercial services contracts for expanding, modernizing, and improving visitor services consistent with the VEIA. Examples of such contracts include, without limitation, management agreements and percentage lease agreements.

(b) The Director may not award commercial services contracts:

(1) For the provision of outfitter and guide services described in section 54 U.S.C. 101913(8); or

(2) To authorize the provision of facilities or services for which the Director has granted to an existing concessioner a preferential right of renewal as defined in 54 U.S.C. 101911 and 101913.

§ 52.5 What types of professional services contracts may the Director issue?

The Director may issue professional services contracts that support the National Park Service in soliciting, awarding, and managing commercial services contracts. Professional services contracts may include asset management agreements under which a service provider assists the National Park Service in overseeing and administering commercial services contracts but does not itself provide visitor services. Professional services contracts also may include contracts for the provision of other consulting services to the National Park Service such as developing requests for proposals, condition assessments, operational or financial analysis, accounting, and other related services.

Subpart B—Solicitation, Selection, and Award Procedures

§ 52.10 How will the Director solicit responses for the award of a commercial services contract?

(a) The Director will award commercial services contracts through a competitive selection process. The Director will issue a request for

proposals inviting responses for consideration by the Director. The request for proposals will describe the terms and conditions of the proposed commercial services contract and the procedures the Director will follow to negotiate and award the commercial services contract.

(b) The terms and conditions of the request for proposals and the proposed commercial services contract are not final until the Director awards the commercial services contract.

(c) The solicitation process may include one or more phases, such as a request for qualifications followed by or in concert with a request for more detailed information through a request for proposals. The process could also include interviews with respondents and a negotiation phase.

(d) If the entity that will become the operator is not established at the time of submission of a response, the response must contain assurances satisfactory to the Director that the entity that will become the operator will be a qualified entity as of the date of the award of the commercial services contract and otherwise have the ability to carry out the commitments made in the response.

§ 52.11 Where will the Director publish notice of the availability of a request for proposals?

(a) The Director will publish notice of the availability of the request for proposals at least once in the System for Award Management (SAM) where Federal business opportunities are electronically posted or in a similar publication if SAM is no longer used. The Director may also publish notices electronically on websites, including social media, and in local or national newspapers or trade magazines.

(b) The Director will make the request for proposals available upon request to all interested persons. The Director may charge a reasonable fee for a printed request for proposals.

§ 52.12 How long will respondents have to submit a response?

The Director will define the process and the timeline for responding and entering into negotiations in the request for proposals. The Director will not consider untimely responses.

§ 52.13 How will the Director share information with potential respondents after issuing the request for proposals?

If the Director shares material information directly related to the request for proposals with one potential respondent, the Director will share the same information with all potential respondents who have advised the Director of their interest in the request for proposals. This does not apply to information that is publicly available.

§ 52.14 How will the Director evaluate responses and select the best one?

(a) The Director will apply the selection factors set forth in the request for proposals. The evaluation will include an assessment of the respondent's written submittals in response to the request for proposals and also may include information presented by the respondent during request for qualifications, interview, and negotiation phases. During this process, the Director may request written clarifications from any respondent that has submitted a timely response.

(b) The Director will use selection factors to evaluate responses that include compliance with the requirements in the request for proposals, ability to comply with the terms and conditions of the commercial services contract, demonstration that the respondent is a qualified entity, demonstrated experience and prior performance in operating similar facilities and providing similar services, financial capability, and the proposed approach and methodology to deliver the services specified. The Director may include other factors that are identified in the request for proposals.

(c) The Director must determine that the commercial services contract issued to the selected respondent will meet the objectives of expanding, modernizing, and improving the condition of commercial facilities and commercial services provided to visitors in the park area, and that such contract is both necessary and appropriate for public use and enjoyment of the park area, and consistent with the preservation and conservation of the resources and values of the park area.

§ 52.15 When will the Director reject a response?

The Director will reject any response if the Director makes any of the following determinations:

(a) The respondent is not a qualified entity.

(b) The response is not responsive to the requirements in the request for proposals. A response is not responsive if the Director determines that it is not timely, does not meet the minimum requirements of the proposed contract, or does not provide the information required by the request for proposals.

§ 52.16 What options does the Director have in accepting or rejecting a response?

(a) If no responsive responses are submitted, the Director may cancel the solicitation. After cancellation, the Director may establish new commercial services contract requirements and issue a new request for proposals.

(b) The Director reserves the right to accept or reject any or all responses received as a result of the solicitation, to waive minor irregularities, or to negotiate with any respondent, in any manner necessary, to serve the best interests of the National Park Service.

(c) No respondent or other person or entity will obtain compensable or other legal rights as a result of an amended, extended, canceled, or resolicited request for proposals for a contract.

§ 52.17 Does this part limit the authority of the Director?

Nothing in this part may be construed as limiting the authority of the Director at any time to determine whether to solicit or award a contract, to cancel a solicitation, or to terminate a contract in accordance with its terms.

§ 52.18 When must the selected respondent execute the contract?

The selected respondent must execute the contract within the time period established by the Director. If the selected respondent fails to execute the contract in this period, the Director may select another responsive response and enter into negotiations with that respondent, or may cancel the solicitation and choose to resolicit the contract.

§ 52.19 When may the Director award the commercial services contract?

The Director may award a commercial services contract at any time after selecting the best response, the conclusion of negotiations, and execution of the contract by the respondent.

§ 52.20 How will the Director solicit and award professional services contracts?

The Director will advertise each opportunity for professional services contracts at least once in the System for Award Management (SAM) where Federal business opportunities are electronically posted or in a similar publication if SAM is no longer used. The Director may also publish notices electronically on websites, including social media, and in local or national newspapers or trade magazines. The Director will evaluate and select professional services providers that are qualified entities following the procedures described in the advertised opportunity.

Subpart C—Contract Provisions

§ 52.25 What is the term of a commercial services contract?

A commercial services contract will generally be awarded for a set term or

for a base term plus option years, with the total term not to exceed 10 years.

§ 52.26 When may the Director terminate a contract?

Contracts will contain appropriate provisions for suspension of operations and for termination by the Director for default, including, without limitation, unsatisfactory performance, or termination when necessary to achieve the purposes of the VEIA.

§ 52.27 May an operator or professional services provider receive leasehold surrender interest in capital improvements?

No. Operators and professional services providers will not receive leasehold surrender interest in capital improvements, as those terms are defined at 54 U.S.C. 101915.

§ 52.28 Are operator rates subject to approval by the Director?

(a) The Director may require prior approval of rates for services provided to visitors under a commercial services contract.

(b) Generally, the Director will approve rates for services provided to visitors based upon market demand, although the Director may specify rates or rate methods for particular services based on factors other than market demand, such as to ensure affordability to a broad segment of visitors.

§ 52.29 May operators assign or encumber commercial services contracts?

Commercial services contracts will include provisions that require the Director's approval prior to any assignment or encumbrance of the contract or any rights or interests under the contract to another operator.

§ 52.30 How may commercial services contracts be funded?

Contract funds will be provided to the operators, who will be solely responsible for maintaining and expending the funds on agreed-upon expenses. Commercial services contracts will clearly define what contract-related funds shall be considered revenue collected for the NPS and will provide for the periodic remittance of such funds to the NPS.

Subpart D—Information and Access to Information

§ 52.35 What records must the operator and professional services provider keep and what access does the Director have to records?

Operators and professional services providers must keep any records that the Director may require for the term of the contract and for five calendar years after the termination or expiration of the contract to enable the Director to determine that all terms of the contract are or were faithfully performed. The Director, or an authorized representative of the Director, may access and examine all pertinent records, books, documents, and papers of the operator, professional services provider, and any subcontractor, parent, or affiliate of the operator or professional services provider (but with respect to parents and affiliates, only to the extent necessary to confirm the validity and performance of any representations or commitments made to the Director by a parent or affiliate of the operator or professional services provider). Further details on records maintenance and access will be set forth in and governed by the contracts themselves.

§ 52. 36 What access does the Comptroller General have to records kept by operators and professional services providers?

The Comptroller General of the United States, or an authorized representative of the Comptroller General, may access and examine all pertinent records, books, documents, and papers of the operator, professional services provider, and any subcontractor, parent, or affiliate of the operator or professional services provider (but with respect to parents and affiliates, only to the extent necessary to confirm the validity and performance of any representations or commitments made to the Director by a parent or affiliate of the operator or professional services provider) going back five years from the closing date of the last fiscal year of the operator or professional service provider.

Subpart E—Miscellaneous

§ 52.40 Does this part affect concession contracts under part 51 of this chapter?

No, nothing in this part modifies the terms or conditions of any existing concession contract or the ability of the Director to enter into concession contracts under part 51 of this chapter. The 1998 Act (as that term is defined in part 51 of this chapter) remains in effect.

§ 52.41 Does the VEIA expire?

Yes. The Director may not award a contract under the VEIA after December 16, 2025, unless extended by law. However, contracts awarded under the VEIA may continue beyond such date, subject to the terms of the particular contract.

§ 52.42 Severability.

A determination that any provision of this part is unlawful will not affect the validity of the remaining provisions.

Shannon A. Estenoz,

Assistant Secretary for Fish and Wildlife and Parks.

BILLING CODE 4312–52–P

POSTAL SERVICE

39 CFR Parts 233 and 273

Inspection Service Authority; Civil Monetary Penalty Inflation Adjustment

AGENCY: Postal Service™.

ACTION: Interim final rule.

SUMMARY: This document updates postal regulations by implementing inflation adjustments to civil monetary penalties that may be imposed under consumer protection and mailability provisions enforced by the Postal Service pursuant to the Deceptive Mail Prevention and Enforcement Act and the Postal Accountability and Enhancement Act, as well as the civil monetary penalty that may be imposed by the Postal Service for false claims and statements under the Program Fraud Civil Remedies Act. These adjustments are required under the Federal Civil Penalties Inflation Adjustment Act of 1990, as amended by the Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015. This document includes the adjustments for 2025 for the statutory civil monetary penalties subject to the 2015 Act and all necessary updates authorized by the 2015 Act for regulatory civil monetary penalties.

DATES: *Effective:* January 17, 2025.

FOR FURTHER INFORMATION CONTACT: Steve Sultan, (202) 268–7385, *SESultan@uspis.gov.*

SUPPLEMENTARY INFORMATION: The Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015 (2015 Act), Public Law 114–74, 129 Stat. 584, amended the Federal Civil Penalties Inflation Adjustment Act of 1990 (1990 Act), Public Law 101–410, 104 Stat. 890 (28 U.S.C. 2461 note), to improve the effectiveness of civil monetary penalties and to maintain their deterrent effect. Section 3 of the 1990 Act specifically includes the Postal Service in the definition of ''agency'' subject to its provisions.

Beginning in 2017, the 2015 Act requires the Postal Service to make an annual adjustment for inflation to civil penalties that meet the definition of

''civil monetary penalty'' under the 1990 Act. The Postal Service must make the annual adjustment for inflation and publish the adjustment in the **Federal Register** by January 15 of each year. Each penalty will be adjusted as instructed by the Office of Management and Budget (OMB) based on the Consumer Price Index (CPI–U) from the most recent October. OMB has furnished detailed instructions regarding the annual adjustment for 2025 in memorandum M–25–02, *Implementation of Penalty Inflation Adjustments for 2025, Pursuant to the Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015* (December 17, 2024), *https://www.whitehouse.gov/wp-content/uploads/2024/12/M-25-02.pdf.* This year, OMB has advised that an adjustment multiplier of 1.02598 will be used. The new penalty amount must be rounded to the nearest dollar.

The 2015 Act allows the interim final rule and annual inflation adjustments to be published without prior public notice or opportunity for public comment.

Adjustments to Postal Service Civil Monetary Penalties

Civil monetary penalties may be assessed for postal offenses under sections 106 and 108 of the Deceptive Mail Prevention and Enforcement Act, Public Law 106–168, 113 Stat. 1811, 1814 (*see* 39 U.S.C. 3012(a), (c)(1), (d), and 3017(g)(2), (h)(1)(A)); and section 1008 of the Postal Accountability and Enhancement Act, Public Law 109–435, 120 Stat. 3259–3261 (*see* 39 U.S.C. 3018(c)(1)(A)). The statutory civil monetary penalties subject to the 2015 Act and the amount of each penalty after implementation of the annual adjustment for inflation are as follows:

39 U.S.C. 3012(a)—False Representations and Lottery Orders

Under 39 U.S.C. 3005(a)(1)–(3), the Postal Service may issue administrative orders prohibiting persons from using the mail to obtain money through false representations or lotteries. Persons who evade, attempt to evade, or fail to comply with an order to stop such prohibited practices may be liable to the United States for a civil penalty under 39 U.S.C. 3012(a). The regulations implemented pursuant to this section currently impose a $88,412 penalty for each mailing less than 50,000 pieces, $176,820 for each mailing of 50,000 to 100,000 pieces, and $17,683 for each additional 10,000 pieces above 100,000 not to exceed $3,536,422. The new penalties will be as follows: a $90,709 penalty for each mailing less than 50,000 pieces, $181,414 for each mailing of 50,000 to 100,000 pieces, and $18,142 for each additional 10,000 pieces above 100,000 not to exceed $3,628,298.

39 U.S.C. 3012(c)(1)—False Representation and Lottery Penalties in Lieu of or as Part of an Order

In lieu of or as part of an order issued under 39 U.S.C. 3005(a)(1)–(3), the Postal Service may assess a civil penalty. Currently, the amount of this penalty, set in the implementing regulations to 39 U.S.C. 3012(c)(1), is $44,206 for each mailing that is less than 50,000 pieces, $88,412 for each mailing of 50,000 to 100,000 pieces, and an additional $8,842 for each additional 10,000 pieces above 100,000 not to exceed $1,768,212. The new penalties will be $45,354 for each mailing that is less than 50,000 pieces, $90,709 for each mailing of 50,000 to 100,000 pieces, and an additional $9,072 for each additional 10,000 pieces above 100,000 not to exceed $1,814,150.

39 U.S.C. 3012(d)—Misleading References to the United States Government; Sweepstakes and Deceptive Mailings

Persons may be liable to the United States for a civil penalty under 39 U.S.C. 3012(d) for sending certain deceptive mail matter described in 39 U.S.C. 3001((h)–(k), including:

- Solicitations making false claims of Federal Government connection or approval;
- Certain solicitations for the purchase of a product or service that may be obtained without cost from the Federal Government;
- Solicitations containing improperly prepared ''facsimile checks''; and
- Certain solicitations for ''skill contests'' and ''sweepstakes'' sent to individuals who, in accordance with 39 U.S.C. 3017(d), have requested that such materials not be mailed to them.

Currently, under the implementing regulations, this penalty is not to exceed $17,683 for each mailing. The new penalty will be $18,142.

39 U.S.C. 3017(g)(2)—Commercial Use of Lists of Persons Electing Not To Receive Skill Contest or Sweepstakes Mailings

Under 39 U.S.C. 3017(g)(2), the Postal Service may impose a civil penalty against a person who provides information for commercial use about individuals who, in accordance with 39 U.S.C. 3017(d), have elected not to receive certain sweepstakes and contest information. Currently, this civil penalty may not exceed $3,536,422 per violation, pursuant to the implementing regulations. The new penalty may not exceed $3,628,298 per violation.

39 U.S.C. 3017(h)(1)(A)—Reckless Mailing of Skill Contest or Sweepstakes Matter

Currently, under 39 U.S.C. 3017(h)(1)(A) and its implementing regulations, any promoter who recklessly mails nonmailable skill contest or sweepstakes matter may be liable to the United States in the amount of $17,683 per violation for each mailing to an individual. The new penalty is $18,142 per violation.

39 U.S.C. 3018(c)(1)(A)—Hazardous Material

Under 39 U.S.C. 3018(c)(1)(A), the Postal Service may impose a civil penalty payable into the Treasury of the United States on a person who knowingly mails nonmailable hazardous materials or fails to follow postal laws on mailing hazardous materials. Currently, this civil penalty is at least $383, but not more than $152,461 for each violation, pursuant to the implementing regulations. The new penalty is at least $393, but not more than $156,422 for each violation.

Adjustments to Regulatory Postal Service Civil Monetary Penalties

In October 1986, Congress enacted the Program Fraud Civil Remedies Act, 31 U.S.C. 3801–3812. The Program Fraud Civil Remedies Act established an administrative remedy against any person who makes, or causes to be made, a false claim or written statement to certain Federal agencies. The Act requires each covered agency to promulgate rules and regulations necessary to implement its provisions. The Postal Service's implementing regulations are found in part 273 of title 39, Code of Federal Regulations. The current penalty amount is $13,946. The new penalty amount is $14,308.

List of Subjects

39 CFR Part 233

Administrative practice and procedure, Banks, Banking, Credit, Crime, Infants and children, Law enforcement, Penalties, Privacy, Seizures and forfeitures.

39 CFR Part 273

Administrative practice and procedure, Claims, Fraud, Penalties.

For the reasons set out in the preamble, the Postal Service amends 39 CFR parts 233 and 273 as follows:

PART 233—INSPECTION SERVICE AUTHORITY

■ 1. The authority citation for part 233 continues to read as follows:

Authority: 39 U.S.C. 101, 102, 202, 204, 401, 402, 403, 404, 406, 410, 411, 1003, 3005(e)(1), 3012, 3017, 3018; 12 U.S.C. 3401–3422; 18 U.S.C. 981, 983, 1956, 1957, 2254, 3061; 21 U.S.C. 881; Pub. L. 101–410, 104 Stat. 890 (28 U.S.C. 2461 note); Pub. L. 104–208, 110 Stat. 3009; Secs. 106 and 108, Pub. L. 106–168, 113 Stat. 1806 (39 U.S.C. 3012, 3017); Pub. L. 114–74, 129 Stat. 584.

§ 233.12 [Amended]

■ 2. In § 233.12:

■ a. In paragraph (a), remove ''$88,412'' and add in its place ''$90,709'', remove ''$176,820'' and add in its place ''$181,414'', remove ''$17,683'' and add in its place ''$18,142'', and remove ''$3,536,422'' and add in its place ''$3,628,298''.

■ b. In paragraph (b), remove ''$44,206'' and add in its place ''$45,354'', remove ''$88,412'' and add in its place ''$90,709'', remove ''$8,842'' and add in its place ''$9,072'', and remove ''$1,768,212'' and add in its place ''$1,814,150''.

■ c. In paragraph (c)(4), remove ''$17,683'' and add in its place ''$18,142''.

■ d. In paragraph (d), remove ''$3,536,422'' and add in its place ''$3,628,298''.

■ e. In paragraph (e), remove ''$17,683'' and add in its place ''$18,142''.

■ f. In paragraph (f), remove ''$383'' and add in its place ''$393'' and remove ''$152,461'' and add in its place ''$156,422''.

PART 273—ADMINISTRATION OF PROGRAM FRAUD CIVIL REMEDIES ACT

■ 3. The authority citation for part 273 continues to read as follows:

Authority: 31 U.S.C. Chapter 38; 39 U.S.C. 401.

■ 4. In § 273.3:

■ a. In paragraph (a)(1)(iv), remove ''$13,946'' and add in its place ''$14,308''.

■ b. In paragraph (b)(1)(ii), remove ''As adjusted under Public Law 114–74, the penalty is $13,946 per claim.''

■ c. In paragraph (b)(1)(iii), add at the end of the paragraph ''As adjusted under Public Law 114–74, the penalty is $14,308 for each such statement.''

RIN 2060–AW25

State Implementation Plan Submittal Deadlines and Implementation Requirements for Reclassified Nonattainment Areas Under the Ozone National Ambient Air Quality Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is finalizing deadlines for submission of state implementation plan (SIP) revisions and implementation of the relevant control requirements that will apply for nonattainment areas reclassified as Moderate, Serious, and Severe under the current and any future ozone National Ambient Air Quality Standards (NAAQS) as a result of either failing to attain the standard by the applicable classification attainment date or the EPA granting a voluntary reclassification request. This final rule articulates the implementation requirements and timeframes that will apply for all such areas once reclassified. The EPA is also finalizing regulatory revisions to codify its existing interpretation that following reclassification, a state is no longer required to submit SIP revisions addressing certain, but not all, requirements related to the prior classification level for an ozone nonattainment area.

DATES: This rule is effective on February 18, 2025.

ADDRESSES: The EPA established Docket ID No. EPA–HQ–OAR–2024–0333 for this action. All documents on the docket are listed at *https://www.regulations.gov.* Although listed in the docket index, some information may not be publicly available, *e.g.,* Confidential Business Information (CBI) or other information for which disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Docket materials are available electronically to the public through *http://www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: For information about this final rule, contact Erin Lowder, U.S. EPA, Office of Air Quality Planning and Standards, Air Quality Policy Division, C535–A Research Triangle Park, NC 27709; telephone number: (919) 541–5421; email address: *lowder.erin@epa.gov;* or Robert Lingard, U.S. EPA, Office of Air Quality Planning and Standards, Air Quality Policy Division, C539–01 Research Triangle Park, NC 27709; by telephone number: (919) 541–5272; email address: *lingard.robert@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document ''we,'' ''us,'' or ''our'' means the EPA.

I. General Information

A. Does this action apply to me?

Entities potentially affected directly by this final rule include state, local, and tribal governments and air pollution control agencies (''air agencies'') responsible for attainment and maintenance of the NAAQS. Entities potentially affected indirectly by this final rule as regulated sources include owners and operators of sources of emissions of volatile organic compounds (VOCs) and nitrogen oxides (NO_X) that contribute to ground-level ozone formation.

B. Where can I get a copy of this document and other related information?

In addition to being available in the docket, an electronic copy of this **Federal Register** document will be posted at *https://www.epa.gov/ground-level-ozone-pollution/ozone-implementation-regulatory-actions.*

II. Overview and Basis of Final Rule

A. Background and Summary of Final Rule

The EPA is finalizing in this action default SIP submittal and implementation deadlines for areas reclassified as Moderate, Serious, and Severe by operation of law pursuant to Clean Air Act (CAA or Act) section 181(b)(2) and voluntary reclassification requests pursuant to CAA section 181(b)(3). These default deadlines are applicable for all current and future ozone NAAQS.

States responsible for areas initially designated as nonattainment under an ozone NAAQS are required to prepare and submit SIP revisions by deadlines relative to the effective date of the rule establishing area designations and classifications, and the submission deadlines vary depending on the SIP element required (*e.g.,* the statute provides 3 or 4 years from initial nonattainment designation to submit SIPs for some requirements and 2 years for others). Areas initially designated as nonattainment are also required to implement reasonably available control technology (RACT) as expeditiously as practicable, but no later than January 1 of the 5th year after the effective date of designations.

The EPA recognizes that upon reclassification to a higher classification, especially when under CAA section 181(b)(2), a state can be faced with limited time to submit and implement required SIP revisions prior to the next attainment date. In addition, in some cases, the SIP submission and implementation deadlines associated with areas formerly classified at a particular level may have already passed at the time of reclassification, making it impossible to apply those original SIP submission and implementation deadlines to areas that are reclassified to that classification level upon failure to attain by a lower classification attainment date or by voluntary request. In light of these considerations, the EPA has historically adjusted deadlines pursuant to the general rulemaking authority granted under CAA section 301(a) to prescribe regulations as are necessary to carry out the functions of the Act, and the specific authority granted by CAA section 182(i).[1] The EPA has promulgated these adjustments of SIP submission and implementation deadlines that apply to reclassified areas with the intent to assure consistency amongst submissions, encourage meaningful reductions towards expeditious attainment of the NAAQS—mindful of newly applicable attainment dates—and promote planning flexibility where possible.

On October 4, 2024, through a notice of proposed rulemaking (NPRM), the EPA solicited public comment on proposed regulatory text codifying default SIP requirements, including submittal and implementation deadlines, that would apply to any nonattainment areas reclassified as Moderate, Serious, and Severe under the current and any future ozone NAAQS. Refer to the proposal for a description of the requirements that were proposed to apply to areas reclassified as Moderate, Serious or Severe.[2] The public comment period for the NPRM ran from October 4, 2024, to November 4, 2024. The EPA received a total of 16 comment submissions on the NPRM. The preamble to this final rule discusses significant comments received on the NPRM and how those comments were considered by the EPA.[3] The comments and the EPA's responses are organized in this final rule under subject titles, and in the same order as they appear in the NPRM. The Response to Comments document associated with this final rule contains our responses to comments that are general in nature or outside the scope of the final rule. The public comments received on the NPRM are posted in the docket at *https://www.regulations.gov* (Docket ID No. EPA–OAR–HQ–2024–0333).

We are finalizing default SIP requirements, including submittal and implementation deadlines, for all ozone nonattainment areas reclassified as Moderate, Serious, and Severe under the current and any future ozone NAAQS. This final rule articulates the implementation requirements and timeframes that will apply for all such areas once reclassified, either as a result of failing to attain the standard by the applicable classification attainment date pursuant to CAA section 181(b)(2) or the EPA granting a voluntary reclassification request pursuant to CAA section 181(b)(3). For any nonattainment areas reclassified as Moderate, Serious, and Severe under the ozone NAAQS, we are finalizing regulatory text codifying default SIP submission and implementation deadlines that will apply upon the effective date of reclassification. The EPA is also finalizing regulatory revisions codifying its existing interpretation that following reclassification, a state is no longer required to submit SIP revisions addressing certain, but not all, requirements related to the prior classification level for an ozone nonattainment area.

B. Statutory Authority for Final Rule

The statutory authority for the actions being finalized in this document is provided by the CAA, as amended (42 U.S.C. 7401 *et seq.*). Relevant portions of the CAA include, but are not necessarily limited to, CAA sections 172, 181, 182, and 301(a).

CAA section 107(d) provides that when the EPA establishes or revises a NAAQS, the agency must designate areas of the country as nonattainment, attainment, or unclassifiable based on whether an area is not meeting (or is contributing to air quality in a nearby area that is not meeting) the NAAQS,

[1] CAA section 182(i) specifically provides authority to the EPA to adjust applicable deadlines, other than attainment dates, for areas that are reclassified as a result of failure to attain under CAA section 182(b)(2), to the extent such adjustment is necessary or appropriate to assure consistency among the required submissions. The provision does not specifically reference areas that are voluntarily reclassified under CAA section 181(b)(3); the EPA is therefore adjusting deadlines for such areas under its general rulemaking authority in CAA section 301(a), consistent with CAA section 182(i).

[2] 89 FR 80833 (October 4, 2024).

[3] Each commenter discussed in this preamble is identified by the docket identification number associated with the comment submission. The Response to Comments (RTC) document in this docket for this final rule contains a table identifying each commenter and their associated docket identification number.

meeting the NAAQS, or cannot be classified as meeting or not meeting the NAAQS, respectively. Part D of title I of the CAA establishes the plan requirements that apply to all areas designated nonattainment. The purpose of these plan requirements is ensuring that these areas achieve attainment of the applicable NAAQS by the applicable area attainment date. Subpart 1 of part D sets out the plan requirements for nonattainment areas in general, and subpart 2 of part D of title I of the CAA governs the classification, state planning, and emissions control requirements for any areas designated as nonattainment for a revised primary ozone NAAQS. In particular, CAA section 181(a)(1) requires each area designated as nonattainment for a revised ozone NAAQS to be classified at the same time as the area is designated based on the extent of the ozone problem in the area (as determined based on the area's design value (DV)). Classifications for ozone nonattainment areas range from Marginal to Extreme. CAA section 172 (in subpart 1) covers nonattainment area plan provisions in general, and CAA section 182 (in subpart 2) provides the specific attainment planning and additional requirements that apply to each ozone nonattainment area based on its classification. Subparts 1 and 2 also establish the timeframes by which air agencies must submit and implement SIP revisions to satisfy the applicable attainment planning elements, and require that such plans ''shall provide for attainment of the NAAQS,'' [4] and that the ''primary standard attainment date for ozone shall be as expeditiously as practicable'' but not later than a maximum attainment date measured from the effective date of the area's designation.[5] The EPA has also promulgated regulations interpreting these requirements for the 2008 ozone NAAQS and the 2015 ozone NAAQS at 40 CFR part 51, subparts X and CC, respectively.

CAA section 182(i) governs the Act's requirements for areas reclassified by operation of law. Specifically, CAA section 182(i) states that areas that are reclassified due to failure to timely attain by the attainment date ''shall meet such requirements of subsections (b) through (d) of this section as may be applicable to the area as reclassified, according to the schedules prescribed in connection with such requirements, except that the Administrator may adjust any applicable deadlines (other than attainment dates) to the extent such adjustment is necessary or appropriate to assure consistency among the submissions.'' Subsections (b) through (d) of CAA section 182 cover the required SIP revisions for Moderate (182(b)), Serious (182(c)), and Severe (182(d)), and those requirements are generally cumulative. *See, e.g.,* CAA section 182(b) (requiring Moderate areas to make submissions relating to Marginal areas in addition to the revisions for the Moderate classification). The SIP revisions, control measures, and timing of such submissions and controls are intended to, among other things, ensure that areas will attain the NAAQS as expeditiously as practicable, but no later than the applicable attainment date. As discussed in more detail later in this document, most SIP requirements are not dependent on the attainment date itself, but certain SIP requirements are inherently tied to the applicable attainment date and therefore are no longer required for the lower classification after the area is reclassified.

As noted, CAA section 182(i) also provides the Administrator with authority to adjust applicable deadlines (other than attainment dates) for areas that are reclassified as a result of failure to attain the NAAQS under CAA section 182(b)(2), ''to the extent such adjustment is necessary or appropriate to assure consistency among the required submissions.'' In finalizing the adjustment of applicable deadlines for reclassified areas, the EPA considered the timeframes provided under the statute for the submission and implementation of requirements for initial area designations and classifications. Unsurprisingly, many of the nonattainment plan requirements in subparts 1 and 2 establish timing of the submission and implementation of controls such that those plans and controls will influence attainment of the NAAQS within the area by the attainment date.[6] The EPA's submission and implementation schedules for reclassified areas in this final rule are consistent with the overall schedule of the submission of substantive requirements that are associated with a classification, but adjusts those schedules to fit the abbreviated timeframe available to reclassified areas, in nearly all cases before the next applicable attainment date. In particular, the EPA's deadlines for implementation of controls and SIP submissions are informed by the need to ensure that the reductions resulting from the Act's requirements are consistently due in time to influence an area's attainment by the attainment date, to the extent the applicable controls are necessary to achieve attainment by that date.

While some areas are reclassified due to failure to attain by the attainment date, others may be reclassified as a result of a state's request. CAA section 181(b)(3) states that ''[t]he Administrator shall grant the request of any State to reclassify a nonattainment area in that State . . . to a higher classification.'' In some cases, states may seek voluntary reclassification to a higher classification early in the planning cycle, and in those cases, the existing SIP submittal and implementation deadlines for the higher classification would continue to apply. In other instances, states may request a voluntary reclassification under CAA section 181(b)(3) where the SIP submittal and implementation deadlines have already passed or will occur in the near future. CAA section 182(i) specifically provides authority to the EPA to adjust applicable deadlines, other than attainment dates, for areas that are reclassified as a result of a failure to attain under CAA section 181(b)(2), but section 182(i) does not specifically reference areas that are voluntarily reclassified under CAA section 181(b)(3). Per CAA section 301(a)(1), in the context of implementing subpart 2 planning requirements, the EPA has determined that regulations are necessary to prescribe the SIP submittal and implementation deadlines for such voluntarily reclassified areas, where the deadlines associated with the requested higher classification have already passed or will occur in the near future (*i.e.,* less than 18 months from the effective date of the reclassification).

The EPA's default deadlines being finalized in this document were also informed by the amount of time that the CAA prescribes when new implementation plans are required to be submitted under various circumstances. *See, e.g.,* CAA section 110(k)(5) (allowing the EPA to ''establish

[4] CAA section 172(c)(1).

[5] CAA section 181(a)(1).

[6] *See, e.g.,* CAA section 172(c)(6) (''Such plan provisions shall include enforceable emission limitations . . . as well as schedules and timetables for compliance, as may be necessary or appropriate to provide for attainment of such standard in such area by the applicable attainment date specified in this part.''); CAA section 182(b)(1)(A)(i) (''Such plan shall provide for such specific annual reductions in emissions of volatile organic compounds and oxides of nitrogen as necessary to attain the [NAAQS] of for ozone by the attainment date applicable under this chapter.''); CAA section 182(b)(2) (requiring control measures on major stationary sources of VOCs or sources of VOCs covered by a CTG to be implemented as expeditiously as practicable but no later than the beginning of the ozone season of the attainment year).

reasonable deadlines (not to exceed 18 months)'' after notification that a SIP is inadequate); CAA section 179(d) (subpart 1 requirement that within 1 year of a finding that a nonattainment area has failed to attain by its attainment date, States must submit a new SIP revision addressing nonattainment plan requirements). As discussed in more detail in response to comments received on the proposed rulemaking, in section III.A.3. of this preamble, these other CAA provisions are not directly applicable to the EPA's adjustment of deadlines for reclassified areas and do not explicitly constrain the Agency's exercise of discretion and judgment under CAA sections 182(i) and 301(a). CAA sections 110(k)(5) and 179(d) are informative, but not prescriptive, to the EPA's final action.

III. Final Actions

A. Default Deadlines for Reclassified Nonattainment Areas Under the Ozone NAAQS

1. Summary of Proposal

The EPA proposed to establish a general default SIP submittal deadline for areas reclassified as Moderate, Serious, or Severe as the sooner of 18 months from the effective date of the reclassification notice or January 1 of the new classification attainment year, except for SIP revisions addressing CAA section 185. For the CAA section 185 fee program SIP submittals required for areas that are reclassified as Severe, the EPA proposed a default deadline of the sooner of 36 months after the effective date of reclassification to Severe or January 1 of the Severe area attainment year. The EPA also proposed that the default SIP submission deadlines could be adjusted where such adjustment is appropriate or necessary, through future notice-and-comment rulemaking in specific EPA actions.

The EPA also proposed default deadlines for implementation of emissions control measures for areas reclassified as Moderate, Serious, or Severe. For reasonably available control technology (RACT), the EPA proposed a default control implementation deadline of the sooner of 18 months after the proposed SIP submittal deadline or the beginning of the relevant attainment year ozone season. For vehicle emissions inspection and maintenance (I/M), the EPA proposed an implementation deadline of no later than 4 years after the effective date of reclassification (unless needed for attainment by the attainment date or to demonstrate reasonable further progress (RFP)). Similar to the SIP submittal deadlines, the EPA proposed that these default control measure implementation deadlines could be adjusted where such adjustment is appropriate or necessary.

2. Final Rule

The EPA is finalizing regulatory text in line with the EPA's position as described in the proposal. The default SIP submittal deadline for all elements, except for the CAA section 185 fee program element, for areas reclassified as Moderate, Serious, or Severe will be the sooner of 18 months from the effective date of the reclassification or January 1 of the new classification attainment year. For the CAA section 185 fee program SIP submittals required for areas that are reclassified as Severe, the default deadline will be the sooner of 36 months after the effective date of reclassification to Severe or January 1 of the Severe area attainment year. The default control implementation deadline for RACT will be as expeditiously as practicable, but no later than the sooner of 18 months after the proposed SIP submittal deadline or the beginning of the relevant attainment year ozone season. For I/M not needed for attainment by the attainment date or to demonstrate RFP, the default implementation deadline will be as expeditiously as practicable, but no later than 4 years after the effective date of reclassification. The EPA retains the authority under the CAA to deviate from these default deadlines for all ozone NAAQS, consistent with the CAA through future notice-and-comment rulemaking.

3. Comments and Responses

a. Default Deadlines Generally

Comment: Three commenters (0030, 0031, 0036) express general support for the proposed default SIP submittal and implementation deadlines, noting that the rulemaking is an effective way to streamline deadlines for ozone nonattainment areas and ensure successful SIP submission and control implementation. One commenter (0036) specifically notes that the EPA should finalize the default deadlines as proposed for the following reasons: (1) these deadlines are legally supported and offer air agencies advanced notice as to when SIPs must be submitted and implemented; (2) it is critical that programs needed to address attainment are implemented no later than the start of the attainment year ozone season; (3) these proposed deadlines offer air agencies some implementation flexibility while acknowledging the constraints of statutorily fixed attainment dates; (4) this proposal would still allow the EPA to set different submittal and implementation deadlines on a case-by-case basis in the future, as necessary. The commenter believes that, at a minimum, the EPA should finalize these deadlines as they apply to any 2015 ozone NAAQS areas reclassified to Serious. It is critical for nonattainment areas needing to meet the 2015 ozone NAAQS Serious area attainment date of August 3, 2027, to understand the requirements sooner rather than later, given the short time available to plan for and implement those requirements.

Response: The EPA agrees with the commenters and is finalizing the deadlines as proposed with minor clarifications as discussed elsewhere in this document.

Comment: One commenter (0036) requests that, for any deadlines established by the EPA that are tied to the start of an area's ozone season, the EPA should clarify that the applicable ozone season is the ozone season as modified by an EPA-approved ozone season waiver. The EPA has proposed a general deadline for certain nonattainment area planning and control requirements as the sooner of 18 months after the attainment SIP due date or the start of the attainment year ozone season as listed in appendix D to 40 CFR part 58. However, 40 CFR part 58, appendix D, section 4.1(i) allows the EPA regional administrators to grant case-by-case deviations from the otherwise applicable ozone monitoring seasons listed in appendix D. Due to approved ozone season deviations, it is possible, therefore, for the effective ozone season in a state to differ from the dates listed in the appendix. To account for these situations, the EPA should clarify that any deadlines associated with the attainment year ozone season is the ozone season as promulgated by appendix D to 40 CFR part 58 or the ozone season as modified by an EPA-approved ozone season waiver.

Response: While the EPA acknowledges that ozone monitoring seasons may be modified with approved waiver requests under 40 CFR part 58, appendix D, section 4.1(i), we note that these waivers are specific to individual monitoring sites and do not otherwise modify the statewide ozone monitoring seasons listed in table D–3 to appendix D of part 58. While it is possible that the ozone monitoring season could be modified for an individual ozone nonattainment area, this would require an approved waiver for all monitoring sites within the area. We are not aware of any nonattainment areas meeting this condition under the 2008 or 2015 ozone NAAQS, and consider it unlikely to occur in the future. Thus, the EPA is

finalizing default control implementation deadlines that align with the attainment year ozone season as promulgated by appendix D to 40 CFR part 58, as proposed.

Comment: One commenter (0030) recommends that the EPA should not allow flexibility in the proposed default deadlines. The commenter notes that allowing deadline extensions reintroduces inconsistencies and undermines the predictability of default deadlines, which is contradictory to the goal of the proposed rule. Furthermore, allowing flexible deadlines can lead to delays in implementing control measures and allowing one state to extend deadlines can set a precedent for others. On the other hand, default deadlines create a sense of urgency and accountability, forcing states to prioritize the NAAQS.

Other commenters (0039, 0042) recommend that the EPA should maximize states' flexibility when implementing ozone NAAQS in reclassified areas. One commenter (0039) notes that retaining the option of adjusting timing of SIP submittals and implementation of controls on a case-by-case basis, while ensuring the timeline is consistent with meeting the NAAQS by the prescribed attainment date, helps to preserve the flexibility contemplated by the CAA and its air quality goals.

Another commenter (0043) requests that the EPA clarify when it is necessary or appropriate to adjust the default deadlines. The commenter notes that the EPA fails to define how it will determine when such an extension is ''necessary or appropriate'' and requests that the EPA outline the factors a state must show to obtain such an adjustment in deadlines. The commenter feels that while the EPA has the authority under the CAA to adopt modified timeframes, there is far too much ambiguity in the term ''as appropriate or necessary'' to ensure that this ''standard'' will be properly and uniformly applied if a state submits a request.

Response: We are finalizing as proposed the default deadlines for reclassified areas that acknowledge that such deadlines may be further adjusted via a notice-and-comment rulemaking per CAA section 182(i). However, we agree with those commenters who note that any flexibility to set deadlines under CAA section 182(i) is constrained by the Act's requirement that the EPA ensure areas expeditiously attain the NAAQS no later than the attainment date. As an initial matter, the EPA is finalizing as proposed the overall limitation of when an adjustment of deadlines is triggered. Where otherwise applicable deadlines that apply to areas initially designated nonattainment have not yet passed or are more than 18 months from the effective date of the reclassification, those deadlines will continue to apply to reclassified areas. Therefore, the default SIP submittal and implementation deadlines finalized in this action, and any adjustment thereof, only apply where those otherwise applicable deadlines have either passed or are less than 18 months in the future from the effective date of the reclassification.

We also note that the deadlines in the EPA's final action inherently already cover much of the available flexibility for reclassified areas. By structuring the default deadlines as ''the earlier of'' an outside timeframe (*e.g.,* 18 months) or a specific date (*e.g.,* January 1 of the attainment year), the EPA is maximizing available time for SIP development, adoption, and submission, while still ensuring that controls are adopted into the SIP and implemented in time to influence attainment of the NAAQS by the attainment date. We anticipate any remaining flexibility on adjustment of deadlines, which again must be adopted through rulemaking after public notice-and-comment, to be minimal. As noted in the proposal, the EPA has in certain historical instances established a SIP submission deadline for reclassified areas as the beginning of the ozone season attainment year (*e.g.,* in March, April, or May) rather than January 1 of the attainment year. We think such flexibility, for example, is permissible under the Act's requirements. But as we stated in the proposal, there are outer boundaries to establishing reasonable deadlines under CAA section 182(i); namely that we cannot establish SIP submission deadlines for a control subsequent to a date when those controls are required under the CAA to be implemented. 89 FR 80839 (October 4, 2024).

Given the limited nature of the anticipated further adjustment of deadlines, we decline at this time to adopt a strict standard or to enumerate factors that must be considered. Rather, we will issue any such adjustments to the finalized default deadlines in accordance with the statutory text of CAA section 182(i), which allows the Administrator to ''adjust any applicable deadlines (other than attainment dates) to the extent such adjustment is necessary or appropriate to assure consistency among the required submissions.'' Those adjustments will be subject to notice-and-comment rulemaking, providing the public the opportunity to provide input on the EPA's application of the statute in those specific circumstances.

Comment: Several commenters provided input regarding the proposal's establishment of 18 months from the effective date of reclassification as the outer bound of the proposed general default deadline for SIP submissions for reclassified areas. Three commenters (0032, 0040, 0042) assert that the EPA's rationale for relying on CAA section 110(k)(5) to establish the proposed default deadlines is flawed, and that 18 months does not provide sufficient time to develop revisions to a SIP for an area that has been reclassified. Two of these commenters (0032, 0042) note that the EPA uses the CAA section 110(k)(5) 18-month timeframe for states to submit SIP revisions as indication that Congress judged this timeframe to be sufficient for states to identify and develop control measures, draft revisions to address attainment plans and other requirements, and complete the required public notice process, adopt such revisions, and submit them to the EPA. These two commenters claim that this is not an acceptable comparison to starting a SIP from the beginning because CAA section 110(k)(5) only applies when an existing SIP requires a revision. These commenters further provide that, in relying on CAA section 110(k)(5) in the proposal, the EPA underestimates the efforts developing a new SIP takes. In addition, one of the commenters (0042) states that CAA section 110(a)(1) provides states with up to 3 years to submit SIP revisions after a NAAQS promulgation or revision and notes that the statute allows the EPA to prescribe a shorter timeframe for such submissions, but the EPA must consider all relevant factors and provide a rational justification for such shorter timeframe. The commenter believes that the EPA's argument that 18 months is the outer bound of reasonableness fails to consider the technical complexity and unique challenges in achieving attainment of the ozone NAAQS facing states, which the commenter claims is particularly true in the case of areas reclassified as Severe. Another commenter (0040) provides that the EPA has not cited to any authority where the EPA is required to abide by the deadlines found in CAA sections 110(k)(5) and 179(d) when setting deadlines for areas that have requested voluntary reclassification. The commenter notes that, in a prior action (*see,* 89 FR 51829, June 20, 2024), the EPA explicitly noted that CAA sections 110(k)(5) and 179(d) do not directly apply to areas that are voluntarily reclassified, rather they are just

informative of what a potentially appropriate deadline may be.

Another commenter (0045) claims that the CAA explicitly provides an 18-month period to states to submit their SIPs to the EPA and to implement those SIPs. This commenter asserts that Congress has provided an overt prescription of 18 months as an adequate standard for SIP development, submittal, and implementation, and that the EPA has distorted Congress' intention in the proposal by interpreting ''this clause'' as a mere recommendation. Other commenters (0037, 0043) assert that a default SIP submission deadline of less than 18 months is contrary to the Act, which they allege establishes that 18 months as the sufficient timeframe. These commenters assert that any amount of time less than 18 months is not reasonable, cannot be justified, and imposes unfair and arbitrary burdens on the state that are contrary to the Act.

Conversely, one commenter (0044) claims that it is unlawful and unnecessary for the EPA to provide states up to 18 months to make a SIP submittal following reclassification, and the EPA's reliance on CAA section 110(k)(5) is flawed. The commenter asserts that CAA section 179(d), which establishes a 12-month deadline for nonattainment SIP submittals for areas that fail to timely attain, is the more relevant CAA deadline. The commenter states that because nothing more specific supplants or overrides CAA section 179(d), that ''generally applicable nonattainment SIP requirement dictates the outer bound of the EPA's authority to extend SIP submittal deadlines following ozone reclassifications.'' The commenter points to the EPA's rule regarding reclassifications of areas designated Marginal under the 2015 ozone NAAQS to illustrate that the EPA has previously determined that 12 months provides adequate time for nonattainment SIP submittals.

Response: As noted in the proposal, neither CAA section 179(d) nor section 110(k)(5) are directly applicable to reclassified ozone areas, and the EPA therefore disagrees with all commenters that have suggested that either of these two provisions dictate how the EPA should adjust deadlines for reclassified areas under CAA section 182(i).

CAA section 179(d)(1) requires the state containing a nonattainment area to submit within 12 months of the CAA section 179(c) determination that the area failed to attain by its attainment date, a revision to their SIP that meets the requirements of CAA section 110 and CAA section 172 and any additional measures that the Administrator may reasonably prescribe. This final action establishes deadlines for states containing areas for which the EPA has made a determination that an area failed to attain under CAA section 181(b)(2), not CAA section 179(c). We therefore do not agree with commenters who allege that CAA section 179(d) ''dictates the outer bound of the EPA's authority'' to establish deadlines for the SIP revisions that are required pursuant to ozone determinations and reclassifications made under CAA section 181(b)(2). Rather, the authority to establish subpart 2 deadlines for areas reclassified pursuant to CAA section 181(b)(2) is explicitly granted in CAA section 182(i), which contains no reference to CAA section 179(d) as establishing an outside limit to the EPA's authority.

CAA section 110(k)(5) states that ''[w]henever the Administrator finds that the applicable implementation plan for any area is substantially inadequate to attain or maintain the relevant [NAAQS], to mitigate adequately the interstate pollutant transport described in section 7506a of . . . or section 7511c of [the CAA], or to otherwise comply with any requirement of this chapter, the Administrator shall require the State to revise the plan as necessary to correct such inadequacies.'' The CAA section 181(b)(2) determinations that ozone nonattainment areas have failed to attain by their attainment dates are not, unless otherwise specified, the findings of inadequacy that the EPA issues under CAA section 110(k)(5). Therefore the authority to establish deadlines for SIP revisions to address SIP inadequacies identified under CAA section 110(k)(5)—*i.e.,* the authority that provides that the EPA ''may establish reasonable deadlines (not to exceed 18 months after the date of such notice) for the submission of such plan revisions''—does not apply to the SIP revisions that are required as a result of the EPA's determinations under CAA section 181(b)(2) that ozone nonattainment areas have failed to attain or the EPA's reclassifications of areas voluntarily requested by air agencies under CAA section 181(b)(3). The commenter who asserted that the 18-month timeframe is an ''overt prescription'' that dictates what the EPA must finalize as a deadline in this rule is therefore plainly incorrect.

Rather, as the EPA stated in the proposal, the Agency's choice to refer to CAA sections 179(d) and 110(k)(5) were for the purpose of informing its exercise of discretion under CAA section 182(i). We do not agree with commenters who assert that Congress' establishment of deadlines in those two provisions somehow created substantive thresholds for the EPA's adjustment of deadlines under CAA section 182(i) such that the EPA must ''justify'' divergence from either. We continue to think it is a permissible exercise of the EPA's discretion under CAA section 182(i) to adjust deadlines to establish a default deadline of no more than 18 months, where the available time before the next attainment deadline permits. Commenters who assert that 18-months should be the minimum timeframe for reclassified areas to revise SIPs because revising a SIP per CAA section 110(k)(5) is not the same as ''starting a SIP from the beginning,'' ignore the fact that any reclassified areas subject to the deadlines in this rule will have already been designated nonattainment for at least 3 years, and for classifications beyond Marginal, many more than three. Because the subpart 2 requirements are cumulative and build on each classification, reclassified areas revising their SIPs to address the requirements of their new classification will also not be starting from scratch. States containing these areas will not only have been subject to the general infrastructure SIP requirements that all states are required to submit after promulgation of a NAAQS, but they will also have been subject to any lower subpart 2 classification requirements that have applied since areas were designated nonattainment. Moreover, the assertion that Congress would have intended states to be entitled to a minimum of 18 months to revise SIPs is contrary to the similar provisions the EPA alluded to in CAA sections 110(k)(5) and CAA section 179(d).[7] CAA section 110(k)(5) on its face defines a reasonable deadline as ''not to exceed 18 months.'' And CAA section 179(d), which as some commenters point out is the Act's default deadline for non-ozone areas that have failed to timely attain establishes an outer boundary of 12 months to revise a SIP. So, we do not agree that there is statutory support for commenters' contention that a deadline of anything less than 18 months is unreasonable, unworkable, or contrary to the Act, when the Act plainly identifies less than 18 months as the routine expectation for a SIP revision in similar situations.

[7] *See* also schedules for plan submissions for areas designated nonattainment for particulate matter in CAA section 189(a)(2)(B) (providing a maximum of 18 months to submit a nonattainment plan after initial designation to nonattainment) and section 189(b)(2) (providing a maximum of 18 months to submit a revised nonattainment plan for particulate matter areas reclassified as a result of failure to attain by the attainment date).

With respect to commenters who suggest the EPA should look to CAA section 110(a)(1)'s provision of up to 3 years to submit SIP revisions after a NAAQS promulgation or revision as guidance for its establishment of subpart 2 deadlines for reclassified areas, the EPA does not agree that this timeframe is appropriate. As an initial matter, CAA section 110(a)(1)'s provision of 3 years after the promulgation of a NAAQS is a generally applicable requirement that was not directed at nonattainment areas.[8] That deadline of 3 years, which in any case the Administrator is permitted to shorten,[9] is untethered from the more-specific statutory purpose of achieving attainment by an attainment deadline, and therefore does not have direct relevance to the issue facing reclassified areas, which are not only nonattainment areas, but specifically nonattainment areas that have either already failed to attain by an attainment date or whose states have recognized are unlikely to do so and have therefore requested to be reclassified.

The EPA also explained at proposal why the attainment deadlines and stringency of requirements under subpart 2 cannot accommodate a long deadline such as the 3 years requested by the commenter. *See* 89 FR 80838–39 (October 4, 2024). CAA section 181(a)(1) establishes the timeframes for maximum attainment deadlines under the Act, and those timeframes are based on the number of years from area designations. Marginal areas have no more than 3 years to attain, Moderate areas 6 years, Serious areas 9 years, Severe areas 15 years, and Extreme areas 20 years. For many of the reclassified areas to which this rule would apply, the time between the attainment deadlines is only 3 years to begin with. For example, a Marginal area that failed to attain by its maximum attainment deadline of August 3, 2021, and is reclassified to Moderate has only until August 3, 2024, to attain. And, as discussed in the proposal and elsewhere in this final action, per the CAA's explicit language in 181(b)(2), the determination of whether that Moderate area attains by August 3, 2024, will be based on the area's design value as of that date, *i.e.,* monitoring data from 2021, 2022, and 2023. Even if the EPA issued the finding that the area failed to attain immediately after the August 3, 2021, attainment date, providing the area 3 years to submit a new SIP for the reclassified Moderate requirements, or until August 3, 2024, would necessarily mean that any new emissions controls required by that SIP would have no impact on the area's likelihood of attaining by the next attainment date. We therefore think that for SIP deadlines associated with these reclassifications—Marginal to Moderate, and Moderate to Serious—the commenter's suggestion that the EPA look to section 110(a)'s provision of 3 years is plainly unworkable. Even for areas reclassified as Severe, which will likely have a longer interval between reclassification to Severe and the Severe area attainment date, the EPA explained at proposal why for these areas that have failed to timely attain multiple times, the 18-month deadline for SIP submissions would benefit such areas, including that control measures contributing to attainment could be implemented for multiple ozone seasons prior to the maximum attainment date. *See* 89 FR 80841(October 4, 2024). The commenter has not explained why the EPA's reasoning for maintaining a consistent deadline under CAA section 182(i) for these areas is unreasonable.

We are finalizing a default SIP submission deadline with an outer bound of 18 months from the effective date of reclassification. We are finalizing this more extended timeframe for submitting new area requirements triggered by reclassification (as opposed to 12 months, which was also contemplated in the proposal), because we acknowledge, as raised by many commenters, the general complexity in developing and implementing effective emission reductions for ozone nonattainment areas, and the opportunity a longer timeframe provides for more attainment demonstration plans that are likely to meet applicable CAA requirements.

b. SIP Submittal Deadline for All Elements, Except for the CAA Section 185 Fee Program Element

Comment: One commenter (0042) recommends that the EPA should not finalize its proposal for areas that request voluntary reclassification with existing submittal deadlines that are 18 months or more from the effective date of reclassification. The commenter notes that the EPA presumes that existing deadlines associated with a higher classification that have not passed will always be practicable for states to meet without adjustment, but provides no rationale in support of such assumption. The commenter believes that the EPA should neither prejudge, nor foreclose, longer submission deadlines.

Response: The EPA's authority to establish deadlines for areas that have voluntarily requested reclassification under CAA section 181(b)(3) is governed by CAA section 301(a). *See* 89 FR 80837 (October 4, 2024) n.12. That provision states, ''The Administrator is authorized to prescribe such regulations as are necessary to carry out his functions under this chapter.'' CAA section 301(a). In proposing to establish default deadlines for areas requesting a reclassification, the EPA elected to apply such deadlines only where an existing deadline has passed *or* there is less than 18 months until the deadline. The commenter is therefore incorrect that the EPA presumed that any deadline associated with a higher classification that had not passed would be practicable for a state to meet; on the contrary, the EPA proposed that if the existing deadline was less than 18 months away, that there was a presumption that it would be necessary to adjust the deadline. The EPA also explained its rationale in support of retaining existing deadlines that were 18 months or more from the reclassification. 89 FR 80837(October 4, 2024) . Where that period of time remained prior to an existing deadline, we stated that we did not find it ''necessary'' under CAA section 301(a) to prescribe a different deadline than what the statute had provided for initially designated and classified areas. To make that adjustment, we believed we needed to provide a reason for doing so—that it would assure expeditious attainment of the NAAQS or ensure that the required submissions would be implemented consistently with the Act's structure—and we did not find a reason to do so where a state still had 18 months before an existing deadline. We also pointed out that the CAA's establishment of 18 months as an outer boundary for a ''reasonable deadline'' for a SIP revision to address an inadequacy (per CAA section 110(k)(5)) indicates that Congress judged that this timeframe would be sufficient for states to identify and develop control measures, to draft revisions to address attainment plans and other requirements, complete the required

[8] *Cf.* Stephen D. Page, Guidance on Infrastructure State Implementation Plan (SIP) Elements under Clean Air Act Sections 110(a)(1) and 110(a)(2), September 13, 2013, at 52, available at *https://www.epa.gov/sites/default/files/2015-12/documents/guidance_on_infrastructure_sip_elements_multipollutant_final_sept_2013.pdf* (explaining that the submission deadline for infrastructure SIPs under CAA section 110(a) do not apply to nonattainment areas, because SIP submissions for designated nonattainment areas ''are subject to a different submission schedule than those for section 110 infrastructure elements'').

[9] CAA section 110(a)(1) (''Each State shall, after reasonable notice and public hearings, adopt and submit to the Administrator, within 3 years *(or such shorter period as the Administrator may prescribe)* after the promulgation of a national primary ambient air quality standard (or any revision thereof) . . .'') (emphasis added).

public notice process, adopt such revisions, and submit them to the EPA.

Comment: One commenter (0042) urges the EPA to set default SIP submittal deadlines no sooner than January 1 of the applicable attainment year for all classifications. The commenter asserts that, in the case of voluntary reclassifications, a SIP submittal deadline of 18 months may be sooner than those given to states that are reclassified as a result of failing to attain, and the EPA provides no rationale to support such earlier deadline. The commenter further provides that states requesting voluntary reclassification do so due to the need for additional time to develop and implement control measures, and reducing the possible additional time available ignores the statutory principle supporting the need for such additional time. In addition, the commenter urges the EPA to update the RACT SIP submittal deadline in the CFR to reflect a general default RACT submittal deadline for reclassified areas of no sooner than January 1 of the applicable attainment year, for all Moderate and higher classifications.

Similarly, another commenter (0039) recommends that the proposed default submission deadline not apply to areas for which a state has voluntarily sought reclassification. The commenter notes that states asking for voluntary reclassification of an area will, in many cases, have more time before the attainment date to plan and implement a SIP than will a state with an area that has been involuntarily reclassified upon failure to attain. The commenter claims that default submission deadlines should not unnecessarily constrain the planning timeline for areas that states have voluntarily reclassified because states that voluntarily reclassify an area often do so to afford them additional time to plan for SIPs and implement the associated control measures to bring the area into attainment.

Conversely, one commenter (0044) agrees with the EPA that under no circumstance should nonattainment SIP submittals be due later than January 1 of the applicable attainment year.

Response: We do not agree with the commenters' requests to establish SIP submittal deadlines as no sooner than January 1 of the attainment year or not to establish any default deadlines at all for areas that voluntarily request to be reclassified. With respect to the commenter who stated that establishing a deadline of 18 months for a voluntarily reclassified area might render that deadline sooner than the deadline that would apply to an area that failed to attain and was reclassified, the EPA agrees that this might be the practical outcome. However, we do not agree with commenter's insinuation that there would be anything unreasonable or inappropriate about this result. A state that early on recognizes that its area is unlikely to timely attain and seeks additional time for planning and development of control measures can time its request for voluntary reclassification in order to ensure that existing deadlines that are further out than 18 months apply *or* that the state can at least have the full default 18 months to develop its SIP. In most mandatory reclassifications due to failure to timely attain, those states and areas will not have the benefit of 18 months of SIP development time, because of how compressed the CAA's attainment deadlines are for the lower classifications. So while a voluntary reclassification area might have a ''sooner'' deadline than an area that is mandatorily reclassified, the area that requests reclassification early enough to obtain the 18 month default deadline (or early enough to have more than 18 months until an existing SIP deadline) will ultimately have *more time, i.e.,* more months, to develop its SIP than the area that is mandatorily classified and subject to the January 1 of the attainment year default deadline. The area that early requests voluntary reclassification will also have the benefit of having control measures in its SIP revisions in place for longer before the next attainment date, increasing the likelihood that it will expeditiously attain the NAAQS by that next date. Finally, commenter asserts that there is a ''statutory principle supporting the need for such additional time'' for states requesting voluntary reclassification, but the commenter does not identify any statutory provision to support its statement. The CAA does not provide any explicit authority for the EPA to establish new SIP submittal deadlines for areas that request to be voluntarily reclassified. The EPA has exercised its discretion under CAA section 301(a), in the context of implementing subpart 2 requirements, to establish such deadlines where it has determined that doing so is necessary, but we do not agree that there is any statutory support for commenter's request to provide states requesting voluntary reclassification the absolute latest possible deadline to submit a new SIP, with the minimum timeframe for emission reductions that would influence timely attainment.

The EPA acknowledges, and to some extent agrees, with the comments that states might request voluntary reclassifications due to the need for additional time to develop and implement control measures than would be afforded to them if they were to wait to be mandatorily reclassified under CAA section 181(b)(2) for failing to attain by the applicable attainment date. However, as noted in the proposal, for any states that seek a voluntary reclassification to a higher classification early in the planning cycle, the existing SIP submittal and implementation deadlines for the higher classification would apply, which could result in SIP submittal deadlines longer than 18 months. On the other hand, any states that seek a voluntary reclassification to a higher classification after the original deadlines have passed or are in the near future (*i.e.,* less than 18 months from the effective date of reclassification), they will be subject to a SIP submittal deadline of 18 months from the effective date of reclassification or January 1 of the applicable attainment year, whichever is sooner. In either case, the codification of these default deadlines will provide states with advance notice and certainty of the applicable SIP submittal and implementation deadlines for any reclassified ozone areas such that they can begin developing, adopting, submitting, and implementing their SIPs as soon as possible. We therefore do not agree with the commenter who suggested that areas requesting reclassification should not be subject to the default deadlines; establishing a default framework for when and how deadlines will apply to such areas will allow states with implementation obligations for these areas to plan with more certainty than under the existing regime, where states requesting reclassification have had to wait for the EPA's notice-and-comment rulemakings to establish final SIP submission deadlines for reclassified areas.

As to the comment about establishing a RACT SIP submittal deadline of no sooner than January 1 of the applicable attainment year for all Moderate and higher classifications, the commenter did not provide a rationale in support of this recommendation. Therefore, the EPA declines at this time to establish such a deadline for RACT SIP revisions.

Comment: One commenter (0044) asserts that the EPA's proposal to establish default SIP submittal deadlines based on the effective date of reclassification is legally and practically flawed for two reasons: (1) it is arbitrary and irrational for the EPA to key dates for nonattainment SIP deadlines to the effective date of reclassification rather than the attainment date; and (2) even if the SIP submittal deadline could

lawfully be tethered to the timing of final action on the reclassification, the EPA has not provided a justification for tethering the SIP submittal deadline to the effective date (rather than date of publication). The commenter recommends that the EPA key SIP submittal deadlines to attainment dates rather than the date by which the EPA acts on states' failure to timely attain because states know whether they have failed to attain and failed to qualify for an extension of the attainment date well before the area's attainment date, let alone the date by which the EPA finalizes a reclassification or makes it effective. This is because attainment is based on ozone season monitor data from the 3 years preceding the attainment year. Because states are on notice from before their attainment date that they are going to fail to attain and be reclassified, it is appropriate for the EPA to base SIP submittal deadlines on the expectations that states will begin working on these submittals prior to the EPA's finalization of reclassifications. This commenter points out that the EPA has historically failed to timely issue determinations that areas failed to attain (with the accompanying reclassifications), and suggests that adding 18 months to those late determinations would have resulted in SIP submittal deadlines many months after all relevant ozone seasons for the next applicable attainment date had already passed.

Another commenter (0045) expresses that the proposal does not enforce a uniform deadline for all nonattainment areas and asserts that the deadline for SIP submittal is relative to the effective date of the rule establishing area designations. The proposed relativity of the SIP submittal deadline is unclear, and the proposal does not include a fixed period for nonattainment areas to develop and submit SIPs. Congress' 18-month period has been nullified in this proposed rulemaking, as states will not be entitled to that time, yet there is no range of time provided in the proposal that reveals how long it should take for states to develop and submit SIPs.

Response: Commenters have presented other potential ways of structuring the adjustments in deadlines for reclassified areas, but we do not agree that the EPA's proposal to require new SIP submittals 18 months from the effective date of reclassification but in any case no later than January 1 of the attainment year is either barred by the CAA or arbitrary or irrational. CAA section 182(i) contains no indication that the grant of authority to the EPA to adjust deadlines in that provision is cabined by a requirement to ''key'' those deadlines to attainment dates, nor that the adjusted deadline must be 18 months, as one commenter suggests.

With respect to the commenter's argument that it is irrational for the EPA to base SIP submittal dates on the effective date of reclassification rather than attainment dates, it is not clear what alternative framework the commenter is advocating for. The commenter does not explain whether they believe that the Act requires the EPA's adjusted deadlines under CAA section 182(i) to be a certain number of months from the preceding attainment date or a certain number of months prior to the new attainment date. The suggestion of ''keying'' SIP submittal deadlines to attainment dates, with no explanation of how to do so, is odd given the commenter's invocation of CAA section 179(d) as a model, since CAA section 179(d) ''keys'' new SIP submittals to the EPA's determinations that areas failed to timely attain, rather than past or future attainment dates. Nor does the commenter's reference to the EPA's historically tardy determinations under CAA section 181(b)(2) explain how any alternative framework would result in more expeditious attainment of the NAAQS. The EPA acknowledges that its historical determinations under CAA section 181(b)(2) have not met the statutory deadline. The EPA proposed and is finalizing these default SIP deadlines that would apply to prospective determinations and reclassifications, in part to streamline the issuance of those mandatory attainment determinations by removing the need to conduct a new rulemaking to adjust applicable deadlines each time areas are reclassified as a result of those determinations. To the extent the commenter is advocating for a system of deadlines that encourage states to begin working early on attainment planning for the next attainment date, we believe the default deadlines in this final action accomplish this policy goal as effectively as the commenter's suggestion. The default schedule for reclassified areas creates certainty for states regarding when SIP submittals for higher classifications will be due, such that they can begin to plan for the next attainment date.

We also do not agree with the commenter's hypothetical application of the proposed default deadlines to the EPA's past tardy determinations. The commenter suggests that under the EPA's proposed default deadlines, the SIP submittal deadline would have been several ozone seasons *after* the relevant attainment date. But the EPA's proposal, and final action, explicitly accounts for the compressed timeframe that can occur by establishing SIP submittal deadlines that are the *earlier of* 18 months from the reclassification action or January 1 of the attainment year. In the example posited by commenter, therefore, the EPA's proposed default deadline framework would result in a SIP submittal deadline of January 1 of the attainment year, *not* 18 months from the reclassification action. In fact, as explained in the proposal, the EPA was cognizant that the default deadlines in this action are consistent with how it has historically established deadlines for reclassified areas, *i.e.,* by no later than the beginning of the attainment year ozone season to ensure that emission reductions would influence attainment by the attainment date. 89 FR 80839 (October 4, 2024) n.17, 18.

Finally, we do not agree that CAA section 179(d)'s establishment of a deadline triggered off of publication of a determination rather than the effective date of a determination mandates that the EPA's adjusted deadlines under CAA section 182(i) must also be structured in the same way, even if the EPA could structure its adjusted deadlines in that way. Nothing in CAA section 182(i) suggests that Congress intended to require the EPA's adjusted deadlines to be triggered off of the publication of its determination rather than the effective date of its determination. We also note that the practical difference between the commenter's suggestion and the EPA's action is small; the only time a difference would come into play is where there is sufficient time between the EPA's determination and the next attainment date such that the 18-month deadline (rather than January 1 of the attainment year) would apply. In such situations, the difference between commenter's suggested deadlines and the EPA's default deadlines would be 30 days, *i.e.,* 18 months from publication (commenter's suggestion) and 19 months (the EPA's deadlines). As noted in the proposal, the EPA has historically established deadlines for submission and implementation of plan revisions based on the effective date of a reclassification action, and we do not agree that the Agency is prohibited from doing so here. For example, in its implementation rule for the 2015 ozone NAAQS, the EPA finalized a default submission deadline for RACT SIP revisions of ''no later than 24 months after the *effective date of reclassification,* or by an alternative deadline established by the Administrator as part of the action reclassifying an area'' (emphasis

added).[10] The EPA has also, on numerous occasions, established SIP submittal and implementation deadlines triggered by the effective date of reclassification as part of actions granting voluntary reclassification requests [11] and actions making determinations of attainment by the attainment date.[12]

We also disagree that the other commenter's assertion that the CAA requires the EPA's adjusted deadlines under CAA section 182(i) (or section 301(a) for voluntarily reclassified areas) to be 18 months from the EPA's determination. Nothing in section 182(i) or any other provision of the CAA suggests that such deadlines must be at least 18 months. We also do not agree that the Act requires that there be a uniform or fixed amount of time for states to revise their SIPs after areas are reclassified, and the commenter has provided no statutory support for its contention.

The EPA is therefore finalizing its proposed schedule for states to revise their SIPs to address applicable subpart 2 requirements after ozone nonattainment areas are reclassified, which is the earlier of 18 months from the effective date of reclassification or January 1 of the applicable attainment year.

Comment: One commenter (0039) recommends that the proposed default submission deadlines align with the start of the ozone season to provide states with ozone seasons that start later in the year additional planning flexibility. Conversely, one commenter (0032) expresses that the EPA's proposed alternative deadline that aligns with the beginning of an area's attainment year ozone season is inadequate. The commenter notes that, historically, the EPA has provided states 3 years to submit attainment demonstration SIPs and modeling, and 2 years to submit RACT and reasonable available control measure (RACM) SIPs. The commenter requests that the states be afforded this amount of time to submit their SIPs.

Response: We are finalizing a default SIP submission deadline of 18 months from the effective date of reclassification or January 1 of the applicable attainment year, whichever is earlier. As discussed in the proposal, in some historical instances, the EPA has established the SIP submittal deadline for reclassified areas as the beginning of the attainment year ozone season, rather than January 1 of the attainment year. Given that the beginning of the attainment year ozone season is January 1 for many ozone nonattainment areas, we are setting the maximum default SIP submission deadline as no later than January 1 of the applicable attainment year ozone season to assure consistency among all SIP submissions for ozone nonattainment areas reclassified as Moderate, Serious, and Severe as well as to promote expeditious attainment of the ozone NAAQS.

The EPA declines the request to provide states 3 years to submit attainment demonstration SIPs and modeling, and 2 years to submit RACT/RACM SIPs. While it is true that the CAA provides submission deadlines that range between 2 and 4 years for some requirements, these schedules are based on the effective date of the rule establishing initial area designations. In the case of reclassifications, these initial SIP submittal and implementation timelines have already been established and, in many cases, are in the past or the near future (*i.e.,* less than 18 months away) at the time of reclassification. Because reclassified nonattainment areas typically face limited time to submit and implement required SIP revisions prior to the next attainment date, it is impossible to establish default deadlines after an attainment date that would afford states 2 or 3 years to submit their SIPs, if those SIPs are to have any impact on the area's ability to attain by the next attainment date.

c. SIP Submittal Deadline for the CAA Section 185 Fee Program Element

Comment: One commenter (0037) claims that the CAA does not support requiring CAA section 185 fee program SIP submittals any sooner than 36 months after the effective date of reclassification to Severe. In CAA section 185, the attainment year is expressly identified as the year in which the attainment date falls. When setting a deadline in relation to CAA section 185, it is not necessary or practical that there be a submittal more than a year before the attainment date. It is entirely reasonable that states could submit those programs later consistently with the implementation of any potential CAA section 185 fee program because the fee payment does not arise until the year after the year in which the attainment date falls.

One commenter (0044) urges the EPA to require states to develop CAA section 185 SIPs on the same timeline as contingency measures for failing to attain. The commenter believes that, just like attainment contingency measures, section 185 penalty fees only kick in after an area fails to timely attain. The EPA properly requires states to submit contingency measure SIPs in well under 3 years and provides no rational explanation for treating the two submissions differently. The commenter notes that a section 185 SIP should be fairly straightforward, requiring no assessment of control methodologies, and states therefore should be able to develop it quickly. The commenter further provides that, given the EPA's and the states' history of missing CAA deadlines, the 36 months or January 1 attainment year deadline would very likely mean that a final section 185 rule would not be in place until after an area failed to attain, which is inconsistent with the CAA.

Response: The EPA disagrees with the comment claiming that the CAA does not support a submission deadline any sooner than 36 months after the effective date of reclassification to Severe. We are finalizing the default deadline for CAA section 185 fee program element as proposed. The CAA and the EPA's implementing regulations for the 2008 and 2015 ozone NAAQS permit states with ozone nonattainment areas initially classified as Severe to submit a SIP revision that meets the requirements of CAA section 185 within 10 years of the effective date of an area's nonattainment designation. Given that nonattainment areas initially classified as Severe have 15 years to attain the NAAQS after the effective date of designation, states with nonattainment areas initially classified as Severe must submit their CAA section 185 fee program SIPs at least 5 years before the attainment date. Therefore, the EPA disagrees with the comment that it is inconsistent with the CAA for states to submit these SIPs more than a year before the attainment date, and given the Act's structure for initially designated and classified areas, which requires the section 185 fee SIP to be submitted at least 5 years before the attainment date, the commenters have failed to explain why the EPA's default deadline of 36 months after reclassification (but no later than January 1 of the attainment year), is not practical or necessary. As noted in the proposal, the EPA has established a 36-month SIP submission deadline for CAA

[10] 83 FR 62998, 63013 (December 6, 2018).

[11] *See, e.g.,* Clean Air Act Reclassification of the San Antonio, Dallas-Fort Worth, and Houston-Galveston-Brazoria Ozone Nonattainment Areas, TX, Final Rule, 89 FR 51829 (June 20, 2024).

[12] *See, e.g.,* Determinations of Attainment by the Attainment Date, Extensions of the Attainment Date, and Reclassification of Several Areas for the 2008 Ozone National Ambient Air Quality Standards, Finale Rule, 81 FR 26697 (May 4, 2016); Determinations of Attainment by the Attainment Date, Extensions of the Attainment Date, and Reclassification of Areas Classified as Marginal for the 2015 Ozone National Ambient Air Quality Standards, Final Rule, 87 FR 60897 (October 7, 2022).

section 185 SIPs in the past. Such an extended deadline is supported by the fact that the CAA specifically sets a later SIP submission deadline for the CAA section 185 fee program than for any other elements.[13] In addition, an extended deadline of 36 months after the effective date of reclassification will still typically be more than 18 months before the attainment date, which will still ensure that CAA section 185 fee programs for reclassified areas will be in place ahead of when they are needed. The EPA agrees that the development of the CAA section 185 program should not pose an undue burden on states. However, as noted in the proposal, we believe that providing states with more time for the CAA section 185 fee program SIP submission could allow more focused attention to be spent on other Severe SIP elements in the first 18 months following reclassification.

The EPA likewise disagrees with the comment suggesting that states must develop CAA section 185 SIPs on the same timeline as contingency measures for failing to attain. The commenter is incorrect in claiming that there is no difference between contingency measures and section 185 fee programs. While section 185 fee programs only kick in after an area fails to timely attain, contingency measures may be triggered as a result of an area's failure to meet RFP or a failure to attain by the attainment date. *See* CAA section 172(c)(9). The later deadline finalized in this action for the CAA section 185 SIP for areas reclassified to Severe mirrors the different, later deadline that CAA section 182(d)(3) provides for the section 185 fee program element for initially designated and classified Severe areas, which it does not do for any other element, including contingency measures.[14] To the degree that states want to take advantage of the administrative efficiency of adopting the CAA section 185 fee program element along with other required Severe area SIP elements, which was a benefit the EPA noted at proposal, they would still have the option to submit their CAA section 185 programs earlier.

In addition, we have previously stated that the EPA retains the ability to set an alternative deadline for CAA section 185 SIP submissions, if appropriate, for nonattainment areas reclassified as Severe and that such an adjustment ''could be appropriate in situations where the reclassification action occurs on a date that is unreasonably near to or past the 10-year deadline applicable to areas initially designated Severe or Extreme.'' [15] The appropriateness of such adjustment applies here. The deadlines that we are finalizing as part of this rule would be applicable to any reclassified Severe areas only if the original 10-year deadline established for nonattainment areas initially classified as Severe has passed or is less than 18 months away from the effective date of reclassification. In either case, a deadline of the earlier of 36 months after the effective date of reclassification or January 1 of the applicable attainment year is reasonable because either date would provide states with adequate time to develop and submit their SIP revisions, while still ensuring that approved CAA section 185 fee programs for reclassified areas will be in place ahead of when they are needed.

Regarding the comment about the EPA and states' history of missing CAA deadlines, we disagree that a default deadline of the earlier of 36 months or January 1 of the attainment year would mean that a state's CAA section 185 program would not be in place until after an area failed to attain. This is unlikely because the CAA provides up to 6 years between the Serious and Severe attainment dates, in contrast to the 3-year intervals for Marginal, Moderate, and Serious classifications. Even with the additional time allowed to develop section 185 fee programs, there will be sufficient time to get such programs in place before the Severe attainment date. Moreover, as noted in the proposal, the purpose of the default deadlines that would apply to reclassified Moderate, Serious, and Severe nonattainment areas is to provide advance notice and certainty to any states with nonattainment areas that may fail to attain an ozone NAAQS by the applicable attainment date as well as any nonattainment areas for which a state requests a voluntary reclassification to a higher classification. The default SIP submission and implementation deadlines that we are finalizing as part of this rule will help streamline the reclassification process and help the EPA, as well as states, meet CAA deadlines in the future. As acknowledged elsewhere in this document, the EPA has routinely adjusted SIP submission and implementation deadlines as part of actions granting voluntary reclassification requests and actions making determinations of attainment by the attainment date. This rule will remove that step from the reclassification process, thereby simplifying and advancing the nonattainment planning cycle for states and the EPA. We expect that the default deadlines finalized as part of this rule will promote efficiency, allowing states and the EPA to continue working towards CAA goals in a timely manner.

d. Deadline for RACT Implementation

Comment: Two commenters (0039, 0042)) recommend that the proposed default RACT implementation deadlines align with the start of the ozone season. One of these commenters (0039) states that this will provide states with ozone seasons that start later in the year additional implementation flexibility. The other commenter (0042) notes that this will allow affected entities to comply with RACT on a timeline that considers sources' ability to control emissions based on technological and economic feasibility, which are primary factors in determining RACT.

Conversely, one commenter (0032) expresses that the EPA's proposed alternative deadline that aligns with the beginning of an area's attainment year ozone season is inadequate. The commenter notes that the CAA requires states to implement RACT as expeditiously as practicable but no later than January 1 of the 5th year after the effective date of designation. The commenter requests that the states be afforded this amount of time to implement RACT.

Response: We are finalizing the default RACT implementation deadlines as proposed. While the EPA agrees with the comments asserting that aligning the RACT implementation deadline with the attainment year ozone season will provide states with additional implementation flexibility, the beginning of the attainment year ozone season will not always be the most expeditious deadline for RACT implementation. In those instances, it may be more expeditious for RACT to be implemented earlier (*i.e.,* EPA's proposed 18 months after the date in which RACT SIPs are due). As with other RACT implementation deadlines that the EPA has established for reclassified areas, an underlying consideration is that, consistent with the CAA, the RACT deadline should, where possible, provide at least one full ozone season in advance of an area's maximum attainment date for implemented controls to achieve emission reductions and positively influence an area's monitored design value.[16] In recognition of this, the EPA is finalizing a default RACT implementation deadline of as expeditiously as practicable but no later

[13] *See* CAA section 182(d)(3).

[14] *See* CAA section 182(d)(3).

[15] 83 FR 62998, 63009 (December 6, 2018).

[16] 89 FR 80833, 80839 (October 4, 2024).

than the earlier of 18 months from the SIP submittal deadline or the beginning of the attainment year ozone season.

The EPA disagrees with the comment that the EPA should establish a RACT implementation deadline that requires states to implement RACT as expeditiously as practicable but no later than January 1 of the 5th year after the effective date of designation.[17] In reclassification scenarios, it is often the case that the RACT implementation deadlines established for areas initially classified as Moderate, Serious, and Severe have already passed or will occur shortly after the effective date of reclassification, thereby making it impossible or unreasonable for a state to comply with the implementation schedules that initially classified areas must comply with. As such, the EPA is finalizing a default RACT implementation deadline that accommodates the need for additional time to develop SIPs and implement controls, while also establishing that deadline in time to influence attainment by the attainment date. In general, this deadline would provide states with a 36-month schedule for SIP submission and controls implementation for reclassified areas (*i.e.,* 18 months to develop and submit required SIP revisions and an additional 18 months to implement controls). Should fact-specific-circumstances arise that would necessitate a further adjustment of deadlines for a particular nonattainment area, the EPA is reserving the right to establish different implementation deadlines for reclassified areas in separate notice-and-comment rulemakings.

Comment: One commenter (0037) believes that there is no basis in the CAA for the EPA to require implementation of controls any sooner than 18 months after the proposed SIP submittal deadline in any given instance of reclassification. The commenter notes that the EPA provides no statutory basis for triggering obligations in advance of a full calendar ''attainment year'' before the year in which the attainment date falls. The commenter claims that the EPA risks upending a state's due consideration of controls and its overall discretion to implement controls to attain the NAAQS consistent with the state's overall economic and air quality priorities by rushing states to implement controls.

Another commenter (0044) believes that the EPA's proposal impermissibly fails to provide states adequate time to fully implement RACT, thereby undermining long-term attainment and maintenance of the ozone NAAQS. This commenter urges the EPA to clarify that, while interim RACT must be implemented as expeditiously as practicable, and no later than prior to the beginning of the applicable attainment year ozone season, RACT must nevertheless be fully implemented even if this necessitates that some components of RACT are implemented subsequent to that attainment year date. By requiring RACT to be fully implemented by deadlines that are already only slightly more than a year out, the commenter claims that the EPA unlawfully precludes states from implementing the full suite of controls that meet the definition of RACT.

Similarly, another commenter (0032) recommends that the EPA should extend the deadline for newly implemented RACT, just as it does for I/M programs. The commenter asserts that the EPA proposed to allow newly required Basic and Enhanced I/M programs to be fully implemented no later than 4 years after the effective date of reclassification, so long as states do not intend to rely upon emission reductions from their newly required Basic or Enhanced I/M program in attainment or RFP SIPs. The commenter believes that this more flexible timeframe should also extend to RACT because states will not be able to rely on RACT for their reclassified 2015 ozone Serious areas by including reductions from it by January 1, 2026, if they cannot practically implement by that date. The commenter asserts that states will be forced to exclude newly implemented RACT from modeling and RFP demonstrations when performing 2026 attainment year modeling and projections.

Response: We are finalizing the default RACT implementation deadline as proposed. As an initial matter, we disagree with the commenter's contention that EPA lacks a statutory basis for establishing a default deadline for RACT implementation in advance of the full calendar ''attainment year'' (*i.e.,* the year before the year in which the attainment date falls). CAA section 182(i) delegates to EPA the authority to ''adjust *any* applicable deadlines (other than attainment dates) to the extent such adjustment is necessary or appropriate to assure consistency among the required submissions'' (emphasis added). Commenter points to no limitation on the EPA's authority contained in the relevant statutory language to support the commenter's position. We also disagree with the commenter's contention that the RACT implementation deadline fails to provide states adequate time to fully implement RACT and unlawfully precludes states from implementing the full suite of controls that meet the definition of RACT. Nothing in this rule reopens or alters the EPA's longstanding definition of RACT [18] as the lowest emission limit that a particular source is capable of meeting by the application of control technology that is reasonably available considering technological and economic feasibility. The EPA always has, and will continue to, evaluate state RACT SIP submittals against this definition, and states remain obligated to implement RACT-level controls in nonattainment areas by any applicable implementation deadline. We acknowledge that timely RACT implementation may be difficult. However, we note that the implementation of controls is intended to help states expeditiously attain the NAAQS no later than the attainment date. If a state adopts new or additional control measures as RACT and relies on the emission reductions caused by those control measures to demonstrate RFP and/or attainment, those states must implement such RACT as expeditiously as practicable, but no later than a date by which the state can achieve emissions reductions that positively influence an area's monitored design value (*e.g.,* the earlier of 18 months from the applicable SIP due date or the beginning of the attainment year ozone season). Further, it is important to establish a generic RACT implementation deadline to provide advance notice and certainty to states so that they can undertake preparation and advanced planning, as appropriate, to timely implement any applicable RACT controls. Given these considerations, in establishing a generic default timeline

[17] To the extent that the commenter is suggesting that the EPA establish the default RACT implementation deadline as January 1 of the 5th year after reclassification, we decline to establish the generic default RACT deadline in this manner. For further discussion, *see* the EPA's response to commenter (0044) in this section seeking a default RACT implementation deadline beyond the attainment deadline.

[18] *See* State Implementation Plans; General Preamble for Proposed Rulemaking on Approval of Plan Revisions for Nonattainment Areas—Supplement (on Control Techniques Guidelines), Proposed Rule, 44 FR 53761, 53762 (September 17, 1979) (defining RACT as ''The lowest emission limitation that a particular source is capable of meeting by the applicable of control technology that is reasonably available consider technological and economic feasibility'') (citing memorandum from Roger Strelow to Regional Administrators, Regions I–X, Guidance for Determining Acceptability of SIP Regulations in Non-attainment Areas (December 9, 1976). *See also, Keystone-Conemaugh Projects* v. *EPA* (3rd Cir.) No. 22–3026, May 2, 2024 (noting that ''EPA has repeatedly interpreted [RACT] to mean 'the lowest emission limit that a particular source is capable of meeting by the application of control technology that is reasonably available consider technological and economic feasibility'').

in this rule, the EPA is setting the RACT implementation deadline to provide at least one full ozone season in advance of an area's maximum attainment date for implemented controls to achieve emission reductions and positively influence an area's monitored design value.[19] Delays in implementing RACT controls associated with reclassification would delay related air quality improvements and human health benefits for residents across reclassified areas. However, the regulations being finalized here preserve flexibility for the EPA in future individual actions to take a different approach to the RACT implementation deadline for specific areas following notice-and-comment rulemaking.

With respect to commenter's suggestion that the EPA establish a longer implementation horizon for RACT, including beyond the attainment date, we appreciate these comments and will take them under advisement for potential future notice and comment rulemaking. As noted in the proposal and in other portions of this final action, the EPA has long taken the position that the statutory requirement for states to assess and adopt RACT for sources in ozone nonattainment areas classified Moderate and higher is independent from the attainment demonstration for such areas and is not directly linked to the attainment date.[20] The EPA acknowledges that the Agency could, where appropriate, afford additional flexibility in the timeline for implementing RACT. Accordingly, as with the other default deadlines finalized as part of this rule, the EPA is reserving the right to establish a different RACT implementation deadline for reclassified areas in a separate notice-and-comment rulemaking, consistent with its authority under CAA section 182(i) and the CAA's requirements that areas expeditiously attain the NAAQS.

e. Deadline for I/M Implementation

Comment: One commenter (0030) recommends that the EPA should align the deadlines for I/M programs with the deadlines for control measure implementation, within 18 months of SIP submission or before the beginning of the ozone season. The commenter notes that this will ensure consistent submission deadlines, which support the goal of the proposed ruling. The commenter cited studies asserting that mobile sources are a major cause of health impacts because they are one of the largest contributors to ozone-forming emissions in the U.S., and therefore the commenter believes that I/M programs must be integrated in a timely manner to reduce negative health impacts. They also state that because the EPA emphasized that some SIPs rely on ozone emission reductions via I/M programs, it would be counterintuitive to allow I/M programs to be implemented up to 4 years after the effective date of reclassification despite other control measures being implemented within 18 months.

Response: We agree with the commenter that, for SIPs that rely on emission reductions from I/M programs, it would be counterintuitive to allow any new or revised I/M programs to be fully implemented beyond the beginning of the attaining ozone season. We explained at proposal that an I/M implementation deadline of as expeditiously as practicable, but no later than the beginning of the attainment year ozone season applies to reclassified areas relying on emission reductions from their newly required Basic or Enhanced I/M programs for attainment or RFP purposes:

> With respect to the default implementation deadlines for Basic and Enhanced I/M programs required as the result of a mandatory reclassification, states wishing to use emission reductions from their newly required I/M programs for the ozone NAAQS would need to have such programs fully established and start testing as expeditiously as practicable, but no later than the beginning of the applicable attainment year ozone season, consistent with the CAA principle (and logic) that measures that are needed to demonstrate attainment by the attainment date must be in place early enough to impact the air quality design value that will be used to determine whether the area attained by that date.[21]

The EPA's requirement in this action that states relying on I/M emission reductions in their attainment or RFP SIPs is consistent with the 2015 ozone implementation rule which requires all control measures in the attainment plan and demonstration to be implemented no later than the beginning of the attainment year ozone season.[22] However, for states that do not intend to rely upon emission reductions from their newly required Basic or Enhanced I/M programs in attainment or RFP SIPs, we maintain, as proposed, that it is reasonable to allow these newly required Basic or Enhanced I/M programs to be fully implemented no later than 4 years after the effective date of reclassification considering the numerous challenges and milestones necessary in establishing a new or revised I/M program. While mobile sources can be a significant source of ozone-forming emissions, I/M is not the only CAA program that generates emission reductions from mobile sources.

Comment: One commenter (0032) believes that the EPA is promulgating a rule that ensures new I/M programs could not be relied on for SIP planning because there is no practical way to start a new I/M program in the proposed timeframe of the beginning of the applicable attainment year ozone season.

Response: We respectfully note that the commenter offered no evidence to support a finding that there is no practical way to start a new I/M program in the proposed timeframe of the beginning of the applicable attainment year ozone season.

In practice, many areas where new Basic I/M or Enhanced I/M SIP revisions are required as the result of a reclassification for a new ozone NAAQS may already be operating I/M programs for a variety of reasons, including to satisfy requirements from designation as nonattainment and classification as Moderate or above under a prior ozone NAAQS. Such areas may use emissions reductions from these programs in attainment SIPs if they have also submitted a new I/M SIP revision for such NAAQS that meets the applicable Basic or Enhanced I/M requirements for the new classification.

For areas that might need to start a new I/M program or revise their existing program as the result of a reclassification, we realize that implementing a new or revised I/M program on an accelerated timeline may be difficult given the unique nature of I/M programs, and many challenges, tasks, and milestones that must be met. However, as discussed in other responses to comments in this document, an I/M implementation deadline, for reclassified areas intending to rely on emission reductions from their newly required Basic or Enhanced I/M program in attainment or RFP SIPs, as expeditiously as practicable but no later than the beginning of the attainment ozone season is consistent with the CAA and is pursuant to the existing implementing regulations for the 2008 and 2015 ozone NAAQS.

Comment: One commenter (0044) urges the EPA to require states to implement I/M programs as expeditiously as practicable, and no later than a timeline that can influence attainment year air quality. The commenter asserts that the EPA's proposal to allow I/M program implementation after the attainment

[19] 89 FR 80833, 80839 (October 4, 2024).

[20] 89 FR 80833, 80847 (October 4, 2024).

[21] 89 FR 80833, 80840 (October 4, 2024).

[22] 40 CFR 51.1308(d)

deadline is unlawful and arbitrary. First, the commenter asserts that the EPA's proposed timeline is contrary to the express indications of Congressional intent, which stipulates that pollution control requirements for nonattainment areas are to take effect before the attainment deadline. In the case of Enhanced I/M programs, Congress's intent was that they take effect on the same timeline as plans for their submission. Second, the commenter states that the EPA's reading undermines the limits on its discretion regarding subpart 2 of the Act, contrary to governing precedent. Third, the commenter claims that the EPA wrongly reads 40 CFR 51.373(d) as allowing implementation to take 4 years from the date of reclassification. Instead, the commenter notes that the regulation provides that the required Enhanced I/M Program ''shall be fully implemented no later than 4 years after the effective date of designation and classification under the 8-hour ozone standard.'' The commenter believes that ''the effective date of designation and classification'' is not the same as the effective date of ''reclassification'' because designation and reclassification did not occur on the same date. The commenter notes that the same is true for Basic I/M. Finally, the commenter asserts that it is inherently unreasonable, arbitrary, and capricious for the EPA to allow an implementation deadline for I/M Programs that is later than the relevant area attainment dates because mobile source emission reductions are so important for reducing ambient ozone levels.

Response: We agree with the commenter that the I/M rule at 40 CFR 51.373(d) regarding the I/M implementation deadline is directly applicable only for areas initially designated and classified. But we do not agree that the EPA cannot consider that regulatory timeframe in adjusting schedules for implementation of newly applicable I/M programs following an area reclassification under CAA sections 182(i) and 301(a). While as a general matter, we agree that expeditious attainment of the NAAQS is best served by implementing control measures in advance of area attainment dates, and ideally in time to influence attainment by the attainment date, we are also cognizant that many, if not all, of the components of an I/M program permit consideration of feasibility within a given time frame. A list of these items that must be included in an I/M SIP is enumerated in 40 CFR 51.372(a). For example, establishment of the inspection network, the request for proposal process to select an inspection hardware/software service provider, inspector recruitment, training and licensing, changes to the state's vehicle registration process, as well as public notification, outreach and education are components to an I/M program that, based on the experience of the EPA and implementing states, we know to be time-intensive and difficult to feasibly accomplish on an accelerated timeframe.

As discussed in the proposal, CAA section 182(i) specifically provides authority to the EPA to adjust applicable deadlines (other than attainment dates) for areas that are reclassified as a result of failure to attain under CAA section 182(b)(2), to the extent such adjustment is necessary or appropriate to assure consistency among the required submissions. The EPA is establishing the same default I/M implementation deadline under its general rulemaking authority in CAA section 301(a), in the context of implementing subpart 2 planning requirements, for voluntarily reclassified areas. We acknowledge that for initially designated and classified areas, all of the submission and implementation deadlines in subpart 2 occur prior to the attainment deadline, and that ideally, states would similarly address all newly applicable subpart 2 requirements for reclassified areas in time to influence an area's air quality by the next attainment date. This is in large part why all of the other default deadlines for reclassified ozone areas in this action have been adjusted consistent with that approach.

We do not agree, however, that CAA section 182(i), or subpart 2 generally, explicitly prohibits the establishment of any deadline beyond the attainment date. Section 182(i) states that states containing reclassified areas shall meet the applicable subpart 2 requirements ''according to the schedules prescribed in connection with such requirements'' in granting the EPA discretion to adjust such deadlines other than the attainment date. The EPA's establishment of the default I/M implementation deadline of no later than 4 years after the effective date of reclassification is a limited exercise of its discretion under CAA section 182(i) to provide one deadline that extends beyond the attainment date. The Agency has a longstanding position that the statutory requirement for states to implement I/M in ozone nonattainment areas classified Moderate and higher generally exists independently from the attainment planning requirements for such areas, and specifically the attainment date.[23] We note that the same commenter taking issue with the EPA's post-attainment date implementation deadline for I/M elsewhere argues that the EPA should establish RACT implementation deadlines ''even if compliance timeframes extend beyond the applicable attainment year ozone season.'' [24]

We agree that given section 182(i)'s requirement that the EPA assure consistency among required submissions and the Act's overall emphasis that areas expeditiously attain the NAAQS, it would be unlawful for the EPA to adjust all submission and implementation deadlines for reclassified areas such that those deadlines fell after the newly applicable attainment dates. But the EPA's action here with respect to providing this limited I/M implementation extension for states that do not intend to rely upon emission reductions from their newly required Basic or Enhanced I/M program in attainment or RFP SIPs is not inconsistent with the Act's goal of attainment of the NAAQS; under the EPA's default deadlines, areas must still submit and implement all control measures necessary to achieve attainment by the attainment date no later than the beginning of the attainment year ozone season. The EPA's final action providing this limited extended I/M implementation deadline for certain reclassified ozone nonattainment areas also aligns with past practice for both mandatorily and voluntarily reclassified areas.[25] We do not dispute that mobile source emission reductions are an important component to reducing ambient ozone levels, but we do not agree with commenter that this fact necessarily renders the final default I/M implementation deadline of 4 years from the effective date of reclassification (for areas not relying on I/M reductions in attainment or RFP SIPs) to be ''inherently unreasonable, arbitrary, and capricious.'' Emissions from mobile sources can be and are addressed under the CAA in other programs besides I/M, including Federal

[25] *See, e.g.,* 87 FR 60897 (October 7, 2022) (establishing Basic I/M implementation deadlines for areas reclassified from Marginal to Moderate for the 2015 ozone NAAQS); 89 FR 51829 (June 20, 2024) (establishing Enhanced I/M implementation deadlines for certain Texas areas that were voluntarily reclassified from Moderate to Serious for the 2015 ozone NAAQS).

vehicle standards, and states may also seek ways to reduce and mitigate mobile source emissions consistent with the CAA in their plans to attain by the attainment date.

B. Status of Certain Requirements of Former Classification

1. Summary of Proposal

The EPA proposed regulations to codify its existing interpretation that, following reclassification to Moderate, Serious, or Severe, certain ozone SIP requirements for the lower, former classification will still be required. Specifically, the EPA restated its interpretation that ozone nonattainment area planning requirements continue to apply following a change in an area's classification level, except where the EPA has specifically determined that the planning requirement is no longer applicable. A state is no longer required to submit SIP revisions addressing the following requirements related to the prior classification level for an ozone nonattainment area: (1) for areas that are mandatorily or voluntarily reclassified, a demonstration of attainment by the prior attainment date; (2) for areas that are mandatorily or voluntarily reclassified, a RACM analysis tied to the prior attainment date; and (3) for areas that are voluntarily reclassified before the lower classification's attainment date, contingency measures specifically related to the area's failure to attain by the attainment date associated with the prior classification.

2. Final Rule

The EPA is finalizing regulatory text in line with the Agency's position as described in the proposal. Planning requirements applicable to the lower, former classification for the ozone NAAQS [26] continue to be legally required following a change in an area's classification level, except: (1) the attainment demonstration; (2) RACM; and (3) for areas that are voluntarily reclassified, contingency measures to address failure to attain by the attainment date associated with the prior classification. Although the EPA's position is unchanged from proposal, the final regulatory text reflects minor changes from the proposed text. This includes minor changes based on comments, as noted in the next section. We also made minor revisions to the definitions of ''former attainment date'' and ''former classification'' to ensure clarity that former attainment dates and former classifications include every classification assigned to an area before it was reclassified, not exclusively the immediately preceding classification (*e.g.,* an area initially classified as Moderate that was subsequently reclassified as Serious and then reclassified again as Severe remains legally responsible for requirements associated with Moderate and Serious classifications as outlined in this rule, in addition to the new requirements for Severe).

3. Comments and Responses

Comment: Two commenters (0036, 0044) generally support the EPA's policy on leftover SIP requirements. One of these commenters (0036) believes that the EPA should finalize its proposal that most SIP requirements from an area's prior classification continue to apply following reclassification because these requirements include important, CAA-required ozone reduction programs, as well as requirements to demonstrate progress towards attainment. The commenter emphasizes that it is critical that states implement these programs in general, and implement these programs on the original deadlines. The other commenter (0044) states that the CAA does not allow reclassification to result in the elimination of unmet SIP requirements that do not depend on the superseded attainment deadline. The commenter believes that the proposed approach is not only reasonable, but compelled by the CAA's carefully constructed statutory scheme, which does not contemplate fewer or different requirements for reclassified areas when compared to those areas initially given that same classification when designated nonattainment. To arrive at the contrary conclusion would allow areas struggling with ozone air pollution to skirt otherwise applicable SIP requirements, which would be unreconcilable with Congress's discretion-limiting intent in enacting the ozone nonattainment requirements.

Response: The EPA agrees with the commenters and is finalizing the deadlines as proposed with minor clarifications as discussed elsewhere in this document.

Comment: Two commenters (0041, 0042) assert that the EPA's policy on leftover SIP requirements is neither required nor supported by statutory provisions that the EPA cites in the proposed rule, and requests that the EPA reconsider the policy. One commenter (0041) states that the CAA section 182(i) does not give the EPA ''gap filling'' authority to specify what requirements apply to an area that has been reclassified, and legislative history indicates that Congress did not intend for requirements of a former classification to apply upon reclassification to a higher classification. The commenter notes that the reference to submissions under CAA sections 182(b) and (c) contained in sections 182(c) and (d) make no mention of the situation where an area has been reclassified (and thus should not be interpreted to apply to a reclassification). Instead, the commenter believes that these provisions should be read to mean classifications under subpart 2 impose cumulative, but not what the commenter considers duplicative, requirements.

Two commenters (0037, 0042) believe that all requirements associated with an area's prior classification are superseded, and no longer due, with more stringent requirements upon reclassification to a higher classification. One of these commenters (0042) claims that requiring a state to submit and have the EPA act on superseded prior classification elements would make no logical or practical sense.

One commenter (0041) believes that the EPA's proposed distinction between SIP elements ''inherently tied'' to an attainment date and SIP elements ''independent'' of an attainment date is not supported by statute. The commenter asserts that, under the EPA's proposed statutory interpretation, requirements that are tied to attainment dates are transitory requirements that are supplanted if an area is reclassified to a higher level of nonattainment, while other requirements in CAA section 182 are effectively immutable and are not affected by a change in an area's classification. The commenter disagrees with the EPA's assertion that the SIP elements associated with an area's CAA section 181 classification are ''generally cumulative from Marginal up to Extreme'' and that ''[t]he requirement to submit such elements remains applicable, and the submittal and implementation deadlines are unchanged.'' The commenter believes that a more rational reading of the statute is that reclassification resets not only the timing of attainment, but also which SIP requirements are applicable and the timeframe under which states and localities must satisfy such requirements. The commenter states that it is difficult to reconcile why an area initially designated as being in Moderate nonattainment (and then reclassified to Serious nonattainment) would be treated differently from an area initially designated as being in Serious nonattainment. The commenter

[26] The EPA's interpretation regarding leftover SIP requirements when an area has been reclassified is specific to the ozone NAAQS, and as codified in this final rule, does not apply to any other NAAQS.

further asserts that a straightforward reading of the provision indicates that: (1) reclassified areas are only subject to requirements that apply to them under a new classification (*i.e.,* requirements ''as may be applicable to the area as reclassified''); and (2) the EPA's Administrator's authority pursuant to CAA section 182(i) is constrained to adjusting ''applicable *deadlines*'' and not ''applicable *requirements.*'' The commenter asserts that this reading gives full force to the increasing burden placed on reclassified areas pursuant to subpart 2 but CAA section 182(i) does not grant the EPA Administrator authority to continue to impose requirements that have been superseded by more stringent requirements. Additionally, the commenter asserts that because reclassification (voluntary or mandatory) effectively increases the obligations imposed on states and localities to meet RFP and provide sufficient contingency measures, the commenter believes that the EPA's interpretation adds to that burden without appreciable benefit.

One commenter (0037) urges the EPA to conclude that a voluntary reclassification moots all leftover SIP elements from the previous classification and any sanctions, where applicable, associated with the failure to submit those elements for approval. The commenter believes that the CAA recognizes that a state can exercise its authority to request a voluntary reclassification, and therefore moot all elements required under the prior classification, because the purpose of the reclassification is to permit a state to take the most effective steps to achieve the NAAQS on the timeline laid out for the new classification. In addition, the commenter states that, even if the EPA holds to its position that these previous classification elements are not tied to the attainment deadline, the elements remain tied to the classification itself and change alongside it. The commenter further believes it is arbitrary and contrary to the CAA to impose requirements, or to continue potential sanctions where applicable, when the purported elements are associated with deadlines that have already passed for an area that will be subject to a more stringent classification. In addition, the commenter asserts that continuing to require elements associated with a lower classification places unnecessary burdens upon states and diverts resources from focusing on the requirements of the more stringent classification.

Response: The EPA disagrees with the commenters. The EPA's interpretation of the CAA regarding what SIP requirements remain due following reclassification is supported by and consistent with the relevant statutory provisions and is the best interpretation of relevant CAA provisions. Subsections (b) through (d) of CAA section 182 cover the required SIP revisions for Moderate (182(b)), Serious (182(c)), and Severe (182(d)), and those requirements are generally cumulative. *See, e.g.,* CAA section 182(b) (requiring Moderate areas to make submissions relating to Marginal areas in addition to the revisions for the Moderate classification). In CAA section 182(i), the statutory language also indicates that the requirements of each classification are cumulative. The EPA interprets the provision ''shall meet such requirements of subsections (b) through (d) . . . as may be applicable to the area reclassified'' to require from a state any and all of the elements contained in subsections (b) through (d) that apply, not only the elements from subsection (b) or subsection (c) or subsection (d) in isolation. The state must meet requirements of subsections (b) through (d)—*i.e.,* subsection b, subsection c, *and* subsection d rather than subsection b, subsection c, *or* subsection d—that apply, and elements of multiple classifications may be applicable at any given point to the area being reclassified.

The commenter's characterization of the EPA's action as using section 182(i) to justify adjusting the requirements is misplaced. The EPA is not adjusting the requirements but rather providing clarity on what the requirements are. The EPA interprets the CAA such that when areas are reclassified to a higher classification of nonattainment, those areas will become responsible for the statutory duties imposed under the new classification and *remain* responsible for the statutory duties imposed under any prior, lower classifications that it was classified as, except for such elements inherently tied to the attainment date of the lower classification. The EPA disagrees with the commenter's claim that the CAA does not support the EPA's distinction between SIP elements ''inherently tied'' to an attainment date and SIP elements ''independent'' of an attainment date. To give sensible construction to the terms of the CAA and avoid an absurd result, common sense necessitates an exception for elements inherently tied to a date in the past. There is only one attainment date that applies at any given time to a singular nonattainment area for a given ozone NAAQS, and the CAA does not require attainment demonstrations for attainment dates that are not applicable to the area. Because the former classification's attainment date is no longer applicable, it is therefore no longer relevant—and is indeed, impossible—for the area to demonstrate attainment with respect to it. As explained in more detail in a later comment response, this same logic applies to RACM. Similarly, there are no requirements to have contingency measures tied to the prior classification's attainment date in a situation where an area can never be found to have failed to attain by a no longer relevant attainment date.

The EPA does not entirely disagree with the commenter's characterization of the elements inherently tied to the attainment date as ''transitory'' but notes that these elements are time-bound in a manner unique to them in that once the attainment date has passed, those elements are, as a matter of logic, impossible to fulfill. No reading of the statute can alter the practical reality that once the attainment date has passed and an area has failed to attain, no steps can be taken by any State nor the EPA to demonstrate that an area would meet a factual scenario that did not come to pass, *i.e.,* attain the ozone NAAQS by the attainment date, when the area failed to attain by the attainment date. Similarly, after the attainment date, a RACM analysis can only be a null set of measures because it is impossible to advance an area's attainment by a year earlier than the attainment date after that attainment date has come and gone. With respect to voluntary reclassification, there is no purpose in requiring a state to have contingency measures that could never be triggered by failure to attain by an attainment date that no longer exists.[27] Similarly, a state cannot plan around meeting an attainment date that has been superseded. It is this characteristic—that these elements are impossible to fulfill—that distinguishes leftover SIP elements from the otherwise cumulative set of requirements enshrined in the CAA's ozone nonattainment classifications. It is an exception to avoid an absurd result.

[27] The term ''triggered'' for CMs refers to the EPA having made a final determination that requires implementation of the CMs, such as a final determination that a nonattainment area has failed to meet RFP or has failed to attain a NAAQS by the applicable attainment date. *See* Joseph Goffman, Guidance on the Preparation of State Implementation Plan Provisions that Address the Nonattainment Area Contingency Measure Requirements for Ozone and Particulate Matter, December 3, 2024, at 3, available at *https://www.epa.gov/air-quality-implementation-plans/final-contingency-measures-guidance.*

The EPA disagrees with the commenters that believe that all requirements associated with an area's prior classification should be superseded, or that by establishing the system of increasing levels of nonattainment (*i.e.,* classifications), Congress meant for the elements of the lower classification to become obsolete upon reclassification. The CAA provides no language suggesting that reclassification nullifies the statutory obligations imposed on a state under its former classification, and commenters provide no explanation of their perceived statutory argument to support a claim that the elements of the former classification are no longer required. Another commenter's assertion that because the EPA would not require elements of classifications lower than the area's initial classification (*e.g.,* for an area initially classified as Serious, requiring elements of Moderate areas), this means that continuing to require elements of lower classifications after an area has been reclassified imposes duplicative rather than cumulative requirements is similarly flawed. The mere fact that an area is reclassified is not a sufficient basis to determine that a CAA requirement imposed on the area under a prior classification no longer applies, and there is no language in the statute which necessitates or supports such a position. The commenters have not identified how the statutory language supports a finding that elements of each classification are additive yet not preserved upon reclassification.

Reclassification to a higher classification is not designed to halt progress toward achieving the NAAQS under the prior classification, but rather the opposite. Reclassification is an acknowledgment that an area needs additional time to attain the NAAQS, and that it needs to implement more stringent requirements and controls in order to attain. The cumulative requirements of each classification Congress specified in the Act—though necessitating a dedication of time and resources by states—provide an intentional, measurable pathway to attainment. The purpose of establishing plan requirements for ozone nonattainment areas is to establish and obligate states to take the most effective steps to achieve the NAAQS, which include all of those steps outlined in the sections of part D applicable to ozone from the least stringent associated with an area's initial classification to the most stringent associated with its highest classification.

While one commenter claims that requiring a state to submit and have the EPA act on superseded prior classification elements would make no logical or practical sense, to the contrary, Congress's choice to identify steps guiding states toward achieving attainment logically reflects its intent for each step to count. This is especially true given the requirement that EPA must reclassify areas with persistent nonattainment problems, with each successive reclassification resulting in requirements to adopt more rigorous SIP elements. Under the commenter's proposed reading, reclassification resets not only the timing of attainment and the degree of stringency of SIPs required, but also interrupts and resets—or in some cases cancels—the implementation of the requirements of the area's former classification. The steps Congress enshrined in the CAA as appropriate to achieve attainment would be obsolete, and areas that are further from achieving the CAA goal of maintaining ambient ozone levels below the threshold requisite to protect public health and welfare (*i.e.,* the primary and secondary ozone NAAQS) would be able to skip, or at least delay, steps that Congress directed them to take. For example, the Serious area RFP provisions begin in the 6th year after designation and establish milestones for 3 percent annual reductions for each 3-year period thereafter.[28] But the Moderate area RFP provisions require 15 percent reductions over the first 6 years after designation. Commenters' logic would make the Moderate requirement obsolete upon reclassification to Serious, resulting in an interpretation that 15% reductions were no longer required for the first 6 years the area was nonattainment; only the Serious area requirement would apply starting in the 7th year. Clearly this is not consistent with the language or purpose of the RFP provisions of the statute, which are intended to avoid this kind of delay in reductions, and this example demonstrates how the commenter's assertion that such submissions are ''duplicative'' is flawed.

Under such a reading, it would be fully possible for a state to elude duties imposed on them under the CAA by waiting until the attainment date has nearly passed, requesting a voluntary reclassification, and waiting for the next attainment date to request an additional voluntary reclassification without planning for, making, or demonstrating meaningful progress toward achieving the NAAQS. Congress could not have intended to render the NAAQS and the steps it prescribed to achieve the NAAQS wholly irrelevant with such a loophole. Introducing new requirements (*e.g.,* requiring an area initially classified as Serious to submit elements of Moderate areas) is clearly distinct from enforcing *existing* requirements. The CAA does not relieve a state of its existing requirements upon reclassification, with the exception of elements inherently tied to the attainment date for the reasons described elsewhere in this document. Under the EPA's interpretation, states remain obligated to address requirements associated with the lower classifications to which they were assigned even following voluntary reclassification, with the limited exception of elements directly tied to the attainment date. The consequences associated with failure to submit elements of a lower classification remain unchanged upon voluntary reclassification with the limited exception of elements directly tied to the attainment date.

With respect to the comment asserting that a voluntary reclassification should moot any sanctions associated with a failure to submit the SIP elements associated with a prior classification, the EPA agrees only with respect to the leftover SIP elements that we consider to no longer be required submissions after a voluntary or mandatory reclassification, as applicable. Pursuant to CAA section 179(a)(1)–(2), a finding of failure to submit or final disapproval of a SIP submission required under part D, title I of the CAA triggers the imposition of sanctions under CAA section 179(b). *See also* 40 CFR 52.31. Similarly, a finding of failure to submit or final disapproval of a required SIP submission triggers the EPA's obligation to promulgate a Federal Implementation Plan (FIP) under CAA section 110(c)(1)(B).

Accordingly, if there is currently a FIP and sanctions clock associated with either (1) a finding of failure to submit, or (2) a prior disapproval of, a SIP submission that is no longer considered to be a required submission due to an intervening reclassification, the EPA would consider the reclassification action to moot the FIP and sanctions clocks. Similarly, if the EPA disapproves a SIP submission that is no longer considered to be a required submission due to an intervening reclassification, there would be no FIP or sanctions clock associated with a disapproval of that submission.[29] In

[28] CAA section 182(c)(2)(B) for Serious area provisions and section 182(b)(1) for Moderate provisions.

[29] CAA section 110(k) requires that the EPA act on any submitted SIP revision, regardless of

Continued

other words, because a state no longer has a legal obligation to submit the relevant SIP submissions that are no longer required for the reasons described in this action, the failure to submit or disapproval of such submissions would not trigger imposition of mandatory sanctions under CAA section 179 and 40 CFR 52.31, or a FIP obligation under CAA section 110(c).

Comment: Four commenters (0036, 0037, 0038, 0039) agree with the EPA's position on leftover SIP requirements regarding attainment demonstrations and RACM. However, one commenter (0044) disagrees with the EPA's position on leftover SIP requirements related to RACM and urges the EPA not to finalize its proposal that reclassification of a nonattainment area, whether by mandatory or voluntary reclassification, excuses the states' obligation to adopt all RACM for the previous classification. The commenter claims that the plain language of the CAA establishes RACM as a mandatory part of each nonattainment plan, and expressly requires that each nonattainment plan implement all RACM. In addition, the commenter states that the text and structure of the CAA make clear that the requirement to adopt all RACM is in addition to, and independent from, the requirement to provide for timely attainment and there is nothing in the text of the statute suggesting that the requirement to impose all RACM is predicated on any particular attainment deadline. Furthermore, to the extent that the EPA believes that RACM is tied to an attainment date, or only relevant if such measures can ''advance attainment date by 1 year,'' the commenter believes that the EPA has failed to articulate how that rationale is consistent with the plain text of the CAA. Finally, the commenter claims that the CAA's paramount purpose of protecting public health supports ensuring that reclassified areas continue to implement all RACM as expeditiously as practicable, regardless of any new attainment deadline. Excusing reclassified areas from the CAA's RACM requirements creates a perverse incentive for states to simply request reclassification or run out the attainment deadline clock, thereby avoiding any need to evaluate or impose reasonable pollution reduction measures.

Response: The EPA agrees with the commenter that the states are required to submit SIPs addressing RACM for all nonattainment areas classified as Moderate and above. *See* 40 CFR 51.1312(c). The EPA further agrees that this requirement to adopt all RACM is in addition to, and independent from, the requirement to submit a SIP revision that includes a demonstration that the SIP will, as revised, provide for attainment of the NAAQS by the applicable attainment date. However, the EPA disagrees that there is nothing connecting the CAA requirement to impose all RACM with the relevant attainment deadline.

As explained in the proposal, in a RACM demonstration a state must show whether there are any reasonably available control measures that could advance an area's attainment date beyond the control strategy associated with the accompanying attainment demonstration. *See, e.g.,* 80 FR 12264, 12282 (March 6, 2015) (interpreting the Clean Air Act ''to require a demonstration that the state has adopted all reasonable measures . . . to meet RFP requirements and to demonstrate attainment as expeditiously as practicable and thus that no additional measures that are reasonable available will advance the attainment date of contribute to RFP for the area.''). The Clean Air Act mandates that SIP submittals must ''provide for the implementation of all reasonably available control measures as expeditiously as practicable . . . and shall provide for attainment of the [NAAQS].'' 42 U.S.C. 7502(c)(1). Given this inextricable link to advancing attainment beyond what is included in the attainment demonstrations, the EPA's rules require that states address RACM as part of their SIP submittal demonstrating that the nonattainment area at issue will attain the ozone NAAQS no later than the applicable attainment date. *See, e.g.,* 40 CFR 51.1312(c) (requiring that ''the state shall submit with the attainment demonstration a SIP revision demonstrating that it has adopted all RACM necessary to demonstrate attainment as expeditiously as practicable and to meet any RFP requirements.''). While the commenter possibly disagrees with the EPA's longstanding interpretation of RACM, in the current rulemaking, the EPA is not reopening its ozone implementation regulations or the interpretations of nonattainment planning requirements contained therein.

The EPA's interpretation of RACM is longstanding. For example, the EPA wrote in the General Preamble, dated April 16, 1992, that states should consider all candidate measures that are potentially available for the particular nonattainment area that could advance the attainment date by 1 year.[30] The EPA similarly explained in a 1979 rule the interpretation that RACM should be implemented ''insofar as necessary to assure reasonable further progress and attainment by the required date.'' [31]

Thus, when this interpretation of RACM is applied to the situation at issue in this rule, the outcomes are clear. For a mandatory reclassification, where the former classification's attainment date is in the past and was not met, it is not possible or meaningful for a state or the EPA to consider whether control measures could advance attainment earlier than the already past attainment date. Similarly, following voluntary reclassification of an area, there is no sense in assessing whether a former attainment date could have been met sooner. In either case, if a state were to submit a RACM analysis for the lower classification, that analysis would be tailored to the already-passed or former attainment deadline for the lower classification. When a state submits a SIP containing an attainment demonstration and RACM prior to the attainment date, the Act is clear about what the EPA must do. The EPA must determine whether the state has demonstrated that the area will attain by the *applicable* attainment date and whether the state has adopted all reasonable measures that would advance that date. However, this is not appropriate when the applicable attainment date has already come and gone—or has moved following a voluntary reclassification.

In this scenario, states are not avoiding being held accountable under the Clean Air Act. For areas that fail to attain and are mandatorily reclassified, states must implement contingency measures for failure to attain by the attainment date. In all situations, while reclassification allows states time to submit a RACM analysis with respect to the new classification level, the new classification imposes added, more stringent obligations on the state.

If the EPA were to require a state to submit a RACM analysis for the former classification after an area is reclassified, it would lead to one of two illogical outcomes. One possibility is that the state would be required to submit a RACM analysis pertaining to an already passed or already supplanted attainment date. Such submissions

whether the submission is considered to be required to meet applicable CAA requirements. A state may withdraw a SIP submission, and then EPA considers there to be no remaining obligation to act on that SIP revision.

[30] State Implementation Plans; General Preamble for the Implementation of Title I of the Clean Air Act Amendments of 1990, Proposed Rule, 57 FR 13507 (April 16, 1992).

[31] 44 FR 20372, 20375 (April 4, 1979).

would not support the goals of the Act and would have no beneficial impact on nonattainment areas' success in attaining by or advancing the no longer relevant attainment date. As already discussed, a RACM analysis is intended to determine what measures can reasonably be adopted to advance the attainment date, but such an attainment date cannot be advanced once an area has failed to attain, or the attainment date no longer exists. The alternative is that a RACM analysis is required for the former classification level, but it would be an analysis conducted with respect to the new applicable attainment date for the higher classification level. This would then require the state to submit a RACM analysis with its lower classification plan, due by a lower classification deadline, but analyzing a brand-new attainment date. States are already required to submit a RACM analysis with respect to the higher classification level and for the higher classification attainment date. The EPA has declined to follow either of these approaches.

Accordingly, following reclassification, a RACM analysis must be done with respect to the new and currently applicable attainment date. The CAA does not require RACM analysis for attainment dates associated with any classification that is not currently applicable to the area.

Comment: One commenter (0042) disagrees with the EPA's assertion that RACT requirements are not tied to the attainment date and therefore are not mooted for a prior classification upon reclassification. The commenter contends that because CAA section 182(b)(2)(A) requires that states implement RACT for all categories of sources covered by a CTG document issued before the date of attainment, there is a clear statutory connection of the RACT review to the attainment date. The commenter argues that because the EPA sets RACT implementation deadlines based on the attainment year, this evidences that that EPA bases RACT requirements on the attainment deadline. The commenter also notes that because higher classification levels have a lower major source threshold for RACT, RACT SIP submissions for a higher classification level would necessarily cover RACT determinations for a lower classification level, thus eliminating the need for a submittal to address RACT for the prior classification.

Response: The EPA disagrees with the commenter. For reclassified areas, the RACT requirements at 40 CFR 51.1312(a)(2)(ii) and (3)(ii) obligate a state to conduct a new, individual RACT analysis for the new classification and implement any identified measures as necessary. Reclassification does not relieve the RACT obligation for the prior classification. The CAA requirement in section 182(b)(2) to implement RACT for specified categories of sources is implemented and assessed based on whether the RACT rules are implementing what is economically and technologically feasible and is not based on reductions needed to attain by the attainment deadline.

We disagree that CAA section 182(b)(2)(A) provides a statutory connection of RACT to the attainment date. Section 182(b)(2)(A) states that RACT requirements apply to each category of sources covered by a CTG document issued by the Administrator between November 15, 1990, ''and the date of attainment.'' This language establishes the sources covered by the RACT analysis that a Moderate or higher area must consider. The reference to the attainment date sets an outer bound of what CTGs will define the categories of sources that fall under the Moderate RACT requirement. It does not tie the substantive RACT analysis, and the level of controls required by the application of RACT, to the attainment date.

We also disagree that the stationary source threshold set by the classification level evidences a connection between RACT and the attainment date. Just as 182(b)(2)(A) defines the categories of sources that need to be covered by a RACT assessment so too the stationary source threshold associated with a classification level defines the sources that need to be covered in the state's RACT assessment. The stationary source threshold establishes the emission levels where RACT would be applied but does not define the substance or content of the RACT analysis. For example, for an area reclassified from Moderate to Serious, the prior Moderate classification would require evaluation of any sources in any category subject to a CTG and any non-CTG sources with a potential to emit more than 100 tons per year (tpy) of NO_X or VOCs. The commenter is correct in that the new Serious classification means the state needs to address RACT for additional sources, namely non-CTG sources with a potential to emit 50 tpy or more of NO_X. But the commenter has failed to explain why this fact—that RACT must be analyzed and implemented for additional smaller sources—should, upon reclassification, result in delayed implementation of RACT for the original set of sources covered by the prior classification. If the EPA were to adopt such an interpretation, it would delay the implementation of RACT for several years in an area that is not attaining the ozone NAAQS, as each successive reclassification halts the submission and/or implementation of (as well as EPA action on) the RACT requirement as it applied to the former classification. This would lead to a delay in required controls in areas that have air quality that exceeds levels protective of human health and the environment, particularly when compared to an area that was initially classified at the higher level, where technologically and economically feasible controls would be implemented by January 1 of the 5th year following designation as nonattainment. The commenter has not identified any language in the CAA that necessitates or even supports such a result.

Finally, the commenters point to the fact that the EPA has based RACT implementation deadlines on the timing required to influence attainment of the standard by the attainment date. This is a correct characterization of several, although not all, of the EPA's actions, but also does not inevitably lead to an interpretation that required SIP revisions and RACT implementation should be delayed by several years following an area's reclassification. As explained, the substantive analysis required in a RACT SIP, namely the implementation of controls that are economically and technologically feasible, does not hinge on what level of control is needed for the area's attainment by the attainment date (this is in contrast to, *e.g.,* the analysis required for RACM). A state's RACT SIP should be based on, and the EPA will review it for, imposition of reasonably available control technology, even if that imposition of reasonably available control technology is not nearly enough to get the area to attainment by the attainment date. At the same time, it is also true that implementation of RACT-level control should aid, at least in part, in getting an area to attainment by the attainment date. Accordingly, both of these things can be true: that RACT is not a requirement directly tied to the attainment date while also requiring that RACT SIPs be due and RACT-level controls be implemented in time to matter for the overall efforts to get an area to attainment.

Comment: Three commenters (0037, 0038, 0039) agree with the EPA's position on leftover SIP requirements regarding contingency measures for failure to attain. However, two commenters (0030, 0044) disagree with the EPA's proposal insofar as it does not require contingency measures for areas that request and receive voluntary

reclassification before the attainment date. They recommend that the EPA continue to require contingency measures for failure to attain for such areas, to be implemented when states request voluntary reclassifications prior to the attainment date.

One commenter (0030) notes that requiring contingency measures for failure to attain for states that request a voluntary reclassification will ensure they are not just extending their SIP submission and implementation deadlines, and claims that allowing such an extension would promote prolonged periods of nonattainment for ozone and negatively impact health. This commenter also cautions that the EPA should be wary of states who request a reclassification as a means to delay such deadlines.

Similarly, another commenter (0044) disagrees with the EPA's position that, for voluntary reclassifications that are effective before the attainment date, contingency measures are not triggered because the EPA is not required to make a determination of whether the area attained by its attainment date. The commenter asserts that the plain language of the CAA provides that contingency measures are triggered if the area did not attain by the attainment date, not whether the EPA made a finding of such, and the fact that the EPA will not make such a determination is not relevant. The commenter further asserts that, if a voluntary reclassification becomes effective after the attainment date, the EPA similarly has no authority to remove the requirement to have contingency measures because CAA sections 172(c)(9) and 182(c)(9) do not say that contingency measures are triggered after the EPA ''determines'' or ''makes a finding.'' The commenter also notes that if the reclassification occurs before but becomes effective after the attainment date, then the previous classification attainment date applied on the effective date because the area was still that previous classification on that date. The commenter recommends, at a minimum, that the EPA should change the word ''occurred'' to ''became effective'' in proposed 40 CFR 51.1403(a)(3) because before the rule granting the voluntary bump up request becomes effective, the applicable attainment date is for the lower classification. Lastly, the commenter takes issue with the EPA's statement in the proposal that ''Requiring a state to submit or the EPA to act on such SIP elements would make no logical or practical sense,'' and asserts that it is both practical and logical for the EPA to require contingency measures to be implemented following a reclassification.

On the contrary, one commenter (0036) urges the EPA to not require contingency measures for failure to attain as a leftover SIP requirement after any reclassification (voluntary or mandatory). The commenter believes that the EPA's justification for requiring these contingency measures only for mandatory reclassifications by attempting to draw a clear distinction between two scenarios is flawed. Under the first scenario, a state requests a voluntary reclassification after its attainment year, but before its attainment date, and, under the second scenario, a state waits to have the EPA take its mandatory action to reclassify the area, which occurs after the attainment date has passed. The commenter asserts that while these situations would appear to be very different, they are both based on the recognition that the area's attainment year ozone data shows that the area will not attain the NAAQS, which is publicly available in uncertified form no later than December 31 of the attainment year and, in certified form, by May 1 of the following year. Both the uncertified and certified data are available well in advance of the attainment dates of the 2015 ozone NAAQS. In other words, both situations are predicated on the recognition that the area will fail to attain the standard by its attainment date, whether this failure to attain has been officially acknowledged by the EPA through a mandatory finding, or not. The commenter claims that, because these situations are identical in practice, there should be no difference in how the contingency measure requirement for failure to attain applies.

Response: The EPA disagrees with the commenters' contention that the Agency should implement contingency measures for failure to attain when states request voluntary reclassifications before the prior classification's attainment date has passed. Considering the case where the state requests, and the EPA approves, a reclassification before the attainment date, there would be no trigger for the implementation of contingency measures where there is no finding of failure to attain because the applicable attainment date has changed. When the area is voluntarily reclassified before the attainment date, the EPA is no longer required to—and cannot—determine whether the area attained by the former attainment date. Once voluntarily reclassified, the area no longer has the attainment date associated with the prior classification level. Because the EPA would not—and could not—issue a finding of failure to attain with respect to the prior, no longer existing attainment date, requiring a state to submit contingency measures for failure to attain by the attainment date associated with the previous classification would no longer have logical significance because such measures could not be triggered. With respect to the commenter's related assertion that contingency measures should be triggered by something other than the EPA's issuance of a finding of failure to attain (*i.e.,* by the voluntary reclassification itself), this is contrary to the EPA's longstanding interpretation of what triggers the requirement to implement contingency measures.[32] As articulated in a number of finding of failure to attain actions, the EPA's determination of a failure to attain triggers the requirement to implement contingency measures.[33] States have full discretion to request voluntary reclassification for any reason, and there is no statutory basis to require states to implement contingency measures based on such a request. However, reclassification does trigger the requirement to submit new contingency measures for failure to attain by the new classification's attainment date. States are also still required to have contingency measures available to implement in the event the area fails to meet any RFP milestone associated with the current of former classification.

The EPA agrees with the commenter that the effective date of the voluntary reclassification is governing with respect to whether contingency measures for failure to attain by the previous attainment date are required. If a voluntary reclassification becomes effective after the attainment date associated with the lower classification level, the EPA would be obligated to determine whether the nonattainment area attained by the attainment date associated with the prior, lower classification. In such a case, states would be required to implement contingency measures for any failure to attain by the attainment date associated with the prior classification level. Therefore, the EPA has adjusted the regulations finalized herein as commenter suggested, specifically changing the word ''occurred'' to ''became effective'' in 40 CFR 51.1403(a)(3).

[32] *See* Joseph Goffman, Guidance on the Preparation of State Implementation Plan Provisions that Address the Nonattainment Area Contingency Measure Requirements for Ozone and Particulate Matter, December 3, 2024, at 3, available at *https://www.epa.gov/air-quality-implementation-plans/final-contingency-measures-guidance.*

[33] *See, e.g.,* 87 FR 21825, 21828 (April 13, 2022).

The EPA disagrees with the commenter that contingency measures for failure to attain should not be required for an area that has, in fact, failed to attain the ozone NAAQS by the applicable attainment date and was subsequently reclassified. Such a result is directly contrary to the plain text of the CAA. CAA section 172(c)(9) requires that states provide, as part of their SIPs, ''implementation of specific measures to be undertaken if the area fails . . . to attain the [primary NAAQS] by the attainment date.'' [34] It is the direct effect of the CAA text that states are required to have contingency measures that can be implemented when an area has failed to attain the NAAQS by the area's attainment date. It would be directly contrary to the statute to determine that such contingency measures are not required for an area that meets this exact fact pattern. The EPA disagrees with the commenter's premise that voluntary and mandatory reclassifications should be treated the same because they are situated the same factually, specifically that voluntary reclassifications are always requested based on data that shows an area will not attain by the applicable attainment date. Voluntary reclassifications are provided as a result of a state's request, and the state does not need to request reclassification based on data indicating an area may not attain by the applicable attainment date; it has full discretion to request such a reclassification at any time, including in advance of such data becoming available. CAA section 181(b)(3) states that ''[t]he Administrator shall grant the request of any State to reclassify a nonattainment area in that State . . . to a higher classification.'' The grant of voluntary reclassification is not premised upon any particular reasoning as to why the state may request reclassification, and there is no statutory basis for the EPA to require contingency measures tied to a failure to attain to be triggered based on such a request.

Comment: One commenter (0041) recommends that the EPA treat RFP requirements and contingency measures for RFP in the same manner as RACM and contingency measures related to a failure to attain because such requirements are related to attainment of the ozone NAAQS. The commenter states that RFP reductions are linked to attainment because CAA section 182(b)(1)(A) refers to RFP reductions as being ''necessary to attain the national primary ambient air quality standard.'' In addition, the commenter asserts that it would be entirely illogical for Congress to impose requirements on states through subpart 2 that were not, in some fashion, directly or indirectly linked to attainment of air quality standards.

Response: The EPA agrees that all subpart 2 requirements are related, in some fashion, to areas' attainment of the ozone NAAQS, but commenters' assertions that RFP is directly tied to the attainment date is inconsistent with the RFP requirements established in the implementing regulations for the 2015 ozone NAAQS and the EPA's longstanding interpretation of RFP for ozone nonattainment areas.

Moderate and higher ozone nonattainment areas are subject to the general requirements for nonattainment plans in CAA subpart 1 and the specific requirements for ozone areas in CAA subpart 2, including the requirements related to RFP and attainment. While CAA section 172(c)(2) of subpart 1 states only that nonattainment plans ''shall require reasonable further progress,'' CAA sections 182(b)(1) and 182(c)(2)(B) of subpart 2 provide specific percent reduction targets for ozone nonattainment areas to meet the RFP requirement. Put another way, subpart 2 defines RFP for ozone nonattainment areas by specifying the incremental amount of emissions reduction required by set dates for those areas.[35] Importantly, these set dates are independent of the attainment date. Although the dates may coincide with a particular attainment date, the required RFP date(s) associated with the lower classification do not change when the attainment date changes as a result of reclassification. For Moderate ozone nonattainment areas, CAA section 182(b)(1) defines RFP by setting a specific 15 percent VOC reduction requirement over the first 6 years of the plan. The 15 percent reduction is ''the base program that all Moderate and above areas must meet. This base program is necessary to ensure actual progress toward attainment in the face of uncertainties inherent with SIP planning.'' [36]

For Serious or higher ozone nonattainment areas, the 15 percent requirement still applies, and section 182(c)(2)(B) further requires specific annual percent reductions for the period following the first 6-year period and allows averaging over a 3-year period. With respect to the 1-hour ozone NAAQS, the EPA has stated that, by meeting the specific percent reduction requirements in CAA sections 182(b)(1) and 182(c)(2)(B), the state will also satisfy the general RFP requirements of section 172(c)(2) for the time period discussed.[37]

The EPA has adapted the RFP requirements under the CAA to implement the three 8-hour ozone NAAQS that have been promulgated since the 1990 CAA Amendments. In the ''Phase 2'' SIP Requirements Rule for the 1997 Ozone NAAQS (Phase 2 rule), *see* 70 FR 71612 (November 29, 2005), the EPA adapted the RFP requirements of CAA sections 172(c)(2) and 182(b)(1) to require plans to provide for the minimum required percent reductions and, for certain Moderate areas, to provide for the reductions as necessary for attainment.[38]

In 2015, the EPA replaced the regulations promulgated through the Phase 2 rule with the regulations promulgated through the 2008 Ozone SIP Requirements Rule (SRR). 80 FR 12264 (March 6, 2015).[39] In the 2008 Ozone SRR, the EPA established RFP requirements for the 2008 ozone NAAQS that are similar, in most respects, to those in the Phase 2 rule for the 1997 ozone NAAQS but that do not define RFP for certain Moderate areas in terms of the reductions needed for attainment by the attainment date.[40] More explicitly, in the 2008 Ozone SRR, the EPA defined RFP as meaning both the ''emissions reductions required under CAA section 172(c)(2) which the EPA interprets to be an average 3 percent per year emissions reductions of either VOC or NO_X and CAA sections 182(c)(2)(B) and (c)(2)(C) and the 15 percent reductions over the first 6 years of the plan and the following three percent per year average under 40 CFR 51.1110.'' *See* 40 CFR 51.1100(t). Thus, under the 2008 Ozone SRR, the RFP emissions reductions required for Serious or higher ozone nonattainment areas under CAA section 172(c)(2) are

[34] 42 U.S.C. 7502(c)(9).

[35] CAA section 171(1) defines RFP as ''such annual incremental reductions in emissions of the relevant air pollutant as are required by this part or may reasonably be required by the Administrator for the purpose of ensuring attainment of the applicable national ambient air quality standard by the applicable date.'' The words ''this part'' in the statutory definition of RFP refer to part D of title I of the CAA, which contains the general requirements in subpart 1 and the pollutant-specific requirements in subparts 2–5 (including the ozone-specific RFP requirements in CAA sections 182(b)(1) and 182(c)(2)(B) for Serious areas).

[36] 57 FR 13498, 13507 (April 16, 1992).

[37] *See* 57 FR 13498, 13510 (April 16, 1992) (for Moderate areas), 13518 (for Serious areas).

[38] *See, e.g.,* 40 CFR 51.910(a)(1)(ii)(A), (b)(2)(ii)(C).

[39] Under 40 CFR 51.919 and 51.1119, the regulations promulgated in the 2008 ozone SRR replaced the regulations promulgated in the Phase 2 rule, with certain exceptions not relevant here.

[40] Compare RFP requirements for the 1997 ozone NAAQS at 40 CFR 51.910(a)(1)(ii)(A) and (b)(2)(ii)(C) with the analogous provisions for the 2008 ozone NAAQS at 40 CFR 51.1110(a)(2)(i)(B).

based on a set annual percentage found in the CAA, not on the specific needs for the area to attain by the attainment date. In this regard, the EPA has been even more explicit in our SRR for the 2015 ozone NAAQS: ''Reasonable further progress (RFP) means the emissions reductions required under CAA sections 172(c)(2), 182(c)(2)(B), 182(c)(2)(C), and 40 CFR 51.1310. The EPA interprets RFP under CAA section 172(c)(2) to be an average 3 percent per year emissions reduction of either VOC or NO_X 40 CFR 51.1300(l).

Thus, the SRR for the 2015 ozone NAAQS defines RFP in terms of percent reduction from the area's emissions in the baseline year, not in terms of the reductions necessary for attainment by the attainment date. In other words, for the 2015 ozone NAAQS, the requirement to demonstrate RFP is independent of the requirement to demonstrate attainment by the attainment date. RFP for the 2015 ozone NAAQS represents the minimum progress that is required under the CAA and our regulations, and does not necessarily need to provide for the reductions necessary to achieve attainment of the ozone NAAQS by the attainment date, which could vary largely from one nonattainment area to another. For all of these reasons, the EPA disagrees with commenter's claim that RFP should be treated the same as the Moderate area attainment demonstration, RACM, and contingency measures for failure to attain. The EPA's explanation for why those three particular SIP elements are no longer required following a reclassification does not apply to the Moderate area RFP SIP element. Unlike the other three SIP elements, RFP is not directly tied to the applicable attainment deadline as explained earlier.

Moreover, the SRR for the 2015 ozone NAAQS lists RFP and ROP as distinct provisions for implementation.[41] These provisions clearly demonstrate the necessity for RFP reductions during the first 6 years of the plan, regardless of the area's initial classification, or whether it was Moderate before being reclassified as Serious, whether voluntarily, or mandatorily.

Because it is not appropriate after an area reclassification to treat RFP the same as the attainment demonstration, RACM, and contingency measures for failure to attain, it necessarily follows that contingency measures for failure to make RFP would also still be required for a failure to meet an RFP target associated with the lower classification after reclassification. If it is appropriate to still require SIP submissions addressing RFP for the prior classification, then it follows that the EPA will require states to have contingency measures in place that would be triggered for failure to meet those RFP milestones.

Comment: One commenter (0042) urges the EPA to update its proposal to note that if states can demonstrate their RFP targets have been met for reclassified areas, the requirement to submit RFP contingency measures for the prior classification would be unnecessary.

Response: The EPA acknowledges that there may be certain unideal situations where the state has not yet submitted, or the EPA has not yet approved, contingency measures for the prior classification, but the state has nonetheless demonstrated that all RFP milestones associated with the prior classification have been met. Where the EPA has determined that demonstration to be adequate, the question of whether the state has adequate contingency measures for failure to meet RFP with respect to that milestone can be moot. This situation is unideal because the CAA is not designed to operate this way with respect to timing, and these situations typically arise because the state is overdue for submitting approvable contingency measures. Under normal CAA timelines, the contingency measures submittal and the EPA approval should occur before the RFP milestone arrives so that the contingency measures could be triggered if the area fails to meet RFP. States should not delay submittal of required contingency submittals in the hopes that they may become moot at a later time. Such an approach contravenes the statutory timelines established by the CAA, and the intent of the contingency measures requirement. If this situation arises and the RFP milestone is not met, the CAA requires implementation of contingency measures without further action by the state or the EPA. That requirement cannot be met on time if the contingency measures submittal is delayed.

However, under the unusual circumstances in which the EPA determines the prior classification's RFP reduction targets were met before the state makes its overdue submittal to satisfy the prior classification's requirement for contingency measures for failure to meet RFP, the EPA believes that no submittal of contingency measures for a potential failure to meet the prior classification's RFP targets would be necessary.[42]

As discussed elsewhere in this document, with a voluntary reclassification there will be no possibility of failure to attain by the attainment date associated with the previous classification, and so the voluntary reclassification negates the need for contingency measures for failure to attain. Further, if a state has provided any applicable RFP demonstration(s) associated with the previous classification and the EPA has determined those demonstrations to be adequate, this would negate the need to submit the contingency measures for failure to meet the RFP milestones associated with the previous classification, thus resulting in mooting the previous classification's contingency measures requirement entirely.

Comment: One commenter (0036) recommends that the requirement to continue to address leftover SIP requirements from prior classifications should apply no matter if the reclassification is voluntary or mandatory. The commenter notes that, in this context, the method of reclassification makes no difference. The commenter claims that a state must also be prevented from repeatedly requesting a voluntary reclassification right before each attainment date, a strategy that would delay indefinitely, at least until Extreme classification is reached, the need for the state to submit any ozone SIP or implement any ozone control program. The commenter claims that this outcome is clearly contrary to the CAA and undermines the very purpose of having defined regulatory requirements for nonattainment areas.

Response: The EPA generally agrees with the commenter, and the EPA's interpretation regarding which SIP elements remain due related to a prior, lower classification level is largely consistent for voluntary and mandatory reclassifications. The only distinction between requirements that remain due for a voluntary versus mandatory reclassification is with respect to contingency measures to failure to attain. As explained in more detail in a prior response to comments, the EPA's distinction for the contingency measure requirement is appropriate given that in the context of a mandatory reclassification, a nonattainment area

[41] *See,* 40 CFR 51.1300(l), 51.1300(m), 51.1310(a)(2)(i) and 51.1310(a)(4)(i).

[42] The EPA notes that we articulated this position in a recent action. *See* 87 FR 67957, 67960 (October 3, 2023) (''EPA agrees with TCEQ that there is no longer a need for contingency measures triggered by failure to meet RFP for the DFW and HGB Serious nonattainment plan for purposes of the 2008 8-hour ozone NAAQS, because these areas met RFP for this specific classification.'').

has failed to attain by the attainment date, thereby triggering contingency measures for that failure to attain. This is completely distinguishable from a voluntary reclassification that becomes effective prior to a nonattainment area's attainment date, where that date is superseded and replaced by the new attainment date related to the new classification level.

The issue of how often and when a state may request a voluntary reclassification for a nonattainment area is beyond the scope of this action. The EPA takes separate actions, independent from this rule, in response to states' requests for voluntary reclassifications. The commenter may look to those actions for the EPA's position on the issue, and has the opportunity to seek judicial review of those actions if it disagrees with the EPA's approach.

Comment: One commenter (0042) asserts that, in cases where States satisfy certain required elements with the submittal of certification statements noting that the requirements have already been addressed (which is commonly used for addressing I/M and NNSR requirements), it is illogical to hold areas under a finding of failure to submit for elements that have already been submitted and approved under previous classifications or standards. The commenter feels that submittal of a certification statement is not legally necessary for the EPA to know that an element, upon which the EPA has already acted and approved, has been addressed, as the EPA's SIP approval actions legally stand on their own merit. In addition, the commenter notes that the infrastructure SIP submittal requirements for each NAAQS already provide certification from the state that existing regulations are adequate to meet the applicable nonattainment area planning requirements.

Response: The EPA understands the commenter as arguing that states should not be required to provide a SIP submission in instances where a state has previously provided, and the EPA approved, a SIP submittal addressing a SIP requirement for a lower classification or earlier ozone NAAQS. This comment is outside the scope of the rulemaking and therefore the comment is not substantively adverse to the action taken herein. As a result, a response to this comment is not required. Although this issue was not discussed in the proposal for this rule, the Agency notes that this issue has been addressed at length in previous rulemakings, including recently with relation to the 2015 ozone NAAQS. *See, e.g.,* 83 FR 62998, 63002. The Agency further notes that the commenter's characterization that infrastructure SIP submittal requirements relate to nonattainment area planning requirements is incorrect. *See* Stephen D. Page, Guidance on Infrastructure State Implementation Plan (SIP) Elements under Clean Air Act Sections 110(a)(1) and 110(a)(2), September 13, 2013, at 52, available at *https://www.epa.gov/sites/default/files/2015-12/documents/guidance_on_infrastructure_sip_elements_multipollutant_final_sept_2013.pdf* (explaining that the submission deadline for infrastructure SIPs under CAA section 110(a) do not apply to nonattainment areas, because SIP submissions for designated nonattainment areas ''are subject to a different submission schedule than those for section 110 infrastructure elements'').

Comment: One commenter (0044) notes that proposed 40 CFR 51.1403(a) mistakenly contains two paragraph 2's. The second, which begins ''If the reclassification occurred prior to the former attainment date,'' should be adjusted to be paragraph 3.

Response: The EPA agrees with the commenter that the cited proposed regulatory text was a mistake, and the EPA has modified the final regulations to reflect the corrected numbering.

C. Serious Area SIP Revisions for the 2015 Ozone NAAQS

1. Summary of Proposal

The EPA proposed to apply its default deadlines to states with newly reclassified Serious areas under the 2015 ozone NAAQS. Those default deadlines, as applied to reclassified Serious areas under the 2015 ozone NAAQS, require such states to submit SIP revisions for those areas, including revisions for RACT needed to achieve attainment of the standards by the attainment date, no later than 18 months after the effective date of the relevant reclassification notice or January 1, 2026, whichever is sooner. The EPA also proposed that the default implementation deadlines for RACT and Enhanced I/M would apply to reclassified Serious areas under the 2015 ozone NAAQS. Thus, such areas would be required to implement RACT by no later than 18 months from the RACT submittal deadline or the beginning of the 2026 attainment year ozone season for that area, whichever is earlier. In addition, for states that do not intend to rely upon emission reductions from their Enhanced I/M program in attainment or RFP SIPs, we proposed to allow Enhanced I/M programs to be fully implemented no later than 4 years after the effective date of reclassification.[43]

2. Final Rule

The EPA is finalizing the default SIP submittal and implementation deadlines for reclassified ozone nonattainment areas as proposed, and thus such deadlines would apply to areas reclassified as Serious under the 2015 ozone NAAQS. Below we address comments regarding the proposed deadlines insofar as they specifically concerned the application of those deadlines to reclassified Serious areas under the 2015 ozone NAAQS.

3. Comments and Responses

a. Due Date for Serious Area SIP Revisions and RACT Implementation

Comment: One commenter (0032) believes that the EPA's proposed default SIP submission deadlines are insufficient for nonattainment areas reclassified as Serious under the 2015 ozone NAAQS. The commenter notes that rulemaking to lower thresholds from 100 tpy to 50 tpy takes a substantial amount of time, and it is unreasonable to expect that newly regulated entities will be able to prepare a RACT SIP submittal, install controls, and come into compliance by January 1, 2026. In addition, the commenter believes that the proposed RACT implementation deadline is not realistic. Even if states currently have regulations ready, only a reclassification could trigger the requirement for RACT implementation, which the commenter believes will not occur until December 31, 2024, providing only 1 year to prepare a RACT study, install controls, and implement RACT. The commenter further provides that the EPA has not reclassified the areas, and many states have no authority to begin the arduous process of rulemaking until a Federal action triggers that requirement.

Response: The EPA acknowledges that the new Serious source threshold may present difficulties for some states in developing a RACT SIP submittal by January 1, 2026. However, as stated in the proposal, a SIP submission deadline of the earlier of 18 months from the effective date of reclassification or January 1, 2026 (January 1 of the attainment year) will allow Serious area control measures to influence attainment by the Serious area attainment date while also balancing the need for a consistent submission

[43] The EPA did not propose any changes to the implementation of any new Basic I/M programs, which are still required by the prior rule that reclassified certain nonattainment areas as Moderate for the 2015 ozone NAAQS. *See* 87 FR 60897, October 7, 2022, at 60900.

deadline among the various Serious area SIP requirements per CAA section 182(i). The outer boundary of January 1, 2026, for states to submit their Serious area SIP revisions applies equally across areas for which an 18-month deadline is not possible and ensures that the newly applicable subpart 2 requirements will be addressed consistent with part D's purpose of achieving expeditious attainment by the attainment date.

To the extent the commenter is concerned that regulated entities will not be able to install controls and come into compliance prior to January 1, 2026, the EPA notes that we proposed, and are finalizing, a RACT implementation deadline for any nonattainment areas reclassified as Serious under the 2015 NAAQS that provides for implementation as expeditiously as possible, but no later than 18 months from the RACT submission deadline or the beginning of the 2026 ozone season, whichever is earlier. For some nonattainment areas that will be reclassified as Serious in separate actions, the last ozone season that can impact air quality before the areas' attainment date begins in January of the attainment year and for other areas it begins in March of the attainment year. *See* 40 CFR part 58, appendix D, section 4.1, table D–3. By structuring the default deadlines as ''the earlier of'' an outside timeframe (*e.g.,* 18 months) or a specific date (*e.g.,* the beginning of the 2026 ozone season), the EPA is maximizing time for SIP development, adoption, and submission, while still ensuring that controls are adopted into the SIP and implemented in time to influence attainment of the NAAQS by the attainment date.

We acknowledge again that meeting this SIP submission deadline will be challenging for many states. However, to the extent that commenters suggested that states can only initiate SIP development activities only after the EPA finalizes its area reclassifications, we disagree. There are proactive and voluntary pathways by which states can anticipate and manage the tight timeframes to develop required SIP revisions for reclassified nonattainment areas, including early planning and voluntary reclassification. The EPA is aware that many states with areas affected by this current action may be constrained in finalizing rulemakings that require additional emissions controls unless the state air agency can demonstrate such controls were mandated by an underlying Federal requirement (*e.g.,* required pursuant to a mandatory area reclassification). However, to our knowledge, most states with affected areas are not prohibited from starting their SIP development activities before the EPA finalizes this current action, particularly because all of those areas are already required under the CAA to attain the 2015 ozone NAAQS. As we noted in prior attainment determination and reclassification actions for the 2008 and 2015 ozone NAAQS, states with nonattainment areas that were proposed for reclassification had known with a reasonable amount of certainty that revised SIPs would be due in the near future to provide for expeditious attainment of the 2008 and 2015 ozone NAAQS, and had the opportunity to make progress on plan development activities before issuance of the final actions.[44] That remains true for this current action, where states with affected Moderate areas have been aware of preliminary 2021–2023 DVs since at least December 2023 and certified 2021–2023 DVs since May 2024, showing that the areas were not going to timely attain and would be reclassified under the CAA. These states, therefore, could have reasonably anticipated that SIP revisions for reclassified Serious areas would be due in the near future, consistent with the CAA and previous EPA determination and reclassification actions. Nonetheless, the EPA recognizes the challenges posed by the SIP submission and RACT implementation deadlines being finalized as part of this rule, and is committed to working closely with states to help them as they prepare SIP revisions in a timely manner.

Comment: One commenter (0036) recommends that the deadlines and requirements set by the EPA for 2015 ozone NAAQS areas reclassified to Serious should be consistent with those established by the EPA in its June 2024 Texas area reclassification rule (89 FR 51829, June 20, 2024). The commenter notes that many of the same issues and options in this proposed rule were also contemplated in the June 2024 rulemaking. The commenter further provides that aligning SIP deadlines and requirements would also benefit state attainment planning efforts by facilitating the use of area-agnostic technical products (such as attainment modeling and control measure analyses) and encouraging interstate attainment planning coordination.

Response: As commenter notes in its letter, the deadlines and requirements that the EPA is finalizing are consistent with those the EPA finalized in its June 2024 rule reclassifying three Texas areas from Moderate to Serious under the 2015 ozone NAAQS.[45]

Comment: One commenter from Delaware (0033) requests that the EPA finalize a SIP submittal deadline of March 1, 2026, for Delaware's 2015 ozone NAAQS Serious attainment plan SIP. March 1, 2026, marks the beginning of Delaware's attainment year ozone season, and establishing a SIP submittal deadline that aligns with the attainment year ozone season will allow Delaware sufficient time to research and prepare a thorough and comprehensive SIP revision as well as time to complete the required SIP revision submittal process. The commenter further provides that March 1, 2026, is a more reasonable time frame because of Delaware's complex and lengthy regulatory process, lack of feedback from the EPA on contingency measures, and absence of resources available for Delaware to calculate contingency measure reductions.

Another commenter from Colorado (0040) requests that the EPA grant Colorado the flexibility to submit its Serious SIP revision sometime after February 15, 2026, or, in the alternative, allow Colorado to submit it as a provisional and non-binding submission that will automatically be converted to a final submission for final approval after February 15, 2026. The commenter notes that the EPA granted Colorado's request for voluntary reclassification from Moderate to Serious on July 24, 2024. The EPA's proposed default SIP submittal deadlines would require Colorado to submit its Serious SIP for the 2015 ozone NAAQS to the EPA no later than January 24, 2026. However, due to Colorado's legislative process and the late timing of the EPA's rule, the commenter will be unable to submit the necessary SIP revisions by the EPA's proposed deadline.

Response: In Section II.A. of the proposal, the EPA articulated that, ''if these default deadlines are finalized as proposed, they will apply to any nonattainment areas that are reclassified as Serious under the 2015 ozone NAAQS for failing to attain the standard by the Moderate attainment date of August 3, 2024, *unless otherwise established in a separate notice-and-comment rulemaking*'' (emphasis added). 89 FR 80833, 80834 (October 4, 2024). The EPA did not propose to establish different SIP submittal or implementation deadlines for any specific nonattainment areas. Any such adjustment would need to be done in a separate notice-and-comment rulemaking. Therefore, the SIP

[44] *See,* 84 FR 44238, 44246 (August 23, 2019); 87 FR 60897, 60909 (October 7, 2022).

[45] 89 FR 51829 (June 20, 2024).

submission deadline that will apply to all nonattainment areas reclassified as Serious under the 2015 ozone NAAQS, including areas within Delaware and Colorado, will be the earlier of 18 months from the effective date of reclassification or January 1, 2026, unless otherwise established in a future notice-and-comment rulemaking.

In the case of Delaware, the EPA granted the state's request for a voluntary reclassification of the Philadelphia-Wilmington-Atlantic City, Pennsylvania-New Jersey-Maryland-Delaware 2015 ozone nonattainment area to Serious, which became effective on July 30, 2024. In applying the ''earlier of'' structure of the default deadlines finalized in this rule, January 1, 2026 (*i.e.,* January 1 of the attainment year) will be the SIP submission deadline for the states in which the Philadelphia-Wilmington-Atlantic City nonattainment area lies because that date occurs before the 18-month timeframe established by the effective date of the reclassification notice (*i.e.,* January 30, 2026).

Likewise, in the case of Colorado, the SIP submission deadline will be January 1, 2026. The EPA granted the state's request for voluntary reclassification of the Denver Metro/North Front Range 2015 ozone nonattainment area to Serious, which became effective on July 24, 2024. In applying the ''earlier of'' structure of the default deadlines finalized in this rulemaking, January 1, 2026 (*i.e.,* January 1 of the attainment year) will be the SIP submission deadline for Colorado because that date occurs before the 18-month timeframe established by the effective date of the reclassification notice (*i.e.,* January 24, 2026).

b. Deadline for Serious Area I/M Implementation

Comment: One commenter (0042) disagrees with the EPA's proposal that it is necessary to establish an implementation date at the beginning of the attainment year ozone season for an Enhanced I/M program under the Serious classification to use the emissions reductions toward meeting Serious classification attainment demonstration and RFP requirements. The commenter believes that the EPA has not provided a rationale for why newly required Enhanced I/M programs for the 2015 ozone standard would have to be fully implemented by no later than the beginning of the Serious attainment year ozone season. The commenter asserts that implementation should not be required by the start date of the attainment year ozone season for the area for the reductions to be used, particularly since emissions reductions from I/M programs are variable, depend on the number of vehicles tested in each month, as well as the vehicles' emissions profiles and state of repair.

Response: We disagree with the commenter's position that the EPA has not provided a rationale for why Enhanced I/M program emission reductions that will be relied upon by the states for attainment demonstration or RFP requirements must be implemented by the beginning of the attainment year ozone season. For Serious areas that intend to rely upon emission reductions from their newly required Enhanced I/M program for attainment and RFP purposes, the implementation deadline is already prescribed by the 2015 ozone implementation rule which requires all control measures (including I/M) in the attainment plan and demonstration to be implemented no later than the beginning of the attainment year ozone season.[46] As the EPA explained in the preamble, EPA's proposal and solicitation of comments as to reclassified Serious areas was limited to the deadline for implementation of Enhanced I/M for areas that were not intending to rely on reductions from those programs in attainment or RFP SIPs. *See* 89 FR 80850 (October 4, 2024).

IV. Environmental Justice Considerations

In this action, the EPA is stablishing default SIP deadlines for submission of SIP revisions and implementation of the related control requirements for nonattainment areas reclassified as Moderate, Serious, and Severe for current and future ozone NAAQS. In addition, the EPA is codifying its existing interpretation that following reclassification, a state is no longer required to submit SIP revisions addressing certain requirements related to the prior classification level for an ozone nonattainment area. The EPA is also articulating how the default deadlines and codification of applicable requirements following reclassification would apply to nonattainment areas reclassified as Serious under the 2015 ozone NAAQS. This action is intended to comply with the CAA program to ensure that affected air agencies comply with CAA obligations for the applicable nonattainment areas.

As explained in the proposal, it is difficult to assess the environmental justice (EJ) implications of this action because the EPA cannot geographically identify or quantify resulting source-specific emission reductions. However, due to the nature of this action, the EPA believes that it will likely have no adverse impact on any existing disproportionate and adverse effects on communities with EJ concerns. At a minimum, the EPA believes that this action will not worsen any existing air quality and is expected to ensure that the areas affected by the rulemaking will meet applicable requirements to attain and/or maintain national air quality standards.

The EPA reiterates, however, that states have flexibility and discretion under the CAA in implementing their attainment strategies to focus resources on controlling those sources of emissions that directly and adversely affect communities with EJ concerns. As stated in the proposal, the EPA strongly urges states to consider the EJ aspects of any control measures in order to provide health protection for communities with EJ concerns. In addition, the EPA strongly encourages states to work with communities experiencing EJ concerns to develop ozone-related control strategies that most effectively reduce emissions contributing to elevated ozone levels. One way to do this would be for states to increase opportunities for meaningful involvement of community groups during their SIP development processes.

The EPA has resources available to help air agencies consider aspects of EJ in their SIP development processes. The EPA released *EPA Legal Tools to Advance Environmental Justice (EJ Legal Tools)* in 2022 to highlight the various environmental and civil rights law authorities available to the EPA that authorize or address consideration of EJ in its decision-making process as it pertains to environmental laws, including the CAA.[47] *EJ Legal Tools* is also intended to promote meaningful engagement among the EPA and communities.[48] In addition, on September 5, 2024, the EPA announced the release of the final policy, ''*Achieving Health and Environmental Protection Through EPA's Meaningful Engagement Policy.*''[49] This final policy updates the EPA's 2003 Public Involvement Policy that guides the EPA's staff to provide meaningful public involvement in all its programs and regions.[50]

[46] 40 CFR 51.1308(d).

[47] U.S. EPA, EPA Legal Tools to Advance Environmental Justice (May 2022).

[48] *Id.*

[49] U.S. EPA, Achieving Health and Environmental Protection Through EPA's Meaningful Engagement Policy (August 2024).

[50] *See* U.S. EPA, Public Involvement Policy of the U.S. Environmental Protection Agency (May 2003).

V. Judicial Review

The CAA regulations promulgated herein may be challenged in the United States Court of Appeals for the District of Columbia Circuit. Pursuant to section 307(b)(1) of the CAA, petitions for judicial review of the CAA regulations must be filed in that court within 60 days after the date notice of this final action is published in the **Federal Register**. Section 307(b)(1) of the CAA provides, in part, that petitions for review must be filed in the United States Court of Appeals for the District of Columbia Circuit: (i) When the agency action consists of ''nationally applicable regulations promulgated, or final actions taken, by the Administrator,'' or (ii) when such action is locally or regionally applicable, if ''such action is based on a determination of nationwide scope or effect.''

The CAA regulations promulgated herein are ''nationally applicable regulations'' within the meaning of CAA section 307(b)(1). These regulations establish regulatory requirements for all applicable areas across the entire United States to implement provisions of the CAA, including regulations establishing SIP submission and implementation deadlines for all newly reclassified ozone nonattainment areas nationwide, and. regulations codifying which requirements related to the prior classification level for an ozone nonattainment area are no longer applicable after an area's reclassification. Accordingly, under section 307(b)(1) of the CAA, petitions for judicial review of these CAA regulations must be filed in the United States Court of Appeals for the District of Columbia by March 18, 2025.

VI. Severability

This final rule includes new and revised requirements for numerous provisions under the implementation regulations for the national ambient air quality standards for ozone, including deadlines for revisions of implementation plans addressing different statutory requirements of the CAA, deadlines for implementation of different control measures required under different provisions of the CAA, and regulations clarifying statutory provisions associated with an area's former classification that are no longer applicable to that area after the effective date of an area's reclassification. Therefore, this final rule is a multifaceted rule that addresses many separate things for independent reasons, as detailed in each respective portion of this preamble. We intend each portion of this rule to be severable from each other, though we took the approach of including all the parts in one rulemaking rather than promulgating multiple rules to ensure the changes are properly coordinated, even though the changes are not interdependent.

For example, although we address both deadlines for newly applicable requirements for reclassified areas and clarifications regarding which statutory requirements are no longer applicable for reclassified areas, these two sets of regulatory provisions are not interdependent and were issued concurrently in this action for administrative efficiency and clarity to impacted jurisdictions (*i.e.,* states) because both sets of provisions pertain to reclassified ozone nonattainment areas. Furthermore, the deadlines established under each regulatory provision are severable from the others because each deadline is set with consideration of the separate statutory authority governing the applicable requirement. Therefore, the EPA's rationale for establishing the deadline for revisions addressing a penalty fee program for Severe areas is distinct from its rationale for establishing the deadline for revisions addressing other newly applicable requirements. Similarly, the considerations of particular statutory programs provide the foundation for control measure implementation deadlines such that these deadlines are severable from one another. Finally, the provisions codifying the EPA's position regarding which requirements remain due following a reclassification are independent in statutory basis and reasoning from all other provisions in this rule, and therefore are severable from the remaining provisions in this rule. Further, the basis upon which the EPA determined whether each element remained due (*e.g.,* RACT, RFP) or no longer due (attainment demonstrations, RACM, and some contingency measures in some instances) was based on reasoning individualized to the SIP requirement, and therefore any judicial determination of the status of an individual SIP requirement is severable for a determination of any other planning element.

Thus, the EPA has independently considered and adopted each of these portions of the final rule and each is severable should there be judicial review. If a court were to invalidate any one of these elements of the final rule, we intend the remainder of this action to remain effective, as we have designed these regulations to function concurrently but independently from one another even if one or more other parts of the rule has been set aside. For example, if a reviewing court were to invalidate any of the deadlines governing newly applicable requirements for reclassified ozone areas, we intend other regulatory amendments, including non-related deadlines and clarifications about requirements that are no longer applicable, to remain effective. Moreover, this list is not intended to be exhaustive, and should not be viewed as an intention by the EPA to consider other parts of the rule not explicitly listed here as not severable from other parts of the rule.

VII. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 14094: Modernizing Regulatory Review

This action is not a significant regulatory action as defined by Executive Order 12866, as amended by Executive Order 14094, and was therefore not subject to a requirement for Executive Order 12866 review.

B. Paperwork Reduction Act (PRA)

This final rule does not impose any new information collection burden under the PRA not already approved by the Office of Management and Budget (OMB). This action establishes deadlines for submission of required SIP revisions and implementation of the related control requirements for newly reclassified Moderate, Serious, and Severe ozone nonattainment areas. This action also codifies the EPA's existing interpretation that following reclassification, a state is no longer required to submit SIP revisions addressing certain requirements related to the prior classification level for an ozone nonattainment area. Thus, the final action does not impose any new information collection burden under the PRA. OMB has previously approved the EPA's information collection activities contained in the existing regulations and has assigned OMB control number 2060–0695.[51]

[51] On April 30, 2018, the OMB approved the EPA's request for renewal of the previously approved information collection request (ICR). The renewed request expired on April 30, 2021, 3 years after the approval date (*see* OMB Control Number 2060–0695 and ICR Reference Number 201801–2060–003 for EPA ICR No. 2347.03). On April 30, 2021, the OMB published the final 30-day document (86 FR 22959) for the ICR renewal titled ''Implementation of the 8-Hour National Ambient Air Quality Standards for Ozone (Renewal)'' (*see* OMB Control Number 2060–0695 and ICR Reference No: 202104–2060–004 for EPA ICR Number 2347.04). The ICR renewal was approved on February 1, 2022, and the renewed request expires on January 31, 2025.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. This action will not impose any requirements on small entities. The SIP submittal and implementation deadlines, and the policy discussion outlining the EPA's interpretation of the status of certain requirements for prior nonattainment classifications following reclassification, do not in and of themselves create any new requirements beyond what is mandated by the CAA. Instead, this rule is administrative in nature, and does not directly regulate any entities.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The action imposes no enforceable duty on any state, local or tribal governments or the private sector.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. The division of responsibility between the Federal Government and the States for purposes of implementing the NAAQS is established under the CAA.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have Tribal implications, as specified in Executive Order 13175. This action will not impose substantial direct costs upon the Tribes, nor will it preempt Tribal law. The CAA requires SIP revisions for all nonattainment areas that are reclassified from a lower classification to a higher classification. For nonattainment areas that include portions of Indian reservation lands, the implementation plan deadlines that apply to States do not directly apply to Tribes. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health and Safety Risks

The EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of ''covered regulatory action'' in section 2–202 of the Executive Order. Therefore, this action is not subject to Executive Order 13045 because it does not directly concern an environmental health risk or safety risk. Since this action does not directly concern human health, the EPA's policy on Children's Health also does not apply.

H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211, because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer Advancement Act (NTTAA)

This rule does not involve technical standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations and Executive Order 14096: Revitalizing Our Nation's Commitment to Environmental Justice for All

The EPA believes that the human health or environmental conditions that exist prior to this action have the potential to result in disproportionate and adverse human health or environmental effects on communities with EJ concerns. The EPA believes that this action is not likely to change existing disproportionate and adverse effects on communities with EJ concerns. The areas impacted by this action are designated as nonattainment for one or more ozone NAAQS and this action is intended to comply with the CAA program to ensure attainment and maintenance of the NAAQS. From a programmatic perspective, this action is intended to ensure that affected air agencies comply with CAA obligations for the applicable nonattainment areas.

The EPA did not perform an EJ analysis and did not consider EJ as a basis for this action. While it is difficult to assess the EJ implications of this action because the EPA cannot geographically identify or quantify resulting source-specific emission reductions that are ultimately determined by air agencies, the EPA believes that this action is likely to have no impact on any existing disproportionate and adverse effects on communities with EJ concerns. Further, there is no information in the record inconsistent with the stated goals of Executive Orders 12898 or 14096.

K. Congressional Review Act (CRA)

This action is subject to the CRA, and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 51

Environmental protection, Administrative practice and procedure, Air pollution control, Designations and classifications, Intergovernmental relations, Nitrogen oxides, Ozone, Reporting and recordkeeping requirements, and Volatile organic compounds.

Joseph Goffman,

Principal Deputy Assistant Administrator, Office of Air and Radiation.

For the reasons stated in the preamble, the EPA is amending Title 40, Chapter I of the Code of Federal Regulations as follows:

PART 51—REQUIREMENTS FOR PREPARATION, ADOPTION, AND SUBMITTAL OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 51 continues to read as follows:

Authority: 23 U.S.C. 101; 42 U.S.C. 7401–7671q.

Subpart CC—Provisions for Implementation of the 2015 Ozone National Ambient Air Quality Standards

§ 51.1312 [Amended]

■ 2. Amend § 51.1312 by removing and reserving paragraphs (a)(2)(ii) and (a)(3)(ii).

■ 3. Add subpart DD consisting of §§ 51.1400 through 51.1403 to part 51 to read as follows:

Subpart DD–Requirements for Reclassified Ozone Nonattainment Areas

Sec.

51.1400 Definitions.
51.1401 Applicability of part 51.
51.1402 SIP submission and control measure implementation deadlines for reclassified ozone nonattainment areas.
51.1403 Applicability of ozone SIP requirements for former classification after reclassification.

§ 51.1400 Definitions.

The following definitions apply for purposes of this subpart. Any term not defined herein shall have the meaning as defined in § 51.100.

Attainment year means the calendar year in which the attainment year ozone season occurs.

Attainment year ozone season means the full ozone season immediately preceding a nonattainment area's maximum attainment date.

CAA means the Clean Air Act as codified at 42 U.S.C. 7401–7671q (2010).

Former attainment date means any attainment date associated with the classification under subpart 2 of part D of title I of the CAA preceding reclassification from a lower classification to a higher classification.

Former classification means any classification under subpart 2 of part D of title I of the CAA preceding reclassification from a lower classification to a higher classification.

Higher classification/lower classification means for purposes of determining which classifications are higher or lower, the classifications are ranked from lowest to highest as follows: Marginal; Moderate; Serious; Severe-15; Severe-17; and Extreme.

I/M refers to the inspection and maintenance programs for in-use vehicles required under the 1990 CAA Amendments and defined by subpart S of 40 CFR part 51.

Initially classified means the first nonattainment classification that becomes effective for an area for a specific ozone NAAQS and does not include reclassification to another classification for that specific NAAQS.

Initially designated means the first designation to nonattainment that becomes effective for an area for a specific ozone NAAQS.

Ozone season means for each state (or portion of a state), the ozone monitoring season as defined in 40 CFR part 58, appendix D, section 4.1(i) for that state (or portion of a state).

§ 51.1401 Applicability of part 51.

The provisions in subparts A through Y, AA, and CC of this part apply to reclassified nonattainment areas for purposes of the ozone NAAQS to the extent they are not inconsistent with the provisions of this subpart.

§ 51.1402 SIP submission and control measure implementation deadlines for reclassified ozone nonattainment areas.

(a) Deadlines for applicable requirements pursuant to a reclassification as Moderate, Serious, or Severe that are 18 months or more after the effective date of reclassification will apply to such reclassified area as though the area were initially designated at that classification.

(b) Deadlines for applicable requirements pursuant to a reclassification as Moderate, Serious, or Severe, where the deadline that would have applied had the area been initially classified at the new classification level at the time of initial nonattainment area designations is less than 18 months after the effective date of reclassification.

(1) *SIP submission deadlines.* (i) For all SIP revisions required pursuant to reclassification (except SIPs addressing CAA section 185 fee programs), the SIP revision deadline is 18 months after the effective date of the relevant reclassification or January 1 of the attainment year, whichever is earlier, unless the Administrator establishes a different deadline in a separate action.

(ii) For SIP revisions addressing CAA section 185 fee programs required pursuant to reclassification, the SIP revision deadline is 36 months after the effective date of the relevant reclassification or January 1 of the attainment year, whichever is earlier, unless the Administrator establishes a different deadline in a separate action.

(2) *Control measure implementation deadlines.* (i) For RACT required pursuant to reclassification, the state shall provide for implementation of such RACT as expeditiously as practicable, but no later than 18 months after the RACT SIP submittal deadline or the beginning of the attainment year ozone season associated with the area's new attainment deadline, whichever is earlier, unless the Administrator establishes a different deadline in a separate action.

(ii) For the required I/M program pursuant to reclassification, the state shall provide for full implementation of such I/M program as expeditiously as practicable, but no later than 4 years after the effective date of the relevant reclassification, unless the I/M program is needed for attainment by the attainment date or RFP, in which case the state shall provide for full implementation of such I/M program no later than the beginning of the attainment year ozone season.

§ 51.1403 Applicability of ozone SIP requirements for former classification after reclassification.

(a) Upon the effective date of reclassification, the requirements of any subpart of this part with respect to ozone nonattainment planning applicable to the area for the former classification shall apply as follows:

(1) Unless specified in paragraph (a)(2) or (3) of this section, the requirement is unaffected by reclassification and continues to be required for the former classification.

(2) The following requirements are no longer applicable with respect to the former attainment date:

(i) A SIP revision to demonstrate attainment by such date.

(ii) A SIP revision demonstrating adoption of all RACM necessary to demonstrate attainment with respect to such date.

(3) If the reclassification became effective prior to the former attainment date pursuant to CAA section 181(b)(3), the plan requirement for contingency measures for failure to attain by such date is no longer applicable with respect to the former attainment date.

(b) Nothing in this section shall affect the requirements applicable to the nonattainment area under its currently applicable classification and attainment date.

[FR Doc. 2025–00336 Filed 1–16–25; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R10–OAR–2024–0511; FRL–12384–01–R10]

Air Plan Approval; AK; Updates to Materials Incorporated by Reference

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule; administrative change.

SUMMARY: The Environmental Protection Agency (EPA) is updating the materials that are incorporated by reference (IBR) into the Alaska State Implementation Plan (SIP). The regulations affected by this update have been previously submitted by the State of Alaska and approved by the EPA. In this final rule, the EPA is also notifying the public of corrections and clarifying changes in the Code of Federal Regulations tables that identify the materials incorporated by reference into the Alaska SIP. This update affects the materials that are available for public inspection at the National Archives and Records Administration and the EPA Regional Office.

DATES: Effective January 17, 2025.

ADDRESSES: The SIP materials for which incorporation by reference into 40 CFR part 52 is finalized through this action are available for inspection at the following locations: Environmental Protection Agency, Region 10, 1200 Sixth Avenue, Suite 155, Seattle, WA 98101; and *www.regulations.gov.* To view the materials at the Region 10 Office, the EPA requests that you email the contact listed in the **FOR FURTHER INFORMATION CONTACT** section to schedule your inspection. The Regional

Office's official hours of business are Monday through Friday 8:30 a.m. to 4:30 p.m., excluding Federal holidays.

FOR FURTHER INFORMATION CONTACT: Kristin Hall, EPA Region 10, 1200 Sixth Avenue—Suite 155, Seattle, WA 98101, at (206) 553–6357, or *hall.kristin@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Each State has a SIP containing the control measures and strategies used to attain and maintain the national ambient air quality standards (NAAQS). The SIP is extensive, containing such elements as air pollution control regulations, emission inventories, monitoring networks, attainment demonstrations, and enforcement mechanisms.

Each State must formally adopt the control measures and strategies in the SIP after the public has had an opportunity to comment on them and then submit the proposed SIP revisions to the EPA. Once these control measures and strategies are approved by EPA, and after notice and comment, they are incorporated into the federally approved SIP and are identified in part 52, ''Approval and Promulgation of Implementation Plans,'' of title 40 of the Code of Federal Regulations (40 CFR part 52). The full text of the State regulation approved by the EPA is not reproduced in its entirety in 40 CFR part 52 but is ''incorporated by reference.'' This means that the EPA has approved a given State regulation or specified changes to the given regulation with a specific effective date. The public is referred to the location of the full text version should they want to know which measures are contained in a given SIP. The information provided allows the EPA and the public to monitor the extent to which a State implements a SIP to attain and maintain the NAAQS and to take enforcement action for violations of the SIP.

The SIP is a living document which the State can revise as necessary to address the unique air pollution problems in the State. Therefore, the EPA from time to time must take action on proposed revisions containing new or revised State regulations. A submission from a State can revise one or more rules in their entirety, or portions of rules. The State indicates the changes in the submission (such as by using redline/strikethrough text) and the EPA then takes action on the requested changes. The EPA establishes a docket for its actions using a unique Docket Identification Number, which is listed in each action. These dockets and the complete submission are available for viewing on *www.regulations.gov.*

On May 22, 1997 (62 FR 27968), the EPA revised the procedures for incorporating by reference, into the CFR, materials approved by the EPA into each SIP. These changes revised the format for the identification of the SIP in 40 CFR part 52, streamlined the mechanisms for announcing the EPA approval of revisions to a SIP, and streamlined the mechanisms for the EPA's updating of the IBR information contained for each SIP in 40 CFR part 52. The revised procedures also called for the EPA to maintain ''SIP Compilations'' that contain the federally approved regulations and source-specific permits submitted by each State agency.

The EPA generally updates these SIP Compilations every few years. Under the revised procedures, the EPA must periodically publish an informational document in the rules section of the **Federal Register** notifying the public that updates have been made to a SIP Compilation for a particular State. The EPA began applying the 1997 revised procedures to the Alaska SIP on April 10, 2014 (79 FR 19820). The EPA subsequently published updates to the IBR materials for Alaska on December 8, 2017 (82 FR 57836) and December 12, 2022 (87 FR 75932).

A. Approved and Incorporated by Reference Regulatory Materials

Since the last IBR update, the EPA approved and incorporated by reference regulatory materials into the Alaska SIP at 40 CFR 52.70(c):

1. Action on March 22, 2023 (88 FR 2873):

- 18 AAC 50.035 (documents, procedures, and methods adopted by reference), except (a)(6), (a)(9), and (b)(4) (State effective 4/16/2022);
- 18 AAC 50.040 (Federal standards adopted by reference), except (a), (b), (c), (d), (e), (g), (j), and (k) (State effective 4/16/2022);
- 18 AAC 50.270 (electronic submission requirements) (State effective 9/7/2022);
- 18 AAC 50.275 (consistency of reporting methodologies) (State effective 9/7/2022); and
- 18 AAC 50.400 (permit administration fees), except (a), (b), (c), and (i) (State effective 9/7/2022).

2. Action on August 9, 2023 (88 FR 53793):

- 18 AAC 50.025 (establishing geographic areas that may need additional pollution control because of special circumstances) (State effective 4/16/2022);
- 18 AAC 50.502 (establishing which types of stationary sources must obtain minor construction and/or operating permits) (State effective 4/14/2022);
- 18 AAC 50.540 (outlining the required contents of an application for a minor construction and/or operating permit) State effective 4/14/2022); and
- 18 AAC 50.542 (establishing the process the state uses to review permit applications from sources, conduct public notice and comment, and issue permits) (State effective 4/14/2022).

3. Action on December 5, 2023 (88 FR 84626):

- 18 AAC 50.075 (solid fuel-fired heating device visible emission standards), except (d)(2) (State effective 11/18/2020).

B. Regulatory Materials Removed From Incorporation by Reference

Since the last IBR update, the EPA also removed the following regulatory materials from the Alaska SIP at 40 CFR 52.70(c):

1. Action on August 9, 2023 (88 FR 53793):

- 18 AAC 50.080 (regulating water vapor emissions from industrial sources that may form ice fog) (State effective 1/18/1997).

II. EPA Action

In this action, the EPA is providing notification of an update to the materials incorporated by reference into the Alaska SIP as of October 1, 2024, and identified in 40 CFR 52.70(c). This update includes SIP materials submitted by Alaska and approved by the EPA since the last IBR update. *See* 87 FR 75932 (December 12, 2022).

III. Good Cause Exemption

The EPA has determined that this action falls under the ''good cause'' exemption in section 553(b)(3)(B) of the Administrative Procedure Act (APA) which, upon finding ''good cause,'' authorizes agencies to dispense with public participation and section 553(d)(3) which allows an agency to make an action effective immediately (thereby avoiding the 30-day delayed effective date otherwise provided for in the APA). This administrative action simply codifies provisions which are already in effect as a matter of law in Federal and approved State programs, makes corrections and clarifying changes to the tables in the CFR, and makes ministerial changes to the prefatory heading to the tables in the CFR. Under section 553 of the APA, an

agency may find good cause where procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Public comment for this administrative action is ''unnecessary'' and ''contrary to the public interest'' since the codification (and corrections) only reflect existing law. Immediate notice of this action in the **Federal Register** benefits the public by providing the public notification of the updated Alaska SIP Compilation and notification of corrections to the Alaska ''Identification of Plan'' portion of the CFR. Further, pursuant to section 553(d)(3), making this action immediately effective benefits the public by immediately updating both the SIP Compilation and the CFR ''Identification of plan'' section (which includes table entry corrections).

IV. Incorporation by Reference

In this document, the EPA is finalizing regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, the EPA is finalizing the incorporation by reference of regulations promulgated by Alaska, previously approved by the EPA and federally effective before October 1, 2024, contained in 40 CFR 52.70(c), *EPA approved laws and regulations,* described in section II. of this preamble. The EPA has made, and will continue to make, these materials generally available through *www.regulations.gov* and at the EPA Region 10 Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information).

V. Statutory and Executive Order Reviews

Under the Clean Air Act (CAA), the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, The EPA's role is to approve State choices, provided that they meet the criteria of the CAA. Accordingly, this action merely addresses administrative requirements related to previously approved State law found to meet Federal requirements and does not impose additional requirements beyond those previously imposed by State law. For that reason, this action:

- Is not a ''significant regulatory action'' subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 14094 (88 FR 21879, April 11, 2023);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it is an administrative action related to State program approval;
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and
- Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act.

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian Tribe has demonstrated that a Tribe has jurisdiction. In those areas of Indian country, the rule does not have Tribal implications and it will not impose substantial direct costs on Tribal governments or preempt Tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

Executive Order 12898 (Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, February 16, 1994) directs Federal agencies to identify and address ''disproportionately high and adverse human health or environmental effects'' of their actions on communities with environmental justice (EJ) concerns to the greatest extent practicable and permitted by law. Executive Order 14096 (Revitalizing Our Nation's Commitment to Environmental Justice for All, 88 FR 25251, April 26, 2023) builds on and supplements Executive Order 12898 and defines EJ as, among other things, the just treatment and meaningful involvement of all people, regardless of income, race, color, national origin, or Tribal affiliation, or disability in agency decision-making and other Federal activities that affect human health and the environment.'' The CAA and applicable implementing regulations neither prohibit nor require an EJ evaluation. This CAA administrative action to update the incorporation by reference of previously submitted and approved State regulatory materials, the EPA did not consider EJ in this action.

The Congressional Review Act, 5 U.S.C. 801 *et seq.,* as added by the Small

Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. The EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

The EPA also believes that the provisions of section 307(b)(1) of the CAA pertaining to petitions for judicial review are not applicable to this action. This is because prior EPA rulemaking actions for each individual component of the Alaska SIP Compilation previously afforded interested parties the opportunity to file a petition for judicial review in the United States Court of Appeals for the appropriate circuit within 60 days of such rulemaking action. Thus, the EPA believes judicial review of this action under section 307(b)(1) is not available.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Carbon monoxide, Incorporation by reference, Intergovernmental relations, Lead, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds.

Dated: January 13, 2025.

Casey Sixkiller,

Regional Administrator, Region 10.

For the reasons set forth in the preamble, 40 CFR part 52 is amended as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart C—Alaska

■ 2. Section 52.70 is amended by revising paragraphs (b) through (e) to read as follows:

§ 52.70 Identification of plan.

* * * * *

(b) *Incorporation by reference.* (1) Material listed in paragraph (c) of this section with an EPA approval date prior to October 1, 2024, was approved for incorporation by reference by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Material is incorporated as it exists on the date of the approval and notification of any change in the material will be published in the **Federal Register**. Entries in paragraph (c) of this section with EPA approval dates after October 1, 2024, will be incorporated by reference in the next update to the SIP compilation.

(2) EPA Region 10 certifies that the rules/regulations provided by the EPA in the SIP compilation at the addresses in paragraph (b)(3) of this section are an exact duplicate of the officially promulgated State rules/regulations which have been approved as part of the State Implementation Plan as of the dates referenced in paragraph (b)(1) of this section.

(3) Copies of the materials incorporated by reference may be inspected at the Region 10 EPA Office at 1200 Sixth Avenue, Suite 155, Seattle, WA 98101. To obtain the material, please call (206) 553–6357. You may inspect the material with an EPA approval date prior to October 1, 2024, for Alaska at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA email *fedreg.legal@nara.gov* or go to *https://www.archives.gov/federal-register/cfr/ibr-locations.*

(c) *EPA approved laws and regulations.*

Title 45—Trade and Commerce, Chapter 45.45. Trade Practices				
Sec. 45.45.400	Prohibited Transfer of Used Cars	6/25/1993	11/18/1998, 63 FR 63983	Except (b).
Title 46—Water, Air, Energy, and Environmental Conservation, Chapter 46.14. Air Quality Control				
Sec. 46.14.550	Responsibilities of Owner and Operator; Agent for Service.	1/4/2013	9/19/2014, 79 FR 56268	
Sec. 46.14.560	Unavoidable Malfunctions and Emergencies.	6/25/1993	11/18/1998, 63 FR 63983	
Sec. 46.14.990	Definitions	1/4/2013	9/19/2014, 79 FR 56268	Except (1) through (3), (6), (7), (9) through (14), (19) through (26), and (28).

TABLE 3 TO PARAGRAPH (c)—CITY AND BOROUGH CODES AND ORDINANCES

State citation	Title/subject	State effective date	EPA approval date	Explanations
Anchorage Municipal Code and Ordinances				
Anchorage Municipal Code 21.85.030.	Improvement Requirements by Improvement Area.	1/16/1987 (city effective date)	8/13/1993, 58 FR 43084	Eagle River PM Plan—Contingency Plan.
Anchorage Municipal Code 21.45.080.W.7.	Paving	9/24/1991 (city effective date)	8/13/1993, 58 FR 43084	Section W.7. Eagle River PM Plan—Contingency Plan.
Anchorage Ordinance 2006–13.	An ordinance amending the Anchorage Municipal Code, Chapters 15.80 and 15.85 to comply with State I/M regulations and to comply with DMV Electronic Procedures.	2/14/2006 (city approval date)	3/22/2010, 75 FR 13436	Anchorage Transportation Control Program—Carbon Monoxide.
City and Borough of Juneau Ordinances				
Ordinance of the City and Borough of Juneau, No. 91–53.	An Ordinance amending the wood smoke control fine schedule to increase the fines for violations of the wood smoke control code.	1/6/1992 (city adoption date)	3/24/1994, 59 FR 13884	Mendenhall Valley PM Plan.
Ordinance of the City and Borough of Juneau No. 93–01.	Setting boundaries for regrading and surfacing.	2/8/1993 (city adoption date)	3/24/1994, 59 FR 13884	Mendenhall Valley PM Plan.

TABLE 3 TO PARAGRAPH (c)—CITY AND BOROUGH CODES AND ORDINANCES—Continued

State citation	Title/subject	State effective date	EPA approval date	Explanations
Ordinance of the City and Borough of Juneau, No. 93–06.	Setting boundaries for regrading and surfacing.	4/5/1993 (city adoption date)	3/24/1994, 59 FR 13884	Mendenhall Valley PM Plan.
Ordinance of the City and Borough of Juneau, No. 93–39am.	An Ordinance creating Local Improvement District No. 77 of the City and Borough, setting boundaries for drainage and paving of streets in the Mendenhall Valley.	11/17/1993 (city adoption date)	3/24/1994, 59 FR 13884	Mendenhall Valley PM Plan.
Ordinance of the City and Borough of Juneau, Serial No. 2008–28.	An Ordinance Amending the Woodsmoke Control Program Regarding Solid Fuel-Fired Burning Devices.	9/8/2008 (city adoption date)	5/9/2013, 78 FR 27071	Mendenhall Valley PM Limited Maintenance Plan.
Fairbanks North Star Borough Ordinances and Code				
Fairbanks North Star Borough Ordinance No. 2001–17.	Mandating a Fairbanks North Star Borough Motor Vehicle Plug-in Program.	4/12/2001 (borough adoption date)	2/4/2002, 67 FR 5064	Fairbanks Transportation Control Program—Carbon Monoxide.
Fairbanks North Star Borough Ordinance No. 2003–71.	An Ordinance amending the Carbon Monoxide Emergency Episode Prevention Plan including implementing a Woodstove Control Ordinance.	10/30/2003 (borough adoption date)	7/27/2004, 69 FR 44601	Fairbanks Carbon Monoxide Maintenance Plan.
Chapter 21.28—$PM^{2.5}$ Air Quality Control Program				
21.28.010	Definitions	3/2/2015 (borough effective date)	9/8/2017, 82 FR 42457	
21.28.020	Borough listed appliances	1/15/2016 (borough effective date)	9/8/2017, 82 FR 42457	
21.28.030	Prohibited acts	10/1/2016 (borough effective date)	9/8/2017, 82 FR 42457	Except H and J.
21.28.050	Forecasting exceedances and restrictions in the air quality control zone during an alert.	6/26/2015 (borough effective date)	9/8/2017, 82 FR 42457	
21.28.060	No other adequate source of heat determination.	8/12/2016 (borough effective date)	9/8/2017, 82 FR 42457	

(d) *EPA approved state source-specific requirements.*

TABLE 4 TO PARAGRAPH (d)—EPA-APPROVED ALASKA SOURCE-SPECIFIC REQUIREMENTS

Name of source	Order/permit number	State effective date	EPA approval date	Explanations
None.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R10–OAR–2024–0430, FRL–12243–02–R10]

Air Plan Approval; Washington; Olympic Region Clean Air Agency, Recreational Fires

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is approving a revision to the Washington State Implementation Plan (SIP) that was submitted by the Department of Ecology (Ecology) in coordination with the Olympic Region Clean Air Agency (ORCAA). In 2013, Ecology and ORCAA inadvertently submitted for incorporation into the SIP a ban on small, recreational fires in Thurston County. These fires are defined as having a maximum pile size of three feet in diameter by two feet high using seasoned firewood or charcoal, generally associated with backyard, summer campfires. Ecology and ORCAA provided a review of the historical record to demonstrate that the ban on recreational fires was not relied upon for attainment, maintenance, or reasonable further progress in the Thurston County area. Ecology and ORCAA also provided data to demonstrate that removing the ban on recreational fires would not interfere with maintenance of the national ambient air quality standards. Therefore, we are approving the request by Ecology and ORCAA to remove this provision from the SIP.

DATES: This final rule is effective February 18, 2025.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–R10–OAR–2024–0430. All documents in the docket are listed on the *https://www.regulations.gov* website. Although listed in the index, some information is not publicly available, *e.g.,* Confidential Business Information or other information the disclosure of which is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available at *https://www.regulations.gov,* or please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section for additional availability information.

FOR FURTHER INFORMATION CONTACT: Jeff Hunt, EPA Region 10, 1200 Sixth Avenue, Suite 155, Seattle, WA 98101, at (206) 553–0256 or *hunt.jeff@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document, wherever ''we'' or ''our'' is used, it means the EPA.

I. Background

On October 24, 2024, the EPA proposed to approve revisions to the Washington SIP to remove a ban on small, recreational fires in Thurston County (89 FR 84842). The reasons for our proposed action are included in the proposal and will not be restated here. The public comment period closed on November 25, 2024. We received two comments from members of the public. The full text of the comments may be found in the docket for this action. We have summarized the comments in the following section II. of this preamble.

II. Comments

The first commenter conveyed overall support for our proposed action. The EPA acknowledges the commenter's support.

The second commenter expressed concern about air emissions from cannabis plants and stated there is a need to study volatile organic compound (VOC) emissions from the plants and how such emissions may contribute to ozone formation. This comment is outside the scope of this action. The revisions to Washington's SIP do not relate to cannabis production in general or VOC emissions from cannabis production in particular. Rather, the revisions to Washington's SIP remove a ban on small, recreational fires using seasoned firewood or charcoal. In addition, the commenter did not indicate that EPA approval of the SIP submissions is inconsistent with the Clean Air Act.

Therefore, for the reasons stated in this preamble and our proposed action on October 24, 2024, we are finalizing our action as proposed (89 FR 84842).

III. Final Action

The EPA is approving ORCAA regulation 6.2.7, State effective March 6, 2023, and incorporating it by reference into the Washington SIP at 40 CFR 52.2470(c)—*Table 6—Additional Regulations Approved for the Olympic Region Clean Air Agency (ORCAA) Jurisdiction.* This action repeals a ban on recreational fires within the city limits of Lacey, Olympia, and Tumwater, and unincorporated areas of Thurston County lying within or between the municipal boundaries of these cities. Based on the demonstration provided by Ecology and ORCAA, we determined that the revision will not interfere with maintenance of the national ambient air quality standards or other applicable requirements of the Clean Air Act.

IV. Incorporation by Reference

In this document, the EPA is finalizing regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, we are finalizing the incorporation by reference of ORCAA regulation 6.2.7, State effective March 6, 2023, as described in section III of this preamble and set forth in the amendments to 40 CFR part 52 in this document. The EPA has made, and will continue to make, these materials generally available through *https://www.regulations.gov* and at the EPA Region 10 Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information).

Therefore, these materials have been approved by the EPA for inclusion in the SIP, have been incorporated by reference by the EPA into that plan, are fully federally enforceable under sections 110 and 113 of the Clean Air Act as of the effective date of the final rule of the EPA's approval, and will be incorporated by reference in the next update to the SIP compilation.[1]

V. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Clean Air Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA's role is to approve State choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this action merely approves State law as meeting Federal requirements and does not impose additional requirements beyond those imposed by State law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 14094 (88 FR 21879, April 11, 2023);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it approves a State program;
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and
- Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act.

Executive Order 12898 (Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, February 16, 1994) directs Federal agencies to identify and address ''disproportionately high and adverse human health or environmental effects'' of their actions on communities with environmental justice (EJ) concerns to the greatest extent practicable and permitted by law. Executive Order 14096 (Revitalizing Our Nation's Commitment to Environmental Justice for All, 88 FR 25251, April 26, 2023) builds on and supplements Executive Order 12898 and defines EJ as, among other things, the just treatment and meaningful involvement of all people, regardless of income, race, color, national origin, or Tribal affiliation, or disability in agency decision-making and other Federal activities that affect human health and the environment.

The air agency did not evaluate environmental justice considerations as part of its SIP submission; the Clean Air Act and applicable implementing regulations neither prohibit nor require such an evaluation. The EPA did not perform an EJ analysis and did not consider EJ in this action. Due to the nature of this action, it is expected to have a neutral to positive impact on the air quality of the affected area. Consideration of EJ is not required as part of this action, and there is no information in the record inconsistent with the stated goal of Executive Order 12898/14096 of achieving environmental justice for communities with EJ concerns.

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian Tribe has demonstrated that a Tribe has jurisdiction. In those areas of Indian country, the rule does not have Tribal implications and it will not impose substantial direct costs on Tribal governments or preempt Tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

This action is subject to the Congressional Review Act, and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by *March 18, 2025.* Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. See section 307(b)(2).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Carbon monoxide, Incorporation by reference, Intergovernmental relations, Lead, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds.

Dated: January 7, 2025.

Daniel Opalski,

Acting Regional Administrator, Region 10.

For the reasons set forth in the preamble, EPA amends 40 CFR part 52 as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart WW—Washington

■ 2. In § 52.2470, amend paragraph (c), table 6 by revising the entry ''6.2.7'' to read as follows:

§ 52.2470 Identification of plan.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R08–OAR–2023–0587; FRL–11571–02–R8]

Revisions to the Federal Implementation Plan for the Billings/Laurel, Montana, Sulfur Dioxide Area

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is revising a Federal Implementation Plan (FIP) applicable to sulfur dioxide (SO_2) emissions from four sources located in Billings and Laurel, Montana. Specifically, the EPA is revising a portion of the FIP promulgated by the EPA in 2008 (2008 Billings/Laurel SO_2 FIP) by removing a provision which contained an affirmative defense for exceedances of flare emission limits during malfunctions, startups, and shutdowns. The EPA is taking this action pursuant to the Clean Air Act (CAA).

DATES: This rule is effective on February 18, 2025.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–R08–OAR–2023–0587. All documents in the docket are listed on the *https://www.regulations.gov* website. Although listed in the index, some information is not publicly available, *e.g.,* Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available through *https://www.regulations.gov,* or please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section for additional availability information.

FOR FURTHER INFORMATION CONTACT: Adam Clark, Air and Radiation Division, EPA, Region 8, Mail code 8ARD–IO, 1595 Wynkoop Street, Denver, Colorado, 80202–1129, telephone number: (303) 312–7104, email address: *clark.adam@epa.gov*.

SUPPLEMENTARY INFORMATION: Throughout this document wherever ''we,'' ''us,'' or ''our'' is used, we mean the EPA.

I. Background

The background for this action is discussed in detail in our October 15, 2024, proposal (89 FR 82948). In that document we proposed to revise the 2008 Billings/Laurel SO_2 FIP by removing the portion of the FIP found at 40 CFR 52.1392(i), titled ''Affirmative defense provisions for exceedances of flare emission limits during malfunctions, startups, and shutdowns.'' We received one comment on this proposal.

II. Response to Comments

Comment: The EPA received one comment on this proposal from an individual commenter. The commenter expressed support for the EPA's proposed action, noting the harms of SO_2 pollution and the importance of protecting the communities near impacted sources.

Response: The EPA acknowledges this supportive comment.

III. Final Action

The EPA is revising the 2008 Billings/Laurel SO_2 FIP by removing section 52.1392(i) and all of the provisions therein, including paragraphs sections 52.1392 (i)(1)–(3).

IV. Environmental Justice Considerations

The EPA defines environmental justice (EJ) as ''the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.'' [1] The EPA further defines the term ''fair treatment'' to mean that ''no group of people should bear a disproportionate burden of environmental harms and risks, including those resulting from the negative environmental consequences of industrial, governmental, and commercial operations or programs and policies.'' [2] Recognizing the importance of these considerations to local communities, the EPA conducted an EJ screening analysis around the location of the facilities associated with this action to evaluate environmental and demographic indicators for the areas impacted by this final action. However, the EPA is providing the information associated with this analysis for informational purposes only. The information provided herein is not a basis of this action.

The EPA conducted the screening analyses using EJScreen, an EJ mapping and screening tool that provides the EPA with a nationally consistent dataset and approach for combining various environmental and demographic

[1] *See https://www.epa.gov/environmentaljustice/learn-about-environmental-justice.*

[2] Id.

indicators.[3] The EJScreen tool presents these indicators at a census block group (CBG) level or a larger user-specified ''buffer'' area that covers multiple CBGs.[4] An individual CBG is a cluster of contiguous blocks within the same census tract and generally contains between 600 and 3,000 people. EJScreen is not a tool for performing in-depth risk analysis, but is instead a screening tool that provides an initial representation of indicators related to EJ and is subject to uncertainty in some underlying data (*e.g.,* some environmental indicators are based on monitoring data which are not uniformly available; others are based on self-reported data).[5] For informational purposes, we have summarized EJScreen data within larger ''buffer'' areas covering multiple block groups and representing the average resident within the buffer areas surrounding the facilities. EJScreen environmental indicators help screen for locations where residents may experience a higher overall pollution burden than would be expected for a block group with the same total population in the U.S. These indicators of overall pollution burden include estimates of ambient particulate matter ($PM_{2.5}$) and ozone concentration, a score for traffic proximity and volume, percentage of pre-1960 housing units (lead paint indicator), and scores for proximity to Superfund sites, risk management plan (RMP) sites, and hazardous waste facilities.[6] EJScreen also provides information on demographic indicators, including percent of low-income, communities of color, linguistic isolation, and less than high school education.

The EPA prepared EJScreen reports covering buffer areas of approximately five kilometers around the four facilities subject to the 2008 Billings/Laurel SO_2 FIP. From those reports, no facilities showed EJ indices greater than the 80th national percentiles.[7] The full, detailed EJScreen reports are provided in the docket for this rulemaking.

V. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 14094: Modernizing Regulatory Review

This action is exempt from review under Executive Order 12866, as amended by Executive Order 14094, as it is not a rule of general applicability. This action specifically applies to 4 facilities in the State of Montana.

B. Paperwork Reduction Act

This action does not impose an information collection burden under the provisions of the Paperwork Reduction Act (PRA), because it revises the reporting requirements for 4 facilities in the State of Montana.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. This action will not impose any requirements on small entities as no small entities are subject to the requirements of this rule.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate of $100 million or more as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. This action imposes no enforceable duty on any State, local, or Tribal governments or the private sector.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have Tribal implications, as specified in Executive Order 13175, because this rule would not apply on any Indian reservation land or in any other area where the EPA or an Indian Tribe has demonstrated that the Tribe has jurisdiction, and it will not impose substantial direct costs on Tribal governments or preempt Tribal law. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

This action is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997). The EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of ''covered regulatory action'' in section 2–202 of the Executive Order. This action is not subject to Executive Order 13045 because it merely removes a provision from the 2008 Billings/Laurel SO_2 FIP that is inconsistent with the requirements of the CAA.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211 (66 FR 28355 (May 22, 2001)), because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act

This rulemaking does not involve technical standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations and Executive Order 14096: Revitalizing Our Nation's Commitment to Environmental Justice for All

The EPA believes that it is not practicable to assess whether the human health or environmental conditions that exist prior to this action result in disproportionate and adverse effects on communities with environmental justice concerns. While the EPA has identified the sources that would be impacted by this action, the EPA cannot quantify the baseline conditions and impacts the affirmative defense provisions have had on these sources, nor can we project potential emissions impacts from these sources as a result of this action. However, the EPA expects that this action is expected to have a neutral to positive impact on the air quality of the affected area.

[3] The EJSCREEN tool is available at *https://www.epa.gov/ejscreen.*

[4] *See https://www.census.gov/programs-surveys/geography/about/glossary.html.*

[5] In addition, EJSCREEN relies on the five-year block group estimates from the U.S. Census American Community Survey. The advantage of using five-year over single-year estimates is increased statistical reliability of the data (*i.e.,* lower sampling error), particularly for small geographic areas and population groups. For more information, *see https://www.census.gov/content/dam/Census/library/publications/2020/acs/acs_general_handbook_2020.pdf.*

[6] For additional information on environmental indicators and proximity scores in EJSCREEN, *see* ''EJSCREEN Environmental Justice Mapping and Screening Tool: EJSCREEN Technical Documentation,'' chapter 3 and appendix C (September 2019) at *https://www.epa.gov/sites/default/files/2021-04/documents/ejscreen_technical_document.pdf.*

[7] For a place at the 80th percentile nationwide, that means 20 percent of the U.S. population has a higher value. The EPA identified the 80th percentile filter as an initial starting point for interpreting EJScreen results. The use of an initial filter promotes consistency for the EPA's programs and regions when interpreting screening results.

K. Determination Under Section 307(d)

Pursuant to CAA section 307(d)(1)(B), this action is subject to the requirements of CAA section 307(d), as it promulgates a FIP under CAA section 110(c).

L. Congressional Review Act (CRA)

This rule is exempt from the CRA because it is a rule of particular applicability.

M. Judicial Review

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by March 18, 2025. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review, does not extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. *See* CAA section 307(b)(2).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Carbon monoxide, Greenhouse gases, Incorporation by reference, Intergovernmental relations, Lead, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds.

Authority: 42 U.S.C. 7401 *et seq.*

Jane Nishida,

Acting Administrator.

For the reasons stated in the preamble, the Environmental Protection Agency is amending 40 CFR part 52 as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart BB—Montana

§ 52.1392 [Amended]

■ 2. In § 52.1392, remove and reserve paragraph (i).

RIN 2060–AU94

National Volatile Organic Compound Emission Standards for Aerosol Coatings Amendments

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The U.S. Environmental Protection Agency (EPA) is finalizing amendments to the National Volatile Organic Compound Emission Standards for Aerosol Coatings. This action revises national emission standards for the aerosol coatings (aerosol spray paints) category under the Clean Air Act (CAA), which requires control of volatile organic compound (VOC) emissions from certain categories of consumer and commercial products for purposes of reducing VOC emissions contributing to ozone formation and ozone nonattainment. The regulation employs a relative reactivity-based approach to control aerosol coating products' contribution to ozone formation by encouraging the use of less reactive VOC ingredients in formulations. In this final rule, the EPA is updating coating category product-weighted reactivity (PWR) limits, adding new compounds and reactivity factors, updating existing reactivity factors, revising the rule's default reactivity factor, amending thresholds for VOC regulated by the rule, amending reporting requirements, updating test methods to reflect more recent versions, adding a new compliance date, and making clarifying edits.

DATES: *Effective date.* The effective date of this final rule is January 17, 2025. The incorporation by reference of certain material listed in this rule is approved by the Director of the Federal Register as of January 17, 2025. The incorporation by reference of certain other material listed in this rule was approved by the Director of the Federal Register as of March 24, 2008.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–HQ–OAR–2006–0971. All documents in the dockets are listed on the *www.regulations.gov* website. Although listed, some information is not publicly available, *e.g.,* Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically through *www.regulations.gov,* or in hard copy at the EPA Docket Center, WJC West Building, Room Number 3334, 1301 Constitution Ave. NW, Washington, DC. The Public Reading Room hours of operation are 8:30 a.m. to 4:30 p.m. Eastern Standard Time (EST), Monday through Friday. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the EPA Docket Center is (202) 566–1742.

FOR FURTHER INFORMATION CONTACT: For information about the National Volatile Organic Compound Emission Standards for Aerosol Coatings, contact Kaye Whitfield, U.S. EPA, Office of Air Quality Planning and Standards, Sector Policies and Programs Division, Minerals and Manufacturing Group (D243–02), Research Triangle Park, North Carolina 27711; telephone number: (919) 541–2509; fax number (919) 541–4991; and email address: *whitfield.kaye@epa.gov.* For questions related to enforcement, contact John Cox, Office of Enforcement and Compliance Assurance, U.S. Environmental Protection Agency, U.S. EPA WJC South Building (2221A), Pennsylvania Avenue NW, Washington, DC 20460; telephone number: (202) 564–1395 and email address: *cox.john@epa.gov.* For questions related to reporting, contact the EPA Regional Office where the regulated entity is located. For a complete list, see Addresses of EPA regional offices in 40 CFR 59.512.

SUPPLEMENTARY INFORMATION:

Preamble acronyms and abbreviations. Throughout this document the use of ''we,'' ''us,'' or ''our'' is intended to refer to the EPA. We use multiple acronyms and terms in this preamble. While this list may not be exhaustive, to ease the reading of this preamble and for reference purposes, the EPA defines the following terms and acronyms here:

ACA American Coatings Association
ASTM American Society for Testing and Materials
CARB California Air Resources Board
CAA Clean Air Act
CBI Confidential Business Information
CDX Central Data Exchange
CEDRI Compliance and Emissions Data Reporting Interface
CFR Code of Federal Regulations
CRA Congressional Review Act
EJ Environmental Justice
EPA Environmental Protection Agency

FR **Federal Register**
g 0_3/g product grams of ozone per grams of product
IBR incorporation by reference

MIR maximum incremental reactivity
NTTAA National Technology Transfer and Advancement Act
OMB Office of Management and Budget
PRA Paperwork Reduction Act
PWR product-weighted reactivity
RF reactivity factor
RFA Regulatory Flexibility Act
UMRA Unfunded Mandates Reform Act
VOC volatile organic compound

Background information. The EPA promulgated ''The National Volatile Organic Compound Emission Standards for Aerosol Coatings,'' on March 24, 2008 (73 FR 15604) and codified the action at 40 CFR part 59, subpart E (§§ 59.500 through 59.516). The rule establishes nationwide VOC reactivity-based standards for the aerosol coatings source category under the statutory authority of section 183(e) of the CAA (42 U.S.C. 7401 *et seq.*). Section 183(e) requires the EPA to control VOC emissions from certain categories of consumer and commercial products for purposes of reducing VOC emissions that contribute to ozone formation and nonattainment of the ozone national ambient air quality standards (NAAQS).

The EPA has amended the original aerosol coatings rule several times to respond to petitions and to make rule clarifications. Many of the amendments were in accordance with a provision in 40 CFR 59.511(j) that allows regulated entities who elect not to use the default reactivity factors (RF) to calculate PWR to ''. . . petition the Administrator to add a compound to table 2A, 2B, or 2C of this subpart. Petitions must include the chemical name, [Chemical Abstract Services] (CAS) number, a statement certifying the intent to use the compound in an aerosol coatings product, and adequate information for the Administrator to evaluate the reactivity of the compound and assign a RF . . .'' Accordingly, the EPA has amended the aerosol coatings rule to add 131 compounds, corresponding RFs, and CAS numbers for each compound or class of compounds listed in 40 CFR part 59, table 2 (79 FR 29604). As for rule clarifications, the EPA has made revisions that clarify which VOC are to be quantified in compliance determinations (79 FR 29604); to inform regulated entities that VOC normally exempt by definition under 40 CFR 51.100(s)(1) and (s)(5) must be counted as VOC for the purposes determining compliance with the aerosol coatings rule (74 FR 29595); and, to ensure that both the certifying entity and the regulated entity have full knowledge of responsibilities assumed by the certifying entity (74 FR 29595).

More recently, on September 17, 2021, in response to petitions from American Coatings Association (ACA), the EPA proposed amendments to the aerosol coatings rule that promote consistency and uniformity between the California Air Resources Board (CARB) aerosol coating product regulation and the national aerosol coatings emission limitations, where appropriate (86 FR 51851).

This action finalizes the Agency's response to the ACA petitions and makes additional revisions based on public comments the EPA received on the proposed action. For more information, see the docket for this action, Docket ID No. EPA–HQ–OAR–2006–0971, and section IV. of this preamble.

Organization of this document. The information in this preamble is organized as follows:

I. General Information
A. Entities Potentially Affected by This Action
B. Where can I get a copy of this document and other related information?
C. Judicial Review and Administrative Reconsideration
II. Background
A. What amendments have been made since promulgation of the original rule?
B. What changes did we propose for the National Volatile Organic Compound Emission Standards for Aerosol Coatings source category on September 21, 2021?
III. Summary of the Final Standards and Changes Since Proposal
A. Table 1 to Subpart E of Part 59: Product-Weighted Reactivity Limits by Coatings Category
B. Table 2A, 2B, and 2C to Subpart E of Part 59: Reactivity Factors, Aliphatic Hydrocarbon Solvent Mixtures, and Aromatic Hydrocarbon Solvent Mixtures
C. The Default Reactivity Factor
D. VOC Regulated by the Rule
E. Electronic Reporting of Notifications and Reports
F. Test Methods
IV. Response to Significant Comments
A. Compliance Date of the Rule
B. Effective Date of the Rule
C. Definitions
D. VOC Regulated by the Rule
E. Default Reactivity Factor
V. Summary of Impacts
A. Environmental Impacts
B. Energy Impacts
C. Cost and Economic Impacts
VI. Statutory and Executive Order Reviews
A. Executive Order 12866: Regulatory Planning and Review and Executive Order 14094: Modernizing Regulatory Review
B. Paperwork Reduction Act (PRA)
C. Regulatory Flexibility Act (RFA)
D. Unfunded Mandates Reform Act (UMRA)
E. Executive Order 13132: Federalism
F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments
G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks
H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use
I. National Technology Transfer and Advancement Act (NTTAA) and 1 CFR Part 51
J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations and Executive Order 14096: Revitalizing Our Nation's Commitment to Environmental Justice for All
K. Congressional Review Act (CRA)

I. General Information

A. Entities Potentially Affected by This Action

The entities potentially affected by this regulation encompass those engaged in many aspects of the manufacture and sale of aerosol coatings. This includes manufacturers, processors, wholesale distributors, or importers of aerosol coating products for sale or distribution in interstate commerce in the United States, or manufacturers, processors, wholesale distributors, or importers who supply the entities listed above with aerosol coatings for sale or distribution in interstate commerce in the United States. In addition, affected entities include those listed in the North American Industry Classification System codes 32551 and 325998. This list is not intended to be exhaustive, but rather provides a guide for entities likely to be affected by this action. If you have any questions regarding the applicability of this action to a particular entity, consult the appropriate EPA contact listed in the **FOR FURTHER INFORMATION CONTACT** section of this preamble.

B. Where can I get a copy of this document and other related information?

The EPA has established a docket for this rulemaking under Docket ID No. EPA–HQ–OAR–2006–0971. All documents in the dockets are listed in *www.regulations.gov.* In addition to being available in the docket, an electronic copy of this final action will also be available on the internet. Following signature by the EPA Administrator, the EPA will post a copy of this final action at *www.epa.gov/stationary-sources-air-pollution/aerosol-coatings-national-volatile-organic-compound-emission.* Following publication in the **Federal Register**, the

EPA will post the **Federal Register** version of the final rule and key technical documents at this same website.

C. Judicial Review and Administrative Reconsideration

Under CAA section 307(b)(1), judicial review of this final action is available only by filing a petition for review in the United States Court of Appeals for the District of Columbia Circuit by March 18, 2025. Under CAA section 307(b)(2), the requirements established by this final rule may not be challenged separately in any civil or criminal proceedings brought by the EPA to enforce the requirements. Section 307(d)(7)(B) of the CAA further provides that only an objection to a rule or procedure which was raised with reasonable specificity during the period for public comment (including any public hearing) may be raised during judicial review. This section also provides a mechanism for the EPA to reconsider the rule if the person raising an objection can demonstrate to the Administrator that it was impracticable to raise such objection within the period for public comment or if the grounds for such objection arose after the period for public comment (but within the time specified for judicial review) and if such objection is of central relevance to the outcome of the rule. Any person seeking to make such a demonstration should submit a Petition for Reconsideration to the Office of the Administrator, U.S. EPA, Room 3000, WJC South Building, 1200 Pennsylvania Ave. NW, Washington, DC 20460, with a copy to both the person(s) listed in the preceding **FOR FURTHER INFORMATION CONTACT** section, and the Associate General Counsel for the Air and Radiation Law Office, Office of General Counsel (Mail Code 2344A), U.S. EPA, 1200 Pennsylvania Ave. NW, Washington, DC 20460.

II. Background

A. What amendments have been made since promulgation of the original rule?

The EPA has amended the original aerosol coatings rule several times to respond to petitions and to make rule clarifications. Many of the amendments were in accordance with a provision in 40 CFR 59.511(j) that allows regulated entities who elect not to use the default RF to calculate PWR to ''. . . petition the Administrator to add a compound to table 2A, 2B, or 2C of this subpart. Petitions must include the chemical name, [Chemical Abstract Services] (CAS) number, a statement certifying the intent to use the compound in an aerosol coatings product, and adequate information for the Administrator to evaluate the reactivity of the compound and assign a RF . . .'' As such, the EPA has amended the rule to add 131 compounds, corresponding reactivity factors, and CAS numbers for each compound or class of compounds listed in 40 CFR part 59 table 2 (79 FR 29604). As for rule clarifications, the EPA has made revisions to clarify which volatile organic compounds must be quantified in compliance determinations (79 FR 29604); to inform regulated entities that VOC normally exempt by definition under 40 CFR 51.100(s)(1) and (s)(5) are to be counted as VOC for the purposes determining compliance with this rule (74 FR 29595); and to ensure that both the certifying entity and the regulated entity have full knowledge of responsibilities assumed by the certifying entity (74 FR 29595).

B. What changes did we propose for the National Volatile Organic Compound Emission Standards for Aerosol Coatings source category on September 21, 2021?

On September 17, 2021, in response to petitions from ACA, the EPA proposed amendments to the standards that promote consistency and uniformity between the CARB aerosol coating product regulation and the EPA aerosol coatings rule emission limitations, where appropriate (86 FR 51851). This action finalizes the Agency's response to the ACA petitions and makes additional revisions based on public comments received on the proposal. For more information, see the docket for this action, Docket ID No. EPA–HQ–OAR–2006–0971, and section IV. of this preamble.

III. Summary of the Final Standards and Changes Since Proposal

A. Table 1 to Subpart E of Part 59: Product-Weighted Reactivity Limits by Coatings Category

This final rule updates the PWR limits for the coating categories listed in table 1 of 40 CFR part 59, subpart E. The changes, which are based on updates to the relative reactivity scale that underlies both the reactivity factors and limits, will further decrease the contribution of aerosol coatings to ozone formation.

In addition, the EPA is adopting identical category names and limits as those in CARB's aerosol coating product regulation and, where possible, including them in the EPA's national aerosol coatings rule in table 1 of 40 CFR part 59, subpart E. This amendment also led to the Agency combining two sets of coatings subcategories into two main categories and adding corresponding limits for those categories, as follows:

- The subcategories ''enamel,'' ''lacquer,'' and ''clear or metallic'' coatings are now subsumed under the category heading, ''Hobby/Model/Craft Coatings,'' with a category limit of 1.6 grams of ozone per gram of VOC (g O_3/g VOC); and
- The subcategories ''clear'' and ''pigmented'' coatings are now subsumed under the category heading, ''Shellac Sealers,'' with a category limit of1.00 g O_3/g VOC.

The EPA also is adding six new specialty coating categories and imposing corresponding emission limitations for consistency with CARB's aerosol coating product regulation, as follows:

- ''Electrical/Electronic/Conformal Coatings,'' with a category limit of 2.00 O_3/g VOC;
- ''Flexible Coatings,'' with a category limit of 1.60 O_3/g VOC;
- ''Mold Release Coatings,'' with a category limit of 1.10 O_3/g VOC;
- ''Rust Converter,'' with a category limit of 1.10 O_3/g VOC;
- ''Two Component Coating,'' with a category of 1.20 O_3/g VOC; and
- ''Uniform Finish Coating,'' with a category limit of 1.30 O_3/g VOC.

B. Table 2A, 2B, and 2C to Subpart E of Part 59: Reactivity Factors, Aliphatic Hydrocarbon Solvent Mixtures, and Aromatic Hydrocarbon Solvent Mixtures

The EPA is finalizing amendments to 40 CFR part 59 subpart E, tables 2A, 2B, and 2C by adding 17 new compounds and corresponding RF to table 2A, and by updating the RF of one existing compound mixture to table 2B. Of the 17 new compound additions to table 2A, 15 have an assigned maximum incremental reactivity (MIR) value in CARB's aerosol coatings regulation, which the Agency is adopting as RF values in this final action. The EPA is also finalizing the addition of two remaining compounds to table 2A: trans-1-chloro-3,3,3-trifluoropropene (HFO–1233zdE), CAS 102687–65–0, and diethyl carbonate, CAS 105–58–8, with RFs of 0.04 g O_3/g VOC and 0.71 g O_3/g VOC, respectively. The RFs that the EPA has assigned to these two compounds are based on MIR values

derived by Venecek [1] and Carter,[2] respectively.

One of the compounds the EPA is adding, dipropylene glycol monomethyl ether, CAS 34590–94–8, is a mixture of isomers. Another compound, 2-[2-methoxypropoxy]-1-propanol, CAS 13588–28–8, is an isomer of dipropylene glycol monomethyl ether, which is already on table 2A; and the EPA is assigning both of those compounds an RF of 2.58 g O_3/g VOC.

In addition to adding the new compounds listed above, the EPA is updating reactivity factors in tables 2A, 2B, and 2C for other compounds already addressed in the EPA's aerosol coatings rule to align with the MIR values in the current CARB aerosol coating product regulation.[3] This will maintain the internal consistency of the relative reactivity scale and changes to the limits finalized in 40 CFR part 59 subpart E, table 1. The updates to the existing RFs listed in tables 2A, 2B, and 2C will take effect on January 17, 2025. Regulated entities who are already formulating their products to meet CARB's aerosol coating product regulation may elect to use the new RFs and meet the new category emission limitations of the EPA's aerosol coatings rule upon the effective date of this action. However, regulated entities must use the new RFs and meet the new emission limitations by the compliance date. All regulated entities must come into compliance with all provisions in this final rule by July 17, 2025.

C. The Default Reactivity Factor

In the EPA's original national aerosol coatings rule, if a regulated entity used a VOC in an aerosol coating formulation that was not listed in tables 2A, 2B, or 2C, it was assigned a default RF of 22.04 g O_3/g VOC (see 40 CFR 59.505(e)(4) and 59.511(j)). In this final action, we reset the default RF for VOCs of unknown reactivity consistent with the methodology used in the original aerosol coatings rule, whereby we identified the VOC with the maximum RF value in table 2A, and then assigned that value as the default RF for any VOC that is not listed with a specific RF (73 FR 15610). Therefore, the EPA is resetting the default RF to 18.50 g O_3/g VOC, the highest value in table 2A of this final action. Furthermore, the EPA is finalizing two additional requirements related to the default RF. First, regulated entities shall include the name and CAS number of all VOCs for which they are using the default RF, as specified in the reporting requirements in 40 CFR 59.511. Second, if a regulated entity uses a VOC in a product that is not listed in table 2A, but its isomer is listed in table 2A, then the regulated entity shall use the RF of the isomer. If more than one isomer of that VOC, or mixtures of the isomers of that VOC, is listed in table 2A, then the regulated entity shall use the highest RF associated with the listed isomers or isomer mixtures.

D. VOC Regulated by the Rule

The EPA is not making changes to the current definition of VOC in 40 CFR 51.100(s)(7) in this final action. However, it is important to note that in the original aerosol coatings rule, the EPA amended the regulatory definition of VOC to remove the exemption of specific organic compounds identified in 40 CFR 51.100(s)(1) and (s)(5) for purposes of determining compliance with the reactivity-based emission limitations in the aerosol coatings rule. Thus, 40 CFR 51.100(s)(7) provides that ''any organic compound in the volatile portion of an aerosol coating is counted towards the product's reactivity-based limit, as provided in part 59, subpart E. Therefore, the compounds that are used in aerosol coating products and that are identified in paragraph (s) of this section as negligibly reactive and excluded from the EPA's definition of VOC are to be counted towards a product's reactivity limit for the purposes of determining compliance with the EPA's aerosol coatings reactivity-based national regulation, as provided in part 59, subpart E.'' To eliminate consideration of VOC that make *de minimis* contributions to a product's overall reactivity in the original aerosol coatings rule, the EPA also excluded from the applicable emission limitations those compounds that: (a) contribute less than 0.1 percent of the product weight (regardless of their RF); and (b) have reactivities less than ethane and comprise less than 7.3 percent of product weight. We explained the basis for the derivation of the 7.3 percent threshold and its relationship to the RF for ethane and the default RF in the original rulemaking (see 73 FR 15604). In this action, the EPA is finalizing amendments to the aerosol coatings rule to retain part (a), where compounds that comprise less than 0.1 percent of the product weight are excluded from the product's mass-weighted reactivity, but eliminate part (b), the exclusion of low reactivity compounds that comprise more than 0.3 percent but less than 7.3 percent of the product weight.

E. Electronic Reporting of Notifications and Reports

The EPA is also finalizing the revision to the aerosol coatings rule to require that regulated entities submit electronic copies of required notifications and reports in template format through the EPA's Central Data Exchange (CDX) using the Compliance and Emissions Data Reporting Interface (CEDRI), instead of the current hard copy submission requirement. A description of the electronic data submission process is provided in the memorandum *Electronic Reporting Requirements for New Source Performance Standards (NSPS) and National Emission Standards for Hazardous Air Pollutants (NESHAP) Rules,* available in the docket for this action. For the nine notifications and reports in the aerosol coatings rule, (*i.e.,* Temporary Variances, Initial Notification, Change to Information in Initial Notification, Response to Written Notification, Exemption Claim Initial Notification, Exemption Claim Annual Report, Notice of Certifying Entity to Maintain Records, Notice Rescinding Certification and Triennial Report), this final rule requires that regulated entities use the appropriate spreadsheet template to submit information to CEDRI. A final version of the spreadsheet template for these notifications and reports is included in the docket and on the CEDRI web page.[4] The EPA has also updated the spreadsheet in response to the comments received on the proposal.

Furthermore, the EPA is finalizing revisions to the aerosol coatings rule that provide owners and operators the ability to seek extensions for submitting electronic reports for circumstances beyond the control of the facility, *i.e.,* for a possible outage in the CDX or CEDRI or for a force majeure event, in the time just prior to a report's due date, as well as the process to assert such a claim.

F. Test Methods

Regulated entities may use formulation data to demonstrate compliance with the emission limitations in the aerosol coatings rule. However, it is also necessary to have test methods in place that can be used

[1] Venecek, Melissa (2020). *Estimating Maximum Incremental Reactivity for Diethyl Carbonate.* Final Report. Sacramento, California: Technical Development Section, Consumer Products and Air Quality Assessment Branch, Air Quality Planning and Science Division, California Air Resources Board.

[2] Carter, William (2009). *Investigation of Atmospheric Ozone Impacts of Trans 1-Chloro-3,3,3—Trifluoropropene,* Final Report. Riverside, California: Center for Environmental Research and Technology, University of California.

[3] Title 17, CCR, Sections 94700–94701.

[4] *www.epa.gov/electronic-reporting-air-emissions/cedri.*

by regulated entities, the EPA, or others to verify the accuracy of formulation data and determine compliance with the reactivity limits. In this final action, we are not requiring new test methods; instead, the EPA is amending the aerosol coatings rule to require use of the updated version of CARB Method 310, ''Determination of Volatile Organic Compounds (VOC) in Consumer Products and Reactive Organic Compounds in Aerosol Coating Products,'' May 25, 2018, when verifying compliance using test methods. For measurement of specular gloss, the EPA will continue to require regulated entities to use, ''Standard Test Method for Specular Gloss,'' ASTM Method D523–08 (2008), formerly ASTM D523–89 (1999). As noted in section IV.A. of this preamble, regulated entities may elect to use the updated RFs and meet the revised emission limitations in this final rule in advance of the compliance date, but if they do so they must use the updated test methods.

IV. Response to Significant Comments

The EPA received a total of eight letters commenting on the September 17, 2021, proposed rule. Significant comments and the EPA's responses appear in this preamble; however, a summary of all public comments and the EPA's responses are contained in the document titled, ''Summary of Public Comments and Responses for the National Volatile Organic Compound Emissions for Aerosol Coatings—Amendments,'' located in the docket for this action, Docket ID No. EPA–HQ–OAR–2006–0971. Copies of all the comment letters are available at the EPA docket Center Public Reading Room and electronically through *www.regulations.gov* by searching Docket ID No. EPA–HQ–OAR–2006–0971.

A. Compliance Date of the Rule

Four commenters requested that the EPA establish a 2-year compliance date for the revisions being made to the aerosol coatings rule in this final action. The commenters argue that sufficient time will be needed for manufacturers to comply with the new VOC MIR emission limitations if they do not already manufacture aerosol coating products for sale in California. In addition, one of the commenters asserts that a two-year compliance date will ensure that industry has sufficient time to reformulate their products and adapt their distribution methods to implement the amended rule's requirements effectively and efficiently. According to the commenter, when a rule is amended, industry requires a reasonable amount of lead time to adjust formulations and supply chain processes to ensure compliance with VOC limits, labeling, and reporting requirements. Additionally, commenters state that manufacturers will need sufficient time to properly communicate these changes to their distributors and retail customers to ensure compliance with amended VOC emission limitations. Therefore, the commenters assert, a compliance date of two years after publication of a final rule would give industry enough time to reformulate with the updated/added compounds and ensure compliance with the new coatings category limits.

The EPA agrees that, especially for regulated entities that do not manufacture or sell products in California, additional time may be needed to come into compliance with the amendments to the aerosol coatings rule. However, the EPA has determined that the two-year compliance period requested by commenters is not warranted, because based upon information available to the agency most, if not all, manufacturers of aerosol coatings already manufacture products that meet the CARB emission limitations, either for themselves or for others. Commenters did not identify any specific manufacturers of aerosol coatings who do not do so. Nevertheless, in this final action, the EPA is providing additional time for manufactures to make any necessary adjustments by finalizing a six-month compliance date for the revised aerosol coatings rule requirements.

It is important to note that the effective date of this rule is the date of publication in the **Federal Register**, or January 17, 2025. In the intervening six months, all regulated entities are subject to the aerosol coatings rule in its current form but may elect to start complying with the amended aerosol coatings rule. This means that regulated entities, including those that are currently in compliance with the CARB aerosol coating product regulation on the effective date of this rule, may elect to begin complying immediately. However, all regulated entities shall come into compliance with all the provisions in this final action by July 17, 2025. The original tables with values for the PWR emission limits by coatings category and the reactivity factors are in appendix A—table 1 and tables 2A, 2B and 2C of this final action.

B. Effective Date of the Final Rule

Several commenters recommend that the EPA allow industry to use the new and updated RF values immediately, once they are finalized and published in the **Federal Register**. The commenters assert that this would allow industry to use the new and updated reactivity values in their formulations to come into compliance with the new coatings category limits in table 1 sooner.

The EPA agrees that this is appropriate. We note that the effective date of this rule indicates when regulated entities may elect to begin meeting the new aerosol coatings product-weighted coating category emission limitations in 40 CFR part 59, subpart E—table 1 using the corresponding reactivity factors in 40 CFR part 59, subpart E—table 2. The Agency directs the commenters to 40 CFR 59.502 and the **DATES** section of this preamble, where the effective date of the rule is the date of publication in the **Federal Register**, or January 17, 2025. Therefore, regulated entities may begin meeting the new emission limitations and using corresponding reactivity factors immediately upon publication of this final rule. The EPA emphasizes that all regulated entities must do so by the compliance date. Also note that, although regulated entities may elect to begin to use the new RF values immediately on January 17, 2025, the EPA is granting a six-month compliance date.

In summary, the EPA has added a provision to 40 CFR 59.502 to clarify that regulated entities may elect to begin meeting the new coating category product-weighted limits in 40 CFR part 59, subpart E—table 1 and use the corresponding reactivity factors in 40 CFR part 59, subpart E—table 2 upon the effective date of the rule, or January 17, 2025. However, all regulated entities must come into compliance with all the revised provisions in the amended aerosol coatings rule by July 17, 2025.

For the reasons discussed above, this final rule is effective immediately upon publication. Section 553(d)(3) of the Administrative Procedure Act (''APA''), 5 U.S.C. 553(d), provides that final rules shall not become effective until 30 days after publication in the **Federal Register** ''except . . . as otherwise provided by the agency for good cause.'' The purpose of this provision is to ''give affected parties a reasonable time to adjust their behavior before the final rule takes effect.'' *Omnipoint Corp.* v. *Fed. Commc'n Comm'n,* 78 F.3d 620, 630 (D.C. Cir. 1996). Thus, in determining whether good cause exists to waive the 30-day delay, an agency should ''balance the necessity for immediate implementation against principles of fundamental fairness which require that all affected persons be afforded a reasonable amount of time to prepare for

the effective date of its ruling.'' Gavrilovic, 551 F.2d at 1105. The EPA has determined that there is good cause for making this final rule effective immediately because, as noted above, regulated entities do not need to come into compliance with the revised provisions for another 181 days—that is, by July 17, 2025.

C. Definitions

Several commenters requested changes, additions, or deletions to the list of definitions included in the aerosol coatings rule. When CARB amended its aerosol coating product regulation in 2013, one commenter stated that they worked diligently with CARB staff to update the definitions so that they correctly characterized industry's products. The commenter noted that further alignment with the definitions in CARB's aerosol coatings regulation is critical and will assist with industry compliance.

The EPA evaluated the commenters' suggestions and has revised some definitions in the updated aerosol coatings rule. Where appropriate, we have amended definitions in the EPA aerosol coatings rule to be consistent with the CARB's definitions. For example, for consistency, we have eliminated the use of the word ''paint'' in both category names and in definitions and replaced it with the more correct term ''coating.'' We have removed words from definitions that needlessly limited a definition, as suggested by commenters. The EPA has removed the term ''synthetic'' from the definition of slip-resistant coatings because it is possible that such a product could use non-synthetic material. We have also removed the term ''elemental'' from the definition of metallic coating, as recommended by a commenter.

In several cases, we are unable to make the changes suggested by the commenters. The EPA does not agree that a claim made by a regulated entity on a label, or on a ''principal display panel'' as specified in CARB's rule, is sufficient to define a category. Our definitions are based solely on the function of the coating and not on the printed claims. Therefore, we will not add a sentence to coatings that defer to a ''principal display panel,'' nor will we include a definition of that term in this final rule. In addition, we will not include definitions of several terms recommended by the commenter but are not used in the EPA's aerosol coatings rule. For example, the term ''Reactivity Limit'' is the term used by CARB in its aerosol coating product regulation, while ''Product-Weighted Reactivity (PWR) limit'' is the term that the EPA uses in the national aerosol coatings rule. The EPA is not adding a definition for the term ''Reactivity Limit'' to the list of definitions because the Agency does not use this term in the aerosol coatings rule.

A more complete discussion of the individual changes to definitions is included in the ''Summary of Public Comments and Responses for the National Volatile Organic Compound Emissions for Aerosol Coatings—Amendments,'' Docket ID No. EPA–HQ–OAR–2006–0971.

D. VOC Regulated by the Rule

The EPA proposed to retain a provision that excludes from the applicable limits those compounds that contribute less than 0.1 percent of the product weight (regardless of their RF) and eliminate a provision from 40 CFR 59.505 that excludes low reactivity compounds that comprise more than 0.1 percent but less than 7.3 percent of the product weight. The EPA received several comments supporting this revision and one that opposed it, based upon concerns that the exclusion of compounds could have unintended adverse impacts. The EPA has concluded that it is appropriate to make the proposed revisions and thus, we are amending 40 CFR 59.505 of this final rule, accordingly. We respond to the adverse comment in more detail in response to comment document titled, ''Summary of Public Comments and Responses for the National Volatile Organic Compound Emissions for Aerosol Coatings—Amendments,'' Docket ID No. EPA–HQ–OAR–2006–0971.

E. Default Reactivity Factor

Five commenters suggested that the EPA adopt a default RF of 11.97 g O_3/g VOC to align with CARB's default MIR value.

The EPA considered whether to adopt CARB's default MIR value as the EPA's default RF in the amended national aerosol coatings rule but is declining to do so. The EPA's methodology for setting a default RF value in the original aerosol coatings rule was to require regulated entities to use the maximum RF value for the compounds specified in table 2. The EPA has used this conservative methodology for setting the default RF to help to ensure the protection of public health by reducing ozone that may result from new and/or previously unstudied VOCs. Consistent with this preferred methodology and considering the updates to RF values in table 2, the EPA is resetting the default RF to 18.50 g O_3/g VOC in this final action.

V. Summary of Impacts

A. Environmental Impacts

There are no anticipated environmental impacts from compliance with this final rule. The revisions to the aerosol coatings rule in this final action are minor and not expected to result in net changes to an aerosol coating product's potential to form ozone because the overall average changes to the values used to measure reactivity of a given regulated product, *i.e.,* category emission limitations and RFs, are small compared to the values in the original rule. The final action is, however, expected to improve upon the original aerosol coatings rule by making updates (*e.g.,* adding new compounds, updating reactivity factors, and adding electronic reporting) that promote consistency and uniformity between State and national regulations. The EPA anticipates that this final action will maintain the level of environmental protection to populations in affected ozone nonattainment areas without having any disproportionately high and adverse human health or environmental effects on any populations, including communities with environmental justice (EJ) concerns.

B. Energy Impacts

There are no adverse energy impacts anticipated from compliance with this final rule.

C. Cost and Economic Impacts

There are no adverse economic impacts anticipated from compliance with this final rule. This action primarily updates reactivity tables and factors and adds electronic reporting provisions.

VI. Statutory and Executive Order Reviews

Additional information about these statutes and Executive Orders can be found at *www.epa.gov/laws-regulations/laws-and-executive-orders.*

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 14094: Modernizing Regulatory Review

This action is not a significant regulatory action as defined in Executive Order 12866, as amended by Executive Order 14094, and was therefore not subject to a requirement for Executive Order 12866 review.

B. Paperwork Reduction Act (PRA)

The information collection requirements in this final rule have been

submitted for approval to OMB under the PRA. The information collection request (ICR) document that the EPA prepared for this action has been assigned OMB control number 2060–0617, EPA ICR Number 2289.06. You can find a copy of the ICR in the docket for this rule, and it is briefly summarized here. The information collection requirements are not enforceable until OMB approves them. There is no increase in burden associated with this action because the rule primarily adds compounds and reactivity factors, updates category limits and reactivity factors, and adds electronic reporting provisions. The burden associated with the change from paper to electronic reporting in this final action will not increase significantly because of this action, and results in a slight decrease in the annual average burden for reporters. In the short term, regulated entities will need time to become familiar with the new reporting scheme and template. In the long term, however, the Agency anticipates that electronic reporting will reduce the burden as regulated entities become more familiar with the electronic reporting process. Additionally, there is a decrease in burden due to a decrease in respondents, which is due to updated information on the number of sources.

Respondents/affected entities: Manufacturers, distributors, and importers of aerosol coatings.

Respondent's obligation to respond: Mandatory (40 CFR part 59, subpart E).

Estimated number of respondents: 47.

Frequency of response: Initially, triennially, and occasionally.

Total estimated burden: 9,562 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: $740,520 (per year), includes no annualized capital or operation and maintenance costs.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for the EPA's regulations in 40 CFR are listed in 40 CFR part 9. When OMB approves this ICR, the Agency will announce that approval in the **Federal Register** and publish a technical amendment to 40 CFR part 9 to display the OMB control number for the approved information collection activities contained in this final rule.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. In making this determination, the EPA concludes that the impact of concern for this rule is any significant adverse economic impact on small entities and that the Agency is certifying that this rule will not have a significant economic impact on a substantial number of small entities because the rule has no net increase in burden on the small entities subject to the rule. The EPA has determined that small entities will incur a reduction in burden over the long term because the primary revisions to the aerosol coatings rule include updating coating categories in table 1, adding compounds to table 2, and adding an electronic reporting provision, where the method of reporting from paper to electronic is the only change. The burden associated with the change from paper to electronic reporting will not increase significantly because of this action, at least in the long term. Small entities will need time to become familiar with the new reporting scheme and template. However, in the long term, the Agency anticipates that, because electronic reporting is more efficient than paper reporting, the burden will be reduced as small entities become more familiar with the electronic reporting process. We have therefore concluded that this action will have no net regulatory burden for all directly regulated small entities.

D. Unfunded Mandates Reform Act (UMRA)

This final action does not contain an unfunded mandate of $100 million (adjusted annually for inflation) or more (in 1995 dollars) as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The costs involved in this action are estimated not to exceed $183 million in 2023 dollars ($100 million in 1995 dollars adjusted for inflation using the GDP implicit price deflator) or more in any one year.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have Tribal implications as specified in Executive Order 13175. The final regulatory action does not have a substantial direct effect on one or more Indian Tribes, in that this action imposes no regulatory burdens on Tribes. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

The EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of ''covered regulatory action'' in section 2–202 of the Executive Order. Therefore, this final action is not subject to Executive Order 13045 because it does not concern an increase in an adverse or environmental health risk or safety risk. Since this action does not concern human health, the EPA's Policy on Children's Health does not apply.

H. Executive Order 13211 Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211 because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act (NTTAA) and 1 CFR Part 51

The national VOC emission standards for aerosol coatings involves technical standards; however, no new technical standards are being finalized in this action. Instead, the EPA is amending this final rule to require that regulated entities use an updated version of an existing test method. As such, we conducted searches for the national VOC standards for aerosol coatings through the Enhanced NSSN Database managed by the American National Standards Institute. We also contacted VCS organizations and accessed and searched their databases. Searches were conducted for EPA Method 311 of 40 CFR part 63, appendix A. During the search, if the title or abstract (if provided) of the VCS described technical sampling and analytical procedures that are like the EPA's reference method, the EPA considered it as a potential equivalent method. All potential standards were reviewed to determine the practicality of the VCS for this final rule. This review requires significant method validation data which meets the requirements of EPA Method 301 for accepting alternative methods or scientific, engineering and policy equivalence to procedures in EPA reference methods. The EPA may

reconsider determinations of impracticality when additional information is available for particular VCS. One voluntary consensus standard was identified as an acceptable alternative to the EPA test method for the purposes of this rule. The voluntary consensus standard, CARB Method 310, ''Determination of Volatile Organic Compounds in Consumer Products and Reactive Organic Compounds in Aerosol Coating Products'' amended May 25, 2018 is an acceptable alternative to EPA Method 311 for determining speciated ingredients and weight percentage of each ingredient of each aerosol coating product. This method is used to determine the weight percent of VOC in consumer products and reactive organic compounds in aerosol coating products and is available from the California Air Resources Board (CARB), 1001 I Street, Sacramento, CA 95814. See *ww2.arb.ca.gov.* In addition, the EPA is incorporating by reference the ASTM D523–08, Standard Test Method for Specular Gloss. This test method is used to measure light reflectiveness of paints, coatings and smooth surface materials and is referenced in CARB Method 310. It covers the measurement of the specular gloss of nonmetallic specimens for glossmeter geometries of 60, 20 and 85 degrees and is available at ASTM, International, 1850 M Street NW, Suite 1030, Washington, DC 20036. See *www.astm.org.*

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations and Executive Order 14096: Revitalizing Our Nation's Commitment to Environmental Justice for All

The EPA believes that the human health and environmental conditions that existed prior to this action do not result in disproportionate and adverse effects on communities with environmental justice concerns. As stated in section V.A. of the preamble of this action, there are no anticipated adverse environmental impacts and no adverse economic impacts anticipated from compliance with this final rule.

The EPA believes that this action is not likely to result in new disproportionate and adverse effects on communities with environmental justice concerns. As stated in section I. of this action, section 183(e) of the CAA requires the control of VOC emissions from certain categories of consumer and commercial products for purposes of reducing VOC emissions contributing to ozone formation and nonattainment of the ozone NAAQS. The health and environmental risks associated with ozone were considered in the establishment of the ozone NAAQS. The level is designed to be protective of the public with an adequate margin of safety. Accordingly, these actions would help increase the level of environmental protection to populations in affected ozone nonattainment areas without having any disproportionately high and adverse human health or environmental effects on any populations, including communities with environmental justice concerns.

K. Congressional Review Act (CRA)

This action is subject to the CRA, and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 59

Environmental protection, Administrative practice and procedure, Aerosol coatings, Air pollution control, Coatings, Incorporation by reference, Reactivity.

Jane Nishida,

Acting Administrator.

For the reasons stated in the preamble, the Environmental Protection Agency is amending part 59 of title 40, chapter I, of the Code of Federal Regulations as follows:

PART 59—NATIONAL VOLATILE ORGANIC COMPOUND EMISSION STANDARDS FOR CONSUMER AND COMMERCIAL PRODUCTS

■ 1. The authority citation for part 59 continues to read as follows:

Authority: 42 U.S.C. 7414 and 7511b(e).

Subpart E—National Volatile Organic Compound Emission Standards for Aerosol Coatings

■ 2. Amend § 59.502 by revising paragraph (a) and adding paragraph (d) to read as follows:

§ 59.502 When do I have to comply with this subpart?

(a) Except as provided in § 59.509 and paragraphs (b) and (c) of this section, you must be in compliance with all provisions of this subpart by July 17, 2025.

* * * * *

(d) Until July 17, 2025 appendix A—table 1, appendix A—table 2A, appendix A—table 2B, appendix A—table 2C and the test methods listed in appendix A table 3 to subpart E of part 59 are applicable to this subpart. Prior to July 17, 2025 regulated entities may elect to use tables 1, 2A, 2B, and 2C. If a regulated entity elects to do so, it shall use the test methods specified in § 59.508 of this subpart. After July 17, 2025 tables 1, 2A, 2B, and 2C, and the test methods specified in § 59.508 of this subpart are applicable.

■ 3. Revise § 59.503 to read as follows:

§ 59.503 What definitions apply to this subpart?

The following terms are defined for the purposes of this subpart only.

Administrator means the Administrator of the United States Environmental Protection Agency (EPA) or an authorized representative.

Aerosol coating product means a pressurized coating product containing pigments or resins that is dispensed by means of a propellant and is packaged in a disposable container for hand-held application, or for use in specialized equipment for ground traffic/marking applications. For this regulation, applicable aerosol coatings categories are listed in table 1 of this subpart.

Art fixative or sealant means a clear coating, including art varnish, workable art fixative and ceramic coating, which is designed and labeled exclusively for application to paintings, pencil, chalk, or pastel drawings, ceramic art pieces or other closely related art uses, in order to provide a final protective coating or to fix preliminary stages of artwork while providing a workable surface for subsequent revisions.

ASTM means ASTM International.

Autobody primer means an automotive primer or primer surfacer coating designed and labeled exclusively to be applied to a vehicle body substrate for the purposes of corrosion resistance, increased intercoat adhesion, or building a repair area to a condition in which, after drying, it can be sanded to a smooth surface.

Automotive bumper and trim product means a product, including adhesion promoters and chip sealants, designed, and labeled exclusively to repair and refinish automotive bumpers and plastic trim parts.

Aviation or marine primer means a coating designed and labeled exclusively to meet federal specification TT–P–1757.

Aviation propeller coating means a coating designed and labeled exclusively to provide abrasion resistance and corrosion protection for aircraft propellers.

Clear coating means a coating which is colorless or transparent, containing resins but no pigments except flatting agents, and is designed and labeled to form a transparent or translucent solid film.

Coating means a material applied onto or impregnated into a substrate for protective, decorative, or functional purposes.

Coating solids means the nonvolatile portion of an aerosol coating product, consisting of the film-forming ingredients, including pigments and resins.

Commercial application means the use of aerosol coating products in the production of goods, or the providing of services for profit, including touch-up and repair.

Corrosion resistant brass, bronze, or copper coating means a clear coating designed and labeled exclusively to prevent tarnish and corrosion of uncoated brass, bronze, or copper metal surfaces.

Distributor means any person who purchases or is supplied aerosol coating product for the purposes of resale or distribution in commerce. Retailers who fall within this definition are distributors. Importers are not distributors.

Electrical/electronic/conformal coating means a coating designed and labeled exclusively to coat electrical or electronic components or devices.

Enamel means a coating which cures by chemical cross-linking of its base resin and is not resoluble in its original solvent.

Engine paint means a coating designed and labeled exclusively to coat engines and their components.

Exact match finish, automotive means a topcoat which meets all of the following criteria:

(1) The product is designed and labeled exclusively to exactly match the color of an original, factory-applied automotive coating during the touch-up of automobile finishes;

(2) The product is labeled with the manufacturer's name for which it is formulated; and

(3) The product is labeled with one of the following:

(i) The original equipment manufacturer's (O.E.M.) color code number;

(ii) The color name; or

(iii) Other designation identifying the specific O.E.M. color to the purchaser.

Notwithstanding the foregoing, automotive clear coatings designed and labeled exclusively for use over automotive exact match finishes to replicate the original factory-applied finish shall be considered to be automotive exact match finishes.

Exact match finish, engine enamel coating means an enamel coating which meets all of the following criteria:

(1) The product is designed and labeled exclusively to exactly match the color of an original, factory-applied engine paint;

(2) The product is labeled with the manufacturer's name for which it is formulated; and

(3) The product is labeled with one of the following:

(i) The O.E.M. color code number;

(ii) The color name; or

(iii) Other designation identifying the specific O.E.M. color to the purchaser.

Exact match finish, industrial means a coating which meets all of the following criteria:

(1) The product is designed and labeled exclusively to exactly match the color of an original, factory-applied industrial coating during the touch-up of manufactured products;

(2) The product is labeled with the manufacturer's name for which it is formulated;

and

(3) The product is labeled with one of the following:

(i) O.E.M. color code number;

(ii) The color name; or

(iii) Other designation identifying the specific O.E.M. color to the purchaser.

Extender means an ingredient added to an ''Aerosol Coating Product'' to increase coating solids.

Flat coating means a coating which, when fully dry, registers specular gloss less than or equal to 15 on an 85° gloss meter, or less than or equal to 5 on a 60° gloss meter, or which is labeled as a flat coating.

Flatting agent means a compound added to a coating to reduce the gloss of the coating without adding color to the coating.

Flexible coating means a coating including, but not limited to, rubberized, mastic, or asphaltic products designed and labeled exclusively to protect surfaces.

Floral spray means a coating designed and labeled exclusively for use on fresh flowers, dried flowers, or other items in a floral arrangement for the purpose of coloring, preserving, or protecting their appearance.

Fluorescent coating means a coating labeled as such, which converts absorbed incident light energy into emitted light of a different hue.

Formulation data, unless otherwise specified, means the recipe used to formulate or manufacture a coating product in terms of the weight fraction (g compound/g product) of each individual VOC in the product.

General coating means the following aerosol coating products: ''Clear Coating,'' ''Flat Coating,'' ''Fluorescent Coating,'' ''Metallic Coating,'' ''Non-flat Coating,'' or ''Primer.''

Glass coating means a coating designed and labeled exclusively for use on glass or other transparent material to create a soft, translucent light effect, or to create a tinted or darkened color while retaining transparency.

Ground traffic/marking coating means a coating designed and labeled exclusively to be applied to dirt, gravel, grass, concrete, asphalt, warehouse floors, or parking lots. Such coatings must be in a container equipped with a valve and spray head designed to direct the spray toward the surface when the can is held in an inverted vertical position.

High temperature coating means a coating, excluding engine coating, which is designed and labeled exclusively for use on substrates which will, in normal use, be subjected to temperatures in excess of 400 °F.

Hobby/model/craft coating means a coating which is designed and labeled exclusively for hobby applications and is sold in aerosol containers of 6 ounces by weight or less.

Importer means any person who brings an aerosol coating product that was manufactured, filled, or packaged at a location outside of the United States into the United States for sale or distribution in the United States.

Impurity means an individual chemical compound present in a raw material which is incorporated in the final aerosol coatings formulation, if the compound is present in amounts below the following in the raw material:

(1) For individual compounds that are carcinogens, each compound must be present in an amount less than 0.1 percent by weight;

(2) For all other compounds present in a raw material, a compound must be present in an amount less than 1 percent by weight.

Ingredient means a component of an aerosol coating product.

Label means any written, printed, or graphic matter affixed to, applied to, attached to, blown into, formed, molded into, embossed on, or appearing upon any consumer product or consumer product package, for purposes of branding, identifying, or giving information with respect to the product or to the contents of the package.

Manufacturer means any person who manufactures or processes an aerosol coating product for sale or distribution within the United States. Manufacturers include:

(1) Processors who blend and mix aerosol coatings;

(2) Contract fillers who develop formulas and package these formulations under a distributor's name; and

(3) Contract fillers who manufacture products using formulations provided by a distributor.

Marine spar varnish means a coating designed and labeled exclusively to provide a protective sealant for marine wood products.

Metallic coating means a topcoat which contains at least 0.5 percent by weight metallic pigment in the formulation, including propellant, and is labeled as ''metallic,'' or with the name of a specific metallic finish such as ''gold,'' ''silver,'' or ''bronze.''

Mold release coating means a coating designed and labeled exclusively to be applied to molds to prevent products from sticking to the surfaces of the mold.

Multi-component kit means an aerosol spray paint system that requires the application of more than one component, *e.g.,* foundation coat and topcoat, where both components are sold together in one package.

Non-flat coating means a coating that, when fully dry, registers a specular gloss greater than 15 on an 85° gloss meter or greater than five on a 60° gloss meter.

Ozone means a colorless gas with a pungent odor, having the molecular form O_3.

Person means an individual, corporation, partnership, association, State, any agency, department, or instrumentality of the United States, and any officer, agent, or employee thereof.

Photographic coating means a coating designed and labeled exclusively to be applied to finished photographs to allow corrective retouching, protection of the image, changes in gloss level, or to cover fingerprints.

Pigment means either a natural or synthetic insoluble material added to a coating to provide color, opacity, or corrosion inhibition to a coating film.

Plasticizer means an ingredient added to an aerosol coating product to aid in flexibility.

Pleasure craft means privately owned vessels used for noncommercial purposes.

Pleasure craft finish primer/surfacer/undercoater means a coating designed and labeled exclusively to be applied prior to the application of a pleasure craft topcoat for the purpose of corrosion resistance and adhesion of the topcoat, and which promotes a uniform surface by filling in surface imperfections.

Pleasure craft topcoat means a coating designed and labeled exclusively to be applied to a pleasure craft as a final coat above the waterline, and below the waterline when stored out of water. This category does not include clear coatings.

Polyolefin adhesion promoter means a coating designed and labeled exclusively to be applied to a polyolefin or polyolefin copolymer surface of vehicular body parts, bumpers, or trim parts to provide a bond between the surface and subsequent coats.

Primer means a coating labeled as such, which is designed to be applied to a surface to provide a bond between that surface and subsequent coats.

Product-Weighted Reactivity (PWR) Limit means the maximum allowed ''product- weighted reactivity,'' as calculated in § 59.505, of an aerosol coating product that is subject to the limits specified in § 59.504 for a specific category, expressed as grams of ozone per gram of product (g O_3/g product).

Propellant means a liquefied or compressed gas that is used in whole or in part to expel a liquid or any other material from the same self-pressurized container or from a separate container.

Reactivity Factor (RF) is a measure of the change in mass of ozone formed by adding a gram of a VOC to the ambient atmosphere, expressed to hundredths of a gram of ozone per gram of VOC (g O3/g VOC). The RF values for individual compounds and hydrocarbon solvent mixtures are specified in tables 2A, 2B, and 2C to this subpart.

Resin means a substance that comprises the film-forming ingredients in an aerosol coating product. Examples of resin ingredients include acrylic, alkyd, enamel, epoxy, lacquer, polyurethane, polyvinyl chloride, shellac, silicone, and polystyrene.

Retailer means any person who sells, supplies, or offers aerosol coating products for sale directly to consumers. Retailers who fall within the definition of ''distributor'' in this section are distributors.

Retail outlet means any establishment where consumer products are sold, supplied, or offered for sale, directly to consumers.

Rust converter means a coating designed and labeled exclusively to convert rust to an inert material and which contains a minimum acid content of 1.0 percent by weight, and a maximum coating solids content of 6.0 percent by weight.

Shellac sealer means a clear or pigmented coating formulated solely with the resinous secretion of the lac beetle (*Laccifer lacca*), thinned with alcohol, and formulated to dry by evaporation without a chemical reaction.

Slip-resistant coating means a coating designed and labeled exclusively as such, which is formulated with grit and used as a safety coating.

Small quantity manufacturer means a manufacturer whose total VOC by mass included in all aerosol coatings manufactured at all facilities in a given calendar year, in the aggregate, is less than 7,500 kilograms.

Spatter coating/multicolor coating/stucco coating means a coating labeled exclusively as such, wherein spots, globules, or spatters of contrasting colors appear on or within the surface of a contrasting or similar background.

Specialty coating means any aerosol coating product that is not a ''General Coating'' unless specifically exempted. An aerosol coating that does not meet all the criteria for a specific ''Specialty Coating'' or an aerosol coating that is not defined in this section is a ''General Coating.''

Stain means a coating which is designed and labeled to change the color of a surface but not conceal the surface.

Two-component coating means a coating packaged in an aerosol container with a separate integrated chamber for a hardener or activator.

Uniform finish coating means a coating designed and labeled exclusively for application to the area adjacent to a spot repair for the purpose of blending the spot repair's color or clear coating to match the appearance of an adjacent area's existing coating. For the purpose of this rule, ''spot repair'' means repair of an area of less than 1 square foot (929 square centimeters).

United States means the United States of America, including the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands.

Vinyl/fabric/leather/polycarbonate coating means a coating designed and labeled exclusively to coat vinyl, fabric, leather, or plastic substrates or to coat flexible substrates including rubber or thermoplastic substrates.

Volatile Organic Compound (VOC) means any organic compound as defined in § 51.100(s) of this chapter. As provided in 40 CFR 51.100(s)(7), exemptions from the definition of VOC in 40 CFR 51.100(s) for certain compounds that are used in aerosol coatings are inapplicable for purposes of this subpart.

Webbing/veiling coating means a coating designed and labeled exclusively to provide a stranded or spider webbed appearance when applied.

Weight fraction means the weight of an ingredient divided by the total net

weight of the product, expressed to thousandths of a gram of ingredient per gram of product (excluding container and packaging).

Weld-through primer means a coating designed and labeled exclusively to provide a bridging or conducting effect for corrosion protection following welding.

Wood stain means a coating which is designed and labeled exclusively as a wood stain and is used to change the color of a wood surface but not conceal the grain pattern or texture.

Wood touch-up/repair/restoration means a coating designed and labeled exclusively to provide an exact color or sheen match on finished wood products.

Working day means any day from Monday through Friday, inclusive, except for days that are Federal holidays.

■ 4. Amend § 59.505 by revising paragraphs (c) through (e) and adding paragraph (h) to read as follows:

§ 59.505 How do I demonstrate compliance with the reactivity limits?

* * * * *

(c) You may use either formulation data (including information for both the liquid and propellant phases), CARB Method 310 (2018) (incorporated by reference, see § 59.515), or EPA's Method 311 (40 CFR part 63, appendix A), to calculate the PWR. However, if there are inconsistencies between the formulation data and the CARB Method 310 (2018) or EPA Method 311 results, the CARB Method 310 (2018) or EPA Method 311 results will govern.

(d) If you manufacture a coating containing either an aromatic or aliphatic hydrocarbon solvent mixture, you must use the appropriate RF for that mixture provided in table 2B or 2C to this subpart when calculating the PWR using formulation data. However, when calculating the PWR for a coating containing these mixtures using data from CARB Method 310 (2018) (incorporated by reference, see § 59.515), or EPA Method 311—(40 CFR part 63, appendix A), you must identify the individual compounds that are present in the solvent mixture and use the weight fraction of those individual compounds and their RF from table 2A to this subpart in the calculation.

(e) The Reactivity Factor (RF) is assigned according to paragraphs (e)(1) through (4):

(1) If a VOC is used in a product and listed in table 2A, 2B, or 2C to this subpart, then the assigned RF shall be used;

(2) If a product contains a mixture and/or multiple isomers of a VOC, the highest RF of the mixture or multiple isomers from table 2A to this subpart shall be used;

(3) If a VOC is used in a product but not listed in table 2A to this subpart, but more than one isomer or mixtures of isomers of the VOC is listed in table 2A to this subpart, then the highest RF associated with the listed isomers or isomer mixtures shall be used; and

(4) If a VOC is used in a product but not listed in table 2A to this subpart, the assigned default RF of 18.50 g O_3 /g VOC shall be used.

* * * * *

(h) Until July 17, 2025 the test methods listed in table 3 of appendix A to subpart E of part 59 are applicable to this subpart.

■ 5. Revise § 59.508 to read as follows:

§ 59.508 What test methods must I use?

(a) Except as provided in § 59.505(c), you must use the procedures in CARB Method 310 (2018) (incorporated by reference, see § 59.515) or EPA's Method 311 (40 CFR part 63, appendix A) to determine the speciated ingredients and weight percentage of each ingredient of each aerosol coating product. EPA Method 311 (40 CFR part 63, appendix A) must be used in conjunction with ASTM Method D3063–94 or D3074–94 for analysis of the propellant portion of the coating. Those choosing to use CARB Method 310 (2018) must follow the procedures specified in section 5.0 of that method with the exception of section 5.3.1, which requires the analysis of the VOC content of the coating. For the purposes of this subpart, you are not required to determine the VOC content of the aerosol coating. For both CARB Method 310 (2018) and EPA Method 311 (40 CFR part 63, appendix A), you must have a listing of the VOC ingredients in the coating before conducting the analysis.

(b) To determine the metal content of metallic aerosol coating products, you must use SCAQMD Method 318–95 (incorporated by reference, see § 59.515).

(c) To determine the specular gloss of flat and non-flat coatings, you must use ASTM Method D523–08 (incorporated by reference, see § 59.515).

■ 6. Amend § 59.509 by revising paragraph (a) introductory text and adding paragraphs (a)(6) and (g) to read as follows:

§ 59.509 Can I get a variance?

(a) Any regulated entity that cannot comply with the requirements of this subpart because of circumstances beyond its reasonable control may apply in writing to the Administrator for a temporary variance. The variance application must include the information specified in paragraphs (a)(1) through (6) of this section.

* * * * *

(6) All identification information included in § 59.511(b)(1) and (2).

* * * * *

(g) Beginning on July 17, 2025, or once the notification/report template for this subpart has been available on the CEDRI website for six months, whichever date is later, submit the request for a variance with the information in paragraphs (a)(1) through (6) following the procedure specified in § 59.511(1).

■ 7. Amend § 59.511 by:

■ a. Removing and reserving paragraph (b)(8);

■ b. Revising paragraphs (b)(9), (c), (d) introductory text, and (d)(5);

■ c. Adding paragraph (d)(6);

■ d. Revising paragraphs (i)(2) and (j); and

■ e. Adding paragraphs (k), (l), (m), and (n).

The revisions and additions read as follows:

§ 59.511 What notifications and reports must I submit?

* * * * *

(b) * * *

(8) [Reserved]

(9) For each product category, VOC formulation data for each formulation that you anticipate manufacturing, importing, or distributing for calendar year 2009 or for the first year that includes your compliance date, if different than 2009. If a regulated entity can certify that the reporting is being completed by another regulated entity for any product, no second report is required. The formulation data must include the weight fraction (g compound/g product) for each VOC ingredient used in the product in an amount greater than or equal to 0.1 percent. For each VOC ingredient reported, the formulation data must also include the information in either paragraph (b)(9)(i), (ii), or (iii) of this section.

(i) For compounds listed in table 2A to this subpart, the chemical name, CAS number, and the applicable reactivity factor;

(ii) For the hydrocarbon solvent mixtures listed in either table 2B or 2C to this subpart, the trade name, solvent mixture manufacturer, bin number, and the applicable reactivity factor; or

(iii) For compounds not listed in table 2A to this subpart, the chemical name,

CAS number, and the default RF in § 59.505(e).

* * * * *

(c) If you change any information included in the initial notification required by paragraph (b) of this section, including the list of aerosol categories, contact information, records location, the category or date coding system, you must notify the Administrator of such changes within 30 days following the change. You are not required to notify the Administrator within 30 days of changes to the information provided as required by paragraph (b)(9) of this section. Changes in formulation are to be reported in the triennial reporting required by paragraph (i) of this section.

(d) Upon 60 days written notice, you must submit to the Administrator a written report with all the information in paragraphs (d)(1) through (6) of this section for each product you manufacture, distribute, or import under your name or another company's name.

* * * * *

(5) For each product, formulation data for each formulation that manufactured, imported, or distributed in the requested time period. The formulation data must include the weight fraction (g compound/g product) for each VOC ingredient used in the product in an amount greater than or equal to 0.1 percent, plus the weight fraction of all other ingredients, including: Water, total solids, and any other compounds assigned an RF of zero. The formulation data must also include the information in either paragraph (d)(5)(i), (ii), or (iii) of this section.

(i) For compounds listed in table 2A to this subpart, the chemical name, CAS number, and the applicable reactivity factor;

(ii) For the hydrocarbon solvent mixtures listed in either table 2B or 2C to this subpart, the trade name, solvent mixture manufacturer, bin number, and the applicable reactivity factor; or

(iii) For compounds not listed in table 2A to this subpart, the chemical name, CAS number, and the default RF in § 59.505(e).

(6) All identification information included in paragraphs (b)(1) and (2) of this section.

* * * * *

(i) * * *

(2) For each product category, VOC formulation data for each formulation that was manufactured, imported, or distributed in the reporting year. If a regulated entity can certify that the reporting is being completed by another regulated entity for any product, no second report is required. The formulation data must include the weight fraction (g compound/g product) for each VOC ingredient used in the product in an amount greater than or equal to 0.1 percent. For each VOC ingredient reported, the formulation data must include the information in paragraph (i)(2)(i), (ii), or (iii) of this section.

(i) For compounds listed in table 2A to this subpart, the chemical name, CAS number, and the applicable reactivity factor;

(ii) For the hydrocarbon solvent mixtures listed in either table 2B or 2C to this subpart, the trade name, solvent mixture manufacturer, bin number, and the applicable reactivity factor; or

(iii) For compounds not listed in table 2A to this subpart, the chemical name, CAS number, and the default RF in § 59.505(e).

* * * * *

(j) If a regulated entity identifies a VOC that is needed for an aerosol formulation that is not listed in table 2A to this subpart, it is assigned a default RF of 18.50 g O_3/g VOC. Regulated entities may petition the Administrator to add a compound to table 2A, 2B, or 2C to this subpart. Petitions must include the chemical name, CAS number, a statement certifying the intent to use the compound in an aerosol coatings product, and adequate information for the Administrator to evaluate the reactivity of the compound and assign an RF consistent with the values for the other compounds listed in table 2A to this subpart. Any requests submitted to EPA on or before June 1, 2008, will be considered and, if appropriate, incorporated into table 2A, 2B, or 2C to this subpart on or before January 1, 2009.

(k) Beginning on July 17, 2025, or once the notification/report template for this subpart has been available on the CEDRI website for six months, whichever date is later, regulated entities shall submit all notifications, reports, and other information required in § 59.511 (b) through (j) following the procedure specified in paragraph (l) of this section.

(l) If you are required to submit notifications or reports following the procedure specified in this paragraph (l), you must submit reports to the EPA via CEDRI, which can be accessed through the EPA's Central Data Exchange (CDX) (*https://cdx.epa.gov/*). The EPA will make all the information submitted through CEDRI available to the public without further notice to you. Do not use CEDRI to submit information you claim as confidential business information (CBI). Anything submitted using CEDRI cannot later be claimed CBI. You must use the appropriate electronic report template on the CEDRI website (*www.epa.gov/electronic-reporting-air-emissions/cedri*) for this subpart. The date in which the report template becomes available will be listed on the CEDRI website. Unless the Administrator or delegated State agency or other authority has approved a different schedule for submission of reports, the report must be submitted by the deadline specified in this subpart, regardless of the method in which the report is submitted. Although we do not expect persons to assert a claim of CBI, if you wish to assert a CBI claim, submit a complete report, including information claimed to be CBI, to the EPA. The report must be generated using the appropriate template on the CEDRI website. The preferred method for CBI submittal is for it to be transmitted electronically using email attachments, File Transfer Protocol (FTP), or other online file sharing services. Electronic submissions must be transmitted directly to the OAQPS CBI Office at the email address: *oaqpscbi@epa.gov* and should include clear CBI markings and be flagged to the attention of the Group Leader, Measurement Policy Group. If assistance is needed with submitting large electronic files that exceed the file size limit for email attachments, and if you do not have your own file sharing service, please email *oaqpscbi@epa.gov* to request a file transfer link. If you cannot transmit the file electronically, you may mail the electronic medium to U.S. EPA/OAQPS/CORE CBI Office, Attention: Aerosol Coatings Sector Lead, (C404–02), Research Triangle Park, North Carolina 27711. The same file with the CBI omitted must be submitted to the EPA via the EPA's CDX as described earlier in this paragraph (l). All CBI claims must be asserted at the time of submission. Furthermore, under CAA section 114(c), emissions data is not entitled to confidential treatment, and the EPA is required to make emissions data available to the public. Thus, emissions data will not be protected as CBI and will be made publicly available.

(m) If you are required to electronically submit a report through CEDRI in the EPA's CDX, you may assert a claim of EPA system outage for failure to timely comply with that reporting requirement. To assert a claim of EPA system outage, you must meet the requirements outlined in paragraphs (m)(1) through (7) of this section.

(1) You must have been or will be precluded from accessing CEDRI and submitting a required report within the

time prescribed due to an outage of either the EPA's CEDRI or CDX systems.

(2) The outage must have occurred within the period of time beginning five business days prior to the date that the submission is due.

(3) The outage may be planned or unplanned.

(4) You must submit notification to the Administrator in writing as soon as possible following the date you first knew, or through due diligence should have known, that the event may cause or has caused a delay in reporting.

(5) You must provide to the Administrator a written description identifying:

(i) The date(s) and time(s) when CDX or CEDRI was accessed, and the system was unavailable;

(ii) A rationale for attributing the delay in reporting beyond the regulatory deadline to EPA system outage;

(iii) A description of measures taken or to be taken to minimize the delay in reporting; and

(iv) The date by which you propose to report, or if you have already met the reporting requirement at the time of the notification, the date you reported.

(6) The decision to accept the claim of EPA system outage and allow an extension to the reporting deadline is solely within the discretion of the Administrator.

(7) In any circumstance, the report must be submitted electronically as soon as possible after the outage is resolved.

(n) If you are required to electronically submit a report through CEDRI in the EPA's CDX, you may assert a claim of force majeure for failure to timely comply with that reporting requirement. To assert a claim of force majeure, you must meet the requirements outlined in paragraphs (n)(1) through (5) of this section.

(1) You may submit a claim if a force majeure event is about to occur, occurs, or has occurred or there are lingering effects from such an event within the period of time beginning five business days prior to the date the submission is due. For the purposes of this section, a force majeure event is defined as an event that will be or has been caused by circumstances beyond the control of the regulated entity, its contractors, or any entity controlled by the regulated entity that prevents you from complying with the requirement to submit a report electronically within the time period prescribed. Examples of such events are acts of nature (*e.g.,* hurricanes, earthquakes, or floods), acts of war or terrorism, or equipment failure or safety hazard beyond the control of the regulated entity (*e.g.,* large scale power outage).

(2) You must submit notification to the Administrator in writing as soon as possible following the date you first knew, or through due diligence should have known, that the event may cause or has caused a delay in reporting.

(3) You must provide to the Administrator:

(i) A written description of the force majeure event;

(ii) A rationale for attributing the delay in reporting beyond the regulatory deadline to the force majeure event;

(iii) A description of measures taken or to be taken to minimize the delay in reporting; and

(iv) The date by which you propose to report, or if you have already met the reporting requirement at the time of the notification, the date you reported.

(4) The decision to accept the claim of force majeure and allow an extension to the reporting deadline is solely within the discretion of the Administrator.

(5) In any circumstance, the reporting must occur as soon as possible after the force majeure event occurs.

■ 8. Revise § 59.512 to read as follows:

§ 59.512 Addresses of EPA Regional Offices.

(a) All requests (including variance requests), reports, submittals, and other communications to the Administrator pursuant to this regulation shall be submitted to the Regional Office of the EPA through CEDRI which serves the State or territory for the address that is listed on the aerosol coating product in question. These areas are indicated in the following list of EPA Regional Offices:

(1) EPA Region I (Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont) Director, Enforcement and Compliance Assurance Division, U.S. EPA Region I, 5 Post Office Square—Suite 100 (04–2), Boston, MA 02109–3912, Attn: Air Compliance Clerk.

(2) EPA Region II (New Jersey, New York, Puerto Rico, Virgin Islands), Director, Division of Enforcement and Compliance Assistance, 290 Broadway, New York, NY 10007–1866.

(3) EPA Region III (Delaware, District of Columbia, Maryland, Pennsylvania, Virginia, West Virginia), Chief, Air Section, Enforcement & Compliance Assurance Division, Air, RCRA and Toxics Branch, U.S. EPA Region 3, 1650 Arch Street—3ED21, Philadelphia, PA 19103.

(4) EPA Region IV (Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee), Director, Air and Radiation Division, 61 Forsyth Street SW, Atlanta, GA 30303–3104.

(5) EPA Region V (Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin), Director, Air and Radiation Division, 77 West Jackson Blvd., Chicago, IL 60604–3507.

(6) EPA Region VI (Arkansas, Louisiana, New Mexico, Oklahoma, Texas), Chief, Air Enforcement Branch, Enforcement and Compliance Assurance Division, Mail Code ECDA, 1201 Elm Street, Suite 500, Dallas, Texas 75270–2102.

(7) EPA Region VII (Iowa, Kansas, Missouri, Nebraska), Director, Air and Waste Management Division, 11201 Renner Boulevard, Lenexa, Kansas 66219.

(8) EPA Region VIII (Colorado, Montana, North Dakota, South Dakota, Utah, Wyoming), Chief, Air and Toxics Enforcement Branch, 1595 Wynkoop Street, Denver, CO 80202–1129.

(9) EPA Region IX (American Samoa, Arizona, California, Guam, Hawaii, Nevada), Chief, Air Division, 75 Hawthorne Street, San Francisco, CA 94105.

(10) EPA Region X (Alaska, Oregon, Idaho, Washington), Chief, Air Permits and Toxics Branch, Air and Radiation Division, 1200 Sixth Avenue, Suite 155, Seattle, WA 98101.

(b) Beginning on July 17, 2025, or once the notification/report template for this subpart has been available on the CEDRI website for six months, whichever date is later, regulated entities shall submit all notifications, reports, and other information required in § 59.511(b) through (j) following the procedure specified in § 59.511(l).

■ 9. Revise § 59.515 to read as follows:

§ 59.515 Incorporations by reference.

Certain material is incorporated by reference into this subpart with the approval of the Director of the Federal Register under 5 U.S.C. 552(a) and 1 CFR part 51. All approved incorporation by reference (IBR) material is available for inspection at the U.S. Environmental Protection Agency (EPA) and at the National Archives and Records Administration (NARA). Contact the EPA at: EPA Docket Center, Public Reading Room, EPA WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC; phone: (202) 566–1744. For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov*. The material may be obtained from the following sources:

(a) ASTM, International (ASTM), 100 Barr Harbor Drive, P.O. Box CB700,

West Conshohocken, Pennsylvania 19428–2959; phone: (800) 262–1373; website: *www.astm.org.*

(1) ASTM Method D523–08, Standard Test Method for Specular Gloss (June 1, 2008), IBR approved for § 59.508(c).

(2) ASTM Method D523–89 (Reapproved 1999), Standard Test Method for Specular Gloss (May 10, 1999), IBR approved for table 3 of appendix A to subpart E of part 59.

(b) California Air Resources Board (CARB), 1001 I Street, P.O. Box 2815, Sacramento, CA 95812–2815, Telephone (916) 327–0900, *www.arb.ca.gov.*

(1) California Air Resources Board Method 310—Determination of Volatile Organic Compounds (VOC) in Consumer Products and Reactive Organic Compounds in Aerosol Coating Products (May 25, 2018) (CARB Method 310 (2018)), IBR approved for §§ 59.505(c) and 59.508(a).

(2) California Air Resources Board Method 310—Determination of Volatile Organic Compounds (VOC) in Consumer Products and Reactive Organic Compounds in Aerosol Coating Products (May 5, 2005) (CARB Method 310 (2005)), IBR approved for table 3 of appendix A to subpart E of part 59.

(c) South Coast Air Quality Management District (SCAQMD), 21865 Copley Dr, Diamond Bar, CA 91765, Telephone (909–396–2000), *www.aqmd.gov.*

(1) South Coast Air Quality Management District Test Method 318–95, Determination of Weight Percent Elemental Metal in Coatings by X-ray Diffraction, (July, 1996) (SCAQMD Test Method 318–95), IBR approved for § 59.508(b) and table 3 of appendix A to subpart E of part 59.

(2) [Reserved]

■ 10. Revise tables 1, 2A, 2B, and 2C to subpart E of part 59 to read as follows:

TABLE 1 TO SUBPART E OF PART 59—PRODUCT-WEIGHTED REACTIVITY LIMITS BY COATING CATEGORY

Coating category	Category code [a]	Reactivity limit (g O_3/g product)
Art Fixatives or Sealants	AFS	1.75
Auto Body Primers	ABP	0.95
Automotive Bumper and Trim Products	ABT	1.70
Aviation or Marine Primers	AMP	1.25
Aviation Propeller Coatings	APC	1.40
Clear Coatings	CCP	0.85
Corrosion Resistant Brass, Bronze, or Copper Coatings	CRB	1.80
Electrical/Electronic/Conformal Coatings	ECC	2.00
Exact Match Finish—Automotive	EFA	0.95
Exact Match Finish—Engine Enamel	EEE	0.95
Exact Match Finish—Industrial	EFI	1.20
Flat Coatings	FCP	0.80
Flexible Coatings	FCC	1.60
Floral Sprays	FSP	0.85
Fluorescent Coatings	FLP	1.30
Glass Coatings	GCP	1.35
Ground Traffic/Marking	GTM	0.85
High Temperature Coatings	HTC	1.85
Hobby/Model/Craft Coatings	HMC	1.60
Marine Spar Varnishes	MSV	0.90
Metallic Coatings	MCP	1.25
Mold Release Coating	MRC	1.10
Non-Flat Coatings	NFP	0.95
Photograph Coatings	PHC	0.75
Pleasure Craft Primers, Surfacers or Undercoaters	PCS	0.90
Pleasure Craft Topcoats	PCT	0.60
Polyolefin Adhesion Promoters	PAP	2.50
Primers	PCP	0.70
Rust Converter Coating	RCC	1.10
Shellac Sealers	SSC	1.00
Slip-Resistant Coatings	SRC	2.10
Spatter/Multicolor Coatings	SMC	1.05
Two Component Coating	TWC	1.20
Uniform Finish Coating	UFC	1.30
Vinyl/Fabric/Leather/Polycarbonate Coatings	VFL	1.45
Webbing/Veiling Coatings	WFC	0.75
Weld-Through Primers	WTP	1.00
Wood Stains	WSP	0.90
Wood Touch-up/Repair or Restoration Coatings	WTR	1.45

[a] Regulated entities may use these category codes or define their own in accordance with § 59.511(b)(6).

TABLE 2A TO SUBPART E OF PART 59—REACTIVITY FACTORS

Compound	CAS No.	Reactivity factor (g O_3/g VOC)
Formaldehyde	50–00–0	9.46
Glycerol (1,2,3-Propanetriol)	56–81–5	3.15
Propylene Glycol	57–55–6	2.58
Ethanol	64–17–5	1.53
Formic Acid	64–18–6	0.06

TABLE 2A TO SUBPART E OF PART 59—REACTIVITY FACTORS—Continued

Compound	CAS No.	Reactivity factor (g O_3/g VOC)
Acetic Acid	64–19–7	0.68
Methanol	67–56–1	0.67
Isopropyl Alcohol (2-Propanol)	67–63–0	0.61
Acetone (Propanone)	67–64–1	0.36
n-Propanol (n-Propyl Alcohol)	71–23–8	2.50
n-Butyl Alcohol (Butanol)	71–36–3	2.88
n-Pentanol (Amyl Alcohol)	71–41–0	2.83
Benzene	71–43–2	0.72
1,1,1-Trichloroethane	71–55–6	0.01
Propane	74–98–6	0.49
Vinyl Chloride	75–01–4	2.83
Acetaldehyde	75–07–0	6.54
Methylene Chloride (Dichloromethane)	75–09–2	0.04
Ethylene Oxide	75–21–8	0.03
Isobutane	75–28–5	1.23
HFC–152A (1,1-Difluoroethane)	75–37–6	0.02
Propylene Oxide	75–56–9	0.29
t-Butyl Alcohol	75–65–0	0.41
Methyl t-Butyl Ketone	75–97–8	0.65
Isophorone (3,5,5-Trimethyl-2-Cyclohexenone)	78–59–1	4.63
Isopentane	78–78–4	1.45
Isobutanol	78–83–1	2.51
2-Butanol (s-butyl alcohol)	78–92–2	1.36
Methyl Ethyl Ketone (2-Butanone)	78–93–3	1.48
Monoisopropanol Amine (1-Amino-2-Propanol)	78–96–6	5.42
Trichloroethylene	79–01–6	0.64
Propionic Acid	79–09–4	1.22
Acrylic Acid	79–10–7	11.38
Methyl Acetate	79–20–9	0.07
Nitroethane	79–24–3	0.06
Methacrylic Acid	79–41–4	18.50
2-Nitropropane	79–46–9	0.11
a-Pinene (Pine Oil)	80–56–8	4.51
Methyl Methacrylate	80–62–6	15.61
Diethyl Phthalate	84–66–2	1.62
Dibutyl Phthalate	84–74–2	1.25
Naphthalene	91–20–3	3.34
2-Ethyl-1,3-hexanediol	94–96–2	2.05
Xylene, ortho-	95–47–6	7.64
o-Cresol	95–48–7	2.40
1,2,4-Trimethylbenzene	95–63–6	8.87
3-Pentanone	96–22–0	1.24
Methyl Ethyl Ketoxime (Ethyl Methyl Ketone Oxime)	96–29–7	1.58
gamma-Butyrolactone	96–48–0	0.96
Ethyl Lactate	97–64–3	2.48
Isobutyl Isobutyrate	97–85–8	0.60
Isobutyl Methacrylate	97–86–9	8.62
Butyl Methacrylate	97–88–1	8.70
Tert-butyl benzene	98–06–6	1.95
Benzotrifluoride	98–08–8	0.29
PCBTF (p-Trifluoromethyl-Cl-Benzene)	98–56–6	0.13
Cumene (Isopropyl Benzene)	98–82–8	2.52
a-Methyl Styrene	98–83–9	1.53
Ethyl Benzene	100–41–4	3.04
Styrene	100–42–5	1.73
Benzyl Alcohol	100–51–6	5.11
Benzaldehyde	100–52–7	0.00
Triethanolamine	102–71–6	4.21
2-Ethyl-Hexyl Acetate	103–09–3	0.66
2-Ethyl-Hexyl Acrylate	103–11–7	2.52
2-Ethyl-1-Hexanol (Ethyl Hexyl Alcohol)	104–76–7	2.00
Ethyl Propionate	105–37–3	0.77
s-Butyl Acetate	105–46–4	1.32
Diethyl Carbonate	105–58–8	0.71
n-Propyl Propionate	106–36–5	0.84
Xylene, para-	106–42–3	5.84
p-Dichlorobenzene	106–46–7	0.18
Dimethyl Succinate	106–65–0	0.23
1,2-Epoxybutane (Ethyl Oxirane)	106–88–7	0.91
n-Propyl Bromide	106–94–5	0.42
Butane	106–97–8	1.15

TABLE 2A TO SUBPART E OF PART 59—REACTIVITY FACTORS—Continued

Compound	CAS No.	Reactivity factor (g O_3/g VOC)
1,3-Butadiene	106–99–0	12.61
Ethylene Glycol	107–21–1	3.13
2-Methyl-2,4-Pentanediol	107–41–5	1.45
Hexamethyldisiloxane	107–46–0	0.00
Isohexane Isomers	107–83–5	1.50
Methyl n-Propyl Ketone (2-Pentanone)	107–87–9	2.81
Propylene Glycol Monomethyl Ether (1-Methoxy-2-Propanol)	107–98–2	2.44
n,n-Dimethylethanolamine	108–01–0	5.62
1-Nitropropane	108–03–2	0.22
Vinyl Acetate	108–05–4	3.20
Methyl Isobutyl Ketone	108–10–1	3.88
Isopropyl Acetate	108–21–4	1.07
Propylene Carbonate (4-Methyl-1,3-Dioxolan-2one)	108–32–7	0.28
Xylene, meta-	108–38–3	9.75
Propylene Glycol Monomethyl Ether Acetate (1-Methoxy-2-Propyl Acetate)	108–65–6	1.70
1,3,5-Trimethyl Benzene	108–67–8	11.76
Di-Isobutyl Ketone (2,6-Dimethyl-4-Heptanone)	108–83–8	2.68
Methylcyclohexane	108–87–2	1.70
Toluene	108–88–3	4.00
Monochlorobenzene	108–90–7	0.32
Cyclohexanol	108–93–0	1.95
Cyclohexanone	108–94–1	1.35
n-Butyl Butyrate	109–21–7	1.08
Propyl Acetate	109–60–4	0.78
Pentane	109–66–0	1.31
Ethylene Glycol Monomethyl Ether (2-Methoxyethanol)	109–86–4	2.93
Dimethoxy Methane	109–87–5	0.94
Tetrahydrofuran	109–99–9	4.31
Methyl Isoamyl Ketone (5-Methyl-2-Hexanone)	110–12–3	2.41
Isobutyl Acetate	110–19–0	0.62
Methyl Amyl Ketone	110–43–0	2.36
Hexane	110–54–3	1.24
n-Propyl Formate	110–74–7	0.78
2-Ethoxyethanol	110–80–5	3.71

Onshore Oil and Gas Operations and Coal Trespass—Annual Civil Penalties Inflation Adjustments

AGENCY: Bureau of Land Management, Interior.

ACTION: Final rule.

SUMMARY: This final rule adjusts the amounts of civil monetary penalties contained in the Bureau of Land Management's (BLM) regulations governing onshore oil and gas operations and coal trespass. This final rule is required by the Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015 and is consistent with applicable Office of Management and Budget (OMB) guidance. The adjustments made by this final rule constitute the 2025 annual inflation adjustments and account for one year of inflation spanning the period from October 2023 through October 2024.

DATES: This rule is effective on January 17, 2025.

FOR FURTHER INFORMATION CONTACT: For information regarding the BLM's Fluid Minerals Program, please contact John Ajak, Acting Division Chief, Fluid Minerals Division, telephone: 505–549–9654; email: *jajak@blm.gov*. For information regarding the BLM's Solid Minerals Program, please contact Matthew Marsh, Acting Division Chief, Solid Minerals Division, telephone: 307–431–1113; email: *mmarsh@blm.gov*.

For questions relating to the regulatory process, please contact Stephen Pollard, Division of Regulatory Affairs, email: *spollard@blm.gov*. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

J. Paperwork Reduction Act
K. National Environmental Policy Act
L. Effects on the Energy Supply (E.O. 13211)

I. Background

On November 2, 2015, the Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015 (Sec. 701, Pub. L. 114–74) (the 2015 Act) became law, amending the Federal Civil Penalties Inflation Adjustment Act of 1990 (Pub. L. 101–410).

On an annual basis, the 2015 Act requires agencies to:

1. Adjust the level of civil monetary penalties for inflation; and

2. Report inflation adjustments in the Agency Financial Reports as directed by OMB Circular A–136, or any successor thereto.

The purpose of these adjustments is to maintain the deterrent effect of civil monetary penalties and promote compliance with the law (*see* Sec 1, Pub. L. 101–410).

As required by the 2015 Act, on June 28, 2016, the BLM issued an interim final rule that adjusted the level of civil monetary penalties in BLM regulations with the initial ''catch-up'' adjustment (RIN 1004–AE46, 81 FR 41860). In subsequent years, the BLM has issued final rules, adjusting the level of civil monetary penalties for inflation, as appropriate for 2017 to 2024.

On December 17, 2024, OMB issued Memorandum M–25–02, which explains agency responsibilities for identifying applicable penalties and calculating the annual adjustment for 2025 in accordance with the 2015 Act.

II. Calculation of 2024 Adjustments

In accordance with the 2015 Act and OMB Memorandum M–25–02, the BLM has identified applicable civil monetary penalties in its regulations and calculated the annual adjustments. A civil monetary penalty is any assessment with a dollar amount that is levied for a violation of a Federal civil statute or regulation and is assessed or enforceable through a civil action in Federal court or an administrative proceeding. A civil monetary penalty does not include a penalty levied for violation of a criminal statute, nor does it include fees for services, licenses, permits, or other regulatory review. The calculated annual inflation adjustments are based on the percentage change between the Consumer Price Index for all Urban Consumers (CPI–U) for the October preceding the date of the adjustment and the prior year's October CPI–U. Consistent with guidance in OMB Memorandum M–25–02, the BLM divided the October 2024 CPI–U by the October 2023 CPI–U to calculate the multiplier. In this case, October 2024 CPI–U (315.66)/October 2023 CPI–U (306.671) = 1.02598. OMB Memorandum M–25–02 confirms that this is the proper multiplier. (OMB Memorandum M–25–02 at 2.)

The 2015 Act requires the BLM to adjust the civil penalty amounts in 43 CFR 3163.2 and 9239.5–3(f)(1). To accomplish this, the BLM multiplied the current penalty amounts in those paragraphs by the multiplier set forth in OMB Memorandum M–25–02 (1.02598) to obtain the adjusted penalty amounts. The 2015 Act requires that the resulting amounts be rounded to the nearest $1.00 at the end of the calculation process.

The adjusted penalty amounts will take effect immediately upon publication of this rule. Pursuant to the 2015 Act, the adjusted civil penalty amounts apply to civil penalties assessed after the date the increase takes effect, even if the associated violation predates such increase.

This final rule adjusts the following civil penalties:

CFR citation	Description of the penalty	Current penalty	Adjusted penalty
43 CFR 3163.2(b)(1)	Failure to comply	$1,333	$1,368
43 CFR 3163.2(b)(2)	If corrective action is not taken	13,343	13,690
43 CFR 3163.2(d)	If transporter fails to permit inspection for documentation.	1,333	1,368
43 CFR 3163.2(e)	Failure to permit inspection, failure to notify	26,685	27,378
43 CFR 3163.2(f)	False or inaccurate documents; unlawful transfer or purchase.	66,712	68,445
43 CFR 9239.5–3(f)(1)	Coal exploration for commercial purposes without an exploration license.	4,995	5,125

III. Procedural Requirements

A. Administrative Procedure Act

In accordance with the 2015 Act, agencies must adjust civil monetary penalties ''notwithstanding Section 553 of the Administrative Procedure Act'' (Sec. 4(b)(2), 2015 Act). The BLM is promulgating this 2024 inflation adjustment for civil penalties as a final rule pursuant to the provisions of the 2015 Act and OMB guidance. A proposed rule is not required because the 2015 Act expressly exempts the annual inflation adjustments from the notice and comment requirements of the Administrative Procedure Act. In addition, the 2015 Act does not give the BLM any discretion to vary the amount of the annual inflation adjustment for any given penalty to reflect any views or suggestions provided by commenters. Accordingly, the BLM will not provide an opportunity for public comment on this rule.

B. Regulatory Planning and Review (Executive Orders 12866, 14094 and 13563)

Executive Order (E.O.) 12866, as amended by E.O. 14094, provides that the Office of Information and Regulatory Affairs (OIRA) in the OMB will review all significant rules. OIRA has determined that this rule is not significant. (*See* OMB Memorandum M–25–02 at 4).

E.O. 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation's regulatory system to promote predictability and to reduce uncertainty and to use the best, most innovative, and least burdensome tools for achieving regulatory ends. E.O. 13563 directs agencies to consider regulatory approaches that reduce burdens and maintain flexibility and freedom of choice for the public where these approaches are relevant, feasible, and consistent with regulatory objectives. E.O. 13563 emphasizes further that regulations must be based on the best available science, and that the rulemaking process must allow for public participation and an open exchange of ideas. We have developed this rule in a manner that is consistent with these requirements to the extent permitted by the 2015 Act.

C. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) requires an agency to prepare a

regulatory flexibility analysis for all rules unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. The RFA applies only to rules for which an agency is required to first publish a proposed rule. *See* 5 U.S.C. 603(a) and 604(a). The 2015 Act expressly exempts these annual inflation adjustments from the requirement to publish a proposed rule for notice and comment (*see* sec. 4(b)(2), 2015 Act). Because the final rule in this case does not include publication of a proposed rule, the RFA does not apply to this final rule.

D. Congressional Review Act

This rule is not a major rule under the Congressional Review Act. This rule:

(a) Will not have an annual effect on the economy of $100 million or more.

(b) Will not cause a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; and

(c) Will not have significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises.

E. Unfunded Mandates Reform Act

This rule does not impose an unfunded mandate on State, local, or Tribal governments, or the private sector of more than $100 million per year. The rule does not have a significant or unique effect on State, local, or Tribal governments or the private sector. Therefore, a statement containing the information required by the Unfunded Mandates Reform Act (2 U.S.C. 1531 *et seq.*) is not required.

F. Takings (E.O. 12630)

This rule does not effect a taking of private property or otherwise have takings implications under E.O. 12630. Therefore, a takings implication assessment is not required.

G. Federalism (E.O. 13132)

Under the criteria in section 1 of E.O. 13132, this rule does not have federalism implications that warrant the preparation of a federalism summary impact statement. Therefore, a federalism summary impact statement is not required.

H. Civil Justice Reform (E.O. 12988)

This rule complies with the requirements of E.O. 12988. Specifically, this rule:

(a) Meets the criteria of section 3(a) requiring that all regulations be reviewed to eliminate errors and ambiguity and be written to minimize litigation; and

(b) Meets the criteria of section 3(b)(2) requiring that all regulations be written in clear language and contain clear legal standards.

I. Consultation With Indian Tribes (E.O. 13175 and Departmental Policy)

The Department of the Interior strives to strengthen its government-to-government relationship with Indian Tribes through a commitment to consultation with Indian Tribes and recognition of their right to self-governance and tribal sovereignty. We have evaluated this rule under the Department's consultation policy and under the criteria in E.O. 13175 and have determined that it has no substantial direct effects on federally recognized Indian Tribes and that consultation under the Department's Tribal consultation policy is not required.

J. Paperwork Reduction Act

This rule does not contain information collection requirements, and a submission to OMB under the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*) is not required. We may not conduct or sponsor, and you are not required to respond to, a collection of information unless it displays a currently valid OMB control number.

K. National Environmental Policy Act (NEPA)

This rule does not constitute a major federal action because of the non-discretionary nature of the civil penalty adjustment as required by law (see 40 CFR 1508.1(q)(1)(ii)). The Department of Labor's Consumer Price Index sets the amount of the annual civil penalty adjustment to account for inflation as required by the Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015. Accordingly, BLM has no discretion in the execution of the civil penalty adjustments. Even if this were a discretionary action, which it is not, a detailed statement under NEPA would also not be required because, as a regulation of an administrative nature, this rule would otherwise be covered by a categorical exclusion. See 43 CFR 46.210(i). BLM has determined that the rule does not implicate any of the extraordinary circumstances listed in 43 CFR 46.215 that would prevent reliance on the categorical exclusion. Because this rule is not a major federal action, it is therefore not subject to the requirements of NEPA.

L. Effects on the Energy Supply (E.O. 13211)

This rule is not a significant energy action under the definition in E.O. 13211. Therefore, a Statement of Energy Effects is not required.

List of Subjects

43 CFR Part 3160

Administrative practice and procedure; Government contracts; Indians-lands; Mineral royalties; Oil and gas exploration; Penalties; Public lands-mineral resources; Reporting and recordkeeping requirements.

43 CFR Part 9230

Penalties, Public lands.

For the reasons given in the preamble, the BLM amends Chapter II of Title 43 of the Code of Federal Regulations as follows:

PART 3160—ONSHORE OIL AND GAS OPERATIONS

■ 1. The authority citation for part 3160 continues to read as follows:

Authority: 25 U.S.C. 396d and 2107; 30 U.S.C. 189, 306, 359, and 1751; 43 U.S.C. 1732(b), 1733, 1740; and Sec. 701, Pub. L. 114–74, 129 Stat. 599, unless otherwise noted.

Subpart 3163—Noncompliance, Assessments, and Penalties

§ 3163.2 [Amended]

■ 2. In § 3163.2:

■ a. In paragraph (b)(1), remove ''$1,333'' and add in its place ''$1,368''.

■ b. In paragraph (b)(2), remove ''$13,343'' and add in its place ''$13,690''.

■ c. In paragraph (d), remove ''$1,333'' and add in its place ''$1,368''.

■ d. In paragraph (e) introductory text, remove ''$26,685'' and add in its place ''$27,378''.

■ e. In paragraph (f) introductory text, remove ''$66,712'' and add in its place ''$68,445''.

Part 9230—TRESPASS

■ 3.The authority citation for part 9230 continues to read as follows:

Authority: R.S. 2478; 43 U.S.C. 1201

Subpart 9239—Kinds of Trespass

§ 9239.5–3 [Amended]

■ 4. In § 9239.5–3(f)(1), remove ''$4,995'' and add in its place ''$5,125''.

This action by the Principal Deputy Assistant Secretary is taken pursuant to an existing delegation of authority.

Steven H. Feldgus,

Principal Deputy Assistant Secretary, Land and Minerals Management.

BILLING CODE 4331–29–P

CORPORATION FOR NATIONAL AND COMMUNITY SERVICE

45 CFR Part 2522

RIN 3045–AA84

AmeriCorps State and National Updates

AGENCY: Corporation for National and Community Service.

ACTION: Final rule.

SUMMARY: The Corporation for National and Community Service (operating as AmeriCorps) is revising regulations governing the number of terms for which AmeriCorps will fund living allowances and other benefits for AmeriCorps State and National members. Specifically, this rule increases the flexibility of the current rule by providing that AmeriCorps funding may be used for living allowances and other benefits for members for as long as it takes the members to either earn the aggregate value of two full-time Segal Education Awards or four terms, whichever is longer.

DATES: This rule is effective January 17, 2025.

FOR FURTHER INFORMATION CONTACT: Jennifer Bastress Tahmasebi, Deputy Director, AmeriCorps State and National, at *JBastressTahmasebi@americorps.gov,* (202) 606–6667; or Elizabeth Appel, Associate General Counsel, at *EAppel@americorps.gov,* (202) 967–5070.

I. Good Cause for Immediate Effective Date

I. Background

The National and Community Service Act of 1990, as amended, 42 U.S.C. 12501 *et seq.,* aims to encourage United States citizens to engage in national service and to expand education opportunity by rewarding individuals who participate in national service with an increased ability to pursue higher education. Specifically, the Act establishes the National Service Trust and authorizes AmeriCorps to use funds from that Trust to provide education awards to eligible individuals who have fulfilled a term of service in an approved national service position and meet other applicable requirements. The Act also requires AmeriCorps State and National programs to provide living allowances and certain other benefits to full-time national service program participants. Notices of funding opportunity specify that programs may to choose to provide living allowances with AmeriCorps funding to members who serve less than full-time.

The ''term of service'' that members serve in AmeriCorps State and National can be of different lengths, depending on the needs of the program. Full-time service is defined as 1,700 hours of service during a period of not more than one year. *See* 45 CFR 2522.220(a)(1). Part-time service is defined as 900 hours of service during a period of not more than two years. *See* 45 CFR 2522.220(a)(2). Reduced part-time terms of service may include terms at a reduced number of hours for categories of participants in certain approved AmeriCorps programs and on a case-by-case basis. *See* 45 CFR 2522.220(a)(3). Summer program terms are considered part-time programs and members serve less than 1,700 hours. *See* 45 CFR 2522.220(a)(4).

Under 45 CFR 2525.50, AmeriCorps State and National members can earn up to the value of two full-time education awards. Because full-time and less than full-time (*e.g.,* part-time, reduced part-time, summer) terms of service have different hour requirements, each takes a different number of terms to reach the aggregate value of the two full-time education awards. 45 CFR 2522.220; 2525.100.

During the period that AmeriCorps State and National members are serving and earning Segal Education awards, AmeriCorps funds living allowances and other member benefits (*e.g.,* financial benefits during an extended term of disaster-related service, childcare, health care). The current regulation, which took effect October 1, 2024, allows members to serve as many terms as necessary to earn the value of two full-time education awards, regardless of whether those terms are served on a full-time or less than full-time time basis. The prior regulation allowed AmeriCorps funding to support members' living allowances and benefits for up to four terms of service.

II. Overview of Final Rule

Overall, this final rule is intended to increase the flexibility of AmeriCorps State and National regulations that removed the four-term limit on AmeriCorps funding for AmeriCorps State and National members' living allowances and other benefits. *See* 89 FR 46024 (May 28, 2024).

The final rule, which appears at 45 CFR 2522.235, retains the current provision that allows AmeriCorps funding for living allowances and other member benefits for the number of terms it takes to earn the aggregate value of two full-time education awards and also reinstates the former provision that allowed AmeriCorps funding for up to four terms. Thus, living allowances and other benefits for members who serve less than full time may continue to be funded for however many terms it takes those members to earn the aggregate value of two education awards, while living allowances and other benefits for members who have earned the aggregate value of two full-time education awards in fewer than four terms may continue to be funded up to four terms.

III. Response to Public Comments

AmeriCorps published a proposed rule on August 28, 2024, at 89 FR 68845 and received 46 public comments in response by the September 27, 2024, comment deadline. Summaries of the points raised in those comments, and AmeriCorps' responses, are provided here. No changes to the proposed regulatory text were made in response to these comments or otherwise, as explained in the response to comments.

A. Comments in Support of Proposed Rule

Several commenters stated their general support for providing AmeriCorps funding for members' living allowances and other benefits for service in AmeriCorps State and National programs for either four terms or as many terms needed to attain the aggregate value of two-full time education awards, whichever is longer. The commenters highlighted that the flexibility in term limits supports members, grantees, and the communities served by, for example:

protecting members' opportunity to serve; offering the necessary support for members to complete their service; supporting members' personal and professional growth; enabling members to earn the statutorily allotted two Segal Education awards; benefiting the grantee organizations through members' institutional knowledge and providing organizations with the ability to better determine recruitment and funding needs; creating a value-added benefit for communities and people served; and ensuring continuity of service in rural and remote communities.

Other commenters specifically noted that allowing continued service into third and fourth terms, after two education awards have been attained, is beneficial. For example, one commenter described the importance of her experience as a member who continued to serve a third term of service after earning the aggregate value of two full-time education awards and credited her third term of service as contributing to her growth as a leader, allowing her to earn her teaching certification, and changing the trajectory of her life. A commenter speaking from the perspective of a grantee stated that third- and fourth-year full-time members contribute institutional knowledge and expertise to programs, a ''spirit of service,'' efficacy, and continuity at service sites. Another commenter noted that consecutive terms of service translate into professional development and leadership opportunities for AmeriCorps members. Several commenters expressed the importance of allowing up to four terms for programs in rural and remote communities where members typically serve full-time and it can be difficult to recruit members due to smaller applicant pools.

Some commenters emphasized their support for continuing to allow members to serve beyond four terms until they have earned the value of two full-time education awards. One commenter noted that some members serve only during summers and require more than four terms to earn the value of two full-time education awards. Another commenter stated that the major issue their organization encountered was that members reached the four-term limit (under the prior rule) before they earned the maximum education award and that allowing them to continue to serve to earn the education award addresses this issue.

Response: This final rule carries forward the proposal that allows AmeriCorps funding to be used for living allowances and other benefits for as long as it takes members to either earn the aggregate value of two Segal Education Awards or four terms, whichever is longer. AmeriCorps agrees that the flexibility provides the benefits noted by the commenters above.

B. Comments in Opposition to the Proposed Rule

A few commenters expressed opposition to the rule in general. Several expressed opposition to the regulation's imposition of any limit on the use of AmeriCorps funding for member benefits. Some of these commenters suggested that imposing a term limit on members' service is an effort to fix an issue that does not exist. The commenters stated that only a minute percentage of members serve for third and fourth terms in AmeriCorps State and National programs, and that assumptions that members will serve indefinitely, or that extended terms prevent others from engaging in service, are unwarranted. These commenters stated that any limit presents a barrier to service and discourages service at different stages of life.

Response: AmeriCorps declines to remove all limits to the time during which it will fund members' living allowances and other benefits because such limits are necessary to safeguard taxpayer funds and encourage and support members' transition to higher education or the workforce.

One commenter opposed the four-term limit prong of the rule, suggesting that the four-term timeframe is too long. They stated that after their third and fourth years, members no longer actively gain new skills and should instead transition from AmeriCorps into the workforce.

Response: The final rule reinstates the four-term limit that previously existed to account for situations described by other commenters whereby members may want to continue serving after earning the value of two education awards and the organization and community benefit from their continued service.

Several commenters from AmeriCorps State and National sponsor/grantee organizations criticized the Agency's statements that terms are ''unlimited'' as misleading because the organizations rely on the AmeriCorps funding for members' living allowances and other benefits and would have to absorb the living allowance and benefit costs for members serving beyond the AmeriCorps-funded limit (when the member earns the value of two full-time education awards or four terms, whichever is longer) in order to truly allow for ''unlimited'' terms. These commenters stated that the financial burden would lead to reduced capacity of organizations—particularly in rural and remote areas—fewer serving members, diminished community impacts, and programmatic struggles to maintain ongoing efforts.

Response: AmeriCorps is not changing its approach to limiting funding of living allowances and other benefits for members after a certain point, it is only changing the point at which the limit occurs—that is, when the member earns the value of two full-time education awards or has served four terms, whichever is longer. The final rule makes clear, as the proposed rule did, that programs may choose to fund or not to fund additional member terms. Programs may base their decisions on their financial capacity and the potential effects cited by the commenters.

One commenter expressed criticism of the either/or nature of the rule. The commenter highlighted the potential for members who struggle to meet expectations and are engaged under an improvement plan to continue to be eligible for continued terms and benefits.

Response: Organizations can hold AmeriCorps State and National members to performance standards and may decline continued service by a member who fails to meet their performance standards.

C. Comments Requesting Changes to the Proposed Rule

A handful of commenters suggested incorporating a waiver option that allows programs to request an extension on the number of terms supported by AmeriCorps. These commenters stated that some members, such as individuals with disabilities or members serving in rural communities where recruiting is difficult, may benefit from serving beyond four full-time terms.

Response: The final rule does not include a waiver option but AmeriCorps may consider incorporating one in the future.

Some commenters suggested that AmeriCorps State and National align the member term limits to that of the Volunteers in Service to America (VISTA) program. Commenters stated that the proposed term limit should be increased to five years, equivalent to the current term limit of VISTA members, to provide consistency across streams of service.

Response: The five-year term limit that applies to VISTA members reflects that VISTA terms are by their nature full-time, such that each term is roughly equivalent to a year. In contrast, AmeriCorps State and National

members may serve summer, part-time, or reduced part-time terms in lieu of full-time terms. Imposing a limit based on years rather than terms would prevent members who serve less than full-time from earning the maximum education award value.

Several commenters sought clarification on how term limits and education award limits are tracked. Commenters noted that a program's access to how many terms a member has served is only available once that member's enrollment is pending, which creates a significant recruitment burden, as few members know with precision how many terms they have served.

Response: AmeriCorps will keep this tracking challenge in mind as it develops its new online member system.

Similarly, a few commenters asked for clarification on whether AmeriCorps will fund a member's entire term if they earn the maximum education award mid-way through a term.

Response: If a member earns the maximum education award mid-way through a term (and has already served four terms), AmeriCorps will continue to fund the member's service through the completion of that term.

One commenter requested clarification on how incomplete terms will be considered in calculating a member's progress toward a term limit.

Response: AmeriCorps' online member management system tracks an individual's number of terms.

One commenter proposed changing the four-term limitation to the equivalent of four terms of full-time service. Among the reasons the commenter provided for this suggestion were that it would clarify what terms count toward the limit and ensure less-than-full-time members do not ''term out'' before accessing the same opportunities and education award value as full-time members.

Response: The commenter's suggestion is a novel approach. If AmeriCorps considers adopting this suggestion in the future, it will do so through a new proposed rulemaking.

Two commenters suggested that, in anticipation of Congressional legislation that proposes an increase in the number of education awards a member is eligible for, the regulatory language should be broadened in an effort to provide flexibility. They suggested updating the language from ''two full-time education awards'' to the ''statutorily allowed maximum education awards.''

Response: The final rule retains the language specifying two full-time education awards because that language reflects the current statute. Should Congress change that statutorily allowed maximum, AmeriCorps will undertake a separate rulemaking to update the regulation to reflect that change.

IV. Regulatory Analyses

A. Executive Orders 12866 and 13563

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. The Office of Information and Regulatory Affairs in the Office of Management and Budget has determined that this rule is not a significant regulatory action, and therefore is not subject to review under Section 6(b) of Executive Order 12866, Regulatory Planning and Review.

B. Regulatory Flexibility Act

As required by the Regulatory Flexibility Act of 1980 (5 U.S.C. 601 *et seq.*), AmeriCorps certifies that this rule will not have a significant economic impact on a substantial number of small entities. Most AmeriCorps State and National grantees are State Commissions and organizations that do not meet the definition of a small entity. Therefore, AmeriCorps has not performed the regulatory flexibility analysis that is required under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) for rules that are expected to have such results.

C. Small Business Regulatory Enforcement Fairness Act (SBREFA)

The Office of Information and Regulatory Affairs in the Office of Management and Budget has determined that this is not a major rule under 5 U.S.C. 804(2) because this rule: (1) does not have an annual effect on the economy of $100 million or more; (2) will not cause a major increase in costs or prices for consumers, individual industries, federal, state, or local government agencies, or geographic regions; and (3) does not have significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of U.S.-based enterprises to compete with foreign-based enterprises in domestic and export markets.

D. Unfunded Mandates Reform Act of 1995

For purposes of title II of the Unfunded Mandates Reform Act of 1995, 2 U.S.C. 1531–1538, as well as Executive Order 12875, this regulatory action does not contain any Federal mandate that may result in increased expenditures in Federal, State, local, or Tribal governments in the aggregate, or impose an annual burden exceeding $100 million on the private sector.

E. Paperwork Reduction Act

Under the PRA, an agency may not conduct or sponsor a collection of information unless the collections of information display valid control numbers. This rule does not include any information collection.

F. Executive Order 13132, Federalism

Executive Order 13132, Federalism, prohibits an agency from publishing any rule that has federalism implications if the rule imposes substantial direct compliance costs on State and local governments and is not required by statute, or the rule preempts State law, unless the agency meets the consultation and funding requirements of section 6 of the Executive order. This rulemaking does not have any federalism implications, as described above.

G. Takings (Executive Order 12630)

This rule does not affect a taking of private property or otherwise have taking implications under Executive Order 12630 because this proposed rule does not affect individual property rights protected by the Fifth Amendment or involve a compensable ''taking.'' A takings implication assessment is not required.

H. Civil Justice Reform (Executive Order 12988)

This rule complies with the requirements of Executive Order 12988. Specifically, this rulemaking: (a) meets the criteria of section 3(a) requiring that all regulations be reviewed to eliminate errors and ambiguity and be written to minimize litigation; and (b) meets the criteria of section 3(b)(2) requiring that all regulations be written in clear language and contain clear legal standards.

I. Consultation With Indian Tribes (Executive Order 13175)

AmeriCorps recognizes the inherent sovereignty of Indian Tribes and their right to self-governance. We have evaluated this rulemaking under our consultation policy and the criteria in Executive Order 13175 and determined

that this rule does not impose substantial direct effects on federally recognized Tribes.

J. Good Cause for Immediate Effective Date

AmeriCorps has determined, pursuant to 5 U.S.C. 553(d)(3), that good cause exists to make this rule effective upon publication, because this rule relieves a restriction by increasing the amount of time AmeriCorps will fund members' living allowances and other benefits beyond the point when the member attains the value of two full-time education awards, up to the point the member has served four terms, so long as the member has not already served four terms by the time the member attains the value of two full-time education awards. In other words, the final rule increases flexibility by providing AmeriCorps funding for the longer of the service time it takes a member to attain the value of two full-time education awards or serve four terms. The primary purpose of a delayed effective date is unnecessary for this rule because there is no time needed to prepare to comply with, or take other action to comply with, this rule. The four-term limit preexisted the October 1, 2024, rule that replaced that limit with the amount of time it takes a member to earn the value of two full-time education awards, and this final rule reinstates that four-term limit when it exceeds the time it takes a member to earn the value of two full-time education awards.

List of Subjects in 45 CFR Part 2522

Grant programs-social programs, Reporting and recordkeeping requirements, Volunteers.

For the reasons stated in the preamble, under the authority of 42 U.S.C. 12651c(c), the Corporation for National and Community Service amends chapter XXV, title 45 of the Code of Federal Regulations as follows:

PART 2522—AMERICORPS PARTICIPANTS, PROGRAMS, AND APPLICANTS

■ 1. The authority citation for part 2522 continues to read as follows:

Authority: 42 U.S.C. 12571–12595; 12651b-12651d; E.O. 13331, 69 FR 9911, Sec. 1612, Pub. L. 111–13.

■ 2. Revise § 2522.235 to read as follows:

§ 2522.235 Is there a limit on the number of terms an individual may serve in an AmeriCorps State and National program?

The number of terms an individual may serve in an AmeriCorps State and National program is not limited, but the limitations in paragraphs (a) and (b) of this section apply.

(a) An individual may attain only the aggregate value of two full-time education awards.

(b) AmeriCorps will fund the benefits described in §§ 2522.240 through 2522.250 only for the number of terms needed to attain the aggregate value of two full-time education awards or for four terms, whichever is longer. Grantees may choose to fund benefits for any additional terms.

Andrea Grill,

Acting General Counsel.

[FR Doc. 2025–00984 Filed 1–16–25; 8:45 am]

BILLING CODE 6050–28–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Parts 1, 90, 95, and 97

[ET Docket No. 19–138; FCC 24–123; FR ID 272367]

Use of the 5.850–5.925 GHz Band; Correction

AGENCY: Federal Communications Commission.

ACTION: Final rule; correction.

SUMMARY: The Federal Communications Commission (Commission) is correcting a final rule that appeared in the **Federal Register** on December 13, 2024. The document addressed the transition of 5.9 GHz Intelligent Transportation System (ITS) operations from Dedicated Short Range Communications (DSRC)-based technology to cellular-vehicle-to-everything (C–V2X)-based technology.

DATES: Effective February 11, 2025.

FOR FURTHER INFORMATION CONTACT: Jamie Coleman of the Office of Engineering and Technology, at *Jamie.Coleman@fcc.gov* or 202–418–2705.

SUPPLEMENTARY INFORMATION: In FR Doc. 2024–28980 appearing on page 100838 in the **Federal Register** of Friday, December 13, 2024, the following corrections are made:

1. On page 100838, in the second column, correct the **DATES** caption to read as follows:

DATES: This final rule is effective February 11, 2025, except for the amendments to 47 CFR 90.7 (instruction 5), 47 CFR 90.149(b) (instruction 9), 47 CFR 90.155(i) (instruction 11), 47 CFR 90.179(f) (instruction 14), 47 CFR 90.210 (instruction 15), 47 CFR 90.213 (instruction 16), 47 CFR 90.350 (instruction 18), the removal of 47 CFR 90.370 through 90.384 (instruction 22), and the removal of a center heading and 47 CFR 95.3105 through 95.3189 (instruction 32), which are effective December 14, 2026.

§ 1.907 [Corrected]

■ 2. On page 100850, in the third column, in § 1.907, the definition of *Covered geographic licenses* is corrected to read as follows:

* * * * *

Covered geographic licenses. Covered geographic licenses consist of the following services: 1.4 GHz Service (part 27, subpart I, of this chapter); 1.6 GHz Service (part 27, subpart J); 24 GHz Service and Digital Electronic Message Services (part 101, subpart G, of this chapter); 218–219 MHz Service (part 95, subpart F, of this chapter); 220–222 MHz Service, excluding public safety licenses (part 90, subpart T, of this chapter); 600 MHz Service (part 27, subpart N); 700 MHz Commercial Services (part 27, subparts F and H); 700 MHz Guard Band Service (part 27, subpart G); 800 MHz Specialized Mobile Radio Service (part 90, subpart S); 900 MHz Specialized Mobile Radio Service (part 90, subpart S); 900 MHz Broadband Service (part 27, subpart P); 3.45 GHz Service (part 27, subpart Q); 3.7 GHz Service (part 27, subpart O); Advanced Wireless Services (part 27, subparts K and L); Air-Ground Radiotelephone Service (Commercial Aviation) (part 22, subpart G, of this chapter); Broadband Personal Communications Service (part 24, subpart E, of this chapter); Broadband Radio Service (part 27, subpart M); Cellular Radiotelephone Service (part 22, subpart H); Citizens Broadband Radio Service (part 96, subpart C, of this chapter); Intelligent Transportation Systems Radio Service in the 5895–5925 MHz band, excluding public safety licenses (part 90, subpart M); Educational Broadband Service (part 27, subpart M); H Block Service (part 27, subpart K); Local Multipoint Distribution Service (part 101, subpart L); Multichannel Video Distribution and Data Service (part 101, subpart P); Multilateration Location and Monitoring Service (part 90, subpart M); Multiple Address Systems (EAs) (part 101, subpart O); Narrowband Personal Communications Service (part 24, subpart D); Paging and Radiotelephone Service (part 22, subpart E; part 90, subpart P); VHF Public Coast Stations, including Automated Maritime Telecommunications Systems (part 80, subpart J, of this chapter); Space Launch Services (part 26 of this chapter); Upper Microwave Flexible Use Service (part 30

of this chapter); and Wireless Communications Service (part 27, subpart D).

* * * * *

§ 90.7 [Corrected]

■ 3. On page 100851, in the second column, in the last line of instruction 5 amending § 90.7, remove ''*Roadside Units (RSU)*'' and add in its place ''*Roadside Unit (RSU)*''.

§ 90.35 [Corrected]

■ 4. On page 100851, in the second column, instruction 7 ''Amend § 90.35 by revising paragraph (b)(91) to read as follows:'' is corrected to read ''Amend § 90.35 by revising paragraph (c)(91) to read as follows:''.

■ 5. On page 100851, in the second column, correct the amendment text for § 90.35 by redesignating paragraph (b)(91) as paragraph (c)(91).

§ 90.390 [Corrected]

■ 6. On page 100854, spanning all columns, correct table 1 to paragraph (a) in § 90.390 to read as follows:

* * * * *

TABLE 1 TO PARAGRAPH (a)

DEPARTMENT OF DEFENSE

Defense Acquisition Regulations System

48 CFR Parts 202, 215, 234, 242, 244, 245, and 252

[Docket DARS–2024–0020]

RIN 0750–AL25

Defense Federal Acquisition Regulation Supplement: Definition of Material Weakness (DFARS Case 2021–D006)

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Final rule.

SUMMARY: DoD is issuing a final rule amending the Defense Federal Acquisition Regulation Supplement (DFARS) to implement sections of the National Defense Authorization Acts for Fiscal Year 2021 that defines the term ''material weakness'' for Government evaluation of contractor business systems. The term ''material weakness'' replaces the term ''significant deficiency.''

DATES: Effective January 17, 2025.

FOR FURTHER INFORMATION CONTACT: Mr. Jon Snyder, telephone 703–945–5341.

SUPPLEMENTARY INFORMATION:

I. Background

DoD published a proposed rule in the **Federal Register** at 89 FR 53561 on June 27, 2024, to implement section 806 of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2021 (Pub. L. 116–383), which amends section 893 of the NDAA for FY 2011 (Pub. L. 111–383). Section 893 of the NDAA for FY 2011 requires a program for the improvement of contractor business systems and provides for DoD approval or disapproval of contractor business systems. Section 806 of the NDAA for FY 2021 defines the term ''material weakness'', which replaces the term ''significant deficiency.'' Three respondents submitted public comments in response to the proposed rule.

II. Discussion and Analysis

DoD reviewed the public comments in the development of the final rule. A discussion of the comments and the changes made to the rule as a result of those comments is provided, as follows:

A. Summary of Significant Changes From the Proposed Rule

There are no significant changes from the proposed rule.

B. Analysis of Public Comments

Comment: A respondent recommended DoD add experience requirements for administrative contracting officers that issue decisions related to business system deficiencies. The respondent also recommended clarifying that, although the terminology has changed, a warranted official is required to make the determination of findings of the audit or review.

Response: Federal Acquisition Regulation 1.603 establishes the requirements for the selection, appointment, and termination of appointment for contracting officers. Section 806 does not require administrative contracting officers that issue decisions related to business system deficiencies to have a certain amount of experience. DFARS 242.7502 specifies that the cognizant contracting officer, in consultation with the auditor or functional specialist, shall determine the acceptability of a contractor's accounting system and approve or disapprove the system and pursue correction of any deficiencies as required. As such, it is not necessary to make the recommended changes.

Comment: A respondent recommended adding a matrix at DFARS 242.7000 that aligns the types of Generally Accepted Accounting Systems internal control findings with the Defense Contract Management Agency (DCMA) corrective action request levels.

Response: The creation of a reference matrix to pre-establish a particular level of a corrective action request would constrain the cognizant contracting officer's ability to administer and oversee contracts. Therefore, this recommendation is not implemented in the final rule.

Comment: A respondent recommended that DoD discontinue the use of or replace earned value management with a ''cash on delivery'' payment system. A respondent recommended that DoD consider a small business exemption from the DFARS business system clauses because they are complex systems that most small businesses cannot afford to invest the human and financial capital into supporting. A respondent recommended that DoD implement an inflation adjustment for each business system for fiscal year 2025 to mitigate the impacts of inflation on small businesses.

Response: These comments are outside the scope of this rule. Section 806 does not authorize DoD to discontinue the use of or replace earned value management, nor does it authorize DoD to establish a small business

exemption or an inflation adjustment. Inflation adjustments are made in accordance with 41 U.S.C. 1908.

C. Other Changes

The clause at DFARS 252.245–7003, Contractor Property Management System Administration, is amended to update the paragraph references to align with the changes made to the clause. At DFARS 242.7203(c)(2)(ii)(A) ''deficiency'' is changed to ''weakness or deficiency''. In addition, at DFARS 215.407–5–70(d)(1) and 244.305–70(c)(1) ''weakness and deficiencies'' is changed to ''weakness or deficiencies''.

III. Applicability to Contracts at or Below the Simplified Acquisition Threshold (SAT), for Commercial Products (Including Commercially Available Off-the-Shelf (COTS) Items), and for Commercial Services

This final rule amends the clauses at DFARS 252.215–7002, Cost Estimating System Requirements; 252.234–7002, Earned Value Management System; 252.242–7004, Material Management and Accounting System; 252.242–7005, Contractor Business Systems; 252.242–7006, Accounting System Administration; 252.244–7001, Contractor Purchasing System Administration—Basic and Alternate I; and 252.245–7003, Contractor Property Management System Administration. However, this final rule does not impose any new requirements on contracts at or below the SAT, for commercial products, including COTS items, or for commercial services. Applicability of the clauses to acquisitions at or below the SAT, to acquisitions of commercial products including COTS items, and to acquisitions of commercial services remains unchanged.

IV. Expected Impact of the Rule

Presently, the DFARS includes a definition of ''significant deficiency'' in the context of DoD evaluation of contractor business systems. ''Significant deficiency'' is defined as ''a shortcoming in the system that materially affects the ability of officials of the Department of Defense to rely upon information produced by the system that is needed for management purposes.'' This final rule replaces the term ''significant deficiency'' in the DFARS with the term ''material weakness,'' defined as a deficiency or combination of deficiencies in the internal control over information in contractor business systems, such that there is a reasonable possibility that a material misstatement of such information will not be prevented, or detected and corrected, on a timely basis. A reasonable possibility exists when the likelihood of an event occurring is probable or more than remote but less than likely.

This definition of ''material weakness'' provides more detail and clarity both to DoD and to industry in the context of evaluating contractor business systems compared to the definition of ''significant deficiency.'' This definition of ''material weakness'' also aligns with generally accepted auditing standards. Therefore, this rule will both create consistency with generally accepted auditing standards and minimize confusion about the seriousness of deficiencies, which will aid both DoD and industry.

V. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, as amended.

VI. Congressional Review Act

As required by the Congressional Review Act (5 U.S.C. 801–808) before an interim or final rule takes effect, DoD will submit a copy of the interim or final rule with the form, Submission of Federal Rules Under the Congressional Review Act, to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States. A major rule under the Congressional Review Act cannot take effect until 60 days after it is published in the **Federal Register**. The Office of Information and Regulatory Affairs has determined that this rule is not a major rule as defined by 5 U.S.C. 804.

VII. Regulatory Flexibility Act

A final regulatory flexibility analysis has been prepared consistent with the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq*. and is summarized as follows:

This rule is necessary to implement section 806 of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2021 (Pub. L. 116–283). Section 806 amends section 893 of the NDAA for FY 2011 (Pub. L. 111–383), which requires a program for the improvement of contractor business systems and provides for DoD approval or disapproval of contractor business systems. Section 806 of the NDAA for FY 2021 replaces the term ''significant deficiency'' with ''material weakness'' and defines the term ''material weakness.''

The objective of the rule is to introduce the term ''material weakness'' for Government evaluation of contractor business systems, replacing the term ''significant deficiency.'' The definition of ''material weakness'' aligns with generally accepted auditing standards. This rule will help DoD maintain appropriate oversight over contractor business systems by enabling clear classification of deficiencies according to severity.

There were no significant issues raised by the public in response to the initial regulatory flexibility analysis.

The rule may impact small entities that are awarded DoD contracts. Based on data from the Federal Procurement Data System and the Electronic Data Access for fiscal years 2021, 2022, and 2023, DoD estimates that an average of 5,134 unique small entities are awarded an average of 22,263 contract actions annually that include one or more relevant clauses.

This rule does not impose any new reporting, recordkeeping or other compliance requirements.

There are no known alternatives that would accomplish the stated objectives of the applicable statute.

VIII. Paperwork Reduction Act

This final rule does not contain any information collection requirements that require the approval of the Office of Management and Budget under the Paperwork Reduction Act (44 U.S.C. chapter 35).

List of Subjects in 48 CFR Parts 202, 215, 234, 242, 244, 245, and 252

Government procurement.

Jennifer D. Johnson,

Editor/Publisher, Defense Acquisition Regulations System.

Therefore, the Defense Acquisition Regulations System amends 48 CFR parts 202, 215, 234, 242, 244, 245, and 252 as follows:

■ 1. The authority citation for 48 CFR 202, 215, 234, 242, 244, 245, and 252 continues to read as follows:

Authority: 41 U.S.C. 1303 and 48 CFR chapter 1.

PART 202—DEFINITIONS OF WORDS AND TERMS

■ 2. Amend section 202.101 by adding in alphabetical order the definition of ''Material weakness'' to read as follows:

202.101 Definitions.

* * * * *

Material weakness means a deficiency or combination of deficiencies in the internal control over information in contractor business systems, such that there is a reasonable possibility that a material misstatement of such information will not be prevented, or detected and corrected, on a timely basis. A reasonable possibility exists when the likelihood of an event occurring is—

(1) Probable; or

(2) More than remote but less than likely (section 806 of Pub. L. 116–283).

* * * * *

■ 3. Amend section 215.407–5–70 by:

■ a. Revising paragraph (a);

■ b. In paragraph (c)(2)(ii) removing ''any deficiencies'' and adding ''any weaknesses or deficiencies'' in its place;

■ c. Revising and republishing paragraph (d); and

■ d. In paragraph (e) removing ''significant deficiencies'' and adding ''material weaknesses'' in its place.

The revisions and republications read as follows:

215.407–5–70 Disclosure, maintenance, and review requirements.

(a) *Definitions.* As used in this section—

Acceptable estimating system means an estimating system that complies with the system criteria in paragraph (d) of 252.215–7002, Cost Estimating System Requirements, and provides for a system that—

(i) Is maintained, reliable, and consistently applied;

(ii) Produces verifiable, supportable, documented, and timely cost estimates that are an acceptable basis for negotiation of fair and reasonable prices;

(iii) Is consistent with and integrated with the contractor's related management systems; and

(iv) Is subject to applicable financial control systems.

Contractor means a business unit as defined in FAR 2.101.

Estimating system means the contractor's policies, procedures, and practices for budgeting and planning controls and for generating estimates of costs and other data included in proposals submitted to customers in the expectation of receiving contract awards. Estimating system includes the contractor's—

(i) Organizational structure;

(ii) Established lines of authority, duties, and responsibilities;

(iii) Internal controls and managerial reviews;

(iv) Flow of work, coordination, and communication; and

(v) Budgeting, planning, estimating methods, techniques, accumulation of historical costs, and other analyses used to generate cost estimates.

* * * * *

(d) *Disposition of findings*—(1) *Reporting of findings.* The auditor shall document findings and recommendations in a report to the contracting officer. If the auditor identifies any material weaknesses, the report shall describe the underlying deficiencies in sufficient detail to allow the contracting officer to understand the weaknesses or deficiencies.

(2) *Initial determination.* (i) The contracting officer shall review all findings and recommendations and, if there are no material weaknesses, shall promptly notify the contractor, in writing, that the contractor's estimating system is acceptable and approved; or

(ii) If the contracting officer finds that there are one or more material weaknesses due to the contractor's failure to meet one or more of the estimating system criteria in the clause at 252.215–7002, the contracting officer shall—

(A) Promptly make an initial written determination on any material weaknesses and notify the contractor, in writing, providing a description of each material weakness in sufficient detail to allow the contractor to understand the deficiency (see PGI 215.407–5–70(d)(2));

(B) Request the contractor to respond in writing to the initial determination within 30 days; and

(C) Promptly evaluate the contractor's responses to the initial determination, in consultation with the auditor or functional specialist, and make a final determination.

(3) *Final determination.* (i) The contracting officer shall make a final determination and notify the contractor in writing that—

(A) The contractor's estimating system is acceptable and approved, and no material weaknesses remain; or

(B) Material weaknesses remain. The notice shall identify any remaining material weaknesses and indicate the adequacy of any proposed or completed corrective action. The contracting officer shall—

(*1*) Request that the contractor, within 45 days of receipt of the final determination, either correct the deficiencies or submit an acceptable corrective action plan showing milestones and actions to eliminate the weaknesses;

(*2*) Disapprove the system in accordance with the clause at 252.215–7002; and

(*3*) Withhold payments in accordance with the clause at 252.242–7005, Contractor Business Systems, if the clause is included in the contract.

(ii) Follow the procedures relating to monitoring a contractor's corrective action and the correction of material weaknesses in PGI 215.407–5–70(d)(3).

* * * * *

PART 234—MAJOR SYSTEM ACQUISITION

234.001 [Redesignated as 234.001–70]

■ 4. Redesignate section 234.001 as section 234.001–70.

■ 5. Revise newly redesignated section 234.001–70 to read as follows:

234.001–70 Definitions.

As used in this part—

Acceptable earned value management system means an earned value management system that generally complies with system criteria in paragraph (b) of 252.234–7002, Earned Value Management System.

Earned value management system means an earned value management system that complies with the earned value management system guidelines in the ANSI/EIA–748.

Production of major defense acquisition program means the production and deployment of a major system that is intended to achieve an operational capability that satisfies mission needs, or an activity otherwise defined as Milestone C under Department of Defense Instruction 5000.02 or related authorities.

■ 6. Amend section 234.201—

■ a. In paragraph (5)(ii) by removing ''any deficiencies'' and adding ''any weaknesses or deficiencies'' in its place;

■ b. By revising and republishing paragraph (7); and

■ c. In paragraph (8) by removing ''significant deficiencies'' and adding ''material weaknesses'' in its place.

The revision and republication reads as follows:

234.201 Policy.

(7) *Disposition of findings*—(i) *Reporting of findings.* The functional specialist or auditor shall document findings and recommendations in a report to the contracting officer. If the functional specialist or auditor identifies any material weakness in the contractor's earned value management system, the report shall describe the

weaknesses or deficiencies in sufficient detail to allow the contracting officer to understand the weaknesses or deficiencies.

(ii) *Initial determination.* (A) The contracting officer shall review all findings and recommendations and, if there are no material weaknesses, shall promptly notify the contractor, in writing, that the contractor's earned value management system is acceptable and approved; or

(B) If the contracting officer finds that there are one or more material weaknesses due to the contractor's failure to meet one or more of the earned value management system criteria in the clause at 252.234–7002, the contracting officer shall—

(*1*) Promptly make an initial written determination of any material weaknesses and notify the contractor, in writing, providing a description of each material weakness in sufficient detail to allow the contractor to understand the weaknesses (see PGI 234.201(7)(ii));

(*2*) Request the contractor to respond, in writing, to the initial determination within 30 days; and

(*3*) Evaluate the contractor's response to the initial determination, in consultation with the auditor or functional specialist, and make a final determination.

(iii) *Final determination.* (A) The contracting officer shall make a final determination and notify the contractor, in writing, that—

(*1*) The contractor's earned value management system is acceptable and approved, and no material weaknesses remain; or

(*2*) Material weaknesses remain. The notice shall identify any remaining material weaknesses and indicate the adequacy of any proposed or completed corrective action. The contracting officer shall—

(*i*) Request that the contractor, within 45 days of receipt of the final determination, either correct the deficiencies or submit an acceptable corrective action plan showing milestones and actions to eliminate the weaknesses;

(*ii*) Disapprove the system in accordance with the clause at 252.234–7002 when initial validation is not successfully completed within the timeframe approved by the contracting officer, or the contracting officer determines that the existing earned value management system contains one or more material weaknesses in high-risk guidelines in ANSI/EIA–748 standards (guidelines 1, 3, 6, 7, 8, 9, 10, 12, 16, 21, 23, 26, 27, 28, 30, or 32). When the contracting officer determines that the existing earned value management system contains one or more material weaknesses in one or more of the remaining 16 guidelines in ANSI/EIA–748 standards, the contracting officer shall use discretion to disapprove the system based on input received from functional specialists and the auditor; and

(*iii*) Withhold payments in accordance with the clause at 252.242–7005, Contractor Business Systems, if the clause is included in the contract.

(B) Follow the procedures relating to monitoring a contractor's corrective action and the correction of material weaknesses at PGI 234.201(7)(iii).

* * * * *

PART 242—CONTRACT ADMINISTRATION AND AUDIT SERVICES

242.302 [Amended]

■ 7. Amend section 242.302 in paragraph (a)(7) by removing ''deficiencies'' and adding ''weaknesses or deficiencies'' in its place.

■ 8. Revise and republish section 242.7000 to read as follows:

242.7000 Contractor business system deficiencies.

(a) *Definitions.* As used in this subpart—

Acceptable contractor business systems means contractor business systems that comply with the terms and conditions of the applicable business system clauses listed in the definition of ''contractor business systems'' in this section.

Contractor business systems means—

(i) Accounting system, if the contract includes the clause at 252.242–7006, Accounting System Administration;

(ii) Earned value management system, if the contract includes the clause at 252.234–7002, Earned Value Management System;

(iii) Estimating system, if the contract includes the clause at 252.215–7002, Cost Estimating System Requirements;

(iv) Material management and accounting system, if the contract includes the clause at 252.242–7004, Material Management and Accounting System;

(v) Property management system, if the contract includes the clause at 252.245–7003, Contractor Property Management System Administration; and

(vi) Purchasing system, if the contract includes the clause at 252.244–7001, Contractor Purchasing System Administration.

Covered contract means a contract that is subject to the Cost Accounting Standards under 41 U.S.C. chapter 15, as implemented in regulations found at 48 CFR 9903.201–1 (10 U.S.C. 3841 note prec., as amended by section 816 of Pub. L. 112–81).

(b) *Determination to withhold payments.* If the contracting officer makes a final determination to disapprove a contractor's business system in accordance with the clause at 252.242–7005, Contractor Business Systems, the contracting officer shall—

(1) In accordance with agency procedures, identify one or more covered contracts containing the clause at 252.242–7005 from which payments will be withheld. When identifying the covered contracts from which to withhold payments, the contracting officer shall ensure that the total amount of payment withholding under 252.242–7005 does not exceed 10 percent of progress payments, performance-based payments, and interim payments under cost-reimbursement, labor-hour, and time-and-materials contracts billed under each of the identified covered contracts. Similarly, the contracting officer shall ensure that the total amount of payment withholding under the clause at 252.242–7005 for each business system does not exceed 5 percent of progress payments, performance-based payments, and interim payments under cost-reimbursement, labor-hour, and time-and-materials contracts billed under each of the identified covered contracts. The contracting officer has the sole discretion to identify the covered contracts from which to withhold payments.

(2) Promptly notify the contractor, in writing, of the contracting officer's determination to implement payment withholding in accordance with the clause at 252.242–7005. The notice of payment withholding shall be included in the contracting officer's written final determination for the contractor business system and shall inform the contractor that—

(i) Payments shall be withheld from the contract or contracts identified in the written determination in accordance with the clause at 252.242–7005, until the contracting officer determines that there are no remaining material weaknesses; and

(ii) The contracting officer reserves the right to take other actions within the terms and conditions of the contract.

(3) Provide a copy of the determination to all contracting officers administering the selected contracts from which payments will be withheld. The contracting officer shall also provide a copy of the determination to the auditor; payment office; affected contracting officers at the buying

activities; and cognizant contracting officers in contract administration activities.

(c) *Monitoring contractor's corrective action.* The contracting officer, in consultation with the auditor or functional specialist, shall monitor the contractor's progress in correcting the weaknesses. The contracting officer shall notify the contractor of any decision to decrease or increase the amount of payment withholding in accordance with the clause at 252.242–7005.

(d) *Correction of material weaknesses.* (1) If the contractor notifies the contracting officer that the contractor has corrected the material weaknesses, the contracting officer shall request the auditor or functional specialist to review the correction to verify that the weaknesses have been corrected. If, after receipt of verification, the contracting officer determines that the contractor has corrected all material weaknesses as directed by the contracting officer's final determination, the contracting officer shall discontinue the withholding of payments, release any payments previously withheld, and approve the system, unless other material weaknesses remain.

(2) Prior to the receipt of verification, the contracting officer may discontinue withholding payments pending receipt of verification, and release any payments previously withheld, if the contractor submits evidence that the material weaknesses have been corrected, and the contracting officer, in consultation with the auditor or functional specialist, determines that there is a reasonable expectation that the corrective actions have been implemented and are expected to correct the material weaknesses.

(3) Within 90 days of receipt of the contractor notification that the contractor has corrected the material weaknesses, the contracting officer shall—

(i) Make a determination that—

(A) The contractor has corrected all material weaknesses as directed by the contracting officer's final determination in accordance with paragraph (d)(1) of this section;

(B) There is a reasonable expectation that the corrective actions have been implemented in accordance with paragraph (d)(2) of this section; or

(C) The contractor has not corrected all material weaknesses as directed by the contracting officer's final determination in accordance with paragraph (d)(1) of this section, or there is not a reasonable expectation that the corrective actions have been implemented in accordance with paragraph (d)(2) of this section; or

(ii) Reduce withholding directly related to the material weaknesses covered under the corrective action plan by at least 50 percent of the amount being withheld from progress payments and performance-based payments, and direct the contractor, in writing, to reduce the percentage withheld on interim cost vouchers by at least 50 percent, until the contracting officer makes a determination in accordance with paragraph (d)(3)(i) of this section.

(4) If, at any time, the contracting officer determines that the contractor has failed to correct the material weaknesses identified in the contractor's notification, the contracting officer will continue, reinstate, or increase withholding from progress payments and performance-based payments, and direct the contractor, in writing, to continue, reinstate, or increase the percentage withheld on interim cost vouchers to the percentage initially withheld, until the contracting officer determines that the contractor has corrected all material weaknesses as directed by the contracting officer's final determination.

(e) *Sample formats.* For sample formats for written notifications of contracting officer determinations to initiate payment withholding, reduce payment withholding, and discontinue payment withholding in accordance with the clause at 252.242–7005, see PGI 242.7000.

■ 9. Revise section 242.7201 to read as follows:

242.7201 Definitions.

As used in this subpart—

Acceptable material management and accounting system means a material management and accounting system that generally complies with the system criteria in paragraph (d) of the clause at 252.242–7004, Material Management and Accounting System.

Material management and accounting system (MMAS) means the contractor's system or systems for planning, controlling, and accounting for the acquisition, use, issuing, and disposition of material. Material management and accounting systems may be manual or automated. They may be stand-alone systems, or they may be integrated with planning, engineering, estimating, purchasing, inventory, accounting, or other systems.

Valid time-phased requirements means material that is—

(1) Needed to fulfill the production plan, including reasonable quantities for scrap, shrinkage, yield, etc.; and

(2) Charged or billed to contracts or other cost objectives in a manner consistent with the need to fulfill the production plan.

242.7202 [Amended]

■ 10. Amend section 242.7202 in paragraph (b)(2) by removing ''any deficiencies'' and adding ''any weaknesses or deficiencies'' in its place.

■ 11. Amend section 242.7203 by—

■ a. Revising and republishing paragraph (c); and

■ b. Revising paragraph (d).

The revisions and republication read as follows:

242.7203 Review procedures.

* * * * *

(c) *Disposition of findings*—(1) *Reporting of findings.* The auditor or functional specialist shall document findings and recommendations in a report to the contracting officer. If the auditor or functional specialist identifies any material weakness, the report shall describe the weaknesses or deficiencies in sufficient detail to allow the contracting officer to understand the weaknesses or deficiencies.

(2) *Initial determination.* (i) The contracting officer shall review findings and recommendations and, if there are no material weaknesses, shall promptly notify the contractor, in writing, that the contractor's MMAS is acceptable and approved; or

(ii) If the contracting officer finds that there are one or more material weaknesses due to the contractor's failure to meet one or more of the MMAS system criteria in the clause at 252.242–7004, the contracting officer shall—

(A) Promptly make an initial written determination on any material weaknesses and notify the contractor, in writing, providing a description of each material weakness in sufficient detail to allow the contractor to understand the weakness or deficiency;

(B) Request the contractor to respond, in writing, to the initial determination within 30 days; and

(C) Promptly evaluate the contractor's response to the initial determination in consultation with the auditor or functional specialist, and make a final determination (see PGI 242.7203(c)(2)).

(3) *Final determination.* (i) The ACO shall make a final determination and notify the contractor that—

(A) The contractor's MMAS is acceptable and approved, and no deficiencies remain; or

(B) Material weaknesses remain. The notice shall identify any remaining material weaknesses and indicate the adequacy of any proposed or completed

corrective action. The contracting officer shall—

(*1*) Request that the contractor, within 45 days of receipt of the final determination, either correct the weaknesses or submit an acceptable corrective action plan showing milestones and actions to eliminate the weaknesses;

(*2*) Disapprove the system in accordance with the clause at 252.242–7004; and

(*3*) Withhold payments in accordance with the clause at 252.242–7005, Contractor Business Systems, if the clause is included in the contract.

(ii) Follow the procedures relating to monitoring a contractor's corrective action and the correction of material weaknesses in PGI 242.7203(c)(3).

(d) *System approval.* The contracting officer shall promptly approve a previously disapproved MMAS and notify the contractor when the contracting officer determines that there are no remaining material weaknesses.

* * * * *

■ 12. Revise section 242.7501 to read as follows:

242.7501 Definitions.

As used in this subpart—

Acceptable accounting system means a system that complies with the system criteria in paragraph (c) of the clause at 252.242–7006, Accounting System Administration, to provide reasonable assurance that—

(1) Applicable laws and regulations are complied with;

(2) The accounting system and cost data are reliable;

(3) Risk of misallocations and mischarges are minimized; and

(4) Contract allocations and charges are consistent with billing procedures.

Accounting system means the contractor's system or systems for accounting methods, procedures, and controls established to gather, record, classify, analyze, summarize, interpret, and present accurate and timely financial data for reporting in compliance with applicable laws, regulations, and management decisions, and may include subsystems for specific areas such as indirect and other direct costs, compensation, billing, labor, and general information technology.

■ 13. Amend section 242.7502—

■ a. In paragraph (b)(2) by removing ''any deficiencies'' and adding ''any weaknesses or deficiencies'' in its place;

■ b. By revising and republishing paragraph (d);

■ c. By revising paragraph (e);

■ d. In the paragraph (g) heading and paragraphs (g)(1) and (g)(2)(i) by removing ''accounting system'';

■ e. In paragraph (g)(2)(iii) by removing ''accounting system's''; and

■ f. In paragraph (g)(3) introductory text by removing ''an accounting system deficiency'' and adding ''a deficiency'' in its place.

The revisions and republication read as follows:

242.7502 Policy.

* * * * *

(d) *Disposition of findings*—(1) *Reporting of findings.* The auditor shall document findings and recommendations in a report to the contracting officer. If the auditor identifies any material weakness, the report shall describe the weaknesses or deficiencies in sufficient detail to allow the contracting officer to understand the weaknesses or deficiencies. Follow the procedures at PGI 242.7502 for reporting of deficiencies.

(2) *Initial determination.* (i) The contracting officer shall review findings and recommendations and, if there are no material weaknesses, shall promptly notify the contractor, in writing, that the contractor's accounting system is acceptable and approved; or

(ii) If the contracting officer finds that there are one or more material weaknesses due to the contractor's failure to meet one or more of the accounting system criteria in the clause at 252.242–7006, the contracting officer shall—

(A) Promptly make an initial written determination on any material weaknesses and notify the contractor, in writing, providing a description of each material weakness in sufficient detail to allow the contractor to understand the weakness (see PGI 242.7502(d)(2));

(B) Request the contractor to respond, in writing, to the initial determination within 30 days; and

(C) Promptly evaluate the contractor's response to the initial determination, in consultation with the auditor or functional specialist, and make a final determination.

(3) *Final determination.* (i) The contracting officer shall make a final determination and notify the contractor, in writing, that—

(A) The contractor's accounting system is acceptable and approved, and no material weaknesses remain; or

(B) Material weaknesses remain. The notice shall identify any remaining material weaknesses and indicate the adequacy of any proposed or completed corrective action. The contracting officer shall—

(*1*) Request that the contractor, within 45 days of receipt of the final determination, either correct the weaknesses or submit an acceptable corrective action plan showing milestones and actions to eliminate the weaknesses;

(*2*) Make a determination to disapprove the system in accordance with the clause at 252.242–7006; and

(*3*) Withhold payments in accordance with the clause at 252.242–7005, Contractor Business Systems, if the clause is included in the contract.

(ii) Follow the procedures relating to monitoring a contractor's corrective action and the correction of material weaknesses in PGI 242.7502(d)(3).

(e) *System approval.* The contracting officer shall promptly approve a previously disapproved accounting system and notify the contractor when the contracting officer determines that there are no remaining material weaknesses.

* * * * *

PART 244—SUBCONTRACTING POLICIES AND PROCEDURES

■ 14. Revise section 244.101 to read as follows:

244.101 Definitions.

Acceptable purchasing system means a purchasing system that complies with the system criteria in paragraph (c) of the clause at 252.244–7001.

Purchasing system means the contractor's system or systems for purchasing and subcontracting, including make-or-buy decisions, the selection of vendors, analysis of quoted prices, negotiation of prices with vendors, placing and administering of orders, and expediting delivery of materials.

■ 15. Amend section 244.305–70—

■ a. In the introductory text by removing ''subsection'' and adding ''section'' in its place;

■ b. By revising and republishing paragraph (c);

■ c. By revising paragraph (d); and

■ d. In the paragraph (f) heading and paragraphs (f)(1) and (f)(2)(i) by removing ''purchasing system'';

■ e. In paragraph (f)(2)(iii) by removing ''purchasing system's''; and

■ f. In paragraph (f)(3) introductory text by removing ''purchasing system''.

The revisions and republications read as follows:

244.305–70 Policy.

* * * * *

(c) *Disposition of findings*—(1) *Reporting of findings.* The purchasing system analyst or auditor shall document findings and recommendations in a report to the contracting officer. If the auditor or purchasing system analyst identifies any

material weaknesses, the report shall describe the underlying deficiencies in sufficient detail to allow the contracting officer to understand the weaknesses or deficiencies.

(2) *Initial determination.* (i) The contracting officer shall review all findings and recommendations and, if there are no material weaknesses, shall promptly notify the contractor that the contractor's purchasing system is acceptable and approved; or

(ii) If the contracting officer finds that there are one or more material weaknesses due to the contractor's failure to meet one or more of the purchasing system criteria in the clause at 252.244–7001, the contracting officer shall—

(A) Promptly make an initial written determination on any material weaknesses and notify the contractor, in writing, providing a description of each material weakness in sufficient detail to allow the contractor to understand the weakness (see PGI 244.305–70(c)(2));

(B) Request the contractor to respond, in writing, to the initial determination within 30 days; and

(C) Evaluate the contractor's response to the initial determination in consultation with the auditor or purchasing system analyst and make a final determination.

(3) *Final determination.* (i) The contracting officer shall make a final determination and notify the contractor, in writing, that—

(A) The contractor's purchasing system is acceptable and approved, and no material weaknesses remain; or

(B) Material weaknesses remain. The notice shall identify any remaining material weaknesses and indicate the adequacy of any proposed or completed corrective action. The contracting officer shall—

(*1*) Request that the contractor, within 45 days of receipt of the final determination, either correct the weaknesses or submit an acceptable corrective action plan showing milestones and actions to eliminate the weaknesses;

(*2*) Disapprove the system in accordance with the clause at 252.244–7001; and

(*3*) Withhold payments in accordance with the clause at 252.242–7005, Contractor Business Systems, if the clause is included in the contract.

(ii) Follow the procedures relating to monitoring a contractor's corrective action and the correction of material weaknesses in PGI 244.305–70(c)(3).

(d) *System approval.* The contracting officer shall promptly approve a previously disapproved purchasing system and notify the contractor when the contracting officer determines that there are no remaining material weaknesses.

* * * * *

PART 245—GOVERNMENT PROPERTY

■ 16. Amend section 245.105—
■ a. By revising paragraph (a);
■ b. In paragraph (b)(2) by removing ''any deficiencies'' and adding ''any weaknesses or deficiencies'' in its place;
■ c. By revising and republishing paragraph (d); and
■ d. In paragraph (e) by removing ''significant deficiencies'' and adding ''material weaknesses'' in its place.

The revisions and republication read as follows:

245.105 Contractors' property management system compliance.

(a) *Definitions.* As used in this subpart—

Acceptable property management system means a property system that complies with the system criteria in paragraph (c) of the clause at 252.245–7003, Contractor Property Management Administration.

Property management system means the contractor's system or systems for managing and controlling Government property.

* * * * *

(d) *Disposition of findings*—(1) *Reporting of findings.* The property administrator shall document findings and recommendations in a report to the contracting officer. If the property administrator identifies any material weaknesses, the report shall describe the underlying deficiencies in sufficient detail to allow the contracting officer to understand the weaknesses or deficiencies.

(2) *Initial determination.* (i) The contracting officer shall review findings and recommendations and, if there are no material weaknesses, shall promptly notify the contractor, in writing, that the contractor's property management system is acceptable and approved; or

(ii) If the contracting officer finds that there are one or more material weaknesses due to the contractor's failure to meet one or more of the property management system criteria in the clause at 252.245–7003, the contracting officer shall—

(A) Promptly make an initial written determination on any material weaknesses and notify the contractor, in writing, providing a description of each material weakness in sufficient detail to allow the contractor to understand the weakness (see PGI 245.105(d)(2));

(B) Request the contractor to respond, in writing, to the initial determination within 30 days and;

(C) Evaluate the contractor's response to the initial determination, in consultation with the property administrator, and make a final determination.

(3) *Final determination.* (i) The contracting officer shall make a final determination and notify the contractor, in writing, that—

(A) The contractor's property management system is acceptable and approved, and no material weaknesses remain; or

(B) Material weaknesses remain. The notice shall identify any remaining material weaknesses and indicate the adequacy of any proposed or completed corrective action. The contracting officer shall—

(*1*) Request that the contractor, within 45 days of receipt of the final determination, either correct the weaknesses or submit an acceptable corrective action plan showing milestones and actions to eliminate the weaknesses;

(*2*) Disapprove the system in accordance with the clause at 252.245–7003; and

(*3*) Withhold payments in accordance with the clause at 252.242–7005, Contractor Business Systems, if the clause is included in the contract.

(ii) Follow the procedures relating to monitoring a contractor's corrective action and the correction of material weaknesses in PGI 245.105(d)(3).

* * * * *

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

■ 17. Amend section 252.215–7002—
■ a. By revising the section heading and clause date;
■ b. In paragraph (a) by—
■ i. Adding in alphabetical order the definition of ''Material weakness''; and
■ ii. Removing the definition of ''Significant deficiency'';
■ c. By revising and republishing paragraph (e); and
■ d. By revising paragraph (f).

The addition, revisions, and republication read as follows:

252.215–7002 Cost Estimating System Requirements.

* * * * *

Cost Estimating System Requirements (Jan 2025)

(a) * * *

Material weakness means a deficiency or combination of deficiencies in the internal control over information in contractor business systems, such that there is a reasonable possibility that a

material misstatement of such information will not be prevented, or detected and corrected, on a timely basis. A reasonable possibility exists when the likelihood of an event occurring is—

(1) Probable; or

(2) More than remote but less than likely (section 806 of Pub. L. 116–283).

* * * * *

(e) *Material weaknesses.* (1) The Contracting Officer will provide an initial determination to the Contractor, in writing, of any material weaknesses. The initial determination will describe the underlying deficiency in sufficient detail to allow the Contractor to understand the weakness or deficiency.

(2) The Contractor shall respond within 30 days to a written initial determination from the Contracting Officer that identifies material weaknesses in the Contractor's estimating system. If the Contractor disagrees with the initial determination, the Contractor shall state, in writing, its rationale for disagreeing.

(3) The Contracting Officer will evaluate the Contractor's response and notify the Contractor, in writing, of the Contracting Officer's final determination concerning—

(i) Remaining material weaknesses;

(ii) The adequacy of any proposed or completed corrective action; and

(iii) System disapproval, if the Contracting Officer determines that one or more material weaknesses remain.

(f) If the Contractor receives the Contracting Officer's final determination of material weaknesses, the Contractor shall, within 45 days of receipt of the final determination, either correct the material weaknesses or submit an acceptable corrective action plan showing milestones and actions to eliminate the material weaknesses.

* * * * *

■ 18. Amend section 252.234–7002—

■ a. By revising the clause date;

■ b. In paragraph (a) by—

■ i. Adding in alphabetical order the definition of ''Material weakness''; and

■ ii. Removing the definition of ''Significant deficiency'';

■ c. By revising and republishing paragraph (i); and

■ d. By adding a heading to paragraph (k).

The additions, revisions, and republication read as follows:

252.234–7002 Earned Value Management System

* * * * *

Earned Value Management System (Jan 2025)

(a) * * *

Material weakness means a deficiency or combination of deficiencies in the internal control over information in contractor business systems, such that there is a reasonable possibility that a material misstatement of such information will not be prevented, or detected and corrected, on a timely basis. A reasonable possibility exists when the likelihood of an event occurring is—

(1) Probable; or

(2) More than remote but less than likely (section 806 of Pub. L. 116–283).

* * * * *

(i) *Material weaknesses.* (1) The Contracting Officer will provide an initial determination to the Contractor, in writing, of any material weaknesses. The initial determination will describe the underlying deficiency in sufficient detail to allow the Contractor to understand the weakness or deficiency.

(2) The Contractor shall respond within 30 days to a written initial determination from the Contracting Officer that identifies material weaknesses in the Contractor's EVMS. If the Contractor disagrees with the initial determination, the Contractor shall state, in writing, its rationale for disagreeing.

(3) The Contracting Officer will evaluate the Contractor's response and notify the Contractor, in writing, of the Contracting Officer's final determination concerning—

(i) Remaining material weaknesses;

(ii) The adequacy of any proposed or completed corrective action;

(iii) System noncompliance, when the Contractor's existing EVMS fails to comply with the earned value management system guidelines in the ANSI/EIA–748; and

(iv) System disapproval, if initial EVMS validation is not successfully completed within the timeframe approved by the Contracting Officer, or if the Contracting Officer determines that the Contractor's earned value management system contains one or more material weaknesses in high-risk guidelines in ANSI/EIA–748 standards (guidelines 1, 3, 6, 7, 8, 9, 10, 12, 16, 21, 23, 26, 27, 28, 30, or 32). When the Contracting Officer determines that the existing earned value management system contains one or more material weaknesses in one or more of the remaining 16 guidelines in ANSI/EIA–748 standards, the Contracting Officer will use discretion to disapprove the system based on input received from functional specialists and the auditor.

(4) If the Contractor receives the Contracting Officer's final determination of material weaknesses, the Contractor shall, within 45 days of receipt of the final determination, either correct the material weaknesses or submit an acceptable corrective action plan showing milestones and actions to eliminate the material weaknesses.

* * * * *

(k) *Subcontracts.* * * *

* * * * *

■ 19. Amend section 252.242–7004—

■ a. Revising the clause date and paragraph (a);

■ b. Revising and republishing paragraph (e); and

■ c. Revising paragraph (f).

The revisions and republication read as follows:

252.242–7004 Material Management and Accounting System.

* * * * *

Material Management and Accounting System (Jan 2025)

(a) *Definitions.* As used in this clause—

Acceptable material management and accounting system means a material management and accounting system that generally complies with the system criteria in paragraph (d) of this clause.

Contractor means a business unit as defined in Federal Acquisition Regulation (FAR) 2.101.

Material management and accounting system (MMAS) means the Contractor's system or systems for planning, controlling, and accounting for the acquisition, use, issuing, and disposition of material. Material management and accounting systems may be manual or automated. They may be stand-alone systems, or they may be integrated with planning, engineering, estimating, purchasing, inventory, accounting, or other systems.

Material weakness means a deficiency or combination of deficiencies in the internal control over information in contractor business systems, such that there is a reasonable possibility that a material misstatement of such information will not be prevented, or detected and corrected, on a timely basis. A reasonable possibility exists when the likelihood of an event occurring is—

(1) Probable; or

(2) More than remote but less than likely (section 806 of Pub. L. 116–283).

Valid time-phased requirements means material that is—

(1) Needed to fulfill the production plan, including reasonable quantities for scrap, shrinkage, yield, etc.; and

(2) Charged or billed to contracts or other cost objectives in a manner

consistent with the need to fulfill the production plan.

* * * * *

(e) *Material weaknesses.* (1) The Contracting Officer will provide an initial determination to the Contractor, in writing, of any material weaknesses. The initial determination will describe the underlying deficiencies in sufficient detail to allow the Contractor to understand the weaknesses or deficiencies.

(2) The Contractor shall respond within 30 days to a written initial determination from the Contracting Officer that identifies material weaknesses in the Contractor's MMAS. If the Contractor disagrees with the initial determination, the Contractor shall state, in writing, its rationale for disagreeing.

(3) The Contracting Officer will evaluate the Contractor's response and notify the Contractor, in writing, of the Contracting Officer's final determination concerning—

(i) Remaining material weaknesses;

(ii) The adequacy of any proposed or completed corrective action; and

(iii) System disapproval if the Contracting Officer determines that one or more material weaknesses remain.

(f) If the Contractor receives the Contracting Officer's final determination of material weaknesses, the Contractor shall, within 45 days of receipt of the final determination, either correct the material weaknesses or submit an acceptable corrective action plan showing milestones and actions to eliminate the material weaknesses.

* * * * *

■ 20. Amend section 252.242–7005—

■ a. By revising the section heading and clause date;

■ b. In paragraph (b) by—

■ i. Adding in alphabetical order the definition of ''Material weakness''; and

■ ii. Removing the definition of ''Significant deficiency''; and

■ c. By revising paragraphs (d), (e)(1) and (2), (e)(3)(i), and (f).

The addition and revisions read as follows:

252.242–7005 Contractor Business Systems.

* * * * *

Contractor Business Systems (Jan 2025)

* * * * *

(b) * * *

Material weakness means a deficiency or combination of deficiencies in the internal control over information in contractor business systems, such that there is a reasonable possibility that a material misstatement of such information will not be prevented, or detected and corrected, on a timely basis. A reasonable possibility exists when the likelihood of an event occurring is—

(1) Probable; or

(2) More than remote but less than likely (section 806 of Pub. L. 116–283).

* * * * *

(d) *Material weaknesses.* (1) The Contractor shall respond, in writing, within 30 days to an initial determination that there are one or more material weaknesses in one or more of the Contractor's business systems.

(2) The Contracting Officer will evaluate the Contractor's response and notify the Contractor, in writing, of the final determination as to whether the Contractor's business system contains material weaknesses. If the Contracting Officer determines that the Contractor's business system contains material weaknesses, the final determination will include a notice to withhold payments.

(e) * * *

(1) If the Contracting Officer issues the final determination with a notice to withhold payments for material weaknesses in a contractor business system required under this contract, the Contracting Officer will withhold 5 percent of amounts due from progress payments and performance-based payments, and direct the Contractor, in writing, to withhold 5 percent from its billings on interim cost vouchers on cost-reimbursement, labor-hour, and time-and-materials contracts until the Contracting Officer has determined that the Contractor has corrected all material weaknesses as directed by the Contracting Officer's final determination. The Contractor shall, within 45 days of receipt of the notice, either correct the weaknesses or submit an acceptable corrective action plan showing milestones and actions to eliminate the weaknesses.

(2) If the Contractor submits an acceptable corrective action plan within 45 days of receipt of a notice of the Contracting Officer's intent to withhold payments, and the Contracting Officer, in consultation with the auditor or functional specialist, determines that the Contractor is effectively implementing such plan, the Contracting Officer will reduce withholding directly related to the material weaknesses covered under the corrective action plan, to 2 percent from progress payments and performance-based payments, and direct the Contractor, in writing, to reduce the percentage withheld on interim cost vouchers to 2 percent until the Contracting Officer determines the Contractor has corrected all material weaknesses as directed by the Contracting Officer's final determination. However, if at any time, the Contracting Officer determines that the Contractor has failed to follow the accepted corrective action plan, the Contracting Officer will increase withholding from progress payments and performance-based payments, and direct the Contractor, in writing, to increase the percentage withheld on interim cost vouchers to the percentage initially withheld, until the Contracting Officer determines that the Contractor has corrected all material weaknesses as directed by the Contracting Officer's final determination.

(3) * * *

(i) The total percentage of payments withheld on amounts due under each progress payment, performance-based payment, or interim cost voucher on this contract shall not exceed—

(A) Five percent for one or more material weaknesses in any single contractor business system; and

(B) Ten percent for material weaknesses in multiple contractor business systems.

* * * * *

(f) *Correction of weaknesses.* (1) The Contractor shall notify the Contracting Officer, in writing, when the Contractor has corrected the business system's weaknesses.

(2) Once the Contractor has notified the Contracting Officer that all weaknesses have been corrected, the Contracting Officer will take one of the following actions:

(i) If the Contracting Officer determines that the Contractor has corrected all material weaknesses as directed by the Contracting Officer's final determination, the Contracting Officer will, as appropriate, discontinue the withholding of progress payments and performance-based payments, and direct the Contractor, in writing, to discontinue the payment withholding from billings on interim cost vouchers under this contract associated with the Contracting Officer's final determination, and authorize the Contractor to bill for any monies previously withheld that are not also being withheld due to other material weaknesses. Any payment withholding under this contract due to other material weaknesses will remain in effect until the Contracting Officer determines that those material weaknesses are corrected.

(ii) If the Contracting Officer determines that the Contractor still has material weaknesses, the Contracting Officer will continue the withholding of progress payments and performance-

based payments, and the Contractor shall continue withholding amounts from its billings on interim cost vouchers in accordance with paragraph (e) of this clause, and not bill for any monies previously withheld.

(iii) If the Contracting Officer determines, based on the evidence submitted by the Contractor, that there is a reasonable expectation that the corrective actions have been implemented and are expected to correct the material weaknesses, the Contracting Officer will discontinue withholding payments, and release any payments previously withheld directly related to the material weaknesses identified in the Contractor notification, and direct the Contractor, in writing, to discontinue the payment withholding from billings on interim cost vouchers associated with the Contracting Officer's final determination, and authorize the Contractor to bill for any monies previously withheld.

(iv) If, within 90 days of receipt of the Contractor notification that the Contractor has corrected the material weaknesses, the Contracting Officer has not made a determination in accordance with paragraph (f)(2)(i), (ii), or (iii) of this clause, the Contracting Officer will reduce withholding directly related to the material weaknesses identified in the Contractor notification by at least 50 percent of the amount being withheld from progress payments and performance-based payments, and direct the Contractor, in writing, to reduce the payment withholding from billings on interim cost vouchers directly related to the material weaknesses identified in the Contractor notification by a specified percentage that is at least 50 percent, but not authorize the Contractor to bill for any monies previously withheld until the Contracting Officer makes a determination in accordance with paragraph (f)(2)(i), (ii), or (iii) of this clause.

(v) At any time after the Contracting Officer reduces or discontinues the withholding of progress payments and performance-based payments, or directs the Contractor to reduce or discontinue the payment withholding from billings on interim cost vouchers under this contract, if the Contracting Officer determines that the Contractor has failed to correct the material weaknesses identified in the Contractor's notification, the Contracting Officer will reinstate or increase withholding from progress payments and performance-based payments, and direct the Contractor, in writing, to reinstate or increase the percentage withheld on interim cost vouchers to the percentage initially withheld, until the Contracting Officer determines that the Contractor has corrected all material weaknesses as directed by the Contracting Officer's final determination.

* * * * *

■ 21. Amend section 252.242–7006—
■ a. Revising the section heading, clause date, and paragraph (a);
■ b. Revising and republishing paragraph (d); and
■ c. Revising paragraph (e).

The revisions and republication read as follows:

252.242–7006 Accounting System Administration.

* * * * *

Accounting System Administration (Jan 2025)

(a) *Definitions.* As used in this clause—

Acceptable accounting system means a system that complies with the system criteria in paragraph (c) of this clause to provide reasonable assurance that—

(1) Applicable laws and regulations are complied with;

(2) The accounting system and cost data are reliable;

(3) Risk of misallocations and mischarges are minimized; and

(4) Contract allocations and charges are consistent with billing procedures.

Accounting system means the Contractor's system or systems for accounting methods, procedures, and controls established to gather, record, classify, analyze, summarize, interpret, and present accurate and timely financial data for reporting in compliance with applicable laws, regulations, and management decisions, and may include subsystems for specific areas such as indirect and other direct costs, compensation, billing, labor, and general information technology.

Material weakness means a deficiency or combination of deficiencies in the internal control over information in contractor business systems, such that there is a reasonable possibility that a material misstatement of such information will not be prevented, or detected and corrected, on a timely basis. A reasonable possibility exists when the likelihood of an event occurring is—

(1) Probable; or

(2) More than remote but less than likely (section 806 of Pub. L. 116–283).

* * * * *

(d) *Material weaknesses.* (1) The Contracting Officer will provide an initial determination to the Contractor, in writing, of any material weaknesses. The initial determination will describe the underlying deficiency in sufficient detail to allow the Contractor to understand the weakness or deficiency.

(2) The Contractor shall respond within 30 days to a written initial determination from the Contracting Officer that identifies material weaknesses in the Contractor's accounting system. If the Contractor disagrees with the initial determination, the Contractor shall state, in writing, its rationale for disagreeing.

(3) The Contracting Officer will evaluate the Contractor's response and notify the Contractor, in writing, of the Contracting Officer's final determination concerning—

(i) Remaining material weaknesses;

(ii) The adequacy of any proposed or completed corrective action; and

(iii) System disapproval, if the Contracting Officer determines that one or more material weaknesses remain.

(e) If the Contractor receives the Contracting Officer's final determination of material weaknesses, the Contractor shall, within 45 days of receipt of the final determination, either correct the material weaknesses or submit an acceptable corrective action plan showing milestones and actions to eliminate the material weaknesses.

* * * * *

■ 22. Amend section 252.244–7001—
■ a. By revising the section heading and clause date;
■ b. In paragraph (a) by—
■ i. Adding in alphabetical order the definition of ''Material weakness''; and
■ ii. Removing the definition of ''Significant deficiency'';
■ c. By revising and republishing paragraph (d);
■ d. By revising paragraph (e); and
■ e. In Alternate I—
■ i. By revising the clause date;
■ ii. In paragraph (a) by—
■ A. Adding in alphabetical order the definition of ''Material weakness''; and
■ B. Removing the definition of ''Significant deficiency'';
■ iii. By revising and republishing paragraph (d); and
■ iv. By revising paragraph (e).

The additions, revisions, and republications read as follows:

252.244–7001 Contractor Purchasing System Administration.

* * * * *

Contractor Purchasing System Administration—Basic (Jan 2025)

(a) * * *

Material weakness means a deficiency or combination of deficiencies in the internal control over information in contractor business systems, such that there is a reasonable possibility that a

material misstatement of such information will not be prevented, or detected and corrected, on a timely basis. A reasonable possibility exists when the likelihood of an event occurring is—

(1) Probable; or

(2) More than remote but less than likely (section 806 of Pub. L. 116–283).

* * * * *

(d) *Material weaknesses.* (1) The Contracting Officer will provide notification of initial determination to the Contractor, in writing, of any material weaknesses. The initial determination will describe the underlying deficiency in sufficient detail to allow the Contractor to understand the weakness or deficiency.

(2) The Contractor shall respond within 30 days to a written initial determination from the Contracting Officer that identifies material weaknesses in the Contractor's purchasing system. If the Contractor disagrees with the initial determination, the Contractor shall state, in writing, its rationale for disagreeing.

(3) The Contracting Officer will evaluate the Contractor's response and notify the Contractor, in writing, of the Contracting Officer's final determination concerning—

(i) Remaining material weaknesses;

(ii) The adequacy of any proposed or completed corrective action; and

(iii) System disapproval, if the Contracting Officer determines that one or more material weaknesses remain.

(e) If the Contractor receives the Contracting Officer's final determination of material weaknesses, the Contractor shall, within 45 days of receipt of the final determination, either correct the material weaknesses or submit an acceptable corrective action plan showing milestones and actions to eliminate the weaknesses.

* * * * *

Alternate I. * * *

Contractor Purchasing System Administration—Alternate I (Jan 2025)

(a) * * *

Material weakness means a deficiency or combination of deficiencies in the internal control over information in contractor business systems, such that there is a reasonable possibility that a material misstatement of such information will not be prevented, or detected and corrected, on a timely basis. A reasonable possibility exists when the likelihood of an event occurring is—

(1) Probable; or

(2) More than remote but less than likely (section 806 of Pub. L. 116–283).

* * * * *

(d) *Material weaknesses.* (1) The Contracting Officer will provide notification of initial determination to the Contractor, in writing, of any material weaknesses. The initial determination will describe the underlying deficiency in sufficient detail to allow the Contractor to understand the weaknesses or deficiency.

(2) The Contractor shall respond within 30 days to a written initial determination from the Contracting Officer that identifies material weaknesses in the Contractor's purchasing system. If the Contractor disagrees with the initial determination, the Contractor shall state, in writing, its rationale for disagreeing.

(3) The Contracting Officer will evaluate the Contractor's response and notify the Contractor, in writing, of the Contracting Officer's final determination concerning—

(i) Remaining material weaknesses;

(ii) The adequacy of any proposed or completed corrective action; and

(iii) System disapproval, if the Contracting Officer determines that one or more material weaknesses remain.

(e) If the Contractor receives the Contracting Officer's final determination of material weaknesses, the Contractor shall, within 45 days of receipt of the final determination, either correct the material weaknesses or submit an acceptable corrective action plan showing milestones and actions to eliminate the weaknesses.

* * * * *

■ 23. Amend section 252.245–7003—
■ a. By revising the clause date;
■ b. In paragraph (a) by—
■ i. Adding in alphabetical order the definition of ''Material weakness''; and
■ ii. Removing the definition of ''Significant deficiency'';
■ c. In paragraph (c), by removing ''paragraph (f)'' and adding ''paragraphs (b) and (f)'' in its place;
■ d. By revising and republishing paragraph (d); and
■ e. By revising paragraph (e).

The addition, revisions, and republication read as follows:

252.245–7003 Contractor Property Management System Administration.

* * * * *

Contractor Property Management System Administration (Jan 2025)

(a) * * *

Material weakness means a deficiency or combination of deficiencies in the internal control over information in contractor business systems, such that there is a reasonable possibility that a material misstatement of such information will not be prevented, or detected and corrected, on a timely basis. A reasonable possibility exists when the likelihood of an event occurring is—

(1) Probable; or

(2) More than remote but less than likely (section 806 of Pub. L. 116–283).

* * * * *

(d) *Material weaknesses.* (1) The Contracting Officer will provide an initial determination to the Contractor, in writing, of any material weaknesses. The initial determination will describe the underlying deficiency in sufficient detail to allow the Contractor to understand the weaknesses or deficiency.

(2) The Contractor shall respond within 30 days to a written initial determination from the Contracting Officer that identifies material weaknesses in the Contractor's property management system. If the Contractor disagrees with the initial determination, the Contractor shall state, in writing, its rationale for disagreeing.

(3) The Contracting Officer will evaluate the Contractor's response and notify the Contractor, in writing, of the Contracting Officer's final determination concerning—

(i) Remaining material weaknesses;

(ii) The adequacy of any proposed or completed corrective action; and

(iii) System disapproval, if the Contracting Officer determines that one or more material weaknesses remain.

(e) If the Contractor receives the Contracting Officer's final determination of material weaknesses, the Contractor shall, within 45 days of receipt of the final determination, either correct the material weaknesses or submit an acceptable corrective action plan showing milestones and actions to eliminate the material weaknesses.

BILLING CODE 6001–FR–P

DEPARTMENT OF DEFENSE

Defense Acquisition Regulations System

48 CFR Parts 206, 217, 219, and 252

[Docket DARS–2024–0001]

Defense Federal Acquisition Regulation Supplement; Technical Amendments

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Final rule; technical amendment.

SUMMARY: DoD is amending the Defense Federal Acquisition Regulation Supplement (DFARS) to make needed editorial changes.

DATES: Effective January 17, 2025.

FOR FURTHER INFORMATION CONTACT: Ms. Jennifer D. Johnson, Defense Acquisition Regulations System, telephone 703–717–8226.

SUPPLEMENTARY INFORMATION: This final rule amends the DFARS to make needed editorial changes to comply with DFARS drafting conventions.

List of Subjects in 48 CFR Parts 206, 217, 219, and 252

Government procurement.

Jennifer D. Johnson,

Editor/Publisher, Defense Acquisition Regulations System.

Therefore, the Defense Acquisition Regulations System amends 48 CFR parts 206, 217, 219, and 252 as follows:

■ 1. The authority citation for 48 CFR parts 206, 217, 219, and 252 continues to read as follows:

Authority: 41 U.S.C. 1303 and 48 CFR chapter 1.

PART 206—COMPETITION REQUIREMENTS

206.303–1 [Amended]

■ 2. Amend section 206.303–1 in paragraphs (b) introductory text and (b)(1) by removing ''sole source'' and adding ''sole-source'' in its place.

PART 217—SPECIAL CONTRACTING METHODS

■ 3. Amend section 217.172 by revising paragraph (f)(2) to read as follows:

217.172 Multiyear contracts for supplies.

* * * * *

(f) * * *

(2) In addition, for contracts equal to or greater than $750 million, the head of the contracting activity must determine that the conditions required by paragraphs (h)(2)(i) through (vii) of this section will be met by such contract, in accordance with the Secretary's certification and determination required by paragraph (h)(2) of this section.

* * * * *

PART 219—SMALL BUSINESS PROGRAMS

219.808–1 [Amended]

■ 4. Amend section 219.808–1 in the introductory text by removing ''sole source'' and adding ''sole-source'' in its place.

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

■ 5. Amend section 252.225–7003—

■ a. By revising the provision heading and date;

■ b. In paragraphs (b) introductory text and (b)(2) introductory text, by removing ''offeror'' wherever it appears and adding ''Offeror'' in its place; and

■ c. In paragraphs (d) introductory text and (e), by removing ''offeror'' and adding ''Offeror'' in its place.

The revisions read as follows:

252.225–7003 Report of Intended Performance Outside the United States and Canada—Submission with Offer.

* * * * *

REPORT OF INTENDED PERFORMANCE OUTSIDE THE UNITED STATES AND CANADA—SUBMISSION WITH OFFER (JAN 2025)

* * * * *

RIN 0750–AL67

Defense Federal Acquisition Regulation Supplement: Update of Challenge Period for Validation of Asserted Restrictions on Technical Data and Computer Software (DFARS Case 2022–D016)

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Final rule.

SUMMARY: DoD is issuing a final rule amending the Defense Federal Acquisition Regulation Supplement (DFARS) to implement a section of the National Defense Authorization Act for Fiscal Year 2012, which addresses the validation of proprietary data restrictions.

DATES: Effective January 17, 2025.

FOR FURTHER INFORMATION CONTACT: David Johnson, telephone 202–913–5764.

SUPPLEMENTARY INFORMATION:

I. Background

DoD published a proposed rule in the **Federal Register** at 89 FR 31686 on April 25, 2024, to implement section 815(b) of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2012 (Pub. L. 112–81). Section 815(b) amended 10 U.S.C. 2321 (currently 10 U.S.C. 3782) by increasing the validation period for asserted restrictions from three years to six years. Section 815(b) also amended 10 U.S.C. 2321 to provide an exception to the prescribed time limit for validation of asserted restrictions if the technical data involved are the subject of a fraudulently asserted use or release restriction. Two respondents submitted public comments in response to the proposed rule. DoD also held a public meeting on May 17, 2024.

II. Discussion and Analysis

DoD reviewed the public comments in the development of the final rule. A discussion of the comments and the changes made to the rule as a result of those comments is provided, as follows:

A. Summary of Significant Changes From the Proposed Rule

There are no significant changes from the proposed rule.

B. Analysis of Public Comments

1. Technical Data or Software Delivered, Furnished, or Otherwise Provided to the Government

Comment: The respondents suggested that the revisions to the clauses at DFARS 252.227–7019, Validation of Asserted Restrictions—Computer Software, and 252.227–7037, Validation of Restrictive Markings on Technical Data, to consistently reference technical data and computer software ''delivered or otherwise provided to the Government'' should be removed from the final rule. The existing clause language already references technical data delivered, software delivered, technical data required to be delivered, and software required to be delivered. Respondents assert that the phrase ''otherwise provided to the Government'' is ambiguous and inconsistent with existing statutes. The respondents also asserted that this language may result in a potential chilling effect on the relationship between Government and contractors.

Response: References to technical data and computer software ''delivered or otherwise provided'' to the Government appear multiple times in the current contract clauses at DFARS 252.227–7013, Rights in Technical Data—Other Than Commercial Products and Commercial Services, and DFARS 252.227–7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer

Software Documentation. These references cover technical data and computer software ''delivered or otherwise furnished'', ''delivered or otherwise provided'', and ''delivered, furnished, or otherwise provided'' to the Government, and both clauses reference the validation clauses. In addition, DFARS 252.227–7019(e) currently references ''software delivered, to be delivered under this contract, or otherwise provided to the Government in the performance of this contract.'' Accordingly, these revisions ensure consistency with existing language in DFARS 252.227–7019, 252.227–7013, and 252.227–7014, and clearly signals the scope of the validation clauses. The Government therefore declines the suggestion to remove these revisions from the final rule.

2. Changes To Align With Statutory Language Related to Restrictions Asserted

Comment: A respondent suggested that the replacement in several places in the DFARS of the phrase ''restrictive markings'' with the phrase ''asserted restriction'' is unnecessary for statutory alignment and may result in confusion.

Response: The underlying statutes (10 U.S.C. 3781–3786) repeatedly reference challenge, justification, and validation of ''restriction[s] asserted'' and ''asserted restriction[s].'' The statutes do not refer to restrictive markings. The final rule aligns the clauses with the underlying statutory language, and it creates consistent nomenclature and syntax throughout the clauses. The final rule references validation of ''asserted restrictions'', rather than validation of restrictive markings (which is inconsistent with the statutory language and more likely to be confused with the separate procedures for ensuring conformity of those markings). Rather than the confusing syntax of ''striking'' an asserted restriction, the final rule references striking ''restrictive markings.''

3. Definition of Fraud

Comment: The respondents requested clarification with respect to when a use or release restriction would be considered ''fraudulently asserted.'' In addition, the respondents proposed specific requirements and limitations for the Government when invoking this exception to the six-year challenge period.

Response: As stated in the proposed rule, the statutory revisions being implemented in DFARS Case 2022–D016 do not establish a specialized definition of ''fraudulently asserted'' or a knowledge requirement. The respondents proposed requirements and limitations on this exception to the six-year challenge period. The respondents did not provide, and DoD is not aware of, either an existing statute, policy, or regulation that includes the proposed requirements or limitations, or evidence of congressional intent to impose the proposed requirements or limitations.

As with other instances of the term fraud in the Federal Acquisition Regulation and DFARS, DoD relies upon the common meaning of the terminology used in the statute and regulatory implementation, informed by applicable procurement statutes, other applicable statutes, and case precedent. In addition, the existing validation procedures require the Government to state the specific grounds for challenging the asserted restriction, which includes the grounds for invoking the exception to the six-year challenge period. Such grounds are subject to review by a court of competent jurisdiction or the Armed Services Board of Contract Appeals.

4. Applicability to Commercial Products or Commercial Services

Comment: One respondent recommended revisions to the proposed language in DFARS 252.227–7037(e)(1) to clarify whether sufficient information to reasonably demonstrate funding for the development of commercial products or commercial services must be provided with every challenge.

Response: The original language indicates that challenges will ''[s]tate the specific grounds for challenging the asserted restriction including, for commercial products or commercial services, sufficient information to reasonably demonstrate that the commercial product or commercial service was not developed exclusively at private expense.'' This requirement related to commercial products or commercial services is not optional, and the proposed revision was not intended to change this requirement. For the sake of clarity, the final rule reverts to the original language.

5. Question About Other Rulemaking Case

Comment: A respondent requested that DoD expedite the issuance of proposed rule for DFARS Case 2023–D022, Definition of Subcontract.

Response: This comment is outside the scope of this rule, which implements section 815(b) of the NDAA for FY 2012.

III. Applicability to Contracts at or Below the Simplified Acquisition Threshold (SAT), for Commercial Products (Including Commercially Available Off-the-Shelf (COTS) Items), and for Commercial Services

This final rule amends the clauses at DFARS 252.227–7019, Validation of Asserted Restrictions—Computer Software, and DFARS 252.227–7037, Validation of Restrictive Markings on Technical Data. However, this final rule does not impose any new requirements on contracts at or below the SAT, for commercial products including COTS items, or for commercial services. The clause will continue to apply to acquisitions at or below the SAT, to acquisitions of commercial products including COTS items, and to acquisitions of commercial services.

IV. Expected Impact of the Rule

This final rule includes changes to lengthen the validation period for asserted restrictions from three years to six years. This final rule also provides an exception to the prescribed time limit for validation of asserted restrictions if the technical data or computer software involved are the subject of a fraudulently asserted restriction. Therefore, the final rule may increase the number of challenges to which contractors must respond. However, DoD cannot quantify the estimated number of the additional challenges at this time.

V. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, as amended.

VI. Congressional Review Act

As required by the Congressional Review Act (5 U.S.C. 801–808) before an interim or final rule takes effect, DoD will submit a copy of the interim or final rule with the form, Submission of Federal Rules Under the Congressional Review Act, to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United

States. A major rule under the Congressional Review Act cannot take effect until 60 days after it is published in the **Federal Register**. The Office of Information and Regulatory Affairs has determined that this rule is not a major rule as defined by 5 U.S.C. 804.

VII. Regulatory Flexibility Act

A final regulatory flexibility analysis has been prepared consistent with the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* and is summarized as follows:

DoD is amending the Defense Federal Acquisition Regulation Supplement (DFARS) to implement section 815(b) of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2012 (Pub. L. 112–81), which addresses the period for validation of proprietary data restrictions. The objective of the rule is to implement section 815(b), which amended 10 U.S.C. 2321 (currently 10 U.S.C. 3782) by increasing the validation period for asserted restrictions from three years to six years. Section 815(b) also amended 10 U.S.C. 2321 to provide an exception to the prescribed time limit for validation of asserted restrictions if the technical data involved are the subject of a fraudulently asserted use or release restriction. This rule will ensure that the Government has adequate opportunity to challenge discrepancies or inaccuracies in contractor assertions of data and software rights.

The public comments raised no significant issues in response to the initial regulatory flexibility analysis.

This rule applies to small entities that have contracts with DoD requiring delivery of data, including technical data and computer software. DoD obtained data for fiscal years 2020 through 2022 from the Procurement Business Intelligence Service for all contracts and modifications that include one or more of the following DFARS clauses: 252.227–7013, Rights in Technical Data—Other Than Commercial Products or Commercial Services; 252.227–7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation; 252.227–7015, Technical Data—Commercial Products and Commercial Services; and 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program. DoD awarded on average 54,255 contract actions per year that included one or more of the listed clauses to 9,550 unique entities, of which 28,657 contract awards (53 percent) were made to 6,033 unique small entities (63 percent).

This rule does not impose any new reporting, recordkeeping, or other compliance requirements for small entities.

There are no known alternatives that would accomplish the stated objectives of the applicable statute.

VIII. Paperwork Reduction Act

The Paperwork Reduction Act (44 U.S.C. chapter 35) applies to this final rule. However, these changes to the DFARS do not impose additional information collection requirements to the paperwork burden previously approved by the Office of Management and Budget (OMB) under OMB Control Number 0704–0369, entitled DFARS Subpart 227.71, Rights in Technical Data; and Subpart 227.72, Rights in Computer Software and Computer Software Documentation, and related provisions and clauses.

List of Subjects in 48 CFR Part 252

Government procurement.

Jennifer D. Johnson,

Editor/Publisher, Defense Acquisition Regulations System.

Therefore, the Defense Acquisition Regulations System amends 48 CFR part 252 as follows:

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

■ 1. The authority citation for part 252 continues to read as follows:

Authority: 41 U.S.C. 1303 and 48 CFR chapter 1.

■ 2. Amend section 252.227–7019—

■ a. By revising paragraph (b);

■ b. In paragraph (d)(2)(i)(B) by revising the second sentence;

■ c. In paragraph (e)(1) by revising the second sentence;

■ d. In paragraph (f)(1)(ii) by removing ''within 60 days'' and adding ''in writing within 60 days'' in its place;

■ e. In paragraph (g)(3)(i)(B) by removing ''government'' and adding ''Government'' in its place.

The revisions read as follows:

252.227–7019 Validation of Asserted Restrictions—Computer Software.

* * * * *

(b) *Justification.* The Contractor shall maintain records sufficient to justify the validity of any asserted restrictions on the Government's rights to use, modify, reproduce, perform, display, release, or disclose computer software delivered, required to be delivered, or otherwise provided to the Government under this contract and shall be prepared to furnish to the Contracting Officer a written justification for such asserted restrictions in response to a request for information under paragraph (d) of this clause or a challenge under paragraph (f) of this clause.

* * * * *

(d) * * *

(2) * * *

(i) * * *

(B) * * * If the Contractor fails to correct or strike the unjustified marking and return the corrected software to the Contracting Officer within 60 days following receipt of the software, the Contracting Officer may correct or strike the marking at the Contractor's expense;

* * * * *

(e) * * *

(1) * * * Except for software that is publicly available, has been furnished to the Government without restrictions, has been otherwise made available without restrictions, or is the subject of a fraudulently asserted use or release restriction, the Government may exercise this right only within 6 years after the date(s) the software is delivered or otherwise furnished to the Government, or 6 years following final payment under this contract, whichever is later.

* * * * *

■ 3. Amend section 252.227–7037—

■ a. By revising the section heading and the clause heading and date;

■ b. By revising paragraphs (c), (d), (e)(1) introductory text, and (e)(1)(iii);

■ c. In paragraph (e)(4) by removing ''restrictive markings'' and adding ''asserted restrictions'' in its place;

■ d. By revising paragraph (g)(1);

■ e. In paragraph (g)(2)(i) by removing ''restrictive marking'' and ''In order to'' and adding ''asserted restriction'' and ''To'' in their places, respectively;

■ f. By revising paragraphs (g)(2)(ii) through (iv);

■ g. In paragraph (h)(1)(i) by removing ''marking'' and adding ''marking that is based on the asserted restriction'' in its place;

■ h. By revising paragraphs (h)(1)(ii) and (i); and

■ i. In paragraph (k) by removing ''restrictive markings'' and ''subcontractors'' and adding ''restrictions'' and ''subcontractor'' in their places, respectively.

The revisions read as follows:

252.227–7037 Validation of Asserted Restrictions on Technical Data.

* * * * *

VALIDATION OF ASSERTED RESTRICTIONS ON TECHNICAL DATA (JAN 2025)

* * * * *

(c) *Justification.* The Contractor or subcontractor at any tier is responsible for maintaining records sufficient to justify the validity of its asserted restrictions on the rights of the Government and others to use, duplicate, release, or disclose technical data delivered, required to be delivered, or otherwise provided to the Government under the contract or subcontract. Except as provided in paragraph (b) of this clause, the Contractor or subcontractor shall be prepared to furnish to the Contracting Officer a written justification for such asserted restrictions in response to a challenge under paragraph (e) of this clause.

(d) *Prechallenge request for information.* (1) The Contracting Officer may request the Contractor or subcontractor to furnish a written explanation for any asserted restriction on the right of the United States or others to use, disclose, or release technical data. If, upon review of the explanation submitted, the Contracting Officer cannot determine the basis of the asserted restriction, the Contracting Officer may further request the Contractor or subcontractor to furnish additional information in the records of, or otherwise in the possession of or reasonably available to, the Contractor or subcontractor to justify the validity of any asserted restriction on technical data delivered, to be delivered, or otherwise provided to the Government under the contract or subcontract (*e.g.,* a statement of facts accompanied with supporting documentation). The Contractor or subcontractor shall submit such written data as requested by the Contracting Officer within the time required or such longer period as may be mutually agreed.

(2) If the Contracting Officer, after reviewing the written data furnished pursuant to paragraph (d)(1) of this clause, or any other available information pertaining to the validity of an asserted restriction, determines that reasonable grounds exist to question the current validity of the asserted restriction and that continued adherence to the asserted restriction would make impracticable the subsequent competitive acquisition of the item or process to which the technical data relates, the Contracting Officer will follow the procedures in paragraph (e) of this clause.

(3) If the Contractor or subcontractor fails to respond to the Contracting Officer's request for information under paragraph (d)(1) of this clause, and the Contracting Officer determines that continued adherence to the asserted restriction would make impracticable the subsequent competitive acquisition of the item or process to which the technical data relates, the Contracting Officer may challenge the validity of the asserted restriction as described in paragraph (e) of this clause.

(e) * * *

(1) Notwithstanding any provision of this contract concerning inspection and acceptance, if the Contracting Officer determines that a challenge to the asserted restriction is warranted, the Contracting Officer will send a written challenge notice to the Contractor or subcontractor making the asserted restriction. The challenge notice and all related correspondence shall be subject to handling procedures for classified information and controlled unclassified information. Such challenge will—

* * * * *

(iii) State that a Contracting Officer's final decision, issued pursuant to paragraph (g) of this clause, sustaining the validity of a prior asserted restriction identical to the current asserted restriction, within the 3-year period preceding the current challenge, shall serve as justification for the current asserted restriction if the prior validated restriction was asserted by the same Contractor or subcontractor (or any licensee of such Contractor or subcontractor) to which such notice is being provided; and

* * * * *

(g) * * *

(1) If the Contracting Officer determines that the Contractor or subcontractor has justified the validity of the asserted restriction, the Contracting Officer will issue a final decision to the Contractor or subcontractor that sustains the validity of the asserted restriction and that states that the Government will continue to be bound by the asserted restriction. The Contracting Officer will issue this final decision within 60 days after receipt of the Contractor's or subcontractor's response to the challenge notice, or within such longer period that the Contracting Officer has notified the Contractor or subcontractor that the Government will require. The Contracting Officer will provide notification of any longer period for issuance of a final decision within 60 days after receipt of the response to the challenge notice.

* * * * *

(2) * * *

(ii) The Government agrees that it will continue to be bound by the asserted restriction for a period of 90 days from the issuance of the Contracting Officer's final decision under paragraph (g)(2)(i) of this clause. The Contractor or subcontractor agrees that, if it intends to file suit in the United States Court of Federal Claims, it will provide a notice of intent to file suit to the Contracting Officer within 90 days from the issuance of the Contracting Officer's final decision under paragraph (g)(2)(i) of this clause. If the Contractor or subcontractor fails to appeal, file suit, or provide a notice of intent to file suit to the Contracting Officer within the 90-day period, the Government may cancel or ignore the restrictive markings that are based on the asserted restrictions, and the failure of the Contractor or subcontractor to take the required action constitutes agreement with such Government action.

(iii) The Government agrees that it will continue to be bound by the asserted restriction where a notice of intent to file suit in the United States Court of Federal Claims is provided to the Contracting Officer within 90 days from the issuance of the final decision under paragraph (g)(2)(i) of this clause. The Government will no longer be bound, and the Contractor or subcontractor agrees that the Government may strike or ignore the restrictive marking that is based on the asserted restriction, if the Contractor or subcontractor fails to file its suit within 1 year after issuance of the final decision. Notwithstanding the foregoing, where the head of an agency determines, on a nondelegable basis, that urgent or compelling circumstances will not permit waiting for the filing of a suit in the United States Court of Federal Claims, the Contractor or subcontractor agrees that the agency may, following notice to the Contractor or subcontractor, authorize release or disclosure of the technical data. Such agency determination may be made at any time after issuance of the final decision and will not affect the Contractor's or subcontractor's right to damages against the United States where its asserted restrictions are ultimately upheld or to pursue other relief, if any, as may be provided by law.

(iv) The Government agrees that it will be bound by the asserted restrictions where an appeal or suit is filed pursuant to the Contract Disputes statute until final disposition by an agency Board of Contract Appeals or the United States Court of Federal Claims. Notwithstanding the foregoing, where the head of an agency determines, on a nondelegable basis, following notice to the Contractor that urgent or compelling circumstances will not permit awaiting the decision by such Board of Contract Appeals or the United States Court of Federal Claims, the Contractor or subcontractor agrees that the agency may authorize release or disclosure of the technical data. Such agency determination may be made at any time after issuance of the final decision and will not affect the Contractor's or subcontractor's right to damages against the United States where its asserted restrictions are ultimately upheld or to pursue other relief, if any, as may be provided by law.

(h) * * *

(1) * * *

(ii) If the asserted restriction is found not to be substantially justified, the Contractor or subcontractor, as appropriate, shall be liable to the Government for payment of the cost to the Government of reviewing the asserted restriction and the fees and other expenses (as defined in 28 U.S.C. 2412(d)(2)(A)) incurred by the Government in challenging the asserted restriction, unless special circumstances would make such payment unjust.

* * * * *

(i) *Duration of right to challenge.* (1) The Government may review the validity of any restriction on technical data, delivered or to be delivered under a contract, asserted by the Contractor or subcontractor. During the period within 6 years of final payment on a contract or within 6 years of delivery of the technical data to the Government, whichever is later, the Contracting Officer may review and make a written determination to challenge the restriction. The Government may, however, challenge a restriction on the release, disclosure, or use of technical data at any time if such technical data—

(i) Are publicly available;
(ii) Have been furnished to the United States without restriction;
(iii) Have been otherwise made available without restriction; or
(iv) Are the subject of a fraudulently asserted use or release restriction.
(2) Only the Contracting Officer's final decision resolving a formal challenge by sustaining the validity of a restrictive marking constitutes ''validation'' as addressed in 10 U.S.C. 3785(c).

* * * * *

[FR Doc. 2025–00722 Filed 1–16–25; 8:45 am]

BILLING CODE 6001–FR–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

49 CFR Part 225

[Docket No. FRA–2024–0034]

RIN 2130–AC98

Accident/Incident Investigation Policy for Gathering Information and Consulting With Stakeholders

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Final rule; withdrawal.

SUMMARY: FRA is withdrawing the direct final rule titled ''Federal Railroad Administration Accident/Incident Investigation Policy for Gathering Information and Consulting with Stakeholders,'' (the Rule) which was published on October 1, 2024.

DATES: Effective on January 17, 2025, FRA withdraws the direct final rule published at 89 FR 79767 on October 1, 2024.

FOR FURTHER INFORMATION CONTACT: Rick Huggins, Supervisory Railroad Security Specialist, Office of Railroad Safety, FRA, telephone: 202–465–6922 or email: *ricky.huggins@dot.gov;* or Senya Waas, Senior Attorney, Office of the Chief Counsel, FRA, telephone: 202–875–4158 or email: *senyaann.waas@dot.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

On October 1, 2024, FRA published the Rule in the **Federal Register** amending 49 Code of Federal Regulations (CFR) 225.31 to, in accordance with Section 22417 of the Infrastructure Investment and Jobs Act (IIJA), create a standard process for investigators to use during accident and incident investigations conducted under that section.[1] This process was to be used to determine when it was appropriate to collect information and the appropriate method for gathering that information about an accident or incident under investigation from railroad carriers, contractors or employees of railroad carriers, or representatives of employees of railroad carriers, and others, as determined relevant by the Secretary. The process was also to be used to determine when it was appropriate to consult with railroad carriers, contractors or employees of railroad carriers, or representatives of employees of railroad carriers, and others, as determined relevant by the Secretary, for technical expertise on the facts of the accident or incident under investigation. *See* Public Law 117–58, Section 22417, Nov. 15, 2021, 135 Stat. 748.

The Rule generated two adverse, substantive comments. Accordingly, as described in more detail below, FRA has decided to withdraw the Rule.

II. Reasons for Withdrawal

FRA is withdrawing the Rule, which took effect on November 15, 2024. FRA received two adverse, substantive comments which opposed the Rule. There were no comments submitted in support of the Rule.[2]

Commenters objecting to the Rule stated that the Rule was insufficient as it needed to be expanded to include the outside review of accidents/incidents by professionals, such as physicists or highly-qualified industrial engineers, as independent reviews of findings.

Commenters also alleged that FRA's outreach to the Class I railroads was limited and insufficient, and nonexistent to short line railroads. As such, it was the position of the commenters that FRA did not account for how the Rule would fully affect the railroad industry in the following ways: (1) FRA's ''catch-all'' provision for determining which accidents trigger the information gathering and stakeholder consultation requirements is vague and fails to properly implement the IIJA mandate; (2) FRA's description of ''stakeholders'' fails to properly implement the IIJA mandate; (3) FRA fails to explain substantive regulatory changes in 49 CFR 225.31(a); (4) loopholes allow for information to be shared with third parties during an investigation; (5) it is unclear how FRA's web-based document sharing site will protect against the disclosure of confidential information; (6) there are no protections against post-investigation disclosures of confidential information; (7) the identity of a stakeholder should not be kept confidential from other stakeholders; (8) FRA's investigation policy would create untenable conflicts with NTSB practice in situations where NTSB and FRA conduct overlapping investigations; (9) FRA improperly limits the basis for restricting stakeholder access to an accident site; (10) FRA does not have the authority to grant a stakeholder ''virtual'' access to railroad property; (11) the investigation policy will result in undue delays in clearing accident sites; (12) FRA adopts an incident command model but fails to provide details on its structure and tasks; and (13) FRA underestimates the cost of compliance of the new regulation.

Given the extent of the commenters' substantive issues with the Rule, FRA is withdrawing the Rule at this time in order to re-assess its components and work further with stakeholders to evaluate potential changes.

III. Regulatory Impact and Notices

A. Executive Order 12866 as Amended by Executive Order 14094 and DOT Regulatory Policies and Procedures

This withdrawal is a non-significant regulatory action within the meaning of Executive Order (E.O.) 12866, as amended by E.O. 14094, ''Modernizing Regulatory Review [3]'' and DOT's Order, ''Rulemaking and Guidance Procedures,'' DOT 2100.6A (June 7, 2021).[4] FRA made this determination because the economic effects of this regulatory action will not exceed the $100 million annual threshold as defined by E.O. 12866.

[1] 89 FR 79767. A correction to the Rule was published on October 28, 2024 (89 FR 85450).

[2] As stated in the Rule: ''If FRA receives an adverse, substantive comment on any of the provisions, it will publish in the **Federal Register** a timely withdrawal, informing the public that the direct final rule will not take effect.'' 89 FR 79767 at 79768.

[3] 88 FR 21879 (Apr. 6, 2023) available at *https://www.federalregister.gov/documents/2023/04/11/2023-07760/modernizing-regulatory-review.*

[4] DOT–2100.6A-Rulemaking and Guidance (Jun. 7, 2021) available at *https://www.transportation.gov/sites/dot.gov/files/2021-08/Final-for-OST-C-210407-001-signed.pdf.*

FRA is amending its Accident/Incident Regulations, covering reporting, classification, and investigations, by withdrawing its regulation (*i.e.,* the Rule) for gathering information from and consulting with stakeholders during an accident/incident investigation. Through this withdrawal of the Rule, FRA is revising its accident investigation process by removing the changes made by the Rule that established procedures for stakeholder participation in investigation, including notifying stakeholders of an accident investigation; permitting the assistance of stakeholders in investigations; and allowing stakeholders to submit information to FRA to assist with the investigation.

FRA anticipates the primary benefit of withdrawing the Rule will be the ability to re-assess and ultimately re-issue a rule addressing Section 22417 of IIJA and concerns raised by commenters.

In the Rule, FRA estimated costs of approximately $1.0 million (Present Value (PV),[5] 2-percent) over the ten-year analysis. By withdrawing the Rule, FRA estimates this will now incur a cost savings. Table 1 displays the cost savings of withdrawing the Rule from the Accident/Incident regulations in 49 CFR part 225.

TABLE 1—TOTAL COST SAVINGS OF THE FINAL RULE

[2023 Dollars][6]

Year	Total stakeholder cost savings	Total government cost savings	Total cost savings	PV 7%	PV 3%	PV 2%
1	$ 97,922	$ 19,753	$ 117,675	$ 117,675	$ 117,675	$ 117,675
2	97,922	10,541	108,463	101,367	105,304	106,336
3	97,922	10,541	108,463	94,736	102,237	104,251
4	97,922	10,541	108,463	88,538	99,259	102,207
5	97,922	10,541	108,463	82,746	96,368	100,203
6	97,922	10,541	108,463	77,333	93,561	98,238
7	97,922	10,541	108,463	72,273	90,836	96,312
8	97,922	10,541	108,463	67,545	88,190	94,424
9	97,922	10,541	108,463	63,126	85,622	92,572
10	97,922	10,541	108,463	58,997	83,128	90,757
Total	979,220	114,622	1,093,842	824,336	962,180	1,002,975

Note: Table may not sum due to rounding.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 ((RFA), 5 U.S.C. 601 *et seq.*) and E.O. 13272 (67 FR 53461, Aug. 16, 2002) require an agency to prepare and make available to the public a regulatory flexibility analysis that describes the effect of the rule on small entities (*i.e.,* small businesses, small organizations, and small governmental jurisdictions). A regulatory flexibility analysis is not required when a rule is exempt from notice-and-comment rulemaking.

C. Paperwork Reduction Act

There are no new or additional information collection requirements associated with this withdrawal. Therefore, FRA is not required to provide an estimate of a public reporting burden in this document.

D. Environmental Assessment

FRA has evaluated this withdrawal in accordance with the National Environmental Policy Act (NEPA) (42 U.S.C. 4321 *et seq.*), the Council of Environmental Quality's NEPA implementing regulations (40 CFR parts 1500 through 1508), FRA's regulations implementing NEPA (23 CFR part 771), and other environmental statutes, executive orders, and related regulatory requirements. FRA has determined that this withdrawal is categorically excluded from environmental review and therefore does not require the preparation of an environmental assessment (EA) or environmental impact statement (EIS). Categorical exclusions (CEs) are actions identified in an agency's NEPA implementing procedures that do not normally have a significant impact on the environment and therefore do not require either an EA or EIS. Specifically, FRA has determined that this withdrawal is categorically excluded from detailed environmental review.

This withdrawal would not directly or indirectly impact any environmental resources and would not result in significantly increased emissions of air or water pollutants or noise. In analyzing the applicability of a CE, FRA must also consider whether unusual circumstances are present that would warrant a more detailed environmental review. FRA has concluded that no such unusual circumstances exist with respect to this withdrawal and it meets the requirements for categorical exclusion.

Pursuant to Section 106 of the National Historic Preservation Act and its implementing regulations, FRA has determined this undertaking has no potential to affect historic properties. FRA has also determined that this withdrawal does not approve a project resulting in a use of a resource protected by Section 4(f). Further, FRA reviewed this withdrawal and found it consistent with E.O. 14008, ''Tackling the Climate Crisis at Home and Abroad.''

E. Environmental Justice

Executive Order 14096, ''Revitalizing Our Nation's Commitment to Environmental Justice for All,'' which expands on E.O. 12898, ''Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations,'' requires DOT agencies to achieve environmental justice as part of their mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects, including interrelated social and economic effects, of their programs, policies, and activities on minority populations and low-income populations. DOT Order 5610.2C (''U.S. Department of

[5] The present value of costs are calculated in this analysis. Present value provides a way of converting future costs into equivalent DOT–2100.6A-Rulemaking and Guidance (Jun. 7, 2021) available at *https://www.transportation.gov/sites/dot.gov/files/2021-08/Final-for-OST-C-210407-001-signed.pdf.*

[6] All figures are presented in a 2023 base year unless otherwise noted.

Transportation Actions to Address Environmental Justice in Minority Populations and Low-Income Populations'') instructs DOT agencies to address compliance with E.O. 12898 and requirements within the DOT Order 5610.2C in rulemaking activities, as appropriate, and also requires consideration of the benefits of transportation programs, policies, and other activities where minority populations and low-income populations benefit, at a minimum, to the same level as the general population as a whole when determining impacts on minority and low-income populations.[7] FRA has evaluated this withdrawal under Executive Orders 12898, 14096, and DOT Order 5610.2C, and has determined it will not cause disproportionate and adverse human health and environmental effects on communities with environmental justice concerns.

F. Federalism Implications

This withdrawal will not have a substantial effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Thus, in accordance with E.O. 13132, ''Federalism'' (64 FR 43255, Aug. 10, 1999), preparation of a Federalism Assessment is not warranted.

G. Unfunded Mandates Reform Act of 1995

This withdrawal will not result in the expenditure, in the aggregate, of $100,000,000 or more, adjusted for inflation, in any one year by State, local, or Indian Tribal governments, or the private sector. Thus, consistent with section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4, 2 U.S.C. 1532), FRA is not required to prepare a written statement detailing the effect of such an expenditure.

H. Energy Impact

E.O. 13211 requires Federal agencies to prepare a Statement of Energy Effects for any ''significant energy action.'' 66 FR 28355 (May 22, 2001). FRA has evaluated this withdrawal in accordance with E.O. 13211 and determined that this withdrawal is not a ''significant energy action'' within the meaning of E.O. 13211.

I. Executive Order 13175 (Tribal Consultation)

FRA has evaluated this withdrawal in accordance with the principles and criteria contained in E.O. 13175, ''Consultation and Coordination with Indian Tribal Governments,'' dated November 6, 2000. The withdrawal would not have a substantial direct effect on one or more Indian Tribes, would not impose substantial direct compliance costs on Indian Tribal governments, and would not preempt Tribal laws. Therefore, the funding and consultation requirements of E.O. 13175 do not apply, and a Tribal summary impact statement is not required.

J. International Trade Impact Assessment

The Trade Agreement Act of 1979 prohibits Federal agencies from engaging in any standards or related activities that create unnecessary obstacles to the foreign commerce of the United States. Legitimate domestic objectives, such as safety, are not considered unnecessary obstacles. The statute also requires consideration of international standards and where appropriate, that they be the basis for U.S. standards. This withdrawal is purely domestic in nature and is not expected to affect trade opportunities for U.S. firms doing business overseas or for foreign firms doing business in the United States.

List of Subjects in 49 CFR Part 225

Investigations, Penalties, Railroad safety, Reporting and recordkeeping requirements.

The Final Rule

In consideration of the foregoing, FRA amends 49 CFR part 225 as follows:

PART 225—RAILROAD ACCIDENTS/INCIDENTS: REPORTS CLASSIFICATION, AND INVESTIGATION

■ 1. The authority citation for part 225 continues to read as follows:

Authority: 49 U.S.C. 103, 322(a), 20103, 20107, 20901–20902, 21301, 21302, 21311; 28 U.S.C. 2461 note; and 49 CFR 1.89.

§ 225.31 [Amended]

■ 2. Amend § 225.31 by removing the heading for paragraph (a), removing paragraph (b), and redesignating paragraphs (a)(1) through (a)(6) as paragraphs (a) through (f) respectively.

Issued in Washington, DC.

Allison Ishihara Fultz,

Chief Counsel.

[FR Doc. 2025–00998 Filed 1–16–25; 8:45 am]

BILLING CODE 4910–06–P

[7] E.O. 14096 ''Revitalizing Our Nation's Commitment to Environmental Justice,'' issued on April 26, 2023, supplements E.O. 12898, but is not currently referenced in DOT Order 5610.2C.

Proposed Rules

Federal Register
Vol. 90, No. 11
Friday, January 17, 2025

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

NUCLEAR REGULATORY COMMISSION

10 CFR Part 73

[NRC–2024–0167]

Law Enforcement Response in Power Reactor Physical Protection Programs

AGENCY: Nuclear Regulatory Commission.

ACTION: Proposed interpretive rule; request for comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing a notice of proposed interpretation of regulatory requirements to clarify that a power reactor applicant or licensee may, when designing or updating its physical protection program, incorporate law enforcement response into its site physical protection program through the implementation of a site-specific Security Bounding Time. This proposed interpretation would provide flexibility to applicants and licensees by allowing them to consider the assistance of law enforcement responders as part of the physical protection program. The NRC is requesting comment on the proposed interpretation and will hold a public meeting during the public comment period to address questions regarding the proposed interpretation and to facilitate public comments.

DATES: Submit comments on the proposed interpretation by March 3, 2025. Comments received after this date will be considered if it is practical to do so, but the NRC is able to ensure consideration only for comments received before this date.

ADDRESSES: You may submit comments by any of the following methods; however, the NRC encourages electronic comment submission through the Federal rulemaking website:

- *Federal Rulemaking website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2024–0167. Address questions about NRC dockets to Helen Chang; telephone: 301–415–3228; email: *Helen.Chang@nrc.gov.* For technical questions contact the individuals listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *Email comments to: Rulemaking.Comments@nrc.gov.* If you do not receive an automatic email reply confirming receipt, then contact us at 301–415–1677.
- *Fax comments to:* Secretary, U.S. Nuclear Regulatory Commission at 301–415–1101.
- *Mail comments to:* Secretary, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, ATTN: Rulemakings and Adjudications Staff.
- *Hand deliver comments to:* 11555 Rockville Pike, Rockville, Maryland 20852, between 7:30 a.m. and 4:15 p.m. eastern time, Federal workdays; telephone: 301–415–1677.

You can read a plain language description of this proposed interpretation at *https://www.regulations.gov/docket/NRC-2024-0167.* For additional direction on obtaining information and submitting comments, see ''Obtaining Information and Submitting Comments'' in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Wellington Tejada, Office of Nuclear Security and Incident Response, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–1623; email: *Wellington.Tejada@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC–2024–0167 when contacting the NRC about the availability of information for this action. You may obtain publicly available information related to this action by any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2024–0167.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Document collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *PDR.Resource@nrc.gov.* For the convenience of the reader, instructions about obtaining materials referenced in this document are provided in the ''Availability of Documents'' section.
- *NRC's PDR:* The PDR, where you may examine and order copies of publicly available documents, is open by appointment. To make an appointment to visit the PDR, please send an email to *PDR.Resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8 a.m. and 4 p.m. eastern time, Monday through Friday, except Federal holidays.

B. Submitting Comments

The NRC encourages electronic comment submission through the Federal rulemaking website (*https://www.regulations.gov*). Please include Docket ID NRC–2024–0167 in your comment submission.

The NRC cautions you not to include identifying or contact information that you do not want to be publicly disclosed in your comment submission. The NRC will post all comment submissions at *https://www.regulations.gov* as well as enter the comment submissions into ADAMS. The NRC does not routinely edit comment submissions to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Background

In the NRC's regulatory framework, power reactor licensees regulated under title 10 of the *Code of Federal Regulations* (10 CFR) part 50, ''Domestic Licensing of Production and Utilization Facilities, or 10 CFR part 52, ''Licenses, Certifications, and Approvals for Nuclear Power Plants,'' are required to provide physical protection sufficient to prevent radiological sabotage from a hostile adversary, the characteristics of which fall within a defined design basis threat (DBT). The DBT of radiological

sabotage has been part of the NRC's regulations in 10 CFR part 73, ''Physical Protection of Plants and Materials,'' since 1979. To date, the Commission has interpreted its regulatory requirements to mean that a licensee's defense against the DBT may not consider the assistance provided by local, State, or Federal law enforcement agencies.

In 2005, the NRC undertook a rulemaking to revise the DBT of radiological sabotage as directed by Section 651 of the Energy Policy Act of 2005. In the final rule, ''Design Basis Threat,'' the Commission set forth its views on the corresponding roles of licensee security forces and offsite Federal and State law enforcement agencies in protecting against the threats applicable to power reactors (72 FR 12705). As the Commission explained, the DBT reflects the Commission's determination of the composite set of adversary features against which private security forces should reasonably have to defend. Although the rule sets an upper limit on the threat that must be considered in the design of licensee security programs, the Commission noted that the defense of our Nation's critical infrastructure is a shared responsibility between the NRC, the Department of Defense, the Department of Homeland Security, Federal and State law enforcement, and other Federal agencies. The Commission also noted that, although licensees are not required to develop protective strategies to defend against beyond-DBT events, it should not be concluded that licensees can provide no defense against those threats. The Commission expressed its confidence that a licensee's security force would respond to any threat—no matter the size or capabilities—that may present itself, and the Commission stated that it expects that licensees and Federal and State authorities will use whatever resources are necessary in response to both DBT and beyond-DBT events.

In 2006, the Commission undertook a separate rulemaking effort to amend its security regulations in § 73.55 and add new security requirements pertaining to nuclear power reactors. As revised in the 2009 final rule, ''Power Reactor Security Requirements,'' the NRC regulations in § 73.55(b)(1) through (3) provide a general performance objective and requirements for a licensee to establish and maintain a physical protection program that must protect against the DBT of radiological sabotage (74 FR 13926). Specific requirements for the design and implementation of the physical protection program are provided in § 73.55(c) through (q). These regulatory requirements establish that the licensee has the ultimate responsibility for protecting an operating power reactor site against an adversary force up to and including the DBT of radiological sabotage. In the 2009 final rule, the Commission further stated that a licensee's ability to defend against the DBT of radiological sabotage is not dependent on the availability of offsite responders.

Taken together, the 2007 and 2009 final rules reflect an interpretation of the security regulations that required licensees to establish a physical protection program, including a private security organization, that is capable of defending against the DBT without the assistance of local, State, or Federal law enforcement. As currently implemented, licensee physical protection programs do not include credit for local, State, or Federal law enforcement response. While § 73.55(k)(9) and paragraph II.B.3.d in appendix C to 10 CFR part 73 require licensees to document and maintain response agreements with law enforcement agencies to the extent practicable, licensees do not recognize this law enforcement response as an essential contributor for how the site will defend against the DBT.

On October 9, 2018, the Commission issued Staff Requirements Memorandum (SRM) to SECY–17–0100, ''Staff Requirements—SECY–17–0100—Security Baseline Inspection Program Assessment Results and Recommendations for Program Efficiencies,'' and directed the staff to provide recommendations for providing credit for response by local, State, and Federal law enforcement in the NRC's security inspection program. On July 30, 2020, in SECY–20–0070, ''Technical Evaluation of the Security Bounding Time Concept for Operating Nuclear Power Plants,'' the NRC staff presented the Commission with a methodology for power reactor licensees to incorporate law enforcement response into their physical protection programs and leverage additional operator actions and equipment to further strengthen site capabilities to protect against the DBT of radiological sabotage through a site-specific Security Bounding Time (SBT). A redacted version of SECY–20–0070 is publicly available and describes how the SBT concept could be implemented at a power reactor site.

On June 6, 2024, the Commission issued SRM–SECY–20–0070, ''Staff Requirements—SECY–20–0070—Technical Evaluation of the Security Bounding Time Concept for Operating Nuclear Power Plants,'' approving the staff's recommendation to reinterpret existing security regulations through a notice of interpretation. This proposed interpretation of regulatory requirements would reinterpret § 73.1 and § 73.55 to allow a licensee to consider the assistance of law enforcement responders as part of its physical protection program through a site-specific SBT and revise its security plans and site procedures to reflect this reading of the regulations in part 73.

III. Proposed Interpretation

Under the regulatory requirements in § 3.55(b)(1) through (3), operating power reactor licensees are required to establish and maintain a physical protection program, to include a security organization, with the capabilities to detect, assess, interdict, and neutralize threats up to and including the DBT of radiological sabotage at all times. This proposed interpretation would allow operating power reactor licensees to establish a site-specific SBT that incorporates law enforcement response as a component of a physical protection program that meets the requirements of § 73.55(b)(1) through (3). The SBT concept would provide a methodology for developing robust tactical response plans with participating law enforcement agencies to preclude prolonged adversary interference with plant operator actions following the initiation of an attack. A site-specific SBT represents the amount of time, following the initiation of an attack, needed to execute this response plan, preclude adversary interference, and complete any planned operator actions to prevent damage to the reactor core or spent fuel. A more detailed description of the SBT concept is found in SECY–20–0070.

A licensee that chooses to develop an SBT, through the incorporation of law enforcement response as a component of its physical protection program, will be responsible for justifying its site-specific SBT and providing assurance that its overall physical protection program meets the requirements of § 73.55(b)(1) through (3). Licensees cannot compel law enforcement agencies to maintain the capabilities documented in any specific agreements they have with licensees, and the NRC does not have regulatory authority over law enforcement agencies. Nevertheless, the NRC has confidence that, when called upon, law enforcement agencies will honor their commitments. As stated in the 2007 DBT final rule, the Commission expects that licensees and State and Federal authorities will use whatever resources are necessary in response to both DBT and beyond-DBT events. Additionally, the Commission has recognized in its regulations, in the

emergency planning context, the reality that in an actual emergency, State and local government officials will exercise their best efforts to protect the health and safety of the public (§ 50.47(c)(1)(iii)(B)). The NRC expects that the exercising of best efforts would extend to law enforcement agencies responding to a security emergency, consistent with the existing agreements between licensees and those agencies. Accordingly, it is reasonable and prudent to allow licensees to consider the assistance of law enforcement responders when designing their physical protection programs.

The inclusion of law enforcement response in the licensee's physical protection program does not mean that law enforcement responders are subject to the same training requirements as members of the licensee's security organization. The NRC's regulations in § 73.55(d)(3) state that the licensee may not permit any individual to implement any part of the physical protection program unless the individual has been trained, equipped, and qualified to perform their assigned duties and responsibilities in accordance with section VI of appendix B to 10 CFR part 73 and the licensee's Training and Qualification Plan. Further, § 73.55(k)(1) states that the licensee shall establish and maintain, at all times, properly trained, qualified and equipped personnel required to interdict and neutralize threats up to and including the DBT of radiological sabotage, to prevent significant core damage and spent fuel sabotage. These provisions are properly applied solely to the licensee's own personnel (*i.e.,* employees or contractors), and not to any law enforcement responders who may be part of the law enforcement response that would be considered a component of the physical protection program through a site-specific SBT. Although law enforcement responders may be considered a part of the licensee's physical protection program, they should not be considered security personnel or members of the licensee's security organization required by § 73.55(d)(1), nor should they be considered among the individuals subject to the requirements of § 73.55(d)(3).

IV. Discussion

This proposed interpretation, if issued, would apply to any licensee of an operating power reactor or applicant for a power reactor license under 10 CFR part 50 or part 52. The NRC expects that the proposed interpretation would allow applicants and licensees to consider, when designing their physical protection programs, that law enforcement agencies will exercise their best efforts to protect the health and safety of the public.

The proposed interpretation would not supplant any physical protection strategies currently permitted under the NRC's regulations. Rather, the proposed interpretation explains that applicants and licensees could consider the expected law enforcement response, developed and documented in accordance with the SBT concept, as part of the physical protection program and revise their security plans and site procedures to reflect this consideration. The proposed interpretation would recognize how, following initiation of an attack, the security at a site evolves over time and additional support from law enforcement is expected to be provided to the licensee to continue to defend against the DBT. Recognizing the role of law enforcement support in a licensee's physical protection program does not reduce the NRC's confidence that licensees can maintain adequate physical protection of their sites against the DBT.

The NRC intends to issue regulatory guidance for developing acceptable site-specific SBTs and associated response plans with participating law enforcement agencies. This guidance will describe planning considerations and tactical response plan elements that should be included in a site-specific SBT. Additionally, the NRC intends to issue regulatory guidance to assist licensees in determining whether Commission approval would be required prior to implementing an SBT at an operating power reactor facility. In accordance with § 50.54(p)(1), licensees may not make a change which would decrease the effectiveness of a physical security plan without prior Commission approval. Prior Commission approval is not required if the changes do not decrease the safeguards effectiveness of the plan; however, these changes must be reported to the NRC within 2 months after the change is made. Implementing an SBT at a site would require a change to the site's security plans, and licensees would need to use existing site or fleet processes to assess the impact of SBT implementation on the effectiveness of the site security plans prior to implementation. The regulatory guidance would include a method that the NRC considers acceptable to determine whether a change would decrease the safeguards effectiveness of the plan, particularly as it relates to SBT implementation, to ensure the appropriate level of NRC review is completed. The NRC plans to solicit public comment on the proposed regulatory guidance in calendar year 2025.

V. Backfit and Issue Finality Considerations

Under § 50.109(a), backfitting is defined in part as the NRC's imposition of staff interpretations of its regulations on nuclear power reactor licensees or certain nuclear power reactor applicants. Provisions analogous to the backfitting requirements, referred to as issue finality provisions, appear in 10 CFR part 52.

The proposed interpretation of regulatory requirements would expand the options available for licensee physical protection programs to meet the NRC's regulatory requirements. Under the proposed interpretation, a licensee could continue to comply with the requirements of its current licensing basis or voluntarily choose to adopt an SBT by revising its security plans and site procedures to reflect the role of law enforcement in the site protective strategy. Because the NRC would not be imposing a staff interpretation of the regulations on nuclear power reactor licensees, this proposed interpretation would not meet the definition of backfitting under § 50.109 and, therefore, would not constitute a backfit or affect the issue finality of any approval issued under 10 CFR part 52.

VI. Request for Comments

The NRC is requesting comments on this proposed interpretation of regulatory requirements. The NRC will publish a document in the **Federal Register** containing an evaluation of the significant comments and any revisions to this proposed interpretation resulting from the comments and their evaluation.

VIII. Paperwork Reduction Act

This proposed interpretation does not contain any new or amended collections of information subject to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). Existing collections of information were approved by the Office of Management and Budget (OMB), approval numbers 3150–0002 and 3150–0011.

Public Protection Notification

The NRC may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the document requesting or requiring the collection displays a currently valid OMB control number.

IX. Public Meeting

The NRC plans to conduct a public meeting to address questions regarding the proposed interpretation. The NRC will publish a notice of the location, time, and agenda of the meeting on the NRC's public meeting website at least 10 calendar days before the meeting. Stakeholders can monitor the NRC's public meeting website for information about the public meeting at *https://www.nrc.gov/public-involve/public-meetings/index.cfm.*

Dated December 9, 2024.

For the Nuclear Regulatory Commission.

John McKirgan,

Director, Division of Physical and Cyber Security Policy, Office of Nuclear Security and Incident Response.

Energy Conservation Program: Energy Conservation Standards for Consumer Boilers

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Proposed rule; withdrawal.

SUMMARY: This document withdraws a proposed rule that was published in the **Federal Register** on August 14, 2023. The proposed rule would have amended energy conservation standards for consumer boilers.

DATES: The proposed rule on Energy Conservation Standards for Consumer Boilers, published in the **Federal Register** on August 14, 2023, at 88 FR 55128 is withdrawn on January 17, 2025.

ADDRESSES: The docket for this rulemaking, which includes **Federal Register** notices, comments, and other supporting documents/materials, is available for review at *www.regulations.gov/docket/EERE-2019-BT-STD-0036.* The docket web page contains instructions on how to access all documents, including public comments, in the docket. All documents in the docket are listed in the *www.regulations.gov* index; however, not all documents listed in the index may be publicly available, such as information that is exempt from public disclosure.

FOR FURTHER INFORMATION CONTACT:

Ms. Julia Hegarty, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies Office, EE–5B, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (240) 597–6737. Email: *ApplianceStandardsQuestions@ee.doe.gov.*

Mr. Uchechukwu ''Emeka'' Eze, U.S. Department of Energy, Office of the General Counsel, GC–33, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (202) 586–4798. Email: *uchechukwu.eze@hq.doe.gov.*

SUPPLEMENTARY INFORMATION: On August 14, 2023, the Department of Energy (''DOE'') published in the **Federal Register** a notice of proposed rulemaking (''NOPR'') and public meeting announcement, in which DOE proposed to amend the energy conservation standards for certain consumer boilers. 88 FR 55128. Specifically, the proposed rule sought to establish more stringent AFUE standards for gas-fired and oil-fired boilers; maintain the current standards for electric steam and hot water boilers; and maintain the design requirements and exceptions to the minimum AFUE requirements established by statute and codified at 10 CFR 430.32(e)(2). After review of the proposed rule and public comments, DOE has decided to withdraw the proposed rule.

DOE received significant oral and written comments on its proposed rule and technical support document from individuals, manufacturers, trade associations, utilities, efficiency advocacy organizations, and other stakeholders. Some commenters opposed the rule, citing concerns about impacts on manufacturers and the analysis underlying the proposed standards. Other commenters supported the proposed rule and highlighted the proposed rule's energy savings, emission reductions, and consumer benefits. Although DOE continues to support the intent and purpose of the proposed energy conservation standards for consumer boilers, in light of the considerable feedback received through the public comment process, the forthcoming change in Administration, and the significant resources needed to review and consider all relevant matters presented in the public comments, DOE does not believe that finalizing the proposed energy conservation standards is an efficient use of its resources at this time.

For each of these independent reasons, DOE is exercising its discretion to withdraw the proposed standards and terminate this rulemaking. DOE does not intend for a final rule to be issued on this NOPR as it will be important for the Department to have updated data and public input to inform a future rule that re-examines these important issues and explores options that best implement the requirements of the Energy Policy and Conservation Act (EPCA). 42 U.S.C. 6291 *et seq.* However, this withdrawal action does not preclude DOE from proposing energy

conservation standards for consumer boilers in the future, including new standards that may be substantially identical or similar to those previously proposed. DOE notes that any future rulemaking it may undertake on this topic would similarly be subject to the notice and comment requirements of EPCA and the Administrative Procedure Act, 5 U.S.C. 551, *et seq.*

Approval of the Office of the Secretary

The Secretary of Energy has approved publication of this proposed rule; withdrawal.

Signing Authority

This document of the Department of Energy was signed on January 10, 2025, by Jeffrey Marootian, Principal Deputy Assistant Secretary for Energy Efficiency and Renewable Energy, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on January 13, 2025.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

Energy Conservation Program: Energy Conservation Standards for Battery Chargers

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Proposed rule; withdrawal.

SUMMARY: This document withdraws a proposed rule that was published in the **Federal Register** on March 15, 2023. The proposed rule would have established amended energy conservation standards for battery chargers.

DATES: The proposed rule on energy conservation standards for battery chargers, published in the **Federal Register** on March 15, 2023, at 88 FR 16112 is withdrawn on January 17, 2025.

ADDRESSES: The docket for this activity, which includes **Federal Register** notices, comments, and other supporting documents/materials, is available for review at *www.regulations.gov/docket/EERE-2022-BT-STD-0002.* The docket web page contains instructions on how to access all documents, including public comments, in the docket. All documents in the docket are listed in the *www.regulations.gov* index; however, not all documents listed in the index may be publicly available, such as information that is exempt from public disclosure.

FOR FURTHER INFORMATION CONTACT: Mr. Jeremy Dommu, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies Office, EE–5B, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (202) 586–9870. Email: *ApplianceStandardsQuestions@ee.doe.gov.*

Mr. Pete Cochran, U.S. Department of Energy, Office of the General Counsel, GC–33, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (202) 586–9870. Email: *Peter.Cochran@hq.doe.gov.*

SUPPLEMENTARY INFORMATION: On March 15, 2023, the Department of Energy (''DOE'') published in the **Federal Register** a notice of proposed rulemaking (''NOPR'') and public meeting announcement, in which DOE proposed to amend energy conservation standards for battery chargers based on the multi-metric approach. 88 FR 16112. Specifically, DOE proposed maximum active charge energy, maximum standby, and maximum off mode power values, based on associated battery energy. 88 FR 16112, 16113. After review of the proposed rule and public comments, DOE has decided to withdraw the proposed rule.

DOE received significant oral and written comments on its proposed rule and technical support document from individuals, manufacturers, trade associations, utilities, efficiency advocacy organizations, and other stakeholders. Some commenters expressed concerns with the rule, citing concerns about impacts on manufacturers and the analysis underlying the proposed standards. Other commenters supported the proposed rule and highlighted the proposed rule's energy savings, emission reductions, and consumer benefits. Although DOE continues to support the intent and purpose of the proposed energy conservation standards for battery chargers, in light of the considerable feedback received through the public comment process, the forthcoming change in Administration, and the significant resources needed to review and consider all relevant matters presented in the public comments, DOE does not believe that finalizing the proposed energy conservation standards is an efficient use of its resources at this time.

For each of these independent reasons, DOE is exercising its discretion to withdraw the proposed standards and terminate this rulemaking. DOE does not intend for a final rule to be issued on this NOPR as it will be important for the Department to be informed by updated data and public input when it re-examines these important issues and explores options that best implement the requirements of the Energy Policy and Conservation Act (EPCA). 42 U.S.C. 6291 *et seq.* However, this withdrawal action does not preclude DOE from proposing energy conservation standards for battery chargers in the future, including new standards that may be substantially identical or similar to those previously proposed. DOE notes that any future rulemaking it may undertake on this topic would similarly be subject to the notice and comment requirements of EPCA and the Administrative Procedure Act, 5 U.S.C. 551, *et seq.*

Approval of the Office of the Secretary

The Secretary of Energy has approved publication of this proposed rule; withdrawal.

Signing Authority

This document of the Department of Energy was signed on January 10, 2025, by Jeffrey Marootian, Principal Deputy Assistant Secretary for Energy Efficiency and Renewable Energy, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on January 13, 2025.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

Energy Conservation Program: Energy Conservation Standards for Fans and Blowers

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Proposed rule; withdrawal.

SUMMARY: This document withdraws a proposed rule that was published in the **Federal Register** on January 19, 2024. The proposed rule would have established equipment classes and energy conservation standards for fans and blowers.

DATES: The proposed rule on energy conservation standards for fans and blowers, published in the **Federal Register** on January 19, 2024, at 89 FR 3714 is withdrawn on January 17, 2025.

ADDRESSES: The docket for this activity, which includes **Federal Register** notices, comments, and other supporting documents/materials, is available for review at *www.regulations.gov/docket/EERE-2022-BT-STD-0002*. The docket web page contains instructions on how to access all documents, including public comments, in the docket. All documents in the docket are listed in the *www.regulations.gov* index; however, not all documents listed in the index may be publicly available, such as information that is exempt from public disclosure.

FOR FURTHER INFORMATION CONTACT:

Mr. Jeremy Dommu, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies Office, EE–5B, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (202) 586–9870. Email: *ApplianceStandardsQuestions@ee.doe.gov.*

Ms. Laura Zuber, U.S. Department of Energy, Office of the General Counsel, GC–33, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (202) 586–4798. Email: *Laura.Zuber@hq.doe.gov.*

SUPPLEMENTARY INFORMATION: On January 19, 2024, the Department of Energy (''DOE'') published in the **Federal Register** a notice of proposed rulemaking (''NOPR'') and public meeting announcement, in which DOE proposed to establish equipment classes and energy conservation standards for fans and blowers. 89 FR 3714. Specifically, the proposed rule sought to establish energy conservation standards for two categories of fans and blowers: air circulating fans (''ACFs'') and fans and blowers that are not air circulating fans, which DOE referred to as general fans and blowers (''GFBs''). DOE proposed standards for various equipment classes of GFBs and ACFs. After review of the proposed rule and public comments, DOE has decided to withdraw the proposed rule.

DOE received significant oral and written comments on its proposed rule and technical support document from individuals, manufacturers, trade associations, utilities, efficiency advocacy organizations, and other stakeholders. Some commenters opposed the rule, citing concerns about impacts on manufacturers and the analysis underlying the proposed standards. Other commenters supported the proposed rule and highlighted the proposed rule's energy savings, emission reductions, and consumer benefits. Although DOE continues to support the intent and purpose of the proposed energy conservation standards for fans and blowers, in light of the considerable feedback received through the public comment process, the forthcoming change in Administration, and the significant resources needed to review and consider all relevant matters presented in the public comments, DOE does not believe that finalizing the proposed energy conservation standards is an efficient use of its resources at this time.

For each of these independent reasons, DOE is exercising its discretion to withdraw the proposed standards and terminate this rulemaking. DOE does not intend for a final rule to be issued on this NOPR as it will be important for the Department to be informed by updated data and public input when it in re-examines these important issues and explores options that best implement the requirements of the Energy Policy and Conservation Act (EPCA). 42 U.S.C. 6291 *et seq.* However, this withdrawal action does not preclude DOE from proposing energy conservation standards for fans and blowers in the future, including new standards that may be substantially identical or similar to those previously proposed. DOE notes that any future rulemaking it may undertake on this topic would similarly be subject to the notice and comment requirements of EPCA and the Administrative Procedure Act, 5 U.S.C. 551, *et seq.*

States are not prohibited from adopting their own energy conservation standards, including the standards proposed by DOE. DOE notes that in proposing these standards, DOE estimated that the standards would save a significant amount of energy and have significant cost savings to consumers and the nation.

Approval of the Office of the Secretary

The Secretary of Energy has approved publication of this proposed rule; withdrawal.

Signing Authority

This document of the Department of Energy was signed on January 10, 2025, by Jeffrey Marootian, Principal Deputy Assistant Secretary for Energy Efficiency and Renewable Energy, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on January 13, 2025.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2025–0007; Project Identifier MCAI–2023–00998–R]

RIN 2120–AA64

Airworthiness Directives; Airbus Helicopters

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for all

Airbus Helicopters Model SA341G and SA342J helicopters. This proposed AD was prompted by reports of corrosion on the contact surfaces of the tail rotor inclined and horizontal drive shaft flanges. This proposed AD would require repetitively inspecting the inclined and horizontal drive shaft flanges and, depending on the results, replacing the inclined or horizontal drive shaft. This proposed AD would also prohibit installing certain inclined and horizontal drive shafts unless certain requirements are met, as specified in a European Union Aviation Safety Agency (EASA) AD, which is proposed for incorporation by reference. The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this NPRM by March 3, 2025.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *regulations.gov*. Follow the instructions for submitting comments.
- *Fax:* (202) 493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2025–0007; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

- For EASA material identified in this proposed AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; phone: +49 221 8999 000; email: *ADs@easa.europa.eu;* website: *easa.europa.eu.* You may find the EASA material on the EASA website at *ad.easa.europa.eu.*
- You may view this material at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Parkway, Room 6N–321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222–5110. It is also available at *regulation.gov* under Docket No. FAA–2025–0007.

FOR FURTHER INFORMATION CONTACT: Evan Weaver, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone: (316) 946–4152; email: *Evan.P.Weaver@faa.gov*.

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2025–0007; Project Identifier MCAI–2023–00998–R'' at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to *regulations.gov*, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Evan Weaver, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone: (316) 946–4152; email: *Evan.P.Weaver@faa.gov.* Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

EASA, which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2023–0168, dated August 31, 2023 (EASA AD 2023–0168) (also referred to as the MCAI), to correct an unsafe condition on all Airbus Helicopters Model SA 341 G and SA 342 J (Gazelle) helicopters. The MCAI states that there have been several reports of corrosion on the contact surfaces of the tail rotor inclined and horizontal drive shaft flanges. More detailed non-destructive testing indicated pitting corrosion on the mating faces of several flanges and further investigation revealed various regions of intergranular failure beneath the surface of corrosion pits. The unsafe condition, if not addressed, could result in the failure of the tail rotor drive and subsequent loss of control of the helicopter.

The FAA is issuing this proposed AD to address the unsafe condition on these products.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2025–0007.

Material Incorporated by Reference Under 1 CFR Part 51

The FAA reviewed EASA AD 2023–0168, which requires repetitively inspecting the flanges of certain part-numbered inclined and horizontal drive shafts for corrosion. If corrosion is found, EASA AD 2023–0168 requires replacing the affected inclined or horizontal drive shaft. EASA AD 2023–0168 also prohibits installing an affected inclined or horizontal drive shaft on any helicopter unless it is a serviceable part as defined within. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination

These products have been approved by the aviation authority of another country and are approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA is issuing this NPRM after determining that the unsafe condition described previously is likely to exist or develop on other products of the same type design.

Proposed AD Requirements in This NPRM

This proposed AD would require accomplishing the actions specified in EASA AD 2023–0168, described previously, as incorporated by reference, except for any differences

identified as exceptions in the regulatory text of this proposed AD and except as discussed under ''Differences Between This NPRM and the MCAI.''

Explanation of Required Compliance Information

In the FAA's ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use some civil aviation authority (CAA) ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has been coordinating this process with manufacturers and CAAs. As a result, the FAA proposes to incorporate EASA AD 2023–0168 by reference in the FAA final rule. This proposed AD would, therefore, require compliance with EASA AD 2023–0168 in its entirety through that incorporation, except for any differences identified as exceptions in the regulatory text of this proposed AD. Using common terms that are the same as the heading of a particular section in EASA AD 2023–0168 does not mean that operators need comply only with that section. For example, where the AD requirement refers to ''all required actions and compliance times,'' compliance with this AD requirement is not limited to the section titled ''Required Action(s) and Compliance Time(s)'' in EASA AD 2023–0168. Material required by EASA AD 2023–0168 for compliance will be available at *regulations.gov* under Docket No. FAA–2025–0007 after the FAA final rule is published.

Differences Between This NPRM and the MCAI

The material referenced in the MCAI specifies sending corroded parts to Airbus Helicopters, whereas this proposed AD would not require that action.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 63 helicopters of U.S. registry. Labor rates are estimated at $85 per work-hour. Based on these numbers, the FAA estimates the following costs to comply with this proposed AD.

Visually inspecting the inclined and horizontal drive shaft flanges would take 4 work-hours for an estimated cost of $340 per helicopter and $21,420 for the U.S. fleet, per inspection cycle. If required, replacing the inclined or horizontal drive shaft would take 4 work-hours and parts would cost $17,900 (inclined drive shaft) or $35,500 (horizontal drive shaft), for an estimated cost of $18,240 or $35,840 per helicopter.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Would not affect intrastate aviation in Alaska, and

(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

Airbus Helicopters: Docket No. FAA–2025–0007; Project Identifier MCAI–2023–00998–R.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by March 3, 2025.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Airbus Helicopters Model SA341G and SA342J helicopters, certificated in any category.

(d) Subject

Joint Aircraft System Component (JASC) Code 6510, Tail Rotor Drive Shaft.

(e) Unsafe Condition

This AD was prompted by reports of corrosion on the contact surfaces of the tail rotor inclined and horizontal drive shaft flanges. The FAA is issuing this AD to detect and address corrosion on the inclined and horizontal drive shaft flanges. The unsafe condition, if not addressed, could result in the failure of the tail rotor drive and subsequent loss of control of the helicopter.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraphs (h) and (i) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, European Union Aviation Safety Agency AD 2023–0168, dated August 31, 2023 (EASA AD 2023–0168).

(h) Exceptions to EASA AD 2023–0168

(1) Where EASA AD 2023–0168 requires compliance in terms of flight hours, this AD requires using hours time-in-service.

(2) Where EASA AD 2023–0168 refers to its effective date, this AD requires using the effective date of this AD.

(3) Where the material referenced in paragraph (2) of EASA 2023–0168 specifies sending corroded inclined or horizontal drive shaft to Airbus Helicopters, this AD does not require that action.

(4) This AD does not adopt the ''Remarks'' section of EASA AD 2023–0168.

(i) No Reporting Requirement

Although the material referenced in EASA AD 2023–0168 specifies to submit certain information to the manufacturer, this AD does not require that action.

(j) Special Flight Permits

Special flight permits are prohibited.

(k) Alternative Methods of Compliance (AMOCs)

(1) The Manager, International Validation Branch, FAA, has the authority to approve

AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the International Validation Branch, send it to the attention of the person identified in paragraph (l) of this AD and email to: *AMOC@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(l) Additional Information

For more information about this AD, contact Evan Weaver, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone: (316) 946–4152; email: *Evan.P.Weaver@faa.gov.*

(m) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) European Union Aviation Safety Agency (EASA) AD 2023–0168, dated August 31, 2023.

(ii) [Reserved]

(3) For EASA material identified in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; phone: +49 221 8999 000; email: *ADs@easa.europa.eu;* website: *easa.europa.eu.* You may find this EASA material on the EASA website at *ad.easa.europa.eu.*

(4) You may view this material at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Parkway, Room 6N–321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222–5110.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2025–0004; Project Identifier AD–2024–00094–T]

RIN 2120–AA64

Airworthiness Directives; The Boeing Company Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for certain The Boeing Company Model 737–600, -700, -700C, -800, -900, and 900ER series airplanes. This proposed AD was prompted by a report that some passenger service unit (PSU)-mounted video monitors became detached from the PSU rails during a hard landing. This proposed AD would require replacing PSU-mounted video monitors that do not have secondary retention lanyards. The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by March 3, 2025.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *regulations.gov*. Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2025–0004; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, any comments received, and other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

- For the material identified in this proposed AD, contact Boeing Commercial Airplanes, Attention: Contractual & Data Services (C&DS), 2600 Westminster Blvd., MC 110–SK57, Seal Beach, CA 90740–5600; telephone 562–797–1717; website *myboeingfleet.com*.
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available at *regulations.gov* under Docket No. FAA–2025–0004.

FOR FURTHER INFORMATION CONTACT: Julie Linn, Aviation Safety Engineer, FAA, 2200 South 216th St., Des Moines, WA 98198; phone: 206–231–3584; email: *julie.linn@faa.gov*.

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under **ADDRESSES**. Include ''Docket No. FAA–2025–0004; Project Identifier AD–2024–00094–T'' at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to regulations.gov, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Julie Linn, Aviation Safety Engineer, FAA, 2200 South 216th

St., Des Moines, WA 98198; phone: 206–231–3584; email: *julie.linn@faa.gov.* Any commentary that the FAA receives that is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

The FAA has received a report that some PSU-mounted video monitors became detached from the PSU rails during a hard landing that did not exceed the emergency load requirements for the PSUs. PSU-mounted video monitors that become fully detached or are held at an unsafe height could result in injury to passengers and impede passenger and crew egress during emergency evacuation.

FAA's Determination

The FAA is issuing this NPRM after determining that the unsafe condition described previously is likely to exist or develop on other products of the same type design.

Material Incorporated by Reference Under 1 CFR Part 51

The FAA reviewed Boeing Special Attention Requirements Bulletins 737–25–1851 RB and 737–25–1858 RB, both dated December 15, 2023. This material specifies procedures for replacing all PSU-mounted video monitors that do not have secondary retention lanyards with PSU-mounted video monitors that have secondary retention lanyards. The replacement includes making sure each inboard lanyard is attached to the inboard PSU rail. These documents are distinct since Boeing Special Attention Requirements Bulletin 737–25–1851 RB, dated December 15, 2023, addresses airplanes with certain Burrana monitors, and Boeing Special Attention Requirements Bulletin 737–25–1858 RB, dated December 15, 2023, addresses airplanes with certain Panasonic monitors. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in **ADDRESSES**.

Proposed AD Requirements in This NPRM

This proposed AD would require accomplishing the actions specified in the material already described, except for any differences identified as exceptions in the regulatory text of this proposed AD, and except as described under ''Difference Between this Proposed AD and the Referenced Material.'' For information on the procedures and compliance times, see this material at regulations.gov under Docket No. FAA–2025–0004.

Difference Between This Proposed AD and the Referenced Material

The effectivity in Boeing Special Attention Requirements Bulletin 737–25–1851 RB, and Boeing Special Attention Requirements Bulletin 737–25–1858 RB, both dated December 15, 2023, is limited to certain line numbers, which address PSU-mounted video monitors installed in production. However, affected PSU-mounted video monitors may also be installed on airplanes modified in accordance with a supplemental type certificate. The applicability of this proposed AD, therefore, is expanded to specify The Boeing Company Model 737–600, -700, -700C, -800, -900, and -900ER series airplanes equipped with PSU-mounted video monitors to ensure that the unsafe condition is adequately addressed in the fleet.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 459 airplanes of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per monitor	Cost on U.S. operators
Replacement (Burrana monitors—airplanes identified Boeing Special Attention Requirements Bulletin 737–25–1851 RB, dated December 15, 2023).	2 work-hours × $85 per hour = $170, per monitor.	$2,734	$2,904	Up to $5,401,440* (62 airplanes).
Replacement (Panasonic monitors—airplanes identified in Boeing Special Attention Requirements Bulletin 737–25–1858 RB, dated December 15, 2023).	2 work-hours × $85 per hour = $170, per monitor.	$354	$524	Up to $5,376,240* (342 airplanes).
Replacement (monitors for airplanes not identified in the Boeing service information).	2 work-hours × $85 per hour = $170, per monitor.	Up to $2,734	Up to $2,904	Up to $4,791,600* (55 airplanes).

*An airplane may have up to 30 monitors.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Would not affect intrastate aviation in Alaska, and

(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

The Boeing Company: Docket No. FAA–2025–0004; Project Identifier AD–2024–00094–T.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by March 3, 2025.

(b) Affected ADs

None.

(c) Applicability

This AD applies to The Boeing Company Model 737–600, -700, -700C, -800, -900, and -900ER series airplanes, certificated in any category, equipped with passenger service unit (PSU)-mounted video monitors.

(d) Subject

Air Transport Association (ATA) of America Code 25, Equipment/furnishings.

(e) Unsafe Condition

This AD was prompted by a report that some PSU-mounted video monitors became detached from the PSU rails during a hard landing that did not exceed the emergency load requirements for the PSUs. The FAA is issuing this AD to address PSU-mounted video monitors that could become fully detached or be held at an unsafe height, which, if not addressed, could result in injury to passengers and impede passenger and crew egress during emergency evacuation.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

(1) For airplanes identified in Boeing Special Attention Requirements Bulletin 737–25–1851 RB, dated December 15, 2023: Except as specified by paragraph (h) of this AD, at the applicable times specified in the ''Compliance'' paragraph of Boeing Special Attention Requirements Bulletin 737–25–1851 RB, dated December 15, 2023, do all applicable actions identified in, and in accordance with, the Accomplishment Instructions of Boeing Special Attention Requirements Bulletin 737–25–1851 RB, dated December 15, 2023.

Note 1 to paragraph (g)(1): Guidance for accomplishing the actions required by paragraph (g)(1) of this AD can be found in Boeing Special Attention Service Bulletin 737–25–1851, dated December 15, 2023, which is referred to in Boeing Special Attention Requirements Bulletin 737–25–1851 RB, dated December 15, 2023.

(2) For airplanes identified in Boeing Special Attention Requirements Bulletin 737–25–1858 RB, dated December 15, 2023: Except as specified by paragraph (h) of this AD, at the applicable times specified in the ''Compliance'' paragraph of Boeing Special Attention Requirements Bulletin 737–25–1858 RB, dated December 15, 2023, do all applicable actions identified in, and in accordance with, the Accomplishment Instructions of Boeing Special Attention Requirements Bulletin 737–25–1858 RB, dated December 15, 2023.

Note 2 to paragraph (g)(2): Guidance for accomplishing the actions required by paragraph (g)(2) of this AD can be found in Boeing Special Attention Service Bulletin 737–25–1858, dated December 15, 2023, which is referred to in Boeing Special Attention Requirements Bulletin 737–25–1858 RB, dated December 15, 2023.

(3) For airplanes not identified in paragraph (g)(1) or (2) of this AD: Within 60 months after the effective date of this AD, replace all PSU-mounted video monitors that do not have secondary retention lanyards with PSU-mounted video monitors that have secondary retention lanyards, using a method approved in accordance with the procedures specified in paragraph (i) of this AD.

(h) Exceptions to Service Information Specifications

(1) Where the Compliance Time columns of the tables in the ''Compliance'' paragraph of Boeing Special Attention Requirements Bulletin 737–25–1851 RB, dated December 15, 2023, refers to the original issue date of Requirements Bulletin 737–25–1851 RB, this AD requires using the effective date of this AD.

(2) Where the Compliance Time columns of the tables in the ''Compliance'' paragraph of Boeing Special Attention Requirements Bulletin 737–25–1858 RB, dated December 15, 2023, refers to the original issue date of Requirements Bulletin 737–25–1858 RB, this AD requires using the effective date of this AD.

(3) Where Boeing Special Attention Requirements Bulletins 737–25–1851 RB and 737–25–1858, both dated December 15, 2023, specify contacting Boeing for alternative installation instructions and doing the installation: This AD requires doing the installation using a method approved in accordance with the procedures specified in paragraph (i) of this AD.

(i) Alternative Methods of Compliance (AMOCs)

(1) The Manager, AIR–520, Continued Operational Safety Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in paragraph (j)(1) of this AD. Information may be emailed to: *AMOC@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(3) An AMOC that provides an acceptable level of safety may be used for any repair, modification, or alteration required by this AD if it is approved by The Boeing Company Organization Designation Authorization (ODA) that has been authorized by the Manager, AIR–520, Continued Operational Safety Branch, FAA, to make those findings. To be approved, the repair method, modification deviation, or alteration deviation must meet the certification basis of the airplane, and the approval must specifically refer to this AD.

(j) Related Information

(1) For more information about this AD, contact Julie Linn, Aviation Safety Engineer, FAA, 2200 South 216th St., Des Moines, WA 98198; phone: 206–231–3584; email: *julie.linn@faa.gov.*

(2) Material identified in this AD that is not incorporated by reference is available at the address specified in paragraph (k)(3) this AD.

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Boeing Special Attention Requirements Bulletin 737–25–1851 RB, dated December 15, 2023.

(ii) Boeing Special Attention Requirements Bulletin 737–25–1858 RB dated December 15, 2023.

(3) For Boeing material identified in this AD, contact Boeing Commercial Airplanes, Attention: Contractual & Data Services (C&DS), 2600 Westminster Blvd., MC 110–SK57, Seal Beach, CA 90740–5600; telephone 562–797–1717; website *myboeingfleet.com.*

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.*

Issued on January 8, 2025.

Suzanne Masterson,

Deputy Director, Integrated Certificate Management Division, Aircraft Certification Service.

Airworthiness Directives; The Boeing Company Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for certain The Boeing Company Model 757–200 and –300 series airplanes. This proposed AD was prompted by a report that some passenger service unit (PSU)-mounted video monitors became detached from the PSU rails during a hard landing. This proposed AD would require replacing PSU-mounted video monitors that do not have secondary retention lanyards. The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by March 3, 2025.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2025–0003; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, any comments received, and other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

- For the material, contact Boeing Commercial Airplanes, Attention: Contractual & Data Services (C&DS), 2600 Westminster Blvd., MC 110–SK57, Seal Beach, CA 90740–5600; telephone 562–797–1717; website *myboeingfleet.com.*
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available at *regulations.gov* under Docket No. FAA–2025–0003.

FOR FURTHER INFORMATION CONTACT: Julie Linn, Aviation Safety Engineer, FAA, 2200 South 216th St., Des Moines, WA 98198; phone: 206–231–3584; email: *julie.linn@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under **ADDRESSES**. Include ''Docket No. FAA–2025–0003; Project Identifier AD–2024–00110–T'' at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to regulations.gov, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Julie Linn, Aviation Safety Engineer, FAA, 2200 South 216th St., Des Moines, WA 98198; phone: 206–231–3584; email: *julie.linn@faa.gov.* Any commentary that the FAA receives that is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

The FAA has received a report that some PSU-mounted video monitors became detached from the PSU rails during a hard landing that did not exceed the emergency load requirements for the PSUs. PSU-mounted video monitors that become fully detached or are held at an unsafe height could result in injury to passengers and impede passenger and crew egress during emergency evacuation.

FAA's Determination

The FAA is issuing this NPRM after determining that the unsafe condition described previously is likely to exist or develop on other products of the same type design.

Material Incorporated by Reference Under 1 CFR Part 51

The FAA reviewed Boeing Special Attention Requirements Bulletins 757–25–0320 RB and 757–25–0321 RB, both dated January 19, 2024. This material specifies procedures for replacing all PSU-mounted video monitors that do not have secondary retention lanyards with PSU-mounted video monitors that have secondary retention lanyards. These documents are distinct since Boeing Special Attention Requirements Bulletin 757–25–0320 RB, dated January 19, 2024, addresses airplanes with certain Burrana monitors, and Boeing Special Attention Requirements Bulletin 757–25–0321 RB, dated January 19, 2024, addresses airplanes with certain Panasonic monitors. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in **ADDRESSES**.

Proposed AD Requirements in This NPRM

This proposed AD would require accomplishing the actions specified in the material already described, except for any differences identified as exceptions in the regulatory text of this proposed AD, and except as described under ''Difference Between this Proposed AD and the Referenced Material.''. For information on the procedures and compliance times, see this material at *regulations.gov* under Docket No. FAA–2025–0003.

Difference Between This Proposed AD and the Referenced Material

The effectivity in Boeing Special Attention Requirements Bulletin 757–25–0320 RB, and Boeing Special Attention Requirements Bulletin 757–25–0321 RB, both dated January 19, 2024, is limited to certain line numbers, which address PSU-mounted video monitors installed in production. However, affected PSU-mounted video monitors may also be installed on airplanes modified in accordance with a supplemental type certificate. The applicability of this proposed AD, therefore, is expanded to specify The Boeing Company Model 757–200 and -300 series model airplanes equipped with PSU-mounted video monitors to ensure that the unsafe condition is adequately addressed in the fleet.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 85 airplanes of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per monitor	Cost on U.S. operators
Replacement (Burrana monitors—airplanes identified in Boeing Special Attention Requirements Bulletin 757–25–0320 RB, dated January 19, 2024).	2 work-hours × $85 per hour = $170, per monitor.	$2,734	$2,904	Up to $3,641,616* (38 airplanes).
Replacement (Panasonic monitors—airplanes identified in Boeing Special Attention Requirements Bulletin 757–25–0321 RB, dated January 19, 2024).	2 work-hours × $85 per hour = $170, per monitor.	$354	$524	Up to $639,804* (37 airplanes).
Replacement (monitors for airplanes not identified in the Boeing service information).	2 work-hours × $85 per hour = $170, per monitor.	Up to $2,734	Up to $2,904	Up to $958,320* (10 airplanes).

*An airplane may have up to 33 monitors.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Would not affect intrastate aviation in Alaska, and

(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

The Boeing Company: Docket No. FAA–2025–0003; Project Identifier AD–2024–00110–T.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by March 3, 2025.

(b) Affected ADs

None.

(c) Applicability

This AD applies to The Boeing Company Model 757–200 and –300 series airplanes, certificated in any category, equipped with passenger service unit (PSU)-mounted video monitors.

(d) Subject

Air Transport Association (ATA) of America Code 25, Equipment/furnishings.

(e) Unsafe Condition

This AD was prompted by a report that some PSU-mounted video monitors became detached from the PSU rails during a hard landing that did not exceed the emergency load requirements for the PSUs. The FAA is issuing this AD to address PSU-mounted video monitors that could become fully detached or be held at an unsafe height, which, if not addressed, could result in injury to passengers and impede passenger and crew egress during emergency evacuation.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

(1) For airplanes identified in Boeing Special Attention Requirements Bulletin 757–25–0320 RB, dated January 19, 2024: Except as specified by paragraph (h) of this AD: At the applicable times specified in the ''Compliance'' paragraph of Boeing Special Attention Requirements Bulletin 757–25–0320 RB, dated January 19, 2024, do all applicable actions identified in, and in accordance with, the Accomplishment Instructions of Boeing Special Attention Requirements Bulletin 757–25–0320 RB, dated January 19, 2024.

Note 1 to paragraph (g)(1): Guidance for accomplishing the actions required by

paragraph (g)(1) of this AD can be found in Boeing Special Attention Service Bulletin 757–25–0320, dated January 19, 2024, which is referred to in Boeing Special Attention Requirements Bulletin 757–25–0320 RB, dated January 19, 2024.

(2) For airplanes identified in Boeing Special Attention Requirements Bulletin 757–25–0321 RB, dated January 19, 2024: Except as specified by paragraph (h) of this AD, at the applicable times specified in the ''Compliance'' paragraph of Boeing Special Attention Requirements Bulletin 757–25–0321 RB, January 19, 2024, do all applicable actions identified in, and in accordance with, the Accomplishment Instructions of Boeing Special Attention Requirements Bulletin 757–25–0321 RB, dated January 19, 2024.

Note 2 to paragraph (g)(2): Guidance for accomplishing the actions required by paragraph (g)(2) of this AD can be found in Boeing Special Attention Service Bulletin 757–25–0321, dated January 19, 2024, which is referred to in Boeing Special Attention Requirements Bulletin 757–25–0321 RB, dated January 19, 2024.

(3) For airplanes not identified in paragraph (g)(1) or (2) of this AD: Within 60 months after the effective date of this AD, replace all PSU-mounted video monitors that do not have secondary retention lanyards with PSU-mounted video monitors that have secondary retention lanyards, using a method approved in accordance with the procedures specified in paragraph (i) of this AD.

(h) Exceptions to Service Information Specifications

(1) Where the Compliance Time columns of the tables in the ''Compliance'' paragraph of Boeing Special Attention Requirements Bulletin 757–25–0320 RB, dated January 19, 2024, refers to the original issue date of Requirements Bulletin 757–25–0320 RB, this AD requires using the effective date of this AD.

(2) Where the Compliance Time columns of the tables in the ''Compliance'' paragraph of Boeing Special Attention Requirements Bulletin 757–25–0321 RB, dated January 19, 2024, refers to the original issue date of Requirements Bulletin 757–25–0321 RB, this AD requires using the effective date of this AD.

(3) Where Boeing Special Attention Requirements Bulletins 757–25–0320 RB and 757–25–0321 RB, both dated January 19, 2024, specify contacting Boeing for alternative installation instructions and doing the installation: This AD requires doing the installation using a method approved in accordance with the procedures specified in paragraph (i) of this AD.

(i) Alternative Methods of Compliance (AMOCs)

(1) The Manager, AIR–520, Continued Operational Safety Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in paragraph (j)(1) of this AD. Information may be emailed to: *AMOC@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(3) An AMOC that provides an acceptable level of safety may be used for any repair, modification, or alteration required by this AD if it is approved by The Boeing Company Organization Designation Authorization (ODA) that has been authorized by the Manager, AIR–520, Continued Operational Safety Branch, FAA, to make those findings. To be approved, the repair method, modification deviation, or alteration deviation must meet the certification basis of the airplane, and the approval must specifically refer to this AD.

(j) Related Information

(1) For more information about this AD, contact Julie Linn, Aviation Safety Engineer, FAA, 2200 South 216th St., Des Moines, WA 98198; phone: 206–231–3584; email: *julie.linn@faa.gov.*

(2) Material identified in this AD that is not incorporated by reference is available at the address specified in paragraph (k)(3) this AD.

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Boeing Special Attention Requirements Bulletin 757–25–0320 RB, dated January 19, 2024.

(ii) Boeing Special Attention Requirements Bulletin 757–25–0321 RB dated January 19, 2024.

(3) For Boeing material identified in this AD, contact Boeing Commercial Airplanes, Attention: Contractual & Data Services (C&DS), 2600 Westminster Blvd., MC 110–SK57, Seal Beach, CA 90740–5600; telephone 562–797–1717; website *myboeingfleet.com.*

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.*

Issued on January 8, 2025.

Suzanne Masterson,

Deputy Director, Integrated Certificate Management Division, Aircraft Certification Service.

14 CFR Part 39

[Docket No. FAA–2025–0005; Project Identifier AD–2024–00646–T]

RIN 2120–AA64

Airworthiness Directives; The Boeing Company Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for certain The Boeing Company Model 787–8, 787–9, and 787–10 airplanes. This proposed AD was prompted by reports of multiple supplier notices of escapement (NOEs) indicating that seat track splice fittings were possibly manufactured with an incorrect titanium alloy material. This proposed AD would require an inspection of seat track splice fittings to determine the material and applicable on-condition actions. The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by March 3, 2025.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2025–0005; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, any comments received, and other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

- For the Boeing material identified in this proposed AD, contact Boeing Commercial Airplanes, Attention: Contractual & Data Services (C&DS), 2600 Westminster Blvd., MC 110–SK57,

Seal Beach, CA 90740–5600; telephone 562–797–1717; website *myboeingfleet.com.*

• You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available at *regulations.gov* under Docket No. FAA–2025–0005.

FOR FURTHER INFORMATION CONTACT: Joseph Hodgin, Aviation Safety Engineer, FAA, 2200 South 216th St., Des Moines, WA 98198; phone: 206–231–3962; email: *Joseph.J.Hodgin@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2025–0005; Project Identifier AD–2024–00646–T'' at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to *regulations.gov,* including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Joseph Hodgin, Aviation Safety Engineer, FAA, 2200 South 216th St., Des Moines, WA 98198; phone: 206–231–3962; email: *Joseph.J.Hodgin@faa.gov.* Any commentary that the FAA receives that is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

The FAA received reports of multiple supplier NOEs indicating that seat track splice fittings were possibly manufactured with an incorrect titanium alloy material. The titanium material that was possibly used is a Grade 1 or 2 commercially pure unalloyed titanium, which has significantly reduced strength, fatigue, and damage tolerance properties compared to the type design Grade 5 Ti-6Al-4V alloy material. This condition, if not addressed, could result in failure of the seat track splice fittings, and could result in serious injury to seated occupants as a result of adverse effects on emergency egress and structural capability to react to emergency landing loads.

FAA's Determination

The FAA is issuing this NPRM after determining that the unsafe condition described previously is likely to exist or develop on other products of the same type design.

Material Incorporated by Reference Under 1 CFR Part 51

The FAA reviewed Boeing Alert Requirements Bulletin B787–81205–SB530086–00 RB, Issue 001, dated October 18, 2024. This material specifies procedures for an X-ray fluorescence spectrometer inspection or a high frequency eddy current inspection of seat track splice fittings to determine the material and applicable on-condition actions. On-condition actions include replacing affected seat track splice fittings with new seat track splice fittings at affected locations.

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Proposed AD Requirements in This NPRM

This proposed AD would require accomplishing the actions specified in the material already described, except for any differences identified as exceptions in the regulatory text of this proposed AD. For information on the procedures and compliance times, see this material at *regulations.gov* under Docket No. FAA–2025–0005.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 37 airplanes of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Inspection	16 work-hours × $85 per hour = $1,360	$0	$1,360	$50,320

The FAA estimates the following costs to do any necessary replacements that would be required based on the results of the proposed inspection. The agency has no way of determining the number of aircraft that might need this replacement:

ON-CONDITION COSTS

Action	Labor cost	Parts cost	Cost per product
Replacement	Up to 20 work-hours × $85 per hour = $1,700	Up to $4,140	Up to $5,840 (per location, up to 20 locations per airplane).

The FAA has included all known costs in its cost estimate. According to the manufacturer, however, some or all of the costs of this proposed AD may be covered under warranty, thereby reducing the cost impact on affected operators.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Would not affect intrastate aviation in Alaska, and

(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

The Boeing Company: Docket No. FAA–2025–0005; Project Identifier AD–2024–00646–T.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by March 3, 2025.

(b) Affected ADs

None.

(c) Applicability

This AD applies to The Boeing Company Model 787–8, 787–9, and 787–10 airplanes, certificated in any category, as identified in Boeing Alert Requirements Bulletin B787–81205–SB530086–00 RB, Issue 001, dated October 18, 2024.

(d) Subject

Air Transport Association (ATA) of America Code 53, Fuselage.

(e) Unsafe Condition

This AD was prompted by reports of multiple supplier notices of escapement (NOEs) indicating that seat track splice fittings were possibly manufactured with an incorrect titanium alloy material. The unsafe condition, if not addressed, could result in failure of the seat track splice fittings, and could result in serious injury to seated occupants as a result of adverse effects on emergency egress and structural capability to react to emergency landing loads.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

Except as specified by paragraph (h) of this AD: At the applicable times specified in the ''Compliance'' paragraph of Boeing Alert Requirements Bulletin B787–81205–SB530086–00 RB, Issue 001, dated October 18, 2024, do all applicable actions identified in, and in accordance with, the Accomplishment Instructions of Boeing Alert Requirements Bulletin B787–81205–SB530086–00 RB, Issue 001, dated October 18, 2024.

Note 1 to paragraph (g): Guidance for accomplishing the actions required by this AD can be found in Boeing Alert Service Bulletin B787–81205–SB530086–00, Issue 001, dated October 18, 2024, which is referred to in Boeing Alert Requirements Bulletin B787–81205–SB530086–00 RB, Issue 001, dated October 18, 2024.

(h) Exceptions to Requirements Bulletin Specifications

Where the Compliance Time column of the table in the ''Compliance'' paragraph of Boeing Alert Requirements Bulletin B787–81205–SB530086–00 RB, Issue 001, dated October 18, 2024, refers to the Issue 001 date of Requirements Bulletin B787–81205–SB530086–00 RB, this AD requires using the effective date of this AD.

(i) Alternative Methods of Compliance (AMOCs)

(1) The Manager, AIR–520, Continued Operational Safety Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in paragraph (j)(1) of this AD. Information may be emailed to: *AMOC@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(3) An AMOC that provides an acceptable level of safety may be used for any repair, modification, or alteration required by this AD if it is approved by The Boeing Company Organization Designation Authorization (ODA) that has been authorized by the Manager, AIR–520, Continued Operational Safety Branch, FAA, to make those findings. To be approved, the repair method, modification deviation, or alteration deviation must meet the certification basis of the airplane, and the approval must specifically refer to this AD.

(j) Related Information

(1) For more information about this AD, contact Joseph Hodgin, Aviation Safety Engineer, FAA, 2200 South 216th St., Des Moines, WA 98198; phone: 206–231–3962; email: *Joseph.J.Hodgin@faa.gov.*

(2) Material identified in this AD that is not incorporated by reference is available at the address specified in paragraph (k)(3) this AD.

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Boeing Alert Requirements Bulletin B787–81205–SB530086–00 RB, Issue 001, dated October 18, 2024.

(ii) [Reserved]

(3) For the material identified in this AD, contact Boeing Commercial Airplanes, Attention: Contractual & Data Services (C&DS), 2600 Westminster Blvd., MC 110–SK57, Seal Beach, CA 90740–5600; telephone 562–797–1717; website *myboeingfleet.com.*

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the

availability of this material at the FAA, call 206–231–3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations,* or email *fr.inspection@nara.gov.*

Issued on January 8, 2025.

Suzanne Masterson,

Deputy Director, Integrated Certificate Management Division, Aircraft Certification Service.

[Docket No. FAA–2025–0006; Project Identifier MCAI–2023–00803–R]

RIN 2120–AA64

Airworthiness Directives; Airbus Helicopters

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for Airbus Helicopters Model AS350B, AS350BA, AS350B1, AS350B2, AS350B3, AS350D, AS355E, AS355F, AS355F1, AS355F2, AS355N, and AS355NP helicopters. This proposed AD was prompted by a report of a sliding door that was locked in the open position detaching from the helicopter during flight. This proposed AD would require modifying certain upper rail rollers, installing a label on each sliding door, and prohibit installing affected upper rail rollers or a door having an affected upper rail roller. These actions are specified in a European Union Aviation Safety Agency (EASA) AD, which is proposed for incorporation by reference. The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this NPRM by March 3, 2025.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* (202) 493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2025–0006; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

- For EASA material identified in this proposed AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; phone: +49 221 8999 000; email: *ADs@easa.europa.eu;* website: *easa.europa.eu.* You may find the EASA material on the EASA website at *ad.easa.europa.eu.*
- You may view this material at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Parkway, Room 6N–321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222–5110. The EASA material is also available at *regulations.gov* under Docket No. FAA–2025–0006.

FOR FURTHER INFORMATION CONTACT: Adam Hein, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone: (316) 946–4116; email: *Adam.Hein@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2025–0006; Project Identifier MCAI–2023–00803–R'' at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to *regulations.gov*, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Adam Hein, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone: (316) 946–4116; email: *Adam.Hein@faa.gov.* Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

EASA, which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2023–0131, dated July 3, 2023 (EASA AD 2023–0131) (also referred to as the MCAI), to correct an unsafe condition on Airbus Helicopters Model AS 350 B, AS 350 D, AS 350 BA, AS 350 BB, AS 350 B1, AS 350 B2, AS 350 B3, AS 355 E, AS 355 F, AS 355 F1, AS 355 F2, AS 355 N, and AS 355 NP helicopters if equipped with a left-hand (LH) and/or right-hand sliding door. The MCAI states that a LH sliding door of a Model AS 350 B3helicopter was lost while flying with the door locked in the open position. Design review determined that the upper rail roller had a single locking device instead of two separate locking devices, which is required for that type of fastener.

This proposed AD would apply to Model AS350B, AS350BA, AS350B1, AS350B2, AS350D, AS355E, AS355F, AS355F1, AS355F2, AS355N, and AS355NP helicopters because they are also affected by this unsafe condition due to design similarity.

The FAA is proposing this AD to address the insufficient upper rail roller locking mechanism of the sliding door. The unsafe condition, if not addressed, could lead to the sliding door detaching from the helicopter during flight, and

subsequent damage to the helicopter and injury to persons on the ground.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2025–0006.

Material Incorporated by Reference Under 1 CFR Part 51

The FAA reviewed EASA AD 2023–0131, which requires modifying affected upper rail rollers and installing a label on each sliding door. EASA AD 2023–0131 also prohibits installing an affected upper rail roller, or a door having an affected upper rail roller installed, on any helicopter. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination

These products have been approved by the aviation authority of another country and are approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA about the unsafe condition described in the MCAI. The FAA is issuing this NPRM after determining that the unsafe condition described previously is likely to exist or develop on other products of these same type designs.

Proposed AD Requirements in This NPRM

This proposed AD would require accomplishing the actions specified in EASA AD 2023–0131, described previously, as incorporated by reference, except for any differences identified as exceptions in the regulatory text of this proposed AD and except as discussed under ''Differences Between This NPRM and the MCAI.''

Explanation of Required Compliance Information

In the FAA's ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use some civil aviation authority (CAA) ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has been coordinating this process with manufacturers and CAAs. As a result, the FAA proposes to incorporate EASA AD 2023–0131 by reference in the FAA final rule. This proposed AD would, therefore, require compliance with EASA AD 2023–0131 in its entirety through that incorporation, except for any differences identified as exceptions in the regulatory text of this proposed AD. Using common terms that are the same as the heading of a particular section in EASA AD 2023–0131 does not mean that operators need comply only with that section. For example, where the AD requirement refers to ''all required actions and compliance times,'' compliance with this AD requirement is not limited to the section titled ''Required Action(s) and Compliance Time(s)'' in EASA AD 2023–0131. Material required by EASA AD 2023–0131 for compliance will be available at *regulations.gov* under Docket No. FAA–2025–0006 after the FAA final rule is published.

Differences Between This NPRM and the MCAI

EASA AD 2023–0131 applies to Model AS350BB helicopters, whereas this proposed AD would not because that model is not FAA-type certificated.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 972 helicopters of U.S. registry. Labor rates are estimated at $85 per work-hour. Based on these numbers, the FAA estimates that operators may incur the following costs in order to comply with this proposed AD.

Modifying the upper rail rollers and installing a label on the sliding doors (up to two doors per helicopter) would take up to 8 work-hours and parts would cost $2,668 for an estimated cost of up to $3,348 per helicopter and $3,254,256 for the U.S. fleet.

The FAA has included all known costs in its cost estimate. According to the manufacturer, however, some of the costs of this proposed AD may be covered under warranty, thereby reducing the cost impact on affected operators.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Would not affect intrastate aviation in Alaska, and

(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

Airbus Helicopters: Docket No. FAA–2025–0006; Project Identifier MCAI–2023–00803–R.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by March 3, 2025.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Airbus Helicopters Model AS350B, AS350BA, AS350B1, AS350B2, AS350B3, AS350D, AS355E, AS355F, AS355F1, AS355F2, AS355N, and AS355NP helicopters, certificated in any category, as identified in European Union Aviation Safety Agency AD 2023–0131, dated July 3, 2023 (EASA AD 2023–0131).

(d) Subject

Joint Aircraft System Component (JASC): Code 5200, Doors.

(e) Unsafe Condition

This AD was prompted by a report of a sliding door that was locked in the open position detaching from the helicopter during flight. The FAA is issuing this AD to address the insufficient upper rail roller locking mechanism of the sliding door. The unsafe condition, if not addressed, could lead to the sliding door detaching from the helicopter during flight, and subsequent damage to the helicopter and injury to persons on the ground.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraphs (h) and (i) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, EASA AD 2023–0131.

(h) Exceptions to EASA AD 2023–0131

(1) Where EASA AD 2023–0131 refers to its effective date, this AD requires using the effective date of this AD.

(2) Where EASA AD 2023–0131 requires compliance in terms of flight hours, this AD requires using hours time-in-service.

(3) Where the service information referenced in EASA AD 2023–0131 specifies to discard parts, this AD requires removing those parts from service.

(4) This AD does not adopt the ''Remarks'' section of EASA AD 2023–0131.

(i) No Reporting Requirement

Although the material referenced in EASA AD 2023–0131 specifies to submit certain information to the manufacturer, this AD does not require that action.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the International Validation Branch, send it to the attention of the person identified in paragraph (k) of this AD. Information may be emailed to: *AMOC@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local Flight Standards District Office/certificate holding district office.

(k) Related Information

For more information about this AD, contact Adam Hein, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone: (316) 946–4116; email: *Adam.Hein@faa.gov.*

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) European Union Aviation Safety Agency (EASA) AD 2023–0131, dated July 3, 2023.

(ii) [Reserved]

(3) For EASA material identified in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; phone: +49 221 8999 000; email: *ADs@easa.europa.eu;* website: *easa.europa.eu.* You may find the EASA material on the EASA website at *ad.easa.europa.eu.*

(4) You may view this material at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Parkway, Room 6N–321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222–5110.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.*

Issued on January 8, 2025.

Steven W. Thompson,

Acting Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2024–2737; Airspace Docket No. 24–ANM–115]

RIN 2120–AA66

Establishment of Class E Airspace at Pine Bluffs Municipal Airport, Pine Bluffs, WY

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to establish Class E airspace area extending upward from 700 feet or more above the surface of the earth at Pine Bluffs Municipal Airport, Pine Bluffs, WY. This action would support the airport's transition from visual flight rules (VFR) to instrument flight rules (IFR) operations.

DATES: Comments must be received on or before March 3, 2025.

ADDRESSES: Send comments identified by FAA Docket No. FAA–2024–2737 and Airspace Docket No. 24–ANM–115 using any of the following methods:

* *Federal eRulemaking Portal:* Go to *www.regulations.gov* and follow the online instructions for sending your comments electronically.

* *Mail:* Send comments to Docket Operations, M–30; U.S. Department of Transportation, 1200 New Jersey Avenue SE, Room W12–140, West Building Ground Floor, Washington, DC 20590–0001.

* *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

* *Fax:* Fax comments to Docket Operations at (202) 493–2251.

Docket: Background documents or comments received may be read at *www.regulations.gov* at any time. Follow the online instructions for accessing the docket or go to the Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FAA Order JO 7400.11J, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *www.faa.gov/air_traffic/publications/.* You may also contact the Rules and Regulations Group, Office of Policy, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783.

FOR FURTHER INFORMATION CONTACT: Keith T. Adams, Federal Aviation Administration, Western Service Center, Operations Support Group, 2200 S 216th Street, Des Moines, WA 98198; telephone (206) 231–2428.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106, describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of the airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority, as it as it would establish Class E airspace to support IFR

operations at Pine Bluffs Municipal Airport, Pine Bluff, WY.

Comments Invited

The FAA invites interested persons to participate in this rulemaking by submitting written comments, data, or views. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. To ensure the docket does not contain duplicate comments, commenters should submit only one time if comments are filed electronically, or commenters should send only one copy of written comments if comments are filed in writing.

The FAA will file in the docket all comments it receives, as well as a report summarizing each substantive public contact with FAA personnel concerning this proposed rulemaking. Before acting on this proposal, the FAA will consider all comments it receives on or before the closing date for comments. The FAA will consider comments filed after the comment period has closed if it is possible to do so without incurring expense or delay. The FAA may change this proposal in light of the comments it receives.

Privacy: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *www.dot.gov/privacy.*

Availability of Rulemaking Documents

An electronic copy of this document may be downloaded through the internet at *www.regulations.gov.* Recently published rulemaking documents can also be accessed through the FAA's web page at *www.faa.gov/air_traffic/publications/airspace_amendments/.*

You may review the public docket containing the proposal, any comments received and any final disposition in person in the Dockets Operations office (see **ADDRESSES** section for address, phone number, and hours of operations). An informal docket may also be examined during normal business hours at the office of the Northwest Mountain Regional Office of the Federal Aviation Administration, Air Traffic Organization, Western Service Center, Operations Support Group, 2200 S 216th Street, Des Moines, WA 98198.

Incorporation by Reference

Class E5 airspace designations are published in paragraph 6005 of FAA Order JO 7400.11, Airspace Designations and Reporting Points, which is incorporated by reference in 14 CFR 71.1 on an annual basis. This document proposes to amend the current version of that order, FAA Order JO 7400.11J, dated July 31, 2024 and effective September 15, 2024. These updates would be published in the next update to FAA Order JO 7400.11. That order is publicly available as listed in the **ADDRESSES** section of this document.

FAA Order JO 7400.11J lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Proposal

The FAA is proposing an amendment to 14 CFR part 71 to establish Class E airspace extending upward from 700 feet or more from the surface of the earth at Pine Bluffs Municipal Airport, Pine Bluffs, WY.

The airport is transitioning from VFR to IFR operations with the development of instrument arrival and departure procedures. Class E airspace should be established within a 7-mile radius of the airport, within 2.1 miles either side of the airport's 090° bearing extending 9.5 mile east, within 2.1 miles either side of the airport's 270° bearing extending 12.2 miles west, and that airspace extending upward from 1,200 feet above the surface within a 30-mile radius from Pine Bluffs Municipal Airport, WY. The establishment of Class E airspace at the airport will provide the containment of IFR operations in a controlled airspace extending upwards from 700 feet to 1,500 feet above the surface of the earth.

Regulatory Notices and Analyses

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures'' prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order JO 7400.11J, Airspace Designations and Reporting Points, dated July 31, 2024, and effective September 15, 2024, is amended as follows:

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

ANM WY E5 Pine Bluffs, WY [New]

Pine Bluffs Municipal Airport, WY
(Lat. 38°57′42″ N, long. 110°13′38″ W)

That airspace extending upward from 700 feet above the surface within a 7-mile radius of the airport, within 2.1 miles either side of the airport's 090° bearing extending 9.5 mile east, within 2.1 miles either side of the airport's 270° bearing extending 12.2 miles west, and that airspace extending upward from 1,200 feet above the surface within a 30-mile radius from Pine Bluffs Municipal Airport, WY.

BILLING CODE 4910–13–P

DEPARTMENT OF THE TREASURY

Alcohol and Tobacco Tax and Trade Bureau

27 CFR Parts 4, 5, and 7

[Docket No. TTB–2025–0003; Notice No. 238]

RIN 1513–AC94

Major Food Allergen Labeling for Wines, Distilled Spirits, and Malt Beverages

AGENCY: Alcohol and Tobacco Tax and Trade Bureau, Treasury.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Alcohol and Tobacco Tax and Trade Bureau (TTB) proposes to require a labeling disclosure of all major food allergens used in the production of alcohol beverages subject to TTB's regulatory authority under the Federal Alcohol Administration Act. Under the proposed regulations, unless an exception applies, labels must declare milk, eggs, fish, Crustacean shellfish, tree nuts, wheat, peanuts, soybeans, and sesame, as well as ingredients that contain protein derived from these foods, if used in the production of the alcohol beverage. TTB proposes a compliance date of 5 years from the date that a final rule resulting from this proposal is published in the **Federal Register**.

DATES: Comments must be received on or before *April 17, 2025.*

ADDRESSES: You may electronically submit comments to TTB on this proposal, and view copies of this document, its supporting materials, and any comments TTB receives on it, within Docket No. TTB–2025–0003 as posted at *https://www.regulations.gov.* A direct link to that docket is available on the TTB website at *https://www.ttb.gov/laws-and-regulations/all-rulemaking* under Notice No. 238. Alternatively, you may submit comments via postal mail to the Director, Regulations and Ruling Division, Alcohol and Tobacco Tax and Trade Bureau, 1310 G Street NW, Box 12, Washington, DC 20005. Please see the Public Participation section of this document for further information on the comments requested regarding this proposal and on the submission, confidentiality, and public disclosure of comments.

FOR FURTHER INFORMATION CONTACT: Curt Eilers, Regulations and Rulings Division, Alcohol and Tobacco Tax and Trade Bureau, 1310 G Street NW, Box 12, Washington, DC 20005; telephone 202–453–1039, ext. 041.

SUPPLEMENTARY INFORMATION: In accordance with 5 U.S.C. 553(b)(4), a summary of this rule may be found at *https://www.regulations.gov/TTB-2025-0003.*

I. Background

On December 16, 2003, the Center for Science in the Public Interest (CSPI) and others petitioned the Alcohol and Tobacco Tax and Trade Bureau (TTB), requesting changes to the alcohol beverage labeling regulations to, among other things, require information about allergens. The following year, Congress enacted the Food Allergen Labeling and Consumer Protection Act of 2004 (FALCPA), which amended the Federal Food, Drug, and Cosmetic Act (FD&C Act) by defining what constitutes a ''major food allergen'' (21 U.S.C. 321(qq)) and requiring the presence of each major food allergen to be declared on the product label using the name of the food source from which the major food allergen is derived.

On July 26, 2006, TTB published an interim rule, T.D. TTB–53 (71 FR 42260), entitled ''Major Food Allergen Labeling for Wines, Distilled Spirits and Malt Beverages,'' which addressed the voluntary labeling of major food allergens used in the production of alcohol beverages. On that same date, TTB published a proposed rule, Notice No. 62 (71 FR 42329), seeking comments on mandatory allergen labeling for alcohol beverages. TTB did not finalize the proposed rule, and mandatory labeling of major food allergens on alcohol beverage labels has not been adopted.

In 2021, TTB received a letter, dated February 24, 2021, from several consumer groups and public health advocates, including CSPI, Alcohol Justice, the American Institute for Cancer Research, Breast Cancer Prevention Partners, the Consumer Federation of America, the National Consumers League, and the U.S. Alcohol Policy Alliance. The letter urged the Secretary of the Treasury to adopt regulations to mandate a standardized label that would include additional information about calories, standard drinks, and advice on moderate drinking from the U.S. Department of Agriculture and U.S. Department of Health and Human Service's *Dietary Guidelines for Americans.* The letter also urged the identification of any major food allergens present in the product and an ingredient declaration that lists each ingredient by its common or usual name.

On February 9, 2022, the Department of the Treasury, in consultation with the Department of Justice and the Federal Trade Commission, released a report entitled ''Competition in the Markets for Beer, Wine, and Spirits'' (Competition Report). The Competition Report was requested by Executive Order 14036, ''Promoting Competition in the American Economy''. One of the Competition Report's findings was that ''[r]egulatory proposals that could serve public health and foster competition by providing information to consumers, such as mandatory allergen, nutrition, and ingredient labeling proposals, have not been implemented.'' [1] The Competition Report contains several recommendations, including that ''TTB should revive or initiate rulemaking proposing ingredient labeling and mandatory information on alcohol content, nutritional content, and appropriate serving sizes.'' [2]

Consistent with the Competition Report's recommendations, and considering the February 2021 letter referenced above, TTB decided to revisit the issue of mandatory allergen labeling for alcohol beverages. In addition, TTB had received several comments in favor of reopening this issue during the public comment period for proposals to modernize alcohol beverage labeling in 2018. See Notice No. 176, 83 FR 60562, November 26, 2018. Because it has been almost 20 years since TTB solicited comments on allergen labeling, TTB published Notice No. 232, which announced two virtual listening sessions, on February 28 and 29, 2024, and the opening of a docket to receive public input on labeling of wine, distilled spirits, and malt beverages with per-serving alcohol and nutritional information, major food allergens, and/or ingredients.

TTB is now publishing for public comment a new proposal that would require allergen labeling for wines, distilled spirits, and malt beverages. TTB is addressing the Competition Report's recommendations and Notice No. 232 comments from the listening sessions on mandatory alcohol facts and ingredient labeling in separate rulemaking projects.

II. TTB's Authority To Regulate Alcohol Beverage Labeling

A. TTB's Statutory Authority Under the FAA Act

TTB is responsible for the administration of the Federal Alcohol Administration Act, 27 U.S.C. 201 *et seq.* (FAA Act), which sets forth

[1] See page 3 of the report, available at *https://home.treasury.gov/system/files/136/Competition-Report.pdf.*

[2] Id. at page 61.

standards for the regulation of the labeling of wine (containing at least 7 percent alcohol by volume), distilled spirits, and malt beverages that will be sold or otherwise introduced in interstate or foreign commerce. (This document generally refers to these products as ''alcohol beverages.'') Section 105(e) of the FAA Act (27 U.S.C. 205(e)) gives the Secretary authority to issue labeling regulations to prevent deception of the consumer, to provide the consumer with ''adequate information'' as to the identity, quality, and alcohol content of the product, and to prohibit false or misleading statements. Additionally, the FAA Act gives the Secretary the authority to prohibit, irrespective of falsity, labeling statements relating to age, manufacturing processes, analyses, guarantees, and scientific or irrelevant matters which are likely to mislead the consumer. In the case of malt beverages, the labeling provisions of the FAA Act apply only if the laws or regulations of the State into which the malt beverages are to be shipped impose similar requirements.

The FAA Act generally requires bottlers and importers to obtain a certificate of label approval (COLA) from TTB prior to bottling wine, distilled spirits, or malt beverages for introduction into interstate commerce, or removing alcohol beverages from customs custody, in bottles, for sale or any other commercial purpose. The law provides that COLAs are to be issued in such manner and form as the Secretary shall prescribe by regulations.

TTB administers the FAA Act provisions pursuant to section 1111(d) of the Homeland Security Act of 2002, codified at 6 U.S.C. 531(d). In addition, the Secretary of the Treasury has delegated certain administrative and enforcement authorities to TTB through Treasury Order 120–01.

Current TTB regulations do not require the disclosure of ingredients or major food allergens on alcohol beverage labels. However, as explained in the next section, labels must disclose the presence of FD&C Yellow No. 5, cochineal extract or carmine, sulfites, and aspartame for health-related reasons. A health warning statement applicable to all alcohol beverages containing 0.5 percent or more alcohol by volume is also required by the Alcoholic Beverage Labeling Act of 1988, codified at 27 U.S.C. 213–219 and 219a and implemented in the TTB regulations at 27 CFR part 16.

B. Current Ingredient Disclosures on Alcohol Beverage Labels

TTB's predecessor agency, the Bureau of Alcohol, Tobacco, and Firearms (ATF), proposed on several occasions to adopt mandatory ingredient disclosure requirements for alcohol beverages. In each case, ATF ultimately decided not to adopt full ingredient labeling requirements. (See Notice No. 41, 70 FR 22274, April 29, 2005, for a more complete history of those ingredient labeling regulatory initiatives.)

In 1980, ATF published regulations that required ingredient labeling for alcohol beverages, with a delayed effective date. See T.D. ATF–66 (45 FR 40538, June 13, 1980). ATF subsequently rescinded those regulations before they went into effect. See T.D. ATF–94 (46 FR 55093, November 6, 1981). CSPI and others challenged this action in court. ATF subsequently undertook a new round of rulemaking, and issued another final rule, T.D. ATF–150 (48 FR 45549, October 6, 1983), which rescinded ingredient labeling but mandated the disclosure of one ingredient, FD&C Yellow No. 5, on alcohol beverage labels. In the preamble to T.D. ATF–150, ATF stated that there was ''no clear evidence in the record that any other ingredient besides FD&C Yellow No. 5 poses any special health problem. The Department will look at the necessity of mandatory labeling of other ingredients on a case-by-case basis through its own rulemaking initiative, or on the basis of petitions for rulemaking. . . .'' Ultimately, the D.C. Circuit Court of Appeals upheld ATF's actions in rescinding mandatory ingredient labeling in favor of a policy that would require the agency to consider the necessity of mandatory labeling of specific ingredients on a case-by-case basis. See *Center for Science in the Public Interest* v. *Department of the Treasury,* 797 F.2d 995, 1004 (D.C. Cir. 1986).

Consistent with that case-by-case review policy, ATF subsequently undertook rulemaking that resulted in the issuance of regulations requiring the disclosure on labels of sulfites in alcohol beverages (T.D. ATF–236, 51 FR 34706, September 30, 1986) because it was determined that the presence of undeclared sulfites in alcohol beverages posed a recognized health problem to sulfite-sensitive individuals. See 27 CFR 4.32, 5.63, and 7.63.

In 1987, ATF entered a Memorandum of Understanding (MOU) with the U.S. Food and Drug Administration (FDA) which continues in effect. See Notice No. 648 (52 FR 45502, November 30, 1987). The MOU states that ATF would initiate rulemaking proceedings to promulgate labeling regulations for alcohol beverages when FDA determined that the presence of an ingredient in food products, including alcohol beverages, posed a recognized public health problem and that the ingredient must be identified on a food product label.

Pursuant to the policies set forth in the MOU, and based on FDA determinations as reflected in its regulations, ATF, and later TTB, subsequently engaged in rulemaking that resulted in regulations requiring a declaration on labels when aspartame is used in the production of malt beverages (T.D. ATF–347, 58 FR 44131, August 19, 1993) and distilled spirits (T.D. TTB–176, 87 FR 7526, February 9, 2022). The following statement must appear in capital letters, separate and apart from all other information: ''PHENYLKETONURICS: CONTAINS PHENYLALANINE.'' [3] On April 16, 2012, TTB amended its regulations to require alcohol beverage labels to disclose the presence of cochineal extract and carmine so consumers who are allergic to these color additives would be able to identify and thus avoid alcohol beverage products that contain them. See T.D. TTB–103 (77 FR 22485, April 16, 2012). See also 27 CFR 4.32, 5.63, and 7.63.

C. Enactment of FALCPA

In 2004, Congress enacted the Food Allergen Labeling and Consumer Protection Act of 2004 (FALCPA). FALCPA amended the Federal Food, Drug and Cosmetic Act (FD&C Act) to require food labels to declare the presence of each major food allergen using the name of the food source from which the major food allergen is derived. For example, instead of merely listing ''semolina,'' the label must also list ''wheat,'' and instead of merely listing ''sodium casein,'' the label must also list ''milk.'' The 2004 FALCPA amendments defined ''major food allergens'' as milk, egg, fish, Crustacean shellfish, tree nuts, wheat, peanuts, and soybeans, as well as most ingredients [4]

[3] The evidence FDA considered showed a need to alert certain individuals with specific medical conditions to the presence of phenylalanine in products containing aspartame. This statement is directed towards individuals with Phenylketonuria (PKU), an inherited disorder of the metabolism of phenylalanine, who need to carefully restrict their phenylalanine intake.

[4] As explained further in this document, FALCPA provides exemptions for any highly refined oil derived from a major food allergen and any ingredient derived from such a highly refined oil, and for food ingredients that are exempt from major food allergen labeling requirements pursuant to a

containing proteins derived from these foods.

The FALCPA amendments provide two ways for a manufacturer to disclose major food allergens on the label:

- The label can show the name of the food source from which the major food allergen is derived within parentheses in the ingredient list, for example, ''Ingredients: Water, wheat, whey (milk), albumen (eggs), and peanuts.''
- The label can list the name of the food source from which the allergen is derived in a ''Contains'' statement after, or adjacent to, an ingredient list, for example: ''Ingredients: Water, sugar, whey, and albumen. Contains Milk and egg.''

The label can also declare the allergen in the ingredient list as well as in a ''Contains'' statement but when this occurs, the ''Contains'' statement must be complete, which means that the ''Contains'' statement must include all the major food allergens in the product. The allergen labeling requirements in FALCPA apply to any packaged FDA-regulated food, as that term is defined in section 201(f) of the FD&C Act, other than raw agricultural commodities. However, the FAA Act assigns TTB jurisdiction to regulate the labeling of wine, distilled spirits, and malt beverages. See *Brown-Forman Distillers Corp.* v. *Mathews,* 435 F. Supp. 5 (W.D. Ky. 1976) and 1987 MOU with FDA.

In its report on FALCPA, the House of Representatives Committee on Energy and Commerce recognized that FALCPA does not apply to alcohol beverages regulated by TTB under the FAA Act and called for TTB to work with FDA to promulgate appropriate allergen labeling regulations, consistent with the 1987 MOU with FDA. The committee report accompanying FALCPA stated:

> The Committee expects, consistent with the November 30, 1987 Memorandum of Understanding, that the Alcohol and Tobacco Tax and Trade Bureau (TTB) of the Department of Treasury will pursuant to the Federal Alcohol Administration Act determine how, as appropriate, to apply allergen labeling of beverage alcohol products and the labeling requirements for those products. The Committee expects that the TTB and the FDA will work together in promulgation of allergen regulations, with respect to those products.

H.R. Rep. No. 608, 108th Cong., 2d Sess., at 3 (2004) (hereafter ''House committee report''). Congress thus recognized TTB's longstanding policy of consulting with FDA in determining what ingredients in alcohol beverages should be disclosed on labels and indicated that TTB should issue appropriate allergen regulations for alcohol beverage products, pursuant to the policies expressed in the MOU with FDA and the authority of the FAA Act.

Consistent with the expectations expressed in the House committee report, TTB consulted with FDA prior to issuing this proposed rule. However, TTB's legal authority to issue regulations on allergen labeling of alcohol beverages is based on the FAA Act, and thus differs in some respects from the requirements of FALCPA. Accordingly, this proposed rule reflects TTB's interpretation of its authority under the FAA Act, as informed by the language in the House committee report.

The proposed regulations do not necessarily represent the views of FDA regarding allergen labeling or the requirements of FALCPA. One of the key differences between the food labeling regulations implemented by FDA and the alcohol beverage labeling regulations implemented by TTB is that the TTB regulations currently do not require the disclosure of all ingredients on labels. As explained later in this document, this is especially important because there are many allergens other than the major food allergens identified in FALCPA.

III. Rulemaking History

A. 2005 Advance Notice of Proposed Rulemaking

Consistent with the FALCPA House committee report, on April 29, 2005, TTB published in the **Federal Register** (70 FR 22274) Notice No. 41, an advance notice of proposed rulemaking (ANPRM) entitled ''Labeling and Advertising of Wines, Distilled Spirits and Malt Beverages; Request for Public Comment.'' Notice No. 41 sought public comment on a wide range of alcohol beverage labeling and advertising issues to help TTB determine what regulatory changes in alcohol beverage labeling and advertising requirements, if any, TTB should propose in future rulemaking documents. These included calorie and carbohydrate claims, ''Serving Facts'' or ''Alcohol Facts'' statements, ingredient labeling, and allergen labeling. TTB invited comments on specific issues related to allergen labeling, including:

- Whether TTB regulations should require allergen labeling to be part of or adjacent to a list of ingredients, similar to the FALCPA requirements;
- Whether an allergen must be labeled in an allergen statement even when the allergen name already appears in the product name;
- How processing or fining agents should be labeled;
- Whether TTB should consider threshold levels in allergen labeling;
- What costs industry might incur from new labeling requirements; and
- How consumers might benefit from allergen labeling.

TTB also invited submission of any other relevant information about allergen labeling.

TTB received over 19,000 comments in response to the ANPRM, approximately 50 of which specifically addressed the subject of allergen labeling. Of those, the vast majority favored mandatory labeling of the major food allergens. Industry members, including major trade associations, as well as consumer and public health advocates commented in support of major food allergen labeling. Although commenters took different positions on some of the specific issues TTB sought comment on in the ANPRM, only a few comments questioned the usefulness of requiring allergen information on alcohol beverage labels.

B. 2006 Interim Rule on Voluntary Allergen Labeling

While TTB is not reproposing its 2006 interim regulations which established standards for voluntary labeling of major allergens, there are similarities in this proposal, such as the procedures for obtaining an exemption, that warrant a brief summary of the 2006 regulations. Under the interim regulations, producers, bottlers, and importers of wines, distilled spirits, and malt beverages may voluntarily declare on their labels the presence of milk, eggs, fish, Crustacean shellfish, tree nuts, wheat, peanuts, and soybeans, as well as ingredients that contain protein derived from these foods. However, if industry members choose to disclose allergens, the interim regulations set forth mandatory rules on how to undertake those disclosures—unless one of three exceptions applies.

Two of these exceptions from major food allergen labeling are based on FALCPA's definition of the term ''major food allergen,'' which excludes both highly refined oil and food ingredients exempt from allergen labeling under the FDA procedures at 21 U.S.C. 343(w)(6) and (7). The third is an exemption through a TTB petition process created by the interim regulations. All three are described in the following paragraphs.

The original FALCPA definition of ''major food allergen'' excluded any highly refined oil derived from one of the eight foods or food groups listed in

---

petition for exemption approved by FDA under 21 U.S.C. 343(w)(6) or pursuant to a notice submitted to FDA under 21 U.S.C. 343(w)(7), provided that the food ingredient meets the terms or conditions, if any, specified for that exemption.

that definition and any ingredient derived from such highly refined oil.[5] TTB included this as an exception from the definition of a major food allergen in the interim regulations.

The second FALCPA exclusion from the definition of ''major food allergen'' arises from two processes FALCPA added to the FD&C Act at 21 U.S.C. 343(w)(6) and (7), by which any person may obtain an exemption from the allergen labeling requirements imposed by the statute. Subsection (w)(6) allows any person to petition the Secretary of Health and Human Services to exempt a food ingredient from the allergen labeling requirements. Under its delegated authority, FDA performs the function of the Secretary in this area. In this situation, the burden is on the petitioner to provide scientific evidence (including the analytical method used to produce the evidence) that demonstrates that the food ingredient, as derived by the method specified in the petition, does not cause an allergic response that poses a risk to human health. FDA must approve or deny any such petition within 180 days of receipt, or the petition will be deemed denied, unless an extension is mutually agreed upon by FDA and the petitioner.

Subsection (w)(7) allows any person to file a notification containing scientific evidence demonstrating that a food ingredient ''does not contain allergenic protein.'' The scientific evidence must include the analytical method used to produce the evidence that the food ingredient, as derived by the method specified in the notification, does not contain allergenic protein. Alternatively, the notification may contain a determination from FDA under a premarket approval or notification program provided for in section 409 of the FD&C Act (21 U.S.C. 348) that the food ingredient does not cause an allergic response that poses a risk to human health. FDA has 90 days to object to a notification. Absent an objection, the food ingredient may be introduced or delivered for introduction into interstate commerce as a food ingredient that is not a major food allergen.

Many ingredients and food additives used in the production of foods regulated by FDA are also used in the production of alcohol beverages regulated by TTB. Accordingly, the interim regulations included in the definition of the term ''major food allergen'' an exception for uses of food ingredients that are exempt pursuant to 21 U.S.C. 343(w)(6) or (7) discussed above. Alcohol beverage industry members also must establish that the proposed use of the ingredient is consistent with any conditions of use in the FD&C Act exemption for the ingredient.

As noted above, the interim regulations' third exception from allergen labeling is through a TTB petition process. TTB recognized that major food allergens are used in alcohol beverage production in ways that may differ from the way they are used in the production of foods regulated by FDA. For this reason, the interim regulations refer to an exception for a product covered by a petition for exemption approved by TTB. See 27 CFR 4.32a–b, 5.82–5.83, and 7.82–7.83. A petition may pertain to the use of a major food allergen in the production of one specific alcohol beverage product or it may pertain to a class of products using a particular process involving a major food allergen.

The TTB petition process is like that of the petition and notification processes provided for at 21 U.S.C. 343(w)(6) and (7), except that the TTB petition procedure focuses on finished products instead of ingredients. The TTB petition process may be used:

- When it is asserted that the product or class of products, as derived by the method specified in the petition, does not cause an allergic response that poses a risk to human health; or
- When it is asserted that the product or class of products, as derived by the method specified in the petition, does not contain allergenic protein, even though a major food allergen was used in production.

The interim TTB regulations provide for only a petition procedure, rather than both the petition procedure and the notification procedure provided for in the FALCPA amendments to the FD&C Act. In addition, the interim regulations provide that if TTB does not approve or deny the petition for exemption within 180 days of receipt, the petition is deemed denied, unless an extension of time is mutually agreed upon by TTB and the petitioner. TTB's petition procedure is therefore like the petition procedure in 21 U.S.C. 343(w)(6) in that both procedures place the burden on the petitioner to provide evidence in support of the exemption and give the agency 180 days to respond.

The regulations also provide that a determination under this section constitutes a final agency action and that even though a petition is deemed denied because no action was taken within the 180-day period, the petitioner may resubmit the petition at any time. A resubmitted petition will be treated as a new petition.

C. 2006 Proposed Rule on Mandatory Allergen Labeling

As noted above, on the same date that TTB published interim regulations on the voluntary labeling of major food allergens, the agency also published Notice No. 62 (71 FR 42329 July 26, 2006), proposing to adopt mandatory alcohol beverage labeling requirements when one or more major food allergens, or ingredients derived from such allergens, are used in the production of the alcohol beverage. The proposed regulations were almost identical to those in the interim rule, except where necessary to note that major food allergen labeling would be mandatory. The proposed regulations set forth the same procedures for petitioning for an exemption from allergen labeling.

TTB received 51 comments in response to Notice No. 62. While most commenters were generally supportive of mandatory allergen labeling, concerns were raised about various implementation issues, including the absence of thresholds for the testing of finished alcohol beverages to determine if the products contained major food allergens; whether distillation should be recognized as a process that removed allergenic proteins; and the treatment of fining agents or processing aids, such as eggs, used in the production of alcohol beverages and then filtered out so that only trace amounts of the major food allergen remained in the finished product. While TTB did not finalize the 2006 proposed rule on mandatory allergen labeling, the interim regulations providing for voluntary allergen labeling remain in effect.

IV. Reasons for Issuing a New Notice on Mandatory Allergen Labeling

A. Comments in Response to Notice No. 176

On November 26, 2018, TTB published in the **Federal Register** Notice No. 176 (83 FR 60562), ''Modernization of the Labeling and Advertising Regulations for Wine, Distilled Spirits, and Malt Beverages,'' which sought comments on the modernization of the labeling regulations, but specifically stated that it would not address issues such as ingredient or allergen labeling. Nonetheless, TTB received several comments critical of that omission. Some of these comments specifically addressed mandatory allergen labeling.

[5] On April 23, 2021, the President signed the Food Allergy Safety, Treatment, Education, and Research (FASTER) Act into law, declaring sesame as the ninth major food allergen. Accordingly, there are now nine major food allergens described in 21 U.S.C. 321(qq).

On February 22, 2019, CSPI, the Consumer Federation of America, and the National Consumers League commented on Notice No. 176 in a letter directed to the Secretary of the Treasury. The comment stated that while the consumer organizations supported the modernization of the labeling regulations, Notice No. 176 ''falls dramatically short of what is needed to truly 'modernize' alcohol labeling by failing to require uniform disclosure of key information—alcohol content, serving size, calories, ingredients, and allergen information—that consumers need to make informed choices.''

The comment stated that ''TTB has similarly failed to follow through on protections for consumers with food allergies. Disclosure of allergen information can have life-and-death consequences for some consumers, a harsh reality that led to passage of [FALCPA], which requires allergen labeling for FDA-regulated foods and beverages.'' The comment questioned why TTB had issued only an interim rule on voluntary allergen labeling, given that in its rulemaking, TTB noted that the major trade associations had expressed support for mandatory labeling of major food allergens. The comment suggested that the voluntary disclosure allowed by the interim rule ''creates a patchwork system that leaves consumers guessing. It may actually undermine public health to the extent that consumers with allergies may assume that an alcoholic beverage is safe to drink if its label has no allergen content declaration, when in fact the manufacturer simply has not bothered to label allergens that may be present.''

The Brewers Association also urged TTB to adopt mandatory allergen labeling, stating that ''the allergen disclosures required by FALCPA should be included in the mandatory information on malt beverage labels.'' The comment also stated that if TTB did not address allergen labeling in this rulemaking, the issue warranted a separate rulemaking in the future. On the other hand, the Distilled Spirits Council of the United States (DISCUS) stated that it supported the proposal to maintain the existing rule on voluntary allergen labeling and suggested that ''TTB should continue to point to FDA as the lead federal agency with regard to allergens.''

B. Letter From Public Health Advocates (2021 CSPI Letter)

On February 24, 2021, a letter was submitted on behalf of CSPI, the Consumer Federation of America, the National Consumers League, Alcohol Justice, the American Institute for Cancer Research, Breast Cancer Prevention Partners, and the U.S. Alcohol Policy Alliance, urging the Secretary to adopt regulations to mandate alcohol content statements and a standardized Serving Facts label on all wine, distilled spirits, and malt beverage products regulated under the FAA Act. The letter also urged the adoption of regulations mandating an ingredient declaration that lists each ingredient by its common or usual name and identifies any major food allergens present in the product.

C. Treasury Report on Competition in the Markets for Beer, Wine, and Spirits

As noted above, on February 9, 2022, the Department of the Treasury, in consultation with the Department of Justice and the Federal Trade Commission, released a report on competition in the markets for alcohol beverages. One of the Competition Report's findings was that ''[r]egulatory proposals that could serve public health and foster competition by providing information to consumers, such as mandatory allergen, nutrition, and ingredient labeling proposals, have not been implemented.'' [6] The Competition Report made some labeling recommendations, including a recommendation that TTB ''should revive or initiate rulemaking proposing ingredient labeling and mandatory information on alcohol content, nutritional content, and appropriate serving sizes.'' [7]

D. 2024 Virtual Public Listening Sessions

In light of the Competition Report, TTB announced in the Spring 2022 Unified Agenda of Federal Regulatory and Deregulatory Actions that it would publish an NPRM on possible changes to its regulations related to allergen labeling for alcohol beverages. Executive Order 14094, ''Modernizing Regulatory Review,'' was subsequently published on April 6, 2023, directing agencies, to the extent practicable and consistent with applicable laws, to provide opportunities for public participation designed to promote equitable and meaningful participation by a range of interested or affected parties to inform regulatory actions.

On January 31, 2024, TTB issued Notice No. 232, which announced two virtual listening sessions and the opening of a public docket to receive written comments on the labeling of alcohol beverages with per-serving alcohol and nutritional information, major food allergens, and/or ingredients. Consistent with Executive Order 14094, TTB sought input from a wide range of stakeholders, including those who may not usually comment on its proposals, to inform rulemaking, particularly given the broad implications of these issues. TTB also posed specific questions. Those related to major food allergens included whether consumers believe that they are adequately informed by information currently provided on alcohol beverage labels and whether listing major food allergens would be important information for consumers in making purchasing or consumption decisions. TTB also asked whether requiring additional information about major food allergens, alcohol or nutritional information, and ingredients on labels would be expected to increase the cost of products, and whether there are alternative ways of providing the information, for example by allowing information to be provided through a website using a quick response code (QR code) or website address on the label.

The listening sessions, held on February 28 and 29, 2024, engaged consumers, public health stakeholders, and industry members representing businesses of different sizes. Approximately 700 registrants attended the two virtual sessions, including 47 different speakers. In addition to the oral comments received during the listening sessions, TTB received 5,159 written comments in response to Notice No. 232.

The vast majority of the comments TTB received on allergens either favored mandatory labeling of major food allergens or did not express opposition to it. This included consumer and public health stakeholders as well as industry members and trade associations representing the alcohol beverage industry. However, some small sized producers opposed any new regulatory requirements. For example, Carriage House Vineyards and Travelers Cellar commented that ''The proposed changes regarding nutritional information, major food allergens and ingredients would significantly and negatively impact our small farm winery. . . . In our years of operation, consumers have shown no interest, nor have to this point inquired on any of the items that the proposal is looking to add.''

Consumers and public health stakeholders stated that major food allergen disclosures are necessary due to the implications for individuals with

[6] See page 3 of the Competition Report, available at *https://home.treasury.gov/system/files/136/Competition-Report.pdf.*

[7] Id. at page 61.

such allergies. TTB received substantially identical comments from 4,724 individuals supporting allergen disclosures, as well as other disclosures for alcohol content, serving size, nutritional information, and ingredients, which stated that ''For the 33 million Americans with food allergies, knowing what is in a product from ingredient and allergen labeling can be a matter of life or death.'' Other individual commenters stressed the uncertainty they face without mandatory allergen disclosures. For example, one individual commented that ''Without this information on alcoholic beverages, consuming them is like playing a lottery—I never know if a product may contain an ingredient I need to avoid until it's too late.'' The Centers for Disease Control and Prevention commented that ''Accurate labeling for major food allergens is crucial information to ensure safety for the consumer.'' AllergyStrong commented that ''The majority of people are not aware alcohol falls outside [FALCPA]—mistakenly believing that any consumable product is accurately labeled for allergens.'' CSPI stated that ''TTB should follow the lead of FDA and other countries and require ingredient and allergen labeling.''

Some commenters expressed a preference that mandatory allergen labeling for alcohol beverages be consistent with FDA requirements. The Asthma and Allergy Foundation of America stated that ''To the extent possible, labeling information should be displayed on alcoholic beverages similar to labeling on FDA-regulated foods. Consumers with food allergies are accustomed to FDA labeling, and would be able to easily transition to a similar model for checking the safety of alcoholic beverages . . .'' The Brewers Association commented that ''TTB should strive to make [major allergen] disclosures as consistent as possible with FDA disclosure rules under the FALCPA and its implementing regulations and guidance documents, while taking into account the different underlying labeling rules that apply to malt and other alcohol beverages versus most foods.''

Other commenters discussed the effect of distillation on allergenic ingredients used in the production of alcohol beverages, suggesting that any mandatory allergen disclosures should be based on the product post-distillation rather than the raw materials prior to distillation. DISCUS stated that ''Scientifically-based major food allergen labeling . . . that properly identifies products containing allergenic protein capable of causing an adverse reaction—can provide beneficial information to consumers with allergies,'' but also noted that distillation removes the proteins that cause allergic reactions and thus, ''any new allergen labeling regulations need to be focused on the post distillation final product.'' The Scotch Whisky Association commented that ''The distillation process completely transforms the raw materials used to produce a distilled spirit, so they are undetectable in the final product. Therefore, distillers should only list the elements and ingredients that have been added to the final product. Otherwise, consumers could be misled into thinking that they would be affected by the properties of the raw material used in the distillation process.''

Many of the comments TTB received from industry members and their trade associations advocated for the use of QR codes to satisfy new labeling requirements generally. However, among those who spoke about major food allergens specifically, some commenters otherwise in favor of QR codes still supported allergen declarations on the product's label. The American Distilled Spirits Alliance (ADSA) commented that ''while certain important information to consumers, including alcohol content and allergen information, may efficiently and effectively be included on a physical product label, more detailed information and information that is subject to periodic modification or update over time may be better communicated through a QR code. . . .'' Similarly, the National Association of Beverage Importers commented that ''The presence of a major allergen is also such an important piece of information'' that it ''must be available to all consumers and appear on a label on the bottle or container.''

Comments from industry also noted concerns about costs associated with new labeling requirements generally, including costs to conduct laboratory testing. While commenters did not specifically refer to costs of laboratory analysis related to mandatory labeling of major food allergens, ADSA commented that ''further discussion must be had around testing, requirements for good manufacturing practices and other safety protocols.''

E. International Developments

TTB participates in the Codex Alimentarius Commission by working with the FDA and the U.S. Codex Office at the U.S. Department of Agriculture. The Commission, which was established by the Food and Agriculture Organization and the World Health Organization, publishes the Codex Alimentarius, or ''Food Code,'' a collection of standards designed to protect the health of consumers and ensure fair practices in food trade. In recent years, the Codex Committee on Food Labelling has been discussing food allergen standards, allergen labeling provisions, and a possible framework for evaluating exemptions for food allergens. TTB is actively monitoring these developments and other Codex Alimentarius work related to alcohol labeling.

V. Proposed Regulatory Changes

For the reasons stated above, TTB is proposing rules for the mandatory labeling of major food allergens used in the production of alcohol beverages. Consistent with the FALCPA House committee report and TTB's statutory mandate under the FAA Act to promulgate regulations ensuring that consumers receive adequate information about the identity and quality of alcohol beverages, TTB believes that alcohol beverage labels should provide consumers with sufficient information about the use of major food allergens in the production of alcohol beverages so that consumers with food allergies may make an informed decision as to whether consumption of a particular beverage may pose a risk of an allergic reaction.

Existing regulations in 27 CFR 4.32, 5.63, and 7.63 list the mandatory information that must appear on labels of wine, distilled spirits, and malt beverages, respectively. TTB proposes to amend these sections to include mandatory allergen labeling requirements, with a cross-reference to the proposed new regulations that provide more detail about the mandatory allergen labeling requirements.

A. Labeling of Major Food Allergens and other Mandatory Disclosures

1. Wording of the Labeling Statement and Other Mandatory Disclosures

TTB is proposing that the mandatory food allergen statement consist of the words ''Contains Major Food Allergen(s)'' followed by a colon and the name of the food source(s) from which each major food allergen is derived, for example, ''Contains Major Food Allergen: milk'' or ''Contains Major Food Allergens: wheat and milk.'' This wording differs from the current voluntary allergen statement and is intended to make clear that the statement only relates to the nine major

food allergens [8] and does not include other, non-major food allergens, or other ingredients that may cause adverse reactions in some individuals.[9] TTB specifically seeks comments below on this wording and other related issues as described in this section.

TTB recognizes that changes in the wording or format of allergen disclosures may be warranted if TTB also requires ingredient disclosures. For example, if TTB requires both, aligning such labeling with food labeling may be warranted. Unlike foods labeled under FDA regulations, alcohol beverages subject to TTB's labeling rules do not currently require the listing of ingredients on labels. TTB is conducting a separate rulemaking on this issue and is not proposing to adopt mandatory ingredient labeling in this document. For food products, FDA allows major food allergens to be listed within the ingredient statement by their common or usual name, or in a separate ''contains'' statement. See 21 U.S.C. 343(w)(1). If TTB adopts mandatory ingredient labeling, allowing a major food allergen disclosure within such a statement, or allowing the statement to simply say ''contains'' instead of ''Contains Major Food Allergen(s),'' may be warranted. TTB seeks comment on these wording and format issues and the issues discussed below.

Under current TTB regulations, certain ingredients that are not ''major food allergens'' but nevertheless pose a recognized public health problem must be disclosed on labels. Currently this includes FD&C Yellow No. 5, cochineal extract or carmine, sulfites, and aspartame.[10] See 27 CFR 4.32, 5.63, and 7.63. If an alcohol beverage contains any of the first four of these ingredients, the label must include a statement to that effect. While examples of such statements are provided, such as ''FD&C Yellow No. 5'' or ''contains carmine,'' the specific wording of the disclosure is left to the industry member. In the case of aspartame, the following statement, in capital letters, must appear, separate and apart from all other information: ''PHENYLKETONURICS: CONTAINS PHENYLALANINE.'' Sometimes industry members combine such disclosures, along with voluntary disclosures of other ingredients, for example, ''contains: cochineal extract and sulfites,'' or ''contains: sulfites and vanilla beans.''

In this notice of proposed rulemaking, TTB is currently only proposing to change its regulations to require the mandatory major food allergen statement ''Contains Major Food Allergen(s): . . .'', which would be separate from and not affect other required disclosures.[11] However, TTB solicits comments on the wording of the proposed mandatory major food allergen statement and the possible inclusion of other mandatory ingredient disclosures. Specifically, TTB solicits comments on the following:

1. Should TTB adopt the proposed wording of the major food allergen statement (''Contains major food allergen(s)'' followed by a colon and the name of the food source from which each major food allergen is derived)? Alternately, should TTB require or allow alternative formats, including the following:

- ''Contains'' followed by a colon and the name of the food source from which each major food allergen is derived; or
- A heading such as ''Major Food Allergen Information'' followed by ''Contains:'' or other language and the name of the food source from which each major food allergen is derived.

2. Should TTB allow the inclusion of major food allergens within a voluntary ingredient statement on labels as an alternative to a separate major food allergen statement?

3. If mandatory ingredient labeling is ultimately adopted, should TTB allow the inclusion of major food allergens in the list of ingredients as an alternative to a separate major food allergen statement? If mandatory ingredient labeling is ultimately adopted, should TTB use the ''Contains'' statement for major food allergens, consistent with FDA's approach? Should TTB limit the use of the ''Contains'' statement only for major food allergens?

4. Should other ingredients that are required to be disclosed under current TTB regulations (FD&C Yellow No. 5, cochineal extract or carmine, sulfites, and aspartame) be required to be listed in one statement on the label? If so, should the other ingredients be included in a ''Contains'' statement that includes the major food allergens? (For example, ''Contains egg and sulfites''). Or should the major food allergens be identified as such, and the other ingredients listed separately (for example, ''Contains Major Food Allergen: egg. Contains sulfites'')? Should another statement be used for ingredients that are required to be disclosed under current TTB regulations (FD&C Yellow No. 5, cochineal extract or carmine, sulfites, and aspartame) to differentiate from the ''Contains'' statement for major food allergens?

5. Would requiring all mandatory disclosures to be in one place on the label, including the proposed major food allergen statement, make it easier for consumers to find this information? Would such a requirement impose additional costs or regulatory burdens on industry members as compared to allowing the mandatory disclosures to appear separately?

6. Should TTB mandate specific placement, type size, and presentation requirements for major allergen labeling statements in addition to the requirements already applicable to all mandatory information on alcohol beverage labels? For example, should the required allergen disclosure statement be set off by a box? Or, to the extent practicable, should TTB mandate formatting consistent with FDA requirements for major allergen labeling?

2. Definition of Major Food Allergen

The definition of the term ''major food allergen'' is consistent with the statutory definition in the FD&C Act, as amended by FALCPA and the FASTER Act. TTB is proposing the same definition used by FALCPA, the FASTER Act, and FDA for consistency in labeling disclosures of major food allergens across products regulated by TTB and FDA. Thus, the proposed regulations define the term ''major food allergen'' as any of the following: ''Milk, egg, fish (for example, bass, flounder, or cod), Crustacean shellfish (for example, crab, lobster, or shrimp), tree nuts (for example, almonds, pecans, or walnuts), wheat, peanuts, soybeans, and sesame.'' The term as defined also includes any food ingredient that contains protein derived from one of these nine foods or food groups, subject to certain exceptions explained below in Section V.B.

It should be noted that, consistent with guidance provided by FDA to the food industry, the proposed regulations allow the terms ''soybean,'' ''soy,'' and ''soya'' as synonyms for the term

[8] As noted previously, the FASTER Act of 2021 revised 21 U.S.C. 321(gg) such that there are now nine major food allergens: milk, eggs, fish, Crustacean shellfish, tree nuts, wheat, peanuts, soybeans, and sesame.

[9] In a draft guidance published in April 2022, FDA notes the distinction between food allergies and other food intolerances, as well as the existence of more than 160 known food allergens, including the 9 currently identified major food allergens. See Evaluating the Public Health Importance of Food Allergens Other Than the Major Food Allergens Listed in the Federal Food, Drug, and Cosmetic Act: Guidance for FDA Staff and Stakeholders (Draft), available at *https://www.fda.gov/regulatory-information/search-fda-guidance-documents/draft-guidance-fda-staff-and-stakeholders-evaluating-public-health-importance-food-allergens-other.*

[10] In the case of sulfites, the disclosure is required if the product contains ''10 or more parts per million of sulfur dioxide or other sulfiting agent(s) measured as total sulfur dioxide.''

[11] For example, ''Contains Major Food Allergen: milk'' or ''Contains Major Food Allergens: egg and milk''.

''soybeans,'' as used in the statute.[12] Furthermore, consistent with FDA guidance, the singular term ''peanut'' may be substituted for the plural term ''peanuts,'' and singular terms (for example, almond, pecan, or walnut) may be used in place of plural terms to describe the different types of tree nuts. FALCPA provides that in the case of tree nuts, the label must list the common name of the specific type of nut (for example, almonds, pecans, or walnuts), and in the case of Crustacean shellfish, the label must list the name of the species of shellfish (for example, crab, lobster, or shrimp). 21 U.S.C. 343(w)(2). The proposed regulations are consistent with the FALCPA amendments with respect to the labeling of tree nuts and Crustacean shellfish.

3. Labeling of Fish Species

In the case of fish, the FALCPA amendments also provide that the name of the species of fish (for example, bass, flounder, or cod) must appear on the label. Id. However, for the reasons outlined below, the proposed regulations set forth in this document would not require labeling of the specific fish species. The proposed regulations would instead require simply listing ''fish'' when any type of finfish protein is used in the production of an alcohol beverage.

Isinglass and fish gelatin are often used to clarify wines and beers. Isinglass is a substance obtained from the swim bladders of sturgeon and other fish. Fish gelatin is obtained from the skin of a fish. Fish gelatin is often made from cod skins but can be made from any species of fish.

It is TTB's understanding that vintners and brewers, when purchasing isinglass or fish gelatin from a manufacturer for fining purposes, often do not know, and have no way of easily finding out, which species of fish was used to make the product. Moreover, it may be difficult for industry members to determine by chemical analysis which fish species was the source of the isinglass or fish gelatin.

TTB recognizes that the FALCPA amendments require the labeling of the species of fish used as an ingredient in a food product. However, it is TTB's responsibility to implement allergen labeling regulations that are appropriate for alcohol beverages, as noted in the FALCPA House committee report. It is likely that declarations of the use of fish in the production of alcohol beverages will generally involve the use of isinglass or fish gelatin as a processing aid, rather than the use of fish or foods derived from fish as an ingredient or a flavor for an alcohol beverage, where the specific fish species may be more easily identified. Because of the particular difficulty faced by producers in determining the specific species of fish used in producing the isinglass or fish gelatin, and because at least some consumers may be allergic to more than one species of fish, requiring labeling with the name of the specific species of fish may impose a difficult fact-finding burden on the alcohol beverage industry without offering consumers significant additional information to help them avoid the risk of an allergic reaction.

Accordingly, TTB solicits comments on whether labeling alcohol beverages produced using finfish protein merely as containing ''fish,'' rather than with the name of the fish species, provides adequate information to consumers. TTB also seeks comments on whether there are alternative approaches to this issue that would provide consumers with adequate information regarding the use of finfish protein in the production of alcohol beverages.

4. Processing and Fining Agents

Pursuant to the FD&C Act and its implementing regulations, incidental additives, including processing aids, are generally not subject to ingredient labeling requirements. FDA regulations exempt from the ingredient labeling requirements incidental additives that are present in a food at insignificant levels and do not have any technical or functional effect in that food. See 21 CFR 101.100(a)(3). However, FALCPA amended the FD&C Act to require that, notwithstanding any other provision of law, a flavoring, coloring, or incidental additive that is, or that bears or contains, a major food allergen must conform to FALCPA's labeling requirements. See 21 U.S.C. 343(w)(4).

The TTB regulations on wine treatment, found at 27 CFR 24.246, authorize the use of certain materials that are approved as being consistent with good commercial practice in the production, cellar treatment, or finishing of wine and, where applicable, in the treatment of juice, subject to certain conditions. Some of these materials are processing aids derived from major food allergens. For example, albumen (egg white) is approved as a fining agent for wine, isinglass (a gelatin prepared from the swim bladders of fish) is approved to clarify wine, and casein (derived from milk) is approved to clarify wine.

TTB is proposing to require the disclosure of fining or processing agents that are or contain major food allergens, with the option of including the added parenthetical ''(processing aid)'' and is soliciting comments on this proposal. For example, if egg whites are used as a processing aid for wine, the industry member has the option of disclosing this on the label as follows: ''Contains Major Food Allergen: egg (processing aid).'' This is an option that industry members may choose to use, but they also may choose to list these agents without the parenthetical. TTB is not proposing parenthetical statements for other incidental additives besides processing aids. TTB seeks comments on whether this proposal, which is generally consistent with FALCPA, will provide adequate information to consumers.

TTB recognizes that some countries may handle this issue through exemptions for particular processing aids and that there are ongoing discussions about exemptions at the international level. TTB will monitor future developments to determine if they provide a scientifically supported basis for a more categorical exemption in this area, and we will continue to consult with FDA on this issue.

5. Threshold Levels

The FALCPA amendments, which took effect for foods labeled on or after January 1, 2006, require allergen labeling for packaged foods regulated by FDA without the establishment of any threshold levels for labeling. The FDA stated that a ''threshold is a value below which it is unlikely that a food allergic individual would experience an adverse effect'' and notes that ''[a]t this time, the FDA has not established a threshold level for any allergens.'' [13]

Consistent with TTB's longstanding policy of consulting with FDA in determining what ingredients in alcohol beverages should be disclosed on labels, TTB defers to FDA on this issue, and FDA has not established any thresholds for major food allergens. Accordingly, TTB is not proposing to set thresholds for the disclosure of major food allergens. Instead, the proposed rule provides that all major food allergens and proteins derived from the major food allergens used in production must be declared on the beverage label, unless the product or class of products is covered by an approved petition for exemption, or otherwise falls under an applicable exception, as discussed below. TTB believes that this position will ensure that consumers have

[12] See Questions and Answers Regarding Food Allergens, Including the Food Allergen Labeling Requirements of the Federal Food, Drug, and Cosmetic Act (Edition 5): Guidance for Industry (last revised, November 2022), page 9, available at *https://www.fda.gov/media/117410/download.*

[13] See *https://www.fda.gov/food/food-labeling-nutrition/food-allergies.*

adequate information about the potential presence of major food allergens used in the production of alcohol beverages. If FDA establishes thresholds in the future, TTB will reconsider its policy on this issue.

6. Allergen Advisory Labeling

TTB's proposal does not specifically address allergen advisory labeling, such as statements that a product *may* contain a major food allergen, *e.g.,* ''May Contain (major food allergen).'' TTB is concerned that allergen advisory labeling could be used as substitute for adherence to current good manufacturing practices and could be misleading. TTB is soliciting comments on the use of allergen advisory labeling.

B. Exceptions From Allergen Labeling Requirements

1. Exceptions Found in Current Regulations

TTB is not proposing to amend the standards set forth in the current regulations providing exceptions from major food allergen labeling for ingredients derived from highly refined oil (consistent with the definition of ''major food allergen'' in the FD&C Act) and for food ingredients that are exempt pursuant to the FDA notice and petition processes in 21 U.S.C. 343(w)(6) or (7). Furthermore, TTB is not proposing to amend the current standards in the regulations that allow an exception for a product or class of products covered by a petition for exemption that is approved by TTB. A petition may pertain to the use of a major food allergen in the production of one specific alcohol beverage product or it may pertain to a class of products using a particular process involving a major food allergen. Consistent with the 1987 MOU with FDA, TTB intends to confer with FDA, as appropriate and as FDA resources permit, on petitions submitted under the proposed rule.

2. Distillation

In previous rulemaking, commenters asked whether spirits distilled from a fermented mash containing a major food allergen (such as wheat) must be labeled as containing that major food allergen. Industry members have suggested that the distillation process removes all protein, including allergenic protein. TTB is therefore proposing in 27 CFR 5.75(b)(2) that major food allergens, or ingredients containing major food allergens, need not be declared on a label when such allergens or ingredients have been subject to distillation in such a manner that no protein, allergenic or otherwise, remains in the distilled product or distilled ingredient. As explained below, this is consistent with the position FDA has taken regarding the removal of proteins using the distillation process within the context of major food allergen labeling and gluten-free labeling of distilled foods.[14] TTB is soliciting comments on this proposal.

In June 2015, FDA published Food Allergen Labeling Exemption Petitions and Notifications: Guidance for Industry.[15] In that guidance, FDA provided general advice for when a petition or notification should be submitted under FALCPA, and specifically addressed the distillation process. In particular, the guidance stated that ''An ingredient derived from a major food allergen that does not contain protein is not subject to the labeling requirements described in section 403(w)(1) of the FD&C Act.'' FDA recognized that ''there are some technologies (*e.g.,* distillation) that may be able to produce protein-free ingredients because of the nature of the process and fundamental biochemical properties of proteins, peptides, and amino acids.''

On August 13, 2020, FDA addressed the distillation issue in more detail in its final rule to establish compliance requirements for fermented and hydrolyzed foods, or foods that contain fermented or hydrolyzed ingredients, bearing a ''gluten-free'' claim. See ''*Food Labeling: Gluten-Free Labeling of Fermented or Hydrolyzed Foods*'' *(85 FR 49240).* The preamble to the FDA final rule explained that ''[i]f good manufacturing practices are followed, the process of distillation must remove all protein (and thus gluten), regardless if the product has been distilled from gluten-containing grains.'' 85 FR 49248. FDA noted that ''the process of distillation heats a liquid, which vaporizes components with lower boiling points and separates them from components with higher boiling points. The remaining compounds, whose boiling points are too high to undergo vaporization, are left behind.'' Id. FDA concluded that ''[i]f distillation is done properly, the process removes gluten because gluten does not vaporize.'' Id. For this reason, FDA determined that ''a distilled product's labeling may bear a 'gluten-free' claim and should be safe for people with celiac disease to consume.'' Id. The final rule provides that when a scientifically valid method for verifying that a distilled product is gluten-free is not available, FDA will evaluate compliance ''by verifying the absence of protein in the distilled component using scientifically valid analytical methods that can reliably detect the presence or absence of protein or protein fragments in the food.'' 21 CFR 101.91(c)(5). The preamble to the FDA final rule noted that the ''[t]ransfer of gluten into the distillate would only be expected to occur under poor manufacturing practices in which the initial material is splashing into the distillate due to poor design of the still. Protein testing can be done to confirm that protein (and thus gluten) is absent in the distilled product.'' 85 FR 49248. FDA also noted that ''any ingredients (such as flavors) added to the distilled product would need to be 'gluten-free' under § 101.91(a)*(3)* for the finished product labeling to bear a gluten-free claim.'' Id.

Consistent with the FDA's findings in its guidance on major food allergens and its final rule on the labeling of distilled food products with ''gluten-free'' claims, TTB is proposing to amend the distilled spirits regulations in proposed 27 CFR 5.75(b)(2) to specifically provide that the mandatory labeling requirements do not apply to major food allergens used in the production of a distilled spirits product if they have been completely distilled in such a manner that no protein remains in the distilled spirits. As needed, TTB will evaluate compliance by verifying the absence of protein in the distilled component using scientifically valid analytical methods that can reliably detect the presence or absence of protein or protein fragments in the finished product. If ingredients containing protein are added to the distilled spirits product after distillation, and no major food allergens are listed on the label, industry members must be prepared to substantiate, upon request, the absence of protein in the distillate, the absence of any major food allergens in the added ingredients, and the precautions taken to prevent cross-contact. TTB is soliciting comments on whether this method of verifying compliance is adequate to protect consumers and whether there are better alternatives.

C. Effective Date and Compliance With the Proposed Regulations

TTB is proposing a compliance date of 5 years from the date that a final rule resulting from this proposal is published in the **Federal Register** to minimize the costs and burdens associated with the proposed new labeling information. TTB solicits comments on whether the proposed

[14] TTB's current position on gluten-free labeling of distilled foods is consistent with FDA's. See *https://www.ttb.gov/rulings/r2020-2.*

[15] Available at *https://www.fda.gov/regulatory-information/search-fda-guidance-documents/guidance-industry-food-allergen-labeling-exemption-petitions-and-notifications.*

compliance date would suffice to limit the impact on small businesses and to reduce overall costs of compliance while ensuring that consumers are adequately informed. TTB also seeks comments on whether the use of a single compliance date for any new regulations on allergen, ingredient, or ''Alcohol Facts'' labeling would provide consumers with adequate information in a coherent and timely manner while also reducing costs and other regulatory burdens on industry. See Section VI, Cost Analysis, below, for additional information on coordinated labeling changes. Similarly, TTB intends to clarify that industry members will not be required to submit new COLA applications when the only change being made to a label is the inclusion of a statement of major food allergens. Therefore, this proposal would not require the submission of a new application for label approval simply to add allergen labeling statements in accordance with the new requirements.

VI. Cost Analysis

Executive Order 12866, as amended, requires TTB to design regulations in the most cost-effective manner that will achieve the regulatory objective. Accordingly, TTB seeks to tailor its regulations to impose the least burden on individuals, businesses of differing sizes, and other entities, consistent with the regulatory objective.

A. TTB's Estimate of Costs Associated With Alcohol Facts Proposed Rule

In Notice No. 237, Alcohol Facts Statements in the Labeling of Wines, Distilled Spirits, and Malt Beverages, also published in this issue of the **Federal Register**, TTB proposed an amendment to the labeling regulations that would require an ''Alcohol Facts'' statement on each wine, distilled spirits, and malt beverage label subject to the FAA Act. TTB will not repeat the substance of that analysis here, but below is a summary of the findings of that analysis.

To estimate the costs associated with the Alcohol Facts proposal, TTB utilized the 2014 FDA Labeling Cost Model,[16] adding its own data inputs, making various assumptions about the alcohol beverage industry, and adjusting costs to reflect inflation through January 2023. While FDA provided TTB with access to its model, FDA is not responsible for the assumptions made by TTB about the alcohol beverage market; nor is FDA responsible for the estimates set out in this analysis.

To determine the number of alcohol beverage Universal Product Codes (UPCs)[17] in the marketplace, TTB contracted with NielsenIQ[18] to obtain a one-time report, which consists of data for the period from September 9, 2021, through September 10, 2022,[19] for the following markets: Total U.S. all outlets combined,[20] liquor, and convenience stores.[21]

Based on the available data, TTB estimated the one-time total labeling costs associated with the proposed rule on Alcohol Facts under a 2-year compliance period to have a present discounted value (PDV)[22] of approximately $323.4 million (or approximately $161.7 million per year). If the compliance date is extended to 3 years, the total PDV would be approximately $258.5 million (or $86.5 million per year); for 42 months, the total PDV would be approximately $204.3 million (or $58.4 million per year). Finally, if the compliance period is extended to 5 years, the total PDV would be approximately $201.2 million (or $40.2 million per year).[23]

B. Costs Associated With Allergen Proposed Rule if Coordinated With Alcohol Facts Proposal

TTB is seeking comments on whether the compliance date for this proposed rule should be coordinated with the compliance dates of other labeling changes that have been proposed by TTB, including Notice No. 237, Alcohol Facts Statements in the Labeling of Wines, Distilled Spirits, and Malt Beverages, which proposed the inclusion of Alcohol Facts statements on alcohol beverage labels, as well as any proposals that may be aired as a result of the ANPRM on ingredient labeling. See Notice No. 237.

Promulgating the requirements for the final label changes together would allow bottlers and importers to undertake all the label revisions necessary to implement these changes in one label change. For example, it is TTB's preliminary conclusion that for industry members that would be required to make label changes under any new requirements resulting from the Alcohol Facts and the Allergen rulemakings, it would be more efficient and less costly to make changes to the label to accommodate both requirements at the same time. If the rules were instead promulgated and took effect at different points in time, TTB assumes that the multiple distinct label changes would result in greater costs. TTB invites comments on this preliminary conclusion.

TTB estimates that the cost savings of a coordinated regulatory compliance date for the proposed labeling change rules would be significant. For the purposes of this economic analysis, TTB is considering major label changes to subsume minor label changes. For example, a UPC subject both to the Alcohol Facts NPRM that will affect virtually all UPCs (*e.g.,* the addition of an Alcohol Facts statement), and the proposed Allergen rule would count only under the final Alcohol Facts rule because the major label change required by the proposed Alcohol Facts rule would subsume the minor label changes

[16] FDA has periodically contracted with RTI International to provide a model to estimate the costs of various product labeling changes required by regulation. The most recent version is the ''2014 FDA Labeling Cost Model, Final Report, August 2015,'' available at *https://downloads.regulations.gov/FDA-2016-N-2527-2681/content.pdf.*

[17] Each individual product may have several UPCs associated with different sizes or types of packaging.

[18] Based in part on data reported by NielsenIQ through its MarketTrack Service for the Alcohol Beverage Category for the period from September 9, 2021 through September 10, 2022, for the Total US all outlets combined, liquor, and convenience stores market. Copyright © 2022 Nielsen Consumer LLC.

[19] TTB emphasizes that the analyses, calculations and conclusions in this document may have been informed in part by the NielsenIQ RMS data through NielsenIQ's Retail Measurement Service (RMS) for the beverage alcohol product categories for the reported time period for Total US expanded all outlets combined, liquor, and convenience stores. However, any such analyses, calculations and conclusions are those of TTB and do not reflect the views of NielsenIQ. NielsenIQ is not responsible for, had no role in, and was not involved in analyzing and preparing the results reported herein, or in developing, reviewing or confirming the research approaches used in connection with this document.

[20] NielsenIQ's xAOC market includes retailers in its Food, Drug, Mass, Walmart, Club, Dollar, and Military channels. Nielsen defines those channels as follows:

—Food is inclusive of all grocery stores with greater than $2MM in annual ACV, including smaller chains and independents, and large players such as Whole Foods.

—Drug is inclusive of all chains and independents with greater than $1MM in annual ACV.

—Select Mass includes Target, K-Mart, and ShopKo.

—Walmart includes Walmart Division 1 + Supercenter's + Neighborhood Markets.

—Select Club is inclusive of Sam's Club and BJ's. Costco does not participate in market measurement with any data provider.

—Select Dollar is inclusive of Dollar General, Family Dollar, and Fred's Dollar.

—Military is inclusive of military commissary stores.

[21] Nielsen states that its Convenience channel includes ''major chains as census cooperators, and is projected to represent all chains and independents.''

[22] The present discounted value of monetary values was calculated using a 2 percent discount rate in accordance with OMB *Circular A–4 Chapter 12,* available at *https://www.whitehouse.gov/wp-content/uploads/2023/11/CircularA-4.pdf.*

[23] All costs in this proposal are provided in 2023 dollars.

required by the proposed Allergen rule. The marginal additional cost of the Allergen rule above the cost of the proposed Alcohol Facts rule is, therefore, negligible if the two rules have the same compliance date. This cost savings arises because alcohol beverage bottlers and importers would generally have to make a major label change to comply with the Alcohol Facts rule, and industry members that were additionally affected by any new allergen disclosure requirements arising out of this rulemaking would be able to undertake just one label change to comply with the requirements of the two rules.

VII. Public Participation

A. Comments Sought

TTB requests comments from the public and all interested parties on the regulatory proposals contained in this document. TTB seeks comments on the proposed rule as well as other approaches also discussed in this document. TTB has posed specific questions on various issues throughout this preamble and also seeks comments in response to those questions. In developing the final rule, TTB will carefully evaluate the proposed regulations considering all comments and suggested alternative approaches and will adopt the most appropriate approach. Where TTB has specifically solicited comments on alternatives to proposed amendments, it may consider adopting such alternatives in lieu of the proposed amendments based on its review of the comments.

TTB also seeks comments on the impact that the proposed changes will have on consumers and on industry members and any suggestions as to how to minimize any costs or regulatory burdens associated with the proposed regulations, including the following issues:

1. Are there alternative ways of providing a major food allergen disclosure, for example, by allowing information to be provided through a website using a quick response code (QR code) or website address on the label? Will such an alternative method still provide adequate information to the consumer?

2. Does the proposed compliance date suffice to reduce overall costs of compliance, and specifically the costs to small businesses, while ensuring that consumers are protected?

3. Is there a shorter compliance period that would provide more benefits to consumers while still limiting costs and potential impacts on small businesses? Specifically, would a 2-, 3-, or 3.5-year compliance period suffice?

4. If a final rule is issued, will industry members begin implementation of the labeling changes in advance of the compliance date? If yes, how might consumers benefit from early compliance by industry?

5. Are there any ongoing costs of compliance with the proposed rule that TTB has not addressed in this document?

6. How many small businesses would be impacted by the proposed rule, and what would be the economic impact of the proposal on these small businesses? How, if at all, does the length of the compliance period affect the impact on small businesses? Please explain in detail and provide specific cost data.

We welcome comments on all other issues presented in this document.

B. Submitting Comments

You may submit comments on this proposal as an individual or on behalf of a business or other organization via the *Regulations.gov* website or via postal mail, as described in the **ADDRESSES** section of this document. Your comment must reference Notice No. 238 and must be submitted or postmarked by the closing date shown in the **DATES** section of this document. You may upload or include attachments with your comment. You also may submit a comment requesting a public hearing on this proposal. The TTB Administrator reserves the right to determine whether to hold a public hearing. If TTB schedules a public hearing, it will publish a notice of the date, time, and place for the hearing in the **Federal Register**.

C. Confidentiality and Disclosure of Comments

All submitted comments and attachments are part of the rulemaking record and are subject to public disclosure. Do not enclose any material in your comments that you consider confidential or that is inappropriate for disclosure.

TTB will post, and you may view, copies of this document, its supporting materials, and any comments TTB receives about this proposal within the related *Regulations.gov* docket. In general, TTB will post comments as submitted, and it will not redact any identifying or contact information from the body of a comment or attachment.

Please contact TTB's Regulations and Rulings Division by email using the web form available at *https://www.ttb.gov/contact-rrd,* or by telephone at 202–453–2265, if you have any questions regarding comments on this proposal or to request copies of this document, its supporting materials, or the comments received in response.

VIII. Regulatory Analysis and Notices

The impacts of this proposed rule have been examined in accordance with Executive Order 12866, as supplemented by Executive Order 13563 and amended by Executive Order 14094, and the Regulatory Flexibility Act (5 U.S.C. 601–612).

A. Purpose of the Rule

The overall purpose of this proposed rule is to provide consumers who are allergic to one or more major food allergens with more information about the identity and quality of alcohol beverage products. Since the effective date of the Food Allergen Labeling and Consumer Protection Act of 2004 (FALCPA), major food allergen labeling has been required for foods subject to the labeling regulations of the FDA (subject to certain exceptions), and the Department of Agriculture has similarly adopted regulations for foods subject to its labeling regulations. Alcohol beverages subject to the labeling regulations of the FAA Act are the only type of packaged beverage category without any requirement for major food allergen labeling.

Accordingly, TTB proposes to require the disclosure of major food allergens used in the production of alcohol beverages subject to the FAA Act.[24] TTB believes this proposal would provide consumers who are allergic to one or more of the nine major food allergens with the information they need to avoid exposure and the health risks posed by these ingredients.

B. Benefits

According to the FDA, food allergies and other food hypersensitivities affect millions of Americans.[25] A food allergy is an immune response to certain proteins in food, which may cause mild symptoms, but may also result in a severe, life-threatening allergic reaction called anaphylaxis. Because food allergies currently cannot be cured, early recognition of which foods cause individuals to have an allergic reaction, and learning how to avoid such foods, are important ways to prevent serious health risks.

TTB does not possess data that would enable it to quantify the monetary benefits of the proposed rule. However, TTB believes that a labeling statement

[24] Further information on the specifics of TTB's proposal and its authority to implement the proposal are in Section II.

[25] See *https://www.fda.gov/food/food-labeling-nutrition/food-allergies.*

with information about the presence of major food allergens in the production of an alcohol beverage will provide significant benefits. Consumers with these food allergies will be able to make an informed decision as to whether consumption of a particular alcohol beverage may pose a risk of an allergic reaction. This proposal will also promote consistency in major food allergen disclosure across all types of food product labels, removing ambiguity about whether a product contains a major food allergen or not. TTB invites comments on its conclusion that consumers would benefit from having this information available on product labels.

C. Costs of Compliance

As set forth in Section VI of this preamble, based on its use of the FDA Labeling Cost Model and assuming a 5-year coordinated compliance period with the Alcohol Facts rule, TTB estimates that the marginal additional cost of the Allergen rule above the cost of the proposed Alcohol Facts rule is negligible. This is because industry members would generally have to make a major label change to comply with the Alcohol Facts rule, and industry members that were additionally affected by any new allergen labeling requirements from this rulemaking would be able to undertake just one label change to comply with the requirements of the two rules.

TTB notes that this proposal does not require additional analytical testing, as it generally requires labeling of major food allergens used as an ingredient, and ingredients are expected to be known by the producer.

D. Executive Orders 12866, 13563, and 14094

This proposed rule is a ''significant regulatory action'' for purposes of Executive Order 12866, as supplemented by Executive Order 13563 and amended by Executive Order 14094, and has been reviewed by the Office of Management and Budget.

E. Regulatory Flexibility Act

Pursuant to the requirements of the Regulatory Flexibility Act (5 U.S.C. 601–612), TTB has analyzed the potential economic effects of this action on small entities. In lieu of the initial regulatory flexibility analysis required to accompany proposed rules under 5 U.S.C. 603, section 605 allows the head of an agency to certify that a rule will not, if promulgated, have a significant economic impact on a substantial number of small entities.

TTB certifies that this proposed rule, if adopted, would not have a significant economic impact on a substantial number of small entities. The proposed rule will not impose, or otherwise cause, a significant increase in reporting, recordkeeping, or other compliance burdens on a substantial number of small entities. The proposed rule is not expected to have significant secondary or incidental effects on a substantial number of small entities. Accordingly, a regulatory flexibility analysis is not required. Pursuant to 26 U.S.C. 7805(f), TTB will submit the proposed regulations to the Chief Counsel for Advocacy of the Small Business Administration (SBA) for comment on the impact of the proposed regulations on small businesses.

The following analysis provides the factual basis for TTB's certification under section 605.

In FY 2022, TTB collected $8.3 billion in taxes from the alcohol industry.[26] With regard to the total number of authorized producers of alcohol beverages, there are 17,649 wineries and bonded wine cellars; 14,185 brewers; and 4,494 distillers.[27] However, the number of authorized producers and importers who obtain certificates of label approval (COLAs) in any given year, and who therefore could be affected by this proposed rule, is much lower. For example, in FY 2022, TTB received 192,954 label applications and 26,922 formula applications for alcohol beverages.[28] Internal data from TTB's COLAs Online system shows that, on average, fewer than 12,000 permittees or brewers applied for label approval in each of Fiscal Years 2020–2022. The data also shows that most of these COLA applications come from the same set of permittees and brewers every year. During the 3-year period of Fiscal Years 2020–2022, fewer than 18,000 unique permittees or brewers applied for label approval.

The value of the U.S. import trade in alcohol beverages in 2021 totaled $23.9 billion.[29] According to data published on the website of the Distilled Spirits Council of the United States,[30] the total economic contribution of the alcohol beverage industry to the U.S. economy in 2019 included 2,514,000 ''direct'' jobs and 5,630,000 ''total'' jobs; $67.9 billion in direct wages and $160.3 billion in total wages; and $242.6 billion in direct economic activity and $572.3 billion in total economic activity.

TTB recognizes that most producers, bottlers, and importers of alcohol beverages are small entities. The SBA sets out size standards based on the North American Industry Classification System (NAICS), under which an entity can be considered small for the purposes of Regulatory Flexibility Act analysis.[31] Breweries are considered small if they have fewer than 1,250 employees; wineries are considered small if they have fewer than 1,000 employees; and distilleries are considered small if they have fewer than 1,100 employees.[32]

The U.S. Census Bureau's Statistics of U.S. Businesses (SUSB) data include information on employment among establishments within NAICS codes. The most recent data are from 2019.[33] The SUSB data did not include employment at the 1,000, 1,100, or 1,250 employee threshold; however, it does include the number of firms within each NAICS code that have at least 500 employees. Based on those numbers, approximately 99% of the firms in these three NAICS codes are small entities. The percentage may be greater, depending on how many firms have at least 500 employees and fewer than 1,000 employees (for wineries), 1,100 employees (for distilleries), or 1,250 employees (for breweries). There is no NAICS code for importers of alcohol beverages.

[26] Alcohol and Tobacco Tax and Trade Bureau Annual Report Fiscal Year 2022 (FY 2022 TTB Annual Report), available at *https://www.ttb.gov/images/pdfs/ttbar2022.pdf,* page 5.

[27] Id. at page 10.

[28] Id. at page 16. It should be noted that the number of label applications does not necessarily correlate to the number of brands and UPCs in the marketplace for several reasons. TTB cannot determine whether approved labels appear in the marketplace, or how long those labels may remain in use. For example, there may be malt beverage labels authorized for a particular sporting event that are no longer found in the marketplace a few months after the event has taken place. On the other hand, some labels may be revised to reflect different net contents or alcohol content statements without submission of a new label to TTB. Industry members may decide not to use labels for which they have obtained approval. Thus, TTB does not use the number of COLA applications as an estimate of how many brands or UPCs are in the marketplace at any given time.
