FEDERAL REGISTER

Vol. 90 Tuesday,

No. 12 January 21, 2025

Pages 6777–7648

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 90 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Rules and Regulations

Federal Register
Vol. 90, No. 12
Tuesday, January 21, 2025

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

DEPARTMENT OF HOMELAND SECURITY

6 CFR Chapter I

49 CFR Chapter XII

Ratification of Security Directives

AGENCY: Office of Strategy, Policy, and Plans, Department of Homeland Security (DHS).

ACTION: Notification of ratification of security directives.

SUMMARY: The Department of Homeland Security (DHS) is publishing official notice that the Transportation Security Oversight Board (TSOB) has ratified Transportation Security Administration (TSA) Security Directive 1580–21–01B, Security Directive 1582–21–01B, Security Directive 1580/82–2022–01A, and Security Directive 1580/82–2022–01C applicable to owners and operators of critical rail entities (owners/operators). Security Directive 1580–21–01B and Security Directive 1582–21–01B extended the requirements of 1580–21–01 and 1582–21–01 series for an additional year, with minor revisions. Security Directive 1580/82–2022–01A and Security Directive 1580/82–2022–01C extend the performance-based requirements of the 1580/82–2022–01 series for an additional year and amends them to strengthen their effectiveness and address emerging cyber threats.

DATES: The TSOB ratified Security Directive 1580–21–01B, Security Directive 1582–21–01B, and Security Directive 1580/82–2022–01A on November 22, 2023. The TSOB ratified Security Directive 1580/82–2022–01C on July 29, 2024.

FOR FURTHER INFORMATION CONTACT: Thomas McDermott, Deputy Assistant Secretary for Cyber, Infrastructure, Risk and Resilience Policy, at 202–834–5803 or *thomas.mcdermott@hq.dhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

A. Cybersecurity Threat

The cyber threat faced by the nation's critical rail infrastructure has only increased in the time since TSA issued its initial security directives addressing cybersecurity in rail and mass transit in December 2021.[1] Cyber threats to surface transportation systems, including railroads and transit systems, continue to proliferate, as both nation-states and criminal cyber groups target critical infrastructure in order to cause operational disruption and economic harm.[2] In recent years, cyber attackers have maliciously targeted surface transportation modes in the United States, including freight railroads, passenger railroads, and rail transit systems, with multiple cyberattack and cyber espionage campaigns.[3] Cyber incidents, particularly ransomware attacks, are likely to increase in the near- and long-term, due in part to vulnerabilities identified by threat actors in U.S. networks.[4] Especially in light of the ongoing Russia-Ukraine conflict,[5] these threats remain elevated and pose a risk to the national and economic security of the United States.

In its 2023 annual assessment, the Intelligence Community noted that ''China almost certainly is capable of launching cyber attacks that could disrupt critical infrastructure services within the United States, including against oil and gas pipelines, and rail systems.'' [6] And the 2024 annual assessment notes that, ''[i]f Beijing believed that a major conflict with the United States were imminent, it would consider aggressive cyber operations against U.S. critical infrastructure and military assets. Such a strike would be designed to deter U.S. military action by impeding U.S. decision-making, inducing societal panic, and interfering with the deployment of U.S. forces.'' [7] In addition, ''Russia maintains its ability to target critical infrastructure . . . in the United States as well as in allied and partner countries'' and ''Tehran's opportunistic approach to cyber-attacks puts U.S. infrastructure at risk for being targeted.'' [8] Furthermore, ''malicious cyber actors have begun testing the capabilities of [artificial intelligence (AI)]-developed malware and AI-assisted software development—technologies that have the potential to enable larger scale, faster, efficient, and more evasive cyber-attacks—against targets, including pipelines, railways, and other US critical infrastructure.'' [9]

B. Regulatory History

To counter the threat to rail infrastructure, in December 2021, TSA issued two security directives to owners and operators of certain higher risk rail entities (owner/operators) requiring them to implement cybersecurity measures necessary to prevent disruption and degradation to their critical infrastructure. Security Directive 1580–21–01 (applicable to freight rail

[1] Transportation Security Administration, SD 1580–21–01 Enhancing Rail Cybersecurity (Dec. 31, 2021), *https://www.tsa.gov/sites/default/files/sd-1580-21-01_signed.pdf;* Transportation Security Administration, SD 1582–21–01 Enhancing public Transportation and Passenger Railroad Cybersecurity (Dec. 31, 2021), *https://www.tsa.gov/sites/default/files/sd-1582-21-01_signed.pdf.*

[2] Annual Threat Assessment of the U.S. Intelligence Community, Office of the Director of National Intelligence (2024 Intelligence Community Assessment), 11, 16 (dated Feb. 5, 2024) (last accessed July 23, 2024, at *https://www.dni.gov/files/ODNI/documents/assessments/ATA-2024-Unclassified-Report.pdf*).

[3] These activities include the January 2023 breach of the Washington Metropolitan Area Transit Authority; the January 2023 breach of San Francisco's Bay Area Rapid Transit System; and the April 2021 breach of New York City's Metropolitan Transportation Authority (the nation's largest mass transit agency) by hackers linked to the government of the People's Republic of China. This threat is ongoing: on February 7, 2024, CISA published an advisory warning of the threat posed by PRC state-sponsored actors. *See* Cybersecurity Advisory (AA24–038A), *PRC State-Sponsored Actors Compromise and Maintain Persistent Access to U.S. Critical Infrastructure.*

[4] Alert (AA22–040A), *2021 Trends Show Increased Globalized Threat of Ransomware,* released by CISA on February 10, 2022 (as revised).

entities) and Security Directive 1582–21–01 (applicable to passenger rail and mass transit entities) required covered owner operators to: (1) report cybersecurity incidents to the Cybersecurity and Infrastructure Security Agency (CISA); (2) designate a cybersecurity coordinator to be available 24/7 to coordinate with TSA and CISA; (3) conduct a vulnerability assessment of cybersecurity practices, identify any gaps, and develop a plan and timeline for remediation; and (4) develop a Cybersecurity Incident Response Plan to reduce the risk of operational disruption in the event of a cybersecurity incident.

Due to the evolving threat to freight and passenger rail, TSA issued Security Directive 1580/82–2022–01 on October 18, 2022, which built on the requirements of the initial directives and required covered owner/operators to implement additional performance-based cybersecurity measures.[10] Under the performance-based framework of Security Directive 1580/82–2022–01, TSA identified critical security outcomes that covered parties must achieve. To ensure that these outcomes are met, the directive required owner/operators to:

- Establish and implement a TSA-approved Cybersecurity Implementation Plan (CIP) that describes the specific cybersecurity measures employed and the schedule for achieving the security outcomes identified; and
- Establish a Cybersecurity Assessment Program (CAP) and submit an annual plan that describes how the owner/operator will proactively and regularly assess the effectiveness of cybersecurity measures and identify and resolve device, network, and/or system vulnerabilities.

The performance-based approach enhances security by mandating that critical security outcomes are achieved while allowing owner/operators to choose the most appropriate security measures for their specific systems and operations.

In response to the continuing cyber threat to rail infrastructure, the requirements of Security Directive 1580–21–01, Security Directive 1582–21–01, and Security Directive 1580/82–2022–01 have been renewed and extended beyond their original expiration dates by subsequent directives, creating three security directive series (the 1580–21–01 series, the 1582–21–01 series, and 1580/82–2022–01 series). As TSA has renewed these directives series, it has also amended their requirements to strengthen their effectiveness and address emerging cyber threats.

The table below provides a list of each of the security directives within the 1580–21–01, 1582–21–01, and 1580/82–2022–01 series. All of the security directives provided in the table are available online in TSA's Surface Transportation Cybersecurity Toolkit.[11]

TABLE 1—TSA SECURITY DIRECTIVES APPLICABLE TO FREIGHT RAIL, PASSENGER RAIL, AND RAIL TRANSIT SYSTEMS

Security directive	Date issued	Effective date	Date ratified by TSOB	Set expiration date	**Federal Register** notice of ratification
1580–21–01	Dec. 2, 2021	Dec. 31, 2021	Dec. 29, 2021	Dec. 31, 2022	87 FR 31093.
1580–21–01A	Oct. 18, 2022	Oct. 24, 2022	Nov. 16, 2022	Oct. 24, 2023	88 FR 36921.
1580–21–01B	Oct. 23, 2023	Oct. 24, 2023	Nov. 22, 2023	Oct. 24, 2024	*Current.
1582–21–01	Dec. 2, 2021	Dec. 31, 2021	Dec. 29, 2021	Dec. 31, 2022	87 FR 31093.
1582–21–01A	Oct. 18, 2022	Oct. 24, 2022	Nov. 16, 2022	Oct. 24, 2023	88 FR 36921.

C. Security Directive 1580–21–01B and Security Directive 1582–21–01B

In light of the continuing threat, TSA determined that the cybersecurity measures required by the 1580–21–01 and 1582–21–01 security directive series remain necessary to protect the nation's critical rail infrastructure beyond the October 24, 2023, expiration date of Security Directive 1580–21–01A and Security Directive 1582–21–01A. On October 23, 2023, TSA issued Security Directive 1580–21–01B and Security Directive 1582–21–01B, extending the requirements of the 1580–21–01 (applicable to freight rail) and 1582–21–01 (applicable to passenger rail and rail transit systems) security directive series for an additional year. Security Directive 1580–21–01B and Security Directive 1582–21–01B contained minor revisions to provide further clarity regarding the applicability of the directives and their compliance deadlines. Additionally, the directives included revisions to improve the effectiveness of the required Cyber Incident Response Plans (CIRPs) by specifying certain requirements for testing exercises. The directives became effective on October 24, 2023, and expired on October 24, 2024.[12]

D. Security Directive 1580/82–2022–01A

Considering the continuing threat, TSA also determined that the measures required by the 1580/82–2022–01 series remained necessary to protect the Nation's critical rail infrastructure beyond Security Directive 1580/82–2022–01's expiration date of October 24, 2023. On October 23, 2023, TSA issued Security Directive 1580/82–2022–01A, extending the requirements of the 1580/82–2022–01 series for an additional year. The directive became effective on October 24, 2023, and was set to expire on October 24, 2024.

In addition to extending the performance-based requirements of the initial directive in this series, Security Directive 1580/82–2022–01A included revisions to strengthen the effectiveness of these requirements and allow greater ability to respond to changing threats. Specifically, the revisions improved the effectiveness of the requirements related to Cybersecurity Assessment Plans (referred to as Cybersecurity Assessment Programs in prior versions); ensured the provisions related to defining Critical Cyber Systems allow flexibility to respond to emerging and evolving threats; and provided greater clarity regarding the role of ''Managed Security Service Providers'' and ''Authorized Representatives.''

[10] 88 FR 36921 (June 6, 2023).

[11] TSA Surface Transportation Cybersecurity Toolkit, *available at https://www.tsa.gov/for-industry/surface-transportation-cybersecurity-toolkit.*

[12] On October 23, 2024, TSA issued Security Directive 1580–21–01C and Security Directive 1582–21–01C. These Security Directives superseded the respective –01B directives. Security Directive 1580–21–01C and Security Directive 1582–21–01C each went into effect on October 24, 2024.

E. Security Directive 1580/82–2022–01C

To address ongoing cyber threats to rail transportation infrastructure, TSA determined that further amendments to the 1580/82–2022–01 series were necessary prior to the expiration of Security Directive 1580/82–2022–01A. On July 1, 2024, TSA issued Security Directive 1580/82–2022–01C, revising and extending the requirements of Security Directive 1580/82–2022–01A.[13] The directive became effective on July 1, 2024, 2024, and is set to expire on May 2, 2025.

Security Directive 1580/82–2022–01C specifically requires Positive Train Control (PTC) systems be included in owner/operators' list of Critical Cyber Systems, subjecting them to the applicable performance-based cybersecurity measures. The designation of PTC systems as a Critical Cyber System ensures that PTC systems are protected by the performance-based cybersecurity measures of the Security Directive 1580/82–2022–01 series.

II. TSOB Ratification

TSA issued Security Directive 1580–21–01B, Security Directive 1582–21–01B, Security Directive 1580/82–2022–01A, and Security Directive 1580/82–2022–01C under 49 U.S.C. 114(*l*)(2)(A), which authorizes TSA to issue emergency regulations or security directives without providing notice or the opportunity for public comment when ''the Administrator determines that a regulation or security directive must be issued immediately in order to protect transportation security . . . .'' Security directives issued pursuant to the procedures in 49 U.S.C. 114(*l*)(2) ''shall remain effective for a period not to exceed 90 days unless ratified or disapproved by the [Transportation Security Oversight Board] or rescinded by the Administrator.'' [14]

The Transportation Security Oversight Board (TSOB) is a body consisting of the Secretary of Homeland Security, the Secretary of Transportation, the Attorney General, the Secretary of Defense, the Secretary of the Treasury, the Director of National Intelligence, or their designees, and a representative of the National Security Council.[15] Among its statutory duties, the TSOB must ''review and ratify or disapprove'' security directives issued under 49 U.S.C. 114(*l*)(2) within 30 days of the action's issuance.[16]

Following the issuance of Security Directive 1580–21–01B, Security Directive 1582–21–01B, Security Directive 1580/82–2022–01A, and Security Directive 1580/82–2022–01C, the chair of the TSOB convened the board to review the directives.[17] In reviewing each directive, the TSOB reviewed the required measures extended and amended by the directives and the continuing need for TSA to maintain these requirements pursuant to its emergency authority under 49 U.S.C. 114(*l*)(2) to prevent the disruption and degradation of the country's critical transportation infrastructure. The TSOB also considered whether to authorize TSA to extend each security directive beyond their expiration dates subject to certain conditions, should the TSA Administrator believe such an extension is necessary to address the evolving threat that may continue beyond the original expiration date.

Following its review, the TSOB ratified Security Directive 1580–21–01B, Security Directive 1582–21–01B, and Security Directive 1580/82–2022–01A on November 22, 2023; and ratified Security Directive 1580/82–2022–01C on July 29, 2024. The TSOB also authorized TSA to extend each of the security directives beyond their current expiration dates, should the TSA Administrator determine such an extension is necessary to address the evolving threat that may continue beyond the original expiration date. Such an extension is subject to the following conditions: (1) there are no changes to the security directive other than an extended expiration date; (2) the TSA Administrator makes an affirmative determination that conditions warrant the extension of the directive's requirements; and (3) the TSA Administrator documents such a determination and notifies the TSOB.

Kristie Canegallo,

Senior Official Performing the Duties of the Deputy Secretary of Homeland Security & Chairman of the Transportation Security Oversight Board.

[FR Doc. 2025–01422 Filed 1–16–25; 4:15 pm]

BILLING CODE 9110–9M–P

[13] TSA first issued these revisions as Security Directive 1580/82–2022–01B on May 1, 2024. Due to two oversights in the original directive that may have created confusion, TSA issued a corrected version of the amended directive (Security Directive 1580/82–2022–01C) on July 1, 2024. TSA sought TSOB review and ratification of the reissued directive, currently in effect.

[14] 49 U.S.C. 114(*l*)(2)(B).

[15] 49 U.S.C. 115(a), (b).

[16] 49 U.S.C. 115(c)(1); 49 U.S.C. 114(*l*)(2)(B).

[17] The Secretary of Homeland Security serves as the TSOB Chairperson, 49 U.S.C. 115(b)(2), and has further delegated that responsibility to the Deputy Secretary of Homeland Secretary. DHS Delegation No. 7071.1.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 1222

[Doc. No. AMS–SC–23–0080]

Paper and Paper-Based Packaging Promotion, Research and Information Order; Clarifying Changes

AGENCY: Agricultural Marketing Service, Department of Agriculture (USDA).

ACTION: Final rule.

SUMMARY: This final rule implements clarifying amendments to the Paper and Paper-Based Packaging Promotion, Research and Information Order (Order). The amendments include an added definition for partnership; clarification of the nominations process; clarification about in person and electronic voting for any Board meetings; an update of the timing of financial reporting; and a revision of requirements for when exemptions can be requested. This final rule brings language in the Order up to date with current industry practices.

DATES: This final rule is effective February 20, 2025.

FOR FURTHER INFORMATION CONTACT: Samantha Mareno, Agricultural Marketing Specialist, Market Development Division, Specialty Crops Program, Agricultural Marketing Service, U.S. Department of Agriculture, 1400 Independence Avenue SW, Room 1406–S, STOP 0244, Washington, DC 20250–0244; Telephone: (720) 827–4907; or Email: *Samantha.Mareno@usda.gov.*

SUPPLEMENTARY INFORMATION: This final rule affecting the Order (7 CFR part 1222) is authorized by the Commodity Promotion, Research, and Information Act of 1996 (Act) (7 U.S.C. 7411–7425).

Executive Orders 12866, 13563 and 14094

The Agricultural Marketing Service (AMS) is issuing this rule in conformance with Executive Orders 12866, 13563, and 14094. Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility. Executive Order 14094 reaffirms, supplements, and

updates Executive Order 12866 and further directs agencies to solicit and consider input from a wide range of affected and interested parties through a variety of means. This rule is not a significant regulatory action within the meaning of Executive Order 12866. Accordingly, this action has not been reviewed by the Office of Management and Budget under section 6 of the Executive Order.

Executive Order 13175

This action has been reviewed in accordance with the requirements of Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, which requires agencies to consider whether their rulemaking actions will have Tribal implications. AMS has determined that this rule is unlikely to have substantial direct effects on one or more Indian Tribes, or the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes.

Executive Order 12988

This rule has been reviewed under Executive Order 12988, Civil Justice Reform. It is not intended to have retroactive effect. Section 524 of the Act (7 U.S.C. 7423) provides that it shall not affect or preempt any other Federal or State law authorizing promotion or research relating to an agricultural commodity.

Under section 519 of the Act (7 U.S.C. 7418), a person subject to an order may file a written petition with the U.S. Department of Agriculture (USDA), stating that an order, any provision of an order, or any obligation imposed in connection with an order, is not established in accordance with the law, and request a modification of an order or an exemption from an order. Any petition filed challenging an order, any provision of an order, or any obligation imposed in connection with an order, shall be filed within two years after the effective date of an order, provision, or obligation subject to challenge in the petition. The petitioner will have the opportunity for a hearing on the petition. Thereafter, USDA will issue a ruling on the petition. The Act provides that the district court of the United States for any district in which the petitioner resides or conducts business shall have the jurisdiction to review a final ruling on the petition if the petitioner files a complaint for that purpose not later than 20 days after the date of the entry of USDA's final ruling.

Background

Under the Order, which became effective on January 23, 2014, the Paper and Packaging Board (Board), with oversight by USDA, administers a nationally coordinated program of research, promotion and information designed to strengthen the paper and paper-based packaging industry. The program covers four types of paper and paper-based packaging—printing and writing paper (used to make products for printing, writing, and other communication purposes), kraft packaging paper (used for products like grocery bags and sacks), containerboard (used to make corrugated boxes, shipping containers, and related products), and paperboard (used for food and beverage packaging, tubes, and other miscellaneous products). The program is financed by assessments on domestic manufacturers and importers of paper and paper-based packaging.

This final rule makes multiple clarifying amendments to the Order. These amendments include an added definition for partnership; clarification on the nomination process; clarification of language about in person and electronic voting for any Board meetings; an update of the timing of financial reporting; and revised requirements concerning when exemptions may be requested. The Board, which is composed of domestic manufacturers from across the country and importers, unanimously recommended the changes to the Order on August 19, 2023. This action modifies language in the Order to bring it up to date with current industry practices.

Board Recommendation to Revise Order

The final rule revises several sections in subpart A of the Order. This rule changes the language in § 1222.7 from fiscal period to fiscal year as the term is better understood by the industry. Sections 1222.12 and 1222.13 include the term produce and producer respectively in the definition of manufacture and manufacturer. The term produce and producer are not used in the paper and paper-based packaging industry. Therefore, the final rule removes these terms from the definition of manufacture and manufacturer.

Lastly, this rule adds a new term for partnership in § 1222.19 and states that a partnership includes, but is not limited to, spouses and joint ventures. This revision clarifies who is responsible for paying assessments. With this change, the existing §§ 1222.19 through 1222.29 are renumbered.

Section 1222.41 outlines the Board nominations and appointments process. This rule amends § 1222.41(c)(1) by specifically issuing a call for nominations to all current manufacturers and importers who have paid assessments during the prior fiscal year. Furthermore, revisions to § 1222.41(c)(4) and (5) remove repetitive language. Lastly, § 1222.41(c)(10) is revised by the rule to specify that no two members shall be employed by a single manufacturer or importer that pays assessments under the Order to avoid confusion as to who can serve on the Board.

Section 1222.43(a) allows the Secretary to remove a Board member or employee for failure or refusal to perform their duties, per the Board's recommendation. This final rule removes the employee clause to be consistent with language in other research and promotion orders.

Section 1222.44 outlines the Board's procedures for conducting Board meetings. Section 1222.44(c) states that votes shall be cast in person at an assembled meeting. Additionally, § 1222.44(d) allows for other means of voting in lieu of voting at an assembled meeting. This final rule includes revisions to both sections to include options for electronic voting, or other means.

Section 1222.47 outlines prohibited activities for the Board. Section 1222.47(c) states no program, plan or project including advertising shall be false, misleading, or disparaging to another agriculture commodity. To be consistent in writing style, the rule modifies the language to state any program, plan or project including advertising that is false, misleading, or disparaging to another agriculture commodity. This section is updated to ensure clarity in wording.

Section 1222.50(i) outlines the operating monetary reserve for the Board and states that the funds in the reserve may not exceed one fiscal year's budget of expenses. This rule increases the funds in the reserve so they may not exceed two fiscal years, which is consistent with other research and promotion orders.

Section 1222.51(b) describes when financial statements are to be submitted to the Department. The current timeframe is 30 days after the time period to which it applies, which is too restrictive because the Board reports financial statements on a quarterly basis. Therefore, this final rule specifies that the financial statements are to be

submitted quarterly and no later than 70 days after the period to which it applies.

Section 1222.51(c) refers to the annual financial statement that is submitted to the Department. The annual financial statement is due to the Department within 90 days after the end of the fiscal year. The Board has had difficulty in meeting this short deadline. Therefore, this rule extends the timeframe to no later than 120 days to allow the Board more time to submit the statement to the Department.

Section 1222.52(e) states that importers of paper and paper-based packaging shall pay assessments through Customs to the Board. Customs does not currently collect import assessments for the Board and therefore, this final rule removes ''through Customs'' in paragraph (e), instead stating that each importer shall pay their assessment to the Board.

Section 1222.52(f) states Customs collects assessments. Since Customs does not collect the assessment, the final rule revises the section to state that each importer is responsible for paying assessments directly to the Board.

Section 1222.53(a)(1) specifies the minimum quantity necessary to be eligible for an exemption from assessments and requires manufacturers to apply for an exemption prior to the start of the marketing year. This final rule removes this requirement, allowing them to apply for an exemption at any time during a marketing year, not just before the year starts.

Section 1222.53(a)(2)(iii) provides that importers' assessments are collected by Customs and the Board shall refund the importer who has filed for exemption. Because Customs doesn't collect assessments, the final rule updates this section to reflect that the importer would pay the Board directly.

Section 1222.53(a)(5) details how the quantity of paper and paper-based packaging counts towards an exemption. This final rule revises the paragraph to ensure that in determining whether a manufacturer or import qualifies for the exemption, the combined quantity of all paper and paper-based packaging manufactured or imported during a marketing year shall count towards the 100,000 short ton exemption.

Section 1222.81(b)(2) refers to the frequency of referenda and outlines the criteria for continuation. This final rule updates this section to clarify that only eligible domestic manufacturers or eligible importers are included in the referendum voting. This change does not change who can vote and does not change voting restrictions.

Section 1222.82(b) states that the Secretary has the right to suspend or terminate the program whenever it is favored by the industry. The final rule updates this section to make the language used more concise to avoid confusion by the industry.

This rule updates definitions in § 1222.101 to be consistent with terms defined in subpart A. Specifically, paragraph (e) includes *producer* in the definition for *eligible domestic manufacturer.* This final rule revises this section to remove the word *producer.* Paragraph (i) includes the term *produce* in the definition of *manufacture* and this final rule removes the term *produce* from the definition.

Lastly, § 1222.102(a) outlines the voting eligibility of domestic manufacturers and importers. This final rule revises this section to include clarifying language to avoid confusion in the eligibility.

Final Regulatory Flexibility Act Analysis

Pursuant to the requirements set forth in the Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), AMS has considered the economic impact of this action on small entities that would be affected by this rule. The purpose of the RFA is to fit regulatory action to scale of businesses subject to such action so that small businesses will not be disproportionately burdened. Manufacturers and importers would be considered agricultural service firms. The Small Business Administration defines small agricultural service firms as those having annual receipts of no more than $30 million (13 CFR part 121).

According to the Board, there are approximately 47 manufacturers in the United States that manufacture the types of paper and paper-based packaging covered under the Order. Using an average price of $1,350 per short ton,[1] a manufacturer who manufactures less than 22,220 short tons of paper and paper-based packaging per year would be considered a small entity. The Board estimated that no entity manufactured less than 22,220 short tons in 2022; thus, no domestic manufacturers would be considered small businesses.

Based on Customs data, there were 3,272 importers of paper and paper-based packaging in 2022. Of these, 40 importers, or 1 percent, had annual receipts of more than $30 million of paper and paper-based packaging. Thus, the majority of importers would be considered small entities.

This final rule makes multiple clarifying changes to the Order. The changes include a revision to the definition of importer; inclusion of a definition for partnership; clarification of the nominations process; clarifying language about in person and electronic voting for any Board meetings; an update to the timing of financial reporting; and a revision to the requirements concerning when exemptions will be requested.

Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35), the information collection and recordkeeping requirements that are imposed by the Order have been approved previously under OMB control number 0581–0093. This final rule does not change the information collection and recordkeeping requirements previously approved and would impose no additional reporting and recordkeeping burden on domestic manufacturers and importers of paper and paper-based packaging.

As with all Federal research and promotion programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sector agencies. AMS has not identified any relevant Federal rules that duplicate, overlap, or conflict with this final rule.

AMS is committed to complying with the E-Government Act to promote the use of the internet and other information technologies to provide increased opportunities for citizen access to government information and services, and for other purposes.

Regarding alternatives, the Board considered not making the clarifying changes to the Order and leaving it as it is currently. The Board decided against leaving the Order unchanged as confusion would continue and potentially worsen over time. Therefore, that alternative was rejected.

Regarding outreach efforts, the Board determined that making these changes clarifies the issues and answer questions that have arisen over the last eight years and will help resolve similar questions in the future. These changes were discussed by the Board in June and November 2022, and the full Board unanimously recommended the changes on August 19, 2023. AMS has performed this RFA analysis regarding the impact of this action on small entities and invited comments concerning potential effects of this action.

[1] No domestic market pricing information for paper and paper-based packaging was publicly available; instead, average prices were estimated using export data from the U.S. Census Bureau.

A proposed rule concerning this action was published in the **Federal Register** on July 15, 2024 (89 FR 57368). A copy of the proposed rule was also made available through the internet by AMS via *https://www.regulations.gov.* A 30-day comment period ending on August 14, 2024, was provided for interested parties to respond to the proposal.

Comment Analysis

During the proposed rule's 30-day comment period, AMS received two comments, which may be viewed on *https://www.regulations.gov/document/AMS-SC-23-0080-0001/comment.* One comment received was in support of the changes, and one comment was opposed.

The commenter in support of the changes stated they are in favor of the changes as they will be helpful for industry stakeholders.

The other commenter opposed the revised definition of importer, stating the change broadens the scope of the definition, potentially causing confusion. The commenter suggested not revising the definition. AMS considered the comment and agreed. Therefore, the change was not made to this rule.

With all relevant material presented, including the information and recommendations submitted by the Board, the comments received, and other available information, it is hereby found that this rule, as hereinafter set forth, is consistent with and will effectuate the purposes of the Order.

List of Subjects in 7 CFR Part 1222

Administrative practice and procedure, Advertising, Labeling, Marketing agreements, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Agricultural Marketing Service amends 7 CFR part 1222 as follows:

PART 1222—PAPER AND PAPER-BASED PROMOTION, RESEARCH AND INFORMATION ORDER

■ 1. The authority citation for 7 CFR part 1222 continues to read as follows:

Authority: 7 U.S.C. 7411–7425; 7 U.S.C. 7401.

■ 2. Revise § 1222.7 to read as follows:

§ 1222.7 Fiscal year and marketing year.

Fiscal year and marketing year means the 12-month period ending on December 31 or such other period as recommended by the Board and approved by the Secretary.

■ 3. Revise § 1222.12 to read as follows:

§ 1222.12 Manufacture.

Manufacture means the process of transforming pulp into paper and paper-based packaging.

■ 4. Revise § 1222.13 to read as follows:

§ 1222.13 Manufacturer.

Manufacturer means any person who manufactures paper and paper-based packaging in the United States.

§§ 1222.19 through 1222.29 [Redesignated as §§ 1222.20 through 1222.30]

■ 5. Redesignate §§ 1222.19 through 1222.29 as §§ 1222.20 through 1222.30, respectively.

■ 6. Add new § 1222.19 to read as follows:

§ 1222.19 Partnership.

Partnership includes, but is not limited to:

(a) Spouses who have title to, or leasehold interest in, a paper and paper-based packaging manufacturing entity as tenants in common, joint tenants, tenants by the entirety, or, under community property laws, as community property; and

(b) So called ''joint ventures'' wherein one or more parties to an agreement, informal or otherwise, contributed land, facilities, capital, labor, management, equipment, or other services, or any variation of such contributions by two or more parties, that results in the manufacturing or importation of paper and paper-based packaging and the authority to transfer title to the paper and paper-based packaging so manufactured or imported.

■ 7. In § 1222.41, revise paragraphs (c)(1), (4), (5), and (10) to read as follows:

§ 1222.41 Nominations and appointments.

* * * * *

(c) * * *

(1) The Board shall issue a call for nominations and conduct outreach to all current manufacturers and importers who paid assessments during the prior fiscal year. Manufacturers and importers may submit nominations to the Board;

* * * * *

(4) For domestic seats allocated by region, domestic manufacturers must manufacture paper and paper-based packaging in the region for which they seek nomination. Nominees that manufacture in both regions may seek nomination in one region of their choice;

(5) Nominees that are both a manufacturer and an importer may seek nomination to the board either as a manufacturer or as an importer so long as they meet the qualifications;

* * * * *

(10) No two members shall be employed by a single manufacturer or importer that pays assessments under this part; and,

* * * * *

■ 8. In § 1222.43, revise paragraph (a) to read as follows:

§ 1222.43 Removal and vacancies.

(a) The Board may recommend to the Secretary that a member be removed from office if the member consistently fails or refuses to perform his or her duties properly or engages in dishonest acts or willful misconduct. If the Secretary determines that any person appointed under this subpart consistently fails or refuses to perform his or her duties properly or engages in acts of dishonesty or willful misconduct, the Secretary shall remove the person from office. A person appointed under this subpart may be removed by the Secretary if the Secretary determines that the person's continued service would be detrimental to the purposes of the Act.

* * * * *

■ 9. In § 1222.44, revise paragraphs (c) and (d) to read as follows:

§ 1222.44 Procedure.

* * * * *

(c) The Board and related committees may conduct meetings by any means of communication available, electronic or otherwise, that effectively assembles the required participants and facilitates open communication. Eligible participants may vote by any means of communication available, electronic or otherwise; provided that votes cast are verifiable and that a quorum and other procedural requirements are met.

(d) In lieu of voting at an assembled meeting and, when in the opinion of the chairperson of the Board such action is considered necessary, the Board may take action if supported by a majority of members (unless a two-thirds majority is required under the Order) by any means of communication available, electronic or otherwise. In that event, all members must be notified and provided the opportunity to vote. Any action so taken shall have the same force and effect as though such action had been taken at an assembled meeting. All votes shall be recorded in Board minutes.

* * * * *

■ 10. In § 1222.47, revise paragraph (c) to read as follows:

§ 1222.47 Prohibited activities.

* * * * *

(c) Any program, plan, or project including advertising that is false, misleading, or disparaging to another

agricultural commodity. Paper and paper-based packaging of all geographic origins shall be treated equally.

■ 11. In § 1222.50, revise paragraph (i) to read as follows:

§ 1222.50 Budget and expenses.

* * * * *

(i) The Board may establish an operating monetary reserve and may carry over to subsequent fiscal years excess funds in any reserve so established: Provided, that the funds in the reserve do not exceed two fiscal year's budget of expenses. Subject to approval by the Secretary, such reserve funds may be used to defray any expenses authorized under this subpart.

* * * * *

■ 12. In § 1222.51, revise paragraphs (b) and (c) to read as follows:

§ 1222.51 Financial statements.

* * * * *

(b) Each quarterly financial statement shall be submitted to the Department no later than 70 calendar days after the period to which it applies.

(c) The Board shall submit to the Department an audited annual financial statement no later than 120 calendar days after the end of the fiscal year to which it applies.

■ 13. In § 1222.52, revise paragraphs (e) introductory text and (f) to read as follows:

§ 1222.52 Assessments.

* * * * *

(e) Each importer of paper and paper-based packaging shall pay to the Board an assessment on the paper and paper-based packaging imported into the United States identified in the Harmonized Tariff Schedule of the United States (HTSUS) number listed in the following table. In the event that any HTSUS number subject to assessment is changed and such change is merely a replacement of a previous number and has no impact on the description of the paper and paper-based packaging involved, assessments will continue to be collected based on the new number.

* * * * *

(f) Each importer is responsible for paying the assessment directly to the Board within 30 calendar days after the end of the quarter in which the paper and paper-based packaging was imported.

* * * * *

■ 14. § 1222.53, revise paragraphs (a)(1), (a)(2)(iii), and (a)(5) to read as follows:

§ 1222.53 Exemption from assessment.

(a) * * *

(1) Manufacturers that manufacture less than 100,000 short tons of paper and paper-based packaging in a marketing year are exempt from paying assessments. Such manufacturers must apply to the Board, on a form provided by the Board, for a certificate of exemption. This is an annual exemption, and manufacturers must reapply each year. Such manufacturers shall certify that they will manufacture less than 100,000 short tons of paper and paper-based packaging during the marketing year for which the exemption is claimed. Upon receipt of an application for exemption, the Board shall determine whether an exemption may be granted. The Board may request past manufacturing data to support the exemption request. The Board will issue, if deemed appropriate, a certificate of exemption to the eligible manufacturer. It is the responsibility of the manufacturer to retain a copy of the certificate of exemption.

(2) * * *

(iii) The Board shall refund to such importers considered exempt assessments that the importer paid to the Board no later than 60 calendar days after the Board receives such assessments. The Board will stop refund of assessments to such importers who during the marketing year import more than 100,000 short tons of paper and paper-based packaging. These importers will be notified accordingly. No interest shall be paid on the assessments collected by the Board.

* * * * *

(5) In calculating whether a manufacturer or importer qualifies for an exemption, the combined quantity of all paper and paper-based packaging manufactured or imported by the manufacturer or importer during a marketing year shall count towards the 100,000 short-ton exemption.

* * * * *

■ 15. In § 1222.81, revise paragraph (b)(2) to read as follows:

§ 1222.81 Referenda.

* * * * *

(b) * * *

(2) Not later than seven years after the Order becomes effective and every seven years thereafter, to determine whether manufacturers and importers favor the continuation of the Order. The Order shall continue if it is favored by a majority of manufacturers and importers voting in the referendum who, during a representative period determined by the Secretary, are each an eligible domestic manufacturer or an eligible importer and who also represent a majority of the volume of paper and paper-based packaging represented in the referendum;

* * * * *

■ 16. In § 1222.82, revise paragraph (b) to read as follows:

§ 1222.82 Suspension or termination.

* * * * *

(b) The Secretary shall suspend or terminate this subpart at the end of the fiscal year whenever the Secretary determines that its suspension or termination is favored by a majority of manufacturers and importers voting in the referendum who, during a representative period determined by the Secretary, are each an eligible domestic manufacturer or an eligible importer and who also represent a majority of the volume of paper and paper-based packaging represented in the referendum.

* * * * *

■ 17. In § 1222.101, revise paragraphs (e) and (i) to read as follows:

§ 1222.101 Definitions.

* * * * *

(e) *Eligible domestic manufacturer* means any person who is currently a domestic manufacturer and who manufactured 100,000 short tons or more of paper and paper-based packaging during the representative period.

* * * * *

(i) *Manufacture* means the process of transforming pulp into paper and paper-based packaging.

* * * * *

■ 18. In § 1222.102, revise paragraph (a) to read as follows:

§ 1222.102 Voting.

(a) Each eligible domestic manufacturer and importer of paper and paper-based packaging shall be entitled to cast only one ballot in the referendum. However, each domestic manufacturer in a landlord/tenant relationship or a divided ownership arrangement involving totally independent entities cooperating only to manufacture paper and paper-based packaging, in which more than one of the parties is a domestic manufacturer or importer, shall be entitled to cast one ballot in the referendum covering only such domestic manufacturer or importer's share of ownership.

BILLING CODE P

DEPARTMENT OF ENERGY

10 CFR Parts 429, 430, and 431

[EERE–2023–BT–CE–0001]

Energy Conservation Program: Energy Conservation Standards and Test Procedures for Certain Consumer Products and Commercial Equipment; Corrections

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Final rule; correcting amendments.

SUMMARY: The U.S. Department of Energy (''DOE'') is publishing a final rule to amend and correct certain energy conservation standards and test procedures of consumer products and commercial and industrial equipment, as described in sections I and II of this document. The changes addressed in this document are technical in nature, and neither the errors nor the corrections in this document affect the substance of any rulemaking or any conclusions reached in support of any final rule.

DATES: *Effective Date:* January 21, 2025. The incorporation by reference of certain material listed in this rule was approved by the Director of the Federal Register as of September 30, 2022, April 24, 2023, June 5, 2023, and June 14, 2023.

FOR FURTHER INFORMATION CONTACT:

Mr. Troy Watson, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies Office, EE–5B, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (202) 449–9387. Email: *ApplianceStandardsQuestions@ee.doe.gov.*

Mr. Eric Stas. Department of Energy, Office of the General Counsel, GC–33, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (202) 586–4798. Email: *Eric.Stas@hq.doe.gov.*

III. Procedural Issues and Regulatory Review
IV. Approval of the Office of the Secretary

I. Background

A. Automatic Commercial Ice Makers

On November 1, 2022, DOE published a final rule in the **Federal Register** amending the test procedure for automatic commercial ice makers (''ACIMs'') (87 FR 65856; ''November 2022 ACIM Final Rule''). As part of the November 2022 ACIM Final Rule, DOE codified certification requirements for ACIMs at title 10 of the Code of Federal Regulations (''CFR'') 429.45. However, in the publication of the November 2022 ACIM Final Rule, DOE inadvertently updated 10 CFR 429.45(a)(2)(ii) with a typographical error in the formula for the upper 95-percent confidence limit (''UCL'') which used a ''minus'' sign instead of a ''plus'' sign between the terms of the UCL formula (*see* 87 FR 65856, 65899 (Nov. 1, 2022)). This document identifies and corrects this error.

B. Integrated Light-Emitting Diode Lamps

On July 1, 2016, DOE published a final rule in the **Federal Register** amending the test procedure for integrated light-emitting diode (''LED'') lamps (81 FR 43404; ''July 2016 Integrated LED Lamps Final Rule''). In the July 2016 Integrated LED Lamps Final Rule, DOE adopted the requirement that testing of lumen output, input power, lamp efficacy, power factor, correlated color temperature (''CCT''), color rendering index (''CRI''), lifetime, and standby mode power (if applicable) for integrated LED lamps be conducted by test laboratories accredited by National Voluntary Laboratory Accreditation Program (''NVLAP'') or an accrediting organization recognized by the International Laboratory Accreditation Cooperation (''ILAC''), as codified at 10 CFR 429.56(b)(2). Further, in the July 2016 Integrated LED Lamps Final Rule, DOE provided that it would state directly that accreditation by an Accreditation Body that is a signatory member to the ILAC Mutual Recognition Arrangement (''MRA'') is an acceptable means of laboratory accreditation. 81 FR 43404, 43419 (July 1, 2016). However, DOE inadvertently did not update the certification requirements for integrated LED lamps in 10 CFR 429.56(b)(2) to reflect this statement. This document identifies and corrects this error by specifying in 10 CFR 429.56(b)(2) that the certification report must include the testing laboratory's ILAC accreditation body's identification number or other approved identification assigned by the ILAC accreditation body.

Additionally, in the July 2016 Integrated LED Lamps Final Rule, DOE inadvertently updated 10 CFR 429.56(b)(2) to specify that lifetime be reported in years. As indicated in the determinations of their represented values in 10 CFR 429.56(a)(1)(ii)(D) and 10 CFR 429.56(a)(2), respectively, lifetime must be reported in hours and life must be reported in years. This document identifies and corrects this error.

C. General Service Lamps

On August 31, 2022, DOE published a final rule in the **Federal Register** amending the test procedure for general service fluorescent lamps (''GSFLs''), incandescent reflector lamps (''IRLs''), and general service incandescent lamps (''GSILs'') (87 FR 53618; ''August 2022 Lamps Final Rule''). In the August 2022 Lamps Final Rule, DOE reorganized 10 CFR 429.27 to apply only to GSFLs (as opposed to GSFLs, GSILs, and IRLs), establishing new sections 10 CFR 429.55 for IRLs and 10 CFR 429.66 for GSILs, so that each lamp type (*i.e.,* GSFL, IRL, GSIL) has its own section within 10 CFR part 429. 87 FR 53618, 53629 (August 31, 2022). However, as part of the August 2022 Lamps Final Rule, DOE inadvertently did not update the certification requirements for general service lamps (''GSLs'') in 10 CFR 429.57 to change references to 10 CFR 429.27 to reflect this reorganization. Specifically, 10 CFR 429.57(a)(2), (a)(5) and (b)(3) refer to certification requirements for GSILs at 10 CFR 429.27 when they should reference 10 CFR 429.66. This document identifies and corrects this error.

Additionally, in the August 2022 Lamps Final Rule DOE clarified the definition of ''rated wattage'' in 10 CFR 430.2, which included replacing the references to appendix R with references to the relevant sections in 10 CFR part 429. 87 FR 53618, 53629 (August 31, 2022). However, in making

this update, with respect to GSILs, DOE inadvertently referenced 10 CFR 429.27 instead of 10 CFR 429.66 (see paragraph (2) of the ''rated wattage'' definition in 10 CFR 430.2). This document identifies and corrects this error.

D. Uninterruptible Power Supplies

On September 8, 2022, DOE published a final rule in the **Federal Register** amending the battery charger portion of the battery charger and uninterruptible power supply (''UPS'') test procedure at 10 CFR part 430, subpart B, appendix Y (''appendix Y'') (87 FR 55090, ''September 2022 Battery Charger Final Rule''). The final rule also created a new test procedure for both products at 10 CFR part 430, subpart B, appendix Y1 (''appendix Y1'') that expanded the scope of the battery charger test method and established separate metrics for active mode, standby mode, and off mode for all battery chargers other than uninterruptible power supplies. Manufacturers must continue to use the amended test procedure in appendix Y until the compliance date of any new final rule establishing amended energy conservation standards based on the newly established test procedure in appendix Y1 (although early compliance is permitted). 87 FR 55090, 55122 (Sept. 8. 2022). After the compliance date of new standards for battery chargers other than UPSs using these new metrics, manufacturers may no longer use appendix Y and instead will be required to determine compliance using the updated test procedure at appendix Y1. *Id.* at 87 FR 55125.

On April 19, 2024, DOE published a final rule in the **Federal Register** (''April 2024 UPS Final Rule'') amending the UPS test procedure in appendix Y and appendix Y1, which incorporated by reference relevant portions of the latest version of the relevant industry testing standard, harmonized the current DOE definitions with the definitions in the latest version of the industry standard, and added a no-load testing condition as an optional test. 89 FR 28581.

DOE has identified a reference error in both DOE's UPS enforcement provisions at 10 CFR 429.134(o), as well as appendix Y of the UPS test procedure. In 10 CFR 429.134(o), and in sections 0.1(d), 0.1(p), 0.1(q), 0.1(r), and 4.3.4 of appendix Y, DOE incorrectly referenced sections 2.28.1 through 2.28.3 of appendix Y for UPS architecture tests. The correct reference should be sections 2.27.1 through 2.27.3 of appendix Y. DOE additionally notes that the UPS enforcement provisions should also have been updated to address how to determine the UPS architecture of a unit tested using appendix Y1. This document identifies and corrects these reference errors.

In the April 2024 UPS Final Rule, DOE also updated the introductory note to appendix Y. 89 FR 28581, 28592 (April 19, 2024). DOE intended to replace the introductory note, to add an introductory table, and to remove the introductory text to appendix Y. However, as written, the final rule did not remove the now-obsolete introductory text. This document identifies and removes this text.

E. Water Heaters

The test procedure established for consumer water heaters and residential-duty commercial water heaters is located in DOE's regulations at 10 CFR part 430, subpart B, appendix E, ''Uniform Test Method for Measuring the Energy Consumption of Water Heaters'' (''appendix E''), and it specifies that tests must be conducted under specific conditions, depending on the type of water heater being tested. On June 21, 2023, the DOE published a final rule in the **Federal Register** adopting an amended test procedure for consumer water heaters and residential-duty commercial water heaters (88 FR 40406; ''June 2023 Water Heater Final Rule'').

In the preamble to the June 2023 Water Heater final rule, DOE discussed that it was amending the ambient air temperature tolerances required for tests conducted on all water heaters other than heat pump water heaters (*i.e.,* for ''non-heat pump water heaters''), which was to be specified at section 2.2.1 of appendix E. 88 FR 40406, 40435–40436 (June 21, 2023). Specifically, in section III.C.4 of the June 2023 Water Heater Final Rule, DOE explained that it had initially proposed in a notice of proposed rulemaking (''NOPR'') published in the **Federal Register** on January 11, 2022 (87 FR 1554; ''January 2022 Water Heater NOPR'') to update the ambient temperature requirement for non-heat pump water heaters to require that the ambient temperature during testing must be an average of 67.5 °F ± 2.5 °F, with a maximum deviation of 67.5 °F ± 5 °F, as opposed to only a maximum deviation of 67.5 °F ± 2.5 °F as specified in the test procedure at that time. In the June 2023 Water Heater Final Rule, DOE concluded that, after considering comments on the January 2022 Water Heater NOPR, it was adopting the changes to ambient air temperature and relative humidity tolerances as proposed. 88 FR 40406, 40435–40436 (June 21, 2023).

However, the relevant regulatory text of section 2.2.1 in appendix E, as amended by the June 2023 Water Heater Final Rule, does not reflect these amended tolerances and improperly maintained the values specified under the previous version of DOE's test procedure for the subject water heaters. This document identifies and corrects this error.

DOE also discovered a typographical error in section 6.3.2 of appendix E. Section 6.3.2 of appendix E addresses the calculations for mass of water removed during each draw of the 24-hour simulated-use test. In that section, it is written that the volume of water must be multiplied by the density of the water during each draw of the 24-hour simulated-use test to arrive at the mass of water removed during each draw of the 24-hour simulated-use test. Throughout appendix E, the symbol ρ (the lowercase symbol for the Greek letter ''rho'') is used to represent density, including the definition for these values in section 6.3.2 of appendix E. However, the first equation in section 6.3.2 of appendix E incorrectly uses the term $P_{del,i}$, using the letter P rather than the symbol ρ. This document identifies and corrects this error.

Additionally, a typographical error occurred which inadvertently changed an equation in section 6.3.6 of appendix E. Section 6.3.6 of appendix E addresses the calculation of adjusted daily water heating energy consumption for water heaters with rated storage volumes greater than or equal to 2 gallons, as well as circulating water heaters. In that section, it is written that the difference between the energy used to heat water in the test and the energy required to heat the same quantity of water over a 67 °F temperature rise (altogether represented by the term Q_{HWD}) must be added to the adjusted daily water heating energy consumption value to arrive at the daily energy consumption value. However, the equation printed directly below shows the terms being subtracted instead of being added together as the text had indicated. The equation in section 6.3.6 of appendix E specifically reads ''$Q_{dm} = Q_{da} - Q_{HWD}$'' instead of properly reading ''$Q_{dm} = Q_{da} + Q_{HWD}$.'' This document identifies and corrects this error as well.

Another printing error caused the inadvertent deletion of the mathematical equation from section 6.4.7 of appendix E that identifies how to calculate the annual fossil fuel energy consumption of a water heater with rated storage volume less than 2 gallons. The annual fossil fuel energy consumption for such a product is equal to the total annual energy consumption

minus the electrical energy consumption (adjusted from kilowatts to Btu per hour). Thus, the equation should read, ''$E_{annual,f} = E_{annual} - (E_{annual,e} \times 3{,}412)$'' as it did in section 6.4.6 of appendix E prior to the June 2023 Water Heater Final Rule which renumbered the section. This document identifies and corrects this error.

This document also identifies and corrects typographical errors pertaining to the amended standards for water heaters found at 10 CFR 430.32(d). On May 6, 2024, DOE published a final rule in the **Federal Register** adopting amended energy conservation standards for consumer water heaters (89 FR 37778; ''May 2024 Water Heater Final Rule''). Throughout the May 2024 Water Heater Final Rule, DOE discussed transitioning standards for consumer water heaters to be based on an effective storage volume metric, as opposed to the previously used rated storage volume metric. Table I.1 in the May 2024 Water Heater Final Rule demonstrated how the amended standards (with compliance required beginning on May 6, 2029) would be based on effective storage volume. *Id.* at 89 FR 37780–37781. However, when adopting these standards into the regulatory text codified at 10 CFR 430.32(d)(2), the table inadvertently maintained a reference to the rated storage volume metric. *Id.* at 89 FR 37944. This document corrects the amended standards table to read ''Effective storage volume and input rating (*if applicable*)'' instead of ''Rated storage volume and input rating (*if applicable*)'' at 10 CFR 430.32(d)(2).

In addition, the current standards, which use the rated storage volume metric, remain applicable until May 6, 2029. The May 2024 Water Heater Final Rule maintained these standards at 10 CFR 430.32(d)(1). However, the adopted regulatory text at 10 CFR 430.32(d)(1) included a typographical error with respect to the compliance dates for the standards therein. Section (d)(1) of 10 CFR 430.32 reads ''The uniform energy factor of water heaters manufactured May 6, 2029 shall not be less than the following'' instead of ''The uniform energy factor of water heaters manufactured *before* May 6, 2029 shall not be less than the following'' (emphasis added on the word ''before''). This document corrects this error as well.

F. Portable Air Conditioners

On May 15, 2023, DOE published a final rule in the **Federal Register** establishing a new test procedure for portable air conditioners (''ACs'') at 10 CFR part 430, subpart B, appendix CC1, ''Uniform Test Method for Measuring the Energy Consumption of Portable Air Conditioners'' (''appendix CC1'') (88 FR 31102; ''May 2023 Portable AC Final Rule''). This test procedure must be used to determine compliance with any amended portable AC energy conservation standards that use the Annualized Energy Efficiency Ratio (''AEER'') metric. 88 FR 31102, 31106 (May 15, 2023). In the May 2023 Portable AC Final Rule, as part of appendix CC1, DOE adopted an updated seasonally adjusted cooling capacity (''SACC'') calculation that consists of a weighted average of the cooling capacities measured at the 95 °F and 83 °F test conditions, each adjusted for duct heat transfer capacity losses and infiltration air capacity losses. For single-speed portable ACs, the adjusted cooling capacity for the 83 °F test condition is also multiplied by a load factor of 0.6 for single-duct units and 0.5363 for dual-duct units. 88 FR 31102, 31114 (May 15, 2023).

DOE has identified an error in section 5.1 of appendix CC1, which contains the calculations of adjusted cooling capacity for portable ACs at the 95 °F and 83 °F operating conditions. The identified error is in the formula for adjusted cooling capacity of single-duct single-speed units at 83 °F (''ACC_{83}''), which as published includes the term ''$Q_{infiltration_95}$.'' This term was included erroneously, and the formula should have used the term ''$Q_{infiltration_83}$'' to reflect the infiltration heat transfer at 83 °F rather than at 95 °F as is currently shown. This erroneous term is also included in the amplifying instruction for single-speed single-duct units in that section, which should reference the $Q_{infiltration_83}$ value in addition to $Q_{infiltration_95}$. This document identifies and corrects these errors.

G. Refrigerators, Refrigerator-Freezers, and Freezers

On January 17, 2024, DOE published a direct final rule in the **Federal Register** adopting amended energy conservation standards for refrigerators, refrigerator-freezers, and freezers (89 FR 3026; ''January 2024 Refrigerator Direct Final Rule''). In the publication of the January 2024 Refrigerator Direct Final Rule, DOE inadvertently updated 10 CFR 430.32(a)(1) with a typographical error which states the current energy conservation standards for refrigerators, refrigerator-freezers, and freezers ''apply to products manufactured on or before September 15, 2014.'' This document identifies and corrects this error, with text that reads ''standards apply to products manufactured on or after September 15, 2014.''

In the January 2024 Refrigerator Direct Final Rule, DOE also inadvertently updated 10 CFR 430.32(a)(1) with another typographical error which lists the equation for the maximum energy use for product class 4I–BI as ''10.22AV + 441.4.2.'' This document identifies and corrects this error, to reflect the correct equation of ''10.22AV + 441.4.''

H. Commercial Package Air Conditioners and Heat Pumps

On May 20, 2024, DOE published a final rule in the **Federal Register** amending the current test procedures for air-cooled commercial unitary air conditioners with a rated cooling capacity greater than or equal to 65,000 Btu/h, evaporatively-cooled commercial unitary air conditioners, and water-cooled commercial unitary air conditioners (referred to collectively as ''CUACs and CUHPs'') (89 FR 43986; ''May 2024 CUAC and CUHP TP Final Rule'').

As part of the publication of the May 2024 CUAC and CUHP TP Final Rule, DOE updated Table 1 to paragraph (b) of 10 CFR 431.96, which lists the test procedure for all commercial air conditioners and heat pumps, and included a typographical error in one of the column headers. Specifically, the column heading in Table 1 to paragraph (b) erroneously stated, ''Use tests, conditions, an procedures in'' instead of ''Use tests, conditions and procedures in'' (*see* 89 FR 43986, 44037 (May 20, 2024). This document identifies and corrects this error.

I. Distribution Transformers

The applicable energy conservation standard requirements for distribution transformers are contained in DOE's regulations at 10 CFR part 431, subpart K and are applicable to products that meet the definition of ''distribution transformer'' as codified at 10 CFR 431.192. 10 CFR 431.192 also includes definitions for several kinds of equipment explicitly excluded from the definition of ''distribution transformer.''

On April 22, 2024, DOE published a final rule in the **Federal Register** adopting amended energy conservation standards for distribution transformers and adopting minor edits to the definitions relevant for distribution transformers, including clarifying edits to the definition of ''special-impedance transformer'' (89 FR 29834; ''April 2024 Transformer Final Rule''). In the publication of the April 2024 Transformer Final Rule, DOE updated 10 CFR 431.192 with a typographical error in the titles of Tables 1 and 2 relevant for the definition of ''special-impedance transformer.'' Specifically,

the headings for Table 1 and Table 2 each state, ''to the Definition o 'Special-Impedance Transformer.' '' This document identifies and corrects this error with text that reads, ''to the Definition of 'Special-Impedance Transformer.' ''

J. Walk-In Coolers and Walk-In Freezers

On May 4, 2023, DOE published a final rule in the **Federal Register** amending the test procedures for walk-in coolers and walk-in freezers (referred to as ''walk-ins'' or ''WICFs'') (88 FR 28780; ''May 2023 WICF TP Final Rule''). As part of the May 2023 WICF TP Final Rule, DOE adopted a new test procedure at 10 CFR part 431, subpart R, appendix C1 (''appendix C1'') and a new efficiency metric (*i.e.,* annual walk-in energy factor 2 (''AWEF2'')), for walk-in refrigeration systems. Appendix C1 references the Air-Conditioning, Heating, and Refrigeration Institute (''AHRI'') industry test standard AHRI 1250–2020, ''2020 Standard for Performance Rating of Walk-in Coolers and Freezers.''

AWEF2 is the ratio of annual total heat removed from a walk-in box (*i.e.,* the annual walk-in box load) to the annual total energy input. For all outdoor dedicated condensing refrigeration systems (*i.e.,* outdoor matched pairs, single-package dedicated systems, and dedicated condensing units), annual walk-in box load and annual energy use are determined by summing the walk-in box load and energy use for 20 different bins and corresponding bin temperatures multiplied by the number of hours in each bin (*see, e.g.,* section 7.4.1 of AHRI 1250–2020). Power values for each bin are interpolated or extrapolated based on the power measurements taken at three different outdoor ambient temperatures (95 °F, 59 °F, and 35 °F). For outdoor dedicated condensing refrigeration systems, there are three off-cycle tests conducted at these same three outdoor ambient conditions (95 °F, 59 °F, and 35 °F), and, therefore, there are three separate measurements of off-cycle condensing unit power (*see, e.g.,* Table 5 of AHRI 1250–2020).

In the May 2023 WICF TP Final Rule, for outdoor dedicated condensing refrigeration systems, DOE deviated from the AHRI 1250–2020 calculations for off-cycle energy use in AWEF2 because the equations for refrigeration system total power input by each bin temperature t_j (*e.g.,* equation 13 of AHRI 1250–2020) do not use off-cycle power values that vary by bin temperature. Because the condensing unit off-cycle power may vary as a function of outdoor temperature, DOE adopted instructions for calculating condensing unit off-cycle power as a function of outdoor temperature based on the measurements made at the three outdoor test condition temperatures. 88 FR 28780, 28812–28813 (May 4, 2023). DOE adopted these provisions for all outdoor dedicated condensing systems, regardless of whether they are high-, medium-, or low-temperature dedicated condensing systems.

Section 3.4.12.2 of appendix C1 specifies how to calculate AWEF2 for high-temperature, outdoor matched pairs or single-packaged refrigeration systems. Section 3.4.12.2 erroneously specifies that the condensing unit off-cycle power, $\dot{E}_{cu,off}$, is measured as described in section C3.5 of AHRI 1250–2020 and does not specify that condensing unit off-cycle power should be determined based on bin temperature t_j per section 3.4.3.3 of appendix C1. This document identifies and corrects this error with text that specify that condensing unit off-cycle power for high-temperature, outdoor matched pairs or single-packaged refrigeration systems should be determined based on bin temperature t_j per section 3.4.3.3 of appendix C1.

K. Circulator Pumps

On May 20, 2024, DOE published a final rule in the **Federal Register** establishing energy conservation standards for circulator pumps (89 FR 44464; ''May 2024 Circulator Pump Final Rule''). In the publication of the May 2024 Circulator Pump Final Rule, DOE updated the section heading of 10 CFR 431.465 which previously read ''Pumps energy conservation standards and their compliance dates'' to read ''Circulator pumps energy conservation standards and their compliance dates.'' This amendment was in error, as this section of the CFR includes energy conservation standards for dedicated purpose pool pumps and commercial and industrial pumps in addition to circulator pumps. This document identifies and corrects this error by reverting to the previous section heading.

L. Commercial and Industrial Pumps

The test procedure established for commercial and industrial pumps is located in DOE's regulations at 10 CFR part 431, subpart Y, appendix A, ''Uniform Test Method for the Measurement of Energy Consumption of Pumps'' (''appendix A''). Sections IV.D.2 and VI.D.2 of appendix A outline how to determine the best efficiency point (''BEP'') using the testing-based approach for pumps sold with motors. On March 24, 2023, DOE published a final rule in the **Federal Register** adopting an amended test procedure for commercial and industrial pumps (88 FR 17934; ''March 2023 Pumps Final Rule'').

DOE has identified errors in sections IV.D.2 and VI.D.2 of appendix A, as finalized in the March 2023 Pumps Final Rule, which erroneously reference ''pump efficiency,'' calculated using ''pump power input,'' in describing how to determine the BEP using the testing-based approach for pumps sold with motors; whereas, those sections should instead reference ''overall efficiency,'' calculated using ''driver power input,'' consistent with the wording as it appeared prior to the amendments of the March 2023 Pumps Final Rule. This document identifies and corrects these errors by reverting to the prior language.

II. Need for Correction

A. Automatic Commercial Ice Makers

As published, the regulatory text in 10 CFR 429.45(a)(2)(ii) will likely cause confusion and may mislead interested parties regarding how to properly determine the UCL for ACIM certification purposes. The relevant changes to 10 CFR 429.45(a)(2)(ii) correct the inadvertent formula error. Accordingly, the changes addressed in this document are technical in nature.

B. Integrated Light-Emitting Diode Lamps

As published, the regulatory text in 10 CFR 429.56(b)(2) will likely cause confusion and may mislead interested parties regarding the entities permitted to test integrated LED lamps and the units to be used in making certain representations. The relevant changes to 10 CFR 429.56(b)(2) correct the units used and the testing laboratory requirements. Accordingly, the changes addressed in this document are technical in nature.

C. General Service Lamps

As published, the erroneous section references in the regulatory text in sections (a) and (b) of 10 CFR 429.57 and the definition of ''rated wattage'' in 10 CFR 430.2 will likely cause confusion and may mislead interested parties regarding how to properly test and certify GSFLs, IRLs, and GSILs. The relevant changes to sections (a) and (b) of 10 CFR 429.57 and the definition of ''rated wattage'' in 10 CFR 430.2 correct the reference errors. Accordingly, the changes addressed in this document are technical in nature.

D. Uninterruptible Power Supplies

As published, the now-obsolete introductory text in appendix Y, the

erroneous section references in the regulatory text in 10 CFR 429.134(o), and sections 0 and 4.3.4 of appendix Y will likely cause confusion and may mislead interested parties regarding test procedure applicability date, and regarding how to properly determine UPS architecture. The relevant changes to 10 CFR 429.134(o) and sections 0 and 4.3.4 of appendix Y correct the reference errors related to UPS architecture testing. Accordingly, the changes addressed in this document are technical in nature.

E. Water Heaters

As published, the regulatory text in sections 2.2.1, 6.3.6, and 6.4.7 of appendix E, will likely cause confusion and may mislead interested parties regarding how to properly conduct testing under DOE's consumer water heaters and residential-duty commercial water heaters test procedure. The relevant changes to section 2.2.1 of appendix E, involving a tolerance to ambient temperature requirement for non-heat pump water heaters, was discussed in the June 2023 Water Heater Final Rule's preamble, but it was inadvertently omitted from the amended regulatory text. The relevant changes to section 6.3.2 and section 6.3.6 of appendix E, involving the proper nomenclature for mass of water removed and the proper calculation of daily energy consumption, respectively, fix inadvertent typographical errors. The changes to section 6.4.7 of appendix E correct the inadvertent deletion of an equation used to compute annual fossil fuel energy consumption. Additionally, the relevant changes to the amended standards at 10 CFR 430.32(d)(1)–(2), involving the description of the compliance date and the storage volume metric, also resolve inadvertent typographical errors. Accordingly, the changes addressed in this document are technical in nature.

F. Portable Air Conditioners

As published, the regulatory text in section 5.1 of appendix CC1 to subpart B of 10 CFR part 430 will likely result in confusion as to the meaning of these terms and the references to provisions elsewhere in the test procedure. The relevant changes to section 5.1 of appendix CC1 correct the typographical errors introduced in the May 2023 Portable AC Final Rule. Accordingly, the changes addressed in this document are technical in nature.

G. Refrigerators, Refrigerator-Freezers, and Freezers

As published, the regulatory text in 10 CFR 430.32(a)(1) will likely cause confusion and may mislead interested parties regarding applicability of the current energy conservation standards of refrigerators, refrigerator-freezers, and freezers. The relevant changes to 10 CFR 430.32(a)(1), correct the inadvertent typographical errors introduced in the January 2024 Refrigerator Direct Final Rule. Accordingly, the changes addressed in this document are editorial in nature.

H. Commercial Package Air Conditioners and Heat Pumps

As published, the regulatory text in section 10 CFR 431.96 may cause confusion to interested parties regarding how to properly conduct testing under DOE's commercial air conditioner and heat pump test procedures. The relevant changes to 10 CFR 431.96 correct the typographical error introduced in the May 2024 CUAC and CUHP TP Final Rule. Accordingly, the changes addressed in this document are editorial in nature.

I. Distribution Transformers

As published, the regulatory text in section 10 CFR 431.192 will likely cause confusion to interested parties regarding definitions relevant to the current energy conservation standards of distribution transformers. The relevant changes to 10 CFR 431.192 correct the typographical error introduced in the April 2024 Transformer Final Rule. Accordingly, the changes addressed in this document are editorial in nature.

J. Walk-In Coolers and Walk-In Freezers

As published, the regulatory text in section 3.4.12.2 of 10 CFR part 431, subpart R, appendix C1 will likely cause confusion and may mislead interested parties regarding how to properly conduct testing of high-temperature, outdoor matched pairs or single-packaged dedicated condensing systems under DOE's walk-in refrigeration systems test procedure. The relevant changes to section 3.4.12.2 of appendix C1 correct the inadvertent error introduced in the May 2023 WICF TP Final Rule. Accordingly, the changes addressed in this document are technical in nature.

K. Circulator Pumps

As published, the title of 10 CFR 431.465 will likely cause confusion and may mislead interested parties regarding the current energy conservation standards of dedicated purpose pool pumps and commercial and industrial pumps. The relevant changes to 10 CFR 431.465 correct the misleading section heading introduced in the May 2024 Circulator Pump Final Rule. Accordingly, the changes addressed in this document are editorial in nature.

L. Commercial and Industrial Pumps

As published, the regulatory text in sections IV.D.2 and VI.D.2 of appendix A to subpart Y of 10 CFR part 431 will likely cause confusion and may mislead interested parties regarding how to properly conduct testing under DOE's commercial and industrial pump test procedure. The relevant changes to 10 CFR part 431, subpart Y, appendix A correct the inadvertent error introduced in the March 2023 Pumps Final Rule. Accordingly, the changes addressed in this document are technical in nature.

III. Procedural Issues and Regulatory Review

DOE has concluded that the determinations made pursuant to the various procedural requirements applicable to the final rules discussed elsewhere in this document related to ACIMs [1]; integrated LED lamps [2]; general service lamps [3]; UPSs [4]; water heaters [5]; portable ACs [6]; refrigerators, refrigerator-freezers, freezers [7]; CUACs and CUHPs [8]; distribution transformers [9]; WICFs [10]; circulator pumps [11]; and commercial and industrial pumps [12] remain unchanged for this final rule correcting amendments.

Pursuant to the Administrative Procedure Act, 5 U.S.C. 553(b)(B), DOE finds that there is good cause to not issue a separate notification to solicit public comment on the changes contained in this document. Issuing a separate notification to solicit public comment would be impracticable, unnecessary, and contrary to the public interest. Neither the errors nor the corrections in this document affect the substance of the aforementioned final rules for the subject consumer products and commercial and industrial equipment or any of the conclusions reached in support of those documents. Additionally, given the energy conservation standards and test procedures that are being corrected are

[12] *See* 88 FR 17934, 17968–17972 (March 24, 2023).

a result of an extensive administrative record with numerous opportunities for public comment, DOE finds additional comment on the technical corrections is unnecessary. Therefore, providing prior notification and an opportunity for public comment on correcting objective, typographical errors that do not change the substance of the relevant energy conservation standards and test procedures serves no useful purpose.

Further, this rule correcting typographical errors makes non-substantive changes to the subject test procedure and energy conservation standards. As such, this rule is not subject to the 30-day delay in effective date requirement of 5 U.S.C. 553(d) otherwise applicable to rules that make substantive changes.

The following standards appear in the amendatory text of this document and were previously approved for the locations in which they appear: ANSI C78.81, ANSI C78.901, AHAM PAC–1–2022, AHRI 1250–2020, and HI 40.6–2021.

IV. Approval of the Office of the Secretary

The Secretary of Energy has approved publication of this final rule.

List of Subjects

10 CFR Part 429

10 CFR Part 430

Administrative practice and procedure, Confidential business information, Energy conservation, Household appliances, Incorporation by reference, Imports, Intergovernmental relations, Reporting and recordkeeping requirements, Small businesses.

10 CFR Part 431

Administrative practice and procedure, Confidential business information, Energy conservation, Incorporation by reference, Reporting and recordkeeping requirements.

Signing Authority

This document of the Department of Energy was signed on January 10, 2025, by Jeffrey Marootian, Principal Deputy Assistant Secretary for Energy Efficiency and Renewable Energy, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on January 13, 2025.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

For the reasons stated in the preamble, DOE corrects parts 429, 430, and 431 of Chapter II of Title 10, Code of Federal Regulations, by making the following correcting amendments:

PART 429—CERTIFICATION, COMPLIANCE, AND ENFORCEMENT FOR CONSUMER PRODUCTS AND COMMERCIAL AND INDUSTRIAL EQUIPMENT

■ 1. The authority citation for part 429 continues to read as follows:

Authority: 42 U.S.C. 6291–6317; 28 U.S.C. 2461 note.

■ 2. Amend § 429.45 by revising paragraph (a)(2)(ii) to read as follows:

§ 429.45 Automatic commercial ice makers.

(a) * * *

(2) * * *

(ii) The upper 95 percent confidence limit (UCL) of the true mean divided by 1.10, where:

$$UCL = \bar{x} + t_{0.95}\left(\frac{s}{\sqrt{n}}\right)$$

And $\bar{x}$ is the sample mean; s is the sample standard deviation; n is the number of samples; and $t_{0.95}$ is the Student's t-Distribution Values for a 95 percent one-tailed confidence interval with n-1 degrees of freedom (from appendix A to this subpart).

* * * * *

■ 3. Amend § 429.56 by revising paragraph (b)(2) to read as follows:

§ 429.56 Integrated light-emitting diode lamps.

* * * * *

(b) * * *

(2) Values reported in certification reports are represented values. Pursuant to § 429.12(b)(13), a certification report must include the following public product-specific information: The testing laboratory's ILAC accreditation body's identification number or other approved identification assigned by the ILAC accreditation body, the date of manufacture, initial lumen output in lumens (lm), input power in watts (W), lamp efficacy in lumens per watt (lm/W), CCT in kelvin (K), power factor, lifetime in hours (and whether value is estimated), and life in years (and whether value is estimated). For lamps with multiple modes of operation (such as variable CCT or CRI), the certification report must also list which mode was selected for testing and include detail such that another laboratory could operate the lamp in the same mode. Lifetime and life are estimated values until testing is complete. When reporting estimated values, the certification report must specifically describe the prediction method, which must be generally representative of the methods specified in appendix BB. Manufacturers are required to maintain records per § 429.71 of the development of all estimated values and any associated initial test data.

* * * * *

■ 4. Amend § 429.57 by revising paragraphs (a) and (b) to read as follows:

§ 429.57 General service lamps.

(a) *Determination of represented value.* Manufacturers must determine represented values, which includes certified ratings, for each basic model of general service lamp in accordance with following sampling provisions.

(1) The requirements of § 429.11 are applicable to general service lamps, and

(2) For general service incandescent lamps, use § 429.66(a);

(3) For compact fluorescent lamps, use § 429.35(a);

(4) For integrated LED lamps, use § 429.56(a);

(5) For other incandescent lamps, use § 429.66(a);

(6) For other fluorescent lamps, use § 429.35(a); and

(7) For OLED lamps and non-integrated LED lamps, use § 429.56(a).

(b) *Certification reports.* (1) The requirements of § 429.12 are applicable to general service lamps;

(2) Values reported in certification reports are represented values;

(3) For general service incandescent lamps, use § 429.66(b);

(4) For compact fluorescent lamps, use § 429.35(b);

(5) For integrated LED lamps, use § 429.56(b); and

(6) For other incandescent lamps, for other fluorescent lamps, for OLED lamps and non-integrated LED lamps, pursuant to § 429.12(b)(13), a certification report must include the following public product-specific

information: The testing laboratory's ILAC accreditation body's identification number or other approved identification assigned by the ILAC accreditation body, initial lumen output, input power, lamp efficacy, and power factor. For non-integrated LED lamps, the certification report must also include the input voltage and current used for testing.

* * * * *

■ 5. Amend § 429.134 by revising paragraph (o)(1) to read as follows:

§ 429.134 Product-specific enforcement provisions.

* * * * *

(o) * * *

(1) To determine the uninterruptible power supply (UPS) architecture:

(i) When testing according to appendix Y to subpart B of part 430, perform the UPS architecture tests specified in the definitions of VI, VFD, and VFI in sections 2.27.1 through 2.27.3 of appendix Y to subpart B of 10 CFR part 430.

(ii) When testing according to appendix Y1 to subpart B of part 430, perform the UPS architecture tests specified in the definitions of VI, VFD, and VFI in sections 2.28.1 through 2.28.3 of appendix Y1 to subpart B of 10 CFR part 430.

* * * * *

PART 430—ENERGY CONSERVATION PROGRAM FOR CONSUMER PRODUCTS

■ 6. The authority citation for part 430 continues to read as follows:

Authority: 42 U.S.C. 6291–6309; 28 U.S.C. 2461 note.

■ 7. Amend § 430.2 by revising the definition of ''Rated wattage'' to read as follows:

§ 430.2 Definitions.

* * * * *

Rated wattage means:

(1) With respect to fluorescent lamps and general service fluorescent lamps:

(i) If the lamp is listed in ANSI C78.81 (incorporated by reference; see § 430.3) or ANSI C78.901 (incorporated by reference; see § 430.3), the rated wattage of a lamp determined by the lamp designation of Clause 11.1 of ANSI C78.81 or ANSI C78.901;

(ii) If the lamp is a residential straight-shaped lamp, and not listed in ANSI C78.81 (incorporated by reference; see § 430.3), the wattage of a lamp when operated on a reference ballast for which the lamp is designed; or

(iii) If the lamp is neither listed in one of the ANSI standards referenced in paragraph (1)(i) of this definition, nor a residential straight-shaped lamp, a represented value of electrical power for a basic model, determined according to 10 CFR 429.27, and derived from the measured initial input power of a lamp tested according to appendix R to subpart B of this part.

(2) With respect to general service incandescent lamps, a represented value of electrical power for a basic model, determined according to 10 CFR 429.66, and derived from the measured initial input power of a lamp tested according to appendix R to subpart B of this part.

(3) With respect to incandescent reflector lamps, a represented value of electrical power for a basic model, determined according to 10 CFR 429.55, and derived from the measured initial input power of a lamp tested according to appendix R to subpart B of this part.

* * * * *

■ 8. Amend appendix E to subpart B of part 430 by revising sections 2.2.1, 6.3.2, 6.3.6, and 6.4.7 to read as follows:

Appendix E to Subpart B of Part 430—Uniform Test Method for Measuring the Energy Consumption of Water Heaters

* * * * *

2.

* * *

2.2 * * *

2.2.1 *Non-Heat Pump Water Heaters.* The ambient air temperature shall be maintained at an average of 67.5 °F ± 2.5 °F (19.7 °C ± 1.4 °C) on a continuous basis throughout the test, with a maximum deviation of 67.5 °F ± 5 °F (19.7 °C ± 2.8 °C).

* * * * *

6. * * *

6.3 * * *

6.3.2 *Mass of Water Removed.* Determine the mass of water removed during each draw of the 24-hour simulated-use test ($M_{del,i}$) as:

If the mass of water removed is measured, use the measured value, or, if the volume of water removed is being measured,

$$M_{del,i} = V_{del,i} \times \rho_{del,i}$$

* * * * *

6.3.6 *Adjusted Daily Water Heating Energy Consumption.* The adjusted daily water heating energy consumption, $Q_{da,}$ takes into account that the ambient temperature may differ from the nominal value of 67.5 °F (19.7 °C) due to the allowable variation in surrounding ambient temperature of 65 °F (18.3 °C) to 70 °C (21.1 °C). The adjusted daily water heating energy consumption is computed as:

$$Q_{da} = Q_d - (67.5\,°F - \overline{T}_{a,stby,2})\ UA\ \tau_{stby,2}$$

or,

$$Q_{da} = Q_d - (19.7\,°C - \overline{T}_{a,stby,2})\ UA\ \tau_{stby,2}$$

Where:

Q_{da} = the adjusted daily water heating energy consumption, Btu (kJ).

Q_d = as defined in section 6.3.4 of this appendix.

$\overline{T}_{a,stby,2}$ = the average ambient temperature during the total standby portion, $\tau_{stby,2}$, of the 24-hour simulated-use test, °F (°C).

UA = as defined in section 6.3.4 of this appendix.

$T_{stby,2}$ = the number of hours during the 24-hour simulated-use test when water is not being withdrawn from the water heater.

A modification is also needed to take into account that the temperature difference between the outlet water temperature and supply water temperature may not be equivalent to the nominal value of 67 °F (125 °F–58 °F) or 37.3 °C (51.7 °C–14.4 °C). The following equations adjust the experimental data to a nominal 67 °F (37.3 °C) temperature rise.

The energy used to heat water, Btu/day (kJ/day), may be computed as:

$$Q_{HW} = \sum_{i=1}^{N} \frac{M_{del,i}\ C_{pi}\left(\overline{T}_{del,i} - \overline{T}_{in,i}\right)}{\eta_r}$$

Where:

N = total number of draws in the 24-hour simulated-use test.

$M_{del,i}$ = the mass of water removed during the *i*th draw (i = 1 to N) as calculated in section 6.3.2 of this appendix, lb (kg).

C_{pi} = the specific heat of the water withdrawn during the *i*th draw of the 24-hour simulated-use test, evaluated at ($\overline{T}_{del,i}$ + $\overline{T}_{in,i}$)/2, Btu/(lb·°F) (kJ/(kg·°C)).

$\overline{T}_{del,i}$ = the average water outlet temperature measured during the *i*th draw (i = 1 to N), °F (°C).

$\overline{T}_{in,i}$ = the average water inlet temperature measured during the *i*th draw (i = 1 to N), °F (°C).

η_r = as defined in section 6.3.3 of this appendix.

The energy required to heat the same quantity of water over a 67 °F (37.3 °C) temperature rise, Btu/day (kJ/day), is:

$$Q_{HW,67°F} = \sum_{i=1}^{N} \frac{M_{del,i}\ C_{pi}(125°F - 58°F)}{\eta_r}$$

or,

$$Q_{HW,37.3°C} = \sum_{i=1}^{N} \frac{M_{del,i}\ C_{pi}(51.7°C - 14.4°C)}{\eta_r}$$

The difference between these two values is:

$Q_{HWD} = Q_{HW,67°F} - Q_{HW}$

or,

$Q_{HWD} = Q_{HW,37.3°C} - Q_{HW}$

This difference (Q_{HWD}) must be added to the adjusted daily water heating energy consumption value. Thus, the daily energy consumption value, which takes into account that the ambient temperature may not be 67.5 °F (19.7 °C) and that the temperature rise across the storage tank may not be 67 °F (37.3 °C) is:

$Q_{dm} = Q_{da} + Q_{HWD}$

* * * * *

6.4 * * *

6.4.7 *Annual Fossil Fuel Energy Consumption.* The annual fossil fuel energy consumption for water heaters with rated storage volumes less than 2 gallons, $E_{annual,f}$, is computed as:

$E_{annual,f} = E_{annual} - (E_{annual,e} \times 3412)$

Where:

E_{annual} = the annual energy consumption as defined in section 6.4.5 of this appendix, Btu (kJ).

$E_{annual,e}$ = the annual electrical energy consumption as defined in section 6.4.6 of this appendix, kWh.

3412 = conversion factor from kWh to Btu.

* * * * *

■ 9. Amend appendix Y to subpart B of part 430 by revising Note 1 and table and sections 0.1(d), 0.1(p), 0.1(q), 0.1(r), and 4.3.4 to read as follows:

Appendix Y to Subpart B of Part 430—Uniform Test Method for Measuring the Energy Consumption of Battery Chargers

Note 1: For all Battery Chargers, including UPSs, compliance with the relevant standard in § 430.32(z) or any representation must be based upon results generated under the corresponding appendix listed in the following table:

	Battery chargers other than UPSs	UPS
On or After July 3, 2024 and Before October 16, 2024 ...	Use appendix Y as it appeared on either March 7, 2023, or July 3, 2024.	Use appendix Y as it appeared on either March 7, 2023, or July 3, 2024.
On or After October 16, 2024 and Before compliance date of any new or amended standards published any time after September 2022.	Use appendix Y as it appeared on July 3, 2024..	Use appendix Y as it appeared on July 3, 2024.
On or After compliance date of any new or amended standards published any time after September 2022.	Use appendix Y1	Use appendix Y1.

0.1 * * *

(d) Section 5.2, UPS input specification, as specified in section 2.27.2 of this appendix;

* * * * *

(p) Section 6.2.2.7, AC input failure, as specified in Note to section 2.27.1 of this appendix;

(q) Section 6.4, Type test procedure (electrical); Section 6.4.1, Input—AC input power compatibility; Section 6.4.1.2, Steady state input voltage tolerance and VI input independency, as specified in Note to section 2.27.3 of this appendix;

(r) Section 6.4.1.3, Combined input voltage/frequency tolerance and VFI input independency, as specified in Note to section 2.27.2 of this appendix;

* * * * *

4. * * *

4.3. * * *

4.3.4 UUT Classification

Optional Test for determination of UPS architecture. Determine the UPS architecture by performing the tests specified in the definitions of VI, VFD, and VFI (sections 2.27.1 through 2.27.3 of this appendix).

* * * * *

■ 10. Amend appendix CC1 to subpart B of part 430 by revising section 5.1 to read as follows:

Appendix CC1 to Subpart B of Part 430—Uniform Test Method for Measuring the Energy Consumption of Portable Air Conditioners

* * * * *

5. * * *

5.1 *Adjusted Cooling Capacity.* Calculate the adjusted cooling capacities at the 95 °F and 83 °F operating conditions specified below of the sample unit, in Btu/h, according to the following equations.

For a single-duct single-speed unit:

$ACC_{95} = Capacity_{SD} - Q_{duct_SD} - Q_{infiltration_95}$

$ACC_{83} = 0.6000 \times (Capacity_{SD} - Q_{duct_SD} - Q_{infiltration_83})$

For a single-duct variable-speed unit:

$ACC_{95} = Capacity_{SD_Full} - Q_{duct_SD_Full} - Q_{infiltration_95}$

$ACC_{83} = Capacity_{SD_Low} - Q_{duct_SD_Low} - Q_{infiltration_83_Low}$

For a dual-duct single-speed unit:

$ACC_{95} = Capacity_{DD_95_Full} - Q_{duct_DD_95_Full} - Q_{infiltration_95}$

$ACC_{83} = 0.5363 \times (Capacity_{DD_83} - Q_{duct_DD_83} - Q_{infiltration_83})$

For a dual-duct variable-speed unit:

$ACC_{95} = Capacity_{DD_95_Full} - Q_{duct_DD_95_Full} - Q_{infiltration_95}$

$ACC_{83} = Capacity_{DD_Low} - Q_{duct_DD_83_Low} - Q_{infiltration_83_Low}$

Where:

ACC_{95} and ACC_{83} = adjusted cooling capacity of the sample unit, in Btu/h, calculated from testing at:

For a single-duct single-speed unit, test configuration 2A in Table 2 of AHAM PAC–1–2022.

For a single-duct variable-speed unit, test configurations 2B and 2C in Table 2 of AHAM PAC–1–2022.

For a dual-duct single-speed unit, test configurations 1A and 1B in Table 2 of AHAM PAC–1–2022.

For a dual-duct variable-speed unit: test configurations 1C and 1E in Table 2 of AHAM PAC–1–2022.

$Capacity_{SD}$, $Capacity_{SD_Full}$, $Capacity_{SD_Low}$, $Capacity_{DD_95}$, $Capacity_{DD_83}$, $Capacity_{DD_95_Full}$, and $Capacity_{DD_83_Low}$ = cooling capacity, in Btu/h, measured in testing at test configuration 2A, 2B, 2C, 1A, 1B, 1C, and 1E of Table 2 in section 8.1 of AHAM PAC–1–2022, respectively.

Q_{duct_SD}, $Q_{duct_SD_Full}$, $Q_{duct_SD_Low}$, $Q_{duct_DD_95}$, $Q_{duct_DD_83}$, $Q_{duct_DD_95_Full}$, and $Q_{duct_DD_83_Low}$ = duct heat transfer while operating in cooling mode for each duct configuration, compressor speed (where applicable) and temperature condition (where applicable), calculated in section 9.1 of AHAM PAC–1–2022, in Btu/h.

$Q_{infiltration_95}$, $Q_{infiltration_83}$, and $Q_{infiltration_83_Low}$ = total infiltration air heat transfer in cooling mode, in Btu/h, for each of the following compressor speed and duct configuration combinations:

For a single-duct single-speed unit, use $Q_{infiltration_95}$ and $Q_{infiltration_83}$ as calculated for a single-duct single-speed unit in section 9.2 of AHAM PAC–1–2022.

For a single-duct variable-speed unit, use $Q_{infiltration_95}$ and $Q_{infiltration_83_Low}$ as calculated for a single-duct variable-speed unit in section 9.2 of AHAM PAC–1–2022.

For a dual-duct single-speed unit, use $Q_{infiltration_95}$ and $Q_{infiltration_83}$ as calculated for a dual-duct single-speed unit in section 9.2 of AHAM PAC–1–2022.

For a dual-duct variable-speed unit, use $Q_{infiltration_95}$ and $Q_{infiltration_83_Low}$ as calculated for a dual-duct variable-speed unit in section 9.2 of AHAM PAC–1–2022.

0.6000 and 0.5363 = empirically-derived load-based capacity adjustment factor for a single-duct and dual-duct single-speed unit, respectively, when operating at test conditions 2A and 1B.

* * * * *

■ 11. Amend § 430.32 by revising paragraph (a)(1), the introductory text to (d)(1), and paragraph (d)(2) to read as follows:

§ 430.32 Energy and water conservation standards and their compliance dates.

* * * * *

(a) * * *

(1) The following standards apply to products manufactured on or after September 15, 2014, and before the 2029/2030 compliance dates depending on product class (see paragraphs (a)(2) and (a)(3) of this section).

TABLE 1 TO PARAGRAPH (a)(1)

Product class	Equations for maximum energy use (kWh/yr)	
	based on AV (ft^3)	based on av (L)
1. Refrigerators and refrigerator-freezers with manual defrost	7.99AV + 225.0	0.282av + 225.0

		Medium	$0.5687 - (0.0021 \times V_{eff})$
		High	$0.6147 - (0.0017 \times V_{eff})$
Instantaneous Electric Water Heater	<2 gal	Very Small	0.91
		Low	0.91
		Medium	0.91
		High	0.92
	≥2 gal	Very Small	$0.8086 - (0.0050 \times V_{eff})$
		Low	$0.9123 - (0.0020 \times V_{eff})$
		Medium	$0.9252 - (0.0015 \times V_{eff})$
		High	$0.9350 - (0.0011 \times V_{eff})$
Grid-Enabled Water Heater	>75 gal	Very Small	$1.0136 - (0.0028 \times V_{eff})$
		Low	$0.9984 - (0.0014 \times V_{eff})$
		Medium	$0.9853 - (0.0010 \times V_{eff})$
		High	$0.9720 - (0.0007 \times V_{eff})$

* V_{eff} is the Effective Storage Volume (in gallons), as determined pursuant to § 429.17 of this chapter.

* * * * *

PART 431—ENERGY EFFICIENCY PROGRAM FOR CERTAIN COMMERCIAL AND INDUSTRIAL EQUIPMENT

■ 12. The authority citation for part 431 continues to read as follows:

Authority: 42 U.S.C. 6291–6317; 28 U.S.C. 2461 note.

■ 13. Amend § 431.96 by revising table 1 to paragraph (b) to read as follows:

§ 431.96 Uniform test method for the measurement of energy efficiency of commercial air conditioners and heat pumps.

* * * * *

(b) * * *

(2) * * *

TABLE 1 TO PARAGRAPH (b)—TEST PROCEDURES FOR COMMERCIAL AIR CONDITIONERS AND HEAT PUMPS

Equipment	Category	Cooling capacity or moisture removal capacity [1]	Energy efficiency descriptor	Use tests, conditions, and procedures in	Additional test procedure provisions as indicated in the listed paragraphs of this section
Commercial Package Air Conditioning and Heating Equipment.	Air-Cooled, 3-Phase, AC and HP.	<65,000 Btu/h	SEER and HSPF	Appendix F to this subpart [2].	None.
Commercial Package Air Conditioning and Heating Equipment.	Air-Cooled, 3-Phase, AC and HP.	<65,000 Btu/h	SEER2 and HSPF2	Appendix F1 to this subpart [2].	None.
Commercial Package Air Conditioning and Heating Equipment.	Air-Cooled AC and HP (excluding double-duct AC and HP).	≥65,000 Btu/h and <760,000 Btu/h.	EER, IEER, and COP	Appendix A to this subpart [2].	None.
Commercial Package Air Conditioning and Heating Equipment.	Air-Cooled AC and HP (excluding double-duct AC and HP).	≥65,000 Btu/h and <760,000 Btu/h.	EER2, COP2, IVEC, and IVHE.	Appendix A1 to this subpart [2].	None.
Commercial Package Air Conditioning and Heating Equipment.	Double-duct AC and HP.	≥65,000 Btu/h and <300,000 Btu/h.	EER, IEER, and COP	Appendix A to this subpart [2].	None.
Commercial Package Air Conditioning and Heating Equipment.	Double-duct AC and HP.	≥65,000 Btu/h and <300,000 Btu/h.	EER2, COP2, IVEC, and IVHE.	Appendix A1 to this subpart [2].	None.
Commercial Package Air Conditioning and Heating Equipment.	Water-Cooled and Evaporatively-Cooled AC.	<760,000 Btu/h	EER and IEER	Appendix A to this subpart [2].	None.
Commercial Package Air Conditioning and Heating Equipment.	Water-Cooled and Evaporatively-Cooled AC.	<760,000 Btu/h	EER2 and IVEC	Appendix A1 to this subpart [2].	None.
Water-Source Heat Pumps.	HP	<760,000 Btu/h	EER and COP	Appendix C to this subpart [2].	None.
Water-Source Heat Pumps.	HP	<760,000 Btu/h	IEER and ACOP	Appendix C1 to this subpart [2].	None.
Packaged Terminal Air Conditioners and Heat Pumps.	AC and HP	<760,000 Btu/h	EER and COP	Paragraph (g) of this section.	Paragraphs (c), (e), and (g).
Computer Room Air Conditioners.	AC	<760,000 Btu/h	SCOP	Appendix E to this subpart [2].	None.
Computer Room Air Conditioners.	AC	<760,000 Btu/h or <930,000 Btu/h [3].	NSenCOP	Appendix E1 to this subpart [2].	None.
Variable Refrigerant Flow Multi-split Systems.	AC	<65,000 Btu/h (3-phase).	SEER	Appendix F to this subpart [2].	None.
Variable Refrigerant Flow Multi-split Systems.	AC	<65,000 Btu/h (3-phase).	SEER2	Appendix F1 to this subpart [2].	None.
Variable Refrigerant Flow Multi-split Systems, Air-cooled.	HP	<65,000 Btu/h (3-phase).	SEER and HSPF	Appendix F to this subpart [2].	None.
Variable Refrigerant Flow Multi-split Systems, Air-cooled.	HP	<65,000 Btu/h (3-phase).	SEER2 and HSPF2	Appendix F1 to this subpart [2].	None.
Variable Refrigerant Flow Multi-split Systems, Air-cooled.	AC and HP	≥65,000 Btu/h and <760,000 Btu/h.	EER and COP	Appendix D to this subpart [2].	None.
Variable Refrigerant Flow Multi-split Systems, Air-cooled.	AC and HP	≥65,000 Btu/h and <760,000 Btu/h.	IEER and COP	Appendix D1 to this subpart [2].	None.
Variable Refrigerant Flow Multi-split Systems, Water-source.	HP	<760,000 Btu/h	EER and COP	Appendix D to this subpart [2].	None.

TABLE 1 TO PARAGRAPH (b)—TEST PROCEDURES FOR COMMERCIAL AIR CONDITIONERS AND HEAT PUMPS—Continued

Equipment	Category	Cooling capacity or moisture removal capacity [1]	Energy efficiency descriptor	Use tests, conditions, and procedures in	Additional test procedure provisions as indicated in the listed paragraphs of this section
Variable Refrigerant Flow Multi-split Systems, Water-source.	HP	<760,000 Btu/h	IEER and COP	Appendix D1 to this subpart [2].	None.
Single Package Vertical Air Conditioners and Single Package Vertical Heat Pumps.	AC and HP	<760,000 Btu/h	EER and COP	Appendix G to this subpart [2].	None.
Single Package Vertical Air Conditioners and Single Package Vertical Heat Pumps.	AC and HP	<760,000 Btu/h	EER, IEER, and COP	Appendix G1 to this subpart [2].	None.
Direct Expansion-Dedicated Outdoor Air Systems.	All	<324 lbs. of moisture removal/hr.	ISMRE2 and ISCOP2	Appendix B to this subpart.	None.

[1] Moisture removal capacity applies only to direct expansion-dedicated outdoor air systems.
[2] For equipment with multiple appendices listed in this table, consult the notes at the beginning of those appendices to determine the applicable appendix to use for testing.
[3] For upflow ducted and downflow floor-mounted computer room air conditioners, the test procedure in appendix E1 to this subpart applies to equipment with net sensible cooling capacity less than 930,000 Btu/h. For all other configurations of computer room air conditioners, the test procedure in appendix E1 to this subpart applies to equipment with net sensible cooling capacity less than 760,000 Btu/h.

* * * * *

■ 14. Amend § 431.192 by revising the headings to Table 1 and Table 2 to read as follows:

§ 431.192 Definitions.

* * * * *

Table 1 to the Definition of ''Special-Impedance Transformer''—Normal Impedance Ranges for Liquid-Immersed Transformers

* * * * *

Table 2 to the Definition of ''Special-Impedance Transformer''—Normal Impedance Ranges for Dry-Type Transformers

* * * * *

■ 15. Amend appendix C1 to subpart R of part 431 by revising section 3.4.12.2 to read as follows:

Appendix C1 to Subpart R of Part 431—Uniform Test Method for the Measurement of Net Capacity and AWEF2 of Walk-In Cooler and Walk-In Freezer Refrigeration Systems

* * * * *

3. * * *

3.4 * * *

3.4.12 * * *

3.4.12.2 Calculate the AWEF2 as follows:

$$AWEF2 = \frac{\sum_{i=1}^{n} \dot{B}L \cdot n_j}{\sum_{j=1}^{n} \left[\dot{E}_{ss}(t_j) \cdot LF(t_j) + \left(\dot{E}F_{comp,off} + \dot{E}_{cu,off}(t_j)\right) \cdot \left(1 - LF(t_j)\right)\right] \cdot n_j}$$

Where:

$\dot{E}_{ss}(t_j$, in W, is the system power input for temperature t_j, calculated as described in section 7.4.2 of AHRI 1250–2020;

$\dot{E}_{cu,off}(t_j$, in W, is the condensing unit off-cycle power consumption for temperature t_j, determined as indicated in section 3.4.3.3 of this appendix; and

n_j are the hours for temperature bin j.

* * * * *

■ 16. Amend § 431.465 by revising the section heading to read as follows:

§ 431.465 Pumps energy conservation standards and their compliance dates.

* * * * *

■ 17. Amend appendix A to subpart Y of part 431 by revising sections IV.D.2 and VI.D.2. to read as follows:

Appendix A to Subpart Y of Part 431—Uniform Test Method for the Measurement of Energy Consumption of Pumps

* * * * *

IV. * * *

IV.D * * *

IV.D.2 Determine the BEP flow rate as the flow rate at the operating point of maximum overall efficiency on the pump efficiency curve, as determined in accordance with section 40.6.6.3 of HI 40.6–2021, where the overall efficiency is the ratio of the pump power output divided by the driver power input, as specified in Table 40.6.2 of HI 40.6–2021, disregarding the calculations provided in section 40.6.6.2 of HI 40.6–2021.

* * * * *

VI. * * *

VI.D * * *

VI.D.2 Determine the BEP flow rate as the flow rate at the operating point of maximum overall efficiency on the pump efficiency curve, as determined in accordance with section 40.6.6.3 of HI 40.6–2021, where the overall efficiency is the ratio of the pump power output divided by the driver power input, as specified in Table 40.6.2 of HI 40.6–2021, disregarding the calculations provided in section 40.6.6.2 of HI 40.6–2021.

BILLING CODE 6450–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2024–2636; Airspace Docket No. 24–AGL–33]

RIN 2120–AA66

Modification of Class E Airspace; Crosby Municipal Airport, Crosby, ND

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action modifies the administrative portions of the Class E airspace legal description for Crosby Municipal Airport, Crosby, ND. This action does not change the airspace boundaries or operating requirements.

DATES: Effective date 0901 UTC, April 17, 2025. The Director of the Federal Register approves this incorporation by reference action under 1 CFR part 51, subject to the annual revision of FAA Order JO 7400.11 and publication of conforming amendments.

ADDRESSES: A copy of this final rule and all background material may be viewed online at *www.regulations.gov* using the FAA Docket number. Electronic retrieval help and guidelines are available on the website. It is available 24 hours each day, 365 days each year.

FAA Order JO 7400.11J, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *www.faa.gov/air_traffic/publications/*. You may also contact the Rules and Regulations Group, Office of Policy, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783.

FOR FURTHER INFORMATION CONTACT: Nathan A. Chaffman, Federal Aviation Administration, Western Service Center, Operations Support Group, 2200 S 216th Street, Des Moines, WA 98198; telephone (206) 231–3460.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of the airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it modifies the administrative portions of the Class E airspace legal descriptions to support visual flight rules (VFR) and instrument flight rules (IFR) operations at Crosby Municipal Airport, Crosby, ND.

Incorporation by Reference

Class E5 airspace areas are published in paragraph 6000 of FAA Order JO 7400.11, Airspace Designations and Reporting Points, which is incorporated by reference in 14 CFR 71.1 on an annual basis. This document amends the current version of that order, FAA Order JO 7400.11J, dated July 31, 2024, and effective September 15, 2024. FAA Order JO 7400.11J is publicly available as listed in the **ADDRESSES** section of this document. These amendments will be published in the next update to FAA Order JO 7400.11.

FAA Order JO 7400.11J lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This action amends 14 CFR part 71 by modifying the administrative portions of the Class E airspace legal descriptions for Crosby Municipal Airport, Crosby, ND. Crosby Municipal Airport's geographic location within line 3 of the Class E legal descriptions is updated to match the FAA database. Additionally, the redundant phrase ''(Canada/United States Boundary)'' is removed from the body of the legal description. These administrative updates do not affect the airspace boundaries or operating requirements; therefore, notice and public procedures under 5 U.S.C. 553(b) are unnecessary.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures,'' paragraph 5–6.5.a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR part 71.1 of FAA Order JO 7400.11J, Airspace Designations and Reporting Points, dated July 31, 2024, and effective September 15, 2024, is amended as follows:

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

AGL ND E5 Crosby, ND [Amended]

Crosby Municipal Airport, ND
(Lat. 48°55′42″ N, long. 103°17′51″ W)

That airspace extending upward from 700 feet above the surface within a 6.4-mile radius of the airport, excluding that airspace north of lat. 49°00′00″ N.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Parts 510, 520, 522, 524, 529, and 558

[Docket No. FDA–2024–N–0002]

New Animal Drugs; Approval of New Animal Drug Applications; Withdrawal of Approval of New Animal Drug Applications; Change of Sponsor; Change of Sponsor Address

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule; technical amendments.

SUMMARY: The Food and Drug Administration (FDA or we) is amending the animal drug regulations to reflect application-related actions for new animal drug applications (NADAs) and abbreviated new animal drug applications (ANADAs) during October, November, and December 2024. The animal drug regulations are also being amended to improve their accuracy and readability.

DATES: This rule is effective January 21, 2025.

FOR FURTHER INFORMATION CONTACT: George K. Haibel, Center for Veterinary Medicine, Food and Drug Administration, 7500 Standish Pl., Rockville, MD 20855, 240–402–5689, *george.haibel@fda.hhs.gov*.

SUPPLEMENTARY INFORMATION:

I. Approval of New Animal Drug Applications

FDA is amending the animal drug regulations to reflect approval actions for NADAs and ANADAs during October, November, and December 2024, as listed in table 1. In addition, FDA is informing the public of the availability, where applicable, of documentation of environmental review required under the National Environmental Policy Act (NEPA) and, for actions requiring review of safety or effectiveness data, summaries of the basis of approval (FOIA Summaries) under the Freedom of Information Act (FOIA). These documents, along with marketing exclusivity and patent information, may be obtained at Animal Drugs @FDA: *https://animaldrugsatfda.fda.gov/adafda/views/#/search*.

TABLE 1—ORIGINAL AND SUPPLEMENTAL NADAS AND ANADAS APPROVED DURING OCTOBER, NOVEMBER, AND DECEMBER 2024 REQUIRING EVIDENCE OF SAFETY AND/OR EFFECTIVENESS

Date of approval	File No.	Sponsor (drug labeler code [1])	Product name	Effect of the action	21 CFR section
October 7, 2024	141–554	Boehringer Ingelheim Animal Health USA, Inc. (000010)	NEXGARD PLUS (afoxolaner, moxidectin, and pyrantel chewable tablets).	Supplemental approval for the treatment and control of Asian longhorned tick infestations for 1 month in dogs and puppies.	520.35
October 7, 2024	141–581	Elanco US Inc. (058198)	CREDELIO QUATTRO (lotilaner, moxidectin, praziquantel, and pyrantel chewable tablets.	Original approval for the prevention of heartworm disease and for the treatment and control of roundworm, hookworm, and tapeworm infections. Kills adult fleas and is indicated for the treatment and prevention of flea infestations and the treatment and control of tick infestations for 1 month in dogs and puppies.	520.1287
October 18, 2024	200–748	Huvepharma EOOD (016592)	PENNCHLOR (chlortetracycline Type A medicated article) and MONOVET (monensin) Type A medicated article) to be used in the manufacture of Type B and Type C medicated feeds.	Original approval as a generic copy of NADA 141–564.	558.128
October 23, 2024	141–589	Elanco US Inc. (058198)	EXPERIOR (lubabegron Type A medicated article) and MGA (melengestrol acetate Type A medicated article) to be used in the manufacture of Type C medicated feeds.	Original approval for increased rate of weight gain, improved feed efficiency, suppression of estrus (heat), and for reduction of ammonia gas emissions per pound of live weight and hot carcass weight in growing beef heifers fed in confinement for slaughter during the last 14 to 91 days on feed.	558.330
October 25, 2024	141–590	Do.	EXPERIOR (lubabegron Type A medicated article), RUMENSIN (monensin Type A medicated article), and MGA (melengestrol acetate Type A medicated article) to be used in the manufacture of Type C medicated feeds.	Original approval for increased rate of weight gain, improved feed efficiency, suppression of estrus (heat), for reduction of ammonia gas emissions per pound of live weight and hot carcass weight, and for the prevention and control of coccidiosis caused by *Eimeria bovis* and *Eimeria zuernii* in growing beef heifers fed in confinement for slaughter during the last 14 to 91 days on feed.	558.330

TABLE 1—ORIGINAL AND SUPPLEMENTAL NADAS AND ANADAS APPROVED DURING OCTOBER, NOVEMBER, AND DECEMBER 2024 REQUIRING EVIDENCE OF SAFETY AND/OR EFFECTIVENESS—Continued

Date of approval	File No.	Sponsor (drug labeler code [1])	Product name	Effect of the action	21 CFR section
October 25, 2024	141–591	Do.	EXPERIOR (lubabegron Type A medicated article), RUMENSIN (monensin Type A medicated article), TYLAN (tylosin Type A medicated article), and MGA (melengestrol acetate Type A medicated article) to be used in the manufacture of Type C medicated feeds.	Original approval for increased rate of weight gain, improved feed efficiency, suppression of estrus (heat), for reduction of ammonia gas emissions per pound of live weight and hot carcass weight, and for the prevention and control of coccidiosis caused by *Eimeria bovis* and *Eimeria zuernii* and for reduction of incidence of liver abscesses associated with *Fusobacterium necrophorum* and *Arcanobacterium pyogenes* in growing beef heifers fed in confinement for slaughter during the last 14 to 91 days on feed.	558.625
November 6, 2024	141–521	Zoetis Inc. (054771)	SIMPARICA TRIO (sarolaner, moxidectin, and pyrantel chewable tablets).	Supplemental approval for the treatment and control of tick infestations with Asian longhorned tick for 1 month in dogs and puppies.	520.2090
November 13, 2024 ..	141–502	Do.	REVOLUTION PLUS (selamectin and sarolaner topical solution).	Supplemental approval for the prevention of tapeworm infections as a direct result of killing vector fleas on the treated cat for 1 month in cats and kittens.	524.2099
November 14, 2024 ..	200–803	Phibro Animal Health Corp. (066104)	PAQFLOR (florfenicol) Type A Medicated Article to be used in the manufacture of Type C medicated feeds.	Original approval as a generic copy of NADA 141–246.	558.261
November 18, 2024 ..	200–793	Parnell Technologies, Pty., Ltd. (068504)	PROPOFOLVET MULTIDOSE (propofol injectable emulsion).	Original approval as a generic copy of NADA 141–098.	522.2005
November 18, 2024 ..	200–805	Virbac AH, Inc. (051311)	MEL 500 (melengestrol acetate Type A liquid medicated article) to be used in the manufacture of Type C medicated feeds.	Original approval as a generic copy of NADA 039–402.	558.342
November 20, 2024 ..	200–636	Bimeda Animal Health, Ltd. (061133)	DORACIDE (doramectin topical solution)	Original approval as a generic copy of NADA 141–095.	524.770
November 22, 2024 ..	141–452	Zoetis Inc. (054771)	SIMPARICA (sarolaner) Chewable Tablet.	Supplemental approval for the treatment and control of tick infestations with Asian longhorned tick for 1 month in dogs and puppies.	520.2086
November 25, 2024 ..	141–532	Intervet, Inc. (000061)	BRAVECTO 1–MONTH (fluralaner) Chewable Tablet.	Supplemental approval for the treatment and control of Asian longhorned tick infestations for 1 month in dogs and puppies.	520.998
December 19, 2024 ..	141–043	Zoetis Inc. (054771)	SYNOVEX CHOICE and SYNOVEX PRIMER (trenbolone acetate and estradiol benzoate implants) Implants.	Supplemental approval of both products for increased rate of weight gain in growing beef steers and heifers on pasture (stocker, feeder, and slaughter).	522.2478

[1] See § 510.600(c) (21 CFR 510.600(c)) for sponsor addresses.

II. Withdrawal of Approval of New Animal Drug Applications

Med-Pharmex, Inc., 2727 Thompson Creek Rd., Pomona, CA 91767–1861 (drug labeler code (054925) requested that FDA withdraw approval of NADA 140–810 for DERMA–VET (nystatin, neomycin sulfate, thiostrepton, triamcinolone acetonide) Ointment because the product is no longer manufactured or marketed. Accordingly, approval of NADA 140–810 was withdrawn effective December 23, 2024. The animal drug regulations do not require amendment as the sponsor's drug labeler code is not codified in 21 CFR 524.1600a.

Mylan Institutional LLC, a Viatris Company, 3711 Collins Ferry Rd., Morgantown, WV 26505 (drug labeler code 063286) requested that FDA withdraw approval of ANADA 200–257 for Ketamine HCL (ketamine hydrochloride injection, USP) Injectable Solution because the product is no longer manufactured or marketed. Accordingly, approval of ANADA 200–257 was withdrawn effective June 29, 2023. The animal drug regulations do not require amendment as the sponsor's drug labeler code was removed from 21 CFR 522.1222 in a rule that published August 16, 2023 (88 FR 55559 at 55564).

III. Changes of Sponsor

The sponsors of the approved applications listed in table 2 have informed FDA that they have transferred ownership of, and all rights and interest in, these applications to another sponsor. The regulations cited in table 2 are amended to reflect these actions.

TABLE 2—APPLICATIONS FOR WHICH OWNERSHIP WAS TRANSFERRED TO ANOTHER SPONSOR DURING OCTOBER, NOVEMBER, AND DECEMBER 2024

File No.	Product name	Transferring sponsor (drug labeler code)	New sponsor (drug labeler code)	21 CFR section
141–339	OVUGEL (triptorelin acetate) Gel	United-AH II LLC (051233)	Aurora Pharmaceutical, Inc. (051072)	529.2620
200–233	SUPERIORBUTE (phenylbutazone) Powder.	Superior Equine Pharmaceuticals, Inc. (027053)	Noble Pharma, LLC (086119)	520.1720e

IV. Change of Sponsor Address

Pharmacosmos, Inc. (drug labeler code 042552 in § 510.600(c)) has informed FDA that it has changed its address to 120 Headquarters Plz., Morristown, NJ 07960. The entries in § 510.600(c) are amended to reflect this action.

V. Technical Amendments

FDA is making the following amendments to improve the accuracy and readability of the animal drug regulations.

- § 510.600(c) is amended to remove entries for Superior Equine Pharmaceuticals, Inc. and United-AH II, LLC from the lists of sponsors of approved applications as these firms are no longer sponsors of an approved application.
- 21 CFR 522.2630(b) is amended to present the sequence of drug labeler codes for tulathromycin injectable solutions.

VI. Legal Authority

This final rule is issued under section 512(i) of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C.360b(i)). Although deemed a rule pursuant to the FD&C Act, this document does not meet the definition of ''rule'' in 5 U.S.C. 804(3)(A) because it is a ''rule of particular applicability'' and is not subject to the congressional review requirements in 5 U.S.C. 801–808. Likewise, this is not a rule subject to Executive Order 12866.

List of Subjects

21 CFR Part 510

Administrative practice and procedure, Animal drugs, Labeling, Reporting and recordkeeping requirements.

21 CFR Parts 520, 522, 524, and 529

Animal drugs.

21 CFR Part 558

Animal drugs, Animal feeds.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR parts 510, 520, 522, 524, 529, and 558 are amended as follows:

PART 510—NEW ANIMAL DRUGS

■ 1. The authority citation for part 510 continues to read as follows:

Authority: 21 U.S.C. 321, 331, 351, 352, 353, 360b, 371, 379e.

■ 2. In § 510.600:

■ a. In the table in paragraph (c)(1), revise the entry for ''Pharmacosmos, Inc.'' and remove the entries for ''Superior Equine Pharmaceuticals, Inc.'' and ''United-AH II, LLC''; and

■ b. In the table in paragraph (c)(2):

■ i. Remove the entry for ''027053'';

■ ii. Revise the entry for ''042552''; and

■ iii. Remove the entry for ''051233''.

The revision reads as follows:

§ 510.600 Names, addresses, and drug labeler codes of sponsors of approved applications.

* * * * *

(c) * * *

(1) * * *

Firm name and address	Drug labeler code
* * * * * * *	
Pharmacosmos, Inc., 120 Headquarters Plz., Morristown, NJ 07960	042552
* * * * * * *	

(2) * * *

Drug labeler code	Firm name and address
* * * * * * *	
042552	Pharmacosmos, Inc., 120 Headquarters Plz., Morristown, NJ 07960.
* * * * * * *	

PART 520—ORAL DOSAGE FORM NEW ANIMAL DRUGS

■ 3. The authority citation for part 520 continues to read as follows:

Authority: 21 U.S.C. 360b.

■ 4. In § 520.35, revise paragraphs (a) and (c)(2) to read as follows:

§ 520.35 Afoxolaner, moxidectin, and pyrantel.

(a) *Specifications.* Each chewable tablet contains:

(1) 9.375 milligrams (mg) afoxolaner, 45 micrograms (mcg) moxidectin, and 18.75 mg pyrantel (as pamoate salt);

(2) 18.75 mg afoxolaner, 90 mcg moxidectin, and 37.5 mg pyrantel (as pamoate salt);

(3) 37.5 mg afoxolaner, 180 mcg moxidectin, and 75 mg pyrantel (as pamoate salt);

(4) 75 mg afoxolaner, 360 mcg moxidectin, and 150 mg pyrantel (as pamoate salt); or

(5) 150 mg afoxolaner, 720 mcg moxidectin, and 300 mg pyrantel (as pamoate salt).

* * * * *

(c) * * *

(2) *Indications for use.* For the prevention of heartworm disease caused by *Dirofilaria immitis* and for the treatment and control of adult hookworm (*Ancylostoma caninum, Ancylostoma braziliense,* and *Uncinaria stenocephala*) and roundworm (*Toxocara canis* and *Toxascaris leonina*) infections. Kills adult fleas and is indicated for the treatment and prevention of flea infestations (*Ctenocephalides felis*) and the treatment and control of *Ixodes scapularis* (black-legged tick), *Rhipicephalus sanguineus* (brown dog tick), *Dermacentor variabilis* (American dog tick), *Amblyomma americanum* (lone star tick), and *Haemaphysalis longicornis* (longhorned tick) infestations for 1 month in dogs and puppies 8 weeks of age and older, weighing 4 pounds of body weight or greater.

* * * * *

■ 5. In § 520.998, revise paragraph (c)(2)(ii) to read as follows:

§ 520.998 Fluralaner.

* * * * *

(c) * * *

(2) * * *

(ii) *Chewable tablets described in paragraph (a)(2) of this section.* Kills adult fleas; for the treatment and prevention of flea infestations (*C. felis*), and the treatment and control of tick infestations (*I. scapularis* (black-legged tick), *D. variabilis* (American dog tick), *R. sanguineus* (brown dog tick), and *H. longicornis* (Asian longhorned tick)) for 1 month in dogs and puppies 8 weeks of age and older, and weighing 4.4 lb or greater; and for the treatment and control of *A. americanum* (lone star tick) infestations for 1 month in dogs and puppies 6 months of age and older, and weighing 4.4 lb or greater.

* * * * *

■ 6. Add § 520.1287 to read as follows:

§ 520.1287 Lotilaner, moxidectin, praziquantel, and pyrantel.

(a) *Specifications.* Each chewable tablet contains:

(1) 56.25 milligrams (mg) lotilaner, 0.056 mg moxidectin, 14.25 mg praziquantel, and 14.25 mg pyrantel (as pamoate salt);

(2) 112.5 mg lotilaner, 0.113 mg moxidectin, 28.5 mg praziquantel, and 28.5 mg pyrantel (as pamoate salt);

(3) 225 mg lotilaner, 0.225 mg moxidectin, 57 mg praziquantel, and 57 mg pyrantel (as pamoate salt);

(4) 450 mg lotilaner, 0.45 mg moxidectin, 114 mg praziquantel, and 114 mg pyrantel (as pamoate salt); or

(5) 900 mg lotilaner, 0.9 mg moxidectin, 228 mg praziquantel, and 228 mg pyrantel (as pamoate salt).

(b) *Sponsor.* See No. 058198 in § 510.600(c) of this chapter.

(c) *Conditions of use*—(1) *Amount.* Administer orally once a month, at the minimum dosage of 9 mg/lb (20 mg/kg) lotilaner, 0.009 mg/lb (0.02 mg/kg) moxidectin, 2.28 mg/lb (5 mg/kg) praziquantel, and 2.28 mg/lb (5 mg/kg) pyrantel (as pamoate salt).

(2) *Indications for use.* For the prevention of heartworm disease caused by *Dirofilaria immitis* and for the treatment and control of roundworm (immature adult and adult *Toxocara canis* and adult *Toxascaris leonina*), hookworm (adult *Uncinaria stenocephala*), and tapeworm (*Dipylidium caninum, Taenia pisiformis* and *Echinococcus granulosus*) infections. Kills adult fleas and is indicated for the treatment and prevention of flea infestations (*Ctenocephalides felis*) and the treatment and control of tick infestations (*Amblyomma americanum* (lone star tick), *Dermacentor variabilis* (American dog tick), *Ixodes scapularis* (black-legged tick), and *Rhipicephalus sanguineus* (brown dog tick)) for 1 month in dogs and puppies 8 weeks of age and older, and weighing 3.3 pounds or greater.

(3) *Limitations.* Federal law restricts this drug to use by or on the order of a licensed veterinarian.

§ 520.1720e [Amended]

■ 7. In § 520.1720e, in paragraph (b)(1), remove the text ''027053'' and in its place add the text ''086119''.

■ 8. In § 520.2086, revise paragraphs (c)(1) and (2) to read as follows:

§ 520.2086 Sarolaner.

* * * * *

(c) * * *

(1) *Amount.* Administer orally once a month at the recommended minimum dosage of 0.91 mg/lb (2 mg/kg).

(2) *Indications for use.* Kills adult fleas, and is indicated for the treatment and prevention of flea infestations (*Ctenocephalides felis*), and the treatment and control of tick infestations (*Amblyomma americanum* (lone star tick), *Amblyomma maculatum* (Gulf Coast tick), *Dermacentor variabilis* (American dog tick), *Ixodes scapularis* (black-legged tick), *Rhipicephalus sanguineus* (brown dog tick), and *Haemaphysalis longicornis* (Asian longhorned tick)) for 1 month in dogs 6 months of age or older and weighing 2.8 pounds or greater. For the prevention of *Borrelia burgdorferi* infections as a direct result of killing *Ixodes scapularis* vector ticks.

* * * * *

■ 9. In § 520.2090, revise paragraph (c)(2) to read as follows:

§ 520.2090 Sarolaner, moxidectin, and pyrantel.

* * * * *

(c) * * *

(2) *Indications for use.* For the prevention of heartworm disease caused by *Dirofilaria immitis* and for the treatment and control of roundworm (immature adult and adult *Toxocara canis* and adult *Toxascaris leonina*) and hookworm (L4, immature adult, and adult *Ancylostoma caninum* and adult *Uncinaria stenocephala*) infections. Kills adult fleas (*Ctenocephalides felis*) and is indicated for the treatment and prevention of flea infestations, and the treatment and control of tick infestations with *Amblyomma americanum* (lone star tick), *Amblyomma maculatum* (Gulf Coast tick), *Dermacentor variabilis* (American dog tick), *Ixodes scapularis* (black-legged tick), *Rhipicephalus sanguineus* (brown dog tick), and *Haemaphysalis longicornis* (Asian longhorned tick) for 1 month in dogs and puppies 8 weeks of age and older, and weighing 2.8 pounds or greater. For the prevention of *Borrelia burgdorferi* infections as a direct result of killing *Ixodes scapularis* vector ticks.

* * * * *

PART 522—IMPLANTATION OR INJECTABLE DOSAGE FORM NEW ANIMAL DRUGS

■ 10. The authority citation for part 522 continues to read as follows:

Authority: 21 U.S.C. 360b.

■ 11. In § 522.2005:

■ a. Revise paragraph (b);

■ b. Revise the heading for paragraph (c);

■ c. Revise paragraph (c)(2); and

■ d. Add paragraph (d).

The revisions and addition read as follows:

§ 522.2005 Propofol.

* * * * *

(b) * * *

(1) No. 086064 for use as in paragraphs (c)(1), (c)(2)(i), (c)(3), (d)(1), (d)(2)(i), and (d)(3) of this section.

(2) No. 054771 for use as in paragraphs (c)(1), (c)(2)(ii), (c)(3), (d)(1), (d)(2)(ii), and (d)(3) of this section.

(3) Nos. 054771 and 068504 for use as in paragraphs (c)(1), (c)(2)(iii), and (c)(3) of this section.

* * * * *

(c) *Conditions of use in dogs*—

* * * * *

(2) *Indications for use.* (i) As a single injection to provide general anesthesia for short procedures; for induction and maintenance of general anesthesia using incremental doses to effect; and for induction of general anesthesia where maintenance is provided by inhalant anesthetics.

(ii) For induction of general anesthesia; for maintenance of anesthesia for up to 20 minutes; and for induction of general anesthesia followed by maintenance with an inhalant anesthetic.

(iii) For induction and maintenance of general anesthesia; and for induction of general anesthesia followed by maintenance with an inhalant anesthetic.

* * * * *

(d) *Conditions of use in* cats—(1) *Amount.* Administer by intravenous injection according to label directions. The use of preanesthetic medication reduces propofol dose requirements.

(2) *Indications for use.* (i) As a single injection to provide general anesthesia for short procedures; for induction and maintenance of general anesthesia using incremental doses to effect; and for induction of general anesthesia where maintenance is provided by inhalant anesthetics.

(ii) For induction and maintenance of general anesthesia; and for induction of general anesthesia followed by maintenance with an inhalant anesthetic.

(3) *Limitations.* Federal law restricts this drug to use by or on the order of a licensed veterinarian.

■ 12. In § 522.2478, revise paragraph (d)(2) to read as follows:

§ 522.2478 Trenbolone acetate and estradiol benzoate.

* * *

(d) * * *

(2) *Growing beef steers and heifers on pasture (stocker, feeder, and slaughter)*—(i) *Amounts and indications for use.* (A) An implant containing 50 mg trenbolone acetate and 7 mg estradiol benzoate as described in paragraph (a)(1)(i) of this section for increased rate of weight gain.

(B) An implant containing 100 mg trenbolone acetate and 14 mg estradiol benzoate as described in paragraph (a)(1)(ii) of this section for increased rate of weight gain.

(C) An extended-release implant containing 150 mg trenbolone acetate and 21 mg estradiol benzoate as described in paragraph (a)(2)(i) of this section for increased rate of weight gain for up to 200 days.

(ii) *Limitations.* Implant pellets subcutaneously in ear only. Not approved for repeated implantation (reimplantation) with this or any other cattle ear implant in growing beef steers and heifers on pasture (stocker, feeder, and slaughter). Safety and effectiveness following reimplantation have not been evaluated. Do not use in beef calves less than 2 months of age, dairy calves, and veal calves because effectiveness and safety have not been established. A withdrawal period has not been established for this product in pre-ruminating calves. Do not use in dairy cows or in animals intended for subsequent breeding. Use in these cattle may cause drug residues in milk and/or in calves born to these cows.

* * * * *

§ 522.2630 [Amended]

■ 13. In § 522.2630, in paragraphs (b)(1) and (2), remove the text ''and 068504, 069043'' and add in its place the text ''068504, and 069043''.

PART 524—OPHTHALMIC AND TOPICAL DOSAGE FORM NEW ANIMAL DRUGS

■ 14. The authority citation for part 524 continues to read as follows:

Authority: 21 U.S.C. 360b.

■ 15. In § 524.770, revise paragraph (b) to read as follows:

§ 524.770 Doramectin.

* * * * *

(b) *Sponsors.* See Nos. 051072, 054771, and 061133 in § 510.600(c) of this chapter.

* * * * *

■ 16. In § 524.2099, revise paragraph (c)(2) to read as follows:

§ 524.2099 Selamectin and sarolaner.

* * * * *

(c) * * *

(2) *Indications for use.* For the prevention of heartworm disease caused by *Dirofilaria immitis,* the treatment and control of roundworm (*Toxocara cati*) and intestinal hookworm (*Ancylostoma tubaeforme*) infections, and the treatment and control of ear mite (*Otodectes cynotis*) infestations. Kills adult fleas (*Ctenocephalides felis*) and is indicated for the treatment and prevention of flea infestations, the prevention of *Dipylidium caninum* (tapeworm) infections as a direct result of killing *Ctenocephalides felis* vector fleas on the treated cat, and the treatment and control of tick infestations with *Amblyomma americanum* (lone star tick), *Amblyomma maculatum* (Gulf Coast tick), *Dermacentor variabilis* (American dog tick), and *Ixodes scapularis* (black-legged tick) for 1 month in cats and kittens 8 weeks and older, and weighing 2.8 pounds or greater.

* * * * *

PART 529—CERTAIN OTHER DOSAGE FORM NEW ANIMAL DRUGS

■ 17. The authority citation for part 529 continues to read as follows:

Authority: 21 U.S.C. 360b.

§ 529.2620 [Amended]

■ 18. In § 529.2620, in paragraph (b), remove the text ''051233'' and in its place add the text ''051072''.

PART 558—NEW ANIMAL DRUGS FOR USE IN ANIMAL FEEDS

■ 19. The authority citation for part 558 continues to read as follows:

Authority: 21 U.S.C. 354, 360b, 360ccc, 360ccc-1, 371.

■ 20. In § 558.128, revise paragraphs (e)(4)(xxi) and (xxii) to read as follows:

§ 558.128 Chlortetracycline.

* * * * *

(e) * * *

(4) * * *

Chlortetracycline amount	Combination in grams/ton	Indications for use	Limitations	Sponsor
*	*	*	*	*
(xxi) 400 to 2,000 g/ton	Monensin, 15 to 84	Replacement beef and dairy heifers: For treatment of bacterial enteritis caused by *Escherichia coli* and bacterial pneumonia caused by *Pasteurella multocida* susceptible to chlortetracycline; and for the prevention and control of coccidiosis caused by *Eimeria bovis* and *Eimeria zuernii*.	For replacement beef and dairy heifers not currently being fed monensin: Feed as the sole ration for not more than 5 days to provide 10 mg chlortetracycline per pound of body weight per day and 0.14 to 0.42 mg monensin per pound of body weight per day, depending upon severity of challenge, to provide 50 to 100 mg monensin per head per day in a minimum of 1 pound of Type C medicated feed. After 5 days, continue to feed monensin Type C medicated feed alone to provide 50 to 200 mg monensin per head per day in a minimum of 1 pound of Type C medicated feed.. For replacement beef and dairy heifers currently being fed monensin: Feed as the sole ration for not more than 5 days to provide 10 mg chlortetracycline per pound of body weight per day and 0.14 to 0.42 mg monensin per pound of body weight per day, depending upon severity of challenge, to provide 50 to 200 mg monensin per head per day in a minimum of 1 pound of Type C medicated feed. After 5 days, continue to feed monensin Type C medicated feed alone. This drug is not approved for use in female dairy cattle 20 months of age or older, including dry dairy cows. Use in these cattle may cause drug residues in milk and/or in calves born to these cows. Monensin as provided by No. 058198 or 016592; chlortetracycline by No. 069254 in § 510.600(c) of this chapter.	069254, 016592
(xxii) 400 to 2,000 g/ton.	Monensin, 15 to 400 ..	Replacement beef and dairy heifers: For treatment of bacterial enteritis caused by *Escherichia coli* and bacterial pneumonia caused by *Pasteurella multocida* susceptible to chlortetracycline; and for increased rate of weight gain.	For replacement beef and dairy heifers not currently being fed monensin: Feed as the sole ration for not more than 5 days to provide 10 mg chlortetracycline per pound of body weight per day and 50 to 100 mg monensin per head per day in a minimum of 1 pound of Type C medicated feed. After 5 days, continue to feed monensin Type C medicated feed alone to provide 50 to 200 mg monensin per head per day in a minimum of 1 pound of Type C medicated feed.. For replacement beef and dairy heifers currently being fed monensin: Feed as the sole ration for not more than 5 days to provide 10 mg chlortetracycline per pound of body weight per day and 50 to 200 mg monensin per head per day in a minimum of 1 pound of Type C medicated feed. After 5 days, continue to feed monensin Type C medicated feed alone. This drug is not approved for use in female dairy cattle 20 months of age or older, including dry dairy cows. Use in these cattle may cause drug residues in milk and/or in calves born to these cows. Monensin as provided by No. 058198 or 016592; chlortetracycline by No. 069254 in § 510.600(c) of this chapter.	0692544, 0165924
*	*	*	*	*

* * * * *

■ 21. In § 558.261, revise paragraph (b) to read as follows:

§ 558.261 Florfenicol.

* * * * *

(b) *Sponsors.* See sponsor numbers as in § 510.600(c) of this chapter.

(1) No. 000061 for use of products described in paragraph (a) of this section as in paragraph (e) of this section.

(2) No. 066104 for use of product described in paragraph (a)(2) of this section as in paragraph (e)(2) of this section.

* * * * *

■ 22. In § 558.330:

■ a. Redesignate paragraph (d) as paragraph (e);

■ b. Add new paragraph (d); and

■ c. Revise newly redesignated paragraph (e).

The addition and revision read as follows:

§ 558.330 Lubabegron.

* * * * *

(d) *Special considerations.* Labeling shall bear the following caution statements:

(1) Lubabegron has not been approved for use in breeding animals because

safety and effectiveness have not been evaluated in these animals.

(2) Do not allow horses or other equines access to feed containing lubabegron.

(3) A decrease in dry matter intake may be noticed in some animals receiving lubabegron.

(e) *Conditions of use.* (1) It is used in cattle feed as follows:

Lubabegron (as lubabegron fumarate) in grams/ton	Combination in grams/ton	Indications for use	Limitations	Sponsors
(i) 1.25 to 4.54		Beef steers and heifers fed in confinement for slaughter: For reduction of ammonia gas emissions per pound of live weight and hot carcass weight during the last 14 to 91 days on feed.	Feed continuously as the sole ration to provide 13 to 90 mg lubabegron/head/day during the last 14 to 91 days on feed. See special labeling considerations in paragraph (d) of this section..	058198
(ii) 1.25 to 4.54	Melengestrol acetate, 0.25 to 2 g/ton.	Growing beef heifers fed in confinement for slaughter: For increased rate of weight gain, improved feed efficiency, suppression of estrus (heat), and for reduction of ammonia gas emissions per pound of live weight and hot carcass weight during the last 14 to 91 days on feed.	Melengestrol acetate Type C top-dress medicated feed (0.5 to 2 lb(s) per head per day) must be top dressed onto or mixed at feeding with a Type C medicated feed containing 1.25 to 4.54 g/ton lubabegron to provide 0.25 to 0.5 mg melengestrol acetate and 13 to 90 mg lubabegron per head per day. Feed as the sole ration during the last 14 to 91 days on feed. See special labeling considerations in paragraph (d) of this section and in § 558.342(d). Lubabegron fumarate as provided by No. 058198; melengestrol acetate as provided by No. 054771 in § 510.600(c) of this chapter..	058198
(iii) 1.25 to 4.54	Monensin, 5 to 40	Beef steers and heifers fed in confinement for slaughter: For reduction of ammonia gas emissions per pound of live weight and hot carcass weight and for improved feed efficiency during the last 14 to 91 days on feed.	Feed continuously as sole ration to provide 13 to 90 mg lubabegron/head/day and 50 to 480 mg monensin/head/day during the last 14 to 91 days on feed. No additional improvement in feed efficiency has been shown from feeding monensin at levels greater than 30 g/ton (360 mg monensin/head/day). See special labeling considerations in paragraph (d) of this section and in § 558.355(d). Lubabegron fumarate as provided by No. 058198; monensin as provided by No. 016592 or 058198 in § 510.600(c) of this chapter..	016592, 058198
(iv) 1.25 to 4.54	Monensin, 10 to 40	Beef steers and heifers fed in confinement for slaughter: For reduction of ammonia gas emissions per pound of live weight and hot carcass weight; and for prevention and control of coccidiosis due to *Eimeria bovis* and *E. zuernii* during the last 14 to 91 days on feed.	Feed continuously as the sole ration to provide 13 to 90 mg lubabegron/head/day and 0.14 to 0.42 mg monensin/lb body weight per day, depending upon severity of coccidiosis challenge, during the last 14 to 91 days on feed. See special labeling considerations in paragraph (d) of this section and in § 558.355(d). Lubabegron fumarate as provided by No. 058198; monensin as provided by No. 016592 or 058198 in § 510.600(c) of this chapter..	016592, 058198
(v) 1.25 to 4.54	Monensin, 10 to 40 and melengestrol acetate, 0.25 to 2.	Growing beef heifers fed in confinement for slaughter: For increased rate of weight gain, improved feed efficiency, suppression of estrus (heat), for reduction of ammonia gas emissions per pound of live weight and hot carcass weight, and for the prevention and control of coccidiosis caused by *Eimeria bovis* and *Eimeria zuernii* during the last 14 to 91 days on feed.	Melengestrol acetate Type C top-dress medicated feed (0.5 to 2 lb(s) per head per day) must be top dressed onto or mixed at feeding with a Type C medicated feed containing 1.25 to 4.54 g/ton lubabegron and 10 to 40 g/ton monensin, to provide 0.25 to 0.5 mg melengestrol acetate and 13 to 90 mg lubabegron per head per day, and 0.14 to 0.42 mg monensin per pound of body weight per day, depending upon severity of challenge, up to a maximum of 480 mg monensin per head per day. Feed as the sole ration during the last 14 to 91 days on feed. See special labeling considerations in paragraph (d) of this section, and in §§ 558.342(d) and 558.355(d). Lubabegron fumarate and monensin as provided by No. 058198; melengestrol acetate as provided by No. 054771 in § 510.600(c) of this chapter..	058198

(2) Lubabegron may also be used in combination with:

(i) [Reserved]

(ii) Tylosin as in § 558.625.

■ 23. In § 558.342:

■ a. Add paragraphs (b)(1) and (2); and

■ b. Revise paragraphs (e)(1)(i) and (ii).

The addition and revision read as follows:

§ 558.342 Melengestrol.

* * * * *

(b) * * *

(1) No. 054771 for use of products described in paragraph (a)(1) of this section:

(2) Nos. 016592, 051311, 054771, and 058198 for use of product described in paragraph (a)(2) of this section.

* * * * *

BILLING CODE 4164–01–P

DEPARTMENT OF JUSTICE

Office of the Attorney General

28 CFR Part 50

[Docket No. OAG 174; AG Order No. 6148–2025]

RIN 1105–AB61

Processes and Procedures for Issuance and Use of Guidance Documents

AGENCY: Office of the Attorney General, Department of Justice.

ACTION: Final rule.

SUMMARY: This rule finalizes without change an interim final rule by which the Department of Justice (''Department'') removed amendments to its regulations that were made during 2020 pursuant to the now-revoked Executive Order 13891, which had imposed limitations on the use of Department guidance documents in criminal and civil enforcement actions brought by the Department.

DATES: This rule is effective January 17, 2025.

FOR FURTHER INFORMATION CONTACT: Robert Hinchman, Senior Counsel, Office of Legal Policy, U.S. Department

of Justice, telephone (202) 514–8059 (not a toll-free number).

SUPPLEMENTARY INFORMATION:

I. Discussion

A. Overview

This rule finalizes without change the interim final rule, Processes and Procedures for Issuance and Use of Guidance Documents (OAG 174; RIN 1105–AB61), published at 86 FR 37674 (July 16, 2021) (the ''July 16 interim rule''). The interim rule implemented Executive Order 13992 of January 25, 2021, 86 FR 7049 (Revocation of Certain Executive Orders Concerning Federal Regulation), by removing the Department's regulations at 28 CFR 50.26 and 50.27 and reserving those sections. The Department's approach to the development, issuance, and use of guidance documents is now governed by the Attorney General Memorandum issued on July 1, 2021, ''Issuance and Use of Guidance Documents by the Department of Justice,'' *https://www.justice.gov/opa/page/file/1408606/download.*

B. Executive Order 13992

As discussed in greater detail in the July 16 interim rule, on January 20, 2021, President Biden issued Executive Order 13992, which, among other things, revoked Executive Order 13891 and stated that ''agencies must be equipped with the flexibility to use robust regulatory action to address national priorities.'' 86 FR at 7049. Executive Order 13992 directed the heads of all agencies to ''promptly take steps to rescind any orders, rules, regulations, guidelines, or policies, or portions thereof, implementing or enforcing'' the revoked Executive Order. *Id.*

C. Revocation of 28 CFR 50.26 and 50.27

Based on its evaluation of the prior regulations at 28 CFR 50.26 and 50.27, the Department concluded that those regulations were unnecessary and unduly burdensome, lacked flexibility and nuance, and limited the ability of the Department to do its work effectively. Among other things, the regulations generated collateral disputes in affirmative and enforcement litigation, and they discouraged Department components from preparing and issuing guidance that would be helpful to members of the public. In addition, because the regulations imposed requirements on a particular category of agency documents deemed to be ''guidance,'' the regulations inherently caused Department staff to expend significant resources determining whether each agency document, product or communication constituted ''guidance'' and was therefore subject to these regulations. Accordingly, the Department determined that the rules should be removed.

In removing the rules, the Department did not depart from the principle that guidance documents are interpretative and thus cannot impose legal requirements beyond those found in relevant constitutional provisions, statutes, and existing regulations. The Department also continues to believe that guidance documents should be clear, transparent, and readily accessible to the public. But these principles, and other related Department policies and practices concerning guidance documents, have traditionally been addressed through memoranda from Department leadership rather than through regulations. The Department therefore removed 28 CFR 50.26 and 50.27 in their entirety, and solicited public comment. On July 1, 2021, the Attorney General issued a new Memorandum setting forth the Department's policies going forward from that date regarding the development, issuance, and use of guidance documents, and the Department has updated other applicable internal protocols in accordance with these policies.

D. Public Comments on the July 16, 2021, Interim Rule Pertaining to 28 CFR 50.26 and 50.27

During the public comment period, which closed on August 16, 2021, the Department received only two comments, both of which supported the interim rule. The reasons given by the commenters in support of the removal of 28 CFR 50.26 and 50.27 largely paralleled the Department's own reasons and justifications. Accordingly, the July 16 interim final rule is being finalized without change.

II. Conforming Changes to the Justice Manual

The provisions of the Justice Manual at section 1–19.000 (*https://www.justice.gov/jm/justice-manual*) have been revised, and the provisions of the Justice Manual previously published at section 1–20.000 have been removed, to conform with the principles set forth in the July 1, 2021, Attorney General Memorandum.

III. Regulatory Certifications

A. Administrative Procedure Act

This final rule relates to a matter of agency management or personnel and is a rule of agency organization, procedure, or practice. As such, this rule is exempt from the usual requirements of prior notice and comment and a 30-day delay in effective date. *See* 5 U.S.C. 553(a)(2), (b)(A), (d). The rule is effective upon being posted for public inspection at the **Federal Register**. The Department, in its discretion, had sought post-promulgation public comment on the July 16 interim rule. As previously explained, the Department received only two comments, both of which supported the rule.

B. Regulatory Flexibility Act

A Regulatory Flexibility Analysis was not required for this final rule because the Department was not required to publish a general notice of proposed rulemaking for this matter. *See* 5 U.S.C. 601(2), 604(a).

C. Executive Orders 12866, 13563, and 14094—Regulatory Review

This final rule has been drafted and reviewed in accordance with Executive Order 12866, ''Regulatory Planning and Review,'' section 1(b), Principles of Regulation; in accordance with Executive Order 13563, ''Improving Regulation and Regulatory Review,'' section 1(b), General Principles of Regulation; and in accordance with Executive Order 14094, ''Modernizing Regulatory Review''.

This final rule is ''limited to agency organization, management, or personnel matters'' and thus is not a ''rule'' for purposes of review by the Office of Management and Budget (OMB), a determination in which OMB has concurred. *See* Executive Order 12866, sec. 3(d)(3). Accordingly, this rule has not been reviewed by OMB. The Department claimed a similar exemption at the time of promulgating the July 16 interim rule.

D. Executive Order 12988—Civil Justice Reform

This regulation meets the applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988, ''Civil Justice Reform.''

E. Executive Order 13132—Federalism

This rule will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various

levels of government. Therefore, in accordance with Executive Order 13132, ''Federalism,'' the Department has determined that this rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement.

F. Unfunded Mandates Reform Act of 1995

This rule will not result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100 million or more (adjusted for inflation) in any one year, and it will not significantly or uniquely affect small governments. Therefore, no actions are necessary under the provisions of the Unfunded Mandates Reform Act of 1995, 2 U.S.C. 1501 *et seq.*

G. Congressional Review Act

This rule is not a major rule as defined by section 804 of the Congressional Review Act (CRA), 5 U.S.C. 804. This action pertains to agency management or personnel, and agency organization, procedure, or practice, and does not substantially affect the rights or obligations of non-agency parties. Accordingly, it is not a ''rule'' as that term is used in the CRA, 5 U.S.C. 804(3), and the reporting requirement of 5 U.S.C. 801 does not apply.

H. Paperwork Reduction Act of 1995

This final rule does not impose any new reporting or recordkeeping requirements under the Paperwork Reduction Act of 1995, 44 U.S.C. 3501–3521.

List of Subjects in 28 CFR Part 50

Administrative practice and procedure.

■ Accordingly, the interim rule amending 28 CFR part 50, which was published at 86 FR 37674 on July 16, 2021, is adopted as final without change.

Dated: January 14, 2025.

Merrick B. Garland,

Attorney General.

BILLING CODE 4410–BB–P

DEPARTMENT OF EDUCATION

34 CFR Parts 36 and 668

RIN 1801–AA25

Adjustment of Civil Monetary Penalties for Inflation

AGENCY: Department of Education.

ACTION: Final regulations.

SUMMARY: The Department of Education (Department) issues these final regulations to adjust the Department's civil monetary penalties (CMPs) for inflation. This adjustment is required by the Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015 (2015 Act), which amended the Federal Civil Penalties Inflation Adjustment Act of 1990 (Inflation Adjustment Act). These final regulations provide the 2025 annual inflation adjustments being made to the penalty amounts in the Department's final regulations published in the **Federal Register** on January 25, 2024 (2024 final rule).

DATES: These regulations are effective January 21, 2025. The adjusted CMPs established by these regulations are applicable only to civil penalties assessed after January 21, 2025, whose associated violations occurred after November 2, 2015.

FOR FURTHER INFORMATION CONTACT: Rhondalyn Primes, U.S. Department of Education, Office of the General Counsel, 400 Maryland Avenue SW, Room 6C150, Washington, DC 20202–2241. Telephone: (202) 453–6444. Email: *rhondalyn.primes@ed.gov.*

If you are deaf, hard of hearing, or have a speech disability and wish to access telecommunications relay services, please dial 7–1–1.

SUPPLEMENTARY INFORMATION:

Background

A CMP is defined in the Inflation Adjustment Act (28 U.S.C. 2461 note) as any penalty, fine, or other sanction that is (1) for a specific monetary amount as provided by Federal law, or has a maximum amount provided for by Federal law; (2) assessed or enforced by an agency pursuant to Federal law; and (3) assessed or enforced pursuant to an administrative proceeding or a civil action in the Federal courts.

The Inflation Adjustment Act provides for the regular evaluation of CMPs to ensure that they continue to maintain their deterrent value. The Inflation Adjustment Act required that each agency issue regulations to adjust its CMPs beginning in 1996 and at least every four years thereafter. The Department published its most recent cost adjustment to its CMPs in the **Federal Register** on January 25, 2024 (89 FR 4829) (2024 final rule), and those adjustments became effective on the date of publication.

The 2015 Act (section 701 of Pub. L. 114–74) amended the Inflation Adjustment Act to improve the effectiveness of CMPs and to maintain their deterrent effect.

The 2015 Act requires agencies to: (1) adjust the level of CMPs with an initial ''catch-up'' adjustment through an interim final rule (IFR); and (2) make subsequent annual adjustments for inflation. Catch-up adjustments are based on the percentage change between the Consumer Price Index for all Urban Consumers (CPI–U) for the month of October in the year the penalty was last adjusted by a statute other than the Inflation Adjustment Act, and the October 2015 CPI–U. Annual inflation adjustments are based on the percentage change between the October CPI–U preceding the date of each statutory adjustment, and the prior year's October CPI–U.[1] The Department published an IFR with the initial ''catch-up'' penalty adjustment amounts on August 1, 2016 (81 FR 50321).

In these final regulations, based on the CPI–U for the month of October 2024, not seasonally adjusted, we are annually adjusting each CMP amount by a multiplier for 2025 of 1.02598, as directed by the Office of Management and Budget (OMB) Memorandum No. M–25–02 issued on December 17, 2024.

The Department's Civil Monetary Penalties

The following analysis calculates new CMPs for penalty statutes in the order in which they appear in 34 CFR 36.2. The penalty amounts are being adjusted up based on the multiplier of 1.02598 provided in OMB Memorandum No. M–25–02.

Statute: 20 U.S.C. 1015(c)(5).

Current Regulations: The CMP for 20 U.S.C. 1015(c)(5) (section 131(c)(5) of the Higher Education Act of 1965, as amended (HEA)), as last set out in statute in 1998 (Pub. L. 105–244, title I, section 101(a), October 7, 1998, 112 Stat. 1602), is a fine of up to $25,000 for failure by an institution of higher education (IHE) to provide information on the cost of higher education to the Commissioner of Education Statistics. In the 2024 final rule, we increased this amount to $46,901.

New Regulations: The new penalty for this section is $48,119.

Reason: Using the multiplier of 1.02598 from OMB Memorandum No. M–25–02, the new penalty is calculated as follows: $46,901 × 1.02598 = $48,119.49, which makes the adjusted penalty $48,119, when rounded to the nearest dollar.

[1] If a statute that created a penalty is amended to change the penalty amount, the Department does not adjust the penalty in the year following the adjustment.

Statute: 20 U.S.C. 1022d(a)(3).

Current Regulations: The CMP for 20 U.S.C. 1022d(a)(3) (section 205(a)(3) of the HEA), as last set out in statute in 2008 (Pub. L. 110–315, title II, section 201(2), August 14, 2008, 122 Stat. 3147), is a fine of up to $27,500 for failure by an IHE to provide information to the State and the public regarding its teacher-preparation programs. In the 2024 final rule, we increased this amount to $39,065.

New Regulations: The new penalty for this section is $40,080.

Reason: Using the multiplier of 1.02598 from OMB Memorandum No. M–25–02, the new penalty is calculated as follows: $39,065 × 1.02598 = $40,079.90, which makes the adjusted penalty $40,080, when rounded to the nearest dollar.

Statute: 20 U.S.C. 1082(g).

Current Regulations: The CMP for 20 U.S.C. 1082(g) (section 432(g) of the HEA), as last set out in statute in 1986 (Pub. L. 99–498, title IV, section 402(a), October 17, 1986, 100 Stat. 1401), is a fine of up to $25,000 for violations by lenders and guaranty agencies of Title IV of the HEA, which authorizes the Federal Family Education Loan Program. In the 2024 final rule, we increased this amount to $69,733.

New Regulations: The new penalty for this section is $71,545.

Reason: Using the multiplier of 1.02598 from OMB Memorandum No. M–25–02, the new penalty is calculated as follows: $69,733 × 1.02598 = $71,544.66, which makes the adjusted penalty $71,545, when rounded to the nearest dollar.

Statute: 20 U.S.C. 1094(c)(3)(B).

Current Regulations: The CMP for 20 U.S.C. 1094(c)(3)(B) (section 487(c)(3)(B) of the HEA), as set out in statute in 1986 (Pub. L. 99–498, title IV, section 407(a), October 17, 1986, 100 Stat. 1488), is a fine of up to $25,000 for an IHE's violation of title IV of the HEA or its implementing regulations. Title IV authorizes various programs of student financial assistance. In the 2024 final rule, we increased this amount to $69,733.

New Regulations: The new penalty for this section is $71,545.

Reason: Using the multiplier of 1.02598 from OMB Memorandum No. M–25–02, the new penalty is calculated as follows: $69,733 × 1.02598 = $71,544.66, which makes the adjusted penalty $71,545, when rounded to the nearest dollar.

Statute: 20 U.S.C. 1228c(c)(2)(E).

Current Regulations: The CMP for 20 U.S.C. 1228c(c)(2)(E) (section 429 of the General Education Provisions Act), as set out in statute in 1994 (Pub. L. 103–382, title II, section 238, October 20, 1994, 108 Stat. 3918), is a fine of up to $1,000 for an educational organization's failure to disclose certain information to minor students and their parents. In the 2024 final rule, we increased this amount to $2,058.

New Regulations: The new penalty for this section is $2,111.

Reason: Using the multiplier of 1.02598 from OMB Memorandum No. M–25–02, the new penalty is calculated as follows: $2,058 × 1.02598 = $2,111.46, which makes the adjusted penalty $2,111, when rounded to the nearest dollar.

Statute: 31 U.S.C. 1352(c)(1) and (c)(2)(A).

Current Regulations: The CMPs for 31 U.S.C. 1352(c)(1) and (c)(2)(A), as set out in statute in 1989 (Pub. L. 101–121, title III, section 319(a)(1), October 23, 1989, 103 Stat. 750), are a fine of $10,000 to $100,000 for recipients of Government grants, contracts, etc. that improperly lobby Congress or the executive branch with respect to the award of Government grants and contracts. In the 2024 final rule, we increased these amounts to $24,496 to $244,958.

New Regulations: The new penalties for these sections are $25,132 to $251,322.

Reason: Using the multiplier of 1.02598 from OMB Memorandum No. M–25–02, the new minimum penalty is calculated as follows: $24,496 × 1.02598 = $25,132.40, which makes the adjusted penalty $25,132, when rounded to the nearest dollar. The new maximum penalty is calculated as follows: $244,958 × 1.02598 = $251,322.00, which makes the adjusted penalty $251,322, when rounded to the nearest dollar.

Statute: 31 U.S.C. 3802(a)(1) and (a)(2).

Current Regulations: The CMPs for 31 U.S.C. 3802(a)(1) and (a)(2), as set out in statute in 1986 (Pub. L. 99–509, title VI, section 6103(a), Oct. 21, 1986, 100 Stat. 1937), are a fine of up to $5,000 for false claims and statements made to the Government. In the 2024 final rule, we increased this amount to $13,946.

New Regulations: The new penalty for this section is $14,308.

Reason: Using the multiplier of 1.02598 from OMB Memorandum No. M–25–02, the new penalty is calculated as follows: $13,946 × 1.02598 = $14,308.32, which makes the adjusted penalty $14,308 when rounded to the nearest dollar.

Executive Orders 12866, 13563 and 14094

Regulatory Impact Analysis

Under Executive Order 12866, the Office of Management and Budget (OMB) must determine whether this regulatory action is ''significant'' and, therefore, subject to the requirements of the Executive order and subject to review by OMB. Section 3(f) of Executive Order 12866, as amended by Executive Order 14094, defines a ''significant regulatory action'' as an action likely to result in a rule that may—

(1) Have an annual effect on the economy of $200 million or more, (adjusted every 3 years by the Administrator of OMB's Office of Information and Regulatory Affairs (OIRA) for changes in gross domestic product); or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, territorial, or Tribal governments or communities;

(2) Create serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) Materially alter the budgetary impacts of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or

(4) Raise legal or policy issues for which centralized review would meaningfully further the President's priorities, or the principles set forth in this Executive order, as specifically authorized in a timely manner by the Administrator of OIRA in each case.

We have determined that these final regulations: (1) exclusively implement the annual adjustment; (2) are consistent with OMB Memorandum No. M–25–02; and (3) have an annual impact of less than $200 million. Therefore, based on OMB Memorandum No. M–25–02, this is not a significant regulatory action subject to review by OMB under section 3(f) of Executive Order 12866 (as amended by Executive Order 14094).

We have also reviewed these regulations under Executive Order 13563, which supplements and explicitly reaffirms the principles, structures, and definitions governing regulatory review established in Executive Order 12866 (as amended by Executive Order 14094). To the extent permitted by law, Executive Order 13563 requires that an agency—

(1) Propose or adopt regulations only upon a reasoned determination that their benefits justify their costs (recognizing that some benefits and costs are difficult to quantify);

(2) Tailor its regulations to impose the least burden on society, consistent with obtaining regulatory objectives and taking into account, among other things, and to the extent practicable, the costs of cumulative regulations;

(3) In choosing among alternative regulatory approaches, select those approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity);

(4) To the extent feasible, specify performance objectives, rather than the behavior or manner of compliance a regulated entity must adopt; and

(5) Identify and assess available alternatives to direct regulation, including economic incentives—such as user fees or marketable permits—to encourage the desired behavior, or providing information that enables the public to make choices.

Executive Order 13563 also requires an agency ''to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible.'' OIRA has emphasized that these techniques may include ''identifying changing future compliance costs that might result from technological innovation or anticipated behavioral changes.''

We are issuing these final regulations as required by statute and in accordance with OMB Memorandum No. M–25–02. The Secretary has no discretion to consider alternative approaches as delineated in the Executive order. Based on this analysis and the reasons stated in the preamble, the Department believes that these final regulations are consistent with the principles in Executive Order 13563.

Waiver of Rulemaking and Delayed Effective Date

Under the Administrative Procedure Act (APA) (5 U.S.C. 553), the Department generally offers interested parties the opportunity to comment on proposed regulations. However, section 4(b)(2) of the 2015 Act (28 U.S.C. 2461 note) provides that the Secretary can adjust these 2025 penalty amounts notwithstanding the requirements of 5 U.S.C. 553. Therefore, the requirements of 5 U.S.C. 553 for notice and comment and delaying the effective date of a final rule do not apply here.

Regulatory Flexibility Act Certification

Pursuant to 5 U.S.C. 601(2), the Regulatory Flexibility Act applies only to rules for which an agency publishes a general notice of proposed rulemaking. The Regulatory Flexibility Act does not apply to this rulemaking because section 4(b)(2) of the 2015 Act (28 U.S.C. 2461 note) provides that the Secretary can adjust these 2025 penalty amounts without publishing a general notice of proposed rulemaking.

Paperwork Reduction Act of 1995

These regulations do not contain any information collection requirements.

Intergovernmental Review

This program is not subject to Executive Order 12372 and the regulations in 34 CFR part 79.

Assessment of Educational Impact

Based on our own review, we have determined that these regulations do not require transmission of information that any other agency or authority of the United States gathers or makes available.

Accessible Format: On request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT**, individuals with disabilities can obtain this document in an accessible format. The Department will provide the requestor with an accessible format that may include Rich Text Format (RTF) or text format (txt), a thumb drive, an MP3 file, Braille, large print, audiotape, compact disc, or other accessible format.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. You may access the official edition of the **Federal Register** and the Code of Federal Regulations at *www.govinfo.gov.* At this site you can view this document, as well as all other Department documents published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access Department documents published in the **Federal Register** by using the article search feature at *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

List of Subjects

34 CFR Part 36

34 CFR Part 668

Administrative practice and procedure, Aliens, Colleges and universities, Consumer protection, Grant programs-education, Loan programs-education, Reporting and recordkeeping requirements, Selective Service System, Student aid, Vocational education.

Miguel Cardona,

Secretary of Education.

For the reasons discussed in the preamble, the Secretary amends parts 36 and 668 of title 34 of the Code of Federal Regulations as follows:

PART 36—ADJUSTMENT OF CIVIL MONETARY PENALTIES FOR INFLATION

■ 1. The authority citation for part 36 continues to read as follows:

Authority: 20 U.S.C. 1221e–3 and 3474; 28 U.S.C. 2461 note, as amended by § 701 of Pub. Law 114–74, unless otherwise noted.

■ 2. Section 36.2 is amended by revising table 1 to read as follows:

§ 36.2 Penalty adjustment.

* * * * *

TABLE 1 TO § 36.2—CIVIL MONETARY PENALTY INFLATION ADJUSTMENTS

Statute	Description	New maximum (and minimum, if applicable) penalty amount
20 U.S.C. 1015(c)(5) (section 131(c)(5) of the Higher Education Act of 1965 (HEA)).	Provides for a fine, as set by Congress in 1998, of up to $25,000 for failure by an institution of higher education (IHE) to provide information on the cost of higher education to the Commissioner of Education Statistics.	$48,119.
20 U.S.C. 1022d(a)(3) (section 205(a)(3) of the HEA).	Provides for a fine, as set by Congress in 2008, of up to $27,500 for failure by an IHE to provide information to the State and the public regarding its teacher-preparation programs.	$40,080.

TABLE 1 TO § 36.2—CIVIL MONETARY PENALTY INFLATION ADJUSTMENTS—Continued

Statute	Description	New maximum (and minimum, if applicable) penalty amount
20 U.S.C. 1082(g) (section 432(g) of the HEA) ...	Provides for a civil penalty, as set by Congress in 1986, of up to $25,000 for violations by lenders and guaranty agencies of title IV of the HEA, which authorizes the Federal Family Education Loan Program.	$71,545.
20 U.S.C. 1094(c)(3)(B) (section 487(c)(3)(B) of the HEA).	Provides for a civil penalty, as set by Congress in 1986, of up to $25,000 for an IHE's violation of title IV of the HEA, which authorizes various programs of student financial assistance.	$71,545.
20 U.S.C. 1228c(c)(2)(E) (section 429 of the General Education Provisions Act).	Provides for a civil penalty, as set by Congress in 1994, of up to $1,000 for an educational organization's failure to disclose certain information to minor students and their parents.	$2,111.
31 U.S.C. 1352(c)(1) and (c)(2)(A)	Provides for a civil penalty, as set by Congress in 1989, of $10,000 to $100,000 for recipients of Government grants, contracts, etc. that improperly lobby Congress or the executive branch with respect to the award of Government grants and contracts.	$25,132 to $251,322.
31 U.S.C. 3802(a)(1) and (a)(2)	Provides for a civil penalty, as set by Congress in 1986, of up to $5,000 for false claims and statements made to the Government.	$14,308.

PART 668—STUDENT ASSISTANCE GENERAL PROVISIONS

■ 3. The authority citation for part 668 continues to read in part as follows:

Authority: 20 U.S.C. 1001–1003, 1070g, 1085, 1088, 1091, 1092, 1094, 1099c, 1099c–1, 1221e–3, and 1231a, unless otherwise noted.

* * * * *

§ 668.84 [Amended]

■ 4. Section 668.84 is amended by:

■ a. In paragraph (a)(1) introductory text, removing the number ''$69,733'' and adding, in its place, the number ''$71,545''.

■ b. Removing the parenthetical authority citation at the end of the section.

BILLING CODE 4000–01–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R09–OAR–2024–0627; FRL–12536–02–R9]

Interim Final Determination To Defer Sanctions, San Joaquin Valley Unified Air Pollution Control District

AGENCY: Environmental Protection Agency (EPA).

ACTION: Interim final determination.

SUMMARY: The Environmental Protection Agency (EPA) is making an interim final determination that the California Air Resources Board (CARB) has submitted a Clean Air Act (CAA or ''Act'') state implementation plan (SIP) revision on behalf of the San Joaquin Valley Unified Air Pollution Control District (SJVUAPCD or ''District'') that corrects deficiencies concerning the District's new source review (NSR) stationary source permitting program. This determination is based on a proposed approval, published elsewhere in this issue of the **Federal Register**, of SJVUAPCD Rules 1020, 2020, and 2201. The effect of this interim final determination is to defer sanctions that were triggered by the EPA's limited disapproval of SJVUAPCD Rule 2201 in 2023.

DATES: This interim final determination is effective January 21, 2025. However, comments will be accepted on or before February 20, 2025.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R09–OAR–2024–0620 at *https://www.regulations.gov.* For comments submitted at *Regulations.gov,* follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov.* The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.* If you need assistance in a language other than English or if you are a person with a disability who needs a reasonable accommodation at no cost to you, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section.

FOR FURTHER INFORMATION CONTACT: Doris Lo, EPA Region IX, 75 Hawthorne St., San Francisco, CA 94105; phone: (415) 972–3959; email: *lo.doris@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document, ''we,'' ''us,'' and ''our'' refer to the EPA.

Table of Contents

I. Background
II. EPA Action
III. Statutory and Executive Order Reviews

I. Background

On July 10, 2023, we published a limited approval and limited disapproval of SJVUAPCD Rule 2201 as adopted locally on August 15, 2019.[1] We based our limited disapproval action on deficiencies identified in the submitted rule. This limited approval and limited disapproval action started a sanctions clock for imposition of offset sanctions 18 months after August 9,

[1] 87 FR 45730 (July 29, 2022).

2023, and highway sanctions six months later, pursuant to section 179 of the Clean Air Act (CAA) and our regulations at 40 CFR 52.31. Under 40 CFR 52.31(d)(1), offset sanctions apply 18 months after the effective date of a disapproval and highway sanctions apply six months after the offset sanctions, unless we determine that the deficiencies forming the basis of the disapproval have been corrected.

On April 20, 2023, SJVUAPCD amended Rules 1020 and 2201 to address the deficiencies that were the basis for our limited disapproval of Rule 2201, as identified in our July 29, 2022, proposal. The State submitted these amended rules to the EPA on October 13, 2023, along with other revisions to Rule 2020 adopted on December 18, 2014. In the Proposed Rules section of this **Federal Register**, we are proposing a limited approval of these rules because we believe they correct the deficiencies identified in our July 10, 2023 disapproval action and meet other applicable CAA requirements. This approval is limited because the EPA is simultaneously proposing a limited disapproval of the rules based on other revisions that do not meet applicable CAA requirements. Based on this proposed action, we are taking this final rulemaking action, effective on publication, to defer the imposition of the offset and highway sanctions that were triggered by our July 10, 2023 limited disapproval.

The EPA is providing the public with an opportunity to comment on this deferral of sanctions. If comments are submitted that change our assessment described in this final determination and our proposed limited approval of SJVUAPCD Rules 1020, 2020, and 2201, we intend to take subsequent final action to reimpose sanctions pursuant to 40 CFR 52.31(d). If no comments are submitted that change our assessment, then all sanctions and sanction clocks associated with our July 10, 2023 final action will be permanently terminated on the effective date of a final rule approval.

II. EPA Action

We are making an interim final determination to defer the imposition of the offset and highway sanctions associated with our limited disapproval of SJVUAPCD Rule 2201 (as adopted in 2023) based on our concurrent proposal finding that the State's SIP revision corrects the deficiencies that initiated the sanctions.

Because the EPA has preliminarily determined that the State has corrected the deficiencies identified in the EPA's July 10, 2023 limited disapproval action, relief from sanctions should be provided as quickly as possible. Therefore, the EPA is invoking the good cause exception under the Administrative Procedure Act (APA) in not providing an opportunity for comment before this action takes effect.[2] However, by this action, the EPA is providing the public with an opportunity to comment on the EPA's determination after the effective date, and the EPA will consider any comments received in determining whether to reverse such action.

The EPA believes that notice-and-comment rulemaking before the effective date of this action is impracticable and contrary to the public interest. The EPA has reviewed the State's submittal and, through its proposed action, is indicating that it is more likely than not that the State has corrected the deficiencies that were the basis for the limited disapproval that started the sanctions clocks. Therefore, it is not in the public interest to apply sanctions. The EPA believes that it is necessary to use the interim final rulemaking process to defer sanctions while the EPA completes its rulemaking process on the approvability of the State's submittal. Moreover, with respect to the effective date of this action, the EPA is invoking the good cause exception to the 30-day notice requirement of the APA because the purpose of this notice is to relieve a restriction.[3]

III. Statutory and Executive Order Reviews

This action defers Federal sanctions and imposes no additional requirements. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 14094 (88 FR 21879, April 11, 2023);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it proposes to approve a state program;
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act.

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian Tribe has demonstrated that a Tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on Tribal governments or preempt Tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

Executive Order 12898 (Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, February 16, 1994) directs Federal agencies to identify and address ''disproportionately high and adverse human health or environmental effects'' of their actions on communities with environmental justice (EJ) concerns to the greatest extent practicable and permitted by law. Executive Order 14096 (Revitalizing Our Nation's Commitment to Environmental Justice for All, 88 FR 25251, April 26, 2023) builds on and supplements Executive Order 12898 and defines EJ as, among other things, ''the just treatment and meaningful involvement of all people, regardless of income, race, color, national origin, Tribal affiliation, or disability, in agency decision-making and other Federal activities that affect human health and the environment.''

The State did not evaluate EJ considerations as part of its SIP submittal; the CAA and applicable implementing regulations neither prohibit nor require such an evaluation. The EPA did not perform an EJ analysis and did not consider EJ in this action. Consideration of EJ is not required as part of this action, and there is no information in the record inconsistent with the stated goal of Executive Orders 12898 and 14096 of achieving EJ for communities with EJ concerns.

This action is subject to the Congressional Review Act, and the EPA will submit a rule report to each House of the Congress and to the Comptroller

[2] 5 U.S.C. 553(b)(B).

[3] 5 U.S.C. 553(d)(1).

General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2). The CRA allows the issuing agency to make a rule effective sooner than otherwise provided by the CRA if the agency makes a good cause finding that notice and comment rulemaking procedures are impracticable, unnecessary, or contrary to the public interest (5 U.S.C. 808(2)). The EPA has made a good cause finding for this action as discussed in Section II of this preamble, including the basis for that finding.

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by March 24, 2025. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and it shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements (see CAA section 307(b)(2)).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Ammonia, Nitrogen oxides, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R05–OAR–2020–0055; FRL–11687–02–R5]

Air Plan Approval; Ohio; Withdrawal of Technical Amendment

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is taking final action to correct a November 19, 2020, rulemaking removing the Air Nuisance Rule (ANR) from the Ohio State Implementation Plan (SIP). This action is in response to a February 10, 2023, decision by the United States Court of Appeals for the Sixth Circuit (Sixth Circuit or Court) to remand without vacatur EPA's removal of the ANR from the Ohio SIP. Because the Court did not vacate EPA's removal of the ANR, the ANR is currently not in Ohio's SIP. After reevaluating EPA's November 19, 2020, rulemaking, upon remand, EPA proposed to determine that its November 2020 final action was in error, and to correct that action by reinstating the ANR as part of the Ohio SIP. EPA proposed to take this action on February 22, 2024 and received both supportive and adverse comments. EPA is finalizing this action as proposed, and upon the effective date of this action, the ANR will be reinstated into the Ohio SIP.

DATES: This final rule is effective on February 20, 2025.

ADDRESSES: EPA has established a docket for this action under Docket ID No. EPA–R05–OAR–2020–0055. All documents in the docket are listed on the *https://www.regulations.gov* website. Although listed in the index, some information is not publicly available, *i.e.,* Confidential Business Information (CBI), Proprietary Business Information (PBI), or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available either through *https://www.regulations.gov* or at the Environmental Protection Agency, Region 5, Air and Radiation Division, 77 West Jackson Boulevard, Chicago, Illinois 60604. This facility is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding Federal holidays. We recommend that you telephone Christos Panos, at (312) 353–8328 before visiting the Region 5 office.

FOR FURTHER INFORMATION CONTACT: Christos Panos, Air and Radiation Division (AR–18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 353–8328, *panos.christos@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document, whenever ''we,'' ''us'' or ''our'' is used, we mean EPA.

I. Background

A detailed history of this matter is provided in EPA's February 22, 2024, 89 FR 13304, notice of proposed rulemaking (February 2024 Proposed Rule). It includes a discussion of EPA's previous rulemaking action to remove the ANR, OAC 3745–15–07, from the Ohio SIP, which EPA proposed on March 23, 2020, 85 FR 16309 (March 2020 Proposed Rule) and finalized on November 19, 2020, 85 FR 73636 (November 2020 Final Rule). That action relied on EPA's error-correction authority under Clean Air Act (CAA or Act) section 110(k)(6). In that action, EPA concluded that we had erred by approving the ANR into Ohio's SIP because we determined that the ANR was not relied upon by Ohio to demonstrate the implementation, maintenance, attainment, or enforcement of any National Ambient Air Quality Standard (NAAQS).

During the public comment period for the March 2020 Proposed Rule to remove the ANR from the Ohio SIP, EPA received comments from the Sierra Club and other environmental groups,[1] referred to in this action collectively as ''Environmental Commenters,'' asserting that EPA's approval of the ANR as part of the SIP was not an error and that EPA's use of its error correction authority to remove the ANR from Ohio's SIP was unlawful. These comments stated that the ANR was an ''important regulatory tool in achieving and maintaining the NAAQS,'' and that its removal from the SIP ''ignored the role of citizen suits in CAA enforcement.'' Further, these comments identified procedural concerns with EPA's error correction, and stated that EPA was required to adhere to the SIP revision process to remove the ANR from Ohio's SIP, which would include addressing the requirements of section 193 of the CAA to demonstrate that no backsliding would result from this change. Additionally, these comments addressed the use of the ANR in enforcement actions.[2] These comments asserted that EPA had failed to consider the impact of eliminating the only available pathway for Ohio residents to enforce the ANR. Therefore, the commenters maintained, removing the ANR from the SIP prevents local governments and non-governmental organizations, as well as affected Ohio communities, from directly enforcing

[1] EPA received comments opposing the removal of the ANR from the Sierra Club, the Ohio Environmental Council, Ohio Citizen Action, Altman Newman Co. LPA, the National Resources Defense Council, and more than 1800 individual commenters who submitted their comments as part of a letter-writing campaign. *See* Docket ID No. EPA–R05–OAR–2020–0055. All documents in the docket are listed on the *www.regulations.gov* website.

[2] *See* ''Sierra Club, Ohio Environmental Council, Ohio Citizen Action, Altman Newman Co. LPA, and Natural Resources Defense Council Comments Regarding EPA Proposed Removal of the Air Pollution Nuisance Rule from the Ohio State Implementation Plan (SIP),'' Docket ID No. EPA–R05–OAR–2020–0055. All documents in the docket are listed on the *www.regulations.gov* website.

the ANR where necessary to protect Ohioans' health, welfare and property. The commenters further contended that individual Ohioans (as well as local governments) had relied, and were relying at the time of the March 2020 Proposed Rule, on the nuisance provision for Federal enforcement of citizen suits under section 304 of the CAA to address highly localized emissions.

Notwithstanding the Environmental Commenters' concerns as articulated in their comments on the March 2020 Proposed Rule, EPA finalized the removal of the ANR from the Ohio SIP in November 2020. The Environmental Commenters then raised many of these same concerns in the United States Court of Appeals for the Sixth Circuit in petitioning for review of EPA's ANR removal action, alongside other environmental groups and private citizens. *See Sierra Club* v. *EPA,* 60 F.4th 1008 (6th Cir. 2023).

During that litigation in the Sixth Circuit, the State of Ohio submitted a letter to the Court [3] acknowledging that it had relied on the ANR as recently as July 2021, when it brought a lawsuit against an iron and steel manufacturing facility that cited exceedances of the NAAQS as evidence of nuisance under the ANR. See *State of Ohio* v. *Republic Steel,* Case No. 2021VC000949 (Sark County, Ohio July 2, 2021).

Ultimately, the Sixth Circuit granted EPA's request for a voluntary remand of EPA's removal of the ANR back to the Agency for further review. In so doing, the Sixth Circuit cited several cases in which parties could and did bring enforcement actions for violations of the ANR (prior to EPA removing the rule from the Ohio SIP). *See Sierra Club,* 60 F.4th at 1014 (citing *Fisher* v. *Perma-Fix of Dayton, Inc.* No., 3:04–C–V–418, 2006 WL 212076 (S.D. Ohio. Jan. 27, 2006); *Sampson* v. *SunCoke Energy,* No. 1:17–cv–00658 (S.D. Ohio)). The Court also noted Petitioners' past reliance on the ANR apart from actually bringing CAA litigation (*i.e.,* filing notices of intent to sue under the CAA). *Id.* While the Court acknowledged EPA's statement in its proposal that it had found ''no information'' indicating the State had relied or intended to rely on the ANR for attainment or maintenance of the NAAQS, the Court noted that there was nothing in EPA's proposal or EPA's January 2020 email exchange with the Ohio EPA official that discussed whether the ANR had a role in NAAQS *enforcement. Sierra Club,* 60 F.4th at 1015 (emphasis in original).

After a careful reevaluation of the November 2020 Final Rule in accordance with the Sixth Circuit's decision, EPA proposed in February 2024 that EPA's November 2020 action removing the ANR from the Ohio SIP was deficient and in error. Consequently, in February 2024, EPA also proposed to reverse its removal and reinstate the ANR into the Ohio SIP. EPA received both adverse and supportive comments on this proposed action. The adverse comments are addressed in Section II. of this preamble.

EPA received comments in support of the proposed rule from more than 600 individual commenters who submitted their comments as part of a letter-writing campaign. The supportive commenters also included Sierra Club, the Ohio Environmental Council, AltmanNewman Co. LPA, the FreshWater Accountability Project, the Case Western Reserve University School of Law Environmental Law Clinic, Communities United for Action, Mom's Clean Air Force (Ohio), and the Athens County Future Action Network. Several of these commenters had previously expressed disagreement with EPA's March 2020 Proposed Rule to remove the ANR from the SIP. Many of these supportive comments reinforced several comments on the March 2020 Proposed Rule, stating that the ANR's inclusion in the SIP is appropriate under the CAA as it provides for the implementation, maintenance, and enforcement of the NAAQS. The supportive commenters agreed with EPA's current position, and referenced the Sixth Circuit's acknowledgement, that the ANR has been used to limit emissions of criteria pollutants under the CAA, and that the CAA gives states wide discretion to design appropriate regulations to attain and maintain the NAAQS. The supportive commenters also reiterated that the ANR has been used in multiple CAA enforcement actions, and agreed with EPA that citizen suits under the CAA serve as a crucial implementation and enforcement mechanism. The supportive commenters also agreed with EPA's acknowledgement that, under CAA section 193, EPA was required to perform an anti-backsliding analysis before removing the ANR from the SIP in the November 2020 Final Rule, because the ANR is considered a control requirement, and EPA could not have properly used its error correction authority under CAA section 110(k)(6) to remove the ANR unless the removal would ensure equivalent or greater emission reductions under CAA section 193.

II. Response to Comments

All of the comments received on the February 2024 Proposed Rule are included in the docket for this action. Relevant supportive comments were summarized in Section I. of this preamble. EPA received adverse comments from a group of Ohio trade associations, the Ohio Attorney General, and the Ohio Environmental Protection Agency (Ohio EPA). The relevant comment summaries are summarized and addressed below.

Comment: The commenter contends that EPA may not withdraw its 2020 final rule and reinstate the ANR in the Ohio SIP through its error correction authority under CAA section 110(k)(6). The commenter states that the 2020 Final Rule was not an action ''approving, disapproving, or promulgating any plan or plan revision'' as required by CAA section 110(k)(6). In addition, the commenter alleges that the 2020 Final Rule was not a ''plan revision''; it was a revision to EPA's final action approving the ANR's inclusion in the Ohio SIP in 1974. The commenter states that EPA is not proposing to correct an error it made when it originally approved Ohio's SIP, or any part of the SIP; it is proposing to reverse a prior correction made in 2020. The commenter claims that EPA's error correction authority would not apply to EPA's 2020 correction, only to errors that existed in the SIP at the time the SIP was originally approved.

Response: As discussed in EPA's February 2024 Proposed Rule, the language in CAA section 110(k)(6) provides EPA authority to issue an error correction action whenever EPA ''determines that [its] action approving, disapproving, or promulgating any plan or plan revision (or part thereof) . . . was in error.'' Once EPA has made a determination that it erred, it ''may in the same manner as the approval, disapproval, or promulgation, revise such action as appropriate without requiring any further submission from the State.'' *Ala. Envtl. Council* v. *EPA,* 711 F.3d 1277 (11th Cir. 2013). As recognized by courts, EPA has broad authority to issue error corrections under CAA section 110(k)(6), which has been interpreted as a ''broad provision [that] was enacted to provide the EPA with an avenue to correct its own erroneous actions and grant the EPA the discretion to decide when to act pursuant to the provision.'' *Assoc. of Irritated Residents* v. *EPA,* 79 F.3d 934, 948 (9th Cir. 2015).

[3] *See* ''Notice of additional information in *Sierra Club, et al.* v. *United States Environmental Protection Agency,* No. 21–3057,'' *Sierra Club* v. *EPA,* No. 21–3057 (6th Cir. Oct. 18, 2022).

As explained in our February 2024 Proposed Rule, EPA's decision to correct its November 2020 Final Rule is based on a determination that our original action to remove the ANR from Ohio's SIP was in error, because that prior determination was deficient for two reasons: (1) because EPA failed to adequately consider the ANR's use in enforcement of the NAAQS, and (2) because EPA failed to conduct an anti-backsliding analysis pursuant to section 193 of the CAA.

With respect to the commenter's assertion that EPA's November 2020 Final Rule was not ''approving, disapproving, or promulgating any plan or plan revision,'' and that therefore EPA cannot correct the November 2020 Final Rule under section 110(k)(6), we disagree. In the November 2020 Final Rule, EPA clearly stated that ''[u]pon the effective date of this action, the nuisance rule will no longer be part of the Ohio SIP.'' [4] In other words, by that action, EPA revised the Ohio SIP to no longer include the ANR. This clearly qualifies as EPA ''promulgating any . . . plan revision,'' and therefore falls within the authority of EPA to correct under CAA section 110(k)(6). EPA further disagrees with the commenter's contention that CAA section 110(k)(6) can be used only to correct errors that existed in the SIP at the time the SIP was originally approved. This limitation on the scope of CAA section 110(k)(6) authority is not present in the text of the CAA and is not clearly inferable from it. The text authorizes EPA to make corrections to actions that EPA has taken in the past, and the commenter has not provided any statutory basis to support the claim that section 110(k)(6) may only be used to correct original SIP approvals. The only support that the commenter cites is an out of context statement from a dissenting opinion in a D.C. Circuit decision that, even if controlling, would not undermine EPA's action here.[5]

Comment: The commenter contends that EPA may not reverse its 2020 final rule and reinstate the ANR in the Ohio SIP through its inherent authority. The commenter alleges that this is because inherent reconsideration does not apply where Congress has spoken, and the CAA carefully prescribes how SIPs may be amended. Congress authorized reconsideration of SIP-related final actions in sections 307(d)(7) and 110(k)(6) of the CAA and the agency cannot rely on its inherent authority to circumvent those express requirements. The commenter further states that even if EPA had reconsideration authority, the exercise of that authority is barred as untimely because an agency's inherent authority to reconsider a prior decision is proper only when ''such reconsideration occurs within a reasonable time after the first decision'' [citations omitted]. Here, EPA's reconsideration comes nearly four years after its original decision, which the commenter claims is not within a reasonable amount of time.

Response: As explained in our February 2024 Proposed Rule, an agency's authority to reconsider past decisions derives from its statutory authority to make those decisions in the first instance. *See Trujillo* v. *General Electric Co.,* 621 F.2d 1084, 1086 (10th Cir. 1980) (''Administrative agencies have an inherent authority to reconsider their own decisions, since the power to decide in the first instance carries with it the power to reconsider.'') (*citing Albertson* v. *FCC,* 182 F.2d 397, 399 (D.C. Cir. 1950)). *See* 621 F.2d at 1088 (''The authority to reconsider may result in some instances, as it did here, in a totally new and different determination.''). In other words, EPA's authority to reconsider its November 2020 Final Rule derives from our statutory authority under CAA section 110(k)(6) that we relied on to take that action in the first instance. Thus, with respect to the commenter's assertion that the agency cannot ''circumvent'' the express requirements of sections 307(d)(7) or 110(k)(6) and rely instead on its inherent reconsideration authority, the commenter misunderstands the basis for this action as articulated in our proposed rule. In this final action, EPA is relying both on its authority under CAA section 110(k)(6) as well as its inherent reconsideration authority to determine that our November 2020 Final Rule was in error. EPA notes that section 307(d)(7) is not applicable to the current action.

Further, EPA has inherent authority to reconsider, repeal, or revise past decisions to the extent permitted by law so long as the Agency provides a reasoned explanation. *See FCC* v. *Fox Television Stations, Inc.,* 556 U.S. 502 (2009) (an agency may revise its policy, but must demonstrate that the new policy is permissible under the statute and is supported by good reasons, taking into account the record of the previous rule).

With respect to the commenter's assertion that EPA's reconsideration is barred because it did not occur within a ''reasonable'' amount of time, EPA notes that the commenter cites to a Sixth Circuit case stating that ''[w]hat is a short and reasonable time period will vary with each case, but absent unusual circumstances, the time period would be measured in weeks, not years.'' *Belville Min. Co.* v. *United States,* 999 F.2d 989, 1000 (6th Cir. 1993). However, EPA further notes that its reconsideration process did not actually begin until the Sixth Circuit issued its February 10, 2023, decision granting EPA's request for voluntary remand of the November 2020 action. To summarize the timeline, EPA's November 2020 Final Rule removing the ANR was challenged almost immediately, both through a Petition for Reconsideration submitted on January 18, 2021, and then a Petition for Review in the Sixth Circuit filed on January 19, 2021. The Sixth Circuit litigation continued until February 10, 2023, when the Court granted EPA's request for voluntary remand. The Agency represented to the Court, and the Court acknowledged in its opinion, that the Agency would ''complete its reevaluation of the ANR within twelve months of remand,'' *Sierra Club,* 60 F.4th at 1020. EPA accordingly reconsidered its November 2020 Final Rule for approximately twelve months, culminating in the February 2024 Proposed Rule at issue here. EPA's action here is therefore timely given the litigation and the Court's express acknowledgement of a twelve-month period to reconsider the ANR's removal. The commenter is incorrect to assert that the reconsideration process occurred over four years, where the majority of that time was spent litigating the original November 2020 Final Rule.

Comment: The commenter contends reinstating the ANR in the Ohio SIP would be arbitrary and capricious, and thus unlawful pursuant to the Administrative Procedure Act and section 307(d) of the CAA (if deemed applicable). The commenter states that in at least 16 separate actions in 14 different states, EPA has removed air and odor nuisance rules from SIPs or declined to include them in SIPs when requested by states, citing an insufficient connection to attainment and maintenance of the NAAQS. Further, the commenter notes that EPA has removed several nuisance rules from SIPs, in some cases using the same provision, CAA section 110(k)(6), that

[4] 85 FR 73636 (November 19, 2020).

[5] The commenter cites to *Texas* v. *EPA,* 726 F.3d 180, 204 (D.C. Cir. 2013) (Kavanaugh, J., dissenting) for the proposition that EPA can use its error correction authority under section 110(k)(6) only if the error existed at the time the SIP was originally approved. The action in that case corrected a prior approval, so in context, this statement was intended to articulate a perceived temporal limitation on EPA's authority to correct errors, (*i.e.,* that the error had to exist at the time of the prior action), not the types of actions that can be corrected—which are clearly delineated in the statutory text.

was used in the removal of the nuisance rule from the Ohio SIP. The ANR prohibits emissions ''of smoke, ashes, dust, dirt, grime, acids, fumes, gases, vapors, or any other substances or combinations of substances in such manner or in such amounts as to endanger the health, safety or welfare of the public, or cause unreasonable injury or damage to property.'' The commenter alleges that the generic categories of substances regulated by the ANR are unrelated to the NAAQS regulated pollutants, and the amounts prohibited bear no relation to compliance with the NAAQS standards. The commenter claims that reinstating the ANR into Ohio's SIP would contradict EPA's decades-long practice and policy toward other states, and that by proposing to reinstate the nuisance rule into the Ohio SIP, EPA is treating Ohio inconsistently with other states that no longer have a nuisance rule in the SIP. Further, the commenter notes that this can have a direct effect on facilities deciding in which location to expand or build, and claims that the ANR is not required to be part of the SIP as demonstrated by EPA's removal of nuisance provisions in other SIPs.

Response: EPA acknowledges that it has declined to approve certain nuisance rules into state SIPs, approved certain state requests to remove nuisance provisions from the respective SIPs, and removed certain nuisance rules from SIPs using our error correction authority under CAA section 110(k)(6). However, EPA maintains that each of the actions the commenter cites requires a distinct analysis based on the nature of the nuisance rule at issue, as well as the facts surrounding the particular rule in the particular state. As the Supreme Court has plainly stated, ''[e]ach State is given wide discretion in formulating its [SIP], and the Act provides that the [EPA] 'shall approve' the proposed plan if it has been adopted after public notice and hearing and if it meets eight specified criteria'' in CAA section 110(a)(2). *Union Elec. Co.* v. *EPA,* 427 U.S. 246, 250 (1976). The criteria in section 110(a)(2) are broad, such as requiring the plan to ''include enforceable emission limitations and other control measures, means, or techniques as may be necessary or appropriate to meet the applicable requirements of this chapter,'' and these criteria implement the overarching requirement in CAA section 110(a)(1) that states must have a SIP that ''provides for implementation, maintenance, and enforcement of the NAAQS.''

Importantly, Congress ''left to the States considerable latitude in determining specifically how the [NAAQS] would be met. This discretion includes the continuing authority to revise choices about the mix of emission limitations.'' *Train* v. *Nat. Res. Def. Council, Inc.,* 421 U.S. 60, 87 (1975). This discretion also encompasses the flexibility that ''[s]tates may submit [SIPs] more stringent than federal law requires'' and the Supreme Court has instructed that EPA ''must approve such plans if they meet the minimum requirements of § 110(a)(2).'' *Union Elec.,* 427 U.S. at 265.

EPA therefore is responsible for evaluating state SIPs and approving those SIPs that meet the requirements of the CAA. With respect to evaluating a state's SIP submission requesting to remove a nuisance provision from the state's SIP, or EPA's use of its error correction authority to remove a nuisance provision from a SIP, this would include an evaluation of the specific nuisance provision's connection to the ''implementation, maintenance, and enforcement'' of the NAAQS. In some cases, such an evaluation could lead to the conclusion that the nuisance provision does not have a connection to the NAAQS, and a conclusion that therefore the state's request to remove the relevant provision from the SIP, or that EPA's prior approval of the provision into the SIP was in error, could be appropriate. In other cases, however, in which the record indicates that there is a connection between the nuisance provision and the ''implementation, maintenance, and enforcement'' of the NAAQS, *see* CAA section 110(a)(1), an EPA action to unilaterally remove that provision from the SIP would be contrary to respecting the state's ''considerable latitude in determining specifically how the [NAAQS] would be met.'' *See Train,* 421 U.S. at 87.

In this case, the type of air pollution identified in the ANR—smoke, ashes, fumes, gases, and vapors—could have a nexus to several NAAQS, including particulate matter (PM), sulfur dioxide (SO_2), lead, and ozone. And as will be discussed at length in response to the next comment, the Ohio ANR has a demonstrated connection to the enforcement of the NAAQS. As acknowledged, the commenters have identified instances in which EPA has removed certain nuisance provisions from state SIPs. The commenters have not, however, identified any analogous situations in which EPA unilaterally removed a nuisance provision from a SIP notwithstanding a demonstrated connection between the nuisance provision and the attainment, maintenance, and enforcement of the NAAQS. As discussed in the February 2024 Proposed Rule, EPA's November 2020 Final Rule failed to consider information in the record demonstrating that the Ohio ANR had been used to enforce the NAAQS. Thus, the specific nature of Ohio's nuisance rule and the facts surrounding its use within the state indicate that EPA did not have an adequate basis in its November 2020 Final Rule to interfere with the choice that Ohio made to include the ANR when originally submitted for incorporation into its SIP in 1974. With respect to Ohio's position on this rulemaking, EPA notes that there is nothing to stop Ohio from undertaking the SIP revision process and exercising its ''continuing authority to revise choices about the mix of emission limitations,'' *see Train,* 421 U.S. at 87, included in its SIP, should Ohio determine that the ANR is no longer appropriate for inclusion in its SIP and such SIP revision removing the ANR meets applicable CAA requirements, including CAA section 193.

With respect to the commenter's contention that reinstating the ANR into Ohio's SIP would contradict EPA's decades-long practice and policy toward other states, and that EPA is treating Ohio inconsistently with other states that no longer have a nuisance rule in the SIP, EPA disagrees with this characterization of this action. As noted, any EPA action to include or remove a nuisance provision in a state SIP should be based on a fact-specific inquiry with respect to whether that specific provision helps provide for the ''implementation, maintenance, and enforcement'' of the NAAQS in that particular state. Commenters have not identified a factually analogous situation in which EPA has removed a nuisance provision from a SIP that has a demonstrated connection to the enforcement of the NAAQS. With respect to the commenter's contention that the inclusion of the ANR in the Ohio SIP impacts where facilities choose to build or expand, this is outside the scope of EPA's evaluation of whether EPA's action to remove the ANR from the SIP was in error. Again, we note that the State of Ohio has the discretion to submit a SIP revision to remove the ANR from its SIP at any time. In this action, EPA is not suggesting that the ANR must remain in Ohio's SIP in perpetuity; EPA is merely determining that its November 2020 Final Rule to unilaterally remove it was an error due to procedural and substantive deficiencies.

Comment: The commenter contends the ANR is not an enforceable emission limitation or other control measure,

means, or technique. According to the commenter, nor does the ANR provide for the enforcement of such measures, so it is not a required element of Ohio's SIP. The commenter acknowledges that a state may, for its own purposes, however, have other regulations that have the effect of improving air quality but do not have NAAQS compliance implications. But the commenter contends that neither the Ohio EPA nor citizens use the ANR to enforce the NAAQS. In the proposed rule, EPA references three citizen suits and one Ohio EPA action as demonstrating where the ANR was used as a tool to enforce the NAAQS. The commenter claims that the three citizen suit actions cited by EPA did not use the ANR to enforce the NAAQS, they used the ANR solely to allege public nuisance impacts to property owners from nearby industrial operations. Further, the commenter states that nowhere in any of the Claims for Relief in the complaints associated with these citizen suits is there a reference to the NAAQS, any reference to ambient concentrations of criteria pollutants, or any reference to use of the ANR to reduce ambient concentrations of criteria pollutants to below a NAAQS standard. The commenter alleges that the NAAQS are only referenced in passing in the preliminary facts of the complaints in providing background on the CAA. With respect to Ohio EPA's action related to Republic Steel, *State of Ohio* v. *Republic Steel,* Case No. 2021VC00949 (Stark County, Ohio), the commenter claims that there is no evidence that Ohio used the ANR against Republic Steel as a means to attain or maintain the lead NAAQS in Stark County, Ohio. The commenter acknowledges that the action cited the ANR and the lead NAAQS, but claims that action did not use the ANR to enforce the NAAQS. Rather, the commenter states that it used exceedances of the NAAQS as evidence of noncompliance with the ANR. A NAAQS exceedance tied to a specific facility is relevant evidence under Ohio Evid. R. 401 tending to prove the existence of a nuisance under Ohio Adm. Code 3745–15–07. However, according to the commenter, a nuisance action is not a means of ''enforcing'' the NAAQS or ensuring attainment and maintenance of the NAAQS. In the *Republic Steel* case, the State alleged multiple additional facts beyond a NAAQS exceedance. However, the commenter states that a NAAQS exceedance does not automatically create a nuisance violation, and a nuisance violation is not dependent on having a NAAQS exceedance. According to the commenter, Ohio considered the plant's impact on an air quality monitor that exceeded the NAAQS to be evidence of a threat to public health and therefore a nuisance, not that the NAAQS exceedance would be sufficiently addressed by a nuisance claim.

The commenter states that while the ANR may improve air quality, it does not ''enforce'' the NAAQS. The commenter acknowledges that it is possible that, while addressing a nuisance violation, a facility may reduce emissions of a criteria pollutant. According to the commenter, that coincidence of result is not the same as using the air nuisance rule for the purpose of ''enforcing'' or maintaining and achieving the NAAQS. The commenter states that EPA appears to conflate any improvement in air quality with ''enforce[ment of] the NAAQS.'' According to the commenter, the result of this is that EPA looks at the improvement the ANR may make to air quality as ''enforcing'' the NAAQS. The commenter claims that the CAA and EPA's own regulations do not make such a loose connection between air improvement and the NAAQS, and that the use of a NAAQS violation is a far cry from EPA's claim that the nuisance rule is ''used to enforce the NAAQS.''

Response: As a threshold matter, EPA reiterates the nature of the current action. Ohio included the ANR for approval into its SIP in 1974, and has not gone through the requisite SIP revision process to request that EPA remove the ANR from the State's SIP. As previously stated, EPA is not responsible for determining the appropriate ''mix of emission limitations,'' *Train,* 421 U.S. at 87, in the Ohio SIP to provide for attainment, maintenance, and enforcement of the NAAQS. Rather, EPA is tasked with evaluating whether Ohio's choices meet the CAA requirements. In this action, EPA is determining that our November 2020 Final Rule was deficient for multiple reasons. As relevant to this comment, one of those reasons is that EPA failed to adequately consider comments on the March 2020 Proposed Rule indicating the reliance on the ANR to enforce the NAAQS. Had we considered those comments, EPA would not have stated in the November 2020 Final Rule that ''the Ohio nuisance rule is not associated with the implementation, maintenance, or enforcement of the NAAQS.'' [6] For the reasons explained in our February 2024 Proposed Rule and this final rule and response to comments, EPA now acknowledges that the Ohio ANR does have a demonstrated connection to the implementation, maintenance, and enforcement of the NAAQS. Accordingly, our previous action to unilaterally remove it from Ohio's SIP was in error.

As a number of courts have recognized, Congress intended citizen suits under the CAA to be an important enforcement mechanism within the broader protective scheme of the CAA. ''The legislative history of the Clean Air Act Amendments reveals that the citizen suits provision reflected a deliberate choice by Congress to widen citizen access to the courts, as a supplemental and effective assurance that the Act would be implemented and enforced.'' *NRDC* v. *Train,* 510 F.2d 692, 700 (D.C. Cir. 1974). As noted by the Sixth Circuit, the petitioners in the *Sierra Club* case, and in comments on the March 2020 and February 2024 Proposed Rules, the ANR has been relied on in multiple CAA enforcement actions, including citizen suit enforcement cases.

Environmental Commenters' comments on the March 2020 Proposed Rule identified specific CAA citizen suits that relied on the ANR as a tool to enforce the NAAQS. As one example, Environmental Commenters pointed to a case in which an individual resident invoked the Ohio ANR to seek relief from numerous airborne pollutants emitted from a nearby waste treatment facility; the district court held, over the defendant's argument to the contrary, that the nuisance provision was federally enforceable. *See Fisher* v. *Perma-Fix of Dayton, Inc.,* No. 3:04–CV–418, 2006 WL 212076, at *5 (S.D. Ohio Jan. 27, 2006). That suit prompted intervention by EPA, which obtained a consent decree citing to the violation of the Ohio ANR as part of the Ohio SIP.[7] EPA notes that the terms of that consent decree included requirements for the facility to, among other things, install controls to limit emissions of Volatile Organic Compounds (VOCs), which are precursors to the formation of both ozone and PM. Ozone and PM are both criteria pollutants that are regulated by the NAAQS, and EPA further notes that Ohio currently has multiple nonattainment and maintenance areas for the ozone and PM NAAQS.

Local governments have also relied on the ANR to halt harmful air pollution and enforce the CAA. *See City of Ashtabula* v. *Norfolk S. Corp.,* 633 F. Supp. 2d 519, 528–29 (N.D. Ohio 2009). In that case, the Ohio Northern District

[6] 85 FR 73636 at 73638 (November 19, 2020).

[7] *See Fisher,* ''Consent Decree'' (September 14, 2017), at 1.

Court determined that the ANR is an emission limitation as defined in CAA section 302(k).[8] The defendant, owner and operator of a Coal Dock facility, moved to dismiss the claim brought under the citizen suit provision of the CAA (section 304), arguing that the ANR was precluded from citizen suit enforcement because it does not establish an emission limitation or standard under CAA section 302(k) given that it does not provide any identifiable limitation on the ''quantity, rate or concentration'' of a pollutant.[9] The court disagreed and denied the motion to dismiss, stating that:

> [Defendant's argument] must be rejected based upon an examination of the plain language of CAA § [302(k)] and OAC Rule 3745–15–07. OAC Rule 3745–15–07 finds the emission of pollutants ''*in such amounts* as to endanger the health, safety or welfare of the public, or cause unreasonable injury or damage to property'' to be a public nuisance and therefore unlawful. *Id.* (emphasis added by the court). While a numerical value is not explicitly stated, pollutants are limited to a quantity that doesn't endanger the public or cause unreasonable injury or damage to property. Because OAC Rule 3745–15–07 ''limits the quantity . . . of air pollutants[,]'' it qualifies as an emission standard or limitation under § [302(k)] of the CAA. Plaintiff can therefore bring Count Four under a CAA citizen suit.[10]

In their comments, Environmental Commenters also pointed to a case that was pending in the Southern District of Ohio at the time EPA finalized our November 2020 Final Rule to remove the ANR from Ohio's SIP. In that case, *Sampson* v. *SunCoke Energy,* 1:17–cv–00658–MRB (S.D. Ohio, filed in 2017), the plaintiffs alleged that numerous noxious and hazardous substances had previously been and continued to be released from the Haverhill Coke Company plant into the environment—that list included PM, PM_{10}, $PM_{2.5}$, nitrogen oxides (NO_X), VOCs, SO_2, and carbon monoxide, among many others.[11] EPA has established NAAQS for PM_{10}, $PM_{2.5}$, SO_2, and carbon monoxide; and NO_X and VOCs are precursors of both PM and ozone, which is another criteria pollutant. Thus, this case had a clear connection to the enforcement of the NAAQS. A motion to dismiss filed by defendants in 2018 alleged that many of the citizen suit claims overlapped with an ongoing Federal enforcement action, and the case was ultimately settled in 2021.[12] This case thus provides another example of how citizen suits can use the ANR as a tool to help limit emissions of NAAQS criteria pollutants and their precursors, contrary to the commenter's suggestions that citizen enforcement actions relying on the ANR are not used to enforce the NAAQS.

The commenters acknowledge that the ANR may improve air quality, but claim that such improvements do not equate to enforcing, achieving, or maintaining the NAAQS. They allege that EPA appears to conflate any improvement in air quality with enforcement of the NAAQS. EPA disagrees with the commenters' narrow reading of the CAA. As stated at the outset of this response, it is not EPA's responsibility to determine what mix of emission limitations the State should impose in its SIP to improve air quality and ultimately attain and maintain the NAAQS. *See Train,* 421 U.S. at 87. Furthermore, EPA reiterates that the Northern District of Ohio affirmatively determined that the ANR is an emissions limitation as defined by CAA section 302(k).[13] Imposing emission limitations on sources of pollution is a primary method that states utilize in constructing SIPs that demonstrate how they will attain and maintain the NAAQS, and, contrary to the commenter's suggestion, a particular emissions limitation need not demonstrate how it would directly lower the concentration of a specific criteria pollutant as a prerequisite for approval into the SIP. In this action, EPA is merely determining that our prior determination that the ANR was ''not associated with the implementation, maintenance, or enforcement of the NAAQS'' was incorrect. Our unilateral removal of the ANR from Ohio's SIP was contrary to giving the State ''considerable latitude in determining specifically how the [NAAQS] would be met'' [14] where the Ohio ANR has a clear connection to the implementation, maintenance, and enforcement of the NAAQS. Even if the ANR were not considered to be an emissions limitation under the definition of that term in CAA section 302(k), it would still squarely fall into the category of ''other control measures, means, or techniques . . . as may be necessary or appropriate to meet the applicable requirements of this chapter.'' CAA section 110(a)(2)(A). Unlike ''emissions limitations,'' which is a term with a specific definition under CAA section 302(k), the CAA does not specifically define ''control measures, means, or techniques.'' EPA notes that these are inherently capacious terms, and in the absence of a specific statutory definition, there is nothing about these terms that would preclude the ANR from being characterized as falling within their broad meanings. EPA therefore interprets these terms broadly in accordance with their plain meanings, *i.e.,* that they refer to any ''measures, means, or techniques'' that impose some form of ''control'' with respect to any of the NAAQS pollutants. The plain meaning of measure, in this context, could include any requirement that imposes some sort of control that may be necessary or appropriate to meet the applicable requirements of the CAA. Similarly, a means or technique in this context could include any sort of method or procedure for imposing controls as may be necessary or appropriate to meet CAA requirements. As illustrated by the specific examples in this response, the ANR has been invoked on multiple occasions with the goal and ultimate outcome of limiting emissions of criteria pollutants and their precursors. Thus, the ANR has been used as a measure, means, or technique, to control relevant emissions as may be necessary or appropriate to meet CAA requirements.

With respect to the commenter's specific assertions regarding the *Republic Steel* case,[15] EPA disagrees with commenters' characterization of that case as being irrelevant to an evaluation of whether the ANR is used to enforce the NAAQS. The commenters acknowledge that the Republic Steel facility's NAAQS exceedances can be evidence of a nuisance claim, but allege that this is distinguishable from using the ANR to enforce the NAAQS. However, the complaint filed by the State of Ohio (''Complaint''), as well as the consent order and final judgment (''Consent Order''), provide important context and details with respect to the relationship of this case to the State's enforcement of the lead NAAQS.

First, the Complaint states the ''Republic Steel is the *only* known source of lead in the vicinity of the Georgetown Rd. lead monitoring site''

[8] *Ashtabula,* 633 F. Supp. 2d at 528.

[9] *Id.* The CAA citizen suit provision allows a person to commence a civil action on his own behalf ''against any person . . . who is alleged to have violated . . . an emission standard or limitation under this chapter.'' CAA section 304(a).

[14] *Train,* 421 U.S. at 87.

[15] *State of Ohio* v. *Republic Steel,* Case No. 2021CV00949 (Stark County, Ohio).

(emphasis added).[16] Second, the Complaint states that ambient air monitoring results from the Georgetown Rd. monitoring site measured 0.25 micrograms per cubic meter (μg/m^3) from March 2018 through May 2018, and 0.167 μg/m^3 from January 2019 through March 2019, while noting that the lead NAAQS is 0.15 μg/m^3.[17] Third, the Complaint details how the Ohio EPA Director issued ''Final Findings and Orders'' to the defendant (Republic Steel), ordering the defendant ''to alleviate the excess lead emissions at the Facility,'' to include ceasing operation during times of high lead emissions or until corrective actions were taken.[18] Notwithstanding those Orders, the defendant then emitted levels of lead in the amounts of 1.69, 2.6, and 2.26 μg/m^3 on May 7, 9, and 13 of 2021, respectively.[19]

In light of these facts, the State of Ohio brought the nuisance claim based on the Ohio ANR as the sole count in the original Complaint.[20] Under this count, the Complaint states: ''[o]n numerous occasions since at least May 2018, Defendant has caused or allowed lead emissions to emit from the Facility *that led to* exceedances of the lead NAAQS three month average and thus endangered the health, safety or welfare of the public and/or caused unreasonable injury or damage to property'' (emphasis added).[21] In other words, the Complaint did not merely point to NAAQS exceedances as evidence of a nuisance; instead, the complaint alleged that the lead emissions from the facility—the sole known source of lead emissions in the vicinity of the relevant air monitor—*caused* these NAAQS exceedances. And the State of Ohio used this action, relying on the ANR, to obtain permanent injunctive relief (as entered in the Consent Order) that requires the Republic Steel facility to ''provide Ohio EPA and CAPC [Canton City Public Health Air Pollution Control Division] staff access to the air monitoring platform associated with the Fenceline Monitor,'' explaining that ''[t]he purpose of the source-oriented monitor pursuant to 40 CFR 58.10(a)(4) is to determine compliance with the NAAQS for lead.'' [22] Further, the Consent Order requires that the facility either comply with the lead NAAQS (as demonstrated by the required monitoring), or ''immediately cease activities that are creating or could possibly be contributing to the NAAQS exceedance.'' [23]

In short, the State of Ohio relied on the ANR to address excess lead emissions from the Republic Steel facility that were causing consistent NAAQS exceedances despite the Ohio EPA's attempts to address such excess emissions through another avenue (Director Final Findings and Orders). Ultimately, the State of Ohio secured injunctive relief to ensure that the facility either complies with the lead NAAQS, or ceases operations that could even possibly be contributing to the NAAQS exceedance (*i.e.,* anything contributing to excess lead emissions). This confirms that the State of Ohio used the ANR to ensure the Republic Steel Facility complies with the lead NAAQS—in other words, to enforce the lead NAAQS.

Comment: The commenter contends the ANR does not meet the CAA's requirements for inclusion in a SIP. The commenter states that when the ANR was incorrectly included into the SIP that was approved in 1974, then-section 110(a)(2)(A) of the CAA (reworded and renumbered section 110(a)(2) in the 1990 CAA amendments) called for approval of a SIP if it ''includes emission limitations, schedules, and timetables for compliance with such limitations, and such other measures as may be necessary to insure attainment and maintenance of [the NAAQS].'' According to the commenter, the ANR fails that test. The commenter claims that Ohio has never relied on the ANR as a strategy for attaining or maintaining the NAAQS. Further, the commenter states that Ohio has never given notice and opportunity to comment on, or proposed or supported, the proposition that the ANR is necessary or appropriate to attain and maintain the NAAQS. The commenter contends that Ohio's federally-approved NAAQS demonstrations, which rely exclusively upon enforceable numerical emission limitations and other control requirements applicable to existing stationary sources, do not rely on the ANR. The commenter notes that the ANR makes no reference to, and is not concerned with, criteria pollutants or NAAQS. The commenter states that EPA must consistently apply its interpretation that nuisance provisions, odor provisions, and general prohibitions on air pollution do not belong in SIPs, because they do not have a reasonable connection to the NAAQS and/or are not designed to control NAAQS pollutants such that EPA could rely on them as a NAAQS attainment and maintenance strategy. According to the commenter, while the nuisance rule may have an impact on emissions, it is not a tool that measures Ohio's compliance with the NAAQS as required by section 110(a)(2) of the CAA. The commenter alleges that the ANR is an inappropriate measure for attaining and enforcing the NAAQS, and claims that EPA would never approve it as a strategy for reducing emissions in a SIP. Further, the commenter states that EPA cannot use NAAQS attainment as a reason to reintroduce the ANR into the Ohio SIP, and that the ANR is too broad, vague, inchoate, and unpredictable in its application to and impact upon criteria pollutant emissions from existing stationary sources to be SIP approvable. In addition, the commenter states that the ANR was not designed or intended by Ohio to federalize ''overkill'' reductions of criteria pollutant emissions more stringent than necessary to attain and maintain the NAAQS. Further, the commenter claims that Ohio has not utilized the ANR for the SIP strategies for the 2015 ozone standards, the 2012 p.m. standard, and the ''bump up'' to moderate ozone nonattainment in the Cleveland area. In the upcoming Canton lead submittal to address the SIP call, according to the commenter, Ohio EPA will not rely on the ANR for attainment of the NAAQS. The commenter further states that EPA dictates a rigorous methodology for the approval of a SIP to address a revised NAAQS or a violation of the NAAQS. For example, the commenter notes that the various steps in developing an attainment demonstration SIP are involved and lengthy, and claims that none of those steps were used by EPA when it proposed to reinstate the nuisance rule into the Ohio SIP.

Response: EPA disagrees with the commenter's statement that the ANR is not appropriate for inclusion in the SIP because it fails the test for approval of a SIP, which in the CAA as it existed in 1974 was that the SIP ''includes emission limitations, schedules, and timetables for compliance with such limitations, and such other measures as may be necessary to insure attainment and maintenance of [the NAAQS].''

The commenters misunderstand what the State is required to show to include a certain emissions limitation or control measure in its SIP. States are generally

[16] *Republic Steel,* ''Complaint for Injunctive Relief and Civil Penalties'' (July 2, 2021), at ¶ 16.

[17] *Id.* at ¶ 17, 19.

[18] *Id.* at ¶ 18.

[19] *Id.* at ¶ 19.

[20] EPA acknowledges that the State amended its original complaint to supplement it with additional counts. However, the original count relying on the ANR remained intact in the amended complaint. *See Republic Steel,* ''Amended and Supplemental Complaint for Injunctive Relief and Civil Penalties'' (Mar. 14, 2023), at ¶ 88.

[21] Complaint at ¶ 35.

[22] *Republic Steel,* ''Final Consent Order and Final Judgment Entry'' (December 12, 2023), at ¶ 16.

[23] *Id.* at ¶ 17.

not required under CAA section 110 to ''rely upon'' a measure to model attainment or maintenance of the NAAQS in order for that measure to be eligible for inclusion in the SIP. A certain subset of SIPs, namely nonattainment SIPs under part D of the CAA, do require certain technical analyses to demonstrate measures included in the nonattainment SIP will model attainment or maintenance of the NAAQS, but this is not a requirement for each and every SIP submission. Ohio itself has submitted a number of SIPs that do not include a demonstration that its measures model attainment or maintenance of the NAAQS.[24] As stated in previous comment responses, Congress ''left to the States considerable latitude in determining specifically how the [NAAQS] would be met. This discretion includes the continuing authority to revise choices about the mix of emission limitations'' [25] in order to ensure implementation, maintenance, and enforcement of the NAAQS.[26]

Moreover, the ANR *does* have a demonstrated connection to implementation, maintenance, and enforcement of the NAAQS, and is therefore properly included in Ohio's SIP. As described in a previous comment response, the Southern District of Ohio has confirmed that the ANR meets the definition of an emission limitation as defined under CAA section 302(k). Again, we note that the State has the discretion to revise its ''choices about the mix of emission limitations'' in its SIP at any time, *Train,* 421 U.S. at 87, and that EPA will approve such choices provided they are consistent with all CAA requirements. The ANR has been used in a number of actions to enforce the NAAQS. As such, the State of Ohio properly included the ANR in its SIP, and EPA's November 2020 Final Rule was in error.

With respect to specific attainment demonstrations related to SIP calls and relatively recently promulgated NAAQS cited by commenters, the State was not required to rely on the ANR in these attainment demonstrations in order to allow the ANR to remain in the SIP. As explained, states have wide discretion in how they implement the requirement to provide for ''implementation, maintenance, and enforcement'' of the NAAQS, and states can and do include control measures in their SIPs that are not cited in their modeled attainment demonstrations. Typically, emissions reductions that are modeled in the attainment demonstration are required for the state to attain the NAAQS by the applicable attainment date. But as discussed above, states' discretion in crafting their SIPs also encompasses the flexibility that ''[s]tates may submit implementation plans more stringent than federal law requires'' and the Supreme Court has instructed that EPA ''must approve such plans if they meet the minimum requirements of § 110(a)(2).'' [27] Thus, the mere fact that Ohio has not included the ANR in recent attainment demonstration submissions and therefore is not relying on the ANR in those demonstrations to result in a certain quantity of emissions reductions required to attain the NAAQS, does not mean that the ANR is not an approvable control measure for inclusion in the SIP.

Comment: The commenter asserts that the nuisance rule cannot be modeled and does not contain numerical criteria, technical control measures, or specific compliance standards. According to the commenter, without extensive and technical parameters, the nuisance rule cannot be relied on in demonstrating that a state has an approvable SIP. The commenter claims that for this reason, EPA has been using the error-correction authority in removing nuisance and other odor provisions similar to the ANR from other SIPs. The commenter further claims that EPA does not have the technical support to reintroduce the ANR into the SIP, and that the ANR does not contain a demonstration of how the rule is used to address the NAAQS. According to the commenter, EPA is not able to quantify the amount of emission reductions attributable to the application of the ANR or illustrate how the nuisance provisions have an impact on air quality through modeling. Without such analysis, the commenter claims that EPA fails to provide a justification that the ANR belongs in the SIP. The commenter states that it is clear that Ohio does not rely on the ANR to enforce the NAAQS because the applicability and emission impacts of the ANR are not known or knowable in advance and are not capable of pre-enforcement correlation with NAAQS attainment. The commenter alleges that the recent decision in the *Environmental Committee* [28] case illustrates the problem of EPA reintroducing the nuisance rule into the SIP because the nuisance rule is simply not a ''necessary or appropriate'' emissions limitation or other control strategy that is needed to be part of a SIP.

Response: As explained above, EPA is not responsible for quantifying the amount of emission reductions attributable to the application of the ANR, nor is EPA required to illustrate how the nuisance provisions have an impact on air quality through modeling or other technical justifications. Rather, the State is responsible for determining the appropriate mix of emissions limitations and control measures to ensure the SIP's compliance with CAA requirements. And as emphasized previously, ''[e]ach State is given wide discretion in formulating its [SIP], and the Act provides that the [EPA] 'shall approve' the proposed plan if it has been adopted after public notice and hearing and if it meets'' the requirements of CAA section 110(a)(2).[29]

As a general matter, EPA is tasked with evaluating SIP submissions for compliance with the CAA requirements, not with overriding state choices with respect to the appropriate mix of emissions limitations and control measures to meet those requirements.[30] And in this particular action, pursuant to the Sixth Circuit's remand of our November 2020 Final Rule, EPA must evaluate whether that November 2020 Final Rule unilaterally removing the ANR from the Ohio SIP was a proper use of our authority under CAA section 110(k)(6). For the reasons explained at length in this action, EPA has

[24] EPA notes that Ohio has not always demonstrated attainment with certain NAAQS through modeling. The State has also demonstrated attainment with a particular standard by providing monitoring data, emissions inventories, and permanent and enforceable control measures responsible for the reduction in emissions. *See* EPA approvals of redesignations for the 1997 Ozone NAAQS standard in the Cincinnati-Hamilton Area [75 FR 26118 (May 11, 2010)], Cleveland-Akron-Lorain Area [74 FR 47414 (September 15, 2009)], Columbus Area [74 FR 47404 (September 15, 2009)], and the Dayton-Springfield Area [72 FR 45169 (August 13, 2007)]; the 1997 annual and 2006 24-hour $PM_{2.5}$ NAAQS standards in the Cleveland-Akron-Lorain Area [78 FR 57270 (September 18, 2013)]; the 2008 Ozone NAAQS standard in the Cincinnati Area [81 FR 91035 (December 16, 2016)] and the Columbus Area [81 FR 93631 (December 21, 2016)]; and the 2015 Ozone NAAQS standard in the Cincinnati area [87 FR 35104 (June 9, 2022)] and the Columbus area [84 FR 43508 (August 21, 2019)].

[25] *Train,* 421 U.S. at 87.

[26] EPA also notes that Ohio has submitted control measures for inclusion its SIP that do not specifically quantify the amount of emissions reductions such measures would achieve, but that still contribute to implementation, maintenance, and enforcement of the NAAQS. *See, e.g.,* EPA approval of Ohio's Open Burning Rules [84 FR 29378 (June 24, 2019), originally approved into the SIP at 43 FR 4611 (Feb. 3, 1978)].

[27] *Union Elec.,* 427 U.S. at 265.

[28] *See Env't Comm. of the Fla. Elec. Power Coordinating Grp., Inc. EPA,* 94 F.4th 77 (D.C. Cir. 2024).

[29] *Union Elec.,* 427 U.S. at 250.

[30] *See, e.g., Mich.* v. *EPA,* 213 F.3d 663, 687 (D.C. Cir. 2000) (''While the states have considerable latitude in fashioning SIPs, the CAA 'nonetheless subjects the States to strict minimum compliance requirements' and gives the EPA the authority to determine a state's compliance with the requirements'' (citing *Union Elec.,* 427 U.S. at 256–57)).

concluded that our November 2020 Final Rule revising the Ohio SIP was in error, and EPA has decided to reinstate the ANR into the SIP for those reasons.

Regarding the *Environmental Committee* decision, EPA disagrees with the commenter with respect to that decision's implications for the action here. That decision speaks to what is required for EPA to determine whether certain emissions limitations are substantially inadequate such that EPA could issue a SIP call under CAA section 110(k)(5) with respect to those emissions limitations.[31] In this action, EPA is not required to make a finding as to whether a particular emissions limitation is necessary or appropriate to ensure compliance with CAA requirements. To the contrary, EPA is concluding that EPA improperly disregarded the ANR's role in enforcement of the NAAQS, and improperly took action to override the State's decision to include the ANR in its SIP by unilaterally removing it in our November 2020 Final Rule. Accordingly, EPA is correcting that error in this action.

Comment: The commenter alleges the ANR is not part of Ohio's infrastructure SIP, which provides for the enforcement of the NAAQS. The commenter states that the CAA mandates a program for enforcement of the NAAQS through the development of an infrastructure SIP for enforcement of the control measures relied upon to attain and maintain the NAAQS. The commenter notes that EPA's Infrastructure SIP guidance requires the SIP to specifically identify the ''statutes, regulations, or other provisions . . . that provide for enforcement of those emission limits'' that have been identified as being necessary for NAAQS attainment and maintenance. According to the commenter, a state's program to ''enforce the NAAQS'' is therefore an EPA-approved program of specifically identified statutes and rules, not an ad hoc collection of any rules that have the potential to impact air emissions. The commenter alleges that the only statutory or regulatory provision that Ohio EPA has identified in its infrastructure SIP for the purposes of enforcing the NAAQS is O.R.C. section 3704.03(R), and that EPA cannot broaden the infrastructure SIP by unilaterally adding the ANR.

Response: EPA has issued non-binding guidance on what EPA refers to as ''infrastructure SIP submissions.'' [32] As stated in that guidance document, the ''conceptual purpose of an infrastructure SIP submission is to assure that the air agency's SIP contains the necessary structural requirements for the new or revised NAAQS, whether by establishing that the SIP already contains the necessary provisions, by making a substantive SIP revision to update the SIP, or both.'' [33]

The commenter seems to suggest that every provision in a state's SIP that is used to enforce the NAAQS must be included in the state's infrastructure SIP submission, and that if a provision that is used to enforce the NAAQS is not included in that SIP submission, it is somehow improper for the state to include it in the SIP at all. However, EPA does not apply such a rigid approach to SIP submissions, nor is the commenter's suggested approach mandated by the CAA. The CAA does not indicate that all SIP provisions intended to enforce the NAAQS must be included in the ''infrastructure SIP submission''—in fact, the CAA does not mention ''infrastructure SIP submissions'' at all. EPA has created the structure and deadlines for states to submit what we refer to as infrastructure SIP submissions in order to ensure that states meet certain CAA requirements. And as mentioned, the purpose of that SIP submission is to ensure that the SIP ''contains the necessary structural requirements'' for a new or revised NAAQS.

EPA therefore does not take the position that every single provision that is ever used to enforce the NAAQS must be included in a state's infrastructure SIP. Infrastructure SIP submissions are distinct from nonattainment plan SIP submissions, which also contain emissions limitations and methods for enforcement, such as required monitoring, recordkeeping, and reporting requirements. Just because a state does not include a certain provision in its infrastructure SIP submission does not mean that it is improper for the state to then use that provision for enforcement purposes.

Moreover, the commenter alleges that EPA is impermissibly broadening the infrastructure SIP by reinstating the ANR into the SIP. EPA is not, and could not, unilaterally place the ANR into an infrastructure SIP submission that has already been submitted and approved by EPA. EPA is not broadening the infrastructure SIP, rather, it is merely reinstating the ANR to the Ohio SIP as it existed prior to EPA's action in the November 2020 Final Rule, which for the reasons we have described in this action, we have determined was in error.

Comment: The commenter states that neither the Constitution nor the CAA permits EPA to delegate responsibility for establishing SIP emission control requirements to the Federal judiciary. The commenter alleges that the Proposed Rule is inconsistent with the CAA because it would give Federal district courts jurisdiction to decide, in CAA citizen suits, the source-specific controls needed to attain and maintain, and enforce, the NAAQS. The commenter states that the Constitution does not allow states to ordain and establish Federal judicial power, and the CAA should not be read to include any implicit delegation of that power to the states. In addition, the commenter notes that section 110 of the CAA gives each state primary authority to choose the mix of source-specific emission controls and associated monitoring, testing, and enforcement provisions that will suffice to attain and maintain the NAAQS. According to the commenter, including a nuisance rule in a SIP would effectively delegate state executive authority under section 110 to Federal judges. Finally, the commenter notes that section 307(b) of the CAA gives Federal circuit courts, not district courts, exclusive jurisdiction to review EPA actions to determine the approvability of state plans to achieve the NAAQS and state-promulgated SIP measures to enforce those plans.

Response: As stated throughout this action, EPA agrees with the commenter that section 110 of the CAA gives each state primary authority to choose the mix of source-specific emission controls and associated monitoring, testing, and enforcement provisions that will suffice to attain and maintain the NAAQS. To that end, in this action, EPA is restoring the ANR as Ohio had included it and as it had existed for more than four decades in the Ohio SIP prior to our erroneous action to remove it in November 2020.

With respect to the commenter's contention that Ohio's inclusion of the ANR in its SIP impermissibly delegates state authority to Federal judges, EPA observes that the CAA is structured around the principle of cooperative federalism. In other words, the CAA creates a system of shared state and Federal responsibility. With respect to enforcing the SIP, a state must provide ''necessary assurances'' that it has the authority to enforce SIP provisions as a prerequisite for EPA to approve those

[31] *See, e.g., Env't Comm.*, 94 F.4th at 100.

[32] *See* Stephen D. Page, ''Guidance on Infrastructure State Implementation Plan (SIP) Elements under Clean Air Act Sections 110(a)(1) and 110(a)(2)'', September 13, 2013, available at *https://www.epa.gov/sites/default/files/2015-12/documents/guidance_on_infrastructure_sip_elements_multipollutant_final_sept_2013.pdf.*

[33] *Id.* at 2.

provisions into the SIP. *See* CAA section 110(a)(2)(E). Once a provision is approved into the SIP, the state retains the authority to enforce it, and in addition, EPA has the authority to enforce it, *see* CAA section 113, as do members of the public, under the CAA section 304 citizen suit provision. Thus, Federal enforcement of SIP provisions is integral to the structure of the CAA, whether by EPA or by the public. The commenter is correct that this could result (and, has in the past resulted) in CAA citizen suit claims to enforce the ANR in Federal district courts. But this does not mean that the states are delegating or establishing power in the Federal judiciary. This is just the CAA's structure of cooperative federalism that Congress created. The ANR can be enforced in state court, and it can be enforced in Federal court because it is part of the federally-approved SIP. The same is true of any SIP provision in any state. To the extent the commenter has an issue with the CAA's cooperative federalism model, that is of course outside the scope of the current rulemaking.

Additionally, EPA agrees with the commenter that CAA section 307(b) gives Federal circuit courts, not district courts, exclusive jurisdiction to review EPA actions on SIPs. The commenter appears to be conflating enforcement of SIP provisions (which as mentioned, could occur through state or Federal court actions), with Federal circuit court review of EPA actions on SIP submissions. Nothing about this action indicates that EPA disagrees that Federal circuit court review is the appropriate forum for review of EPA actions on SIP submissions.

Comment: The commenter notes that EPA contends it should have first performed an anti-backsliding analysis before correcting the SIP. However, according to the commenter, SIP corrections do not require an anti-backsliding analysis. The commenter asserts that requirements under CAA section 193 would not apply to the removal of the ANR from Ohio's SIP for attainment areas because the ANR is not a ''control requirement.'' The commenters further assert that, because the ANR's inclusion in the Ohio SIP was in error, it is not a ''control requirement'' triggering the need for an anti-backsliding analysis upon removal from the SIP under CAA section 193, 42 U.S.C. 7515.

The commenters also argue that EPA's interpretation of the anti-backsliding provision in CAA section 193 would conflict with EPA's SIP correction authority under CAA section 110(k)(6). According to the commenters, if the ANR is not a necessary or appropriate element of a SIP, then removing it cannot be considered backsliding under CAA section 110(l), because an anti-backsliding analysis is only concerned with emissions of criteria pollutants in areas that are non-attainment for those pollutants. The commenters state that since emissions addressed by the ANR cannot be quantified, a backsliding analysis is not justified, and that given the State's position, engaging in a backsliding analysis does not make sense. The commenters also contend that even if an anti-backsliding analysis were required, EPA must conduct it before finalizing this rulemaking.

Response: EPA disagrees with the commenter's claim that an anti-backsliding analysis was not required for EPA's November 2020 Final Rule removing the ANR from the Ohio SIP. The plain language of CAA section 193 precludes this conclusion.

CAA section 193 provides, in relevant part, that no control requirement in effect before November 15, 1990, ''in any area which is a nonattainment area for any air pollutant may be *modified* after November 15, 1990, *in any manner* unless the modification insures equivalent or greater emission reductions of such air pollutant'' (emphasis added). The CAA does not specifically define what qualifies as a ''control requirement'' in the context of section 110 SIPs, and EPA therefore interprets the term broadly in accordance with its plain meaning, *i.e.,* that it refers to any ''requirement'' that imposes some form of ''control'' with respect to any of the NAAQS pollutants. The term ''control requirement'' is similar to the language in CAA section 110(a)(2)(A) referring to ''emissions limitations and other control measures, means, or techniques.'' As explained and illustrated by the specific examples in a previous comment response, the ANR has been invoked on multiple occasions with the goal and ultimate outcome of limiting emissions of criteria pollutants and their precursors. Thus, the ANR has been used as a measure, means, or technique, to control relevant emissions, which means that it squarely falls within the definition of a ''control requirement'' as the term is used in CAA section 193.

Thus, CAA section 193 prohibits the modification of the ANR ''in any manner'' unless there is a showing that the modification would result in equivalent or greater emissions reductions, which is commonly referred to as an anti-backsliding analysis. The plain meaning of ''modify'' is to make a change to something, and the qualifier ''in any manner'' indicates that the requirement for an anti-backsliding analysis is triggered by *any* possible change to a control requirement that otherwise meets the requirements of this section. EPA does not see any statutory basis for concluding that an anti-backsliding analysis was not required for EPA's November 2020 Final Rule removing the ANR from Ohio's SIP. To the contrary, such an interpretation would directly undermine the plain language of section 193, which encompasses changes to the SIP made ''in any manner.''

For support, the commenter cites to a 1996 SIP action approving Arizona's contingency measures and withdrawing its Federal Implementation Plan (FIP) ''contingency process,'' in which EPA took the position that CAA section 193 was not applicable. In the context of this action, EPA acknowledged that ''the term 'control requirement' is not defined in the Act,'' and stated that ''it is generally viewed as a discrete regulation directed at a specific source of pollution.'' [34] EPA distinguished this from the ''contingency process'' at issue in that action, which was not grounded in a statutory requirement and was based on 1982 guidance ''designed to fill a perceived gap in the absence of a statutory requirement.'' [35] The 1982 guidance required ''a list of planned transportation measures and projects that *may* adversely affect air quality and that will be delayed, while the SIP is being revised'' (emphasis added), and ''a description of the process that will be used to determine and implement additional transportation measures beneficial to air quality that will compensate for the unanticipated shortfalls in emission reduction.'' Further, in the 1996 action, EPA explained how the 1990 Amendments to the CAA filled the identified statutory gap by adding the section 172(c)(9) contingency measure requirement to the CAA, rendering EPA's pre-amendment 1982 guidance, and the ''contingency process'' implementing that guidance, ''inconsistent with this new statutory scheme'' and thus ''ineffective under section 193.'' [36]

In other words, EPA determined that the ''contingency process'' was not a control measure because ''[a] list of highway projects that may be delayed and a description of actions that may occur at some later date are not control requirements,'' and because section 193 precluded the contingency process under the first part of that section,

[34] 61 FR 51999 at 51602 (October 3, 1996).

[35] *Id.*

[36] *Id.*

which reads: ''Each regulation, standard, rule, notice, order and guidance promulgated or issued by the Administrator as in effect before November 15, 1990 shall remain in effect according to its terms, *except to the extent otherwise provided under this chapter, inconsistent with any provision of this chapter,* or revised by the Administrator.'' [37] The ANR is distinguishable from the ''contingency process'' because (1) it can be considered a control requirement with demonstrated impacts on emissions, as explained at length in this action, and (2) it is not based on outdated guidance that has been superseded by the CAA Amendments of 1990.

With respect to the commenter's assertions regarding the requirements of CAA section 110(l), EPA notes that we did not rely on CAA section 110(l) in our proposed rule as a basis for determining our prior November 2020 Final Rule was in error. As discussed elsewhere, EPA has concluded that an anti-backsliding analysis should have been conducted for the November 2020 Final Rule under section 193. While CAA section 110(l) was not a basis for EPA's proposed rule, EPA disagrees with the commenter that if the ANR is not a necessary or appropriate element of a SIP, then removing it cannot be considered backsliding under CAA section 110(l). The commenter misstates the requirements of 110(l), which prohibits EPA from approving a SIP revision if it would interfere with any applicable requirement concerning attainment of the NAAQS, *or* any other applicable requirement of the CAA. Whether the ANR is a necessary or appropriate element of a SIP because the State has not relied on it for attainment of the NAAQS therefore is not the only relevant inquiry under CAA section 110(l). As CAA section 110(l) is not applicable to the present action, EPA need not consider whether we are prohibited under this provision from approving removal of the ANR from the SIP.

Finally, EPA disagrees with the commenter that EPA is required to conduct an anti-backsliding analysis for this action reinstating the ANR into the Ohio SIP. The commenter misstates the standard that section 193 applies in asserting that EPA must determine that removing the ANR from Ohio's SIP would result in *lesser* reductions. Under section 193, the only requirement is that the modification must insure ''equivalent or greater reductions.'' The commenter identifies no basis for concluding that reinstating the ANR does not provide for ''equivalent or greater reductions,'' *i.e.,* that it would increase emissions. As discussed at length in this action, the ANR has been used to enforce the NAAQS and has resulted in emissions reductions in the past. The ANR has also been deemed an emission limitation within the meaning of CAA section 302(k).[38] There is therefore no basis to conclude that reinstating the ANR into the SIP would result in increased emissions. There is reason to believe, based on the record, that having the ANR in the SIP will continue to result in emissions reductions. But even if that is not the case, the ANR would still result in at least ''equivalent reductions'' as would not including it in the SIP at all.

Comment: The commenter states that there are multiple mechanisms by which Ohio citizens can redress alleged air pollution at the state level regardless of whether the ANR is in the SIP. In contrast, according to the commenter, reinstating the ANR would harm Ohio businesses, with no corresponding benefit to the environment because potential citizen suits under the CAA could result in attorneys' fees being awarded to prevailing parties.

Response: With respect to the commenter's assertion that there are multiple mechanisms by which Ohio citizens can address air pollution regardless of whether the ANR is in the SIP, EPA wholeheartedly supports providing different mechanisms for the public to address air pollution. In this action, EPA is not making a determination as to whether the Ohio State system provides for adequate opportunities for the public to address air pollution. Instead, EPA is merely determining that its November 2020 Final Rule removing the ANR from the Ohio SIP was deficient because EPA failed to consider the ANR's role in the enforcement of the NAAQS, and because EPA failed to conduct an anti-backsliding analysis under CAA section 193.

EPA understands the commenter's assertion that reinstating the ANR into the SIP would harm Ohio businesses to suggest that the consequences of noncompliance with the ANR could be more severe in a CAA citizen suit brought in Federal court, because prevailing parties may be awarded attorney's fees. While EPA acknowledges that this could be a consequence of noncompliance with the ANR, EPA does not find this a relevant consideration for this action. EPA is not obligated, and the commenter has not identified any statutory or otherwise legal basis for such obligation, to consider the potential adverse consequences of noncompliance with the ANR for Ohio businesses in determining whether its November 2020 Final Rule was in error.

III. What action is EPA taking?

EPA has considered the comments received on its February 2024 Proposed Rule, and is finalizing its action as proposed, for the reasons described in the February 2024 Proposed Rule, this final rule, and the response to comments herein. EPA is taking this action to reverse its November 2020 removal of the ANR and to reinstate OAC 3745–15–07 into the Ohio SIP, under its authority in CAA section 110(k)(6) and its inherent reconsideration authority, and consistent with the requirements of CAA section 110(a)(2). EPA has determined that its prior action removing OAC 3745–15–07 from the Ohio SIP was deficient for two reasons: (1) because EPA failed to adequately consider the ANR's use in enforcement of the NAAQS, and (2) because EPA failed to conduct an anti-backsliding analysis pursuant to section 193 of the CAA. EPA has determined that the ANR was appropriately included in the Ohio SIP as part of the State's collection of ''enforceable emission limitations and other control measures, means, or techniques . . . as may be necessary or appropriate to meet the applicable requirements of [the CAA].'' *See* CAA section 110(a)(2). Accordingly, EPA is recodifying this reinstatement by revising the appropriate paragraph under 40 CFR part 52, subpart KK, § 52.1870 (Identification of Plan).

IV. Incorporation by Reference

In this action, EPA is reinstating regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, EPA is finalizing the incorporation by reference of the Ohio Regulations described in section III. of this preamble and set forth in the amendments to 40 CFR part 52 below. EPA has made, and will continue to make, these documents generally available through *www.regulations.gov* and at EPA Region 5 Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information). Therefore, these materials have been approved by EPA for inclusion in the SIP, have been incorporated by reference by EPA into that plan, are fully federally enforceable under sections 110 and 113 of the CAA as of

[37] *Id.* (emphasis in original) (citing to CAA section 193).

[38] *Ashtabula,* 633 F. Supp. 2d at 528.

the effective date of the final rulemaking of EPA's approval, and will be incorporated by reference in the next update to the SIP compilation.[39]

V. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993), and 14094 (88 FR 21879, April 11, 2023);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it approves a state program;
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and
- Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA.

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian Tribe has demonstrated that a Tribe has jurisdiction. In those areas of Indian country, the rule does not have Tribal implications and will not impose substantial direct costs on Tribal governments or preempt Tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

Executive Order 12898 (Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, February 16, 1994) directs Federal agencies to identify and address ''disproportionately high and adverse human health or environmental effects'' of their actions on communities with environmental justice (EJ) concerns to the greatest extent practicable and permitted by law. Executive Order 14096 (Revitalizing Our Nation's Commitment to Environmental Justice for All, 88 FR 25251, April 26, 2023) builds on and supplements E.O. 12898 and defines EJ as, among other things, the just treatment and meaningful involvement of all people, regardless of income, race, color, national origin, or Tribal affiliation, or disability in agency decision-making and other Federal activities that affect human health and the environment.

EPA did not perform an EJ analysis and did not consider EJ in this action. Consideration of EJ is not required as part of this action, and there is no information in the record inconsistent with the stated goal of E.O. 12898/14096 of achieving EJ for communities with EJ concerns.

This action is subject to the Congressional Review Act, and EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by March 24, 2025. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Carbon monoxide, Incorporation by reference, Intergovernmental relations, Lead, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds.

Dated: January 10, 2025.

Debra Shore,

Regional Administrator, Region 5.

For the reasons stated in the preamble, 40 CFR part 52 is amended as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

■ 2. In § 52.1870, the table in paragraph (c) is amended under the section entitled ''Chapter 3745–15 General Provisions on Air Pollution Control'' by adding an entry for ''3745–15–07'' after the entry for ''3745–15–06'' to read as follows:

§ 52.1870 Identification of plan.

Approval and Promulgation of Implementation Plans; State of California; Coachella Valley; Extreme Attainment Plan for 1997 8-Hour Ozone Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is taking final action to approve elements of a state implementation plan (SIP) submittal from the State of California to meet Clean Air Act (CAA) ''Extreme'' nonattainment area requirements for the 1997 8-hour ozone national ambient air quality standards (NAAQS) in the Riverside Co. (Coachella Valley), CA nonattainment area (''Coachella Valley''). We are specifically approving the reasonable further progress (RFP) demonstration and the vehicle miles traveled demonstration.

DATES: This rule is effective February 20, 2025.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–R09–OAR–2023–0448. All documents in the docket are listed on the *https://www.regulations.gov* website. Although listed in the index, some information is not publicly available, *e.g.,* Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available through *https://www.regulations.gov,* or please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section for additional availability information. If you need assistance in a language other than English or if you are a person with a disability who needs a reasonable accommodation at no cost to you, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section.

FOR FURTHER INFORMATION CONTACT: Tom Kelly, Geographic Strategies and Modeling Section (AIR–2–2), EPA Region IX, 75 Hawthorne Street, San Francisco, CA 94105; phone: (415) 972–3856; or email: *kelly.thomasp@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document, ''we,'' ''us,'' and ''our'' refer to the EPA.

III. The EPA's Action
IV. Statutory and Executive Order Reviews

I. Proposed Action

A. Summary

On April 16, 2024,[1] the EPA proposed to approve two SIP submittals from the South Coast Air Quality Management District (SCAQMD or ''District'') and the California Air Resources Board (CARB) addressing the Extreme area planning requirements for the 1997 ozone NAAQS in Coachella Valley. The first submittal, the ''Final Coachella Valley Extreme Area Plan for the 1997 8-Hour Ozone Standard'' (''Coachella Valley Ozone Plan'' or ''Plan''),[2] was prepared by the SCAQMD and submitted by CARB on December 29, 2020.[3] We proposed to approve all elements of the Plan except the reasonably available control technology (RACT) demonstration, which we plan to address in a subsequent rulemaking. The second submittal, the ''2020 Coachella Valley Vehicle Miles Traveled Emissions Offset Demonstration'' (''VMT Offset Demonstration''),[4] was prepared by CARB and submitted on March 18, 2021.[5] We proposed to approve the entire VMT Offset Demonstration. Our proposed action contains more information on the two submittals and our evaluation.

On June 12, 2024, we finalized our proposed action on certain portions of the Coachella Valley Ozone Plan.[6] Specifically, we finalized approval of the reasonably available control measures demonstration, the attainment demonstration, and the State's demonstration that it has satisfied the clean fuels for boilers requirement for the Coachella Valley nonattainment area. Our June 12, 2024, notice stated that we intended to take final action on the remaining VMT Offset Demonstration and RFP demonstration in a future rulemaking. We are finalizing approval of these elements in this notice.

B. Correction

In summarizing the State's photochemical modeling and the associated control measures, the EPA's proposed rule incorrectly stated that the Coachella Valley control strategy for the 1997 ozone NAAQS relies on aggregate emissions reduction commitments from the ''Final 2016 Air Quality Management Plan'' (''2016 AQMP'').[7] While the Coachella Valley Ozone Plan discusses rules addressing the area's progress related to commitments needed for the area to meet the 2008 ozone NAAQS by 2026, the emissions reductions associated with these rules are not reflected in the area's inventory, and the Plan does not rely on the commitments to attain the 1997 ozone NAAQS in 2023.[8]

II. Public Comments and the EPA's Responses

The EPA's proposed action provided a 30-day public comment period. During this period, we received comments from Air Law for All (ALFA), dated May 16, 2024. These comments relate to our proposed action on the RFP demonstration. No comments were received on other parts of the proposal. The comments are summarized and addressed below.

Comment #1: ALFA criticizes the EPA's proposal to decline to act on the area's contingency measures and new source review (NSR) submittals for the 1997 ozone NAAQS. The commenter argues that the EPA lacks discretion to act on selected portions of submittals when the 18-month statutory deadline for action has passed. The commenter states that CAA section 110(k) does not explicitly grant the EPA authority to act on selected portions of submittals, and argues that when an agency exercises discretion, it must give permissible reasons for doing so. The commenter asserts that the EPA has not given a permissible reason for acting on only portions of the submittal and speculates that the EPA has done so only to delay disapproval of the provisions and avoid starting the associated sanctions and federal implementation plan clocks. The commenter also points out that the EPA noted in the proposal that the State has not yet submitted certain required portions of the plan, and states that EPA has not offered an explanation for not making a finding of failure to submit for those missing portions of the attainment plan.

Response to Comment #1: As a general matter, comments regarding SIP elements not addressed in the proposed rule are outside the scope of this action. The EPA intends to address all required planning elements for the Coachella Valley for the 1997 ozone NAAQS in subsequent actions.[9]

While the EPA has a statutory deadline by which to act on all SIP submittals under CAA section 110(k)(2), the EPA is not obligated to act on all SIP submittals or all SIP elements for a nonattainment area in the same action. The EPA routinely takes separate actions on submittals or portions of submittals that address unique CAA requirements.[10] The EPA strives to meet all statutory deadlines; however, the EPA acknowledges that we are sometimes delayed due to resource limitations and other practical constraints.

With respect to the Coachella Valley contingency measures, the EPA notes that CARB and the SCAQMD previously made a submittal addressing the contingency measures requirement for the 1997 ozone NAAQS that was subsequently withdrawn,[11] and the EPA has no obligation to act on withdrawn submittals. The EPA's current approach for evaluating contingency measures submittals has been shaped by several recent court decisions.[12] In response to these decisions, the EPA has issued the draft guidance cited in our proposed action, titled ''DRAFT: Guidance on the Preparation of State Implementation Plan Provisions that Address the Nonattainment Area Contingency Measure Requirements for Ozone and Particulate Matter.'' [13] Following our issuance of this draft guidance document, the District and CARB submitted Coachella Valley contingency measures for the 1997 ozone NAAQS to the EPA on April 3, 2024. The EPA notes that the statutory deadline to act on that submittal under CAA section 110(k)(2) has not yet passed.

Comment #2: ALFA comments that the submittal fails to show that the substitute NO_X emissions reductions will ''result in a reduction of ozone concentrations at least equivalent'' to the required 3 percent per annum VOC emissions reductions, and that as a result, the EPA's proposed approval is arbitrary and capricious and contrary to law. The commenter describes the relative roles of VOC and NO_X in ozone formation, including the existence of an ''optimum'' VOC to NO_X ratio for a given level of VOC (*i.e.,* a NO_X concentration at which the maximum amount of ozone is produced). As explained by the commenter, in a ''NO_X saturated'' situation where NO_X levels exceed this optimum ratio, a reduction in NO_X levels can lead to increases in ozone levels, and in a ''NO_X limited'' situation with NO_X levels below the optimum ratio, VOC reductions toward the optimum ratio may have little effect on ozone levels. As a result, the commenter says, ozone response to precursor control can vary greatly between areas. The commenter argues that language in the CAA, including CAA sections 185B, 182(f), and 182(c)(2)(C), indicates that Congress was aware of these issues, including that in some scenarios NO_X reductions may not decrease ozone concentrations.

The commenter also points to the EPA's consideration of the relative effectiveness of NO_X and VOC controls for interpollutant offset trading under the new source review (NSR) permitting program and in applying requirements for major stationary sources of VOC to NO_X sources under CAA 182(f), noting that in these situations EPA guidance indicates that photochemical grid modeling of multiple scenarios should be conducted to support demonstrations related to the relative effectiveness of controls. Through these comparisons, the commenter suggests that the Coachella Valley submittal should have included similar photochemical grid modeling to determine whether the substitute NO_X emissions reductions result in equivalent ozone reductions.

While acknowledging that ozone isopleths, which are graphs of ozone levels resulting from various levels of emissions reductions for each monitoring station, are a technically sound method of comparing the relative benefits of reducing NO_X and VOC emissions, the commenter states that the EPA's overall analysis is insufficient and that there are missing steps in going from isopleths to a justification for the percentage method in the NO_X Substitution Guidance. The commenter states, ''if EPA plans to rely on the isopleths'' as the justification for NO_X substitution, ''EPA must re-propose its action with an explanation that is reasonably detailed enough for the public to be able to comment on it.'' The commenter further states that CAA section 182(c)(2)(C)'s use of the plural ''ozone concentrations'' means that an equivalency demonstration at a single monitoring site would be contrary to the CAA and argues that Congress intended the equivalence requirement to apply throughout the nonattainment area.

Response to Comment #2: We disagree with the commenter's characterization of the District's submittal and the EPA's proposed approval. As described further in this document, the EPA concludes that the analysis included with the modeling and control strategy in the Coachella Valley Ozone Plan adequately demonstrates that plan reductions of VOC and NO_X would result in a reduction in ozone concentrations at least equivalent to that resulting from VOC emissions reductions. This condition is required under CAA 182(c)(2)(C) for substituting NO_X reductions for VOC reductions. We therefore conclude that the District's use of NO_X substitution in the RFP demonstration for the Coachella Valley is appropriate in this circumstance.

[9] For example, in addition to the contingency measures submittal noted previously, the EPA recently received the State's submittal to address the fee requirements of CAA section 185 for the Coachella Valley. Letter from Steven S. Cliff, CARB, to Martha Guzman, EPA, dated August 9, 2024, and submitted electronically on August 13, 2024.

[10] See, *e.g.,* 85 FR 8181 (February 13, 2020), 85 FR 11817 (February 27, 2020) (acting separately on Imperial Valley RACT element and ozone plan, respectively, for the 2008 ozone NAAQS).

[11] Contingency measures were submitted on November 28, 2007, in the SCAQMD ''Final 2007 Air Quality Management Plan,'' transmitted to the EPA in a letter from James N. Goldstene, CARB, to Wayne Nastri, EPA, and withdrawn by the District, in a letter dated April 7, 2020, from Wayne Nastri, SCAQMD to Richard Corey, CARB, and withdrawn by CARB in a letter dated April 28, 2020, from Richard Corey, CARB, to John W. Busterud, EPA.

[13] 88 FR 17571 (March 23, 2023).

One factor, not discussed in the Coachella Valley Ozone Plan, that contributes to the NO_X-limited conditions is biogenic VOC emissions from vegetation. Biogenic VOC emissions are not required to be reported in nonattainment area inventories. Biogenic emissions are, however, included in the inventory used to model attainment in the Plan, and do contribute to the formation of ozone in the area. The most recent National Emissions Inventory estimates that biogenic VOC emissions represent more than 37 percent of VOC emissions in Riverside County.[14] California's statewide estimate for biogenic VOC emissions represents nearly 43 percent of the total VOC inventory. Biogenic NO_X, in comparison, represent only 3.4 percent of Riverside County NO_X emissions and 7.7 percent of statewide NO_X.[15] Because biogenic VOC is such a large portion of the inventory, reducing anthropogenic VOC emissions represents a smaller reduction in total VOC than a corresponding reduction of anthropogenic NO_X compared to total NO_X reductions.[16] When biogenic emissions are taken into account, the amount of NO_X relative to VOC is smaller, tending to make the ozone chemistry more NO_X-limited. That is, reductions of NO_X are even more effective than VOC reductions at reducing ozone, and appropriate to substitute for VOC reductions to achieve equivalent ozone concentration reductions.

The Coachella Valley Ozone Plan provides ample documentation that the transport of ozone and ozone precursors in the South Coast Air Basin is the primary cause of high ozone concentrations in the Coachella Valley, such as the correlation between the annual number of exceedance days for the two areas.[17] The Plan relies on upwind reductions within the South Coast Air Basin, where NO_X and VOC emissions are respectively more than 20 and nearly 27 times larger than those within Coachella Valley.[18] By the time ozone precursors have been transported to the Coachella Valley, NO_X has been preferentially removed by chemical and physical processes.[19] At the same time, there are fewer NO_X emissions and more biogenic VOC emissions in moving from the more developed Los Angeles urban area to the more rural Coachella area. This leaves less NO_X available to form ozone, creating a NO_X-limited condition where NO_X emissions reductions are more effective than VOC emissions reductions at decreasing ozone concentrations.

The isopleth diagrams in the Coachella Valley Ozone Plan show that NO_X reductions are more effective than VOC reductions at decreasing ozone across a wide range of VOC emissions quantities, which is all that is needed to show that substitution on a 1–1 basis yields a reduction in ozone concentrations at least equivalent to the required VOC reductions.[20] The District generated these diagrams by using photochemical grid modeling to simulate various combinations of NO_X and VOC emissions reductions and then plotting the resulting ozone concentrations for the monitor. Thus, while the commenter suggests that the submittal should have included photochemical modeling, that modeling is the basis of the analysis already provided in the form of the isopleth diagrams. The isopleth diagrams have VOC emissions on the horizontal x-axis and NO_X emissions on the vertical y-axis. Isopleth lines represent the ozone concentration at different levels of VOC and NO_X emissions, and a 45-degree line sloping from upper left to lower right would indicate that NO_X and VOC emissions reductions are equally effective at reducing ozone concentrations.

For the Palm Springs monitor, which is the only monitor in the Coachella Valley exceeding the 1997 ozone NAAQS, the diagram shows nearly horizontal isopleth lines.[21] This indicates a very small ozone response to VOC reductions, so that ozone formation in the Palm Springs area is much more responsive to NO_X emissions reductions than to VOC reductions. The 2016 AQMP's isopleth for Indio-Jackson Street monitor near the center of the nonattainment area shows a similarly flat slope.[22]

In other words, the graphs show that when NO_X emissions are reduced, the level of ozone decreases substantially, and that, in contrast, reducing the level of VOC emissions results in much less reduction in the level of ozone. The curve of the line on the graphs indicates that reductions in NO_X emissions will be considerably more effective than VOC reductions in reducing ozone concentrations on both a mass and percentage basis, and that VOC reductions will achieve only minor reductions in ozone concentrations even under scenarios involving large VOC reductions relative to current levels. Because NO_X reductions are more effective than VOC reductions at reducing ozone concentrations, the Plan's NO_X to VOC substitution ratio of one to one (equivalent on a percentage basis) is a conservative way to determine the amount of NO_X reductions needed to replace VOC emissions reductions and result in at least an equivalent ozone decrease in ozone concentration as required under CAA section 182(c)(2).

In fact, the isopleths show that a given percentage of NO_X reductions provide more of a reduction in ozone concentration than the same percentage of VOC reductions.[23] Thus, the Plan's NOx to VOC substitution ratio of one to one is an appropriate ratio here and the analysis is not missing steps, as the commenter has alleged. As explained, the isopleths for the two Coachella Valley monitoring sites (Indio-Jackson Street and Palm Springs-Fire Station) show that ozone concentrations are more sensitive to reductions in NO_X than reductions in VOC across a wide range of VOC emissions quantities. In addition, the Plan provides multiple lines of evidence to support its statement that ''ozone concentration in Palm Springs is much more sensitive to changes in NO_X emissions than to changes in VOC emissions and indicates that NO_X emission reduction is key for ozone attainment in the Coachella Valley.'' [24] Thus, as the Coachella Valley Ozone Plan's modeling and control strategy demonstrates, NO_X reductions are more effective than VOC reductions in reducing ozone concentration for this

[14] See file titled ''D.1.a. Riverside NO_X & VOC Emissions.xlsx'' in the docket for this rulemaking, which displays information from the EPA's Emissions Inventory Gateway (*https://www.epa.gov/air-emissions-inventories/emissions-inventory-system-eis-gateway*).

[24] Id.

area based on a one to one substitution ratio, and the underlying requirement in CAA section 182(c)(2)(C) has been met.

The EPA disagrees with the commenter's suggestion that our approval relies on demonstration of equivalence at a ''a single monitoring site'' and is therefore contrary to the CAA. As explained in this notice, this demonstration includes the analysis of isopleth graphs for both the Palm Springs-Fire Station and Indio-Jackson Street monitoring sites, which are the only two monitoring sites in the Coachella Valley nonattainment area. Moreover, the EPA disagrees that CAA section 182(c)(2)(C)'s use of the term ''ozone concentrations'' warrants the narrow interpretation that equivalence must be specifically demonstrated throughout a nonattainment area. As an initial matter, we note that the Act commonly uses the term ''concentrations'' to refer generally to ambient pollution levels at one or more (but not necessarily multiple) monitors or locations.[25] CAA section 182(c)(2)(C) grants the EPA discretion to define the conditions under which NO_X reductions may be substituted for or combined with VOC reductions ''in order to maximize the reduction in ozone air pollution'' and does not further specify the conditions that represent an ''equivalent'' reduction in ozone; for instance, it does not require a specific concentration test at every monitor or at specific locations within an area.[26] No such requirement appears in the Act's other provisions governing the RFP demonstration, which define specific percentage reductions aimed at ensuring timely attainment of the NAAQS,[27] or in the EPA's 1993 NO_X Substitution Guidance, which describes a recommended procedure for states to follow to utilize NO_X substitution.[28] We interpret CAA section 182(c)(2)(C) and these supporting authorities as properly reflecting Congress' intent to allow NO_X reductions to be considered to substitute for the required VOC reductions so long as these reductions are at least as effective in reducing ozone concentrations and consistent with the area's demonstration of timely attainment.[29]

Further, we believe that the commenter's comparison to the EPA's requirements and recommendations for interpollutant trading and exemption from NO_X requirements under CAA 182(f) misunderstands the purpose of and requirements for NO_X substitution under CAA 182(c)(2)(B) relative to these other examples. First, interpollutant trading is no longer allowed for ozone.[30] Second, the guidance documents cited by the commenter for these examples are non-binding and do not constrain the EPA's discretion to adopt a different approach where appropriate.[31] The documents recommend photochemical grid modeling in some scenarios but do not require this approach or any other specific demonstration. This reflects the EPA's acknowledgement that the level of analysis required for any particular demonstration related to NO_X and VOC reductions will differ based on context and local conditions, such as those noted by the commenter regarding the relative effectiveness of controlling each. In the context of CAA 182(c)(2)(C), in an area where isopleths generated through photochemical grid modeling and accompanying analysis indicate that the VOC reductions required under CAA 182(c)(2)(B) will be less effective for reducing ozone concentrations than a corresponding percentage reduction in NO_X emissions, no additional modeling or demonstration is required.

For the reasons described herein, the EPA disagrees that additional justification is needed to show that equal percentage reductions of NO_X emissions can substitute for VOC emissions to meet the CAA requirements for RFP in this context. We find that the District has provided ample evidence to demonstrate that NO_X reductions will be more effective at reducing ozone concentrations in Coachella Valley, and that the photochemical grid modeling conducted for the attainment demonstration, in combination with the supporting analysis accompanying the control strategy and other demonstrations, is sufficient to support the District's use of NO_X substitution.

Comment #3: ALFA faults the EPA's NO_X Substitution Guidance, contending that it recommends a procedure that fails to demonstrate any equivalence between VOC and NO_X reductions, as required by CAA Section 182(c)(2)(C); relies on incorrect policy assumptions; and gives legal justifications that are without merit.

Response to Comment #3: Comments relating solely to the NO_X Substitution Guidance are outside the scope of this rulemaking action. Our proposed approval of the Plan's use of NO_X substitution is consistent with the recommended approach outlined in the NO_X Substitution Guidance, which, while non-binding and not having the force of regulation, provides a recommended procedure for substituting NO_X emissions reductions for VOC reductions on a percentage basis, consistent with a state's ozone attainment plan, control strategy, modeled attainment demonstration, and RFP milestones and requirements. As noted in our response to Comment #2 above, our approval of the District's use of NO_X substitution is supported by local conditions and needs as documented in the modeling and analysis included in the Coachella Valley Ozone Plan and the 2016 AQMP's use of NOx substitution in this RFP demonstration is consistent with the requirements of CAA 182(c)(2)(C) for the reasons described in this notice.

III. The EPA's Action

Pursuant to section 110(k)(3) of the CAA, and for the reasons provided in our April 16, 2024 proposed rule and this final action and response to comments, the EPA is taking final action to approve into the California SIP the RFP demonstration of the ''Final Coachella Valley Extreme Area Plan for the 1997 8-Hour Ozone Standard,'' dated December 2020, as meeting the requirements of CAA sections 172(c)(2) and 182(c)(2)(B), and 40 CFR 51.1105(a)(1) and 51.1100(o)(4).

In addition, the EPA is taking final action to approve CARB's ''2020 Coachella Valley Vehicle Miles Traveled Emissions Offset Demonstration,'' release date January 22, 2021, as meeting the requirements of CAA

[25] E.g., CAA section 107(e)(2); CAA section 110(a)(5)(D).

Page, Director, Office of Air Quality Planning and Standards, U.S. EPA, to EPA Regional Air Directors, Regions I–X, Subject: ''Guidance on Limiting Nitrogen Oxides (NO_X) Requirements Related to 8-Hour Ozone Implementation,'' 3; EPA–454/R–18–004, ''Technical Guidance for Demonstration of Inter-Precursor Trading (IPT) for Ozone in the Nonattainment New Source Review Program,'' Office of Air Quality Planning and Standards (May 2018) (''IPT Guidance''), 2. The IPT Guidance specifically excludes applicability to RFP demonstrations. IPT Guidance at 2, n.1.

section 182(d)(1)(A) and 40 CFR 51.1105(a)(1) and 51.1100(o)(10).

IV. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA's role is to approve State choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this action merely approves State law as meeting Federal requirements and does not impose additional requirements beyond those imposed by State law. For that reason, this action:

- Is not a ''significant regulatory action'' subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 14094 (88 FR 21879, April 11, 2023);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it approves a State program;
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because applications of those requirements would be inconsistent with the Clean Air Act.

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian tribe has demonstrated that a Tribe has jurisdiction. In those areas of Indian country, the rule does not have Tribal implications and will not impose substantial direct costs on tribal governments or preempt Tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

Executive Order 12898 (Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, February. 16, 1994) directs Federal agencies to identify and address ''disproportionately high and adverse human health or environmental effects'' of their actions on communities with environmental justice (EJ) concerns to the greatest extent practicable and permitted by law. Executive Order 14096 (Revitalizing Our Nation's Commitment to Environmental Justice for All, 88 FR 25251, April 26, 2023) builds on and supplements Executive Order 12898 and defines EJ as, among other things, ''the just treatment and meaningful involvement of all people, regardless of income, race, color, national origin, Tribal affiliation, or disability, in agency decision-making and other Federal activities that affect human health and the environment.''

The State did not evaluate EJ considerations as part of its SIP submittal; the CAA and applicable implementing regulations neither prohibit nor require such an evaluation. Our June 12, 2024 final action on other elements of the Plan includes additional discussion about how SCAQMD responded to comments related to EJ concerns during development of the Plan.[32] The EPA did not perform an EJ analysis and did not consider EJ in this action. Due to the nature of the action being taken here, this action is expected to have a neutral to positive impact on the air quality of the affected area. Consideration of EJ is not required as part of this action, and there is no information in the record inconsistent with the stated goal of Executive Orders 12898 and 14096 of achieving EJ for communities with EJ concerns.

This action is subject to the Congressional Review Act, and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by March 24, 2025. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2)).

COUNCIL ON ENVIRONMENTAL QUALITY

40 CFR Parts 1515 and 1516

[CEQ–2024–0001]

RIN 0331–AA02

Freedom of Information Act and Privacy Act Regulations

AGENCY: Council on Environmental Quality.

ACTION: Final rule.

SUMMARY: The Council on Environmental Quality (CEQ) is finalizing its Freedom of Information Act (FOIA) regulations to incorporate amendments to the FOIA set forth in the FOIA Improvement Act of 2016; to conform to guidance for Federal agencies from the Department of Justice; to make them easier for the public to understand and use; and to better reflect CEQ's current policy and practice. These final regulations reaffirm CEQ's commitment to providing the fullest possible disclosure of records to the public. In addition, CEQ is amending its regulations implementing the Privacy Act of 1974 (the Privacy Act) to make them easier for the public to understand and use and to better reflect CEQ's current policy and practice. These final regulations also make administrative changes, including reorganizing, renumbering, and renaming the sections of CEQ's current FOIA and Privacy Act regulations. CEQ considered all of the public comments received on its proposed rule and made changes in response in this final rule.

DATES: The effective date is February 20, 2025.

ADDRESSES: CEQ established a docket for this action on *www.regulations*.gov, under docket number CEQ–2024–0001. The docket contains all of the public comments that CEQ received on this action.

FOR FURTHER INFORMATION CONTACT: Samuel Roth, Associate General Counsel, 202–395–5750, *Samuel.E.Roth@ceq.eop.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

A. The FOIA

The FOIA, 5 U.S.C. 552, provides a right of access to certain records that Federal agencies maintain and control. The FOIA directs each Federal agency to publish regulations that describe how the agency will process FOIA requests it receives from members of the public.

CEQ first adopted its FOIA regulations in 1977.[1] In 2010, CEQ amended its regulations to reflect legislative amendments to the FOIA, a 2009 Presidential Memorandum regarding FOIA policy, and additional guidance from the Department of Justice (DOJ) and the Office of Management and Budget (OMB).[2] CEQ's current FOIA regulations are codified at 40 CFR part 1515.

CEQ is revising and republishing its FOIA regulations in their entirety in order to make several improvements to the current rules. First, CEQ is making updates to reflect a number of important changes to the FOIA made by the FOIA Improvement Act of 2016 (Pub. L. 114–185). Section 3(a) of the Act directs each agency to review its FOIA regulations and update them to implement the changes set forth in the Act. Second, CEQ is including a number of provisions to improve the usefulness and readability of its FOIA regulations consistent with DOJ's 2017 revised Template for Agency Regulations (the Template).[3] CEQ modeled this final rule on the Template, which also incorporates the FOIA Improvement Act of 2016's amendments to the FOIA.

Third, CEQ is making updates to better convey the FOIA's and the CEQ regulation's requirements to members of the public who are interested in CEQ's operations and activities, so they can easily understand and use CEQ's FOIA process.[4] Specifically, CEQ referred to the Plain Writing Act of 2010 and the Federal Plain Language Guidelines [5] in preparing the final rule.

Finally, the final rule reflects updates to CEQ's FOIA policies and procedures, as well as the practical experience of CEQ's FOIA staff. As it does under its current regulations, CEQ will administer the FOIA under the final regulations with a presumption of openness, consistent with the Memorandum of the Attorney General dated March 15, 2022.[6]

B. The Privacy Act

The Privacy Act, 5 U.S.C. 552a, governs each Federal agency's collection, maintenance, use, and dissemination of any information about individuals that it maintains in a system of records. The Privacy Act directs each Federal agency to publish regulations that describe the agency's procedures for carrying out the provisions of the Privacy Act. CEQ first adopted its Privacy Act regulations in 1977,[7] codified at 40 CFR part 1516.

CEQ is revising and republishing its Privacy Act regulation in its entirety to make it easier for the public to understand and use and to reflect updates to CEQ's Privacy Act procedures over the past five decades.

II. Discussion of Comments on the Notice of Proposed Rulemaking

On December 11, 2024, CEQ published a notice of proposed rulemaking for public comment.[8] The public comment period concluded on January 10, 2025. Two commenters provided input on the proposal during the public comment period. As noted above, their comments are available on *www.regulations.gov* under docket number CEQ–2024–0001.

Comment 1: One commenter recommended that CEQ explicitly incorporate the ''presumption of openness'' in its FOIA regulations. The presumption of openness, which Congress codified in the FOIA through the FOIA Improvement Act of 2016, directs agencies to withhold information in response to a FOIA request ''only if . . . the agency reasonably foresees that disclosure would harm an interest protected by an exemption [under the FOIA],'' or disclosure is prohibited by law. 5 U.S.C. 552(a)(8)(A). As the Memorandum of the Attorney General dated March 15, 2022, explains, the presumption means that ''[i]nformation that might technically fall within an exemption should not be withheld from a FOIA requester unless the agency can identify a foreseeable harm or legal bar to disclosure.'' [9]

As CEQ noted in the preamble to the proposed rule, CEQ currently administers its FOIA program consistent

[8] CEQ, Freedom of Information Act and Privacy Act Regulations, 89 FR 99799 (Dec. 11, 2024).

[9] Department of Justice, *Freedom of Information Act Guidelines* (Mar. 15, 2022), *https://www.justice.gov/media/1212566/dl.*

with the presumption of openness and will continue to do so under its revised regulations. CEQ has revised the language of § 1515.16(b) to clarify that it applies the presumption of openness in its FOIA program.

Comment 2: One commenter recommended that CEQ revise § 1515.4 to clarify that, when a FOIA requester submits an appeal, a CEQ official other than the one who was responsible for processing the original request will process the appeal. The commenter observed that the Department of Justice's Office of Information Policy, which provides guidance to agencies on FOIA administration, recommends this practice.[10] Consistent with this recommendation, the commenter recommended that CEQ delete the last sentence of § 1515.4(b) (''Otherwise, the Chief FOIA Officer or the Chief FOIA Officer's designee is responsible for processing FOIA appeals.'').

CEQ agrees with the commenter that it is good practice to assign the processing of a FOIA appeal to a different official than the one who was responsible for processing the original FOIA request. CEQ routinely follows this practice in its administration of the FOIA. CEQ is a small agency, however, whose size varies widely from one Presidential Administration to the next. From time to time, it may not be reasonably possible to assign a FOIA appeal to a different official than the one who reviewed the original request, if CEQ lacks sufficient personnel with FOIA expertise. Accordingly, CEQ has inserted a sentence in § 1515.22(b) to explain that, whenever reasonably practicable, CEQ will assign the processing of a FOIA appeal to a different official than the one who was responsible for processing the original request.

Comment 3: One commenter recommended that CEQ modify § 1515.11 and proposed § 1515.20 to change the requirement to include the phrase ''Freedom of Information Act Request'' in the subject line of a request (or ''Freedom of Information Act Appeal'' in the subject line of an appeal, as the case may be) into a recommendation.

CEQ agrees with the commenter that the FOIA statute does not impose this requirement. CEQ regularly receives correspondence, however, that is unclear about whether the sender is making a request for records or seeking some other kind of official action. CEQ has changed the language of §§ 1515.11 and 1515.21 to provide that FOIA requests and appeals must clearly identify themselves as such, and encourage, but do not require them to use the phrase ''Freedom of Information Act Request'' or ''Freedom of Information Act Appeal.''

Comment 4: One commenter recommended that CEQ change § 1515.19(a)(4) to refer to ''records,'' rather than ''information,'' for consistency with the FOIA statute. CEQ has made this change.

III. Summary of the Final Rules

A. Part 1515—Freedom of Information Act Procedures

1. Subpart A—The Council on Environmental Quality's FOIA Program

Section 1515.1—What is the purpose of the rules in this part? This section describes the purpose of part 1515, which is to set forth CEQ's FOIA procedures, and explains the limitations of the regulations.

Section 1515.2—What kind of records does CEQ maintain? This section explains CEQ's activities and legal authorities.

Section 1515.3—Are there any CEQ records that CEQ proactively discloses and for which I do not have to make a request? This section describes CEQ information the public can access without filing a FOIA request. In the final rule, CEQ uses the term ''proactive disclose'' in the title and provision to improve clarity.

Section 1515.4—Who is responsible for processing FOIA requests and appeals to CEQ? This section explains the roles of Chief FOIA Officer and FOIA Appeals Officer at CEQ.

Section 1515.5—Who can help me with my FOIA request to CEQ? This section explains that FOIA requesters can obtain assistance from CEQ's FOIA Public Liaison and dispute resolution services from the National Archives and Records Administration's Office of Government Information Services. In the final rule, CEQ clarifies in § 1515.5(b) that CEQ will actively engage when CEQ agrees to participate in the voluntary dispute resolution services consistent with the Template.

Section 1515.6—What are CEQ's procedures for preserving records? This section explains CEQ's procedures for preserving records in connection with its administration of the FOIA.

2. Subpart B—Making a FOIA Request and Receiving a Response

Section 1515.11—How do I make a FOIA request to CEQ? This section explains how members of the public may request CEQ records under the FOIA. It also describes CEQ's procedures for clarifying requests that do not reasonably describe the records that the requester is seeking.

Section 1515.12—Will CEQ keep my request confidential? This section notes that FOIA requests and the identities of FOIA requesters are generally matters of public record. In the final rule, CEQ adds ''generally'' in the second sentence, for consistency with the third sentence, to account for certain circumstances where CEQ determines it appropriate to withhold a requester's identity.

Section 1515.13—When will CEQ respond to my request? This section describes CEQ's timeline for responding to FOIA requests, including circumstances in which CEQ will extend or pause the ordinary time period for processing FOIA requests. In the final rule, CEQ adds to the explanation of ''unusual circumstances'' in § 1515.13(b)(1) the need to search separate facilities consistent with 5 U.C.C. 552(a)(6)(B)(iii)(I), and adds the term ''aggregate'' for clarity in § 1515.13(b)(2).

Section 1515.14—What if my request is urgent? This section explains how to ask CEQ to expedite its processing of a FOIA request or appeal.

Section 1515.15—How will CEQ process my request? This section describes CEQ's procedures for processing requests and circumstances in which CEQ will deny requests. In the final rule, in § 1515.13(b)(3), CEQ changes ''will include'' to ''may include'' before ''CEQ's estimate of the date on which we will respond to your request.'' CEQ makes this change because FOIA does not require CEQ to provide such a date, but CEQ considers it a best practice to provide an estimate when it is able to do so.

Section 1515.16—How does CEQ determine when to withhold records or portions of a record? This section describes CEQ's procedures for applying the statutory exemptions from disclosure set forth in the FOIA.

Section 1515.17—What if I request records that involve another Government office or agency? This section describes CEQ's procedures for consulting with other Federal agencies regarding whether to disclose or withhold particular records in response to a FOIA request, as well as CEQ's procedures for referring records to another agency for processing.

Section 1515.18—What happens if CEQ grants my request in full or in part? This section describes CEQ's procedure for disclosing records in response to a FOIA request.

[10] Department of Justice, OIP Guidance: Adjudicating Administrative Appeals Under the FOIA (Aug. 12, 2021), *https://www.justice.gov/oip/oip-guidance/Adjudicating%20Administrative%20Appeals%20Under%20the%20FOIA.*

Section 1515.19—What happens if CEQ denies my request in full or in part? This section describes CEQ's procedure for withholding records in response to a FOIA request.

3. Subpart C—Appealing a FOIA Request

In the final rule, CEQ revised the numbering from the proposed rule to start with § 1515.21 instead of § 1515.20.

Section 1515.21—Can I appeal CEQ's response to my request? This section describes how a FOIA requester may appeal a determination that CEQ made in processing the requester's request.

Section 1515.22—How will CEQ process my appeal? This section describes CEQ's procedures for upholding, reversing, or modifying a prior determination on appeal. In the final rule, CEQ adds paragraph (e), to clarify that ordinarily, it will not adjudicate an appeal if the request becomes the subject of litigation.

4. Subpart D—Fees for FOIA Requests and Appeals

Section 1515.31—Can CEQ charge fees for processing FOIA requests and appeals? This section explains that CEQ charges fees for processing FOIA requests, but not appeals, and describes the rules that CEQ will follow in determining whether to charge a fee and the amount of the fee. As in CEQ's current FOIA regulation, the provisions of this section and the subsequent sections reflect OMB's Uniform Freedom of Information Act Fee Schedule and Guidelines.

Section 1515.32—What is the amount of the fee for processing a request? This section describes how CEQ will determine the amount of the fee for processing a FOIA request.

Section 1515.33—Are there any exceptions for special requesters? This section describes the services that CEQ will exclude from the calculation of fees for non-commercial requesters, in general, and for representatives of non-commercial scientific institutions, educational institutions, and the news media, in particular.

Section 1515.34—Can I apply for a fee waiver? This section describes the availability of fee waivers and explains the criteria CEQ will apply in determining whether to grant a fee waiver.

Section 1515.35—When will CEQ contact me about fee-related matters? This section describes CEQ's procedures for contacting FOIA requesters to resolve fee-related matters.

Section 1515.36—Do I have to pay fees if CEQ misses the deadline for responding to my request? This section describes the circumstances in which CEQ will not charge fees for processing a FOIA request because CEQ did not respond to the request within the time period set forth in the FOIA.

Section 1515.37—When are fees due and how do I pay them? This section describes when and how FOIA requesters must pay fees to CEQ, including the circumstances in which CEQ may require a FOIA requester to pay fees in advance.

Section 1515.38—What will CEQ do if I do not promptly pay the fee? This section explains when CEQ will charge interest and use debt collection procedures.

5. Subpart E—Confidential Commercial Information and Preservation of Records

Section 1515.41—How does CEQ handle confidential commercial information? This section implements the requirements of Executive Order (E.O.) 12600, *Predisclosure Notification Procedures for Confidential Commercial Information,*[11] which directs Federal agencies to allow submitters of information to designate records that contain confidential commercial information and to notify submitters when a FOIA requester seeks disclosure of confidential commercial information.

B. Part 1516—Privacy Act Implementation

Section 1516.1—What is the purpose of this part? This section describes the purpose of part 1516, which is to set forth CEQ's Privacy Act procedures.

Section 1516.2—What records does this part cover? This section explains when part 1516 applies and explains the meaning of ''record'' and ''system of records'' for purposes of part 1516.

Section 1516.3—When will CEQ disclose records about me? This section describes the conditions under which CEQ will disclose records, which are (1) in response to an individual's request for the individual's own records; (2) as part of a routine use of records; or (3) pursuant to one of the other bases for disclosure that appear in section 3 of the Privacy Act, 5 U.S.C. 552a(b).

Section 1516.4—How can I obtain access to CEQ's records about me? This section describes the procedures for an individual to request access to the individual's own records.

Section 1516.5—How can I obtain information about how CEQ has used its records about me? This section describes the procedures for an individual to request an accounting of disclosures of the individual's own records.

Section 1516.6—How can I ask CEQ to correct my records? This section describes the procedures for an individual to request an amendment of the individual's own records and explains how CEQ will review such a request.

Section 1516.7—How can I appeal CEQ's decision to deny my request to access or correct records about me? This section describes the procedures for an individual to appeal CEQ's denial of the individual's request to amend the individual's own records.

Section 1516.8—Will CEQ charge me a fee for a copy of my records? This section describes the fees CEQ will charge for copies of records.

IV. Regulatory Analysis and Notices

A. Regulatory Flexibility Act and Executive Order 13272, Proper Consideration of Small Entities in Agency Rulemaking

The Regulatory Flexibility Act (RFA), as amended, 5 U.S.C. 601 *et seq.,* and E.O. 13272, *Proper Consideration of Small Entities in Agency Rulemaking,*[12] require agencies to assess the impacts of proposed and final rules on small entities. Under the RFA, small entities include small businesses, small organizations, and small governmental jurisdictions. An agency must prepare an Initial Regulatory Flexibility Analysis (IRFA) unless it determines and certifies that the rule, if promulgated, would not have a significant economic impact on a substantial number of small entities. 5 U.S.C. 605(b). The FOIA authorizes Federal agencies to charge fees only to certain requesters, and only in order to recover the direct costs of searching for, reviewing, and duplicating agency records. Under the final rule, CEQ will continue to charge fees in accordance with the FOIA and guidelines from DOJ and OMB. The Privacy Act authorizes Federal agencies to charge fees only to individuals, and accordingly CEQ will not charge fees under the Privacy Act to small entities within the meaning of the RFA.

The fees that CEQ assesses for processing FOIA requests are nominal and will not have a significant impact on a substantial number of small entities within the meaning of the RFA. Accordingly, CEQ hereby certifies that the rule will not have a significant economic impact on a substantial number of small entities.

B. Unfunded Mandates Reform Act

Section 201 of the Unfunded Mandates Reform Act of 1995 (Pub. L.

[11] 52 FR 23781 (June 25, 1987).

[12] 67 FR 53461 (Aug. 16, 2002).

104–4, 2 U.S.C. 1531), requires Federal agencies to assess the effects of their regulatory actions on State, Tribal, and local governments, and the private sector to the extent that such regulations incorporate requirements specifically set forth in law. Before promulgating a rule that may result in the expenditure by a State, Tribal, or local government, in the aggregate, or by the private sector of $100 million, adjusted annually for inflation, in any 1 year, an agency must prepare a written statement that assesses the effects on State, Tribal, and local governments and the private sector. 2 U.S.C. 1532. This final rule will apply only to requesters under the FOIA or the Privacy Act and will not result in expenditures of $100 million or more for State, Tribal, and local governments, in the aggregate, or the private sector in any 1 year. This final action also will not impose any enforceable duty, contain any unfunded mandate, or otherwise have any effect on small governments subject to the requirements of 2 U.S.C. 1531–1538.

C. Executive Order 12866, Regulatory Planning and Review

E.O. 12866, as supplemented and affirmed by E.O. 13563 and amended by E.O. 14094, provides that the Office of Information and Regulatory Affairs will review any regulatory action that qualifies as a ''significant regulatory action'' within the meaning of the E.O.[13] The final rule does not qualify as a significant regulatory action.

D. Executive Order 12988, Civil Justice Reform

Under section 3(a) of E.O. 12988,[14] agencies must review their proposed regulations to eliminate drafting errors and ambiguities, draft them to minimize litigation, and provide a clear legal standard for affected conduct. Section 3(b) provides a list of specific matters that agencies must consider when conducting the review required by section 3(a). CEQ has conducted this review and determined that this final rule complies with the requirements of E.O. 12988.

E. Paperwork Reduction Act

This final rule will not impose any new information collection burden that will require additional review or approval by OMB under the Paperwork Reduction Act (PRA), 44 U.S.C. 3501 *et seq.*

F. National Environmental Policy Act (NEPA)

The National Environmental Policy Act of 1969 (NEPA) (Pub. L. 118–5, 42 U.S.C. 4321 *et seq.*), as amended, and the CEQ regulations that implement NEPA, 40 CFR parts 1500 through 1508, require consideration of the environmental effects of proposed actions in agency decision making. NEPA provides for three levels of review. First, agencies may establish in their agency-specific NEPA procedures categorical exclusions (CEs) for categories of actions that normally do not have a significant effect on the human environment, individually or in the aggregate, and apply CEs to individual actions, as appropriate.[15] If an agency proposes to take an action that does not fall within a CE but is not likely to have significant environmental effects (or the significance of whose effects is unknown), CEQ's NEPA regulations direct the agency to prepare an environmental assessment (EA).[16] If, as a result of this assessment, the agency determines that the proposed action will not have significant effects, the agency may make a finding of no significant impact (FONSI), in which case the agency may proceed with the action.[17] Otherwise, the agency must prepare an environmental impact statement (EIS).[18]

CEQ has not established a CE for the dissemination of information under the FOIA; the disclosure of records under the Privacy Act; or the preparation, revision, and adoption of regulations generally. Accordingly, CEQ prepared an EA to determine whether the revisions to CEQ's FOIA and Privacy Act regulations would have a significant effect on the human environment. Because, as set forth below, the final regulations will likely result in a small reduction in the use of resources in CEQ's administration of the FOIA and the Privacy Act, CEQ finds that the final rule will have no significant impact on the human environment and that it is therefore unnecessary to prepare an EIS.

1. Environmental Assessment

Purpose and Need: As set forth in the proposed rule and the above Summary of the Final Rule, CEQ adopted its FOIA regulations in 1977 and has not updated them to reflect developments in FOIA law, policy, and practice since 2010. As such, the current regulations fail to reflect current FOIA requirements, including those set forth in the FOIA Improvement Act of 2016. Furthermore, CEQ's current FOIA regulations do not conform in all points to the Template and the directions in the Plain Writing Act of 2010, and do not fully reflect CEQ's current policy and practice with respect to the FOIA. Likewise, CEQ adopted its Privacy Act regulations in 1977, and has not updated them since that time to reflect updates to CEQ's Privacy Act procedures.

Proposed Action and Alternatives: A summary of the final action, which is one of two action alternatives analyzed in this EA, is set forth in the NPRM and in the above Summary of the Final Rule. Under a no action alternative, CEQ would continue to operate under its current regulations, addressing inconsistencies between the regulations and current law and agency procedure on a case-by-case basis. CEQ has decided that this approach is undesirable because it is confusing to the public and requires CEQ staff to address inconsistencies between the regulation, the law, and agency procedure that CEQ can obviate by updating the regulation.

CEQ considered another action alternative of making only narrowly tailored amendments to its current FOIA regulations in order to implement the FOIA Improvement Act of 2016. While this alternative would eliminate direct inconsistencies between CEQ's regulations and the FOIA, it would not address inconsistencies between CEQ's FOIA regulations, the Template and CEQ's FOIA policies and procedures, or inconsistencies between CEQ's Privacy Act regulations and CEQ's practice in implementing the Privacy Act.

CEQ's preferred alternative is to amend its regulations as described in the proposed rule and this final rule, for the reasons set forth in parts I through III of this preamble.

Environmental Effects of Alternatives: CEQ's FOIA and Privacy Act programs affect the environment primarily through requesters' use of paper and energy in submitting requests and CEQ's use of paper and energy in searching for, reviewing, and duplicating responsive records. CEQ's use of paper and energy for these purposes has remained within the range typical of the operations of a small office. Currently, CEQ accepts FOIA and Privacy Act requests by mail and fax, which require the use of paper and energy to print and transmit requests to CEQ. The final regulations will direct FOIA and Privacy Act requesters to submit their requests electronically if they are able to do so, thereby reducing the use of paper and

[13] *See* E.O. 12866, *Regulatory Planning and Review,* 58 FR 51735, 51737 (Oct. 4, 1993); E.O. 14094, *Modernizing Regulatory Review,* 88 FR 21879, 21879–80 (Apr. 11, 2023); E.O. 13563, *Improving Regulation and Regulatory Review,* 76 FR 3821, 3822 (Jan. 21, 2011).

[14] 61 FR 4729 (Feb. 7, 1996).

[15] 40 CFR 1501.4(a).

[16] *Id.* § 1501.5(a).

[17] *Id.* § 1501.6.

[18] 40 CFR part 1502.

energy associated with mailed and faxed requests. CEQ receives requests by fax or mail infrequently, however, so any reduction in the use of resources is likely to be modest. In addition, by improving the public's timely access to information contained in CEQ records, the final regulations support the meaningful involvement of all communities, including communities with environmental justice concerns, in Federal decision-making processes.

List of Agencies and Persons Consulted: CEQ's NEPA staff reviewed and commented on this EA, the proposed rule, and this final rule.

2. Finding of No Significant Impact

Based on the foregoing EA, CEQ finds that implementation of the final regulations will reduce the use of paper and energy resources in CEQ's FOIA and Privacy Act programs, streamline CEQ's FOIA and Privacy Act procedures, make CEQ more accessible and responsive to the public, and improve the opportunity for all communities to access information and be meaningfully involved in Federal decision-making processes. Thus, there will be no significant environmental effects associated with implementation of the proposed action, and it is not necessary for CEQ to prepare an EIS.

CEQ further finds that the final action is not one that normally requires the preparation of an EIS, closely similar to such an action, or an action without precedent.

List of Subjects

40 CFR Part 1515

Administrative practice and procedures, Courts, Freedom of information, Government employees, Records.

40 CFR Part 1516

Administrative practice and procedures, Courts, Government employees, Privacy, Records.

Amy B. Coyle,

Principal Deputy General Counsel.

■ For the reasons discussed in the preamble, the Council on Environmental Quality revises and republishes 40 CFR parts 1515 and 1516 to read as follows:

PART 1515—FREEDOM OF INFORMATION ACT PROCEDURES

Subpart A—The Council on Environmental Quality's FOIA Program

Sec.
1515.1 What is the purpose of the rules in this part?
1515.2 What kind of records does CEQ maintain?
1515.3 Are there any CEQ records that CEQ proactively discloses and for which I do not have to make a request?
1515.4 Who is responsible for processing FOIA requests and appeals to CEQ?
1515.5 Who can help me with my FOIA request to CEQ?
1515.6 What are CEQ's procedures for preserving records?

Subpart B—Making a FOIA Request and Receiving a Response

Sec.
1515.11 How do I make a FOIA request to CEQ?
1515.12 Will CEQ keep my request confidential?
1515.13 When will CEQ respond to my request?
1515.14 What if my request is urgent?
1515.15 How will CEQ process my request?
1515.16 How does CEQ determine when to withhold records or portions of a record?
1515.17 What if I request records that involve another Government office or agency?
1515.18 What happens if CEQ grants my request in full or in part?
1515.19 What happens if CEQ denies my request in full or in part?

Subpart C—Appealing a FOIA Request

Sec.
1515.21 Can I appeal CEQ's response to my request?
1515.22 How will CEQ process my appeal?

Subpart D—Fees for FOIA Requests and Appeals

Sec.
1515.31 Can CEQ charge fees for processing FOIA requests and appeals?
1515.32 What is the amount of the fee for processing a request?
1515.33 Are there any exceptions for special requesters?
1515.34 Can I apply for a fee waiver?
1515.35 When will CEQ contact me about fee-related matters?
1515.36 Do I have to pay fees if CEQ misses the deadline for responding to my request?
1515.37 When are fees due and how do I pay them?
1515.38 What will CEQ do if I do not promptly pay the fee?

Subpart E—Confidential Commercial Information and Preservation of Records

Sec.
1515.41 How does CEQ handle confidential commercial information?

Authority: 5 U.S.C. 552; E.O. 13392, 70 FR 75373, 3 CFR, 2005 Comp., p. 216; Pres. Mem., 74 FR 4685, 3 CFR, 2009 Comp., p. 338.

Section 1515.41 also issued under E.O. 12600, 52 FR 23781, 3 CFR, 1987 Comp., p. 235.

Subpart A—The Council on Environmental Quality's FOIA Program

§ 1515.1 What is the purpose of the rules in this part?

(a) This part explains how you, a member of the public, may request copies of records from the Council on Environmental Quality (CEQ) under the Freedom of Information Act (FOIA). You can find the text of the FOIA at 5 U.S.C. 552.

(b) Nothing in this part entitles you to any service or to the disclosure of any record to which you are not entitled under the FOIA.

§ 1515.2 What kind of records does CEQ maintain?

CEQ carries out responsibilities under the National Environmental Policy Act of 1969, as amended (42 U.S.C. 4321–4347); the Environmental Quality Improvement Act of 1970, as amended (42 U.S.C. 4371–4375); Reorganization Plan No. 1 of 1977 (July 15, 1977); and various Executive orders, among other authorities. CEQ maintains certain records on these subjects, among others.

§ 1515.3 Are there any CEQ records that CEQ proactively discloses and for which I do not have to make a request?

Yes. The FOIA requires CEQ to proactively disclose—that is, to make certain records available for public inspection online—records that have been or are likely to become the subject of repeated requests. You can find those records, together with an index, at *https://www.whitehouse.gov/ceq/foia/.*

§ 1515.4 Who is responsible for processing FOIA requests and appeals to CEQ?

(a) CEQ's Chief FOIA Officer oversees the administration of requests made to CEQ under the FOIA. The Chief FOIA Officer, or the Chief FOIA Officer's designee, is responsible for processing and granting or denying FOIA requests. The Chair of CEQ appoints the Chief FOIA Officer.

(b) The Chief FOIA Officer may appoint a FOIA Appeals Officer. If the Chief FOIA Officer does so, the FOIA Appeals Officer or the FOIA Appeals Officer's designee is responsible for processing and granting or denying FOIA appeals. Otherwise, the Chief FOIA Officer or the Chief FOIA Officer's designee is responsible for processing FOIA appeals.

§ 1515.5 Who can help me with my FOIA request to CEQ?

(a) You may contact CEQ's FOIA Public Liaison for assistance with your FOIA request, including help in formulating your request and

information about the status of your request, or to submit concerns about CEQ's handling of your request. You can contact CEQ's FOIA Public Liaison by email at *efoia@ceq.eop.gov* or by phone at 202–395–5750. For additional contact information, visit *https://www.foia.gov* and choose ''Council on Environmental Quality'' in the index of Government agencies.

(b) If you have a dispute with CEQ over its handling of your FOIA request, you may contact the National Archives and Records Administration's Office of Government Information Services for assistance or dispute resolution services by calling (202) 741–5770 or visiting *https://archives.gov/ogis.* If CEQ agrees to participate in the voluntary dispute resolution services provided by the Office of Government Information Services, CEQ will actively engage as a partner to the process in an attempt to resolve the dispute.

(c) If you are an individual with a disability, CEQ will provide you with access to and use of information and data through its FOIA program that is comparable to the access to and use of the information and data by members of the public who are not individuals with disabilities, unless doing so would impose an undue burden on CEQ.

(d) If your proficiency in English is limited, CEQ will take steps as appropriate to provide you with meaningful access to CEQ's FOIA program.

§ 1515.6 What are CEQ's procedures for preserving records?

(a) CEQ preserves records pursuant to title 44 of the United States Code and the Records Schedules issued by the Archivist of the United States.

(b) CEQ will not dispose of or destroy agency records that are the subject of a pending request, appeal, or lawsuit under the FOIA.

Subpart B—Making a FOIA Request and Receiving a Response

§ 1515.11 How do I make a FOIA request to CEQ?

(a) You must make your request by email to *efoia@ceq.eop.gov* or by completing the request form at *https://www.foia.gov.* If you are not able to make your request by either of these methods, please contact CEQ's FOIA Public Liaison for assistance.

(b) When making a request to CEQ, you must:

(1) Clearly indicate that you are making a request for records, such as by including ''Freedom of Information Act Request'' in the subject line if you are submitting your request by email. If your email includes attachments, you must enter your request in the body of the email in addition to the attachment.

(2) Identify or reasonably describe the records you are requesting in sufficient detail to enable CEQ personnel to locate them with a reasonable amount of effort. Make your request as specific as you can. If possible, include the date (or a range of dates), title or name, author, recipient, subject matter, case number, file designation, or reference number for the records you seek.

(3) Explain if you need CEQ to provide the records in a particular form or format. CEQ ordinarily provides records in Portable Document Format (PDF), but CEQ will provide its response in the format you request if it is reasonably practicable to do so.

(4) Provide your contact information, such as your phone number, your email address, or both, so that CEQ is able to contact you, as necessary, regarding the status of your request and to clarify matters related to your request.

(5) Indicate the maximum amount you are willing to pay in fees, as described in subpart E of this part. If you are requesting a fee waiver as part of your initial request, include the statement described at § 1515.34(a).

(6) If applicable, include a signed letter on your institution's official letterhead, stating that you believe you qualify for a reduction of fees, as described in § 1515.33, because you are a representative of a non-commercial scientific institution, a representative of an educational institution, or a member of the news media.

(c) If you are requesting information that is subject to the Privacy Act of 1974 (*i.e.,* records about you that CEQ maintains in a system of records), you must follow the procedures under part 1516 of this chapter, instead of the procedures in this part.

(d) If you are requesting copies of ethics-related documents that CEQ makes available pursuant to section 105 of the Ethics in Government Act of 1978 (such as CEQ employees' public financial disclosure reports), you must follow the procedures at 5 CFR 2634.603, instead of the procedures in this part. For more information, visit the U.S. Office of Government Ethics website at *https://www.oge.gov.*

(e) If CEQ determines that your request does not reasonably describe the records you are seeking, such that CEQ would not be able to locate the records you have requested with a reasonable amount of effort, CEQ will notify you and explain what additional information you need to provide regarding the records that you seek.

(1) For example, if you request all records related to a broad subject or all communications between CEQ and a third party, we will generally ask you to clarify the scope of your request.

(2) Furthermore, your request must seek existing records of CEQ; we will not create new records or compile new information in order to respond to a FOIA request.

(3) If you have not provided a way to contact you, or you do not respond to our inquiry within 30 working days (*i.e.,* excepting Saturdays, Sundays, and Federal holidays), CEQ will administratively close your request. If possible, we will notify you of the closure.

§ 1515.12 Will CEQ keep my request confidential?

No. CEQ generally will not keep your request confidential. A FOIA request, including the requester's identity, is generally a matter of public record. CEQ publishes logs of requests and requesters at *https://www.whitehouse.gov/ceq/foia/.*

§ 1515.13 When will CEQ respond to my request?

(a) CEQ's Chief FOIA Officer or the Chief FOIA Officer's designee will make an initial determination of how CEQ will respond to your request within 20 working days from the date that CEQ received your request, except as provided in this section.

(b) If CEQ is unable to make a determination within the 20-day period because of ''unusual circumstances,'' we may extend the period of time in which we will respond to your request.

(1) ''Unusual circumstances'' exist when, in order to properly process your request, CEQ must search for, collect, and appropriately examine a voluminous amount of separate and distinct records, CEQ must consult with another agency or another component of the Executive Office of the President, or CEQ must search at separate facilities.

(2) In determining whether ''unusual circumstances'' are present, CEQ may aggregate and treat multiple requests on clearly related matters from you (or from other persons acting in concert with you) as a single request.

(3) Before the conclusion of the 20-day period, CEQ will notify you of the ''unusual circumstances'' that apply and the date by which we estimate we will complete processing your request.

(4) When the extension will exceed 10 working days, CEQ will provide you the opportunity to modify the request or arrange an alternative time period for processing the original or modified request.

(c) If CEQ reasonably requires additional information from you to clarify your request or to resolve fee-related matters, we may toll (*i.e.,* pause) the 20-day period, or any extension of that period, from the date we request information from you until the date you respond. We will only toll the response period one time for the purpose of clarifying your request, but we may toll the response period more than once to resolve fee-related matters.

§ 1515.14 What if my request is urgent?

(a) You may ask CEQ to expedite the processing of your FOIA request or appeal. If CEQ agrees to expedite processing of your request or appeal, we will process it with priority over non-expedited requests and appeals and respond to you as quickly as possible.

(b) CEQ will expedite requests or appeals if:

(1) Failing to expedite the request or appeal could reasonably be expected to pose an imminent threat to the life or physical safety of an individual; or

(2) You are primarily engaged in disseminating information (*e.g.,* you are a member of the news media), and you have an urgent need to inform the public about an actual or alleged Federal Government activity, beyond the public's right to know about Government activity generally.

(c) You may ask for expedited processing when you make your initial request or appeal, or at any later time.

(d) In order to ask for expedited processing, you must submit a statement, certified to be true and correct, that explains in detail why your request or appeal satisfies the requirements of paragraph (b)(1) or (2) of this section. If you believe that you have an urgent need to inform the public about an actual or alleged Federal Government activity, you should provide examples of other coverage of the same or related subjects, if possible. CEQ may waive the formal certification requirement at its discretion.

(e) CEQ will notify you within 10 calendar days whether we will grant or deny you expedited processing.

(f) If CEQ denies you expedited processing, you may appeal that determination using the procedures in subpart C of this part. We will process your appeal as promptly as we can.

§ 1515.15 How will CEQ process my request?

(a) If your request does not reasonably describe the records you seek; the information you have requested is not a record subject to FOIA; CEQ has already published the information you are requesting; or your request does not follow the procedures described in the regulations in this part, we will deny your request in accordance with § 1515.19.

(b) If your request reasonably describes the records you seek and otherwise comports with the procedures described in this part, CEQ will process your request as follows:

(1) CEQ will acknowledge your request in writing and assign it an individualized tracking number. The written acknowledgment may include CEQ's estimate of the date on which we will respond to your request.

(2) CEQ will search for agency records that respond to your request. CEQ ordinarily will search records in our possession as of the date that we begin our search. We will notify you if we use a different date.

(3) If CEQ finds records that you have requested, we will determine whether to grant your request (*i.e.,* provide you with the records you have requested) or to deny it (*i.e.,* withhold the relevant records from disclosure in accordance with § 1515.16).

(4) Once CEQ has determined whether to grant your request in full, grant it in part and deny it in part, or deny it in full, we will notify you of our determination in writing.

(c) If CEQ determines that it has a voluminous amount of records responsive to your request, or if your request requires CEQ to search for records in multiple locations (electronic or physical), CEQ may provide you with one or more interim responses, releasing responsive records to you on a rolling basis.

§ 1515.16 How does CEQ determine when to withhold records or portions of a record?

(a) If CEQ finds records that are responsive to your request, we will review the records to determine whether to withhold any of the records or portions of individual records.

(b) The FOIA identifies nine exemptions to the requirement that agencies provide agency records upon request. CEQ will only withhold a record or a portion of a record under one of these exemption to the FOIA if CEQ reasonably foresees that disclosing it would harm an interest that the exemption protects. In determining the interests at stake in disclosing or withholding CEQ records, we bear in mind that Congress, in creating CEQ, intended for the CEQ Chair to serve as a confidential advisor to the President and the President's immediate advisors on matters of environmental policy.

(c) CEQ will also withhold a record, or a portion of a record, if disclosing it would violate another provision of the FOIA or a law other than the FOIA.

(d) If the record concerns another government agency, CEQ generally will involve the other agency in determining whether to withhold the record or portions of the record, using the procedures at § 1515.17.

§ 1515.17 What if I request records that involve another Government office or agency?

(a) If CEQ determines that any of the CEQ records you have requested involve another agency in the Federal Government, including another component of the Executive Office of the President, we generally will involve the other agency in reviewing that record in either of two ways.

(1) CEQ may consult with the other agency regarding the record to obtain the other agency's views on whether the record or portions of the record are exempt from disclosure under the FOIA. We will take the other agency's views into consideration when making a final determination of whether to withhold the record or any portions of the record.

(2) CEQ may refer the record to the other agency, in which case the other agency will determine whether the record or portions of the record are exempt from disclosure under the FOIA, and will respond directly to you regarding your request for the record. If CEQ determines to refer records you have requested to another agency, we will notify you of the referral and explain how to contact the other agency's FOIA officials.

(b) CEQ will choose between consulting with another agency about a record and referring the record to the other agency according to the following principles:

(1) Ordinarily, CEQ will use consultation procedures for records that originated with CEQ but that contain information of interest to another agency or office, and CEQ will refer records that originated with another agency to that agency.

(2) CEQ will typically refer a classified record (or a portion of a record) or a record that may be appropriate for classification to the agency that either classified the information or should consider the information for classification.

(c) CEQ may make agreements with other agencies about how CEQ will handle records involving that agency or how that agency will handle records involving CEQ. Any agreement we make will comply with the FOIA and this part.

§ 1515.18 What happens if CEQ grants my request in full or in part?

Once you have paid the fees that are due under subpart E of this part (if any), CEQ will promptly provide you with a copy of the records you requested, except for the records or portions of records we have determined to withhold under § 1515.16. We will follow the procedures in § 1515.19 with respect to those records or portions of records.

§ 1515.19 What happens if CEQ denies my request in full or in part?

(a) CEQ may deny your request in full or in part for these reasons, among others:

(1) CEQ determines to withhold all or a portion of the records you requested under § 1515.16;

(2) Your request does not reasonably describe the records you seek;

(3) The information you requested is not a record subject to the FOIA;

(4) CEQ has already published the records you are requesting;

(5) The records you requested do not exist, cannot be located, or have been destroyed;

(6) The records you requested are not readily reproducible in the form or format you seek; or

(7) Your request does not comport with the procedures set forth in this part.

(b) If CEQ denies your request regarding expedited processing or fee-related matters, we will also treat that as a denial of your request in part and follow the procedures in this section.

(c) If CEQ determines to deny your request in full or in part, we will notify you of the basis for the denial. The notification will include the following information:

(1) The name and title or position of the person responsible for the denial;

(2) A brief statement of the reasons for the denial, including any FOIA exemption CEQ applied in determining to withhold records (or portions thereof) under § 1515.16;

(3) An estimate of the volume of the records CEQ is withholding, unless the volume is indicated by markings we have made on the records we are providing;

(4) A statement that you may appeal the denial to CEQ, under subpart C of this part, and an explanation of what you must do to appeal; and

(5) A reminder that you can obtain assistance from CEQ's FOIA Public Liaison and dispute resolution services from the National Archives and Records Administration's Office of Government Information Services.

(d) For each record CEQ discloses in part, we will mark the record clearly to show which portions we are withholding and the FOIA exemptions we applied in determining to withhold those portions, unless doing so would harm an interest protected by an applicable FOIA exemption. If technically feasible, we will mark the record to indicate the location of the portions we are withholding.

Subpart C—Appealing a FOIA Request

§ 1515.21 Can I appeal CEQ's response to my request?

(a) Yes. You may appeal CEQ's response if you disagree with any determination that CEQ made in responding to your request, including CEQ's determination to deny your request in whole or in part, CEQ's determination to deny you expedited processing, CEQ's determination of how to conduct the search for records, and fee-related determinations.

(b) CEQ must receive your appeal within 90 calendar days of the date on which CEQ notified you of the relevant determination in writing.

(c) You must make your appeal by email to *efoia@ceq.eop.gov.* If you are not able to make your appeal by email, please contact CEQ's FOIA Public Liaison for assistance.

(1) Clearly indicate that you are making an appeal, such as by including ''Freedom of Information Act Appeal'' in the subject line. If your email includes attachments, you also must explain your request in the body of the email, in addition to the attachment.

(2) If you are not able to make your appeal by email, please contact CEQ's FOIA Public Liaison for assistance.

(d) Your appeal must include your request's individualized tracking number and must identify the specific CEQ determinations you are appealing.

(e) If you fail to properly appeal a determination that CEQ made in processing your request, you may lose your right to challenge that determination in Federal court.

§ 1515.22 How will CEQ process my appeal?

(a) CEQ will review the determinations you have appealed and determine if they are consistent with applicable law and policy. CEQ will conduct this review *de novo,* which means that CEQ will not presume that its prior determinations were correct. Whenever reasonably possible, CEQ will assign your appeal to a different official than the one who was responsible for processing your original request.

(b) CEQ will respond to your appeal within 20 working days from the date that CEQ received your appeal.

(c) If CEQ determines to uphold a determination that you have appealed, CEQ's response will:

(1) Include a statement that identifies our reasons for affirming the decision, including any FOIA exemption CEQ applied in determining to affirm our determination to withhold a record or a portion of a record; and

(2) Explain how to challenge our determination by filing a lawsuit in Federal court and how to seek dispute resolution services from the National Archives and Records Administration's Office of Government Information Services.

(d) If CEQ determines to reverse or modify a determination that you have appealed, we will reprocess your request in accordance with the reversed or modified determination, using the procedures set forth at § 1515.15.

(e) CEQ ordinarily will not adjudicate an appeal if the appealed request becomes the subject of litigation.

Subpart D—Fees for FOIA Requests and Appeals

§ 1515.31 Can CEQ charge fees for processing FOIA requests and appeals?

(a) Yes. CEQ may charge fees for processing your FOIA request.

(b) CEQ will determine whether to charge a fee and the amount of the fee by using the rules in this subpart and the Office of Management and Budget's Uniform Freedom of Information Act Fee Schedule and Guidelines, as amended.[1]

(c) CEQ will not charge fees for deciding whether to grant or deny your appeal. If CEQ grants your appeal, we will charge fees for any additional searching, reviewing, or duplication that we carry out as a result of your appeal. For instance, if you appeal our determination of how to conduct the search for records, and we grant your appeal, we will conduct a new search in the manner you requested and will charge you fees accordingly.

§ 1515.32 What is the amount of the fee for processing a request?

(a) CEQ will charge fees equal to:

(1) The basic hourly rate of pay for each employee who participates in searching for records, reviewing records, or duplicating records (including contract employees), multiplied by the total number of hours that the employee worked on your request (rounded to the nearest quarter of an hour), plus 16 percent (to account for employee benefits); plus

(2) The total direct costs that CEQ incurs in searching for, reviewing, or

[1] 52 FR 10016 (Mar. 27, 1987).

duplicating records, such as the cost of operating computers and other electronic equipment, but excluding overhead expenses such as the cost of office space, heating, and lighting; plus

(3) An additional fee equal to the total direct costs of any additional services that you and CEQ agree upon, such as providing multiple copies of a record.

(b) In determining the fee under paragraph (a) of this section, CEQ will use the following guidelines:

(1) ''Searching for records'' is the process of looking for and retrieving the records you requested (including by electronic search) and determining whether individual records contain the information that you seek. CEQ will charge fees for searching for records even if we do not locate any records that respond to your request, or even if we determine not to disclose any of the records that we locate.

(2) ''Reviewing records'' is the process of examining records to determine whether to withhold them, in accordance with § 1515.16, and preparing records for disclosure (for instance, by marking records to indicate which portions CEQ is withholding).

(i) ''Reviewing records'' also includes the time CEQ spends obtaining and considering the views of other government agencies under § 1515.17 and the time CEQ spends obtaining and considering formal objections to disclosure under § 1515.41.

(ii) ''Reviewing records'' does not include time CEQ spends resolving general legal or policy questions regarding the application of exemptions.

(iii) CEQ will charge fees for reviewing records even if we determine not to disclose any of the records that we review.

(3) ''Duplicating records'' is the process of reproducing records, including scanning or printing records as necessary, in order to provide you with a copy.

(4) CEQ may include employee costs and direct costs that another component of the Executive Office of the President incurs in assisting CEQ with your request.

(c) CEQ will not charge fees if the total is less than $25.00, or if we determine that the cost of collecting the fee would exceed the amount of the fee.

(d) If CEQ reasonably determines that you (or other persons acting in concert with you) have submitted multiple requests on related matters for the purpose of avoiding fees, we may aggregate those requests and charge fees accordingly.

§ 1515.33 Are there any exceptions for special requesters?

(a) Yes. CEQ makes the following exceptions for special requesters:

(1) CEQ will not charge you fees for searching for records if you are an educational institution, a noncommercial scientific institution, or a representative of the news media. Otherwise, CEQ will not charge you fees for the first 2 hours of searching for records, unless you are a commercial requester.

(2) CEQ will not charge you fees for reviewing records, unless you are a commercial requester.

(3) CEQ will not charge you fees for the first 100 pages of duplication (or an equivalent cost for duplication in other media), unless you are a commercial requester.

(b) For purposes of applying the exceptions in this section:

(1) You are a representative of a non-commercial scientific institution if your institution operates solely for the purpose of conducting scientific research the results of which are not intended to promote any particular product or industry, and your request is in furtherance of scientific research.

(2) You are a representative of an educational institution if you work for or study at a school that operates a program of scholarly research and your request is in furtherance of scholarly research.

(3) You are a representative of the news media if you or your employer gathers information of potential interest to a segment of the public, uses editorial skills to turn the raw materials into a distinct work, and distributes that work to an audience, and your request is in furtherance of these activities. For the purposes of this paragraph (b), *news* means information that is about events of current interest to the public.

(i) If you are a freelance journalist, CEQ will consider you a representative of the news media if you can demonstrate that you have a solid basis to expect that a news media entity will publish the work to which your request relates, such as a publishing contract or a strong record of past publications.

(ii) If you are a representative of the news media, CEQ will ordinarily presume that your request does not primarily further a commercial interest for purposes of this section and § 1515.34.

(4) You are a commercial requester if you do not qualify as a special requester under paragraph (b)(1), (2), or (3) of this section and your request furthers a commercial, trade, or profit interest or supports litigation in furtherance of those interests.

(c) If you claim to be a representative of a non-commercial scientific institution, an educational institution, or the news media, CEQ may require you to verify your status by providing reasonable documentation, such as a signed letter on official letterhead. If you claim that your request is non-commercial for another reason, CEQ may require you to explain why it is non-commercial.

§ 1515.34 Can I apply for a fee waiver?

(a) Yes. You can apply for a waiver of fees (or a reduction of fees) by submitting a written statement that explains why disclosing the information will meet the conditions in paragraph (c) of this section.

(b) You can apply for a fee waiver at any time before CEQ completes processing your request or an appeal of your request. You can apply for a fee waiver with respect to a part of the records you seek or with respect to all of them.

(c) CEQ will grant you a fee waiver if all of the following conditions are met:

(1) Disclosure of the requested information would shed light on the operations or activities of the Government. The connection between the subject matter of your request, on the one hand, and identifiable operations or activities of the Federal Government, on the other, must be direct and clear, not remote or attenuated.

(2) Disclosure of the requested information would likely contribute significantly to public understanding of those operations or activities, because it would satisfy both of the following criteria:

(i) Disclosure of the requested records would be meaningfully informative about Government operations or activities. (The disclosure of information that already is in the public domain, in either the same or a substantially identical form, would not be meaningfully informative if nothing new would be added to the public's understanding.)

(ii) The disclosure would contribute to the understanding of a reasonably broad audience of persons interested in the subject, as opposed to your own individual understanding. (CEQ will presume that your request satisfies this criterion if you are a representative of the news media; otherwise, we will consider your expertise in the subject area as well as your ability and intention to effectively convey information to the public.)

(3) Disclosure of the requested information would not primarily

advance your commercial, trade, or profit interests.

(d) CEQ will determine whether to grant or deny your request for a fee waiver if and when we would otherwise charge you fees. If we determine prior to that time that we are unlikely to grant your request for a fee waiver, we may notify you of our determination so that you may modify your request.

§ 1515.35 When will CEQ contact me about fee-related matters?

(a) If CEQ determines or estimates that we will charge you more than $25.00 in fees, we will notify you of our determination or estimate, unless you have already told us that you are willing to pay fees equal to or in excess of the amount we have determined or estimated.

(1) If CEQ can only estimate a part of the fee, we will explain that in the notice.

(2) If you are entitled to 2 hours of searching and 100 pages of duplication for free for the reasons described in § 1515.33, CEQ will advise you of this and explain whether we have already provided these entitlements.

(3) CEQ may ask you to tell us the maximum amount you are willing to pay in fees in writing, in which case we will toll the period for processing your request until you respond.

(b) If CEQ determines or estimates that the fee will exceed the maximum amount you previously told us you were willing to pay, we will inquire with you about modifying your request or increasing the maximum, and we will toll the period for processing your request until you respond.

(c) If you have not provided a way to contact you regarding fee matters, or you do not respond to a fee-related inquiry within 30 calendar days, CEQ will deny your request.

§ 1515.36 Do I have to pay fees if CEQ misses the deadline for responding to my request?

CEQ will not charge search fees or duplication fees if we have failed to grant or deny your request within the period described in § 1515.13, unless:

(a) CEQ determines that unusual circumstances are present, as described in § 1515.13; and

(1) CEQ finishes processing your request within 10 working days of the original deadline; or

(2) Your request seeks more than 5,000 pages of records; CEQ has provided you timely written notice of the unusual circumstances; and we have discussed with you how you could effectively limit the scope of your request (or we made at least three attempts in good faith to do so); or

(b) A court grants CEQ additional time to process your request due to exceptional circumstances, and we finish processing your request within the period set forth in a court order.

§ 1515.37 When are fees due and how do I pay them?

(a) Ordinarily, CEQ will bill you for fees at the time we respond to your FOIA request.

(b) When CEQ determines or estimates that the total fee for your request will exceed $250, we may require that you pay all or part of the anticipated fee in advance before we will process (or continue to process) your request.

(c) If you have previously failed to pay a FOIA fee that was due to any Government agency within 30 calendar days of the billing date, CEQ may require you to pay the outstanding fee (including interest) and make an advance payment of the anticipated fee for your current request before we will process (or continue to process) your request.

(d) If CEQ requires you to make an advance payment under this section, we will toll the period for processing your request until we receive the payment. If you do not pay within 30 calendar days, we will deny your request.

(e) CEQ will inform you of how to make a payment at the time that we bill you or require you to make an advance payment.

§ 1515.38 What will CEQ do if I do not promptly pay the fee?

If you do not pay a fee within 30 calendar days of the date of the bill:

(a) CEQ may charge interest, at the rate provided for in 31 U.S.C. 3717, from the 31st day following the date of billing through the date we receive your payment; and

(b) CEQ will follow the provisions of the Debt Collection Act of 1982 (Pub. L. 97–365, 96 Stat. 1749), as amended, including its administrative procedures, which provide for the use of consumer reporting agencies, collection agencies, and offset.

Subpart E—Confidential Commercial Information and Preservation of Records

§ 1515.41 How does CEQ handle confidential commercial information?

(a) At the time that a person or entity outside the Federal Government (a submitter) directly or indirectly provides information to CEQ, the submitter must mark or otherwise designate any part of its submission that it considers in good faith to be confidential commercial information.

(1) *Confidential commercial information* means commercial or financial information that comes within the scope of Exemption 4 of the FOIA, 5 U.S.C. 552(b)(4).

(2) *In good faith* means not frivolously.

(3) The submitter also must explain how long CEQ should consider the information to be confidential commercial information, or else CEQ will presume that the designation expires after 10 years.

(b) Prior to disclosing information in response to a FOIA request, CEQ will provide written notice to the submitter if:

(1) The submitter has properly designated the information as confidential commercial information pursuant to paragraph (a) of this section; or

(2) CEQ requires the submitter's views on whether the information is confidential commercial information.

(c) Each notice under paragraph (b) of this section will either describe the information in question or include a copy of the requested records (or portions of records) containing the information. If the matter involves a large number of submitters, CEQ may post or publish the notice in a place or manner reasonably likely to inform the submitters of the potential disclosure, instead of sending individual notifications.

(d) CEQ will not provide a notice under paragraph (b) of this section if:

(1) CEQ has determined to withhold the information under § 1515.16;

(2) Someone other than CEQ has already lawfully published the information; or

(3) A law other than the FOIA requires CEQ to disclose the information.

(e) When CEQ provides a notice under paragraph (b) of this section:

(1) CEQ will give the submitter a reasonable period in which to reply.

(2) If the submitter objects to CEQ disclosing the information (in whole or in part), the submitter must reply to CEQ with a detailed explanation of which FOIA exemptions it believes apply to the information and why the information comes within the scope of those FOIA exemptions. CEQ will consider the submitter's reply, if any, in determining whether to disclose the information in question in response to a FOIA request.

(3) If the submitter does not reply to CEQ during the period stated in the notice, CEQ will deem the submitter to have no objection to CEQ's disclosure of the information, except that CEQ may consider late replies in its discretion.

(f) If CEQ determines to disclose information over a submitter's objection, CEQ will notify the submitter in writing.

(1) The notice will explain why CEQ disagreed with the submitter's objections and describe the information CEQ will disclose (or include a copy of the relevant agency records in the form in which CEQ will release them).

(2) The notice will indicate the date on which CEQ will disclose the information, which will be a reasonable number of calendar days following the date of the notice unless the FOIA requires us to disclose the information more promptly.

(3) CEQ will also provide the notice described in this paragraph (f) when CEQ determines to disclose information that a submitter designated as confidential commercial information not in good faith.

(g) CEQ will notify a submitter who has designated confidential commercial information pursuant to paragraph (b) of this section if a requester files a lawsuit seeking to compel CEQ to disclose the information under the FOIA.

(h) CEQ will notify the relevant FOIA requester whenever it provides a notice under paragraph (b) or (f) of this section, and whenever a submitter files a lawsuit to prevent the disclosure of information.

PART 1516—PRIVACY ACT IMPLEMENTATION

Sec.

1516.1 What is the purpose of this part?
1516.2 What records does this part cover?
1516.3 When will CEQ disclose records about me?
1516.4 How can I obtain access to CEQ's records about me?
1516.5 How can I get information about how CEQ has used its records about me?
1516.6 How can I ask CEQ to correct my records?
1516.7 How can I appeal CEQ's decision to deny my request to access or correct records about me?
1516.8 Will CEQ charge me a fee for a copy of my records?

Authority: 5 U.S.C. 552a.

§ 1516.1 What is the purpose of this part?

(a) This part explains how the Council on Environmental Quality (CEQ) manages certain records about individuals under the Privacy Act of 1974 (the Privacy Act). You can find the text of the Privacy Act at 5 U.S.C. 552a.

(b) This part explains how you, a citizen or lawful permanent resident of the United States, can request access to records about yourself, request that CEQ amend or correct those records, or request that CEQ inform you about how it has used those records.

§ 1516.2 What records does this part cover?

(a) This part covers any records about you that CEQ maintains in a system of records.

(b) A record is any item, collection, or grouping of information about you that contains your name or another piece of information that identifies you (for example, your social security number).

(c) CEQ maintains your record in a system of records if CEQ:

(1) Maintains, collects, uses, or disseminates the record as part of a larger group of records; and

(2) Organizes the group by individuals' names or by another piece of information that identifies individuals (such as their Social Security numbers).

§ 1516.3 When will CEQ disclose records about me?

CEQ will only disclose records about you that it maintains in system of records if:

(a) You or your authorized representative submit a request for your own records or agree in writing that CEQ may disclose the records to someone else;

(b) CEQ is making the disclosure as part of one of CEQ's routine uses of the records, which CEQ must have previously established in a written public notice; or

(c) The disclosure qualifies for one of the other exceptions described in section 3 of the Privacy Act, which you can find at 5 U.S.C. 552a(b).

§ 1516.4 How can I obtain access to CEQ's records about me?

(a) You can obtain access to CEQ's records about you by submitting a request by email to *efoia@ceq.eop.gov.* If you are not able to make your request by email, please contact CEQ's Office of the General Counsel for assistance by calling 202–395–5750.

(b) Your request must describe the records that you want, in enough detail to enable CEQ to locate them with a reasonable amount of effort.

(1) You should name or describe the system of records you want CEQ to search.

(2) If you are not sure which system of records you are interested in, you may request that CEQ inform you which of its systems of records, if any, contain records about you.

(c) To protect the privacy of your records, CEQ will require you to verify your identity before processing your request. CEQ may require you to:

(1) Provide a statement that contains your name, your current address, and your date and place of birth, and sign the statement before a notary public;

(2) Verify your identity using an electronic authentication process; or

(3) Supply additional information as necessary in order to verify your identity.

(d) CEQ may deny your request if:

(1) CEQ prepared the records you are seeking in reasonable anticipation of a civil action or proceeding (that is, a lawsuit or a similar proceeding); or

(2) The Privacy Act exempts the system containing your records from the requirement that CEQ provide those records upon request.

(e) If CEQ grants your request, you may arrange to review your records in person, obtain a copy from CEQ, or both. If you choose to review your records in person, you may choose one person to accompany you, except that CEQ may first require you to authorize CEQ to discuss your records in that person's presence.

(f) If CEQ denies your request in whole or in part, CEQ will give you the reason for its decision in writing and explain how you can challenge the denial.

§ 1516.5 How can I get information about how CEQ has used its records about me?

You can request information about how CEQ has used its records about you—called an ''accounting of disclosures''—using the same procedures you would use to make a request for access to your records under § 1516.4.

§ 1516.6 How can I ask CEQ to correct my records?

(a) You can request that CEQ correct or update its records about you using the same procedures you would use to make a request for access to your records under § 1516.4.

(b) In your request, you must explain exactly what change you are requesting and point out specific pieces of information in your CEQ records that are inaccurate, irrelevant, outdated, or incomplete.

(c) CEQ will review your request, decide whether to grant or deny it, and inform you of the decision within 10 working days (*i.e.,* excepting Saturdays, Sundays, and Federal holidays).

(d) If CEQ denies your request, CEQ will give you the reason for its decision in writing and explain how you can appeal the denial.

§ 1516.7 How can I appeal CEQ's decision to deny my request to access or correct records about me?

(a) If CEQ denies your request to access or correct CEQ's records about you, you can appeal the decision using the same procedures you would use to

make a request for access to your records under § 1516.4.

(b) In your appeal, you must include a copy of CEQ's decision denying your request and explain exactly why you believe the decision was wrong.

(c) The General Counsel of CEQ (or the General Counsel's designee) will review your appeal, decide whether to grant or deny it, and inform you of the decision within 30 working days. If it is necessary to extend the time for making a decision, the Chair of CEQ (or the Chair's designee) will explain why in writing.

(d) If CEQ's General Counsel (or designee) denies your appeal, you may provide CEQ with a concise statement that explains your disagreement with the decision, and you may bring a civil lawsuit against CEQ.

(1) If CEQ subsequently discloses the disputed record under § 1516.4, we will clearly identify the disputed portion of the record and attach a copy of your statement of disagreement.

(2) For more information about filing a civil lawsuit, see 5 U.S.C. 552a(g)(1).

§ 1516.8 Will CEQ charge me a fee for a copy of my records?

If you request a copy of CEQ's records about you, CEQ may charge you a fee of no more than 10 cents per page, which you must pay before CEQ provides you with a copy of your records.

[FR Doc. 2025–00960 Filed 1–17–25; 8:45 am]

BILLING CODE 3325–FA–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 4

[PS Docket Nos. 21–346, 15–80; ET Docket No. 04–35; FCC 24–5; FR ID 272202]

Resilient Networks; Disruptions to Communications

AGENCY: Federal Communications Commission.

ACTION: Final rule, announcement of compliance date.

SUMMARY: In this document, the Federal Communications Commission (Commission) announces that the Office of Management and Budget (OMB) has approved the information collection associated with the rule adopted in a Second Report and Order and Second Further Notice of Proposed Rulemaking (*Resilient Networks Second Report and Order*) requiring cable communications, wireless, wireline, and interconnected Voice over Internet Protocol (VoIP) providers to report their infrastructure status information in the Disaster Information Reporting System (DIRS) daily when the Commission activates DIRS in geographic areas in which they provide service, even when their reportable infrastructure has not changed compared to the prior day. It also codifies, in the Commission's outage reporting rules, that a subject provider's Networks Outage Reporting System reporting obligations are waived while they report in DIRS and requires that subject providers who report in DIRS provide a single, final DIRS report to the Commission, within 24 hours of the Commission's deactivation of DIRS, that provides the status of their infrastructure identified to the Commission during the DIRS reporting period that has not yet been fully restored at the time of the deactivation. This document is consistent with the *Resilient Networks Second Report and Order,* which states the Commission will publish a document in the **Federal Register** announcing a compliance date for the rule section and revise the rule accordingly.

DATES: Effective February 20, 2025. Compliance with 47 CFR 4.18, published at 89 FR 25535, on April 11, 2024, and 89 FR 32373 on April 26, 2024, is required as of February 20, 2025. In addition, this document removes 47 CFR 4.18(c), which advised that compliance with the new rules would not be required until § 4.18(c) is removed or the Commission announces a compliance date.

FOR FURTHER INFORMATION CONTACT: Logan Bennett, Attorney Advisor, Cybersecurity and Communications Reliability Division, Public Safety and Homeland Security Bureau, at (202) 418–7790 or *logan.bennett@fcc.gov.* For additional information concerning the Paperwork Reduction Act information collection requirements contact Nicole Ongele at (202) 418–2991 or via email: *Nicole.Ongele@fcc.gov.*

SUPPLEMENTARY INFORMATION: This document announces that OMB approved the information collection requirement in § 4.18 on December 5, 2024.

The Commission publishes this document as an announcement of the compliance date of the rules.

If you have any comments on the burden estimates listed in the following, or how the Commission can improve the collections and reduce any burdens caused thereby, please contact Nicole Ongele, Federal Communications Commission, 45 L Street NE, Washington, DC 20554. Please include OMB Control Number, 3060–1033, in your correspondence. The Commission will also accept your comments via email at *PRA@fcc.gov.* To request materials in accessible formats for people with disabilities (Braille, large print, electronic files, audio format), send an email to *fcc504@fcc.gov* or call the Consumer and Governmental Affairs Bureau at (202) 418–0530 (voice).

Synopsis

As required by the Paperwork Reduction Act of 1995 (44 U.S.C. 3507), the FCC is notifying the public that it received final OMB approval as approved with changes on December 5, 2024, for the information collection requirement contained in § 4.18.

Under 5 CFR part 1320, an agency may not conduct or sponsor a collection of information unless it displays a current, valid OMB Control Number.

No person shall be subject to any penalty for failing to comply with a collection of information subject to the Paperwork Reduction Act that does not display a current, valid OMB Control Number.

The foregoing notice is required by the Paperwork Reduction Act of 1995, Public Law 104–13, October 1, 1995, and 44 U.S.C. 3507.

The total annual reporting burdens and costs for the respondents are as follows:

OMB Control Number: 3060–1003.

OMB Approval Date: December 5, 2024.

OMB Expiration Date: December 31, 2027.

Title: Communications Disaster Information Reporting System (DIRS).

Form Number: N/A.

Respondents: Business or other for-profit entities, and State, local or tribal governments, and Federal Government.

Number of Respondents and Responses: 18,306 respondents; 292,896 responses.

Estimated Time per Response: 0.166 hours.

Frequency of Response: Annual and on occasion reporting requirements and recordkeeping requirements.

Obligation to Respond: Mandatory. Statutory authority for this collection of information is contained in sections 1, 4(i), 4(j), 4(n), 201, 214, 218, 251(e)(3), 301, 303(b), 303(g), 303(j), 303(r), 307, 309 316, 332, and 403 of the Communications Act of 1934, as amended, and 47 U.S.C. 151, 154(i)–(j) & (n), 201, 214, 218, 251(e)(3), 301, 303(b), 303(g), 303(r), 307, 309(a), 309(j), 316, 332, 403; sections 2, 3(b), and 6–7 of the Wireless Communications and Public Safety Act of 1999, 47 U.S.C. 615 note, 615, 615a–1, 615b, section 106 of the Twenty First Century Communications and Video Accessibility Act of 2010, 47 U.S.C.

615c, section 506(a) of the Repack Airways Yielding Better Access for Users of Modern Services Act of 2018 (RAY BAUM'S Act), and section 6206 of the Middle Class Tax Relief and Job Creation Act of 2012, 47 U.S.C. 1426.

Total Annual Burden: 48,816 hours.

Total Annual Cost: No Cost.

Needs and Uses: Using DIRS, participating communications companies provide the Commission with their emergency contact information and can subsequently inform the Commission of damage to their infrastructure and facilities, as well as request resources for restoration from the Commission. DIRS respondents provide this information using web-based electronic forms tailored to their types of networks and facilities.

In the Mandated Disaster Information Reporting System Order, 89 FR 32373, April 26, 2024 (previously 89 FR 25535, April 11, 2024), the Commission is requiring cable communications, wireless, wireline and interconnected VoIP providers (Subject Providers) to report their infrastructure status information in DIRS on a daily basis while DIRS is activated. During that time, Subject Providers will not be required to file reports of system outages in the FCC's Network Outage Reporting System (NORS) that arise during the DIRS activation and that are timely reported in DIRS.

The new rules also require Subject Providers to provide a final report to the Commission within 24 hours of the Commission's deactivation of DIRS and the termination of required daily reporting that details the state of their infrastructure at the time of DIRS deactivation and provides an estimated date of resolution of any remaining outages. This mandatory reporting requirement replaces the former voluntary DIRS reporting framework because, after almost two decades of observation, the Commission notes that the United States has been experiencing an increasing number of perilous floods, hurricanes, winter storms, tornados, and wildfires necessitating a more regular activation of DIRS.

List of Subjects in 47 CFR Part 4

Communications equipment, Reporting and recordkeeping requirements, Telecommunications.

Federal Communications Commission.

Marlene Dortch,

Secretary, Office of the Secretary.

Final Rules

For the reasons discussed in the preamble, the Federal Communications Commission amends 47 CFR part 4 as follows:

PART 4—DISRUPTIONS TO COMMUNICATIONS

■ 1. The authority citation for part 4 continues to read as follows:

Authority: 47 U.S.C. 34–39, 151, 154, 155, 157, 201, 251, 307, 316, 615a–1, 1302(a), and 1302(b); 5 U.S.C. 301, and Executive Order no. 10530.

§ 4.18 [Amended]

■ 2. Amend § 4.18 by removing paragraph (c).

BILLING CODE 6712–01–P

Proposed Rules

Federal Register
Vol. 90, No. 12
Tuesday, January 21, 2025

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2025–0008; Project Identifier MCAI–2024–00563–T]

RIN 2120–AA64

Airworthiness Directives; Airbus SAS Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for all Airbus SAS Model A321–251NX, –252NX, –253NX, –271NX, and –272NX airplanes. This proposed AD was prompted by discovery of two bushes that had migrated on the latch shaft of an emergency overwing exit door (OWED) during accomplishment of an inspection on an in-service airplane. This proposed AD would require repetitive detailed inspections (DETs) of the affected parts and, in case of discrepancies, modification of the affected parts, and would prohibit the installation of affected parts, as specified in a European Union Aviation Safety Agency (EASA) AD, which is proposed for incorporation by reference (IBR). The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by March 7, 2025.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *regulations.gov*. Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2025–0008; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

- For EASA material identified in this proposed AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu*; website *easa.europa.eu*. You may find this material on the EASA website at *ad.easa.europa.eu*. It is also available at *regulations.gov* under Docket No. FAA–2025–0008.
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

FOR FURTHER INFORMATION CONTACT: Timothy Dowling, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone 206–231–3667; email *Timothy.P.Dowling@faa.gov*.

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2025–0008; Project Identifier MCAI–2024–00563–T'' at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to *regulations.gov*, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Timothy Dowling, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone 206–231–3667; email *Timothy.P.Dowling@faa.gov*. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

EASA, which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2024–0187, dated September 25, 2024 (EASA AD 2024–0187) (also referred to as the MCAI), to correct an unsafe condition for all Airbus SAS Model A321–251NX, –252NX, –253NX, –271NX, and –272NX airplanes. The MCAI states during accomplishment of an inspection on an in-service airplane, two bushes were found migrated on the latch shaft of an OWED. This condition, if not detected and corrected, could affect the fatigue life of the lower beam of the OWED and, consequently, the structural integrity of the airplane.

The FAA is proposing this AD to address the unsafe condition on these products.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2025–0008.

Material Incorporated by Reference Under 1 CFR Part 51

EASA AD 2024–0187 specifies procedures for repetitive DETs for discrepancies of the affected parts and, in case of discrepancies, modification of discrepant parts. Accomplishment of the modification terminates the repetitive inspections. Discrepancies include any signs of bush migration or deterioration of the sealant between the bush and latch bracket. EASA AD 2024–0187 also prohibits the installation of affected parts. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA is issuing this NPRM after determining that the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Proposed AD Requirements in This NPRM

This proposed AD would require accomplishing the actions specified in EASA AD 2024–0187 described previously, except for any differences identified as exceptions in the regulatory text of this proposed AD.

Explanation of Required Compliance Information

In the FAA's ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use some civil aviation authority (CAA) ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has been coordinating this process with manufacturers and CAAs. As a result, the FAA proposes to incorporate EASA AD 2024–0187 by reference in the FAA final rule. This proposed AD would, therefore, require compliance with EASA AD 2024–0187 in its entirety through that incorporation, except for any differences identified as exceptions in the regulatory text of this proposed AD. Using common terms that are the same as the heading of a particular section in EASA AD 2024–0187 does not mean that operators need comply only with that section. For example, where the AD requirement refers to ''all required actions and compliance times,'' compliance with this AD requirement is not limited to the section titled ''Required Action(s) and Compliance Time(s)'' in EASA AD 2024–0187. Material required by EASA AD 2024–0187 for compliance will be available at *regulations.gov* under Docket No. FAA–2025–0008 after the FAA final rule is published.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 284 airplanes of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
3 work-hours × $85 per hour = $255	$0	$255	$72,420 per inspection cycle.

The FAA estimates the following costs to do any on-condition action that would be required based on the results of any required actions. The FAA has no way of determining the number of aircraft that might need this on-condition action:

ESTIMATED COSTS OF ON-CONDITION ACTIONS

Labor cost	Parts cost	Cost per product
51 work-hours × $85 per hour = $4,335	$2,150	$6,485

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Would not affect intrastate aviation in Alaska, and

(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator,

the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

Airbus SAS: Docket No. FAA–2025–0008; Project Identifier MCAI–2024–00563–T.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by March 7, 2025.

(b) Affected ADs

None.

(c) Applicability

This AD applies to all Airbus SAS Model A321–251NX, –252NX, –253NX, –271NX, and –272NX airplanes, certificated in any category.

(d) Subject

Air Transport Association (ATA) of America Code 52, Doors.

(e) Unsafe Condition

This AD was prompted by discovery of two bushes that had migrated on the latch shaft of an emergency overwing exit door (OWED) during accomplishment of an inspection on an in-service airplane. The FAA is issuing this AD to address bush migration on the latch shaft. The unsafe condition, if not addressed, could affect the fatigue life of the lower beam of the OWED and, consequently, the structural integrity of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraphs (h) and (i) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, European Union Aviation Safety Agency AD 2024–0187, dated September 25, 2024 (EASA AD 2024–0187).

(h) Exceptions to EASA AD 2024–0187

(1) Where EASA AD 2024–0187 refers to its effective date, this AD requires using the effective date of this AD.

(2) Where paragraph (2) of EASA AD 2024–0187 states ''discrepancies, as defined in the ISB,'' this AD requires replacing that text with ''any signs of bush migration or deterioration of the sealant between the bush and latch bracket.''

(3) This AD does not adopt the ''Remarks'' section of EASA AD 2024–0187.

(i) No Reporting Requirement

Although the material referenced in EASA AD 2024–0187 specifies to submit certain information to the manufacturer, this AD does not include that requirement.

(j) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, AIR–520, Continued Operational Safety Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the Continued Operational Safety Branch, send it to the attention of the person identified in paragraph (k) of this AD and email to: *AMOC@faa.gov*. Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, AIR–520, Continued Operational Safety Branch, FAA; or EASA; or Airbus SAS's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(3) *Required for Compliance (RC):* Except as required by paragraph (i) and (j)(2) of this AD, if any material contains procedures or tests that are identified as RC, those procedures and tests must be done to comply with this AD; any procedures or tests that are not identified as RC are recommended. Those procedures and tests that are not identified as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the procedures and tests identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to procedures or tests identified as RC require approval of an AMOC.

(k) Additional Information

For more information about this AD, contact Timothy Dowling, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone 206–231–3667; email *Timothy.P.Dowling@faa.gov*.

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) European Union Aviation Safety Agency (EASA) AD 2024–0187, dated September 25, 2024.

(ii) [Reserved]

(3) For EASA material identified in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu*; website *easa.europa.eu*. You may find this material on the EASA website at *ad.easa.europa.eu*.

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations,* or email *fr.inspection@nara.gov*.

Issued on January 14, 2025.

Suzanne Masterson,

Deputy Director, Integrated Certificate Management Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

FEDERAL TRADE COMMISSION

16 CFR Part 425

[File No. R507001]

Petition for Rulemaking of Central Office of Reform and Efficiency (Negative Option Rule)

AGENCY: Federal Trade Commission.

ACTION: Receipt of petition; request for comment.

SUMMARY: Please take notice that the Federal Trade Commission (''Commission'') received a petition for rulemaking from the Central Office of Reform and Efficiency and has published that petition online at *https://www.regulations.gov.* This petition requests to clarify vague terms for precise enforcement of negative option plan regulations. The Commission invites written comments concerning the petition. Publication of this petition is pursuant to the Commission's Rules of Practice and Procedure and does not affect the legal status of the petition or its final disposition.

DATES: Comments must identify the petition docket number and be filed by February 20, 2025.

ADDRESSES: You may view the petition, identified by docket number FTC–2025–0003, and submit written comments concerning its merits by using the Federal eRulemaking Portal at *https://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit sensitive or confidential information. You may read background documents or comments received at *https://www.regulations.gov* at any time.

FOR FURTHER INFORMATION CONTACT: Amy Bunk (phone: 202–326–3476, email: *abunk@ftc.gov*), Office of General Counsel, Federal Trade Commission,

600 Pennsylvania Avenue NW, Washington, DC 20580.

SUPPLEMENTARY INFORMATION: This petition requests to amend 16 CFR 425.1 to clarify vague terms for precise enforcement of negative option plan regulations.

Pursuant to section 18(a)(1)(B) of the Federal Trade Commission Act, 15 U.S.C. 57a(1)(B), and FTC Rule 1.31(f), 16 CFR 1.31(f), notice is hereby given that the above-captioned petition has been filed with the Secretary of the Commission and has been placed on the public record for a period of thirty (30) days. Any person may submit comments in support of or in opposition to the petition. All timely and responsive comments submitted in connection with this petition will become part of the public record.

The Commission will not consider the petition's merits until after the comment period closes. It may grant or deny the petition in whole or in part, and it may deem the petition insufficient to warrant commencement of a rulemaking proceeding. The purpose of this document is to facilitate public comment on the petition to aid the Commission in determining what, if any, action to take regarding the request contained in the petition. This document is not intended to start, stop, cancel, or otherwise affect rulemaking proceedings in any way.

Because your comment will be placed on the publicly accessible website at *https://www.regulations.gov,* you are solely responsible for making sure your comment does not include any sensitive or confidential information. In particular, your comment should not include any sensitive personal information, such as your or anyone else's Social Security number; date of birth; driver's license number or other state identification number, or foreign country equivalent; passport number; financial account number; or credit or debit card number. You are also solely responsible for making sure your comment does not include any sensitive health information, such as medical records or other individually identifiable health information. In addition, your comment should not include any ''trade secret or any commercial or financial information which . . . is privileged or confidential''—as provided by Section 6(f) of the FTC Act, 15 U.S.C. 46(f), and FTC Rule 4.10(a)(2), 16 CFR 4.10(a)(2).

Authority: 15 U.S.C. 46; 15 U.S.C. 57a; 5 U.S.C. 601 note.

April J. Tabor,

Secretary.

[FR Doc. 2025–00634 Filed 1–17–25; 8:45 am]

BILLING CODE 6750–01–P

CONSUMER PRODUCT SAFETY COMMISSION

16 CFR Parts 1238

[Docket No. CPSC–2018–0015]

Notice of Availability and Request for Comment: Revision to the Voluntary Standard for Stationary Activity Centers

AGENCY: Consumer Product Safety Commission.

ACTION: Notice of availability and request for comment.

SUMMARY: The U.S. Consumer Product Safety Commission's (Commission or CPSC) mandatory rule, Safety Standard for Stationary Activity Centers, incorporates by reference ASTM F2012–18 $^{epsiv:1}$, Standard Consumer Safety Performance Specification for Stationary Activity Centers. ASTM notified the Commission that it has revised this incorporated voluntary standard. CPSC seeks comment on whether the revision improves the safety of stationary activity centers.

DATES: Comments must be received by February 4, 2025.

ADDRESSES: You can submit comments, identified by Docket No. CPSC–2018–0015, by any of the following methods:

Electronic Submissions: Submit electronic comments to the Federal eRulemaking Portal at: *https://www.regulations.gov.* Follow the instructions for submitting comments. Do not submit through this website: confidential business information, trade secret information, or other sensitive or protected information that you do not want to be available to the public. CPSC typically does not accept comments submitted by email, except as described below.

Mail/Hand Delivery/Courier/Confidential Written Submissions: CPSC encourages you to submit electronic comments by using the Federal eRulemaking Portal. You may, however, submit comments by mail, hand delivery, or courier to: Office of the Secretary, Consumer Product Safety Commission, 4330 East-West Highway, Bethesda, MD 20814; telephone: (301) 504–7479. If you wish to submit confidential business information, trade secret information, or other sensitive or protected information that you do not want to be available to the public, you may submit such comments by mail, hand delivery, or courier, or you may email them to: *cpsc-os@cpsc.gov.*

Instructions: All submissions must include the agency name and docket number. CPSC may post all comments without change, including any personal identifiers, contact information, or other personal information provided, to: *https://www.regulations.gov.* Do not submit to this website: confidential business information, trade secret information, or other sensitive or protected information that you do not want to be available to the public. If you wish to submit such information, please submit it according to the instructions for mail/hand delivery/courier/confidential written submissions.

Docket: For access to the docket to read background documents or comments received, go to: *https://www.regulations.gov,* and insert the docket number, CPSC–2018–0015, into the ''Search'' box, and follow the prompts.

FOR FURTHER INFORMATION CONTACT: Bradley Gordon, Project Manager, Division of Mechanical and Combustion Engineering, U.S. Consumer Product Safety Commission, 5 Research Place, Rockville, MD 20850; telephone: (301) 987–2099; email: *bgordon@cpsc.gov.*

SUPPLEMENTARY INFORMATION: Section 104(b) of the Consumer Product Safety Improvement Act of 2008 (CPSIA) requires the Commission to adopt mandatory standards for durable infant or toddler products. 15 U.S.C. 2056a(b)(1). Mandatory standards must be ''substantially the same as'' voluntary standards, or they may be ''more stringent'' than the applicable voluntary standards, if the Commission determines that more stringent requirements would further reduce the risk of injury associated with the products. *Id.* Mandatory standards may be based, in whole or in part, on a voluntary standard.

Section 104(b)(4)(B) of the CPSIA specifies the process for when a voluntary standards organization revises a standard that the Commission incorporated by reference under section 104(b)(1). First, the voluntary standards organization must notify the Commission of the revision. Once the Commission receives this notification, the Commission may reject or accept the revised standard. To reject a revised standard, the Commission must notify the voluntary standards organization within 90 days of receiving the notice of revision that the Commission has determined that the revised standard

does not improve the safety of the consumer product and that CPSC is retaining the existing standard. If the Commission does not take this action, the revised voluntary standard will be considered a consumer product safety standard issued under section 9 of the Consumer Product Safety Act (CPSA) (15 U.S.C. 2058), effective 180 days after the Commission received notification of the revision (or a later date specified by the Commission in the **Federal Register**). 15 U.S.C. 2056a(b)(4)(B).

Under this authority, the Commission issued a mandatory safety rule that incorporates by reference ASTM F2012–18 epsiv;[1], Safety Standard for Stationary Activity Centers, codified at 16 CFR part 1238 (84 FR 28205, June. 18, 2019). The ASTM standard incorporated by CPSC defines a stationary activity center as ''a freestanding product intended to remain stationary that enables a sitting or standing occupant whose torso is completely surrounded by the product to walk, rock, play, spin or bounce, or all of these, within a limited range of motion.'' 16 CFR 1238.2. This mandatory standard includes performance requirements and test methods, as well as requirements for warning labels and instructions, to address hazards to children.

On January 6, 2025, ASTM notified the Commission that it had approved and published another revised version of the voluntary standard, ASTM F2012–2024. CPSC is assessing the revised voluntary standard to determine, consistent with section 104(b)(4)(B) of the CPSIA, its effect on the safety of stationary activity centers subject to 16 CFR part 1238. The Commission invites public comment to inform CPSC staff's assessment and subsequent Commission consideration of the revisions in ASTM F2012–2024.[1]

The currently incorporated voluntary standard (ASTM F2012–18ε[1]) and the revised voluntary standard (ASTM F2012–24) are available for review in several ways. A read-only copy of the existing, incorporated standard is available for viewing, at no cost, on the ASTM website at: *https://www.astm.org/READINGLIBRARY/.* A read-only copy of the revised standard (ASTM F2012–24), including red-lined versions that identify the changes from the 2018 versions to the 2024 version, is available, at no cost, on ASTM's website at: *https://www.astm.org/CPSC.htm.* Interested parties can also download copies of the standards by purchasing them from ASTM International, 100 Barr Harbor Drive, P.O. Box C700, West Conshohocken, PA 19428–2959; phone: 610–832–9585; *https://www.astm.org.* Alternatively, interested parties can schedule an appointment to inspect copies of the standards at CPSC's Office of the Secretary, U.S. Consumer Product Safety Commission, 4330 East-West Highway, Bethesda, MD 20814, telephone: 301–504–7479.

Comments must be received by February 4, 2025. Because of the short statutory time frame Congress established for the Commission to consider revised voluntary standards under section 104(b)(4) of the CPSIA, CPSC will not consider comments received after this date.

Alberta E. Mills,

Secretary, Consumer Product Safety Commission.

[FR Doc. 2025–01277 Filed 1–17–25; 8:45 am]

BILLING CODE 6355–01–P

[1] On January 10, 2025, the Commission voted (4–1) to publish this notice.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

18 CFR Part 40

[Docket No. RM25–3–000]

Reliability Standards for Frequency and Voltage Protection Settings and Ride-Through for Inverter-Based Resources

AGENCY: Federal Energy Regulatory Commission.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Federal Energy Regulatory Commission (Commission) proposes to approve proposed Reliability Standards PRC–024–4 (Frequency and Voltage Protection Settings for Synchronous Generators, Type 1 and Type 2 Wind Resources, and Synchronous Condensers) and PRC–029–1 (Frequency and Voltage Ride-through Requirements for Inverter-Based Resources), which the North American Electric Reliability Corporation submitted in response to Commission directives. The Commission seeks comments on all aspects of the proposed approval.

DATES: Comments are due March 24, 2025.

ADDRESSES: Comments, identified by docket number, may be filed in the following ways. Electronic filing through *http://www.ferc.gov,* is preferred.

- *Electronic Filing:* Documents must be filed in acceptable native applications and print-to-PDF, but not in scanned or picture format.
- For those unable to file electronically, comments may be filed by USPS mail or by hand (including courier) delivery.

○ *Mail via U.S. Postal Service Only:* Addressed to: Federal Energy Regulatory Commission, Secretary of the Commission, 888 First Street, NE, Washington, DC 20426.

○ *Hand (including courier) delivery:* Deliver to: Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT:

Syed Ahmad (Technical Information), Office of Electric Reliability, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426, (202) 502 8718, *Syed.Ahmad@ferc.gov*

Felicia West (Legal Information), Office of General Counsel, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426, (202) 502 8948, *Felicia.West@ferc.gov*

Hampden T. Macbeth (Legal Information), Office of General Counsel, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426, (202) 502 8957, *Hampden.Macbeth@ferc.gov*

SUPPLEMENTARY INFORMATION:

1. Pursuant to section 215(d)(2) of the Federal Power Act (FPA),[1] the Commission proposes to approve the addition of the newly defined term ''Ride-through'' to the North American Electric Reliability Corporation (NERC) Glossary of Terms and to approve the proposed Protection and Control (PRC) Reliability Standards PRC–024–4 (Frequency and Voltage Protection Settings for Synchronous Generators, Type 1 and Type 2 Wind Resources, and Synchronous Condensers) [2] and PRC–029–1 (Frequency and Voltage Ride-through Requirements for Inverter-Based Resources (IBR)). We also propose to approve the associated violation risk factors, violation severity levels,

[1] 16 U.S.C. 824o(d)(2).

[2] Type 1 and type 2 wind resources are not inverter-based wind turbine generators. Rather, type 1 and type 2 wind resources rely on passive induction generators with limited ability to control active power, reactive power, or voltage. NERC, *Reliability Guideline: Power Plant Model Verification for Inverter-Based Resources,* vii, ix (Sept. 2018), *https://www.nerc.com/comm/RSTC_Reliability_Guidelines/PPMV_for_Inverter-Based_Resources.pdf.*

implementation plans, and effective dates for proposed Reliability Standards PRC–024–4 and PRC–029–1, as well as to approve the retirement of currently effective Reliability Standard PRC–024–3.

2. In Order No. 901, the Commission directed NERC to develop new or modified Reliability Standards addressing, among other things, reliability gaps associated with IBRs tripping or entering momentary cessation in aggregate.[3] Specifically, Order No. 901 directed NERC to submit by November 4, 2024 new or modified Reliability Standards that establish IBR performance requirements, including requirements addressing frequency and voltage ride through, post disturbance ramp rates, phase lock loop synchronization, and other known causes of IBR tripping or momentary cessation.[4]

3. NERC submitted the proposed Reliability Standards in response to Commission directives in Order No. 901.[5] The purpose of proposed Reliability Standard PRC–024–4 ''is to ensure that protection of synchronous generators, type 1 and type 2 wind resources, and synchronous condensers do not cause tripping during defined frequency and voltage excursions in support'' of the Bulk-Power System.'' [6] The purpose of proposed Reliability Standard PRC–029–1 is to ''ensure that IBRs Ride-through disturbances to support the Bulk-Power System . . . during and after defined frequency and voltage excursions.'' [7] We seek comments on all aspects of the proposed approvals.

4. We propose to find that proposed Reliability Standards PRC–024–4 and PRC–029–1 are consistent with and responsive to applicable directives in Order No. 901 in requiring generator owners of IBRs to ride through frequency and voltage excursions, such as a fault on the transmission or sub-transmission system.

5. In addition, we propose to direct NERC to develop and submit two informational filings 12 months and 24 months after the conclusion of NERC's proposed 12-month exemption request period for existing IBRs. Proposed Reliability Standard PRC–029–1 includes a provision that allows existing IBRs that are already in operation when proposed Reliability Standard PRC–029–1 goes into effect (legacy IBRs) to obtain an exemption to the voltage and frequency Ride-through requirements if hardware replacements would be necessary to comply. The Commission seeks to understand the volume of exemptions, the circumstances in which entities have invoked the exemption provision, and ultimately to understand what if any effect the exemption provision has on the efficacy of Reliability Standard PRC–029–1. Therefore, we propose to direct that NERC submit two informational filings that provide details on requested exemptions from generator owners of legacy IBRs for frequency and/or voltage Ride-through requirements.

I. Background

A. Section 215 and Mandatory Reliability Standards

6. Section 215 of the FPA provides that the Commission may certify an Electric Reliability Organization (ERO), the purpose of which is to develop mandatory and enforceable Reliability Standards, subject to Commission review and approval.[8] Reliability Standards may be enforced by the ERO, subject to Commission oversight, or by the Commission independently.[9] Pursuant to section 215 of the FPA, the Commission established a process to select and certify an ERO,[10] and subsequently certified NERC.[11]

B. Order No. 901

7. In Order No. 901, the Commission explained, among other things, that the majority of installed IBRs use grid-following inverters, which can track grid state parameters (*e.g.,* voltage angle) in milliseconds and react nearly instantaneously to changing grid conditions.[12] The Commission then explained that, as found by multiple NERC reports,[13] some IBRs ''are not configured or programmed to support grid voltage and frequency in the event of a system disturbance, and, as a result, will reduce power output, exhibit momentary cessation, or trip in response to variations in system voltage or frequency.'' [14]

8. In addition, the Commission explained that IBRs across the Bulk-Power System exhibit common mode failures that are amplified when IBRs act in the aggregate.[15] ''IBRs that enter momentary cessation may act in aggregate and cause a reduction in power output far in excess of any individual IBR's impact on the Bulk-Power System.'' [16] The Commission emphasized that the anticipated growth of IBRs would exacerbate these reliability concerns.[17]

9. Therefore, the Commission directed NERC to develop new or modified Reliability Standards pertaining to IBRs in four areas: (1) data sharing; (2) model validation; (3) planning and operational studies; and (4) performance requirements.[18] The Commission required NERC to submit by November 4, 2024 new or modified Reliability Standards that require registered IBR generator owners and operators to use appropriate settings ''to ride through frequency and voltage system disturbances and that permit IBR tripping only to protect the IBR equipment in scenarios similar to when synchronous generation resources use tripping as protection from internal faults.'' [19]

10. The Commission mandated that the new or modified ride through Reliability Standards must require registered IBRs to continue to inject current and perform frequency support during Bulk-Power System disturbances. Additionally, the new or modified Reliability Standards must assure that registered IBR generator owners and operators continue to inject energy into the electric grid during disturbances, within an established no-trip zone. Finally, the Commission directed that the new or modified Reliability Standards must establish requirements for frequency and voltage ride through, post disturbance ramp rates, phase lock loop synchronization, and other known causes of IBR tripping or momentary cessation.[20]

11. The Commission also recognized that some older IBRs may have hardware limitations that IBR owners would have to physically replace and

may have settings and configurations that IBR owners could not modify through software updates and in such circumstances could not implement voltage ride through performance requirements. Thus, the Commission directed NERC to ''determine whether the new or modified Reliability Standards should provide for a limited and documented exemption for certain registered IBRs from voltage ride through performance requirements.'' [21] The Commission added that if NERC determined that an exemption is appropriate, the new or modified Reliability Standards should mitigate the reliability impacts to the Bulk-Power System of such an exemption.[22]

II. NERC Petition

12. On November 4, 2024,[23] in response to Order No. 901, NERC submitted for Commission approval the proposed definition of the term Ride-through for the NERC Glossary of Terms, proposed Reliability Standards PRC–024–4 and PRC–029–1, the associated violation risk factors and violation severity levels, implementation plans and effective dates for Reliability Standards PRC–024–4 and PRC–029–1, and the retirement of currently effective Reliability Standard PRC–024–3.[24] NERC asserts that proposed Reliability Standards PRC–024–4 and PRC–029–1 would ensure that applicable Bulk-Power System-connected resources Ride-through system disturbances, avoiding reliability risks associated with unnecessary tripping and momentary cessation.[25] According to NERC, proposed Reliability Standard PRC–029–1 addresses 13 of the Order No. 901 directives.[26]

A. Addition of Defined Term Ride-Through to NERC Glossary of Terms

13. NERC states that proposed Reliability Standard PRC–029–1 uses the term Ride-through, which NERC proposes to include in the NERC Glossary of Terms. NERC explains that the term Ride-through would mean that ''the plant/facility remains connected and continues to operate through voltage or frequency system disturbances.'' [27]

B. Proposed Reliability Standard PRC–024–4

14. NERC explains that proposed Reliability Standard PRC–024–4 removes language relating to IBR functionality in Requirements R1, R2, R3, and R4 because IBR performance requirements are included in proposed Reliability Standard PRC–029–1. Instead, proposed Reliability Standard PRC–024–4 would maintain capability-based requirements for synchronous generators, synchronous condensers, and type 1 and type 2 wind resources.[28] NERC also notes that, consistent with the proposed definition for IBRs in the NERC Glossary of Terms,[29] type 1 and type 2 wind resources, which operate as asynchronous resources and lack modern controllers capable of riding through system events as they do not have a power electronic device, are not considered IBRs.[30] Moreover, NERC explains that, because synchronous units do not require performance-based requirements to Ride-through system disturbances, proposed Reliability Standard PRC–024–4 would continue to address Ride-through compatible frequency and voltage protection setting ranges for synchronous generators, synchronous condensers, and type 1 and type 2 wind resources.[31]

15. NERC also includes minor edits in proposed Reliability Standard PRC–024–4 to maintain the Standard's frequency and voltage protection capability-based requirements for synchronous resources. Specifically, NERC modified section 4.1.1 to restrict the applicability of proposed Reliability Standard PRC–024–4 to synchronous generators and type 1 and type 2 wind resources, and NERC added section 4.2.2 to include synchronous condensers and associated equipment as applicable facilities.[32] Further, NERC modified Requirements R1, R2, R3, and R4 to apply to transmission owners that apply frequency, voltage, and volts per hertz protection for their synchronous condensers.

C. Proposed Reliability Standard PRC–029–1

16. NERC explains that proposed Reliability Standard PRC–029–1 would address directives in Order No. 901 by establishing frequency and voltage Ride-through performance requirements for generator owners of IBRs.

1. Proposed Requirement R1

17. Under proposed Requirement R1 each generator owner of a NERC-registered IBR must ''ensure the design and operation is such that each IBR meets or exceeds Ride-through requirements, in accordance with the 'must Ride-through zone' as specified in Attachment 1'' of proposed Reliability Standard PRC–029–1, except in the following four conditions specified by the Standard: [33]

- The IBR needed to electrically disconnect in order to clear a fault;
- The voltage at the high-side of the main power transformer went outside an accepted hardware limitation, in accordance with Requirement R4;
- The instantaneous positive sequence voltage phase angle change is more than 25 electrical degrees at the high-side of the main power transformer and is initiated by a non-fault switching event on the transmission system; or
- The Volts per Hz (V/Hz) at the high-side of the main power transformer exceed 1.1 per unit for longer than 45 seconds or exceed 1.18 per unit for longer than 2 seconds.[34]

18. NERC explains that it adopted the Institute of Electrical and Electronics Engineers (IEEE) standard 2800–2022's (IEEE 2800–2022) terminology for ''must

[21] *Id.* P 193.

[22] *Id.* P 199.

[23] Following the issuance of Order No. 901, NERC submitted an informational filing that included its Order No. 901 Work Plan with four key milestones for meeting the directives of Order No. 901. Milestone 1: submit Work Plan (completed Jan. 17, 2024). Milestone 2: submit new or modified Reliability Standards to address performance requirements and post-event performance validation for registered IBRs (completed with NERC's filing of three petitions on Nov. 4, 2024). Milestone 3: submit new or modified Reliability Standards to address data sharing and model validation by Nov. 4, 2025. Milestone 4: submit new or modified Reliability Standards to address planning and operational studies requirements for all IBRs by Nov. 4, 2026. NERC, Informational Filing Regarding the Development of Reliability Standards Responsive to Order No. 901, Docket No. RM22–12–000, at 6 (filed Jan. 17, 2024).

[24] NERC Petition at 2–3, 5. Proposed Reliability Standards PRC–024–4 and PRC–029–1 are not attached to this notice of proposed rulemaking. The proposed Reliability Standards are available on the Commission's eLibrary document retrieval system in Docket No. RM25–3–000 and on the NERC website, *www.nerc.com*.

[25] *Id.* at 1, 19.

[26] *Id.* Ex. D (Standards Development Consideration of Directives from FERC Order No. 901).

[27] *Id.* at 23.

[28] *Id.* at 15.

[29] On November 4, 2024, NERC concurrently filed along with other Milestone 2 Reliability Standards, a petition with the Commission for approval of its proposed definition for IBR as:

A plant/facility consisting of individual devices that are capable of exporting Real Power through a power electronic interface(s) such as an inverter or converter, and that are operated together as a single resource at a common point of interconnection to the electric system. Examples include, but are not limited to, plants/facilities with solar photovoltaic (PV), Type 3 and Type 4 wind, battery energy storage system (BESS), and fuel cell devices.

NERC, Petition for Approval of a New Term ''Inverter-Based Resource'' Used in NERC Reliability Standards, Docket No. RD25–1–000, at 1 (filed Nov. 4, 2024) (IBR Definition), currently pending before the Commission.

[34] *Id.* at 26.

ride-through zones,'' which are defined in terms of voltage and frequency magnitude and time duration.[35] NERC explains that it considered but ultimately rejected Ride-through criteria more stringent than set forth in IEEE 2800–2022 due to industry comments raised during the IBR technical conference conveyed by NERC.[36] But, NERC adds, the must Ride-through zones in proposed Requirement R1 are ''more similar'' to IEEE 2800–2022's Ride-through zones, are more robust than currently effective PRC–024–3, and are sufficient to address the recommendations NERC identified in response to reports and assessments analyzing IBR loss of power events.[37]

19. NERC asserts that proposed Requirement R1 is responsive to the directive that NERC develop performance-based Reliability Standards that require IBRs to ride through voltage system disturbances and require post-disturbance ramp rates to return to pre-disturbance levels.[38] Similarly, NERC avers that proposed Requirement R1 is consistent with the directive that IBRs inject current and perform frequency support during a disturbance by requiring IBRs remain connected and fulfill control and regulation functions to Ride-through a system disturbance.[39] Additionally, NERC asserts that the provision in proposed Requirement R1 requiring IBRs to meet or exceed Ride-through requirements in Attachment 1 of proposed Reliability Standard PRC–029–1 that restricts the use of momentary cessation satisfies the directive to prohibit momentary cessation in the no-trip zone during disturbances.[40]

2. Proposed Requirement R2

20. Under proposed Requirement R2, each generator owner of a NERC-registered IBR must adhere to voltage Ride-through performance criteria during system disturbances unless a documented hardware limitation exists in accordance with Requirement R4.[41] Similar to Requirement R1, NERC asserts that proposed Requirement R2 satisfies the following directives: (1) that NERC develop performance-based Reliability Standards that require IBRs to ride through voltage system disturbances; and (2) that IBRs inject current and perform frequency support during a disturbance by requiring IBRs remain connected and fulfill control and regulation functions to Ride-through a system disturbance.[42]

3. Proposed Requirement R3

21. Under proposed Requirement R3, each generator owner of a NERC-registered IBR must ensure that its IBR adheres to Ride-through requirements during frequency excursion events by continuing to exchange current and remain electrically connected in accordance with the ''must ride-through zone'' as specified in the proposed Reliability Standard's Attachment 2 and while the ''absolute rate of change of frequency (RoCoF) magnitude is less than or equal to 5 Hz/second, unless a documented hardware limitation exists in accordance with Requirement R4.'' [43] NERC explains that proposed Requirement R3 contains a wider frequency Ride-through band than presently exists in Reliability Standard PRC–024–3 and is consistent with IEEE 2800–2022.[44]

22. NERC asserts that proposed Requirement R3 is responsive to the directive that NERC develop performance-based Reliability Standards that require IBRs to ride through frequency system disturbances.[45] Additionally, NERC contends that proposed Requirement R3 satisfies the directive that IBRs inject current and perform frequency support during a disturbance by requiring IBRs remain connected and fulfill control and regulation functions to Ride-through a system disturbance.[46]

4. Proposed Requirement R4

23. Proposed Requirement R4 would allow each generator owner of an existing legacy IBR, *i.e.,* one in service by the effective date of PRC–029–1, to obtain an exemption to the voltage and frequency Ride-through requirements if the generator owner would need hardware replacements to comply with Requirements R1 through R3. Specifically, Requirement R4 provides that ''[e]ach Generator Owner identifying an IBR that is in-service by the effective date of PRC–029–1, has known hardware limitations that prevent the IBR from meeting Ride-through criteria as detailed in Requirements R1–R3, and requires an exemption from specific Ride-through criteria shall . . . [d]ocument information supporting the identified hardware limitation. . . .'' [47] Each generator owner of an IBR must provide the information (unless it is considered proprietary by the original equipment manufacturer) to each planning coordinator, transmission planner, transmission operator, and reliability coordinator in the footprint in which the legacy IBR is located.[48] Moreover, the generator owner must submit documentation to the relevant Compliance Enforcement Authority—typically a Regional Entity—that ''must accept that all aspects of the documentation specified in proposed Requirement R4 have been provided by the Generator Owner before an exemption can [be] granted.'' [49] According to NERC, this last requirement ''would ensure that NERC has visibility into each hardware exemption that is granted and that [it has] been accurately limited to the particular limitation of the hardware.'' [50]

24. NERC explains that it determined that an exemption process for generator owners of legacy IBRs for voltage and frequency performance requirements is necessary. In its petition, NERC expressed concern that hardware limitations would lead entities to take units offline to retrofit IBRs or risk noncompliance and could determine that the economically prudent course of action is to retire the units.[51] The implementation plan gives generator owners 12 months to request an exemption following the effective date of the Reliability Standard, after which NERC will not accept further exemption requests.[52] If the hardware causing the limitation is replaced later, the generator owner must communicate this information to the planning coordinator, transmission planner, reliability coordinator, and transmission operator within 90 days of the hardware replacement and comply with Requirements R1 through R3.[53] Further,

[35] *Id.* at 27.

[36] Following the failure of the third ballot on proposed Reliability Standard PRC–024–4 and proposed Reliability Standard PRC–029–1, NERC convened a public technical conference under section 321 of the NERC Rules of Procedure to discuss issues surrounding the Order No. 901 directives. *Id.* at 7. Section 321 of the NERC Rules of Procedure allows the NERC Board of Trustees to take special actions when a ballot pool has ''failed to approve a proposed Reliability Standard that contains a provision to adequately address a specific matter identified in a directive issued'' by the Commission. NERC, *Rules of Procedure,* Sec. 321 (Nov. 28, 2023), *https://www.nerc.com/AboutNERC/RulesOfProcedure/NERC%20ROP%20effective%2020240627_with%20appendicies_signed.pdf.*

[53] *Id.* at 41.

NERC explains that the exemptions must be specific and limited to the voltage or frequency bands and associated duration that cannot be satisfied or as to the number of cumulative voltage deviations within a ten-second period that the equipment can Ride-through if it is less than four deviations within any ten-second period.[54]

25. NERC asserts that proposed Requirement R4 meets the directive that NERC determine whether the new or modified Reliability Standards provide an opportunity for certain generator owners of IBRs that are currently in operation and unable to meet performance requirements to request an exemption from voltage ride-through performance requirements.[55] NERC determined that a frequency exemption was also necessary and appropriate because of hardware-based capability limitations for a significant amount of installed IBRs, a concern that was raised during the IBR technical conference convened by NERC.[56]

26. Regarding the Commission directive to NERC to develop new or modified Reliability Standards to mitigate the reliability impacts to the Bulk-Power System of approved exemptions, NERC claims that the reliability impacts of voltage and frequency ride-through exemptions are mitigated by existing Reliability Standards that address the responsibilities of transmission planners, planning coordinators, reliability coordinators, and transmission operators.[57] Moreover, under Milestone 4 of the Order No. 901 Work Plan,[58] NERC indicates that it ''will develop Reliability Standards that will specifically require evaluations that include accurately-modeled performance capabilities of IBRs, inclusive of any documented Ride-through criteria exemption accepted through the process detailed in proposed Reliability [Standard] PRC–029–1 Requirement R4, and that evaluate for reliability impacts'' on the Bulk-Power System.[59]

[59] NERC Petition at 46.

III. Discussion

27. Pursuant to section 215(d)(2) of the FPA, the Commission proposes to approve the proposed definition of Ride-through and proposed Reliability Standards PRC–024–4 and PRC–029–1 as just, reasonable, not unduly discriminatory or preferential, and in the public interest. We also propose to approve the associated violation risk factors, violation severity levels, implementation plans, and effective dates of Reliability Standards PRC–024–4 and PRC–029–1, as well as to approve the retirement of currently effective Reliability Standard PRC–024–3.

28. We propose to find that the proposed Reliability Standards are consistent with the performance requirement directives of Order No. 901 as generator owners of NERC-registered IBRs will be subject to the Ride-through performance requirements of proposed Reliability Standard PRC–029–1 unless exempted under that standard. The Commission seeks comments on all aspects of these proposals.

A. Proposal To Approve the Addition of Defined Term Ride-Through to NERC Glossary of Terms

29. NERC's proposed definition of the term Ride-through for inclusion in the NERC Glossary of Terms should provide a clear and consistent understanding of the term across all Reliability Standards, including proposed new or modified Reliability Standards filed with the Commission in response to various Order No. 901 directives. We therefore propose to approve the proposed definition of the term Ride-through for inclusion in the NERC Glossary of Terms.

B. Proposal To Approve Proposed Reliability Standard PRC–024–4

30. Proposed Reliability Standard PRC–024–4 should maintain the Reliability Standard's frequency and voltage protection setting requirements as applicable to only synchronous generators, type 1 and 2 wind resources, and synchronous condensers. Specifically, synchronous generators, type 1 and 2 wind resources, and synchronous condensers will have to have voltage and frequency protection set to avoid tripping during defined frequency and voltage excursions. We believe that it is reasonable to remove references to IBRs in proposed Reliability Standard PRC–024–4 as IBRs would be subject to the Ride-through requirements in proposed Reliability Standard PRC–029–1.

31. Therefore, we propose to approve proposed Reliability Standard PRC–024–4 as just, reasonable, not unduly discriminatory or preferential, and in the public interest. We seek comments on all aspects of our proposed approval of proposed Reliability Standard PRC–024–4.

C. Proposal To Approve Proposed Reliability Standard PRC–029–1

32. We propose to find that the proposed Reliability Standard PRC–029–1 responds to the relevant Order No. 901 Ride-through performance requirement directives. The Ride-through provisions of proposed Requirements R1 through R3 would require that each generator owner of a NERC-registered IBR ensure that their IBR continues to inject current and perform frequency support during a Bulk-Power System disturbance and avoids momentary cessation in the no-trip zone during a disturbance by meeting or exceeding the Ride-through requirements. Further, these proposed provisions establish specific requirements for frequency and voltage Ride-through, post-disturbance ramp rates, phase lock loop synchronization, and other known causes of IBR tripping or momentary cessation. The Ride-through requirements of proposed Requirements R1 through R3 should strengthen the reliability of the Bulk-Power System by ensuring that IBRs are designed and operated to remain connected to the Bulk-Power system and continue to inject real and/or reactive current during system disturbances.

33. The Commission proposes to find that NERC reasonably determined that an exemption process for generator owners of legacy IBRs for voltage and frequency performance requirements as set out in Requirement R4 is appropriate based on industry input during the standards drafting process, as explained in the NERC Petition.[60] Regarding whether NERC met the Order No. 901 directive to develop new or modified Reliability Standards to mitigate the reliability impacts to the Bulk-Power System of such exemptions, we will defer our determination until after NERC files Milestone 4 Reliability Standards with the Commission by November 4, 2026. As described by NERC's petition, NERC is planning to meet this mitigation directive with its anticipated approach to Milestone 4 Reliability Standards that will require accurate modeling of IBRs' performance capabilities, including accepted Ride-through criteria exemptions, and

[60] *Id.* at 38–41.

evaluate reliability impacts on the Bulk-Power System.[61]

34. The Commission seeks comments on its proposed approval of proposed Reliability Standard PRC–029–1. While we seek comments on all aspects of the proposed Reliability Standard, we are particularly interested in comments and supporting materials, where applicable, on concerns regarding: (1) the IBR performance requirement set forth in Requirement R1; (2) the absolute RoCoF in Requirement R3; and (3) the adequacy of NERC's proposed exemption provision in Requirement R4 as it pertains to both projects in service and those under contract, but not yet in-service as of the effective date of Reliability Standard PRC–029–1. Comments on whether the exemption provision is too broad or too narrow should address the risks and benefits of expanding or narrowing the exemption provision and should provide detailed, quantified, and fact-based support for their position.

D. Proposed Directive for Informational Filings

35. Finally, we propose to direct NERC to develop and submit two informational filings pertaining to requests for exemption by generator owners of legacy IBRs from frequency and/or voltage Ride-through requirements. While we understand the appropriateness of a limited exemption for certain legacy equipment that may otherwise not be able to comply with the proposed Ride-through requirements, we are concerned about the practical implications of the exemptions as proposed. Specifically, if too many generators are exempt from the frequency and/or voltage Ride-through requirements, proposed Reliability Standard PRC–029–1 may fail to address the reliability gaps associated with IBRs tripping or entering momentary cessation in aggregate that it is intended to address.[62] Accordingly, we propose that 12 months and 24 months after the conclusion of the 12-month exemption request period, NERC submit an informational filing with the following data for (1) each Interconnection and (2) each reliability coordinator area (within that interconnection) within the United States:

- Total number of IBRs for which NERC-registered generator owners will be subject to compliance with Reliability Standard PRC–029–1;
- Aggregated megawatts (MW) capacity of IBRs for which NERC-registered generator owners will be subject to compliance with Reliability Standard PRC–029–1;
- Total number of IBRs for which NERC-registered generator owners requested exemptions;
- Aggregated MW capacity of IBRs for which NERC-registered generator owners requested exemptions;
- Total number of IBRs for which NERC-registered generator owners were granted exemptions;
- Aggregated MW capacity of IBRs for which NERC-registered generator owners were granted exemptions;
- Total number of granted exemptions by exemption type (voltage and/or frequency);
- Aggregated MW capacity of granted exemptions by exemption type (voltage and/or frequency);
- Total number of granted exemptions by IBR type (wind, solar PV, BESS, fuel cell); and
- Aggregated MW capacity of granted exemptions by IBR type (wind, solar PV, BESS, fuel cell).

Additionally, we propose that each informational filing include an analysis of the reasons that entities provided for exemptions (both granted and denied),[63] an evaluation of the efficacy of the exemption process, and any recommendations to modify either the substance or procedural aspects.

IV. Information Collection Statement

36. The FERC–725G information collection requirements are subject to review by the Office of Management and Budget (OMB) under section 3507(d) of the Paperwork Reduction Act of 1995. OMB's regulations require approval of certain information collection requirements imposed by agency rules. Upon approval of a collection of information, OMB will assign an OMB control number and expiration date. Respondents subject to the filing requirements will not be penalized for failing to respond to these collections of information unless the collections of information display a valid OMB control number. The Commission solicits comments on the need for this information, whether the information will have practical utility, the accuracy of the burden estimates, ways to enhance the quality, utility, and clarity of the information to be collected or retained, and any suggested methods for minimizing respondents' burden, including the use of automated information techniques.

37. The Commission bases its paperwork burden estimates on the additional paperwork burden presented by the proposed Reliability Standards PRC–024–4 and PRC–029–1, as modified and new Reliability Standards, respectively, and the proposed directive for NERC to submit two informational filings related to Ride-through exemption requests.[64] Reliability Standards are objective-based and allow entities to choose compliance approaches best tailored to their systems. The NERC Compliance Registry, as of September 2024, identifies the following unique U.S. entities that are subject to mandatory compliance with Reliability Standard PRC–024–4: 1,230 generator owners will have an additional compliance burden. It is estimated that there will be no additional compliance burden for transmission owners that have synchronous condensers, as that data is not included in the NERC Compliance Registry, and transmission owners are already applicable to PRC–024–4. The estimated unique U.S. entities subject to Reliability Standard PRC–029–1 compliance are based on numbers supplied by NERC, with 591 registered generator owners that own bulk electric system (BES) solar and wind facilities and a median of 755 generator owners that own non-BES facilities.[65] Based on these assumptions, we estimate the following reporting burden:

[61] *Id.* at 46.

[62] *See, e.g.,* Order No. 901, 185 FERC ¶ 61,042 at PP 1, 13, 190.

[63] NERC Petition at 40 (explaining that under Requirement R4.2.2, NERC will work with regional entities to evaluate exemption submissions in a fair and consistent manner across the ERO Enterprise and NERC will monitor the disposition of requests as the proposed standard is implemented).

[64] *See supra* P 35.

[65] NERC estimates that 591 BES IBRs and a range of 588 to 922 non-BES IBRs, with a median of 755, will be subject to proposed Reliability Standard PRC–029–1 and the other Milestone 2 Reliability Standards that were filed in Docket Nos. RD25–2–000 and RD25–3–000. *See* NERC, Petition For Approval of Proposed Distribution Monitoring Reliability Standards PRC–028–1 and PRC–002–5, Docket No. RD25–2–000, at 41 n.60 (filed Nov. 4, 2024) (description of NERC estimates of BES IBRs and the range of non-BES IBRs that would be subject to compliance with proposed Reliability Standard PRC–028–1).

PROPOSED CHANGES IN BURDEN PRC–024–4 DOCKET NO. RM25–3–000

Reliability standard	Type and number of entity [66]	Number of annual responses per entity	Total number of responses	Average number of burden hours per response [67]	Total burden hours
	(1)	(2)	(1) * (2) = (3)	(4)	(3) * (4) = (5)
Annual Collection PRC024–4 FERC–725G					
Annual review and record retention	1,230 (GO)	1	1,230	20 hrs. $70.67/hr	24,600 hrs. $1,738,482
Total for PRC–024–4			1,230	20 hrs. $70.67/hr	24,600 hrs. $1,738,482

PROPOSED BURDEN PRC–029–1 DOCKET NO. RM25–3–000

Reliability standard	Type and number of entity [68]	Number of annual responses per entity	Total number of responses	Average number of burden hours per response [69]	Total burden hours
	(1)	(2)	(1) * (2) = (3)	(4)	(3) * (4) = (5)
Annual Collection PRC–029–1 FERC–725G					
Annual review and record retention	591 (BES IBR GO) 755 (Non-BES IBR GO)	1 1	591 755	40 hrs. $70.67/hr 80 hrs. $70.67/hr	23,640 hrs. $1,670,638.80 60,400 hrs. $4,268,468.00
Total for PRC–024–4			1,346		84,040 hrs. $5,939,106.80

38. The responses and burden hours for Years 1–3 will total respectively as follows:

- Year 1–3 each: for proposed Reliability Standard PRC–024–4 will be 1,230 responses; 24,600 hours; and
- Year 1–3 each: for proposed Reliability Standard PRC–029–1 will be 1,346 responses; 84,040 hours.
- The annual cost burden for each year One to Three is $1,738,482 for proposed Reliability Standard PRC–024–4; and $5,939,106.80 for proposed Reliability Standard PRC–029–1.

39. *Title:* Mandatory Reliability Standards, Revised Protection and Control Reliability Standards

Action: Revision to FERC–725G information collection.

OMB Control No.: 1902–0281.

Respondents: Businesses or other for-profit institutions; not-for-profit institutions.

Frequency of Responses: On Occasion.

Necessity of the Information: This notice of proposed rulemaking proposes to approve the requested modifications to Reliability Standards pertaining to the protection and control of the Bulk-Power System. As discussed above, the Commission proposes to approve proposed Reliability Standards PRC 024–4 and PRC–029–1 pursuant to section 215(d)(2) of the FPA because it establishes frequency and voltage Ride-through requirements for IBRs. Additionally, the Commission proposes to direct NERC to file two informational filings with the Commission on Ride-through exemption requests.

Internal Review: The Commission has reviewed the proposed Reliability Standards and made a determination that its action is necessary to implement section 215 of the FPA.

Interested persons may obtain information on the reporting requirements by contacting the following: Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426 [Attention: Kayla Williams, Office of the Executive Director, email: *DataClearance@ferc.gov,* phone: (202) 502–8663, fax: (202) 273–0873].

40. For submitting comments concerning the collection(s) of information and the associated burden estimate(s), please send your comments to the Commission, and to the Office of Management and Budget, Office of Information and Regulatory Affairs, Washington, DC 20503 [Attention: Desk Officer for the Federal Energy Regulatory Commission, phone: (202) 395–4638, fax: (202) 395–7285]. For security reasons, comments to OMB should be submitted by email to: *oira_submission@omb.eop.gov.* Comments submitted to OMB should include Docket Number RM25–3–000 and OMB Control Number 1902–0281.

V. Environmental Analysis

41. The Commission is required to prepare an Environmental Assessment or an Environmental Impact Statement for any action that may have a significant adverse effect on the human environment.[70] The Commission has categorically excluded certain actions from this requirement as not having a significant effect on the human environment. Included in the exclusion are rules that are clarifying, corrective, or procedural or that do not substantially change the effect of the regulations being amended.[71] The actions proposed herein falls within this categorical exclusion in the Commission's regulations.

[66] The ''Number of Entity'' data is compiled from the September 24, 2024, edition of the NERC Compliance Registry.

[67] The estimated hourly cost (salary plus benefits) is a combination of the following categories from the Bureau of Labor Statistics (BLS) website, *http://www.bls.gov/oes/current/naics2_22.htm:* 75% of the average of an Electrical Engineer (17–2071) $79.31/hr., 79.31 × .75 = 59.4825 ($59.48-rounded) ($59.48/hour); and 25% of an Information and Record Clerk (43–4199) $44.74/hr., $44.74 × .25% = 11.185 ($11.19 rounded) ($11.19/hour), for a total ($59.48+$11.19 = $70.67/hour).

[68] The ''Number of Entity'' data is compiled from NERC's petition for approval of proposed Reliability Standard PRC–028–1 in Docket No. RD25–2–000. NERC, Petition For Approval of Proposed Distribution Monitoring Reliability Standards PRC–028–1 and PRC–002–5, Docket No. RD25–2–000, at 41 n.60 (filed Nov. 4, 2024).

[69] The estimated hourly cost (salary plus benefits) is a combination of the following categories from the Bureau of Labor Statistics (BLS) website, *http://www.bls.gov/oes/current/naics2_22.htm:* 75% of the average of an Electrical Engineer (17–2071) $79.31/hr., 79.31 × .75 = 59.4825 ($59.48-rounded) ($59.48/hour); and 25% of an Information and Record Clerk (43–4199) $44.74/hr., $44.74 ×.25% = 11.185 ($11.19 rounded) ($11.19/hour), for a total ($59.48+$11.19 = $70.67/hour).

[70] *Regulations Implementing the National Environmental Policy Act,* Order No. 486, 52 FR 47897 (Dec. 17, 1987), FERC Stats. & Regs. ¶ 30,783 (1987) (cross-referenced at 41 FERC ¶ 61,284).

[71] 18 CFR 380.4(a)(2)(ii).

VI. Regulatory Flexibility Act Certification

42. The Regulatory Flexibility Act of 1980 (RFA)[72] generally requires a description and analysis of proposed rules that will have significant economic impact on a substantial number of small entities. The Small Business Administration's (SBA) Office of Size Standards develops the numerical definition of a small business.[73] The SBA revised its size standard for electric utilities (effective March 17, 2023) to a standard based on the number of employees, including affiliates (from the prior standard based on megawatt hour sales).[74]

43. Proposed Reliability Standard PRC–024–4 (included in FERC–725G) will apply to approximately 1,230 generator owners and proposed Reliability Standard PRC–029–1 (included in FERC–725G) will apply to approximately 1,346 BES/IBR combined generator owners and non-generator owners in the United States.[75] Pursuant to SBA regulations, the employment threshold for generator owners is 950 employees. We estimate that the percentage of employees that are considered small to be 74.59% based on the North American Industry Classification System 221121 code (Electric Bulk Power Generation) and that the annual cost for each entity will be $1,413.40 for each generator owner and $2,826.80 for each BES IBR generator owner and $5,653.60 for each Non-BES IBR generator owner.

44. We view this as a minimal economic impact for each entity. Accordingly, we certify that the proposed Reliability Standards PRC–024–4 and PRC–029–1 will not have a significant economic impact on a substantial number of small entities. Thus, no regulatory flexibility analysis is required.

VII. Comment Procedures

45. The Commission invites interested persons to submit comments on the matters and issues proposed in this notice to be adopted, including any related matters or alternative proposals that commenters may wish to discuss. Comments are due March 24, 2025. Comments must refer to Docket No. RM25–3–000, and must include the commenter's name, the organization they represent, if applicable, and their address in their comments. All comments will be placed in the Commission's public files and may be viewed, printed, or downloaded remotely as described in the Document Availability section below. Commenters on this proposal are not required to serve copies of their comments on other commenters.

46. The Commission encourages comments to be filed electronically via the eFiling link on the Commission's website at *http://www.ferc.gov.* The Commission accepts most standard word processing formats. Documents created electronically using word processing software must be filed in native applications or print-to-PDF format and not in a scanned format. Commenters filing electronically do not need to make a paper filing.

47. Commenters that are not able to file comments electronically may file an original of their comment by USPS mail or by courier-or other delivery services. For submission sent via USPS only, filings should be mailed to: Federal Energy Regulatory Commission, Office of the Secretary, 888 First Street NE, Washington, DC 20426. Submission of filings other than by USPS should be delivered to: Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, MD 20852.

VIII. Document Availability

48. In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://www.ferc.gov*).

49. From the Commission's Home Page on the internet, this information is available on eLibrary. RIN 1685–AA02

Trade and National Security Actions and Low-Value Shipments

AGENCY: U.S. Customs and Border Protection, Department of Homeland Security; Department of the Treasury.

ACTION: Notice of proposed rulemaking.

SUMMARY: This document proposes amendments to the U.S. Customs and Border Protection (CBP) regulations pertaining to the administrative exemption for certain low-value shipments not exceeding $800. Specifically, CBP proposes to make merchandise that is subject to specified trade or national security actions ineligible for this administrative exemption and to require that certain shipments claiming this exemption provide the 10-digit Harmonized Tariff Schedule of the United States (HTSUS) classification of the merchandise.

DATES: Comments must be received by March 24, 2025.

ADDRESSES: Please submit comments, identified by docket number, by the following method:

• *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments via docket number USCBP–2025–0003.

Instructions: All submissions received must include the agency name and docket number for this rulemaking. All comments received will be posted without change to *https://www.regulations.gov,* including any personal information provided. Comments must be submitted in English, or an English translation must be provided.

Docket: For access to the docket to read background documents or comments received, go to *https://www.regulations.gov.* In accordance with 5 U.S.C. 553(b)(4), a summary of this rule may also be found at *https://www.regulations.gov.*

Proposed Amendments to the CBP Regulations

I. Public Participation

Interested persons are invited to participate in this rulemaking by submitting written data, views, or arguments on all aspects of this notice of proposed rulemaking (NPRM). U.S. Customs and Border Protection (CBP) also invites comments that relate to the economic, environmental, or federalism effects that might result from this proposed rule. Comments that will provide the most assistance to CBP will reference a specific portion of the NPRM, explain the reason for any recommended change, and include data, information, argument, or authority that supports such recommended change.

Regulatory Alternatives

This rulemaking proposes to make imported merchandise subject to certain trade or national security actions ineligible for the administrative exemption found in 19 U.S.C. 1321(a)(2)(C) and to require that certain shipments claiming this exemption provide the 10-digit Harmonized Tariff Schedule of the United States (HTSUS) classification of the merchandise. However, in addition to comments on the above proposals, CBP is also requesting comments on whether these proposals should be extended to bona-fide gifts valued at $100 or less ($200, if the gift is from certain island possessions) sent from persons in foreign countries to persons in the United States and/or certain personal or household articles valued at $200 or less accompanying persons arriving in the United States pursuant to 19 U.S.C. 1321(a)(2)(A) and 19 U.S.C. 1321(a)(2)(B).

Moreover, given the unique nature of the international mail shipments in the postal environment as set forth in Section II.D below, CBP is specifically seeking public comments as to the effects of this proposed rulemaking on those shipments into the United States.

II. Background and Purpose

A. Administrative Exemption From Duties and Taxes

Section 321(a)(2) of the Tariff Act of 1930 (19 U.S.C. 1321(a)(2)), as amended by the Trade Facilitation and Trade Enforcement Act of 2015 (TFTEA), Section 901, Public Law 114–125, 130 Stat. 122 (Section 321), authorizes administrative exemptions from duty and tax imposed on or by reason of importation for three categories of imported articles, when the amount of revenue to be collected is disproportionate to the expense and inconvenience caused to the government. These categories include: bona-fide gifts valued at $100 or less ($200, if the gift is from certain island possessions) sent from persons in foreign countries to persons in the United States; certain personal or household articles valued at $200 or less accompanying persons arriving in the United States; and other imported articles when the value of the article is $800 or less.[1] These exemptions are subject to the condition that the aggregate fair retail value in the country of shipment of articles imported by one person on one day and exempted from duty cannot exceed the authorized amounts. Also, these exemptions are not to be granted if merchandise covered by a single order or contract is forwarded in separate lots to obtain the benefit of duty- and tax-free entry. Finally, these exemptions are also not to be granted in circumstances where regulations prescribe exceptions or limitations on eligibility for these exemptions. Pursuant to Section 321(b), such regulations may be prescribed whenever such action is consistent with the purpose of Section 321(a), or, when ''necessary for any reason to protect the revenue or to prevent unlawful importations.'' All further references to ''the administrative exemption'' in this document will be to the administrative exemption found in 19 U.S.C. 1321(a)(2)(C), unless specified otherwise.

All merchandise imported into the customs territory of the United States is subject to entry and clearance procedures, unless specifically excepted. These procedures ensure the proper appraisement, valuation, and tariff classification of the merchandise for the purpose of collecting the lawful amount of duties owed, as well as compliance with all other laws and regulations administered and enforced by CBP. Different procedures are provided for the entry and clearance of merchandise depending upon the value of the merchandise. Shipments of merchandise valued at $2,500 or less and entered pursuant to 19 U.S.C. 1498(a)(1)(A) are referred to as ''informal entries.'' Specifically, 19 U.S.C. 1498(a)(1)(A) authorizes the Secretary of the Treasury[2] to ''prescribe rules and regulations for the declaration and entry of merchandise when the aggregate value of the shipment does not exceed an amount specified . . . by regulation, but not more than $2,500.'' Shipments that are eligible for the administrative exemptions at 19 U.S.C. 1321(a)(2) are a subset of the informal entries covered by 19 U.S.C. 1498(a)(1)(A). The statutory framework of 19 U.S.C. 1498 authorizes, in effect, a less formal entry process than under 19 U.S.C. 1484 (referred to as ''formal entries''). As a result, informal entry procedures are less burdensome and complex than the formal entry procedures. These simplified procedures reduce the overall administrative burden on informal entry filers. The regulations pertaining to entry of merchandise claiming the exemptions in 19 U.S.C. 1321(a)(2) are found throughout various parts of title 19 of the Code of Federal Regulations (CFR). The informal entry procedures for low-value shipments claiming the administrative exemption under 19 U.S.C. 1321(a)(2)(C) are specifically found in Part 143, subpart C, which cross-reference other regulations establishing eligibility requirements. Pursuant to the current text of 19 CFR 143.23(j), such eligible merchandise must be entered by providing certain information on a bill of lading or a manifest listing each bill. However, the requirements for shipments imported by

[1] 19 U.S.C. 1321(a)(2). Shipments entered under this exemption are also commonly referred to as ''*de minimis*'' shipments.

[2] In accordance with Treasury Order 100–20, the Secretary of the Treasury delegated to the Secretary of Homeland Security the authority related to the customs revenue functions vested in the Secretary of the Treasury as set forth in 6 U.S.C. 212 and 215, subject to certain exceptions.

mail are found in 19 CFR part 145, and the requirements for shipments imported by express consignment operators and carriers are covered by 19 CFR part 128.[3]

Over the last 10 years, the number of shipments entering the United States claiming the administrative exemption has increased significantly, from approximately 139 million a year to over one billion a year. This exponential increase in shipments claiming the administrative exemption creates challenges to CBP's effective enforcement of U.S. trade laws, health and safety requirements, intellectual property rights, and consumer protection rules. Low-value e-commerce shipments pose the same health, safety, and security risks as higher-value shipments. Transnational criminal organizations and other bad actors perceive low-value shipments as less likely to be interdicted because these types of shipments are not subject to the more extensive formal entry procedures. This has resulted in attempts to enter illicit goods, such as illicit fentanyl, into the country through these types of shipments. Of particular concern are the large volume of daily importations and the more limited data regarding low-value shipments which make it increasingly difficult for CBP to target and block illicit synthetic drugs such as fentanyl and synthetic drug raw materials and related manufacturing equipment from entering the country. These developments have also created challenges with respect to the enforcement of trade actions designed to address threats to national security, unreasonable or discriminatory trade practices, and injury to domestic industry caused by import surges. In response to the significant changes in the trade environment and supply chains, substantial increases in the volume of shipments, and advancements to CBP's technological capabilities, CBP is proposing two regulatory actions to modify the regulations governing the administrative exemption.[4]

First, on [DATE], CBP published an NPRM regarding the entry of certain low-value shipments eligible for the administrative exemption under Section 321(a)(2)(C). *See* 90 FR 3048 The NPRM, titled ''Entry of Low-Value Shipments'' (ELVS NPRM) proposed various amendments to the CBP regulations pertaining to the entry of low-value shipments.

The existing informal entry requirements for low-value shipments are less rigorous than those required for other entry types, and often do not provide sufficient information for CBP to accurately identify the merchandise in the shipment and the parties involved in its sale and purchase. Furthermore, novel and complex e-commerce business models have expanded the traditional array of parties involved in the import transaction. New or infrequent importers often possess less familiarity with U.S. customs laws and regulations, which can lead to the attempted importation of non-compliant goods.

The ELVS NPRM proposed the creation of a new entry process for entering low-value shipments, referred to as the ''enhanced entry process,'' which would allow CBP to target high-risk shipments more effectively. The enhanced entry process is set forth in the ELVS NPRM as proposed § 143.23(l) and would require the provision of the 10-digit HTSUS classification of the merchandise. The ELVS NPRM also proposed revisions to the current process for entering low-value shipments, referred to as the ''basic entry process,'' to require additional data elements that would assist CBP in verifying eligibility for duty- and tax-free entry. The basic entry process is set forth in the ELVS NPRM as proposed § 143.23(k).

Second, this rulemaking proposes to prescribe exceptions to eligibility for the administrative exemption under Section 321(a)(2)(C). These exceptions, described in more detail below, are consistent with the purpose of Section 321(a), and necessary to protect the revenue and prevent unlawful importations. In addition, this rulemaking proposes to require a 10-digit HTSUS classification for shipments entered using the basic entry process claiming the administrative exemption under Section 321(a)(2)(C).

B. Specified Trade and National Security Actions

The President has statutory authority to impose tariffs and establish quotas (among other actions) to address threats to national security, and serious injury or threat thereof to domestic industry, while the U.S. Trade Representative has statutory authority to take action to address unreasonable or discriminatory acts, policies, or practices, subject to any direction by the President. This rulemaking focuses on actions taken under Section 232,[5] Section 201,[6] and Section 301[7] and will refer to these actions collectively as ''specified trade or national security actions.'' Currently, merchandise provided for in any absolute or tariff-rate quota, whether the quota is open or closed, and merchandise subject to antidumping and countervailing duties are not eligible for the administrative exemption under Section 321(a)(2)(C).[8] However, merchandise subject to specified trade or national security actions imposing an *ad valorem* tariff is currently eligible to claim this administrative exemption.

Section 232 authorizes the President to adjust the imports of an article and its derivatives, if the Secretary of Commerce finds that the article is being imported into the United States in such quantities or under such circumstances as to threaten to impair the national security.[9] For example, beginning in 2018, the President imposed *ad valorem* tariffs, absolute quotas, and tariff-rate quotas on steel mill articles and on aluminum articles from almost all countries, pursuant to this authority.[10]

Section 201 provides that, if the U.S. International Trade Commission determines that a good is being imported into the United States in such increased quantities as to be a substantial cause of serious injury, or the threat thereof, to the domestic industry producing a good like or directly competitive with the imported good, then the President is authorized to take all appropriate and feasible action within his power which the President determines will facilitate efforts by the domestic industry to make a positive adjustment to import competition (*i.e.,* safeguards).[11] These actions include imposing temporary duties and other trade measures. For example, in 2018, the United States imposed an *ad valorem* tariff and tariff-rate quota on certain crystalline silicon photovoltaic

[3] The procedures for low-value shipments imported by mail are not implicated in this proposed rulemaking.

[10] *See* 83 FR 11625 (March 15, 2018) and 83 FR 11619 (March 15, 2018), as amended. Effective February 8, 2022, the United States also imposed *ad valorem* tariffs on imports of aluminum derivative articles and steel derivative articles into the United States under section 232 of the Trade Expansion Act of 1962. *See* 85 FR 5281 (January 24, 2020), as amended.

[11] 19 U.S.C. 2251, *et seq.*

cells, whether partially or fully assembled into other products, pursuant to this authority.[12]

Section 301 allows USTR to address, among others, unreasonable or discriminatory acts, policies, or practices that burden or restrict U.S. commerce. Actions may include suspending trade agreement concessions or imposing import restrictions, subject to the specific direction of the President, if USTR determines that a trading partner of the United States is violating trade agreement commitments or engaging in discriminatory or unreasonable practices that burden or restrict U.S. commerce.[13] For example, the United States has imposed an additional *ad valorem* tariff on many products from China because China employs a series of technology transfer-related acts, policies, and practices that are unreasonable or discriminatory and burden or restrict U.S. commerce pursuant to this authority.[14]

Collectively, these trade or national security statutes empower the President, or USTR, in consultation with designated agencies, to enforce U.S. trade or national security objectives with respect to certain imported merchandise by, among other actions, imposing an *ad valorem* tariff in addition to the standard applicable duty rate.

C. Excepting Merchandise Subject to Specified Trade or National Security Actions From Eligibility for the Administrative Exemption

To uphold the objectives of the specified trade or national security actions discussed above, and consistent with the purpose of Section 321(a), to protect the revenue, and prevent unlawful importations, this rulemaking proposes to except merchandise subject to an *ad valorem* tariff imposed under Section 232, 201, or 301 from eligibility for the exemption under Section 321(a)(2)(C). The Secretary of the Treasury is authorized by 19 U.S.C. 1321(b) to prescribe such exceptions to any administrative exemption.

These specified trade or national security actions are meant to prevent specific harms such as the threat of certain imports to national security or domestic industries or to respond to discriminatory or unreasonable practices that restrict or burden U.S. commerce. Thus, any Government expense involved in the collection of these additional duties is outweighed by the fact that continuing to exempt these goods would undermine the statutory scheme for trade or national security actions generally and the effectiveness of specific actions that are currently in force. Further, creating this exception would ensure that administrative exemption eligibility for products covered by the specified trade or national security actions is consistent with treatment under other U.S. trade laws. For instance, products covered by antidumping or countervailing duty orders are already excepted from eligibility for the administrative exemption under 19 U.S.C. 1321(a)(2)(C).[15]

Merchandise that would be ineligible to claim the administrative exemption under this rulemaking may continue to be entered under an appropriate formal or informal entry process to ensure collection of any applicable tariff. For purposes of ensuring merchandise subject to additional tariffs imposed pursuant to a specified trade or national security action is not accorded duty-free entry under Section 321(a)(2)(C), this rulemaking additionally proposes to require a 10-digit HTSUS classification for merchandise entered under the proposed ''basic entry process'' claiming an exemption under Section 321(a)(2)(C), in addition to the proposed requirement to provide the 10-digit HTSUS classification for merchandise entered under the ''enhanced entry process'' that was proposed in the ELVS NRPM. Provision of the 10-digit HTSUS classification at entry enables CBP to determine whether the merchandise is subject to *ad valorem* tariffs as a result of a specified trade or national security action, and therefore whether the merchandise is eligible for the administrative exemption.

The proposed exception applies to all merchandise identified in a specified trade or national security action imposing an *ad valorem* tariff, even if the merchandise is accorded an exclusion from the *ad valorem* tariff imposed by a specific action.[16] CBP's proposal does not affect exclusions for purposes of determining whether an *ad valorem* trade or national security action tariff is applicable at entry. Merchandise accorded an exclusion may continue to be entered under an appropriate formal or informal entry process without being subject to the *ad valorem* tariff, that would otherwise apply had the exclusion not been accorded, consistent with all applicable requirements. Products that are not subject to the *ad valorem* tariff imposed by a specified trade or national security action, as detailed in each action, remain eligible for the exemption under Section 321(a)(2)(C). For example, in recently issued Presidential Proclamation 10782, imports of aluminum from Mexico are not subject to the *ad valorem* tariff imposed pursuant to Section 232 if the article meets specified criteria.[17]

The proposal to make merchandise subject to specified trade or national security actions ineligible for the administrative exemption under Section 321(a)(2)(C) is consistent with the purpose of Section 321(a) and is necessary to protect the revenue. The rate of duty for merchandise subject to additional Section 232, 201 and 301 duties is higher than the rate applicable to merchandise subject to regular rates of duty (that is, most-favored-nation rates or rates under trade agreements or preference programs). Currently, the standard duty rate assessed on imported merchandise, on average, is less than 2 percent for goods subject to regular rates of duty. In comparison, the additional Section 301 *ad valorem* tariff rate assessed on certain goods from China currently ranges from 7.5 percent to 100 percent, the Section 201 tariff rate on certain solar cells is an additional 14.25 percent, and the Section 232 tariff rate is an additional 10 percent for aluminum and an additional 25 percent for steel mill articles.

As described in the Regulatory Flexibility Act section, when the standard duty rate is combined with the tariff rate applied to the aggregate value of imported merchandise subject to an *ad valorem* tariff under Section 232, 201 and 301, the total amount of additional revenue to be collected on merchandise subject to these trade or national security actions is projected to range between $5.9 billion and $7.8 billion in 2025. Considering the rates of duties and the aggregate trade volume of affected imports, CBP anticipates that the amount of additional revenue to be collected under the proposed exception would substantially outweigh the expense and inconvenience to the U.S. Government of collecting the duties.

[12] *See, e.g.,* 83 FR 3541 (January 23, 2018). For additional information on actions taken under Section 201, please refer to *https://ustr.gov/issue-areas/enforcement/section-201-investigations* (last visited November 7, 2024).

[13] 19 U.S.C. 2411–2420.

[14] *See, e.g.,* 83 FR 28710 (June 20, 2018). For additional information on actions taken under Section 301, please refer to: *https://ustr.gov/issue-areas/enforcement/section-301-investigations/tariff-actions* (last visited November 7, 2024).

[15] *See* 19 U.S.C. 1671h; 19 U.S.C. 1673g (requiring CBP to collect antidumping and countervailing duty deposits for ''*all* entries, or withdrawals from warehouse, for consumption of merchandise subject to [an antidumping or countervailing duty] order'') (emphasis added).

[16] CBP notes that merchandise subject to either an absolute or tariff-rate quota is already ineligible for the administrative exemption pursuant to 19 CFR 10.153(g). As a result, CBP is not discussing these quotas further in this NPRM.

[17] *See* 89 FR 57339 (July 10, 2024).

Thus, making goods subject to *ad valorem* tariffs pursuant to these trade or national security actions ineligible for the administrative exemption is consistent with the purpose of Section 321(a), because the amount of revenue to be collected on goods subject to *ad valorem* tariffs pursuant to these trade or national security actions is substantial enough to outweigh the expense and inconvenience to the government of processing the low-value shipments. Moreover, creating an exception for goods subject to *ad valorem* tariffs pursuant to these trade or national security actions protects the revenue because failing to collect these duties represents a substantial loss of revenue to the U.S. Government.

The above proposal also serves to prevent unlawful importations. As noted above, over the last 10 years, the number of shipments entering the United States claiming the administrative exemption has increased significantly, from approximately 139 million a year in 2015 to over one billion a year in 2024. Even though these shipments have a low value, this significant increase in volume makes it more challenging for CBP to conduct targeting for purposes of, among other things, identifying violations of U.S. trade laws, health and safety requirements, intellectual property rights, and consumer protection rules, and to block illicit synthetic drugs such as fentanyl and synthetic drug raw materials and related manufacturing equipment from entering the country. Such enforcement challenges put American consumers at risk. CBP anticipates that excepting merchandise subject to *ad valorem* tariffs pursuant to specified trade or national security actions from eligibility for the administrative exemption will result in a decrease in the overall volume of shipments claiming this exemption. CBP expects that shipments of ineligible merchandise will be consolidated into larger shipments and entered under an appropriate formal or informal entry process, resulting in decreased overall volume of shipments.

D. Unique Considerations for Applicability to the International Mail Shipments

While CBP has included international mail in the scope of this proposed rulemaking, CBP seeks public comments that address the operational feasibility in the international mail environment. The U.S. Postal Service (USPS) has committed to provide comments as part of the rulemaking record. This approach seeks to determine whether there are sufficient reasons why postal shipments can and should be treated differently, and those differences are best addressed as the rulemaking moves forward with input from the USPS and the public.

The reasons postal shipments may require a different approach in the proposed rulemaking include the following: (1) the USPS is subject to universal service obligations to deliver international mail and other constraints under both international agreements and domestic law, which create unique challenges to the application of the proposed rule to international mail; (2) international mail operates differently from other modes of global commerce, including that international postal shipments do not benefit from an end-to-end process as do commercial shipments; (3) the overwhelming majority of international mail consists of low-value shipments and the USPS typically cannot collect duties directly from the foreign mailers with whom it has no relationship; and (4) as a result of these operational considerations, the application of this proposed rulemaking may create substantial unrecoverable financial costs for the USPS, which would be inconsistent with the legal obligation of the USPS to operate in a financially self-sufficient manner.

Further, if CBP decides to exclude international mail from the scope of a final rule, the agency would intend to address the trade remedies and national security loophole for de minimis goods through additional rulemaking tailored to the unique operational and legal characteristics of the international mail environment.

III. Discussion of Proposed Amendments

This rulemaking proposes amendments to provisions found in 19 CFR parts 10, 128, and 143. Because CBP has also proposed amendments to the same provisions in the ELVS NPRM, the regulatory amendments proposed in this section are amendments of the regulations as proposed in the ELVS NPRM. See 90 FR 3048.[18]

CBP proposes an amendment to 19 CFR part 10 that would make merchandise subject to an *ad valorem* tariff under Sections 232, 201 and 301 ineligible for the exemption under Section 321(a)(2)(C). Part 10, among other things, implements in CBP regulations the statutorily authorized administrative exemption for low-value shipments, and lists the conditions that must be met to qualify for the exemption. Section 10.153 identifies exceptions to the administrative exemption. The ELVS NPRM proposes to amend § 10.153 by adding a new paragraph (i), which tracks the existing statutory exception to eligibility for merchandise subject to antidumping and countervailing duties. In this present notice of proposed rulemaking, CBP proposes to further amend this section to add an additional new paragraph (j), providing that imported merchandise subject to actions imposing additional duties pursuant to Section 232, Section 201, or Section 301 are also ineligible for the administrative exemption.

CBP additionally proposes amendments to 19 CFR parts 128 and 143, to require a 10-digit HTSUS classification for all merchandise entered under the proposed basic entry process as described in the ELVS NPRM. As a result of these proposed amendments, a 10-digit HTSUS classification would be required under both the proposed basic and enhanced entry process described in the ELVS NPRM. By requiring a 10-digit HTSUS classification for entries using either the proposed basic or enhanced process, CBP will have additional data needed to corroborate the product description that would also be required for all basic and enhanced entries. This HTSUS classification assists CBP in determining eligibility for the administrative exemption, including whether merchandise is subject to specified trade or national security actions, as well as assisting with administration and enforcement more generally. Therefore, CBP is proposing to amend 19 CFR part 128, by adding this classification requirement to § 128.21(a)(4)(ii), as proposed in the ELVS NPRM, and part 143, by adding this requirement to § 143.23(k), as proposed in the ELVS NPRM.

Part 128, subpart C, sets forth requirements and procedures for the clearance of imported merchandise carried by express consignment operators and carriers, including couriers, under special procedures. Current § 128.21(a) lists the manifest information required in advance of the arrival of all express consignment cargo. The ELVS NPRM proposed to amend § 128.21(a)(4)(ii) to explain that the HTSUS subheading number would not be required for low-value shipments entered under the basic entry process in § 143.23(k). However, given that this notice of proposed rulemaking now proposes to extend this HTSUS subheading number reporting requirement to the basic entry process, CBP now proposes to amend § 128.21(a)(4)(ii) to make clear that the

[18] CBP will take into account all public comments on the ELVS NPRM and will adjust this rulemaking's language as appropriate.

HTSUS subheading number is required for shipments claiming the administrative exemption entered under either the basic entry process, as proposed in § 143.23(k) of the ELVS NPRM, or the enhanced entry process, as proposed in § 143.23(l) of the ELVS NPRM.

Part 143, subpart C, sets forth the requirements for the clearance of imported merchandise under informal entry procedures. In the ELVS NPRM, CBP proposed to amend the current release from manifest process described in current § 143.23(j) and (k). The ELVS NPRM consolidates the general requirements for the basic entry process in proposed § 143.23(k). CBP is proposing to further amend paragraph (k) by adding the 10-digit HTSUS classification as a required data element that must be provided for all shipments entered using the basic or enhanced entry processes proposed in the ELVS NPRM.

IV. Statutory and Regulatory Reviews

A. Executive Orders 12866 and 13563

Executive Orders 12866 (Regulatory Planning and Review), as amended by Executive Order 14094 (Modernizing Regulatory Review), and 13563 (Improving Regulation and Regulatory Review) direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

This rule is a ''significant regulatory action'' that is economically significant under section 3(f)(1) of Executive Order 12866, as amended by Executive Order 14094, because the rule would have an annual effect of $200 million or more during at least one year of the analysis. A regulatory impact analysis (RIA), entitled Trade and National Security Actions and Low-Value Shipments (TraNSALS) Regulatory Analysis and Regulatory Flexibility Analysis, has been included in the docket of this rulemaking USCBP–2025–0003. The following presents a summary of the aforementioned regulatory impact analysis. Although this analysis attempts to mirror the terms and wording of the rule, no attempt is made to precisely replicate the regulatory language and readers are cautioned that the actual finalized regulatory text, not the text of this assessment, is binding.

1. Purpose of the Rule

This proposed rule makes merchandise subject to an *ad valorem* tariff pursuant to a trade or national security action under Section 232, 201, or 301 ineligible for the administrative exemption in 19 U.S.C. 1321(a)(2)(C). The administrative exemption allows shipments of merchandise to be imported by one person on one day to pass free of duty and tax imposed on or by reason of importation if the aggregate fair retail value in the country of shipment does not exceed $800, and the shipment is not covered by a single order or contract but sent in a separate lot to secure duty-free treatment. Throughout this analysis, we refer to low-value shipments that qualify for the administrative exemption in 19 U.S.C. 1321(a)(2)(C) as ''qualifying low-value shipments.'' For fiscal year 2023, CBP estimates that hundreds of thousands of qualifying low-value shipments would have been assessed additional tariffs owed under Section 232, 201, or 301, had they not claimed the administrative exemption. By allowing these low-value shipments to be imported without assessment of the additional duties owed pursuant to an applicable trade or national security action, the administrative exemption is undermining the United States' trade and national security actions. Additionally, low-value shipment volumes have grown rapidly in recent years, rising from approximately 139 million to over 1 billion shipments per year between fiscal years 2015 and 2023.[19] This overwhelming volume has created operational inefficiencies for CBP's inspection of low-value shipments for compliance with U.S. laws and regulations. CBP anticipates that this rulemaking would increase tariff revenue, reduce the volume of qualifying low-value shipments, improve effectiveness of specified trade and national security actions, and thereby increase the efficiency with which CBP targets imports for security risks.

2. Need for the Proposed Rule

The Trade Expansion Act of 1962 and the Trade Act of 1974 authorize the President and USTR to impose tariffs in certain circumstances. Specifically, as relevant to this proposed rulemaking, Section 232 of the Trade Expansion Act of 1962 authorizes the President to adjust imports of an article and its derivatives if the Secretary of Commerce finds that the article is being imported into the United States in such quantities or under such circumstances as to threaten to impair the national security. Section 201 of the Trade Act of 1974 authorizes the President to impose temporary trade measures if the International Trade Commission finds that an article is being imported in such increased quantities as to be a ''substantial cause of serious injury or the threat thereof'' to U.S. industries. Lastly, Section 301 of the Trade Act of 1974 authorizes USTR, subject to the direction of the President, if any, to impose import restrictions to address, among other things, unreasonable or discriminatory acts, policies, or practices that burden or restrict U.S. commerce. This proposed rulemaking refers to tariffs imposed under Section 232, 201, or 301 as ''specified trade or national security actions.''

These specified trade or national security actions are designed to protect domestic industries, and to address the harm to domestic industry and the American public from substantial cause of serious injury or threat thereof from surges of injurious imports and unreasonable or discriminatory trade practices, and may in turn encourage foreign governments to eliminate policies that gave rise to the action, or to address the threatened impairment of U.S. national security caused by certain imports. However, some merchandise subject to specified trade or national security actions may also be eligible for the administrative exemption pursuant to Section 321 of the Trade Act of 1930, as amended (19 U.S.C. 1321(a)(2)). Section 321 provides administrative exemptions from duty and taxes that are imposed upon or by reason of importation for three categories of imported articles:

- Certain bona-fide gifts valued at $100 or less ($200, if the gift was from certain island possessions) sent from persons in foreign countries to persons in the United States;
- Certain personal or household articles valued at $200 or less accompanying persons arriving in the United States; and
- All other imported articles when the aggregate fair retail value of the articles in the country of shipment is $800 or less.

This proposed rulemaking only concerns shipments in the third category, which is covered by the administrative exemption in 19 U.S.C. 1321(a)(2)(C). To avoid confusion with the other two administrative exemptions, we will refer to this exemption alone as the ''administrative

[19] Data pulled from CBP's Automated Targeting System (ATS) database.

exemption.'' Specifically, the administrative exemption allows a shipment to be imported duty-free when the aggregate fair retail value in the country of shipment of all articles imported by one person on the same day and exempted from the payment of duty is less than or equal to $800. This administrative exemption was originally set at $1 in the Customs Administrative Act of 1938 to limit the ''expense and inconvenience'' of collecting duty when it was a disproportionate amount of work by the U.S. Government compared to the amount of revenue that would be collected. Since its inception, Congress has increased the daily aggregate value cap to $5 in 1978, $200 in 1993, and $800 in 2016. In recent years, the volume of imports subject to *ad valorem* tariffs as a result of specified trade or national security actions under Sections 232, 201, and 301 has increased, but low-value shipments qualifying for the administrative exemption are permitted to enter duty-free, even when subject to additional duties pursuant to these actions. Thus, the administrative exemption dampens the impact of specified trade or national security actions by allowing low-value imports that claim the exemption to legally avoid all duties and taxes imposed upon or by reason of importation that would otherwise be collected, including the additional duties collected under specified trade and national security actions. In fiscal year 2023, an estimated 77 percent of shipments claiming the administrative exemption would have been assessed additional duties under Section 232, 201, or 301 had they not claimed the administrative exemption.[20]

Additionally, low-value shipments create operational inefficiencies for CBP's ability to inspect these goods due to their high volumes and more limited data requirements. The volume of shipments claiming the administrative exemption has risen sharply from approximately 139 million in fiscal year 2015 (prior to the increase in the daily aggregate exempted value cap) to 1 billion shipments per year in fiscal year 2023.[21] In 2019, CBP implemented the Entry Type 86 Test (84 FR 40079; subsequently amended in 89 FR 2630), which created a new electronic process for filing entries of qualifying low-value shipments in the Automated Commercial Environment (ACE), as a voluntary alternative to the current regulatory ''release from manifest'' process under parts 128 and 143 of the CBP regulations. Under this test, an owner, purchaser, or customs broker appointed by an owner, purchaser, or consignee may file an entry type 86 through ACE for shipments claiming the administrative exemption. Ten data elements are required to be transmitted to CBP as part of the entry, including the 10-digit HTSUS classification for the imported merchandise. The Entry Type 86 Test facilitates the clearance of compliant low-value shipments into the United States through the filing of an electronic entry in ACE, to include the submission of partner government agency (PGA) data, which expedites release. While Entry Type 86 has sped up processing for many shipments claiming the administrative exemption, the remaining shipments entered under the current regulatory ''release from manifest'' process [22] may require manual clearance and provide CBP with more limited data. CBP anticipates that this rulemaking would reduce the volume of shipments claiming the administrative exemption and thereby increase the efficiency with which CBP targets imports for security risks, including curbing the smuggling of illegal opioids such as heroin and fentanyl, by shifting some shipments to other entry types that require more data and the use of an authorized broker.

3. Summary of Proposed Rule

In this proposed rule, CBP proposes to make all goods subject to trade or national security actions under Sections 232, 201, and 301 ineligible for the administrative exemption. As a result, importers of such goods would have to pay both the standard duties and any additional duties imposed pursuant to trade and national security actions under Sections 232, 201, and 301, even when the entry value is under $800; shipments containing such goods would instead need to be entered through an alternative entry type. CBP assumes that filers will use entry type 11 (another informal entry type) or entry type 01 (a formal entry type), depending on the value of the merchandise.[23] To enable CBP to determine whether merchandise is eligible for the administrative exemption, CBP proposes to collect the 10-digit HTSUS classification as part of the basic as well as the enhanced processes, as described in the ELVS NPRM. This is a proposed modification of the ELVS NPRM, which did not propose to require the 10-digit HTSUS classification as part of the data required for entry under the basic entry process.[24] In the ELVS NPRM, CBP proposed to only require the 10-digit HTSUS classification of the merchandise to be provided as part of the enhanced entry process (subject to waiver in certain circumstances subject to specified conditions).[25] This Trade and National Security Actions and Low-Value Shipments NPRM would expand that HTSUS classification reporting requirement to include shipments claiming the administrative exemption under the basic entry process.

The proposed rule would strengthen the United States' specified trade and national security actions, especially for Section 301 tariffs. For example, the goal of the current Section 301 action is to discourage China's acts, policies, and practices related to technology transfer, intellectual property, and innovation that burden or restrict U.S. commerce. Additionally, the specified trade or national security actions can be used to protect domestic industries from serious injury, or the threat thereof, by import surges or adjust imports that threaten to impair the national security. Moreover, enforcement of U.S. trade laws and US trading rights protects domestic industries and workers from unfairly traded imports. An industry that is particularly vulnerable to circumvention by qualifying low-value shipments from China is the U.S. textile and apparel manufacturing industry. A large volume of Chinese textile and apparel imports claim the administrative exemption, thereby avoiding tariffs. Further, approximately

[20] Our estimate is based on a random sample of 6,238,513 ET86 entries from fiscal year 2023, pulled from CBP's ACE database. We assume that qualifying low-value shipments cleared off the manifest are as likely as type 86 entries (a test which created a new electronic informal entry process for filing qualifying low-value shipments in ACE (84 FR 40079)) to be covered by additional Section 232, 201, or 301 tariffs.

[21] Data pulled from CBP's Automated Targeting System (ATS) database.

[22] The ''release from manifest'' process describes shipments claiming an exemption under 19 U.S.C. 1321(a)(2)(C) which are released from CBP custody based on the information provided on the manifest or bill of lading, 19 CFR 128.24(e) and 143.23(j)(3)–(k). *See* 84 FR 40079, 40080 (Aug. 13, 2019); 89 FR 2630, 2631 (Jan. 16, 2024).

[23] While other entry types are available, they comprise a minor portion of total entries. Because type 01 and 11 entries are most common, we assume these are the most likely types that will be employed for shipments that no longer qualify for the administrative exemption.

[24] The ''basic entry process,'' as described in the ELVS NPRM is largely the same as what is known as the ''release from manifest'' process currently in use but with minor changes to certain data elements. Detailed information about those proposed data element changes can be found in the Entry of Low-Value Shipment NPRM.

[25] The proposed ELVS rule would allow entry filers to apply for a waiver privilege (*i.e.,* a ''waiver'') from the requirement to transmit the HTSUS as part of an enhanced entry for non-PGA related goods. To obtain a waiver, the filers meet several criteria generally demonstrating their ability to properly classify merchandise, determine whether the merchandise is subject to the requirements of partner government agencies (PGAs), or otherwise precluded by law from eligibility for the administrative exemption.

50 percent of the value of current qualifying low-value shipments is attributed to textiles and apparel that would otherwise be subject to additional duties under Section 301. Broadly speaking, an estimated 15.9 percent of total imports covered by Section 232, 201, and 301 tariffs are exempt from the tariffs as a result of claiming the administrative exemption.[26] By excepting imported goods that are subject to additional duties imposed under Section 232, 201, and 301 actions from the administrative exemption under 19 U.S.C. 1321(a)(2)(C), CBP would increase the effectiveness of these specified trade or national security actions. This proposed rule would further help protect domestic industries and discourage unreasonable or discriminatory practices, among other things, by other countries.

This rule would also increase CBP's inspection efficiency by shifting a large volume of shipments that would become ineligible to claim the administrative exemption into alternative entry types, such as formal type 01 and informal type 11 entries. Low-value shipments claiming the administrative exemption are currently more challenging for CBP to efficiently inspect than other entry types because they arrive with more limited data. As a result, CBP officers must do more work to ensure that a low-value shipment is admissible and to determine whether the shipment is eligible for the administrative exemption, which is often impossible without physical inspection of the shipment. Shipments entered using type 01 or 11 entries, in contrast, arrive with more detailed information about the contents of the goods included in the shipment, increasing CBP's inspection efficiencies.

Furthermore, shifting shipments that will become ineligible for the administrative exemption to an alternative entry type, such as type 01 formal or type 11 informal entry, is likely to result in the consolidation of multiple, similar items into a single shipment.[27] Specifically, the $800 daily aggregate value limit for shipments claiming the administrative exemption incentivizes importers to de-consolidate goods into numerous low-value shipments to avoid paying tariffs. Absent the ability to avoid tariffs, importers are likely to be incentivized to reduce per-unit shipping costs by consolidating items in bulk shipments.[28] This consolidation results in fewer, higher value entries, where multiple identical items can be reviewed by CBP officers at the same time. Consolidation of non-identical items is also possible and could result in savings if they are from the same shipper or origin or have other similar characteristics. However, for the purposes of this analysis, we focus on the consolidation of similar or identical goods, because that is where there are the clearest savings for both trade members and CBP.

Finally, the proposed rule is likely to improve CBP's ability to accurately identify the contents of a shipment claiming the administrative exemption even if it does not contain goods subject to an *ad valorem* tariff as a result of a trade or national security action under Section 232, 201, or 301. Many of these goods currently use the ''release from manifest'' entry process, and absent this rule, would use the basic entry process if the ELVS NPRM is finalized. The ''release from manifest'' process (or its proposed modification into the ''basic entry process'' as described in the ELVS NPRM) is less costly for importers, because less information is submitted to CBP, but the release of shipments by CBP is slower, averaging 3 days.[29] In contrast, shipments using type 01 or 11 entries, or the current Entry Type 86 Test (or its proposed modification into the ''enhanced entry process'' as described in the ELVS NPRM), are typically released by CBP within 1 day. This proposed rule would require a 10-digit HTSUS classification under both the basic and enhanced entry process. As a result, importers will likely opt for enhanced entry, with its faster clearance times, given that the difference in administrative costs between the basic and enhanced entry processes will become negligible. Having the HTSUS classification along with several additional data elements required for enhanced entry under the ELVS NPRM will improve CBP's targeting abilities.[30]

4. Proposed Rule Benefits, Costs and Transfers

Analytic Baseline

This analysis estimates the benefits, costs, and transfers anticipated for a 10-year period beginning in 2025, the expected year of rule implementation. Estimating these effects requires defining and modeling a baseline scenario that reflects the world without the proposed regulation. By comparing the baseline, or ''world without the regulation,'' to the ''world with the regulation,'' analysts can characterize the incremental effects of the regulation. The baseline scenario is forward-looking, in that it projects what the world would look like, in the future, absent the new regulation. We make three key assumptions related to the baseline scenario:

- *Shipment modes and entry types:* We assume that in the future, absent this proposed rule, shipments would continue to be entered into the United States in the same proportions (by shipment mode and entry type) as in 2023. These entries are predominantly commercial non-express type 86 entries (58 percent), followed by manifest express entries (17 percent), manifest commercial non-express (16 percent), postal (8 percent), and express type 86 entries (1 percent).
- *Low-value shipment growth:* We assume the total value of qualifying low-value shipments in 2026 through 2034 grows at the rate of projected GDP growth over the same period. We note that this assumption is highly uncertain. Since 2016, when Congress increased the administrative exemption limit to $800, the volume of qualifying low-value shipments has increased exponentially, with shipments from

[26] See Chapter 5 of standalone RIA for sources and estimation method.

[27] We acknowledge that consolidation may not be possible for all qualifying low-value shipments. For a discussion of which shipments might be consolidated see Exhibit 3–5 of the standalone RIA.

[28] For example, imagine a retailer sells 10,000 identical shirts manufactured in China via an eCommerce platform, and each shirt has a value of $10. Packaging each shirt individually at a factory or distribution center in China for direct delivery to the final consumer in the United States allows filers to claim the administrative exemption on behalf of the final consignee (*i.e.,* the consumer). Absent this administrative exemption, the retailer must pay the tariff based on the value of each shirt as well as a filing fee for each individual shipment. If the retailer chooses instead to ship all 10,000 shirts as a single line item in a bulk shipment to an existing distribution center in the United States, the total tariff payment is the same, but the filing fee is orders of magnitude smaller because it is only paid once (rather than 10,000 times). The shirts can then be packaged in the United States for individual delivery to the final customer. Retailers will make strategic decisions about how to import goods affected by this rule based on a variety of factors including filing fees; the relative costs of using foreign or domestic distribution centers; the costs in terms of money and time associated with slower, lower-priced ocean freight (bulk containers) versus faster, higher-priced air freight (individual packets); inventory management costs; etc.

[29] See the ELVS Regulatory Analysis supporting the NPRM.

[30] ELVS proposes to require a CTIN, the country of shipment of the merchandise, the 10-digit HTSUS for all enhanced entries. ELVS also proposes to require enhanced entries to include a URL, product picture, product identifier, and/or a shipment x-ray or other security screening report number verifying completion of foreign security scanning of the shipment. The seller name and address, purchaser name and address, any data or documents required by other government agencies, advertised retail product description, and marketplace name and website or phone number are proposed to be required for enhanced entries as they are applicable.

China the primary contributor to this growth. We assess the sensitivity of our results to alternative growth assumptions.

• *Entry of Low-Value Shipments (ELVS) Rule:* CBP has published a Notice of Proposed Rulemaking proposing the ELVS rule, which would replace the existing Entry Type 86 Test with a new entry process (''enhanced entry'') providing expedited clearance for qualifying low-value shipments. For the purposes of this analysis, we assume that the final ELVS rule will be published and implemented in advance of the Trade and National Security Action final rule. If it is not, this analysis will be revised as necessary in the final rule.

Incremental Costs and Transfers

We model costs and transfers from the proposed rule using a partial equilibrium analysis for industry-level qualifying low-value imports from 2025 to 2034. The primary costs of the proposed rule are consumer surplus losses resulting from increased duties and possibly increased processing fees, resulting in higher prices for imported goods paid by U.S. consumers on imported goods.[31] [32] Under the proposed rule, importers are required to pay tariffs on all goods subject to an *ad valorem* tariff pursuant to Section 232, 201, or 301, and some shipments are subject to additional fees. Our analysis focuses only on goods that would be subject to Section 301 tariffs absent the administrative exemption. Data shows that 0.1 percent of goods (by value) that entered using ET86 in FY 2023 had HTSUS codes subject to Section 232 or 201 tariffs. The resulting price increases lead to higher equilibrium duty-inclusive prices and reduced imported quantities, leading to a decline in consumer surplus, a measure of welfare that reflects the difference between what a consumer is willing to pay and what the consumer paid for a product.

An important component of consumer surplus loss is the transfer of tariff revenue to the government. Although consumers face higher prices for imported goods, the U.S. government generates tariff revenue on goods that were previously avoiding tariffs by claiming the administrative exemption. The net effect of consumer surplus losses and gain in government tariff revenues is the resulting welfare change under the proposed rule.[33]

Cost Shocks

To model the impact of the proposed rule, we introduce cost shocks comprised of two components: (1) a tariff that will apply to certain goods currently claiming the administrative exemption; and (2) additional fees associated with services provided by licensed customs brokers and CBP staff to process low-value shipments, regardless of whether the shipments remain in the 19 U.S.C. 1321(a)(2)(C) exemption environment or shift to formal type 01 or informal type 11 entry. The tariffs apply on an *ad valorem* basis to affected goods, regardless of whether these goods are shipped individually or as part of larger, consolidated shipments. The weighted average tariff rate for affected low-value shipments across all industries included in the analysis is 21.2 percent. Table 1 presents the weighted average tariff rate by industry for affected low-value shipments.

TABLE 1—WEIGHTED AVERAGE SECTION 301 AND MFN TARIFF RATES BY 3-DIGIT NAICS CODE

NAICS code	NAICS description	Weighted average tariff rate (%)
11	Agriculture, Forestry, Fishing and Hunting	21.8
211	Oil and Gas Extraction	25.0
212	Mining (except Oil and Gas)	25.0
311–312	Food, Beverage and Tobacco Product Manufacturing	12.2
313	Textile Mills	31.2
314	Textile Product Mills	31.0
315	Apparel Manufacturing	21.0
316	Leather and Allied Product Manufacturing	28.3
321–323	Wood, Paper, Printing	21.2
324	Petroleum and Coal Products Manufacturing	26.8
325–326	Chemical, Plastics, Rubber Products Manufacturing	17.8
327	Nonmetallic Mineral Product Manufacturing	23.9
331	Primary Metal Manufacturing	23.1
332	Fabricated Metal Product Manufacturing	25.5
333	Machinery Manufacturing	24.9
334	Computer and Electronic Product Manufacturing	21.0
335	Electrical Equipment, Appliance, and Component Manufacturing	26.4
336	Transportation Equipment Manufacturing	22.8
337–339	Furniture and Miscellaneous Manufacturing	14.1
All Industries		21.2

Source: Data provided by the International Trade Administration (ITA) via email on October 11, 2024.

In contrast to tariff payments, fees are assessed on a per-shipment basis, and thus vary significantly depending on assumptions about the degree to which items are bundled together in larger, consolidated shipments. These fees include: (1) payments to brokers to file and process entries; and (2) the merchandise processing fee (MPF) paid

[31] Consumer surplus is an economic measure of welfare that reflects the difference between what a consumer is willing to pay and what the consumer paid for a product.

[32] In this analysis, we assume the prices experienced by consumers include tariffs and processing fees paid by manufacturers or retailers selling the goods and arranging for their importation and delivery.

[33] We note that this analysis focuses primarily on the overall societal effect of the proposed rule. It does not quantify the potential distributional effects associated with the incidence of the increased prices for affected goods and the incidence of revenue gains associated with the collection of tariff revenue; however, it describes the potential distributional effects of increased prices qualitatively in Section 3.4 and Appendix A. Forecasting how the tariff revenue may be returned to the U.S. population (*e.g.,* through tax cuts or other policy options) is beyond the scope of this effort. If tax cuts are selected, additional distributional distortions are possible.

to CBP on all type 01 and 11 entries.[34] Table 2 presents the fees charged by brokers (working with carriers) to file and process entries. Our estimate for the cost of processing an international shipment in the postal environment is $8.55. We do not include the $7.20 dutiable mail fee charged by CBP, which is required when CBP personnel must complete the paperwork for postal shipments themselves, as it is not clear how often CBP personnel would be the ones completing the paperwork. CBP is requesting public comment on the expected costs of processing a shipment in the postal environment, including how often the dutiable mail fee is expected to apply.

TABLE 2—PER SHIPMENT FEES

Type	Fee ($/shipment)
Broker fee: [1]	
Non-express commercial carrier [2]	$1.00
Express commercial carrier [3]	30.00
Postal carrier [3]	8.55
Merchandise Processing Fee (MPF): [4]	
All	2.53

Sources and assumptions:
[1] A licensed broker is not currently required for the ''release from manifest'' entry process, nor would the ELVS NPRM require one for the basic entry process if the ELVS NPRM is finalizes as proposed. We assume for purposes of this analysis that a broker fee is charged for any entry requiring an HTSUS code and is similar regardless of whether the filer uses enhanced entry, entry type 86, 01, or 11. (Source: Personal communication with representatives of a major broker association on 9/26/2024.)
[2] Email from CBP dated 10/11/2024.
[3] Fajgelbaum and Khandelwal (2024).
[4] Minimum merchandise processing fee for informal entries as of October 1, 2023. (As viewed on 10/11/2024 on *https://www.federalregister.gov/documents/2023/07/28/2023-16197/cobra-fees-to-be-adjusted-for-inflation-in-fiscal-year-2024-cbp-dec-23-08*.)

We highlight that these fees are a significant additional cost for many qualifying low-value shipments relative to the overall value of these goods. For example, roughly one-fifth (18.5 percent) of qualifying low-value shipments have a declared value of $5 or less and the majority of these shipments (61.5 percent) have a declared value of $25 or less. Examination of the magnitude of fees relative to the value of shipments currently claiming the administrative exemption, coupled with discussions with representatives of the customs broker and logistics community, suggest that shipment consolidation is a likely outcome of the proposed rule (see chapter 3 in the RIA available in the docket of this rulemaking for additional detail). We evaluate the uncertainty associated with an assumption about the likelihood of consolidation by modeling two separate scenarios, summarized below:

- *Low impact scenario.* We assume that in order to mitigate additional fees, similar or identical Section 301 goods are consolidated into larger, bulk shipments, which would be entered using either entry type 01 or entry type 11 and would be comprised of multiple pieces of identical items.[35] As a result, the only increase in price experienced by consumers of goods subject to Section 301 duties is the duty because all fees are assumed to be fully mitigated.[36] Certain shipments without Section 301 goods are also affected because they must provide an HTSUS code where none was required previously. Non-Section-301 shipments in the express environment using the basic entry process are consolidated to mitigate the fees paid to the broker for filing the entry with the HTSUS (*i.e.,* similar to Section 301 goods, fees are assumed to be negligible, or $0). For express shipments that would use enhanced entry, and therefore already provide HTSUS codes, no change in entry mode occurs. Similarly, because this rule does not require an HTSUS code for postal shipments, postal shipments without Section 301 goods are also unaffected.
- *High impact scenario.* In this scenario, we assume less consolidation occurs. Shipments without Section 301 goods remain qualifying low-value shipments and pay a fee to a customs broker to file the entry with the HTSUS code. The fee ranges from $1 to $30 per shipment, depending on the carrier. Because the affected parties are hiring a broker to file the entry and assign an HTSUS code, they file an enhanced entry, rather than a basic entry.[37] For shipments with Section 301 goods, we assume that the typical business relationship between non-express carriers and their clients supports consolidation of like items as a means of mitigating fees, which would result in these shipments being entered either using entry type 01 or entry type 11 (*i.e.,* net fees, when combined with the potential savings in shipping costs associated with consolidation, are assumed to be negligible, or close to $0). However, we assume Section 301 shipments transported by express carriers and the postal service remain unconsolidated and apply associated per shipment fees (*i.e.,* broker/filing fees range from $8.55 to $30 per shipment, depending on the carrier, plus a MPF of $2.53 per shipment).

[34] Conversations with brokers suggest the MPF for higher-value bulk shipments will be negligible. Therefore, we do not consider the MPF fees explicitly in the analysis.

[35] As noted earlier, we acknowledge that consolidation may not be possible for all qualifying low-value shipments. Thus, this scenario more likely represents a lower-bound estimate of the impacts of the proposed rule.

[36] As discussed in detail in Section 3.3.2 of the standalone RIA, given the high cost of broker fees and MPF relative to the value of items included in qualifying low-value shipments, it is likely that retailers will strategically consolidate shipments in order to negate the impact of these fees. Thus, this low impact scenario considers only the impact of newly applicable tariffs. The impact of additional broker fees and MPF is considered in the high impact scenario.

[37] In this high impact scenario, some shipments are likely to remain as low value shipments and should therefore see faster clearance times resulting from the use of a different filing process. However, as discussed earlier and in Chapter 3 of the standalone RIA, in both the low and high impact scenarios, we anticipate substantial consolidation of individual items in larger, bulk shipments, where they will be sent to U.S. facilities for storage, packaging, and distribution. These items will likely travel by ship, rather than plane, so while they will be cleared through customs more quickly, they will take longer to travel from the foreign port to their U.S. destination (this time cost is offset by substantially lower freight costs associated with ocean freight). On balance, considering all affected shipments, it is difficult to say whether net time savings will occur. For this reason, we do not explicitly quantify potential time-savings or time costs in this analysis.

Results

Results from the partial equilibrium analysis are as follows:

1. *Consumer surplus losses* in 2025 range from $10.0 billion (low scenario) to $18.2 billion (high scenario). These losses are largely explained by higher import prices faced by consumers. In both scenarios, tariffs raise the price of low-value shipments for the consumer. In the high scenario, these price increases are heightened due to broker fees and MPF applicable to many shipments. In addition, consumers experience a welfare loss associated with a reduction in import quantities resulting from these price increases.

2. *Tariff revenues increase* in all years relative to the baseline. In 2025, $7.8 billion in tariff revenues are generated in the low scenario, compared with $5.9 billion in the high scenario. Because tariff revenues depend on the value of imported goods, the high scenario generates less revenue as consumer demand falls in response to the additional fees on many shipments.

3. The proposed rule results in *net decreases in welfare* in the low scenario (−$2.2 billion in 2025) and high scenario ($−12.3 billion in 2025).[38] For the 10 years following rule implementation, the present value of these welfare effects is a loss of $21.9 billion in the low scenario and $121.9 billion in the high scenario (assuming a 2 percent real discount rate).[39] The greater impacts in the high scenario result from the additional costs imposed on imported goods in the form of broker fees and merchandise processing fees.[40]

4. *Tariff pass-through*—the rate at which increased tariffs are passed on to consumers through higher prices—is a key parameter that influences all three partial equilibrium outputs presented in this report: consumer surplus, tariff revenues, and net welfare effects. Consistent with recent economic evidence on tariff pass-through, we assume full tariff pass-through to U.S. consumers in our main estimates.[41] That is, consumers bear the full cost of increased tariffs as foreign suppliers do not adjust their supply prices. Given uncertainty in the rate of tariff pass-through, we calculated the ''break-even'' points where the net welfare effects are $0.[42] In the low scenario, pass-through rates greater than 79 percent (including the 100 percent pass-through assumed in our main estimates) result in net welfare losses; lower pass-through rates would result in net welfare gains. In the high scenario, this break-even point is roughly 35 percent. In other words, if foreign producers reduce their prices by an amount equal to 21 percent of the tariff increase in the low scenario, or 65 percent of the tariff increase in the high scenario, consumer surplus losses are offset by increased tariff revenue.[43] [44]

5. Impacts are largely concentrated among qualifying low-value shipments containing Section 301 goods, which are subject to tariffs under the proposed rule. In the high scenario, we estimate additional costs for a subset of qualifying low-value shipments not containing Section 301 goods, which may be subject to additional broker fees to comply with the rule's requirements to provide HTSUS codes.

6. Apparel manufacturing comprises the majority (51.4 percent) of the value of qualifying low-value shipments. While the effects of the rule on each industry are not exactly proportional to its share of imports (due to differing demand elasticities and tariffs in each sector), the effects are concentrated among few industries comprising most affected imports.

7. *Distributional considerations:* While data limitations hindered our ability to examine how the proposed rule may disproportionately impact some consumers, Fajgelbaum and Khandelwal (2024)[45] provide evidence that eliminating the administrative exemption entirely would disproportionately affect lower-income and minority consumers. In their paper, the authors explain that direct-to-consumer imports comprise a higher share of household spending for zip codes with lower incomes and lower shares of white households. Their analysis finds that consumers in the poorest zip codes lose 24.8 percent more consumer surplus than the representative consumer. In Appendix A in the standalone RIA, we provide additional detail on this study and its

[38] As discussed in Point #7, these losses are likely to be regressive in nature, disproportionately affecting low-income and minority consumers.

[39] OMB Circular No. A–4 (2023) requires agencies to estimate the present value and annualized impacts of a proposed rule by applying a 2 percent real discount rate.

[40] We note that our estimate of the net effect of changes in consumer surplus and tariff revenue does not explicitly measure potential changes in producer surplus. The direction and magnitude of bias introduced to the net welfare estimate is uncertain. Please see Section 3.1 for additional discussion.

[41] The historical evidence on tariff pass-through (and the related phenomenon of exchange rate pass-through) has suggested that the benefits from reduced tariffs are only partially passed through to consumers (*i.e.,* foreign suppliers increase their prices in response to the tariff cut). More recent evidence focuses on the effect of the sharp increases in tariffs, primarily hitting Chinese imports, in 2018 to 2019. In this episode, the estimated effects are very different. Fajgelbaum et al. (2020) finds complete pass-through of tariffs to import prices using product-level monthly import and export data from the U.S. Census Bureau, *i.e.,* foreign supplier did not reduce their prices in response to the tariffs. These results are supported by more recent analyses by Chang et al. (2021) and Ma et al. (2021) (as cited in Fajgelbaum and Khandelwal 2021) and Amiti et al. (2020). These studies focus on the price of imported goods at the entry port. Cavallo et al. (2019) employs data from product-level data for several large U.S. retailers and finds tariffs were passed through almost fully to U.S. import prices at the entry port. However, the effects on resulting retail prices were muted, suggesting tariff incidence was largely born by U.S. retailers. Importantly, these studies evaluated the effects of the tariff on all imports, not just qualifying low-value shipments, which comprise a small percentage of imports in each product category. If a comprehensive tariff did not lower supply prices, a tariff affecting only a small percentage of the total is even less likely to lower supply prices. In this analysis, we assume that higher U.S. import prices at the entry port are passed on entirely to U.S. consumers, similar to the assumptions in Fajgelbaum and Khandelwal (2024).

[42] We highlight three reasons why evidence of full pass-through is accompanied by uncertainty. First, analysis of the recent tariff episode is drawn from a relatively short time window before the effects of the global pandemic and supply chain disruptions thoroughly confounded the ability to measure longer run effects carefully. This episode includes elements of what Fajgelbaum and Khandelwal term the ''trade war'' that are important because firms on both sides of the market were experiencing shocks to both supply (via traded inputs) and demand, making identification of the demand effects complicated. Further, a potential reason for complete pass-through of tariffs is that markets are slow to adjust to shocks: prices are locked in by previously negotiated contracts; and consumers of imported goods are slow to find alternative sources of supply. Second, while the recent episodes tend to find complete pass-through for most goods they examine, there is some heterogeneity in the response across firms and product sectors. This no doubt results from differences in market structure, response horizons, and substitution options in both supply and demand. As an example, Fajgelbaum and Khandelwal (2021) emphasizes that this work does not address how tariffs might change the selection of products to be imported, or the possibility that foreign suppliers might downgrade the quality of imported products while holding prices fixed. Finally, it should be said that while the evidence of complete tariff pass-through in the recent episode is very strong, it is also regarded as significantly puzzling and a subject for active research to uncover precisely why foreign supply prices were not more responsive.

[43] It is possible that there will also be an increase in producer surplus. See Section 3.1.

[44] As noted earlier, our analysis focuses primarily on the overall societal effect of the proposed rule. It does not quantify the potential distributional effects associated with the incidence of the increased prices for affected goods and the incidence of revenue gains associated with the collection of tariff revenue; however, it describes the potential distributional effects of increased prices qualitatively in Section 3.4 and Appendix A. If more of the tariff is borne by foreign producers, price increases will be smaller, reducing the disproportionate impact on lower-income consumers. The potential for disproportionate impacts associated with tax policies designed to return tariffs to consumers also exists in such a scenario.

[45] Fajgelbaum, P.D. and A. Khandelwal. (2024). ''The Value of De Minimis Imports.'' National Bureau of Economic Research Working Paper No. 32607.

applicability to our analysis of the proposed rule.

8. *Baseline growth in qualifying low-value imports* is highly uncertain. In our main estimates, we assume that post-2025 growth in qualifying low-value import values follows growth in real GDP. In essence, this implies that the value of qualifying low-value shipments would comprise the same share of overall GDP in each year from 2025 to 2034. Growth in the low-value import sector, however, has considerably outpaced GDP in recent years. As a sensitivity analysis, we present a high-growth scenario assuming 18.4 percent annual increases in qualifying low-value shipment value and associated welfare effects. This percentage corresponds with the growth in total low-value shipment values between 2023 and 2024 and is generally reflective of growth since 2016. The resulting present value of welfare losses over the 10-year analysis period is approximately doubled relative to our main estimates: using a discount rate of 2 percent, we estimate $47.2 billion in net welfare losses in the low scenario and $262.5 billion in net welfare losses in the high scenario. We note, however, that sustaining 18 percent growth in the value of qualifying low-value shipments may be implausible.

Our primary estimates are presented in Table 3. Programming costs to the U.S. government associated with rule implementation are also considered. Over the 10-year period of our analysis, the present value cost of these software changes is approximately $460,000, assuming a discount rate of 2 percent.

TABLE 3—PARTIAL EQUILIBRIUM ANALYSIS RESULTS: 2025–2034 MAIN RESULTS

[$Billions, 2024 dollars]

Year	Low impact scenario			High impact scenario		
	Consumer	Tariff	Welfare	Consumer	Tariff	Welfare
2025	−$10.0	$7.8	−$2.2	−$18.2	$5.9	−$12.3
2026	−10.3	8.0	−2.2	−18.6	6.0	−12.5
2027	−10.5	8.2	−2.3	−18.9	6.2	−12.8
2028	−10.7	8.3	−2.3	−19.3	6.3	−13.0
2029	−10.9	8.5	−2.4	−19.6	6.4	−13.2
2030	−11.0	8.6	−2.4	−19.9	6.5	−13.4
2031	−11.2	8.7	−2.5	−20.3	6.6	−13.7
2032	−11.4	8.9	−2.5	−20.6	6.7	−13.9
2033	−11.6	9.1	−2.5	−21.0	6.8	−14.2
2034	−11.8	9.2	−2.6	−21.4	7.0	−14.4
Total, undiscounted	−109.4	85.4	−24.0	−197.9	64.5	−133.4
Present value, 2% d.r.	−99.9	78.0	−21.9	−180.8	58.9	−121.9
Annualized, 2% d.r.	−10.9	8.5	−2.4	−19.7	6.4	−13.3

Note: Growth in the value of qualifying low-value shipments is assumed to match growth in real GDP from 2025 to 2034. When growth is assumed to match year-over-year growth in low-value shipments since 2016, net welfare losses in the low scenario are estimated at $47.2 billion and $262.5 billion in the high impact scenario.

Incremental Benefits

The proposed rule would preclude goods subject to specified trade or national security actions from claiming the administrative exemption, which would strengthen the effectiveness of the United States' trade and national security actions. Moreover, the change in eligibility for the administrative exemption would significantly reduce the volume of qualifying low-value shipments, and to enforce this change in eligibility for the administrative exemption, CBP would require all low-value shipments entered through basic entry to provide an additional data element. Both the reduction in qualifying low-value shipments and the additional data would improve CBP's ability to identify violative goods and prevent inadmissible merchandise from entering the United States. These benefits are described qualitatively below.

Trade and National Security Actions

First, the proposed rule would strengthen the effectiveness of United States' trade and national security actions. Section 301 tariffs are meant to incentivize changes in foreign governments' acts, policies, or practices. Additionally, specified trade and national security actions can be used to protect U.S. industries from injurious serious injury, or the threat thereof, caused by import surges, unreasonable or discriminatory practices, or adjust imports that threaten to impair national security. Allowing these goods to be imported without assessing the Section 301 tariff that would otherwise be applicable undermines this effort. Excluding these goods from the administrative exemption and requiring additional data will allow CBP officers to assess additional duties, specified in an applicable trade or national security action.

By increasing tariff revenue, this rule would help accomplish the goals of the tariff actions. The largest effect would be on goods subject to Section 301 tariffs. Based on a random sample of 6,238,717 type 86 entries in fiscal year 2023, we estimate that 77 percent of the total value of all ET86 entries covered goods subject to tariffs imposed under Section 301. According to CBP statistics, the total value of all imports claiming the administrative exemption in FY 2023 was $54.6 billion. We assume that the share of the total value of qualifying low-value shipments containing goods subject to Section 301 tariffs was the same for entries entered under the ''release from manifest'' process as compared to type 86 entries. With this assumption, we estimate that the total value of all qualifying low-value shipments that would have been subject to Section 301 tariffs in fiscal year 2023 was $41.1 billion. The total value of type 01 and 11 entries covered by Section 301 tariffs that same year was $215.9 billion. Hence, we estimate that qualifying low-value shipments made up 16.0 percent of the total value of goods covered by Section 301 tariffs. This rule would therefore strengthen the incentive for China to eliminate its acts, policies, and practices related to technology transfer, intellectual property, and innovation that are unreasonable or discriminatory and burden or restrict U.S. commerce.

Targeting of Violative Shipments

In addition to the primary benefit of this regulation, strengthening U.S. trade and national security actions, the proposed rule will also support CBP's efforts to identify and intercept items violating import laws and regulations. The proposed rule would require all shipments claiming the administrative exemption under 19 U.S.C. 1321(a)(2)(C), entered under either the proposed new basic or the proposed new enhanced entry process, to provide a 10-digit HTSUS classification for the merchandise within the shipment. In the absence of the proposed modification to the rule as proposed in the ELVS NPRM, basic entries would not be required to provide 10-digit HTSUS classifications. This additional data element would allow CBP to more effectively target and screen basic entries in order to identify violative shipments (*e.g.,* prohibited items that are not allowed to enter the United States and other items ineligible for entry under the administrative exemption). CBP seizure statistics show that low-value shipments pose a security concern when compared to type 01 and 11 entries. In particular, CBP finds that goods claiming the administrative exemption have higher seizure rates for narcotics, IPR violations, and prohibited items than goods entered through entry type 01 and 11. See Section 5 of the standalone RIA for more details on the security concerns posed by low-value shipments. Imports claiming the administrative exemption made up 87 percent of total seizures in fiscal year 2023.

Macroeconomic and Distributional Effects

We estimate the macro-economic and distributional effects of the proposed rule using USAGE–TERM, a computable general equilibrium (CGE) model of the United States. At its most disaggregate level USAGE–TERM tracks variables like inputs, output, employment, investment, trade, and prices for 513 sectors in 70 regions across the U.S. A summary of the results of the CGE analysis follows:

- In the low impact scenario, we estimate that the average price of imported goods would be 0.29% higher. We estimate that consumer prices would be 0.10% higher in year 1 and 0.12% higher in year 10.
- We estimate consumer welfare losses of $9.5 billion in year 1, shrinking to $6.7 billion in year 10.
- We estimate a decrease in GDP, compared to the baseline, of 0.03% in both year 1 and year 10.
- Sectors that benefit from the proposed rule, like apparel, textiles, and leather, would see job growth. These sectors would employ 5,900 more people in year 1, and 3,900 more people in year 10 compared to the baseline.
- We did not explicitly model the impacts on the logistics and express sectors. To the extent that consumers use more logistics and express services we would expect these sectors to benefit from the proposed rule.
- These job gains, which could be a result of new jobs being created or fewer job separations, would be offset by a net reduction of jobs in other sectors. On net, the U.S. economy would have 97,000 fewer jobs in year 1, due to an increase in job separations and a reduction in new hires. By year 10 the economy would return to full employment.[46]
- In the high impact scenario, we estimate that the average price of imported goods would be 0.51% higher. We estimate consumer prices would be 0.17% higher in year 1 and 0.21% higher in year 10.
- In the high impact scenario, we estimate consumer welfare losses of $16.5 billion in year 1, shrinking to $11.6 billion in year 10.
- We estimate a decrease in GDP, compared to the baseline growth of GDP, compared to the baseline, of 0.06% in year 1 and 0.05% in year 10.
- Sectors that benefit from the proposed rule, like apparel, textiles, and leather, would see job growth. These sectors would employ 9,700 more people in year 1, and 6,400 more people in year 10 compared to the baseline.
- These job gains would be offset by fewer jobs in other sectors. On net, the U.S. economy would have 136,000 fewer jobs in year 1, due to an increase in job separations and a reduction in new hires. By year 10 the economy would return to full employment.

B. Additional Requirements for Regulatory Analysis

Table 4 provides a cost accounting statement for the proposed rule. Estimates correspond to the low-impact scenario based on our understanding that many low-value shipments are likely to be consolidated under the proposed rule to lessen costs associated with fees. Therefore, CBP considers the low-impact scenario as the primary estimate of the impact of this proposed rule.

TABLE 4—A–4 ACCOUNTING STATEMENT FOR THE PROPOSED RULE

Category	Annualized estimate (in 2024 dollars)	Source citation
Benefits		
Monetized benefits	None	RIA, Chapter 5.
Quantified, non-monetized benefits	None.	
Qualitative (unquantified) benefits	Greater enforcement/effectiveness by requiring goods with 232, 201, and 301 duties to utilize entry types subject to duty payment. Improved targeting of violative shipments by requiring certain qualifying low-value shipments to provide HTSUS codes that describe the contents of the entry. In certain cases, CBP estimates that consolidation of shipments would lead to faster merchandise release, enhanced national security and improved health and safety.	
Costs		
Monetized costs	$10.9 billion (low scenario) or $19.7 billion (high scenario) in consumer surplus loss.	RIA, Chapter 3.
Quantified, non-monetized costs	None.	

[46] For context, in 2023, 68.1 million U.S. workers separated from their job, either voluntarily or involuntarily. But in 2023, 70.8 million workers were hired at new jobs, leading to the economy adding about 2.7 million jobs on net. These estimates suggest that if the proposed rule had been first active in 2023, the economy would have added about 2.6 million jobs on net instead.

TABLE 4—A–4 ACCOUNTING STATEMENT FOR THE PROPOSED RULE—Continued

Category	Annualized estimate (in 2024 dollars)	Source citation
Qualitative (unquantified) costs	None.	
Cost Savings Monetized costs	None.	
Quantified, non-monetized cost savings	None.	
Qualitative (unquantified) cost savings	None.	
Transfers		
Monetized budgetary transfers	None	RIA, Chapter 3.
Other monetized transfers	$8.5 billion (low scenario) or $6.4 billion (high scenario) in additional duty revenue, paid for by U.S. consumers assuming full pass-through by foreign producers and returned to consumers to offset consumer surplus loss.	
Distributional Effects		
Effects on State, local, and/or tribal governments.	The proposed rule affects consumers, which could include anyone in the United States, including businesses, not-for-profit organizations, government jurisdictions, as well as individuals. As a result, a substantial number of small entities are likely to be affected. Prices for an individual affected low-value shipment could increase by 12.2 to 31.2 percent, depending on whether only tariffs or tariffs plus broker fees are incurred, the type of carrier transporting the shipment into the United States, and the underlying value of the shipment. Lacking readily-available information describing the number of qualifying low- value shipments and their value imported annually by small entities, CBP cannot certify this rule under the Regulatory Flexibility Act at this time. Instead, it conducts an Initial Regulatory Flexibility Analysis (IRFA).	RIA, Chapter 6.
Effects on small businesses		
Effects on inflation	Inflation increases by between 0.1% and 0.17% in year 1	RIA, Chapter 4.
Effects on growth	GDP growth is 0.03% lower in year 1	RIA, Chapter 4.

Note: Present value calculations use 2025 as the base year. Costs are annualized over 10 years from 2025 to 2034 and reflect a 2 percent discount rate.

C. Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 (5 U.S.C. 601 *et. seq.*) (RFA), as amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA), requires agencies to assess the impact of regulations on small entities. A small entity may be a small business (defined as any independently owned and operated business not dominant in its field that qualifies as a small business per the Small Business Act); a small not-for-profit organization; or a small governmental jurisdiction (locality with fewer than 50,000 people).

Under the requirements of the RFA, as amended by SBREFA and Executive Order 13272 entitled ''Proper Consideration of Small Entities in Agency Rulemaking,'' agencies must consider the potential impact of proposed regulations on small businesses, small governmental jurisdictions, and small organizations during the development of their rules.

Specifically, CBP is required to prepare an RFA analysis and take other steps to assist small entities, unless it certifies that the rule will not have a ''significant economic impact on a substantial number of small entities.'' The Small Business Administration (SBA) provides guidelines on the analytical process used to assess the impact of a particular rulemaking on small entities. Generally, an agency first conducts a threshold analysis to determine whether it can certify the proposed rule. The threshold analysis provides the factual basis for such a determination. If the results of the threshold analysis indicate that a rule may have a significant impact on a substantial number of small entities, or if the agency is uncertain, it is required to prepare an Initial Regulatory Flexibility Analysis (IRFA) and publish the IRFA for public comment with the proposed rule. The analytic components of an IRFA are:

1. A description of the reasons why action by the agency is being considered;

2. A succinct statement of the objectives of, and legal basis for, the proposed rule;

3. A description of, and, where feasible, an estimate of the number of small entities to which the proposed rule will apply;

4. A description of the projected reporting, record-keeping and other compliance requirements of the proposed rule, including an estimate of the classes of small entities that will be subject to the requirement and the type of professional skills necessary for preparation of the report or record;

5. An identification, to the extent practicable, of all relevant Federal rules which may duplicate, overlap or conflict with the proposed rule;

6. A description of any significant alternatives to the proposed rule that accomplish the stated objectives of applicable statutes and that minimize any significant economic impact of the proposed rule on small entities, such as,

- *the establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities;*
- *the clarification, consolidation, or simplification of compliance and reporting requirements under the rule for such small entities;*
- *the use of performance rather than design standards; and,*
- *an exemption from coverage of the rule, or any part thereof, for such small entities.*

This section presents data and analysis in support of these requirements. First, we provide an overview of the proposed rule, and then we conduct the threshold analysis in Section 6.2 of the RIA. Because the significance of impacts of the proposed rule on small entities is uncertain, we also prepare an IRFA in Section 6.3 of the RIA.

Overview of the Proposed Rule

This proposed rule makes merchandise subject to an *ad valorem* tariff pursuant to a trade or national

security action under Section 232, 201, or 301 ineligible for the administrative exemption in 19 U.S.C. 1321(a)(2)(C).

Such shipments would instead need to be entered through an alternate entry type, such as entry type 01 (formal) or entry type 11 (informal). Importers of such goods would then have to pay both the additional duties owed under a specified trade or national security action and regular customs duties, if applicable, when the value is below $800. To enable CBP to determine which entries are ineligible, CBP would require a 10-digit Harmonized Tariff Schedule of the United States (HTSUS) classification for all shipments of merchandise entered using the basic or enhanced entry processes proposed in the ELVS NPRM and claiming the administrative exemption. In the ELVS NPRM, CBP proposed to require that HTSUS codes be collected for qualifying low-value shipments entered through an enhanced entry process. Modifying these changes proposed in ELVS, this Trade and National Security Actions and Low-Value Shipments NPRM would expand that requirement to low-value shipments entered through the basic entry process proposed in ELVS, by requiring the provision of a 10-digit HTSUS code(s) on the bill of lading or other entry document.

This proposed rule would strengthen the United States' trade and national security actions, especially for Section 301 tariffs. For example, the goal of the current Section 301 tariffs is to discourage China's acts, policies, and practices related to technology transfer, intellectual property, and innovation that are unreasonable or discriminatory and burden or restrict U.S. commerce. Additionally, trade and national security actions can be used to protect domestic industries from substantial threat of serious injury, or the threat thereof by import surges or adjust imports that threaten to impair national security. An industry that is particularly vulnerable to circumvention by qualifying low-value shipments is the U.S. textile and apparel manufacturing industry. A large volume of textile and apparel imports claim the administrative exemption thereby avoiding tariffs. Specifically, approximately 50 percent of the value of current qualifying low-value shipments is attributed to textiles and apparel that would otherwise be subject to additional duties under Section 301.[47] Broadly speaking, an estimated 15.9 percent of imports covered by Section 232, 201, and 301 tariffs are exempt from the additional tariffs under the administrative exemption.[48] By including imports that would have been eligible for the administrative exemption without this rule, CBP would increase the effectiveness of these specified trade and national security actions. These actions would help protect national security and discourage unreasonable or discriminatory practices.

This rule would also increase CBP's inspection efficiency by shifting a large share of low-value shipments into alternative entry types. Qualifying low-value entries are more challenging for CBP to efficiently inspect than other entry types because they arrive with more limited data. As a result, CBP officers must do more work to ensure a low-value shipment is admissible and otherwise complies with applicable U.S. trade laws and regulations. Shipments entered using entry type 01 or entry type 11, in contrast, arrive with more detailed information about the contents of the goods included in the shipment.

Furthermore, shifting low-value shipments to an alternative entry type is likely to result in consolidation of multiple items into a single shipment. Specifically, the $800 limit for qualifying low-value shipments incentivizes importers to de-consolidate goods into numerous low-value shipments to avoid paying tariffs. Absent the ability to avoid tariffs, importers are likely to be incentivized to reduce per-unit shipping costs by consolidating items in bulk shipments. This consolidation results in fewer, higher value entries, where multiple items can be reviewed by CBP officers at the same time.

Finally, the proposed rule is likely to improve CBP's ability to accurately identify the contents of a shipment claiming the administrative exemption even if it does not contain goods subject to a trade or national security action under Section 232, 201, or 301. Many of these goods currently use manifest clearance to enter the United States. The ''release from manifest'' entry process (or the proposed new basic entry) is (or would be) less costly for importers, because less information is submitted to CBP, but the release of shipments by CBP is slower, averaging 3 days.[49] In contrast, shipments using entry types 01 or 11, or the current entry type 86 (or the proposed new enhanced entry), are (or would be) typically released by CBP within 1 day. This proposed rule would require a 10-digit HTSUS classification for all basic entry shipments. As a result, importers will likely opt for enhanced entry, with its faster clearance times, given that the difference in administrative costs between basic and enhanced will become negligible. Having the HTSUS classification, along with several additional data elements required for enhanced entry, will improve CBP's ability to identify violative shipments. Furthermore, because enhanced entry is an automated process with required data elements being submitted in advance of the shipment's arrival in the United States, additional efficiency gains for CBP officers and importers are likely.

Threshold Analysis

A threshold analysis conducted pursuant to RFA/SBREFA involves determining whether the proposed regulatory changes will significantly impact a substantial number of small entities subject to the regulation. Responding to this question requires understanding both: (1) the number of affected entities that are small; and (2) the economic impact on these small entities in the context of the proposed regulatory action.

Should the proposed rule go into effect, entities could be affected in two ways:

1. Imports subject to a trade or national security action under Section 232, 201, or 301 would no longer qualify for the administrative exemption in 19 U.S.C. 1321(a)(2)(C), which allows a shipment to be imported duty-free when the aggregate fair retail value in the country of shipment for articles imported into the United States on the same day and exempted from the payment of duty does not exceed the administrative exemption limit of $800 per person per day. Consignees (*i.e.,* consumers) of these imports will pay higher prices for the goods resulting from tariffs and, possibly, additional processing fees.

2. Paperwork for other imported goods using the administrative exemption will need to include HTSUS codes to facilitate CBP's ability to confirm that the goods are not covered by Section 232, 201, or 301 tariffs. Consignees of these imports will pay higher prices for the goods resulting from additional processing fees assessed by CBP and by licensed customs brokers.

[47] Proportion of qualifying low-value shipments containing Section 301 textile and apparel items is calculated using data on type 86 entries provided by CBP via email on August 14, 2024. We assume that qualifying low-value shipments cleared off the manifest are similar in nature to goods using type 86 entry.

[48] See Chapter 5 of the RIA available in the docket of this rulemaking for sources and estimation method.

[49] See the ELVS Regulatory Analysis supporting the NPRM.

Judicial review of agency compliance with the RFA requirements limits the scope of regulatory flexibility analyses to directly regulated entities (SBA 2017). In the case of the proposed rule, the entities that would have claimed the administrative exemption absent the proposed rule are considered directly regulated and therefore the subject of the threshold analysis. Here, consignees (*i.e.,* consumers) are the entities or individuals potentially eligible for the administrative exemption. As described in detail in Section 3.4 of the RIA, we assume that all duties and fees are incurred directly by consignees.

Consistent with the scenarios evaluated in the above sections, this section conducts the threshold analysis under two scenarios meant to act as upper and lower bounds of the effects of this proposed rule. These scenarios highlight the uncertainty regarding how importers will respond to the rule requirements:

- *Low Impact Scenario:* All importers respond to avoid fees. Importers of Section 232, 201, and 301 goods consolidate while importers of goods not subject to specified trade or national security actions either consolidate or move to postal. In this scenario, price increases are limited to required tariffs, because all other fees are assumed to be fully mitigated.
- *High Impact Scenario:* In this scenario, less consolidation of shipments occurs. As a result, in addition to tariffs, prices are also affected by higher fees. See Sections 3.3.1 and 3.3.2 of the RIA for detailed descriptions of the price shocks under each scenario.

Substantial Test

This section explores whether a substantial number of affected entities are small. The RFA does not provide a definition of a ''substantial number.'' In its guide to government describing how to comply with the RFA, the SBA states:

''*Substantial number*'' *depends on the number of regulated entities and the size of the regulated industry. The interpretation of the term* ''*substantial number*'' *is not likely to be five small firms in an industry with more than 1,000 small firms. On the other hand, it is important to recognize that five small firms in an industry with only 20 firms would be a substantial number. Depending on the rule, the substantiality of the number of small businesses affected should be determined on an industry-specific basis and/or on the number of small businesses overall. (SBA 2017, p. 21.)*

This analysis evaluates the extent to which a substantial number of consignees that would become ineligible for the administrative exemption due to the proposed rule are small entities. Affected consignees could be anyone in the United States—including businesses, not-for-profit organizations, and government jurisdictions as well as individuals—that purchases a good valued at $800 or less from a retailer that manufactures products outside of the United States. Individuals are not ''entities'' as defined by the RFA, and thus are excluded from this analysis.

All small entities in the United States have the potential to be affected by the proposed rule. As described in Chapter 3 of the standalone RIA document, the proposed rule affects products produced by 19 industries defined at the 3-digit North American Industry Classification System (NAICS) sector, with more than half of the affected goods coming from the apparel industry. Ideally, this analysis would rely on all historical low-value shipment transactions to characterize the entities most likely to be affected by the proposed rule. In the absence of that information, we characterize which industries are most likely to be affected, and which portion of consignees may be small entities, using data on consignees who imported goods using type 86 entries over the course of an example day in fiscal year 2023. This analysis relied on the following steps:

1. Identify a sample of businesses that are consignees. As noted above, we rely on a sample of shipments using type 86 entry for one day in fiscal year 2023 as a representative sample of consignees importing qualifying low-value shipments absent this rule. On this date, CBP identified nearly 1.2 million consignees associated with approximately 1.6 million type 86 entries. Within this list, CBP detected 786 likely businesses based on the names provided in the ''header party'' field and randomly selected 394 of these businesses for analysis.[50] [51]

2. Obtain the business profiles of the consignees. We uploaded the names and location information for the 394 businesses to D&B Hoovers' website and relied on D&B Hoovers' proprietary algorithm to match entities with the information stored in its database.[52] For the 394 businesses in our sample, D&B Hoovers' search functionality was able to match profiles for 182 entities (46 percent). The 212 unmatched consignees either do not have business profiles in D&B Hoovers or the owner's name and location information provided by CBP do not match the business records on the site. For the 182 matched entities, we collect primary NAICS code, number of employees,[53] and annual revenue information as presented in D&B.[54]

3. Determine which businesses in the sample are small businesses. We compare number of employees and annual revenues with the SBA's definitions of small business associated with each six-digit NAICS code (SBA 2023).[55]

The 182 businesses in the sample are associated with 117 NAICS codes (6-digit) spanning many sectors. Table 5 provides a sample of NAICS codes represented by the consignee businesses to demonstrate the breadth of industries associated with type 86 entries on a given day. As shown in Table 6, the consignees organize into nearly every 2-digit sector NAICS code. Using the 6-digit NAICS codes for classification purposes, 92 percent of businesses in the sample qualify as small businesses.

Data from CBP does not identify the type of good associated with the consignees, therefore we are unable to differentiate between entities that would be affected by Section 301 tariffs (in both the low scenario and high scenario) and all other entities that would be affected by fees in the high scenario only.

Taken together, this analysis finds that a substantial number of small entities may be affected by the proposed rule.

[50] To detect businesses, CBP looked for entities that used the following key terms in their names: Inc., Co., LLC. Individuals with these letter combinations in their names were later manually screened out of the sample. CBP did not attempt to identify not-for-profit organizations or governmental jurisdictions in its consignee data. (Personal communication between IEc and CBP on July 6, 2023.)

[51] Data pulled from ACE Reports on June 13, 2023 representing all consignees of type 86 entries on January 1, 2023. CBP provided the cleaned data to IEc via email on June 23, 2023.

[52] This process relies on D&B Hoovers' automated search functions to identify the business profiles associated with a list of businesses, not manual business-by-business searching. This search functionality is described in more detail in D&B Hoovers (2019, p. 25). This resource is available at *https://app.dnbhoovers.com/product/wp-content/uploads/2020/10/DB-Hoovers-User-Guide-920.pdf.*

[53] D&B Hoovers contains data fields for both ''employees at single site'' and ''employees at all sites.'' When both numbers are provided, we default to using the ''employees at all sites'' entry in order to capture the size of the larger parent company. When only the ''employees at single site'' information is available, we use that entry instead.

[54] The matched data was downloaded from D&B Hoovers on July 27, 2023, accessed via: *app.dnbhoovers.com/login.* We assume all data to be in 2023 dollars, consistent with the download date.

[55] In some cases, SBA provides a size standard for the NAICS code as well as an ''exception'' for a subset of businesses with specific activity types. This analysis does not consider the ''exceptions'' when classifying businesses as small.

TABLE 5—EXAMPLE NAICS CODES AMONG SAMPLED CONSIGNEES

NAICS code	Industry
111998	All Other Miscellaneous Crop Farming.
221118	Other Electric Power Generation.
236115	New Single-family Housing Construction.
238340	Tile and Terrazzo Contractors.
238910	Site Preparation Contractors.
238990	All Other Specialty Trade Contractors.
311615	Poultry Processing.
325199	All Other Basic Organic Chemical Manufacturing.
325412	Pharmaceutical Preparation Manufacturing.
325510	Paint and Coating Manufacturing.
325910	Printing Ink Manufacturing.
332312	Fabricated Structural Metal Manufacturing.
332322	Sheet Metal Work Manufacturing.
332710	Machine Shops.
333310	Commercial and Service Industry Machinery Manufacturing.
335313	Switchgear and Switchboard Apparatus Manufacturing.
339940	Office Supplies (except Paper) Manufacturing.
423110	Automobile and Other Motor Vehicle Merchant Wholesalers.
423120	Motor Vehicle Supplies and New Parts Merchant Wholesalers.
423110	Automobile and Other Motor Vehicle Merchant Wholesalers.
423120	Motor Vehicle Supplies and New Parts Merchant Wholesalers.
423110	Automobile and Other Motor Vehicle Merchant Wholesalers.
445110	Supermarkets and Other Grocery Retailers.
449110	Furniture Retailers.
449210	Electronics and Appliance Retailers.
531311	Residential Property Managers.
532111	Passenger Car Rental.
541618	Other Management Consulting Services.
561730	Landscaping Services.
611110	Elementary and Secondary Schools.
811111	General Automotive Repair.
811192	Car Washes.
812112	Beauty Salons.
812910	Pet Care (except Veterinary) Services.

Note: The NAICS codes presented in this table represent a sample of industries associated with entry type 86 consignees on a typical recent date, not a comprehensive list of all affected industries. See the main text for details.

TABLE 6—NUMBER OF SMALL BUSINESSES IN SAMPLE OF CONSIGNEES

Two-digit NAICS code [a]	Sector	Total businesses in sample	Small businesses in sample	Percent small
11	Agriculture, Forestry, Fishing and Hunting	1	1	100
22	Utilities	2	2	100
23	Construction	11	11	100
31	Manufacturing	2	1	50
32	Manufacturing	7	6	86
33	Manufacturing	17	16	94
42	Wholesale Trade	14	12	86
44	Retail Trade	23	22	96
45	Retail Trade	8	8	100
48	Transportation and Warehousing	5	5	100
49	Transportation and Warehousing	1	1	100
51	Information	5	5	100
52	Finance and Insurance	1	1	100
53	Real Estate and Rental and Leasing	5	5	100
54	Professional, Scientific, and Technical Services	21	20	95
55	Management of Companies and Enterprises	2	1	50
56	Administrative and Support and Waste Management and Remediation Services.	9	7	78
61	Educational Services	2	1	50
62	Health Care and Social Assistance	5	4	80
72	Accommodation and Food Services	6	5	83
81	Other Services (except Public Administration)	18	17	94
99	Unclassified [b]	17	17	100
Total		182	168	92

Sources: IEc analysis of 182 businesses named as consignees of type 86 entries for one day in 2023 (provided by CBP), business profiles from D&B Hoovers, and SBA small business size standards (SBA 2023). See text for details.

Notes:

1. While 2-digit NAICS codes are used for presentation purposes, the 6-digit NAICS codes were used to determine which businesses are small.
2. All businesses identified with NAICS code 999990 in D&B Hoovers are presumed small.

Significance Test

This section tests whether the effects of the rule would be significant for the small entities identified above. The RFA does not define a ''significant effect'' in quantitative terms. In its guidance to agencies on how to comply with the RFA, SBA states,

[i]n the absence of statutory specificity, what is 'significant' will vary depending on the economics of the industry or sector to be regulated. The agency is in the best position to gauge the small entity impacts of its regulation. (SBA 2017, p. 18.)

DHS component agencies typically assume that an annual per entity cost exceeding 1 percent of the annual gross revenues for that entity is significant (Houser 2012). Therefore, this analysis considers the 1 percent threshold when analyzing these potential impacts.

To accurately assess whether small entity consignees are likely to be significantly affected by the rule requires data on the total volume of affected shipments each entity is likely to purchase. Data describing total historical qualifying low-value shipment volume for the 168 small businesses in the sample of consignees provided by CBP is not readily available. Instead, we compare the value of the shipments with the percent increase in cost considering Section 301 tariffs (for the low and high scenarios) as well as the increased fees associated with entry (for the high scenario only). While the value of a shipment is not a measure of revenue, it provides a proxy for the capacity of entities to absorb the potential increases in shipment costs.

Low Impact Scenario

In the low impact scenario, qualifying low-value shipments formerly claiming the administrative exemption incur tariffs averaging 21.25 percent on an *ad valorem* basis (see Chapter 3 in the standalone RIA available in the docket of this rulemaking). As described in Chapter 3, we assume consignees incur 100 percent of the tariff. Table 7 presents the distribution of affected shipments by shipment value, using entry type 86 shipments imported in fiscal year 2023 as a representative sample (*i.e.,* the exact distribution may differ for shipments cleared off the manifest that would have entered with an administrative exemption in the baseline).

TABLE 7—DISTRIBUTION OF QUALIFYING LOW-VALUE SHIPMENTS BY SHIPMENT VALUE

Shipment value bin	Mid-point of shipment value	% of total entry type 86 shipments
$0–$5	$2.50	18.5
$6–$25	15.50	43.0
$26–$50	38.00	20.0
$51–$75	63.00	8.4
$76–$100	88.00	4.7
$101–$200	150.50	4.7
Over $200	500.50	0.8

Source: IEc analysis of data provided by email from CBP on September 9, 2024.

Using the mid-point of shipment value for each bin, the weighted average value per shipment is approximately $32. Applying the tariff rate likely to be incurred by consignees, we find that the increased cost per shipment is approximately $6.80 (21.25 percent of $32). We do not have readily available data on the number of affected shipments imported annually per entity. Therefore, it is uncertain whether tariff rates of this magnitude impose a significant impact on small entities importing these affected shipments under the low scenario. However, a 21.25 percent increase in the cost of importing affected goods represents a significant impact relative to the value of the shipment.

High Impact Scenario

In the high impact scenario, consignees of affected low-value shipments experience price increases resulting from the tariffs described above in the low impact scenario. Additionally, some consignees incur additional price increases resulting from fees required to file and process shipments (for a detailed description see Chapter 3 in the standalone RIA available in the docket of this rulemaking). Table 8 summarizes the additional per shipment fees that might be incurred, depending on the carrier providing shipping services. None or some combination of these fees apply, depending on whether the shipment includes a good subject to additional Section 232, 201, or 301 duties, and whether a broker is already involved in the shipping process in the baseline.

TABLE 8—PER SHIPMENT FEES

Type	Fee ($/shipment)
Broker fee: [1]	
Commercial non-express carrier [2]	$1.00
Express commercial carrier [3]	30.00
Postal carrier [3]	8.55
Merchandise Processing Fee: [4]	
All	2.53

Sources and assumptions:

[1] A licensed broker is not currently required for the ''release from manifest'' entry process, nor would the ELVS NPRM require one for the basic entry process if the ELVS NPRM is finalized as proposed. We assume for the purposes of this analysis that a broker fee is charged for any entry requiring an HTSUS code and is similar regardless of whether the filer uses enhanced entry, entry type 86, 01, or 11. (Source: Personal communication with representatives of a major broker association on 9/26/2024.)

[2] Email from CBP dated 10/11/2024.

[3] Fajgelbaum and Khandelwal (2024).

[4] Minimum merchandise processing fee for informal entries as of October 1, 2023. (As viewed on 10/11/2024 on *https://www.federalregister.gov/documents/2023/07/28/2023-16197/cobra-fees-to-be-adjusted-for-inflation-in-fiscal-year-2024-cbp-dec-23-08.*) Informal entries apply to shipments that do not exceed $2,500 and is the entry option most likely to be used for shipments currently exercising the administrative exemption (*i.e.,* shipments that do not exceed $800).

Relying on the detailed information characterizing shipment/fee combinations provided in Chapter 3 in the standalone RIA (available in the docket of this rulemaking) we find:

- Approximately 73 percent of qualifying low-value shipments do not experience increases in fees; only additional tariffs will apply.
- Among the commercial non-express carriers, only the consignees with shipments moving from manifest clearance to enhanced are expected to incur increased fees. This bin represents approximately 4 percent of total qualifying low-value shipment volume. Increased fees range from 1 percent to 40 percent of the value of the shipment.
- Among express commercial carriers, nearly all shipments will incur additional fees, ranging from 1 percent to 1,301 percent of the value of the shipment. These fees are in addition to the tariffs described above. The affected shipments represent 18 percent of total qualifying low-value shipments.
- For postal, only shipments containing Section 232, 201, and 301 goods experience additional fees. These shipments represent approximately 6 percent of total low-value shipment volume. Increased fees range from 2 percent to 443 percent of the shipment value, and are in addition to tariffs.

As described in the low impact scenario, data describing the number, value, and entry mode of qualifying low-value shipments by consignee is not readily available. Therefore, we are uncertain whether tariffs and fees of this magnitude impose a significant impact on the annual revenues of small entities importing these affected shipments. However, the value of fees and tariffs relative to the value of individual shipments suggests the potential for a significant increase in the price of affected goods. Given that options exist for reducing fees, such as consolidation, and are likely to be available for many shipments, we believe the low impact scenario is more likely.

D. Initial Regulatory Flexibility Analysis (IRFA)

Due to uncertainty regarding whether impacts to various small entities are significant, CBP does not certify that this rule has a significant economic impact on a substantial number of small entities and we instead provide information in this section for an IRFA.

1. A description of the reasons why action by the agency is being considered.

U.S. trade law authorizes the President or USTR to assess additional tariffs under certain acts of Congress, including the Trade Expansion Act of 1962 and the Trade Act of 1974. Section 232 of the Trade Expansion Act of 1962 authorizes the President to adjust imports of an article and its derivatives if there is a determination that the article is being imported in such quantities or under such circumstances as to threaten to impair the national security. Section 201 of the Trade Act of 1974 authorizes the President to impose temporary trade measures if there is substantial cause of serious injury or threat thereof to U.S. industries because of increased imports. Lastly, Section 301 of the Trade Act of 1974 allows USTR to impose import restrictions to address, among others, unreasonable or discriminatory acts, policies, or practices that burden or restrict U.S. commerce. This proposed rulemaking will refer to Section 232, 201, or 301 as ''specified trade or national security actions.''

Trade or national security actions are designed to protect domestic industries and the American public from serious injury, or the threat thereof, caused by import surges and unfair trade practices or to adjust imports that threaten to impair national security, or to encourage foreign governments to eliminate policies that are unreasonable or discriminatory and burden or restrict U.S. commerce. However, some merchandise subject to specified trade or national security actions may also be eligible for the administrative exemption pursuant to Section 321 of the Trade Act of 1930, as amended (19 U.S.C. 1321(a)(2)). Section 321 provides administrative exemptions from duty and taxes that are imposed by reason of importation for three categories of imported articles:

- Certain bona-fide gifts valued at $100 or less ($200, if the gift was from certain island possessions) sent from persons in foreign countries to persons in the United States;
- Certain personal or household articles valued at $200 or less accompanying persons arriving in the United States; and
- All other imported articles when the aggregate fair retail value of the articles in the country of shipment is $800 or less.

This proposed rulemaking concerns shipments in the third category, which are covered by the administrative exemption in 19 U.S.C. 1321(a)(2)(C). To avoid confusion with the other two administrative exemptions, we will refer to this exemption alone as the ''administrative exemption.'' Specifically, the administrative exemption allows a shipment to be imported free of duties and taxes imposed upon or by reason of importation when the aggregate fair retail value in the country of shipment of articles imported by the same person on the same day and exempted from the payment of duty is less than or equal to $800. The administrative exemption limit was originally set at $1 in the Customs Administrative Act of 1938 to limit the ''expense and inconvenience'' of collecting duty when it was a disproportionate amount of work by the U.S. government compared to the amount of revenue that would be collected. Since its inception, Congress has increased this daily aggregate value cap to $5 in 1978, $200 in 1993, and $800 in 2016. In recent years, the volume of imports subject to specified trade or national security actions has increased, but the tariffs imposed as a result of these actions do not apply to imports that enter as qualifying low-value shipments. Thus, the administrative exemption dampens the impact of specified trade or national security actions by allowing imports that claim the exemption to legally avoid all duties and taxes that would otherwise be collected, including the additional duties collected under specified trade and national security actions. In fiscal year 2023, hundreds of thousands of shipments would have been assessed additional tariffs under Section 232, 201, or 301 had they entered through formal or other type of informal entry.

Additionally, low-value shipments create operational inefficiencies for

CBP's ability to conduct an inspection of these goods. The volume of qualifying low-value shipments has risen sharply from approximately 139 million in fiscal year 2015 (prior to the increase in the exemption value) to 1 billion shipments per year in fiscal year 2023.[56] While entry type 86 has sped up processing for many of the qualifying low-value shipments, the remaining shipments are processed manually and with more limited data than other types of entries. CBP anticipates that this rulemaking would reduce the volume of qualifying low-value shipments and thereby increase the efficiency with which CBP identifies imports presenting security risks, including curbing the smuggling of illegal opioids such as heroin and fentanyl, by shifting some shipments to other entry types that require more data and the use of an authorized broker.

2. A succinct statement of the objectives of, and legal basis for, the proposed rule.

The proposed rulemaking aims to uphold the objectives of U.S. trade and national security actions, protect the revenue, and prevent unlawful importations. Trade or national security actions, such as additional tariffs under Section 232, Section 201, and Section 301, are meant to prevent specific harms such as the threat posed by certain imports to national security or domestic industries or to respond to discriminatory or unreasonable practices that restrict or burden U.S. commerce. The rule would prevent low-value shipments from circumventing these trade or national security actions by claiming the administrative exemption. Moreover, considering the rate of duties and the aggregate trade volume of affected imports, the amount of additional revenue to be collected under the proposed rule would substantially outweigh any added expense or inconvenience to the U.S. Government. Finally, CBP expects that the affected goods would be consolidated into larger shipments and entered under an appropriate formal or informal entry process, resulting in decreased overall volume of shipments. This consolidation would help CBP officers inspect entries for inadmissible merchandise more efficiently.

The authority to except merchandise subject to specified trade or national security actions from the administrative exemption comes from 19 U.S.C. 1321(b). This statutory provision authorizes regulations that except certain merchandise from eligibility for the administrative exemptions in 19 U.S.C. 1321(a) when such exceptions are consistent with the purpose of 19 U.S.C. 1321(a), or necessary to protect the revenue or to prevent unlawful importations. The authority to require HTSUS classification as part of the proposed basic entry process (in addition to the proposed enhanced entry process) as described in the ELVS NPRM comes from 19 U.S.C. 498(a)(1)(A), which authorizes the prescription of special rules for the declaration and entry of low-value shipments.

3. A description of, and, where feasible, an estimate of the number of small entities to which the proposed rule will apply.

As described in Section 6.2.1 of the standalone RIA, the proposed rule does not directly regulate any one industry. Instead, it 1) imposes additional requirements on shipments that seek to use the administrative exemption, and 2) makes goods subject to *ad valorem* tariffs under Section 232, 201, and 301 ineligible for the administrative exemption. Therefore, any individual or entity that would have claimed the administrative exception in the baseline is affected by the proposed rule. Those individuals and entities importing goods that previously met the requirements for the administrative exemption are likely to be affected by higher prices for these goods.

Any small entity in the United States has the potential to be affected by the rule as a consignee. Analysis of a sample of consignees of shipments using type 86 entry for one day in 2023 demonstrates that 92 percent of businesses in the sample qualify as small.

4. A description of the projected reporting, record-keeping and other compliance requirements of the proposed rule, including an estimate of the classes of small entities that will be subject to the requirement and the type of professional skills necessary for preparation of the report or record.

The proposed rule would add a reporting requirement to the basic entry process beyond the proposed requirements described in the ELVS NPRM. Under this rule, the 10-digit HTSUS classification would need to be reported with the entry filing for each product in a basic entry. The 10-digit HTSUS classification reporting requirement is already proposed for enhanced entry in the ELVS NPRM. Any small entity that would import a low-value shipment subject to specified trade or national security actions through basic entry in the absence of this rule would be affected by this new requirement. This would include both small businesses and individual consumers. Reporting the HTSUS codes requires the ability to determine the merchandise's HTSUS codes. We expect most importers to hire a licensed customs broker to determine the HTSUS codes and file the entry.

5. An identification, to the extent practicable, of all relevant Federal rules which may duplicate, overlap or conflict with the proposed rule.

This proposed rule would not conflict with any relevant Federal rules. This NPRM does, however, propose amendments to another NPRM's proposed amendments. The ELVS NPRM proposes the creation of a new entry process for entering low-value shipments, referred to as the ''enhanced entry process,'' which would allow CBP to target high-risk shipments more effectively. The ELVS NPRM also proposes revisions to the current process for entering low-value shipments cleared off the manifest, referred to as the ''basic entry process,'' to require additional data elements that would assist CBP in verifying eligibility for duty- and tax-free entry. For more information about the ELVS NPRM and its effects, please see *regulations.gov* for the rule and the accompanying regulatory analysis.

6. A description of any significant alternatives to the proposed rule that accomplish the stated objectives of applicable statutes and that minimize any significant economic impact of the proposed rule on small entities.

In addition to the preferred regulatory alternative (the proposed rule), CBP also considered two other alternatives.

- First, CBP considered a more stringent alternative where all shipments except for bona fide gifts under 19 U.S.C. 1321(a)(2)(A) would be prohibited from claiming the administrative exemption. Although this alternative is not modeled in this analysis, CBP anticipates the incremental welfare loss and gain in tariff revenue under this alternative would be greater than those under the proposed rule because more shipments would be affected. Therefore, this alternative has the potential to increase impacts on small entities.
- Second, CBP considered an alternative identical to the proposed rule but with an additional requirement that HTSUS codes be required for postal shipments entered by USPS. This alternative is not feasible because the collection of HTSUS codes in the postal environment is currently restricted by U.S. obligations under the Universal Postal Union. Therefore, this alternative would not meet the stated objectives of the proposed rule.

[56] Data pulled from CBP's Automated Targeting System (ATS) database.

E. Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3507), an agency may not conduct, and a person is not required to respond to, a collection of information unless the collection of information displays a valid control number assigned by the Office of Management and Budget (OMB). The collection of information contained in this proposed rule, will be submitted to OMB for review under section 3507(d) of the Paperwork Reduction Act (PRA). The public can direct comments to the Office of Information and Regulatory Affairs of OMB, Attention: Desk Officer for Customs and Border Protection. Such comments can be submitted in the regulatory docket for this proposed rule.

This rule, if finalized, would make low-value shipments subject to specified trade or national security actions ineligible for the administrative exemption, resulting in a change to OMB-approved collection 1651–0024 beyond the changes proposed in the Entry of Low-Value Shipments NPRM. Under the changes to the information collection in that NPRM, basic entries do not have a time burden as they have no data requirement beyond what is submitted on the bill of lading, whereas CBP reports separate burden estimates for Form 3461s filed on paper, Form 3461s and Form 3461ALTs filed electronically, and enhanced entries filed electronically.

The proposed rule would require all entries using the basic entry process (as described in the ELVS NPRM) to provide a 10-digit HTSUS code to facilitate CBP's ability to confirm eligibility for the administrative exemption. Shipments found ineligible would need to refile under formal or other type of informal entry to enter the merchandise (excluding enhanced or basic entry), leading to a decrease in both basic and enhanced entries. Because the HTSUS code will be required for all shipments entered using the basic or enhanced entry process (subject to waiver in certain circumstances, as detailed in the Entry of Low-Value Shipments NPRM), there is less of a difference in the filing requirements between basic and enhanced entries, so we expect some basic entries to shift to enhanced entries. As a result, we will see a change in the number of responses for Form 3461, 3461ALT; Excluding Enhanced, and enhanced entries. CBP does not expect a change in the number of respondents as a result of this rule.

As low-value shipments subject to specified trade or national security actions are made ineligible for the administrative exemption, importers will have to file entry under formal or other type of informal entry (excluding enhanced or basic entry) and fill out Form 3461, 3461ALT (excluding enhanced). As low-value shipments shift away from basic or enhanced, CBP and brokers expect them to reconsolidate into larger shipments. CBP does not know the level of consolidation that will occur, and it is not estimated in the main analysis of this rulemaking, but subject matter experts in the trade community that CBP interviewed as part of the economic analysis report that they expect enough consolidation to occur that this rule will not result in additional time burden for the public and that it may even result in time savings. In keeping with that information, CBP is adjusting its estimates of the filings to reflect a level of consolidation at which the time burden to the public breaks even as a result of this rule. CBP will revisit these estimates when it renews this information collection. Upon finalization of this proposed rule, OMB-approved collection 1651–0024 will be revised to reflect the increased burden hours as follows:

Paper Only Entry/Immediate Delivery Form 3461

Estimated Number of Respondents: 1,669.

Estimated Number of Total Annual Responses: 33,923.

Estimated Time per Response: 0.25 hours (15 minutes).

Estimated Total Annual Burden Hours: 8,481.

ACE Cargo Release Electronic Submission

Form 3461 and 3461ALT Excluding Enhanced Entry

Estimated Number of Respondents: 6,580.

Estimated Number of Total Annual Responses: 23,027,005.

Estimated Time per Response: 0.17 hours (10 minutes).

Estimated Total Annual Burden Hours: 3,837,834.

Enhanced Entry

Estimated Number of Respondents: 535.

Estimated Number of Total Annual Responses: 242,230,193.

Estimated Time per Response: 0 hours (0.0007 minutes).

Estimated Total Annual Burden Hours: 2,826.

F. National Environmental Policy Act

DHS and its components analyze actions to determine whether the National Environmental Policy Act of 1969 (''NEPA''), 42 U.S.C. 4321 *et seq.,* applies to these actions and, if so, what level of NEPA review is required. 42 U.S.C. 4336. DHS's Directive 023–01, Revision 01 and Instruction Manual 023–01–001–01, Revision 01 (''Instruction Manual 023–01–001–01'') establish the procedures that DHS uses to comply with NEPA and the Council on Environmental Quality (''CEQ'') regulations for implementing NEPA, 40 CFR parts 1500 through 1508.[57]

Federal agencies may establish categorical exclusions for categories of actions they determine normally do not significantly affect the quality of the human environment and, therefore, do not require the preparation of an Environmental Assessment or Environmental Impact Statement. 42 U.S.C. 4336e(1); *see also* 40 CFR 1501.4, 1507.3(c)(8), 1508.1(e). DHS has established categorical exclusions, which are listed in Appendix A of its Instruction Manual 023–01–001–01. Under DHS's NEPA implementing procedures, for an action to be categorically excluded, it must satisfy each of the following three conditions: (1) the entire action clearly fits within one or more of the categorical exclusions; (2) the action is not a piece of a larger action; and (3) no extraordinary circumstances exist that create the potential for a significant environmental effect.

DHS has analyzed this action under Directive 023–01 and Instruction Manual 023–01–001–01. DHS has made a determination that this rulemaking action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. First, this proposed rule clearly fits within the Categorical Exclusions A3(a) and A3(d) of DHS's Instruction Manual 023–01–001–01, Appendix A, for the promulgation of rules of a ''strictly administrative or procedural nature'' and rules that ''interpret or amend an existing regulation without changing its environmental effect,'' respectively. The proposed rule would create a new

[57] CBP is aware of the November 12, 2024 decision in *Marin Audubon Society* v. *Federal Aviation Administration,* No. 23–1067 (D.C. Cir. Nov. 12, 2024). To the extent that a court may conclude that CEQ regulations implementing NEPA are not judicially enforceable or binding on this agency action, CBP has nonetheless elected to follow those CEQ regulations, in addition to DHS's Directive and Instruction Manual, to meet the agency's obligations under NEPA, 42 U.S.C. 4321 *et seq.*

process for entering low-value shipments, allowing CBP to target high-risk shipments more effectively. The proposed rule would also revise the current process for entering low-value shipments to require additional data elements that would assist CBP in verifying eligibility for duty- and tax-free entry of low-value shipments and bona-fide gift. Second, this NPRM is not part of a larger action. Third, this NPRM presents no extraordinary circumstances creating the potential for significant environmental effects. Therefore, a more detailed NEPA review is not necessary. DHS seeks any comments or information that may lead to the discovery of any significant environmental effects from this NPRM.

Signing Authority

In accordance with Treasury Order 100–20, the Secretary of the Treasury delegated to the Secretary of Homeland Security the authority related to the customs revenue functions vested in the Secretary of the Treasury as set forth in 6 U.S.C. 212 and 215, subject to certain exceptions. This regulation is being issued in accordance with DHS Directive 07010.3, Revision 03.2, which delegates to the Commissioner of CBP the authority to prescribe and approve/sign regulations related to customs revenue functions. Pete Flores, Senior Official Performing the Duties of the Commissioner, having reviewed and approved this document, has delegated the authority to electronically sign this document to the Director (or Acting Director, if applicable) of the Regulations and Disclosure Law Division of CBP, for purposes of publication in the **Federal Register**.

List of Subjects

19 CFR Part 10

Bonds, Exports, Imports, Reporting and recordkeeping requirements, Trade agreements.

19 CFR Part 128

Administrative practice and procedure, Freight, Reporting and recordkeeping requirements.

19 CFR Part 143

Reporting and recordkeeping requirements.

Proposed Amendments to the CBP Regulations

For the reasons stated above in the preamble, CBP proposes to amend 19 CFR parts 10, 128, and 143 as set forth below.

PART 10—ARTICLES CONDITIONALLY FREE, SUBJECT TO A REDUCED RATE, ETC.

■ 1. The general authority citation for part 10 continues to read as follows:

Authority: 19 U.S.C. 66, 1202 (General Note 3(i), Harmonized Tariff Schedule of the United States (HTSUS)), 1321, 1481, 1484, 1498, 1508, 1623, 1624, 4513.

* * * * *

■ 2. Amend § 10.153 by adding paragraph (j);

The addition reads as follows:

§ 10.153 Conditions for exemption.

* * * * *

(j) The exemption provided for in § 10.151 is not to be allowed with respect to imported merchandise covered in an action imposing additional duties pursuant to either Section 232 of the Trade Expansion Act of 1962 (19 U.S.C. 1862), Section 201 of the Trade Act of 1974 (19 U.S.C. 2251 *et seq.*), or Section 301 of the Trade Act of 1974 (19 U.S.C. 2411 *et seq.*).

* * * * *

PART 128—EXPRESS CONSIGNMENTS

■ 3. The general authority citation for part 128 continues to read as follows:

Authority: 19 U.S.C. 58c, 66, 1202 (General Note 3(i), Harmonized Tariff Schedule of the United States), 1321, 1484, 1498, 1551, 1555, 1556, 1565, 1624.

■ 4. Amend § 128.21 by revising paragraph (a)(4)(ii) to read as follows:

§ 128.21 Manifest requirements.

(a) * * *

(4) * * *

(ii) If the merchandise is eligible for, and is entered under, the informal entry procedures as provided in § 128.24, except for merchandise eligible to pass free of duty and tax as provided in § 128.24(f) and entered under § 143.23(k) of this chapter.

* * * * *

PART 143—SPECIAL ENTRY PROCEDURES

■ 5. The general authority citation for part 143 continues to read as follows:

Authority: 19 U.S.C. 66, 1321, 1414, 1481, 1484, 1498, 1624, 1641.

■ 6. Amend § 143.23 by adding paragraph (k)(9) to read as follows:

§ 143.23 Form of entry.

* * * * *

(k) * * *

(9) The 10-digit classification of the merchandise in Chapters 1–97 (and additionally in Chapter 99, if applicable) of the Harmonized Tariff Schedule of the United States (HTSUS), if entering merchandise meeting the requirements of 19 U.S.C. 1321(a)(2)(C) and § 10.151.

* * * * *

Robert F. Altneu,

Director, Regulations & Disclosure Law Division, Regulations & Rulings, Office of Trade, U.S. Customs and Border Protection.

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

23 CFR Part 500

23 CFR Part 515

[FHWA Docket No. FHWA–2024–0048]

RIN 2125–AG00

Asset Management Plans; Management and Monitoring Systems

AGENCY: Federal Highway Administration (FHWA), U.S. Department of Transportation (DOT).

ACTION: Proposed rule; extension of comment period.

SUMMARY: The FHWA is extending the comment period for a notice of proposed rulemaking (NPRM) and request for comments, which was published on November 13, 2024. The original comment period is set to close on January 13, 2025. The extension is based on concerns expressed by stakeholders that the January 13, 2025, closing date does not provide sufficient time to review and provide comprehensive comments. The FHWA recognizes that others interested in commenting may have similar concerns and agrees that the comment period should be extended. Therefore, the closing date for comments is changed to February 12, 2025, which will provide stakeholders and others interested in commenting additional time to discuss, evaluate, and submit responses to the docket.

DATES: Comments must be received on or before February 12, 2025. Late comments will be considered to the extent practicable.

ADDRESSES: Mail or hand deliver comments to the U.S. Department of Transportation, Dockets Management Facility, 1200 New Jersey Avenue SE., Washington, DC 20590, or submit electronically at *https://www.regulations.gov.* All comments should include the docket number that

appears in the heading of this document. All comments received will be available for examination and copying at the above address from 9:00 a.m. to 5:00 p.m., E.T., Monday through Friday, except Federal holidays. Those desiring notification of receipt of comments must include a self-addressed, stamped postcard or may print the acknowledgment page that appears after submitting comments electronically. Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (Volume 65, Number 70, Pages 19477–78) or you may visit *https://www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: Ms. Tashia J. Clemons, Office of Infrastructure, 202–493–0551, *tashia.clemons@dot.gov;* or Mariya Tikhonova, Office of the Chief Counsel, 202–366–1356, *mariya.tikhonova@dot.gov,* Federal Highway Administration, 1200 New Jersey Avenue SE, Washington, DC 20590. Office hours are from 8:00 a.m. to 4:30 p.m., E.T., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:

Electronic Access and Filing

You may submit or access all comments received by the DOT online through: *https://www.regulations.gov.* Electronic submission and retrieval help and guidelines are available on the website. It is available 24 hours each day, 365 days each year. Please follow the instructions. An electronic copy of this document may also be downloaded from the **Federal Register**'s home page at: *https://www.federalregister.gov.*

Background

On November 13, 2024, at 89 FR 89506, FHWA published in the **Federal Register** an NPRM proposing changes to the Asset Management Plans and Management and Monitoring Systems regulations. The original comment period for the NPRM closes on January 13, 2025. Stakeholders have expressed concern that this closing date does not provide sufficient time to review and provide comprehensive comments on the proposal. The FHWA recognizes that others interested in commenting may have similar concerns and agrees that the comment period should be extended by 30 days for interested parties to submit comprehensive comments. The closing date is changed from January 13, 2025, to February 12, 2025.

Authority: Sec. 1106 and 1203 of Pub. L. 112–141, 126 Stat. 405; 23 U.S.C. 109, 119(e), 144, 150(c), and 315; 49 CFR 1.85(a).

Gloria M. Shepherd,

Acting Deputy Administrator, Federal Highway Administration.

DEPARTMENT OF JUSTICE

Office of Justice Programs

28 CFR Part 94

[Docket No.: OJP (OVC) 1812]

RIN 1121–AA91

International Terrorism Victim Expense Reimbursement Program

AGENCY: Office for Victims of Crime, Justice.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Office for Victims of Crime (''OVC'') of the U.S. Department of Justice's Office of Justice Programs (''OJP''), proposes this rule to amend the program regulations for the International Terrorism Victim Expense Reimbursement Program (''ITVERP''), to streamline program operation, more expressly reflect certain policy and procedures adopted by OVC since it began administering the program in 2006, and to adjust cost category caps.

DATES: Comments must be received by no later than 11:59 p.m., E.T., on March 24, 2025.

ADDRESSES:

Electronic comments: OVC encourages commenters to submit all comments electronically through the Federal eRulemaking Portal, which provides the ability to type comments directly into the comment field on the web page or attach a file. Please go to *https://www.regulations.gov* and follow the on-line instructions at that site for submitting comments. Upon completion of your submission, you will receive a Comment Tracking Number. Submitted comments are not instantaneously available for public view on *regulations.gov*. If you have received a Comment Tracking Number, you have submitted your comment successfully and there is no need to resubmit the same comment. Commenters should be aware that the system will not accept comments after 11:59 p.m. Eastern Time on the last day of the comment period.

Paper comments: OVC prefers to receive comments via *www.regulations.gov* where possible. Paper comments that duplicate electronic submissions are not necessary and are discouraged. Should you wish to mail a paper comment in lieu of an electronic comment, it should be sent via regular or express mail to: ITVERP, Office for Victims of Crime, Office of Justice Programs, U.S. Department of Justice, 810 7th Street NW, Washington, DC 20531.

To ensure proper handling of comments, please reference ''OJP Docket No. 1812'' on all electronic and written correspondence, including any attachments.

FOR FURTHER INFORMATION CONTACT: Victoria Jolicoeur, International Terrorism Victim Expense Reimbursement Program, Office for Victims of Crime, at 202–307–5134.

SUPPLEMENTARY INFORMATION:

I. Posting of Public Comments

Please note that all comments received are considered part of the public record and made available for public inspection online at *www.regulations.gov*. Such information includes personal identifying information (such as your name, address, etc.) voluntarily submitted by the commenter. The Freedom of Information Act applies to all comments received.

If you wish to submit personal identifying information (such as your name, address, etc.) as part of your comment, but do not wish for it to be posted online, you must include the phrase ''PERSONAL IDENTIFYING INFORMATION'' in the first paragraph of your comment. You must also place all of the personal identifying information that you do not want posted online in the first paragraph of your comment, and identify with specificity what information you want the agency to redact.

If you wish to submit confidential business information as part of your comment, but do not wish it to be posted online, you must include the phrase ''CONFIDENTIAL BUSINESS INFORMATION'' in the first paragraph of your comment. You must also prominently identify all confidential business information to be redacted within the comment. If a comment has so much confidential business information that it cannot be effectively redacted, the agency may choose not to post all or part of that comment.

Personal identifying information identified and located as set forth above will be placed in the agency's public docket file, but not posted online. Confidential business information

identified and located as set forth above will not be placed in the public docket file. If you wish to inspect the agency's public docket file in person by appointment, please see the ''For Further Information Contact'' paragraph.

II. Background

The Victims of Crime Act of 1984 (VOCA), sec. 1404C (34 U.S.C. 20106), added in an amendment to VOCA by the Victims of Trafficking and Violence Protection Act (VTVPA) of 2000, sec. 2003(c), authorizes OVC to reimburse certain expenses to eligible victims of acts of international terrorism. Eligible victims include U.S. nationals, as well as foreign nationals working for the U.S. government at the time of the terrorist act. OVC published a notice of proposed rulemaking at 70 FR 49518–49525, on August 24, 2005, and published the current rule at 71 FR 52446, on September 6, 2006, and it went into effect on October 6, 2006. On April 11, 2011, at 76 FR 19909, OVC published an interim-final rule allowing the Director additional discretion to accept late-filed claims upon a showing of good cause. This was finalized at 88 FR 3656 on January 20, 2023. Aside from the 2011 amendment to the deadline provision, the overall rule, including category caps, has not been updated since the program's inception.

OVC proposes this rule, pursuant to its rulemaking authority at 34 U.S.C. 20110(a), to make minor updates to the regulations to reflect contemporary program policies and procedures adopted by OVC since it began administering the program in 2006, and to adjust cost category caps.

III. Section-by-Section Discussion of Proposed Changes

The following is a summary of the changes that OVC proposes:

Current provision	Proposed change
94.12(c) Definition of *Collateral sources*.	Makes patent longstanding OVC policy of presuming (unless the claimant demonstrates otherwise) that hostile fire or imminent danger pay for U.S. military personnel who claim expenses for incidents occurring in an officially designated combat zone or a qualified hazardous duty area, is a collateral source. Non-substantive changes to improve readability.
94.12(g) Definition of *Funeral and burial*.	Allows reimbursement of travel costs for up to five family members, instead of two. This reflects OVC's observation that it is common for more than two family members to travel to attend victim funerals. Increasing the cap to five would allow OVC to better assist victims with legitimate expenses while maintaining a cap on program expenses for funeral travel.
94.12(i) Definition of *Incompetent* ...	Minor change to replace the outdated and offensive term ''mental retardation'' with ''cognitive disability.''
94.12(r) Definition of *Property loss*	Adds the word ''typically'' when providing that medical devices are to be included under the medical expense category and not the property loss category. This would replace the current limit with a presumption to allow OVC to characterize medical device loss in the category that maximizes victim reimbursement.
94.12(u) Definition of *Victim*	Adds the words ''Is otherwise unable to submit a claim as a result of the act of terrorism'' (in a new subparagraph (iv) under (u)(2)) to allow for the surviving spouse, children, parents, and siblings to be considered victims for purposes of this program when an individual is rendered missing as a result of an act of international terrorism. The Federal Bureau of Investigation (FBI) has indicated to OVC that it has encountered victims who would have found such support from ITVERP to be beneficial.
94.21 Eligibility	Clarifies OVC's longstanding practice of allowing applicants to submit an initial application, followed by supplemental applications for expenses incurred after the initial application (e.g., ongoing medical care).
94.23 Amount of reimbursement ..	Clarifies that the reimbursement cap in effect at the time that the application (whether initial or supplemental) is received is the cap that applies to all awards under that application. Thus, an applicant may file a supplemental claim to take advantage of a higher cap limit in categories where that applicant previously hit the cap. This rule increases the administrative burden on OVC to determine additional supplemental claims, but OVC anticipates being able to manage this burden within current program resources due to the ITVERP's relatively small size. The change has the benefit of providing better coverage of actual victim expenses and avoiding discrepancies between caps applied to claimants under the same incident who filed at different times. The proposed provision also adds language to automatically adjust the caps for inflation every five years.
94.24 Determination of the award	Makes patent OVC's preferred practice of providing claimant notification via electronic means (e.g., email or its claims management system) by default.
94.25 Collateral sources	Makes non-substantive edits to paragraph (a) to clarify the provision, which addresses when offset of ITVERP reimbursement because of collateral sources is required.
94.31 Application procedures	Makes patent OVC's current practice (required by the ITVERP electronic claim system) of requiring all claimants to submit an itemized list of incident-related expenses for which they seek reimbursement, and to certify and attest to the veracity of that list and the supporting documentation. Adds that such certification must be made ''under penalty of perjury'' to make patent the penalty for a false certification. It also permits the Director to accept the list or alternative documentation, as appropriate, in lieu of receipts, which often are not retained (and are thus ''lost'') for a variety of reasons. Finally, the provision would make patent OVC's current practice of allowing claimants to submit *copies* of receipts, instead of the original document.
94.32 Application deadline	Makes patent OVC's current policy that the application deadline applies to the initial application. If the initial application is submitted in a timely manner, supplemental applications will be accepted any time after that at reasonable intervals (e.g., for ongoing costs).
94.33 Investigation and analysis of claims.	Modifies the prohibition on sharing victim identifying information with expert examiners/reviewers to require, instead, that OVC make reasonable efforts to minimize victim identifying information released to such reviewers. This change would allow OVC flexibility to take alternative measures to protect victim identities when redacting identifying information from voluminous medical records is not feasible.
94.41 Interim emergency payment	Changes the term ''interim emergency payment'' to ''conditional payment'' to better reflect the actual processing of claims where up-front payment may be justified. As a practical matter, conditional payments are rare, and ITVERP typically is not an ideal payment source for ''emergency'' needs due to the multiple reviews required prior to payment. Adds mental health care to the list of care that could be provided under a conditional payment.
94.42 Repayment and waiver of repayment.	Non-substantive simplifying and conforming (to the proposed 94.41) change to delete ''interim emergency or final award'' and replace it with ''award''.

Current provision	Proposed change
94.51 Request for reconsideration	Non-substantive conforming change to delete ''initial'' to reflect OVC's current practice of allowing ''initial'' and ''supplemental'' applications. The change would clarify that the Director may make determinations based on material submitted with either type of application or request for additional information.
Reimbursement caps	Increases overall cap from $105,000 to $175,000 per claimant.
Medical expenses	Increases cap from $50,000 to $80,000. OVC has received 7 claims over the category cap since 2006; the excess averaging $17,087.89. The proposed cap would accommodate these expenses.
Mental health care	Increases cap from $5,000 to $20,000, and eliminates the timeframe during which OVC may provide reimbursement. OVC has received 57 claims (about 10%) that have requested reimbursement above the mental health cap; the excess averaging $6112.78. Increasing the category cap would have covered these expenses. The higher cap also would align better with caps in most state victim compensation programs. Eliminating the time limit on mental health costs better reflects the reality that victims have mental health needs exceeding one year. The proposed provision also makes a conforming change reflecting the proposed 94.12(u)(iv), which recognizes family members of persons missing due to a terrorist incident as victims (where such a victim ''Is otherwise unable to submit a claim as a result of the act of terrorism'').
Property loss, repair, and replacement.	Increases cap from $10,000 to $15,000. OVC has received 17 claims exceeding this cap; the excess averaging $5561.18. The higher cap would have covered most of these expenses.
Funeral and burial costs	Increases cap from $25,000 to $35,000. OVC received four claims exceeding this cap; the excess averaging $5646.84. The higher cap would have covered most of these expenses.
Miscellaneous expenses	Increases cap from $15,000 to $25,000. OVC received six claims exceeding this cap; the excess averaging $8693.81. The higher cap would have covered most of these expenses.

All proposed amendments would apply to claims pending determination by OVC, and to all initial and supplemental claims filed after the effective date of the final rule.

IV. Regulatory Certifications

A. Regulatory Flexibility Act

The Regulatory Flexibility Act (''RFA'', 5 U.S.C. 601–612) applies to rules that are subject to notice and comment under section 553(b) of the Administrative Procedure Act (''APA''). As noted in the discussion, below, however, regarding the applicability of the APA, this proposed rule is exempt from the notice and comment requirements under section 553(b) or other provisions of law. Consequently, the RFA does not apply.

Nevertheless, consistent with the analysis typically required by the RFA (5 U.S.C. 605(b)), OVC has reviewed this proposed regulation and by approving it certifies that it will not have a significant economic impact on a substantial number of small entities. This proposed regulation has no cost to State, local, or tribal governments, or to the private sector. The ITVERP is funded by fines, fees, penalty assessments, and bond forfeitures paid by Federal offenders, as well as gifts from private individuals, deposited into the Crime Victims Fund in the U.S. Treasury. Therefore, an analysis of the impact of this proposed regulation on such entities is not required under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*).

B. Executive Orders 12866, 13563, and 14094—Regulatory Review

This proposed regulation has been drafted and reviewed in accordance with Executive Order 12866, ''Regulatory Planning and Review'' section 1(b), Principles of Regulation, Executive Order 13563 ''Improving Regulation and Regulatory Review'' section 1(b), General Principles of Regulation; and Executive Order 14094, ''Modernizing Regulatory Review.'' This proposed rule is not a ''significant regulatory action'' under Executive Order 12866, section 3(f), Regulatory Planning and Review. Accordingly, this rule has not been reviewed by the Office of Management and Budget.

Executive Order 13563 directs agencies to propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs; tailor the regulation to impose the least burden on society, consistent with obtaining the regulatory objectives; and, in choosing among alternative regulatory approaches, select those approaches that maximize net benefits. Executive Order 13563 recognizes that some benefits and costs are difficult to quantify and provides that, where appropriate and permitted by law, agencies may consider and discuss qualitatively values that are difficult or impossible to quantify, including equity, human dignity, fairness, and distributive impacts.

The proposed rule would clarify and update the existing rule, to make patent in the program rule the existing OVC program policies and practices that have been developed since the program's inception, increase reimbursement category caps to reflect the actual data on victim needs gathered by OVC since 2006, and to make technical adjustments for clarity. It would not alter the underlying program structure. The cost to the federal government is largely administrative and is clearly outweighed by the government's interest, and statutory mandate, to see that U.S. victims of international terrorism are reimbursed for the expenses associated with their victimization. This proposed regulation has no cost to state, local, or tribal governments, or to the private sector. The ITVERP is funded by fines, fees, penalty assessments, and forfeitures paid by federal offenders, as well as gifts from private individuals, deposited into the Crime Victims Fund in the U.S. Treasury, and set aside in the Antiterrorism Emergency Reserve Fund, from which OVC may obligate no more than $50 million in any given year.

The proposed changes in §§ 94.12(c), 94.12(u), 94.21, 94.24, 94.31, 94.32, 94.12(g), 94.12(i), 94.12(r), 94.25, 94.33, 94.41, 94.42 and 94.51, largely codify existing agency practices, update terminology, make technical clarifications, or make simplifying or conforming changes, and thus impose no costs but provide the substantial benefit of transparency in program administration. A few changes provide OVC with some additional flexibility (*e.g.,* to reimburse five instead of just two travelers for funeral/burial, or to characterize medical devices in either the medical or property loss category to maximize victim reimbursement), but do not create costs for non-Federal entities or individuals or materially increase Federal administrative costs.

The proposed change in section 94.23 to apply the current cap to any applications filed after the effective date of that cap, whether those applications are initial or supplemental, could result in approximately $637,328 in one-time costs. That figure assumes,

conservatively, that all claimants who previously hit a category cap would file a supplemental application. This one-time outlay would not materially change the budgetary impact of this program and would be covered within the existing program funding allocation from the Crime Victims Fund. It would benefit victims by allowing them to receive reimbursement for amounts closer to the actual costs that they incurred due to a terrorist attack.

Based on the number of claims with costs exceeding the caps that were filed in each category and the average excess amount for each category (set out in the chart of proposed changes above), divided by 16 years (the span of time OVC's data regarding claims with costs exceeding the caps covers), OVC estimates that the proposed change to the category caps would create approximately $39,833 in additional claim payment costs per year from the Crime Victims Fund Anti-Terrorism Emergency Reserve. The proposed increase would not change the overall budgetary impact of this program, nor would it materially change the OVC outlays for this program on an annual basis. It would, however, have substantial benefit to the victims that incur costs above the current caps. Moreover, the proposed overall cap of $175,000, is just modestly above the 2006 cap ($105,000) as adjusted for inflation from 2006 to 2023, $158,411.

C. Administrative Procedure Act

This proposed rule concerns matters relating to ''grants, benefits, or contracts,'' 5 U.S.C. 553(a)(2), and is therefore exempt from the requirement of notice and comment and a 30-day delay in the effective date. Nevertheless, in its discretion, OVC has decided to solicit comments on this proposed rule.

D. Executive Order 13132—Federalism

This proposed rule will not have substantial direct effects on the States, on the relationship between the national government and the States, or on distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order No. 13132, it is determined that this proposed rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

E. Executive Order 12988—Civil Justice Reform (Plain Language)

This proposed rule meets the applicable standards set forth in section 3(a) and (b)(2) of Executive Order No. 12988. Pursuant to section 3(b)(1)(I) of the Executive Order, nothing in this or any previous rule (or in any administrative policy, directive, ruling, notice, guideline, guidance, or writing) directly relating to the Program that is the subject of this proposed rule is intended to create any legal or procedural rights enforceable against the United States, except as the same may be contained within 28 CFR part 94, subpart A.

F. Unfunded Mandates Reform Act of 1995

This proposed rule, when finalized, would not result in the expenditure by State, local and tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more in any one year, and it will not significantly or uniquely affect small governments. Therefore, no actions were deemed necessary under the provisions of the Unfunded Mandates Reform Act of 1995.

G. Congressional Review Act

This proposed rule is not a major rule as defined by 5 U.S.C. 804.

H. Paperwork Reduction Act

This proposed rule does not propose any new, or changes to existing, ''collection[s] of information'' as defined by the Paperwork Reduction Act of 1995 (44 U.S.C. 3501, *et seq.*) and its implementing regulations at 5 CFR part 1320. The existing collection (ITVERP Application, 1121–0309) has been cleared by the Office of Management and Budget.

List of Subjects in 28 CFR Part 94

Administrative practice and procedure, Victim compensation, Claims program, International terrorism, Victim expense reimbursement, Victims of Crime Act (VOCA) of 1984.

Accordingly, for the reasons set forth in the preamble, OVC proposes to amend part 94 of chapter I of Title 28 of the Code of Federal Regulations as follows:

PART 94—CRIME VICTIM SERVICES

■ 1. The authority citation for Part 94 continues to read as follows:

Authority: 34 U.S.C., 20103, 20106, 20110(a), 20111.

■ 2. Amend § 94.12 by:
■ a. In paragraph (c), in the first sentence, removing '': except that any reimbursement received under this subpart shall be reduced by the amount of'' and adding in its place ''; and ''; and adding a new sentence to the end of the paragraph.
■ b. In paragraph (g), removing the phrase ''travel for not more than two family members'' and adding in its place the phrase ''travel for not more than five family members'';
■ c. In paragraph (i), removing the term ''mental retardation'' and adding in its place the term ''cognitive disability'';
■ d. In paragraph (r), adding the word ''typically'' before ''are included in the category of'';
■ e. In paragraph (u)(2)(ii), at the end of the paragraph, removing the word ''or'';
■ f. In paragraph (u)(2)(iii), removing the period and adding in its place ''; or''; and
■ g. Adding paragraph (u)(2)(iv).

The additions read as follows:

§ 94.12 Definitions.

* * * * *

(c) * * * To the extent that a claimant is a member of the U.S. military, and the expenses claimed relate to a terrorist incident occurring in an officially designated combat zone or qualified hazardous duty area, where the member is also entitled to hostile fire pay or imminent danger pay, pursuant to 37 U.S.C. 310, OVC will presume that such pay constitutes a collateral source that offsets the expenses claimed, unless the claimant demonstrates otherwise.

* * * * *

(u) * * *

(2) * * *

(iv) Is otherwise unable to submit a claim as a result of the act of terrorism.

■ 5. Amend § 94.21 in paragraph (a) by adding a new first sentence, to read as follows:

§ 94.12 Eligibility.

(a) Claimants may submit an initial application, and (as necessary) supplemental applications, in the form and manner required by the Director. * * *

* * * * *

■ 6. Revise § 94.23 to read as follows:

§ 94.23 Amount of reimbursement.

Categories of expenses are capped, as set forth in the chart in the appendix to subpart A of part 94. Those caps shall be adjusted on October 1, 2028, and every five years thereafter, to reflect the change in the Consumer Price Index for All Urban Consumers, published by the Bureau of Labor Statistics, during the preceding five years; and otherwise may be adjusted, from time to time, by rulemaking. The cap in effect within a particular expense category at the time that the application (whether initial or supplemental) is received shall apply to all awards under that application. Thus, a claimant whose expenses were not reimbursable due to a previous category cap may file a supplemental application to have expenses considered under the most recent cap.

§ 94.24 [Amended]

■ 7. Amend § 94.24 in the second sentence by removing the phrase ''mailed to the claimant at his last known address'' and adding in its place the phrase ''sent to the claimant electronically (or mailed to his last known address)''.

■ 8. Amend § 94.25 by revising paragraph (b) to read as follows:

§ 94.25 Collateral sources.

* * * * *

(b) Notwithstanding paragraph (a) of this section, the claimant's award under this subpart shall not be reduced by the amount that the claimant receives from a collateral source, nor shall the claimant be required to subrogate the United States to the claim for reimbursement from the collateral source, except when combined reimbursement under this subpart and any collateral source would exceed the actual expense.

■ 9. Revise § 94.31 to read as follows:

§ 94.31 Application procedures.

(a) To receive reimbursement, a claimant must submit a completed application under this program requesting payment based on a detailed itemized list of expenses accompanied by copies of original receipts (if available) or (as permitted by the Director) appropriate alternative documentation or certification.

(b) The claimant must certify under penalty of perjury that the items and amounts submitted for reimbursement are true and correct to the best of his knowledge. In the event that it is later determined that a fraudulent certification was made, the United States may take action to recover any payment made under this section, and pursue criminal prosecution, as appropriate.

■ 10. Amend § 94.32 by:

■ a. Removing the phrase ''file an application'' and adding in its place the phrase ''file an initial application'' wherever it appears; and

■ b. Adding a sentence to the end of the section.

The addition reads as follows:

§ 94.32 Application deadline.

* * * OVC will accept supplemental applications at any time (subject to the Director's reasonable limits on the frequency of submission), provided that the initial application was filed on time.

§ 94.33 [Amended]

■ 11. Amend § 94.33 by removing the phrase ''no identifying information for the victim or representative shall be released'' and adding in its place the phrase ''the Director will make reasonable efforts to minimize and safeguard any victim identifying information that is released to the reviewer''

§ 94.41 [Amended]

■ 12. Amend § 94.41 by:

■ a. In the section heading, removing the words ''Interim emergency'' and adding in their place the word ''Conditional''; and

■ b. Removing the term ''an interim emergency payment'' and adding in its place the term ''a conditional payment'' wherever it appears.

§ 94.42 [Amended]

■ 13. Amend § 94.42 in the first sentence by removing the words ''interim emergency award or final''.

§ 94.51 [Amended]

■ 14. Amend § 94.51 to remove ''initial'' before ''application''.

■ 15. Amend Appendix to Subpart A of Part 94, by revising the Chart of Expense Categories and Limits as follows:

Appendix to Subpart A of Part 94—International Terrorism Victim Expense Reimbursement Program (ITVERP); Chart of Expense Categories and Limits

* * * * *

Expense categories	Subcategories and conditions	Expense limits
Medical expenses, including dental and rehabilitation costs.	Victim's medical care, including, without limitation, treatment, cure, and mitigation of disease or injury; replacement of medical devices, including, without limitation, eyeglasses or other corrective lenses, dental services, prosthetic devices, and prescription medication; and other services rendered in accordance with a method of healing recognized by the jurisdiction in which the medical care is administered. Victim's cost for physiotherapy; occupational therapy; counseling; workplace, vehicle, and home modifications. For example, if a victim were to sustain a physical injury, such as blindness or paralysis, which would affect his ability to perform current professional duties, physical rehabilitation to address work skills would be appropriate.	Up to $80,000.
Mental health care	Victim's (and, when victim is a minor, incompetent, incapacitated, or deceased, or is otherwise unable to submit a claim as a result of the act of terrorism, certain family members') mental health counseling costs.	Up to $20,000.
Property loss, repair, and replacement	Includes crime scene cleanup, and replacement of personal property (not including medical devices) that is lost, destroyed, or held as evidence.	Up to $15,000 to cover repair or replacement, whichever is less.
Funeral and burial costs	Includes, without limitation, the cost of disposition of remains, preparation of the body and body tissue, refrigeration, transportation of remains, cremation, procurement of a final resting place, urns, markers, flowers and ornamentation, costs related to memorial services, and other reasonably associated activities.	Up to $35,000.

Expense categories	Subcategories and conditions	Expense limits
Miscellaneous expenses	Includes, without limitation, temporary lodging up to 30 days, local transportation, telephone costs, etc.; with respect to emergency travel, two family members' transportation costs to country where incident occurred (or other location, as appropriate) to recover remains, care for victim, care for victim's dependents, accompany victim to receive medical care abroad, accompany victim back to U.S., and attend to victim's affairs in host country.	Up to $25,000.

Brent J. Cohen,

Acting Assistant Attorney General, Office of Justice Programs.

[FR Doc. 2025–00071 Filed 1–17–25; 8:45 am]

BILLING CODE 4410–18–P

DEPARTMENT OF JUSTICE

28 CFR Part 95

[Docket No. OAG 182; AG Order No. 6144–2025]

RIN 1105–AB70

Homicide Victims' Families' Rights Act

AGENCY: Office of the Attorney General, Department of Justice.

ACTION: Proposed rule.

SUMMARY: The Department of Justice is proposing a rule to implement the Homicide Victims' Families' Rights Act of 2021. The proposed rule would explain and effectuate the Act's system for reviewing and, as warranted, reinvestigating murders investigated by Federal law enforcement agencies that remain unsolved after three years.

DATES: Written and electronic comments must be sent or submitted on or before March 24, 2025. Comments received by mail will be considered timely if they are postmarked on or before the last day of the comment period. The electronic Federal Docket Management System will accept electronic comments until midnight eastern time at the end of that day.

ADDRESSES: Comments may be mailed to Regulations Docket Clerk, Office of Legal Policy, U.S. Department of Justice, 950 Pennsylvania Avenue NW, Room 4234, Washington, DC 20530. To ensure proper handling, please reference RIN 1105–AB70 or Docket No. OAG 182 on your correspondence. You may submit comments electronically or view an electronic version of this proposed rule at *http://www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: David J. Karp, Senior Counsel, Office of Legal Policy, U.S. Department of Justice, Washington, DC, 202–514–3273.

SUPPLEMENTARY INFORMATION:

I. Public Participation

Posting of Public Comments. Interested persons are invited to participate in this rulemaking by submitting written data, views, or arguments on all aspects of this rule via one of the methods and by the deadline stated above. The Department of Justice (''Department'') also invites comments that relate to the economic, environmental, or federalism effects that might result from this rule. Comments that will provide the most assistance to the Department in developing these procedures will reference a specific portion of the rule, explain the reason for any recommended change, and include data, information, or authority that support such recommended change.

Please note that all comments received are considered part of the public record and made available for public inspection at *http://www.regulations.gov.* Such information includes personally identifying information (''PII'') (such as your name, address, etc.).

Interested persons are not required to submit their PII in order to comment on this rule. However, any PII that is submitted is subject to being posted to the publicly accessible website at *http://www.regulations.gov* without redaction.

If you want to submit confidential business information as part of your comment but do not want it to be posted online, you must include the phrase ''CONFIDENTIAL BUSINESS INFORMATION'' in the first paragraph of your comment. You must also prominently identify confidential business information to be redacted within the comment. If a comment has so much confidential business information that it cannot be effectively redacted, all or part of that comment may not be posted on *http://www.regulations.gov.*

Confidential business information identified and located as set forth above will not be placed in the public docket file. The Department may withhold from public viewing information provided in comments that it determines may impact the privacy of an individual or is offensive. For additional information, please read the Privacy Act notice that is available via the link in the footer of *http://www.regulations.gov.* To inspect the agency's public docket file in person, you must make an appointment with the agency. Please see the **FOR FURTHER INFORMATION CONTACT** paragraph above for agency contact information.

II. Overview

The Homicide Victims' Families' Rights Act of 2021 (''Act'' or ''HVFRA''), which was enacted on August 3, 2022, Public Law 117–164, 136 Stat. 1358, provides a system for the review of case files, and for carrying out further investigation as warranted, in murder cases investigated by Federal law enforcement agencies that have gone unsolved for over three years. The general objective of the Act is to facilitate the identification of the perpetrators of these ''cold case'' murders and thereby help to bring the perpetrators to justice and provide closure for the victims' families.

The Act specifically provides for carrying out case file reviews in cold case murder investigations on application by certain family members of the victim, and for further investigation if the case file review concludes that a full reinvestigation would result in probative investigative leads. The Act also directs the collection and publication of statistics on the number of cold case murders and reports to the House and Senate Judiciary Committees on the operation and results of the system established by the Act.

This proposed rule would add a new part 95 to title 28 of the Code of Federal Regulations to implement the Act. The new part would explain the Act's requirements and key concepts, and it would specify assignments of responsibility and procedures to ensure that the Act is effectively carried out.

III. Legal Authority

The Department of Justice is issuing this rule pursuant to the HVFRA and the authority of the Attorney General under Executive Order 11396, 33 FR 2689 (Feb. 7, 1968).

IV. Section-by-Section Analysis

The proposed rule would provide a statement of purpose in § 95.1 and define key terms in § 95.2. Section 95.3 would explain what is required in cold case murder file reviews. Section 95.4 would set out procedures for victims' family members to apply for file reviews and for action on the applications by the responsible investigative agencies. Section 95.5 would explain the Act's requirements relating to full reinvestigations. Section 95.6 would direct that case file reviews and reinvestigations be carried out in a cohesive manner when multiple agencies are involved. Section 95.7 would address consulting with and informing applicants, and keeping them up to date about case file reviews and reinvestigations. Section 95.8 would articulate the Act's timing rules for successive applications. Sections 95.9, 95.10, and 95.11 would address the Act's requirements relating to compliance, data collection, and annual reports. Section 95.12 would incorporate a provision of the Act that allows the withholding of information whose disclosure would have serious adverse effects or be unlawful. More detailed descriptions of these provisions follow.

A. Section 95.1—Purpose

The Act creates a system for reviewing and, as warranted, reinvestigating murder cases previously investigated by Federal agencies in which ''all probative investigative leads have been exhausted'' and ''no likely perpetrator has been identified'' after three years, HVFRA 12(6), upon application by certain persons. Section 95.1 would state this general purpose of the Act in terms similar to the Act's full title (''To provide for a system for reviewing the case files of cold case murders at the instance of certain persons, and for other purposes.'').

B. Section 95.2—Definitions

1. Paragraph (a)—Designated Person

Section 95.2(a) would define ''designated person'' for purposes of the Act, which refers to the class of individuals who may apply for cold case murder reviews. Section 12(1) and (2) of the Act state that the term includes an ''immediate family member,'' defined to mean a parent, parent-in-law, grandparent, grandparent-in-law, sibling, spouse, child, or step-child of a murder victim, and ''someone similarly situated'' to an immediate family member, ''as defined by the Attorney General.'' While the express statutory definition of immediate family member includes a parent, child, or step-child, it does not include a step-parent. Pursuant to the Attorney General's authority under section 12(1) of the Act, § 95.2(a) would define ''designated person'' to include a step-parent, as a person ''similarly situated'' to a parent, in addition to immediate family members as defined in the statute.

2. Paragraph (b)—Victim

Section 95.2(b) of the proposed rule, as provided in section 12(3) of the Act, would define ''victim'' to mean a natural person who died as a result of a cold case murder.

3. Paragraph (c)—Murder

Section 95.2(c) of the proposed rule would implement section 12(4) of the Act, which defines ''murder'' to mean ''any criminal offense under section 1111(a) of title 18, United States Code, or any offense the elements of which are substantially identical to such section.''

Section 1111 of title 18 of the United States Code is the Federal murder offense that applies directly in cases arising in the special maritime and territorial jurisdiction of the United States, which includes Federal lands and facilities as provided in 18 U.S.C. 7(3). The first sentence of section 1111(a) defines ''murder'' as ''the unlawful killing of a human being with malice aforethought.'' Malice aforethought is generally understood to mean killing a person intentionally, knowingly, or with extreme recklessness, albeit with variations in the verbal formulas that courts use to explicate the concept. *See, e.g., United States* v. *Begay,* 33 F.4th 1081, 1091 (9th Cir. 2022). The second sentence of section 1111 specifies that certain types of murder are first-degree murder, including premeditated murders and murders committed in the course of other specified offenses. The list of predicate offenses for this purpose includes ''arson, escape, murder, kidnapping, treason, espionage, sabotage, aggravated sexual abuse or sexual abuse, child abuse, burglary, [and] robbery.'' Courts have interpreted the sentence in conformity with the traditional felony-murder doctrine, which categorically treats the specified offenses as involving murder if someone dies during the commission of the offense, without requiring any particular culpability of the offender with respect to resulting death. *See, e.g., United States* v. *Garcia Ortiz,* 528 F.3d 74, 80–81 (1st Cir. 2008); *United States* v. *Tham,* 118 F.3d 1501, 1508 (11th Cir. 1997).

The inclusion of ''any criminal offense under section 1111(a) of title 18'' in the definition of murder in section 12(4) of the Act broadly brings within the scope of the Act murders committed on Federal lands, such as national parks and military bases. The proposed rule would parallel the statutory inclusion of murders that directly violate 18 U.S.C. 1111 by providing in the first sentence of § 95.2(c)(1) that murder ''means an offense under 18 U.S.C. 1111.''

The second clause of the statutory definition of ''murder'' in section 12(4) of the Act refers to offenses whose elements are ''substantially identical'' to section 1111(a). The first sentence of paragraph (c)(1) in § 95.2 of the proposed rule would interpret this to mean other Federal offenses ''that incorporate[ ] by reference the elements of 18 U.S.C. 1111.'' This interpretation understands the ''substantially identical'' language in section 12(4) of the Act to include offenses whose substantive elements are identical to elements of the substantive offense defined in 18 U.S.C. 1111(a), regardless of differences in jurisdictional elements. For example, the offense of murdering a Federal officer, in violation of 18 U.S.C. 1114(1), is within the scope of the HVFRA, although the basis for jurisdiction under 18 U.S.C. 1114 (Federal officer victim) is different from the basis for jurisdiction under 18 U.S.C. 1111 (special maritime and territorial jurisdiction).

The requirement of substantial identity to 18 U.S.C. 1111 is satisfied by, and only by, offenses that appropriate the elements of section 1111 by cross-reference. Other Federal homicidal offenses (except those cross-referencing section 1111) define their elements in varying ways—*see, e.g.,* 18 U.S.C. 1112 (manslaughter); 21 U.S.C. 841(b) (up to life imprisonment for drug trafficking if death results from use of controlled substance)—but they are not defined to be the killing of a human being with malice aforethought as that concept is understood in section 1111. The offenses identified in § 95.2(c)(1), all of which incorporate by reference the elements of section 1111, provide a comprehensive compilation of the Federal offenses whose substantive elements match those of section 1111.

Offenses can incorporate by reference the elements of 18 U.S.C. 1111, and hence be ''substantially identical'' to section 1111, in three ways—by expressly cross-referencing section 1111, *e.g.,* 18 U.S.C. 1114(1); by referring to ''murder'' without further definition, which is understood to mean murder as defined in 18 U.S.C. 1111(a),

e.g., 18 U.S.C. 1153; *see United States* v. *Antelope,* 430 U.S. 641, 642–43, 647–48 & n.9 (1977); or by referencing a broader class of crimes that includes 18 U.S.C. 1111, *e.g.,* 18 U.S.C. 1152. Regardless of the particular way in which an offense incorporates by reference the elements of 18 U.S.C. 1111, offenses that satisfy this criterion are within the scope of the HVFRA.

The initial language in § 95.2(c)(1) includes ''an offense under 18 U.S.C. 1111.'' This encompasses murders committed in the special maritime and territorial jurisdiction of the United States, *see* 18 U.S.C. 7, in which section 1111 applies directly.

Section 95.2(c)(1)(i), which refers to 18 U.S.C. 1152 and 1153, confirms the Act's coverage of Indian country murders. The first paragraph of section 1152 says that Federal criminal laws that apply ''in any place within the sole and exclusive jurisdiction of the United States . . . shall extend to the Indian Country''—the referenced Federal criminal laws include section 1111(a)—subject to exceptions in the second paragraph, such as offenses committed by Indians against Indians. Section 1153 reaches ''major crimes'' committed by Indians in Indian country, including ''murder,'' which is understood to mean murder as defined in section 1111(a). Section 95.2(c)(1)(i) would make the coverage of Indian Country murders explicit.

Section 1114 of title 18 proscribes killings of Federal officers or employees performing their duties, and provides that violators shall be punished ''in the case of murder, as provided under section 1111.'' Section 1114 through this cross-reference expressly incorporates the elements and penalties of section 1111, satisfying in such cases the Act's coverage of offenses whose elements are substantially identical to section 1111(a). Section 95.2(c)(1)(ii) would make the Act's coverage of murders of Federal officers or employees in violation of section 1114 explicit, as well as murders of federally protected persons under several other provisions. The other provisions, and their relevant language and subdivisions that incorporate the elements of section 1111(a) by reference, are:

- 18 U.S.C 115(b)(3) (murder under statute protecting certain Federal officials, former officials, and their immediate family members ''shall be punished as provided in section[ ] 1111'');
- 18 U.S.C. 351(a) (killing of certain high level Federal officials ''shall be punished as provided by section[ ] 1111'');
- 18 U.S.C. 1116(a) (killing of foreign official, official guest, or internationally protected person ''shall be punished as provided under section[ ] 1111'');
- 18 U.S.C. 1121(a) (whoever intentionally kills a person aiding a Federal criminal investigation ''shall be sentenced according to the terms of section 1111'');
- 18 U.S.C. 1503(b)(1), 1512(a)(3)(A), 1513(a)(2)(A) (killings under Federal obstruction of justice provisions subject to ''the punishment provided in section[ ] 1111'');
- 18 U.S.C. 1751(a) (killing of President, Vice President, or members of their staffs ''shall be punished as provided by section[ ] 1111'');
- 18 U.S.C. 1841(a), (b)(1) (applying section 1111 to murder of child in utero and applying penalties of section 1111 to intentional killing of child in utero under other specified provisions); and
- 7 U.S.C. 2146(b); 15 U.S.C. 1825(a)(2)(C); 21 U.S.C. 461(c), 675, 1041(b) (killing of persons while engaged in or on account of their performance of official duties under Federal regulatory schemes punishable ''as provided under section[ ] 1111'').

Section 1119(b) of title 18, in relevant part, provides that killing by a U.S. national of a U.S. national who is outside the United States but within the jurisdiction of another country ''shall be punished as provided under section[ ] 1111.'' Section 2332(a)(1), relating to the context of terrorist murders of U.S. nationals abroad, provides that ''if the killing is murder (as defined in section 1111(a))'' the perpetrator shall be ''punished by death or imprisonment for any term of years or for life.'' Section 95.2(c)(1)(iii) would expressly confirm the Act's coverage of murder offenses under these provisions, which proscribe killings of U.S. nationals outside of the United States.

Section 95.2(c)(1)(iv) would identify other Federal murder offenses that satisfy the criteria for coverage by the Act. These are:

- 18 U.S.C. 36(b)(2) (providing, in relation to drive-by shootings in the context of major drug offenses, that a killing that is ''a first degree murder (as defined in section 1111(a))'' is punishable by death or imprisonment for any term of years or life and that ''a murder other than a first degree murder (as defined in section 1111(a))'' is punishable by imprisonment for any term of years or life);
- 18 U.S.C. 924(j)(1) (providing, in relation to killing with a firearm in a Federal crime of violence or drug trafficking crime, that ''if the killing is a murder (as defined in section 1111),'' the punishment is death or imprisonment for any term of years or life);
- 18 U.S.C. 930(c) (killings in the course of armed attacks in or on Federal facilities ''shall be punished as provided in section[ ] 1111'');
- 18 U.S.C. 1118 (person serving Federal life term of imprisonment who commits ''a first degree or second degree murder (as defined in section 1111)'' shall be punished by death or life imprisonment);
- 18 U.S.C. 1120 (killing by person escaped from a Federal correctional institution where he was serving a life term ''shall be punished as provided in section[ ] 1111'');
- 18 U.S.C. 1652 (U.S. citizen pirate who ''commits any murder . . . on the high seas . . . shall be imprisoned for life'');
- 18 U.S.C. 1958 (murder for hire punishable by death or life imprisonment);
- 18 U.S.C. 1959(a)(1) (murder in aid of racketeering punishable by death or life imprisonment);
- 18 U.S.C. 2245 (murder in course of sex offenses punishable by death or up to life imprisonment);
- 18 U.S.C. 3261(a) (members of, and persons accompanying, the armed forces who engage in conduct that would constitute a felony if engaged in within the special maritime and territorial jurisdiction of the United States—which includes murder under 18 U.S.C. 1111—shall be punished as provided for that offense);
- 18 U.S.C. 3273(a) (certain Federal personnel stationed or deployed in Canada who engage in conduct that would be federally prosecutable had the conduct occurred within the special maritime and territorial jurisdiction of the United States—which includes murder under 18 U.S.C. 1111—shall be imprisoned as provided for that offense); and
- 49 U.S.C. 46506(1) (individual on an aircraft in the special aircraft jurisdiction of the United States ''who commits an act that . . . if committed in the special maritime and territorial jurisdiction of the United States . . . would violate section . . . 1111 . . . shall be . . . imprisoned under that section'').

The proposed rule's definition of covered ''murder'' offenses in § 95.2(c)(1) accords with and encompasses the types of offenses that the legislative history specifically references as within the intended scope of the Act. The Act's sponsor, Rep. Swalwell, stated regarding the Act: ''It also assists investigators in homicide cases that serve important underserved communities such as Native Americans

on Indian Reservations, Federal law enforcement officers killed in action, U.S. citizens who are murdered abroad, or homicides that take place on Federal land and the high seas.'' 168 Cong. Rec. H3877; *see id.* H3876 (remarks of Rep. Bentz) (''The majority of cold cases at issue under this bill are likely to be cases arising from Tribal jurisdictions.'').

In the sponsor's statement, ''homicides that take place on Federal land and the high seas'' is a reference to the special maritime and territorial jurisdiction of the United States, *see* 18 U.S.C. 7, in which 18 U.S.C. 1111 applies directly. The prefatory language in § 95.2(c)(1), referring to ''an offense under 18 U.S.C. 1111,'' includes these cases. ''Native Americans on Indian Reservations'' in the statement refers to Indian Country cases, which are prosecuted under 18 U.S.C. 1152 and 1153. Section 95.2(c)(1)(i), which refers to 18 U.S.C. 1152 and 1153, confirms the Act's coverage of Indian country murders. ''Federal law enforcement officers killed in action'' alludes to murders in violation of 18 U.S.C. 1114, which is included in § 95.2(c)(ii). ''U.S. citizens who are murdered abroad'' refers to the offenses that proscribe extraterritorial killings of U.S. nationals, 18 U.S.C. 1119 and 2332, which are included in § 95.2(c)(1)(iii).

In addition to clarifying the types of offenses that are ''murders'' for purposes of the Act, the proposed rule, in § 95.2(c)(2), would identify certain types of offenses that are not covered.

Section 95.2(c)(2)(i) would state that murders in which the victims died before January 1, 1970, are not covered. This provision implements section 11 of the Act, which limits the Act's applicability to cold case murders occurring on or after January 1, 1970.

Section 95.2(c)(2)(ii) would provide that the scope of the Act and the proposed rule is limited to cases involving murders in violation of Federal law, as opposed to offenses that violate only the laws of a State, the District of Columbia, or a U.S. territory. While Federal agencies may help State and local agencies in the investigation of non-Federal crimes, *see, e.g.,* 28 U.S.C. 540–540B, that does not bring those investigations within the scope of the Act, which is intended to apply ''[i]n federal cases.'' H. Rep. No. 117–280, at 6; *see* 168 Cong. Rec. H3876 (remarks of Rep. Bentz) (''[T]his bill would only apply to Federal cases of murder, and it wouldn't apply to murder cases investigated by State and local law enforcement, which are most cases.''). The Act was not intended to supplant the role of State and local law enforcement, which have primary responsibility for the investigation of murders under the laws of their jurisdictions and are best situated to review and reinvestigate cold cases involving those crimes; rather, the expectation was that the enactment of such a law for Federal cases ''will . . . serve as a crucial model for the States to . . . adopt a local Homicide Victims Bill of Rights.'' 168 Cong. Rec. H3877 (remarks of Rep. Swalwell).

As a corollary to the limitation to cases involving Federal crimes, case file reviews and reinvestigation are not required in cases in which it has been determined that Federal jurisdiction is lacking. For example, suppose that a witness or informant in a Federal case is killed and the case is initially investigated as a possible retaliatory murder under 18 U.S.C. 1513. Interviews with witnesses to the incident show, however, that the killing resulted from the victim's provoking a bar fight with a stranger that turned lethal, with no connection to the victim's involvement in Federal proceedings. Such a case is outside the scope of the Act because it does not involve a murder in violation of Federal law.

More broadly, § 95.2(c)(2)(iii) would provide that the Act's scope does not include incidents in which there was no murder as defined in § 95.2(c)(1). For example, suppose that a Federal agent is found dead, and the case is initially investigated as a possible murder in violation of 18 U.S.C. 1114 because the agent had been pursuing dangerous criminals who would have reason to kill him. The investigation is closed when a fuller examination of the evidence shows that the agent died of natural causes or because of an accident. Such cases are outside the scope of the Act because its application is limited to murder cases that satisfy certain criteria. *See* HVFRA 12(6).

Conversely, a case may be within the scope of the Act even if it was not initially investigated as a murder. For example, the investigation may begin as a missing person case, in which it is uncertain whether the person is alive or dead. Or it may start as a case involving a fatality, but one in which the known facts are consistent with accidental death, suicide, or involuntary manslaughter. As the case progresses, however, fuller knowledge of the facts and circumstances indicates the commission of a murder as defined in § 95.2(c). If the other conditions defining a ''cold case murder'' are also satisfied, *see* HVFRA 12(6), such a case would be subject to the Act.

The definition of ''murder'' in section 12(4) of the Act, and its construction in § 95.2(c) of the proposed rule, also limit the class of Federal crimes that are subject to the Act. Beyond the statutes identified in § 95.2(c)(1), there are many other provisions of Federal law that define and prescribe penalties for homicidal crimes. For example, 21 U.S.C. 841 prohibits producing or distributing a controlled substance, and it provides for imprisonment between 20 years and life if death results from the use of the controlled substance. Such provisions, though they include parts defining homicidal offenses, are not within the scope of the Act because their elements are not substantially identical to 18 U.S.C. 1111, as required by the statutory and regulatory definition of ''murder'' for purposes of the Act.

4. Paragraph (d)—Agency

Section 95.2(d) of the proposed rule would track the definition of ''agency'' in section 12(5) of the Act, which means Federal law enforcement entities with jurisdiction to engage in the detection, investigation, or prosecution of cold case murders. The proposed rule would explain that this definition excludes State and local law enforcement agencies and agencies of the District of Columbia and U.S. territories from the class of agencies subject to the Act.

5. Paragraph (e)—Principal Investigative Agency

Section 95.2(e) of the proposed rule would define ''principal investigative agency'' to mean ''the federal investigative agency that had the primary responsibility for the initial investigation of a murder.'' Section 95.2(e) would exclude a Federal agency from this definition if a ''a murder was investigated by state or other non-federal authorities and the role of federal agencies was the provision of investigative assistance,'' if ''a murder was investigated by a federal agency but thereafter state or other non-federal authorities assumed the primary responsibility for the investigation,'' or if the Federal agency is a prosecutorial agency of the Department of Justice. The definition would serve three purposes:

First, more than one Federal agency may be involved in the investigation of a murder. The Act presupposes that the case file reviews and reinvestigations it requires will be carried out by the agency that ''conducted the initial investigation,'' as provided in section 10 of the Act. This is naturally understood to refer to the agency with the lead role in the prior investigation, as opposed to agencies that just assisted or played a

peripheral role. The agency with the lead role in the prior investigation logically should be responsible for receiving and acting on applications by family members of the victim for case file reviews. That agency is best situated to carry out such reviews and to undertake further investigation if warranted. The definition of ''principal investigative agency'' in the proposed rule accordingly would assign these functions to the Federal investigative agency that had the primary responsibility for the initial investigation. If it is unclear which of a number of Federal agencies had primary responsibility—for example, because different agencies had the lead role at different stages in the previous investigation—§ 95.4(c)(1) of the rule would make them jointly responsible for ensuring that the Act's requirements are carried out.

Second, the proposed rule would make clear that the Federal agencies with responsibilities under the Act are Federal investigative agencies, as opposed to prosecutorial agencies. The prosecution of Federal crimes is carried out by the United States Attorneys' Offices and by the prosecutorial components of the Justice Department's litigating divisions, such as the Criminal Division and the National Security Division. Federal prosecutors may be involved to varying degrees at the investigative stage of murder cases within Federal jurisdiction, and they are necessarily involved where there is a need to secure or use legal process in the investigation, such as search warrants or grand jury subpoenas. Nevertheless, the functions required under the Act are properly carried out by investigative agencies rather than prosecutors, and the proposed rule would specify that the Justice Department's prosecutorial units are not to be considered the principal investigative agency in any case.

Third, in cases in which there is concurrent State and Federal jurisdiction over a murder, both State and Federal authorities may be involved in the investigation. The question then arises whether the investigation was a Federal investigation, which is within the scope of the Act, or a State investigation, which is not. *See* 168 Cong. Rec. H3876 (remarks of Rep. Jackson Lee) (stating that the Act applies ''in cases investigated at the Federal level''); *id.* (remarks of Rep. Bentz) (stating that the Act ''wouldn't apply to murder cases investigated by State and local law enforcement'').

The proposed rule's definition of ''principal investigative agency'' would provide for Federal agency responsibility where the Federal agency was primarily responsible for the investigation of a murder, but not where the investigation was pursued as a State matter and the role of Federal agencies was limited to providing investigative assistance. Federal law enforcement agencies frequently provide investigative assistance to their State and local counterparts, which may involve such measures as sharing information and intelligence, carrying out forensic testing and analysis, interviewing witnesses, and other collection of evidence and information. Federal legal process may also come into play, complementing and supplementing the capabilities of the responsible State agencies—for example, execution of Federal search warrants or subpoenas in places outside the State agency's jurisdiction, or at the early stages of an investigation that is ultimately pursued primarily as a State matter. The proposed rule's definition would make it clear that such measures in the regular conduct of Federal-State cooperation in criminal investigations do not convert State investigations into Federal investigations.

6. Paragraph (f)—Initial Investigation

Section 95.2(f) would define ''initial investigation'' to mean ''the investigation of a murder before it became a cold case murder.'' This is a technical definition that, in the context of the proposed rule, would assign responsibility for case file reviews and potential reinvestigation of a cold case murder to the agency that previously investigated the murder.

7. Paragraph (g)—Cold Case Murder

Section 95.2(g) would track the definition of ''cold case murder'' in section 12(6) of the Act. The conditions in the definition are that (i) the time of the murder's commission (interpreted to mean the time when the victim died) was more than three years prior to the application for case file review, (ii) the murder was previously investigated by a Federal law enforcement entity, (iii) all probative leads have been exhausted, and (iv) no likely perpetrator has been identified. Murders involving multiple perpetrators in which one or more of them have been identified are not within the scope of the Act.

8. Paragraph (h)—Probative Leads

Section 95.2(h) would define ''probative leads'' to mean ''information that identifies the perpetrator or that provides a sufficient likelihood of enabling the identification of the perpetrator to warrant further investigation, in the agency's judgment and consistent with the agency's policies and practices regarding the use of investigative methods.'' This key concept in the Act determines, among other things, whether the results of a case file review warrant further investigation, and what the objective of a reinvestigation should be. The Act uses this term or similar phrases in a number of places, but with varying wording and without further definition. *See* HVFRA 2(a) (requiring case file review to determine if a full reinvestigation would result in ''the identification of probative investigative leads or a likely perpetrator''); *id.* (2)(b)(4) (requiring update of case file using the most current investigative standards to the extent it would ''help develop probative leads''); *id.* (2)(c) (requiring certification that ''all probative investigative leads have been exhausted or that a likely perpetrator will not be identified''); *id.* 4(a) (requiring reinvestigation if ''a full reinvestigation . . . would result in probative investigative leads''); *id.* 4(b) (requiring analysis of all evidence in a reinvestigation ''for the purpose of developing probative investigative leads or a likely perpetrator''); *id.* 12(6)(C) (defining ''cold case murder'' in part as one ''for which all probative investigative leads have been exhausted'').

These provisions do not require pursuit of all possible leads, but only those that are ''probative.'' Determining what leads are ''probative,'' so as to warrant further investigation, calls for exercises of judgment by the investigative agency. The reference to ''probative'' leads also raises the question—probative of what?—a matter for which further definition is required to provide clear guidance to investigative agencies in discharging their responsibilities under the Act.

Section 95.2(h) in the proposed rule would provide the needed clarification by defining this term—probative leads—to mean information that identifies the perpetrator, or that provides a sufficient likelihood of enabling the identification of the perpetrator so as to warrant further investigation in the agency's judgment. The definition is based on the contexts in which the Act uses the term or similar terms and the Act's general design and purpose to address and solve cases in which ''no likely perpetrator has been identified.'' HVFRA § 12(6)(D). Variant terminology, ''probative investigative leads,'' which is used in some provisions of the Act, is understood to have the same meaning.

The proposed rule's definition of ''probative leads'' also would specify that the agency's policies and practices

regarding the use of investigative methods must be taken into account—policies and practices that affect whether leads are potentially probative regarding the perpetrator's identity, as bearing on the reliability of investigative methods and what methods would actually be used in a reinvestigation. In the investigation of murders and other crimes, Federal agencies are guided and constrained by policies and practices that ensure the reliability and effectiveness of the methods utilized in the investigation, and ensure respect for legal norms and the privacy of persons affected by the investigation. These policies and practices apply in reinvestigations under the HVFRA as they do in other investigative contexts. To the extent that a method would not be utilized under the applicable policies and practices, the theoretical possibility of using it is not a positive factor in judging whether further investigation is warranted under the Act.

For example, the legislative history of the Act emphasizes the use of technological improvements to solve cold cases:

> Because advances in science progress rapidly, new technology could have been discovered and implemented in the time since detectives last revisited the case. The Office of Justice Programs reports advancements in DNA technology are breathing new life into old, cold, and unsolved criminal cases. Investigators in California used new DNA technology to apprehend the Golden State Killer, a case that had remained cold for decades.

H. Rep. No. 117–280, at 6 (internal quotation marks omitted); *see* 168 Cong. Rec. H3877 (remarks of Rep. Swalwell) (''Improvements in technology . . . will also better equip law enforcement agencies with tools . . . that would assist in identifying new leads . . . to solve crimes'').

As the Committee Report notes, H. Rep. No. 117–280, at 6, the emergence and progressive development of DNA identification technology has revolutionized the investigation of cold cases and has produced remarkable results in innumerable cases. At the same time, the use of DNA methods is subject to policies and practices that promote its sound use and guard against adverse effects. Regular DNA testing in criminal investigations is carried out in conformity with the rules and procedures of the Combined DNA Index System. *See generally Maryland* v. *King,* 569 U.S. 435, 442–46, 463–66 (2013). The use of forensic genetic genealogy—referenced in the Act's Committee Report for solving the Golden State Killer case—is subject to policies tailored to its operation and characteristics. *See United States Department of Justice, Interim Policy, Forensic Genetic Genealogical DNA Analysis and Searching* (Nov. 1, 2019).

Thus, in assessing whether further investigation is warranted under the HVFRA, it is not sufficient to note that there is some retained evidence in the case to which an investigative method or technique might in theory be applied. The agency would also need to consider whether and to what extent the relevant investigative method would actually be used in a reinvestigation, consistent with applicable policy and practice, and whether it holds sufficient promise under the facts of the case to warrant further investigation in the agency's judgment. For example, if a family member of the victim sought reopening of a cold case murder investigation, based on a novel DNA identification method they read about that has not been scientifically validated, an agency would not be required to act on such a request under the HVFRA if it would not use that unproven method in other investigative contexts.

The same consideration applies in relation to other methods the use of which is restricted or forgone under an agency's general policies and practices. For example, in a cold case murder, a relative of the victim may seek to have the victim's body exhumed for purposes of additional examination or forensic testing. Investigative agencies may not often agree with such requests. Rather, the likelihood that significant new information will be obtained is assessed, and any potential value is balanced against the sensitivity of disinterring the deceased. General policies and practices regarding exhumation need to be taken into account in assessing whether it should be done in a case subject to the HVFRA, as in other investigative contexts.

While the requirement under the Act to pursue ''probative leads,'' as defined in § 95.2(h), pertains only to matters that could facilitate the identification of the perpetrator, this does not limit the authority of any agency to carry out case file reviews or investigate or reinvestigate murder cases for other purposes. As with other aspects of the Act, this proposed rule would only articulate what agencies must do to comply with the Act and would not restrict their ability to go beyond the Act's requirements, on their own initiative or as requested by others. In relation to investigative leads, in particular, agencies are free to review and reinvestigate murder cases for any lawful purpose, such as learning more about the circumstances of a murder or what happened to the victim, regardless of whether the review or reinvestigation may help to identify the perpetrator.

C. Section 95.3—Case File Review

Section 95.3 of the proposed rule would implement section 2 of the Act, relating to case file reviews.

Section 95.3(a) of the proposed rule would provide for review of case files upon written application by one designated person, following section 2(a) of the Act.

Section 95.3(b) of the proposed rule would reproduce the required elements of a case file review, as set forth in section 2(b) of the Act, and explain specifically how they should be carried out by reviewers. Paragraphs (1) through (3) of § 95.3(b) would detail the requirements for reviewing what investigative steps may have been missed, whether witnesses should be interviewed or reinterviewed, and whether all appropriate forensic testing and analysis was performed in the first instance or if additional testing may be productive.

Paragraph (4) in § 95.3(b) would resolve ambiguous language in section 2(b)(4) of the Act, which requires that a case file review include ''an update of the case file using the most current investigative standards as of the date of the review to the extent it would help develop probative leads.'' The initial phrase in this quoted language, ''an update of the case file,'' might be understood to require technical enhancements of the case file, such as digitizing documents and creating links to other records. The latter language, ''using the most current investigative standards as of the date of the review,'' would more naturally be understood as requiring consideration of whether reinvestigation in conformity with current investigative standards would help develop probative leads.

Section 95.3(b)(4) of the proposed rule would give weight to the latter language in interpreting section 2(b)(4) of the statute because it is more consistent with the statutory context of case file review to determine whether reinvestigation is warranted, and because an intended aspect of the review would otherwise not be referenced in the statute. The other three paragraphs in section 2(b) of the Act are concerned respectively with whether there were missed steps in the original investigation, whether there were shortfalls in interviewing witnesses, and whether there were shortfalls in forensic testing and analysis. They do not require consideration of whether there were shortfalls in comparison with current investigative standards, though such

consideration should be part of case file review in unsolved murder cases—including in particular Indian country murders—in line with the legislative intent in the HVFRA:

> The majority of cold cases at issue under this bill are likely to be cases arising from Tribal jurisdictions . . . . [E.O. 13898] took steps to try to solve cold cases in Tribal jurisdictions . . . creat[ing] the Operation Lady Justice Task Force . . . . In its first year, this task force opened seven offices across the country to address the number of missing and murdered indigenous women. The task force held listening sessions, Tribal consultations, webinars, meetings with law enforcement, and victims' services programs, and formed domestic violence and sexual assault coalitions . . . . The task force put out guidance and protocols, developed relationships with entities like missing persons clearing-houses, began training for investigators and volunteers, and started a public awareness campaign . . . . This legislation is cut from similar cloth . . . .

168 Cong. Rec. H3876–77 (remarks of Rep. Bentz); *see id.* H3878 (''The HVFRA assists families and loved ones of homicide victims by . . . [p]roviding a full reinvestigation using the most up-to-date technologies and investigative standards''); *About DOJ Efforts to Address MMIP, http://www.justice.gov/tribal/mmip/about* (containing a description and sources regarding enhanced investigative measures, relating to missing or murdered indigenous persons, under E.O. 14053 and 13898).

Paragraph (5) of § 95.3(b) would direct the reviewer to notify any other known Federal investigative agency that has been involved in the case and to consider any information provided by such other agency. The Act aims to ensure that reinvestigation decisions and the conduct of reinvestigations are informed by all available evidence. *See* HVFRA 4(b), 6(a). Reaching out to other agencies that have investigated or participated in the investigation of a murder is instrumental to realizing this objective. For example, another Federal investigative agency may have additional information about the case because it initially responded to or investigated the crime before engaging the principal investigative agency, or because it assisted the principal investigative agency in carrying out its investigation. The requirements of § 95.3(b)(5) accordingly would help to ensure that reinvestigation decisions and the conduct of reinvestigations are informed by all available evidence.

Section 95.3(c) of the proposed rule would implement section 2(d) of the Act, which bars having the reviewer be a person who previously investigated the murder. The proposed rule would add that this restriction does not limit the reviewer in getting information from or consulting with people who were previously involved. Consulting such people may be especially valuable in understanding the case, and the reasons why things were done or not done in the previous investigation, and doing so does not conflict with the Act's objective of having ''fresh eyes'' cast on the case. H. Rep. No. 117–280, at 6; 168 Cong. Rec. H3876, 3879 (remarks of Rep. Jackson Lee).

Section 95.3(d) of the proposed rule would track section 2(e) of the Act, which requires the agency to promptly notify the applicant regarding receipt of the application and the applicant's rights under the Act.

Section 95.3(e) of the proposed rule would implement section 2(c) of the Act, which states that case file review is unnecessary where the case ''does not satisfy the criteria for a cold case murder,'' and directs the agency to certify in such a case ''that final review is not necessary because all probative investigative leads have been exhausted or that a likely perpetrator will not be identified.'' The certification described in section 2(c) does not reflect the circumstances in which the criteria for a cold case murder under the Act are not satisfied. Rather, the criteria for a ''cold case murder'' are not satisfied if the murder was committed within three years prior to the application, the murder was not previously investigated by a Federal law enforcement entity, all probative investigative leads have not been exhausted, or a likely perpetrator has been identified. HVFRA 12(6). To resolve this inconsistency, the proposed rule would provide that the agency is to certify in such a case that the cold case murder criteria are not satisfied and to inform the applicant of the reason for the denial.

D. Section 95.4—Review Procedures

Section 95.4(a) of the proposed rule would implement section 3 of the Act, which requires each agency to develop a written application to be used in requesting case file reviews. The proposed rule would add that this requirement can be satisfied by an agency's adopting a standard form developed by the Government or another organizational unit of the Government.

Section 95.4(b) would state that an application for case file review may be denied if it is submitted to the wrong agency, *i.e.,* an agency that did not previously investigate the murder or was not the principal investigative agency in the investigation. However, in such a case, the proposed rule would require the agency that receives the application to advise the applicant of the problem, and, if that agency is aware of another Federal investigative agency that was the principal investigative agency, to transfer the application to the appropriate agency if the applicant so wishes. If no Federal agency was the principal investigative agency in the initial investigation, then the case is outside the scope of the Act, but the proposed rule would direct the agency to which the application was submitted to point the applicant toward any known State or local agency that investigated the case.

Section 95.4(c)(1) would address situations in which more than one agency participated in the investigation of a murder. It would require coordination among the agencies so that there is only one case file review or full reinvestigation going on at any one time, following sections 2(f), 4(d), and 10 of the Act. The proposed rule generally assigns responsibility for case file reviews and reinvestigation to the principal investigative agency in the initial investigation. In case of disagreement among the agencies involved about who had primary responsibility for the prior investigation, § 95.4(c)(1) would direct them to jointly consider the application and collaborate in carrying out any case file review or reinvestigation, or responsibility for those functions could be assumed by or assigned to one of the agencies.

Section 95.4(c)(2) would address situations in which a family member of the victim submits an application for case file review, and then another family member submits an application with respect to the same victim during the pendency of the first application or a resulting case file review or reinvestigation. The latter application would conflict with the specification in section 2(a) of the Act that ''one designated person'' may apply for a case file review, which ensures that the responsible agency can deal in an orderly and efficient way with a single family contact. Section 95.4(c)(2) would provide that the agency need not take any action based on the later application, but in such a case the agency shall advise the later applicant that there was an earlier application, and the agency may consider any information provided by the later applicant.

Section 95.4(c)(3) would state that only one case file review shall be undertaken at any one time with respect to the same cold case murder victim, tracking section 2(f) of the Act. The proposed rule would add that, for cases in which multiple applications are

received with respect to different victims of a murder, any resulting case file reviews may be consolidated. While the Act does not require consolidation in the latter circumstance, conducting a single unified case file review may further the Act's objective of ensuring that all available evidence is fully considered.

Section 95.4(d) would implement section 2(g) and (h) of the Act, setting up a general six-month time limit for completing case file reviews, but allowing one extension of up to six months in certain circumstances.

E. Section 95.5—Full Reinvestigation

Section 95.5(a) of the proposed rule would require a full reinvestigation if a case file review concludes that it would result in probative leads, following section 4(a) of the Act. Section 95.5(a) would refer to the proposed rule's definition of ''probative leads'' in § 95.2(h), which requires reinvestigation if there is information that identifies the perpetrator or that provides a sufficient likelihood of enabling the identification of the perpetrator to warrant further investigation, in the agency's judgment and consistent with its policies and practices for use of investigative methods. In referring to the conclusion of a case file review, the Act contemplates, in accordance with its objective of solving cold case murders, that the agency will consider all the information it has at the time of the review in deciding whether to reinvestigate, including any new information provided by the applicant, not only information that appears directly in the case file. *See* HVFRA § 6 (implying that newly discovered evidence would be taken into account in case file review and reinvestigation decisions); H. Rep. No. 117–280, at 6 (''[N]on-law enforcement personnel finding new evidence in homicide cases serve as examples where a fresh perspective can help break a case open.''); 168 Cong. Rec. H3877 (daily ed. Mar. 28, 2022) (remarks of Rep. Swalwell) (explaining that the HVFRA ''requires a complete reexamination of the file and accompanying evidence'').

Section 95.5(b) of the proposed rule would specify what an investigative agency needs to do in conducting a full reinvestigation under the HVFRA. Section 95.5(b) first would define a full reinvestigation as one in which all new probative leads are exhausted. This definition is based on section 12(6)(C) of the Act, which defines a cold case murder in part as a murder ''for which all probative investigative leads have been exhausted''; section 2(a) of the Act, which directs the agency to review the case file to determine if a full reinvestigation would result in ''the identification of probative investigative leads or a likely perpetrator''; and section 4(a) of the Act, which directs the agency to conduct a full reinvestigation if the case file review concludes that it would result in ''probative investigative leads.'' These provisions manifest a purpose to address cases that have gone cold, in the sense that previously investigated leads that might have resulted in the identification of the perpetrator have not panned out; provide means for developing new potentially perpetrator-identifying leads through case file review; and follow up on those new leads to determine whether their promise for identifying the perpetrator can be realized.

Section 95.5(b) next would provide additional specifications regarding the conduct of full reinvestigations. Paragraph (b)(1) would require an investigative agency to analyze all evidence regarding the murder for the purpose of developing probative leads, following section 4(b) of the Act. The evidence available to the agency at the time of an HVFRA reinvestigation includes the content of the case file from the initial investigation and associated evidence retained from the initial investigation; any additional information that has been provided by the relative of the victim who applied for the case file review or that has come to the agency from other sources; and any additional leads or information that the agency may discover or develop in the course of the reinvestigation. The direction of § 95.5(b)(1) is to apply the whole body of evidence in furtherance of identifying the perpetrator.

Paragraph (b)(2) would provide that a full reinvestigation under the HVFRA does not require pursuit of leads that are insufficiently probative with respect to the potential identification of the perpetrator to warrant further investigation in the agency's judgment, or that would require the use of investigative methods inconsistent with the agency's policies or practices. This is a reiteration, for clarity and explicitness, of limitations appearing in the definition of ''probative leads'' in § 95.2(h).

The reinvestigation criteria of § 95.5(a) and (b) of the proposed rule do not require investigative agencies to modify or waive their normal standards for initiating and conducting investigations, if consistent with the Act's requirements. For example, consider the Attorney General's Guidelines for Domestic FBI Operations (''FBI Guidelines'' or ''Guidelines''), *http://www.justice.gov/archive/opa/docs/guidelines.pdf.* These Guidelines apply only to the FBI's investigative activities, but other investigative agencies may have similar policies or guidelines. As relevant to the HVFRA, the FBI Guidelines authorize three levels of investigative activity: assessments, preliminary investigations, and full investigations. *Id.* Part II, pp. 16–22.

An assessment may be opened to obtain information about a Federal crime. Assessments may be used to check out or resolve allegations or other information concerning Federal crimes through the relatively non-intrusive methods authorized in assessments, such as obtaining publicly available information, checking government records, using online services and resources, and interviewing witnesses. *Id.* at 17–20. An HVFRA reinvestigation could be opened as an assessment under the Guidelines in any case because the reinvestigation has the purpose of obtaining information about the murder in question, specifically, the identity of the perpetrator.

The Guidelines authorize the FBI to initiate a preliminary investigation if there is information or an allegation indicating that (i) a Federal crime may have occurred and (ii) investigation may obtain information relating to the crime or the involvement or role of an individual in the crime. Preliminary investigations may involve all lawful investigative methods, with the exception of electronic surveillance and intrusive searches. *Id.* Part II.B, pp. 20–22.

In the context of the HVFRA, the FBI's initial investigation of the murder for which reinvestigation is sought implies that the FBI already has information indicating the possible commission of a Federal crime—*i.e.,* the murder in question—which satisfies the first precondition for opening a preliminary investigation. The second precondition under the Guidelines for opening a preliminary investigation is also satisfied, because the HVFRA's basis for requiring a reinvestigation is probative leads resulting from the case file review. This ensures that there is now a new lead such that further investigation may obtain information relating to the murder or the involvement or role of an individual (*i.e.,* the heretofore unknown perpetrator) in the murder.

Accordingly, reinvestigations under the HVFRA may be opened as preliminary investigations under the Guidelines. The methods excluded in preliminary investigations—electronic surveillance and intrusive searches—would then not be available. But if these methods were needed to pursue the

probative leads underlying the reinvestigation and legally permitted, they could be secured by opening or reopening the HVFRA reinvestigation as a full investigation under the Guidelines.

The Guidelines allow the FBI to initiate a full investigation if there is an articulable factual basis for the investigation that reasonably indicates that (i) a Federal crime may have occurred and (ii) the investigation may obtain information relating to the crime or the involvement or role of an individual in the crime. Full investigations may involve all lawful investigative methods. *Id.*

The preconditions for opening a full investigation under the Guidelines are likely to be satisfied in any case involving reinvestigation under the HVFRA. This is so because it is unlikely that the FBI would have previously investigated a murder, and now judges, following a case file review, that new leads are sufficiently likely to enable the identification of the perpetrator to warrant further investigation, in the absence of articulable facts that reasonably indicate that (i) the murder may have occurred and (ii) the reinvestigation may obtain information relating to the murder or the involvement or role of an individual (*i.e.,* the heretofore unknown perpetrator) in the murder.

The preconditions for opening a full investigation under the Guidelines will always be satisfied in HVFRA reinvestigation cases in which opening a full investigation under the Guidelines is needed to pursue the investigative methods excluded in preliminary investigations—electronic surveillance and intrusive searches—and use of those methods is legally permitted. This is so because the legal predication requirements for authorizing those methods, including probable cause, exceed the ''articulable factual basis'' required for opening a full investigation under the Guidelines. On the other hand, if the legal predication required for use of electronic surveillance or intrusive searches is not satisfied, use of those methods would not be required in an HVFRA reinvestigation, because only investigative methods consistent with agency policy need be used, *see* § 95.5(b)(2), and only lawful methods are consistent with the Guidelines.

It follows that when the conditions for required reinvestigation under the HVFRA and the rule are satisfied, the conditions for initiating an investigation under the Guidelines for the FBI's investigative activities will also be satisfied. There is accordingly no conflict or inconsistency between investigation or reinvestigation in conformity with the Guidelines' standards and investigation or reinvestigation in conformity with the HVFRA's requirements. The same point would apply to other investigative agencies with investigative policies resembling the FBI's in relevant respects.

Section 95.5(c) of the proposed rule would implement section 4(c) of the Act, which provides that a reinvestigation shall not be conducted by a person who previously investigated the murder. The proposed rule would add that this does not limit consulting with or obtaining information from a previously involved person, or using such a person in a subordinate role in the reinvestigation. Engaging people with previous knowledge of the case in a reinvestigation has similar value to engaging such persons in case file reviews, as discussed above, and does not conflict with the objectives of the Act.

Section 95.5(c) does not bar a person who carried out a case file review under the Act from conducting or being involved in an ensuing reinvestigation. It only precludes reinvestigation by a person who previously investigated the murder. The heading of section 4(c) of the Act, ''Reviewer,'' does not signify the contrary. It replicates the heading of the corresponding provision regarding case file reviews, section 2(d), and reflects in both contexts a policy of ensuring that ''fresh eyes'' will be cast on the case, H. Rep. No. 117–280, at 6; 168 Cong. Rec. H3876, 3879 (remarks of Rep. Jackson Lee), by prohibiting people who previously investigated the case from conducting case file review and any resulting reinvestigation. This policy does not imply that the role of the case file reviewer in subsequent reinvestigation should be restricted. The legislative history of the HVFRA further confirms that the case file reviewer may conduct a resulting reinvestigation under the HVFRA. H. Rep. No.117–280, at 10 (''The person(s) conducting the full reinvestigation must not have previously investigated the cold case murder at issue, *except for the case file review described in section 2.*'') (emphasis added).

Section 95.5(d) would provide that there can be only one full reinvestigation at any time with respect to the same cold case murder victim, tracking section 4(d) of the Act. As with case file reviews, the proposed rule would add that if reinvestigation is found to be warranted with respect to multiple victims, the resulting reinvestigations may be consolidated.

F. Section 95.6—Multiple Agencies

Section 95.6, which would track section 10 of the Act, would require that case file reviews and reinvestigations be carried out in a cohesive way when more than one agency is involved, so that there is only one joint case file review or reinvestigation happening with respect to a cold case murder at any time.

G. Section 95.7—Consultation, Updates, and Explanation

Section 95.7 would implement section 5 of the Act, regarding agency consultations, updates, and explanation of reinvestigation decisions.

Section 95.7(a) and (b) would require investigative agencies to consult with applicants and provide them with periodic updates. With respect to consultation, the proposed rule would explain that this requires discussing the application with the applicant on at least one occasion.

Section 95.7(c) would require investigative agencies to meet with the applicant and discuss the evidence to explain the decision whether or not to reinvestigate at the conclusion of a case file review. There are constraints on discussing the evidence in pending investigations with private persons, as the Act recognizes in section 9, which provides that information may be withheld if it would endanger the safety of any person, unreasonably impede an ongoing investigation, violate a court order, or violate legal obligations regarding privacy. Additional concerns about disclosing investigative information include potentially damaging the reputation of persons who come under suspicion, but may eventually be cleared, and exposing them to harassment and other adverse social consequences. Accordingly, § 95.7(c) would make clear that the discussion of the evidence with an applicant may be at an appropriate level of generality that does not involve disclosing the information described in section 9 of the Act and that is consistent with the general policies and practices affecting the sharing of information with murder victims' family members. *See, e.g.,* The Attorney General Guidelines for Victim and Witness Assistance, Arts. II.B, IV.I (2022 ed.).

Section 95.7(d) would provide that meetings required under § 95.7 may be carried out in person, or through remote video communication, the latter option often being more convenient for both the agency and victims' family members. It further states that consultations and updates may be

carried out in person, or through other means of communication, such as over the phone or by email.

H. Section 95.8—Subsequent Reviews

Section 95.8 of the proposed rule would implement section 6 of the Act, which provides that case file reviews and reinvestigations generally do not have to be undertaken more frequently than at five-year intervals.

Paragraph (a) of § 95.8 would incorporate the basic rule that case file reviews and reinvestigations need not be undertaken more frequently than at five-year intervals, subject to a proviso for situations in which ''there is newly discovered, materially significant evidence.''

Paragraph (b) of § 95.8 would explain the proviso for situations involving new, material evidence. The proposed rule would interpret this proviso in a manner consistent with the definition of ''probative leads'' in § 95.2(h). Specifically, case file reviews and reinvestigations may need to be undertaken at intervals of less than five years only if there is evidence discovered subsequent to the previous case file review or reinvestigation that identifies the perpetrator, or that provides a sufficient likelihood of enabling the identification of the perpetrator to warrant further investigation, in the agency's judgment and consistent with its policies and practices regarding the use of investigative methods.

Paragraph (c) of § 95.8 would resolve an inconsistency in the language of section 6 of the Act. Section 6(a) says that if a case is not reinvestigated, ''no additional case file review shall be required to be undertaken . . . for a period of five years.'' Section 6(b) says that if a full reinvestigation is completed without identifying the perpetrator, ''no additional case file review or full reinvestigation shall be undertaken . . . for a period of five years.'' In other words, where subsection (a) says that an agency is not required to engage in further review of the case for five years, subsection (b) seems to say that the agency cannot engage in further review of the case for five years.

Considering the Act's purpose of promoting the solution of cold case murders, the prohibitory language of subsection (b) appears to reflect a drafting error that resulted from adding the ''required to be'' language appearing in subsection (a) but neglecting to add the same language in subsection (b). *Cf.* H.R. 3359, 117th Cong., 1st Sess., § 7 (proposed HVFRA as originally introduced). No reason appears why Congress, in enacting the HVFRA, would have sought to prohibit agencies from exercising their broad discretion to reopen cold case murder investigations if a case was reinvestigated unsuccessfully under the HVFRA. ''Congress could not plausibly have intended'' this ''illogical'' outcome, *Stovic* v. *Railroad Retirement Board,* 826 F.3d 500, 505 (D.C. Cir. 2016), which would deprive agencies of their pre-existing discretion to reopen the investigation of cold case murders at any time, as warranted in their judgment, and would impose a restriction on agency discretion to reopen murder investigations that does not apply to reopening investigations of any other type of crime. The rule would resolve the inconsistency by providing in § 95.8 that ''[a]n agency may, in its discretion, review case files, continue investigation, or reinvestigate notwithstanding the absence of an application by a designated person or the time when previous review, investigation, or reinvestigation occurred.''

I. Section 95.9—Procedures To Promote Compliance

Section 95.9(a) would implement section 8 of the Act by requiring each agency to promulgate regulations to enforce the rights of designated persons under the Act and ensure compliance, including designation of an administrative authority to receive and investigate complaints, training of appropriate personnel regarding the Act, disciplinary sanctions for ''willful or wanton'' noncompliance, and a procedure for resolving complaints.

Section 95.9(a)(1) would provide that the requirement to issue such regulations applies to agencies that may be the principal investigative agencies in murder investigations, because the proposed rule assigns responsibility for carrying out the Act to those agencies. The proposed rule would further specify that agencies need not separately promulgate regulations to the extent they adopt, or are subject to, regulations issued by another organizational unit of the Government regarding these matters. For example, a Department that includes a number of agencies that investigate murders may have Department-wide rules and processes regarding training and disciplinary sanctions for violations of the Act.

Section 95.9(a)(2) would specify the content of the regulations that agencies must promulgate.

Section 95.9(a)(3) would provide that the ''agency'' for these purposes may be a broader organizational unit of the Government in which the principal investigative agency is situated. Many provisions of the Act direct the responsible ''agency'' (or head of the agency) to take certain actions. *See* HVFRA 2(a) (review of case file), 2(c) (certification in lieu of review), 2(e) (confirmation of receipt of application and notice of rights), 2(g) through (h) (time limits for agency to conclude review), 4(a) (conduct of full reinvestigation), 5 (agency to consult, update, and meet with the applicant), 8 (complaint and disciplinary functions to ensure compliance with the Act), 10 (multiple agencies to coordinate), 13 (submission of reports to congressional committees). Depending on the nature of the required action and the operational conditions and practices of the affected governmental entities, it may make sense for the required actions to be carried out by the particular governmental component that investigated a case, or alternatively, at the departmental level or another broader level. Either approach is legitimate and consistent with the Act's definition of ''agency'' as ''a Federal law enforcement entity with jurisdiction to engage in the detection, investigation, or prosecution of a cold case murder,'' HVFRA 12(5), since both the individual component and the broader organizational unit of Government in which it is situated are governmental entities with law enforcement functions. Section 95.9(a)(3) confirms this point with respect to the training, complaint, and disciplinary functions described in HVFRA 8. For example, with respect to the requirement of section 8(b)(1) of the Act that the regulations designate an administrative authority ''within the agency to receive and investigate complaints,'' a Department may decide to assign this function to its Inspector General for all of its components, taking ''the agency'' in this context to refer to the Department as a whole. But it is also consistent with the Act if a Department decides to assign these functions to its individual investigative components, as § 95.9(b) provides for the Department of Justice.

Section 95.9(b) would implement the requirements of section 8 of the Act with respect to the agencies of the Department of Justice specifically, including the FBI, which is broadly responsible for investigating murders within the scope of the Act. For the Justice Department agencies, the training, complaint, and disciplinary matters required by section 8 of the Act are most appropriately carried out by the individual investigative agencies within the Department.

Section 95.9(b)(1) would require each such agency to provide training for officers and employees involved in

carrying out the Act, following the requirement of section 8(b)(2) of the Act.

Section 95.9(b)(2) would require each agency to designate an official to receive and investigate complaints of HVFRA violations, following the requirement of section 8(b)(1) of the Act. In some instances the designated official may have a conflict of interest in investigating a complaint, such as when the complaint relates to actions the designated official was involved in. In such cases, the proposed rule would direct the official to notify the entity within the agency responsible for addressing or resolving such conflicts, and investigation of the complaint may be assigned to a different official.

Section 95.9(b)(3) and (4) would carry out the requirement of section 8(b)(4) of the Act to provide a procedure for the resolution of complaints under the Act.

Section 95.9(b)(3) would provide initially that a complaint may be submitted in writing by the person who requested the case file review under section 95.3(a). Since the persons who have requested a case file review under the Act are the individuals who have rights under the Act, they are the appropriate persons to complain if the Act's requirements have not been complied with. This would comport with the Act's direction in section 8(a) that the agency must ''promulgate regulations to enforce the right of a designated person to request a review under this Act,'' and the Act's direction in section 8(b)(4) that the agency must provide a procedure for the resolution of complaints filed by ''the designated person,'' *i.e.,* the person who requested a case file review.

Section 95.9(b)(3) further would provide timing rules for the submission of complaints. These timing rules are designed both to provide applicants adequate time to bring alleged violations of the Act to the agency's attention, and to promote the prompt investigation of potential violations and fairness to agency personnel who may be the subject of complaints. The general time limit to submit a complaint is one year after the complainant becomes aware of a violation. However, a complaint would be timely within one year of the complainant's being informed of the completion of a case file review or reinvestigation, regardless of when the complainant became aware of the violation. The time would be extended to five years after the application for case file review was submitted if the agency did not inform the applicant about completion of a case file review or reinvestigation, either because a review or reinvestigation is ongoing or because the agency failed to inform the applicant of the completion of a case file review or reinvestigation as required by § 95.7(b) and (c). Section 95.9(b)(3) also would state that a complaint submitted outside the specified time frames must include an explanation for why it was not timely submitted. If satisfied by the explanation, the agency could entertain an untimely complaint, but only as a matter of discretion.

The remainder of § 95.9(b)(3) would specify information to be included in a complaint, to the extent the complainant is able, which is needed to enable the agency official to investigate the complaint. This includes providing identifying information for the complainant, the case, and any agency officer or employee whose conduct is the subject of the complaint, together with information about the nature of the alleged violation, when and how it occurred, and any prior dealings with agency personnel about it.

Section 95.9(b)(4) would direct the agency official to investigate a complaint that satisfies the proposed rule's conditions, document and close the investigation in conformity with agency procedures, and inform the complainant about the disposition of the complaint. It further directs the agency official to determine whether further action is warranted. For example, if it is determined that measures required by the Act were not taken, such as the consultation, updating, and explanation requirements of section 5 of the Act, supplying the omitted measures may now be warranted, and retraining or referral for disciplinary action may be warranted for officers and employees who violated the Act, depending on their culpability and the nature of the violation.

Section 95.9(b)(4) would provide, however, that the complaint procedure is not available to entertain complaints about the initial investigation of the murder, or to revisit the agency's decision whether reinvestigation is warranted under the Act. This reflects the complaint procedure's function of promoting compliance with the Act and addressing violations of the Act. Its purposes do not include reviewing the conduct of the initial investigation or providing a second opinion whether the results of a case file review under the Act warrant reinvestigation.

Section 8 of the HVFRA, which is titled ''Procedures to Promote Compliance,'' requires agencies to promulgate regulations that provide a procedure for resolving complaints ''concerning the agency's handling of a cold case murder investigation or the case file evaluation,'' in order ''to enforce the right of a designated person to request a review under this Act and to ensure compliance by the agency with the obligations described in this Act.'' This statutory language is naturally understood to require a complaint procedure to address violations of the HVFRA—not to second-guess the agency's handling of the initial investigation, which is not subject to the HVFRA, or to secure a re-examination or redetermination of whether the results of an HVFRA case file review warrant reinvestigation. On the latter point, nothing in the HVFRA suggests that the personnel responsible for the complaint and disciplinary process must be empowered to redetermine the matter and potentially override the judgment of the responsible agents who carried out the case file review and decided whether to conduct a reinvestigation. Rather, the HVFRA entitles a qualifying applicant to one case file review, and provides that the agency is not required to do another for five years, absent newly discovered and materially significant evidence. HVFRA 6. Section 95.9(b)(4) would make these points clear.

Section 95.9(b)(4) would also specify that the agency's complaint procedure is not available to entertain complaints about personnel of other agencies, whose conduct is properly the responsibility of their employing agencies.

Section 95.9(b)(5) would make the agency head or a designee the final arbiter of the complaint, and preclude judicial review, following section 8(b)(5) of the Act.

Section 95.9(b)(6) would provide that officers or employees of the agency who have failed to comply with the Act may be required to undergo retraining or additional training, and it would carry out the requirement of section 8(b)(3) of the Act for disciplinary sanctions, including potentially suspension or termination of employment, for willful or wanton violations.

Section 95.9(b)(7) would provide that the complaint process provisions do not authorize the agency to exercise authority over, take disciplinary action against, or involve officers or employees of other agencies. This reflects the normal division of authority and responsibility among Federal agencies. For example, an Assistant U.S. Attorney (''AUSA'') may have some involvement in an HVFRA case file review or reinvestigation, such as being consulted on a legal question, being asked to secure a warrant or subpoena, or being presented with the results of a reinvestigation for a decision whether to prosecute. As in other investigative contexts, that would not bring the

AUSA within the scope of the investigative agency's complaint processes or subject the AUSA to any authority of the investigative agency.

J. Section 95.10—Data Collection

Section 95.10 would implement section 7 of the Act, which requires the National Institute of Justice to publish annual statistics regarding cold case murders. The proposed rule would provide that the Attorney General may delegate this function to the Bureau of Justice Statistics or another Justice Department component, which may be more appropriate agencies to carry out this function. Delegating statutory functions to other components is within the Attorney General's authority under 28 U.S.C. 509, 510. The proposed rule would also specify the relevant time frames and classes of cold case murders to be covered in each annual publication of statistics.

K. Section 95.11—Annual Report

Section 95.11 would implement section 13 of the Act, which requires each agency to submit annual reports to the House and Senate Judiciary Committees describing actions taken and results achieved under the Act. The proposed rule would specify that the reporting requirement applies to agencies that may be the principal investigative agencies in the investigation of murders, because the rule assigns responsibility for carrying out the Act to those agencies, and other agencies would have nothing to report. The proposed rule further would provide that an agency need not submit a separate report if the required information with respect to the agency is included in a report submitted by another organizational unit of the Government. For example, a Department may wish to submit consolidated annual reports providing the required information for all of its investigative agencies. The latter approach may be more consistent with the Department's general procedures in dealing with Congress and more useful to the Committees than separate reports from individual agencies.

L. Section 95.12—Withholding Information

Section 95.12, tracking section 9 of the Act, would make it clear that the Act does not require an agency to disclose information that would endanger the safety of any person, unreasonably impede an ongoing investigation, violate a court order, or violate legal obligations regarding privacy.

V. Regulatory Requirements

A. Regulatory Flexibility Act

The Attorney General, in accordance with the Regulatory Flexibility Act (5 U.S.C. 605(b)), has reviewed this regulation and by approving it certifies that this regulation will not have a significant economic impact on a substantial number of small entities for the purposes of that Act because the regulation only concerns the review and reinvestigation of cold case murders by Federal investigative agencies.

B. Executive Orders 12866, 13563, and 14094—Regulatory Review

The Office of Management and Budget has determined that this rulemaking is a ''significant regulatory action'' under section 3(f) of Executive Order 12866, 58 FR 51735, 51738 (Oct. 4, 1993), but it is not a section 3(f)(1) significant action. Accordingly, this proposed rule has been submitted to the Office of Management and Budget (''OMB'') for review. This proposed rule has been drafted and reviewed in accordance with section 1(b) of Executive Order 12866, Executive Order 13563, 76 FR 3821 (Jan. 21, 2011), and Executive Order 14094, 88 FR 21879 (Apr. 11, 2023).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health, and safety effects, distributive impacts, and equity). 58 FR 51735–36; 76 FR 3821. Executive Order 13563 emphasizes the importance of using the best available methods to quantify costs and benefits, reducing costs, harmonizing rules, and promoting flexibility. 76 FR 3822.

The costs and benefits of this rulemaking, which implements the HVFRA's requirements, are attributable to the HVFRA itself. The costs include the work required in processing applications, carrying out case file reviews, and reinvestigating cold case murders as warranted, in conformity with the HVFRA. The benefits include solving cold case murders where the HVFRA process is successful and providing closure for the victims' families. No alternative regulatory approach would significantly reduce these costs while achieving the benefits constituting the legislative objective with similar effectiveness.

C. Executive Order 13132—Federalism

This regulation will not have substantial direct effects on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government, as outlined by Executive Order 13132, 64 FR 43255 (Aug. 10, 1999). The regulation only concerns the review and reinvestigation of cold case murders by Federal investigative agencies.

D. Executive Order 13175—Consultation and Coordination With Indian Tribal Governments

The Department of Justice and the Department of the Interior, in accordance with section 5(b) of Executive Order 13175, 65 FR 67249 (Nov. 9, 2000), will consult with Tribal officials regarding this proposed regulation.

E. Executive Order 12988—Civil Justice Reform

This proposed rule meets the applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988, 61 FR 4729, 4731 (Feb. 7, 1996), to specify provisions in clear language. Pursuant to section 3(b)(1)(I) of the Executive Order, nothing in this proposed rule is intended to create any legal or procedural rights enforceable against the United States.

F. Unfunded Mandates Reform Act of 1995

This rule when finalized will not result in the expenditure by State, local and Tribal governments, in the aggregate, or by the private sector, of $100 million or more (as adjusted for inflation) in any one year and it will not significantly or uniquely affect small governments. Therefore, no actions were deemed necessary under the provisions of the Unfunded Mandates Reform Act of 1995. The rule only concerns the review and reinvestigation of cold case murders by Federal investigative agencies.

G. Congressional Review Act

This rule is not a ''major rule'' as defined by the Congressional Review Act, 5 U.S.C. 804(2).

List of Subjects in 28 CFR Part 95

Crime, Law enforcement.

Authority and Issuance

Accordingly, for the reasons stated in the preamble, the Department of Justice proposes to add 28 CFR part 95 to read as follows:

PART 95—HOMICIDE VICTIMS' FAMILIES' RIGHTS

Sec.

95.1 Purpose.
95.2 Definitions.
95.3 Case file review.
95.4 Review procedures.
95.5 Full reinvestigation.
95.6 Multiple agencies.
95.7 Consultation, updates, and explanation.
95.8 Subsequent reviews.
95.9 Procedures to promote compliance.
95.10 Data collection.
95.11 Annual report.
95.12 Withholding information.

Authority: Pub. L. 117–164, 136 Stat. 1358.

§ 95.1 Purpose.

The purpose of this part is to implement the Homicide Victims' Families' Rights Act of 2021 (the ''Act''). The Act provides for a system to review the case files of cold case murders at the instance of certain persons and potentially carry out further investigation.

§ 95.2 Definitions.

In this part:

(a) The term ''designated person'' means a parent, step-parent, parent-in-law, grandparent, grandparent-in-law, sibling, spouse, child, or step-child of a murder victim.

(b) The term ''victim'' means a natural person who died as a result of a cold case murder.

(c)(1) The term ''murder'' means an offense under 18 U.S.C. 1111, or another Federal offense that incorporates by reference the elements of 18 U.S.C. 1111. The offenses that incorporate by reference the elements of 18 U.S.C. 1111 are—

(i) A murder committed in Indian country, investigated as a crime potentially prosecutable under 18 U.S.C. 1152 or 1153;

(ii) A murder in which the victim was a Federal officer or employee, or another person whose status or activities would make the person's murder a Federal crime, investigated as a crime potentially prosecutable under 18 U.S.C. 115, 351, 1114, 1116, 1121, 1503, 1512, 1513, 1751, or 1841; 7 U.S.C. 2146; 15 U.S.C. 1825; or 21 U.S.C. 461, 675, or 1041;

(iii) A murder in which the victim was a United States national killed outside of the United States, investigated as a crime potentially prosecutable under 18 U.S.C. 1119 or 2332; and

(iv) A murder in which the status or activities of the perpetrator, or the means or circumstances of the murder's commission, would make the murder a Federal crime, investigated as a crime potentially prosecutable under 18 U.S.C. 36, 924(j), 930, 1118, 1120, 1652, 1958, 1959, 2245, 3261, or 3273; or 49 U.S.C. 46506.

(2) The term ''murder'' does not include—

(i) A murder in which the victim died before January 1, 1970;

(ii) A murder that is not an offense under the laws of the United States, even if it is an offense under the laws of a State, the District of Columbia, or a territory or possession of the United States; or

(iii) Any offense, conduct, or occurrence that did not involve the commission of a murder as defined in paragraph (c)(1) of this section.

(d) The term ''agency'' means a Federal law enforcement entity with jurisdiction to engage in the detection, investigation, or prosecution of a cold case murder. The term ''agency'' does not include a State or local law enforcement entity or a law enforcement entity of the District of Columbia or a territory or possession of the United States.

(e) The term ''principal investigative agency'' means the Federal investigative agency that had the primary responsibility for the initial investigation of a murder. In a case in which a murder was investigated by State or other non-Federal authorities and the role of Federal agencies was the provision of investigative assistance, and in a case in which a murder was investigated by a Federal agency but thereafter State or other non-Federal authorities assumed the primary responsibility for the investigation, no Federal agency was the principal investigative agency and the case is not within the scope of this part. A prosecutorial agency of the Department of Justice, though involved in the investigation of a murder, is not the principal investigative agency in any case.

(f) The term ''initial investigation'' means the investigation of a murder before it became a cold case murder.

(g) The term ''cold case murder'' means a murder—

(1) In which the victim died more than three years prior to the date of an application by a designated person under § 95.3;

(2) Previously investigated by a Federal law enforcement entity;

(3) For which all probative leads have been exhausted; and

(4) For which no likely perpetrator has been identified.

(h) The term ''probative leads'' means information that identifies the perpetrator or that provides a sufficient likelihood of enabling the identification of the perpetrator to warrant further investigation, in the agency's judgment and consistent with the agency's policies and practices regarding the use of investigative methods. Variant terminology used in some provisions of the Act, ''probative investigative leads,'' has the same meaning.

§ 95.3 Case file review.

(a) *In general.* Upon written application by one designated person, the principal investigative agency shall review the case file regarding a cold case murder to determine if a full reinvestigation would result in probative leads.

(b) *Review.* A review under paragraph (a) of this section shall include the following elements:

(1) An analysis of what investigative steps or follow-up steps may have been missed in the initial investigation. This element requires the reviewer to consider whether, in the reviewer's judgment, there were steps or follow-up steps that should have been taken in the original investigation but were not taken.

(2) An assessment of whether witnesses should be interviewed or reinterviewed. This element requires the reviewer to consider whether, in the reviewer's judgment, there were witnesses in the original investigation who should have been interviewed but were not interviewed, or who should have been asked additional questions or interviewed in a different manner than in the original investigation.

(3) An examination of physical evidence to see if all appropriate forensic testing and analysis was performed in the first instance or if additional testing might produce information relevant to the investigation. This element has two aspects. It requires the reviewer to consider whether, in the reviewer's judgment, there was forensic testing available at the time, such as checking for latent fingerprints, which should have been carried out in the initial investigation but was not carried out. It also requires the reviewer to consider whether there have been advances in forensic technology or methods, such as more sensitive DNA testing, which were unavailable at the time of the initial investigation, but which would now be utilized in a like investigation under current policies and practices regarding the use of investigative methods.

(4) An update of the case file using the most current investigative standards as of the date of the review to the extent it would help develop probative leads. This element requires the reviewer to consider whether additional or potentially more effective investigative measures would have been taken in the

initial investigation had current investigative standards been in effect. For example, two Executive Orders, E.O. 14053 and E.O. 13898, have been issued, in 2021 and 2019 respectively, to enhance and prioritize the investigation of cases involving missing or murdered indigenous persons. This element requires the reviewer to consider in such cases whether application of the current investigative standards would help develop probative leads.

(5) If the reviewer is aware of another agency that investigated or participated in the investigation of the murder, notification of the other agency that the case is under review and consideration of any information provided by the other agency.

(c) *Reviewer.* A review under paragraph (a) of this section shall not be conducted by a person who previously investigated the murder at issue. This does not limit the reviewer in seeking information from or consulting with a person who conducted or was involved in the initial investigation.

(d) *Acknowledgment.* The agency shall provide in writing to the applicant, as soon as reasonably possible, confirmation of the agency's receipt of the application and notice of the applicant's rights under the Act.

(e) *Certification in lieu of review.* The application for a case file review may be denied if the case does not satisfy the criteria for a cold case murder as defined in § 95.2(g). If a case file review is denied on this ground, the agency shall issue a written certification that the case does not satisfy the criteria for a cold case murder and shall inform the applicant of the reason for the denial.

§ 95.4 Review procedures.

(a) *Application form.* Each agency that may be the principal investigative agency in a cold case murder investigation shall develop a written application form to be used for designated persons to request a case file review. An agency may adopt for this purpose a standard form developed by the government, or by another organizational unit of the government, and need not separately develop an agency-specific form.

(b) *Responsible agency.* An application for a case file review may be denied if it is submitted to an agency that did not previously investigate the murder or was not the principal investigative agency in the initial investigation of the murder. If a case file review is denied on this ground, the agency shall inform the applicant of the reason for the denial. If the agency is aware of another Federal agency that was the principal investigative agency in the initial investigation, the agency shall so advise the applicant and shall, if the applicant wishes, transfer the application to the principal investigative agency. If no Federal agency was the principal investigative agency in the initial investigation, but the agency knows the identity of a non-Federal entity that investigated the murder, the agency shall so advise the applicant.

(c) *Multiple agencies or applications.* (1) If more than one agency participated in the investigation of a murder, the agencies shall coordinate any case file review or full reinvestigation so that there is only one joint case file review or full reinvestigation at any one time. An application for review shall not be denied based on disagreement among agencies as to which agency was the principal investigative agency in the initial investigation. In such a case, the relevant agencies shall jointly consider the application and collaborate in carrying out any resulting case file review or reinvestigation, or responsibility for those functions may be assumed by or assigned to one of the agencies involved.

(2) An agency need not take any action based on an application by a designated person during the pendency of an application by another designated person with respect to the same victim, or during the pendency of a resulting case file review or reinvestigation, but the agency shall advise the applicant that there was an earlier application and may consider any information provided by the later applicant.

(3) Only one case file review shall be undertaken at any one time with respect to the same cold case murder victim. If an agency receives multiple applications with respect to different victims, it may consolidate any resulting case file reviews.

(d) *Time limit.* An agency shall complete a case file review and decide whether a full reinvestigation is warranted not later than six months after the receipt by the agency of the application resulting in the review. The agency may extend this time limit once for a period not exceeding six months if the agency finds that the number of case files to be reviewed makes it impracticable to comply with the time limit without unreasonably taking resources from other law enforcement activities. If the time limit is extended, the agency shall notify and explain its reasoning to the applicant.

§ 95.5 Full reinvestigation.

(a) *In general.* An agency shall conduct a full reinvestigation of a cold case murder if review of the case file concludes that a full reinvestigation would result in probative leads. As provided in the definition of ''probative leads'' in § 95.2(h), this means that a full reinvestigation is required if the case file review produces information that identifies the perpetrator or that provides a sufficient likelihood of enabling the identification of the perpetrator to warrant further investigation, in the agency's judgment and consistent with the agency's policies and practices regarding the use of investigative methods.

(b) *Full reinvestigation.* A full reinvestigation for purposes of the Act means an investigation in which all new probative leads are exhausted. A full reinvestigation—

(1) Shall include analyzing all evidence regarding the murder for the purpose of developing probative leads; but

(2) Need not involve pursuing leads that do not, in the agency's judgment, provide a sufficient likelihood of enabling the identification of the perpetrator to warrant further investigation, or whose pursuit is not consistent with the agency's policies and practices regarding the use of investigative methods.

(c) *Person conducting reinvestigation.* A reinvestigation shall not be conducted by a person who previously investigated the murder. This prohibition does not limit consulting with or obtaining information from a person involved in the previous investigation, or using such a person in a subordinate role in the reinvestigation.

(d) *Unified reinvestigation.* Only one full reinvestigation shall be undertaken at any one time with respect to the same cold case murder victim. If reinvestigation is found to be warranted with respect to multiple victims, the resulting reinvestigations may be consolidated.

§ 95.6 Multiple agencies.

If more than one agency conducted the initial investigation of a cold case murder, each agency shall coordinate with the other agency or agencies any case file review or full reinvestigation so that there is only one case file review or full reinvestigation occurring at a time, as provided in §§ 95.4(c) and 95.5(d).

§ 95.7 Consultation, updates, and explanation.

(a) *Consultation.* The agency shall consult with the designated person who filed an application for case file review. This means discussing the application with the applicant on at least one occasion.

(b) *Updates.* The agency shall provide the applicant with periodic updates during any case file review or full reinvestigation. The required update shall include informing the applicant whether the review or reinvestigation is in progress or has been completed.

(c) *Explanation of decision.* At the conclusion of a case file review, the agency shall meet with the applicant and discuss the evidence to explain the decision whether or not to engage in a full reinvestigation. Discussion of the evidence and explanation of the decision do not require disclosure of information described in § 95.12 or other information that would not generally be shared with a victim's family members in the investigation of a murder.

(d) *Means of communication.* Meetings required under this section may be carried out in person or through remote video communication. Consultations and updates may be carried out in person or through any other means of communication.

§ 95.8 Subsequent reviews.

(a) *In general.* If an agency concludes following a case file review that a full reinvestigation is not warranted, or if a full reinvestigation is undertaken and completed without identifying a likely perpetrator, no additional case file review or reinvestigation is required to be undertaken with respect to a cold case murder for a period of five years, unless there is newly discovered, materially significant evidence.

(b) *New material evidence.* For purposes of the Act, newly discovered, materially significant evidence means evidence discovered subsequent to the previous case file review or reinvestigation that identifies the perpetrator or that provides a sufficient likelihood of enabling the identification of the perpetrator to warrant further investigation, in the agency's judgment and consistent with the agency's policies and practices regarding the use of investigative methods.

(c) *Discretionary authority.* An agency may, in its discretion, review case files, continue investigation, or reinvestigate notwithstanding the absence of an application by a designated person or the time when previous review, investigation, or reinvestigation occurred.

§ 95.9 Procedures to promote compliance.

(a) *In general*—(1) *Regulations.* The Act provides that, not later than August 3, 2023, each agency shall promulgate regulations to enforce the right of a designated person to request a review under the Act and to ensure compliance by the agency with the obligations described in the Act. This requirement applies to any agency that may be the principal investigative agency in a murder investigation. An agency is not required to separately promulgate regulations to the extent it adopts, or is subject to, regulations issued by another organizational unit of the government regarding the matters described in this section.

(2) *Content of regulations.* The Act provides that the regulations promulgated under paragraph (a)(1) of this section shall—

(i) Designate an administrative authority within the agency to receive and investigate complaints relating to case file reviews and reinvestigations and provide a procedure for the resolution of such complaints;

(ii) Require a course of training for appropriate employees and officers within the agency regarding the procedures, responsibilities, and obligations under the Act;

(iii) Contain disciplinary sanctions, which may include suspension or termination from employment, for employees of the agency who have willfully or wantonly failed to comply with the Act; and

(iv) Provide that the head of the agency, or a designee, shall be the final arbiter of the complaint, and that there shall be no judicial review of the final decision of the head of the agency or designee by a complainant.

(3) *Agency.* For purposes of paragraphs (a)(1) and (2) of this section, the ''agency'' may be a broader organizational unit of the government in which the principal investigative agency is situated.

(b) *Department of Justice.* The following shall apply to each agency of the Department of Justice that may be the principal investigative agency in a cold case murder investigation:

(1) The agency shall require a course of training regarding the procedures, responsibilities, and obligations required under the Act for agency officers and employees whose involvement in carrying out the Act warrants such training.

(2) The agency shall designate an official within the agency to receive and investigate complaints alleging that the agency engaged in a violation of the Act relating to case file review or reinvestigation of a cold case murder. If investigation of a complaint by the official could create a conflict of interest, the official shall notify the appropriate individual or office within the agency and investigation of the complaint may be assigned to a different official.

(3) A complaint under this subsection must be submitted in writing by a person who applied for case file review under § 95.3(a). The complaint must be submitted within one year of the complainant's knowledge of a violation or receipt of information from the agency indicating completion of a case file review or reinvestigation, but if no such information has been received from the agency, then within five years of the submission of the application for case file review. A complaint submitted outside these time frames must include an explanation for why it was not timely submitted, which will be considered in deciding whether to accept the application. The complaint shall contain, to the extent known to, or reasonably available to, that person, the following information:

(i) The name and contact information of the complainant.

(ii) The investigative case number or name of the murder victim.

(iii) Any tracking number or other identifier of the complainant's application for case file review under § 95.3(a).

(iv) If the complaint pertains to a specific officer or employee of the agency, that person's name and contact information, or other identifying information if the complainant is not able to provide name and contact information.

(v) Information about the alleged violation of the Act sufficient to enable the agency official to conduct an investigation including: the nature of the violation; when and how it occurred; whether, when, and how the complainant notified an agency officer or employee of the alleged violation; and any actions taken by an agency officer or employee in response to such notification.

(4) The agency official shall investigate a complaint that satisfies the conditions set forth in paragraph (b)(3) of this section, determine whether further action is warranted, document and close the investigation of the complaint in conformity with agency procedures, and inform the complainant about the disposition of the complaint. However, the complaint procedure under this subsection is not available to present complaints about the conduct of the initial investigation, to present complaints about the conduct of an officer or employee of another agency, or to secure a reexamination or redetermination of the agency's decision whether a reinvestigation is warranted under the Act.

(5) The head of the agency or a designee shall be the final arbiter of the

complaint and there shall be no judicial review of that person's final decision.

(6) An officer or employee of the agency who has failed to comply with the Act may be required to undergo retraining or additional training. All disciplinary actions authorized by the agency or the Department of Justice may be taken, as appropriate, including suspension or termination from employment, for officers or employees of the agency who are determined to have willfully or wantonly failed to comply with the Act.

(7) The provisions of paragraph (b) of this section do not authorize the agency to exercise authority over, take disciplinary action against, or involve in its complaint or disciplinary processes, an officer or employee of another agency.

§ 95.10 Data collection.

(a) *Publication of statistics.* Not later than August 3, 2025, and annually thereafter, the National Institute of Justice shall publish statistics on the number of cold case murders. The Attorney General may delegate this function to the Bureau of Justice Statistics or another component of the Department of Justice.

(b) *Content of published statistics.* The statistics published pursuant to paragraph (a) of this section shall, at a minimum, be disaggregated by the circumstances of the cold case murder, including the classification of the offense, and by agency.

(c) *Annual publications.* The statistics published in each year shall provide the required information for—

(i) Cold case murders in which the murder occurred after the enactment of the Act and no likely perpetrator was identified by the end of the preceding year; and

(ii) Cold case murders in which an application for review under § 95.3(a) was filed before the end of the preceding year and no likely perpetrator was identified by the end of that year.

§ 95.11 Annual report.

(a) *In general.* The Act provides that each agency shall submit an annual report to the Committees on the Judiciary of the House of Representatives and of the Senate describing actions taken and results achieved under this Act during the previous year. This requirement applies to any agency that may be the principal investigative agency in a murder investigation. An individual agency need not submit a separate report if the required information with respect to the agency is included in a report submitted to the Committees by another organizational unit of the government.

(b) *Contents of report.* The Act provides that the report described in paragraph (a) of this section shall include—

(1) The number of written applications filed with the agency pursuant to section 2(a) of the Act and § 95.3(a);

(2) The number of extensions granted, and an explanation of reasons provided under section 2(h) of the Act and § 95.4(d);

(3) The number of full reinvestigations initiated and closed pursuant to section 4 of the Act and § 95.5; and

(4) Statistics and individualized information on topics that include identified suspects, arrests, charges, and convictions for reviews under section 2 of the Act and § 95.3 and reinvestigations under section 4 of the Act and § 95.5.

§ 95.12 Withholding information.

Nothing in the Act or this part requires an agency to provide information that would endanger the safety of any person, unreasonably impede an ongoing investigation, violate a court order, or violate legal obligations regarding privacy.

Dated: January 13, 2025.

Merrick B. Garland,

Attorney General.

29 CFR Parts 4000, 4006, 4007, 4010, 4041, 4041A, 4043, 4065, 4203, 4204, 4207, 4211, 4219, 4220, 4233, 4262, 4281, and 4909

RIN 1212–AB51

Miscellaneous Corrections, Clarifications, and Improvements

AGENCY: Pension Benefit Guaranty Corporation.

ACTION: Proposed rule.

SUMMARY: The Pension Benefit Guaranty Corporation (PBGC) proposes miscellaneous technical corrections, clarifications, and improvements to its regulations, including its regulations on premium rates, premium due dates, and termination of single-employer plans. These changes are a result of PBGC's ongoing retrospective review of the effectiveness and clarity of its rules and of statutory changes.

DATES: Comments must be submitted on or before March 24, 2025 to be assured of consideration.

ADDRESSES: Comments may be submitted by any of the following methods:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the online instructions for submitting comments.
- *Email: reg.comments@pbgc.gov.* Refer to 1212–AB51 in the subject line.
- *Mail or Hand Delivery:* Regulatory Affairs Division, Office of the General Counsel, Pension Benefit Guaranty Corporation, 445 12th Street SW, Washington, DC 20024–2101.

Commenters are strongly encouraged to submit comments electronically. Commenters who submit comments on paper by mail should allow sufficient time for mailed comments to be received before the close of the comment period. All submissions must include the agency's name (Pension Benefit Guaranty Corporation, or PBGC) and the Regulation Identifier Number (RIN) for this rulemaking (RIN 1212–AB51). Comments received will be posted without change to PBGC's website, *www.pbgc.gov,* including any personal information provided. Do not submit comments that include any personally identifiable information or confidential business information.

Copies of comments may also be obtained by writing to Disclosure Division (*disclosure@pbgc.gov*), Office of the General Counsel, Pension Benefit Guaranty Corporation, 445 12th Street SW, Washington, DC 20024–2101, or calling 202–326–4040 during normal business hours. If you are deaf or hard of hearing, or have a speech disability, please dial 7–1–1 to access telecommunications relay services.

FOR FURTHER INFORMATION CONTACT: Monica O'Donnell (*odonnell.monica@pbgc.gov*), Attorney, Regulatory Affairs Division, Office of the General Counsel, Pension Benefit Guaranty Corporation, 445 12th Street SW, Washington, DC 20024–2101; 202–229–8706. If you are deaf or hard of hearing, or have a speech disability, please dial 7–1–1 to access telecommunications relay services.

SUPPLEMENTARY INFORMATION:

Executive Summary

Purpose and Authority

The purpose of this regulatory action is to make miscellaneous technical corrections, clarifications, updates, and improvements to several of the Pension Benefit Guaranty Corporation's (PBGC's) regulations. These changes are based on PBGC's ongoing retrospective review of the effectiveness and clarity of its rules

and on statutory changes to the Employee Retirement Income Security Act of 1974 (ERISA).

Legal authority for this action comes from section 4002(b)(3) of ERISA which authorizes PBGC to issue regulations to carry out the purposes of title IV of ERISA. It also comes from section 4006 of ERISA (Premium Rates), section 4007 of ERISA (Payment of Premiums), section 4010 of ERISA (Authority to Require Certain Information), section 4041 of ERISA (Termination of Single-Employer Plans), section 4041A of ERISA (Termination of Multiemployer Plans), section 4043 of ERISA (Reportable Events), section 4065 of ERISA (Annual Report of Plan Administrator), section 4203 of ERISA (Complete Withdrawal), section 4204 of ERISA (Sale of Assets), section 4207 of ERISA (Reduction or Waiver of Complete Withdrawal Liability), section 4211 of ERISA (Methods for Computing Withdrawal Liability), section 4219 of ERISA (Notice, Collection, Etc., of Withdrawal Liability), section 4220 of ERISA (Approval of Amendments), section 4233 of ERISA (Partitions of Eligible Multiemployer Plans), section 4262 of ERISA (Special Financial Assistance by the Corporation), and section 4281 of ERISA (Benefits Under Certain Terminated Plans).

Major Provisions

The major provisions of this proposed rulemaking would amend PBGC's regulations on:

- Premium Rates, by codifying the changes of the Setting Every Community Up for Retirement Enhancement Act of 2019 (SECURE Act) (Pub. L. 116–94, Division O) applicable to cooperative and small employer charity (CSEC) plans [1] and certain community newspaper plans; [2]
- Payment of Premiums, by revising the due date for the final premium for terminating plans to be the earlier of the normal premium due date or 45 days after the date the post-distribution certification is filed; and
- Termination of Single-Employer Plans, by setting due dates for the standard termination notice and notice of intent to terminate where the plan administrator has not provided a proposed termination date, and by adding additional criteria majority owners must meet to waive their benefits if they are owners through constructive ownership.

Background

PBGC administers two insurance programs for private-sector defined benefit pension plans under title IV of ERISA: a single-employer plan termination insurance program and a multiemployer plan insolvency insurance program. In addition, PBGC administers a special financial assistance program for certain financially distressed multiemployer plans. The amendments proposed in this rulemaking apply primarily to the single-employer plan termination insurance program.

Proposed Amendments

The proposed technical and clarifying amendments and improvements to PBGC's regulations are discussed below. PBGC invites comment on these proposals.

Premium Rates—29 CFR Part 4006

Sponsors of plans covered under PBGC's single-employer program are subject to rules requiring the calculation and payment of annual premiums to PBGC under section 4006 of ERISA and PBGC's regulation on Premium Rates (29 CFR part 4006), ''premium rates regulation.'' The SECURE Act modified the calculation of premiums under section 4006 of ERISA for a CSEC plan and the funding requirements for a community newspaper plan under section 303(m) of ERISA and section 430(m) of the Internal Revenue Code (the Code). The SECURE Act also modified section 401 of the Code to allow an employer to adopt a new pension plan and elect to treat the plan as if it had been adopted during the prior taxable year. PBGC proposes to amend its premium rates regulation to account for these SECURE Act modifications.

CSEC Plans—Variable Rate Premiums

The SECURE Act modified flat and variable rate premiums and changed the way the variable rate premium is calculated for CSEC plans first effective for 2019.[3] Under section 4006(a)(3)(A) of ERISA, as amended by the SECURE Act, CSEC plans calculate the variable rate premiums that they owe to PBGC based on alternative minimum funding standards. CSEC plans now apply an alternate definition of unfunded vested benefits (UVBs). This definition refers to the funding liability of the CSEC plan as determined under section 306(j)(5)(C) of ERISA and section 433(j)(5)(C) of the Code. PBGC issued guidance [4] on these changes and incorporated the special premium rules for CSEC plans into the premium filing instructions starting with the 2021 filing instructions.

Although the rules have been in place for several years, PBGC is now proposing to amend its premium rates regulation to codify the SECURE Act changes regarding how CSEC plans determine UVBs for the purpose of calculating variable rate premiums. First, proposed new § 4006.5(h) would provide the rules to calculate a CSEC plan's ''premium funding target'' using the alternate definition of UVBs as provided in section 306(j)(5)(C) of ERISA and section 433(j)(5)(C) of the Code. In addition, PBGC would make conforming amendments to §§ 4006.2, 4006.4(b)(1) and 4006.4(f)(2) to further conform to changes under the SECURE Act for CSEC plans.

Community Newspaper Plans

The SECURE Act amended section 430 of the Code and section 303 of ERISA, providing that community newspaper plans may elect to use alternative minimum funding standards.[5] However, section 4006 of ERISA was not similarly amended, so community newspaper plans are not permitted to use these alternative standards to calculate the premiums that they owe to PBGC. PBGC proposes to add a reference to community newspaper plans in § 4006.4(f) to denote them as plans subject to special funding rules, which are disregarded for purposes of determining UVBs.

Definition of New Plan

Under PBGC's premium rates regulation and its regulation on Payment of Premiums (29 CFR part 4007) ''payment of premiums regulation,'' plans that are newly adopted are subject to special rules concerning calculations and payment of premiums. Before the SECURE Act, a ''new plan'' meant a plan that did not exist before the premium payment year. Following the SECURE Act, which allows employers to elect to treat newly adopted plans as having been adopted during the prior tax year, this definition must be changed. The current definition does not account for newly adopted plans that employers have elected to treat as having a retroactive effective

[1] A CSEC plan is a plan maintained by multiple employers, most of which are rural cooperatives, charities, or agricultural cooperatives or maintained by a rural telephone cooperative association. *See* section 104 of the Pension Protection Act, Public Law 109–280.

[2] A community newspaper plan means a plan as defined in section 303(m)(5) of ERISA and section 430(m)(5) of the Code.

[3] The SECURE Act's reduced premium rates applicable to CSEC plans are reflected in § 4006.3(a) and (b) of PBGC's premium rates regulation.

[4] PBGC Technical Update 20–1 (2020).

[5] Section 9707 of the American Rescue Plan Act of 2021, Public Law 117–2, further modified the definition of the term ''eligible newspaper plan sponsor,'' but that modification does not require additional changes to part 4006.

date. Accordingly, PBGC proposes to change the definition of ''New plan'' in § 4006.2 to mean a plan with an effective date during the premium payment year.

Payment of Premiums—29 CFR Part 4007

The final step in a plan's standard termination is the filing of the post-distribution certification under § 4041.29 of PBGC's regulation on Termination of Single-Employer Plans (29 CFR part 4041). The plan administrator of the terminating plan must file the certification (on PBGC Form 501) within 30 days of the final benefits distribution date, or within 60 days of the final benefits distribution date if it certifies to PBGC within 30 days after the final benefits distribution date that the plan assets have been distributed as required. Before 2014, the final premium filing for a terminating plan was due on the same date it would have been due if the plan had not terminated (*i.e.,* the 15th day of the 10th month after the plan year began). However, there were instances in which plan administrators of terminating plans neglected to file the final premium filing by the time it was due because the due date was several months after the Form 501 was filed. PBGC found that in some of these cases, especially when the plan sponsor was no longer in business by the final premium due date, it was difficult for the plan administrator to go back or even reconstruct records to calculate and pay premiums, as well as pay the late payment interest and penalties that PBGC assessed.

In 2014, PBGC amended its payment of premiums regulation by revising the premium due date rules for terminating plans.[6] This was intended to facilitate the timely payment of these final year premiums for terminating plans and to relieve them of the burden of calculating premiums long after the final distributions were made. This rule set the due date for the final premium filing for a terminating plan as the earlier of (1) the normal premium due date found in § 4007.11(a), or (2) the date when the post-distribution certification is filed. Therefore, a plan that closes out in the first eight-and-a-half months of its final plan year faces an accelerated premium filing due date.[7]

Practitioners have informed PBGC that in some cases, it is challenging to prepare and submit both the post-distribution certification (*i.e.,* PBGC Form 501) and the final premium filing on the same day. As a result of these challenges, some plan administrators have missed filing due dates and been assessed late premium payment charges.

For the reasons described in the 2014 rule and above, PBGC still believes it is important to have an accelerated premium due date for plans that complete a standard termination long before the ''normal'' premium due date. However, to reduce the administrative difficulties and related possibility of late or missed filings, PBGC proposes to amend § 4007.11(d)(2) to revise the due date for the final premium filing to be the earlier of (1) the normal premium due date, or (2) 45 days after the date the post-distribution certification is filed.

Termination of Single-Employer Plans—29 CFR Part 4041

Under section 4041 of ERISA, a single-employer plan can terminate in either a standard termination or a distress termination. A plan administrator of a single-employer plan covered by PBGC's termination insurance program that has sufficient assets to provide all plan benefits may voluntarily terminate the plan in a standard termination. The rules governing standard terminations are in section 4041 of ERISA and subpart B of PBGC's regulation on Termination of Single-Employer Plans (29 CFR part 4041), ''termination regulation.'' Within specified timeframes, a plan administrator must notify participants of the proposed termination; provide participants detailed information on their plan benefits; file certain information with PBGC; and, absent the issuance of a notice of noncompliance by PBGC, distribute plan assets to satisfy all plan benefits under the plan.

A single-employer plan insured by PBGC that does not have sufficient assets to pay all plan benefits owed to participants and beneficiaries but does have sufficient assets to pay benefits guaranteed by PBGC, may terminate voluntarily in a distress termination only if the employer and the members of the employer's ''controlled group'' of affiliated companies meet certain statutory requirements.

Majority Owner

Under PBGC's termination regulation, in the event that a plan lacks sufficient funds to pay required plan benefits, a majority owner may forgo receipt of their plan benefits (1) to enable the plan to satisfy all other plan benefits in a standard termination,[8] or (2) in connection with a distress termination.[9] In a standard termination, the election to waive payment of benefits is permitted only to facilitate the standard termination. This alternative treatment of a majority owner's plan benefit is only valid if the election is in writing; requisite spousal consent criteria is met, if applicable; and the majority owner's election and the spouse's consent does not violate a qualified domestic relations order.[10] A majority owner electing to forgo receipt of their plan benefits in a distress termination must meet these same criteria as a majority owner in a standard termination, but in addition, must receive PBGC approval if such election is made after the termination date and would result in PBGC determining that the plan is sufficient for guaranteed benefits under paragraph (c) of § 4041.47.[11]

The term ''majority owner'' is defined under § 4041.2 of the termination regulation as a person who owns, directly or indirectly, 50 percent or more, taking into account the constructive ownership rules of sections 414(b) and (c) of the Code, of an unincorporated trade or business; the capital interest or profits interest in a partnership; or either the voting stock of a corporation or the value of all of the stock of a corporation. One way in which a person can become a majority owner is through an option agreement to acquire stock. If a person has an option to acquire stock, that stock is considered as owned by the person who holds the option.[12]

PBGC is concerned that the rules in the current regulation do not effectively eliminate the risk of participants being coerced to waive their benefits as ''majority owners'' when they are given ownership options by the plan sponsor in anticipation of plan termination. To avoid such potential coercion, PBGC proposes to amend the criteria individuals must meet to waive their benefits by modifying its application of the constructive ownership rules. Under the proposal, if the majority owner has an option to acquire any outstanding interest in an organization, such interest

[10] 29 CFR 4041.21(b)(2)(i)–(iv).

[11] 29 CFR 4041.47(d).

[12] 26 U.S.C. 1563(e)(1).

will be considered as owned by such person by an option agreement under 26 CFR 1.414(c)–4(b)(1) if the person directly owns 5 percent or more of the unincorporated business or trade, capital interest or the profits interest in a partnership, or either 5 percent or more of the voting stock of a corporation or the value of all the stock of a corporation.[13] Alternatively, if the person does not have a 5 percent or more direct ownership interest, the person would be able to qualify as a majority owner under an option agreement if the person has been a member of the board of directors, a fiduciary, or participated in the management of the plan sponsor for each of the 3 years immediately preceding the date of plan termination. These exceptions to the ownership rules are intended to minimize the potential misuse of option agreements and protect the benefits of participants who are not direct owners or who have not participated in the management of the plan sponsor.

Clarifying Due Dates

To complete a standard termination, the plan administrator must: (1) issue notices of intent to terminate and notices of plan benefits to participants, beneficiaries, and other affected parties; (2) file a standard termination notice and post-distribution certification with PBGC; and (3) distribute the plan's assets in satisfaction of the plan's benefit liabilities. Under § 4041.25(a), the standard termination notice is due on or before the 180th day after the proposed termination date. Under § 4041.25(b), a plan's date of termination is the later of the date specified in the standard termination notice or the date specified in the notice of intent to terminate (but not later than 90 days after the earliest date a notice of intent to terminate was provided to any party). However, if the plan administrator fails to specify such date in the notice of intent to terminate and/or fails to file a standard termination notice (thus failing to declare a proposed termination date), then the due date for the standard termination notice is unclear. PBGC proposes, in such cases, to clarify this ambiguity by clearly establishing a due date for the standard termination notice that does not depend on the declaration of a proposed termination date. Under the proposed rule, § 4041.25(a) would be modified such that the due date for a standard termination notice is the earlier of: (1) 180 days after the plan's proposed termination date as specified in the standard termination notice; or (2) 60 days before making any distribution governed by section 4041(b) of ERISA. Thus, the due date for a standard termination notice, where the notice is not filed with PBGC, will be 60 days before distributions begin, and PBGC may assess penalties for the missed filing from that point going forward.

PBGC is also proposing a corresponding change to § 4041.29(b), which provides to plan administrators who timely filed a standard termination notice a 90-day grace period for the assessment of penalties for an untimely post-distribution certification. This section would be modified such that the grace period continues to be available but only if the plan administrator filed a standard termination notice within 180 days of the proposed termination date.

Other Clarifications, Corrections, and Updates

Filing, Issuance, Computation of Time, and Record Retention—29 CFR Part 4000

PBGC proposes to amend its regulation on Filing, Issuance, Computation of Time, and Record Retention (29 CFR part 4000) to require electronic filing by plans of standard termination filings, missing participant filings, and coverage determination forms. These filings are made by plans and practitioners representing plans, and not by individual participants. Filing this information electronically (by email or through an e-filing portal) is currently optional. However, because electronic filing is more efficient for both PBGC and filers and has become the standard method of filing for PBGC's regulated community, PBGC proposes to amend § 4000.3(b) to require electronic filing by plans for standard termination filings under subpart B of 29 CFR part 4041, missing participant filings under 29 CFR part 4050, and coverage determination forms under section 4021 of ERISA, in accordance with instructions on PBGC's website at *www.pbgc.gov.*

The proposed rule also makes other clarifying and editorial changes to part 4000.

Annual Financial and Actuarial Information Reporting—29 CFR Part 4010

Under PBGC's regulation on Annual Financial and Actuarial Information Reporting (29 CFR part 4010), certain underfunded plans[14] must annually report identifying, financial, and actuarial information to PBGC. Section 4010.8(a)(12) provides that the actuarial information must be certified, in writing, by an enrolled actuary. PBGC proposes to amend this paragraph so that the filing instructions, not the regulation, provide the rules about the certification (*i.e.,* what information must be contained in the certification and how to complete the certification). This proposed amendment is intended to give PBGC greater flexibility to consider methods other than written certifications, such as e-certifications, in the future.

Reportable Events and Certain Other Notification Requirements—29 CFR Part 4043

Plan administrators and contributing sponsors are responsible for notifying PBGC in the event of a reportable event under section 4043 of ERISA or a failure to make certain required contributions under section 303(k)(4) of ERISA or section 430(k)(4) of the Code. PBGC's regulation on Reportable Events and Certain Other Notification Requirements (29 CFR part 4043), the ''reportable events regulation,'' prescribes the requirements for notifying PBGC of one of these circumstances. Filers must submit these notices using PBGC's e-filing portal. The e-filing portal, available for submitting notices for reportable events since 2016, offers a secure application for submitting reportable events information. Currently, under § 4043.3(a)(3), the language states that if notices are required for two or more events, the notices can be combined into one filing. This provision was originally intended to make filing paper notices easier by allowing filers to combine paper notices into one filing. However, this provision is obsolete as under the e-filing portal, the filer is prompted to enter information for only one reportable event per filing. This method is not burdensome for filers as information about the filer is saved in the e-filing portal and does not need to be re-entered for each filing. Therefore, PBGC is proposing to remove the obsolete language in § 4043.3(a)(3).

PBGC is also proposing changes to § 4043.62 of the reportable events regulation. In 2020, § 4043.29 was amended to clarify that PBGC does not need notice of a change in the contributing sponsor to a plan if the change does not result in a contributing sponsor ceasing to be a member of the plan's controlled group.[15] Therefore, the heading of § 4043.29 was revised to remove ''contributing sponsor,'' and the

[13] 26 CFR 1.414(c)–3(d)(2).

[14] A filer is described in § 4010.4.

[15] *See* 85 FR 6046, 6049 (Feb. 4, 2020).

description of reportable event was revised to provide that a reportable event occurs for a plan when there is a transaction that results, or will result, in one or more persons (including any person who is or was a contributing sponsor) ceasing to be a member of the plan's controlled group (other than by merger involving members of the same controlled group). The advance notice requirement in § 4043.62 refers to the description of the event that must be reported under § 4043.29. To conform with changes made to § 4043.29 in 2020, PBGC proposes to amend the heading of § 4043.62 by removing ''contributing sponsor or,'' and proposes to amend paragraph (a) of § 4043.62 to remove ''contributing sponsor or.'' These amendments would clarify and minimize confusion as to the advance notice requirement for a change in controlled group.

Allocating Unfunded Vested Benefits To Withdrawing Employers—29 CFR Part 4211

Under PBGC's regulation on Allocating Unfunded Vested Benefits to Withdrawing Employers (29 CFR part 4211), a plan is responsible for determining the amount of unfunded vested benefits to be allocated to the withdrawing employer and using one of four methods to do so. Under § 4211.23, PBGC can approve an alternative allocation method or modification to an allocation method if such change or modification would not significantly increase the risk of loss to plan participants and beneficiaries or to PBGC.

PBGC proposes to amend paragraph (c) of § 4211.23 by removing language that implies that reconsideration of PBGC's decision on an alternative allocation method or modification to an allocation method is a right of a plan sponsor. Per PBGC's regulations on Rules for Administrative Review of Agency Decision (29 CFR part 4003), decisions made by PBGC under 29 CFR part 4211 are not subject to either appeal or reconsideration. Instead, PBGC has the authority to review, upon request or its own initiative, determinations when it is deemed to be appropriate. This proposed change will clarify that a plan sponsor may request review of PBGC's decision regarding an alternative allocation method.

Partitions of Eligible Multiemployer Plans—29 CFR Part 4233

A multiemployer plan that is seeking partition must comply with the requirements set forth under PBGC's regulation on Partitions of Eligible Multiemployer Plans (29 CFR part 4233). The specific application filing requirements are outlined in § 4233.3, including a specific statement under penalties of perjury that the plan sponsor must use with the signed and dated application for partition.

PBGC proposes to amend paragraph (b) of § 4233.3 to better comply with the affidavit requirements prescribed by the Department of Justice for perjury cases under 28 U.S.C. 1746. The new language for the affidavit must include language specifically referring to the penalty of perjury ''under the laws of the United States of America'' to adhere the sample form outlined in paragraph (1) of 28 U.S.C. 1746.

Special Financial Assistance by PBGC—29 CFR Part 4262

Under the Special Financial Assistance by PBGC regulation (29 CFR part 4262), PBGC is amending paragraph (h)(3)(iv)(B) of § 4262.16 by changing the reference from ''section 4291(b)(1)(A) of ERISA'' to ''section 4219(b)(1)(A) of ERISA.''

OMB Control Numbers for PBGC Information Collection Requirements—29 CFR Part 4909

PBGC proposes to add a chart in currently reserved part 4909 which would display, per the requirements of 5 CFR 1320.5(b)(2)(ii)(C), the Office of Management and Budget control numbers of PBGC information collections for which there is no corresponding paper or electronic form. This change is intended for better organization and clarity. In addition, PBGC proposes to remove outdated or duplicative OMB control numbers from the following sections: 4007.12, 4010.15, 4041A.11, 4065.3, 4203.6, 4204.11, 4204.21, 4207.10, 4211.22, 4219.20, 4220.3, and 4281.4.

Compliance With Rulemaking Guidelines

Executive Orders 12866 and 13563

The Office of Management and Budget (OMB) has determined that this rule is not a ''significant regulatory action'' under Executive Order 12866. Accordingly, OMB has not reviewed the proposed rule under Executive Order 12866.

Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity).

Although this is not a significant regulatory action under Executive Order 12866, PBGC has examined the economic and policy implications of this proposed rule. Most of the proposed amendments, including those to parts 4006, 4007, 4010, and 4041, clarify regulations or conform regulations to statutory changes, or are otherwise cost-neutral in their impact.

Section 6 of Executive Order 13563 requires agencies to rethink existing regulations by periodically reviewing their regulatory program for rules that ''may be outmoded, ineffective, insufficient, or excessively burdensome.'' These rules should be modified, streamlined, expanded, or repealed as appropriate. PBGC has identified technical corrections, clarifications, and improvements to some of its regulations and has included those amendments in this proposed rulemaking. PBGC expects to propose periodic rulemakings of this nature.

Regulatory Flexibility Act

The Regulatory Flexibility Act [16] (RFA) imposes certain requirements respecting rules that are subject to the notice-and-comment requirements of section 553(b) of the Administrative Procedure Act, or any other law,[17] and that are likely to have a significant economic impact on a substantial number of small entities. Unless an agency certifies that a proposed rule will not, if promulgated, have a significant economic impact on a substantial number of small entities, section 603 of the RFA requires that the agency present an initial regulatory flexibility analysis at the time of the publication of the proposed rule describing the impact of the rule on small entities and seek public comment on such impact. Small entities include small businesses, organizations, and governmental jurisdictions.[18]

For purposes of the RFA requirements with respect to this proposed rule, PBGC considers a small entity to be a plan with fewer than 100 participants.[19] This is substantially the same criterion PBGC uses in other regulations [20] and is consistent with certain requirements in

[16] 5 U.S.C. 601 *et seq.*

[17] The applicable definition of ''rule'' is found in section 601 of the RFA. *See* 5 U.S.C. 601(2).

[18] The applicable definitions of ''small business,'' ''small organization,'' and ''small governmental jurisdiction'' are found in section 601 of the RFA. *See* 5 U.S.C. 601.

[19] PBGC consulted with the Small Business Administration's Office of Advocacy before making this determination. Memorandum received from the U.S. Small Business Administration, Office of Advocacy on March 9, 2021.

[20] *See, e.g.,* special rules for small plans under part 4007 (Payment of Premiums).

title I of ERISA [21] and the Code,[22] as well as the definition of a small entity that PBGC and the Department of Labor (DOL) have used for purposes of the RFA.[23]

Further, while some large employers operate small plans along with larger ones, in general, most small plans are maintained by small employers. PBGC believes that assessing the impact of the final rule on small plans is an appropriate substitute for evaluating the effect on small entities. The definition of small entity considered appropriate for this purpose differs, however, from a definition of small business based on size standards promulgated by the Small Business Administration (13 CFR 121.201) pursuant to the Small Business Act. PBGC therefore requests comments on the appropriateness of the size standard used in evaluating the impact on small entities of this proposed rule.

Based on its proposed definition of small entity, PBGC certifies under section 605(b) of the RFA that the amendments in this proposed rule would not have a significant economic impact on a substantial number of small entities. As explained above under ''Executive Orders 12866 and 13563,'' most of the proposed amendments offer clarifications or conform the regulation to statutory changes and thus are neutral in their impact. For instance, the clarification of deadlines of standard termination filings under part 4041 does not impose any new requirements, but rather clarifies existing ones. While it is possible that individual small plans may be impacted by this change, the overall effect on small plans will not be significant. Accordingly, as provided in section 605 of the Regulatory Flexibility Act, sections 603 and 604 do not apply.

Paperwork Reduction Act

This proposed rule contains collections of information that PBGC has submitted to OMB for review and approval under the Paperwork Reduction Act (PRA). OMB's decision regarding these information collection requests will be available at *http://www.reginfo.gov.* An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Most of the changes PBGC expects to make are revisions to filing instructions, where necessary or helpful, to incorporate the clarifications in the proposed rule. Therefore, PBGC estimates that the proposed rule will have no impact on the hour and cost burden of reporting as described below.

Termination of Single-Employer Plans Regulation

The collection of information under part 4041 is approved under OMB control number 1212–0036 (expires March 31, 2026). The current information collection requirements have an estimated annual hour burden of 41,730 hours and a cost burden of $8,509,747.

PBGC's Standard Termination Filing Instructions would be updated to reflect the changes in this proposed rule to make clear that the forms under OMB control number 1212–0036 must be submitted electronically (by email or through the e-filing portal) and eliminate the option of filing paper forms. In addition, PBGC is making other editorial and clarifying changes to both the standard termination and distress termination instructions. The clarifications incorporated into the instructions would replace or augment existing language but would not create additional filing burden.

Annual Financial and Actuarial Information Reporting Regulation

The collection of information under part 4010 is approved under OMB control number 1212–0049 (expires February 28, 2026). The current information collection requirements have an estimated annual hour burden of 800 hours and a cost burden of $11,080,000.

PBGC's ERISA 4010 Filing Instructions would be updated to reflect the change in this proposed rule to include the rules about the certification of actuarial information submitted by certain underfunded plans. The change incorporated into the instructions would replace or augment existing language but would not create additional filing burden.

Missing Participants Regulation

The collection of information under part 4050 is approved under OMB control number 1212–0069 (expires November 30, 2026). The current information collection requirements have an estimated annual hour burden of 70 hours and a cost burden of $497,835.

PBGC's Missing Participants Instructions would be updated to reflect the changes in this proposed rule to make clear that the forms under OMB control number 1212–0069 must be submitted electronically (by email or through an e-filing portal) and eliminate the option of filing paper forms. The clarifications incorporated into the instructions would replace or augment existing language but would not create additional filing burden.

Premium Filing Regulation

The collection of information under part 4007 is approved under OMB control number 1212–0009 (expires December 31, 2026). The current information collection requirements have an estimated annual hour burden of 13,565 hours and a cost burden of $21,661,676.

PBGC's Comprehensive Premium Instructions would be updated to reflect the changes in this proposed rule to change the options for the final premium filing due date. The clarifications incorporated into the instructions would replace or augment existing language but would not create additional filing burden.

PBGC is soliciting public comments to—

- Evaluate whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the collection of information, including the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology (*e.g.,* permitting electronic submission of responses).

In consideration of the foregoing, PBGC proposes to amend 29 CFR chapter XL as follows.

PART 4000—FILING, ISSUANCE, COMPUTATION OF TIME, AND RECORD RETENTION

■ 1. The authority citation for part 4000 continues to read as follows:

Authority: 29 U.S.C. 1083(k), 1302(b)(3).

§ 4000.3 [Amended]

■ 2. Amend § 4000.3 by:

■ a. Removing the words ''the PBGC'' and ''the PBGC's'' and adding in their places the words ''PBGC'' and ''PBGC's'', respectively, wherever they appear;

■ b. Removing the words ''Web site'' and adding in their place the word ''website'' wherever they appear in paragraph (b);

■ c. Adding paragraphs (b)(5), (6), and (7); and

■ d. Removing '', including permitted filing methods, fax numbers, and mail and email addresses,'' in paragraph (c) introductory text.

The additions read as follows:

§ 4000.3 What methods of filing may I use?

* * * * *

(b) * * *

(5) You must submit the information required under subpart B of part 4041 of this chapter electronically in accordance with the instructions on PBGC's website, except as otherwise provided by PBGC.

(6) You must submit the information required under part 4050 of this chapter electronically in accordance with the instructions on PBGC's website, except as otherwise provided by PBGC.

(7) You must submit the information necessary to request a coverage determination under section 4021 of ERISA electronically in accordance with the instructions on PBGC's website, except as otherwise provided by PBGC.

* * * * *

PART 4006—PREMIUM RATES

■ 3. The authority citation for part 4006 continues to read as follows:

Authority: 29 U.S.C. 1302(b)(3), 1306, 1307.

■ 4. Amend § 4006.2 as follows:

■ a. Add a definition of ''CSEC plan'' in alphabetical order;

■ b. In the first sentence of the definition of ''New plan,'' remove ''that did not exist before'' and add in its place ''with an effective date during''; and

■ c. In the definition of ''UVB valuation date,'' remove ''in accordance with ERISA section 303(g)(2)'' and add in its place ''for a plan other than a CSEC plan in accordance with ERISA section 303(g)(2) and for a CSEC plan in accordance with ERISA section 306(c)(8)(B)(i) without regard to section 306(c)(8)(B)(ii)''.

The addition reads as follows:

§ 4006.2 Definitions.

* * * * *

CSEC plan means a plan as defined in section 210(f)(1) of ERISA.

* * * * *

■ 5. Amend § 4006.4 by revising paragraphs (b)(1) and (f)(2) to read as follows:

§ 4006.4 Determination of unfunded vested benefits.

* * * * *

(b) * * *

(1) *In general.* A plan's premium funding target is its standard premium funding target under paragraph (b)(2) of this section, except that—

(i) If the plan is not a CSEC plan and an election to use the alternative premium funding target under § 4006.5(g) is in effect, its premium funding target is its alternative premium funding target under § 4006.5(g), and;

(ii) If the plan is a CSEC plan, its premium funding target is determined under § 4006.5(h).

* * * * *

(f) * * *

(2) Section 303(m) of ERISA and section 430(m) of the Code, dealing with defined benefit pension plans maintained by certain community newspapers.

■ 6. Amend § 4006.5 by adding paragraph (h) to read as follows:

§ 4006.5 Exemptions and special rules.

* * * * *

(h) *CSEC plan premium funding target.* The premium funding target of a CSEC plan is its funding liability as determined under section 306(j)(5)(C) of ERISA for the UVB valuation year taking only vested benefits into account.

PART 4007—PAYMENT OF PREMIUMS

■ 7. The authority citation for part 4007 continues to read as follows:

Authority: 29 U.S.C. 1302(b)(3), 1303(a), 1306, 1307.

■ 8. Amend § 4007.11 by revising paragraph (d)(2) to read as follows:

§ 4007.11 Due Dates

* * * * *

(d) * * *

(2) Forty-five (45) days after the date the post-distribution certification under § 4041.29 of this chapter is filed.

* * * * *

§ 4007.12 [Amended]

■ 9. Amend § 4007.12 by removing ''(Approved by the Office of Management and Budget under control number 1212–0009)''.

PART 4010—ANNUAL FINANCIAL AND ACTUARIAL INFORMATION REPORTING

■ 10. The authority citation for part 4010 continues to read as follows:

Authority: 29 U.S.C. 1302(b)(3), 1310.

■ 11. Amend § 4010.8 by revising paragraph (a)(12) to read as follows:

§ 4010.8 Plan actuarial information.

(a) * * *

(12) Certification of the actuarial information by an enrolled actuary, as described in the related filing instructions and permitted under 26 CFR 301.6059–1(d).

* * * * *

§ 4010.15 [Removed]

■ 12. Remove § 4010.15.

PART 4041—TERMINATION OF SINGLE-EMPLOYER PLANS

■ 13. The authority citation for part 4041 continues to read as follows:

Authority: 29 U.S.C. 1302(b)(3), 1341, 1344, 1350.

■ 14. Amend § 4041.21 by adding paragraph (b)(2)(v) to read as follows:

§ 4041.21 Requirements for a standard termination.

* * * * *

(b) * * *

(2) * * *

(v) In any case in which the majority owner has an option to acquire any outstanding interest in an organization, such interest will be considered as owned by such person only if the following requirements are met:

(A) The person has a 5 percent or more direct ownership interest, or

(B) Such person has been a member of the board of directors, a fiduciary, or participated in the management of the plan sponsor for each of the 3 years immediately preceding the date of the plan termination.

■ 15. Amend § 4041.25 by revising paragraph (a) to read as follows:

§ 4041.25 Standard termination notice.

(a) *Notice requirement.* The plan administrator must file with PBGC a standard termination notice, consisting of PBGC Form 500, completed in accordance with the instructions thereto, on or before the earlier of—

(1) One hundred-eighty (180) days after the proposed termination date; or

(2) Sixty (60) days before making any distribution governed by section 4041(b) of ERISA and this part.

* * * * *

■ 16. Amend § 4041.29 by revising paragraph (b) to read as follows:

§ 4041.29 Post-distribution certification.

* * * * *

(b) *Penalty considerations.* If a standard termination notice is filed in accordance with § 4041.25(a)(1), PBGC may assess a penalty for a late filing under paragraph (a) of this section only if the required information is filed more than 90 days after the distribution deadline (including extensions) under § 4041.28(a).

§ 4041.47 [Amended]

■ 17. Amend § 4041.47 by removing ''§ 4041.21(b)(2)(i) through (iv)'' and adding in its place ''§ 4041.21(b)(2)(i) through (v)'' in paragraph (d)(1).

PART 4041A—TERMINATION OF MULTIEMPLOYER PLANS

■ 18. The authority citation for part 4041A continues to read as follows:

Authority: 29 U.S.C. 1302(b)(3), 1341a, 1431, 1441.

§ 4041A.11 [Amended]

■ 19. Amend § 4041A.11 by removing ''(Approved by the Office of Management and Budget under control number 1212–0020)''.

PART 4043—REPORTABLE EVENTS AND CERTAIN OTHER NOTIFICATION REQUIREMENTS

■ 20. The authority citation for part 4043 continues to read as follows:

Authority: 29 U.S.C. 1083(k), 1302(b)(3), 1343.

§ 4043.3 [Amended]

■ 21. Amend § 4043.3 by removing the last sentence of paragraph (a)(3).

■ 22. Amend § 4043.62 by revising the section heading and paragraph (a) to read as follows:

§ 4043.62 Change in controlled group.

(a) *Reportable event.* Advance notice is required for a change in a plan's controlled group, as described in § 4043.29(a).

PART 4065—ANNUAL REPORT

■ 23. The authority citation for part 4065 continues to read as follows:

Authority: 29 U.S.C. 1302(b)(3), 1365.

§ 4065.3 [Amended]

■ 24. Amend § 4065.3 by removing ''(Approved by the Office of Management and Budget under control number 1212–0026)''.

PART 4203—EXTENSION OF SPECIAL WITHDRAWAL LIABILITY RULES

■ 25. The authority citation for part 4203 continues to read as follows:

Authority: 29 U.S.C. 1302(b)(3).

§ 4203.6 [Removed]

■ 26. Remove § 4203.6.

PART 4204—VARIANCES FOR SALE OF ASSETS

■ 27. The authority citation for part 4204 continues to read as follows:

Authority: 29 U.S.C. 1302(b)(3), 1384(c).

§ 4204.11 [Amended]

■ 28. Amend § 4204.11 by removing ''(Approved by the Office of Management and Budget under control number 1212–0021)''.

§ 4204.21 [Amended]

■ 29. Amend § 4204.21 by removing ''(Approved by the Office of Management and Budget under control number 1212–0021)''.

PART 4207—REDUCTION OR WAIVER OF COMPLETE WITHDRAWAL LIABILITY

■ 30. The authority citation for part 4207 continues to read as follows:

Authority: 29 U.S.C. 1302(b)(3), 1387.

§ 4207.10 [Amended]

■ 31. Amend § 4207.10 by removing ''(Approved by the Office of Management and Budget under control number 1212–0044)''.

PART 4211—ALLOCATING UNFUNDED VESTED BENEFITS TO WITHDRAWING EMPLOYERS

■ 32. The authority citation for part 4211 continues to read as follows:

Authority: 29 U.S.C. 1302(b)(3); 1391(c)(1), (c)(2)(D), (c)(5)(A), (c)(5)(B), (c)(5)(D), and (f).

§ 4211.22 [Amended]

■ 33. Amend § 4211.22 by removing ''(Approved by the Office of Management and Budget under control number 1212–0035)''.

§ 4211.23 [Amended]

■ 34. Amend § 4211.23 by removing ''of the sponsor's right to request a reconsideration of the decision pursuant to part 4003 of this chapter'' and adding in its place ''that the plan sponsor may request review of the decision'' in paragraph (c).

PART 4219—NOTICE, COLLECTION, AND REDETERMINATION OF WITHDRAWAL LIABILITY

■ 35. The authority citation for part 4219 continues to read as follows:

Authority: 29 U.S.C. 1302(b)(3) and 1399(c)(6).

§ 4219.20 [Removed]

■ 36. Remove § 4219.20.

PART 4220—PROCEDURES FOR PBGC APPROVAL OF PLAN AMENDMENTS

■ 37. The authority citation for part 4220 continues to read as follows:

Authority: 29 U.S.C. 1302(b)(3), 1400.

§ 4220.3 [Amended]

■ 38. Amend § 4220.3 by removing ''(Approved by the Office of Management and Budget under control number 1212–0031)''.

PART 4233—PARTITIONS OF ELIGIBLE MULTIEMPLOYER PLANS

■ 39. The authority citation for part 4233 continues to read as follows:

Authority: 29 U.S.C. 1302(b)(3), 1413.

■ 40. Amend § 4233.3 by revising the second sentence in paragraph (b) to read as follows:

§ 4233.3 Application filing requirements.

* * * * *

(b) * * * The application must be signed and dated by an authorized trustee who is a current member of the board of trustees, and must include the following statement under penalties of perjury: ''Under penalty of perjury under the laws of the United States of America, I declare that I have examined this application, including accompanying documents, and, to the best of my knowledge and belief, the application contains all the relevant facts relating to the application; all statements of fact contained in the application are true, correct, and not misleading because of omission of any material fact; and all accompanying documents are what they purport to be.'' * * *

* * * * *

PART 4262—SPECIAL FINANCIAL ASSISTANCE BY PBGC

■ 41. The authority citation for part 4262 continues to read as follows:

Authority: 29 U.S.C. 1302(b)(3), 1432.

§ 4262.16 [Amended]

■ 42. Amend § 4262.16 by removing the citation to ''section 4291(b)(1)(A) of ERISA'' and adding in its place ''section 4219(b)(1)(A) of ERISA'' in paragraph (h)(3)(iv)(B).

PART 4281—DUTIES OF PLAN SPONSOR FOLLOWING MASS WITHDRAWAL

■ 43. The authority citation for part 4281 continues to read as follows:

Authority: 29 U.S.C. 1302(b)(3), 1341(a), 1399(c)(1)(D), 1431, and 1441.

§ 4281.4 [Removed]

■ 44. Remove § 4281.4.

■ 45. Add part 4909, consisting of § ??.??, to read as follows:

PART 4909—OMB CONTROL NUMBERS FOR PBGC INFORMATION COLLECTION REQUIREMENTS

Authority: 29 U.S.C. 1302(b)(3), 5 CFR part 1320.

§ 4909.1 Information collection control numbers.

PBGC regulations that contain information collections requirements without corresponding written or electronic forms, questionnaires, or instructions are displayed in table 1 to this section. They are displayed along with their respective control numbers as assigned by the Office of Management and Budget (OMB) under the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.*

Coast Guard

33 CFR Parts 100 and 165

[Docket Number USCG–2024–0879]

RIN 1625–AA08 and 1625–AA00

Special Local Regulations & Safety Zones; USCG Sector Eastern Great Lakes

AGENCY: Coast Guard, DHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Coast Guard is proposing to amend existing regulations relating to special local regulations and safety zones that occur annually in Captain of the Port Zone Eastern Great Lakes. This action is necessary to provide for the safety of life on these navigable waters. We invite your comments on this proposed rulemaking.

DATES: Comments and related material must be received by the Coast Guard on or before February 20, 2025.

ADDRESSES: You may submit comments identified by docket number USCG–2024–0879 using the Federal Decision-Making Portal at *https://www.regulations.gov.* See the ''Public Participation and Request for Comments'' portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments. This notice of proposed rulemaking with its plain-language, 100-word-or-less proposed rule summary will be available in this same docket.

FOR FURTHER INFORMATION CONTACT: If you have questions about this proposed rulemaking, call or email LT William Kelley, Waterways Management at Sector Eastern Great Lakes, U.S. Coast Guard; telephone 716–843–9343, email *D09-SMB-SECBuffalo-WWM@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
COTP Captain of the Port
DHS Department of Homeland Security
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background, Purpose, and Legal Basis

The Coast Guard lists annual marine events in the Code of Federal Regulations (CFR). For USCG Sector Eastern Great Lakes, special local regulations are listed in 33 CFR 100.901 and safety/security zones are listed in 33 CFR 165.939. Over the 2023 calendar year, the Coast Guard was notified of multiple marine events that are conducted on an annual basis. The Coast Guard previously established temporary regulations implementing safety zones or local regulations for each of the respective events. The Captain of the Port (COTP) Sector Eastern Great Lakes determined that potential hazards associated with these events would be a safety concern for anyone within boundaries defined in proposed special local regulations and safety zones during the time period of these respective events. Moreover, the COTP Sector Easter Great Lakes also seeks to rename several of the enumerated events in 33 CFR 165.939 to accurately reflect the current event names. Additionally, the COTP Sector Eastern Great Lakes also determined that some of the events currently listed in the existing regulations are no longer required.

The purpose of this rulemaking is to ensure the safety of vessels and the navigable waters before, during, and after each respective scheduled event. The Coast Guard is proposing this rulemaking under authority in 46 U.S.C. 70034 and 70041.

III. Discussion of Proposed Rule

The COTP is proposing to amend established special local regulations found in 33 CFR part 100.901 and established safety zone regulations found in 33 CFR part 165.939. The special local regulations and safety zones would cover various navigable waters within boundaries defined below. As stated in prior rulemakings, instituting temporary final rules for each event, the duration of the special local regulations and safety zones are intended to ensure the safety of vessels and these navigable waters before, during, and after the scheduled events. No vessel or person would be permitted to enter these zones without obtaining permission from the COTP or a designated representative. The regulatory organization, text, event details, and precise coordinates for all proposed events appear at the end of this document.

A. Proposed events for 33 CFR 100.901:

i. Henderson Harbor Sprint Triathlon, Henderson Harbor, NY: A swim loop of a triathlon from the Henderson Harbor Boat Launch around the southern branch of Henderson Harbor in Lake Ontario, on or around the second week of July. *(see § 165.T09–0413,* 87 FR 37740*)*

ii. Women Swimmin' for Hospicare, Ithaca, NY: A swim route from Ithaca Yacht Club horizontally to the Eastern shoreline of Cayuga Lake on the second Saturday of August. *(see § 160.T09–0544,* 89 FR 56677*)*

B. Proposed events for 33 CFR 165.939:

i. United Refining Company of Pennsylvania Fireworks, Erie, PA: Circular safety zone within 583 feet of Dobbins Landing in Presque Isle Bay, Erie, PA, on or around the last week of April. (*See* § 165.T2024–0294, 89 FR 27388*)*

ii. Village of Sodus Point Labor Day Fireworks, Sodus Point, NY: Circular safety zone extending 560 feet around Sodus Point Beach Park in Sodus Bay, Sodus Point, NY on or around the first weekend in September. (*see* § 165.T09–0718, 82 FR 40070)

iii. Light the Night at Canalside, Buffalo, NY: Circular safety zone extending 350 feet from the end of the pier at Wilkeson Pointe in Buffalo River, Buffalo, NY, on or around the first weekend in October. (*see* § 165.T09–0765, 88 FR 66686)

iv. City of Oswego Tree Lighting Display, Oswego, NY: Circular safety zone extending 210 feet around a pedestrian walkway over the Oswego River in Oswego, NY, on or around the fourth weekend in November. (*see* § 165.T09–0865,
88 FR 80589)

v. City of North Tonawanda NYE Fireworks, North Tonawanda, NY: Circular safety zone extending 105 feet from a pedestrian bridge over the Erie Canal in North Tonawanda, NY, on or around the last night in December. *(see* § 165.T09–0986, 88 FR 89576)

vi. Tri CLE Rock Roll Run, Cleveland, OH: Rectangular safety zone on Lake Erie encompassing a race area, immediately adjacent to Edgewater Beach, on or around the 2nd weekend of August. (*see* § 165.T09–17714, 89 FR 65203)

C. Events with proposed name changes in 33 CFR 165.939.

i. 33 CFR 165.939(a)(23) pka. Salute to Our Heroes; event name changed to NYSOPRHP Patriotic-Themed Fireworks Display, Hamlin, NY

ii. 33 CFR 165.939(b)(3) pka. High Speed Boat Races; event name changed to Eastlake Willoughby Grand Prix

iii. 33 CFR 165.939(b)(4) pka. Downtown Cleveland Alliance July 4th Fireworks; event name changed to City of Cleveland July 4th Fireworks

iv. 33 CFR 165.939(b)(6) pka. Parade of Lights; event name changed to Whiskey Island Boat Club Parade of Lights

v. 33 CFR 165.939(b)(8) pka. Conneaut Festival; event name changed to Conneaut Red, White, and Boom Over Lake Erie

vi. 33 CFR 165.939(b)(12) pka. Lake Erie Open Water Swim; Event name changed to Brogan Open Water Classic

D. Events proposed for removal from 33 CFR 100.901. This document is also removing several entries from the table in 33 CFR 100.901 where the categorization of the event or safety zones prescribed are no longer appropriate. Those events are addressed below:

i. Fireworks by Grucci, Oswego, NY, currently 33 CFR 100.901, Table 1 (1)

Flagship International Offshore Challenge, Erie, PA, currently 33 CFR 100.901, Table 1 (3)

ii. Friendship Festival Airshow, Buffalo, NY, currently 33 CFR 100.901, Table 1 (4)

iii. NFBRA Red Dog Kilo Time Trials, Tonawanda, NY, currently 33 CFR 100.901, Table 1 (5)

iv. Sodus Bay 4th of July Fireworks, Sodus Point, NY, currently 33 CFR 100.901, Table 1 (6)

v. Tall Ships Erie, Erie, PA, currently 33 CFR 100.901, Table 1 (7)

vi. Thomas Graves Memorial Fireworks Display, Port Bay, NY, currently 33 CFR 100.901, Table 1 (8)

vii. Thunder Island Offshore Challenge, Oswego, NY, currently 33 CFR 100.901, Table 1 (9)

viii. We Love Erie Days Fireworks, Erie, PA, currently 33 CFR 100.901, Table 1 (10)

IV. Regulatory Analyses

We developed this proposed rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This NPRM has not been designated a ''significant regulatory action,'' under section 3(f) of Executive Order 12866, as amended by Executive Order 14094 (Modernizing Regulatory Review). Accordingly, the NPRM has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the size, location, duration, and time-of-day of each respective event. Each event establishes temporary safety/security zones or special local regulations lasting a short period of time over a small geographic area.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this proposed rule would not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the affected areas may be small entities, for the reasons stated in section IV.A above, this proposed rule would not have a significant economic impact on any vessel owner or operator.

If you think that your business, organization, or governmental jurisdiction qualifies as a small entity and that this proposed rule would have a significant economic impact on it, please submit a comment (see **ADDRESSES**) explaining why you think it qualifies and how and to what degree this rule would economically affect it.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this proposed rule. If the proposed rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section. The Coast Guard will not retaliate against small entities that question or complain about this proposed rule or any policy or action of the Coast Guard.

C. Collection of Information

This proposed rule would not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132 (Federalism), if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this proposed rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this proposed rule does not have tribal implications under Executive Order 13175 (Consultation and Coordination with Indian Tribal Governments) because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this proposed rule has implications for federalism or Indian tribes, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this proposed rule would not result in such an expenditure, we do discuss the potential effects of this proposed rule elsewhere in this preamble.

F. Environment

We have analyzed this proposed rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have made a preliminary determination that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This proposed rule involves two separate table revisions that contain special regulated areas and safety zones lasting various times which prohibit entry within defined areas. All additions, removals, and existing items in the aforementioned tables have been previously categorically excluded. Normally such actions are categorically excluded from further review under paragraph L60(a) and L61 of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A preliminary Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble. We

seek any comments or information that may lead to the discovery of a significant environmental impact from this proposed rule.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

V. Public Participation and Request for Comments

We view public participation as essential to effective rulemaking and will consider all comments and material received during the comment period. Your comment can help shape the outcome of this rulemaking. If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation.

Submitting comments. We encourage you to submit comments through the Federal Decision-Making Portal at *https://www.regulations.gov.* To do so, go to *https://www.regulations.gov,* type USCG–2024–0879 in the search box and click ''Search.'' Next, look for this document in the Search Results column, and click on it. Then click on the Comment option. If you cannot submit your material by using *https://www.regulations.gov,* call or email the person in the **FOR FURTHER INFORMATION CONTACT** section of this proposed rule for alternate instructions.

Viewing material in docket. To view documents mentioned in this proposed rule as being available in the docket, find the docket as described in the previous paragraph, and then select ''Supporting & Related Material'' in the Document Type column. Public comments will also be placed in our online docket and can be viewed by following instructions on the *https://www.regulations.gov* Frequently Asked Questions web page. Also, if you click on the Dockets tab and then the proposed rule, you should see a ''Subscribe'' option for email alerts. The option will notify you when comments are posted, or a final rule is published.

We review all comments received, but we will only post comments that address the topic of the proposed rule. We may choose not to post off-topic, inappropriate, or duplicate comments that we receive.

Personal information. We accept anonymous comments. Comments we post to *https://www.regulations.gov* will include any personal information you have provided. For more about privacy and submissions to the docket in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020).

List of Subjects

33 CFR Part 100

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard is proposing to amend 33 CFR parts 100 and 165 as follows:

PART 100—SAFETY OF LIFE ON NAVIGABLE WATERS

■ 1. The authority citation for part 100 continues to read as follows:

Authority: 46 U.S.C. 70041; 33 CFR 1.05–1.

■ 2. In § 100.901, revise and republish Table 1 to read as follows:

TABLE 1 TO § 100.901

Event	Location [1]	Date [2]
Sector Eastern Great Lakes, NY		
(1) Flagship International Kilo Speed Challenge. *Sponsor:* Presque Isle Powerboat Racing Association.	That portion of Lake Erie, Presque Isle Bay, south of a line drawn from 42°08′54″ N 080°05′42″ W; to 42°07′ N 080°21′ W will be a regulated area. That portion of Lake Erie, Presque Isle Bay, north of a line drawn from 42°08′54″ N 080°05′42″ W; to 42°07′ N 080°21′ W will be a ''caution area''. All vessels transiting the caution area will be operated at bare steerageway, keeping the vessel's wake at a minimum, and will exercise a high degree of caution in the area. The bay entrance will not be affected.	On or around the 3rd or 4th weekend of June.
(2) Christmas in July *Sponsor:* Henderson Business and Community Council.	The special local regulation area will cover ALL WATERS WITHIN A MOVING ZONE THAT ENCOMPASSES A 50 yard BUFFER ZONE ahead of the lead vessel, 50 yards astern of the last participating vessel, and 50 yards on each side of the parade vessels as it travels the parade route in the Henderson Bay, starting at point 43°51′44″ N 76°12′07.3″ W and running north adjacent to the shore to point 43°52′12.2″ N 76°11′32.7″ W, continuing northwest to point 43°53′40.9″ N 76°12′40.6″ W and running south adjacent to the shore to point 43°51′47.2″ N 76°14′08.3″ W, ending at the starting position at point 43°51′44.0″ N 76°12′07.3″ W. Latitude Longitude 43°51′44″ N 076°12′07.3″ W, thence to 43°52′12.2″ N 076°11′32.7″ W, thence to 43°53′40.9″ N 076°14′08.3″ W, thence along the shoreline to end at the starting position.	On or around the final weekend of July.
(3) Henderson Harbor Sprint Triathlon *Sponsor:* Henderson Business and Community Council.	The special local regulation would cover navigable waters within Henderson Bay starting at point 43°51′02.5″ N 076°12′21.9″ W and running northeast adjacent to the shore to point 43°51′05.9″ N 076°12′12.2″ W, continuing west to point 43°51′06.2″ N 076°12′21.2″ W, ending at starting position at point 43°51′02.5″ N 076°12′21.9″ W.	On or around the 2nd weekend of July.
(4) Event Name: Women Swimmin' for Hospicare. *Sponsor:* Hospicare Palliative Care Services.	The special local regulation would cover the navigable waters within Cayuga Lake described below. *Regulated area:* Latitude Longitude 42°30′07.01″ N 076°30′57.04″ W Along shoreline to position: 42°30′30.03″ N 076°31′09.34″ W thence to 42°29′50.20″ N 076°32′24.99″ W Along shoreline to position: 42°29′34.71″ N 076°32′17.11″ W thence	On or around the 2nd Saturday of August.

TABLE 1 TO § 100.901—Continued

Event	Location [1]	Date [2]
	To starting position.	
Sector Northern Great Lakes, MI		
(1) Bridgefest Regatta ..... *Sponsor:* Bridgefest Committee.	Keweenaw Waterway, from the Houghton Hancock Lift Bridge to 1000 yards west of the bridge, near Houghton, MI.	2nd weekend of June.
(2) Duluth Fourth Fest Fireworks ..... *Sponsor:* Office of the Mayor, Duluth, MN.	That portion of the Duluth Harbor Basin Northern Section bounded on the south by a line drawn on a bearing of 087° true from the Cargill Pier through Duluth Basin Lighted Buoy #5 (LLNR 15905) to the opposite shore on the north by the Duluth Aerial Bridge. That portion of Duluth Harbor Basin Northern Section within 600 yards of position 46°46′47″ N 092°06′10″ W.	4th of July weekend.
(3) July 4th Fireworks ..... *Sponsor:* City of Sault Ste Marie, MI.	That portion of the St. Mary's River, Sault Ste. Marie, MI within a 1000-foot radius of Brady Park, located on the south shore of the river. These waters are enclosed by the Locks to the west and to the east from a line drawn from the pier light of the east center pier to the U.S. Coast Guard Base to the southeast.	4th of July weekend.

[1] All coordinates listed in Table 1 to part 100.901 reference North American Datum of 1983 (NAD 1983).
[2] As noted in the introductory text of this section, the enforcement dates and times for each of the listed events in this table are subject to change. In the event of a change, or for enforcement periods listed that do not allow a specific date or dates to be determined, the Captain of the Port will provide notice to the public by publishing a Notice of Enforcement in the FEDERAL REGISTER, as well as, issuing a Broadcast Notice to Mariner.

PART 165—Regulated Navigation Areas and Limited Access Areas

■ 3. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051, 70124; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.3.

■ 4. In § 165.939, revise and republish the Table to read as follows:

TABLE 1 TO § 165.939

Event	Location [1] [2]	Date [3]
(a) January Safety Zones		
[Reserved].		
(b) February Safety Zones		
[Reserved].

DEPARTMENT OF EDUCATION

34 CFR Chapter III

[Docket ID ED–2024–OSERS–0138]

Rehabilitation Long-Term Training Program

AGENCY: Office of Special Education and Rehabilitative Services (OSERS), Department of Education.

ACTION: Proposed priorities and requirements.

SUMMARY: The Department of Education (Department) proposes priorities and requirements under the Rehabilitation Long-Term Training (RLTT) program with a focus on the Comprehensive System of Personnel Development (CSPD) and six rehabilitation topic areas. The Department may use these priorities and requirements for competitions in fiscal year (FY) 2025 and later years. This action is intended to address the national needs for the RLTT program, particularly the retention of qualified vocational rehabilitation (VR) personnel in the field of State VR services and the training of RSA scholars who aspire to become VR professionals and will fill critical VR positions where there are shortages.

DATES: We must receive your comments on or before February 20, 2025.

ADDRESSES: Comments must be submitted via the Federal eRulemaking Portal at *www.regulations.gov*. However, if you require an accommodation or cannot otherwise submit your comments via *www.regulations.gov,* please contact the program contact person listed under **FOR FURTHER INFORMATION CONTACT**. The Department will not accept comments submitted by fax or by email, or after the comment period closes. To ensure the Department does not receive duplicate copies, please submit your comments only once. In addition, please include the Docket ID at the top of your comments.

Federal eRulemaking Portal: Go to *www.regulations.gov* to submit your comments electronically. Information on using *Regulations.gov*, including instructions for accessing agency documents, submitting comments, and viewing the docket, is available on the site under ''FAQ.''

Note: The Department's policy is generally to make comments received from members of the public available for public viewing in their entirety on the Federal eRulemaking Portal at *www.regulations.gov.* Therefore, commenters should be careful to only include information in their comments that they wish to make publicly available.

FOR FURTHER INFORMATION CONTACT: Diandrea Bailey, U.S. Department of Education, 400 Maryland Avenue SW, room 4A10, Washington, DC 20202. Telephone: (202) 987–0126. Email: *84.129@ed.gov*.

If you are deaf, hard of hearing, or have a speech disability and wish to access telecommunications relay services, please dial 7–1–1.

SUPPLEMENTARY INFORMATION:

Invitation to Comment: We invite you to submit comments regarding the proposed priorities and requirements. To ensure that your comments have maximum effect in developing the final priorities and requirements, we urge

you to clearly identify the specific section of the proposed priorities and requirements that each comment addresses.

We are particularly interested in comments about whether the proposed priorities or requirements would be challenging for new applicants to meet and, if so, how the proposed priorities or requirements could be revised to address potential challenges.

We invite you to assist us in complying with the specific requirements of Executive Orders 12866, 13563, and 14094 and their overall requirement of reducing regulatory burden that might result from these proposed priorities and requirements. Please let us know of any further ways we could reduce potential costs or increase potential benefits while preserving the effective and efficient administration of the program.

During and after the comment period, you may inspect public comments about the proposed priorities and requirements, by accessing *Regulations.gov.* To inspect comments in person, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

Assistance to Individuals with Disabilities in Reviewing the Rulemaking Record: On request, we will provide an appropriate accommodation or auxiliary aid to an individual with a disability who needs assistance to review the comments or other documents in the public rulemaking record for the proposed priorities and requirements. If you want to schedule an appointment for this type of aid, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

Purpose of Program: The purpose of the RLTT program is to provide financial assistance for academic training in areas of personnel shortages identified by the Secretary and published in a notice in the **Federal Register**. RLTT funds are awarded to colleges and universities. Grantees must award at least 65 percent of project funds as scholarships (*i.e.,* awards of financial assistance, including disbursements or credits for student stipends, tuition and fees, books and supplies, and student travel in conjunction with training assignments) to students (herein referred to as RSA scholars) enrolled in the RLTT program.

Assistance Listing Number: 84.129.

Program Authority: 29 U.S.C. 772.

Applicable Regulations: 34 CFR parts 385 and 386.

Proposed Priorities: This document contains two proposed priorities. The Department may use one or both priorities for the FY 2025 RLTT program competitions and for any subsequent competitions.

Proposed Priority 1: RLTT Program for State VR Agencies' CSPD: Master's Degree or Certificate, Assistance Listing Number (ALN) 84.129W.

Background: The Department published a Notice of Final Priority in the **Federal Register** on July 23, 2014, establishing a priority for nine rehabilitation specialty areas of national need, including CSPD. Subsequently, RSA awarded eight CSPD grants to institutions of higher education (IHEs) in FY 2015 with a focus on providing academic training leading to a master's degree or academic certificate that supported State agency VR counselors. Grants were funded for a five-year cycle and expired in FY 2020. RSA has not awarded CSPD grants since FY 2015 as the national need for CSPDs was not the primary priority. Additionally, the RSA discretionary Rehabilitation Training-State Vocational Rehabilitation Unit In-Service Training program that supported special projects to train state vocational rehabilitation unit personnel was no longer available in 2015 (as a result of the amendments to the Rehabilitation Act made by the Workforce Innovation and Opportunity Act). As such, there remains a need to provide continuing education to rehabilitation professionals and paraprofessionals within the designated State unit, particularly with respect to rehabilitation technology so that they can establish and maintain education and experience requirements, to ensure that the personnel have a 21st century understanding of the evolving labor force and the needs of individuals with disabilities as mandated by the Rehabilitation Act. This continuing education is also important for rehabilitation professionals and paraprofessionals to meet the current challenges facing State VR agencies and related agencies in assisting individuals with disabilities to achieve high-quality competitive integrated employment outcomes.

Under Proposed Priority 1, applicants must propose a CSPD project that provides training to currently employed State VR agency personnel, including VR counselors with disabilities and VR counselors from racially and ethnically diverse backgrounds.

The academic training for all participants must meet (A) the designated State unit (DSU) personnel standards required under section 101(a)(7) of the Rehabilitation Act of 1973, as amended, and 34 CFR 361.18 and (B) the qualifications for the master's degree or academic certificate specified in the State's CSPD plans or of the States with which the State VR counselors and other personnel are working.

CSPD proposed projects must develop and use innovative approaches to train VR professionals, including using cutting-edge technology or innovative applications of advanced technology (*e.g.,* hybrid learning and competency-based programs) to maximize participation in, and improve the effectiveness of, the academic training.

Proposed Priority 2: RLTT Program for Rehabilitation Topic Areas, ALNs 84.129B, 84.129E, 84.129H, 84.129L, 84.129P, and 84.129Q.

Background: The goal of this priority is to increase the number of RSA scholars, and upgrade the skills of qualified VR personnel, especially rehabilitation counselors, who are trained in providing VR and related services to assist individuals with disabilities to achieve competitive integrated employment through academic training in six rehabilitation topic areas. Upon successful completion of their program of study, RSA scholars will be prepared to effectively meet the needs and demands of consumers with disabilities, especially individuals with significant disabilities, and employers.

Proposed Priority:

Under the Proposed Priority 2, applicants must propose a project that provides academic training to RSA scholars where the training leads to a degree (undergraduate or master's level) or academic certificate in one of six rehabilitation topic areas that follow:

1. Vocational Rehabilitation (VR) Counseling: Master's Degree (ALN 84.129B). Projects in this topic area must be designed to support RSA scholars interested in pursuing a master's degree in VR counseling. Projects must increase the skills of RSA scholars so that they are, upon successful completion of their program of study, prepared to, effectively and with an advanced level of expertise, help individuals with disabilities (consumers) meet their career and personal goals and help employers in their hiring efforts. Projects should also increase RSA scholars understanding of and ability to support consumers access to pre-employment transition services.

2. Rehabilitation Technology (ALN 84.129E). Projects in this topic area must provide scholarships to RSA scholars to pursue a degree or certificate in the application of advanced technology in rehabilitation services, and for use in careers in rehabilitation technology. Rehabilitation technology training includes training on the use, applications, and benefits of technology (including assistive technology and

artificial intelligence tools) to individuals with disabilities to achieve and/or maintain competitive integrated employment and independence.

The rehabilitation technology training program must be designed to ensure that RSA scholars acquire a 21st-century understanding of the evolving technology labor force, the needs of individuals with disabilities that might be addressed via technology, and the ways technology can unlock individuals' strengths.

3. Rehabilitation of Individuals With Mental Health Disorders or Illnesses (ALN 84.129H). Projects in this topic area must be designed to support RSA scholars interested in pursuing a degree or certificate for careers that provide specialized services to individuals who have mental health disorders or illnesses and are participants in the State VR programs. Additionally, projects must be designed to prepare RSA scholars to address a range of issues in VR services for individuals with mental health disorders or illnesses to assist them to achieve and maintain competitive integrated employment. Such mental health disorders and illnesses might include mood disorders (*e.g.,* depressive disorders and bipolar disorders), suicidality, schizophrenia, eating disorders, post-traumatic stress disorder, and other mild to severe mental health disorders. This can include mental health issues related to long-term effects of post-acute infection syndromes (COVID–19 and myalgic encephalomyelitis/chronic fatigue syndrome (ME/CFS) for which mental health care may be part of treating a potentially more systematic illness.

4. Undergraduate Education in the Rehabilitation Services (ALN 84.129L). Projects in this topic area must train undergraduate RSA scholars interested in pursuing careers as rehabilitation generalists, VR paraprofessionals, or other entry-level positions in the public VR services. Projects must also be designed to provide training and clinical learning experiences to equip RSA scholars with foundational knowledge of disability conditions, VR processes, interviewing techniques, and other skills required for working with consumers in the public VR services, including the skills to coordinate the diagnosis and evaluation of a person's disabling condition, create individual plans, arrange various VR services, assist VR counselors in working with persons with disabilities in selecting a vocational goal, provide personal and social adjustment services, conduct job placement activities, and provide follow-up services to individuals after other services are completed. Pre-employment transition services should be included as part of programmatic content.

5. Rehabilitation of Individuals Who Are Blind or Have Low Vision (ALN 84.129P). Projects in this topic area must train RSA scholars interested in pursuing a degree or certificate for careers in providing specialized services to persons who are blind or have low vision. Projects must be designed to provide training and hands-on experiences in VR services for persons who are blind or have low vision to assist them to achieve and/or maintain competitive integrated employment, including training in orientation and mobility, methods of independent and safe travel, and application of advanced technology.

6. Rehabilitation of Individuals Who Are Deaf or Hard of Hearing (ALN 84.129Q). Projects in this topic area must train RSA scholars interested in pursuing a degree or certificate for careers in providing specialized rehabilitation to persons who are deaf or hard of hearing. The training must include opportunities for RSA scholars to acquire the necessary skills to communicate effectively with individuals who are deaf or hard of hearing, and to assess and address the communication needs of individuals who are deaf or hard of hearing. Additionally, projects must have plans to support RSA scholars in developing competency in sign language/ASL and other communication methods as well as familiarity with the use of various assistive listening devices and application of other advanced assistive technology.

Projects must provide assistance to scholars to secure or maintain employment with State VR agencies, where the job duties include provision of rehabilitation of individuals who are deaf or hard of hearing (*e.g.,* assessment services, vocational and adjustment counseling services, provision of independent living skills training, interpreting services, interpreter referral services, advocacy services, and job placement services).

The academic training for all participants must meet (A) the DSU) personnel standards required under section 101(a)(7) of the Rehabilitation Act of 1973, as amended, and 34 CFR 361.18.

Rehabilitation topic area projects under this proposed priority must develop and use innovative approaches to train RSA scholars, including using cutting-edge technology or innovative application of advanced technology (*e.g.,* hybrid learning or competency-based programs) to maximize participation in, and improve the effectiveness of, the academic training.

In addition to academic training, RSA funded projects may provide a one-time stipend, to an amount as specified in the Notice Inviting Applications published in the **Federal Register** to RSA scholars based on identified needs for—

(a) completing an internship (*e.g.,* room and board, travel);

(b) obtaining qualifying employment in the specific field of study within a period of time after graduating and maintaining qualifying employment a minimum period of time beyond the required service obligation period as specified in the NIA; and

(c) utilizing a vetted employment expert or consultant to assist the RSA scholar in securing employment within a period of time after graduating with a State VR or related agency in the field of study as specified in the NIA.

Proposed Requirements

The Department proposes the following requirements for the RLTT program. We may apply one or more of these requirements in any year in which this program is in effect. We propose these requirements because we believe they would help applicants to develop well-designed, comprehensive projects. The proposed requirements would also provide the Department information critical to grants monitoring, such as an up-to-date picture of the employment needs in the applicant's geographic area.

Application Requirements: All applicants must—

(a) Provide data on the current and projected employment needs and personnel shortages in State VR agencies and other related agencies (as defined in 34 CFR 386.4) in their local area, region, and State; and describe how the proposed project will address those employment needs and personnel shortages;

(b) Describe how the project will train RSA scholars, as applicable, including how the project will provide them with an understanding of the evolving labor force and the needs of individuals with disabilities to ensure that the RSA scholars have a 21st century understanding of the evolving labor force and the needs of individuals with disabilities. Applicants must describe how, upon completion of the training program, State VR personnel including VR counselors or RSA scholars will be prepared to assist individuals with disabilities to meet current demands and emerging trends in the labor market, including how—

(1) The program provides a breadth of knowledge, experience, and rigor that

will adequately prepare scholars to meet the employment needs and goals of VR consumers and aligns with evidence-based (as defined in 34 CFR 77.1) practices and with competency-based skills (*e.g.,* advanced counseling skills, critical thinking skills, and skills in building collaborative relationships);

(2) The program prepares RSA scholars to meet all applicable certification standards;

(3) The program addresses new or emerging consumer employment needs or trends at the national, State, and regional levels;

(4) The program trains RSA scholars to possess the skills needed to address the specialized needs of individuals with specific types of disability conditions and backgrounds, which may include, but are not limited to, physical disabilities, mental health disorders or illnesses, intellectual and developmental disabilities, blindness, and deaf or hard of hearing, and individuals with disabilities who are from diverse cultural backgrounds or historically underserved populations;

(5) The program trains RSA scholars to understand the applications and strategies related to the integration of advanced assistive technology and artificial intelligence tools to fuel competitive integrated employment in the 21st century for individuals with disabilities, recognize the assistive technology needs of consumers and employers who hire individuals with disabilities, throughout the rehabilitation process so that they will be better able to coordinate the provision of appropriate advanced assistive technology services and devices including artificial intelligence in order to assist the consumers to obtain and retain competitive integrated employment;

(6) The program teaches RSA scholars to work effectively with employers, including by teaching strategies for developing relationships with employers in their State and local areas, identifying employer needs and skill demands, making initial employer contacts, presenting job-ready clients to potential employers, and conducting follow-up with employers;

(7) The program teaches RSA scholars to work effectively with state education agencies (SEAs), and local educational agencies (LEAs), particularly special education systems and educators. This includes instruction on collaborating effectively with SEAs, LEAs, school administrators, and special education teachers to ensure their awareness of pre-employment transition services and vocational rehabilitation transition services, and ensuring the successful planning and provision of these services; and

(8) The latest technology is incorporated into the methods of instruction (*e.g.,* technology that supports the use of hybrid education to reach scholars who live far from the university and the use of technology to acquire labor market information);

(c) Describe their methods to—

(1) Recruit highly capable prospective State VR counselors or RSA scholars who have the potential to successfully complete the academic program, all required practicum and internship experiences, and the required service obligation;

(2) Educate potential RSA scholars about the terms and conditions of the service obligation under 34 CFR 386.4, 386.34, and 386.40 through 386.43 so that they will be fully informed before accepting a scholarship and aware of the consequences should they fail to complete the program;

(3) Maintain a system that ensures that RSA scholars sign a payback agreement when they start and an exit certification form when they exit the program, regardless of whether they drop out, are removed, or successfully complete the program;

(4) Provide academic support and counseling to RSA scholars throughout the course of the academic program to ensure successful completion;

(5) Ensure that all RSA scholars complete an internship in a State VR agency (as defined in 34 CFR 386.4) as a requirement for program completion, unless the Secretary determines upon grantee request that there is sufficient justification for not completing an internship;

(6) Provide career counseling, including informing RSA scholars of professional contacts and networks, job leads including those available through the RSA Payback Information Management System (PIMS), and other necessary resources and information to support RSA scholars in successfully obtaining and retaining qualifying employment;

(7) Maintain bi-monthly contact with RSA scholars upon successful academic training program completion and provide post-graduation support to assist RSA scholars to achieve qualifying employment as well as employment support, at a minimum, for the RSA scholars' initial three to six months of employment;

(8) Maintain quarterly communication with RSA scholars after program exit until the beginning of their service obligation date to ensure that scholar contact information in PIMS is up to date;

(9) Maintain and safeguard credentials to access PIMS for the timely review and approval of scholar employment; and

(10) Maintain accurate financial information on, while safeguarding the privacy of, current and former scholars from the time they are enrolled in the program until they successfully meet their service obligation;

(d) Describe a plan for developing and maintaining partnerships with State VR agencies, community-based rehabilitation service providers, and LEAs that includes—

(1) Coordination between the grantee and the State VR agencies and community-based rehabilitation service providers that will promote qualifying employment opportunities for RSA scholars and formalized on-boarding and induction experiences for new hires;

(2) Formal opportunities for RSA scholars to obtain work experiences through internships, practicum agreements, job shadowing, and mentoring opportunities;

(3) Formal opportunities for RSA scholars to obtain work experiences in LEAs to develop practical knowledge on effective special education teacher-VR counselor collaborations that foster increased awareness in LEAs of pre-employment transition services and vocational rehabilitation transition services, and the successful planning and provision of these services; and

(4) A scholar internship assessment tool that is developed to ensure a consistent approach to the evaluation of scholars in a particular program. Applicants must describe how—

(i) The tool will reflect the specific responsibilities of the scholar during the internship;

(ii) Grantees and worksite supervisors will work together to develop the assessment tool. Supervisors at the internship site will complete the assessment detailing the scholar's strengths and areas for improvement that must be addressed and provide the results of the assessment to the grantee; and

(iii) The grantee will ensure that (A) RSA scholars are provided with a copy of the assessment and all relevant rubrics prior to beginning their internship, (B) supervisors have sufficient technical support to accurately complete the assessment, and (C) scholars receive a copy of the results of the assessment within 90 days of the end of their internship;

(e) Describe how RSA scholars will be evaluated throughout the program to ensure that they are proficient in meeting the needs and demands of

consumers and employers, including the steps that will be taken to provide assistance to an RSA scholar who is not meeting academic standards or who is performing poorly in a practicum or internship setting;

(f) Describe how the program will be evaluated, including how—

(1) The program will determine its effectiveness over time in filling vacancies in the State VR agency with qualified counselors or rehabilitation professionals capable of providing quality services to consumers;

(2) Input from State VR agencies and community-based rehabilitation service providers will be included in the evaluation;

(3) Feedback from consumers of VR services and employers (including the assessments described in paragraph (d)(4)) will be included in the evaluation;

(4) Data on the State VR program from other sources, such as the Department, will be included in the evaluation; and

(5) The data and results from the evaluation will be used to make necessary adjustments and improvements to the program.

Types of Priorities:

When inviting applications for a competition using one or more priorities, we designate the type of each priority as absolute, competitive preference, or invitational through a notice in the **Federal Register**. The effect of each type of priority follows:

Absolute priority: Under an absolute priority, we consider only applications that meet the priority (34 CFR 75.105(c)(3)).

Competitive preference priority: Under a competitive preference priority, we give competitive preference to an application by (1) awarding additional points, depending on the extent to which the application meets the priority (34 CFR 75.105(c)(2)(i)); or (2) selecting an application that meets the priority over an application of comparable merit that does not meet the priority (34 CFR 75.105(c)(2)(ii)).

Invitational priority: Under an invitational priority we are particularly interested in applications that meet the priority. However, we do not give an application that meets the priority a preference over other applications (34 CFR 75.105(c)(1)).

Final Priority and Requirements:

We will announce the final priorities and requirements in a document in the **Federal Register**. We will determine the final priorities and requirements after considering public comments on the proposed priorities and requirements and other information available to the Department. This document does not preclude us from proposing additional priorities, requirements, definitions, and selection criteria subject to meeting applicable rulemaking requirements.

Note: This document does not solicit applications. In any year in which we choose to use these proposed priorities and requirements, we invite applications through a notice in the **Federal Register**.

Executive Orders 12866, 13563, and 14094

Regulatory Impact Analysis

Under Executive Order 12866, the Office of Management and Budget (OMB) determines whether this regulatory action is ''significant'' and, therefore, subject to the requirements of the Executive order and subject to review by OMB. Section 3(f) of Executive Order 12866, as amended by Executive Order 14094, defines a ''significant regulatory action'' as an action likely to result in a rule that may—

(1) Have an annual effect on the economy of $200 million or more (adjusted every three years by the Administrator of Office of Information and Regulatory Affairs (OIRA) for changes in gross domestic product); or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, territorial, or Tribal governments or communities;

(2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) Materially alter the budgetary impacts of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or

(4) Raise legal or policy issues for which centralized review would meaningfully further the President's priorities, or the principles set forth in this Executive order, as specifically authorized in a timely manner by the Administrator of OIRA in each case.

This proposed regulatory action is not a significant regulatory action subject to review by OMB under section 3(f) of Executive Order 12866, as amended by Executive Order 14094.

We have also reviewed this proposed regulatory action under Executive Order 13563, which supplements and explicitly reaffirms the principles, structures, and definitions governing regulatory review established in Executive Order 12866, as amended by Executive Order 14094. To the extent permitted by law, Executive Order 13563 requires that an agency—

(1) Propose or adopt regulations only upon a reasoned determination that their benefits justify their costs (recognizing that some benefits and costs are difficult to quantify);

(2) Tailor its regulations to impose the least burden on society, consistent with obtaining regulatory objectives and taking into account—among other things and to the extent practicable—the costs of cumulative regulations;

(3) In choosing among alternative regulatory approaches, select those approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity);

(4) To the extent feasible, specify performance objectives, rather than the behavior or manner of compliance a regulated entity must adopt; and

(5) Identify and assess available alternatives to direct regulation, including economic incentives—such as user fees or marketable permits—to encourage the desired behavior, or provide information that enables the public to make choices.

Executive Order 13563 also requires an agency ''to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible.'' OIRA has emphasized that these techniques may include ''identifying changing future compliance costs that might result from technological innovation or anticipated behavioral changes.''

We are issuing these proposed priorities and requirements only on a reasoned determination that their benefits would justify their costs. In choosing among alternative regulatory approaches, we selected those approaches that would maximize net benefits. Based on the analysis that follows, the Department believes that this regulatory action is consistent with the principles in Executive Order 13563.

We also have determined that this regulatory action would not unduly interfere with State, local, and Tribal governments in the exercise of their governmental functions.

In accordance with these Executive orders, the Department has assessed the potential costs and benefits, both quantitative and qualitative, of this regulatory action. The potential costs are those resulting from statutory requirements and those we have determined as necessary for administering the Department's programs and activities.

Clarity of the Regulations

Executive Order 12866 and the Presidential memorandum ''Plain Language in Government Writing''

require each agency to write regulations that are easy to understand.

The Secretary invites comments on how to make the proposed priorities and requirements easier to understand, including answers to questions such as the following:

- Are the requirements in the proposed priorities and requirements clearly stated?
- Do the proposed priorities and requirements contain technical terms or other wording that interferes with their clarity?
- Does the format of the proposed priorities and requirements (grouping and order of sections, use of headings, paragraphing, etc.) aid or reduce their clarity?
- Would the proposed priorities and requirements be easier to understand if we divided them into more (but shorter) sections?
- Could the description of the proposed priorities and requirements in the **SUPPLEMENTARY INFORMATION** section of this preamble be more helpful in making the proposed priority and requirements easier to understand? If so, how?
- What else could we do to make the proposed priorities and requirements easier to understand?

To send any comments about how the Department could make the proposed priorities and requirements easier to understand, see the instructions in the **ADDRESSES** section.

Intergovernmental Review

These programs are subject to Executive Order 12372 and the regulations in 34 CFR part 79. One of the objectives of the Executive order is to foster an intergovernmental partnership and a strengthened federalism. The Executive order relies on processes developed by State and local governments for coordination and review of proposed Federal financial assistance.

This document provides early notification of our specific plans and actions for this program.

Regulatory Flexibility Act Certification

The Secretary certifies that the proposed priorities and requirements would not have a significant economic impact on a substantial number of small entities. The small entities that this proposed regulatory action would affect are IHEs, Indian tribes, and public or private nonprofit organizations. The Secretary believes that the costs imposed on applicants by the proposed priorities and requirements would be limited to paperwork burden related to preparing an application and that the benefits would outweigh any costs incurred by applicants.

Participation in this program is voluntary. For this reason, the proposed priorities and requirements would impose no burden on small entities unless they applied for funding under the program. We expect that in determining whether to apply for RLTT funds, an eligible applicant would evaluate the requirements of preparing an application and any associated costs and weigh them against the benefits likely to be achieved by receiving a RLTT grant. Eligible applicants most likely would apply only if they determine that the likely benefits exceed the costs of preparing an application. The likely benefits include the potential receipt of a grant as well as other benefits that may accrue to an entity through its development of an application, such as the use of that application to seek funding from other sources to train State VR counselors or RSA scholars in their pursuit to successfully graduate with an undergraduate or master's level degree, or certificate of completion and then secure or maintain employment at the State VR agency, filling critical VR positions where there are shortages or a need.

This proposed regulatory action would not have a significant economic impact on a small entity once it receives a grant because it would be able to meet the costs of compliance using the funds provided under this program. We invite comments from eligible small entities as to whether they believe this proposed regulatory action would have a significant economic impact on them and, if so, request evidence to support that belief.

Paperwork Reduction Act of 1995

The proposed priorities and requirements do not contain any information collection requirements.

Accessible Format: On request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT**, individuals with disabilities can obtain this document in an accessible format. The Department will provide the requestor with an accessible format that may include Rich Text Format (RTF) or text format (txt), a thumb drive, an MP3 file, braille, large print, audiotape, compact disc, or other accessible format.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. You may access the official edition of the **Federal Register** and the Code of Federal Regulations at *www.govinfo.gov.* At this site you can view this document, as well as all other Department documents published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access Department documents published in the **Federal Register** by using the article search feature at *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Glenna Wright-Gallo,

Assistant Secretary for Special Education and Rehabilitative Services.

[FR Doc. 2025–00268 Filed 1–17–25; 8:45 am]

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

34 CFR Chapter III

[Docket ID ED–2024–OSERS–0144]

Technical Assistance on State Data Collection—National Technical Assistance Center To Improve State Capacity To Collect, Report, Analyze, and Use Accurate IDEA Part B and Part C Fiscal Data

AGENCY: Office of Special Education and Rehabilitative Services, Department of Education.

ACTION: Proposed priority.

SUMMARY: The Department of Education (Department) proposes a priority for a National Technical Assistance Center to Improve State Capacity to Collect, Report, Analyze, and Use Accurate IDEA Part B and Part C Fiscal Data Center (Fiscal Data Center) under the Technical Assistance on State Data Collection program. The Department may use this priority for competitions in fiscal year (FY) 2025 and later years. We take this action to focus attention on an identified national need to provide technical assistance (TA) to improve the capacity of States to meet the fiscal data collection requirements under Part B and Part C of the Individuals with Disabilities Education Act (IDEA). This Fiscal Data Center will support States in collecting, reporting, and determining how to best analyze and use their IDEA Part B and Part C fiscal data to establish and meet high expectations for each child with a disability and will customize its TA to meet each State's specific needs.

DATES: We must receive your comments on or before April 7, 2025.

ADDRESSES: Comments must be submitted via the Federal eRulemaking Portal at *www.regulations.gov.* However,

if you require an accommodation or cannot otherwise submit your comments via *www.regulations.gov,* please contact the program contact person listed under **FOR FURTHER INFORMATION CONTACT**. The Department will not accept comments submitted by fax or by email, or comments submitted after the comment period closes. To ensure the Department does not receive duplicate copies, please submit your comments only once. In addition, please include the Docket ID at the top of your comments.

Federal eRulemaking Portal: Go to *www.regulations.gov* to submit your comments electronically. Information on using *Regulations.gov*, including instructions for accessing agency documents, submitting comments, and viewing the docket, is available on the site under ''FAQ.''

Note: The Department's policy is generally to make comments received from members of the public available for public viewing in their entirety on the Federal eRulemaking Portal at *www.regulations.gov.* Therefore, commenters should be careful to include in their comments only information that they wish to make publicly available.

FOR FURTHER INFORMATION CONTACT: Charles D. Kniseley, U.S. Department of Education, 400 Maryland Avenue SW, Room 4A10, Washington, DC 20202. Telephone: (202) 987–0907. Email: *Charles.Kniseley@ed.gov.*

If you are deaf, hard of hearing, or have a speech disability and wish to access telecommunications relay services, please dial 7–1–1.

A brief summary of the rule is available at *www.regulations.gov/docket/ED-2024-OSERS-0144.*

SUPPLEMENTARY INFORMATION:

Invitation to Comment: We invite you to submit comments regarding the proposed priority. To ensure that your comments have maximum effect in developing the final priority, we urge you to identify clearly the specific section of the proposed priority that each comment addresses.

We invite you to assist us in complying with the specific requirements of Executive Orders 12866, 13563, and 14094 and their overall requirement of reducing regulatory burden that might result from the proposed priority. Please let us know of any further ways we could reduce potential costs or increase potential benefits while preserving the effective and efficient administration of the program.

During and after the comment period, you may inspect public comments about the proposed priority by accessing *Regulations.gov*. To inspect comments in person, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

Assistance to Individuals with Disabilities in Reviewing the Rulemaking Record: On request we will provide an appropriate accommodation or auxiliary aid to an individual with a disability who needs assistance to review the comments or other documents in the public rulemaking record for the proposed priority. If you want to schedule an appointment for this type of accommodation or auxiliary aid, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

Purpose of Program: The purpose of the Technical Assistance on State Data Collection program is to improve the capacity of States to meet IDEA data collection and reporting requirements. Funding for the program is authorized under section 611(c)(1) of IDEA, which gives the Secretary authority to reserve not more than one-half of one percent of the amounts appropriated under Part B for each fiscal year to provide TA activities authorized under section 616(i), where needed, to improve the capacity of States to meet the data collection and reporting requirements under Parts B and C of IDEA. The maximum amount the Secretary may reserve under this set-aside for any fiscal year is $25,000,000, cumulatively adjusted by the rate of inflation. Section 616(i) of IDEA requires the Secretary to review the data collection and analysis capacity of States to ensure that data and information determined necessary for implementation of sections 616 and 642 of IDEA are collected, analyzed, and accurately reported to the Secretary. It also requires the Secretary to provide TA, where needed, to improve the capacity of States to meet the data collection requirements, which include the data collection and reporting requirements in sections 616 and 618 of IDEA. In addition, the Further Consolidated Appropriations Act, 2024, Public Law 118–47, gives the Secretary authority to use funds reserved under section 611(c) of IDEA to ''administer and carry out other services and activities to improve data collection, coordination, quality, and use under Parts B and C of the IDEA.'' Further Consolidated Appropriations Act, 2024, Public Law 118–47, Division D, Title III, 138 Stat. 460, 685 (2024).

Assistance Listing Number: 84.373F.

OMB Control Number: 1820–0028.

Program Authority: 20 U.S.C. 1411(c), 1416(i), 1418(c), 1418(d), 1442; Further Consolidated Appropriations Act, 2024, Public Law 118–47, Division D, Title III, 138 Stat. 460, 685 (2024).

Applicable Program Regulations: 34 CFR 300.702.

Proposed Priority

This document contains one proposed priority.

National Technical Assistance Center to Improve State Capacity to Collect, Report, Analyze, and Use Accurate IDEA Part B and Part C Fiscal Data.

Background

Collecting, analyzing, and using valid and reliable IDEA fiscal data are critical for States to be able to ensure that funds made available to support programs for infants, toddlers, children, and youth with disabilities are used consistent with requirements and to implement effective programs that improve outcomes for infants, toddlers, children, and youth with disabilities. However, the Department's review and analysis of State-submitted fiscal data show that States are not meeting all fiscal requirements or effectively using their data to understand how to meet the requirements, thereby impacting program effectiveness and outcomes. For example, State-submitted data regarding local educational agency (LEA) maintenance of effort (MOE) and coordinated early intervening services (CEIS) for school year 2021–2022 indicate that 239 LEAs across 20 States failed to maintain effort, with approximately 28 percent of those failures occurring in public charter schools that are LEAs. The data also show that States made repayment for only 26 of those LEA MOE shortfalls at the time States submitted their data to the Department. Assisting States in understanding and analyzing why LEAs, including public charter schools that are LEAs, are failing LEA MOE, and the factors contributing to delays in State repayments for MOE failures, has high-stakes implications for IDEA implementation, including ensuring that children with disabilities who attend public charter schools that are LEAs have sufficient resources to receive a free appropriate public education.

Changes to Federal fiscal requirements that impact the fiscal data States must submit to the Department require States to build their capacity to submit valid and reliable fiscal data. Starting in FY 2024, State lead agencies (LAs) for Part C are now reporting the data submission related to LAs' use of subgrants.[1] LAs have demonstrated

[1] Ten States indicated that they are currently subgranting IDEA Part C funds. It should be noted that subgranting of IDEA Part C funds was first

confusion in determining whether or not they are subgranting and need to understand what these data represent as well as the underlying requirements when subgranting Federal funds, including the cross-cutting Federal fiscal requirements and related responsibilities that apply both to the LA as a pass-through entity and to its early intervention services (EIS) providers and programs as subgrantees.

Changes within a State, such as the methods by which State and local special education and early intervention funding is calculated and distributed, can also impact its ability to submit accurate and valid fiscal data. As an example, when a State changes its special education funding formula from a per capita amount of State aid based on the number of children with disabilities in an LEA to a weighted formula that provides variable funding based on children within each of IDEA's 13 disability categories, the change potentially affects calculations of both State maintenance of financial support (MFS) and LEA MOE as well as a State's and LEAs' ability to meet MFS and LEA MOE respectively.

When States change LAs or shift LA responsibility under IDEA Part C to reorganize their early childhood programs and create offices that serve children birth to five,[2] this can also impact how fiscal data are collected, analyzed, and used. These types of organizational changes result in modifications to early intervention methods of establishing financial responsibility, consistent with 34 CFR 303.511, and often have implications for the LA's use of IDEA Part C funds and the methodology for determining indirect costs. There may also be the challenge of having new, inexperienced staff collecting, analyzing, and reporting IDEA Part C fiscal data in the new LA or office.

Even in States that have not reorganized their SEA or LA, the high rate of turnover among State staff responsible for implementing IDEA in some States is an ongoing challenge that creates a continuing need for supporting States' ability to accurately collect, report, analyze, and use fiscal data. In 2023, 23 percent of State Directors of Special Education, who are responsible for implementing IDEA Part B requirements including fiscal requirements, left their positions, and 38 percent of State Directors of Special Education had fewer than two years of experience in their roles that year.[3] Similar leadership trends can be found in Part C LAs. In 2023, 49 percent of Part C Coordinators, who are responsible for implementing IDEA Part C, including fiscal requirements and providing information related to their program's intended use of funds in the IDEA Part C grant application, had two years or less of experience in the position. In that same year, 74 percent of Part C Coordinators reported having five years or less experience.[4] The impacts of staff turnover on SEA and LA fiscal performance and data reporting can potentially include the loss of knowledge related to fiscal requirements; loss of institutional knowledge related to State policies, procedures, and practices; and costs associated with recruiting and training new staff.[5]

The situations identified above highlight States' need for support in building the knowledge and expertise to help ensure compliance with IDEA's fiscal data requirements and to use the results to identify issues and improve State systems. Lack of staff knowledge and expertise may contribute to inaccurate reporting of IDEA fiscal data by a State, which may lead to noncompliance with IDEA fiscal requirements and potential monetary consequences, including the recovery of funds.

The Department has found that because of the complex nature of, and high-stakes need for meeting, IDEA fiscal requirements, SEA and LA staff request and readily take advantage of targeted and intensive TA activities, such as expert-led communities of practice and hands-on workshops, including workshops devoted to the development of IDEA fiscal policies and procedures operationalizing State practices, to build their capacity to address fiscal system needs.

To meet the array of complex challenges regarding the collection, reporting, analysis, and use of IDEA fiscal data by States; to ensure States have access to TA, including fiscal tools tailored to their individual circumstances; and to support them in collecting and reporting complex IDEA fiscal data to improve IDEA programs, the Department proposes a priority to establish and operate the National Technical Assistance Center to Improve State Capacity to Collect, Report, Analyze, and Use Accurate IDEA Part B and Part C Fiscal Data.

Proposed Priority

The purpose of this proposed priority is to fund a cooperative agreement to establish and operate the National Technical Assistance Center to Improve State Capacity to Collect, Report, Analyze, and Use Accurate IDEA Part B and Part C Fiscal Data (Fiscal Data Center).

The Fiscal Data Center will provide TA to improve the capacity of States to meet the IDEA Part B and Part C fiscal data collection requirements under IDEA sections 618 and 642 and increase States' knowledge of the underlying IDEA fiscal requirements and calculations necessary to submit valid and reliable data for the following collections: (1) MFS in Section V of the IDEA Part B Annual State Application; (2) LEA MOE Reduction and CEIS; (3) Description of Use of IDEA Part B Section 611 Funds reserved for State administration and other State-level activities in Section III of the IDEA Part B Annual State Application; (4) Description of Use of Federal IDEA Part C Funds for the LA and the Interagency Coordinating Council in Section III of the IDEA Part C Annual State Application; (5) IDEA Part C MOE requirements; (6) Restricted Indirect Cost Rate/Cost Allocation Plan Information in Sections III and IV of the IDEA Part C Annual State Application; and (7) Part C Subgranting, in Section III.F. of the Part C Annual State Application.

The Fiscal Data Center must be designed to achieve, at a minimum, the following expected outcomes:

(a) Increased capacity of States to collect, report, analyze, and use high-quality IDEA Part B and Part C fiscal data;

(b) Increased capacity of States to accurately perform calculations related to IDEA Part B and Part C statutory and regulatory fiscal requirements, and submit valid and reliable fiscal data under IDEA Part B and Part C;

permitted in the FY 2021 Consolidated Appropriations Act (HR 133), and is now supported by revisions to 34 CFR 76.50 of the Education Department General Administrative Regulations (EDGAR).

[2] Since FY 2021, 11 States have changed lead agencies, with a number moving to newly created early learning agencies serving birth to five.

(c) Improved State fiscal infrastructure to communicate and coordinate effective IDEA Part B and Part C fiscal data collections and reporting strategies among relevant State offices, including SEAs, LAs and other State agencies, LEAs, schools, public charter schools that are LEAs, and EIS programs or providers;

(d) Increased capacity of States to submit accurate and timely IDEA Part B and Part C fiscal data, and enhance State validation procedures to prevent errors in State-reported IDEA data;

(e) Increased capacity of States to train personnel to meet the IDEA Part B and Part C fiscal data collection and reporting requirements under sections 616, 618, and 642 of IDEA; and

(f) Increased capacity of SEAs and LAs to work with LEAs, including public charter schools that are LEAs, and EIS programs or providers to analyze and use IDEA fiscal data to identify issues and address those issues through monitoring, TA, and partner involvement.

In addition to these programmatic requirements, to be considered for funding under this priority, applicants must meet the application and administrative requirements in this priority, which are:

(a) Describe, in the narrative section of the application under ''Significance,'' how the proposed project will—

(1) Address the current and emerging needs of States and local systems to collect, report, analyze, and use high-quality IDEA Part B and Part C fiscal data. To meet this requirement, the applicant must—

(i) Demonstrate knowledge of how SEAs, LAs, LEAs, including public charter schools that are LEAs, and EIS programs and providers are meeting IDEA Part B and Part C fiscal data collection and reporting requirements and the underlying statutory and regulatory fiscal requirements, as well as knowledge of State and local data collection systems, as appropriate; and

(ii) Present applicable national, State, and local data to show the current capacity needs of SEAs, LAs, LEAs, including public charter schools that are LEAs, and EIS programs and providers to meet IDEA Part B and Part C fiscal data collection and reporting requirements; and

(2) Improve how SEAs and LAs use IDEA section 618 fiscal data as a means of both improving data quality and identifying programmatic strengths and areas for improvement, and indicate the likely magnitude or importance of the improvements.

(b) Describe, in the narrative section of the application under ''Quality of project services,'' how the proposed project will—

(1) Achieve its goals, objectives, and intended outcomes. To meet this requirement, the applicant must provide—

(i) Measurable intended project outcomes; and

(ii) In Appendix A, the logic model (as defined in 34 CFR 77.1) by which the proposed project will achieve its intended outcomes that depicts, at a minimum, the goals, activities, outputs, and intended outcomes of the proposed project;

(2) Use a conceptual framework (and provide a copy in Appendix A) to develop project plans and activities, describing any underlying concepts, assumptions, expectations, beliefs, or theories, as well as the presumed relationships or linkages among these variables, and any empirical support for this framework;

Note: The following website provides more information on logic models and conceptual frameworks: *https://ies.ed.gov/ncee/rel/Products/Region/central/Resource/100644.*

(3) Be based on current research and make use of evidence-based [6] practices (EBPs). To meet this requirement, the applicant must describe—

(i) The current research on the capacity of SEAs, LEAs, including public charter schools that are LEAs, LAs, and EIS providers to report and use IDEA Part B and Part C data submitted under section 616 and section 618, as a means of both improving data quality and identifying strengths and areas for improvement; and

(ii) How the proposed project will incorporate current research and EBPs in the development and delivery of its products and services;

(4) Develop products and provide services that are of high quality and sufficient intensity and duration to achieve the intended outcomes of the proposed project. To address this requirement, the applicant must describe—

(i) How it proposes to expand the knowledge base on—

(A) Fiscal data management and data system integration needed for IDEA Part B and Part C data collection and reporting;

(B) IDEA fiscal data validation that leads to improvements in the validity and reliability of fiscal data required by IDEA; and

(C) Effective ways to communicate fiscal data to local consumers (*e.g.,* parents, LEAs, including public charter schools that are LEAs, EIS programs or providers, the general public);

(ii) Its proposed approach to universal, general TA,[7] which must describe—

(A) The intended recipients, including the type and number of recipients, that will receive the products and services;

(B) The products and services that the project proposes to make available;

(C) The development and maintenance of a high-quality website, with an easy-to-navigate design, that meets or exceeds government- or industry-recognized standards for accessibility; and

(D) The expected reach and impact of universal, general TA;

(iii) Its proposed approach to targeted, specialized TA,[8] which must describe—

(A) The intended recipients, including the type and number of recipients, that will receive the products and services;

(B) The products and services that the project proposes to make available; and

(C) The proposed approach to measure the readiness of potential TA recipients to work with the project, including, at a minimum, an assessment of potential recipients' current infrastructure, available resources, and ability to build capacity at the local level; and

(iv) Its proposed approach to intensive, sustained TA,[9] which must describe—

[6] For purposes of these requirements, ''evidence-based'' means the proposed project component is supported by one or more of strong evidence, moderate evidence, promising evidence, or evidence that demonstrates a rationale (as such terms are defined in 34 CFR 77.1).

[7] ''Universal, general TA'' means TA and information provided to independent users through their own initiative, resulting in minimal interaction with TA center staff and including one-time, invited or offered conference presentations by TA center staff. This category of TA also includes information or products, such as newsletters, guidebooks, or research syntheses, downloaded from the TA center's website by independent users. Brief communications by TA center staff with recipients, either by telephone or email, are also considered universal, general TA.

[8] ''Targeted, specialized TA'' means TA services based on needs common to multiple recipients and not extensively individualized. A relationship is established between the TA recipient and one or more TA center staff. This category of TA includes one-time, labor-intensive events, such as facilitating strategic planning or hosting regional or national conferences. It can also include episodic, less labor-intensive events that extend over a period of time, such as facilitating a series of conference calls on single or multiple topics that are designed around the needs of the recipients. Facilitating communities of practice can also be considered targeted, specialized TA.

[9] ''Intensive, sustained TA'' means TA services often provided on-site and requiring a stable, ongoing relationship between the TA center staff and the TA recipient. ''TA services'' are defined as negotiated series of activities designed to reach a valued outcome. This category of TA should result in changes to policy, program, practice, or

(A) The intended recipients, including the type and number of recipients from a variety of settings and geographic distribution, that will receive the products and services;

(B) Its proposed approach to addressing States' challenges reporting high-quality IDEA fiscal data to the Department and the public, which should, at a minimum, include providing virtual and on-site consultation to the SEA or LA to—

(*1*) Implement model practices for the management of IDEA data and data system integration policies, procedures, processes, and activities within the State;

(*2*) Develop, use, or adapt tools to meet State-specific IDEA data needs;

(*3*) Develop a sustainability plan for the State to continue the management of IDEA data and data system integration work in the future; and

(*4*) Implement a cybersecurity plan to ensure a secure IDEA fiscal data system;

(C) Its proposed approach to measure the readiness of SEAs and LAs to work with the project, including their commitment to the initiative, alignment of the initiative to their needs, current infrastructure, available resources, and ability to build capacity at the State and local levels;

(D) Its proposed plan to prioritize States with the greatest need for intensive TA to receive products and services;

(E) Its proposed plan for assisting SEAs and LAs to build or enhance training systems that include professional development based on adult learning principles and coaching;

(F) Its proposed plan for working with appropriate levels of the education system (*e.g.,* SEAs, LAs, regional TA providers, LEAs, including public charter schools that are LEAs, local EIS programs and providers, and families) to ensure that there is communication between each level and that there are systems in place to support the collection, reporting, analysis, and use of high-quality IDEA fiscal data as well as IDEA fiscal data management and data system integration; and

(G) The expected impact of intensive, sustained TA; and

(v) How the proposed project will intentionally engage families of children with disabilities and individuals with disabilities—including underserved families [10] and individuals—in the development, implementation, and evaluation of its products and services across all levels of TA;

(5) Develop products and implement services that maximize efficiency. To address this requirement, the applicant must describe—

(i) How the proposed project will use technology to achieve the intended project outcomes;

(ii) With whom the proposed project will collaborate and the intended outcomes of this collaboration, including the process by which the proposed project will collaborate with Department-funded centers (including privacy TA centers such as the DaSy Center that provides Department-funded TA on early childhood data privacy, and the Privacy Technical Assistance Center) and other federally funded TA centers to develop and implement a coordinated TA plan when they are involved in a State; and

(iii) How the proposed project will use non-project resources, such as non-Federal funds and in-kind contributions, to achieve the intended project outcomes; and

(6) Systematically disseminate information, products, and services to varied intended audiences. To address this requirement the applicant must describe—

(i) The variety of dissemination strategies the project will use throughout the five years of the project to promote awareness and use of its products and services;

(ii) How the project will tailor dissemination strategies across all planned levels of TA to ensure that products and services reach intended recipients, and those recipients can access and use those products and services;

(iii) How the project's dissemination plan is connected to the proposed outcomes of the project; and

(iv) How the project will evaluate and correct all digital products and external communications to ensure they meet or exceed government or industry-recognized standards for accessibility.

(c) In the narrative section of the application under ''Quality of the project evaluation or other evidence-building,'' describe how the project will develop an evaluation plan in consultation with, and to be implemented by, a third-party evaluator.[11] The evaluation plan must—

(1) Articulate formative and summative evaluation questions, including important process and outcome evaluation questions. These questions must be related to the project's proposed logic model required under paragraph (b)(1)(ii) of these application and administrative requirements;

(2) Describe how progress in and fidelity of implementation, as well as project outcomes, will be measured to answer the evaluation questions. In measuring progress of implementation across all levels of TA, the plan must include criteria for determining the extent to which the project's products and services reached intended recipients; data, including feedback from recipients, on how recipients used the products and services; and the impact of the products and services. The plan must also specify sources for data, and measures and instruments appropriate to the evaluation questions, including information on reliability and validity of the measures and associated instruments where appropriate;

(3) Describe strategies for analyzing data and how data collected as part of this plan will be used to inform and improve service delivery over the course of the project and to refine the proposed logic model and evaluation plan, including subsequent data collection;

(4) Provide a timeline for conducting the evaluation and include staff assignments for completing the plan. The timeline must indicate that the data will be available annually for the Annual Performance Report and at the end of Year 2; and

(5) Dedicate sufficient funds in each budget year to cover the costs of developing or refining the evaluation plan in consultation with a third-party evaluator, as well as the costs associated with the implementation of the evaluation plan by the third-party evaluator.

(d) Describe, in the narrative section of the application under ''Adequacy of resources and quality of the project personnel,'' how—

(1) The proposed project will encourage applications for employment from persons who are members of

operations that support increased recipient capacity or improved outcomes at one or more systems levels.

[10] For the purposes of this priority, ''underserved families'' refers to foster, kinship, migrant, technologically unconnected, and military- or veteran-connected families; and families of color, living in poverty, without documentation of immigration status, experiencing homelessness or housing insecurity, or impacted by the justice system, including the juvenile justice system. Underserved families also refers to families that include: members of a federally or State recognized Indian Tribe; English learners; adults who experience a disability; members who are lesbian, gay, bisexual, transgender, queer or questioning, or intersex (LGBTQI+); adults in need of improving their basic skills or with limited literacy; and disconnected adults.

[11] A ''third-party'' evaluator is an independent and impartial program evaluator who is contracted by the grantee to conduct an objective evaluation of the project. This evaluator must not have participated in the development or implementation of any project activities, except for the evaluation activities, nor have any financial interest in the outcome of the evaluation.

groups that have traditionally been underrepresented based on race, color, national origin, gender, age, or disability, as appropriate;

(2) The proposed key project personnel, consultants, and subcontractors have the qualifications and experience to carry out the proposed activities and achieve the project's intended outcomes;

(3) The applicant and any key partners have adequate resources to carry out the proposed activities;

(4) The proposed project will have processes, resources, and funds in place to provide equitable access for project staff, contractors, and partners, who require digital accessibility accommodations; [12] and

(5) The proposed costs are reasonable in relation to the anticipated results and benefits, and funds will be spent in a way that increases their efficiency and cost-effectiveness.

(e) Describe, in the narrative section of the application under ''Quality of the management plan,''—

(1) How the proposed management plan will ensure that the project's intended outcomes will be achieved on time and within budget. To address this requirement, the applicant must describe—

(i) Clearly defined responsibilities for key project personnel, consultants, and subcontractors, as applicable; and

(ii) Timelines and milestones for accomplishing the project tasks;

(2) Allocations of key project personnel and any consultants and subcontractors and how these allocations are appropriate and adequate to achieve the project's intended outcomes;

(3) How the proposed management plan will ensure that the products and services provided are of high quality, relevant, and useful to recipients; and

(4) How the proposed project will benefit from a diversity of perspectives, including those of families, educators, TA providers, researchers, and policy makers, among others, in its development and operation.

(f) Address the following application requirements. The applicant must—

(1) Include, in Appendix A, personnel-loading charts and timelines, as applicable, to illustrate the management plan described in the narrative;

(2) Include, in the budget, attendance at the following:

(i) A one and one-half day kick-off meeting in Washington, DC, after receipt of the award, and an annual planning meeting in Washington, DC, with the Office of Special Education Programs (OSEP) project officer and other relevant staff during each subsequent year of the project period.

Note: Within 30 days of receipt of the award, a post-award teleconference must be held between the OSEP project officer and the grantee's project director or other authorized representative;

(ii) A three-day project directors' conference in Washington, DC, during each year of the project period, provided that, if the conference is conducted virtually, the project must reallocate unused travel funds no later than the end of the third quarter of each budget period; and

(iii) Three annual two-day trips to attend Department briefings, Department-sponsored conferences, and other meetings, as requested by OSEP;

(3) Include, in the budget, a line item for an annual set-aside of five percent of the grant amount to support emerging needs that are consistent with the proposed project's intended outcomes, as those needs are identified in consultation with, and approved by, the OSEP project officer. With approval from the OSEP project officer, the project must reallocate any remaining funds from this annual set-aside no later than the end of the third quarter of each budget period;

(4) Budget at least 50 percent of the grant award for providing targeted and intensive TA to States; and

(5) Include, in Appendix A, an assurance to assist OSEP with the transfer of pertinent resources and products and to maintain the continuity of services to States during the transition to this new award period and at the end of this award period, as appropriate.

Types of Priorities

When inviting applications for a competition using one or more priorities, we designate the type of each priority as absolute, competitive preference, or invitational through a notice in the **Federal Register**. The effect of each type of priority follows:

Absolute priority: Under an absolute priority, we consider only applications that meet the priority (34 CFR 75.105(c)(3)).

Competitive preference priority: Under a competitive preference priority, we give competitive preference to an application by (1) awarding additional points, depending on the extent to which the application meets the priority (34 CFR 75.105(c)(2)(i)); or (2) selecting an application that meets the priority over an application of comparable merit that does not meet the priority (34 CFR 75.105(c)(2)(ii)).

Invitational priority: Under an invitational priority, we are particularly interested in applications that meet the priority. However, we do not give an application that meets the priority a preference over other applications (34 CFR 75.105(c)(1)).

Final Priority

We will announce the final priority in a document in the **Federal Register**. We will determine the final priority after considering public comments on the proposed priority and other information available to the Department. This document does not preclude us from proposing additional priorities, requirements, definitions, or selection criteria, subject to meeting applicable rulemaking requirements.

Note: This document does *not* solicit applications. In any year in which we choose to use this proposed priority, we invite applications through a notice in the **Federal Register**.

Executive Orders 12866, 13563, and 14094

Regulatory Impact Analysis

Under Executive Order 12866, the Office of Management and Budget (OMB) determines whether this regulatory action is ''significant'' and, therefore, subject to the requirements of the Executive order and subject to review by OMB. Section 3(f) of Executive Order 12866, as amended by Executive Order 14094, defines a ''significant regulatory action'' as an action likely to result in a rule that may—

(1) Have an annual effect on the economy of $200 million or more (adjusted every three years by the Administrator of Office of Information and Regulatory Affairs (OIRA) for changes in gross domestic product); or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, territorial, or Tribal governments or communities;

(2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) Materially alter the budgetary impacts of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or

(4) Raise legal or policy issues for which centralized review would meaningfully further the President's priorities, or the principles set forth in the Executive order, as specifically authorized in a timely manner by the Administrator of OIRA in each case.

[12] For information about digital accessibility and accessibility standards from Section 508 of the Rehabilitation Act, visit *https://sites.ed.gov/idea/topic-areas/#Accessibility-Creating-Content.*

This proposed regulatory action is not a significant regulatory action subject to review by OMB under section 3(f) of Executive Order 12866, as amended by Executive Order 14094.

We have also reviewed this proposed regulatory action under Executive Order 13563, which supplements and explicitly reaffirms the principles, structures, and definitions governing regulatory review established in Executive Order 12866, as amended by Executive Order 14094. To the extent permitted by law, Executive Order 13563 requires that an agency—

(1) Propose or adopt regulations only upon a reasoned determination that their benefits justify their costs (recognizing that some benefits and costs are difficult to quantify);

(2) Tailor its regulations to impose the least burden on society, consistent with obtaining regulatory objectives and taking into account—among other things and to the extent practicable—the costs of cumulative regulations;

(3) In choosing among alternative regulatory approaches, select those approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity);

(4) To the extent feasible, specify performance objectives, rather than the behavior or manner of compliance a regulated entity must adopt; and

(5) Identify and assess available alternatives to direct regulation, including economic incentives—such as user fees or marketable permits—to encourage the desired behavior, or provide information that enables the public to make choices.

Executive Order 13563 also requires an agency ''to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible.'' The Office of Information and Regulatory Affairs of OMB has emphasized that these techniques may include ''identifying changing future compliance costs that might result from technological innovation or anticipated behavioral changes.''

We are issuing the proposed priority only on a reasoned determination that their benefits would justify their costs. In choosing among alternative regulatory approaches, we selected those approaches that would maximize net benefits. Based on the analysis that follows, the Department believes that this regulatory action is consistent with the principles in Executive Order 13563.

We also have determined that this regulatory action would not unduly interfere with State, local, territorial, and Tribal governments in the exercise of their governmental functions.

In accordance with these Executive orders, the Department has assessed the potential costs and benefits, both quantitative and qualitative, of this regulatory action. The potential costs are those resulting from statutory requirements and those we have determined as necessary for administering the Department's programs and activities.

Clarity of the Regulations

Executive Order 12866 and the Presidential memorandum ''Plain Language in Government Writing'' require each agency to write regulations that are easy to understand.

The Secretary invites comments on how to make the proposed priority easier to understand, including answers to questions such as the following:

- Are the requirements in the proposed priority clearly stated?
- Does the proposed priority contain technical terms or other wording that interferes with its clarity?
- Does the format of the proposed priority (grouping and order of sections, use of headings, paragraphing) aid or reduce its clarity?
- Would the proposed priority be easier to understand if we divided it into more (but shorter) sections?
- Could the description of the proposed priority in the **SUPPLEMENTARY INFORMATION** section of this preamble be more helpful in making the proposed priority easier to understand? If so, how?
- What else could we do to make the proposed priority easier to understand?

To send any comments about how the Department could make the proposed priority easier to understand, see the instructions in the **ADDRESSES** section.

Intergovernmental Review: This program is subject to Executive Order 12372 and the regulations in 34 CFR part 79. One of the objectives of the Executive order is to foster an intergovernmental partnership and a strengthened federalism. The Executive order relies on processes developed by State and local governments for coordination and review of proposed Federal financial assistance.

This document provides early notification of our specific plans and actions for this program.

Regulatory Flexibility Act Certification: The Secretary certifies that the proposed priority would not have a significant economic impact on a substantial number of small entities. The small entities that this proposed regulatory action would affect are LEAs, including charter schools that operate as LEAs under State law; institutions of higher education; other public agencies; private nonprofit organizations; freely associated States and outlying areas; Indian Tribes or Tribal organizations; and for-profit organizations. We believe that the costs imposed on an applicant by the proposed priority would be limited to paperwork burden related to preparing an application and that the benefits of the proposed priority would outweigh any costs incurred by the applicants.

Participation in the Technical Assistance on State Data Collection program is voluntary. For this reason, the proposed priority would impose no burden on small entities unless they applied for funding under the program. We expect that in determining whether to apply for Technical Assistance on State Data Collection program funds, an eligible entity would evaluate the requirements of preparing an application and any associated costs and weigh them against the benefits likely to be achieved by receiving a Technical Assistance on State Data Collection program grant. An eligible entity probably would apply only if it determines that the likely benefits exceed the costs of preparing an application.

We believe that the proposed priority would not impose any additional burden on a small entity applying for a grant than the entity would face in the absence of the proposed action. That is, the length of the applications those entities would submit in the absence of the proposed regulatory action and the time needed to prepare an application would likely be the same.

This proposed regulatory action would not have a significant economic impact on a small entity once it receives a grant, because it would be able to meet the costs of compliance using the funds provided under this program. We invite comments from eligible small entities as to whether they believe this proposed regulatory action would have a significant economic impact on them and, if so, request evidence to support that belief.

Paperwork Reduction Act of 1995

The proposed priority contains information collection requirements that are approved by OMB under OMB control number 1820–0028. The proposed priority does not affect the currently approved data collection.

Accessible Format: On request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT**, individuals with disabilities can obtain this document in an accessible format. The Department will provide the

requestor with an accessible format that may include Rich Text Format (RTF) or text format (txt), a thumb drive, an MP3 file, braille, large print, audiotape, or compact disc, or other accessible format.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. You may access the official edition of the **Federal Register** and the Code of Federal Regulations at *www.govinfo.gov.* At this site you can view this document, as well as all Department documents published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access Department documents published in the **Federal Register** by using the article search feature at *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Glenna Wright-Gallo,

Assistant Secretary for Special Education and Rehabilitative Services.

RIN 1090–AB29

Subsistence Management Regulations for Public Lands in Alaska—2026–27 and 2027–28 Subsistence Taking of Wildlife Regulations

AGENCY: Forest Service, Agriculture; Office of Subsistence Management, Interior.

ACTION: Proposed rule.

SUMMARY: This proposed rule would establish regulations for hunting and trapping seasons, harvest limits, and methods and means related to taking of wildlife for subsistence uses during the 2026–27 and 2027–28 regulatory years. The Federal Subsistence Board (hereafter referred to as ''the Board'') is on a schedule of completing the process of revising subsistence taking of wildlife regulations in even-numbered years and subsistence taking of fish and shellfish regulations in odd-numbered years; public proposal and review processes take place during the preceding year. The Board also addresses customary and traditional use determinations during the applicable cycle. When final, the resulting rulemaking will replace the existing subsistence wildlife taking regulations. This proposed rule could also amend the general regulations on subsistence taking of fish and wildlife.

DATES: *Public meetings:* The Federal Subsistence Regional Advisory Councils (hereafter referred to as ''the Councils'') will receive comments and make proposals to change this proposed rule during public meetings held between February 18, 2025, and April 2, 2025. The Councils will hold another round of public meetings to discuss and receive comments on the proposals and make recommendations on the proposals to the Board on several dates between September 16, 2025, and October 30, 2025 (see Alaska Subsistence Regional Advisory Council Meetings for 2025; 89 FR 63962; August 06, 2024). The Board will discuss and evaluate proposed regulatory changes during a public meeting in Anchorage, Alaska, in April 2026. See **SUPPLEMENTARY INFORMATION** for specific information on dates and locations of the public meetings.

Public comments: Comments and proposals to change this proposed rule must be received or postmarked by April 4, 2025.

ADDRESSES:

Public meetings: The Board and the Councils' public meetings are held at various locations in Alaska. See **SUPPLEMENTARY INFORMATION** for specific information on dates and locations of the public meetings.

Public comments: You may submit comments by one of the following methods:

Electronically: Go to the Federal eRulemaking Portal: *https://www.regulations.gov.* In the Search box, enter Docket number DOI–2024–0011. Then, click on the Search button. On the resulting page, in the Search panel on the left side of the screen, under the Document Type heading, check the Proposed Rule box to locate this document. You may submit a comment by clicking on ''Comment.''

By hard copy: Submit by U.S. mail or hand delivery: Regulations, Attn: DOI–2024–0011; Office of Subsistence Management; 1011 E Tudor Road M/S 121, Anchorage AK 99503. If in-person Council meetings are held, you may also deliver a hard copy to the Designated Federal Official attending any of the Councils' public meetings. See **SUPPLEMENTARY INFORMATION** for additional information on locations of the public meetings.

We will post all comments on *http://www.regulations.gov.* This generally means that we will post any personal information you provide us (see the Public Review Process section below for more information).

FOR FURTHER INFORMATION CONTACT: Chair, Federal Subsistence Board, c/o Office of Subsistence Management, Attention: Crystal Leonetti, Director; (907) 786–3888 or *subsistence@ios.doi.gov.* For questions specific to National Forest System lands, contact Gregory Risdahl, Regional Subsistence Program Leader, USDA, Forest Service, Alaska Region; (907) 302–7354 or *gregory.risdahl@usda.gov.* In compliance with the Providing Accountability Through Transparency Act of 2023, please see Docket No. DOI–2024–0011 on *https://www.regulations.gov* for a document that summarizes this proposed rule.

SUPPLEMENTARY INFORMATION:

Background

Under title VIII of the Alaska National Interest Lands Conservation Act (ANILCA) (16 U.S.C. 3111–3126), the Secretary of the Interior and the Secretary of Agriculture (hereafter referred to as ''the Secretaries'') jointly implement the Federal Subsistence Management Program (hereafter referred to as ''the Program''). The Program provides a preference for take of fish and wildlife resources for subsistence uses on Federal public lands and waters in Alaska. Only Alaska residents of areas identified as rural are eligible to participate in the Program. The Secretaries published temporary regulations to carry out the Program in the **Federal Register** on June 29, 1990 (55 FR 27114), and final regulations on May 29, 1992 (57 FR 22940). Program officials have subsequently amended these regulations a number of times. Because the Program is a joint effort between the Departments of the Interior and Agriculture, these regulations are located in two titles of the Code of Federal Regulations (CFR): The Agriculture regulations are at title 36, ''Parks, Forests, and Public Property,'' and the Interior regulations are at title 50, ''Wildlife and Fisheries,'' at 36 CFR 242.1–28 and 50 CFR 100.1–28, respectively. Consequently, to indicate that identical changes are proposed for regulations in both titles 36 and 50, in this document we will present references to specific sections of the

CFR as shown in the following example: § __.24.

The Program regulations contain subparts as follows: Subpart A, General Provisions; Subpart B, Program Structure; Subpart C, Board Determinations; and Subpart D, Subsistence Taking of Fish and Wildlife. Consistent with subpart B of these regulations, the Secretaries established a Federal Subsistence Board (hereafter referred to as ''the Board'') to administer the Program. The Board comprises:

- A Chair appointed by the Secretary of the Interior with concurrence of the Secretary of Agriculture;
- Five public members appointed by the Secretary of the Interior with concurrence of the Secretary of Agriculture;
- The Alaska Regional Director, Bureau of Indian Affairs;
- The Alaska State Director, Bureau of Land Management;
- The Alaska Regional Director, National Park Service;
- The Alaska Regional Director, U.S. Fish and Wildlife Service; and
- The Alaska Regional Forester, U.S. Forest Service.

Through the Board, these agencies and public members participate in the development of regulations for subparts C and D. Subpart C sets forth important Board determinations regarding program eligibility, *i.e.,* which areas of Alaska are considered rural and which species are harvested in those areas as part of a ''customary and traditional use'' for subsistence purposes. Subpart D sets forth specific seasons, limits, and other harvest parameters and requirements.

In administering the Program, the Secretaries divided Alaska into 10 subsistence resource regions, each of which is represented by a Federal Subsistence Regional Advisory Council. The Councils provide a forum for rural residents with personal knowledge of local conditions and resource requirements to have a meaningful role in the subsistence management of fish and wildlife on Federal public lands in Alaska. The Council members represent varied geographical, cultural, and user interests within each region.

Public Review Process—Comments, Proposals, and Public Meetings

The Councils have a substantial role in reviewing this proposed rule and making recommendations for the final rule. The Board, through the Councils, will hold public meetings in person and via teleconference on this proposed rule at the following locations in Alaska, on the following dates:

TABLE 1—WINTER 2025 MEETINGS OF THE FEDERAL SUBSISTENCE REGIONAL ADVISORY COUNCILS

Regional Advisory Council	Dates	Location
Southeast Alaska—Region 1	March 18–20	Sitka.
Southcentral Alaska–Region 2	March 12–13	Cordova.
Kodiak/Aleutians—Region 3	March 6–7	Kodiak.
Bristol Bay—Region 4	February 18–19	Naknek.
Yukon-Kuskokwim Delta—Region 5	March 4–5	Bethel.
Western Interior—Region 6	February 25–26	Fairbanks.
Seward Peninsula—Region 7	April 1–2	Nome.
Northwest Arctic—Region 8	March 27–28	Kotzebue.
Eastern Interior—Region 9	February 19–20	Fairbanks.
North Slope—Region 10	February 27–28	Utqiagvik.

During April 2025, the written proposals to change the regulations at subpart D, take of wildlife and subpart C, customary and traditional use determinations, will be compiled and distributed for public review. Written public comments will be accepted on the distributed proposals during a second 30-day public comment period, which will be announced in statewide newspaper and radio ads and posted to the Program web page and social media. The Board, through the Councils, will hold a second series of public meetings or teleconference meetings in September through October 2025, to receive comments on specific proposals and to develop recommendations to the Board on the following dates:

TABLE 1—FALL 2025 MEETINGS OF THE FEDERAL SUBSISTENCE REGIONAL ADVISORY COUNCILS

Regional Advisory Council	Dates	Location
Southeast Alaska—Region 1	October 21–23	Wrangell.
Southcentral Alaska–Region 2	October 14–15	Anchorage.
Kodiak/Aleutians—Region 3	September 17–18	TBD.
Bristol Bay—Region 4	October 29–30	Dillingham.
Yukon-Kuskokwim Delta—Region 5	October 21–23	TBD.
Western Interior—Region 6	October 7–8	Fairbanks.
Seward Peninsula—Region 7	October 14–15	Nome.
Northwest Arctic—Region 8	October 27–28	Kotzebue.
Eastern Interior—Region 9	October 8–10	Tok.
North Slope—Region 10	September 16–17	Utqiagvik.

A public notice of specific dates, times, call-in number(s), and how to participate and provide public testimony will be published in local and statewide newspapers, announced in radio ads, and posted to the Program web page and social media at least 2 weeks prior to each meeting. The amount of work on each Council's agenda determines the length of each Council's meeting, but typically the meetings are scheduled to last 2 days. Occasionally a Council will lack information necessary during a scheduled meeting to make a recommendation to the Board or to provide comments on other matters affecting subsistence in the region. If this situation occurs, the Council may announce on the record a later teleconference to address the specific

issue when the requested information or data is available; it is noted that any follow-up teleconference would be an exception and must be approved, in advance, by the Director of the Office of Subsistence Management. These teleconferences are open to the public, along with opportunities for public comment; the date and time will be announced during the scheduled meeting, and that same information will be announced through news releases and local radio, newspaper, Program web page, and social media ads.

The Board will discuss and evaluate proposed changes to the subsistence management regulations during a public meeting scheduled to be held in Anchorage, Alaska, in April 2026. The Council Chairs, or their designated representatives, will present their respective Councils' recommendations at the Board meeting. Additional oral testimony may be provided on specific proposals before the Board at that time. At that public meeting, the Board will deliberate and take final action on proposals received that request changes to this proposed rule.

Proposals to the Board to modify the general fish and wildlife regulations, wildlife harvest regulations, and customary and traditional use determinations must include the following information:

a. Name, address, and telephone number of the requestor;

b. Each section and/or paragraph designation in the current regulations for which changes are suggested, if applicable;

c. A description of the regulatory change(s) desired;

d. A statement explaining why each change is necessary;

e. Proposed wording changes; and

f. Any additional information that you believe will help the Board in evaluating the proposed change.

The Board will immediately reject proposals that fail to include the above information, or proposals that are beyond the scope of authorities in § ____.24, subpart C (the regulations governing customary and traditional use determinations) and § ____.25 and ____.26 of subpart D (the general and specific regulations governing the subsistence take of wildlife). If a proposal needs clarification, prior to being distributed for public review, the proponent may be contacted, and the proposal could be revised based on their input. Once a proposal is distributed for public review, no additional changes may be made as part of the original submission. During the April 2026 meeting, the Board may defer review and action on some proposals to allow time for cooperative planning efforts, or to acquire additional needed information. The Board may elect to defer taking action on any given proposal if the workload of staff, Councils, or the Board becomes excessive. These deferrals may be based on recommendations by the affected Council(s) or staff members, or on the basis of the Board's intention to do least harm to the subsistence user and the resource involved. A proponent of a proposal may withdraw the proposal provided it has not been considered, and a recommendation has not been made, by a Council. The Board may consider and act on alternatives that address the intent of a proposal while differing in approach.

You may submit written comments and materials concerning this proposed rule by one of the methods listed in **ADDRESSES**. If you submit a comment via *http://www.regulations.gov,* your entire comment, including any personal identifying information, will be posted on the website. If you submit a hardcopy comment that includes personal identifying information, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. We will post all hardcopy comments on *http://www.regulations.gov.*

Comments and materials we receive, as well as supporting documentation we used in preparing this proposed rule, will be available for public inspection on *http://www.regulations.gov* at Docket No. DOI–2024–0011, or by appointment, provided no public health or safety restrictions are in effect, between 8 a.m. and 3 p.m., Monday through Friday, except Federal holidays, at: Office of Subsistence Management, 1011 East Tudor Road, Anchorage, AK 99503.

Reasonable Accommodations

The Board is committed to providing access to these meetings for all participants. Please direct all requests for sign language interpreting services, closed captioning, or other accommodation needs to Robbin LaVine, 907–786–3888, *subsistence@ios.doi.gov,* or 800–877–8339 (TTY), 7 business days prior to the meeting you would like to attend.

Tribal Consultation and Comment

As expressed in Executive Order 13175, ''Consultation and Coordination with Indian Tribal Governments,'' the Federal officials that have been delegated authority by the Secretaries are committed to honoring the unique government-to-government political relationship that exists between the Federal Government and federally recognized Indian Tribes (herein after referred to as ''Tribes'') as listed in 82 FR 4915 (January 17, 2017). Consultation with Alaska Native corporations is based on Public Law 108–199, div. H, Sec. 161, Jan. 23, 2004, 118 Stat. 452, as amended by Public Law 108–447, div. H, title V, Sec. 518, Dec. 8, 2004, 118 Stat. 3267, which provides that: ''The Director of the Office of Management and Budget and all Federal agencies shall hereafter consult with Alaska Native corporations on the same basis as Indian tribes under Executive Order No. 13175.''

The Alaska National Interest Lands Conservation Act does not provide specific rights to Tribes for the subsistence taking of wildlife, fish, and shellfish. However, because Tribal members are affected by subsistence fishing, hunting, and trapping regulations, the Secretaries, through the Board, will provide Tribes and Alaska Native corporations an opportunity to consult on this proposed rule.

The Board will engage in outreach efforts for this proposed rule, including a notification letter, to ensure that Tribes and Alaska Native corporations are advised of the mechanisms by which they can participate. The Board provides a variety of opportunities for consultation: proposing changes to the existing rule, commenting on proposed changes to the existing rule, engaging in dialogue at the Regional Council meetings, engaging in dialogue at Board meetings, and providing input in person, by mail, email, or phone at any time during the rulemaking process. The Board will commit to efficiently and adequately providing an opportunity to Tribes and Alaska Native corporations for consultation in regard to subsistence rulemaking.

The Board will consider Tribes' and Alaska Native corporations' information, input, and recommendations, and address their concerns as much as practicable.

Developing the 2026–27 and 2027–28 Wildlife Seasons and Harvest Limit Proposed Regulations

In titles 36 and 50 of the CFR, the subparts C and D regulations are subject to periodic review and revision. The Board currently completes the process of revising subsistence take of wildlife regulations in even-numbered years and fish and shellfish regulations in odd-numbered years; public proposal and review processes take place during the preceding year. The Board also addresses customary and traditional use determinations during the applicable cycle. Nonrural determinations are

taken up during every other fish and shellfish cycle, beginning in 2018.

Based on Board policy, the Board reviews each closure to the take of fish/shellfish and wildlife every 4 years, during each applicable cycle. The following table lists the current closures being reviewed for this cycle. In reviewing a closure, the Board may maintain, modify, or rescind the closure. If a closure is rescinded, the existing regulations apply, or if no regulations are in place, any changes to or the establishment of seasons, methods and means, and harvest limits must go through the full public review process. The public is encouraged to comment on these closures, and anyone recommending a regulatory change outside the scope of a closure review (*i.e.,* a change not directly affecting the closure) should submit a regulatory proposal.

TABLE 3—WILDLIFE CLOSURES TO BE REVIEWED BY THE FEDERAL SUBSISTENCE BOARD FOR THE 2026–2027 AND 2027–2028 REGULATORY YEARS

Unit and area descriptor	Species	Closure
2	Deer	Closed from Aug. 1–15 to non-federally qualified users. Non-federally qualified users may only harvest up to two bucks.
5A, except Nunatak Bench, east of the Dangerous River	Moose	Closed from Sept. 16–30 to non-federally qualified users.
5A, except Nunatak Bench, west of the Dangerous River	Moose	Closed from Oct. 8–21 to non-federally qualified users.
9C, draining into the Naknek River from the South	Moose	Closed from Dec. 1–31 to non-federally qualified users.
17A, 17C, Nushagak Peninsula	Caribou	Closed to non-federally qualified users unless the population estimate exceeds 900 caribou.
22A, North	Moose	Closed from Sep. 21–Aug. 31 to non-federally qualified users.
22A, Unalakleet	Moose	Closed to non-federally qualified users.
22A remainder	Moose	Closed from Oct. 1–Aug. 31 to non-federally qualified users.
22B, west of the Darby Mountains	Moose	Closed to non-federally qualified users during fall season.
22B, west of the Darby Mountains	Moose	Closed except by residents of White Mountain and Golovin during the winter season.
22D, Kougarok, Kuzitrin, and Pilgrim River drainages	Moose	Closed except by residents of Units 22C and 22D.
22D, west of Tisuk River drainage and Canyon Creek	Moose	Closed except by residents of Units 22C and 22D.
22D remainder	Moose	Closed to non-federally qualified users.
22E	Moose	Closed to non-federally qualified users.
23, Baird Mountains	Sheep	Closed to non-federally qualified users.
23, Noatak River corridor, Squirrel, Eli, and Agashashok River drainages.	Caribou	Closed to non-federally qualified users.
25D west	Moose	Closed except by residents of Unit 25D west and Birch Creek.
26C	Muskox	Closed to non-federally qualified users.

The current subsistence program regulations form the starting point for consideration during each new rulemaking cycle. Consequently, in this rulemaking action pertaining to wildlife, the Board will consider proposals to revise the regulations in any of the following sections of titles 36 and 50 of the CFR:

- § __.24: customary and traditional use determinations;
- § __.25: general provisions governing the subsistence take of wildlife, fish, and shellfish; and
- § __.26: specific provisions governing the subsistence take of wildlife.

As such, the text of the proposed 2026–2028 subparts C and D subsistence regulations in titles 36 and 50 is the combined text of previously issued rules that revised these sections of the regulations. The following **Federal Register** citations show when these CFR sections were last revised. Therefore, the regulations established by these final rules constitute the text of this proposed rule:

The text of the proposed amendments to 36 CFR 242.24 and 242.26 and 50 CFR 100.24 and 100.26 is the final rule for the 2024–2026 regulatory period for wildlife (89 FR 70358, August 29, 2024).

The text of the proposed amendments to 36 CFR 242.25 and 50 CFR 100.25 is the final rule for the 2022–2024 regulatory period for wildlife (87 FR 44858; July 26, 2022).

These regulations will remain in effect until subsequent Board action changes elements as a result of the public review process outlined above in this document and a final rule is published.

Compliance with Statutory and Regulatory Authorities

National Environmental Policy Act

A Draft Environmental Impact Statement that described four alternatives for developing a Federal Subsistence Management Program was distributed for public comment on October 7, 1991. The Final Environmental Impact Statement (FEIS) was published on February 28, 1992. The Record of Decision (ROD) on Subsistence Management for Federal Public Lands in Alaska was signed April 6, 1992. The selected alternative in the FEIS (Alternative IV) defined the administrative framework of an annual regulatory cycle for subsistence regulations.

A 1997 environmental assessment dealt with the expansion of Federal jurisdiction over fisheries and is available at the office listed under **FOR FURTHER INFORMATION CONTACT**. The Secretary of the Interior, with concurrence of the Secretary of Agriculture, determined that expansion of Federal jurisdiction does not constitute a major Federal action significantly affecting the human environment and, therefore, signed a Finding of No Significant Impact.

Section 810 of ANILCA

An ANILCA section 810 analysis was completed as part of the FEIS process on the Federal Subsistence Management Program. The intent of all Federal subsistence regulations is to accord subsistence uses of fish and wildlife on public lands a priority over the taking of fish and wildlife on such lands for other purposes, unless restriction is necessary to conserve healthy fish and wildlife populations. The final section 810 analysis determination appeared in the April 6, 1992, ROD and concluded that the Federal Subsistence Management Program, under Alternative IV with an annual process for setting subsistence regulations, may have some local impacts on subsistence

uses, but will not likely restrict subsistence uses significantly.

During the subsequent environmental assessment process for extending fisheries jurisdiction, an evaluation of the effects of the subsistence program regulations was conducted in accordance with section 810. That evaluation also supported the Secretaries' determination that the regulations will not reach the ''may significantly restrict'' threshold that would require notice and hearings under ANILCA section 810(a).

Paperwork Reduction Act of 1995 (PRA)

This proposed rule does not contain any new collections of information that require Office of Management and Budget (OMB) approval under the PRA (44 U.S.C. 3501 *et seq.*). OMB has reviewed and approved the collections of information associated with the subsistence regulations at 36 CFR part 242 and 50 CFR part 100, and assigned OMB Control Number 1018–0075, with an expiration date of November 30, 2027. We may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid OMB control number.

Regulatory Planning and Review (Executive Order 12866)

Executive Order 12866 provides that the Office of Information and Regulatory Affairs (OIRA) in the Office of Management and Budget will review all significant rules. OIRA has determined that this proposed rule is not significant.

Executive Order 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation's regulatory system to promote predictability, to reduce uncertainty, and to use the best, most innovative, and least burdensome tools for achieving regulatory ends. The executive order directs agencies to consider regulatory approaches that reduce burdens and maintain flexibility and freedom of choice for the public where these approaches are relevant, feasible, and consistent with regulatory objectives. E.O. 13563 emphasizes further that regulations must be based on the best available science and that the rulemaking process must allow for public participation and an open exchange of ideas. We have developed this proposed rule in a manner consistent with these requirements.

Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 (5 U.S.C. 601 *et seq.*) requires preparation of flexibility analyses for rules that will have a significant economic impact on a substantial number of small entities, which include small businesses, organizations, or governmental jurisdictions. In general, the resources to be harvested under this proposed rule are already being harvested and consumed by the local harvester and do not result in an additional dollar benefit to, or impact on the economy. Therefore, the Departments certify that this rulemaking will not have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act.

Small Business Regulatory Enforcement Fairness Act

Under the Small Business Regulatory Enforcement Fairness Act (5 U.S.C. 801 *et seq.*), this proposed rule is not a major rule. It will not have an effect on the economy of $100 million or more, will not cause a major increase in costs or prices for consumers, and will not have significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises.

Executive Order 12630

Title VIII of ANILCA requires the Secretaries to administer a subsistence priority on public lands. The scope of this program is limited by definition to certain public lands. Likewise, these proposed regulations have no potential takings of private property implications as defined by Executive Order 12630.

Unfunded Mandates Reform Act

The Secretaries have determined and certify pursuant to the Unfunded Mandates Reform Act, 2 U.S.C. 1502 *et seq.,* that this rulemaking will not impose a cost of $100 million or more in any given year on local or State governments or private entities. The implementation of this rule is by Federal agencies and there is no cost imposed on any State or local entities or tribal governments.

Executive Order 12988

The Secretaries have determined that these regulations meet the applicable standards provided in sections 3(a) and 3(b)(2) of Executive Order 12988, regarding civil justice reform.

Executive Order 13132

In accordance with Executive Order 13132, this proposed rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment. Title VIII of ANILCA precludes the State from exercising subsistence management authority over fish and wildlife resources on Federal lands unless it meets certain requirements.

Executive Order 13175

Title VIII of ANILCA does not provide specific rights to Tribes for the subsistence taking of wildlife, fish, and shellfish. However, as described above under *Tribal Consultation and Comment,* the Secretaries, through the Board, will provide federally recognized Tribes and Alaska Native corporations a variety of opportunities for consultation: commenting on proposed changes to the existing rule; engaging in dialogue at the Regional Council meetings; engaging in dialogue at the Board's meetings; and providing input in person, by mail, email, or phone at any time during the rulemaking process.

Executive Order 13211

This Executive Order requires agencies to prepare Statements of Energy Effects when undertaking certain actions. However, this proposed rule is not a significant regulatory action under E.O. 13211, affecting energy supply, distribution, or use, and no Statement of Energy Effects is required.

Drafting Information

Justin Koller drafted this proposed rule under the guidance of Crystal Leonetti of the Office of Subsistence Management, Department of the Interior, Office of the Assistant Secretary for Policy, Management, and Budget, Anchorage, Alaska. Additional assistance was provided by:

- Chris McKee, Alaska State Office, Bureau of Land Management;
- Eva Patton, Alaska Regional Office, National Park Service;
- Dr. Glenn Chen, Alaska Regional Office, Bureau of Indian Affairs;
- Jill Klein, Alaska Regional Office, U.S. Fish and Wildlife Service; and
- Gregory Risdahl, Alaska Regional Office, USDA–Forest Service.

List of Subjects

36 CFR Part 242

Administrative practice and procedure, Alaska, Fish, National forests, Public lands, Reporting and recordkeeping requirements, Wildlife.

50 CFR Part 100

Administrative practice and procedure, Alaska, Fish, National forests, Public lands, Reporting and recordkeeping requirements, Wildlife.

Proposed Regulation Promulgation

For the reasons set out in the preamble, the Federal Subsistence Board proposes to amend 36 CFR part

242 and 50 CFR part 100 for the 2026–27 and 2027–28 regulatory years:

Proposed amendments to 36 CFR 242.24 and 242.26 and 50 CFR 100.24 and 100.26 last amended by the final rule for the 2024–2026 regulatory period for wildlife (89 FR 70358, August 29, 2024).

Proposed amendments to 36 CFR 242.25 and 50 CFR 100.25 last amended by the final rule for the 2022–2024 regulatory period for wildlife (87 FR 44858; July 26, 2022).

Crystal Leonetti,

Director, DOI—Office of Subsistence Management.

Gregory Risdahl,

Subsistence Program Leader, USDA–Forest Service.

POSTAL REGULATORY COMMISSION

39 CFR Part 3050

[Docket No. RM2025–6; Order No. 8459]

Periodic Reporting

AGENCY: Postal Regulatory Commission.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Commission is acknowledging a recent Postal Service filing requesting the Commission initiate a rulemaking proceeding to consider changes to analytical principles relating to periodic reports. This document informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* February 27, 2025.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov.* Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction
II. Proposal
III. Notice and Comment
IV. Information Request
V. Ordering Paragraphs

I. Introduction

On December 19, 2024, the Postal Service filed a petition pursuant to 39 CFR 3050.11 requesting that the Commission initiate a rulemaking proceeding to consider changes to analytical principles relating to periodic reports.[1] The Petition presents an updated facility rental analysis used to distribute space provision costs to individual products in the *Annual Compliance Report.* Petition at 1.

II. Proposal

Background. The Postal Service explains that the recent facility rental analysis, which was completed in 1992, was based on Facility Management System (FMS) data. *Id.* Proposal at 1 (citing Docket No. R94–1, USPS LR–G–120, Section IV.). This analysis relied on a sampling approach to estimate rental values for 18 facility groupings over a study period of November 30, 1981, to November 30, 1991. Petition, Proposal at 2. The Postal Service notes that the adjusted results from this analysis were last used to distribute space provision costs in Docket No. ACR2023, Library Reference USPS–FY23–8. *Id.* at 1. The Postal Service explains that there are two analyses in the facility portion of Library Reference USPS–FY23–8. *Id.*

The first consists of the results from an updated Facility Space Usage Study (FSUS), which was approved by the Commission via Proposal Nine in August 2020.[2] The results from that analysis are used to distribute both space support and space provision costs. Petition, Proposal at 2.

The second analysis concerns rental costs and was listed as a near-term study in response to the Commission's request for possible data improvements.[3] The results from this analysis are used to distribute the space provision costs only. Petition, Proposal at 2. The Postal Service identifies the affected cost segments in Table 1. *Id.*

The Postal Service identifies three key limitations of the 1992 rental value analysis. *Id.* at 4–5. First, the Postal Service observes the apparent absence of a definitive source for nationwide cap rates, which are used to evaluate real estate investments that can be calculated by dividing the net income from a property (*i.e.,* rent) by its current market value. *Id.* at 4. Second, the Postal Service notes that the FMS ''building cost'' (construction costs for the facility at the time the facility was built or the acquisition costs at the time the facility was acquired) and ''land cost'' (purchase price for the land at the time the property was acquired) fields contain cost data that were incurred at different points in time. *Id.* at 4–5. Third, the Postal Service explains that the definition of ''new'' buildings covered a 10-year period (over which fair market value can change significantly) and that ''new owned'' data were used to impute rental values for ''old owned'' facilities and were applied to all ''old'' properties even though some facilities were decades older than other facilities. *Id.* at 5.

Proposal. Based on the discussion above, the Postal Service states that it proposes a simplified and more representative analysis in which the rental cost distribution by operation and function is estimated using Fiscal Year (FY) 2019 eFMS rental cost data for all active facilities included in Proposal Nine. *Id.* This proposal does not use sampling methods. *Id.* The Postal Service describes the proposed data sources, organization of the inputs and outputs, methodology, and modifications to the facility file appearing in Library Reference USPS–FY23–8. *Id.* at 6–10.

Impact. The Postal Service asserts that using postal data rather than sampling would mean that ''subjective inputs, such as capitalization rates and rent change factors, are no longer needed.'' *Id.* at 1. The Postal Service contends that its proposal would ''more accurately represent[ ] market value rental rates for each operation and function.'' *Id.* at 10. The Postal Service states that the ''previous methodology may have overstated the market value rental rates for plants . . . .'' *Id.* The Postal Service presents Table 2, which summarizes the 2019 rental cost distribution by operation and function (component) that would be generated by adopting the proposal. *Id.* at 10, 12. The Postal Service presents Table 3, which summarizes the impact that applying this proposal would have had on the overall (*i.e.,* across all cost segments) volume-variable and product-specific costs for each product in FY 2023.[4] Under the proposal, the Postal Service estimates that attributable costs for Market Dominant products and Competitive products would decrease

[4] *Id.* at 10, 13. The Postal Service states that a more comprehensive version of Table 3, which includes disaggregated rows for individual Competitive Products, is provided under seal. *Id.* at 11.

2.12 percent and 1.53 percent, respectively. *Id.*

III. Notice and Comment

The Commission establishes Docket No. RM2025–6 for consideration of matters raised by the Petition. More information on the Petition may be accessed via the Commission's website at *https://www.prc.gov.* Interested persons may submit comments on the Petition and the proposal by February 27, 2025. Pursuant to 39 U.S.C. 505, Almaroof Agoro is designated as an officer of the Commission (Public Representative) to represent the interests of the general public in this proceeding.

IV. Information Request

On December 23, 2024, Pitney Bowes filed a motion seeking issuance of an information request to the Postal Service.[5] Because the response to the proposed question is likely to aid evaluation of the Petition, the Motion is granted. The Postal Service shall respond to the following question by January 7, 2025: Please provide modified versions of Library Reference USPS–FY23–24: FY 2023 Non-Operation Specific Piggyback Factors (Public Portion) and Library Reference USPS–FY23–25: FY 2023 Mail Processing Piggyback Factors (Operation Specific) that incorporate the impact of the proposed changes to analytical principles.

V. Ordering Paragraphs

It is ordered:

1. The Commission establishes Docket No. RM2025–6 for consideration of the matters raised by the Petition of the United States Postal Service to Initiate a Proceeding to Change Analytical Principles and Notice of Filing Non-Public Materials, filed December 19, 2024.

2. Comments by interested persons in this proceeding are due February 27, 2025.

3. The Motion of Pitney Bowes Inc. for Issuance of Information Request, filed December 23, 2024, is granted.

4. The Postal Service shall respond to the following question by January 7, 2025, and provide modified versions of Library Reference USPS–FY23–24: FY 2023 Non-Operation Specific Piggyback Factors (Public Portion) and Library Reference USPS–FY23–25: FY 2023 Mail Processing Piggyback Factors (Operation Specific) that incorporate the impact of the proposed changes to analytical principles.

[5] Motion of Pitney Bowes Inc. for Issuance of Information Request, December 23, 2024 (Motion).

5. Pursuant to 39 U.S.C. 505, the Commission appoints Almaroof Agoro to serve as an officer of the Commission (Public Representative) to represent the interests of the general public in this docket.

6. The Secretary shall arrange for the publication of this order in the **Federal Register**.

By the Commission.

Erica A. Barker,

Secretary.

[FR Doc. 2025–00153 Filed 1–17–25; 8:45 am]

BILLING CODE 7710–FW–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R09–OAR–2024–0627; FRL–12536–01–R9]

Air Plan Revisions; California Air Plan Revisions; San Joaquin Valley Unified Air Pollution Control District; Stationary Source Permits

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing action on three permitting rules submitted as a revision to the San Joaquin Valley Unified Air Pollution Control District (SJVUAPCD or ''District'') portion of the California State Implementation Plan (SIP). These revisions concern the District's New Source Review (NSR) permitting program for new and modified sources of air pollution under section 110(a)(2)(C) and part D of title I of the Clean Air Act (CAA or ''Act''). This action will update the California SIP with rules that the District has revised to address deficiencies identified in a previous limited disapproval action and to incorporate other revisions related to NSR requirements. We are taking comments on this proposal and plan to follow with a final action. Elsewhere in this **Federal Register**, we are making an interim final determination that will defer the imposition of CAA sanctions associated with our previous limited disapproval action. This action also proposes to revise regulatory text to clarify that the SJVUAPCD is not subject to the federal implementation plan related to protection of visibility.

DATES: WComments must be received on or before February 20, 2025.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R09–OAR–2024–0627 at *https://www.regulations.gov.* For comments submitted at *Regulations.gov,* follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov.* The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.* If you need assistance in a language other than English or if you are a person with a disability who needs a reasonable accommodation at no cost to you, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section.

FOR FURTHER INFORMATION CONTACT: Doris Lo, EPA Region IX, 75 Hawthorne St., San Francisco, CA 94105. By phone: (415) 972–3959, or by email at *lo.doris@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document, the terms ''we,'' ''us,'' and ''our'' refer to the EPA.

III. Incorporation by Reference

IV. Statutory and Executive Order Reviews

I. The State's Submittal

A. What rules did the State submit?

Table 1 lists the rules addressed by this proposal including the date they were adopted by the District and submitted to the EPA by the California

Air Resources Board (CARB), which is the governor's designee for California SIP submittals.

TABLE 1—SUBMITTED RULES

Rule No.	Rule title	Adopted	Submitted
1020	Definitions	4/20/23	10/13/23
2020	Exemptions	12/18/14	10/13/23
2201	New and Modified Stationary Source Review Rule	4/20/23	10/13/23

On April 13, 2024, the submittal of each rule became complete by operation of law.

B. Are there other versions of these rules?

The SIP-approved versions of the submitted rules are identified below in Table 2.

TABLE 2—SIP-APPROVED RULES

Rule No.	Rule title	SIP approval date	**Federal Register** citation
1020	Definitions	10/02/14	79 FR 59433.
2020	Exemptions	9/17/14	79 FR 55637.
2201	New and Modified Stationary Source Review Rule	7/10/23	88 FR 43434.

If the EPA finalizes the action proposed herein, these rules will be replaced in the SIP by the submitted set of rules listed in Table 1. Additionally, as described below, the EPA's final approval of these rules will resolve our previous limited disapproval of Rule 2201.

C. What is the purpose of the submitted rules?

The submitted rules constitute part of the District's program for preconstruction review and permitting of new or modified stationary sources under its jurisdiction. The rule revisions that are the subject of this action update the District's preconstruction review and permitting program and are intended to satisfy the NSR program requirements under part D of title I of the Act (''nonattainment NSR'' or ''NNSR''), the general preconstruction review requirements under section 110(a)(2)(C) of the Act (''minor NSR''), and related EPA regulations. The submitted rules are also intended to resolve deficiencies identified in our July 10, 2023 final action (''2023 NSR Action''),[1] which included a limited disapproval of a prior version of Rule 2201. The rules also include other assorted revisions, including new and revised definitions and applicability and compliance provisions.

The San Joaquin Valley is currently designated attainment for the nitrogen dioxide, carbon monoxide, particulate matter equal to or less than 10 micrometers (PM_{10}), sulfur dioxide (SO_2), and lead National Ambient Air Quality Standards (NAAQS). The San Joaquin Valley is currently designated ''Extreme'' nonattainment for the 1997, 2008, and 2015 ozone NAAQS and ''Serious'' nonattainment for the 1997, 2006, and 2012 particulate matter equal to or less than 2.5 micrometers ($PM_{2.5}$) NAAQS.[2] Therefore, the District is required to adopt and implement a SIP-approved NNSR permitting program that applies to new or modified major stationary sources of ozone precursors, $PM_{2.5}$, and $PM_{2.5}$ precursors within the San Joaquin Valley.

The SIP submittal evaluated in this action includes revisions to Rule 1020, ''Definitions,'' Rule 2020, ''Exemptions,'' and Rule 2201, ''New and Modified Stationary Source Review Rule.'' Rule 1020 provides definitions for certain key terms used throughout the District's regulations. Rule 2020 specifies types of emissions units that are not required to obtain an Authority to Construct (ATC) or Permit to Operate (PTO). The rule also specifies the recordkeeping requirements to verify a permit exemption and outlines the compliance schedule for existing emissions units that lose their permit exemption. Rule 2201 is intended to satisfy the requirements of the NNSR program under part D of title I of the CAA that are applicable in ozone and $PM_{2.5}$ nonattainment areas and the general NSR program permit requirements.

The EPA's technical support document (TSD) for this action, which is included in the docket for our proposed rulemaking, has more information about the purposes of the submitted rules and the District's revisions.

II. The EPA's Evaluation and Action

A. How is the EPA evaluating the rules?

The EPA has evaluated the submitted rules to determine whether they address the deficiencies identified in our 2023 NSR Action. We have also evaluated all additional rule revisions for compliance with CAA sections 172(c)(5), 173, 182(e), and 189(b), which establish the requirements for stationary source preconstruction permitting programs, including those specifically applicable for an Extreme ozone nonattainment area and Serious $PM_{2.5}$ nonattainment area, as well as the federal regulations applicable to stationary source permitting at 40 CFR 51.160 through 51.165. Additionally, the EPA reviewed the rules for consistency with other general CAA requirements for SIP submittals, including requirements at CAA section 110(a)(2)(A) regarding rule enforceability and requirements at CAA sections 110(l) and 193 for SIP revisions. We have also considered whether the rules meet the federal visibility requirements related to state NNSR programs as described in 40 CFR 51.307.

[1] 87 FR 45730.

[2] See 40 CFR 81.305 (describing geographic extent of San Joaquin Valley nonattainment area for each NAAQS).

B. Do the rules meet the evaluation criteria?

With the exceptions noted below, the EPA finds that Rules 1020, 2020, and 2201 generally satisfy the applicable CAA and regulatory requirements for sources subject to NNSR permit program requirements. Below, we discuss our evaluation of the submitted rules. The TSD for this action contains a more detailed analysis.

The SJVUAPCD revised Rules 1020 and 2201 to address the deficiencies identified in the 2023 NSR action. Specifically, the District revised Rules 1020 and 2201 to address our findings that the previous version of Rule 2201 (1) omitted certain definitions necessary for application of the District's permitting program for new and modified stationary sources; (2) included provisions allowing for interprecursor trading (IPT) that are no longer permissible due to a 2021 D.C. Circuit Court of appeals decision; (3) allowed for impermissible exemptions for relocated sources; (4) lacked public notice requirements for certain minor sources; (5) included an offset tracking system that failed to ensure equivalency with federal offset requirements; (6) did not include certain required provisions for temporary replacement units and routine replacement emission units; and (7) included other more minor deficiencies. The District addressed all these deficiencies in the SIP submission that is being evaluated in this action. The TSD for this action provides further detail on these deficiencies and how they were addressed by the District. While the District addressed all the deficiencies identified in the 2023 NSR action, pursuant to sections 110(k)(3) and 301(a) of the Act, we are proposing a limited approval and limited disapproval of Rules 1020, ''Definitions,'' 2020, ''Exemptions,'' and 2201, ''New and Modified Stationary Source Review Rule'' due to the newly identified deficiencies found in each rule. These new deficiencies are described in Section II.C of this action.

The submitted rules comply with the substantive and procedural requirements of CAA section 110(l). With respect to the procedural requirements, based on our review of the public process documentation included with the submitted rules, we find that the District has provided sufficient evidence of public notice and opportunity for comment and public hearings prior to submittal of this SIP revision and has satisfied these procedural requirements under CAA section 110(l).

With respect to the substantive requirements of CAA section 110(l), we have determined that our approval of the submitted rules would not interfere with the area's ability to attain or maintain the NAAQS or with any other applicable requirements of the CAA. Similarly, we find that the submitted rules are approvable under section 193 of the Act because they do not modify any control requirement in effect before November 15, 1990, without ensuring equivalent or greater emission reductions. The submitted rules are otherwise consistent with criteria for the EPA's approval of regulations submitted for inclusion in the SIP, including the requirement at CAA section 110(c)(2)(A) that submitted regulations be clear and legally enforceable.

For the reasons stated above and explained further in the TSD for this action, we find that the submitted rules generally satisfy the applicable CAA and regulatory requirements for NSR permit programs under CAA section 110(a)(2)(A) and part D of title I of the Act and other applicable requirements, subject to the exceptions noted below where the EPA has identified deficiencies. This submittal also corrects the deficiencies described in our 2023 NSR Action. If we finalize this action as proposed, our action will resolve the limited disapproval of Rule 2201 and will be codified through revisions to 40 CFR 52.220 (Identification of plan—in part). Because Rules 1020, 2020, and 2201 are not fully consistent with these requirements, we are proposing a limited approval and limited disapproval of the rules under CAA sections 110(k)(3) and 301(a). The specific rule provisions that do not meet the evaluation criteria are summarized in the following section and described in more detail in the TSD included in the docket for this proposed action.

We are concurrently making an interim final determination to defer CAA section 179 sanctions associated with the 2023 NSR Action's limited disapproval of Rule 2201. Consistent with our order of sanction regulations,[3] this determination is based on this proposal to approve SIP revisions from the District that resolve the deficiencies that were the basis of our prior limited disapproval that triggered sanctions under section 179 of the CAA.

C. What are the rule deficiencies?

The following provisions of Rules 1020, 2020, and 2201 do not satisfy the requirements of section 110 and/or part D of title I of the Act and prevent full approval of the rules. The District must correct the deficiencies identified in this section and resubmit the rules for the EPA's approval in a subsequent action. The EPA has identified three deficiencies in the submitted rules.

1. Rule 1020—Definitions

The definition of VOC in Rule 1020 is deficient because it does not include trans-1,1,1,4,4,4-hexafluorobut-2-ene (also known as HFO–1336mzz(E)), which is an exempt compound listed in the definition of VOC as found in 40 CFR 51.100(s)(1). In addition, on November 12, 2024, the EPA proposed to add (Z)-1-chloro-2,3,3,3-tetrafluoropropene (also known as HCFO–1224yd(Z)) to the definition of VOC as an exempt compound. The District must revise the Rule 1020 definition of VOC to match the federal definition at 40 CFR 51.100(s), including the exemptions listed at 40 CFR 51.100(s)(1).

2. Rule 2020—Exemptions

Several American Society for Testing and Materials (ASTM) test method citations provided in Rule 2020 are deficient because they do not include the revision or reissuance date of the specific ASTM methods.

3. Rule 2201—New and Modified Stationary Source Review Rule

The term ''Emission Reduction Credit'' is used in Rule 2201, but the term is not defined in the rule or in Rule 1020, ''Definitions.'' We note that the term is defined in Rule 2301—Emission Reduction Credit Banking, but this rule has not been submitted for SIP approval. Therefore, we find Rule 2201 deficient because it does not provide a definition for the term Emission Reduction Credit, and the term is a necessary component of an approvable NNSR program.

D. EPA Recommendations To Further Improve the Rules

The TSD for this action includes recommendations for the next time the District revises Rule 2201.

E. Proposed Action and Public Comment

As authorized in sections 110(k)(3) and 301(a) of the Act, the EPA is proposing a limited approval and limited disapproval of Rules 1020, 2020, and 2201. We will accept comments from the public on this proposal until February 20, 2025. If we finalize this action as proposed, this action will incorporate the submitted rules into the SIP, including those provisions identified as deficient. This approval is limited because the EPA is

[3] 40 CFR 52.31.

simultaneously proposing a limited disapproval of the rules under section 110(k)(3). If finalized as proposed, our limited disapproval action would trigger an obligation on the EPA to promulgate a federal implementation plan (FIP) unless the State corrects the deficiencies, and the EPA approves the related plan revisions, within two years of the final action. Additionally, because the deficiency relates to NNSR requirements under part D of title I of the Act, the offset sanction in CAA section 179(b)(2) would apply in the San Joaquin Valley 18 months after the effective date of a final limited disapproval, and the highway funding sanctions in CAA section 179(b)(1) would apply in the area six months after the offset sanction is imposed. Neither sanction will be imposed under the CAA if the State submits and we approve, prior to the implementation of the sanctions, a SIP revision that corrects the deficiencies we identify in our final action. The EPA intends to work with the District to correct the deficiencies in a timely manner.

This action would also revise the regulatory provisions at 40 CFR 52.281(d) concerning the applicability of the visibility FIP at 40 CFR 52.28 as it pertains to California, to provide that this FIP does not apply to sources subject to review under the District's SIP-approved NNSR program. As described in more detail in the TSD for this action, we are proposing to find that Rule 2201 satisfies the visibility provisions for sources subject to the NNSR program at 40 CFR 51.307.

Note that the submitted rules have been adopted by the District, and the EPA's final limited disapproval would not prevent the local agency from enforcing them. The limited disapproval would also not prevent any portion of the rules from being incorporated by reference into the federally enforceable SIP.[4]

III. Incorporation by Reference

In this rule, the EPA is proposing to include in a final EPA rule regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, the EPA is proposing to incorporate by reference the rules listed in Table 1 of this preamble. These rules implement the District's nonattainment NSR program. The EPA has made, and will continue to make, this document available electronically through *https://www.regulations.gov* and at the EPA Region IX Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information).

IV. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA's role is to review state choices and approve those choices if they meet the minimum criteria of the Act. Accordingly, this proposed action is proposing a limited approval and limited disapproval of state law as meeting federal requirements and does not impose additional requirements beyond those imposed by state law.

Additional information about these statutes and Executive Orders can be found at *https://www.epa.gov/laws-regulations/laws-and-executive-orders.*

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is not a significant regulatory action and was therefore not submitted to the Office of Management and Budget (OMB) for review.

B. Paperwork Reduction Act (PRA)

This action does not impose an information collection burden under the PRA because this action does not impose additional requirements beyond those imposed by state law.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. This action will not impose any requirements on small entities beyond those imposed by state law.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. This action does not impose additional requirements beyond those imposed by state law. Accordingly, no additional costs to state, local, or tribal governments, or to the private sector, will result from this action.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Coordination With Indian Tribal Governments

This action does not have tribal implications, as specified in Executive Order 13175, because the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction, and will not impose substantial direct costs on tribal governments or preempt tribal law. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

The EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of ''covered regulatory action'' in section 2–202 of the Executive Order. Therefore, this action is not subject to Executive Order 13045 because it is merely proposing a limited approval and limited disapproval of state law as meeting federal requirements. Furthermore, the EPA's Policy on Children's Health does not apply to this action.

H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211, because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act (NTTAA)

Section 12(d) of the NTTAA directs the EPA to use voluntary consensus standards in its regulatory activities unless to do so would be inconsistent with applicable law or otherwise impractical. The EPA believes that this action is not subject to the requirements of section 12(d) of the NTTAA because application of those requirements would be inconsistent with the CAA.

[4] Memorandum dated July 9, 1992, from John Calcagni, Director, Air Quality Management Division, Office of Air Quality Planning and Standards, U.S. EPA, to EPA Regional Air Directors, Regions I–X, Subject: ''Processing of State Implementation Plan (SIP) Submittals.''

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations and Executive Order 14096: Revitalizing Our Nation's Commitment to Environmental Justice for All

Executive Order 12898 (Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, February 16, 1994) directs Federal agencies to identify and address ''disproportionately high and adverse human health or environmental effects'' of their actions on communities with environmental justice (EJ) concerns to the greatest extent practicable and permitted by law. Executive Order 14096 (Revitalizing Our Nation's Commitment to Environmental Justice for All, 88 FR 25251, April 26, 2023) builds on and supplements Executive Order 12898 and defines EJ as, among other things, ''the just treatment and meaningful involvement of all people, regardless of income, race, color, national origin, Tribal affiliation, or disability, in agency decision-making and other Federal activities that affect human health and the environment.''

The State did not evaluate EJ considerations as part of its SIP submittal; the CAA and applicable implementing regulations neither prohibit nor require such an evaluation. The EPA did not perform an EJ analysis and did not consider EJ in this action. Consideration of EJ is not required as part of this action, and there is no information in the record inconsistent with the stated goal of Executive Orders 12898 and 14096 of achieving EJ for communities with EJ concerns.

List of Subjects in 40 CFR Part 52

Environmental protection, Administrative practice and procedure, Air pollution control, Incorporation by reference, Intergovernmental relations, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur dioxide, Volatile organic compounds.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R03–OAR–2024–0625; FRL–10253–01–R3]

Air Plan Disapproval; West Virginia; Regional Haze State Implementation Plan for the Second Implementation Period

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to disapprove a revision to West Virginia's State Implementation Plan (SIP) submitted by the West Virginia Department of Environmental Protection (WV DEP) on August 12, 2022. The SIP was submitted to satisfy applicable requirements under the Clean Air Act (CAA) and EPA's Regional Haze Rule (RHR) for the program's second planning period. If finalized, disapproval does not start a mandatory sanctions clock. The EPA is taking this action pursuant to sections 110 and 169A of the Clean Air Act.

DATES: Written comments must be received on or before February 20, 2025.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R03–OAR–2024–0625 at *www.regulations.gov.* For comments submitted at *Regulations.gov,* follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov.* For either manner of submission, the EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be confidential business information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. SUPPLEMENTARY INFORMATION: Throughout this document ''we,'' ''us,'' and ''our'' refer to the EPA.

I. What action is the EPA proposing?

The EPA is proposing to disapprove West Virginia's Regional Haze plan for the second planning period. As required by sections 169A and 169B of the CAA, the Federal RHR at 40 CFR 51.308 calls for State and Federal agencies to work together to improve visibility in 156 national parks and wilderness areas. The rule requires the States, in coordination with the EPA, the U.S. National Parks Service (NPS), U.S. Fish and Wildlife Service (FWS), the U.S. Forest Service (USFS), and other interested parties, to develop and implement air quality protection plans to reduce the pollution that causes visibility impairment in mandatory Class I Federal areas. Visibility impairing pollutants include fine and coarse particulate matter (PM) (*e.g.,* sulfates, nitrates, organic carbon, elemental carbon, and soil dust) and their precursors (*e.g.,* sulfur dioxide (SO_2), oxides of nitrogen (NO_X), and, in some cases, volatile organic compounds (VOC) and ammonia (NH_3)). As discussed in further detail below, the EPA is proposing to find that West Virginia has submitted a Regional Haze plan that does not meet the statutory and regulatory Regional Haze requirements for the second planning period. The State's 2022 submission can be found in the docket for this action.

II. Background and Requirements for Regional Haze Plans

A. Regional Haze Background

In the 1977 CAA Amendments, Congress created a program for protecting visibility in the nation's mandatory Class I Federal areas, which include certain national parks and wilderness areas.[1] CAA section 169A. The CAA establishes as a national goal the ''prevention of any future, and the remedying of any existing, impairment of visibility in mandatory class I Federal

[1] Areas statutorily designated as mandatory Class I Federal Areas consist of national parks exceeding 6,000 acres, wilderness areas and national memorial parks exceeding 5,000 acres, and all international parks that were in existence on August 7, 1977. CAA 162(a). There are 156 mandatory Class I Areas. The list of areas to which the requirements of the visibility protection program apply is in 40 CFR part 81, subpart D.

areas which impairment results from manmade air pollution.'' CAA section 169A(a)(1). The CAA further directs the EPA to promulgate regulations to assure reasonable progress toward meeting this national goal. CAA section 169A(a)(4). On December 2, 1980, the EPA promulgated regulations to address visibility impairment in mandatory Class I Federal Areas (hereinafter referred to as ''Class I Areas'') that is ''reasonably attributable'' to a single source or small group of sources. (45 FR 80084, December 2, 1980). These regulations, codified at 40 CFR 51.300 through 51.307, represented the first phase of the EPA's efforts to address visibility impairment. In 1990, Congress added section 169B to the CAA to further address visibility impairment, specifically, impairment from Regional Haze. CAA 169B. The EPA promulgated the RHR, codified at 40 CFR 51.308,[2] on July 1, 1999. (64 FR 35714, July 1, 1999). These Regional Haze regulations are a central component of the EPA's comprehensive visibility protection program for Class I Areas.

Regional Haze is visibility impairment that is produced by a multitude of anthropogenic sources and activities which are located across a broad geographic area and that emit pollutants that impair visibility. Visibility impairing pollutants include fine and coarse PM (*e.g.,* sulfates, nitrates, organic carbon, elemental carbon, and soil dust) and their precursors (*e.g.,* SO_2, NO_X, and, in some cases, VOC and NH_3). Fine particle precursors react in the atmosphere to form fine PM ($PM_{2.5}$), which impairs visibility by scattering and absorbing light. Visibility impairment reduces the perception of clarity and color, as well as visible distance.[3]

To address Regional Haze visibility impairment, the 1999 RHR established an iterative planning process that requires both States in which Class I Areas are located and States ''the emissions from which may reasonably be anticipated to cause or contribute to any impairment of visibility'' in a Class I Area to periodically submit SIP revisions to address such impairment. CAA section 169A(b)(2);[4] see also 40 CFR 51.308(b), (f) (establishing submission dates for iterative Regional Haze SIP revisions); (64 FR 35768, July 1, 1999). Under the CAA, each SIP submission must contain ''a long-term (ten to fifteen years) strategy for making reasonable progress toward meeting the national goal,'' CAA section 169A(b)(2)(B); the initial round of SIP submissions also had to address the statutory requirement that certain older, larger sources of visibility impairing pollutants install and operate the best available retrofit technology (BART). CAA section 169A(b)(2)(A); 40 CFR 51.308(d), (e). States' first Regional Haze SIPs were due by December 17, 2007, 40 CFR 51.308(b), with subsequent SIP submissions containing an updated long-term strategy (LTS) originally due July 31, 2018, and every ten years thereafter. (64 FR 35768, July 1, 1999). The EPA established in the 1999 RHR that all States either have Class I Areas within their borders or ''contain sources whose emissions are reasonably anticipated to contribute to Regional Haze in a Class I Area''; therefore, all States must submit Regional Haze SIPs.[5] *Id.* at 35721.

Much of the focus in the first implementation period of the Regional Haze program, which ran from 2007 through 2018, was on satisfying States' BART obligations. First implementation period SIPs were additionally required to contain a long-term strategy for making reasonable progress toward the national visibility goal, of which BART is one component. The core required elements for the first implementation period SIPs (other than BART) are laid out in 40 CFR 51.308(d). Those provisions required that States containing Class I Areas establish reasonable progress goals (RPGs) that are measured in deciviews and reflect the anticipated visibility conditions at the end of the implementation period including from implementation of States' long-term strategy. The first planning period RPGs were required to provide for an improvement in visibility for the most impaired days over the period of the implementation plan and ensure no degradation in visibility for the least impaired days over the same period. In establishing the RPGs for any Class I Area in a State, the State was required to consider four statutory factors: the costs of compliance, the time necessary for compliance, the energy and non-air quality environmental impacts of compliance, and the remaining useful life of any potentially affected sources. CAA section 169A(g)(1); 40 CFR 51.308(d)(1).

States were also required to calculate baseline (using the five-year period of 2000–2004) and natural visibility conditions (*i.e.,* visibility conditions without anthropogenic visibility impairment) for each Class I Area, and to calculate the linear rate of progress needed to attain natural visibility conditions, assuming a starting point of baseline visibility conditions in 2004 and ending with natural conditions in 2064. This linear interpolation is known as the uniform rate of progress (URP) and is used as a tracking metric to help States assess the amount of progress they are making towards the national visibility goal over time in each Class I Area.[6] 40 CFR 51.308(d)(1)(i)(B), (d)(2). The 1999 RHR also provided that States' long-term strategy must include the ''enforceable emissions limitations, compliance, schedules, and other

[2] In addition to the generally applicable Regional Haze provisions at 40 CFR 51.308, the EPA also promulgated regulations specific to addressing Regional Haze visibility impairment in Class I Areas on the Colorado Plateau at 40 CFR 51.309. The latter regulations are applicable only for specific jurisdictions' Regional Haze plans submitted no later than December 17, 2007, and thus are not relevant here.

[3] There are several ways to measure the amount of visibility impairment, *i.e.,* haze. One such measurement is the deciview, which is the principal metric used by the RHR. Under many circumstances, a change in one deciview will be perceived by the human eye to be the same on both clear and hazy days. The deciview is unitless. It is proportional to the logarithm of the atmospheric extinction of light, which is the perceived dimming of light due to its being scattered and absorbed as it passes through the atmosphere. Atmospheric light extinction (bext.) is a metric used for expressing visibility and is measured in inverse megameters (Mm–1). The EPA's Guidance on Regional Haze State Implementation Plans for the Second Implementation Period (''2019 Guidance'') offers the flexibility for the use of light extinction in certain cases. Light extinction can be simpler to use in calculations than deciviews, since it is not a logarithmic function. See, *e.g.,* 2019 Guidance at 16, 19, *www.epa.gov/visibility/guidance-regional-haze-state-implementation-plans-second-implementation-period,*The EPA Office of Air Quality Planning and Standards, Research Triangle Park (August 20, 2019). The formula for the deciview is 10 ln (bext.)/10 Mm–1). 40 CFR 51.301.

[4] The RHR expresses the statutory requirement for states to submit plans addressing out-of-state Class I Areas by providing that states must address visibility impairment ''in each mandatory Class I Federal Area located outside the State that may be affected by emissions from within the State.'' 40 CFR 51.308(d), (f).

[5] In addition to each of the fifty states, the EPA also concluded that the Virgin Islands and District of Columbia must also submit Regional Haze SIPs because they either contain a Class I Area or contain sources whose emissions are reasonably anticipated to contribute Regional Haze in a Class I Area. See 40 CFR 51.300(b), (d)(3).

[6] The EPA established the URP framework in the 1999 RHR to provide ''an equitable analytical approach'' to assessing the rate of visibility improvement at Class I Areas across the country. The start point for the URP analysis is 2004 and the endpoint was calculated based on the amount of visibility improvement that was anticipated to result from implementation of existing CAA programs over the period from the mid-1990s to approximately 2005. Assuming this rate of progress would continue into the future, the EPA determined that natural visibility conditions would be reached in 60 years, or 2064 (60 years from the baseline starting point of 2004). However, the EPA did not establish 2064 as the year by which the national goal must be reached. 64 FR 35731–32, July 1, 1999. That is, the URP and the 2064 date are not enforceable targets, but rather are tools that ''allow for analytical comparisons between the rate of progress that would be achieved by the state's chosen set of control measures and the URP.'' (82 FR 3078, 3084, January 10, 2017).

measures as necessary to achieve the reasonable progress goals.'' 40 CFR 51.308(d)(3). In establishing their long-term strategy, States are required to consult with other States that also contribute to visibility impairment in a given Class I Area and include all measures necessary to obtain their shares of the emission reductions needed to meet the RPGs. 40 CFR 51.308(d)(3)(i) and (ii). Section 51.308(d) also contains seven additional factors States must consider in formulating their long-term strategy, 40 CFR 51.308(d)(3)(v), as well as provisions governing monitoring and other implementation plan requirements. 40 CFR 51.308(d)(4). Finally, the 1999 RHR required States to submit periodic progress reports—SIP revisions due every five years that contain information on States' implementation of their Regional Haze plans and an assessment of whether anything additional is needed to make reasonable progress, see 40 CFR 51.308(g), (h)—and to consult with the Federal Land Manager(s)[7] (FLMs) responsible for each Class I Area according to the requirements in CAA section 169A(d) and 40 CFR 51.308(i).

On January 10, 2017, the EPA promulgated revisions to the RHR, (82 FR 3078, January 10, 2017), that apply for the second and subsequent implementation periods. The 2017 rulemaking made several changes to the requirements for Regional Haze SIPs to clarify States' obligations and streamline certain Regional Haze requirements. The revisions to the Regional Haze program for the second and subsequent implementation periods focused on the requirement that States' SIPs contain long-term strategies for making reasonable progress towards the national visibility goal. The reasonable progress requirements as revised in the 2017 rulemaking (referred to here as the 2017 RHR Revisions) are codified at 40 CFR 51.308(f). Among other changes, the 2017 RHR Revisions adjusted the deadline for States to submit their second implementation period SIPs from July 31, 2018, to July 31, 2021, clarified the order of analysis and the relationship between RPGs and the long-term strategy, and focused on making visibility improvements on the days with the most anthropogenic visibility impairment, as opposed to the days with the most visibility impairment overall. The EPA also revised requirements of the visibility protection program related to periodic progress reports and FLM consultation. The specific requirements applicable to second implementation period Regional Haze SIP submissions are addressed in detail below.

The EPA provided guidance to the States for their second implementation period SIP submissions in the preamble to the 2017 RHR Revisions as well as in subsequent, stand-alone guidance documents. In August 2019, the EPA issued ''Guidance on Regional Haze State Implementation Plans for the Second Implementation Period'' (''2019 Guidance'').[8] On July 8, 2021, the EPA issued a memorandum containing ''Clarifications Regarding Regional Haze State Implementation Plans for the Second Implementation Period'' (''2021 Clarifications Memo'').[9] Additionally, the EPA further clarified the recommended procedures for processing ambient visibility data and optionally adjusting the URP to account for international anthropogenic and prescribed fire impacts in two technical guidance documents: the December 2018 ''Technical Guidance on Tracking Visibility Progress for the Second Implementation Period of the Regional Haze Program'' (''2018 Visibility Tracking Guidance''),[10] and the June 2020 ''Recommendation for the Use of Patched and Substituted Data and Clarification of Data Completeness for Tracking Visibility Progress for the Second Implementation Period of the Regional Haze Program'' and associated Technical Addendum (''2020 Data Completeness Memo'').[11]

As previously explained in the 2021 Clarifications Memo, the EPA intends the second implementation period of the Regional Haze program to secure meaningful reductions in visibility impairing pollutants that build on the significant progress States have achieved to date. The Agency also recognizes that analyses regarding reasonable progress are state-specific and that, based on States' and sources' individual circumstances, what constitutes reasonable reductions in visibility impairing pollutants will vary from state-to-state. While there exist many opportunities for States to leverage both ongoing and upcoming emission reductions under other CAA programs, the Agency expects States to undertake rigorous reasonable progress analyses that identify further opportunities to advance the national visibility goal consistent with the statutory and regulatory requirements. See generally 2021 Clarifications Memo. This is consistent with Congress's determination that a visibility protection program is needed in addition to the CAA's national ambient air quality standards (NAAQS) and prevention of significant deterioration (PSD) programs, as further emission reductions may be necessary to adequately protect visibility in Class I Areas throughout the country.[12]

B. Roles of Agencies in Addressing Regional Haze

Because the air pollutants and pollution affecting visibility in Class I Areas can be transported over long distances, successful implementation of the Regional Haze program requires long-term, regional coordination among multiple jurisdictions and agencies that have responsibility for Class I Areas and the emissions that impact visibility in those Areas. In order to address Regional Haze, States need to develop strategies in coordination with one another, considering the effect of emissions from one jurisdiction on the air quality in another. Five regional planning organizations (RPOs),[13] which include representation from State and

[7] The EPA's regulations define ''Federal Land Manager'' as ''the Secretary of the department with authority over the Federal Class I Area (or the Secretary's designee) or, with respect to Roosevelt-Campobello International Park, the Chairman of the Roosevelt-Campobello International Park Commission.'' 40 CFR 51.301.

(December 20, 2018).

[11] Recommendation for the Use of Patched and Substituted Data and Clarification of Data Completeness for Tracking Visibility Progress for the Second Implementation Period of the Regional Haze Program, *www.epa.gov/visibility/memo-and-technical-addendum-ambient-data-usage-and-completeness-regional-haze-program.* EPA Office of Air Quality Planning and Standards, Research Triangle Park (June 3, 2020).

[12] See, *e.g.,* H.R. Rep No. 95–294 at 205 (''In determining how to best remedy the growing visibility problem in these areas of great scenic importance, the committee realizes that as a matter of equity, the national ambient air quality standards cannot be revised to adequately protect visibility in all areas of the country.''), (''the mandatory Class I increments of [the PSD program] do not adequately protect visibility in Class I Areas'').

[13] RPOs are sometimes also referred to as ''multi-jurisdictional organizations,'' or MJOs. For the purposes of this document, the terms RPO and MJO are synonymous.

tribal governments, the EPA, and FLMs, were developed in the lead-up to the first implementation period to address Regional Haze. RPOs evaluate technical information to better understand how emissions from State and tribal land impact Class I Areas across the country, pursue the development of regional strategies to reduce emissions of PM and other pollutants leading to Regional Haze, and help States meet the consultation requirements of the RHR.

The Visibility Improvement State and Tribal Association of the Southeast (VISTAS), one of the five RPOs described above, is a collaborative effort of State governments, tribal governments, and various Federal agencies established to initiate and coordinate activities associated with the management of regional haze, visibility, and other air quality issues in the Southeastern region of the United States. Member States and tribes include Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, and West Virginia, the Eastern Band of Cherokee Indians, and Knox County, Tennessee (representing the 17 Southeastern local air agencies). The Federal partner members of VISTAS are the EPA, NPS, FWS, and USFS.

III. Requirements for Regional Haze Plans for the Second Implementation Period

Under the CAA and THE EPA's regulations, all 50 States, the District of Columbia, and the U.S. Virgin Islands are required to submit regional haze SIPs satisfying the applicable requirements for the second implementation period of the regional haze program by July 31, 2021. Each State's SIP must contain a long-term strategy for making reasonable progress toward meeting the national goal of remedying any existing and preventing any future anthropogenic visibility impairment in Class I areas. CAA 169A(b)(2)(B). To this end, 40 CFR 51.308(f) lays out the process by which States determine what constitutes their long-term strategy, with the order of the requirements in 40 CFR 51.308(f)(1) through (3) generally mirroring the order of the steps in the reasonable progress analysis [14] and 40 CFR 51.308(f)(4) through (6) containing additional, related requirements. Broadly speaking, a State first must identify the Class I areas within the State and determine the Class I areas outside the State in which visibility may be affected by emissions from the State. These are the Class I areas that must be addressed in the State's long-term strategy. See 40 CFR 51.308(f) and (f)(2). For each Class I area within its borders, a State must then calculate the baseline, current, and natural visibility conditions for that area, as well as the visibility improvement made to date and the URP. See 40 CFR 51.308(f)(1). Each State having a Class I area and/or emissions that may affect visibility in a Class I area must then develop a long-term strategy that includes the enforceable emission limitations, compliance schedules, and other measures that are necessary to make reasonable progress in such areas. A reasonable progress determination is based on applying the four factors in CAA section 169A(g)(1) to sources of visibility-impairing pollutants that the State has selected to assess for controls for the second implementation period. Additionally, as further explained below, the RHR at 40 CFR 51.3108(f)(2)(iv) separately provides five ''additional factors'' [15] that States must consider in developing their long-term strategy. See 40 CFR 51.308(f)(2). A State evaluates potential emission reduction measures for those selected sources and determines which are necessary to make reasonable progress. Those measures are then incorporated into the State's long-term strategy. After a State has developed its long-term strategy, it then establishes RPGs for each Class I area within its borders by modeling the visibility impacts of all reasonable progress controls at the end of the second implementation period, *i.e.,* in 2028, as well as the impacts of other requirements of the CAA. The RPGs include reasonable progress controls not only for sources in the State in which the Class I area is located, but also for sources in other States that contribute to visibility impairment in that area. The RPGs are then compared to the baseline visibility conditions and the URP to ensure that progress is being made towards the statutory goal of preventing any future and remedying any existing anthropogenic visibility impairment in Class I areas. 40 CFR 51.308(f)(2) and (3).

In addition to satisfying the requirements at 40 CFR 51.308(f) related to reasonable progress, the regional haze SIP submissions revisions due by July 31, 2021, for the second implementation period must address the requirements in 40 CFR 51.308(g)(1) through (5) pertaining to periodic reports describing progress towards the RPGs, 40 CFR 51.308(f)(5), as well as requirements for FLM consultation that apply to all visibility protection SIPs and SIP revisions. 40 CFR 51.308(i).

A State must submit its regional haze SIP and subsequent SIP revisions to the EPA according to the requirements applicable to all SIP revisions under the CAA and the EPA's regulations. See CAA 169(b)(2); CAA 110(a). Upon EPA approval, a SIP is enforceable by the Agency and the public under the CAA. If the EPA finds that a State fails to make a required SIP revision, or if the EPA finds that a State's SIP is incomplete or disapproves the SIP, the Agency must promulgate a Federal implementation plan (FIP) that satisfies the applicable requirements. CAA 110(c)(1).

A. Identification of Class I Areas

The first step in developing a regional haze SIP is for a State to determine which Class I areas, in addition to those within its borders, ''may be affected'' by emissions from within the State. In the 1999 RHR, the EPA determined that all States contribute to visibility impairment in at least one Class I area, 64 FR 35720–22, July 1, 1999, and explained that the statute and regulations lay out an ''extremely low triggering threshold'' for determining ''whether States should be required to engage in air quality planning and analysis as a prerequisite to determining the need for control of emissions from sources within their State.'' *Id.* at 35721.

A State must determine which Class I areas must be addressed by its SIP by evaluating the total emissions of visibility impairing pollutants from all sources within the State. While the RHR does not require this evaluation to be conducted in any particular manner, the EPA's 2019 Guidance provides recommendations for how such an assessment might be accomplished, including by, where appropriate, using the determinations previously made for the first implementation period. 2019 Guidance at 8–9. In addition, the determination of which Class I areas may be affected by a State's emissions is subject to the requirement in 40 CFR 51.308(f)(2)(iii) to ''document the technical basis, including modeling, monitoring, cost, engineering, and emissions information, on which the State is relying to determine the emission reduction measures that are necessary to make reasonable progress in each mandatory Class I Federal area it affects.''

[14] EPA explained in the 2017 RHR Revisions that we were adopting new regulatory language in 40 CFR 51.308(f) that, unlike the structure in 51.308(d), ''tracked the actual planning sequence.'' (82 FR 3091, January 10, 2017).

[15] The five ''additional factors'' for consideration in section 51.308(f)(2)(iv) are distinct from the four factors listed in CAA section 169A(g)(1) and 40 CFR 51.308(f)(2)(i) that states must consider and apply to sources in determining reasonable progress.

B. Calculations of Baseline, Current, and Natural Visibility Conditions; Progress to Date; and the Uniform Rate of Progress

As part of assessing whether a SIP submission for the second implementation period is providing for reasonable progress towards the national visibility goal, the RHR contains requirements in 40 CFR 51.308(f)(1) related to tracking visibility improvement over time. The requirements of this section apply only to States having Class I areas within their borders; the required calculations must be made for each such Class I area. The EPA's 2018 Visibility Tracking Guidance [16] provides recommendations to assist States in satisfying their obligations under 40 CFR 51.308(f)(1); specifically, in developing information on baseline, current, and natural visibility conditions, and in making optional adjustments to the URP to account for the impacts of international anthropogenic emissions and prescribed fires. *See* 82 FR 3078 at 3103–05, January 10, 2017.

The RHR requires tracking of visibility conditions on two sets of days: the clearest and the most impaired days. Visibility conditions for both sets of days are expressed as the average deciview index for the relevant five-year period (the period representing baseline or current visibility conditions). The RHR provides that the relevant sets of days for visibility tracking purposes are the 20% clearest (the 20% of monitored days in a calendar year with the lowest values of the deciview index) and 20% most impaired days (the 20% of monitored days in a calendar year with the highest amounts of anthropogenic visibility impairment).[17] 40 CFR 51.301. A State must calculate visibility conditions for both the 20% clearest and 20% most impaired days for the baseline period of 2000–2004 and the most recent five-year period for which visibility monitoring data are available (representing current visibility conditions). 40 CFR 51.308(f)(1)(i) and (iii). States must also calculate natural visibility conditions for the clearest and most impaired days,[18] by estimating the conditions that would exist on those two sets of days absent anthropogenic visibility impairment. 40 CFR 51.308(f)(1)(ii). Using all these data, States must then calculate, for each Class I area, the amount of progress made since the baseline period (2000–2004) and how much improvement is left to achieve in order to reach natural visibility conditions.

Using the data for the set of most impaired days only, States must plot a line between visibility conditions in the baseline period and natural visibility conditions for each Class I area to determine the URP—the amount of visibility improvement, measured in deciviews, that would need to be achieved during each implementation period in order to achieve natural visibility conditions by the end of 2064. The URP is used in later steps of the reasonable progress analysis for informational purposes and to provide a non-enforceable benchmark against which to assess a Class I area's rate of visibility improvement.[19] Additionally, in the 2017 RHR Revisions, the EPA provided States the option of proposing to adjust the endpoint of the URP to account for impacts of anthropogenic sources outside the United States and/or impacts of certain types of wildland prescribed fires. These adjustments, which must be approved by the EPA, are intended to avoid any perception that States should compensate for impacts from international anthropogenic sources and to give States the flexibility to determine that limiting the use of wildland-prescribed fire is not necessary for reasonable progress. 82 FR 3078 at 3107 footnote 116, January 10, 2017.

The EPA's 2018 Visibility Tracking Guidance can be used to help satisfy the 40 CFR 51.308(f)(1) requirements, including in developing information on baseline, current, and natural visibility conditions, and in making optional adjustments to the URP. In addition, the 2020 Data Completeness Memo provides recommendations on the data completeness language referenced in 40 CFR 51.308(f)(1)(i) and provides updated natural conditions estimates for each Class I area.

C. Long-Term Strategy for Regional Haze

The core component of a regional haze SIP submission is a long-term strategy that addresses regional haze in each Class I area within a State's borders and each Class I area that may be affected by emissions from the State. The long-term strategy ''must include the enforceable emissions limitations, compliance schedules, and other measures that are necessary to make reasonable progress, as determined pursuant to (f)(2)(i) through (iv).'' 40 CFR 51.308(f)(2). The amount of progress that is ''reasonable progress'' is based on applying the four statutory factors in CAA section 169A(g)(1) in an evaluation of potential control options for sources of visibility impairing pollutants, which is referred to as a ''four-factor'' analysis. The outcome of that analysis is the emission reduction measures that a particular source or group of sources needs to implement in order to make reasonable progress towards the national visibility goal. See 40 CFR 51.308(f)(2)(i). Emission reduction measures that are necessary to make reasonable progress may be either new, additional control measures for a source, or they may be the existing emission reduction measures that a source is already implementing. See 2019 Guidance at 43; 2021 Clarifications Memo at 8–10. Such measures must be represented by ''enforceable emissions limitations, compliance schedules, and other measures'' (*i.e.,* any additional compliance tools) in a State's long-term strategy in its SIP. 40 CFR 51.308(f)(2).

Section 51.308(f)(2)(i) provides the requirements for the four-factor analysis. The first step of this analysis entails selecting the sources to be evaluated for emission reduction measures; to this end, the RHR requires States to consider ''major and minor stationary sources or groups of sources, mobile sources, and area sources'' of visibility impairing pollutants for potential four-factor control analysis. 40 CFR 51.308(f)(2)(i). A threshold question at this step is which visibility impairing pollutants will be analyzed. As the EPA previously explained, consistent with the first implementation period, the EPA generally expects that each State will analyze at least SO_2 and NO_X in selecting sources and determining control measures. See 2019 Guidance at 12, 2021 Clarifications Memo at 4. A State that chooses not to consider at least these two pollutants should demonstrate why such

[16] The 2018 Visibility Tracking Guidance references and relies on parts of the 2003 Tracking Guidance: ''Guidance for Tracking Progress Under the Regional Haze Rule,'' which can be found at *www3.epa.gov/ttnamti1/files/ambient/visible/tracking.pdf.*

[17] This document also refers to the 20% clearest and 20% most anthropogenically impaired days as the ''clearest'' and ''most impaired'' or ''most anthropogenically impaired'' days, respectively.

[18] The RHR at 40 CFR 51.308(f)(1)(ii) contains an error related to the requirement for calculating two sets of natural conditions values. The rule says ''most impaired days or the clearest days'' where it should say ''most impaired days and clearest days.'' This is an error that was intended to be corrected in the 2017 RHR Revisions but did not get corrected in the final rule language. This is supported by the preamble text at 82 FR 3098, January 10, 2017: ''In the final version of 40 CFR 51.308(f)(1)(ii), an occurrence of ''or'' has been corrected to ''and'' to indicate that natural visibility conditions for both the most impaired days and the clearest days must be based on available monitoring information.''

[19] Being on or below the URP is not a ''safe harbor''; *i.e.,* achieving the URP does not mean that a Class I area is making ''reasonable progress'' and does not relieve a state from using the four statutory factors to determine what level of control is needed to achieve such progress. See, *e.g.,* 82 FR 3078 at 3093, January 10, 2017.

consideration would be unreasonable. 2021 Clarifications Memo at 4.

While States have the option to analyze *all* sources, the 2019 Guidance explains that ''an analysis of control measures is not required for every source in each implementation period,'' and that ''[s]electing a set of sources for analysis of control measures in each implementation period is . . . consistent with the Regional Haze Rule, which sets up an iterative planning process and anticipates that a State may not need to analyze control measures for all its sources in a given SIP revision.'' 2019 Guidance at 9. However, given that source selection is the basis of all subsequent control determinations, a reasonable source selection process ''should be designed and conducted to ensure that source selection results in a set of pollutants and sources the evaluation of which has the potential to meaningfully reduce their contributions to visibility impairment.'' 2021 Clarifications Memo at 3.

The EPA explained in the 2021 Clarifications Memo that each State has an obligation to submit a long-term strategy that addresses the regional haze visibility impairment that results from emissions from within that State. Thus, source selection should focus on the in-state contribution to visibility impairment and be designed to capture a meaningful portion of the State's total contribution to visibility impairment in Class I areas. A State should not decline to select its largest in-state sources on the basis that there are even larger out-of-state contributors. 2021 Clarifications Memo at 4.[20]

Thus, while States have discretion to choose any source selection methodology that is reasonable, whatever choices they make should be reasonably explained. To this end, 40 CFR 51.308(f)(2)(i) requires that a State's SIP submission include ''a description of the criteria it used to determine which sources or groups of sources it evaluated.'' The technical basis for source selection, which may include methods for quantifying potential visibility impacts such as emissions divided by distance metrics, trajectory analyses, residence time analyses, and/or photochemical modeling, must also be appropriately documented, as required by 40 CFR 51.308 (f)(2)(iii).

Once a State has selected the set of sources, the next step is to determine the emissions reduction measures for those sources that are necessary to make reasonable progress for the second implementation period.[21] This is accomplished by considering the four factors—''the costs of compliance, the time necessary for compliance, and the energy and non-air quality environmental impacts of compliance, and the remaining useful life of any existing source subject to such requirements.'' CAA 169A(g)(1). The EPA has explained that the four-factor analysis is an assessment of potential emission reduction measures (*i.e.,* control options) for sources; ''use of the terms 'compliance' and 'subject to such requirements' in section 169A(g)(1) strongly indicates that Congress intended the relevant determination to be the requirements with which sources would have to comply in order to satisfy the CAA's reasonable progress mandate.'' 82 FR 3078 at 3091, January 10, 2017. Thus, for each source it has selected for four-factor analysis,[22] a State must consider a ''meaningful set'' of technically feasible control options for reducing emissions of visibility impairing pollutants. *Id.* at 3088. The 2019 Guidance provides that ''[a] state must reasonably pick and justify the measures that it will consider, recognizing that there is no statutory or regulatory requirement to consider all technically feasible measures or any particular measures. A range of technically feasible measures available to reduce emissions would be one way to justify a reasonable set.'' 2019 Guidance at 29.

The EPA's 2021 Clarifications Memo provides further guidance on what constitutes a reasonable set of control options for consideration: ''A reasonable four-factor analysis will consider the full range of potentially reasonable options for reducing emissions.'' 2021 Clarifications Memo at 7. In addition to add-on controls and other retrofits (*i.e.,* new emission reduction measures for sources), The EPA explained that States should generally analyze efficiency improvements for sources' existing measures as control options in their four-factor analyses, as in many cases such improvements are reasonable given that they typically involve only additional operation and maintenance costs. Additionally, the 2021 Clarifications Memo provides that States that have assumed a higher emission rate than a source has achieved or could potentially achieve using its existing measures should also consider lower emission rates as potential control options. That is, a State should consider a source's recent actual and projected emission rates to determine if it could reasonably attain lower emission rates with its existing measures. If so, the State should analyze the lower emission rate as a control option for reducing emissions. 2021 Clarifications Memo at 7. The EPA's recommendations to analyze potential efficiency improvements and achievable lower emission rates apply to both sources that have been selected for four-factor analysis and those that have forgone a four-factor analysis on the basis of existing ''effective controls.'' See 2021 Clarifications Memo at 5, 10.

After identifying a reasonable set of potential control options for the sources it has selected, a State then collects information on the four factors with regard to each option identified. The EPA has also explained that, in addition to the four statutory factors, States have flexibility under the CAA and RHR to reasonably consider visibility benefits as an additional factor alongside the four statutory factors.[23] The 2019 Guidance provides recommendations for the types of information that can be used to characterize the four factors (with or without visibility), as well as ways in which States might reasonably consider and balance that information to determine which of the potential control options is necessary to make reasonable

[20] Similarly, in responding to comments on the 2017 RHR Revisions EPA explained that ''[a] state should not fail to address its many relatively low-impact sources merely because it only has such sources and another state has even more low-impact sources and/or some high impact sources.'' Responses to Comments on Protection of Visibility: Amendments to Requirements for State Plans; Proposed Rule (81 FR 26942, May 4, 2016) at 87–88.

[21] The CAA provides that, ''[i]n determining reasonable progress there shall be taken into consideration'' the four statutory factors. CAA 169A(g)(1). However, in addition to four-factor analyses for selected sources, groups of sources, or source categories, a state may also consider additional emission reduction measures for inclusion in its long-term strategy, *e.g.,* from other newly adopted, on-the-books, or on-the-way rules and measures for sources not selected for four-factor analysis for the second planning period.

[22] ''Each source'' or ''particular source'' is used here as shorthand. While a source-specific analysis is one way of applying the four factors, neither the statute nor the RHR requires states to evaluate individual sources. Rather, states have ''the flexibility to conduct four-factor analyses for specific sources, groups of sources or even entire source categories, depending on state policy preferences and the specific circumstances of each state.'' 82 FR 3078 at 3088, January 10, 2017. However, not all approaches to grouping sources for four-factor analysis are necessarily reasonable; the reasonableness of grouping sources in any particular instance will depend on the circumstances and the manner in which grouping is conducted. If it is feasible to establish and enforce different requirements for sources or subgroups of sources, and if relevant factors can be quantified for those sources or subgroups, then states should make a separate reasonable progress determination for each source or subgroup. 2021 Clarifications Memo at 7–8.

[23] See, *e.g.,* Responses to Comments on Protection of Visibility: Amendments to Requirements for State Plans; Proposed Rule (81 FR 26942, May 4, 2016), Docket Number EPA–HQ–OAR–2015–0531, U.S. Environmental Protection Agency at 186; 2019 Guidance at 36–37.

progress. See 2019 Guidance at 30–36. The 2021 Clarifications Memo contains further guidance on how States can reasonably consider modeled visibility impacts or benefits in the context of a four-factor analysis. 2021 Clarifications Memo at 12–13, 14–15. Specifically, the EPA explained that while visibility can reasonably be used when comparing and choosing between multiple reasonable control options, it should not be used to summarily reject controls that are reasonable given the four statutory factors. 2021 Clarifications Memo at 13. Ultimately, while States have discretion to reasonably weigh the factors and to determine what level of control is needed, 40 CFR 51.308(f)(2)(i) provides that a State ''must include in its implementation plan a description of . . . how the four factors were taken into consideration in selecting the measure for inclusion in its long-term strategy.''

As explained previously, 40 CFR 51.308(f)(2)(i) requires States to determine the emission reduction measures for sources that are necessary to make reasonable progress by considering the four factors. Pursuant to 40 CFR 51.308(f)(2), measures that are necessary to make reasonable progress towards the national visibility goal must be included in a State's long-term strategy and in its SIP.[24] If the outcome of a four-factor analysis is a new, additional emission reduction measure for a source, that new measure is necessary to make reasonable progress towards remedying existing anthropogenic visibility impairment and must be included in the SIP. If the outcome of a four-factor analysis is that no new measures are reasonable for a source, continued implementation of the source's existing measures is generally necessary to prevent future emission increases and thus to make reasonable progress towards the second part of the national visibility goal: preventing future anthropogenic visibility impairment. See CAA 169A(a)(1). That is, when the result of a four-factor analysis is that no new measures are necessary to make reasonable progress, the source's existing measures are generally necessary to make reasonable progress and must be included in the SIP. However, there may be circumstances in which a State can demonstrate that a source's existing measures are *not* necessary to make reasonable progress. Specifically, if a State can demonstrate that a source will continue to implement its existing measures and will not increase its emission rate, it may not be necessary to have those measures in the long-term strategy in order to prevent future emission increases and future visibility impairment. The EPA's 2021 Clarifications Memo provides further explanation and guidance on how States may demonstrate that a source's existing measures are not necessary to make reasonable progress. See 2021 Clarifications Memo at 8–10. If the State can make such a demonstration, it need not include a source's existing measures in the long-term strategy or its SIP.

As with source selection, the characterization of information on each of the factors is also subject to the documentation requirement in 40 CFR 51.308(f)(2)(iii). The reasonable progress analysis, including source selection, information gathering, characterization of the four statutory factors (and potentially visibility), balancing of the four factors, and selection of the emission reduction measures that represent reasonable progress, is a technically complex exercise, but also a flexible one that provides States with bounded discretion to design and implement approaches appropriate to their circumstances. Given this flexibility, 40 CFR 51.308(f)(2)(iii) plays an important function in requiring a State to document the technical basis for its decision making so that the public and the EPA can comprehend and evaluate the information and analysis the State relied upon to determine what emission reduction measures must be in place to make reasonable progress. The technical documentation must include the modeling, monitoring, cost, engineering, and emissions information on which the State relied to determine the measures necessary to make reasonable progress. This documentation requirement can be met through the provision of and reliance on technical analyses developed through a regional planning process, so long as that process and its output has been approved by all State participants. In addition to the explicit regulatory requirement to document the technical basis of their reasonable progress determinations, States are also subject to the general principle that those determinations must be reasonably moored to the statute.[25] That is, a State's decisions about the emission reduction measures that are necessary to make reasonable progress must be consistent with the statutory goal of remedying existing and preventing future visibility impairment.

The four statutory factors (and potentially visibility) are used to determine what emission reduction measures for selected sources must be included in a State's long-term strategy for making reasonable progress. Additionally, the RHR at 40 CFR 51.308(f)(2)(iv) separately provides five ''additional factors'' [26] that States must consider in developing their long-term strategies: (1) emission reductions due to ongoing air pollution control programs, including measures to address reasonably attributable visibility impairment; (2) measures to reduce the impacts of construction activities; (3) source retirement and replacement schedules; (4) basic smoke management practices for prescribed fire used for agricultural and wildland vegetation management purposes and smoke management programs; and (5) the anticipated net effect on visibility due to projected changes in point, area, and mobile source emissions over the period addressed by the long-term strategy. The 2019 Guidance provides that a State may satisfy this requirement by considering these additional factors in the process of selecting sources for four-factor analysis, when performing that analysis, or both, and that not every one of the additional factors needs to be considered at the same stage of the process. See 2019 Guidance at 21. The EPA provided further guidance on the five additional factors in the 2021 Clarifications Memo, explaining that a State should generally not reject cost-effective and otherwise reasonable controls merely because there have been emission reductions since the first planning period owing to other ongoing air pollution control programs or merely because visibility is otherwise projected to improve at Class I areas. Additionally, States generally should not rely on these additional factors to

[24] States may choose to, but are not required to, include measures in their long-term strategies beyond just the emission reduction measures that are necessary for reasonable progress. See 2021 Clarifications Memo at 16. For example, states with smoke management programs may choose to submit their smoke management plans to EPA for inclusion in their SIPs but are not required to do so. See, *e.g.,* 82 FR 3078 at 3108–09, January 10, 2017 (requirement to consider smoke management practices and smoke management programs under 40 CFR 51.308(f)(2)(iv) does not require states to adopt such practices or programs into their SIPs, although they may elect to do so).

[25] *See Arizona ex rel. Darwin* v. *U.S. EPA*, 815 F.3d 519, 531 (9th Cir. 2016); *Nebraska* v. *U.S. EPA*, 812 F.3d 662, 668 (8th Cir. 2016); *North Dakota* v. *EPA*, 730 F.3d 750, 761 (8th Cir. 2013); *Oklahoma* v. *EPA*, 723 F.3d 1201, 1206, 1208–10 (10th Cir. 2013); cf. also *Nat'l Parks Conservation Ass'n* v. *EPA*, 803 F.3d 151, 165 (3d Cir. 2015); Alaska Dep't of Envtl. Conservation v. EPA, 540 U.S. 461, 485, 490 (2004).

[26] The five ''additional factors'' for consideration in section 51.308(f)(2)(iv) are distinct from the four factors listed in CAA section 169A(g)(1) and 40 CFR 51.308(f)(2)(i) that states must consider and apply to sources in determining reasonable progress.

summarily assert that the State has already made sufficient progress and, therefore, no sources need to be selected or no new controls are needed regardless of the outcome of four-factor analyses. 2021 Clarifications Memo at 13.

Because the air pollution that causes regional haze crosses State boundaries, 40 CFR 51.308(f)(2)(ii) requires a State to consult with other States that also have emissions that are reasonably anticipated to contribute to visibility impairment in a given Class I area. Consultation allows for each State that impacts visibility in an area to share whatever technical information, analyses, and control determinations may be necessary to develop coordinated emission management strategies. This coordination may be managed through inter- and intra-RPO consultation and the development of regional emissions strategies; additional consultations between States outside of RPO processes may also occur. If a State, pursuant to consultation, agrees that certain measures (*e.g.,* a certain emission limitation) are necessary to make reasonable progress at a Class I area, it must include those measures in its SIP. 40 CFR 51.308(f)(2)(ii)(A). Additionally, the RHR requires that States that contribute to visibility impairment at the same Class I area consider the emission reduction measures the other contributing States have identified as being necessary to make reasonable progress for their own sources. 40 CFR 51.308(f)(2)(ii)(B). If a State has been asked to consider or adopt certain emission reduction measures, but ultimately determines those measures are not necessary to make reasonable progress, that State must document in its SIP the actions taken to resolve the disagreement. 40 CFR 51.308(f)(2)(ii)(C). The EPA will consider the technical information and explanations presented by the submitting State and the State with which it disagrees when considering whether to approve the State's SIP. See *id.;* 2019 Guidance at 53. Under all circumstances, a State must document in its SIP submission all substantive consultations with other contributing States. 40 CFR 51.308(f)(2)(ii)(C).

D. Reasonable Progress Goals

Reasonable progress goals ''measure the progress that is projected to be achieved by the control measures States have determined are necessary to make reasonable progress based on a four-factor analysis.'' 82 FR 3078 at 3091, January 10, 2017. Their primary purpose is to assist the public and the EPA in assessing the reasonableness of States' long-term strategies for making reasonable progress towards the national visibility goal. See 40 CFR 51.308(f)(3)(iii) and (iv). States in which Class I areas are located must establish two RPGs, both in deciviews—one representing visibility conditions on the clearest days and one representing visibility on the most anthropogenically impaired days—for each area within their borders. 40 CFR 51.308(f)(3)(i). The two RPGs are intended to reflect the projected impacts, on the two sets of days, of the emission reduction measures the State with the Class I area, as well as all other contributing States, have included in their long-term strategies for the second implementation period.[27] The RPGs also account for the projected impacts of implementing other CAA requirements, including non-SIP based requirements. Because RPGs are the modeled result of the measures in States' long-term strategies (as well as other measures required under the CAA), they cannot be determined before States have conducted their four-factor analyses and determined the control measures that are necessary to make reasonable progress. See 2021 Clarifications Memo at 6.

For the second implementation period, the RPGs are set for 2028. Reasonable progress goals are not enforceable targets, 40 CFR 51.308(f)(3)(iii); rather, they ''provide a way for the States to check the projected outcome of the [long-term strategy] against the goals for visibility improvement.'' 2019 Guidance at 46. While States are not legally obligated to achieve the visibility conditions described in their RPGs, 40 CFR 51.308(f)(3)(i) requires that ''[t]he long-term strategy and the reasonable progress goals must provide for an improvement in visibility for the most impaired days since the baseline period and ensure no degradation in visibility for the clearest days since the baseline period.'' Thus, States are required to have emission reduction measures in their long-term strategies that are projected to achieve visibility conditions on the most impaired days that are better than the baseline period and shows no degradation on the clearest days compared to the clearest days from the baseline period. The baseline period for the purpose of this comparison is the baseline visibility condition—the annual average visibility condition for the period 2000–2004. See 40 CFR 51.308(f)(1)(i), 82 FR 3078 at 3097–98, January 10, 2017.

So that RPGs may also serve as a metric for assessing the amount of progress a State is making towards the national visibility goal, the RHR requires States with Class I areas to compare the 2028 RPG for the most impaired days to the corresponding point on the URP line (representing visibility conditions in 2028 if visibility were to improve at a linear rate from conditions in the baseline period of 2000–2004 to natural visibility conditions in 2064). If the most impaired days RPG in 2028 is above the URP (*i.e.,* if visibility conditions are improving more slowly than the rate described by the URP), each State that contributes to visibility impairment in the Class I area must demonstrate, based on the four-factor analysis required under 40 CFR 51.308(f)(2)(i), that no additional emission reduction measures would be reasonable to include in its long-term strategy. 40 CFR 51.308(f)(3)(ii). To this end, 40 CFR 51.308(f)(3)(ii) requires that each State contributing to visibility impairment in a Class I area that is projected to improve more slowly than the URP provide ''a robust demonstration, including documenting the criteria used to determine which sources or groups [of] sources were evaluated and how the four factors required by paragraph (f)(2)(i) were taken into consideration in selecting the measures for inclusion in its long-term strategy.'' The 2019 Guidance provides suggestions about how such a ''robust demonstration'' might be conducted. See 2019 Guidance at 50–51.

The 2017 RHR, 2019 Guidance, and 2021 Clarifications Memo also explain that projecting an RPG that is on or below the URP based on only on-the-books and/or on-the-way control measures (*i.e.,* control measures already required or anticipated before the four-factor analysis is conducted) is not a ''safe harbor'' from the CAA's and RHR's requirement that all States must conduct a four-factor analysis to determine what emission reduction measures constitute reasonable progress. The URP is a planning metric used to gauge the amount of progress made thus far and the amount left before reaching natural visibility conditions. However, the URP is not based on consideration of the four statutory factors and therefore cannot

[27] RPGs are intended to reflect the projected impacts of the measures all contributing states include in their long-term strategies. However, due to the timing of analyses and of control determinations by other states, other on-going emissions changes, a particular state's RPGs may not reflect all control measures and emissions reductions that are expected to occur by the end of the implementation period. The 2019 Guidance provides recommendations for addressing the timing of RPG calculations when states are developing their long-term strategies on disparate schedules, as well as for adjusting RPGs using a post-modeling approach. 2019 Guidance at 47–48.

answer the question of whether the amount of progress being made in any particular implementation period is ''reasonable progress.'' See 82 FR 3078 at 3093, 3099–3100, January 10, 2017; 2019 Guidance at 22; 2021 Clarifications Memo at 15–16.

E. Monitoring Strategy and Other State Implementation Plan Requirements

Section 51.308(f)(6) requires States to have certain strategies and elements in place for assessing and reporting on visibility. Individual requirements under this section apply either to States with Class I areas within their borders, States with no Class I areas but that are reasonably anticipated to cause or contribute to visibility impairment in any Class I area, or both. A State with Class I areas within its borders must submit with its SIP revision a monitoring strategy for measuring, characterizing, and reporting regional haze visibility impairment that is representative of all Class I areas within the State. SIP revisions for such States must also provide for the establishment of any additional monitoring sites or equipment needed to assess visibility conditions in Class I areas, as well as reporting of all visibility monitoring data to the EPA at least annually. Compliance with the monitoring strategy requirement may be met through a State's participation in the Interagency Monitoring of Protected Visual Environments (IMPROVE) monitoring network, which is used to measure visibility impairment caused by air pollution at the 156 Class I areas covered by the visibility program. 40 CFR 51.308(f)(6), (f)(6)(i) and (iv). The IMPROVE monitoring data is used to determine the 20% most anthropogenically impaired and 20% clearest sets of days every year at each Class I area and tracks visibility impairment over time.

All States' SIPs must provide for procedures by which monitoring data and other information are used to determine the contribution of emissions from within the State to regional haze visibility impairment in affected Class I areas. 40 CFR 51.308(f)(6)(ii) and (iii). Section 51.308(f)(6)(v) further requires that all States' SIPs provide for a statewide inventory of emissions of pollutants that are reasonably anticipated to cause or contribute to visibility impairment in any Class I area; the inventory must include emissions for the most recent year for which data are available and estimates of future projected emissions. States must also include commitments to update their inventories periodically. The inventories themselves do not need to be included as elements in the SIP and are not subject to EPA review as part of the Agency's evaluation of a SIP revision.[28] All States' SIPs must also provide for any other elements, including reporting, recordkeeping, and other measures, that are necessary for States to assess and report on visibility. 40 CFR 51.308(f)(6)(vi). Per the 2019 Guidance, a State may note in its regional haze SIP that its compliance with the Air Emissions Reporting Rule (AERR) in 40 CFR part 51, subpart A satisfies the requirement to provide for an emissions inventory for the most recent year for which data are available. To satisfy the requirement to provide estimates of future projected emissions, a State may explain in its SIP how projected emissions were developed for use in establishing RPGs for its own and nearby Class I areas.[29]

Separate from the requirements related to monitoring for regional haze purposes under 40 CFR 51.308(f)(6), the RHR also contains a requirement at 40 CFR 51.308(f)(4) related to any additional monitoring that may be needed to address visibility impairment in Class I areas from a single source or a small group of sources. This is called ''reasonably attributable visibility impairment.'' [30] Under this provision, if the EPA or the FLM of an affected Class I area has advised a State that additional monitoring is needed to assess reasonably attributable visibility impairment, the State must include in its SIP revision for the second implementation period an appropriate strategy for evaluating such impairment.

F. Requirements for Periodic Reports Describing Progress Towards the Reasonable Progress Goals

Section 51.308(f)(5) requires a State's regional haze SIP revision to address the requirements of 40 CFR 51.308(g)(1) through (5) so that the plan revision due in 2021 will serve also as a progress report addressing the period since submission of the progress report for the first implementation period. The regional haze progress report requirement is designed to inform the public and the EPA about a State's implementation of its existing long-term strategy and whether such implementation is in fact resulting in the expected visibility improvement. See 81 FR 26942, 26950 (May 4, 2016), (82 FR 3078 at 3119, January 10, 2017). To this end, every State's SIP revision for the second implementation period is required to describe the status of implementation of all measures included in the State's long-term strategy, including BART and reasonable progress emission reduction measures from the first implementation period, and the resulting emissions reductions. 40 CFR 51.308(g)(1) and (2).

A core component of the progress report requirements is an assessment of changes in visibility conditions on the clearest and most impaired days. For second implementation period progress reports, 40 CFR 51.308(g)(3) requires States with Class I areas within their borders to first determine current visibility conditions for each area on the most impaired and clearest days, 40 CFR 51.308(g)(3)(i)(B), and then to calculate the difference between those current conditions and baseline (2000–2004) visibility conditions in order to assess progress made to date. See 40 CFR 51.308(g)(3)(ii)(B). States must also assess the changes in visibility impairment for the most impaired and clearest days since they submitted their first implementation period progress reports. See 40 CFR 51.308(g)(3)(iii)(B) and (f)(5). Since different States submitted their first implementation period progress reports at different times, the starting point for this assessment will vary state by state.

Similarly, States must provide analyses tracking the change in emissions of pollutants contributing to visibility impairment from all sources and activities within the State over the period since they submitted their first implementation period progress reports. See 40 CFR 51.308(f)(5) and (g)(4). Changes in emissions should be identified by the type of source or activity. Section 51.308(g)(5) also addresses changes in emissions since the period addressed by the previous progress report and requires States' SIP revisions to include an assessment of any significant changes in anthropogenic emissions within or outside the State. This assessment must include an explanation of whether these changes in emissions were anticipated and whether they have limited or impeded progress in reducing emissions and improving visibility relative to what the State projected based on its long-term strategy for the first implementation period.

G. Requirements for State and Federal Land Manager Coordination

Clean Air Act section 169A(d) requires that before a State holds a

[28] See ''Step 8: Additional requirements for regional haze SIPs'' in 2019 Regional Haze Guidance at 55.

[29] *Id.*

[30] EPA's visibility protection regulations define ''reasonably attributable visibility impairment'' as ''visibility impairment that is caused by the emission of air pollutants from one, or a small number of sources.'' 40 CFR 51.301.

public hearing on a proposed regional haze SIP revision, it must consult with the appropriate FLM or FLMs; pursuant to that consultation, the State must include a summary of the FLMs' conclusions and recommendations in the notice to the public. Consistent with this statutory requirement, the RHR also requires that States ''provide the [FLM] with an opportunity for consultation, in person and at a point early enough in the State's policy analyses of its long-term strategy emission reduction obligation so that information and recommendations provided by the [FLM] can meaningfully inform the State's decisions on the long-term strategy.'' 40 CFR 51.308(i)(2). Consultation that occurs 120 days prior to any public hearing or public comment opportunity will be deemed ''early enough,'' but the RHR provides that in any event the opportunity for consultation must be provided at least 60 days before a public hearing or comment opportunity. This consultation must include the opportunity for the FLMs to discuss their assessment of visibility impairment in any Class I area and their recommendations on the development and implementation of strategies to address such impairment. 40 CFR 51.308(i)(2). In order for the EPA to evaluate whether FLM consultation meeting the requirements of the RHR has occurred, the SIP submission should include documentation of the timing and content of such consultation. The SIP revision submitted to the EPA must also describe how the State addressed any comments provided by the FLMs. 40 CFR 51.308(i)(3). Finally, a SIP revision must provide procedures for continuing consultation between the State and FLMs regarding the State's visibility protection program, including development and review of SIP revisions, five-year progress reports, and the implementation of other programs having the potential to contribute to impairment of visibility in Class I areas. 40 CFR 51.308(i)(4).

IV. EPA's Evaluation of West Virginia's Regional Haze Submission for the Second Implementation Period

A. Background on West Virginia's First Implementation Period SIP Submission

West Virginia submitted its Regional Haze SIP for the first implementation period to the EPA on June 18, 2008. The EPA issued a limited approval and limited disapproval of West Virginia's first implementation period Regional Haze SIP submission on March 23, 2012 (77 FR 16937) because, while West Virginia's SIP revision, as a whole, strengthened the West Virginia SIP, deficiencies in the State's June 2008 regional haze SIP submittal arising from the remand by the U.S. Court of Appeals for the District of Columbia (D.C. Circuit) to the EPA of the Clean Air Interstate Rule (CAIR) necessitated a limited disapproval of these aspects of the State's SIP submittal. The EPA subsequently converted this limited approval/limited disapproval of West Virginia's regional haze SIP to a full approval on September 24, 2018, (83 FR 48249) after West Virginia submitted a revision to its Regional Haze SIP to change its reliance from CAIR to the Cross-State Air Pollution Rule (CSAPR) for the purpose of meeting BART for regional haze and addressing reasonable progress requirements. The requirements for Regional Haze SIPs for the first implementation period are contained in 40 CFR 51.308(d) and (e). Pursuant to 40 CFR 51.308(g), West Virginia was also responsible for submitting a five-year progress report as a SIP revision for the first implementation period, which it did on April 30, 2013. The EPA approved the progress report into West Virginia's SIP on June 5, 2015 (80 FR 32019).

B. West Virginia's Second Implementation Period SIP Submission and the EPA's Evaluation

In accordance with CAA sections 169A and the RHR at 40 CFR 51.308(f), (g), and (i), on August 12, 2022, WV DEP submitted a revision to West Virginia's SIP to address its Regional Haze obligations for the second implementation period, which runs through 2028. West Virginia made its 2022 Regional Haze SIP submission available for public comment on November 5, 2021. West Virginia received and responded to public comments and included both the comments and responses to those comments in its submission.

The following sections describe West Virginia's SIP submission. This document also contains the EPA's evaluation of West Virginia's submission against the applicable requirements of the CAA and RHR for the second implementation period of the Regional Haze program.

C. Identification of Class I Areas

Section 169A(b)(2) of the CAA requires each State in which any Class I Area is located or ''the emissions from which may reasonably be anticipated to cause or contribute to any impairment of visibility'' in a Class I Area to have a plan for making reasonable progress toward the national visibility goal. The RHR implements this statutory requirement at 40 CFR 51.308(f), which provides that each State's plan ''must address Regional Haze in each mandatory Class I Federal Area located within the State and in each mandatory Class I Federal Area located outside the State that may be affected by emissions from within the State,'' and (f)(2), which requires each State's plan to include a long-term strategy that addresses Regional Haze in such Class I Areas.

The EPA explained in the 1999 RHR preamble that the CAA section 169A(b)(2) requirement that States submit SIPs to address visibility impairment establishes ''an 'extremely low triggering threshold' in determining which States should submit SIPs for regional haze.'' 64 FR 35721, July 1, 1999. In concluding that each of the contiguous 48 States and the District of Columbia meet this threshold,[31] the EPA relied on ''a large body of evidence demonstrat[ing] that long-range transport of fine PM contributes to regional haze,'' *id.,* including modeling studies that ''preliminarily demonstrated that each State not having a Class I Area had emissions contributing to impairment in at least one downwind Class I Area.'' *Id.* at 35722. In addition to the technical evidence supporting a conclusion that each State contributes to existing visibility impairment, the EPA also explained that the second half of the national visibility goal—preventing *future* visibility impairment—requires having a framework in place to address future growth in visibility-impairing emissions and makes it inappropriate to ''establish criteria for excluding States or geographic areas from consideration as potential contributors to regional haze visibility impairment.'' *Id.* at 35721. Thus, the EPA concluded that the agency's ''statutory authority and the scientific evidence are sufficient to require all States to develop regional haze SIPs to ensure the prevention of any future impairment of visibility, and to conduct further analyses to determine whether additional control measures are needed to ensure reasonable progress in remedying existing impairment in downwind Class I Areas.'' *Id.* at 35722. The EPA's 2017 revisions to the RHR did not disturb this conclusion. See 82 FR 3094.

To address 40 CFR 51.308(f), WV DEP identified Class I areas within West

[31] The EPA determined that ''there is more than sufficient evidence to support our conclusion that emissions from each of the 48 contiguous states and the District of Columba may reasonably be anticipated to cause or contribute to visibility impairment in a Class I Area.'' 64 FR 35721, July 1, 1999 . Hawaii, Alaska, and the U.S. Virgin Islands must also submit Regional Haze SIPs because they contain Class I Areas.

Virginia and out-of-state Class I areas downwind of West Virginia that were affected by West Virginia statewide emissions of visibility impairing pollutants. West Virginia has two mandatory Class I areas within its borders: Dolly Sods Wilderness Area (Dolly Sods) and Otter Creek Wilderness Area (Otter Creek). Out-of-state Class I Areas affected by West Virginia included Acadia National Park (Maine), James River Face Wilderness Area (Virginia), Lye Brook Wilderness Area (Vermont), Moosehorn Wilderness Area (Maine), Roosevelt Campobello International Park (Maine/New Brunswick), Shenandoah National Park (Virginia), and Swanquarter Wilderness Area (North Carolina).

West Virginia, like other VISTAS States, implemented a two-step process to select sources contributing to visibility impairment in Class I areas within and outside the State. West Virginia presented the results of Particulate Matter Source Apportionment Technology (PSAT) [32] modeling that VISTAS conducted to estimate the projected impact of statewide SO_2 and NO_X emissions across all emissions sectors in 2028 on total light extinction for the 20 percent most impaired days in all Class I areas in the VISTAS modeling domain.[33] PSAT results were used to calculate the percent contribution of each tagged facility to the total sulfate and nitrate point source (EGU + non-EGU) contribution at each Class I area; more details of the PSAT analysis can be found in Appendix E–7b of WV DEP's SIP submittal. West Virginia also relied on facility-level SO_2 and NO_X Area of Influence (AOI) analyses [34] for each Class I area to assess relative visibility impacts from each facility.[35]

WV DEP concluded that sources and emissions within the State contribute to visibility impairment at seven out-of-state Class I Areas and took part in the emission control strategy consultation process as a member of VISTAS. WV DEP also included analyses of visibility impairing pollutant emissions and visibility impacts from other RPOs and States, and their impact on Class I Areas within VISTAS.[36] From these analyses, WV DEP concluded that ''sulfate will generally be a much larger contributor to visibility impairment in 2028 at VISTAS mandatory Federal Class I areas than nitrates'' and, that ''emissions from other planning organizations . . . generally have higher contributions to 2028 visibility impairment at mandatory Federal Class I areas in VISTAS than the emissions from the home State.'' [37] As stated previously, the threshold for visibility impact on Class I Areas is low. Therefore, a supposedly small visibility impact on any of the Class I Areas identified by WV DEP as being impacted by its emissions is sufficient to trigger the regional haze requirements to evaluate sources for control measures considering the four factors.

D. Calculations of Baseline, Current, and Natural Visibility Conditions; Progress to Date; and the Uniform Rate of Progress

Section 51.308(f)(1) requires states to determine the following for ''each mandatory Class I Federal Area located within the State'': baseline visibility conditions for the most impaired and clearest days, natural visibility conditions for the most impaired and clearest days, progress to date for the most impaired and clearest days, the differences between current visibility conditions and natural visibility conditions, and the URP. This section also provides the option for States to propose adjustments to the URP line for a Class I Area to account for visibility impacts from anthropogenic sources outside the United States and/or the impacts from wildland prescribed fires that were conducted for certain, specified objectives. 40 CFR 51.308(f)(1)(vi)(B). WV DEP included this information in sections 2, 3, and 7 of its Regional Haze SIP submittal for the second planning period.

In its submittal, WV DEP determines and presents the baseline, natural, and current visibility conditions as well as the differences between these for the 20 percent most anthropogenically impaired days and the 20 percent clearest days for the State's two Class I Areas, as required by the RHR. Specifically, WV DEP included the baseline visibility conditions (2000–2004) in table 2–3, current visibility conditions (2014–2018) in table 2–5, and natural visibility conditions in table 2–2 for the 20 percent clearest and 20 percent most impaired days in each VISTAS Class I area in deciviews, including those in West Virginia. WV DEP also included the actual progress made in deciviews toward natural visibility conditions to date since the baseline period (current minus baseline), and the additional progress needed to reach natural visibility conditions from current conditions (natural minus current) in table 2–6 (for the 20 percent most impaired days) and table 2–7 (for the 20 percent clearest days) for VISTAS Class I areas, including those in West Virginia.

Additionally, Figure 3–1 of WV DEP's submittal provides the URP glide path for the 20 percent most impaired days for Dolly Sods. The URP shown in Figure 3–1 for Dolly Sods is considered representative of Otter Creek.[38] The URPs were developed by the State using EPA guidance [39] and used data collected from the IMPROVE monitoring sites.

However, as set forth later in this NPRM, because the EPA is proposing to disapprove West Virginia's Regional Haze plan for the second planning period due to deficiencies in the overall submittal, the EPA takes no position on whether the analysis described in section D meets the requirements of the Clean Air Act.

[32] PSAT is Particulate Matter Source Apportionment Technology, which is an option in the photochemical visibility impact modeling performed by VISTAS that is a methodology to track the fate of both primary and secondary PM. PSAT allows emissions to be tracked (''tagged'') for individual facilities as well as various combinations of sectors and geographic areas (*e.g.,* by state). The PSAT results provide the modeled contribution of each of the tagged sources or groups of sources to the total visibility impacts.

[33] West Virginia did not include primary PM (directly emitted) data in this analysis because the PSAT analyses performed by VISTAS tagged statewide emissions of SO_2 and NO_X and did not tag primary total PM emissions in the analysis after concluding that emissions of the PM precursors SO_2 and NO_X, particularly from point sources, are projected to have the largest impact on visibility impairment in 2028 and that SO_2 and NO_X are the most significant visibility impairing pollutants from controllable anthropogenic sources.

[34] States often use an AOI analysis to help identify the areas and sources most likely contributing to poor visibility in Class I areas. The AOI analysis involves running a backward trajectory model to determine the origin of the air parcels affecting visibility, which is then combined with emissions data to determine the sources or source sectors most likely contributing to pollutant emissions. For more information on AOI analyses, see Appendix D of WV DEP's Regional Haze SIP Submittal for the 2nd Planning Period.

[35] See Section 7.5, ''Area of Influence Analyses for West Virginia Class I Areas'' of WV DEP's Regional Haze SIP Submittal for the 2nd Planning Period.

[36] See Section 7.2.3, ''Projected VISTAS 2028 Emissions Inventory'', Section 7.2.5, ''2028 Visibility Projection Results'', and Section 7.4, ''Relative Contributions to Visibility Impairment: Pollutants, Source Categories, and Geographic Areas'' of WV DEP's Regional Haze SIP Submittal for the 2nd Planning Period.

[37] See Section 7.4, ''Relative Contributions to Visibility Impairment: Pollutants, Source Categories, and Geographic Areas'' of WV DEP's Regional Haze SIP Submittal for the 2nd Planning Period.

[38] Otter Creek has no IMPROVE monitor. Visibility at Otter Creek is assumed to be the same as the nearest Class I area monitor located at Dolly Sods.

E. Long-Term Strategy for Regional Haze

Each State having a Class I Area within its borders or emissions that may affect visibility in a Class I Area must develop a long-term strategy for making reasonable progress towards the national visibility goal. CAA section 169A(b)(2)(B). As explained in the Background section of this document, reasonable progress is achieved when all States contributing to visibility impairment in a Class I Area are implementing the measures determined—through application of the four statutory factors to sources of visibility impairing pollutants—to be necessary to make reasonable progress. 40 CFR 51.308(f)(2)(i). Each State's long-term strategy must include the enforceable emission limitations, compliance schedules, and other measures that are necessary to make reasonable progress. 40 CFR 51.308(f)(2). All new (*i.e.,* additional) measures that are the outcome of four-factor analyses are necessary to make reasonable progress and must be in the long-term strategy. If the outcome of a four-factor analysis and other measures necessary to make reasonable progress is that no new measures are reasonable for a source, that source's existing measures are necessary to make reasonable progress, unless the State can demonstrate that the source will continue to implement those measures and will not increase its emission rate. Existing measures that are necessary to make reasonable progress must also be in the long-term strategy. In developing its long-term strategy, a State must also consider the five additional factors in 40 CFR 51.308(f)(2)(iv). As part of its reasonable progress determinations, the State must describe the criteria used to determine which sources or group of sources were evaluated (*i.e.,* subjected to four-factor analysis) for the second implementation period and how the four factors were taken into consideration in selecting the emission reduction measures for inclusion in the long-term strategy. 40 CFR 51.308(f)(2)(iii).

1. Source Selection

To determine the necessary emission reductions measures, a State must first select the sources to evaluate. As stated in the Background section of this document, source selection should focus on the in-state contribution to visibility impairment and be designed to capture a meaningful portion of the State's total contribution to visibility impairment in Class I areas. WV DEP included information on the emissions impacts from numerous sources within the State on various Class I Areas. Section 7.6.1, Table 7–17 of the WV DEP submittal lists the facilities selected for PSAT tagging in Virginia and West Virginia based on an AOI visibility contribution of 0.2% or more which include thirteen facilities located in West Virginia.[40] West Virginia then decided not to select eight of those facilities for analysis of reasonable progress measures or controls.[41] The State considered a percent contribution of greater than or equal to 1.00% (individual facility contribution divided by the total sulfate and nitrate contributions from EGU + non-EGU point sources) to determine whether to select a facility for a reasonable progress analysis. West Virginia excluded seven of the eight unselected facilities in part based on a PSAT modeling result of <1.00% as well as various factors through a qualitative weight-of-the evidence approach.[42] The remaining of the unselected facilities, Grant Town Plant,[43] had a PSAT modeling result of ≥1.00% which WV DEP claimed could be scaled down to <1.00% contribution to Dolly Sods based on recent emissions data.[44] WV DEP also included discussion as to why no reasonable progress analysis is warranted for Mountaineer Plant, a ninth facility that was not tagged for PSAT modeling.[45]

After excluding eight of the thirteen facilities selected for PSAT tagging—along with Mountaineer Plant, which had not been selected for PSAT—West Virginia then selected the remaining five facilities: Harrison Power Station; Fort Martin Power Station; Pleasants Power Station; Mitchell Plant; and the John E. Amos Plant, to perform a four-factor analysis.[46] WV DEP also included in its reasonable progress discussion at section 7.8 of the SIP submittal a sixth facility—Grant Town Plant—which was initially included among the eight facilities for which WV DEP explained that no reasonable progress analysis was warranted.[47] Although the State then selected Grant Town Plant for a reasonable progress evaluation, it did not contact the facility to request such analysis giving as the reason, ''the facility is already subject to a federally enforceable Title V permit (R30–04900026–2020) that limits SO_2 emissions to less than the quantity projected to exceed the 1.00% visibility threshold of the VISTAS PSAT modeling.'' [48] Below in this document, when discussing reasonable progress and the facilities included in section 7.8 of the SIP submittal, the EPA refers to the group selected for reasonable progress analysis as ''five facilities plus Grant Town Plant'' or ''six facilities'' for ease of reference, even though it is somewhat unclear whether WV DEP's discussion of Grant Town Plant in section 7.8 of the SIP submittal is meant to be a reasonable progress analysis.[49]

Section 7.6.2, Table 7–19 of the SIP submittal contains PSAT results for the Dolly Sods Area, which includes fifteen facilities where sulfate contributions are ≥1.00% and addresses nearly 36.5% of the entire sulfate plus nitrate point source visibility impact in 2028; six of these fifteen facilities are located in West Virginia.[50] Table 7–20 contains PSAT results for the Otter Creek Wilderness Area, which includes fourteen facilities where sulfate contributions are ≥1.00% and addresses more than 34.7% of the entire sulfate plus nitrate point source visibility impact in 2028; five of these fourteen

Amos Plant; Dominion Resources, Inc.—Mount Storm Power Station; Equitrans—Copley Run CS 70; Files Creek; Glady; Kingsford Manufacturing Company; Longview Power; Mitchell Plant; Monongahela Power Co.—Fort Martin Power; Monongahela Power Co.—Pleasants Power Station; Morgantown Energy Associates.

[41] See section 7.6.4, ''Selection of Sources for Reasonable Progress Evaluation'' of WV DEP's Regional Haze SIP submittal for the 2nd Planning Period (''section 7.6.4'' or ''section 7.6.4 of the SIP submittal'').

[42] *Id.*

[43] West Virginia refers to this facility as ''Grant Town Plant'' as well as ''Grant Town Power Plant'' in the SIP submittal.

[44] *Id.* at 182 of 257.

[45] *Id.* at 187 of 257. West Virginia's SIP submittal provided scant explanation for Mountaineer's inclusion in this group of facilities. West Virginia might have included Mountaineer because the EPA's January 5, 2022 comments submitted during the public comment period asked for ''further explanation of why the 4th largest SO_2 source in the state was not selected for a 4-factor analysis . . . .'' Appendix H–4 ''West Virginia Department of Environmental Protection Division of Air Quality Responses to EPA Region 3 Comments on the West Virginia Draft Regional Haze State Implementation Plan August 2022,'' section. 6.e.

[46] See section 7.8, ''Reasonable Progress for Individual Sources to be Included in the Long-Term Strategy'', of WV DEP's Regional Haze SIP submittal for the 2nd Planning Period (''section 7.8'' or ''section 7.8 of the SIP submittal'').

[47] *Id.* and section 7.6.4 of the SIP submittal.

[48] Section 7.8 of the SIP submittal at 197 of 257.

[49] West Virginia does not clearly explain why it included Grant Town Plant in the section 7.8 reasonable progress discussion after it already claimed that Grant Town Plant should be excluded from four-factor analysis and reasonable progress analysis in the section 7.6.4 source selection discussion whittling down the larger group of thirteen facilities tagged for PSAT modeling.

[50] Allegheny Energy Supply Co, LLC—Harrison; Monongahela Power Co—Pleasants Power Station; Kentucky Power Company—Mitchell Plant; Appalachian Power Company—John E. Amos Plant; Monongahela Power Co—Fort Martin Power; and American Bituminous Power—Grant Town Plant.

facilities are located in West Virginia.[51] The West Virginia facilities listed in tables 7–19 and 7–20 are the same as the five facilities plus Grant Town Plant in section 7.8 of the SIP submittal.

Tables 7–21 through 7–27 contain the PSAT results for the five West Virginia facilities[52] that WV DEP selected for evaluation of emissions control measures based on sulfate contributions of ≥1.00% to the following out-of-state Class I Areas: Acadia National Park (Maine), James River Face Wilderness Area (Virginia), Lye Brook Wilderness Area (Vermont), Moosehorn Wilderness Area (Maine), Roosevelt Campobello International Park (Maine/New Brunswick), Shenandoah National Park (Virginia), and Swanquarter Wilderness Area (North Carolina), respectively.

Further, WV DEP States that (1) the Allegheny Energy Supply Co LLC—Harrison facility[53] affects eight Class I areas; (2) Monongahela Power Co.—Pleasants Power Station impacts six Class I areas; (3) Mitchell Plant impacts four Class I areas; (4) Monongahela Power Co.—Fort Martin Power impacts three Class I areas; (5) Appalachian Power Company—John E. Amos Plant impacts three Class I areas; and (6) American Bituminous Power—Grant Town Plant impacts one Class I area. The full list of tagged facilities and their contributions to each Class I area can be found in Appendix E–7b of the SIP submittal. Thus, WV DEP ultimately identifies six West Virginia facilities as contributing to visibility impairment in at least one Class I Area, and five of these facilities as contributing to visibility impairment in multiple Class I Areas.[54] [55]

While the RHR does not explicitly list factors that a State must or may not consider when selecting the sources for which it will determine what control measures are necessary to make reasonable progress, a State opting to select a set of its sources to analyze must reasonably choose factors and apply them in a reasonable way given the statutory requirement to make reasonable progress towards natural visibility.[56] The 2019 Guidance provides examples of criteria a State may consider to select sources for analysis of emission control measures[57] none of which align with the types of information that West Virginia provided as justification. Given that WV DEP already performed quantitative PSAT and AOI modeling for these sources, confirming their contribution to visibility impairment at multiple in-state and out-of-state Class I areas, it is not clear based on the record presented why it is appropriate for WV DEP to rely on a qualitative weight-of-evidence reasoning, such as general claims about topography and stack height, to exclude these impacting sources from analysis under the four factors, which is what WV DEP did for eight of the thirteen facilities tagged for PSAT analysis.

2. Four-Factor Analysis and Reasonable Progress Analysis

For five of the six facilities discussed in section 7.8 of the SIP submittal, WV DEP requested that each of the facilities perform four-factor analyses to evaluate measures necessary for reasonable progress.[58] Four of these five facilities declined to provide four-factor analyses and instead claimed that such analyses were unnecessary for various reasons.[59] It is unclear whether WV DEP relied on the justifications provided by these four facilities, though WV DEP never performed its own full four-factor analysis for any of those four facilities. Only one of the five facilities—Pleasants Power Station—provided to WV DEP an engineering consultant's report titled ''Regional Haze Four-Factor SO_2 Analysis.'' [60] WV DEP included the facilities' explanations in the SIP submittal at section 7.8, and related appendices. The sixth facility discussed in section 7.8 is Grant Town Plant[61] even though WV DEP did not request from the facility a reasonable progress or four-factor analysis for Grant Town Plant because WV DEP did not believe such an analysis was warranted.[62] WV DEP then included tables of its own cost estimates[63] for scrubber replacement at six facilities—the five facilities plus Grant Town Plant—which this document discusses at section IV.E.2.c. of this document. However, as we discuss in section IV.E.2.c. of this document, these cost estimates were deficient and insufficiently documented.

a. Harrison Power Station, Grant Town Power Plant, Fort Martin Power Station, Mitchell Power Plant, and John E. Amos Power Plant

In Section 7.8, WV DEP lists a variety of reasons four of the selected facilities (Harrison Power Station, Fort Martin Power Station, Mitchell Power Plant, and John E. Amos Power Plant) provided for not performing a four-factor analysis. In the SIP submittal, WV DEP does not explicitly state that it is adopting the four facilities' reasons as its own, but WV DEP reiterates the facilities' reasons in detail and does not disavow their explanations. To the extent that WV DEP relied on this information in developing its long-term strategy, it did not analyze or evaluate the information provided by the facilities and did not adequately explain how such information was or was not being used to support WV DEP's decision not to require a full four-factor analysis of these facilities. Although it is unclear whether WV DEP is relying on the four facilities' rationales, the EPA addresses them in this NPRM. WV DEP also provided its own reasons why Grant Town Plant, which it did not request to perform a four-factor analysis but included in the reasonable progress discussion, should not be required to impose any additional measures.

[51] Allegheny Energy Supply Co, LLC—Harrison; Monongahela Power Co—Pleasants Power Station; Kentucky Power Company—Mitchell Plant; Appalachian Power Company—John E. Amos Plant; and Monongahela Power Co—Fort Martin Power.

[52] Allegheny Energy Supply Co, LLC—Harrison; Monongahela Power Co—Pleasants Power Station; Kentucky Power Company—Mitchell Plant; Appalachian Power Company—John E. Amos Plant; and Monongahela Power Co—Fort Martin Power.

[53] WV DEP sometimes refers to this facility as Monongahela Power Company—Harrison Power Station, with a Facility ID of 54033–6271711. This is the same Facility ID used for Allegheny Energy Supply Co LLC—Harrison.

[54] See Section 7.6.2, ''PSAT Contributions at West Virginia Class I Areas'' and Section 7.6.3, ''AoI versus PSAT Contributions'' of WV DEP's Regional Haze SIP submittal for the 2nd Planning Period.

[55] In its submittal, and as described in IV.E.2. of this document, West Virginia eventually ruled out additional and existing emission reduction measures as being necessary for reasonable progress for five of these sources, without conducting a full analysis of the four statutory factors of CAA 169A(g)(1) and 40 CFR 51.308(f)(2). However, for the sixth facility, Pleasants Power, which conducted a documented four-factor analysis, West Virginia did not reasonably justify its reliance on the four factors to rule out additional and existing emissions reductions measures that could be necessary for reasonable progress. See sections 7.6.4 and 7.8 of the SIP submittal.

[56] 2019 Guidance at 10.

[57] *Id.* (''Factors could include but are not limited to baseline source emissions, baseline source visibility impacts (or a surrogate metric for the impacts), the in-place emission control measures and by implication the emission reductions that are possible to achieve at the source through additional measures, the four statutory factors (to the extent they have been characterized at this point in SIP development), potential visibility benefits (also to the extent they have been characterized at this point in SIP development), and the five additional required factors listed in 40 CFR 51.308(f)(2)(iv).'')

[61] Section 7.8 of the SIP submittal at 197–98 of 257.

[62] See Section 7.6.4 of the SIP submittal at 182 of 257.

[63] Section 7.8, Table 7–37 ''Estimated FGD replacement costs per facility, based on a 20-year remaining life expectancy,'' and Table 7–38, ''Estimated FGD replacement costs per unit'', SIP submittal at 203–05 of 257.

For Harrison Power Station, WV DEP stated in its SIP submittal [64] that, when asked for a reasonable progress analysis, facility owner/operator Monongahela Power Company (MonPower) ''stated neither a formal SO_2 controls four-factor analysis nor an SO_2 permit limit were necessary or appropriate for Harrison for regional haze purposes for multiple reasons.'' These reasons included claims by MonPower that ''visibility impacts from the facility are presently well below the URP glide paths, proving already implemented past measures have been and continue to be successful''; that ''Harrison FGD systems demonstrated a 97.1% average removal efficiency for 2017 through 2019, which exceeds the 95% control deemed as BART by EPA''; and that ''Harrison averaged 0.16 pounds per mmBtu SO_2 emissions from 2015 through 2020 [which] is in compliance with the 0.2 pounds per mmBtu SO_2 emission limit of the MATS rule for coal-fired EGUs, which the company claims is adequate to meet the exemption outlined in the EPA's August 20, 2019 Guidance on Regional Haze State Implementation Plans for the Second Implementation Period. . . .'' [65] MonPower further claims that ''Harrison is subject to and meets the limits of the CSAPR FIP, and EPA and the courts have previously determined CSAPR is better than BART.''

For Grant Town Plant, WV DEP stated in its SIP submittal [66] that because ''the facility is already subject to a federally enforceable Title V permit (R30–04900026–2020) that limits SO_2 emissions to less than the quantity projected to exceed the 1.00% visibility threshold of the VISTAS PSAT modeling, it was determined that a reasonable progress analysis or a four-factor analysis request for Grant Town Plant was not warranted'' and that ''Grant Town maintains adequate SO_2 emissions credits from CAMD for its SO_2 emissions, and the facility is subject to the CSAPR SO_2 budget.'' WV DEP also claimed that the remaining lifespan of Grant Town Power Plant is thirteen years, or until 2035,[67] when the power purchase agreement for the facility expires, and that WV DEP does not anticipate that this power purchase agreement will be extended. WV DEP therefore concludes ''additional SO_2 controls would not be economically feasible for such a small and unique facility with a looming anticipated retirement date.'' [68] Because of the reasons previously stated, WV DEP decided to not request a four-factor analysis from Grant Town Power Plant.[69]

For Fort Martin Power Station, WV DEP included in its SIP submittal [70] the same claims that MonPower relied on for screening out Harrison Power Station from additional analysis, except that MonPower stated that ''Fort Martin averaged 0.11 pounds per mmBtu SO_2 emissions from 2015 through 2020.'' WV DEP also claimed that the remaining lifespan of Fort Martin Power Station is expected to be four years, or 2026, when WV DEP expects ''the proposed Good Neighbor CSAPR FIP would require the facility to install SCR for NOx control'' and that WV DEP does not expect the facility's owner/operator to do so.[71]

For Mitchell Power Plant, WV DEP stated in its SIP submittal [72] that, when asked for a reasonable progress analysis, facility owner/operator Kentucky Power Company (KPCo), a subsidiary of American Electric Power (AEP), responded that ''Mitchell emissions were well ahead of the uniform rate of progress goals to natural background visibility''; that ''continuing emissions reductions and retirements of coal-fired EGUs within the eastern United States, including within the AEP system, would provide for continuing progress within the planning period without the need for additional SO_2 emissions reductions from Mitchell''; that ''Mitchell already employs the most effective type of SO_2 controls available, which are designed to achieve a minimum of 98% emissions reduction''; that ''first CAIR and then CSAPR were previously determined by EPA to be better than BART, and Mitchell is in compliance with the CSAPR emissions trading program''; that ''Mitchell has always achieved the 0.2 pounds SO_2 per million Btu limit implemented by the MATS rule as a surrogate compliance emission limit, often by less than half this amount on an annual basis''; and that ''EPA's own guidance States sources which were selected for analysis in the first planning period, and which installed BART controls could be excluded from analysis for the second planning period.'' Based on these claims, KPCo concluded that no further evaluation of Mitchell nor additional SO_2 controls are necessary.

For John E. Amos Power Plant, WV DEP stated in its SIP submittal [73] that, when asked for a reasonable progress analysis, facility owner/operator Appalachian Power Company (APCo), stated that ''Amos emissions were well ahead of the uniform rate of progress goals to natural background visibility''; that continuing emissions reductions and retirements of coal-fired EGUs within the eastern United States, including within the AEP system, would provide for continuing progress within the planning period without the need for additional SO_2 emissions reductions from Amos''; that ''Amos already employs the most effective type of SO_2 controls available, which are designed to achieve a minimum of 98% emissions reduction''; that ''first CAIR and then CSAPR were previously determined by EPA to be better than BART, and Amos complies with the CSAPR emissions trading program''; that ''Amos has always achieved the 0.2 pounds SO_2 per million Btu limit implemented by the MATS rule as a surrogate compliance emission limit, often by well less than half this amount on an annual basis''; and that ''EPA's own guidance States sources which were selected for analysis in the first planning period, and which installed BART controls could be excluded from analysis for the second planning period.'' Based on these claims, APCo concluded that no further evaluation of Amos nor additional SO_2 controls are necessary.

WV DEP's rejection of reasonable progress measures for Harrison Power Station, Grant Town Plant, Fort Martin Power Station, Mitchell Power Plant, and John E. Amos Power Plant is not based on consideration of the mandatory four factors and instead appears to be based, at least in part, on the facility owners' contention that these facilities are effectively controlled via existing measures,[74] as described in

[64] Section 7.8 of the SIP submittal at 197 of 257.

[74] Section 7.8 of the SIP submittal at 196–202 of 257. It is unclear if West Virginia is adopting the rationales of these facilities to justify not requiring these facilities to conduct the four-factor analysis West Virginia requested, or whether West Virginia's justification for not requiring a four-factor analysis is based solely on what it describes as West Virginia's own ''cost analyses for replacing the BART SO_2 controls at the six selected facilities with limestone forced oxidation (LFSO) scrubbers, assuming a 98% average reduction for the hypothetical new scrubbers.'' SIP Submittal at 202

Continued

the August 2019 Guidance.[75] However, if the outcome of a four-factor analysis is that no new measures are reasonable for a source, the EPA has interpreted the statute and the RHR to require that the source's existing measures are needed to prevent future visibility impairment (*i.e.,* to prevent future emission increases) and thus necessary to make reasonable progress.[76] If existing controls are determined to be necessary to make reasonable progress the existing controls must be incorporated into the SIP and made federally enforceable and permanent within the long-term strategy.[77] Furthermore, if a State does not find its existing measures necessary for reasonable progress, a State must submit a demonstration within its submittal supporting its rationale.[78] However, WV DEP did not provide any demonstration assessing the necessity of existing measures for reasonable progress; did not provide documentation for any specific existing measures such as permits, emissions limitations, or consent decrees; did not identify any existing controls to be included in the long-term strategy for the second planning period; and in the event the State found its existing controls unnecessary for reasonable progress, did not provide a demonstration supporting such a statement.[79] WV DEP also cites anticipated source retirements, *i.e.,* shutdowns (for example, Fort Martin by 2026) as reasons for not requiring new measures on screened-in sources as a result of reasonable progress analyses.[80] WV DEP also states that its estimated expected visibility improvements in its two Class I areas will be achieved via proposed or past shutdowns.[81] However, while WV DEP provides information regarding anticipated and prior shutdowns within its submittal, it also states that it ''considers all shuttered facilities which emit air pollution as necessary for reasonable progress towards the goal of minimizing anthropogenic visibility impairment at Class I areas.'' [82]

Nevertheless, WV DEP did not include the necessary documentation (*e.g.,* for sources that have recently retired, documentation that demonstrates applicable sources are unable to resume operation and/or the State has revoked the active air permits) to ensure such shutdowns are made federally enforceable and permanent within the SIP.[83] In fact, WV DEP stated that ''modifying the SIP to reflect every permit modification or facility shutdown which contributes to reasonable progress is itself not reasonable.'' [84] However, the RHR at 40 CFR 51.308(f)(2) and (3) requires that measures necessary for reasonable progress must be enforceable, documented and included in the SIP. WV DEP has not done so with respect to either existing or anticipated source shutdowns.

Furthermore, WV DEP did not explain or adequately justify the absence of existing measures for certain facilities identified in the reasonable progress discussion within its SIP submission. WV DEP presents information from four of the facilities in support of those facilities' claims that four-factor analyses and SO_2 permit limits are unnecessary (Harrison Power Station, Fort Martin Power Station, Mitchell Power Plant, John E. Amos Power Plant) because they emit at or below the Mercury and Air Toxics Standards (MATS) SO_2 limits. To support its decision, WV DEP cites page 23 of the 2019 Guidance.[85] However, while States may rely on the use of applicable SO_2 limits (such as the 0.2 lb/MMBtu MATS limit) as being necessary for reasonable progress for the second planning period, States must have adopted either permit conditions or State regulations containing the SO_2 limit(s) for the source(s) in question. Furthermore, the State must incorporate the applicable permit conditions or State regulations into the State's SIP submittal to make the conditions permanent and federally enforceable.[86] Without documentation confirming what SO_2 limits are necessary for reasonable progress, and documentation that the four sources are required to meet a federally enforceable and permanent permit condition equal to the applicable MATS SO_2 limits, West Virginia has not fulfilled its obligation under the CAA and RHR under 40 CFR 51.308(f)(2) to develop a long-term strategy containing enforceable measures that are necessary to make reasonable progress in the second planning period.

WV DEP presents justifications from the facilities regarding compliance with BART control efficiencies (Harrison Power Station, Fort Martin Power Station) and CSAPR emissions trading

of 257. EPA has addressed in this NPRM the issues raised by the facilities to the extent they may have been relied upon by West Virginia.

[75] See August 2019 Guidance at 22–25.

[76] Section 4 of the 2021 Clarifications Memo, pages 8–9. See also CAA 169A(b)(2); 40 CFR 51.308(f)(2).

[77] Section 4 of the 2021 Clarifications Memo. See also CAA 169A(b)(2); 40 CFR 51.308(f)(2). Additionally, consistent with our proposed partial disapproval of Arizona's Haze Plan (see 89 FR 47398, May 31, 2024), if a state determines no new measures are necessary for reasonable progress, the must then determine whether a source's existing measures are necessary for reasonable progress. EPA finalized partial disapproval of Arizona's Haze Plan on December 18, 2024 (see 89 FR 102744).

[78] Consistent with our proposed partial disapproval for Wyoming's Haze Plan (see 89 FR 63030, August 1, 2024), to the extent a state finds its existing measures are not necessary for reasonable progress, a state must provide a demonstration supporting their claim. EPA finalized partial disapproval of Wyoming's Haze Plan on December 2, 2024 (see 89 FR 95121). See also 2019 Guidance at 22–25.

[79] EPA is not stating that all existing measures are required to be in the SIP. As we acknowledged in the 2021 Clarifications Memo, ''there may be circumstances in which a source's existing measures are not necessary to make reasonable progress.'' However, EPA would expect that if a state believed that existing measure are not necessary for reasonable progress for the second planning period the state would ''demonstrate that a source will continue to implement its existing measures and will not increase its emission rate, it may not be necessary to require those measures under the regional haze program in order to prevent future emission increases.'' 2021 Clarifications Memo at 9. WVDEP provided no demonstration or explanation of its decision not to evaluate existing controls for these sources.

[80] ''Cost Estimates for Scrubber Replacement at Facilities Selected for Four Factor Analyses'' at 206 of 257 of the SIP submittal. Note also that as part of source selection West Virginia gives as a reason for not choosing Morgantown Energy Associates facility for reasonable progress analysis its filing of a permit application for two boiler retirements scheduled for 2020, SIP submittal at 184 of 257.

[81] West Virginia states that Pleasants Power should be placed on the deactivation list by June 1, 2023, SIP submittal 206 of 257 and uses this as the lifespan of the facility in estimating costs of replacement controls as discussed below. West Virginia also lists a number of past shutdowns for various West Virginia facilities in section 7.2.2, ''State Control Programs Included in the 2028 Projection Year.''

[82] Appendix H–4, ''West Virginia Department of Environmental Protection Division of Air Quality Responses to EPA Region 3 Comments on the West Virginia Draft Regional Haze State Implementation Plan August 2022,'' section 2, WV DEP's Regional Haze SIP Submittal for the 2nd Planning Period.

[83] While fuel conversions are not mentioned with respect to the six sources, West Virginia describes fuel conversions for other facilities at section 7.2.2, ''State Control Programs Included in the 2028 Projection Year.'' In the body of the main SIP submittal at section 7.2.2, West Virginia neither indicates whether it is relying on these fuel conversions as measures necessary for reasonable progress in the second planning period nor does it include the necessary documentation to ensure that the emission reductions resulting from the fuel conversions are permanently and federally enforceable. However, in Appendix H–4, section 4, in responding to EPA comments, West Virginia discusses non-EGU industrial boilers being replaced with natural gas units and states that it ''considers boiler replacements at these smaller non-EGU Sources to be reasonable progress'' and that ''[f]ederally enforceable permits demonstrating these changes have been added to the SIP supporting documentation.'' EPA is unable to locate these permits in the supporting documentation appended to the SIP submittal.

[84] Appendix H–4, section 2.

[85] SIP submittal at 197 and 198 of 257.

[86] The MATS SO_2 limit is a limit that facilities may use to demonstrate that they meet the HCl limit for MATS, but facilities also have the option of directly complying with the MATS HCl limit, and therefore are not necessarily required to meet the MATS SO_2 limit unless the limit is included as a specific permit condition.

(Grant Town Power Plant, Mitchell Power Plant, John E. Amos Power Plant) as reasons not to conduct four-factor analyses to evaluate additional measures that may be necessary for reasonable progress in the second planning period. Although it may be reasonable for a State not to select a particular source with BART-eligible units that installed and began operating controls to meet BART emission limits for the first implementation period on a pollutant-specific basis for further analysis,[87] the Regional Haze Rule at 40 CFR 51.308(e)(5) anticipates the re-assessment of BART-eligible sources under second planning period SIP emissions control analyses. A State might, however, have a different, reasonable basis for not selecting such sources for control measure analysis.[88] To the extent that this basis applies to the sources WV DEP selected for further analysis, West Virginia must document this basis within its SIP submittal as required by 40 CFR 51.308(f)(2)(i) and (iii). In this case, West Virginia failed to do so. Additionally, West Virginia's BART determination for EGUs for the regional haze first planning period relied on CSAPR as an alternative to source-specific BART determinations.[89] CSAPR is a trading program that does not impose specific emissions limitations on particular facilities. And in fact, WV DEP did not identify any enforceable and permanent SO_2 limits that apply to the selected power plants subject to CSAPR. Therefore, in accordance with 40 CFR 51.308(e)(5), it is not reasonable for West Virginia to exclude the selected BART-eligible sources from consideration under the four statutory factors, simply because they are in compliance for BART.

Finally, WV DEP also notes, as the facilities noted, that several consent decrees related to currently installed SO_2 scrubbers for two of the facilities identified for further evaluation in its SIP (Mitchell Power Plant, John E. Amos Power Plant). But WV DEP does not state whether the consent decrees impose any specific emission limits, and does not ask for the measures required under the consent decrees submitted to be made federally enforceable and permanent within the SIP if there are such specific emission limits.

In conclusion, while WV DEP reiterates the facilities' information—that there are or may be anticipated or recent source retirements, the applicable MATS SO_2 emissions limits, BART requirements, and consent decrees within its SIP submittal for five of the sources selected for consideration under the four statutory factors—WV DEP provides no documentation or evidence within its submittal that it has incorporated the aforementioned existing effective controls as federally enforceable and permanent measures to be included in its long-term strategy for the second planning period. Additionally, WV DEP provides no evidence of, or documentation of, an actual long-term strategy that contains enforceable emissions limitations that West Virginia has determined are necessary to make reasonable progress as required by CAA 169A and the RHR, 40 CFR 51.308(f)(2).

For four of the six facilities (Harrison Power Station, Fort Martin Power Station, John E Amos Power Plant, Mitchell Power Plant) that were selected to determine measures necessary for reasonable progress, WV DEP also cites information from the owners of the power plants with reference to its progress toward achieving the URP glidepath for Dolly Sods and Otter Creek. The facility owners cite being below the URP as an additional reason for not providing four-factor analyses or imposing any reasonable progress measures or controls. While it is not clear if West Virginia is relying on any of the information provided by the facilities, including the URP, the EPA reinforces the fact that reliance on being at or below the URP is not a basis to forgo requiring further analysis of emissions measures for these sources, in the 2017 RHR preamble, the EPA clearly stated that being on or below the URP is not a ''safe harbor''; *i.e.,* achieving the URP does not mean that a Class I Area is making ''reasonable progress'' and does not relieve a State from using the four statutory factors to determine the emissions measures needed to achieve such progress.[90] Simply being below the URP should therefore not be used as a factor when determining what additional controls, if any, are necessary for reasonable progress. The URP is a planning metric used to gauge the amount of progress made thus far and the amount left to make. Because the URP is not based on the four statutory factors, it cannot be used to determine whether the amount of progress made in any particular implementation period is reasonable.[91]

WV DEP also indicates that SO_2 reductions achieved in the first planning period for certain sources or facilities—including Harrison Power Station, Fort Martin Power Station, Mitchell Power Plant, and John E. Amos Power Plant—was raised by those facilities as a justification to excuse them from having to undergo further evaluation and a four-factor analysis.[92] The EPA acknowledges that West Virginia made significant reductions in SO_2 emissions in the first planning period and that surrounding States and RPOs contribute to SO_2 emissions in West Virginia Class I Areas. But, to the extent that West Virginia is relying on this rationale, neither the Regional Haze Rule nor the CAA allows a State to avoid properly considering the four factors, in reliance on their previous planning period reductions and/or due to emissions in other States, as required by CAA 169A(g)(1) and the RHR, 40 CFR 51.308(f)(2). Additionally, the EPA has advised States that a source's visibility impact relative to a State's total contribution to visibility impairment is relevant to ensuring that a State is addressing its own contribution regardless of what other States are doing.[93]

b. Pleasants Power Station

As previously discussed, WV DEP evaluated six facilities as part of the reasonable progress analysis to determine if any potential emissions reduction measures were necessary for reasonable progress in the second planning period. Of these six facilities, only Pleasants Power Station (owned and operated by Energy Harbor) submitted an analysis utilizing the four statutory factors prescribed under CAA 169A(g)(1) and 40 CFR 51.308(f)(2)(i).[94] The Pleasants Power Station reasonable progress analysis considered three pre-combustion and five post-combustion SO_2 emissions controls.[95] The pre-

[92] See, for example, pages 201–202 of WV DEP's Regional Haze SIP Submittal for the 2nd Planning Period.

[93] 2021 Clarifications Memo at 15.

[94] The four statutory factors are the costs of compliance, the time necessary for compliance, the energy and non-air quality environmental impacts of compliance, and the remaining useful life of any potentially affected anthropogenic source of visibility impairment. *See* CAA 169A(g)(1) and 40 CFR 51.308(f)(2)(i).

[95] Section 7.8 of the SIP submittal at 199 of 257.

combustion control options considered were: utilization of lower sulfur coals; fuel blending with limestone; and coal cleaning. The post-combustion controls considered were: wet limestone scrubbers, also known as limestone forced oxidation scrubbers (LSFO);[96] spray dry absorbers (SDA); dry sorbent injection (DSI); circulating dry scrubbers with fabric filters (DS/FF); and hydrated ash reinjection (HAR).''[97] Based on the documentation provided within the submittal, it appears WV DEP relied, at least in part, on the January 2021 ''Regional Haze Four-Factor Analysis''[98] provided by Energy Harbor to eliminate all potential control options, aside from LSFO, from further consideration under the four statutory factors under the basis of technological feasibility. However, the justifications provided by Energy Harbor as to why it determined these control options to be infeasible are more appropriately considered within the context of an economic analysis. For example, Energy Harbor stated that use of lower sulfur coal is technologically infeasible. To justify this statement, Energy Harbor explained that use of lower sulfur coal would require facility modifications. While those modifications would come with some associated cost (which is not quantified or documented within the West Virginia submittal), those modifications are not described in sufficient detail for the EPA to be able to evaluate whether these options are, in fact, technologically infeasible. WV DEP did not provide any additional explanation or analysis beyond that provided by Energy Harbor.

Similarly, several post-combustion controls—spray dryer absorber, dry sorbent injection, circulating dry scrubber, and hydrated ash reinjection—were also stated to be technologically infeasible, but the justifications are, again, primarily economic in nature.[99] Table 1–1 of the January 2021 ''Regional Haze Four-Factor Analysis'' lists loss of revenue from sale of recovered gypsum and the need to add a particulate removal system and dry by-product disposal issues as the primary reasons to reject these controls on the basis of technological infeasibility. First, as with the pre-combustion controls, WV DEP (and the facility) have not provided sufficient detail for the EPA to be able to adequately evaluate whether these potential control options were appropriately eliminated from further analysis under the four statutory factors based on technological infeasibility. Second, while there may be legitimate technological issues with the addition of a particulate removal system (*e.g.,* plant layout/space constraints), the loss of revenue from gypsum recovery and additional waste removal costs are economic in nature and more appropriately considered under the cost of compliance factor. However, neither Energy Harbor, nor WV DEP, provided sufficient evidence as to how these factors would impact the cost of compliance for implementing these control technologies. While the facility did provide some cost data within its submittal to the State, neither the source nor the State provided cost calculations in the form of dollar per ton of emissions reduced. Therefore, because there is no detailed cost analysis documented within the SIP submittal using an established metric such as dollar per ton, the EPA therefore is unable to evaluate whether these controls might be available at reasonable cost.[100] West Virginia failed to substantiate its determination that energy and non-air quality impacts resulting from the installation of SO_2 control measures and the remaining useful life of the units did not justify the cost of installing SO_2 controls. West Virginia also failed to reasonably quantify and consider the ''cost of compliance'' and develop a record with respect to those costs as a basis for eliminating potential control options, in addition to incorrectly classifying the rationale as being based on technological infeasibility. These deficiencies result in an inadequate consideration by West Virginia of the four factors to eliminate possible controls for reasonable progress.

With respect to LSFO, which was the single control option that was deemed to be technologically feasible and was evaluated for cost of compliance, WV DEP stated that Energy Harbor estimated the ''cost-effectiveness of the LFSO (sic) system is $11,292.95 per ton, or $9,931.94 per ton for one scrubber,'' and ''the installation time for an LFSO (sic) system at Pleasants to be approximately 5 years with 2–3 years of plant non-operation, which is insurmountable lost revenue.''[101] However, neither Energy Harbor nor WV DEP has provided documentation within the record to support these calculations and the assertion that a two-year outage would be necessary for the modifications.

In addition to the deficient four-factor analysis, West Virginia's submission does not meet the requirements of CAA 169A or 40 CFR 51.308(f) because it did not analyze or include federally enforceable existing effective measures for Pleasants Power Station as necessary measures to meet reasonable progress for the second planning period. As we noted in our discussion with respect to West Virginia's failure to consider existing measures for the facilities for which it ultimately did not require a four-factor analysis, West Virginia's rejection of new controls for Pleasants Power Station should have resulted in consideration of whether existing measures at Pleasants Power Station are necessary for reasonable progress.[102] The RHR is designed to achieve the statutory goal of ''remedying of any existing, impairment of visibility in mandatory class I Federal areas which impairment results from manmade air pollution,'' CAA 169A(a), through a ''long-term strategy [that] must include the enforceable emissions limitations, compliance schedules, and other measures that are necessary to make reasonable progress, as determined pursuant to [40 CFR 51.308](f)(2)(i) through (iv).'' 40 CFR 51.308(f)(2). While existing visibility impairment is remedied by reducing emissions from existing sources, the EPA has explained that ''[f]uture visibility impairment is prevented by mitigating impacts from new sources and ensuring that existing sources do not increase their emissions in a manner inconsistent with reasonable progress.'' Therefore, ''[w]hen the outcome of a four-factor analysis is that no new measures are reasonable for a source, the source's existing measures are generally needed to prevent future visibility impairment (*i.e.,* to prevent future emission increases) and thus necessary to make reasonable progress. Measures that are necessary to make reasonable progress must be included in the SIP.''[103] West Virginia eliminated additional control measures with a deficient and

[96] LSFO is the correct abbreviation, though West Virginia also uses the incorrect abbreviation LFSO multiple times in the SIP submittal as quoted by EPA.

[97] Section 7.8 of the SIP submittal at 199 of 257.

[98] Appendix G–2 at G–2d ''Response Letter from Energy Harbor (Pleasants Station),'' WV DEP's Regional Haze SIP Submittal for the 2nd Planning Period.

[99] See Appendix G–2 at G–2d section 4.2 ''Step 2: Eliminate Technically Infeasible SO_2 Control Technologies'' of the ''Regional Haze Four Factor Analysis.''

[100] The cost data provided in the WV DEP Regional Haze SIP Submittal is presented in table 4.1.2 of the January 2021 ''Regional Haze Four-Factor Analysis,'' in various units of $/KW, $/kw-yr, and $/MWh. It is unclear how these values relate to EPA's recommended metric of cost/ton of emissions reduction. It is also unclear how/if West Virginia relied on these costs, since these controls were deemed to be technically infeasible, rather than being too costly. See 2019 Guidance at 31.

[101] Section 7.8 of the SIP Submittal at 200 of 257.

[102] See 2019 Guidance at 22–25

[103] Section 4 of the 2021 Clarifications Memo, pages 8–9. See also CAA 169A(b)(2); 40 CFR 51.308(f)(2).

inadequately justified or documented four-factor analysis and then did not analyze whether existing measures at Pleasants Power Station were necessary for reasonable progress, leaving the EPA unable to determine if the existing control measures should have been included in the long-term strategy as required by 40 CFR 51.308(f)(2) and outlined in our 2019 Guidance at 20–22.

West Virginia also stated in its SIP submittal that ''Energy Harbor noted the mandatory Federal Class I areas where the VISTAS PSAT modeling predicted greater than 1.00% threshold visibility impacts from the facility are presently well below the URP glide paths, demonstrating already implemented past emissions reductions measures have been and continue to be successful.'' Like the discussion in section IV.E.2.a. of this document regarding the other five facilities, simply being below the URP should not be used to determine what additional controls, if any, are necessary for reasonable progress, as the URP is only meant to gauge the amount of progress made thus far and the amount left to make. Because the URP is not based on the four statutory factors, it cannot be used to determine whether the amount of progress made in any particular implementation period is reasonable.[104] While it is unclear as to what extent Energy Harbor relied upon this assumption when conducting its analyses, the EPA reiterates that the URP cannot be used to eliminate additional control measures from consideration under a reasonable progress analysis/four statutory factors.

WV DEP stated that the remaining useful life of Pleasants Power Station is one year, based on the claim that Energy Harbor placed both units on the PJM deactivation list for deactivation by June 1, 2023.[105] However, as of November 2024, there is no evidence as to if this facility remains in operation or has permanently shut down, and WV did not include any documentation with its SIP submittal to substantiate this anticipated shutdown that would make it permanent and federally enforceable within the SIP submittal.[106] As explained previously in the discussion on the other facilities selected for reasonable progress, certain retirements/shutdowns could be considered as part of West Virginia's long-term strategy for making progress towards the national goal, provided that they are made permanent and federally enforceable and are included in the SIP. However, West Virginia has not requested that the shutdown, nor provided the necessary documentation of the shutdown, for it to be included as a permanent and federally enforceable measure necessary for reasonable progress its long term strategy in the SIP. Therefore, the EPA concludes there is nothing within WV DEP's submittal to substantiate the use of the one year remaining useful life provided for Pleasants Power Station.

c. West Virginia's Cost Estimates and Four-Factor Analyses for Replacing Existing SO_2 Controls With New LSFO Scrubbers

As previously discussed, WV DEP provided its own independent cost estimates analyzing the replacement of existing BART SO_2 controls with new LSFO scrubbers for all six facilities in section 7.8 of the SIP submittal. WV DEP stated within its submittal that LSFO ''is considered the best technology with the highest SO_2 removal efficiency of all coal and acid gas control technologies.'' [107] In table 7–37,[108] WV DEP estimated the facility-wide cost per potential ton of emission reduction based on a twenty-year remaining life expectancy.

As set forth in table 7–38, WV DEP then estimated the cost per potential ton of emission reduction for each unit based on the anticipated remaining useful life of each unit. WV DEP states that these per-unit cost estimates are ''significantly more representative'' because the estimates in table 7–37 ''are quite generous in assuming the expected life of the selected facilities to be 20 years.'' [109] WV DEP stated that the remaining useful life of Fort Martin Power Station is anticipated to be four years, or until 2026, when WV DEP expects ''the proposed Good Neighbor CSAPR FIP would require the facility to install SCR for NO_X control'' and that WV DEP does not expect the facility's owner/operator to do so.[110] WV DEP also stated that the remaining useful life of Grant Town Plant is thirteen years, or 2035,[111] when the power purchase agreement for the facility expires, and that WV DEP does not anticipate that this power purchase agreement will be extended beyond 2035. WV DEP also stated that the remaining lifespans of Harrison Power Station, the John E. Amos Plant, and the Mitchell Plant each are not anticipated to exceed fifteen years, or 2037, based on the age of the facility in 2037 (sixty-five years old) compared to the fifty-year average lifespan of coal-fired power plants in the United States according to the Energy Information Administration (EIA).[112] Finally, as discussed previously, WV DEP stated that the remaining lifespan of Pleasants Power Station is one year, as the owner/operator placed the facility on the PJM list for deactivation by June 1, 2023, though WV DEP's response to the EPA's comments also notes that this shutdown is ''not currently enforceable.''[113] Furthermore, WV DEP has not provided any evidence that the described retirement dates for any of the six facilities it performed cost effectiveness analyses for are federally enforceable and permanent within its SIP submittal.

In addition to ''remaining useful life'' being one of the four statutory factors, the EPA has previously established within its 2019 Guidance that a short remaining useful life is also directly correlated with the cost of compliance factor, as the annualized calculated cost of compliance generally increases with a shorter remaining useful life based on the decreasing amortization period.[114] In other words, a short remaining useful life increases the remaining cost of compliance for implementing new or additional emissions control technologies. As previously discussed, WV DEP has not provided sufficient evidence within its SIP submittal that any of the six retirement dates are federally enforceable to warrant the use of a shorter remaining useful life within its cost estimates. Therefore, the EPA is unable to conclude whether the provided dates represent a reasonable

[104] See 2019 Guidance at 50 and 2021 Clarifications Memo at 15.

[105] Section 7.8 of the SIP Submittal at 204, 206 of 257

[106] 2019 Guidance at 34 (''In the situation of an enforceable requirement for the source to cease operation before the end of the useful life of the controls under consideration, a state may use the enforceable shutdown date as the end of the remaining useful life. To the extent such a requirement is being relied upon for a reasonable progress determination, the measure would need to be included in the SIP and/or be federally enforceable. See 40 CFR 51.308(f)(2).'').

assumption upon which to base a cost analysis [115].

Additionally, the cost estimates that WV DEP performed for the six facilities discussed in IV.E.2.a. and IV.E.2.b., of this document, are insufficiently justified within its SIP submittal. For example, WV DEP includes categories of costs (such as new LSFO costs and annual operation and maintenance costs as facility-wide and unit-specific costs) in tables 7–37 and 7–38. WV DEP explains that these costs were based on a 9,500 Btu/kWH [116] heat rate and an assumed 20-year lifetime. However, WV DEP does not provide any evidence supporting how it established those costs, nor does WV DEP explain the origin of such information including its underlying calculations or documentation. For example, as noted above, WV DEP did not provide unit level evidence of enforceable and permanent retirements for units that have an assumed shortened lifetime in table-7–38. But WV DEP also did not adequately explain why they used a 20-year lifetime for the calculations in table 7–37 instead of a 30-year lifetime, as recommended in the EPA's Control Cost Manual. Comparing the existing age of operating plants to the average age of all plants in the country is not an appropriate justification for assuming a shortened lifetime (using 20 years instead of 30 years). The EPA agrees that it would likely be impractical and prohibitively expensive to remove the existing control equipment and replace it with entirely new controls in pursuit of relatively minor improvements in emission reduction efficiency. However, this is not the appropriate basis upon which to exclude potential additional measures (*e.g.,* optimization of existing controls with a corresponding emissions limit) from consideration in a reasonable progress analysis, and would be inconsistent with consideration of a ''meaningful set'' of control options.[117] In addition, as West Virginia is requiring no additional emissions reductions measures for selected sources in the second planning period, the SIP submittal also does not explain or adequately support the absence of analysis or documentation of existing measures within the SIP (*e.g.,* existing permit limits) for the facilities identified in the reasonable progress discussion and whether those measures are necessary for reasonable progress. West Virginia's deficient and insufficiently documented cost estimates ultimately result in the State's failure to develop a long-term strategy containing enforceable measures that are necessary to make reasonable progress in the second planning period under CAA 169A and RHR 40 CFR 51.308(f)(2).[118]

d. Summary/Conclusion

Regarding selection of sources for reasonable progress and four-factor analyses, West Virginia's submittal cites the EPA's 2019 Guidance in saying that ''that the selection of emission sources for analysis is the responsibility of the state.'' [119] However, as part of this analysis, States are required to adequately justify their rationale and methodology for selecting sources and evaluating emissions controls. And in fact, West Virginia quotes the regional haze rule requirement at 40 CFR 51.308(f)(2)(i) that ''The State must include in its implementation plan a description of the criteria it used to determine which sources or groups of sources it evaluated and how the four factors were taken into consideration in selecting the measures for inclusion in its long-term strategy.'' [120] Based on the information contained in the SIP submittal and the EPA's review of the information, West Virginia has not satisfied this requirement.

Therefore, West Virginia's inadequate analysis of the four statutory factors was unreasonable. It was not reasonable for West Virginia to reject determining what measures, if any, are necessary to make reasonable progress toward the national goal, and thus need to be a part of the State's long-term strategy. West Virginia failed to ''evaluate and determine the emission reduction measures that are necessary to make reasonable progress by considering the costs of compliance, the time necessary for compliance, the energy and non-air quality environmental impacts of compliance, and the remaining useful life of any potentially affected anthropogenic source of visibility impairment,'' as required by 40 CFR 51.308(f)(2)(i) and CAA section 169A(g)(1). The EPA expressed these issues and concerns during the public comment period of West Virginia's draft SIP submittal.[121] West Virginia's submittal has not adequately addressed these deficiencies.

Further, the national goal set by Congress outlines both the remedying of any existing visibility impairment, and also preventing any future visibility impairment. CAA section 169A(a). In the absence of any new measures, West Virginia also did not evaluate whether the continued implementation of the existing measures at any of the selected sources is necessary for reasonable progress. Specifically, West Virginia did not clearly explain that it intends to submit any of the measures for the six facilities discussed in section 7.8 of the SIP as existing measures necessary for reasonable progress, did not submit documentation for any particular existing measures, and does not request to include such measures in the SIP as part of its long-term strategy. West Virginia therefore did not provide a reasonable rationale to support a conclusion that for the second planning period, no new or existing measures are necessary for its long-term strategy, despite identifying numerous sources that impact visibility at nine Class I Areas.

Providing a long-term strategy for making reasonable progress toward the national goal, including consideration of the four factors, is a statutory and regulatory requirement for every State. Although WV DEP selected six sources for reasonable progress analysis and conducted its own cost estimates for those six sources, and one facility conducted a four-factor analysis upon which WV DEP relied, West Virginia failed to conduct sufficiently robust and adequately supported analyses of the four statutory factors for any of the six sources. West Virginia neither assessed other potential new measures, nor did it conduct any analysis of existing measures or put forth such measures for inclusion in the SIP. Therefore West Virginia has not established that its second planning period SIP submission contains the emission limits, schedules of compliance, and other measures as may be necessary to make reasonable progress toward meeting the national

[115] The EPA Control Cost Manual generally recommends an assumed 30-year lifetime for scrubbers and used a 30- year lifetime in all of the Control Cost Manual example calculations. See Section 5—Chapter 1: Wet and Dry Scrubbers for Acid Gas Control, pp 1–8 and 1–36 to 1–37, available at*www.epa.gov/sites/default/files/2021-05/documents/wet_and_dry_scrubbers_section_5_chapter_1_control_cost_manual_7th_edition.pdf.* See also 2019 Guidance at 33–34 (''In the situation where an enforceable shutdown date does not exist, the remaining useful life of a control under consideration should be full period of useful life of that control as recommended by EPA's Control Cost Manual.'').

[116] Kilowatthour (kWh) is a measure of electricity defined as a unit of work or energy, measured as 1 kilowatt (1,000 watts) of power expended for 1 hour.

[117] 82 FR 3088.

[118] West Virginia's independent analysis did not consider two of the four statutory factors of CAA section 169A(g)(1)—the energy and non air quality environmental impacts of compliance and time necessary for compliance.

[119] See section 7.6.4 of the SIP submittal at 180 of 257.

[120] *Id.*

[121] See January 5, 2022, letter from Cristina Fernandez, Director Air and Radiation Division, EPA Region 3 to Laura Crowder, Division of Air Quality, WV DEP, in the rulemaking docket for this action.

visibility goal consistent with the CAA and the RHR.[122]

In conclusion, the SIP submission meets neither the regional haze requirements, nor requirements of the CAA. Specifically, as described in detail above, the SIP submission fails to satisfy the statutory requirements in CAA section 169A(b)(2)(B) to contain a long-term strategy for making reasonable progress; the CAA section 169A(g)(1) requirement to consider the four factors in determining reasonable progress; and the CAA section 169A(b)(2) requirement for the SIP to contain the emissions limits, schedules of compliance and other measures as may be necessary to make reasonable progress toward meeting the national goal. In addition, lack of robust evaluation of emissions measures considering the four factors, and related inadequate supporting documentation of the analyses and conclusions, results in West Virginia not meeting the regulatory requirements in 40 CFR 51.308(f)(2) and (f)(2)(i) and (iii). Therefore, the EPA is proposing to disapprove West Virginia's Regional Haze SIP submission.

F. Additional Long-Term Strategy Requirements

The consultation requirements of 40 CFR 51.308(f)(2)(ii) provide that States must consult with other States that are reasonably anticipated to contribute to visibility impairment in a Class I Area to develop coordinated emission management strategies containing the emission reductions measures that are necessary to make reasonable progress. Section 51.308(f)(2)(ii)(A) and (B) require States to consider the emission reduction measures identified by other States as necessary for reasonable progress and to include agreed upon measures in their SIPs. Section 51.308(f)(2)(ii)(C) speaks to what happens if States cannot agree on what measures are necessary to make reasonable progress.

WV DEP included documentation of its calls, webinars, presentations, and other consultation with VISTAS and non-VISTAS States from December 2017 to October 2020. West Virginia's consultation documentation confirms that no States disagreed with or provided comment on West Virginia's approach to its long-term strategy.

Section 51.308(f)(2)(iii) also requires that the emissions information considered to determine the measures that are necessary to make reasonable progress include information on emissions for the most recent year for which the State has submitted triennial emissions data to the EPA (or a more recent year), with a twelve-month exemption period for newly submitted data.

WV DEP included emissions information from the most recent year in its submittal; 2017, 2018, and 2019 emissions information that had been previously reported to the EPA and compared these emissions to the 2028 emissions used in its modeling.[123] Table 7–35 shows all West Virginia facilities with greater than 100 tpy SO_2 emissions in 2017 and table 7–36 shows all West Virginia facilities with greater than 100 tpy NO_X emissions in 2017.

As summarized in section IV of this document, the State provided emissions inventory information for individual sources for multiple years, including the most recent year for which the State submitted emissions data to the EPA in compliance with the triennial reporting requirements of the AERR.

Regardless, as explained in the preceding sections, due to flaws and omissions in its source evaluations, four-factor analyses and the resulting control determinations, the EPA finds that West Virginia failed to submit to the EPA a long-term strategy that includes ''the enforceable emissions limitations, compliance schedules, and other measures that are necessary to make reasonable progress'' as required by 40 CFR 51.308(f)(2).[124] Consequently, we find that West Virginia's SIP does not satisfy the long-term strategy requirements of 40 CFR 51.308(f)(2). Therefore, the EPA proposes to disapprove all elements of West Virginia's SIP submission as it relates to 40 CFR 51.308(f)(2)'s long-term strategy requirements.

G. Reasonable Progress Goals

Section 51.308(f)(3) contains the requirements pertaining to RPGs for each Class I Area. Section 51.308(f)(3)(i) requires a State in which a Class I area is located to establish RPGs—one each for the clearest days and the most impaired days—reflecting the visibility conditions that will be achieved at the end of the planning period as a result of the emission limitations, compliance schedules, and other measures required under paragraph (f)(2) to be in a State's long-term strategy, as well as the implementation of other CAA requirements. The long-term strategy, as reflected by the RPGs, must provide for an improvement in visibility on the most impaired days relative to the baseline period and ensure no degradation on the clearest days relative to the baseline period. Section 51.308(f)(3)(ii) applies in circumstances in which a Class I area's RPG for the most impaired days represents a slower rate of visibility improvement than the uniform rate of progress calculated under 40 CFR 51.308(f)(1)(vi). Under 40 CFR 51.308(f)(3)(ii)(A), if the State in which a mandatory Class I area is located establishes an RPG for the most impaired days that provides for a slower rate of visibility improvement than the URP, the State must demonstrate that there are no additional emission reduction measures for anthropogenic sources or groups of sources in the State that would be reasonable to include in its long-term strategy. Section 51.308(f)(3)(ii)(B) requires that if a State contains sources that are reasonably anticipated to contribute to visibility impairment in a Class I area in another State, and the RPG for the most impaired days in that Class I area is above the URP, the upwind State must provide the same demonstration.

West Virginia established 2028 RPGs for both of its Class I areas in deciviews for the 20 percent clearest days and the 20 percent most impaired in tables 8–1 and 8–2 of its submittal, respectively, and both Class I areas are projected to remain below the URP based on VISTAS modeling. However, as outlined throughout this document, because West Virginia's SIP submission did not meet the required statutory or regulatory requirements, the EPA is proposing to disapprove the SIP in its entirety, and is not proposing to approve these regulatory requirements. Additionally, per 40 CFR 51.308(f)(3)(iv), the EPA must evaluate the demonstrations the State developed pursuant to 40 CFR 51.308(f)(2) to determine whether the State's reasonable progress goals for visibility improvement provide for reasonable progress towards natural visibility conditions. As previously explained in section IV.E. of this document we are proposing to disapprove West Virginia's long-term strategy for failing to meet the requirements of 40 CFR 51.308(f)(2). Therefore, we also propose to disapprove West Virginia's reasonable progress goals under 40 CFR 51.308(f)(3) because compliance with that

[122] See also CAA 169A(b)(2).

[123] See Section 7.6.5, ''Evaluation of Recent Emission Inventory Information'' of WV DEP's Regional Haze SIP Submittal for the 2nd Planning Period.

[124] See also CAA 169A(b)(2)(B) (requiring regional haze SIPs to ''contain such emission limits, schedules of compliance and other measures as may be necessary to make reasonable progress toward meeting the national goal, . . . including . . . a long-term . . . strategy for making reasonable progress[.]'').

requirement is dependent on compliance with 40 CFR 51.308(f)(2).[125]

H. Monitoring Strategy and Other Implementation Plan Requirements

Section 51.308(f)(6) specifies that each comprehensive revision of a State's Regional Haze SIP must contain or provide for certain elements, including monitoring strategies, emissions inventories, and any reporting, recordkeeping and other measures needed to assess and report on visibility. A main requirement of this section is for States with Class I Areas to submit monitoring strategies for measuring, characterizing, and reporting on visibility impairment. Section 51.308(f)(6)(ii) requires SIPs to provide for procedures by which monitoring data and other information are used in determining the contribution of emissions from within the State to Regional Haze visibility impairment at mandatory Class I Federal Areas both within and outside the State. Section 51.308(f)(6)(iii) requires SIPs to provide procedures by which monitoring data and other information are used in determining the contribution of emissions from within the State to Regional Haze visibility impairment at mandatory Class I Federal Areas in other States. Section 51.308(f)(6)(iv) requires the SIP to provide for the reporting of all visibility monitoring data to the Administrator at least annually for each Class I area in the State. Section 51.308(f)(6)(v) requires SIPs to provide for a statewide inventory of emissions of pollutants that are reasonably anticipated to cause or contribute to visibility impairment, including emissions for the most recent year for which data are available. Section 51.308(f)(6)(v) also requires States to include estimates of future projected emissions and include a commitment to update the inventory periodically.

With respect to 40 CFR 51.308(f)(6)(i), WV DEP stated that the existing IMPROVE monitors for the State's Class I areas are sufficient for the purposes of this SIP revision. With respect to 40 CFR 51.308(f)(6)(ii), WV DEP stated that it will use data from these IMPROVE monitors for future haze plans and progress reports. 40 CFR 51.308(f)(6)(iii) does not apply to West Virginia, as this provision only applies to States with no Class I areas. With respect to 40 CFR 51.308(f)(6)(iv), the NPS manages and oversees the IMPROVE monitoring network and reviews, verifies, and validates IMPROVE data before its submission to the EPA's Air Quality System (AQS). With respect to 40 CFR 51.308(f)(6)(v), WV DEP provided a baseline emissions inventories, current emissions data, and 2028 future emissions projections for visibility-impairing pollutants for source categories and specific point sources, and committed to update the inventory periodically.[126] With respect to 40 CFR 51.308(f)(6)(vi), West Virginia affirmed that there are no elements, including reporting, recordkeeping, or other measures, necessary to address and report on visibility for West Virginia's Class I areas or Class I areas outside the State that are affected by sources in West Virginia.

However, as outlined throughout this document, because West Virginia's SIP submission did not meet the required statutory or regulatory requirements, the EPA is proposing to disapprove the SIP in its entirety and is not proposing to approve these regulatory requirements.

I. Requirements for Periodic Reports Describing Progress Towards the Reasonable Progress Goals

Section 51.308(f)(5) requires that periodic comprehensive revisions of States' Regional Haze plans also address the progress report requirements of 40 CFR 51.308(g)(1) through (5). The purpose of these requirements is to evaluate progress towards the applicable RPGs for each Class I Area within the State and each Class I Area outside the State that may be affected by emissions from within that State. Sections 51.308(g)(1) and (2) apply to all States and require a description of the status of implementation of all measures included in a State's first implementation period Regional Haze plan and a summary of the emission reductions achieved through implementation of those measures. Section 51.308(g)(3) applies only to States with Class I Areas within their borders and requires such States to assess current visibility conditions, changes in visibility relative to baseline (2000–2004) visibility conditions, and changes in visibility conditions relative to the period addressed in the first implementation period progress report.

Section 51.308(g)(4) applies to all States and requires an analysis tracking changes in emissions of pollutants contributing to visibility impairment from all sources and sectors since the period addressed by the first implementation period progress report. This provision further specifies the year or years through which the analysis must extend depending on the type of source and the platform through which its emission information is reported. Finally, 40 CFR 51.308(g)(5), which also applies to all States, requires an assessment of any significant changes in anthropogenic emissions within or outside the State that have occurred since the period addressed by the first implementation period progress report, including whether such changes were anticipated and whether they have limited or impeded expected progress towards reducing emissions and improving visibility.

With respect to the 40 CFR 51.308(g)(1) through (5) requirements, WV DEP included a description of the status of the implementation of all measures included in West Virginia's first implementation period Regional Haze Plan, a summary of the emissions reductions achieved from these measures, an analysis tracking changes in emissions, and an assessment of significant changes in emissions. However, as outlined throughout this document, because West Virginia's SIP submission did not meet the required statutory or regulatory requirements, the EPA is proposing to disapprove the SIP in its entirety and is not proposing to approve these regulatory requirements.

J. Requirements for State and Federal Land Manager Coordination

Section 169A(d) of the CAA requires States to consult with FLMs before holding the public hearing on a proposed Regional Haze SIP, and to include ''a summary of the FLMs' conclusions and recommendations in the notice to the public.''

Section 51.308(i)(2)'s FLM consultation provision requires a State to provide FLMs with an opportunity for consultation that is early enough in the State's policy analyses of its emission reduction obligation so that information and recommendations provided by the FLMs can meaningfully inform the State's decisions on its long-term strategy. If the consultation has taken place at least 120 days before a public hearing or public comment period, the opportunity for consultation will be deemed early enough. Regardless, the opportunity for consultation must be provided at least sixty days before a public hearing or public comment period at the State level. Section 51.308(i)(2) also provides two substantive topics on which FLMs must be provided an opportunity to discuss with States: assessment of visibility impairment in any Class I Area

[125] See CAA 169A(b)(2), 40 CFR 51.308(f)(2).

[126] See Section 4, ''Types of Emissions Impacting Visibility Impairment in West Virginia Class I Areas'', Section 7.2.4, ''EPA Inventories'', and Section 13, ''Progress Report'' of WV DEP's Regional Haze SIP Submittal for the 2nd Planning Period.

and recommendations on the development and implementation of strategies to address visibility impairment. Section 51.308(i)(3) requires States, in developing their implementation plans, to include a description of how they addressed FLMs' comments.

WV DEP included records of its consultation with various FLMs. The NPS submitted comments to WV DEP on October 19, 2021, the USFS submitted comments on October 26, 2021, and the FWS did not submit comments. WV DEP included the FLM comments and its responses in its submittal.[127]

While WV DEP did take administrative steps to conduct consultation, if the EPA finalizes the disapproval of the SIP, in the process of correcting the deficiencies outlined above with respect to the RHR and statutory requirements, the State (or the EPA in the case of an eventual FIP) will again be required to satisfy the FLM consultation requirements under 40 CFR 51.308(i)(2).[128] However, as discussed throughout this document, because WV DEP's SIP submission did not meet the required statutory or regulatory requirements, the EPA is proposing to disapprove the SIP in its entirety, and is not proposing to approve these regulatory requirements.

V. Environmental Justice

WV DEP included Appendix I, ''Environmental Justice,'' to its SIP submittal. Appendix I consists entirely of a 2021 Informal Resolution between WV DEP and the EPA resolving a claim under Title VI of the Civil Rights Act of 1964 related to alleged discrimination against African American descendants of persons buried in the Boyd Carter Memorial Cemetery. Appendix I does not contain any analysis or evaluation of impacts of this SIP on communities with environmental justice concerns. Neither the CAA nor the applicable implementing regulations either prohibit or require such an evaluation. The EPA did not conduct an environmental justice (EJ) screening analysis for this SIP submittal.

VI. Proposed Action

The EPA is proposing to disapprove the WV DEP SIP submission relating to Regional Haze for the second planning period received on August 12, 2022, because the State's SIP submission fails to meet both the regulatory requirements of the Regional Haze Rule and the statutory requirements of the Clean Air Act. Specifically, because WV DEP failed to conduct the proper analyses to determine what measures are necessary for reasonable progress and did not adequately consider the four statutory factors, thereby not including a sufficiently robust and adequately justified long-term strategy that includes measures necessary for reasonable progress in its second planning period SIP submission. West Virginia's SIP submission does not contain the emission limits, schedules of compliance, and other measures as may be necessary to make reasonable progress toward meeting the national visibility goal. Therefore, the SIP submission does not meet the regional haze requirements, nor requirements of the CAA. Specifically, as described in detail in this NPRM, the SIP submission does not meet the statutory requirements in CAA section 169A(b)(2)(B) to contain a long-term strategy for making reasonable progress; the CAA section 169A(g)(1) requirement to consider the four factors in determining reasonable progress; and the CAA section 169A(b)(2) requirement for the SIP to contain the emissions limits, schedules of compliance and other measures as may be necessary to make reasonable progress toward meeting the national goal. In addition, the insufficiently robust and inadequately justified source selection, evaluation of emissions measures considering the four factors, related inadequate supporting documentation, and the failure to discuss or adequately evaluate existing measures in the absence of any new measures results in the WV DEP SIP submission not meeting the regulatory requirements in 40 CFR 51.308(f)(2).

The EPA is not proposing a FIP at this time. If the EPA finalizes the disapproval, that will start a two-year clock for the EPA to propose and finalize a FIP. We are processing this as a proposed action because we are soliciting comments on this proposed action. Disapproval does not start a mandatory sanctions clock for West Virginia. Final rule will occur after consideration of any comments.

VII. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA's role is to approve State choices, provided that they meet the criteria of the CAA. Accordingly, this action proposes to disapprove State law as not meeting Federal requirements and does not impose additional requirements. For that reason, this proposed action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and
- Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act;
- Executive Order 12898 (Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, February 16, 1994) directs Federal agencies to identify and address ''disproportionately high and adverse human health or environmental effects'' of their actions on minority populations and low-income populations to the greatest extent practicable and permitted by law. The EPA defines environmental justice (EJ) as ''the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.'' The EPA further defines the term fair treatment to mean that ''no group of people should bear a disproportionate burden of environmental harms and risks, including those resulting from the

[127] Appendix H–2 ''Federal Land Manager Comments'' in WV DEP's Regional Haze SIP Submittal for the 2nd Planning Period.

[128] In addition, if the EPA finalizes our proposed disapproval of WV DEP's SIP submittal, the State (or the EPA in the potential case of a FIP) will be required to again complete the FLM consultation requirements under 40 CFR 51.308(i).

negative environmental consequences of industrial, governmental, and commercial operations or programs and policies.'' West Virginia did not evaluate EJ considerations as part of its SIP submittal; the CAA and applicable implementing regulations neither prohibit nor require such an evaluation. The EPA did not perform an EJ analysis and did not consider EJ in this action. Due to the nature of the action being taken here, this action is expected to have a neutral impact on the air quality of the affected area. Consideration of EJ is not required as part of this action, and there is no information in the record inconsistent with the stated goal of E.O. 12898 of achieving environmental justice for people of color, low-income populations, and Indigenous peoples.

• In addition, this action does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP is not approved to apply in Indian country located in the State, and the EPA notes that it will not impose substantial direct costs on tribal governments or preempt tribal law. Thus, Executive Order 13175 does not apply to this action.

40 CFR Part 52

[EPA–R04–OAR–2024–0241; FRL–12545–01–R4]

Air Plan Partial Approval and Partial Disapproval; South Carolina; Minor Source Permit Program Revisions

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to partially approve and partially disapprove changes to South Carolina's State Implementation Plan (SIP) to revise regulations prescribing minor source permit program requirements, including minor new source review (NSR) requirements as submitted by the State of South Carolina, through the South Carolina Department of Health and Environmental Control (SC DHEC), on the following dates: October 1, 2007; July 18, 2011; June 17, 2013; August 8, 2014; January 20, 2016; July 27, 2016; and April 24, 2020. This action is being proposed pursuant to the Clean Air Act (CAA or Act).

DATES: Comments must be received on or before February 20, 2025.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R04–OAR–2024–0241 at *regulations.gov*. Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *regulations.gov*. EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.*

IV. Proposed Action
V. Statutory and Executive Order Reviews

I. What action is EPA proposing?

On October 1, 2007; July 18, 2011; June 17, 2013; August 8, 2014; January 20, 2016; July 27, 2016;[1] September 5, 2017; April 24, 2020; and February 4, 2022, SC DHEC[2] submitted SIP revisions to EPA for approval that include changes to South Carolina's minor source permitting regulations to clarify and streamline the State's federally approved minor preconstruction and minor operating permitting program. This federally approved program requires stationary sources of air pollutants planning to construct or modify to first obtain a construction permit and to obtain and maintain operating permits in accordance with the South Carolina Code of Regulations Annotated (S.C. Code Ann. Regs. hereinafter ''Regulation'') 61–62.1, Section II,

[1] EPA notes that while the July 27, 2016, submittal was signed and dated by SC DHEC on July 25, 2016, it was received via EPA's SPeCS for SIPs system on July 27, 2016.

[2] On July 1, 2024, SC DHEC was restructured into a health agency, the Department of Public Health, and an environmental agency, the Department of Environmental Services (DES). In a letter dated June 20, 2024, South Carolina represented to EPA that all the functions, powers, and duties of the environmental divisions, offices, and programs of DHEC, including the authority to administer and enforce State implementation plans, are retained and continued in full force and effect under DES. This letter is in the docket for this proposed rulemaking. Throughout this proposal, the terms, ''Department'', ''South Carolina Department of Health and Environmental Services'', ''SCDHEC'', ''South Carolina Department of Environmental Services'', and ''SCDES'' are all interchangeable.

Permit Requirements. CAA section 110(a)(2)(C) provides that SIPs must include a program to regulate the construction and modification of any stationary source as necessary to assure that the national ambient air quality standards (NAAQS) are achieved, and it cites to more detailed CAA permitting requirements that pertain to the construction of major sources of air pollution. These CAA requirements for regulating the construction and modification of stationary sources, known collectively as the New Source Review (NSR) program, consists of the following three programs: (1) Prevention of significant deterioration (PSD) for major stationary sources and major modifications in attainment and unclassifiable areas; (2) nonattainment new source review (NNSR) for major stationary sources and major modifications locating in or impacting nonattainment areas, and (3) minor NSR, which applies generally to attainment, unclassifiable, and nonattainment areas for new sources and modifications that fall below the major NSR thresholds. Federal regulations setting forth these NSR programs are prescribed at 40 CFR part 51, subpart I, *Review of New Sources and Modifications,* and Appendix S to part 51, *Emission Offset Interpretive Ruling.* Specifically, 40 CFR 51.165 generally details components of the NNSR program in conjunction with Appendix S to part 51. Next, 40 CFR 51.166 prescribes minimum requirements for SIP-approved PSD programs. The regulations at 40 CFR 51.160–164 are generally applicable to all NSR programs, but because of the more specific implementing regulations for the NNSR and PSD programs at 40 CFR 51.165 and 51.166, and 40 CFR 51.160–164 serve primarily as the basis for EPA's evaluation of minor NSR programs. Accordingly, in this proposed action, EPA is evaluating submitted changes to South Carolina's existing SIP-approved minor NSR program against the generally applicable Federal NSR rules and is proposing to approve in part, and disapprove in part, these revisions. EPA is also evaluating changes to provisions for obtaining minor source operating permits, which are already approved into the South Carolina SIP. These regulations include provisions for federally enforceable State operating permits (FESOPs), which include limits on potential to emit (PTE) to enable a source or modification to qualify as minor and avoid major NSR applicability (PSD and NNSR programs) as well as title V major source status.

Through a notice of proposed rulemaking (NPRM) published on August 17, 2017 (82 FR 39083), EPA proposed to approve changes to the October 1, 2007; July 18, 2011; June 17, 2013; August 8, 2014; January 20, 2016; and July 25, 2016 SIP submissions. A comprehensive discussion of EPA's analysis and rationale for those proposed changes to the South Carolina SIP is described in the August 17, 2017 NPRM. Comments on the August 17, 2017 NPRM were due on or before September 18, 2017. Adverse comments were received on the proposed changes to Regulation 61–62.1, subparagraph II(B)(2)(h); Regulation 61–62.1, paragraph II(B)(3); Regulation 61–62.1, paragraph II(B)(5); Regulation 61–62.1, paragraph II(B)(6); Regulation 61–62.1, subsection II(D); Regulation 61–62.1, paragraph II(E)(4); Regulation 61–62.1, Section II(I); Regulation 61–62.1, subsection II(K); Regulation 61–62.1, paragraph II(N)(1); and Regulation 61–62.1, paragraph II(N)(6). The comments are available in the docket for this proposed action. EPA did not finalize action on the August 2017 NPRM. Comments on that action have persuaded EPA to reconsider some elements of the SIP submissions described above. EPA is now proposing to disapprove several provisions that received adverse comment. In addition, EPA is proposing to disapprove several provisions that did not receive adverse comment, and is re-proposing approval of several provisions that received adverse comment in the 2017 NPRM. EPA is not reconsidering or seeking additional comment on certain provisions found in the 2017 NPRM that did not receive comments.[3] In this proposed action, EPA is also proposing to act on the SIP revisions requested by South Carolina since the 2017 NPRM in its submittals from September 5, 2017; April 24, 2020; and February 4, 2022.

II. Analysis of the State's Submittals

A. Overview and Analysis of Changes to Regulation 61–62.1, Section II, Permit Requirements

Section 110(a)(2)(C) of the CAA requires that SIPs include a program to regulate the construction and modification of stationary sources as necessary to ensure that the NAAQS are maintained. Federal regulations at 40 CFR 51.160(e) require that such a State program identify the types and sizes of sources subject to review and the basis for determining which sources are subject. Additionally, CAA section 110(l) provides that EPA shall not approve a revision to a plan if the revision would interfere with any applicable requirement concerning attainment and reasonable further progress (as defined in CAA section 171), or any other applicable requirement of the CAA.

South Carolina has a SIP-approved minor source permitting program that includes minor NSR permitting at Regulation 61–62.1, Section II, *Permit Requirements.* These regulations require stationary sources that are planning to construct, alter, or add to a source of air pollutants to first obtain a preconstruction permit from the permitting agency and to request an operating permit upon placing the new or altered source into operation. These stationary sources include different types of minor sources. The program covers ''true minor'' sources, which have the potential to emit (PTE) certain pollutants below major NSR thresholds for new sources and modifications. The SIP-approved minor source permitting program also includes provisions for issuing permits that establish federally enforceable emissions limits to restrict the PTE of certain pollutants below major stationary source and major modification applicability thresholds: ''synthetic minor'' permits establish these enforceable emision limits for sources obtaining construction permits, and ''conditional major'' permits establish these emission limits in the corresponding operating permits. South Carolina initially revised its minor source permitting program rules in the October 1, 2007 submittal to clarify and streamline requirements for obtaining minor source construction and operating permits. Subsequent submittals make other changes, which are discussed for each subsection of the regulation, below.

EPA has reviewed the proposed changes to the minor source construction and operating permitting regulations and is proposing to approve in part and disapprove in part for the reasons discussed below.

1. Subsection II(B)—Exemptions From the Requirement To Obtain a Construction Permit

Regulation 61–62.1, Section II(B)—*Exemptions from the Requirement to*

[3] EPA proposed to approve and did not receive comments on changes in the 2017 NPRM to the following: 61–62.1, subsection II.A; 61–62.1, paragraphs II(B)(1) and II(B)(4); 61–62.1, subsection II(C); 61–62.1, paragraphs II(E)(1), II(E)(2), II(E)(3), and II(E)(5); 61–62.1 subsection II(F); 61–62.1, subsection II(J); 61–62.1, subsection II(M); 61–62.1, paragraph II(N)(5); and 61–62.1, subsection II(O). For more information on these proposed changes, see 82 FR 39083 (August 17, 2017). However, in this document, EPA is now proposing to disapprove Regulation 61–62.1, subsection II(E) in its entirety and subsection II(F) in its entirety, as discussed in Sections II.A.4 and II.A.5 of this NPRM.

Obtain a Construction Permit specifies which types of minor sources are exempt from obtaining minor source construction permits. The October 1, 2007 submittal makes several changes to subsection II(B), including renumbering subsection II(F)[4] to subsection II(B) and modifying the title to clarify that the paragraph applies only to construction permits. Additional changes are made to subsection II(B) in the submittals from July 18, 2011; June 17, 2013; August 8, 2014; and April 24, 2020, and are described below.

One universal change to subsection II(B) from the April 24, 2020 submittal is administrative in nature by placing the alphanumeric provision dividers in parentheses. The submittal also makes other non-substantive and ministerial changes. EPA is proposing to approve these editorial and minor changes as they are consistent with CAA section 110.

a. Paragraph II(B)(2)

The October 1, 2007 submittal revises paragraph II(B)(2) by clarifying that the permits described are ''construction'' permits. It also specifies that stationary sources exempt from the construction permit requirements are listed in subparagraphs II(B)(2)(a) through (h). Additionally, the 2007 submittal adds a statement that a source's exemption status may change (and thus require a permit) upon the promulgation of new regulatory requirements. EPA has reviewed these ministerial changes and preliminarily found them to be consistent with CAA section 110. Therefore, EPA is proposing to approve these changes to South Carolina's SIP at Regulation 61–62.1, subsection II(B).

i. Subparagraph II(B)(2)(b)

In the October 1, 2007 submittal, a new subparagraph in Section II—(B)(2)(b)—adds an exemption to the requirement to obtain a construction permit for boilers and space heaters of less than 10 million British thermal units per hour (MMBtu/hr) rated input capacity that burn only virgin gas fuels. South Carolina has determined that these small boilers and space heaters do not require permits because they are not likely to have significant air quality impacts and permits for these units would be unlikely to set forth unique requirements. Units of this size would be generally consistent with other pollutant-rate based exemptions of 1 lb/hr for particulate matter (PM) that are approved in the current SIP at paragraph II(F)(2) and that the State also put forward for additional pollutants at subparagraph II(B)(2)(h) in the October 1, 2007, submittal, which is discussed below. EPA similarly does not prescribe specific requirements for boilers smaller than this threshold. *See* 40 CFR 60.40c(a).

EPA has reviewed this new exemption and supports the State's determination to exempt auxiliary boilers and space heaters of less than 10 MMBtu/hr rated input capacity that burn only virgin gas fuels because they are not expected to interfere with any applicable requirement concerning attainment and reasonable further progress or any other applicable CAA requirement. Therefore, EPA is proposing to approve subparagraph II(B)(2)(b) into the SIP pursuant to the CAA.

By inserting the new subparagraph (b) under subparagraph (B)(2), the subparagraphs below are relettered, such that the old subparagraph (b) becomes the new subparagraph (c), and so forth. EPA is also proposing to approve this minor change.

ii. Subparagraph II(B)(2)(f)

The October 1, 2007 submittal revises subparagraph II(B)(2)(f) to expand the exemption from construction permitting requirements for certain emergency power generators. The current SIP-approved regulation provides an exemption from construction permits for emergency power generators of ''less than'' 150 kilowatt (KW) rated capacity, as well as larger emergency power generators that operate 250 hours per year or less and have a method to record the actual hour of use, such as an hour meter. The revision provides an exemption for emergency power generators of ''less than or equal to'' 150 KW rated capacity, as well as generators that are designated for emergency use only and operate 500 hours or less per year for testing and maintenance and have a method to record the actual hours of use, such as an hour meter.

South Carolina's December 30, 2016 letter explains that the State considered CAA section 110(l), and asserts that the State expects no increase in actual emissions as a result of raising this exemption threshold for emergency power generators.[5] South Carolina further explains that the 500 hours per year threshold is commonly used to determine the PTE for title V and other major NSR applicability determinations, consistent with an EPA guidance memorandum.[6] These sources are still restricted to emergency conditions, meaning that other types of non-emergency activities—such as peak shaving[7]—would not qualify for the exemption under subparagraph II(B)(2)(f). Additionally, the State points to applicable Federal requirements for emergency generators at 40 CFR part 63 at subpart ZZZZ and 40 CFR part 60 at subparts IIII and JJJJ that restrict non-emergency use of these sources to 100 hours per year.

Subsequently, South Carolina submitted a letter dated March 23, 2020, more specifically addressing equivalent changes to Regulation 61–62.1, Standard No. 5.2, *Control of Oxides of Nitrogen (NO_X),* to provide further clarifying information.[8] In this letter, the State notes that no Federal standards were in place for these emergency engines at the time they were developing the original Standard No. 5.2 in the 2004 timeframe. In fact, the exemption in place in 61–62.1, Section II had been in place over a decade before.[9] The March 23, 2020 letter explains that South Carolina had polled owners and operators in the past about typical usage for testing and maintenance for these emergency generators, and the State developed the 250-hour per year threshold as a result. The State explains that the 250-hour per year threshold was never intended to limit actual emergency use of the generators but was meant to serve as a general exemption for a reasonable amount of non-emergency use. This is also a critical change to include in the SIP so that the Regulation is clear as to how the State applies it and emergency generators are not limited in their emergency use. Since that time, EPA promulgated 40 CFR part 63, subpart ZZZZ, which South Carolina confirms in its letter applies to all such emergency engines in the State. The exemption in subparagraph II(B)(2)(f) also clearly only applies to generators designated for emergency use. Consequently, all non-emergency use for these emergency generators is

[4] Additional changes to the revised subsection II(F) are discussed later in this document.

[5] This letter is included in the docket for this proposed action.

[6] Seitz, John S, ''Calculating Potential to Emit (PTE) for Emergency Generators.'' Memorandum to Program Directors in EPA Regional Offices, Office of Air Quality Planning and Standards, Research Triangle Park, NC (Sept. 6, 1995).

[7] Peak shaving is the practice of reducing a facility's consumption of utility-provided power by instead using limited onsite power during periods of high energy demand.

[8] This letter is included in the docket for this proposed action. South Carolina submitted SIP revisions with changes to the NO_X control rules at Regulation 61–62.5, Standard No. 5.2, *Control of Oxides of Nitrogen (NO_X),* dated October 1, 2007; July 25, 2016; September 5, 2017; and February 4, 2022. EPA will address these revisions in a future rulemaking.

[9] *See* 60 FR 63434 (December 11, 1995).

restricted to 100 hours per year as per the Federal regulation, including for testing and maintenance. The change to provide that exemptions from permitting requirements extend to 500 hours of testing and maintenance would have no practical effect on the universe of exempt sources, as detailed above, since all such units are subject to the 40 CFR part 63, subpart ZZZZ. Therefore, this change to subparagraph II(B)(2)(f) will not result in any actual increase in emissions, and therefore, will not interfere with any applicable requirement regarding attainment or reasonable further progress. The State also has the discretion to define the scope of its minor NSR program pursuant to 40 CFR 51.160(e) and has previously determined that these units (with the specified size and hourly operation restrictions) do not need to undergo unique case-by-case permit reviews. Therefore, EPA is proposing to approve these changes to Regulation 61–62.1, subparagraph II(B)(2)(f) into the SIP pursuant to the CAA.

iii. Subparagraph II(B)(2)(h)

The October 1, 2007 submittal also makes changes to subparagraph II(B)(2)(h), formerly subparagraph II(F)(2)(g), by expanding the available exemption from a construction permit to sources with a total uncontrolled emissions rate of less than 1 pound per hour (lb/hr) each of sulfur dioxide, nitrogen oxides (NO_X), and carbon monoxide. These exemptions expand on the current, SIP-approved exemptions that apply to sources with an uncontrolled PM emission rate of less than 1 lb/hr and/or uncontrolled volatile organic compounds (VOCs) emission rate of less than 1,000 lbs/month. The July 18, 2011 submittal adds language to require that emissions calculations or other information necessary to demonstrate that a source qualifies for the exemption must be kept on site and provided to the State upon request.

Next, the August 8, 2014 submittal revises the emissions exemption threshold in subparagraph II(B)(2)(h) in two ways. First, it revises total uncontrolled PTE from 1 lb/hr to 5 ton per year (tpy). Second, it adds language stating that sources with a PTE higher than the 5 tpy applicability threshold may be exempted from the requirement to obtain a construction permit under this subparagraph if the sources demonstrate that they are not subject to any State or Federal limits or requirements. The State provided EPA with a December 30, 2016 letter, addressing the second revision, asserting that it is primarily intended to apply to sources with PTE only slightly above the 5 tpy threshold. The State further asserts that the rule contains a safeguard that sources subject to any applicable regulation, such as Federal requirements, cannot be exempt from obtaining construction permits via this case-by-case process. The letter then steps through an example of the process that small sources of VOC emissions would undergo, including an assessment of any potentially applicable requirements related to NAAQS, toxics, or hazardous air pollutants; consideration of the PTE relative to major NSR thresholds; and any other special considerations. South Carolina contends that it determines the applicability of construction permits for these sources under close scrutiny, on a case-by-case basis. However, the language in this provision from the August 8, 2014 submittal does not prescribe any upper bound on emissions for the case-by-case exemptions from minor NSR permitting, nor does it provide adequate justification for those higher thresholds being exempt from a case-by-case permitting process, and the safeguard therefore cannot cover the universe of possibly exempt sources.

SIPs must contain a minor NSR program with enforceable procedures enabling the State to determine whether the construction or modification of a source will, among other things, interfere with attainment or maintenance of the NAAQS. *See* CAA section 110(a)(2)(C); 40 CFR 51.160(a). These procedures must identify the types and sizes of the sources subject to review, and the SIP must discuss the basis for determining which facilities will be subject to review. *See* 40 CFR 51.160(e). Furthermore, CAA section 110(l) prohibits EPA from approving a SIP revision that would interfere with any applicable requirement concerning attainment and reasonable further progress toward attainment, or any other applicable requirement. The language introduced in the August 8, 2014 submittal at subparagraph II(B)(2)(h) appears to be inconsistent with CAA section 110(a)(2)(C), 40 CFR 51.160, and CAA section 110(l) because it would allow the State to exempt sources without determining whether the sources would interfere with the NAAQS, and it does not adequately identify the types and sizes of sources subject to preconstruction review and the basis for determining which sources are subject to review. Because of these concerns, and because EPA cannot evaluate potential NAAQS impacts that may occur from undefined future exemptions from these SIP requirements, EPA is proposing to disapprove changes to subparagraph II(B)(2)(h) from the August 8, 2014 submittal. EPA is also proposing to disapprove the changes to subparagraph II(B)(2)(h) that were requested in the October 1, 2007 submittal because those changes were superseded by the changes in the August 8, 2014 submittal and are no longer state-effective.

The July 18, 2011 submittal makes a distinct change to the rule, which is found in the current, state-effective regulation. The revision adds the sentence ''Emissions calculations and any other information necessary to document qualification for this exemption must be maintained onsite and provided to the Department upon request.'' This revision adds an administrative requirement to show compliance. However, because the change is so closely linked to the changes in the October 1, 2007, and August 8, 2014 submittals, EPA is proposing to disapprove this change as well.[10]

b. Paragraph II(B)(3)

In its October 1, 2007 submittal, South Carolina requested to add paragraph (B)(3) to Section II in its SIP. The new paragraph requires the State to maintain a list of sources exempted under subparagraphs II(B)(2)(a) through II(B)(2)(g) on a list of sources to be exempted without further review, along with any other sources determined to have total uncontrolled emissions less than the thresholds in subparagraph II(B)(2)(h). The list of sources that are exempt without further review from the requirement to obtain a construction permit will be maintained by the Department and periodically published in the *South Carolina State Register* for use by the public and regulated community.

The July 18, 2011 submission revises language in paragraph II(B)(3) to clarify that source types which are added to the list of exempted sources will be determined not to interfere with the attainment or maintenance of any State or Federal standard, replacing the requirement for the list to include sources that have total uncontrolled emissions less than the thresholds in subparagraph II(B)(2)(h). Lastly, the August 8, 2014 submittal includes the addition of language to paragraph II(B)(3) asserting that the State may develop emission thresholds for exemptions that are determined not to

[10] If EPA finalizes disapproval of the changes to subsection II(B) at subparagraph II(B)(2)(h), subparagraph II(F)(2)(g), effective June 24, 2005, would remain in the SIP.

interfere with attainment or maintenance of State or Federal standards to include in the list maintained pursuant to this subparagraph, and that South Carolina could be petitioned to consider adding additional sources to this list.

While EPA notes that South Carolina has inherent flexibility to determine which types and sizes of sources need to undergo preconstruction review and permitting in the State pursuant to 40 CFR 51.160(e), the language introduced in the August 8, 2014 submittal at paragraph II(B)(3) provides the State with the ability to modify the universe of sources subject to the minor NSR program without further regulatory changes and without any basis for determining which facilities will be subject to review. These changes are inconsistent with CAA section 110(a)(2)(C) and 40 CFR 51.160(e) because they do not identify the types and sizes of sources subject to preconstruction review and the basis for determining which sources are subject to review. Furthermore, paragraph II(B)(3) as revised through the August 8, 2014 submittal, is inconsistent with CAA section 110(l), which provides that EPA shall not approve a SIP revision that would interfere with any requirements concerning attainment and reasonable further progress, or any other applicable CAA requirement because EPA cannot evaluate potential future exemptions from these SIP requirements. Therefore, due to these reasons, as well as the enforceability issues described in the above Section II(A)(1)(a)(iii), EPA is proposing to disapprove paragraph II(B)(3).

c. Paragraph II(B)(5)

Paragraph II(B)(5) is a new provision that was added in the August 8, 2014 submittal. The version of paragraph (B)(5) that is in the current SIP is moved to paragraph (B)(6) and is explained below. Paragraph (B)(5), as introduced in the August 8, 2014 submittal, states that sources of VOCs greater than 1,000 lb/month (*i.e.,* the emission threshold listed in subparagraph (B)(2)(h)) may be exempted from the requirement to obtain a construction permit on a case-by-case basis, and that exempt sources may later be required to be included in subsequent construction or operating permits.

Similar to the revised subparagraph (B)(2)(h), the State could grant or deny exemptions from the requirement to obtain a construction permit on a case-by-case basis above SIP-specified thresholds with no upper bound other than the major stationary source or major modification threshold. While EPA notes that the State has inherent flexibility to determine which types and sizes of sources need to undergo preconstruction review and permitting in the State, the language introduced in the August 8, 2014 submittal at paragraph II(B)(5) provides the State with the ability to modify the universe of sources subject to the minor NSR program without further regulatory changes. These changes are inconsistent with CAA section 110(a)(2)(C) and 40 CFR 51.160(e) because they do not identify the types and sizes of sources subject to preconstruction review and the basis for determining which sources are subject to review. Furthermore, paragraph II(B)(5) as introduced in the August 8, 2014 submittal, is inconsistent with CAA section 110(l), which provides that EPA shall not approve a SIP revision that would interfere with any requirements concerning attainment and reasonable further progress, or any other applicable CAA requirement because EPA cannot evaluate potential future exemptions from these SIP requirements. Therefore, EPA is proposing to disapprove paragraph II(B)(5).

d. Paragraph II(B)(6)

Paragraph II(B)(6) was added in the October 1, 2007 submittal as paragraph (B)(5). When the new paragraph (B)(5) was introduced in the August 8, 2014 submittal, the paragraph was moved to (B)(6). This paragraph requires that any new sources similar to those already on the exempted source list established by paragraph II(B)(3), or sources with modifications to existing equipment,[11] must include the following information in their request for exemption: (1) A complete description of the existing equipment and proposed modification; (2) the pollutant(s) being emitted and any deviation from the parameters provided in earlier permit applications, permit exemptions, and issued permits; (3) any ambient air quality demonstrations needed for Regulation 61–62.5, Standards No. 2, *Ambient Air Quality Standards,* No. 7, *Prevention of Significant Deterioration,* and No. 8, *Toxic Air Pollutants;* and (4) a regulatory review to demonstrate the project is not a CAA title I modification, nor is subject to Regulation 61–62.5, Standards No. 7, *Prevention of Significant Deterioration,* and 7.1, *Nonattainment New Source Review (NSR).* EPA is proposing to disapprove paragraph II(B)(6) because it functions only in conjunction with subparagraph II(B)(2)(h) and paragraph II(B)(3), which the Agency is also proposing to disapprove for the aforementioned reasons.

e. Paragraph II(B)(7)

Paragraph II(B)(7) was added in the October 1, 2007 submittal as paragraph (B)(6). When the new paragraph (B)(5) was introduced in the August 8, 2014 submittal, the paragraph was moved to (B)(7). It states that the construction permitting exemptions in subsection II(B) do not relieve the owner or operator of any source from any obligation to comply with any other applicable requirements. This clarifying statement simply notes that exemption from the requirement to obtain a construction permit under Regulation 61–62.1, Section II does not result in an exemption from any other applicable requirements, such as Federal standards or other requirements under the SIP.

Subsection II(B) was revised in the July 18, 2011 submittal with a two-sentence addition that states that South Carolina reserves the right to require a construction permit and the need for permit(s) will be made by South Carolina on a case-by-case basis, and that the determination will take into consideration, but will not be limited to, the nature and amount of the pollutants, location, proximity to residences and commercial establishments, and other factors. This statement clarifies that, while subsection II(B) generally provides for a list of sources and projects that are exempt from minor NSR and the need to obtain a permit, the State may indeed require a permit. In the July 18, 2011 submittal, the State notes that this provision is intended to allow for requiring a permit in cases ''where other avenues of compliance are ineffective.'' A minor formatting change was also made in the 2014 submittal. Because this provision is clarifying in nature, further describing how the State intends to make use of the exemptions paragraph, and because the provision is consistent with the CAA, EPA is proposing to approve the addition of paragraph II(B)(7) to South Carolina's SIP and the changes to that paragraph discussed above.

2. Subsection II(C)—Construction Permit Applications

Subsection II(C), *Construction Permit Applications,* specifies the requirements for sources applying for and obtaining construction permits. The changes made to subsection II(C) in the submittals from October 1, 2007; June 17, 2013; January 20, 2016; and July 25, 2016, were explained and proposed for

[11] Modifications to existing equipment include the reconstruction, relocation, and replacement of existing equipment, which may qualify for exemption pursuant to subparagraph II(B)(2)(h) and paragraph II(B)(4).

approval in the NPRM published on August 17, 2017. *See* 82 FR 39083. No comments were received on these changes, and EPA is not seeking additional comments here.

The April 24, 2020 submittal adds subparagraph II(C)(2)(d), which provides an exemption from professional engineering review for package-type concrete batch plants that are designed to be hauled to a site, set up, and broken down quickly, with little to no additional equipment needed to manufacture product. The submittal also makes administrative edits to Regulation 61–62.1, subsection II(C) by placing the alphanumeric paragraph titles in parentheses and making minor restructuring edits.

EPA has reviewed the changes made to Regulation 61–62.1, subsection II(C) in the April 24, 2020, submittal and found them to be consistent with CAA sections 110(a)(2)(C) and 110(l). Therefore, EPA is proposing to approve the addition of subparagraph II(C)(2)(d) to South Carolina's SIP.

3. Subsection II(D)—General Construction Permits

In the October 1, 2007 submittal, subsection II(D), *Exceptions,* is moved to subsection II(K) and is discussed subsequently in this document. A new section, *General Construction Permits,* is added in its place. The new subsection II(D) allows the State to develop and issue general construction permits applicable to similar types of sources for new construction projects or minor modifications to existing stationary sources. Subsection II(D) provides for the following: (1) General permits shall incorporate all applicable requirements for construction of similar sources and identify the criteria by which sources can qualify for the permit; (2) sources may submit applications to the State that request coverage under the general permit, and the State shall grant coverage to sources certifying qualification for and agreeing to the conditions and terms of the general construction permit for similar sources; sources later determined not to qualify for the general permit are subject to enforcement; (3) approval to operate under a permit is a final permit action for the purposes of judicial review; (4) the application for coverage may deviate from the provisions of subsection II(C) if enough information is included to determine the source's qualification for, and compliance with, the general permit; and (5) sources qualifying for coverage under general construction permits are able to apply for individual construction permits in lieu of coverage under the general permit.

The August 8, 2014 submittal makes minor restructuring edits to this section. It also adds a new paragraph (2), which states that general construction permits shall incorporate all requirements applicable to the construction of similar sources and shall identify criteria by which sources may qualify for coverage under a general construction permit. Additionally, the August 8, 2014 submittal restructures paragraphs (3) and (4) to move the last sentence of paragraph (3) to its own paragraph (4).

The April 24, 2020 submittal, in addition to minor reformatting revisions, creates two subparagraphs—(3)(a) and (3)(b)—under the title ''Coverage under a General Construction Permit.'' Subparagraph (a) was the entirety of paragraph (3) in the October 1, 2007 submittal. Subparagraph (b) is new language, stating that a source that has submitted an individual construction permit application to the State and has not requested coverage under the conditions and terms of a general construction permit for similar sources—but which is determined to qualify for coverage under a general construction permit—may be granted coverage under the general construction permit at the sole discretion of the State.

While general permits can be an effective method of streamlining permitting requirements and procedures, any general permits developed pursuant to a SIP-approved minor NSR program must meet the Federal minimum requirements. Section II(D), as added in the October 1, 2007 submittal and modified through the April 24, 2020 submittal, does not require any form of public notice and comment prior to the State issuing a general construction permit. While EPA regulations for minor NSR SIPs at 40 CFR 51.160–164 do not use the term general permit or expressly describe general construction permits, EPA interprets the relevant statutory and regulatory provisions to allow State agencies to develop mechanisms such as South Carolina's general construction permits to authorize construction for new minor sources and minor modifications of existing sources, provided that these mechanisms assure that the NAAQS are achieved and meet other applicable regulatory requirements. The rules require ''legally enforceable procedures'' that meet the requirements set forth therein and do not specify that a program to regulate construction must require an individual construction permit for every source. However, the requirements in Federal regulations include a provision that sources (projects) that are subject to the minor NSR program are subject to the public notice procedures in 40 CFR 51.161. 40 CFR 51.161 provides that the legally enforceable procedures in 40 CFR 51.160 must require that the SIP provide for public notice of the information submitted to the State, the State's analysis of the effects of the construction or modification of the project, and the State's proposed decision. In other words, the universe of sources subject to minor NSR procedures pursuant to 40 CFR 51.160, including individual permits and other permitting mechanisms such as general construction permits, would also be subject to public notice procedures in 40 CFR 51.161 prior to issuing the permit. Importantly, in the case of a general permit, once a general permit has met the public notice procedures in 40 CFR 51.161 and is issued in final form, approvals for coverage of individual sources under the general permit are not required to meet the public notice procedures in 40 CFR 51.161 because the issuance of the general permit has already met the requirement. Since South Carolina's general minor construction permits do not follow the public notice procedures in 40 CFR 51.161 when they are initially issued, EPA is proposing to disapprove subsection II(D).

4. Subsection II(E)—Synthetic Minor Construction Permits

Subsection II(E), *Synthetic Minor Construction Permits,* describes provisions for synthetic minor construction permits for any stationary source requesting federally enforceable permit limits to limit a source's PTE so the source does not qualify as a major source (thus becoming a minor source ''synthetically''). The October 1, 2007 submittal moves the current subsection II(E), *Transfer of Ownership/Operation,* to subsection II(M). The *Synthetic Minor Construction Permits Plant* provisions, currently at subsection II(H), are moved in its place and the title is changed to ''*Synthetic Minor Construction Permits.*'' In contrast to the General Construction Permits provisions under subsection II(D), the State rules require an opportunity for public notice and comment on Synthetic Minor Construction Permits under subsection II(E). However, these public participation requirements now refer to and depend on subsection II(N), *Public Participation Procedures,* which was modified from paragraph II(G)(5) in the October 1, 2007 submittal.[12] For the

[12] The SIP-approved version of subsection II(H), *Synthetic Minor Plant Permits,* requires public participation via a cross-reference to paragraph II(G)(5).

reasons explained in Section II.A.10. of this preamble, EPA is proposing to disapprove subsection II(N). Because EPA is proposing to disapprove the changes to move paragraph II(G)(5) to subsection II(N), the updated subsection II(E) would not have a functional cross-reference to those public notice procedures which would therefore have the effect of removing the current requirements for public notice from the synthetic minor construction permits subsection. EPA is therefore proposing to disapprove the entirety of subsection II(E). Specifically, EPA is proposing to disapprove the renumbering of subsection II(H) to subsection II(E) and other changes transmitted in the October 1, 2007, August 8, 2014, July 27, 2016, and April 24, 2020 submittals. The revisions made to subsection II(E) in the submittals from October 1, 2007, August 8, 2014, and July 27, 2016, were explained and proposed for approval in the NPRM published on August 17, 2017. *See* 82 FR 39083. No comments were received on revisions made to paragraphs (E)(1), (E)(2), (E)(3), and (E)(5), and these changes are not further explained here as their proposed disapproval is based solely on the lack of a public notice component. If EPA takes final action on subsection II(E) as proposed, the existing synthetic minor construction permitting portion of the minor NSR program at subsection II(H) in the SIP, State effective June 24, 2005, would continue to function. Other revisions to subsection II(E) which did receive comment or were submitted subsequent to the 2017 NPRM are explained below.

a. Subparagraphs II(E)(4)(a)–(E)(4)(d)

Paragraph II(E)(4) was revised in the October 1, 2007 submittal first by being renumbered from II(H)(3) and being retitled from ''General Permits'' to ''General Synthetic Minor Construction Permits'' to reflect that the specific mechanism under subsection II(E) for establishing general construction permits is to establish general synthetic minor construction permits, which also helps distinguish this from the types of general permits the State intends to create for true minor sources pursuant to new Section II(D). The April 24, 2020 submittal makes administrative and clarifying edits throughout paragraph II(E)(4).

The provision is further revised to update the cross-reference from paragraph II(G)(5) to subsection II(N), which prescribes the required public notice procedures that South Carolina will follow prior to establishing a general synthetic minor construction permit and is further explained in Section II.A.10. of this document. The 2007 revision also adds that sources may submit an application to the State requesting coverage under the conditions and terms of a general synthetic minor construction permit for similar sources, and the State shall grant coverage to sources certifying qualification for and agreeing to the conditions and terms of the general synthetic minor construction permit for similar sources. Subsequently, the August 8, 2014 submittal makes formatting changes to subparagraph (E)(4)(a) by breaking into four subparagraphs—(E)(4)(a) through (d)—without changing the wording of the rules. After the changes, subparagraphs (E)(4)(a)–(d) would allow the State to issue a general synthetic minor construction permit applicable to similar sources after providing notice and opportunity for public participation under subsection II(N).

EPA has reviewed these changes made to Regulation 61–62.1, subparagraph II(E)(4)(a) and they appear to be consistent with CAA sections 110(a)(2)(C) and 110(l). However, due to the proposed disapproval of subsection II(N) as described below, the revised subsection II(E) lacks the public participation component required under 40 CFR 51.161. Therefore, EPA is proposing to disapprove the changes to South Carolina's SIP at Regulation 61–62.1, subparagraph II(E)(4)(a).

b. Subparagraph II(E)(4)(c)

The April 24, 2020 submittal makes further edits to subparagraph II(E)(4)(c) by breaking up the subparagraph into two parts. The first part, II(E)(4)(c)(i), was the entirety of the subparagraph as reformatted in the 2014 submittal. The second part, II(E)(4)(c)(ii), introduces a new provision that gives South Carolina sole discretion to grant coverage under a general synthetic minor construction permit for a source that has not requested such coverage, but has submitted an individual synthetic minor construction permit application and the State has determined qualifies for a general synthetic minor construction permit for similar sources.

The April 24, 2020 submittal notes that this reflects current permitting practices for the State and is intended to streamline the application process. It explains that there may be situations where a source has submitted a synthetic minor construction permit application and is unaware of the available general synthetic minor construction permit. In this scenario, if the proposed project qualifies for an issued general synthetic minor construction permit, the State would not require the source to submit a separate request for coverage under the corresponding general synthetic minor permit. The State would, on its own initiative, process the application as an application for coverage under the general synthetic minor construction permit. EPA believes that this flexibility reflects inherent discretion that the State has within its program to process applications in an efficient manner and is reasonable given that the source has provided enough information for the State to determine that the project would qualify under the general construction permit.

EPA has reviewed these changes made to Regulation 61–62.1, subparagraph II(E)(4)(c), and they appear to be consistent with CAA sections 110(a)(2)(C) and 110(l). However, due to the proposed disapproval of subsection II(N) as described below, the revised subsection II(E) lacks the public participation component required under 40 CFR 51.161. Therefore, EPA is proposing to disapprove these changes to South Carolina's SIP at Regulation 61–62.1,subparagraph II(E)(4)(c).

c. Subparagraph II(E)(4)(e)

The October 1, 2007 submittal rewrites and simplifies subparagraph (E)(4)(b), which is relettered in the August 8, 2014 submittal to become (E)(4)(e). The 2007 submittal provides the State authority to grant a source's request for authorization to operate under a general permit without further public notice and says that such a grant shall be a final permit action for purposes of judicial review. The changes made in the October 1, 2007 submittal also removes a redundant sentence that essentially re-stated this and made an additional cross-reference to the public notice procedures. Subsequently, the April 24, 2020 submittal makes minor changes to subparagraph (E)(4)(e) to clarify that the coverage is available for ''general synthetic minor construction'' permits rather than ''general'' permits.

EPA has reviewed these changes made to Regulation 61–62.1, subparagraph II(E)(4)(e) and they appear to be consistent with CAA sections 110(a)(2)(C) and 110(l). However, due to the proposed disapproval of Subsection II(N) as described below, the revised subsection II(E) lacks the public participation component required under 40 CFR 51.161. Therefore, EPA is proposing to disapprove the aforementioned changes to South Carolina's SIP at Regulation 61–62.1, subparagraph II(E)(4)(e).

d. Subparagraph II(E)(4)(g)

The April 24, 2020 submittal adds new subparagraph (E)(4)(g), which states that a source that qualifies for coverage under a general synthetic minor construction permit may submit a construction permit application to the State and request an individual synthetic minor construction permit in lieu of coverage under a general synthetic minor construction permit.

South Carolina had similar language included in subsection II(D) of the State effective version of Regulation 61–62.1 for general permits since the October 1, 2007 submittal. The State notes that an aim of its submittal is to improve consistency in language for general and registration permits. This provision acknowledges that sources can request that the State issue an individual synthetic minor permits in lieu of coverage under a corresponding general synthetic minor construction permit. This language states that use of a general synthetic minor construction permit is not required, and the State will consider the preference of the source.

EPA has reviewed these changes made to Regulation 61–62.1, subparagraph II(E)(4)(g) and they appear to be consistent with CAA sections 110(a)(2)(C) and 110(l). However, due to the proposed disapproval of subsection II(N) as described below, the revised subsection II(E) lacks the public participation component required under 40 CFR 51.161. Therefore, EPA is proposing to disapprove the aforementioned changes to South Carolina's SIP at Regulation 61–62.1, subparagraph II(E)(4)(g).

5. Subsection II(F)—Operating Permits

Subsection II(F), *Operating Permits,* describes provisions for minor operating permits for any true minor stationary source, meaning those sources smaller than the major source thresholds at Regulation 61–62.70, *Title V Operating Permit Program,* and which do not need federally enforceable emission limits to restrict PTE to avoid title V major source status pursuant to subsection II(G). The October 1, 2007 submittal adds a new subsection II(F), *Operating Permits,* in place of former subsection II(F), *Exemptions,* which is renumbered to subsection II(B). In contrast to subsection II(G), *Conditional Major Operating Permits,* subsection II(F) does not require an opportunity for public notice and comment on the covered minor source operating permits.[13] EPA does not require States to submit minor source operating permit programs to the Agency for incorporation into their SIPs; however, EPA set forth criteria for the approvability of such programs into SIPs in a June 28, 1989 final rule. *See* 54 FR 27274. Among EPA's criteria for an approvable program is that the operating permits are subject to public participation prior to issuance, which is not the case under subsection II(F). *See id.* at 27282. EPA is therefore proposing to disapprove the entirety of subsection II(F). Specifically, EPA is proposing to disapprove the addition of subsection II(F) transmitted in the October 1, 2007 submittal and other changes made in the August 8, 2014; July 27, 2016; and April 24, 2020.[14] The revisions made to subsection II(F) in the submittals from October 1, 2007; August 8, 2014; and July 27, 2016 submittals were explained and proposed for approval in the NPRM published on August 17, 2017. *See* 82 FR 39083. No comments were received on the addition of, and changes made to, subsection II(F), and these paragraphs and changes to subsection II(F) are not further explained here as their disapproval is based not on the content of the changes but on the lack of a public notice component. The April 24, 2020 submittal makes several subsequent changes to subsection II(F), as discussed below.

a. Paragraphs II(F)(2) and (F)(3)

The April 24, 2020 submittal adds subparagraph II(F)(2) to distinguish a specific situation for sources awaiting the issuance of an operating permit from the State. Paragraph II(F)(3), as renumbered from II(F)(2) in this submittal, provides that the professional engineer in charge of the project shall certify that the construction completed under the corresponding construction permit has been completed in accordance with the construction permit and application. This provision allows for the source to operate under the issued construction permit until the State has issued the operating permit if the certification is provided by the engineer. If, however, the construction is not completed in accordance with the permit application and construction permit, this provision requires the owner or operator to submit a description of the modifications from the permit prior to commencing operation. The provision further requires that any construction variances that would trigger additional requirements that have not been addressed prior to commencing operation will be treated as construction without a permit for compliance purposes.

The April 24, 2020 submittal also adds the phrase ''when a Department issued construction permit includes engineering and/or construction specifications'' to clarify that this provision is intended to function for projects with unique engineering and construction requirements. The new paragraph II(F)(2) covers situations for which construction permits do not include engineering and/or construction specifications for the project. Specifically, this subparagraph allows for these sources to operate under the issued construction permit until the State issues the operating permit. In applicable situations, there are no engineering or construction specifications that the professional engineer would need to certify. Regardless of the type of minor source construction project, these minor source operating permits must be applied for within 15 days of initial startup. This addition, therefore, is a clarification that not all minor source construction permits will need certification from a professional engineer. However, as discussed above, EPA is proposing to disapprove the entirety of subsection II(F) due to a lack of public notice procedures. Therefore, EPA is proposing to disapprove these changes to South Carolina's SIP at Regulation 61–62.1, paragraphs II(F)(2) and (F)(3).

b. Paragraph II(F)(5)

The April 24, 2020 submittal also adds an entire section on the ability to develop general minor source operating permits at paragraph II(F)(5). However, similar to Section II(D) for general minor source construction permits, paragraph II(F)(5) would allow for the development and issuance of general true minor source operating permits without first going through public notice and comment. As noted above, States are not required to include minor source operating permit programs in their SIPs, and EPA has identified criteria, including public participation, for approving minor source operating permits into SIPs for those States that elect to submit a program to EPA for incorporation.

EPA has evaluated the changes to subsection II(F) transmitted in the April 24, 2020, submittal and found them to

[13] EPA approved subsection II(G) into the SIP because, among other things, it provides EPA and the public with timely notice of the proposal and issuance of such permits; provides EPA, on a timely basis, with a copy of each proposed (or draft) and final permit; and provides for an opportunity for public comment on the permit applications prior to issuance of the final permit. *See* 60 FR 63434, 63435 (December 11, 1995).

[14] Final disapproval of subsection II(F) and changes to subsection II(B) at subparagraph II(B)(2)(h) would leave in place a portion of subsection II(F), *Exemptions,* at subparagraph II(F)(2)(g), State effective June 24, 2005.

be inconsistent with EPA's criteria for approving minor source operating permit programs into SIPs. Therefore, EPA is proposing to disapprove the ability to create general minor source operating permits at paragraph II(F)(5).

6. Subsection II(G)—Conditional Major Operating Permits

Subsection II(G), *Conditional Major Operating Permits,* describes provisions for synthetic minor operating permits for any stationary source requesting federally enforceable permit limits to limit a source's PTE so the source does not qualify as a major source (thus becoming a minor source ''synthetically''). As noted above, EPA set forth criteria for approval of minor source operating permits in its June 28, 1989 final rule. *See* 54 FR 27274. EPA evaluated these criteria, including adequate public notice procedures, and approved subsection II(G) for conditional major (synthetic minor) operating permits in its December 11, 1995 final rule. *See* 60 FR 63434. However, these public participation requirements now refer to and depend on subsection II(N), *Public Participation Procedures,* which was modified from paragraph II(G)(5) in the October 1, 2007 submittal.[15] For the reasons explained in Section II.A.10. of this document, EPA is proposing to disapprove subsection II(N). Because EPA is proposing to disapprove the changes that include moving paragraph II(G)(5) to subsection II(N), the updated subsection II(G) would not have a functional cross-reference to applicable public notice procedures and would therefore have the effect of removing the current requirements for public notice from the conditional major operating permits subsection. EPA is therefore proposing to disapprove the changes to subsection II(G). Specifically, EPA is proposing to disapprove the changes transmitted in the October 1, 2007; July 18, 2011; August 8, 2014; July 27, 2016; and April 24, 2020 submittals. The revisions made to subsection II(G) in the submittals from October 1, 2007; July 18, 2011; August 8, 2014; and July 27, 2016 submittals were explained and proposed for approval in the NPRM published on August 17, 2017. *See* 82 FR 39083. No comments were received on revisions made to subsection II(G), and these changes are not further explained here as their proposed disapproval is based solely on the lack of a public notice component. If EPA takes final action as proposed, the existing SIP-approved conditional major operating permitting program at subsection II(G) in the SIP, State effective June 24, 2005, would continue to function. Other revisions to subsection II(G) which were submitted subsequent to the August 17, 2017 NPRM are explained below.

a. Subparagraph II(G)(2)(d)

The April 24, 2020 submittal removes subparagraph II(G)(2)(d), which was added to II(G)(2)(c) in the October 1, 2007 submittal and restructured to II(G)(2)(d) in the August 8, 2014 submittal.[16] Subparagraph II(G)(2)(d) would allow the owner or operator to continue operating a source pursuant to the most recent conditional major operating permit after submitting a request for renewing its operating permit until the State acts on the permit application. The renewal request must meet requirements in subsection II(H). Subparagraph II(G)(2)(d) is removed, but a substantially similar provision allowing the owner or operator to continue operating a source if a timely renewal application for any operating permit meeting the requirements of subsection II(H) is introduced at subparagraph II(H)(1) in the April 24, 2020 submittal. This is discussed further under changes to subsection II(H) below. For the purposes of subparagraph II(G)(2)(d), removing this provision from subsection II(G) and including the same requirement at subsection II(H) concerning operating permit renewal requests is reasonable because the provision merely requires any request for renewal of conditional major operating permits to comply with requirements in subsection II(H) in order for the source to continue operating while awaiting State action on its timely application. However, due to the disapproval of subsection II(N) as described below, subsection II(G) lacks the public participation component which was a basis for EPA's approval of subsection II(G) into the SIP. EPA is therefore proposing to disapprove this change to subparagraph II(G)(2)(d).

b. Subparagraph II(G)(7)(c)

The April 24, 2020, submittal breaks subparagraph (G)(7)(c) into two parts. Subparagraph (G)(7)(c)(i) is a reformatting of the language introduced in the August 8, 2014 submittal. The new provision in the April 24, 2020 submittal is at subparagraph (G)(7)(c)(ii). It states that a source that has submitted an individual permit application to the State and has not requested coverage under the conditions and terms of a general conditional major operating permit for similar sources, but which is determined to qualify for coverage under a general conditional major operating permit, may be granted coverage under the general conditional major operating permit at the sole discretion of the State.

The April 24, 2020 submittal notes that this reflects current permitting practices for South Carolina and is intended to streamline the application process. It explains that there may be situations where a source has submitted an individual conditional major operating permit application and is unaware of the available general conditional major operating permit. In this scenario, if the proposed project qualifies for an issued general conditional major operating permit, the State would not require the source to submit a separate request for coverage under the corresponding general conditional major operating permit. The State would, on its own initiative, process the application as an application for coverage under the general conditional major operating permit. EPA has reviewed these changes made to Regulation 61–62.1, subparagraph II(G)(7)(c) and they appear to not be inconsistent with EPA's criteria for federally enforceable operating permits. EPA believes that the flexibility in the State's rule reflects inherent discretion that the State has within its program to process applications in an efficient manner and is reasonable if the source has provided enough information for the State to determine that the project would qualify under the general conditional major operating permit. However, due to the proposed disapproval of subsection II(N) as described below, subsection II(G) lacks the public participation component which was a basis for EPA's approval of subsection II(G) into the SIP. Therefore, EPA is proposing to disapprove these changes to South Carolina's SIP at Regulation 61–62.1, subparagraph II(G)(7)(c).

c. Subparagraph II(G)(7)(g)

The April 24, 2020 submittal adds subparagraph (G)(7)(g), which states that a source that qualifies for coverage under a general conditional major operating permit may submit a permit application to the State and request an individual conditional major operating permit in lieu of coverage under a general conditional major operating permit. The State had similar language included in Section II(D) for general permits since the October 1, 2007 submittal. The State notes that an aim

[15] The revision to subsection II(G) would move the public participation provision at II(G)(5) to II(N) and include a cross-reference to (II)(N) within II(G).

[16] Subparagraph II(G)(2)(d) has not been approved into the SIP.

of its submittal is to improve consistency in language for general and registration permits. This provision acknowledges that sources can request that the State issue an individual conditional major operating permit in lieu of coverage under a corresponding general conditional major operating permit. This language states that use of a general conditional major operating permit is not required, and that the State will consider the preference of the source. EPA has reviewed these changes made to Regulation 61–62.1, subparagraph II(G)(7)(g) and they appear found them to not be inconsistent with EPA's criteria for federally enforceable operating permits. However, due to the proposed disapproval of subsection II(N) as described below, subsection II(G) would lack the public participation component which was a basis for EPA's approval of subsection II(G) into the SIP. Therefore, EPA is proposing to disapprove the aforementioned changes to South Carolina's SIP at Regulation 61–62.1, subparagraph II(G)(7)(g).

7. Subsection II(H)—Operating Permit Renewal Requests

South Carolina's October 1, 2007; July 18, 2011; June 17, 2013; August 8, 2014, and July 27, 2016 submittals revised subsection II(H), *Operating Permit Renewal Requests,* which specifies requirements for requesting renewals of operating permits for sources which are not subject to the State's title V program at Regulation 61–62.70. Those changes to former paragraph II(B)(2), recodified to subsection II(H) in the October 1, 2007, submittal, were reviewed and proposed for approval in the August 17, 2017 NPRM and are not further discussed here. *See* 82 FR 39083. The April 24, 2020 submittal makes several subsequent changes to subsection II(G), as discussed below.

First, subparagraph II(H)(1) is added. This subparagraph would allow the owner or operator to continue operating a source pursuant to the most recent conditional major operating permit after submitting a request for renewing its operating permit until South Carolina takes final action on the request for renewal. The renewal request must meet requirements in subparagraphs II(H)(2)–(5), as renumbered from (H)(1)–(4).

Next, subparagraph II(H)(5), formerly II(H)(4), is revised to include requirements that the name, mailing address, email address, and telephone number of both the owner or operator of the facility and the permit contact person for the facility be included in the renewal application. Finally, minor edits are made throughout subsection II(H), including placing the alphanumeric provision dividers in parentheses. The changes to subsection II(H) in the April 24, 2020 submittal are reasonable changes make to these renewal provisions for operating permits. The ability for the source to continue to operate under the previously issued operating permit if a timely renewal submittal has been made and the State has not yet acted to issue the renewal permit functions like the permit application shield provisions under the Federal title V operating permitting program for major sources at 40 CFR part 70 and approved for South Carolina at Regulation 61–62.70. The remaining changes to subsection II(H) in this submittal are either ministerial or minor in nature, such as requiring additional information to be included in the renewal request compared to what is presently required in the SIP and what EPA also previously proposed to approve in this recodified subsection in the August 17, 2017 NPRM. EPA has reviewed these changes made to Regulation 61–62.1, subsection II(H) and found them to not be inconsistent with EPA's criteria for federally enforceable operating permits, and to be consistent with similar provisions for Federal provisions for major source operating permits. Therefore, EPA is proposing to approve the aforementioned changes to South Carolina's SIP at Regulation 61–62.1, subsection II(H). EPA notes that the effect of approving subsection II(H), *Operating Permit Renewal Requests,* as renumbered from paragraph II(B)(2), while disapproving the changes to existing subsection II(H), *Synthetic Minor Plant Permits,* would create a second subsection II(H) in the SIP. If both proposed actions are finalized, the provisions for subsection II(H), *Synthetic Minor Plant Permits,* would retain the June 24, 2005 State effective date, and the provisions for subsection II(H), *Operating Permit Renewal Requests,* would have a April 24, 2020 State effective date.

8. Subsection II(I)—Registration Permits

Subsection II(I), *Registration Permits,* prescribes regulations by which South Carolina can issue registration permits that cover construction and operation of similar types of stationary sources. The October 1, 2007 submittal introduces the new subsection (I) to Section II. South Carolina explains that the difference between registration permits and general construction permits or general operating permits is that registration permits are permits issued for stationary sources that that fall within a specified industrial grouping or sector and have the PTE less than the threshold for major NSR or title V applicability (*i.e.,* they are true minor sources).[17] The equipment similarities within the grouping or sector remove the need for in depth site-specific review. In contrast, general construction permits pursuant to subsection II(D) could be for any source that meets criteria across sections (*e.g.,* similar units, overall emissions threshold).

The July 18, 2011 submittal makes subsequent changes to subsection II(I) as follows: (1) Makes administrative edits; (2) adds language to assert that, regardless of qualification for registration permits, South Carolina reserves the right to require individual construction and operating permits, as determined on a case-by-case basis; and (3) changes language to clarify that registration permits shall contain any applicable permit conditions under subsection II(J), rather than all permit conditions listed in subsection II(J), as the State finds appropriate.

The August 8, 2014 submittal includes other changes to paragraph II(I), including administrative edits throughout and adding language to assert that the State can reopen registration permits for cause or to include new standards or regulations that become applicable during the lifetime of the permit. The August 8, 2014 submittal also removes language at subparagraph (I)(1)(a) requiring the State to provide notice and opportunity for public participation prior to developing new registration permits. However, the State withdrew this change from EPA's consideration in a letter dated August 7, 2017. In the letter, the State explained that its intent in withdrawing the change was to require the Department to comply with the public participation procedures at subsection II(N) when developing registration permits.[18]

South Carolina has added subsection II(I) to the permitting program to allow for the creation of a subcategory of general permits called registration construction and/or operating permits, which would be for certain industry categories of qualifying true minor sources. This permitting mechanism is intended to streamline permitting requirements and procedures. Any general permits developed pursuant to a SIP-approved minor NSR program must meet the Federal minimum requirements. Unlike the general minor

[17] The State references Regulation 61–62.70, Title V Operating Permit Program; Regulation 61–62.5, Standard No. 7, Prevention of Significant Deterioration; and Regulation 61–62.5, Standard No. 7.1, Nonattainment New Source Review, which prescribe requirements for major sources for the construction and operating permit programs.

[18] The August 7, 2017, withdrawal letter is available in the docket for this NPRM.

NSR permits provided for at Section II(D) of Regulation 61–62.1, subsection II(I) would require public notice and comment in developing the general construction and/or operating permits. However, these public participation requirements refer to and depend on subsection II(N), *Public Participation Procedures,* which was moved and modified from paragraph II(G)(5) in the October 1, 2007 submittal. For the reasons explained in Section II.A.10. of this document, EPA is proposing to disapprove subsection II(N). Because EPA is proposing to disapprove the changes to move paragraph II(G)(5) to subsection II(N), the new subsection II(I) would not have a functional cross-reference to those public notice procedures in the SIP as the State intends. EPA is therefore proposing to disapprove the entirety of subsection II(I). Specifically, EPA is proposing to disapprove the addition of subsection II(I) and subsequent changes transmitted in the October 1, 2007, July 18, 2011, August 8, 2014, and April 24, 2020 submittals. The revisions made to subsection II(I) in the submittals from October 1, 2007; July 18, 2011; and August 8, 2014 submittals were explained and proposed for approval in the NPRM published on August 17, 2017. *See* 82 FR 39083. However, EPA received adverse comments on subsection II(I). Other revisions to subsection II(I) which were submitted subsequent to the August 17, 2017 NPRM are explained below.

a. Subparagraph II(I)(2)(a)(ii)

The April 24, 2020 submittal breaks subparagraph (I)(2)(a) into two parts. The first part—(I)(2)(a)(i)—revises and clarifies language from (I)(2)(a). The second part—(I)(2)(a)(ii)—gives the State sole discretion to grant coverage under a registration permit to a qualifying source that applied for a construction and operating permit under Sections II(A) and II(F) even if the source did not request coverage under the registration permit.

The April 24, 2020 submittal notes that this reflects current permitting practices for the State and is intended to streamline the application process. It explains that there may be situations where a source has submitted a minor construction permit application and is unaware of the available registration minor construction permit. In this scenario, if the proposed project qualifies for an issued registration minor construction permit, the State would not require the source to submit the separate request for coverage under the corresponding registration minor permit. The State would, on its own initiative, process the application as an application for coverage under the general conditional major operating permit. EPA has reviewed these changes made to Regulation 61–62.1, subparagraph II(I)(2)(a)(ii) and they appear to be consistent with CAA sections 110(a)(2)(C) and 110(l) and 40 CFR 51.160–164. EPA believes that this flexibility reflects inherent discretion that the State has within its program to process applications in an efficient manner and is reasonable given that the source has provided enough information for the State to determine that the project would qualify under the registration (general) permit. However, due to the proposed disapproval of subsection II(N) as described below, this provision lacks the public participation component required under 40 CFR 51.161. Therefore, EPA is proposing to disapprove these changes to South Carolina's SIP at Regulation 61–62.1, subparagraph II(I)(2)(a)(ii).

b. Subparagraph II(I)(2)(e)

South Carolina's April 24, 2020 submittal adds subparagraph (I)(2)(e), which states that a source that qualifies for coverage under a registration permit may submit a permit application to the State and request an individual permit in lieu of coverage under a general registration permit.

South Carolina had similar language in Section II(D) for general permits since the October 1, 2007 submittal. South Carolina notes that an aim of its April 24, 2020, submittal is to improve consistency in language for general and registration permits. This provision acknowledges that sources can request that the State issue an individual minor construction permit in lieu of coverage under a corresponding registration (general) minor construction permit. This language notes that use of a registration minor construction permit is not required and that the State will consider the preference of the source. EPA has reviewed these changes to Regulation 61–62.1, subparagraph II(I)(2)(e) and they appear to be consistent with CAA section 110. However, due to the proposed disapproval of subsection II(N) as described below, this provision lacks the public participation component required under 40 CFR 51.161. Therefore, EPA is proposing to disapprove the aforementioned changes to Regulation 61–62.1, subparagraph II(I)(I)(2)(e).

9. Subsection II(K)—Exceptions

Regulation 61–62.1, subsection II(K) sets forth factors that the State will consider in determining whether to impose alternative emissions limits, compliance schedules, or other restrictions. The October 1, 2007 submittal makes non-substantive changes to this subsection, including moving subsection II(K), *Exceptions,* from subsection II(D) and makes minor administrative and typographical changes. This provision says that this subsection does not apply to mass emission limitations imposed by Federal New Source Performance Standards, Federal National Emissions Standards for Hazardous Air Pollutants, Federal or State PSD regulations, or any nonattainment requirements. Therefore, the provisions in subsection II(K) cannot be utilized for changing any emission limits set via those requirements. Subsection II(K) also requires an air quality demonstration to revise emission limits or visibility standards. Any alternative compliance schedules requested would need to provide for compliance with the applicable regulations as expeditiously as practicable. Finally, the exceptions from otherwise previously established restrictions on operation would be subject to public notice and opportunity for a public hearing. The April 24, 2020 submittal makes formatting changes by placing the alphanumeric provision dividers in parentheses.

EPA has reviewed these non-substantive changes made to subsection II(K), *Exceptions,* and found them to be consistent with CAA sections 110(a)(2)(C) and 110(l) and 40 CFR 51.160–164. This process for establishing alternative permit conditions, compliance schedules, or other restrictions on operation of a source, which is already part of the SIP, provides for a substantive evaluation of the impacts of making the changes to otherwise applicable requirements. These provisions effectively require substantively similar provisions to the issuance of a construction permit to approve the exceptions to previously established permit terms. Therefore, EPA is proposing to approve the aforementioned changes to Regulation 61–62.1, subsection II(K), into the SIP.

10. Subsection II(N)—Public Participation Procedures

The October 1, 2007 submittal makes changes to the public notice provisions in Section II, as follows. SIP-approved subparagraph II(G)(5) is moved from under the subsection titled *Conditional Major Operating Permits* [19] to a new

[19] One of the revisions to subsection in the October 1, 2007, submittal was retitling subsection G from ''*Conditional Major Source Permits*'' to ''*Conditional Major Operating Permits.*''

standalone subsection at II(N) titled *Public Participation Procedures.* The submittal adds the following language providing the State with discretion to require notice of permitting activity, even when not otherwise required by the State's regulations: ''When determined to be appropriate by the Department (or specified by regulation) notice of permitting activity shall be provided to the public and other entities for their review and comment.'' SIP-approved Section II only requires public notice for conditional major (operating) permits and synthetic minor (construction) permits. By adding this new language and moving the public participation procedures to a new standalone paragraph, the rule expands the types of permits potentially subject to public notice. The October 1, 2007 submittal also adds language stating that the State may use means other than publishing in newspapers, the *State Register,* and mailing lists to notify the public of minor source permitting.

The July 18, 2011 submittal removes the phrase ''or operating'' from the restriction in subparagraph II(N)(5) that prevents sources from commencing any construction prior to completing the required public participation procedures because the State authorizes construction via a construction permit rather than a minor source operating permit. Sources are required by Regulation 61–62.1 subparagraph II(F)(4)(b) to submit a postmarked written application for minor source operating permits within 15 days after the actual date of initial startup of each new or modified source.

Next, the August 8, 2014 submittal modifies paragraph (N)(1) to add the Department's website as another option for notifying the public of permitting activity in addition to newspapers and the *South Carolina State Register.*[20] The submittal then changes paragraph (N)(2) to restructure the required elements of the public notice into new subsections, (a) through (g). The submittal also revises language and adds subparagraphs (a) and (b) to paragraph (N)(3) to identify how the State will address and record comments, and broadens the State's procedures to require the State to consider all comments received at any public hearing rather than only those received in writing at a public hearing.[21] The August 8, 2014 revision to paragraph (N)(3) also removes language requiring the State to provide a written response to all written comments received by mail and at the public hearing, providing that all comments received within the time specified in the public notice will be considered, and that the State will maintain a record of commenters and the comments made.

Finally, the April 24, 2020 submittal revises paragraph (N)(1) to change the option to post on the Department's website to an option to post on a public website identified by the Department. The submittal also makes minor and ministerial changes to paragraph (N)(1), including to note that ''additional means of public notice'' may include public meetings. This submittal also changes the word ''other'' to ''additional'' means of public notice, to clarify that the other methods are required, while avenues like public meetings can also be used on a case-by-case basis.

The changes in the October 1, 2007 submittal to allow for other methods of public notice, and in the April 24, 2020 submittal to explicitly list a public website identified by the Department as a possible method of public notice, are consistent with the minor NSR public notice regulations at 40 CFR 51.161.[22] The Department can therefore make use of a website, public hearings, and other methods in lieu of or in addition to publication in a newspaper. The provisions at subsection II(N) prescribe generally applicable public notice procedures, and additional public notice requirements are contained in the major NSR and major operating permit (title V) regulations at Regulation 61–62.5, Standard No. 7, *Prevention of Significant Deterioration (PSD),* 61–62.5, Standard No. 7.1, *Nonattainment New Source Review (NSR),* and 61–62.70, *Title V Operating Permit Program.*

While the changes to the public notice requirements in the October 1, 2007 submittal applying public notice procedures to permitting activities beyond conditional major (operating) permits and synthetic minor (construction) permits at the State's discretion are an improvement, they do not fully satisfy the public notice procedures in 40 CFR 51.161. The Federal regulations provide that the legally enforceable procedures in 40 CFR 51.160 must require that the State provide for opportunity for public comment on the information submitted to the State by owners and operators, the State's analysis of the effects of the construction or modification of the project, and the State's proposed decision. In other words, in order for the SIP to meet the public notice requirements in 40 CFR 51.161, all of the projects that South Carolina determines are subject to minor NSR procedures pursuant to 40 CFR 51.160(e) need to be subject to public notice procedures prescribed in the SIP. While the changes transmitted in the October 1, 2007 submittal may increase the level of public participation in the minor NSR program, subsection II(N) as submitted, and as modified further in the July 18, 2011; August 8, 2014; and April 20, 2020 submittals, does not meet the minimum requirements in 40 CFR 51.160 and 51.161. Accordingly, EPA is proposing to disapprove subsection II(N).

III. Incorporation by Reference

In this document, EPA is proposing to include in a final EPA rule regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, and as discussed in Section II of this preamble, EPA is proposing to incorporate by reference South Carolina Regulation 61–62.1, Section II, *Permit Requirements,* State effective April 24, 2020, except for the following: subsection II(G), which is incorporated by reference with a State effective version of June 24, 2005; subsection II(B) at paragraph II(B)(2)(h); subsection II(B) at paragraph II(B)(3); subsection II(B) at paragraph II(B)(5); subsection II(B) at paragraph II(B)(6); subsection II(D); subsection II(F), except for the title and subparagraph II(F)(2)(g), which are incorporated by reference with a State effective date of June 24, 2005; and subsection II(I).[23] EPA has made, and will continue to make, these materials generally available through *www.regulations.gov* and at the EPA Region 4 office (please contact the person identified in the ''For Further Information Contact'' section of this preamble for more information).

[20] In addition to the publication outlets, the SIP-approved regulation requires the State to notify persons who requested in writing to be on a mailing list, as well as others on a mailing list developed by the State.

[21] The SIP-approved regulation also requires the State to consider and provide a written response to all written comments received by mail within the time specified for the public comment period.

[22] EPA has previously noted that the public notice requirement at 40 CFR 51.161(b)(3) is media neutral, and EPA modified 40 CFR 51.161 in an October 18, 2016, final rule to specifically allow for electronic notice of the draft permit and other information, including for synthetic minor sources. *See* 81 FR 71613.

[23] If EPA finalizes disapproval of subsection II(E), *Synthetic Minor Construction Permits,* subsection II(H), *Synthetic Minor Plant Permits,* State effective June 24, 2005, would remain in the SIP. Additionally, final approval of subsection II(H), *Operating Permit Renewal Requests,* State effective April 24, 2020, would result in two subsections II(H) within into the SIP.

IV. Proposed Action

EPA is proposing to approve the portions of the SIP revisions consisting of the following changes: parenthesizing of the lettering and numbering of the titles of the sections and spelling out certain words instead of using numerical notation in Regulation 61–62.1, Section II, *Permit Requirements,* in the April 24, 2020, submittal; the aforementioned changes to Regulation 61–62.1, subsection II(B), except for subparagraph II(B)(2)(h), and paragraphs II(B)(3), II(B)(5), or II(B)(6); the changes to subsection II(C); the addition of and changes to subsection II(H), and the restructuring of and changes to subsection II(K). EPA is proposing to approve the aforementioned changes to the SIP for the reasons discussed in Section II of this document.

For the aforementioned reasons, EPA is also proposing to disapprove the portions of the South Carolina SIP revisions consisting of changes to: Regulation 61–62.1, subsection II(B) at paragraph (2)(h); paragraphs II(B)(3), II(B)(5), and II(B)(6); the addition of and changes to subsection II(D); the restructuring of and changes to subsection II(E);[24] the addition of and changes to subsection II(F);[25] the addition of and changes to subsection II(I); and the restructuring of and changes to subsection II(N).

V. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. *See* 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to review State choices, and approve those choices if they meet the minimum criteria of the Act. Accordingly, this proposed approval proposes to partially approve and partially disapprove a SIP submission as meeting or not meeting Federal requirements, respectively, and does not impose additional requirements beyond those imposed by State law.

Additional information about these statutes and Executive Orders can be found at *https://www.epa.gov/laws-regulations/laws-and-executive-orders.*

[24] See footnote 21.

[25] Final disapproval of subsection II(F) and subparagraph II(B)(2)(h) would leave subparagraph II(F)(2)(g), State effective June 24, 2005, in the SIP.

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 14094: Modernizing Regulatory Review

This proposed action is not a significant regulatory action as defined in Executive Order 12866, as amended by Executive Order 14094, and was therefore not subject to a requirement for Executive Order 12866 review.

B. Paperwork Reduction Act (PRA)

This proposed action does not impose an information collection burden under the PRA because it does not contain any information collection activities.

C. Regulatory Flexibility Act (RFA)

I certify that this proposed action will not have a significant economic impact on a substantial number of small entities under the RFA. This proposed action will not impose any requirements on small entities because it merely partially approves and partially disapproves a SIP submission as meeting or not meeting Federal requirements, respectively.

D. Unfunded Mandates Reform Act (UMRA)

This proposed action does not contain an unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The proposed action imposes no enforceable duty on any State, local or Tribal governments or the private sector.

E. Executive Order 13132: Federalism

This proposed action does not have federalism implications. It will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination with Indian Tribal Governments

Because this proposed action merely partially approves and partially disapproves State law as meeting Federal requirements and does not impose additional requirements beyond those imposed by State law, this proposed action for the State of South Carolina does not have Tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000). Therefore, this action will not impose substantial direct costs on Tribal governments or preempt Tribal law. The Catawba Indian Nation (CIN) Reservation is located within the boundary of York County, South Carolina. Pursuant to the Catawba Indian Claims Settlement Act, S.C. Code Ann. 27–16–120 (Settlement Act), ''all state and local environmental laws and regulations apply to the [Catawba Indian Nation] and Reservation and are fully enforceable by all relevant State and local agencies and authorities.'' The CIN also retains authority to impose regulations applying higher environmental standards to the Reservation than those imposed by State law or local governing bodies, in accordance with the Settlement Act.

G. Executive Order 13045: Protection of Children from Environmental Health Risks and Safety Risks

EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that EPA has reason to believe may disproportionately affect children, per the definition of ''covered regulatory action'' in section 2–202 of the Executive Order. Therefore, this proposed action is not subject to Executive Order 13045 because it merely proposed to partially approve and partially disapprove a SIP submission as meeting or not meeting Federal requirements, respectively. Furthermore, EPA's Policy on Children's Health does not apply to this action.

H. Executive Order 13211: Actions Concerning Regulations that Significantly Affect Energy Supply, Distribution, or Use

This proposed action is not subject to Executive Order 13211 because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act (NTTAA)

This proposed rulemaking does not involve technical standards.

J. Executive Order 12898 and Executive Order 14096: Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations and Revitalizing Our Nation's Commitment to Environmental Justice for All

Executive Order 12898 (Federal Actions to Address Environmental Justice in Minority

Populations and Low-Income Populations, 59 FR 7629, February 16, 1994) directs Federal agencies to identify and address ''disproportionately high and adverse human health or environmental effects'' of their actions on communities with EJ concerns to the greatest extent

practicable and permitted by law. Executive Order 14096 (Revitalizing Our Nation's Commitment to Environmental Justice for All, 88 FR 25251, April 26, 2023) builds on and supplements E.O. 12898 and defines EJ as among other things, the just treatment and meaningful involvement of all people regardless of income, race, color, national origin, or Tribal affiliation, or disability in agency decision-making and other Federal activities that affect human health and the environment.

South Carolina did not evaluate EJ considerations as part of its SIP submittal; the CAA and applicable implementing regulations neither prohibit nor require such an evaluation. EPA did not perform an EJ analysis and did not consider EJ in this proposed action. Due to the nature of the proposed action being taken here, this proposed action is expected to have a neutral to positive impact on the air quality of the affected area. Consideration of EJ is not required as part of this action, and there is no information in the record inconsistent with the stated goal of E.O. 12898/14096 of achieving EJ for communities with EJ concerns.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Carbon monoxide, Incorporation byreference, Intergovernmental relations, Lead, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds.

Authority: 42 U.S.C. 7401 *et seq.*

Dated: January 6, 2025.

Jeaneanne Gettle,

Acting Regional Administrator, Region 4.

RIN 2040–AG37

Clean Water Act Methods Update Rule 22 for the Analysis of Contaminants in Effluent

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The U.S. Environmental Protection Agency (EPA) is proposing to promulgate new methods and update the tables of approved methods for the Clean Water Act. The Clean Water Act requires the EPA to promulgate test procedures for the analysis of pollutants. Promulgating new methods and updating the tables of approved methods increases the quality and consistency of data collected for the purposes of the Clean Water Act. In this rule, the EPA proposes to add new EPA methods for per- and polyfluoroalkyl substances (PFAS) and polychlorinated biphenyl (PCB) congeners, and add methods previously published by voluntary consensus bodies that industries and municipalities would use for reporting under the EPA's National Pollutant Discharge Elimination System permit program. The EPA also proposes to withdraw the seven Aroclor (PCB mixtures) parameters. In addition, the EPA is proposing to simplify the sampling requirements for two volatile organic compounds, and make a series of minor corrections to existing tables of approved methods. This proposed rule does not mandate when a parameter must be monitored or establish a discharge limit.

DATES: Comments must be received on or before February 20, 2025.

ADDRESSES: You may send comments, identified by Docket ID No. EPA–HQ–OW–2024–0328, by any of the following methods:

- *Federal eRulemaking Portal: https://www.regulations.gov/* (our preferred method). Follow the online instructions for submitting comments.
- *Mail:* U.S. Environmental Protection Agency, EPA Docket Center, Office of Water Docket, Mail Code 28221T, 1200 Pennsylvania Avenue NW, Washington, DC 20460.
- *Hand Delivery or Courier:* EPA Docket Center, WJC West Building, Room 3334, 1301 Constitution Avenue NW, Washington, DC 20004. The Docket Center's hours of operations are 8:30 a.m.–4:30 p.m., Monday–Friday (except Federal Holidays).

Instructions: All submissions received must include the Docket ID No. for this rulemaking. Comments received may be posted without change to *https://www.regulations.gov/*, including any personal information provided. For detailed instructions on sending comments and additional information on the rulemaking process, see the ''Public Participation'' heading of the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Adrian Hanley, Engineering and Analysis Division, Office of Water (4303T), Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, DC 20460–0001; telephone number: 202–564–1564; email address: *hanley.adrian@epa.gov.*

A. Written Comments

Submit your comments, identified by Docket ID No. EPA–HQ–OW–2024–0328, at *https://www.regulations.gov* (our preferred method), or the other methods identified in the **ADDRESSES** section. Once submitted, comments cannot be edited or removed from the docket. The EPA may publish any comment received to its public docket. Do not submit to the EPA's docket at *https://www.regulations.gov* any information you consider to be Confidential Business Information (CBI), Proprietary Business Information (PBI), or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). Please visit *https://www.epa.gov/dockets* for additional submission information; the full EPA public comment policy; information about CBI, PBI, or multimedia submissions; and general guidance on making effective comments. Publicly available docket materials are available electronically in *https://www.regulations.gov* at the Water Docket in EPA Docket Center, EPA/DC, EPA West William J. Clinton Building, Room 3334, 1301 Constitution Avenue NW, Washington, DC. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. Any copyright material can be viewed at the Reading Room, please contact the EPA Docket Center, Public Reading Room. The telephone number for the Public Reading Room is 202–566–1744, and the telephone number for the Water Docket is 202–566–2426. Fax: 202–566–9744. Email: *docket-customerservice@epa.gov.*

II. General Information

A. Does this action apply to me?

Entities potentially affected by the requirements of this action include:

Category	Examples of potentially affected entities
State, Territorial, and Indian Tribal Governments.	States authorized to administer the National Pollutant Discharge Elimination System permitting program; states, territories, and Tribes providing certification under CWA section 401; state, territorial, and Tribal-owned facilities that must conduct monitoring to comply with NPDES permits.
Industry	Facilities that must conduct monitoring to comply with NPDES permits; the environmental monitoring industry.
Municipalities	Publicly Owned Treatment Works or other municipality-owned facilities that must conduct monitoring to comply with NPDES permits.

This table is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be affected by this action. This table lists types of entities that the EPA is now aware of that could potentially be affected by this action. Other types of entities not listed in the table could also be affected. To determine whether your facility is affected by this action, you should carefully examine the applicability language at 40 CFR 122.1 (NPDES purpose and scope), 40 CFR 136.1 (NPDES permits and CWA) and 40 CFR 403.1 (pretreatment standards purpose and applicability). If you have questions regarding the applicability of this action to a particular entity, consult the appropriate person listed in the preceding **FOR FURTHER INFORMATION CONTACT** section.

B. What action is the Agency taking?

Periodically, the EPA updates the approved methods in 40 CFR part 136. This proposed rulemaking is the 24th update to 40 CFR part 136 since its inception in 1973, 22 Method Update Rules and two Routine Method Update Rules. In general, the changes in this action fall into six categories. The first category is withdrawal of the seven Aroclor parameters and associated methods. The second category is withdrawal of outdated methods that have been supplanted by already approved methods at 40 CFR part 136. The third category is a simplification of the sampling and preservation requirements for two volatile organic compound methods. The fourth category includes minor corrections in the text and tables in 40 CFR part 136. The EPA is proposing these revisions to keep current with technology advances, and to improve data quality and consistency for the regulated community. The fifth category is new EPA methods for new parameters that are being added to 40 CFR part 136. The sixth category is new methods published by a voluntary consensus standard body or vendor for new parameters. The following paragraphs provide details on the revisions. The first four categories are discussed in section IV Corrections or Amendments to the Text and Tables of 40 CFR part 136 of this preamble, the fifth and sixth categories are discussed in section V Incorporation by Reference of this preamble.

C. What is the Agency's authority for taking this action?

The EPA is proposing this regulation under the authorities of sections 301(a), 304(h), and 501(a) of the CWA; 33 U.S.C. 1251, 1311(a), 1314(h) and 1361(a). Section 301(a) of the CWA prohibits the discharge of any pollutant into navigable waters unless the discharge complies with, among other provisions, a NPDES permit issued under section 402 of the CWA. Section 304(h) of the CWA requires the EPA Administrator to ''. . .promulgate guidelines establishing test procedures for the analysis of pollutants that shall include the factors which must be provided in any certification pursuant to [section 401 of the CWA] or permit application pursuant to [section 402 of the CWA].'' Section 501(a) of the CWA authorizes the EPA Administrator to ''. . . prescribe such regulations as are necessary to carry out this function under [the CWA].'' The EPA generally has codified its test procedure regulations (including analysis and sampling requirements) for CWA programs at 40 CFR part 136, though some requirements are codified in other parts (*e.g.,* 40 CFR Chapter I, Subchapters N and O).

III. Background

This preamble describes the abbreviations and acronyms used, the legal authority and reasons for the proposed rule, and a summary of the proposed changes and clarifications, and solicits comment from the public.

Abbreviations and Acronyms Used in the Preamble

AOF: Adsorbable Organic Fluorine
ASTM: ASTM International [1]
CFR: Code of Federal Regulations
CWA: Clean Water Act
EPA: The U.S. Environmental Protection Agency
GC/MS: Gas Chromatography/Mass Spectrometry
H_2O_2: Hydrogen Peroxide
ICP/AES: Inductively Coupled Plasma-Atomic Emission Spectroscopy
LC–MS/MS: Liquid Chromatography-Tandem Mass Spectrometry (also used as LC/MS/MS in some methods)
NPDES: National Pollutant Discharge Elimination System
NTTAA: National Technology Transfer and Advancement Act
PAA: Peracetic Acid
PCB: Polychlorinated Biphenyl
PFAS: Per- and Polyfluoroalkyl Substances
POTW: Publicly Owned Treatment Works
QC: Quality Control
TNI: The NELAC Institute
USGS: United States Geological Survey
VCSB: Voluntary Consensus Standards Body

NPDES permits must include conditions to ensure compliance with the technology-based and water quality-based requirements of the CWA, including in many cases, restrictions on the quantity of specific pollutants that can be discharged. Permittees must use EPA-approved analytical methods that are sensitive enough to detect and measure pollutants at or below permit limits or water quality criteria (CWA section 402(b)(2)(A)). Permits include measurement and reporting requirements for these specific pollutants; however, permittees often have a choice of which approved test procedure they will use when the EPA has approved more than one method for a specific pollutant.

The procedures for the analysis of pollutants required by CWA section 304(h) are a central element of the NPDES permit program. Examples of

[1] Formerly known as the American Society for Testing and Materials (ASTM).

where these EPA-approved analytical methods must be used include the following: (1) applications for NPDES permits, (2) sampling or other reports required under NPDES permits, (3) other requests for quantitative or qualitative effluent data under the NPDES regulations, (4) State CWA 401 certifications, and (5) sampling and analysis required under EPA's General Pretreatment Regulations for Existing and New Sources of Pollution, 40 CFR 136.1, 40 CFR 403.12(b)(5)(v), and 40 CFR 403.12(g)(3).

Periodically, the EPA promulgates updates to the approved methods in 40 CFR part 136 to improve data quality and consistency. The changes proposed in this action fall into the following categories. The first category is withdrawal of seven Aroclor mixtures and the associated approved methods for Aroclors from the list of parameters at Table Ic that have been replaced with a method for the PCB congeners and total PCBs at Table Ii that provides a more accurate and complete characterization of the PCB content of samples than Aroclor analyses (see section V.A of this preamble). The second category is withdrawal of outdated methods that includes single-analyte total metal colorimetric methods for twelve metal parameters, a Waters™ anion method, and EPA Method 1664A for the parameter ''oil and grease'' (see section IV.B of this preamble). The third category is simplifying sampling requirements for purgeable compounds by making the preservation requirement for acrolein and acrylonitrile consistent with the other pollutants analyzed by volatile organic compound methods (see section IV.C of this preamble). The fourth category is minor corrections to the text and tables at 40 CFR part 136 (see section IV.D of this preamble). The fifth category is new EPA methods for new parameters not previously listed at 40 CFR part 136 that will be added by incorporation by reference: per- and polyfluoroalkyl substances (PFAS) by EPA Method 1633A to a new Table Ij, adsorbable organic fluorine (AOF) by EPA Method 1621 to Table Ic, and polychlorinated biphenyl (PCB) congeners by EPA Method 1628 to a new Table Ii (see section V.A of this preamble). The EPA has finalized these three EPA methods and has posted these methods, along with their validation study reports, on EPA's CWA Methods website (*https://www.epa.gov/cwa-methods*). The sixth category is new methods published by the voluntary consensus standard bodies (VCSBs) or vendors for new parameters not previously listed at 40 CFR part 136 that will be added by incorporation by reference: PFAS analytes by ASTM D8421–24 to Table Ij; peracetic acid (PAA) by Standard Method ''4500–PAA Peracetic Acid (Residual),'' and hydrogen peroxide (H_2O_2) by Standard Method ''4500–H_2O_2 Hydrogen Peroxide (Residual)'' to Table Ib (see section V.B of this preamble). Finally, as a consequence of adding the two new tables for the PCB congeners and PFAS, the format of the numbers for the existing Tables IA through IH are being revised to be called out as Tables Ia through Ih. The use of a lowercase letter in the table identifier is necessary to avoid confusion between the new Table Ii of PCB congeners and the existing Table II with the required containers, preservation techniques, and holding times (see section V.A of this preamble).

IV. Corrections or Amendments to the Text and Tables of 40 CFR Part 136

A. Withdrawal of the Aroclor Parameters and the Associated Methods

The EPA proposes to withdraw the seven Aroclor parameters listed as PCB–1016, PCB–1221, PCB–1232, PCB–1242, PCB–1248, PCB–1254, and PCB–1260 and their associated methods from Table Ic, Parameters 88–94. Removing these parameters will result in the renumbering of all of the subsequent parameters in that table. This will also result in deletion of footnote 8, and the renumbering of footnotes 9 through 16. All of the methods listed for these parameters are listed elsewhere for other parameters, so none of them will be completely removed from 40 CFR part 136.3. The ''PCBs'' class of compounds is made up of 209 structurally related but distinct chemicals often called ''congeners.'' The seven Aroclor parameters are commercial PCB mixtures and were first included in the EPA's 1976 Priority Pollutant List (Appendix A to Part 423, Title 40). These seven PCB mixtures were the only ones for which the EPA had valid methods at that time. However, none of these Aroclor mixtures include all the PCB congeners that may be present in an environmental sample. The EPA developed the original Aroclor methods in the 1970s, when analysis of individual PCB congeners was impractical with the existing affordable analytical technology and in the absence of automated laboratory information management systems. During the multi-laboratory study of Method 608 in the late 1970s, roughly 20% of the Aroclor data were rejected due to poor accuracy, and false negatives (non-detects) were an issue even with samples that were spiked with fresh standards.[2]

When used as a surrogate for PCBs, the results from the approved Aroclor methods can create false confidence that PCBs are not present. Given that the manufacturing and use of PCBs have been banned in the U.S. since 1979, most PCBs in the environment have been subjected to extensive changes in composition and concentration through processes that are collectively referred to as ''weathering.'' Moreover, there are other relevant sources of PCBs to the environment beyond the seven Aroclor parameters that are not accounted for through Aroclor analyses. Aroclor methods were the best available technology when they were validated in 1978, but now there are much more accurate methods. Thus, the EPA is proposing to replace the Aroclor analysis with EPA Method 1628, which detects the 209 PCB congeners directly, either as individual congeners or groups of co-eluting congeners. As demonstrated by the EPA's multi-laboratory study,[3] EPA Method 1628 can be widely implemented because it uses laboratory equipment that is readily available and is already employed by many full-service laboratories.

Withdrawal of the Aroclor parameters and associated methods will not have any immediate impact on current NPDES permits because permits that have been issued by the permitting authority can continue until they expire. 40 CFR 122.21(e)(3)(ii) states: ''(ii) When there is no analytical method that has been approved under 40 CFR part 136, required under 40 CFR chapter I, subchapter N or O, and is not otherwise required by the Director, the applicant may use any suitable method but shall provide a description of the method. When selecting a suitable method, other factors such as a method's precision, accuracy, or resolution, may be considered when assessing the performance of the method.'' EPA anticipates renewed permits will switch to the approved PCB congener method. Given that most permits are renewed every 5 years or less, promulgation of this part of this proposed rule would result in a multi-year phase out of Aroclor analysis.

B. Withdrawal of Outdated Methods

The EPA proposes to withdraw approval of outdated colorimetric

[2] EPA document EPA–600/4–84–061, ''EPA Method Study 18 Method 608—Organochlorine Pesticides and PCBs.'' June 1984.

[3] EPA document EPA 820–R–21–003, ''Report on the Multi-laboratory Validation of Clean Water Act Method 1628 for PCB Congeners.'' April 2021.

methods for 12 individual metals and one inorganic anions alternate test procedure that the sponsoring organization no longer supports or makes available to the public. The removal of these methods and their associated footnotes will result in renumbering of the following footnotes at the end of Table Ib.

1. The EPA proposes to withdraw 12 single-metal colorimetric methodology types that measure a total metal concentration (*e.g.,* ''Aluminum—Total'') from 40 CFR 136.3, Table Ib. There are multiple inductively coupled plasma (ICP) and graphite furnace methods that are more sensitive and provide more accurate results in challenging matrices that are already listed in Table Ib. These ICP and graphite furnace methods are also relatively inexpensive and easily automated, particularly when analyzing for one parameter (as is done for the colorimetric methods that the EPA is proposing to withdraw). The suggestion to withdraw these methods initially came from The NELAC Institute (TNI), which accredits a large portion of the environmental laboratories in the U.S. TNI is unaware of any laboratory that is currently accredited for these outdated colorimetric methods. If the EPA receives compelling reason to not withdraw any of these methods, the EPA will consider keeping some or all of these methods in 40 CFR part 136. Otherwise, the EPA proposes to withdraw the methods in the rows where ''Colorimetric'' is the listed methodology for the following total metals, listed in order of the parameter number in Table Ib: 3. Aluminum—Total, 6. Arsenic—Total, 8. Beryllium—Total, 10. Boron—Total, 12. Cadmium—Total, 19. Chromium—Total, 22. Copper—Total, 30. Iron—Total, 32. Lead—Total, 34. Manganese—Total, 74. Vanadium—Total, and 75. Zinc—Total. In addition, footnotes pertaining to only these withdrawals will be removed and the remaining footnotes renumbered sequentially. The relevant methods that will be withdrawn are listed here by organization. Standard Methods: 3500-Al B–2020, 3500-As B–2020, 4500–B B–2011, 3500-Cd D–1990, 3500-Cr B–2020, 3500-Cu B and C–2020, 3500 Fe B–2011, 3500-Pb B–2020, 3500-Mn B–2020, 3500–V B–2011, 3500-Zn B–2020, and Footnote 61 that references an aluminon colorimetric method in Standard Methods 19th Edition. ASTM: D2972–15 (A), D1068–15 (C). USGS: Methods I–3060–85 and I–3112–85. Hach: Footnote 19 that references Method 8506, Bicinchoninate Method for Copper, Hach Handbook of Water Analysis, 1979; Footnote 22 that references Method 8008, 1,10-Phenanthroline Method using FerroVer Iron Reagent for Water, 1980; Footnote 23 that references Method 8034, Periodate Oxidation Method for Manganese, Hach Handbook of Wastewater Analysis, 1979; and Footnote 33 that references Method 8009, Zincon Method for Zinc, Hach Handbook of Water Analysis, 1979. AOAC International: Footnote 3 that references Method 920.203, the persulfate oxidation procedure from the Official Methods of Analysis of the Association of Official Analytical Chemists, Methods Manual, Sixteenth Edition, 4th Revision, 1998.

2. The EPA also proposes to withdraw from Table Ib the Waters™ Corporation alternate test procedure: ''Method D6508 Rev.2, Test Method for Determination of Dissolved Inorganic Anions in Aqueous Matrices Using Capillary Ion Electrophoresis and Chromate Electrolyte.'' The Waters™ Corporation no longer supports this method and no longer provides copies of this method to the public. Waters™ developed their alternative test procedure to incorporate additional analysis techniques into an older ASTM standard. The method modifications developed by Waters™ were incorporated into later versions of the ASTM standard, including D6508–15, which is the currently approved method for the same anions: bromide, chloride, fluoride, nitrate, nitrate-nitrite, nitrite, orthophosphate, and sulfate (86 FR 27226, May 19, 2021). Both the Waters™ and ASTM methods are capillary ion electrophoresis methods that provide a simultaneous separation and determination of several inorganic anions and identifies all anions present in the sample by indirect UV detection. The EPA proposes to remove the eight occurrences of Method D6508 Rev. 2 from Table Ib. They are found in parameters: 11. Bromide, 16. Chloride, 25. Fluoride-Total, 38 Nitrate (as N), 39. Nitrate-nitrite (as N), 40. Nitrite (as N), 44. Ortho-phosphate (as P), and 65. Sulfate (as SO_4).

3. The EPA proposes to withdraw EPA Method 1664, Revision A: N-Hexane Extractable Material (HEM; Oil and Grease) and Silica Gel Treated N-Hexane Extractable Material (SGTHEM; Non-polar Material) by Extraction and Gravimetry, approved at 64 FR 26315, May 14, 1999, from Table Ib, parameter 41. A later revision of Method 1664, (1664 Rev. B), was approved by the EPA in a 2012 rulemaking, 77 FR 29758, May 18, 2012. That 2012 rule strongly recommended laboratories and permitting authorities replace Method 1664, Rev. A with Method 1664, Rev. B. The 2012 rule also said that the EPA would revisit withdrawing Method 1664, Rev. A in a future rulemaking (77 FR 29758, May 18, 2012). Laboratories and regulatory entities have had more than 12 years to make this adjustment, so the EPA is proposing to withdraw Method, 1664, Rev. A from Table Ib, for parameter 41. Oil and Grease—Total recoverable.

C. Simplify the Sampling and Preservation Requirements for Two Purgeable Organic Compounds (Often Referred to as Volatile Organic Compounds)

The EPA proposes to change the sampling and preservation requirements for acrolein and acrylonitrile to match those of the other purgeable halocarbons and purgeable aromatic hydrocarbons in Table II under the section for parameters in Table Ic. The EPA proposes to change the preservation pH requirement from pH 4–5 to a pH of 2, and to use hydrochloric acid to adjust the sample pH, to align with the approved practice for other purgeable organic compounds. The Environmental Monitoring Coalition provided the EPA with the results from a study using multiple wastewater types that demonstrated that the analysis of acrolein and acrylonitrile is not adversely affected by the lower pH preservation. That Environmental Monitoring Coalition study report: ''Evaluating Preservation Requirements for Acrolein and Acrylonitrile in Aqueous Matrices,'' is provided in the docket. Thus, the EPA is proposing these changes to make the sampling, analysis, and data reporting more efficient for purgeable organic compound methods.

D. Minor Corrections and Amendments to the Texts and Tables of 40 CFR Part 136

Stakeholders have identified several minor errors in Tables Ib, Id, and II. The EPA proposes to correct the following entries in those tables.

1. The EPA proposes to remove the row for the methodology ''Amperometric direct (low level)'' in Table Ib, parameter 17A, Chlorine-Free Available, because the only method listed in that row, Standard Method 4500 Cl E, measures Total Residual Chlorine (*e.g.,* parameter 17), not free chlorine. The method will remain in the corresponding row for Residual Chlorine parameter 17, where the parameter matches the method.

2. The EPA proposes to amend Table Ib parameter 24 by adding 4500–CN P–2021 and D7511(17) to allow use of any method approved for measurement of Total Cyanide in both the untreated and

treated fractions of a sample for determination of available cyanide by cyanide amenable to chlorination (CATC), provided the treatment steps in the two currently approved amenable cyanide methods, 4500–CN G–2016 and ASTM D2036–09(15)(B), are followed.

3. The EPA proposes to add EPA Method 625.1 as an approved method for the parameter Parathion ethyl, parameter 53 in Table Id. The use of EPA Method 625.1 was incorrectly omitted from Table Id for this parameter the last time that Table Id was updated (82 FR 40836, August 28, 2017) because the method lists this analyte as ''Parathion,'' rather than Parathion ethyl. EPA Method 625.1 measures aqueous samples by extracting them with methylene chloride at pH 11—13 and again at a pH less than 2 using a separatory funnel or continuous liquid/liquid extractor. Then the extract is concentrated and analyzed by GC/MS.

4. The EPA proposes to apply footnote 9 to the entry for EPA Method 1613B in Table Ic for parameter 96, 2,3,7,8-Tetrachloro-dibenzo-*p*-dioxin (formerly listed a parameter 103). This footnote (formerly listed as footnote 10) was to be added to all 17 dioxin and furan congeners in a previous rule (88 FR 10739, February 21, 2023) but was inadvertently missed for this parameter.

5. The EPA proposes to add sodium thiosulfate, $Na_2S_2O_3$, to the preservation column for parameter 4, Ammonia, under Table Ib in Table II, and apply Footnote 5 to that entry to address the fact that residual chlorine in samples will react with ammonia to form chloramines, which are an interference with ammonia analyses. The EPA also is adding the following text to the end of Footnote 5, ''Section A.2 of Standard Method 4500–NH3 discusses the need for dechlorination of samples for ammonia analysis.''

6. The EPA proposes to edit Footnote 17 to Table II under the section for parameters in Table Ib, as applied to parameter 35 for ''Mercury (CVAFS)'' to include mention of EPA Method 245.7 along with EPA Method 1631 in the footnote. Both methods employ the same cold vapor atomic fluorescence spectroscopy (CVAFS) determinative technique and including EPA Method 245.7 in the footnote will help clarify that the 90-day holding time applies to EPA Method 245.7 as well as EPA Method 1631. Currently, Method 245.7 is not specifically mentioned in Table II, which was an oversight.

7. The EPA proposes to specify in Table II that sodium thiosulfate is to be added to samples to remove oxidants (*e.g.,* chlorine) for the Table 1B parameter 48 (Phenols) and the Table 1C parameters 107 to 111 (Alkylated phenols). The EPA also proposes to restore footnote 5 in Table II for Table 1C parameters 23, 30, 44, 49, 53, 77, 80, 81, 91, 93, and 105 (Phenols), and to add Footnote 5 for Table 1C parameters 112 (Adsorbable Organic Halides) and 113 (Chlorinated Phenolics), and to clarify that the addition of sodium thiosulfate is only necessary when oxidants are present (*e.g.,* chlorine).

8. The EPA proposes to add a new footnote to Table II under Table Ib and apply it to the entry for parameter 50, Phosphorus—Total. The new Footnote 25 addresses the fact that many laboratories determine total phosphorus using EPA Method 200.7, an ICP/AES procedure for metals that is also approved for phosphorus. However, as laboratories often note, the acid specified in Table II to preserve metals samples is nitric acid, where Table II calls out sulfuric acid for phosphorous. In both cases the specified pH is a value less than or equal to 2. In addition, while Table II allows acidified samples to held for 6 months, it only allows phosphorus samples to be held for 28 days. The new Footnote 25 reads: ''When EPA Method 200.7 or another approved ICP/AES method is used to determine total phosphorus, sulfuric acid may be used to preserve the sample to pH ≤ 2, or the acid-preserved sample for metals may be used for analysis, and the holding time for total phosphorus may be extended to 6 months.''

V. Incorporation by Reference

Currently, hundreds of methods and alternate test procedures are incorporated by reference within 40 CFR part 136. In most cases, 40 CFR part 136 contains multiple approved methods for a single parameter (or pollutant) and regulated entities often have a choice in selecting a method. The proposed rule contains VCSB methods that are incorporated by reference (see section V.B of this preamble). The proposed VCSB methods are consistent with the requirements of the National Technology Transfer and Advancement Act (NTTAA), under which Federal agencies should use technical standards developed or adopted by the VCSBs if compliance would not be inconsistent with applicable law or otherwise impracticable (see section VI of this preamble). The proposed copyrighted VCSB methods are available on their respective websites (standardmethods.org and astm.org) to everyone at a cost determined by the VCSB, generally from $60 to $80. Both organizations also offer memberships or subscriptions that allow unlimited access to their methods. The cost of obtaining these methods is not a significant financial burden for a discharger or environmental laboratory, making the methods reasonably available.

This proposal includes EPA Method 1621, EPA Method 1628, and EPA Method 1633A (see section V.A of this preamble) and ASTM D8421–24, Standard Method ''4500–PAA Peracetic Acid (Residual)'', and Standard Method ''4500–H2O2 Hydrogen Peroxide (Residual)'' for four parameter types (see section V.B of this preamble) which the EPA proposes to incorporate by reference. The EPA methods and the vendor methods are available free of charge on their respective websites, therefore the EPA methods and vendor methods incorporated by reference are reasonably available.

Other standards appear in the amendatory text of this document and have already been approved for the locations in which they appear.

A. Changes to 40 CFR 136.3 To Include Three New EPA Methods and Their Associated Parameters

The EPA proposes to add three new EPA methods and their associated parameters to 40 CFR 136.3: EPA Method 1621: Determination of Adsorbable Organic Fluorine (AOF) in Aqueous Matrices by Combustion Ion Chromatography (CIC), EPA Method 1628: Polychlorinated Biphenyl (PCB) Congeners in Water, Soil, Sediment, Biosolids, and Tissue by Low-resolution GC/MS using Selected Ion Monitoring, and EPA Method 1633A: Analysis of Per- and Polyfluoroalkyl Substances (PFAS) in Aqueous, Solid, Biosolids, and Tissue Samples by LC–MS/MS. All three of these methods have multi-laboratory validation studies that demonstrate they perform well in a wide variety of wastewater types at multiple laboratories. These methods include performance (or quality control) criteria that the EPA generated by statistically analyzing the data from the multi-laboratory validation studies. The multi-laboratory validation study reports and methods are available to the public on the EPA's Clean Water Act Analytical Methods website at *https://www.epa.gov/cwa-methods,* and in the docket to this proposed rulemaking.

Adding these methods and parameters to 40 CFR part 136 does not require the permitting authority to require monitoring for those parameters, but it informs the permitting authority and discharger that there is an available method that has been validated and tested. Once these methods are finalized in 40 CFR part 136, then use of the approved test procedure is required if

any of these parameters are added to a NPDES permit. The EPA proposes to add the parameter ''Adsorbable Organic Fluorine,'' (AOF) to Table Ic with the approved test procedure EPA Method 1621. EPA Method 1621 determines adsorbable organic fluorine by passing an aqueous sample through two granular activated carbon columns. The columns are rinsed with sodium nitrate to remove inorganic fluoride, combusted at ≥1000 °C in an oxygen or oxygen/argon stream, and the gaseous hydrogen fluoride is absorbed into reagent water. The fluoride is separated by ion chromatography (IC), identified by comparing sample fluoride retention time to retention times for calibration standards acquired under identical Ic conditions, and then quantified using the external standard technique.

The EPA proposes to redesignate all tables in 136.3 with a lower case letter, for example Table IA would be ''Table Ia—List of Approved Biological Methods for Wastewater and Sewage Sludge.'' This redesignation of the table titles is needed to avoid confusion with the currently existing Table II (Roman numeral two) and the new table for PCBs in order to distinguish between Roman numeral one followed by the letter ''I'' and Roman numeral two. Then Tables Ii and Ij will be added, as discussed below. The number format for Table II—Required Containers, Preservation Techniques, and Holding Times will remain unchanged.

The EPA proposes to add the 209 Polychlorinated Biphenyl (PCB) Congeners and Total PCBs as new parameters in a new Table Ii with the approved test procedure EPA Method 1628. Method 1628 detects all PCB 209 congeners, which are all the compounds that make up the class of chemicals called ''PCBs.'' The new parameter called ''Total PCBs'' will be the summation of all the detected PCB congeners in the sample as determined by Method 1628. The summation will use zero (0) for the contribution of the congeners that are not detected. Otherwise, every method blank would have a non-zero result, even when no congeners are detected, affecting assessments of the sample results relative to the method blank. There is no method detection limit (MDL) for Total PCBs because it is the sum of the results for many individual parameters. Method blanks and samples with no detects are reported as ''ND'' for non-detect, or a similarly appropriate non-numeric value. Method 1628 analyzes samples by spiking them with isotope dilution standards, extracting the PCBs using separatory funnel extraction or solid-phase extraction, cleaning the extracts with a Florisil® column, and analyzing the sample extracts using GC/MS with selected ion monitoring. Because the full names of the PCB congeners are long and contain many numbers indicating the positions of the chlorine substituents (*e.g.,* 2,3,3′,4,4′,5-Hexachlorobiphenyl), they are often expressed as a ''congener number'' in the format ''PCB–XYZ,'' where ''XYZ is a number between 1 and 209. The EPA has included the congener numbers in Table Ii to facilitate consistency in reporting of the results for these new parameters.

The EPA proposes to add the 40 target PFAS analytes in Method 1633A as new parameters in a new Table Ij, with the approved test procedure EPA Method 1633A. Method 1633A analyzes samples by spiking them with isotope dilution standards, subjecting them to solid-phase extraction and activated carbon cleanup, and analyzing the sample extracts using liquid chromatography-tandem mass spectrometry (LC–MS/MS).

The EPA proposes to add these new parameters to the relevant section of Table II—Required Containers, Preservation Techniques, and Holding Times. The specifications for the containers, preservation techniques, and holding times for these parameters are the same as the specifications provided in the method.

B. Changes to 40 CFR 136.3 To Include New Parameters and Methods Published by VCSBs and Vendors

The EPA solicited VCSBs and relevant vendors to submit methods, along with study reports and validation data, for the following parameters: the PFAS parameters listed in Method 1633A, peracetic acid, and hydrogen peroxide. The VCSBs or vendors submitted data that demonstrate that their methods can be used at multiple laboratories and can reliably detect and quantify the parameter in a wide variety of wastewater types (as the EPA does with its own CWA methods). The methods and multi-laboratory study reports for each of the following methods are in the docket for this rulemaking. The EPA proposes to add the following parameters and methods to 40 CFR part 136.

The EPA also proposes to add these new parameters to the relevant section of Table II—Required Containers, Preservation Techniques, and Holding Times. The specifications for the containers, preservation techniques, and holding times for peracetic acid, and hydrogen peroxide are the same as the specifications provided in the methods. The preservation and holding time specifications for the PFAS parameters parallel those from EPA Method 1633A.

1. ''ASTM D8421–24 Standard Test Method for Determination of Per- and Polyfluoroalkyl Substances (PFAS) in Aqueous Matrices by Co-solvation followed by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS),'' as an approved test procedure for the 40 PFAS analytes being added as new parameters in Table Ij. ASTM D8421–24 analyzes aqueous samples by adding labeled surrogates to a 5-mL sample in the original container, adding 5 mL of methanol, filtering the sample, adjusting the pH and injecting a small aliquot of the extract into an LC–MS/MS instrument.

2. The EPA proposes to add the parameter ''Peracetic acid (PAA)'' to Table Ib and approve Standard Method ''4500–PAA Peracetic Acid (Residual).'' This method uses a simple handheld instrument that uses N,N-diethyl–p-phenylenediamine (DPD) chemical indicator (for PAA) followed by colorimetric detection. It is similar to the colorimetric methods used for residual chlorine. This new parameter will provide POTWs and other wastewater treatment permittees that utilize peracetic acid as an alternative to chlorine-based disinfectants with an approved method to monitor their discharges.

3. The EPA also proposes to add the parameter ''Hydrogen Peroxide (H_2O_2),'' to Table Ib and approve Standard Method ''4500–H_2O_2 Hydrogen Peroxide (Residual).'' This method uses a simple handheld instrument that uses ferric thiocyanate chemical indicator (for H_2O_2) followed by colorimetric detection. It is similar to the colorimetric methods used for residual chlorine. Hydrogen peroxide is a by-product of the use of Peracetic acid as an alternative to chlorine-based disinfectants and in conjunction with the addition of the new parameter ''Peracetic acid (PAA),'' Standard Method ''4500–H_2O_2 Hydrogen Peroxide (Residual) will provide POTWs and other wastewater treatment permittees that utilize peracetic acid with approved methods to monitor their discharges.

VI. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review Executive Order 14094: Modernizing Regulatory Review

This action is not a significant regulatory action as defined in Executive Order 12866, as amended by Executive Order 14094, and was therefore not subject to a requirement for Executive Order 12866 review.

B. Paperwork Reduction Act

This action does not impose an information collection burden under the Paperwork Reduction Act. This rule does not impose any information collection, reporting, or recordkeeping requirements. This proposal would merely add or revise CWA test procedures.

C. Regulatory Flexibility Act

I certify that this action would not have a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act. This action would not impose any requirements on small entities. This action would approve new and revised versions of CWA testing procedures. Generally, these changes improve data quality. In general, the EPA expects the proposed revisions would lead to few direct costs. Adding these parameters and methods to 40 CFR part 136 does not require the permitting authority to require monitoring that parameter, but it informs the permitting authority and discharger that there is an available method that has been validated and tested in a wide variety of wastewater types. If a permittee is already monitoring for one of more of the parameters, then the permittee may need to change methods. This would not be a significant change in cost, given that the permittee is already paying a laboratory to analyze for the parameter(s). The EPA proposes methods that would be incorporated by reference. If a permittee elected to use these methods, they could incur a small cost associated with obtaining these methods from the listed sources. See section IV of this preamble.

D. Unfunded Mandates Reform Act

This action does not contain an unfunded mandate as described in the Unfunded Mandates Reform Act, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The action imposes no enforceable duty on any state, local or tribal governments or the private sector.

E. Executive Order 13132: Federalism

This proposed rule does not have federalism implications. It would not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This proposed rule does not have tribal implications as specified in Executive Order 13175. This rule would merely approve new and revised versions of test procedures. The EPA does not expect the proposal would lead to any costs to any tribal governments, and if incurred, the EPA projects they would be minimal. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of ''covered regulatory action'' in section 2–202 of the Executive Order. Therefore, this action is not subject to Executive Order 13045 because it does not concern an environmental health risk or safety risk. Since this action does not concern human health, the EPA's policy on Children's Health also does not apply.

H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211 because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act of 1995

This action involves technical standards. The EPA proposes to approve the use of technical standards developed and recommended by the Standard Methods Committee and ASTM International for use in compliance monitoring where the EPA determined that those standards meet the needs of CWA programs. As described above, this proposal is consistent with the NTTAA.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations and Executive Order 14096: Revitalizing Our Nation's Commitment to Environmental Justice for All

The EPA believes that this type of action does not concern human health or environmental conditions and therefore cannot be evaluated with respect to potentially disproportionate and adverse effects on communities with environmental justice concerns.

This action has no effect on communities because this action will approve new CWA testing procedures. These changes would provide increased flexibility for the regulated community in meeting monitoring requirements while improving data quality. Adding new parameters to 40 CFR part 136 does not require the parameters to be monitored. In addition, this update to the CWA methods will incorporate technological advances in analytical technology. Although this action does not concern human health or environmental conditions, the EPA identifies and addresses environmental justice concerns by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of their programs, policies, and activities on minority populations (people of color) and low-income populations.

List of Subjects in 40 CFR Part 136

Environmental protection, Incorporation by reference, Reporting and recordkeeping requirements, Test procedures, Water pollution control.

Michael S. Regan,

Administrator.

For the reasons set forth in the preamble, the EPA proposes to amend 40 CFR part 136 as follows:

PART 136—GUIDELINES ESTABLISHING TEST PROCEDURES FOR THE ANALYSIS OF POLLUTANTS

■ 1. The authority citation for part 136 continues to read as follows:

Authority: Secs. 301, 304(h), 307 and 501(a), Pub. L. 95–217, 91 Stat. 1566, *et seq.* (33 U.S.C. 1251, *et seq.*) (the Federal Water Pollution Control Act Amendments of 1972 as amended by the Clean Water Act of 1977).

■ 2. Amend § 136.3 by:
■ a. Redesignating tables IA through IH as tables Ia through Ih, respectively;
■ b. In paragraph (a):
■ i. Revising the introductory text;
■ ii. Revising newly redesignated tables Ib and Ic;
■ iii. In newly redesignated table Id, revising the third column heading and the entry for ''53. Parathion ethyl'';
■ iv. Adding in alphabetical order tables Ii and Ij; and
■ c. In paragraph (b):
■ i. Revising the introductory text;
■ ii. Redesignating paragraphs (b)(8)(xi) through (xvi) as paragraphs (b)(8)(xiv) through (xix) and adding new paragraphs (b)(8)(xi) through (xiii);
■ iii. Revising and republishing paragraph (b)(10);

■ iv. Removing paragraph (b)(13)(i)(A), and redesignating paragraphs (b)(13)(i)(B) through (X) as paragraphs (b)(13)(i)(A) through (W);
■ v. Adding paragraph (b)(15)(lxxi);
■ vi. Removing paragraphs (b)(20)(ii) through (v), and redesignating paragraphs (b)(20)(vi) through (x) as paragraphs (b)(ii) through (vi);
■ vii. Revising paragraph (b)(38)(i); and
■ viii. Removing paragraph (b)(41).
■ d. In paragraph (e), table II:
■ i. Redesignating entries ''Table IA'' through ''Table IH'' as ''Table Ia'' ''through Table Ih'', respectively;
■ ii. Revising the entry for ''4. Ammonia'' under Table Ib-Inorganic Tests;
■ iii. Revising entries for ''48. Phenols'' and ''50. Phosphorus, total'', and adding entries for ''77. Hydrogen Peroxide'' and ''78. Peracetic Acid'' under Table Ib—Metals;
■ iv. Revising the table entitled ''Table Ic-Organic Tests'';
■ v. Adding in alphabetical order entries for ''Table Ii—Polychlorinated Biphenyl Congener Tests'' and ''Table Ij—Per- and Polyfluorinated Alkyl Substances Tests'';
■ vi. Revising footnotes 5 and 17 and
■ vii. Adding footnotes 25 through 29.

The revisions and additions read as follows:

§ 136.3 Identification of test procedures

(a) Parameters or pollutants, for which methods are approved, are listed together with test procedure descriptions and references in Tables Ia, Ib, Ic, Id, Ie, If, Ig, Ih, Ii, and Ij of this section. The methods listed in Tables Ia, Ib, Ic, Id, Ie, If, Ig, Ih, Ii, and Ij are incorporated by reference, see paragraph (b) of this section, with the exception of EPA Methods 200.7, 601–613, 624.1, 625.1, 1613, 1624, and 1625. The full texts of Methods 601–613, 624.1, 625.1, 1613, 1624, and 1625 are printed in appendix A of this part, and the full text of Method 200.7 is printed in appendix C of this part. The full text for determining the method detection limit when using the test procedures is given in appendix B of this part. In the event of a conflict between the reporting requirements of 40 CFR parts 122 and 125 and any reporting requirements associated with the methods listed in these tables, the provisions of 40 CFR parts 122 and 125 are controlling and will determine a permittee's reporting requirements. The full texts of the referenced test procedures are incorporated by reference into Tables Ia, Ib, Ic, Id, Ie, If, Ig, Ih, Ii, and Ij. The year after the method number indicates the latest editorial change of the method. The discharge parameter values for which reports are required must be determined by one of the standard analytical test procedures incorporated by reference and described in Tables Ia, Ib, Ic, Id, Ie, If, Ig, Ih, Ii, and Ij, or by any alternate test procedure which has been approved by the Administrator under the provisions of paragraph (d) of this section and §§ 136.4 and 136.5. Under certain circumstances (paragraph (c) of this section, in § 136.5(a) through (d) or 40 CFR 401.13) other additional or alternate test procedures may be used.

* * * * *

TABLE Ib—LIST OF APPROVED INORGANIC TEST PROCEDURES

Parameter	Methodology [53]	EPA [48]	Standard Methods [78]	ASTM	USGS/AOAC/ Other
1. Acidity, as $CaCO_3$, mg/L	Electrometric endpoint or phenolphthalein endpoint		2310 B-2020	D1067-16	I-1020-85 [2]
2. Alkalinity, as $CaCO_3$, mg/L	Electrometric or Colorimetric titration to pH 4.5, Manual		2320 B-2021	D1067-16	973.43 [3], I-1030-85 [2]
	Automatic	310.2 (Rev. 1974)[1]			I-2030-85 [2]
3. Aluminum—Total,[4] mg/L	Digestion[4], followed by any of the following:				
	AA direct aspiration [32]		3111 D-2019 or 3111 E-2019		I-3051-85 [2]
	AA furnace		3113 B-2020		
	STGFAA	200.9, Rev. 2.2 (1994)

Table Ib Notes:

[1] Methods for Chemical Analysis of Water and Wastes, EPA-600/4-79-020. Revised March 1983 and 1979, where applicable. U.S. EPA.

[2] Methods for Analysis of Inorganic Substances in Water and Fluvial Sediments, Techniques of Water-Resource Investigations of the U.S. Geological Survey, Book 5, Chapter A1., unless otherwise stated. 1989. USGS.

[3] Official Methods of Analysis of the Association of Official Analytical Chemists, Methods Manual, Sixteenth Edition, 4th Revision, 1998. AOAC International.

[4] For the determination of total metals (which are equivalent to total recoverable metals) the sample is not filtered before processing. A digestion procedure is required to solubilize analytes in suspended material and to break down organic-metal complexes . For non-platform graphite furnace atomic absorption determinations, a digestion using nitric acid (as specified in Section 4.1.3 of Methods for Chemical Analysis of Water and Wastes) is required prior to analysis. The procedure used should subject the sample to gentle acid refluxing, and at no time should the sample be taken to dryness. For direct aspiration flame atomic absorption (FLAA) determinations, a combination acid (nitric and hydrochloric acids) digestion is preferred, prior to analysis. The approved total recoverable digestion is described as Method 200.2 in Supplement I of "Methods for the Determination of Metals in Environmental Samples" EPA/600R-94/111, May 1994, and is reproduced in EPA Methods 200.7, 200.8, and 200.9 from the same Supplement. However, when using the gaseous hydride technique or for the determination of certain elements such as antimony, arsenic, selenium, silver, and tin by non-EPA graphite furnace atomic absorption methods,

mercury by cold vapor atomic absorption, the noble metals and titanium by FLAA, a specific or modified sample digestion procedure may be required, and, in all cases the referenced method write-up should be consulted for specific instruction and/or cautions. For analyses using inductively coupled plasma-atomic emission spectrometry (ICP-AES), the direct current plasma (DCP) technique or EPA spectrochemical techniques (platform furnace AA, ICP-AES, and ICP-MS), use EPA Method 200.2 or an approved alternate procedure (*e.g.*, CEM microwave digestion, which may be used with certain analytes as indicated in Table Ib of this section); the total recoverable digestion procedures in EPA Methods 200.7, 200.8, and 200.9 may be used for those respective methods. Regardless of the digestion procedure, the results of the analysis after digestion procedure are reported as "total" metals.

[5] Copper sulfate or other catalysts that have been found suitable may be used in place of mercuric sulfate.

[6] Manual distillation is not required if comparability data on representative effluent samples are on file to show that this preliminary distillation step is not necessary; however, manual distillation will be required to resolve any controversies. In general, the analytical method should be consulted regarding the need for distillation. If the method is not clear, the laboratory may compare a minimum of 9 different sample matrices to evaluate the need for distillation. For each matrix, a matrix spike and matrix spike duplicate are analyzed both with and without the distillation step (for a total of 36 samples, assuming 9 matrices). If results are comparable, the laboratory may dispense with the distillation step for future analysis. Comparable is defined as < 20% RPD for all tested matrices). Alternatively, the two populations of spike recovery percentages may be compared using a recognized statistical test.

[10] In-Situ Method 1003-8-2009, Biochemical Oxygen Demand (BOD) Measurement by Optical Probe. 2009. In-Situ Incorporated.

[11] The use of normal and differential pulse voltage ramps to increase sensitivity and resolution is acceptable.

[12] Carbonaceous biochemical oxygen demand ($CBOD_5$) must not be confused with the traditional BOD_5

test method which measures "total 5-day BOD." The addition of the nitrification inhibitor is not a procedural option but must be included to report the $CBOD_5$ parameter. A discharger whose permit requires reporting the traditional BOD_5 may not use a nitrification inhibitor in the procedure for reporting the results. Only when a discharger's permit specifically states $CBOD_5$ is required can the permittee report data using a nitrification inhibitor.

[21] Methods for Analysis of Organic Substances in Water and Fluvial Sediments, Techniques of Water-Resources Investigations of the U.S. Geological Survey, Book 5, Chapter A3, (1972 Revised 1987). 1987. USGS.

[22] Method 8507, Nitrogen, Nitrite-Low Range, Diazotization Method for Water and Wastewater. 1979. Hach Company.

[23] Just prior to distillation, adjust the sulfuric-acid-preserved sample to pH 4 with 1 + 9 NaOH.

[24] The colorimetric reaction must be conducted at a pH of 10.0 ± 0.2.

[25] Addison, R.F., and R.G. Ackman. 1970. Direct Determination of Elemental Phosphorus by Gas-Liquid Chromatography, *Journal of Chromatography*, 47(3):421-426.

[26] Approved methods for the analysis of silver in industrial wastewaters at concentrations of 1 mg/L and above are inadequate where silver exists as an inorganic halide. Silver halides such as the bromide and chloride are relatively insoluble in reagents such as nitric acid but are readily soluble in an aqueous buffer

of sodium thiosulfate and sodium hydroxide to pH of 12. Therefore, for levels of silver above 1 mg/L, 20 mL of sample should be diluted to 100 mL by adding 40 mL each of 2 M $Na_2S_2O_3$ and NaOH. Standards should be prepared in the same manner. For levels of silver below 1 mg/L the approved method is satisfactory.

[27] The use of EDTA decreases method sensitivity. Analysts may omit EDTA or replace with another suitable complexing reagent provided that all method-specified quality control acceptance criteria are met.

[28] For samples known or suspected to contain high levels of silver (*e.g.*, in excess of 4 mg/L), cyanogen iodide should be used to keep the silver in solution for analysis. Prepare a cyanogen iodide solution by adding 4.0 mL of concentrated NH_4OH, 6.5 g of KCN, and 5.0 mL of a 1.0 N solution of I_2 to 50 mL of reagent water in a volumetric flask and dilute to 100.0 mL. After digestion of the sample, adjust the pH of the digestate to >7 to prevent the formation of HCN under acidic conditions. Add 1 mL of the cyanogen iodide solution to the sample digestate and adjust the volume to 100 mL with reagent water (NOT acid). If cyanogen iodide is added to sample digestates, then silver standards must be prepared that contain cyanogen iodide as well. Prepare working standards by diluting a small volume of a silver stock solution with water and adjusting the pH>7 with NH_4OH. Add 1 mL of the cyanogen iodide solution and let stand 1 hour. Transfer to a 100-mL volumetric flask and dilute to volume with water.

[52] When using sulfide removal test procedures described in EPA Method 335.4, reconstitute particulate that is filtered with the sample prior to distillation.

[53] Unless otherwise stated, if the language of this table specifies a sample digestion and/or distillation "followed by" analysis with a method, approved digestion and/or distillation are required prior to analysis.

[54] Samples analyzed for available cyanide using OI Analytical method OIA-1677-09 or ASTM method D6888-16 that contain particulate matter may be filtered prior to the ligand exchange reagents have been added to the samples.

[55] Analysts should be aware that pH optima and chromophore absorption maxima might differ when

phenol is replaced by a substituted phenol as the color reagent in Berthelot Reaction ("phenol-hypochlorite reaction") colorimetric ammonium determination methods. For example, when phenol is used as the color reagent, pH optimum and wavelength of maximum absorbance are about 11.5 and 635 nm, respectively—see, Patton, C.J. and S.R. Crouch. March 1977. *Anal. Chem.* 49:464-469. These reaction parameters increase to pH > 12.6 and 665 nm when salicylate is used as the color reagent—see, Krom, M.D. April 1980. *The Analyst* 105:305-316.

[76] FIAlab Instruments, Inc. Method FIAlab 100, "Determination of Inorganic Ammonia by Continuous Flow Gas Diffusion and Fluorescence Detector Analysis", April 4, 2018, FIAlab Instruments, Inc.

[77] MACHEREY-NAGEL GmbH and Co. Method 036/038 NANOCOLOR® COD LR / HR, "Spectrophotometric Measurement of Chemical Oxygen Demand in Water and Wastewater", Revision 1.5, May 2018, MACHEREY-NAGEL GmbH and Co. KG.

[78] Please refer to the following applicable Quality Control Sections: Part 2000 Methods, Physical and Aggregate Properties 2020 (2021); Part 3000 Methods, Metals, 3020 (2021); Part 4000 Methods, Inorganic Nonmetallic Constituents, 4020 (2022); Part 5000 Methods, and Aggregate Organic

Constituents, 5020 (2022). These Quality Control Standards are available for download at *www.standardmethods.org* at no charge.

[79] Each laboratory may establish its own control limits by performing at least 25 glucose-glutamic acid (GGA) checks over several weeks or months and calculating the mean and standard deviation. The laboratory may then use the mean + 3 standard deviations as the control limit for future GGA checks. However, GGA acceptance criteria can be no wider than 198 ± 30.5 mg/L for BOD_5. GGA acceptance criteria for CBOD must be either 198 ± 30.5 mg/L, or the lab may develop control charts under the following conditions: dissolved oxygen uptake from the seed contribution is between 0.6 – 1.0 mg/L; control charts are performed on at least 25 GGA checks with three standard deviations from the derived mean; the RSD must not exceed 7.5%; and any single GGA value cannot be less than 150 mg/L or higher than 250 mg/L.

[80] The approved method is that cited in *Standard Methods for the Examination of Water and Wastewater*, 14th Edition, 1976.

[81] Prior to in-line UV digestion followed by gas diffusion amperometry, the sample must be treated as specified in SM 4500-CN- P-2021 (4a, b, and c) or ASTM D2036-09(15) (B, steps 21.1.1 through 21.1.5)

TABLE Ic—LIST OF APPROVED TEST PROCEDURES FOR NON-PESTICIDE Organic COMPOUNDS

Parameter [1]	Method	EPA [2, 7]	Standard Methods [16]	ASTM	Other
1. Acenaphthene	GC	610			
	GC/MS	625.1, 1625B	6410 B-2020		See footnote [8] p. 27
	HPLC	610	6440 B-2021	D4657-92 (98)	
2. Acenaphthylene	GC	610			
	GC/MS	625.1, 1625B	6410 B-2020		See footnote [8] p. 27
	HPLC	610	6440 B-2021	D4657-92 (98)	

Parameter [1]	Method	EPA [2, 7]	Standard Methods [16]	ASTM	Other
3. Acrolein	GC	603			
	GC/MS	624.1 [4], 1624B			
4. Acrylonitrile	GC	603			
	GC/MS	624.1 [4], 1624B			O-4127-96 [12]
5. Anthracene	GC	610			
	GC/MS	625.1, 1625B	6410 B-2020		See footnote [8] p. 27
	HPLC	610	6440 B-2021	D4657-92 (98)	
6. Benzene	GC	602	6200 C-2020		
	GC/MS	624.1, 1624B	6200 B-2020		O-4127-96 [12], O-4436-16 [13]
7. Benzidine	Spectro-photometric				See footnote [3] p.1
	GC/MS	625.1 [5], 1625B	6410 B-2020		
	HPLC	605			
8. Benzo(a)anthracene	GC	610			
	GC/MS	625.1, 1625B	6410 B-2020		See footnote [8] p. 27
	HPLC	610	6440 B-2021	D4657-92 (98)	

Parameter [1]	Method	EPA [2, 7]	Standard Methods [16]	ASTM	Other
9. Benzo(a)pyrene	GC	610			
	GC/MS	625.1, 1625B	6410 B-2020		See footnote [8] p. 27
	HPLC	610	6440 B-2021	D4657-92 (98)	
10. Benzo(b)fluoranthene	GC	610			
	GC/MS	625.1, 1625B	6410 B-2020		See footnote [8] p. 27
	HPLC	610	6440 B-2021	D4657-92 (98)	
11. Benzo(g,h,i)perylene	GC	610			
	GC/MS	625.1, 1625B	6410 B-2020		See footnote [8] p. 27
	HPLC	610	6440 B-2021	D4657-92 (98)	
12. Benzo(k)fluoranthene	GC	610			
	GC/MS	625.1, 1625B	6410 B-2020		See footnote [8] p. 27
	HPLC	610	6440 B-2021	D4657-92 (98)	
13. Benzyl chloride	GC				See footnote [3] p. 130

Parameter [1]	Method	EPA [2,7]	Standard Methods [16]	ASTM	Other
	GC/MS				See footnote [6] p. S102
14. Butyl benzyl phthalate	GC	606			
	GC/MS	625.1, 1625B	6410 B-2020		See footnote [8] p. 27
15. bis(2-Chloroethoxy) methane	GC	611			
	GC/MS	625.1, 1625B	6410 B-2020		See footnote [8] p. 27
16. bis(2-Chloroethyl) ether	GC	611			
	GC/MS	625.1, 1625B	6410 B-2020		See footnote [8] p. 27
17. bis(2-Ethylhexyl) phthalate	GC	606			
	GC/MS	625.1, 1625B	6410 B-2020		See footnote [8] p. 27
18. Bromodichloromethane	GC	601	6200 C-2020		
	GC/MS	624.1, 1624B	6200 B-2020		O-4127-96 [12], O-4436-16 [13]
19. Bromoform	GC	601	6200 C-2020		

Parameter [1]	Method	EPA [2, 7]	Standard Methods [16]	ASTM	Other
	GC/MS	624.1, 1624B	6200 B-2020		O-4127-96 [12], O-4436-16 [13]
20. Bromomethane	GC	601	6200 C-2020		
	GC/MS	624.1, 1624B	6200 B-2020		O-4127-96 [12], O-4436-16 [13]
21. 4-Bromophenyl phenyl ether	GC	611			
	GC/MS	625.1, 1625B	6410 B-2020		See footnote [8] p. 27
22. Carbon tetrachloride	GC	601	6200 C-2020		See footnote [3] p. 130
	GC/MS	624.1, 1624B	6200 B-2020		O-4127-96 [12], O-4436-16 [13]
23. 4-Chloro-3-methyl phenol	GC	604	6420 B-2021		
	GC/MS	625.1, 1625B	6410 B-2020		See footnote [8] p. 27
24. Chlorobenzene	GC	601, 602	6200 C-2020		See footnote [3] p. 130.
	GC/MS	624.1, 1624B	6200 B-2020		O-4127-96 [12] O-4436-16 [13]
25. Chloroethane	GC	601	6200 C-2020		
	GC/MS	624.1, 1624B	6200 B-2020		O-4127-96 [12]

Parameter [1]	Method	EPA [2, 7]	Standard Methods [16]	ASTM	Other
26. 2-Chloroethylvinyl ether	GC	601			
	GC/MS	624.1, 1624B			
27. Chloroform	GC	601	6200 C-2020		See footnote [3] p. 130
	GC/MS	624.1, 1624B	6200 B-2020		O-4127-96 [12], O-4436-16 [13]
28. Chloromethane	GC	601	6200 C-2020		
	GC/MS	624.1, 1624B	6200 B-2020		O-4127-96 [12], O-4436-16 [13]

Table IC notes:

[1] All parameters are expressed in micrograms per liter (µg/L) except for Method 1613B, in which the parameters are expressed in picograms per liter (pg/L).

[2] The full text of Methods 601-613, 1613B, 1624B, and 1625B are provided at appendix A, Test Procedures for Analysis of Organic Pollutants. The standardized test procedure to be used to determine

the method detection limit (MDL) for these test procedures is given at appendix B of this part, Definition and Procedure for the Determination of the Method Detection Limit. These methods are available at: https://www.epa.gov/cwa-methods as individual PDF files.

[4] Method 624.1 may be used for quantitative determination of acrolein and acrylonitrile, provided that the laboratory has documentation to substantiate the ability to detect and quantify these analytes at levels necessary to comply with any associated regulations. In addition, the use of sample introduction techniques other than simple purge-and-trap may be required. QC acceptance criteria from Method 603 should be used when analyzing samples for acrolein and acrylonitrile in the absence of such criteria in Method 624.1.

[5] Method 625.1 may be extended to include benzidine, hexachlorocyclopentadiene, N-nitrosodimethylamine, N-nitrosodi-n-propylamine, and N-nitrosodiphenylamine. However, when they are known to be present, Methods 605, 607, and 612, or Method 1625B, are preferred methods for these compounds. Method 625.1 may be applied to 2,3,7,8-Tetrachloro-dibenzo-p-dioxin for screening purposes only.

[6] Selected Analytical Methods Approved and Cited by the United States Environmental Protection Agency, Supplement to the 15th Edition of Standard Methods for the Examination of Water and Wastewater. 1981. American Public Health Association (APHA).

[7] Each analyst must make an initial, one-time demonstration of their ability to generate acceptable precision and accuracy with Methods 601-603, 1624B, and 1625B in accordance with procedures in Section 8.2 of each of these methods. Additionally, each laboratory, on an on-going basis must spike and analyze 10% (5% for Methods 624.1 and 625.1 and 100% for methods 1624B and 1625B) of all samples to monitor and evaluate laboratory data quality in accordance with Sections 8.3 and 8.4 of these methods. When the recovery of any parameter falls outside the quality control (QC) acceptance criteria in the pertinent method, analytical results for that parameter in the unspiked sample are suspect. The results should be reported but cannot be used to demonstrate regulatory compliance. If the method does not contain QC acceptance criteria, control limits of ± three standard deviations around the mean of a minimum of five replicate measurements must be used. These quality control requirements also apply to the Standard Methods, ASTM Methods, and other methods cited.

[8] Method O-3116-87 is in Open File Report 93-125, Methods of Analysis by U.S. Geological Survey National Water Quality Laboratory—Determination of Inorganic and Organic Constituents in Water and Fluvial Sediments. 1993. USGS.

[9] Analysts may use Fluid Management Systems, Inc. Power-Prep system in place of manual cleanup provided the analyst meets the requirements of Method 1613B (as specified in Section 9 of the method) and permitting authorities. Method 1613, Revision B, Tetra- through Octa-Chlorinated Dioxins and Furans by Isotope Dilution HRGC/HRMS. Revision B, 1994. U.S. EPA. The full text of this method is provided in appendix A to this part and at https://www.epa.gov/cwa-methods/approved-cwa-test-methods-organic-compounds.

[10] Method 1650, Adsorbable Organic Halides by Adsorption and Coulometric Titration. Revision C, 1997 U.S. EPA. Method 1653, Chlorinated Phenolics in Wastewater by In Situ Acetylation and GCMS. Revision A, 1997 U.S. EPA. The full text for both of these methods is provided at appendix A in part 430 of this chapter, The Pulp, Paper, and Paperboard Point Source Category.

[11] The compound was formerly inaccurately labeled as 2,2'-oxybis(2-chloropropane) and bis(2-chloroisopropyl) ether. Some versions of Methods 611, and 1625 inaccurately list the analyte as "bis(2-chloroisopropyl) ether," but use the correct CAS number of 108-60-1.

[12] Method O-4127-96, U.S. Geological Survey Open-File Report 97-829, Methods of analysis by the U.S. Geological Survey National Water Quality Laboratory—Determination of 86 volatile organic compounds in water by gas chromatography/mass spectrometry, including detections less than reporting limits,1998, USGS.

209. Decachlorobiphenyl	PCB-209	GC/MS	1628			
210. Total PCBs[3]	Total PCBs	GC/MS	1628			

Table Ii notes:

[1] EPA Substance Registry Services name (https://cdxapps.epa.gov/oms-substance-registry-services/)

[2] Preferred abbreviation to facilitate consistency in reporting of the results for these parameters.

[3] Total PCBs is the sum of all the detected congeners in the sample. Calculate the total PCB concentration by using zero (0) for the contribution of the congeners that are not detected. Otherwise, every method blank will have a non-zero result, even when no congeners are detected, affecting assessments of the sample results relative to the method blank. Further, there is no method detection limit (MDL) for Total PCBs because it is the sum of the results for many individual parameters. Method blanks and samples with no detects are reported as "ND" for non-detect for the Total PCBs result (or a similarly appropriate non-numeric value).

TABLE Ij–LIST OF APPROVED TEST PROCEDURES FOR PER- AND POLYFLUORINATED ALKYL SUBSTANCES (PFAS)

Parameter[1]	Abbreviation[2]	Methodology	EPA	Standard Methods	ASTM[3]	Other
1. Perfluorobutanoic acid	PFBA	LC-MS/MS	1633A		D8421-24	
2. Perfluoropentanoic acid	PFPeA	LC-MS/MS	1633A		D8421-24	
3. Perfluorohexanoic acid	PFHxA	LC-MS/MS	1633A		D8421-24	
4. Perfluoroheptanoic acid	PFHpA	LC-MS/MS	1633A		D8421-24	
5. Perfluorooctanoic acid	PFOA	LC-MS/MS	1633A		D8421-24	
6. Perfluorononanoic acid	PFNA	LC-MS/MS	1633A		D8421-24	
7. Perfluorodecanoic acid	PFDA	LC-MS/MS	1633A		D8421-24

TABLE II—REQUIRED CONTAINERS, PRESERVATION TECHNIQUES, AND HOLDING TIMES

Parameter number/name	Container [1]	Preservation [2,3]	Maximum holding time [4]
* * * * * * *			
Table Ib—Inorganic Tests			
* * * * * * *			
4. Ammonia	P, FP, G	Cool, ≤6 °C[18], 0.008% $Na_2S_2O_3$ [5], H_2SO_4 to pH <2	28 days
* * * * * * *			
Table Ib Metals[7]			
* * * * * * *			
35. Mercury (CVAFS)	FP,G; and FP-lined cap[17]	5 mL/L 12N HCL or 5mL/L BrCl[17]	90 days. [17]
* * * * * * *			
48. Phenols	G	Cool, ≤6 °C[18], , 0.008% $Na_2S_2O_3$[5], H_2SO_4 to pH <2	28 days.
* * * * * * *			
50. Phosphorus, total	P, FP,G	Cool, ≤6 °C 18, H2SO4 to pH <2 [25]	28 days.
* * * * * * *			
77. Hydrogen Peroxide	P, G	None required	Analyze within 15 minutes.
78. Peracetic Acid	P, G	None required	Analyze within 15 minutes.
* * * * * * *			
Table Ic—Organic Tests [8]			
13, 18-20, 22, 24, 25, 27, 28, 34-37, 39-43, 45-47, 56, 76, 97, 98, 101-104, 106. Purgeable Halocarbons	G, FP-lined septum	Cool, ≤6 °C[18], 0.008% $Na_2S_2O_3$[5], HCl to pH 2[9]	14 days [9]
26. 2-Chloroethylvinyl ether	G, FP-lined septum	Cool, ≤6 °C[18], 0.008% $Na_2S_2O_3$[5]	14 days[9]
6, 57, 99. Purgeable aromatic hydrocarbons	G, FP-lined septum	Cool, ≤6 °C[18], 0.008% $Na_2S_2O_3$[5], HCl to pH 2[9]	14 days [9]
3, 4. Acrolein and acrylonitrile	G, FP-lined septum	Cool, ≤6 °C[18], 0.008% $Na_2S_2O_3$, HCl to pH 2[10]	14 days [10]
23, 30, 44, 49, 53, 77, 80, 81, 91, 93, 105. Phenols [11]	G, FP-lined cap	Cool, ≤6 °C[18], 0.008% $Na_2S_2O_3$[5]	7 days until extraction, 40 days after extraction
7, 38. Benzidines[11 12]	G, FP-lined cap	Cool, ≤6 °C[18], 0.008% $Na_2S_2O_3$[5]	7 days until extraction.[13]
14, 17, 48, 50-52. Phthalate esters[11]	G, FP-lined cap	Cool, ≤6 °C[18]	7 days until extraction, 40 days after extraction

Parameter number/name	Container [1]	Preservation [2,3]	Maximum holding time [4]
82-84. Nitrosamines[11 14]	G, FP-lined cap	Cool, ≤6 °C[18], store in dark, 0.008% $Na_2S_2O_3$[5]	7 days until extraction, 40 days after extraction.
88-94. PCBs[11]	G, FP-lined cap	Cool, ≤6 °C[18]	1 year until extraction, 1 year after extraction.
54, 55, 75, 79 Nitroaromatics and isophorone[11]	G, FP-lined cap	Cool, <6 °C[18], store in dark, 0.008% $Na_2S_2O_3$[5]	7 days until extraction, 40 days after extraction.
1, 2, 5, 8-12, 32, 33, 58, 59, 74, 78, 92, 94. Polynuclear aromatic hydrocarbons [11]	G, FP-lined cap	Cool, ≤6 °C[18], store in dark, 0.008% $Na_2S_2O_3$[5]	7 days until extraction, 40 days after extraction
15, 16, 21, 31, 87. Halocthers[11]	G, FP-lined cap	Cool, ≤6 °C[18], 0.008% $Na_2S_2O_3$[5]	7 days until extraction, 40 days after extraction.
29, 35-37, 63-65, 73, 100. Chlorinated hydrocarbons [11]	G, FP-lined cap	Cool, ≤6 °C[18]	7 days until extraction, 40 days after extraction
60-62, 66-72, 85, 86, 88-90, 95, 96. CDDs/CDFs [11]	G	See footnote 11	See footnote 11
Aqueous Samples: Field and Lab Preservation	G	Cool, ≤6 °C[18], 0.008% $Na_2S_2O_3$[5], pH <9	1 Year.
Solids and Mixed-Phase Samples: Field Preservation	G	Cool, ≤6 °C[18]	7 Days.
Tissue Samples: Field Preservation	G	Cool, ≤6 °C[18]	24 Hours
Solids, Mixed-Phase, and Tissue Samples: Lab Preservation	G	Freeze, ≤−10 °C	1 Year
107-111. Alkylated phenols	G	Cool, <6 °C, 0.008% $Na_2S_2O_3$[5], H_2SO_4 to pH <2	28 days until extraction, 40 days after extraction
112. Adsorbable Organic Halides (AOX)	G	Cool, <6 °C, 0.008% $Na_2S_2O_3$[5], HNO_3 to pH <2	Hold *at least* 3 days, but not more than 6 months
113. Chlorinated Phenolics	G, FP-lined cap	Cool, <6 °C, 0.008% $Na_2S_2O_3$[5], H_2SO_4 to pH <2	30 days until acetylation, 30 days after acetylation

Parameter number/name	Container [1]	Preservation [2,3]	Maximum holding time [4]
114. Adsorbable Organic Fluorine (AOF)	HDPE with linerless HDPE or PP caps [26]	Cool, <6 °C	90 days
* * * * * * *			
Table Ii—Polychlorinated Biphenyl Congener Tests			
1-210. PCB Congeners			
Aqueous Samples: Field Preservation	G, FP-lined cap	Cool, ≤6 °C[18], 0.008% $Na_2S_2O_3$[5]	1 year
Solids, Biosolids, and Mixed-Phase Samples: Field Preservation	G, FP-lined cap	Cool, ≤6 °C[18]	1 year
Tissue Samples: Field Preservation	G, FP-lined cap	Cool, ≤6 °C[18]	24 hours
Solids, Biosolids, Mixed-Phase, and Tissue Samples: Lab Preservation	G, FP-lined cap	Freeze, ≤ -10 °C	1 year
Sample Extracts	G, amber	Freeze, < -20 °C	1 year
Table Ij—Per- and Polyfluorinated Alkyl Substances Tests			
1-40. PFAS			
Aqueous Samples: Field Preservation	HDPE or PP, linerless cap[27]	Cool, ≤6 °C[18]	48 hours
Solids, Biosolids, and Mixed-Phase Samples: Field Preservation	HDPE, linerless cap[27]	Cool, ≤6 °C[18]	24 hours [28], or 48 hours
Tissue Samples: Field Preservation	HDPE, linerless cap[27]	Cool, ≤6 °C[18], or Freeze, ≤ -20 °C	24 hours [28], or 48 hours [29]
Leachate Samples: Field Preservation	HDPE or PP, linerless cap[27]	Cool, ≤6 °C[18]	48 hours
Aqueous and Leachate Samples: Lab Preservation	HDPE or PP, linerless cap[27]	Cool, ≤6 °C[18], or Freeze, ≤ -20 °C	28 days, or 90 days
Solids, Biosolids, and Mixed-Phase Samples: Lab Preservation	HDPE, linerless cap[27]	Cool, ≤6 °C[18], or Freeze, ≤ -20 °C	90 days
Tissue Samples: Lab Preservation	HDPE, linerless cap[27]	Freeze, ≤ -20 °C	90 days
Sample Extracts		Cool, ≤6 °C[18], or Freeze, ≤ 0 °C	90 days

[1] "P" is for polyethylene; "FP" is fluoropolymer (polytetrafluoroethylene [PTFE]; Teflon®), or other fluoropolymer, unless stated otherwise in this Table II; "G" is glass; "PA" is any plastic that is made of a sterilizable material (polypropylene or other autoclavable plastic); "LDPE" is low density polyethylene;

"HDPE" is high density polyethylene; "PP" is polypropylene.

[2] Except where noted in this Table II and the method for the parameter, preserve each grab sample within 15 minutes of collection. For a composite sample collected with an automated sample (e.g., using a 24-hour composite sample; see 40 CFR 122.21(g)(7)(i) or 40 CFR part 403, appendix E), refrigerate the sample at ≤ 6 °C during collection unless specified otherwise in this Table II or in the method(s). For a composite sample to be split into separate aliquots for preservation and/or analysis, maintain the sample at ≤ 6 °C, unless specified otherwise in this Table II or in the method(s), until collection, splitting, and preservation is completed. Add the preservative to the sample container prior to sample collection when the preservative will not compromise the integrity of a grab sample, a composite sample, or aliquot split from a composite sample within 15 minutes of collection. If a composite measurement is required but a composite sample would compromise sample integrity, individual grab samples must be collected at prescribed time intervals (e.g., 4 samples over the course of a day, at 6-hour intervals). Grab samples must be analyzed separately and the concentrations averaged. Alternatively, grab samples may be collected in the field and composited in the laboratory if the compositing procedure produces results equivalent to results produced by arithmetic averaging of results of analysis of individual grab samples. For examples of laboratory compositing procedures, see EPA Method 1664 Rev. A (oil and grease) and the procedures at 40 CFR 141.24(f)(14)(iv) and (v) (volatile organics).

[3] When any sample is to be shipped by common carrier or sent via the U.S. Postal Service, it must comply with the Department of Transportation Hazardous Materials Regulations (49 CFR part 172). The person offering such material for transportation is responsible for ensuring such compliance. For the preservation requirement of Table II, the Office of Hazardous Materials, Materials Transportation Bureau, Department of Transportation has determined that the Hazardous Materials Regulations do not apply to the following materials: Hydrochloric acid (HCl) in water solutions at concentrations of 0.04% by weight or less (pH about 1.96 or greater; Nitric acid (HNO3) in water solutions at concentrations of 0.15% by weight or less (pH about 1.62 or greater); Sulfuric acid (H2SO4) in water solutions at concentrations of 0.35% by weight or less (pH about 1.15 or greater); and Sodium hydroxide (NaOH) in water solutions at concentrations of 0.080% by weight or less (pH about 12.30 or less).

[4] Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before the start of analysis and still be considered valid. Samples may be held for longer periods only if the permittee or monitoring laboratory have data on file to show that, for the specific types of samples under study, the analytes are stable for the longer time, and has received a variance from

the Regional ATP Coordinator under § 136.3(e). For a grab sample, the holding time begins at the time of collection. For a composite sample collected with an automated sampler (e.g., using a 24-hour composite sampler; see 40 CFR 122.21(g)(7)(i) or 40 CFR part 403, appendix E), the holding time begins at the time of the end of collection of the composite sample. For a set of grab samples composited in the field or laboratory, the holding time begins at the time of collection of the last grab sample in the set. Some samples may not be stable for the maximum time period given in the table. A permittee or monitoring laboratory is obligated to hold the sample for a shorter time if it knows that a shorter time is necessary to maintain sample stability. See § 136.3(e) for details. The date and time of collection of an individual grab sample is the date and time at which the sample is collected. For a set of grab samples to be composited, and that are all collected on the same calendar date, the date of collection is the date on which the samples are collected. For a set of grab samples to be composited, and that are collected across two calendar dates, the date of collection is the dates of the two days; e.g., November 14-15. For a composite sample collected automatically on a given date, the date of collection is the date on which the sample is collected. For a composite sample collected automatically, and that is collected across two calendar dates, the date of collection is the dates of the two days; e.g., November 14-15. For static-renewal toxicity tests, each grab or composite sample may also be used to prepare test solutions for renewal at 24 h, 48 h, and/or 72 h after first use, if stored at 0-6 °C, with minimum head space.

[5] ASTM D7365-09a specifies treatment options for samples containing oxidants (e.g., chlorine) for cyanide analyses. Also, Section 9060A of Standard Methods for the Examination of Water and Wastewater (23rd edition) addresses dechlorination procedures for microbiological analyses. Section A.2 of Standard Method 4500-NH3 discusses the need for dechlorination of samples for ammonia analysis. Addition of sodium thiosulfate to samples for other parameters is only necessary when oxidants are present (e.g., chlorine).

* * * * *

[8] Guidance applies to samples to be analyzed by GC, LC, or GC/MS for specific compounds.

[9] If the sample is not adjusted to pH 2, then the sample must be analyzed within seven days of sampling.

[10] Samples for acrolein receiving no pH adjustment must be analyzed within 3 days of sampling.

[11] When the extractable analytes of concern fall within a single chemical category, the specified preservative and maximum holding times should be observed for optimum safeguard of sample integrity (i.e., use all necessary preservatives and hold for the shortest time listed). When the analytes of concern fall within two or more chemical categories, the sample may be preserved by

cooling to ≤6 °C, reducing residual chlorine with 0.008% sodium thiosulfate, storing in the dark, and adjusting the pH to 6-9; samples preserved in this manner may be held for seven days before extraction and for forty days after extraction. Exceptions to this optional preservation and holding time procedure are noted in footnote 5 (regarding the requirement for thiosulfate reduction), and footnotes 12, 13 (regarding the analysis of benzidine).

[12] If 1,2-diphenylhydrazine is likely to be present, adjust the pH of the sample to 4.0 ± 0.2 to prevent rearrangement to benzidine.

[13] Extracts may be stored up to 30 days at <0 °C.

[14] For the analysis of diphenylnitrosamine, add 0.008% Na2 S2 O3 and adjust pH to 7-10 with NaOH within 24 hours of sampling.

* * * * *

[17] Samples collected for the determination of trace level mercury (<100 ng/L) using EPA Method 1631 or EPA Method 245.7 must be collected in tightly-capped fluoropolymer or glass bottles and preserved with BrCl or HCl solution within 48 hours of sample collection. The time to preservation may be extended to 28 days if a sample is oxidized in the sample bottle. A sample collected for dissolved trace level mercury should be filtered in the laboratory within 24 hours of the time of collection. However, if circumstances preclude overnight shipment, the sample should be filtered in a designated clean area in the field in accordance with procedures given in Method 1669. If sample integrity will not be maintained by shipment to and filtration in the laboratory, the sample must be filtered in a designated clean area in the field within the time period necessary to maintain sample integrity. A sample that has been collected for determination of total or dissolved trace level mercury must be analyzed within 90 days of sample collection.

[18] Aqueous samples must be preserved at ≤ 6 °C, and should not be frozen unless data demonstrating that sample freezing does not adversely impact sample integrity is maintained on file and accepted as valid by the regulatory authority. Also, for purposes of NPDES monitoring, the specification of "≤ 6 °C" is used in place of the "4 °C" and "< 4 °C" sample temperature requirements listed in some methods. It is not necessary to measure the sample temperature to three significant figures (1/100th of 1 degree); rather, three significant figures are specified so that rounding down to 6 °C may not be used to meet the ≤ 6 °C requirement. The preservation temperature does not apply to samples that are analyzed immediately (less than 15 minutes).

* * * * *

[25] Samples to be analyzed for total phosphorous using EPA Method 200.7 or another approved ICP/AES method may be preserved using nitric acid to pH < 2, or the acid-preserved sample for metals may be used

for analysis, and the holding time for total phosphorus may be extended to 6 months.

[26] For AOF, collect three separate containers (see Section 8 of Method 1621).

[27] Samples for EPA Method 1633 are collected in HDPE containers with linerless HDPE or PP caps. Aqueous samples for ASTM D841-22 are collected in pre-labeled and pre-weighed 15-mL PP tubes. Containers for either method must be lot-tested and shown to be free of detectable PFAS.

[28] Samples should be extracted within 24 hours if NFDHA is a required analyte for a given project.

[29] If the whole fish or other seafood sample is frozen within 48 hours of collection, the holding time begins when the tissue is processed for analysis (e.g., filleting, grinding, removal of specific tissue for analysis. Prepared tissue sample aliquots may be held for up to 90 days when stored at less than or equal to -20 °C.

BILLING CODE 6560–50–C

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPP–2024–0562; FRL–12480–01–OCSPP]

40 CFR Part 156

Pesticides; Petition Seeking Rulemaking To Modify Labeling Requirements for Pesticides and Devices

AGENCY: Environmental Protection Agency (EPA).

ACTION: Petition for rulemaking.

SUMMARY: The Environmental Protection Agency (EPA) is announcing the availability of and seeking public comment on a petition received from the Attorneys General of the States of Nebraska, Iowa, Alabama, Arkansas, Georgia, Indiana,

Louisiana, Montana, North Dakota, South Carolina, and South Dakota requesting the Agency initiate rulemaking to amend the existing regulations under the Federal Insecticide, Rodenticide, and Fungicide Act (FIFRA). The Attorneys General believe the Agency should modify its requirements such that any state labeling requirements inconsistent with EPA's findings and conclusions from its human health risk assessment on human health effects, such as a pesticide's likelihood to cause cancer, birth defects, or reproductive harm, constitute misbranding.

DATES: Comments must be received on or before February 20, 2025.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA–HQ–OPP–2024–0562, by one of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.
- *Mail:* OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001.
- *Hand Delivery:* To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at *http://www.epa.gov/dockets/contacts.html.*

Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at *http://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Charles Smith, Director, Registration Division (7505P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; main telephone number: (202) 566–1030; email address: *RDFRNotices@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

This action is directed to the public in general and may be of interest to a wide range of stakeholders including pesticide registrants, environmental, human health, and agricultural advocates, pesticide users, and members of the public interested in the use of pesticides. This listing is not intended to be exhaustive but rather provides a guide for readers regarding entities likely to be affected by his action. Because others may also be interested, the Agency has not attempted to describe all the specific entities that may be affected by this action.

B. What should I consider as I prepare my comments for EPA?

1. *Submitting CBI.* Do not submit this information to EPA through *Regulations.gov* or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD–ROM that you mail to EPA, mark the outside of the disk or CD–ROM as CBI and then identify electronically within the disk or CD–ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When preparing and submitting your comments, see the commenting tips at *https://www.epa.gov/dockets/commenting-epa-dockets.*

II. What action is the Agency taking?

EPA requests public comment on a petition received from several state Attorneys General that asks EPA to amend 40 CFR 156.10(a)(5) by adding a paragraph (xi) to include the following as an example of statements or representations in the labeling which constitute misbranding: ''Statements or conclusions regarding the product's human health effects, including the likelihood of causing cancer, birth defects, or reproductive harm, that are different from EPA's findings and

conclusions stated in its human health risk assessment conducted during the registration review of the product's principal active ingredients.''

A copy of the petition is available in the docket.

Authority: 7 U.S.C. 136 *et seq.*

Dated: December 23, 2024.

Edward Messina,

Director, Office of Pesticide Programs.

BILLING CODE 6560–50–P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Part 17

[FXES1111090FEDR–256–FF09E21000]

Endangered and Threatened Wildlife and Plants; 90-Day Findings for Eight Species

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notification of petition findings and initiation of status reviews.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), announce 90-day findings on seven petitions to add species to, and one petition to remove a species from, the Lists of Endangered and Threatened Wildlife and Plants under the Endangered Species Act of 1973, as amended (Act). Based on our review, we find that the petitions to list the Amargosa toad (*Anaxyrus nelsoni*), Carson Valley monkeyflower (*Erythranthe carsonensis*), large marble butterfly (*Euchloe ausonides*) (including the large marble butterfly type subspecies (*Euchloe ausonides ausonides*)), Mohave ground squirrel (*Xerospermophilus mohavensis*), Morrison bumble bee (*Bombus morrisoni*), Oasis Valley population of Amargosa speckled dace (*Rhinichthys nevadensis nevadensis;* hereafter referred to as ''Oasis Valley speckled dace''), Tennessee bottlebrush crayfish (*Barbicambarus simmonsi*), and one petition to delist the golden-cheeked warbler (*Setophaga chrysoparia*) present substantial scientific or commercial information indicating that the petitioned actions may be warranted. Therefore, with the publication of this document, we announce that we are initiating status reviews of these species to determine whether the petitioned actions are warranted. To ensure that the status reviews are comprehensive, we request scientific and commercial data and other information regarding the species and factors that may affect their status. Based on the status reviews, we will issue 12-month petition findings, which will address whether or not the petitioned actions are warranted, in accordance with the Act.

DATES: WThese findings were made on January 21, 2025.

ADDRESSES: *Supporting documents:* Summaries of the basis for the petition findings contained in this document are available on *https://www.regulations.gov* under the appropriate docket number (see table 1 under **SUPPLEMENTARY INFORMATION**). In addition, this supporting information is available by contacting the appropriate person, as specified in **FOR FURTHER INFORMATION CONTACT**.

Status reviews: If you have new scientific or commercial data or other information concerning the status of, or threats to, the Amargosa toad, Carson Valley monkeyflower, golden-cheeked warbler, large marble butterfly (including the large marble butterfly type subspecies), Mohave ground squirrel, Morrison bumble bee, Oasis Valley speckled dace, and Tennessee bottlebrush crayfish, or their habitats, please provide those data or information by one of the following methods listed below.

(1) *Electronically:* Go to the Federal eRulemaking Portal: *https://www.regulations.gov.* In the Search box, enter the appropriate docket number (see table 1 under **SUPPLEMENTARY INFORMATION**). Then, click on the ''Search'' button. After finding the correct document, you may submit information by clicking on ''Comment.'' If your information will fit in the provided comment box, please use this feature of *https://www.regulations.gov,* as it is most compatible with our information review procedures. If you attach your information as a separate document, our preferred file format is Microsoft Word. If you attach multiple comments (such as form letters), our preferred format is a spreadsheet in Microsoft Excel.

(2) *By hard* copy: Submit by U.S. mail to: Public Comments Processing, Attn: [Insert appropriate docket number; see table 1 under **SUPPLEMENTARY INFORMATION**], U.S. Fish and Wildlife Service, MS: PRB/3W, 5275 Leesburg Pike, Falls Church, VA 22041–3803.

We request that you send information only by the methods described above. We will post all information we receive on *https://www.regulations.gov.* This generally means that we will post any personal information you provide us (see *Information Submitted for a Status Review,* below).

FOR FURTHER INFORMATION CONTACT:

Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION:

Information Submitted for a Status Review

You may submit your comments and materials concerning the status of, or threats to, the Amargosa toad, Carson Valley monkeyflower, golden-cheeked warbler, large marble butterfly (including the large marble butterfly type subspecies), Mohave ground squirrel, Morrison bumble bee, Oasis Valley speckled dace, and Tennessee bottlebrush crayfish, or their habitats, by one of the methods listed in **ADDRESSES**. We request that you send comments only by the methods described in **ADDRESSES**. Please include sufficient information with your submission (such as scientific journal articles or other publications) to allow us to verify any scientific or commercial information you include.

If you submit information via *https://www.regulations.gov,* your entire submission—including any personal identifying information—will be posted on the website. If your submission is made via a hardcopy that includes personal identifying information, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. We will post all hardcopy submissions on *https://www.regulations.gov.*

Comments and materials we receive, as well as supporting documentation we used in preparing these findings, will be available for public inspection on *https://www.regulations.gov.*

Background

Section 4 of the Act (16 U.S.C. 1533) and its implementing regulations in title 50 of the Code of Federal Regulations (50 CFR part 424) set forth the procedures for adding species to, removing species from, or reclassifying species on the Federal Lists of Endangered and Threatened Wildlife and Plants (Lists or List) in 50 CFR part 17. Section 4(b)(3)(A) of the Act requires that we make a finding on whether a petition to add a species to the List (*i.e.,* ''list'' a species), remove a species from the List (*i.e.,* ''delist'' a species), or change a listed species' status from endangered to threatened or from threatened to endangered (*i.e.,* ''reclassify'' a species) presents substantial scientific or commercial information indicating that the petitioned action may be warranted. To the maximum extent practicable, we are to make this finding within 90 days of our receipt of the petition and publish the finding promptly in the **Federal Register**.

In 2016, the Service and the National Marine Fisheries Service of the Department of Commerce revised the regulations that outline the procedures for evaluating petitions (81 FR 66462; September 27, 2016). These regulations at 50 CFR 424.14 were effective October 27, 2016. These current regulations establish that substantial scientific or commercial information with regard to a 90-day petition finding refers to credible scientific or commercial information in support of the petition's claims such that a reasonable person conducting an impartial scientific review would conclude that the action proposed in the petition may be warranted (50 CFR 424.14(h)(1)(i)). A positive 90-day petition finding does not indicate that the petitioned action is warranted; the finding indicates only that the petitioned action may be warranted and that a full review should occur. When evaluating the seven petitions (received after September 27, 2016) to add species to the Lists of Endangered and Threatened Wildlife and Plants, we applied the current regulations at 50 CFR 424.14.

We received the petition to delist the golden-cheeked warbler prior to the effective date of the current regulations. Therefore, we evaluated the golden-cheeked warbler petition under the 50 CFR 424.14 requirements that were in effect prior to October 27, 2016, as those requirements applied when the petition was received. The regulations in effect prior to October 27, 2016, establish that the standard for substantial scientific or commercial information with regard to a 90-day petition finding is ''that amount of information that would lead a reasonable person to believe that the measure proposed in the petition may be warranted'' (former 50 CFR 424.14(b)).

A species may be determined to be an endangered species or a threatened species because of one or more of the five factors described in section 4(a)(1) of the Act (16 U.S.C. 1533(a)(1)). The five factors are:

(a) The present or threatened destruction, modification, or curtailment of its habitat or range (Factor A);

(b) Overutilization for commercial, recreational, scientific, or educational purposes (Factor B);

(c) Disease or predation (Factor C);

(d) The inadequacy of existing regulatory mechanisms (Factor D); and

(e) Other natural or manmade factors affecting its continued existence (Factor E).

These factors represent broad categories of natural or human-caused actions or conditions that could have an effect on a species' continued existence. In evaluating these actions and conditions, we look for those that may have a negative effect on individuals of the species, as well as other actions or conditions that may ameliorate any negative effects or may have positive effects.

We use the term ''threat'' to refer in general to actions or conditions that are known to, or are reasonably likely to, affect individuals of a species negatively. The term ''threat'' includes actions or conditions that have a direct impact on individuals (direct impacts), as well as those that affect individuals through alteration of their habitat or required resources (stressors). The term ''threat'' may encompass—either together or separately—the source of the action or condition, or the action or condition itself. However, the mere identification of any threat(s) may not be sufficient to compel a finding that the information in the petition is substantial information indicating that the petitioned action may be warranted. The information presented in the petition must include evidence sufficient to suggest that these threats may be affecting the species to the point that the species may meet the definition of an endangered species or threatened species under the Act.

If we find that a petition presents such information, our subsequent status review will evaluate all identified threats by considering the individual-, population-, and species-level effects and the expected response by the species. We will evaluate individual threats and their expected effects on the species, then analyze the cumulative effect of the threats on the species as a whole. We also consider the cumulative effect of the threats in light of those actions and conditions that are expected to have positive effects on the species—such as any existing regulatory mechanisms or conservation efforts that may ameliorate threats. It is only after conducting this cumulative analysis of threats and the actions that may ameliorate them, and the expected effect on the species now and in the foreseeable future, that we can determine whether the species meets the definition of an endangered species or threatened species under the Act.

If we find that a petition presents substantial scientific or commercial information indicating that the petitioned action may be warranted, the Act requires that we promptly commence a review of the status of the species, and we will subsequently complete a status review in accordance with our prioritization methodology for

12-month findings (81 FR 49248; July 27, 2016).

We note that designating critical habitat is not a petitionable action under the Act. Petitions to designate critical habitat (for species without existing critical habitat) are reviewed under the Administrative Procedure Act (5 U.S.C. 551 *et seq.*) and are not addressed in these findings (see 50 CFR 424.14(j)). To the maximum extent prudent and determinable, any proposed critical habitat will be addressed concurrently with a proposed rule to list a species, if applicable.

Summaries of Petition Findings

The petition findings contained in this document are listed in the tables below, and the basis for each finding, along with supporting information, is available on *https://www.regulations.gov* under the appropriate docket number.

TABLE 1—STATUS REVIEWS

Common name	Docket No.	URL to docket on *https://www.regulations.gov*
Amargosa toad	FWS–R8–ES–2024–0176	*https://www.regulations.gov/docket/FWS-R8-ES-2024-0176*.
Carson Valley monkeyflower	FWS–R8–ES–2024–0100	*https://www.regulations.gov/docket/FWS-R8-ES-2024-0100*.
Golden-cheeked warbler	FWS–R2–ES–2024–0179	*https://www.regulations.gov/docket/FWS-R2-ES-2024-0179*.
Large marble butterfly (including the large marble type subspecies).	FWS–R8–ES–2024–0097	*https://www.regulations.gov/docket/FWS-R8-ES-2024-0097*.

Evaluation of a Petition To List Amargosa Toad

Species and Range

Amargosa toad (*Anaxyrus nelsoni*); Nye County, Nevada.

Petition History

On May 29, 2024, we received a petition from the Center for Biological Diversity (CBD), requesting that the Amargosa toad (*Anaxyrus nelsoni*) be listed as a threatened species or an endangered species and critical habitat be designated for this species under the Act. The petitioner also asked that we consider using the emergency provisions of the Act to list the species. The petition clearly identified itself as such and included the requisite identification information for the petitioner, required at 50 CFR 424.14(c). Listing a species on an emergency basis is not a petitionable action under the Act, and the question of when to list on an emergency basis is left to the discretion of the Service. If the Service determines that the standard for emergency listing in section 4(b)(7) of the Act is met, the Service may exercise that discretion to take an emergency listing action at any time. At this time, the Service has not determined that the standard for emergency listing has been met. Therefore, we are considering the May 29, 2024, petition as a petition to list the Amargosa toad. This finding addresses the petition.

Finding

We reviewed the petition, sources cited in the petition, and other readily available information (within the constraints of the Act and 50 CFR 424.14(h)(1)). We considered the credible information that the petition provided regarding effects of the threats that fall within factors under the Act's section 4(a)(1) as potentially ameliorated or exacerbated by any existing regulatory mechanisms or conservation efforts. Based on our review of the petition and readily available information regarding gold mining (Factor A), we find that the petition presents substantial scientific or commercial information indicating that listing the Amargosa toad as an endangered species or a threatened species may be warranted.

The petitioners also presented information suggesting solar energy development, wild burros, livestock grazing, off-road vehicles, road maintenance and runoff, invasive plants, water abstraction and diversion, chytridiomycosis, predation by bullfrogs and nonnative crayfish, hybridization with Woodhouse's toad (*Anaxyrus woodhousii*), climate change, and stochastic events may be threats to the Amargosa toad. We will fully evaluate these potential threats during our 12-month status review, pursuant to the Act's requirement to review the best scientific and commercial information available when making that finding.

The basis for our finding on this petition and other information regarding our review of the petition can be found as an appendix at *https://www.regulations.gov* under Docket No. FWS–R8–ES–2024–0176 under the Supporting Documents section.

Evaluation of a Petition To List the Carson Valley Monkeyflower

Species and Range

Carson Valley monkeyflower (*Erythranthe carsonensis*); Carson City, Douglas, Lyon, and Washoe Counties, Nevada; Alpine County, California.

Petition History

On January 8, 2024, we received a petition from CBD requesting that the Carson Valley monkeyflower (*Erythranthe carsonensis*) be listed as a threatened species and critical habitat be designated for this species under the Act. The petition clearly identified itself as such and included the requisite identification information for the petitioner, required at 50 CFR 424.14(c). This finding addresses the petition.

Finding

We reviewed the petition, sources cited in the petition, and other readily available information (within the constraints of the Act and 50 CFR 424.14(h)(1)). We considered the credible information that the petition provided regarding effects of the threats that fall within factors under the Act's section 4(a)(1) as potentially ameliorated or exacerbated by any existing regulatory mechanisms or conservation efforts. Based on our review of the petition and readily available information regarding habitat loss associated with commercial, residential, and industrial development (Factor A), we find that the petition presents substantial scientific or commercial information indicating that listing the Carson Valley monkeyflower

as an endangered species or a threatened species may be warranted.

The petitioners also presented information suggesting road development and maintenance, off-highway vehicle use, other recreational use, mineral exploration and development, trash dumping, utility corridor development and maintenance, animal grazing and trampling, fire and fire suppression activities, flooding, and stormwater management may be threats to the Carson Valley monkeyflower. We will fully evaluate these potential threats during our 12-month status review, pursuant to the Act's requirement to review the best scientific and commercial information available when making that finding.

The basis for our finding on this petition and other information regarding our review of the petition can be found as an appendix at *https://www.regulations.gov* under Docket No. FWS–R8–ES–2024–0100 under the Supporting Documents section.

Evaluation of a Petition To Delist the Golden-Cheeked Warbler

Species and Range

Golden-cheeked warbler (*Setophaga chrysoparia*); Texas, United States; Chiapas, Mexico; and Central America (Guatemala, Honduras, Nicaragua, and El Salvador).

Petition History

On June 30, 2015, we received a petition dated June 29, 2015, from Nancie G. Marzulla (Marzulla Law, LLC—Washington, DC) and Robert Henneke (Texas Public Policy Foundation—Austin, TX) requesting that the golden-cheeked warbler (*Setophaga chrysoparia*) be delisted under the Act due to recovery or error in information. The petition clearly identified itself as a petition and included the requisite identification information for the petitioner, as required by the former 50 CFR 424.14(a). No information is presented that would suggest that the species was originally listed due to an error in information. The golden-cheeked warbler is a taxonomically unique species and was shown to be in danger of extinction at the time of the listing.

On December 11, 2015, we received supplemental information from the petitioners that included additional published studies and an unpublished report. The studies and report, as well as other studies known to the Service and in our files at the time the supplement was received, were considered, as appropriate. On June 3, 2016, we published in the **Federal Register** (81 FR 35698) our finding that the petition did not provide substantial scientific or commercial information indicating that the petition action (*i.e.,* delisting) may be warranted. The General Land Office of Texas (GLO) challenged this negative 90-day finding on the petition to delist. The District Court found in favor of the Service. The GLO appealed the decision, and the Circuit Court vacated the 90-day finding and remanded it to the Service. On July 27, 2021, the Service published another 90-day finding in the **Federal Register** (86 FR 40186) that the petition did not present substantial scientific or commercial information indicating that the petitioned action was warranted. The GLO filed suit against the Service on January 12, 2022, challenging the new 90-day finding. On September 5, 2024, the District Court vacated and remanded the July 27, 2021, 90-day finding to the Service. This finding addresses the petition as remanded by the District Court.

Finding

We reviewed the petition, sources cited in the petition, supplemental information provided, and other readily available information (within the constraints of the Act and former 50 CFR 424.14(b)). We considered the information that the petition provided regarding effects of the threats that fall within factors under section 4(a)(1) as potentially ameliorated or exacerbated by any existing regulatory mechanisms or conservation efforts. The petitioner provided substantial information indicating that greater amounts of golden-cheeked warbler habitat occur across the species range, the species is capable of utilizing smaller habitat patches, and warblers are more abundant than previously thought (Factor A). Additionally, oak wilt may not be as significant of a stressor to warbler habitat (Factor E). Based on our review of the petition, sources cited in the petition, and other readily available information, we find that the petition presents substantial scientific or commercial information indicating that delisting the golden-cheeked warbler may be warranted. We will fully evaluate these potential threats during our 12-month status review, pursuant to the Act's requirements to review the best scientific and commercial data available when making that finding.

The basis for our finding on this petition and other information regarding our review of the petition can be found as an appendix at *https://www.regulations.gov* under Docket No. FWS–R2–ES–2024–0179 under the Supporting Documents section.

Evaluation of a Petition To List the Large Marble Butterfly and the Large Marble Type Subspecies

Species and Range

Large marble butterfly (*Euchloe ausonides*); Alaska, California, Colorado, Idaho, Michigan, Minnesota, Montana, Nebraska, New Mexico, North Dakota, Oregon, South Dakota, Utah, Washington, and Wyoming, United States; Yukon Territory, British Columbia, Northwest Territories, Nunavut, Alberta, Saskatchewan, Manitoba, and Ontario, Canada.

Large marble butterfly type subspecies (*Euchloe ausonides ausonides*); central western California.

Petition History

On October 3, 2023, we received a petition from the Xerces Society for Invertebrate Conservation, requesting that the large marble butterfly be listed as a threatened species and the large marble type subspecies be listed as an endangered species under the Act. The petition clearly identified itself as such and included the requisite identification information for the petitioner, required at 50 CFR 424.14(c). This finding addresses the petition.

Finding

We reviewed the petition, sources cited in the petition, and other readily available information (within the constraints of the Act and 50 CFR 424.14(h)(1)). We considered the credible information that the petition provided regarding effects of the threats that fall within factors under the Act's section 4(a)(1) as potentially ameliorated or exacerbated by any existing regulatory mechanisms or conservation efforts. Based on our review of the petition and readily available information regarding habitat loss and degradation from urbanization (Factor A), we find that the petition presents substantial scientific or commercial information indicating that listing the large marble butterfly as a threatened species and that listing the large marble butterfly type subspecies as an endangered species may be warranted.

The petitioners also presented information suggesting that habitat conversion to agriculture, livestock grazing, herbicide impacts to nectar and host plants, changes in wildfire regimes, predation by nonnative predators and parasitoids, pesticide use, climate change, and loss of genetic diversity may be threats to the large marble butterfly and the *E. a. ausonides* subspecies. We will fully evaluate these potential threats during our 12-month

status review, pursuant to the Act's requirement to review the best scientific and commercial information available when making that finding.

The basis for our finding on this petition and other information regarding our review of the petition can be found as an appendix at *https://www.regulations.gov* under Docket No. FWS–R8–ES–2024–0097 under the Supporting Documents section.

Evaluation of a Petition To List the Mohave Ground Squirrel

Species and Range

Mohave ground squirrel (*Xerospermophilus mohavensis*); southwestern Inyo, eastern Kern, northeastern Los Angeles, and northwestern San Bernardino counties, California.

Petition History

On December 13, 2023, we received a petition from Defenders of Wildlife, Desert Tortoise Preserve Committee, Inc., Mohave Ground Squirrel Conservation Council, and Dr. Philip Leitner, requesting that the Mohave ground squirrel be listed as a threatened species and that critical habitat be designated under the Act. The petition clearly identified itself as such and included the requisite identification information for the petitioner, required at 50 CFR 424.14(c). This finding addresses the petition.

Finding

We reviewed the petition, sources cited in the petition, and other readily available information (within the constraints of the Act and 50 CFR 424.14(h)(1)). We considered the credible information that the petition provided regarding effects of the threats that fall within factors under the Act's section 4(a)(1) as potentially ameliorated or exacerbated by any existing regulatory mechanisms or conservation efforts. Based on our review of the petition and readily available information regarding habitat loss, degradation, and fragmentation (Factor A), we find that the petition presents substantial scientific or commercial information indicating that listing the Mohave ground squirrel as an endangered or a threatened species may be warranted. The petitioners also presented information suggesting commercial filming activities, hybridization, competition, and climate change may be threats to the Mohave ground squirrel. We will fully evaluate these potential threats during our 12-month status review, pursuant to the Act's requirement to consider the best scientific and commercial information available when making that finding.

The basis for our finding on this petition and other information regarding our review of the petition can be found as an appendix at *https://www.regulations.gov* under Docket No. FWS–R8–ES–2024–0098 under the Supporting Documents section.

Evaluation of a Petition To List Morrison Bumble Bee

Species and Range

Morrison bumble bee (*Bombus morrisoni*); eastern Sierra Nevada Mountain range, through northeastern Arizona and northern New Mexico, north to Colorado and Rocky Mountains in the east, and portions of Idaho and Washington.

Petition History

On November 16, 2023, we received a petition from the Xerces Society requesting that the Morrison bumble bee (*Bombus morrisoni*) be listed as either a threatened species or endangered species under the Act. The petition clearly identified itself as such and included the requisite identification information for the petitioner, required at 50 CFR 424.14(c). This finding addresses the petition.

Finding

We reviewed the petition, sources cited in the petition, and other readily available information (within the constraints of the Act and 50 CFR 424.14(h)(1)). We considered the credible information that the petition provided regarding the effects of the threats that fall within factors under the Act's section 4(a)(1) as may be ameliorated or exacerbated by existing regulatory mechanisms or conservation efforts. Based on our review of the petition and sources cited in the petition regarding pesticides (Factor E), livestock overgrazing (Factor A), urban development (Factor A), agricultural intensification (Factor A), pathogens and parasites (Factor C), and global climate change (Factor E), we find that the petition presents substantial scientific or commercial information indicating that listing the Morrison bumble bee as an endangered or threatened species may be warranted.

The petitioners also present information suggesting the following may be threats to the Morrison bumble bee: energy development and mining; overutilization for commercial, recreational scientific or educational purposes; pathogen spillover; the effects of small, isolated populations; and competition with commercial honeybees. The petition also suggests that despite the existing regulatory mechanisms, potential threats continue to negatively affect the species. We will fully evaluate these potential threats during our status review, pursuant to the Act's requirement to review the best scientific and commercial information available when making our 12-month finding.

The basis for our finding on this petition and other information regarding our review of the petition can be found as an appendix at *https://www.regulations.gov* under Docket No. FWS–R2–ES–2024–0099 under the Supporting Documents section.

Evaluation of a Petition To List the Oasis Valley Speckled Dace

Species and Range

Amargosa speckled dace [Oasis Valley distinct population segment] (*Rhinichthys nevadensis nevadensis*) (=Oasis Valley speckled dace)—provisional determination; Nye County, Nevada.

Petition History

On July 2, 2024, we received a petition from CBD, requesting that the Oasis Valley speckled dace distinct population segment of Amargosa speckled dace be listed as a threatened species or an endangered species and critical habitat be designated for this species under the Act. Based on our review of the petition, sources cited in the petition, and other readily available information, we find that the petition presents substantial information that the Oasis Valley population may be discrete based on marked separation from other populations of the taxon as a consequence of physical separation and evidenced by genetic differences. This suggests that the petitioned population segment differs markedly from other populations of Amargosa speckled dace in its genetic characteristics. As such, the petitioned population segment may be significant per criterion 4 of our DPS policy due to evidence that the population segment differs markedly from other populations of the species in its genetic characteristics (61 FR 4725). Therefore, we find that the petition provides substantial scientific or commercial information indicating that the petitioned entity may qualify as a DPS and, therefore, that it may be a listable entity under the Act. For the purposes of this 90-day finding evaluation, we will use the generally recognized common name—Oasis Valley speckled dace—to refer to the Oasis Valley population of Amargosa speckled dace that occurs in the

watershed of the Amargosa River in Oasis Valley, Nevada.

The petitioner also asked that we consider using the emergency provisions of the Act to list the species. The petition clearly identified itself as such and included the requisite identification information for the petitioner, required at 50 CFR 424.14(c). Listing a species on an emergency basis is not a petitionable action under the Act, and the question of when to list on an emergency basis is left to the discretion of the Service. If the Service determines that the standard for emergency listing in section 4(b)(7) of the Act is met, the Service may exercise that discretion to take an emergency listing action at any time. Therefore, we are considering the July 2, 2024, petition as a petition to list the Oasis Valley speckled dace. This finding addresses the petition.

Finding

We reviewed the petition, sources cited in the petition, and other readily available information (within the constraints of the Act and 50 CFR 424.14(h)(1)). We considered the credible information that the petition provided regarding effects of the threats that fall within factors under the Act's section 4(a)(1) as potentially ameliorated or exacerbated by any existing regulatory mechanisms or conservation efforts. Based on our review of the petition and readily available information] regarding gold mining (Factor A), we find that the petition presents substantial scientific or commercial information indicating that listing the Oasis Valley speckled dace as an endangered species or a threatened species may be warranted.

The petitioners also presented information suggesting solar energy development, water diversions, livestock grazing, wild burros, invasive species, climate change, and the effects of isolated populations may be threats to the Oasis Valley speckled dace We will fully evaluate these potential threats during our 12-month status review, pursuant to the Act's requirement to review the best scientific and commercial information available when making that finding.

The basis for our finding on this petition and other information regarding our review of the petition can be found as an appendix at *https://www.regulations.gov* under Docket No. FWS–R8–ES–2024–0177 under the Supporting Documents section.

Evaluation of a Petition To List Tennessee Bottlebrush Crayfish

Species and Range

Tennessee bottlebrush crayfish (*Barbicambarus simmonsi*); Lawrence County, Tennessee, and Lauderdale County, Alabama.

Petition History

On June 16, 2023, we received a petition from CBD, requesting that the Tennessee bottlebrush crayfish (*Barbicambarus simmonsi*) be listed as a threatened or endangered species and critical habitat be designated for this species under the Act. The petition clearly identified itself as such and included the requisite identification information for the petitioner, required at 50 CFR 424.14(c). This finding addresses the petition.

Finding

We reviewed the petition, sources cited in the petition, and other readily available information (within the constraints of the Act and 50 CFR 424.14(h)(1)). We considered the credible information that the petition provided regarding effects of the threats that fall within factors under the Act's section 4(a)(1) as potentially ameliorated or exacerbated by any existing regulatory mechanisms or conservation efforts. Based on our review of the petition and readily available information regarding habitat destruction and alteration from the effects of dams and land use practices including agriculture, silviculture, urban runoff, and wastewater treatment facilities (Factor A), we find that the petition presents substantial scientific or commercial information indicating that listing the Tennessee bottlebrush crayfish as an endangered species or a threatened species may be warranted.

The petitioners also presented information suggesting overutilization or collection and impacts of climate change may be threats to the Tennessee bottlebrush crayfish. The petitioners also provided information that, despite the existing regulatory mechanisms, these potential threats are still affecting the species. We will fully evaluate these potential threats during our 12-month status review, pursuant to the Act's requirement to review the best scientific and commercial information available when making that finding.

The basis for our finding on this petition and other information regarding our review of the petition can be found at *https://www.regulations.gov* under Docket No. FWS–R4–ES–2024–0101 under the Supporting Documents section.

Conclusion

On the basis of our evaluation of the information presented in the petitions under section 4(b)(3)(A) of the Act, we have determined that the petitions summarized above for the Amargosa toad, Carson Valley monkeyflower, golden-cheeked warbler, large marble butterfly (including the large marble butterfly type subspecies), Mohave ground squirrel, Morrison bumble bee, Oasis Valley speckled dace, and Tennessee bottlebrush crayfish present substantial scientific or commercial information indicating that the petitioned actions may be warranted. We are, therefore, initiating status reviews of these species to determine whether the actions are warranted under the Act. At the conclusion of the status reviews, we will issue findings, in accordance with section 4(b)(3)(B) of the Act, as to whether the petitioned actions are not warranted, warranted, or warranted but precluded by pending proposals to determine whether any species is an endangered species or a threatened species.

Authors

The primary authors of this document are staff members of the Ecological Services Program, U.S. Fish and Wildlife Service.

Authority

The authority for these actions is the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*).

Martha Williams,

Director, U.S. Fish and Wildlife Service.

BILLING CODE 4333–15–P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Part 17

[Docket No. FWS–R2–ES–2024–0083; FXES1111090FEDR–256–FF09E21000]

RIN 1018–BG16

Endangered and Threatened Wildlife and Plants; Endangered Species Status for Big Red Sage

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), propose to list the big red sage (*Salvia pentstemonoides*), a plant species from central Texas, as an endangered species under the Endangered Species Act of

1973, as amended (Act). This determination also serves as our 12-month finding on a petition to list the big red sage. After a review of the best available scientific and commercial information, we find that listing the species is warranted. If we finalize this rule as proposed, it would add this species to the List of Endangered and Threatened Plants and extend the Act's protections to the species. We have determined that designating critical habitat for the big red sage is not prudent.

DATES: We will accept comments received or postmarked on or before March 24, 2025. Comments submitted electronically using the Federal eRulemaking Portal (see **ADDRESSES**, below) must be received by 11:59 p.m. eastern time on the closing date. We must receive requests for a public hearing, in writing, at the address shown in **FOR FURTHER INFORMATION CONTACT** by March 7, 2025.

ADDRESSES: You may submit comments by one of the following methods:

(1) *Electronically:* Go to the Federal eRulemaking Portal: *https://www.regulations.gov.* In the Search box, enter FWS–R2–ES–2024–0083, which is the docket number for this rulemaking. Then, click on the Search button. On the resulting page, in the panel on the left side of the screen, under the Document Type heading, check the Proposed Rule box to locate this document. You may submit a comment by clicking on ''Comment.''

(2) *By hard copy:* Submit by U.S. mail to: Public Comments Processing, Attn: FWS–R2–ES–2024–0083, U.S. Fish and Wildlife Service, MS: PRB/3W, 5275 Leesburg Pike, Falls Church, VA 22041–3803.

We request that you send comments only by the methods described above. We will post all comments on *https://www.regulations.gov.* This generally means that we will post any personal information you provide us (see Information Requested, below, for more information).

Availability of supporting materials: Supporting materials, such as the species status assessment report, are available on the Service's website at *https://www.fws.gov/office/austin-ecological-services,* at *https://www.regulations.gov* at Docket No. FWS–R2–ES–2024–0083, or both.

FOR FURTHER INFORMATION CONTACT: Karen Myers, Field Supervisor, U.S. Fish and Wildlife Service, Austin Ecological Services Field Office, 1505 Ferguson Lane, Austin, TX 78754; telephone 512–937–7371. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. Please see Docket No. FWS–R2–ES–2024–0083 on *https://www.regulations.gov* for a document that summarizes this proposed rule.

SUPPLEMENTARY INFORMATION:

Executive Summary

Why we need to publish a rule. Under the Act (16 U.S.C. 1531 *et seq.*), a species warrants listing if it meets the definition of an endangered species (in danger of extinction throughout all or a significant portion of its range) or a threatened species (likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range). If we determine that a species warrants listing, we must list the species promptly and designate the species' critical habitat to the maximum extent prudent and determinable. We have determined that the big red sage meets the Act's definition of an endangered species; therefore, we are proposing to list it as such. Listing a species as an endangered or threatened species can be completed only by issuing a rule through the Administrative Procedure Act rulemaking process (5 U.S.C. 551 *et seq.*).

What this document does. We propose to list the big red sage as an endangered species under the Act.

The basis for our action. Under the Act, we may determine that a species is an endangered or threatened species because of any of five factors: (A) The present or threatened destruction, modification, or curtailment of its habitat or range; (B) overutilization for commercial, recreational, scientific, or educational purposes; (C) disease or predation; (D) the inadequacy of existing regulatory mechanisms; or (E) other natural or manmade factors affecting its continued existence. We have determined that big red sage is endangered due to the following threats: herbivory (Factor C), collection and inappropriate propagation (Factor B), land use changes (Factor A), and effects from climate change such as flash floods and erosion (Factor E).

Section 4(a)(3) of the Act requires the Secretary of the Interior (Secretary), to the maximum extent prudent and determinable, to designate critical habitat concurrent with listing. We have determined that designating critical habitat for big red sage is not prudent because one of the main drivers of the species' status is direct mortality and loss of genetic integrity resulting from the collection of seeds and entire plants from wild populations (Factor B). The threat of collection potentially imperils all populations whose geographic locations are publicized and accessible to the public. Since we have determined that the species is threatened by taking or other human activity and identification of critical habitat can be expected to increase the degree of such threat to the species, we determine that designation of critical habitat is not prudent for the species.

Information Requested

We intend that any final action resulting from this proposed rule will be based on the best scientific and commercial data available and be as accurate and as effective as possible. Therefore, we request comments or information from other governmental agencies, Native American Tribes, the scientific community, industry, or any other interested parties concerning this proposed rule. We particularly seek comments concerning:

(1) The species' biology, range, and population trends, including:

(a) Biological or ecological requirements of the species, including habitat requirements for feeding, breeding, and sheltering;

(b) Genetics and taxonomy;

(c) Historical and current range, including distribution patterns and the locations of any additional populations of this species;

(d) Historical and current population levels, and current and projected trends; and

(e) Past and ongoing conservation measures for the species, its habitat, or both.

(2) Threats and conservation actions affecting the species, including:

(a) Factors that may be affecting the continued existence of the species, which may include habitat modification or destruction, overutilization, disease, predation, the inadequacy of existing regulatory mechanisms, or other natural or manmade factors;

(b) Biological, commercial trade, or other relevant data concerning any threats (or lack thereof) to this species; and

(c) Existing regulations or conservation actions that may be addressing threats to this species.

(3) Additional information concerning the historical and current status of this species.

(4) Information regarding our determination that designating critical

habitat for the big red sage is not prudent.

Please include sufficient information with your submission (such as scientific journal articles or other publications) to allow us to verify any scientific or commercial information you include.

Please note that submissions merely stating support for, or opposition to, the action under consideration without providing supporting information, although noted, do not provide substantial information necessary to support a determination. Section 4(b)(1)(A) of the Act directs that determinations as to whether any species is an endangered or a threatened species must be made solely on the basis of the best scientific and commercial data available, and section 4(b)(2) of the Act directs that the Secretary shall designate critical habitat on the basis of the best scientific data available.

You may submit your comments and materials concerning this proposed rule by one of the methods listed in **ADDRESSES**. We request that you send comments only by the methods described in **ADDRESSES**.

If you submit information via *https://www.regulations.gov,* your entire submission—including any personal identifying information—will be posted on the website. If your submission is made via a hardcopy that includes personal identifying information, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. We will post all hardcopy submissions on *https://www.regulations.gov.*

Comments and materials we receive, as well as supporting documentation we used in preparing this proposed rule, will be available for public inspection on *https://www.regulations.gov.*

Our final determination may differ from this proposal because we will consider all comments we receive during the comment period as well as any information that may become available after this proposal. Based on the new information we receive (and, if relevant, any comments on that new information), we may conclude that the species is threatened instead of endangered, or we may conclude that the species does not warrant listing as either an endangered species or a threatened species. In our final rule, we will clearly explain our rationale and the basis for our final decision, including why we made changes, if any, that differ from this proposal.

Public Hearing

Section 4(b)(5) of the Act provides for a public hearing on this proposal, if requested. Requests must be received by the date specified in **DATES**. Such requests must be sent to the address shown in **FOR FURTHER INFORMATION CONTACT**. We will schedule a public hearing on this proposal, if requested, and announce the date, time, and place of the hearing, as well as how to obtain reasonable accommodations, in the **Federal Register** and local newspapers at least 15 days before the hearing. We may hold the public hearing in person or virtually via webinar. We will announce any public hearing on our website, in addition to the **Federal Register**. The use of virtual public hearings is consistent with our regulations at 50 CFR 424.16(c)(3).

Previous Federal Actions

On June 18, 2007, Forest Guardians (now Wild Earth Guardians) petitioned the Service to list 475 species in the southwestern United States, including big red sage, as endangered or threatened species under the Act. On December 16, 2009, the Service published in the **Federal Register** (74 FR 66866) a partial 90-day petition finding that the petition provided substantial information indicating that the big red sage may warrant listing under the Act. This document constitutes the 12-month finding on the petition to list the big red sage under the Act.

Peer Review

A species status assessment (SSA) team prepared an SSA report for the big red sage. The SSA team was composed of Service biologists, in consultation with other species experts. The SSA report represents a compilation of the best scientific and commercial data available concerning the status of the species, including the impacts of past, present, and future factors (both negative and beneficial) affecting the big red sage.

In accordance with our joint policy on peer review published in the **Federal Register** on July 1, 1994 (59 FR 34270), and our August 22, 2016, memorandum updating and clarifying the role of peer review in listing actions under the Act (*https://www.fws.gov/sites/default/files/documents/peer-review-policy-directors-memo-2016-08-22.pdf*), we solicited independent scientific review of the information contained in the big red sage SSA report. We sent the SSA report to four independent peer reviewers and received three responses. Results of this structured peer review process can be found at *https://www.regulations.gov.* In preparing this proposed rule, we incorporated the results of these reviews, as appropriate, into the SSA report, which is the foundation for this proposed rule.

Summary of Peer Reviewer Comments

As discussed above in Peer Review, we received comments from three peer reviewers on the draft SSA report. We reviewed all comments we received from the peer reviewers for substantive issues and new information regarding the contents of the SSA report. The peer reviewers generally concurred with our methods and conclusions, and provided additional information, clarifications, and suggestions, including clarifications in terminology and discussions of genetics and hydrology, and other editorial suggestions. Otherwise, no substantive changes to our analysis and conclusions within the SSA report were deemed necessary, and peer reviewer comments are addressed in version 1.1 of the SSA report.

I. Proposed Listing Determination

Background

A thorough review of the taxonomy, life history, and ecology of big red sage is presented in the SSA report (version 1.1; Service 2023, pp. 2–11).

Big red sage is a perennial herbaceous plant in the mint family (Lamiaceae) that occurs along streams and narrow ravines in the Edwards Plateau of central Texas. The historical range of the species includes Bandera, Bexar, Comal, Gillespie, Kendall, Kerr, Real, Uvalde, and Wilson Counties. Most big red sage plants occur on bluffs, ledges, and slopes along watercourses and ravines where groundwater slowly seeps through limestone to the surface.

Its long, crimson flowers with purplish bases adorn 5-foot-tall stalks that arise from rosettes of shiny, dark green leaves (Service 2023, p. 2). Big red sage flowers opportunistically from May through November in response to rainfall and the persistence of soil moisture (Service 2023, p. 6). The flowers are specifically pollinated by hummingbirds (Wester 2007, pp. 40, 72; Cibolo Center for Conservation 2021, p. 4); black-chinned hummingbirds (*Archilochus alexandri*) are the most abundant species throughout the range and flowering period of the big red sage (Service 2023, p. 8). Hummingbirds may forage within discrete territories they establish and defend around concentrated nectar sources; alternatively, they may also forage in a more dispersed pattern along traplines, in which rewarding nectar sources are

visited repeatedly in a predictable sequence (Tello-Ramos et al. 2015, pp. 812–813). Trapline foraging behavior has been documented among black-chinned hummingbirds (Arizmendi and Ornelas 1990, p. 177). Based on the trapline forage range of other hummingbird species (Gill 1988, entire), we estimate that black-chinned hummingbirds foraging along consistent, regular routes may cross-pollinate individuals of big red sage that are separated by as much as 0.5 to 1.0 kilometers (km) (0.3 to 0.6 miles (mi)), and thus are important vectors for the species' gene flow. However, the species' fecundity is low, and small, inbred populations produce few viable seeds (Service 2023, p. 9). Individual plants can live at least 10 years, and the rootstocks may branch to form multiple rosettes that appear to be separate individuals; therefore, the effective population sizes may be less than the numbers of individuals counted in censuses (Service 2023, pp. 9–10).

The Texas Parks and Wildlife Department's (TPWD) Texas Natural Diversity Database (TXNDD) maintains geographic and population data of plant and animal species of conservation concern in Texas. Data for each species are organized by standard geographical units for populations and habitats called ''source features'' (SFs) and ''element occurrences'' (EOs). SFs and EOs are geographic locations where a species has been recorded one or more times. They may be displayed as points, lines, or polygons buffered by their estimated geographic precision. SFs may be combined into a single E.O. if they are separated by less than 1 km (0.6 mi) in the wild (NatureServe 2002, p. 26). Therefore, each E.O. may contain one or more SFs. For the big red sage and other plant species of conservation concern, we use the E.O. standard as the unit of analysis because it ensures consistency among all the partners concerned with the conservation and management of a species, and this method involves rigorous scientific investigations spanning many years. We use numbers to identify the EOs for the big red sage, and all EOs are associated with unique identifiers in the TXNDD (Service 2023, pp. 26–27). Big red sage has been documented at 18 EOs (see table 1, below). Please refer to the SSA report for a full list of EOs and their respective SFs for the big red sage (Service 2023, pp. 26–27).

TABLE 1—SUMMARY OF THE EOS OF BIG RED SAGE

[TXNDD ranks each EO as historical (H) or extant (E). Those marked as historical may not have population estimates.]

EO No.	Site name	County	TXNDD rank	Most recent population estimate	Year of most recent survey
1	Barron Creek	Kendall	H		
2	Guadalupe River at Kerrville	Kerr	H	50	1894
3	Verde Creek south of Kerrville	Bandera/Kerr	H		
4	Turtle Creek south of Kerrville	Kerr	E	0	2013
5	Cibolo Creek near Boerne	Kendall	E	170	2013
7	Sutherland Springs	Wilson	H		
8	Frio Waterhole	Kerr	H		
10	Confluence of Bear Creek and Pedernales River	Gillespie	E	0	2013
11	Can Creek and Hale Hollow at Lost Maples State Natural Area	Bandera/Real	E	4	2013
14	Frederick Creek at Interstate 10	Kendall	E	401	2013
15	Big Joshua Creek	Kendall	E	0	2013
16	Wilson Hollow	Real	E	2	1991
19	Comanche Springs on Salado Creek	Bexar	H		
20	North Fork Guadalupe River above Farm to Market Road 1340	Kerr	E	8	2016
21	Blue Hole	Real	E	15	2018
22	Pedernales River at Friedrich Road	Gillespie	E	0	2013
23	South Grape Creek east of Luckenbach	Gillespie	E	0	2013
24	Canyon near Frederick Creek	Kendall	E	54	2013

Regulatory and Analytical Framework

Regulatory Framework

Section 4 of the Act (16 U.S.C. 1533) and the implementing regulations in title 50 of the Code of Federal Regulations set forth the procedures for determining whether a species is an endangered species or a threatened species, issuing protective regulations for threatened species, and designating critical habitat for endangered and threatened species.

The Act defines an ''endangered species'' as a species that is in danger of extinction throughout all or a significant portion of its range and a ''threatened species'' as a species that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range. The Act requires that we determine whether any species is an endangered species or a threatened species because of any of the following factors:

(A) The present or threatened destruction, modification, or curtailment of its habitat or range;

(B) Overutilization for commercial, recreational, scientific, or educational purposes;

(C) Disease or predation;

(D) The inadequacy of existing regulatory mechanisms; or

(E) Other natural or manmade factors affecting its continued existence.

These factors represent broad categories of natural or human-caused actions or conditions that could have an effect on a species' continued existence. In evaluating these actions and conditions, we look for those that may have a negative effect on individuals of the species, as well as other actions or conditions that may ameliorate any negative effects or may have positive effects.

We use the term ''threat'' to refer in general to actions or conditions that are known to or are reasonably likely to negatively affect individuals of a species. The term ''threat'' includes actions or conditions that have a direct impact on individuals (direct impacts), as well as those that affect individuals through alteration of their habitat or required resources (stressors). The term ''threat'' may encompass—either together or separately—the source of the action or condition or the action or condition itself.

However, the mere identification of any threat(s) does not necessarily mean that the species meets the statutory

definition of an ''endangered species'' or a ''threatened species.'' In determining whether a species meets either definition, we must evaluate all identified threats by considering the species' expected response and the effects of the threats—in light of those actions and conditions that will ameliorate the threats—on an individual, population, and species level. We evaluate each threat and its expected effects on the species, then analyze the cumulative effect of all of the threats on the species as a whole. We also consider the cumulative effect of the threats in light of those actions and conditions that will have positive effects on the species, such as any existing regulatory mechanisms or conservation efforts. The Secretary determines whether the species meets the Act's definition of an ''endangered species'' or a ''threatened species'' only after conducting this cumulative analysis and describing the expected effect on the species.

The Act does not define the term ''foreseeable future,'' which appears in the statutory definition of ''threatened species.'' Our implementing regulations at 50 CFR 424.11(d) set forth a framework for evaluating the foreseeable future on a case-by-case basis, which is further described in the 2009 Memorandum Opinion on the foreseeable future from the Department of the Interior, Office of the Solicitor (M–37021, January 16, 2009; ''M-Opinion,'' available online at *https://www.doi.gov/sites/doi.opengov.ibmcloud.com/files/uploads/M-37021.pdf*). The foreseeable future extends as far into the future as the U.S. Fish and Wildlife Service and National Marine Fisheries Service (hereafter, the Services) can make reasonably reliable predictions about the threats to the species and the species' responses to those threats. We need not identify the foreseeable future in terms of a specific period of time. We will describe the foreseeable future on a case-by-case basis, using the best available data and taking into account considerations such as the species' life-history characteristics, threat projection timeframes, and environmental variability. In other words, the foreseeable future is the period of time over which we can make reasonably reliable predictions. ''Reliable'' does not mean ''certain''; it means sufficient to provide a reasonable degree of confidence in the prediction, in light of the conservation purposes of the Act.

Analytical Framework

The SSA report documents the results of our comprehensive biological review of the best scientific and commercial data regarding the status of the species, including an assessment of the potential threats to the species. The SSA report does not represent our decision on whether the species should be proposed for listing as an endangered or threatened species under the Act. However, it does provide the scientific basis that informs our regulatory decisions, which involve the further application of standards within the Act and its implementing regulations and policies.

To assess big red sage viability, we used the three conservation biology principles of resiliency, redundancy, and representation (Shaffer and Stein 2000, pp. 306–310). Briefly, resiliency is the ability of the species to withstand environmental and demographic stochasticity (for example, wet or dry, warm or cold years); redundancy is the ability of the species to withstand catastrophic events (for example, droughts, large pollution events); and representation is the ability of the species to adapt to both near-term and long-term changes in its physical and biological environment (for example, climate conditions, pathogens). In general, species viability will increase with increases in resiliency, redundancy, and representation (Smith et al. 2018, p. 306). Using these principles, we identified the species' ecological requirements for survival and reproduction at the individual, population, and species levels, and described the beneficial and risk factors influencing the species' viability.

The SSA process can be categorized into three sequential stages. During the first stage, we evaluated the individual species' life-history needs. The next stage involved an assessment of the historical and current condition of the species' demographics and habitat characteristics, including an explanation of how the species arrived at its current condition. The final stage of the SSA involved making predictions about the species' responses to positive and negative environmental and anthropogenic influences. Throughout all of these stages, we used the best available information to characterize viability as the ability of a species to sustain populations in the wild over time, which we then used to inform our regulatory decision.

The following is a summary of the key results and conclusions from the SSA report; the full SSA report can be found at Docket No. FWS–R2–ES–2024–0083 on *https://www.regulations.gov.*

Summary of Biological Status and Threats

In this discussion, we review the biological condition of the species and its resources, and the threats that influence the species' current and future condition, in order to assess the species' overall viability and the risks to that viability. For the big red sage to maintain viability, its populations must be highly resilient with sufficient redundancy and representation. Several factors influence the resiliency of big red sage populations, including: (1) herbivory, (2) land use changes, (3) collection and inappropriate propagation (*i.e.,* breeding in captivity using closely related wild-sourced individuals that results in inbreeding and decreased genetic diversity), and (4) effects from climate change. These resiliency factors and habitat elements are discussed in detail in the SSA report (Service 2023, entire) and are summarized here.

Species Needs

Soil Moisture

Big red sage growth and flowering require the maintenance of soil moisture through rainfall and/or seepage through fissures and cavities in the limestone substrate. Flowering occurs opportunistically from May through November in response to rainfall and the presence of soil moisture (Service 2023, p. 6). Big red sage individuals establish on bluffs, ledges, and slopes along watercourses (including first-order streams) where soil moisture is relatively persistent (Correll and Johnston 1978, p. 1368; Pasztor 2004, p. 1; Poole et al. 2007, p. 437). Big red sage populations most often occur within 165 feet (50 meters) of watercourses and where slopes are greater than 25 percent (Taylor and O'Kennon 2013, pp. 3–5). The species is endemic to the riparian ravines in the Edwards Plateau, and it occurs in specific positions where intermittent seepage occurs. Additionally, portions of EOs appear to obtain moisture from a major aquifer, the Edwards-Trinity or Trinity, at least when aquifer levels are high (Service 2023, pp. 37–38).

Minimum Viable Population

Highly resilient populations of big red sage must also have stable or increasing demographic trends over time. This means that recruitment of new individuals is at least as great as the mortality rate, and populations must be large enough to have a high probability of surviving a prescribed period of time. Species that have more populations distributed over a broader geographic

range have a greater chance of surviving catastrophic events (Shaffer and Stein 2000, pp. 308–310). Species or populations are highly resilient when the probability of persisting 100 years is greater than 90 percent (Mace and Lande 1991, p. 151). This metric of population resilience is called minimum viable population (MVP) (Pavlik 1996, p. 137). We estimate that highly resilient populations have an MVP of at least 1,600 individuals of reproductive age (Service 2023, pp. 32–33). MVP for a species varies based on different traits of that species, including, but not limited to, longevity (*i.e.,* perennial vs. annual), growth form (*i.e.,* woody vs. herbaceous), fecundity, and longevity of seed viability. We determined that the MVP of 1,600 individuals for big red sage based on the specific traits of big red sage, which fall in the moderate range of several of these categories (Pavlik 1996, p. 137). For example, big red sage is perennial, occurs in old-growth vegetation, plants may produce a moderate number of ramets (physically separate but genetically identical individuals) that branch off the original root system, it is herbaceous, has low fecundity, individual survivorship is low, and environmental variation is high (Service 2024, p. 33). Therefore, populations require a moderately high MVP to persist for 100 years.

Individual and Population Connectivity

Small, reproductively isolated populations are susceptible to the loss of genetic diversity, to genetic drift, and to inbreeding (Barrett and Kohn 1991, pp. 3–30). Additionally, the loss of genetic diversity may reduce the ability of a species or population to resist pathogens and parasites, to adapt to changing environmental conditions, or to colonize new habitats (Service 2023, p. 34). Conversely, populations that pass through a genetic bottleneck may subsequently benefit through the elimination of harmful alleles. Nevertheless, the net result of the loss of genetic diversity is likely to be a loss of fitness and lower chance of survival of populations and of the species.

Additionally, the seeds of big red sage have a very limited dispersal range (Service 2023, p. 34). The forage range for the black-chinned hummingbird, an important pollinator of big red sage, determines the typical limits of gene flow between individuals (Service 2023, p. 34). We estimate that this limit may be from 0.5 to 1.0 km (0.3 to 0.6 mi) (Service 2023, p. 34). When the limits of gene flow are unknown, we apply the TXNDD's use of the NatureServe default minimum separation distance of 1.0 km (0.6 mi) to delineate populations (NatureServe 2020, p. 4). Therefore, big red sage populations must have sufficient numbers of individuals and populations that are not too closely related or too widely dispersed for effective pollination, outcrossing, and seed production.

Risk Factors for Big Red Sage

We reviewed the potential risk factors (*i.e.,* threats, stressors) that could be currently affecting the big red sage. In this proposed rule, we will discuss only those factors in detail that could meaningfully impact the status of the species. The primary risk factors (*i.e.,* threats) affecting the status of big red sage are herbivory (Factor C), collection and inappropriate propagation (Factor B), land use changes (Factor A), and effects from climate change (Factor E).

Herbivory

Big red sage is palatable to browsing herbivores, such as white-tailed deer (*Odocoileus virginianus*), introduced ungulates, and goats (*Capra hircus*). Within large portions of the range of the big red sage, the numbers of white-tailed deer are about three times greater than the recommended sustainable deer population levels (Morrow 2020, p. 8; Armstrong and Young 2000, p. 20; Service 2023, p. 36). In addition to native white-tailed deer, several species of nonnative ungulate game animals have been introduced in the Edwards Plateau (Mungall and Sheffield 1994, pp. 188–194). Some introduced ungulates have escaped and established large breeding populations in the wild, compounding the browsing pressure from native white-tailed deer. Additionally, ranchers also introduced large numbers of goats in Real County and elsewhere in the Edwards Plateau beginning in the early 20th century (Minton 2019, unpaginated). Since goats are voracious browsers and nimble scalers of rocky slopes, large numbers of goats likely had a severe impact on populations of big red sage before conservationists began searching for the species.

Browsing from unsustainably large populations of deer has eradicated big red sage from all known habitats except areas that are inaccessible to deer, such as bluffs and steep slopes (Taylor and O'Kennon 2013, p. 10). Herbivory has already resulted in the decline of two of the seven remaining EOs of big red sage (EOs 11 and 14) (Ward 2010, p. 2). Therefore, herbivory, and thus mortality of individual plants, by native and introduced ungulates has severely affected all populations throughout the species' range and is a continuing severe threat throughout the range.

Land Use Changes

Current rates of human population growth are stable or decreasing in Real, Bandera, and Uvalde Counties; increasing moderately in Kerr and Gillespie Counties; and increasing rapidly in Kendall County (Service 2023, pp. 83–84). Although bluffs and steep slopes are not suitable for most forms of land development, many big red sage populations occur near watercourses where human activities are concentrated (Service 2023, p. 30). Construction and maintenance of houses, roads, bridges, and other recreational land uses may impact these populations of big red sage.

All or portions of four EOs (2, 10, 19, 22) have been lost to development or land use changes that altered the native plant community (Taylor and O'Kennon 2013, pp. 6, 8, 9; TXNDD 2019, pp. 3, 4, 15, 16, 35, 36, 43). In these cases, some individuals were likely to have been destroyed when habitats were converted to buildings or pavement, or when nonnative vegetation was introduced in developed areas, while others may have died as a result of other drastic changes to the habitat.

In addition to losses that are directly attributable to urban and residential development, an increase in the amount of impermeable surfaces or a loss of vegetative cover may reduce the infiltration of water into the ground; this in turn may reduce the availability and constancy of seep moisture that sustains big red sage individuals and populations. The drying of these seepage areas may impact big red sage populations because of the reduction of necessary soil moisture for sustaining plant and population growth (Taylor and O'Kennon 2013, pp. 10–11). Three of the remaining seven EOs (EOs 5, 14, and 24) are currently at the greatest risk to development. Based on the extent of land use changes to known populations and current rates of human population growth in the encompassing counties, we estimate that this threat currently affects 25 percent of all extant populations. Therefore, land use changes are a continuing, potentially severe threat throughout the species' range.

Collection From the Wild and the Loss of Genetic Integrity Due to Inappropriate Propagation

Big red sage is used in landscapes and pollinator gardens, both within its native range in Texas as well as throughout North America and elsewhere. It has been propagated and

sold by several commercial nurseries since 1986 (Enquist 1987, p. 5). Seeds and entire plants have been collected from the wild for landscaping and commercial propagation from at least two EOs (14 and 20) that are accessible to the public (Collier 1989, pp. 1–2; Taylor and O'Kennon 2013, p. 11). E.O. 14, the source of at least one propagated population (Hoban and Garner 2019, p. 1), was widely known and easily accessible to the public. In 1988, the State Department of Highways and Public Transportation placed signs at E.O. 14 stating, ''Non Mowing Area,'' ''Wildflower Research Area,'' and ''Property of State of Texas, Penalty for Private Use.'' On June 27, 1989, State Department of Highways and Public Transportation maintenance personnel found the signs pulled out of the ground with cut flowering stems of the big red sage placed on top of them, with evidence of digging and cutting of the plants (Collier 1989, pp. 1–2). Therefore, there is confirmation that collection contributed to the decline of that population, along with other possible causes, including a major flood, competition from invasive plants, and ungulate browsing (Service 2023, p. 10). Other EOs, such as 11 and 21, are vulnerable to collection from the wild; undocumented populations may also have been discovered and depleted by collectors. Although the habitat of E.O. 11 is intact and is in high condition, and the site is protected as a State Natural Area, this population has declined 87 percent over 31 years (Service 2023, pp. 22, 65). This decline can be attributed to illicit collection because the collection sites have been publicized. However, additional factors may have also contributed to this decline, including herbivory by over-abundant white-tailed deer and introduced ungulates, and the demographic and genetic consequences of small population sizes. Because collection and sale of the big red sage has been ongoing for decades, we conclude that collection from wild populations is a potentially severe, continuing threat to all populations that occur in sites that are known to and accessible by the public.

Inappropriate propagation is also a threat to big red sage. Propagation, in general, is a useful tool for plant conservation. However, there are several potential risks if conducted without regard for the conservation of a species' genetic integrity. Propagated plant populations often arise from a very small number of founders collected from the wild, and propagated populations may lose alleles, and thus experience a decline in genetic diversity through genetic drift (the random reduction in frequency of alleles or the complete loss of alleles). Genetic drift occurs most rapidly when the number of breeding individuals is small.

Additionally, propagated populations may also experience a decrease in genetic diversity through deliberate or inadvertent selection. Selection leads to non-random changes in allele frequencies and non-random losses of alleles. Deliberate selection occurs when seeds are selected from plants with specific desirable traits, such as size, form, or flower color, and are used to propagate subsequent generations. Inadvertent selection occurs as an unintended consequence of propagation. For example, growers typically retain only the individuals that germinate readily and then use those individuals as future seed sources; consequently, propagated populations frequently lose the seed dormancy mechanisms that benefit the survival of wild populations. Each successive propagated generation incrementally changes the frequencies of alleles in the gene pool, including the complete loss of alleles. Ultimately, both deliberate and inadvertent selection lead to plants that are more fit in cultivation but less likely to persist if transplanted back into the wild (Service 2023, p. 39).

Through propagation, it is possible to create unlimited numbers of individuals that, once released to the wild, may interbreed with and overwhelm the much smaller wild populations with a very narrow sample of the species' original genetic diversity, thus causing the loss of rare wild genotypes. Release of individuals bred in cultivation may also introduce genes that reduce fitness (*e.g.,* loss of seed dormancy) into the wild population, as discussed above. Finally, horticulturalists and plant collectors may bring big red sage into proximity with other *Salvia* species that are geographically separated in the wild; if these taxa can breed with each other, this could lead to hybridization. An escape of hybridized *Salvia* species into the wild populations could lead to the extinction of the original wild genotype through interbreeding.

We have no evidence that the progeny of propagated individuals of big red sage have colonized wild population sites. Nevertheless, propagated big red sage populations have very low genetic diversity (Hoban and Garner 2019, p. 4). We conclude that inappropriate propagation is a potentially severe threat of unknown extent to the genetic integrity of the remaining wild populations and the species.

Effects From Climate Change

The Summary for Policy Makers in the Sixth Assessment Report of the Intergovernmental Panel on Climate Change concluded that global surface temperatures will continue to increase until at least the mid-century under all emissions scenarios considered; the frequency and intensity of hot extremes, marine heatwaves, and agricultural and ecological droughts will increase in some regions; and heavy precipitation events will become more frequent (IPCC 2021, pp. 16–20). The U.S. Global Climate Research Program (USGCRP) Fourth National Climate Assessment reports that average annual temperatures from 1986 to 2016 have increased in the Southern Great Plains, which includes the range of big red sage, by 0.42 degrees Celsius (°C) (0.76 degrees Fahrenheit (°F)), compared to the 1901 to 1960 baseline (USGCRP 2017, p. 187). The frequency of heavy precipitation events in the Southern Great Plains has increased from 1901 to 2016 and 1948 to 2016 (USGCRP 2017, pp. 20 –212) and is projected to continue to increase under both moderate and high emission scenarios.

Because the big red sage only occurs where there is seep moisture along the slopes and bluffs of canyons and ravines, it requires relatively persistent soil moisture. Additionally, to evaluate how a changing climate may affect big red sage, we used the National Climate Change Viewer to compare past and projected future climate conditions for the Upper Guadalupe River watershed in Texas. The National Climate Change Viewer projects a decrease in soil water storage and an increase in summer evaporative deficit by 2050 to 2074, indicating that soil moisture will become more limiting to plant growth, and thus will restrict the big red sage to a smaller amount of suitable habitat (Service 2023, p. 42). Although climate models do not consistently project how total rainfall may change, the ongoing trend toward greater extremes in rainfall will likely increase with rising temperatures. We expect that mortality will increase and recruitment will decrease during longer, more severe droughts. Furthermore, the increasing frequency and intensity of heavy rainfall events will also exacerbate the threat of flash flooding. Flash floods have already caused population declines at EOs 5 and 14, and EO 15 was completely destroyed by a landslide when the bluff above it collapsed, which may have been caused by flooding along Big Joshua Creek. Flood waters may uproot individual plants or wash away their substrates, or the plants may be buried under silt and

debris (Service 2023, p. 40). Many EOs that occur along watercourses have individuals established below the high-water level that will likely be destroyed by a flood event at some point in the future (Taylor and O'Kennon 2013, p. 10). We conclude that the direct and indirect effects of climate change and associated flash floods and bank erosion represent a potentially severe threat to the portions of big red sage populations that are close to watercourses and below the high-water level of floods throughout the species' range.

Summary

Several historical and ongoing influences, including herbivory, land use changes, collection, and inappropriate propagation, may affect the viability of the big red sage. The most pervasive threats to the species are herbivory and collection, which have already resulted in the extirpation and decline of several populations. Additionally, climate change is expected to exacerbate impacts from all aforementioned threats.

Conservation Efforts and Regulatory Mechanisms

TPWD has previously supported two grants that promoted the conservation of the big red sage. The 2012 Texas Conservation Action Plan identified a research priority to study the distribution of and threats to the big red sage. This led to a wildlife conservation grant to update the species' status (Taylor and O'Kennon 2013, entire). The TPWD Conservation License Plate Program supported an investigation of the species' conservation genetics in 2019 (Hoban and Garner 2019, pp. 1–2). This genetic study was conducted at EO 11 located at Lost Maples State Natural Area, which is protected by TPWD. Although the habitat is intact and the site is protected as a State Natural Area, this population has declined 87 percent over 31 years. Factors that may have contributed to this decline include herbivory by overabundant white-tailed deer and introduced ungulates, as well as the demographic and genetic consequences of a small population size. Since the collection sites have been publicized, it is also possible that illicit collection may also have contributed to this decline. TPWD is currently supporting a third project, funded through the Service's cooperative endangered species conservation fund (see 16 U.S.C. 1535(i)). The objectives of this project are to seek access to private lands and conduct surveys for new populations, collect seeds from wild populations, and propagate seeds of wild populations to increase seed available for reintroduction and augmentation of populations, scientific research, and seed banking.

One of the largest populations of the big red sage occurs at Cibolo Bluffs (EO 5), which is owned by Cibolo Center for Conservation and is monitored annually by volunteers of the Cibolo Center for Conservation and trustees of Cibolo Preserve. In 2005, there was a big red sage reintroduction at Cibolo Center for Conservation (formerly Cibolo Nature Center) from seeds obtained from the Lady Bird Johnson Wildflower Center and collected from the wild (likely Cibolo Bluffs). Results from this reintroduction suggest that the big red sage may be relatively resilient to the wide extremes in annual rainfall that characterize the Edwards Plateau (Service 2023, p. 46). However, none of the individuals that were planted outside of exclosures survived, indicating that herbivory by overabundant white-tailed deer is a severe threat to the survival of the big red sage. While the protected individuals declined over time, they also produced large numbers of seeds, with new big red sage individuals found growing nearby along a creek in 2013. In summary, this small pilot reintroduction demonstrates that it is possible to establish new population sources or to augment existing populations, provided that the sites are protected from white-tailed deer and other ungulates.

Cumulative Effects

We note that, by using the SSA framework to guide our analysis of the scientific information documented in the SSA report, we have analyzed the cumulative effects of identified threats and conservation actions on the species. To assess the current and future condition of the species, we evaluate the effects of all the relevant factors that may be influencing the species, including threats and conservation efforts. Because the SSA framework considers not just the presence of the factors, but to what degree they collectively influence risk to the entire species, our assessment integrates the cumulative effects of the factors and replaces a standalone cumulative-effects analysis.

Species Condition

We used the U.S. Geological Survey's hydrologic unit code watershed boundaries to delineate four representation areas of the big red sage: Guadalupe, Cibolo, Frio-Sabinal, and Pedernales. The current condition of the big red sage considers the risks to the populations previously and currently. For each EO, we developed and assigned categories for the species' demographic and habitat conditions to measure population resiliency of the big red sage. Our analysis was conducted at the EO level, but some individual SFs may have different conditions than the EO in which it falls.

Seven EOs (EO numbers 5, 11, 14, 16, 20, 21, and 24) are extant and seven EOs (EO numbers 2, 4, 10, 15, 19, 22, and 23) are extirpated (Service 2024, p. 50). There are 4 EOs that were reliably recorded in the past for which there have been no recent visits, or the exact geographic location is unknown (EO numbers 1, 3, 7, and 8). We considered these previously documented populations where we could not determine if they are currently extant or extirpated as ''non-contributing'' (*i.e.,* not contributing to the overall viability of the species), and they are not included in the overall condition assessment of the species. Therefore, we consider there to be 14 known historical populations contributing to our understanding of the overall viability of the species.

We used MVP as the metric to determine the population condition (*i.e.,* resiliency) for each EO (Pavlik 1996, p. 137). MVP is an estimate of population size needed for a population to have a high probability of surviving 100 years, which for the big red sage is 1,600 individuals (Service 2023, p. 33). The estimate of MVP is based only on numbers of mature individuals (those that have flowered at least once or are judged capable of flowering) because juveniles that die before they reproduce do not contribute to the effective population size or future genetic diversity.

We categorized the population condition of each EO as high, moderate, low, or extirpated. EOs are in high condition when they have the estimated MVP of 1,600 mature individuals, meaning the populations would likely persist for 100 years. Moderate condition is a population of at least 100 individuals, which is a population size that is likely to persist for at least 10 years and has the ability to have increased resiliency through conservation and management. We adopt 10 years as the threshold for moderate condition because 10 years is the observed lifespan of an individual and it is long enough for both recruitment and mortality to occur and for demographic trends to emerge (Taylor 2021, pers. comm.). Low condition is a population size fewer than 100 individuals that is not likely to persist 10 years and is unlikely to increase resilience without

augmentation as well as conservation and management.

The evaluation of habitat conditions of the EOs includes the amount and percent of good and excellent habitat, the presence of gaps between areas of good or excellent habitat, the proximity of urban and residential development, and the abundance of forested ravines and tributaries that connect to the EOs (Service 2023, p. 54). High habitat condition was categorized by having, on average, abundant potential habitat, few (if any) significant habitat gaps, low proximity to or absence of nearby urban and residential development, and abundant tributary ravines. Moderate habitat condition was categorized by having, on average, relatively abundant potential habitat, large or several gaps between suitable habitat areas, some proximity to urban and residential development, and few forested ravines and tributaries. Low habitat condition was categorized by having, on average, low amounts of potential habitat, many or large significant habitat gaps, large amounts or very nearby urban and residential development, and few to no nearby forested ravines and tributaries. We categorized the overall condition of each EO as the lesser of the population condition and habitat condition (see table 2, below). There are several populations that were reliably recorded in the past for which there have been no recent visits, or the exact geographic location is unknown. We considered these previously documented populations where we could not determine if they are currently extant or extirpated as ''non-contributing'' (*i.e.,* not contributing to the overall viability of the species), and they are not included in the overall condition assessment of the species.

TABLE 2—SUMMARY OF REPRESENTATION AREAS, POPULATION AND HABITAT CONDITIONS, AND OVERALL RESILIENCE OF THE EOS OF BIG RED SAGE

Representation area	Element occurrence	Population condition	Habitat condition	Overall EO resilience
Guadalupe or Pedernales	1	Non-Contributing	Not Determined	Non-Contributing.
Guadalupe	2	Extirpated	Developed	Extirpated.
Guadalupe	3	Non-Contributing	Not Determined	Non-Contributing.
Guadalupe	4-Upper Turtle Creek	Non-Contributing	High	Non-Contributing.
Guadalupe	4-Middle Turtle Creek	Non-Contributing	Low	Non-Contributing.
Guadalupe	4-Lower Turtle Creek	Extirpated	Low	Extirpated.
Guadalupe	15	Extirpated	Not Determined	Extirpated.
Guadalupe	20	Moderate	High	Moderate.
Unknown	7	Non-Contributing	Unknown	Non-Contributing.
Cibolo	5-Upstream Cibolo Creek	Non-Contributing	High	Non-Contributing.
Cibolo	5-Midstream Cibolo Creek	Non-Contributing	Moderate	Non-Contributing.
Cibolo	5-Downstream Cibolo Creek.	Moderate	High	Moderate.
Cibolo	14	Moderate	Moderate	Moderate.
Cibolo	24	Moderate	Moderate	Moderate.
Frio-Sabinal	8	Non-Contributing	High	Non-Contributing.
Frio-Sabinal	11	Low	High	Low.
Frio-Sabinal	16	Low	High	Low.
Frio-Sabinal	21	Low	High	Low.
Pedernales	10	Extirpated/Non-Contributing.	Not Determined	Extirpated/Non-Contributing.
Pedernales	22	Extirpated	Not Determined	Extirpated.
Pedernales	23	Extirpated	Not Determined	Extirpated.
Headwaters Salado Creek	19	Extirpated	Developed	Extirpated.

The species' total known populations have declined by 46 percent since 1988. Twenty-eight percent of known EOs have been completely extirpated. All known EOs in the Pedernales representation area are extirpated. The Guadalupe representation area has only one remaining E.O., which is in moderate condition. The Frio-Sabinal representation area has three EOs, all of which are in low condition. The Cibolo representation area has three EOs in moderate condition that are currently isolated, or nearly isolated, from each other by urban, residential, and recreational development.

Redundancy for the big red sage is characterized by having multiple, sufficiently resilient populations distributed across the spring systems historically occupied by the species for the species to be able to withstand catastrophic events. Species that have redundant, sufficiently resilient populations distributed across their historical ranges are less susceptible to the risk of extinction from catastrophic events. Of the 14 known historical populations of big red sage, 7 have become extirpated. Therefore, redundancy has been significantly reduced from historical levels, making the species more vulnerable to catastrophic events such as flash floods and prolonged drought.

Representation reflects a species' capacity to adapt to changing environmental conditions over time and can be characterized by genetic and ecological diversity within and among populations. We describe species representation for the big red sage as genetic diversity both within and among populations. Current populations of big red sage have very low overall species diversity and small population sizes and are likely to continue to experience declines in genetic diversity and increased inbreeding (Hoban and Garner 2019, pp. 3–4). Although the big red sage has critically low genetic diversity, wild populations maintain greater genetic diversity than propagated populations (Hoban and Garner 2019, pp. 3–4). When coupled with small population sizes, big red sage populations may experience an increased loss in genetic variation, resulting in a population's reduced ability to survive and reproduce (*i.e.,* inbreeding depression) (Hoban and Garner 2019, p. 4). The big red sage occurs only in small, isolated groups of individuals, which are susceptible to the loss of genetic diversity, to genetic drift, and to inbreeding (Barrett and

Kohn 1991, pp. 3–30). This is evident in propagated populations of big red sage with known low genetic diversity that did not produce viable seeds (Hoban and Garner 2019, p. 4). Because of the species' low genetic diversity, its ability to withstand stochastic events and adapt to changing environmental conditions is reduced.

In summary, of the 14 known historical populations, 7 are extirpated and 7 are extant. This reduced redundancy makes the species more susceptible to catastrophic events such as floods and prolonged drought. Furthermore, of the extant populations, only four populations are expected to persist at least 10 years and three populations are likely to become extirpated within 10 years. The remaining populations are small, are isolated, and have low genetic diversity, making them less able to withstand stochastic events.

As part of the SSA, we also developed two future condition scenarios to capture the range of uncertainties regarding future threats and the projected responses by the big red sage. Because we determined that the current condition of the big red sage is consistent with an endangered species (see Determination of the Big Red Sage's Status, below), we are not presenting the results of the future scenarios in this proposed rule. Please refer to the SSA report (Service 2023, pp. 78–98) for the full analysis of future scenarios.

Determination of the Big Red Sage's Status

Section 4 of the Act (16 U.S.C. 1533) and its implementing regulations (50 CFR part 424) set forth the procedures for determining whether a species meets the definition of an endangered species or a threatened species. The Act defines an ''endangered species'' as a species in danger of extinction throughout all or a significant portion of its range and a ''threatened species'' as a species likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range. The Act requires that we determine whether a species meets the definition of an endangered species or a threatened species because of any of the following factors: (A) The present or threatened destruction, modification, or curtailment of its habitat or range; (B) overutilization for commercial, recreational, scientific, or educational purposes; (C) disease or predation; (D) the inadequacy of existing regulatory mechanisms; or (E) other natural or manmade factors affecting its continued existence.

Status Throughout All of Its Range

After evaluating threats to the species and assessing the cumulative effect of the threats under the Act's section 4(a)(1) factors, we find that the big red sage has declined from known historical levels in size and number of populations. Our analysis revealed several factors that caused this decline and pose a meaningful risk to the viability of the species. These threats are primarily related to habitat changes (Factor A), including land use changes; overutilization (Factor B) by collection and inappropriate propagation; herbivory (Factor C); and the effects of climate change (Factor E).

Of the 14 known historical populations, 7 are extirpated and 7 are extant. This decline in number of populations from known historical levels indicates a reduced level of redundancy, making the big red sage more vulnerable to catastrophic events such as flash floods. Of the seven extant populations, only four populations are expected to persist at least 10 years and three are likely to become extirpated within 10 years. These levels of resiliency of the remaining populations exhibit a lowered ability of the species to withstand environmental and demographic stochasticity. Additionally, overall genetic diversity of the species is low, meaning that the species may not be adequately able to adapt to both near-term and long-term changes in its physical and biological environment (*i.e.,* the species may lack adaptive capacity).

The most pervasive threats to the species are herbivory and collection and inappropriate propagation. Browsing from unsustainably large populations of deer has eradicated big red sage from all known habitats except areas that are inaccessible to deer, such as bluffs and steep slopes (Taylor and O'Kennon 2013, p. 10). Herbivory has already resulted in the decline of several EOs of big red sage, including EOs 11 and 14 (Ward 2010, p. 2). Seeds and entire plants have been collected from the wild for landscaping and commercial propagation from at least two EOs (14 and 20) that are accessible to the public (Collier 1989, pp. 1–2; Taylor and O'Kennon 2013, p. 11). E.O. 14 was widely known and easily accessible to the public, and collection contributed to the decline of that population, which remains extant.

These threats, in addition to land use changes and effects from climate change, have reduced available habitat for the big red sage and resulted in the direct and indirect destruction of individual plants and entire populations. All or portions of four EOs have been lost to development or land use changes where individual plants were likely to have been destroyed when habitats were converted to buildings or pavement, or when nonnative vegetation was introduced in developed areas, while others may have died as a result of other drastic changes to the habitat (Taylor and O'Kennon 2013, pp. 6, 8, 9; TXNDD 2019, pp. 3, 4, 15, 16, 35, 36, 43). Effects from climate change such as flash floods have already caused population declines at three EOs, one of which was completely destroyed. Flood waters may uproot individual plants or wash away their substrates, or the plants may be buried under silt and debris (Service 2023, p. 40).

In summary, the big red sage is very susceptible to extirpations from catastrophic events and has limited adaptive capacity. The number of known populations has already been reduced from 14 to 7 populations due to herbivory, collection and inappropriate propagation, land use changes, and effects from climate change, all of which remain active threats to existing populations. The species is in danger of extinction due to the aforementioned threats, which have historically impacted, and are currently impacting, the species and reducing its viability across its range. We do not find the species meets the Act's definition of a threatened species because the species has already shown declines in the number and resiliency of populations. Half of known populations have already become extirpated due to the threats mentioned above, and all remaining populations are at risk due to the same threats. Because current redundancy is reduced from known historical levels, and representation is limited due to low genetic diversity, the species is vulnerable to catastrophic and stochastic events. Thus, after assessing the best scientific and commercial data available, we determine that the big red sage is in danger of extinction throughout all of its range.

Status Throughout a Significant Portion of Its Range

Under the Act and our implementing regulations, a species may warrant listing if it is in danger of extinction or likely to become so within the foreseeable future throughout all or a significant portion of its range. We have determined that the big red sage is in danger of extinction throughout all of its range and accordingly did not undertake an analysis of any significant portion of its range. Because the big red sage warrants listing as endangered

throughout all of its range, our determination does not conflict with the decision in *Center for Biological Diversity* v. *Everson,* 435 F. Supp. 3d 69 (D.D.C. 2020), because that decision related to significant portion of the range analyses for species that warrant listing as threatened, not endangered, throughout all of their range.

Determination of Status

Our review of the best available scientific and commercial information indicates that the big red sage meets the Act's definition of an endangered species. Therefore, we propose to list the big red sage as an endangered species in accordance with sections 3(6) and 4(a)(1) of the Act.

Available Conservation Measures

Conservation measures provided to species listed as endangered or threatened species under the Act include recognition as a listed species, planning and implementation of recovery actions, requirements for Federal protection, and prohibitions against certain practices. Recognition through listing results in public awareness, and conservation by Federal, State, Tribal, and local agencies, foreign governments, private organizations, and individuals. The Act encourages cooperation with the States and other countries and calls for recovery actions to be carried out for listed species. The protection required by Federal agencies, including the Service, and the prohibitions against certain activities are discussed, in part, below.

The primary purpose of the Act is the conservation of endangered and threatened species and the ecosystems upon which they depend. The ultimate goal of such conservation efforts is the recovery of these listed species, so that they no longer need the protective measures of the Act. Section 4(f) of the Act calls for the Service to develop and implement recovery plans for the conservation of endangered and threatened species. The goal of this process is to restore listed species to a point where they are secure, self-sustaining, and functioning components of their ecosystems.

The recovery planning process begins with development of a recovery outline made available to the public soon after a final listing determination. The recovery outline guides the immediate implementation of urgent recovery actions while a recovery plan is being developed. Recovery teams (composed of species experts, Federal and State agencies, nongovernmental organizations, and stakeholders) may be established to develop and implement recovery plans. The recovery planning process involves the identification of actions that are necessary to halt and reverse the species' decline by addressing the threats to its survival and recovery. The recovery plan identifies recovery criteria for review of when a species may be ready for reclassification from endangered to threatened (''downlisting'') or removal from protected status (''delisting''), and methods for monitoring recovery progress. Recovery plans also establish a framework for agencies to coordinate their recovery efforts and provide estimates of the cost of implementing recovery tasks. Revisions of the plan may be done to address continuing or new threats to the species, as new substantive information becomes available. The recovery outline, draft recovery plan, final recovery plan, and any revisions will be available on our website as they are completed (*https://www.fws.gov/program/endangered-species*), or from our Austin Ecological Services Field Office (see **FOR FURTHER INFORMATION CONTACT**).

Implementation of recovery actions generally requires the participation of a broad range of partners, including other Federal agencies, States, Tribes, nongovernmental organizations, businesses, and private landowners. Examples of recovery actions include habitat restoration (*e.g.,* restoration of native vegetation), research, captive propagation and reintroduction, and outreach and education. The recovery of many listed species cannot be accomplished solely on Federal lands because their range may occur primarily or solely on non-Federal lands. To achieve recovery of these species requires cooperative conservation efforts on private, State, and Tribal lands.

If this species is listed, funding for recovery actions will be available from a variety of sources, including Federal budgets, State programs, and cost-share grants for non-Federal landowners, the academic community, and nongovernmental organizations. In addition, pursuant to section 6 of the Act, the State of Texas would be eligible for Federal funds to implement management actions that promote the protection or recovery of the big red sage. Information on our grant programs that are available to aid species recovery can be found at: *https://www.fws.gov/service/financial-assistance.*

Although the big red sage is only proposed for listing under the Act at this time, please let us know if you are interested in participating in recovery efforts for this species. Additionally, we invite you to submit any new information on this species whenever it becomes available and any information you may have for recovery planning purposes (see **FOR FURTHER INFORMATION CONTACT**).

Section 7 of the Act is titled, ''Interagency Cooperation,'' and it mandates all Federal action agencies to use their existing authorities to further the conservation purposes of the Act and to ensure that their actions are not likely to jeopardize the continued existence of listed species or adversely modify critical habitat. Regulations implementing section 7 are codified at 50 CFR part 402.

Section 7(a)(2) states that each Federal action agency shall, in consultation with the Secretary, ensure that any action they authorize, fund, or carry out is not likely to jeopardize the continued existence of a listed species or result in the destruction or adverse modification of designated critical habitat. Each Federal agency shall review its action at the earliest possible time to determine whether it may affect listed species or critical habitat. If a determination is made that the action may affect listed species or critical habitat, formal consultation is required (50 CFR 402.14(a)), unless the Service concurs in writing that the action is not likely to adversely affect listed species or critical habitat. At the end of a formal consultation, the Service issues a biological opinion, containing its determination of whether the Federal action is likely to result in jeopardy or adverse modification.

In contrast, section 7(a)(4) of the Act requires Federal agencies to confer with the Service on any action which is likely to jeopardize the continued existence of any species proposed to be listed under the Act or result in the destruction or adverse modification of critical habitat proposed to be designated for such species. Although the conference procedures are required only when an action is likely to result in jeopardy or adverse modification, action agencies may voluntarily confer with the Service on actions that may affect species proposed for listing or critical habitat proposed to be designated. In the event that the subject species is listed or the relevant critical habitat is designated, a conference opinion may be adopted as a biological opinion and serve as compliance with section 7(a)(2) of the Act.

Examples of discretionary actions for the big red sage that may be subject to conference and consultation procedures under section 7 are land management or other landscape-altering activities on Federal lands as well as actions on State, Tribal, local, or private lands that require a Federal permit (such as a

permit from the U.S. Army Corps of Engineers under section 404 of the Clean Water Act (33 U.S.C. 1251 *et seq.*) or a permit from the Service under section 10 of the Act) or that involve some other Federal action (such as funding from the Federal Highway Administration, Federal Aviation Administration, or the Federal Emergency Management Agency). Federal actions not affecting listed species or critical habitat—and actions on State, Tribal, local, or private lands that are not federally funded, authorized, or carried out by a Federal agency—do not require section 7 consultation. Federal agencies should coordinate with the local Service Field Office (see **FOR FURTHER INFORMATION CONTACT**) with any specific questions on section 7 consultation and conference requirements.

The Act and its implementing regulations set forth a series of general prohibitions and exceptions that apply to endangered plants. The prohibitions of section 9(a)(2) of the Act, and the Service's implementing regulations codified at 50 CFR 17.61, make it illegal for any person subject to the jurisdiction of the United States to commit, to attempt to commit, to solicit another to commit or to cause to be committed any of the following with an endangered plant: (1) import to, or export from, the United States; (2) remove and reduce to possession from areas under Federal jurisdiction; maliciously damage or destroy on any such area; or remove, cut, dig up, or damage or destroy on any other area in knowing violation of any law or regulation of any State or in the course of any violation of a State criminal trespass law; (3) deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever and in the course of a commercial activity; or (4) sell or offer for sale in interstate or foreign commerce. Certain exceptions to these prohibitions apply to employees or agents of the Service, other Federal land management agencies, and State conservation agencies.

We may issue permits to carry out otherwise prohibited activities involving endangered plants under certain circumstances. Service regulations governing permits for endangered plants are codified at 50 CFR 17.62, and general Service permitting regulations are codified at 50 CFR part 13. With regard to endangered plants, a permit may be issued for scientific purposes or for enhancing the propagation or survival of the species. The statute also contains certain exemptions from the prohibitions, which are found in sections 9 and 10 of the Act.

II. Critical Habitat

Background

Critical habitat is defined in section 3 of the Act as:

(1) The specific areas within the geographical area occupied by the species, at the time it is listed in accordance with the Act, on which are found those physical or biological features

(a) Essential to the conservation of the species, and

(b) Which may require special management considerations or protection; and

(2) Specific areas outside the geographical area occupied by the species at the time it is listed, upon a determination that such areas are essential for the conservation of the species.

Our regulations at 50 CFR 424.02 define the geographical area occupied by the species as an area that may generally be delineated around species' occurrences, as determined by the Secretary (*i.e.,* range). Such areas may include those areas used throughout all or part of the species' life cycle, even if not used on a regular basis (*e.g.,* migratory corridors, seasonal habitats, and habitats used periodically, but not solely by vagrant individuals).

Conservation, as defined under section 3 of the Act, means to use and the use of all methods and procedures that are necessary to bring an endangered or threatened species to the point at which the measures provided pursuant to the Act are no longer necessary. Such methods and procedures include, but are not limited to, all activities associated with scientific resources management such as research, census, law enforcement, habitat acquisition and maintenance, propagation, live trapping, and transplantation, and, in the extraordinary case where population pressures within a given ecosystem cannot be otherwise relieved, may include regulated taking.

Critical habitat receives protection under section 7 of the Act through the requirement that each Federal action agency ensure, in consultation with the Service, that any action they authorize, fund, or carry out is not likely to result in the destruction or adverse modification of designated critical habitat. The designation of critical habitat does not affect land ownership or establish a refuge, wilderness, reserve, preserve, or other conservation area. Such designation also does not allow the government or public to access private lands. Such designation does not require implementation of restoration, recovery, or enhancement measures by non-Federal landowners. Rather, designation requires that, where a landowner requests Federal agency funding or authorization for an action that may affect an area designated as critical habitat, the Federal agency consult with the Service under section 7(a)(2) of the Act. If the action may affect the listed species itself (such as for occupied critical habitat), the Federal agency would have already been required to consult with the Service even absent the designation because of the requirement to ensure that the action is not likely to jeopardize the continued existence of the species. Even if the Service were to conclude after consultation that the proposed activity is likely to result in destruction or adverse modification of the critical habitat, the Federal action agency and the landowner are not required to abandon the proposed activity, or to restore or recover the species; instead, they must implement ''reasonable and prudent alternatives'' to avoid destruction or adverse modification of critical habitat.

Under the first prong of the Act's definition of critical habitat, areas within the geographical area occupied by the species at the time it was listed are included in a critical habitat designation if they contain physical or biological features (1) which are essential to the conservation of the species and (2) which may require special management considerations or protection. For these areas, critical habitat designations identify, to the extent known using the best scientific data available, those physical or biological features that are essential to the conservation of the species (such as space, food, cover, and protected habitat).

Under the second prong of the Act's definition of critical habitat, we can designate critical habitat in areas outside the geographical area occupied by the species at the time it is listed, upon a determination that such areas are essential for the conservation of the species.

Section 4 of the Act requires that we designate critical habitat on the basis of the best scientific data available. Further, our Policy on Information Standards Under the Endangered Species Act (published in the **Federal Register** on July 1, 1994 (59 FR 34271)), the Information Quality Act (section 515 of the Treasury and General Government Appropriations Act for Fiscal Year 2001 (Pub. L. 106–554; H.R.

5658)), and our associated Information Quality Guidelines provide criteria, establish procedures, and provide guidance to ensure that our decisions are based on the best scientific data available. They require our biologists, to the extent consistent with the Act and with the use of the best scientific data available, to use primary and original sources of information as the basis for recommendations to designate critical habitat.

When we are determining which areas should be designated as critical habitat, our primary source of information is generally the information from the SSA report and information developed during the listing process for the species. Additional information sources may include any generalized conservation strategy, criteria, or outline that may have been developed for the species; the recovery plan for the species; articles in peer-reviewed journals; conservation plans developed by States and counties; scientific status surveys and studies; biological assessments; other unpublished materials; or experts' opinions or personal knowledge.

Habitat is dynamic, and species may move from one area to another over time. We recognize that critical habitat designated at a particular point in time may not include all of the habitat areas that we may later determine are necessary for the recovery of the species. For these reasons, a critical habitat designation does not signal that habitat outside the designated area is unimportant or may not be needed for recovery of the species. Areas that are important to the conservation of the species, both inside and outside the critical habitat designation, will continue to be subject to: (1) Conservation actions implemented under section 7(a)(1) of the Act; (2) regulatory protections afforded by the requirement in section 7(a)(2) of the Act for Federal agencies to ensure their actions are not likely to jeopardize the continued existence of any endangered or threatened species; and (3) the prohibitions found in section 9 of the Act. Federally funded or permitted projects affecting listed species outside their designated critical habitat areas may still result in jeopardy findings in some cases. These protections and conservation tools will continue to contribute to recovery of the species. Similarly, critical habitat designations made on the basis of the best available information at the time of designation will not control the direction and substance of future recovery plans, habitat conservation plans, or other species conservation planning efforts if new information available at the time of those planning efforts calls for a different outcome.

Prudency Determination

Section 4(a)(3) of the Act, as amended, and implementing regulations (50 CFR 424.12) require that, to the maximum extent prudent and determinable, the Secretary shall designate critical habitat at the time the species is determined to be an endangered species or a threatened species. Our regulations (50 CFR 424.12(a)(1)) state that designation of critical habitat may not be prudent in circumstances such as, but not limited to, the following:

(i) The species is threatened by taking or other human activity and identification of critical habitat can be expected to increase the degree of such threat to the species;

(ii) The present or threatened destruction, modification, or curtailment of a species' habitat or range is not a threat to the species;

(iii) Areas within the jurisdiction of the United States provide no more than negligible conservation value, if any, for a species occurring primarily outside the jurisdiction of the United States; or

(iv) No areas meet the definition of critical habitat.

As discussed above, big red sage is threatened by collection and inappropriate propagation, and identification of critical habitat can be expected to increase the degree of these threats to the species. Because of this, we have determined that designation of critical habitat is not prudent. We reach this conclusion largely because of the pervasive threat of collection (Factor B). The threat of collection potentially imperils all populations whose geographic locations are publicized and accessible to the public. Collection results in direct mortality when whole plants are removed from wild sites, and seed collection from wild populations for propagation can reduce recruitment of new individuals and contribute to the decline of those populations. What remains is a very small number of isolated fragments of former populations, none of which have viable population sizes. Designation of critical habitat would publicize locations of the big red sage that are not currently publicized, which puts those populations at risk for collection and thus extirpation. Designation of critical habitat would also not provide any additional conservation benefit to the species because it does not establish specific land management standards or prescriptions and only prohibits Federal agencies from carrying out, funding, or authorizing actions that would destroy or adversely modify critical habitat, whereas big red sage occurs almost entirely on private land. Therefore, a designation of critical habitat would not be advantageous for this species. Since we have determined that the big red sage is threatened by taking or other human activity and identification of critical habitat can be expected to increase the degree of such threat to the species, in accordance with 50 CFR 424.12(a)(1), we determine that designation of critical habitat is not prudent for the big red sage.

Required Determinations

Clarity of the Rule

We are required by Executive Orders (E.O.s) 12866 and 12988 and by the Presidential memorandum of June 1, 1998, to write all rules in plain language. This means that each rule we publish must:

(1) Be logically organized;

(2) Use the active voice to address readers directly;

(3) Use clear language rather than jargon;

(4) Be divided into short sections and sentences; and

(5) Use lists and tables wherever possible.

If you feel that we have not met these requirements, send us comments by one of the methods listed in **ADDRESSES**. To better help us revise the rule, your comments should be as specific as possible. For example, you should tell us the numbers of the sections or paragraphs that are unclearly written, which sections or sentences are too long, the sections where you feel lists or tables would be useful, etc.

Government-to-Government Relationship With Tribes

In accordance with the President's memorandum of April 29, 1994 (Government-to-Government Relations with Native American Tribal Governments; 59 FR 22951, May 4, 1994), E.O. 13175 (Consultation and Coordination with Indian Tribal Governments), the President's memorandum of November 30, 2022 (Uniform Standards for Tribal Consultation; 87 FR 74479, December 5, 2022), and the Department of the Interior's manual at 512 DM 2, we readily acknowledge our responsibility to communicate meaningfully with federally recognized Tribes and Alaska Native Corporations (ANCs) on a government-to-government basis. In accordance with Secretary's Order 3206 of June 5, 1997 (American Indian Tribal Rights, Federal-Tribal Trust

Responsibilities, and the Endangered Species Act), we readily acknowledge our responsibilities to work directly with Tribes in developing programs for healthy ecosystems, to acknowledge that Tribal lands are not subject to the same controls as Federal public lands, to remain sensitive to Indian culture, and to make information available to Tribes. We have determined that the big red sage does not occur on Tribal lands, so no Tribes would be affected if we list the species.

References Cited

A complete list of references cited in this rulemaking is available on the internet at *https://www.regulations.gov* and upon request from the Austin Ecological Services Field Office (see **FOR FURTHER INFORMATION CONTACT**).

Authors

The primary authors of this proposed rule are the staff members of the Fish and Wildlife Service's Species Assessment Team and the Austin Ecological Services Field Office.

List of Subjects in 50 CFR Part 17

Endangered and threatened species, Exports, Imports, Plants, Reporting and recordkeeping requirements, Transportation, Wildlife.

Proposed Regulation Promulgation

Accordingly, we propose to amend part 17, subchapter B of chapter I, title 50 of the Code of Federal Regulations, as set forth below:

PART 17—ENDANGERED AND THREATENED WILDLIFE AND PLANTS

■ 1. The authority citation for part 17 continues to read as follows:

Authority: 16 U.S.C. 1361–1407; 1531–1544; and 4201–4245, unless otherwise noted.

■ 2. In § 17.12, in paragraph (h), amend the List of Endangered and Threatened Plants by adding an entry for ''*Salvia pentstemonoides*'' in alphabetical order under FLOWERING PLANTS to read as follows:

§ 17.12 Endangered and threatened plants.

* * * * *

(h) * * *

Scientific name	Common name	Where listed	Status	Listing citations and applicable rules
		FLOWERING PLANTS		
*	*	*	*	*
Salvia pentstemonoides	big red sage	Wherever found	E	[**Federal Register** citation when published as a final rule].

BILLING CODE 4333–15–P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Part 20

[Docket No. FWS–HQ–MB–2024–0127; FXMB1231099BPP0–245–FF09M32000]

RIN 1018–BH65

Migratory Bird Hunting; Proposed 2025–26 Migratory Game Bird Hunting Regulations (Preliminary)

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule.

SUMMARY: The U.S. Fish and Wildlife Service (Service or we) proposes to establish hunting regulations for certain migratory game birds for the 2025–26 hunting season. Through an annual rulemaking process, we prescribe outside limits (which we refer to as frameworks) within which States may select hunting seasons. This proposed rule provides the regulatory schedule, describes the proposed regulatory alternatives for the 2025–26 general duck seasons, and provides preliminary proposals that vary from the 2024–25 hunting season regulations. Migratory bird hunting seasons provide opportunities for recreation and sustenance; aid Federal, State, and Tribal governments in the management of migratory game birds; and permit harvests at levels compatible with migratory game bird population status and habitat conditions.

DATES: *Comments:* You may comment on the general duck season regulatory alternatives, the process for authorizing annual hunting seasons, and other preliminary proposals for the 2025–26 season until February 20, 2025.

ADDRESSES: *Comments:* You may submit comments on the proposals by one of the following methods:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments on Docket No. FWS–HQ–MB–2024–0127.
- *U.S. mail:* Public Comments Processing, Attn: FWS–HQ–MB–2024–0127; U.S. Fish and Wildlife Service; MS: PRB/3W; 5275 Leesburg Pike; Falls Church, VA 22041–3803.

We will not accept emailed or faxed comments. We will post all comments on *https://www.regulations.gov.* This generally means that your entire submission—including any personal identifying information—will be posted on the website. See Public Comments, below, for more information.

FOR FURTHER INFORMATION CONTACT: Jerome Ford, U.S. Fish and Wildlife Service, Department of the Interior, (703) 358–2606; *jerome_ford@fws.gov.* Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point of contact in the United States. For a summary of the proposed rule, please see the ''rule summary document'' in docket FWS–HQ–MB–2024–0127 on *https://www.regulations.gov.*

SUPPLEMENTARY INFORMATION:

Process for Establishing Annual Migratory Game Bird Hunting Regulations

Background

Migratory game birds are those bird species so designated in conventions between the United States and several foreign nations for the protection and management of these birds. Under the Migratory Bird Treaty Act (MBTA; 16 U.S.C. 703–712), the Secretary of the Interior is authorized to determine when ''hunting, taking, capture, killing,

possession, sale, purchase, shipment, transportation, carriage, or export of any such bird, or any part, nest, or egg'' of migratory game birds can take place, and to adopt regulations for this purpose (16 U.S.C. 704(a)). These regulations are written after giving due regard to ''the zones of temperature and to the distribution, abundance, economic value, breeding habits, and times and lines of migratory flight of such birds'' (16 U.S.C. 704(a)) and are updated annually. This responsibility has been delegated to the Service as the lead Federal agency for managing and conserving migratory birds in the United States. However, migratory bird management is a cooperative effort of Federal, State, and Tribal governments.

The Service annually develops migratory game bird hunting regulations by establishing the frameworks, or outside limits, for season dates, season lengths, shooting hours, bag and possession limits, and areas where migratory game bird hunting may occur. These frameworks are necessary to allow harvest at levels compatible with migratory game bird population status and habitat conditions. After the frameworks are established, States may select migratory game bird hunting seasons within the frameworks. States may always be more conservative in their selections than the frameworks, but never more liberal. The annual process of developing migratory game bird hunting regulations concludes when we establish the State season selections as Federal regulations under 50 CFR part 20, subpart K.

Acknowledging regional differences in hunting conditions, the Service has administratively divided the United States into four Flyways for the primary purpose of managing migratory game birds. Each Flyway (Atlantic, Mississippi, Central, and Pacific) has a Flyway Council, a formal organization generally composed of one member from each State within the Flyway, as well as Provinces in Canada that share migratory bird populations with the Flyway. The Flyway Councils, established through the Association of Fish and Wildlife Agencies, also assist in researching and providing migratory game bird management information for Federal, State, Tribal, and Provincial governments, as well as private conservation entities and the general public.

Overview of the Rulemaking Process

The process for adopting migratory game bird hunting regulations, which are set forth at 50 CFR part 20, is constrained by three primary factors. Legal and administrative considerations dictate how long the rulemaking process will last. Most importantly, however, the biological cycle of migratory game birds controls the timing of data-gathering activities and thus the dates on which these results are available for consideration and deliberation.

For the regulatory cycle, Service biologists gather, analyze, and interpret biological survey data and provide this information to all those involved in the process through a series of published status reports and presentations to Flyway Councils and other interested parties. Because the Service is required to take abundance of migratory game birds and other factors into consideration, the Service undertakes a number of surveys throughout the year in conjunction with Service Regional Offices, the Canadian Wildlife Service, and State and Provincial wildlife-management agencies. To determine the appropriate frameworks for each species, we consider factors such as population size and trend, geographical distribution, annual breeding effort, condition of breeding and wintering habitat, number of hunters, and anticipated harvest.

Service Migratory Bird Regulations Committee Meetings

The Service Migratory Bird Regulations Committee (SRC) conducted an open meeting on May 17, 2024, to discuss preliminary issues for the 2025–26 regulations and will conduct another meeting in fall 2024 to review information on the current status of migratory game birds and develop recommendations for the 2025–26 hunting regulations for these species. In accordance with 50 CFR 20.153, these meetings are open to public observation, and observers may submit written comments to the Service on the matters discussed. These meetings are announced in the **Federal Register** or online on the Service's Migratory Bird Program website at *https://www.fws.gov/event/us-fish-and-wildlife-service-migratory-bird-regulations-committee-meeting* at least 2 weeks before the meeting date.

Rulemaking Process for the 2025–26 Season

This document is the first in a series of proposed and final rulemaking documents for migratory game bird hunting regulations. This document announces our intent to establish open hunting seasons for certain designated groups or species of migratory game birds for 2025–26 in the contiguous United States, Alaska, Hawaii, Puerto Rico, and the Virgin Islands, under §§ 20.101 through 20.107, 20.109, and 20.110 of 50 CFR part 20, subpart K. For the 2025–26 migratory game bird hunting season, we will propose regulations for certain designated members of the avian families Anatidae (ducks, geese, and swans); Columbidae (doves and pigeons); Gruidae (cranes); Rallidae (rails, coots, and gallinules); and Scolopacidae (woodcock and snipe).

The proposed regulatory alternatives for the 2025–26 duck hunting seasons are contained at the end of this document. We will publish additional proposals for public comment in the **Federal Register** as population, habitat, harvest, and other information become available. We annually publish definitions of flyways and management units and a description of the data used in and the factors affecting the regulatory process. This information will be included in proposed and final rules later in the regulations-development process (see 89 FR 41522, May 13, 2024, for the latest definitions and descriptions). Major steps in the 2025–26 regulatory cycle relating to open public meetings and **Federal Register** notifications are illustrated in the diagram at the end of this proposed rule. All publication dates of **Federal Register** documents are target dates. Our goal is to publish final regulatory alternatives for duck seasons and proposed season frameworks in winter 2024 and final season frameworks in spring 2025.

Subject Matter Organization

Sections of this and subsequent documents outlining hunting frameworks and guidelines are organized under numbered headings. These headings are:

1. Ducks
   - A. General Harvest Strategy
   - B. Regulatory Alternatives
   - C. Zones and Split Seasons
   - D. Special Seasons/Species Management
   - i. Early Teal Seasons
   - ii. Early Teal/Wood Duck Seasons
   - iii. Black Ducks
   - iv. Canvasbacks
   - v. Pintails
   - vi. Scaup
   - vii. Mottled Ducks
   - viii. Wood Ducks
   - ix. Eastern Mallards
   - x. Youth and Veterans–Active-Military-Personnel Hunting Days
   - xi. Mallard Management Units
   - xii. Other
2. Sea Ducks
3. Mergansers
4. Canada Geese
   - A. Special Early Seasons
   - B. Regular Seasons
   - C. Special Late Seasons
5. White-fronted Geese
6. Brant

7. Snow and Ross's (Light) Geese
8. Swans
9. Sandhill Cranes
10. Coots
11. Gallinules
12. Rails
13. Snipe
14. Woodcock
15. Band-tailed Pigeons
16. Doves
17. Alaska
18. Hawaii
19. Puerto Rico
20. Virgin Islands
21. Falconry
22. Other

This and subsequent documents will refer only to numbered items requiring attention at the time of publication. Because this and other documents will omit those items not requiring attention, the remaining numbered items may be discontinuous and the list may appear incomplete.

Potential New Process for Authorizing Annual Hunting Seasons

For subsequent documents concerning the 2025–26 hunting regulations for certain migratory game birds, we may publish the remaining proposed and final rulemaking documents as we have done for many years (*i.e.,* by following the current rulemaking process). However, to improve the regulations development process, we are considering a new approach that would be based on a change in our administrative process. In the Spring 2024 Unified Agenda of Regulatory and Deregulatory Actions (see *https://www.reginfo.gov*), we announced that we are developing this new process, which would be published as a proposed rule under RIN 1018–BI04.

In brief, the new approach would involve codifying in regulations a new administrative process and our current provisions that change infrequently. By placing these provisions in regulations, we would no longer need to go through annual rulemaking to authorize annual migratory game bird hunting seasons. In the future, we would engage in rulemaking only when we have determined that changes to specific provisions in our regulations are appropriate and necessary.

We expect this new direction for our administrative process to increase efficiency, better meet State, Tribal, and Federal rulemaking constraints, and reduce complexity and costs in the promulgation of annual migratory game bird hunting regulations. Our goal is to better serve State and Tribal partners and the hunting public while continuing to meet the legal requirements of the Administrative Procedure Act (5 U.S.C. 551–559) and the conservation purposes of the MBTA. By eliminating annual rulemaking, the Service would save about $80,000 per year in printing costs, reduce staff workload by about 1,700 hours, reduce managerial workload of reviewing and surnaming documents by about 200 hours, and allow Federal limits to be established in the spring versus in the late summer, thereby providing States and Tribes more time for developing their annual regulations.

A National Hunting Regulations Working Group has been established that includes representatives from all four Flyway Councils to help develop and review this potential new process.

Tribal Regulations

As part of our effort to improve the annual rulemaking process, we published a final rule for migratory game bird hunting regulations on certain Federal Indian reservations and ceded lands on September 1, 2023 (88 FR 60375). Tribal migratory bird hunting regulations include guidelines for Tribes that want to establish migratory game bird hunting regulations on Federal Indian reservations (including off-reservation trust lands) and ceded lands through their own rulemaking process. Tribes are not required to submit a proposal to the Service for our review and approval. We established these regulatory guidelines in response to Tribal requests for our recognition of their reserved hunting rights, recognition of their Tribal sovereignty, and, for some Tribes, recognition of their authority to regulate hunting by both Tribal and nontribal members throughout their reservations. For inquiries on Tribal guidelines, Tribes should contact the address indicated under **FOR FURTHER INFORMATION CONTACT**.

Public Comments

The Department of the Interior's policy is, whenever practicable, to afford the public an opportunity to participate in the rulemaking process. Accordingly, we invite interested persons to submit written comments, suggestions, or recommendations regarding this proposed rule. We seek information and comments on the proposed regulatory alternatives for the 2025–26 general duck hunting seasons, other recommended changes or specific preliminary proposals that vary from the 2024–25 regulations, and issues requiring early discussion, action, or the attention of the States.

The Service believes that a 30-day comment period is warranted for this proposed rule, as subsequent **Federal Register** documents will allow the public to submit comments on the overall hunting frameworks (see *Schedule of Biological Information Availability, Regulations Meetings, and Federal Register Publications for the 2025–26 Hunting Season* at the end of this proposed rule for further information). For each subsequent proposed rule associated with this rulemaking action, we will establish a specific comment period. Before promulgation of final migratory game bird hunting regulations, we will take into consideration all comments we receive. We will summarize the comments received and publish responses to all proposals and written comments when we develop final frameworks for the 2025–26 season. Such comments, and any additional information we receive, may lead to final regulations that differ from the proposed rules.

You may submit your comments and materials concerning this proposed rule by one of the methods listed in **ADDRESSES**. We will not accept comments sent by email or fax or to an address not listed in **ADDRESSES**. Finally, we will not consider mailed comments that are not postmarked by the date specified in **DATES**. We will post all comments in their entirety—including your personal identifying information—on *https://www.regulations.gov.* Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so. Comments and materials we receive, as well as supporting documentation we used in preparing this proposed rule, will be available for public inspection on *https://www.regulations.gov.*

Required Determinations

National Environmental Policy Act (NEPA) Consideration

The programmatic document, ''Second Final Supplemental Environmental Impact Statement: Issuance of Annual Regulations Permitting the Sport Hunting of Migratory Birds (EIS 20130139),'' filed with the Environmental Protection Agency (EPA) on May 24, 2013, addresses NEPA compliance by the Service for issuance of the annual

framework regulations for hunting of migratory game bird species. We published a notice of availability in the **Federal Register** on May 31, 2013 (78 FR 32686), and our Record of Decision on July 26, 2013 (78 FR 45376). We also address NEPA compliance for waterfowl hunting frameworks through the annual preparation of separate environmental assessments, the most recent being ''Duck Hunting Regulations for 2024–25,'' with its corresponding 2024 finding of no significant impact.

Endangered Species Act Consideration

Before issuance of the 2025–26 migratory game bird hunting regulations, we will comply with provisions of the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531–1543), to ensure that hunting is not likely to jeopardize the continued existence of any species designated as endangered or threatened or adversely modify or destroy its critical habitat and is consistent with conservation programs for those species. Consultations under section 7 of the ESA may cause us to change proposals in future supplemental proposed rulemaking documents.

Regulatory Planning and Review—Executive Orders 12866, 13563, and 14094

Executive Order (E.O.) 14094 reaffirms and amends the principles of E.O. 12866 and E.O. 13563. E.O. 13563 emphasizes that regulations must be based on the best available science. The rulemaking process must allow for public participation and an open exchange of ideas; promote predictability and reduce uncertainty; identify and use the best, most innovative, and least burdensome tools for achieving regulatory ends; take into account benefits and costs, both quantitative and qualitative; and ensure that regulations are accessible, consistent, written in plain language, and easy to understand. E.O. 14094 states that regulatory analysis should facilitate agency efforts to develop regulations that serve the public interest and advance statutory objectives. As practicable and appropriate and to the extent permitted by law, regulatory analysis shall recognize distributive impacts and equity. To the extent practicable and consistent with applicable law, regulatory actions should be informed by input from interested or affected communities; State, local, territorial, and Tribal officials and agencies; interested or affected parties in the private sector and other regulated entities; those with expertise in relevant disciplines; and the public as a whole. We have developed this proposed rule in a manner consistent with these requirements.

E.O. 12866, as reaffirmed by E.O. 13563 and reaffirmed and amended by E.O. 14094, provides that the Office of Information and Regulatory Affairs (OIRA) in the Office of Management and Budget (OMB) will review all significant rules. This action is a ''significant regulatory action,'' as defined under section 3(f)(1) of E.O. 12866 (58 FR 51735, October 4, 1993), as amended by E.O. 14094 (88 FR 21879, April 11, 2023).

An economic analysis was prepared for the 2025–26 migratory bird hunting season. This analysis was based on data from the 2011 and the 2016 National Survey of Fishing, Hunting, and Wildlife-Associated Recreation (National Survey), the most recent years for which data are available. See discussion under Required Determinations, *Regulatory Flexibility Act,* below. This analysis estimated consumer surplus for four alternatives for hunting regulations. As defined by OMB in Circular A–4, consumers' surplus is the difference between what a consumer pays for a unit of a good or service and the maximum amount the consumer would be willing to pay for that unit. The duck hunting regulatory alternatives are (1) not opening a hunting season, (2) issuing restrictive regulations that allow fewer days than the 2024–25 season, (3) issuing moderate regulations that allow more days than in Alternative 2 but fewer days than the 2024–25 season, and (4) issuing liberal regulations that allow days similar to the 2024–25 season. The estimated consumer surplus associated with liberal regulations issued for the 2024–25 season across all flyways was $606 million to $797 million (2023$). We also chose Alternative 4 (liberal regulations) for the 2009–10 through 2023–24 seasons. The 2025–26 analysis is part of the record for this rulemaking action and is available at *https://www.regulations.gov* at Docket No. FWS–HQ–MB–2024–0127.

Regulatory Flexibility Act

The annual migratory bird hunting regulations have a significant economic impact on substantial numbers of small entities, such as restaurants, grocery stores, lodging, transportation, and sporting goods stores, under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). An initial regulatory flexibility analysis was prepared to analyze the economic impacts of the annual hunting regulations on small business entities. This analysis is updated annually. The primary source of information about hunter expenditures for migratory game bird hunting is the National Survey, which is generally conducted at 5-year intervals. The 2022 National Survey did not collect migratory bird expenditure data, so the 2025–26 migratory bird hunting season analysis is based on the 2011 and 2016 National Surveys and the U.S. Department of Commerce's County Business Patterns, from which it is estimated that migratory bird hunters will spend approximately $2.6 billion (2023$) at small businesses during the 2025–26 migratory bird hunting season. In summary, this proposed rule would have a significant beneficial economic impact on small entities. Without these annual regulations, States cannot establish migratory bird hunting seasons. A wide range of businesses and individuals benefit economically from the establishment of the annual migratory bird hunting regulations. The initial regulatory flexibility analysis can be found in the economic analysis of the migratory game bird hunting regulations for the 2025–26 season. Copies of the economic analysis are available upon request from the person listed above under **FOR FURTHER INFORMATION CONTACT** or from *https://www.regulations.gov* at Docket No. FWS–HQ–MB–2024–0127.

Clarity of the Rule

We are required by E.O. 12866 and 12988 and by the Presidential Memorandum of June 1, 1998, to write all rules in plain language. This means that each rule we publish must:

(a) Be logically organized;

(b) Use the active voice to address readers directly;

(c) Use clear language rather than jargon;

(d) Be divided into short sections and sentences; and

(e) Use lists and tables wherever possible.

If you feel that we have not met these requirements, send us comments by one of the methods listed in **ADDRESSES**. To better help us revise the rule, your comments should be as specific as possible. For example, you should tell us the numbers of the sections or paragraphs that are unclearly written, which sections or sentences are too long, the sections where you feel lists or tables would be useful, etc.

Paperwork Reduction Act

This proposed rule does not contain any new collection of information that requires approval by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). OMB has

previously approved the information collection requirements associated with migratory bird surveys and the procedures for establishing annual migratory bird hunting seasons under the following OMB control numbers:

- 1018–0019, ''North American Woodcock Singing Ground Survey'' (expires 02/28/2027).
- 1018–0023, ''Migratory Bird Surveys, 50 CFR 20.20'' (expires 05/31/2026). Includes Migratory Bird Harvest Information Program, Migratory Bird Hunter Surveys, Sandhill Crane Survey, and Parts Collection Survey.
- 1018–0171, ''Establishment of Annual Migratory Bird Hunting Seasons, 50 CFR part 20'' (expires 10/30/2027).

You may view the information collection request(s) at *https://www.reginfo.gov/public/do/PRAMain.* An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

Unfunded Mandates Reform Act

We have determined and certify, in compliance with the requirements of the Unfunded Mandates Reform Act, 2 U.S.C. 1501 *et seq.,* that this proposed rulemaking does not include any Federal mandate that may result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of $100 million or more (adjusted for inflation) in any 1 year and does not significantly or uniquely affect small governments.

Civil Justice Reform—Executive Order 12988

The Department, in promulgating this proposed rule, has determined that this rulemaking will not unduly burden the judicial system and that it meets the requirements of sections 3(a) and 3(b)(2) of E.O. 12988.

Takings Implication Assessment—Executive Order 12630

In accordance with E.O. 12630, this proposed rule, authorized by the MBTA, does not have significant takings implications and does not affect any constitutionally protected property rights. This proposed rule would not result in the physical occupancy of property, the physical invasion of property, or the regulatory taking of any property. In fact, this proposed rule would allow hunters to exercise otherwise unavailable privileges and, therefore, reduces restrictions on the use of private and public property.

Energy Effects—Executive Order 13211

E.O. 13211 requires agencies to prepare statements of energy effects when undertaking certain actions. While this proposed rule is a significant regulatory action under E.O. 12866, it is not likely to have a significant adverse effect on the supply, distribution, or use of energy and has not been designated by OIRA as a significant energy action. Therefore, no statement of energy effects is required.

Government-to-Government Relationship With Tribes

In accordance with the President's memorandum of April 29, 1994, ''Government-to-Government Relations with Native American Tribal Governments'' (59 FR 22951), E.O. 13175, and 512 DM 2, we have evaluated possible effects on federally recognized Indian Tribes with respect to impacts to Tribes' treaty rights to hunt waterfowl. We have determined that there are de minimis effects on Indian Tribes for that aspect of their treaty rights. Through this process to establish annual hunting regulations, we regularly coordinate with Tribes that are affected by this proposed rulemaking action. Tribes have the opportunity to attend spring and fall flyway meetings, provide comments on **Federal Register** publications concerning migratory bird hunting, and, whenever needed, we hold informal consultations with Tribes regarding trust resources, trust assets, health, and safety. Also, while streamlining the migratory bird hunting regulation process, four informational webinars were held to present the new process to Tribes, giving Tribes the opportunity to provide input and to ask questions about the Tribal migratory bird hunting regulations. This proposed rule would not have substantial direct effects on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes.

This proposed rule is general in nature and does not directly affect any specific Tribal lands, treaty rights, or Tribal trust resources. In addition, this proposed rule does not interfere with the ability of Tribes to manage themselves or their funds or to regulate migratory bird activities on Tribal lands. Therefore, we preliminarily conclude that this proposed rule does not have ''Tribal implications'' under section 1(a) of E.O. 13175 with respect to waterfowl treaty rights. Thus, formal government-to-government consultation is not required by E.O. 13175 and related policies of the Department of the Interior. We will continue to collaborate with Tribes on concerns related to migratory bird hunting regulations.

Federalism Effects—Executive Order 13132

Due to the migratory nature of certain species of birds, the Federal Government has been given responsibility over these species by the MBTA. We annually prescribe frameworks from which the States make selections regarding the hunting of migratory birds, and we employ guidelines to establish special regulations on Federal Indian reservations and ceded lands. This process preserves the ability of the States and Tribes to determine which seasons meet their individual needs.

Any State or Tribe may be more restrictive in its regulations than the Federal frameworks at any time. The frameworks are developed in a cooperative process with the States and the Flyway Councils. This process allows States to participate in the development of frameworks from which they will make selections, thereby having an influence on their own regulations. This proposed rule would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with E.O. 13132, these proposed regulations do not have federalism implications and do not warrant the preparation of a federalism summary impact statement.

Exports, Hunting, Imports, Reporting and recordkeeping requirements, Transportation, Wildlife.

Authority

The rules that eventually will be promulgated for the 2025–26 hunting season are authorized under 16 U.S.C. 703–712, and 742 a–j.

Shannon A. Estenoz,

Assistant Secretary for Fish and Wildlife and Parks.

Proposed 2025–26 Migratory Game Bird Hunting Regulations (Preliminary)

Pending current information on populations, harvest, and habitat conditions, and receipt of recommendations from the four Flyway Councils, we may defer specific regulatory proposals. Issues requiring early discussion, action, or the attention of the States or Tribes are described below.

1. Ducks

As mentioned earlier in this document, the categories used to discuss issues related to duck harvest management are: (A) General Harvest Strategy, (B) Regulatory Alternatives, (C) Zones and Split Seasons, and (D) Special Seasons/Species Management. Only those categories containing substantial recommendations (A, B, C, and D) are discussed below.

A. General Harvest Strategy

We will continue to use adaptive harvest management (AHM) to help determine appropriate duck-hunting regulations for the 2025–26 season. AHM is a tool that permits sound resource decisions in the face of uncertain regulatory impacts and provides a mechanism for reducing that uncertainty over time. We use an AHM protocol (decision framework) to evaluate four regulatory alternatives, each with a different expected harvest level, and choose the optimal regulation for duck hunting based on the status and demographics of mallards for the Mississippi, Central, and Pacific Flyways, and based on the status and demographics of a suite of four species (eastern waterfowl) in the Atlantic Flyway. We have specific AHM protocols that guide appropriate bag limits and season lengths for species of special concern, including black ducks, scaup, pintails, and mallards in the Atlantic Flyway (eastern mallards), within the general duck season. These protocols use the same outside season dates and lengths as those regulatory alternatives for the 2025–26 general duck seasons.

For the 2025–26 hunting season, we will continue to use independent optimizations to determine the appropriate regulatory alternative for mallard stocks in the Mississippi, Central, and Pacific Flyways and for eastern waterfowl in the Atlantic Flyway. This means that we will develop regulations for mid-continent mallards, western mallards, and eastern waterfowl independently based on the breeding stock that contributes primarily to each Flyway. We detailed implementation of AHM protocols for mid-continent and western mallards in the July 24, 2008, **Federal Register** (73 FR 43290), and for eastern waterfowl in the September 21, 2018, **Federal Register** (83 FR 47868).

B. Regulatory Alternatives

The basic structure of the current regulatory alternatives for AHM was adopted in 1997 (beginning with the 1997–98 general duck hunting season; 62 FR 31298, June 6, 1997). Beginning with the 2002–03 season, based upon recommendations from the Flyway Councils, we extended framework dates in the ''moderate'' and ''liberal'' regulatory alternatives by changing the opening date from the Saturday nearest October 1 to the Saturday nearest September 24, and by changing the closing date from the Sunday nearest January 20 to the last Sunday in January (67 FR 47224, July 17, 2002). These extended dates were made available with no associated penalty in season length or bag limits. Beginning with the 2019–20 season, we adopted a closing duck framework date of January 31 for the ''moderate'' and ''liberal'' alternatives in the Atlantic Flyway as part of the Atlantic Flyway's eastern waterfowl AHM protocol (83 FR 47868, September 21, 2018). We subsequently proposed to extend the framework closing date to January 31 across all four Flyways for the 2019–20 season (84 FR 16152, April 17, 2019).

The John D. Dingell, Jr. Conservation, Management, and Recreation Act of 2019 (Pub. L. 116–9, Dingell Act) amended the MBTA to establish that the closing framework date for duck seasons will be January 31, unless a flyway chooses an earlier closing date. Thus, as directed by the Dingell Act, we adjusted the framework closing date under each regulatory alternative for all four Flyways to January 31 beginning with the 2019–20 season (84 FR 42996, August 19, 2019). Beginning with the 2021–22 season, we agreed to move the opening framework date to 1 week earlier in the restrictive regulatory alternative for the Mississippi and Central Flyways based on their recommendations (85 FR 51854, August 21, 2020).

For the 2025–26 general duck season, we propose to use the same regulatory alternatives that are in effect for the 2024–25 season (see table at the end of this proposed rule for specifics of the regulatory alternatives). Alternatives are specified for each Flyway and are designated as ''RES'' for the restrictive, ''MOD'' for the moderate, and ''LIB'' for the liberal alternative. We plan to finalize AHM regulatory alternatives for the 2025–26 season in a proposed rule, which we plan to publish by winter 2024 (see *Schedule of Biological Information Availability, Regulations Meetings, and* **Federal Register** *Publications for the 2025–26 Hunting Season* at the end of this proposed rule for further information).

C. Zones and Split Seasons

Zones and split seasons are special regulations designed to distribute hunting opportunities and harvests according to temporal, geographic, and demographic variability in waterfowl and other migratory game bird populations. The Service has allowed the use of zones to provide equitable distribution of duck hunting opportunities within a State or region. The intent is not to increase total annual waterfowl harvest in the zoned areas; harvest levels are to be adjusted downward if they exceeded traditional levels as a result of zoning. In 1991, the Service developed guidelines to provide a framework for controlling the proliferation of zones and split seasons in duck hunting. Substantial concern remains about the unknown consequences of zones and split seasons on duck populations and harvest redistribution among States and flyways, potential reduced effectiveness of regulations (season length and bag limit) to reduce duck harvest if needed, and the administrative burden. The guidelines identified a limited number of zone and split-season configurations that could be used for duck hunting and restricted the frequency of changes in State selection among these configurations to the beginning of 5-year intervals.

The next opportunity for States to select zones and split-season configurations for duck hunting is in 2025 for the fixed period of 2026–2030 seasons. We are proposing to adopt the same zones and split-season guidelines and configurations for duck hunting as we used for the 2021–25 seasons. We discussed and presented guidelines and configurations for duck zones and split seasons during 2021–25 seasons in our August 21, 2020, final rule (85 FR 51854 at 51857–51858). For those States wishing to change zone and split-season configurations in time for the 2026–2030 seasons, we would need to receive configuration selections and zone descriptions by August 31, 2025.

We also note that when we adopted guidelines for duck zones and split seasons during 2021–25 seasons, we offered a new configuration (two zones with up to three season segments in each) at the request of the four Flyway Councils. We expressed our sensitivity to the States' desires for flexibility in addressing human dimensions concerns of the hunting public (*i.e.,* foster hunter recruitment, retention, and satisfaction) despite our continued concerns about the proliferation of zones, impacts to harvest, regulation complexity, and administrative burden. Similarly, we revised the zones-splits guidelines for the 2011–2015 period to allow two new options (four zones with a continuous season, and three zones with up to two

season segments in each) at the request of the four Flyway Councils (77 FR 23094 at 23100–23101, April 17, 2012). Because the two zones and three season segments configuration are new, we stated in 2020 (85 FR 51854 at 51857–51858, August 21, 2020) that States that select this configuration must conduct an evaluation of impacts to hunter dynamics (*e.g.,* hunter numbers, satisfaction) and harvest during the fixed 5-year period it is implemented (*e.g.,* 2021–25 period). Five States selected the new configuration for the 2021–25 period in two Flyways: Atlantic (Connecticut, Maryland, North Carolina, and Virginia) and Mississippi (Louisiana). These States will need to provide an evaluation through the 2025 season regardless of actual implementation.

D. Special Seasons/Species Management

v. Pintails

Over the past 5 years, scientists from the U.S. Geological Survey (USGS) and the Service, in consultation with the Flyway Councils, have collaborated on the development of a revised decision framework for pintail harvest management. The Flyway Councils and Service undertook the revision process due to several concerns about the current strategy (adopted in 2010; see 75 FR 44856 at 44860; July 29, 2010). Concerns included public desires for inclusion of a more liberal regulatory alternative (3-pintail daily bag limit), reliance on outdated modeling techniques and data, and communication challenges associated with the regulatory schedule. To address these concerns, the Service convened the national Pintail Working Group (PWG) composed of two representatives from each Flyway, the four Service Flyway Representatives, and technical experts from the Service and USGS.

The PWG evaluated pintail population and harvest dynamics, built new models using updated data and modern estimation methods, and developed and evaluated many alternative harvest strategies. An important change is that the model of predicted harvest includes an estimate of fall population size. This has an important effect on the harvest strategy because the expected harvest decreases with decreasing fall pintail population size. The strategy recognizes that there is sustainable harvest under conditions that were not previously thought sustainable. (*i.e.,* expected increase in frequency of regulatory alternatives with liberal pintail daily bag limits including the possibility for 3 pintails).

In January 2024, after extensive consultation, the PWG proposed an interim harvest strategy to inform harvest management decisions for pintails and to learn about the effects of a 3-bird daily bag limit (new alternative) on management objectives. The interim strategy is intended to be implemented until three hunting seasons with a 3-bird daily bag limit have been realized (*i.e.,* trial phase over three or more hunting seasons) with an additional allowance for 2 years for data collection and analysis, review of performance, and evaluation of updated alternative strategies. Evaluation results will be provided to the Flyway technical committees for consideration in the development of a proposed operational harvest strategy, which may or may not include an option for a 3-bird daily bag limit.

We greatly appreciate the time and attention over the last 5 years that the PWG has devoted to review and consideration of the current pintail harvest strategy, technical updates, and the various alternatives for implementing a derived pintail harvest strategy. The revised interim strategy addresses stakeholder concerns with the current strategy and includes important technical updates with implications for our harvest management policy. In compliance with the Information Quality Act (section 515 of Pub. L. 106–554) and Service policy, a scientific peer review of the interim harvest strategy model was completed in early May 2023; during that review, no technical issues or concerns were identified, and reviewer comments have been addressed. Therefore, we propose to adopt the interim harvest strategy for pintail harvest management as described by the PWG in their report entitled, ''Proposed Interim Northern Pintail Harvest Strategy'' dated February 9, 2024, beginning with the 2025–26 hunting seasons. The proposed interim pintail harvest strategy is available at the address indicated under **FOR FURTHER INFORMATION CONTACT** and at *https://www.regulations.gov.*

xii. Other

Although not part of any current harvest management strategy, we propose to allow South Dakota and Nebraska an additional year to conduct a pilot study during the 2025–26 duck season of a two-tier regulatory system as described in our March 19, 2020, proposed rule (85 FR 15870 at 15875–15876). The 2024–25 hunting season is the last year of the planned 4-year pilot study. A final report on the 4-year pilot study will be due to the Service after the 2024–25 hunting season in about May 2025, which is after proposals for 2025–26 hunting season are formulated (about October 2024) by the Service and Flyway Councils. The 1-year extension will allow the Service and Flyway Councils to evaluate the results of the pilot study in meeting the primary goal of increasing or stabilizing the number of waterfowl hunters before the subsequent 2026–27 hunting regulations are developed. If the pilot study results indicate there is merit, the Service and Flyway Councils will consider developing a phase-two study that considers application of the pilot study concepts at the Flyway or national level, rather than at the State level, which is consistent with the Service's policy on the scale of migratory game bird management.

The intent of the two-tier regulation study is to evaluate whether regulations that relax the requirement for hunters to identify duck species can improve waterfowl hunter recruitment and retention.[1] Declines in waterfowl hunter numbers have been of concern to the Service and the Flyway Councils, prompting the development of recruitment, retention, and reactivation efforts in the conservation community. The study allows a person to obtain one of two license types during the duck season. The first license type (tier 1) allows a daily bag limit as specified in the current duck regulations (six ducks) with species- and sex-specific daily bag limit restrictions for species of special concern. The second license type (tier 2) allows a daily bag limit of 3 ducks with no species- or sex-specific restrictions in the daily bag limit. A memorandum of agreement between the Service and the two States specifies the purpose of the study and the roles and responsibilities of each party while conducting the pilot study.

16. Doves

Similar to duck hunting (see 1. Ducks, above), the Service has allowed the use

[1] The Service's primary goal is to ensure that waterfowl sport harvest management conforms to the MBTA and ensures the long-term conservation of bird populations. The various harvest strategies reflect this goal by ensuring that harvest does not exceed maximum sustainable yield (MSY). Secondarily to the MBTA, the Service has adopted policies to promote wildlife-based recreation, including migratory bird harvest. To the extent that management actions designed to promote hunter recruitment and retention do not result in harvest greater than the biological capacity of a population (*i.e.,* does not exceed MSY), the Service deems these actions to be in accordance with the MBTA. Management actions that result in harvest equal to or less than MSY will result in stable or increasing populations and provide consumptive and nonconsumptive uses indefinitely.

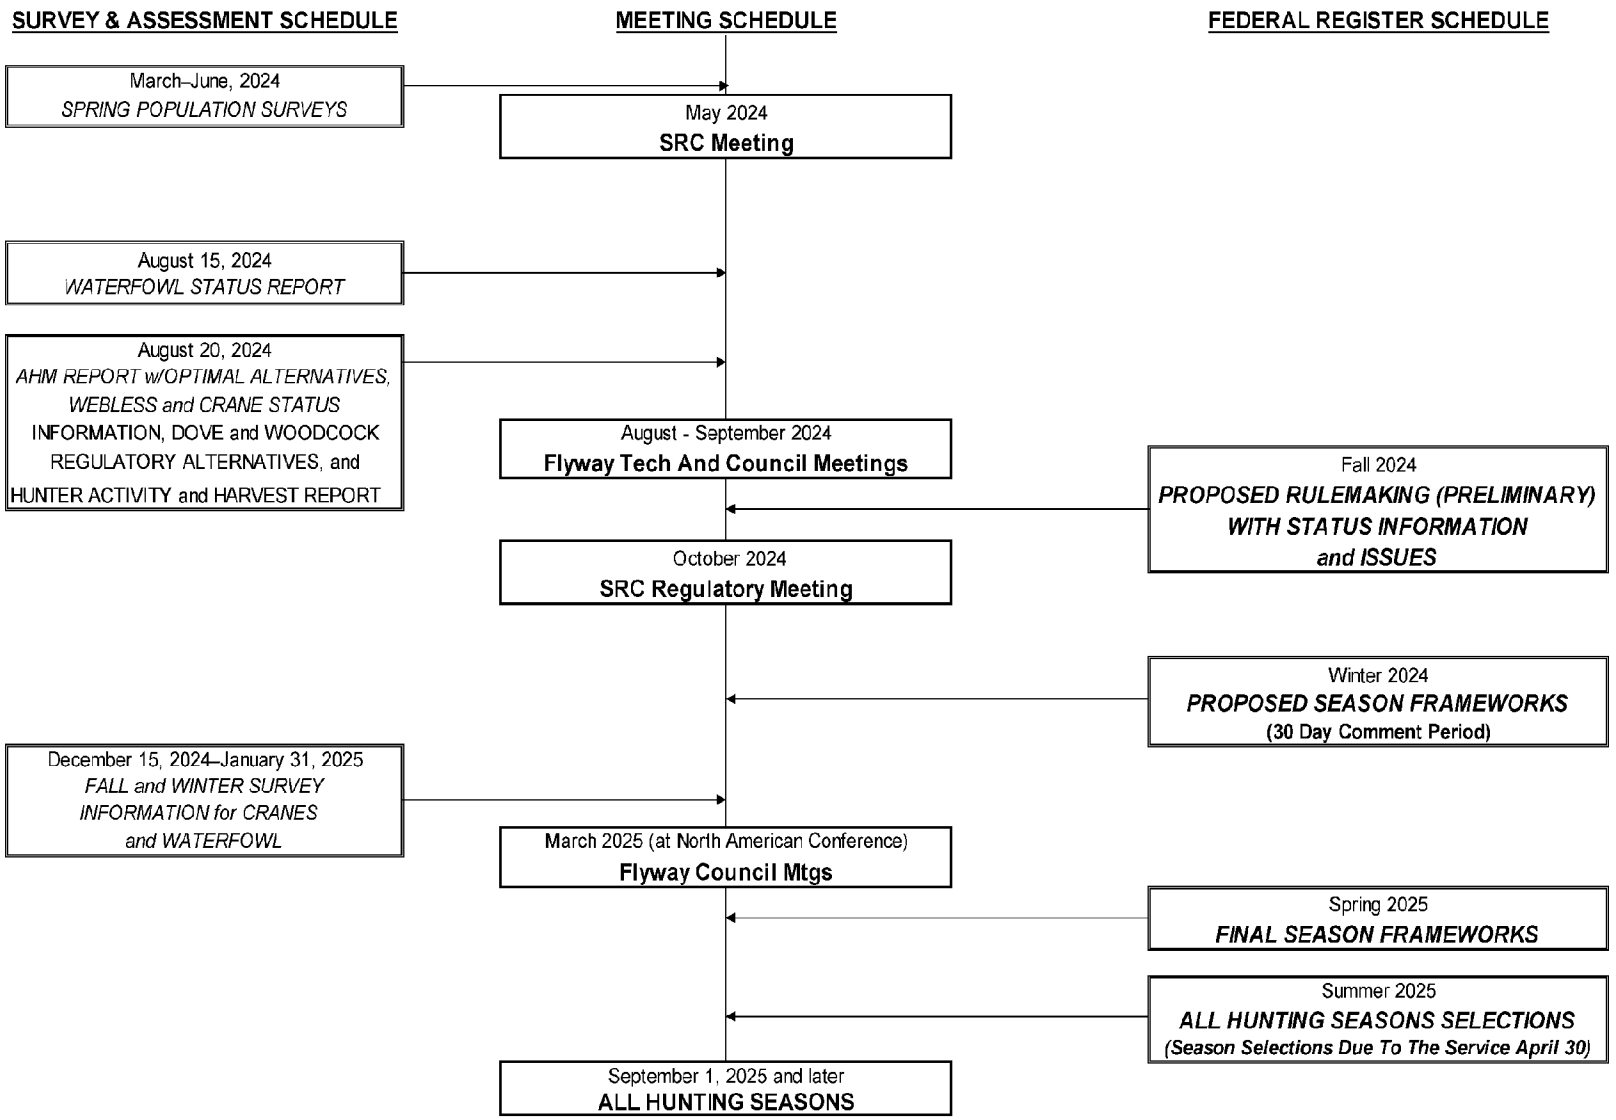
of zones to provide equitable distribution of dove hunting opportunities within a State or region. The intent is not to increase total annual dove harvest in the zoned areas; harvest levels are to be adjusted downward if they exceed traditional levels as a result of zoning. In 2006, the Service developed guidelines to provide a framework for controlling the proliferation of zones and split seasons in dove hunting (see 71 FR 51406 at 51408, August 29, 2006). Substantial concern remains about the unknown consequences of zones and split seasons on dove populations and harvest redistribution among States and flyways, potential reduced effectiveness of regulations (season length and bag limit) to reduce dove harvest if needed, and the administrative burden. The guidelines identified a limited number of zone and split-season configurations that could be used for dove hunting and restricted the frequency of changes in State selection among these configurations to the beginning of a 5-year interval.

The next opportunity for States to select zones and split-season configurations for dove hunting is in 2025 for the fixed period of 2026–2030 seasons. We are proposing to adopt the same zones and split-season guidelines and configurations for dove hunting as we used for the 2021–25 seasons. We discussed and presented guidelines and configurations for dove zones and split seasons during 2021–25 seasons in the August 21, 2020, final rule (85 FR 51854 at 51865–51866). For those States wishing to change zone and split-season configurations in time for the 2026–2030 seasons, we would need to receive configuration selections and zone descriptions by August 31, 2025.

BILLING CODE 4333–15–P

PROPOSED REGULATORY ALTERNATIVES FOR THE 2025–26 GENERAL DUCK SEASONS

	ATLANTIC FLYWAY			MISSISSIPPI FLYWAY			CENTRAL FLYWAY (a)			PACIFIC FLYWAY (b)(c)		
	RES	MOD	LIB	RES	MOD	LIB	RES	MOD	LIB	RES	MOD	LIB
Beginning Shooting Time	1/2 hr. before sunrise	1/2 hr. before sunrise	1/2 hr. before sunrise	1/2 hr. before sunrise	1/2 hr. before sunrise	1/2 hr. before sunrise	1/2 hr. before sunrise	1/2 hr. before sunrise	1/2 hr. before sunrise	1/2 hr. before sunrise	1/2 hr. before sunrise	1/2 hr. before sunrise
Ending Shooting Time	Sunset	Sunset	Sunset	Sunset	Sunset	Sunset	Sunset	Sunset	Sunset	Sunset	Sunset	Sunset
Opening Date	Oct. 1	Sat. nearest Sept. 24	Sat. nearest Sept. 24	Sat. nearest Sept. 24	Sat. nearest Sept. 24	Sat. nearest Sept. 24	Sat. nearest Sept. 24	Sat. nearest Sept. 24	Sat. nearest Sept. 24	Sat. nearest Oct. 1	Sat. nearest Sept. 24	Sat. nearest Sept. 24
Closing Date	Jan. 31	Jan. 31	Jan. 31	Jan. 31	Jan. 31	Jan. 31	Jan. 31	Jan. 31	Jan. 31	Jan. 31	Jan. 31	Jan. 31
Season Length (in days)	30	45	60	30	45	60	39	60	74	60	86	107
Daily Bag	3	6	6	3	6	6	3	6	6	4	7	7
Species/Sex Limits within the Overall Daily Bag Limit												
Mallard (Total/Female)	(d)	(d)	(d)	2/1	4/1	4/2	3/1	5/1	5/2	3/1	5/2	7/2



(a) In the High Plains Mallard Management Unit, all regulations would be the same as the remainder of the Central Flyway, with the exception of season length. Additional days would be allowed under the various alternatives as follows: Restrictive 12, days; Moderate and Liberal, 23 days. Under all alternatives, additional days must be on or after the Saturday nearest December 10.

(b) In the Columbia Basin Mallard Management Unit, all regulations would be the same as the remainder of the Pacific Flyway, with the exception of season length. Under all alternatives except the liberal alternative, an additional 7 days would be allowed.

(c) In Alaska, framework dates, bag limits, and season length would be different from the remainder of the Pacific Flyway. The bag limit (depending on the area) would be 5–8 under the restrictive alternative, and 7–10 under the moderate and liberal alternatives. Under all alternatives, season length would be 107 days and framework dates would be September 1–January 26.

(d) Under the multi-stock AHM protocol for the Atlantic Flyway, the mallard bag limit is not prescribed by the regulatory alternative.

SCHEDULE[(a)] OF BIOLOGICAL INFORMATION AVAILABILITY, REGULATIONS MEETINGS AND FEDERAL REGISTER PUBLICATIONS FOR THE 2025–26 HUNTING SEASON

(a) All publication dates of Federal Register documents are target dates.

RIN 1018–BG70

Migratory Bird Subsistence Harvest in Alaska

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), are proposing changes to the migratory bird subsistence harvest regulations in Alaska. Subsistence harvest regulations allow for the continuation of customary and traditional subsistence uses of migratory birds in Alaska and establish when and where the harvesting of certain migratory birds may occur within each subsistence region. Subsistence harvest regulations, including these proposed changes, were developed under a co-management process involving the Service, the Alaska Department of Fish and Game, and Alaska Native representatives.

DATES: We will accept comments received or postmarked on or before February 20, 2025.

ADDRESSES: You may submit comments by one of the following methods:

- *Federal eRulemaking Portal: https://www.regulations.gov*. Follow the instructions for submitting comments to Docket No. FWS–R7–MB–2024–0197.
- *U.S. Mail:* Public Comments Processing, Attn: FWS–R7–MB–2024–0197, U.S. Fish and Wildlife Service, MS: JAO/3W, 5275 Leesburg Place, Falls Church, VA 22041–3803.

We will post all comments on *https://www.regulations.gov*. This generally means that we will post any personal information you provide us (see Public Comment Procedures, below, for more information).

FOR FURTHER INFORMATION CONTACT: Wendy Loya, U.S. Fish and Wildlife Service, 1011 E Tudor Road, Mail Stop 201, Anchorage, AK 99503; (907) 227–2942. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point of contact in the United States. Please see Docket No. FWS–R7–MB–2024–0197 on *https://www.regulations.gov* for a document that summarizes this proposed rule.

SUPPLEMENTARY INFORMATION:

Public Comment Procedures

To ensure that any action resulting from this proposed rule will be as accurate and as effective as possible, we request that you send relevant information for our consideration. The comments that will be most useful and likely to influence our decisions are those that you support by quantitative information or studies and those that include citations to, and analyses of, the applicable laws and regulations. Please make your comments as specific as possible and explain the basis for them. In addition, please include sufficient information with your comments to allow us to authenticate any scientific or commercial data you include.

You must submit your comments and materials concerning this proposed rule by one of the methods listed above in **ADDRESSES**. We will not accept comments sent by email or fax or to an address not listed in **ADDRESSES**. If you submit a comment via *https://www.regulations.gov,* your entire comment—including any personal identifying information, such as your address, telephone number, or email address—will be posted on the website. When you submit a comment, the system receives it immediately. However, the comment will not be publicly viewable until we post it, which might not occur until several days after submission.

If you mail a hardcopy comment directly to us that includes personal information, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. All comments and materials we receive will be available for public inspection via *https://www.regulations.gov*. Search for FWS–R7–MB–2024–0197, which is the docket number for this rulemaking.

Background

The Migratory Bird Treaty Act of 1918 (MBTA, 16 U.S.C. 703 *et seq.*) was enacted to protect migratory birds and gives the Secretary of the Interior the authority to regulate the harvest of certain migratory birds. The law further authorizes the Secretary to issue regulations to ensure that the indigenous inhabitants of the State of Alaska may take certain migratory birds and collect their eggs for nutritional and other essential needs during seasons established by the Secretary to provide for the preservation and maintenance of these migratory birds (16 U.S.C. 712(1)).

The take of migratory birds for subsistence uses in Alaska occurs primarily during the spring and summer, a timeframe not included in the fall and winter general migratory game bird hunting regulations for the United States. Regulations governing the subsistence harvest of migratory birds in Alaska are located in title 50 of the Code of Federal Regulations (CFR) in part 92. These regulations allow for the continuation of customary and traditional subsistence uses of migratory birds and establish when and where the harvesting of certain birds in Alaska may occur within each subsistence region.

The migratory bird subsistence harvest regulations are developed cooperatively. The Alaska Migratory Bird Co-Management Council (Council or AMBCC) consists of the Service, the Alaska Department of Fish and Game (ADFG), and Alaska Native representatives. The Council's primary purpose is to develop recommendations pertaining to the subsistence harvest of migratory birds.

The Council generally holds an annual spring meeting to review and recommend any regulatory changes for migratory bird subsistence harvest regulations in Alaska. The Council met May 22–23, 2024, and recommended changes to the subsistence harvest regulations intended to take effect beginning with the 2025 harvest season. The Council's recommendations were presented to the Pacific Flyway Council for their review and comment and subsequent submission to the Service Regulations Committee (SRC) for consideration at the SRC meeting on November 19, 2024.

Proposed Revisions to the Regulations

Under the collaborative process described above, this document proposes the following revisions to the regulations for the taking of certain migratory birds for subsistence uses in Alaska during the spring and summer.

Proposed Revision to Subpart A

In 50 CFR part 92, subpart A (general provisions), we propose to correct a reference to the United States Code (U.S. Code). The current definition for *Alaska Native* in § 92.4 incorrectly references 16 U.S.C. 1602(b), which refers to section 3(b) of the Alaska Native Claims Settlement Act. The Alaska Native Claims Settlement Act is found in title 43 not title 16 of the U.S.

Code. Therefore, the definition needs to be corrected to reference 43 U.S.C. 1602(b).

Proposed Revisions to Subpart C

In 50 CFR part 92, subpart C (general regulations governing subsistence harvest), we propose several changes to clarify the language regarding regional species closures, remove a species from the list of subsistence migratory bird species, and update the common and or scientific names of three species.

First, we propose revisions to clarify that the list of species open to subsistence harvest in § 92.22 may have additional region-specific harvest restrictions that do not appear in the list of subsistence migratory bird species. The language in the introductory paragraph in § 92.22 states that the only exceptions to the species open to harvest is a regional closure in Southeast Alaska for the harvest of all migratory bird species except glaucous-winged gulls for egg harvesting only. While this provision was accurate at the time the regulation was initially promulgated, current regulations include other regional species-specific harvest restrictions, some of which are included in the statewide list of subsistence migratory bird species at § 92.22. For example, for tundra swans, the regulation at § 92.22(a)(7) states that these birds and their eggs may be harvested except in Units 9(D) and 10. However, some regions in Alaska have species-specific harvest restrictions that are not listed in the statewide list of subsistence migratory bird species and are found only in § 92.31 (region-specific regulations). For example, in the Gulf of Alaska region's Prince William Sound Area East (§ 92.31(j)(2)(iii)), most non-waterfowl species are closed to harvest, but these restrictions can be found only in the region-specific regulations. Given this ambiguity, we propose to revise the language in the introductory paragraph of § 92.22 to clarify that regional species-specific harvest restrictions may exist in the region-specific regulations.

Second, we propose revisions to the list of subsistence migratory bird species in § 92.22 to reflect the Council's recommendation to close emperor goose harvest statewide. In 2016, the Council adopted an Emperor Goose Management Plan (Plan) to guide regulations for a spring-summer subsistence harvest of emperor geese and their eggs, which were opened to legal harvest in spring 2017. The Plan was developed in conjunction with the revised Pacific Flyway Council Management Plan for Emperor Geese (2016) that prescribes recommendations for the fall-winter hunting regulations. The two management plans complement each other and use the same population assessment methods, population objectives, and regulatory thresholds in their respective harvest strategies. The harvest strategy in the Plan uses the indicated total bird index (index) from the Yukon-Kuskokwim Delta Coastal Zone (Coastal Zone) survey that the Service conducts to assess population status relative to established thresholds. The harvest strategy specifies that the spring-summer subsistence emperor goose season will be open if the Coastal Zone index from the previous year is greater than 23,000 birds, and harvest will be closed if the index is below that threshold. If the Coastal Zone index is between 23,000 and 28,000 birds, the Council will consider implementing regulatory or nonregulatory conservation measures. The 2024 Coastal Zone index was 18,788 (95 percent confidence interval of 16,589–20,988) birds, which is below the harvest closure threshold of 23,000 birds. Thus, the Council recommended that the 2025 spring-summer subsistence season be closed to harvesting emperor geese. This recommendation was supported by the Pacific Flyway Council and the SRC in November 2024 and intended for implementation beginning with the 2025 subsistence harvest season. Therefore, we propose to remove emperor geese from the list of subsistence migratory bird species open to harvest in § 92.22.

Third, we propose an update to the list of subsistence migratory bird species in § 92.22 to incorporate changes in the list of birds protected by the MBTA at 50 CFR 10.13. On July 31, 2023, we published in the **Federal Register** (88 FR 49310) a revised list of migratory birds protected under the MBTA by adding or removing species or changing species names. Reasons for the changes to the list in § 10.13 included revised taxonomy and new evidence of natural occurrence or absence in the United States or U.S. territories. That rule went into effect on August 30, 2023. The revised list had updated nomenclature for three species on the list of subsistence migratory bird species at § 92.22.

Therefore, to be consistent with the list in § 10.13, we are proposing to change the common and scientific names of mew gull and change the scientific names for two species of cormorants, pelagic and double-crested, in § 92.22. The species formerly named mew gull has been split into two species, the common gull (*Larus canus*), which primarily occurs in Europe and Asia, and the short-billed gull (*Larus brachyrhynchus*), which occurs in North America. Therefore, we propose to replace mew gull (*Larus canus*) with short-billed gull (*Larus brachyrhynchus*). Pelagic and double-crested cormorants formerly shared the genus name Phalacrocorax, but now this genus has been split into multiple genera. We propose to update the scientific names of pelagic cormorant to *Urile pelagicus* and double-crested cormorant to *Nannopterum auritum*.

Proposed Revisions to Subpart D

In part 92, subpart D (annual regulations governing subsistence harvest), we propose to revise the regulations in § 92.31 to reflect the Council's recommendation to eliminate the permit requirement in the Kodiak Island Roaded Area (KIRA) and to change the species names for mew gulls. In 2021, spring-summer subsistence harvesting of migratory birds and eggs was opened experimentally for 3 years (2021–2023) in the Kodiak Archipelago region's KIRA by registration permit with a harvest reporting requirement. The Service requested that the Council evaluate harvest information from the experimental seasons before a season could be considered for operational status. In October 2023, the SRC recommended extending the experimental season by 1 year through 2024 to provide hunting opportunity while the Council completed their review. An announcement was published in the **Federal Register** on May 1, 2024 (89 FR 35010), to inform the public of the 1-year extension.

Following the 2023 subsistence season, the Council evaluated the harvest data from the experimental period. Based on permit report data, the Council determined that harvest was low during the experimental period; the average annual harvest of migratory birds and eggs in the KIRA during 2021–2023 was 122 birds and 100 eggs. For context, the data can be compared to the reported harvest from the last survey of the Kodiak Archipelago region in 2020. Residents in communities of the Kodiak Roaded Area subregion (communities that occur on the road system but hunted outside the KIRA) harvested 3,812 migratory birds and 2,612 eggs during that spring–summer season (Naves and Mengak 2023). Assuming KIRA permit registrants in 2021–2023 were residents of the KIRA, and their hunt effort was similar to 2020, average annual migratory birds and eggs harvested during the experimental period represented 3 percent of total birds (122 of 3,812) and 4 percent of total eggs (100 of 2,612) harvested in the

subregion. Based on this information, the Council concluded that an operational spring–summer hunt in the KIRA was unlikely to significantly increase harvest in the Kodiak Archipelago region.

Participation in the permit hunt was low and slightly increased over the experimental period, evidenced by issued permits: 46 in 2021, 58 in 2022, and 64 in 2023. The Council noted that the increase in participants over the experimental period was minimal, but future participation will be difficult to measure without a permit requirement. However, the Council also recognized that a change in participation may be indirectly monitored through public reports to Tribal organizations, the Kodiak City government, local law enforcement, ADFG, and the Service. If the increase is significant, the Council may consider future surveys to assess change in hunter participation, and if warranted, propose regulatory changes. Nonetheless, given the low harvest during the experimental season, the Council recommended eliminating the permit and harvest reporting requirement, acknowledging that such requirements are not part of customary and traditional hunting practices, may be a barrier to Indigenous participation, and are costly to administer.

The Council recommended retaining the species closures for Aleutian terns, Arctic terns, short-billed gulls, and emperor geese within the KIRA to protect species of conservation concern. Aleutian tern nesting colonies have declined by more than 80 percent in Alaska over the last 20 years, and only a few colonies remain on Kodiak Island. The largest colonies are within the KIRA, and implementing protective regulations for this species is a priority of the Council. Further, to offer additional protection for Aleutian terns, the season for Arctic terns and short-billed gulls, which nest in the same areas as Aleutian terns, will remain closed to harvest to reduce accidental harvest and colony disturbance of Aleutian terns. The KIRA will also remain closed to emperor geese (when emperor geese are open to harvest), a species of management concern, given that an open season may increase harvest for emperor geese along the road system.

On May 22, 2024, the Council recommended an amendment to the regulations for the Kodiak Archipelago region to remove the permit and reporting requirements, retain the four species closures, and make the season operational in the KIRA. This regulatory amendment was supported by the Pacific Flyway Council and the SRC in November 2024 and intended for implementation beginning with the 2025 subsistence season.

Compliance With the MBTA and the Endangered Species Act

The Service has dual objectives and responsibilities for authorizing a subsistence harvest while protecting migratory birds and threatened species. Although these objectives continue to be challenging, they are not irreconcilable, provided that: (1) Regulations continue to protect threatened species, (2) measures to address documented threats are implemented, and (3) the subsistence community and other conservation partners commit to working together.

Mortality, sickness, and poisoning from lead exposure have been documented in many waterfowl species, including threatened spectacled eiders (*Somateria fischeri*) and the Alaska-breeding population of Steller's eiders (*Polysticta stelleri*). While lead shot has been banned nationally for waterfowl hunting since 1991, Service staff have documented the availability of lead shot in waterfowl rounds for sale in communities on the Yukon-Kuskokwim Delta and North Slope. The Service will work with partners to increase our education, outreach, and enforcement efforts to ensure that subsistence waterfowl hunting is conducted using nontoxic shot.

Conservation Under the MBTA

We have monitored subsistence harvest for several decades through the use of household surveys in the most heavily used subsistence harvest areas, such as the Yukon-Kuskokwim Delta. Based on our monitoring of the migratory bird species and populations taken for subsistence, we find that this proposed rule will provide for the preservation and maintenance of migratory birds as required by the MBTA. Communication and coordination with the AMBCC and the Pacific Flyway Council have aided in the establishment of hunting regulations to ensure the long-term viability of the migratory birds exposed to harvest.

Endangered Species Act Consideration

Spectacled eiders and the Alaska-breeding population of Steller's eiders are listed as threatened species under the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*). Their migration and breeding distribution overlap with areas where the spring and summer subsistence migratory bird harvest is open in Alaska. Neither species is included in the list of subsistence migratory bird species at § 92.22; therefore, both species are closed to subsistence harvest. Under §§ 92.21 and 92.32, the Service may implement emergency closures, if necessary, to protect Steller's eiders or any other endangered or threatened species or migratory bird population.

Section 7 of the ESA requires the Secretary of the Interior to review other programs administered by the Department of the Interior and utilize such programs in furtherance of the purposes of the ESA. The Secretary is further required to ensure that any action authorized, funded, or carried out by the Department of the Interior is not likely to jeopardize the continued existence of any endangered species or threatened species or result in the destruction or adverse modification of critical habitat.

The Service's Alaska Region Migratory Bird Management Program will conduct an intra-agency consultation with the Service's Northern Alaska Fish and Wildlife Field Office on this proposed rule. A biological opinion will be updated based on new information to ensure this proposed rulemaking action is not likely to jeopardize the continued existence of endangered or threatened species or result in the destruction or adverse modification of designated critical habitat. Therefore, we expect that this proposed rule will comply with the ESA.

Comment Period

Implementation of the Service's 2013 supplemental environmental impact statement (SEIS) on the hunting of migratory birds resulted in changes to the overall timing of the annual regulatory schedule for the establishment of migratory bird hunting regulations and the Alaska migratory bird subsistence harvest regulations. The programmatic document, ''Second Final Supplemental Environmental Impact Statement: Issuance of Annual Regulations Permitting the Hunting of Migratory Birds (SEIS 20130139),'' filed with the Environmental Protection Agency on May 24, 2013, addressed compliance with the National Environmental Policy Act by the Service for issuance of the annual framework regulations for hunting of migratory game bird species. We published a notice of availability of the SEIS in the **Federal Register** on May 31, 2013 (78 FR 32686), and our Record of Decision on July 26, 2013 (78 FR 45376).

The 2013 SEIS resulted in the Service moving the annual summer-fall SRC meeting from July to October or November, and this procedural change

has greatly shortened the period to publish the proposed subsistence harvest regulations and solicit comments before subsistence harvest seasons start on April 2 each year. Thus, we have established a 30-day comment period for this proposed rule (see **DATES**, above), and we will be conducting Tribal consultations within Alaska simultaneously. We believe a 30-day comment period gives the public adequate time to provide meaningful comments.

Required Determinations

Regulatory Planning and Review (Executive Orders 12866, 13563, and 14094)

Executive Order (E.O.) 14094 amends and reaffirms the principles of E.O. 12866 and E.O. 13563 and states that regulatory analysis should facilitate agency efforts to develop regulations that serve the public interest, advance statutory objectives, and are consistent with E.O. 12866 and 13563. Regulatory analysis, as practicable and appropriate, shall recognize distributive impacts and equity, to the extent permitted by law. Executive Order 13563 emphasizes further that regulations must be based on the best available science and that the rulemaking process must allow for public participation and an open exchange of ideas. We have developed this proposed rule in a manner consistent with these requirements.

Executive Order 12866, as reaffirmed by E.O. 13563 and E.O. 14094, provides that the Office of Information and Regulatory Affairs (OIRA) will review all significant rules. OIRA has determined that this proposed rule is not significant.

Regulatory Flexibility Act

The Department of the Interior certifies that, if adopted as proposed, this proposed rule will not have a significant economic impact on a substantial number of small entities as defined under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). A regulatory flexibility analysis is not required. Accordingly, a small entity compliance guide is not required. The regulations at 50 CFR part 92 legalize a preexisting subsistence activity. The commodities that are regulated under these regulations are migratory birds, and the resources harvested are consumed. This proposed rule would make only modest changes to the current regulations.

Congressional Review Act

This proposed rule is not a major rule under 5 U.S.C. 804(2), the Congressional Review Act. This proposed rule:

(a) Would not have an annual effect on the economy of $100 million or more. The regulations at 50 CFR part 92 legalize the subsistence harvest of migratory birds and, as such, do not involve commodities traded in the marketplace. This proposed rule would not result in a substantial increase in subsistence harvest or a significant change in harvesting patterns.

(b) Would not cause a major increase in costs or prices for consumers; individual industries; Federal, State, or local government agencies; or geographic regions. This proposed rule does not deal with traded commodities and, therefore, would not have an impact on prices for consumers.

(c) Would not have significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises. This proposed rule deals with the harvesting of wildlife for personal consumption. It would not regulate the marketplace in any way to generate substantial effects on the economy or the ability of businesses to compete.

Unfunded Mandates Reform Act

We have determined and certified under the Unfunded Mandates Reform Act (2 U.S.C. 1501 *et seq.*) that this proposed rule would not impose a cost of $100 million or more in any given year on local, State, or Tribal governments or private entities. The proposed rule would not have a significant or unique effect on local, State, or Tribal governments or the private sector. A statement containing the information required by the Unfunded Mandates Reform Act is not required. Participation on regional management bodies and the Council requires travel expenses for some Alaska Native organizations and local governments. In addition, they assume some expenses related to coordinating involvement of village councils in the regulatory process. Total coordination and travel expenses for all Alaska Native organizations are estimated to be less than $300,000 per year. When funding permits, the Service makes annual grant agreements available to the partner organizations and the ADFG to help offset their expenses. However, this proposed rule would not revise any regulations pertaining to participation in the regulatory process.

Takings (Executive Order 12630)

Under the criteria in Executive Order 12630, this proposed rule would not have significant takings implications. The regulations at 50 CFR part 92 are not specific to particular landownership but instead apply to the harvesting of migratory bird resources throughout Alaska. A takings implication assessment is not required.

Federalism (Executive Order 13132)

In accordance with Executive Order 13132 (Federalism), this proposed rule does not have significant federalism implications to warrant the preparation of a federalism summary impact statement. The Service worked with the State of Alaska to develop these proposed regulations. Therefore, a federalism summary impact statement is not required.

Civil Justice Reform (Executive Order 12988)

The Department, in promulgating this proposed rule, has determined that it would not unduly burden the judicial system and that it meets the requirements of sections 3(a) and 3(b)(2) of Executive Order 12988.

Government-to-Government Relations With Native American Tribal Governments

Consistent with Executive Order 13175 (65 FR 67249; November 9, 2000), ''Consultation and Coordination with Indian Tribal Governments,'' and Department of the Interior policy on Consultation with Indian Tribes (December 1, 2011), we will send letters via electronic mail to all 229 Alaska federally recognized Indian Tribes. Consistent with Congressional direction (Pub. L. 108–199, div. H, sec. 161, Jan. 23, 2004, 118 Stat. 452, as amended by Pub. L. 108–447, div. H, title V, sec. 518, Dec. 8, 2004, 118 Stat. 3267), we also will send letters to approximately 200 Alaska Native Corporations and other Tribal entities in Alaska soliciting their input as to whether or not they would like the Service to consult with them on the proposed changes to the migratory bird subsistence harvest regulations.

We implemented the amended treaty with Canada with a focus on local involvement. The treaty calls for the creation of management bodies to ensure an effective and meaningful role for Alaska's indigenous inhabitants in the conservation of migratory birds. According to the Letter of Submittal, management bodies are to include Alaska Native, Federal, and State of Alaska representatives as equals. They develop recommendations for, among other things: seasons and bag limits, methods and means of take, law enforcement policies, population and harvest monitoring, educational programs, research and use of traditional knowledge, and habitat protection. The management bodies

involve village councils to the maximum extent possible in all aspects of management. To ensure maximum input at the village level, we required each of the 11 participating regions to create regional management bodies consisting of at least one representative from the participating villages. The regional management bodies meet twice annually to review and/or submit proposals to the statewide body.

Paperwork Reduction Act of 1995 (PRA)

This proposed rule does not contain any new collection of information that requires approval by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. OMB has previously approved the information collection requirements associated with subsistence harvest reporting and assigned the following OMB control numbers:

- Alaska Migratory Bird Subsistence Harvest Household Survey, OMB Control Number 1018–0124 (expires July 31, 2027), and
- Regulations for the Taking of Migratory Birds for Subsistence Uses in Alaska, 50 CFR part 92, OMB Control Number 1018–0178 (expires July 31, 2027).

National Environmental Policy Act Consideration (42 U.S.C. 4321 et seq.)

The regulations at 50 CFR part 92 and options are considered in the environmental assessment, ''Managing Migratory Bird Subsistence Hunting in Alaska: Hunting Regulations for the 2025 Spring/Summer Harvest.'' Copies are available from the person listed under **FOR FURTHER INFORMATION CONTACT**.

Energy Supply, Distribution, or Use (Executive Order 13211)

Executive Order 13211 requires agencies to prepare statements of energy effects when undertaking certain actions. This proposed rule is not a significant regulatory action under this Executive order; it allows only for traditional subsistence harvest and improves conservation of migratory birds by allowing effective regulation of this harvest. This proposed rule would not have any effect on energy supplies, distribution, or use. Therefore, this action is not a significant energy action under Executive Order 13211, and a statement of energy effects is not required.

Hunting, Treaties, Wildlife.

Proposed Regulation Promulgation

For the reasons set out in the preamble, we propose to amend 50 CFR part 92 as set forth below:

PART 92—MIGRATORY BIRD SUBSISTENCE HARVEST IN ALASKA

■ 1. The authority citation for part 92 continues to read as follows:

Authority: 16 U.S.C. 703–712.

■ 2. Amend § 92.4 by revising the definition of ''Alaska Native'' to read as follows:

§ 92.4 Definitions.

* * * * *

Alaska Native means the same as ''Native,'' defined in section 3(b) of the Alaska Native Claims Settlement Act, 43 U.S.C. 1602(b).

* * * * *

■ 3. Amend § 92.22 by:
■ a. Revising the introductory text;
■ b. Removing paragraph (a)(1);
■ c. Redesignating paragraphs (a)(2) through (33) as paragraphs (a)(1) through (32); and
■ d. Revising paragraphs (i)(6) and (l)(1) and (2).

The revisions read as follows:

§ 92.22 Subsistence migratory bird species.

You may harvest birds or gather eggs from the following species, listed in taxonomic order, within all included areas except where region-specific harvest restrictions apply as set forth in § 92.31. When birds are listed at the species level, all subspecies existing in Alaska are also open to harvest. All bird species not listed are closed to harvesting and egg gathering.

* * * * *

(i) * * *

(6) Short-billed Gull (*Larus brachyrhynchus*).

* * * * *

(l) * * *

(1) Double-crested Cormorant (*Nannopterum auritum*).

(2) Pelagic Cormorant (*Urile pelagicus*).

* * * * *

■ 4. Amend § 92.31 by revising the introductory text of paragraph (e) to read as follows:

§ 92.31 Region-specific regulations.

* * * * *

(e) *Kodiak Archipelago region.* No hunting or egg gathering for Arctic terns, Aleutian terns, short-billed gulls, and emperor geese is allowed in the Kodiak Island Roaded Area. The Kodiak Island Roaded Area consists of that portion of Kodiak Island (including exposed tidelands) south of a line from Termination Point along the north side of Cascade Lake to Anton Larsen Bay and east of a line from Crag Point to the west end of Saltery Cove. Marine waters adjacent to the Kodiak Island Roaded Area within 500 feet from the water's edge are included in the Kodiak Island Roaded Area. The Kodiak Island Roaded Area does not include islands offshore of Kodiak Island.

* * * * *

Shannon A. Estenoz,

Assistant Secretary for Fish and Wildlife and Parks.

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

The Department of Agriculture has submitted the following information collection requirement(s) to Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments are requested regarding: whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; ways to enhance the quality, utility and clarity of the information to be collected; ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Comments regarding this information collection received by February 20, 2025 will be considered. Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Rural Utilities Service

Title: RUS Electric Loan Application and Related Reporting Burdens.

OMB Control Number: 0572–0032.

Summary of Collection: The Rural Utilities Service (RUS) was established in 1994 by the Federal Crop Insurance Reform and Department of Agriculture Reorganization Act of 1994 (Pub. L. 103–354, 108 Stat. 3178, 7 U.S.C. 6941 *et seq.*) as successor to the Rural Electrification Administration (REA) with respect to certain programs, including the electric loan and loan guarantee program authorized under the Rural Electrification Act (RE Act) of 1936. The RE Act authorizes and empowers the Administrator of RUS to make and guarantee loans to furnish and improve electric service in rural areas. These loans are amortized over a period of up to 35 years and secured by the borrower's electric assets and/or revenue. RUS will collect information including studies and reports to support borrower loan applications.

Need and Use of the Information: RUS will collect information to determine the eligibility of applicants for loans and loan guarantees under the RE Act; monitor the compliance of borrowers with debt covenants and regulatory requirements in order to protect loan security; ensure that borrowers use loan funds for purposes consistent with the statutory goals of the RE Act; and obtain information on the progress of rural electrification and evaluate the success of RUS program activities. Without the information RUS would be unable to accomplish statutory goals.

Description of Respondents: Private Sector; Not-for-profit institutions.

Number of Respondents: 608.

Frequency of Responses: Reporting: On occasion; Annually.

Total Burden Hours: 37,515.

Rural Utilities Service

Title: Telecommunications System Construction Policies and Procedures.

OMB Control Number: 0572–0059.

Summary of Collection: The Rural Electrification Act of 1936 (RE Act), 7 U.S.C. 901 *et seq.,* was amended in 2002 by title IV, Rural Broadband Access, by Farm Security and rural Investment Act, which authorizes Rural Utilities Service (RUS) to provide loans and loan guarantees to fund the cost of construction, improvement, or acquisition for facilities and equipment for the provision of broadband service in eligible rural communities in the States and territories of the United States. Title VI of the RE Act requires that loans are granted only to borrowers who demonstrated that they will be able to repay in full within the time agreed. RUS has established certain standards and specification for materials, equipment and construction to assure that standards are maintained; loans are not adversely affected, and loans are used for intended purposes.

Need and Use of the Information: RUS has developed specific forms for borrowers to use when entering into contracts for goods or services. The information collected is used to implement certain provisions of loan documents about the borrower's purchase of materials and equipment and the construction of its broadband system and is provided on an as needed basis or when the individual borrower undertakes certain projects. The standardization of the forms has resulted in substantial savings to borrowers by reducing preparation of the documentation and the costly review by the Government.

Description of Respondents: Private Sector; Business or other for-profit; Not-for-profit institutions.

Number of Respondents: 1,434.

Frequency of Responses: Reporting: On occasion.

Total Burden Hours: 7,703.

Rural Utilities Service

Title: 7 CFR 1726, Electric System Construction Policies and Procedures—Electric.

OMB Control Number: 0572–0107.

Summary of Collection: The Rural Electrification Act of 1936, 7 U.S.C. 901 *et.seq.,* as amended, (RE ACT) in sec. 4 (7 U.S.C. 904) authorizes and empowers the Administrator of the Rural Utilities Service (RUS) to make loans in the several States and Territories of the United States for rural electrification and the furnishing and improving of electric energy to persons in rural areas. These loans are for a term of up to 35 years and are secured by a first mortgage on the borrower's electric system. In the interest of protecting loan security and accomplishing the statutory objective of a sound program of rural electrification, Section 4 of the RE Act further requires

that RUS make or guarantee a loan only if there is reasonable assurance that the loan, together with all outstanding loans and obligations of the borrower, will be repaid in full within the time agreed. RUS will collect information using various RUS forms.

Need and Use of the Information: RUS will collect information to implement certain provisions of the RUS standard form of loan documents regarding the borrower's purchase of materials and equipment and the construction of its electric system by contract or force account. The use of standard forms and procurement procedures helps assure RUS that appropriate standards and specifications are maintained; agency loan security is not adversely affected; and loan and loan guarantee funds are used effectively and for the intended purposes. The information will be used by RUS electric borrowers, their contractors and by RUS. If standard forms were not used, borrowers would need to prepare their own documents at a significant expense; and each document submitted by a borrower would require extensive and costly review by both RUS and the Office of the General Counsel.

Description of Respondents: Private Sector; Not-for-profit institutions; Business or other for-profit.

Number of Respondents: 477.

Frequency of Responses: Reporting: On occasion.

Total Burden Hours: 82.

Rural Utilities Service

Title: Technical Assistance Program, 7 CFR part 1775.

OMB Control Number: 0572–0112.

Summary of Collection: The Rural Utilities Service is authorized by section 306 of the Consolidated Farm and Rural Development Act (7 U.S.C. 1926) to make loans to public agencies, American Indian Tribes, and nonprofit corporations to fund the development of drinking water, wastewater, and solid waste disposal facilities in rural areas with populations of up to 10,000 residents. Under the CONACT, 7 U.S.C. 1925(a), as amended, section 306(a) (14) (A) authorizes Technical Assistance and Training grants, and 7 U.S.C. 1932(b), section 310B authorizes Solid Waste Management grants. Grants are made for 100 percent of the cost of assistance. The Technical Assistance and Training Grants and Solid Waste Management Grants programs are administered through 7 CFR part 1775.

Need and Use of the Information: Nonprofit organizations applying for TAT and SWM grants must submit a pre-application, which includes an application form, narrative proposal, various other forms, certifications and supplemental information. RUS will collect information to determine applicant's eligibility, project feasibility, and the applicant's ability to meet the grant and regulatory requirements. RUS will review the information, evaluate it, and, if the applicant and project are eligible for further competition, invite the applicant to submit a formal application. Failure to collect proper information could result in improper determinations of eligibility, improper use of funds, or hindrances in making grants authorized by the TAT and SWM program.

Description of Respondents: Private Sector; Not-for-profit institutions.

Number of Respondents: 66.

Frequency of Responses: Reporting: Annually; On occasion.

Total Burden Hours: 5,558.

Rural Utilities Service

Title: 7 CFR part 1724 and Part 1738 Electric Engineering, Architectural Services and Design Policies and Procedures; and Rural Broadband Access Loans and Loan Guarantees.

OMB Control Number: 0572–0118.

Summary of Collection: The Rural Electrification Act of 1936, 7 U.S.C. 901 *et seq.,* as amended, authorizes Rural Utilities Service (RUS) to make loans in several States and Territories of the United States for broadband access and rural electrification and the furnishing and improving of electric energy to persons in rural areas. Title 7 CFR 1724 requires each borrower to select a qualified architect to perform certain architectural services and to use the designated form that provides for these services. The agency has developed standardized contractual forms used by borrowers to contract for services.

Need and Use of the Information: The information collected stipulates the parties to the agreement, contain certain information relating to the approved loan or loan guarantee, and provide detailed contractual obligations and services to be provided and performed relating to construction, project design, construction management, compensation, and related information. The contractual forms provide standardized contract agreements between the electric or broadband borrower and the engineering or architectural firm providing services to the borrower. This has resulted in substantial savings to borrowers by reducing preparation of the documentation and the costly review by the Government.

Description of Respondents: Private Sector; Business or other for-profit.

Number of Respondents: 4.

Frequency of Responses: Reporting: On occasion.

Total Burden Hours: 8.

Rural Utility Service

Title: 7 CFR 1780, Water and Waste Disposal Loan and Grant Program.

OMB Control Number: 0572–0121.

Summary of Collection: The Rural Utilities Service (''RUS''), an agency of the Rural Development (''RD''), United States Department of Agriculture, is requesting OMB clearance of the reporting requirements relating to 7 CFR part 1780, the regulation utilized to administer the Water and Waste Loans and Grants program. In addition, RUS is seeking clearance for applicants applying under 7 CFR part 1777, section 306C Water and Waste Disposal Loans and Grant,'' and 7 CFR part 1778, ''Emergency Community Water Assistance Grants'', which follow 7 CFR part 1780 for application requirements.

Section 306 of the Consolidated Farm and Rural Development Act (''CONACT''), 7 U.S.C. 1926, authorizes RUS to make loans and grants to public entities, federally-recognized American Indian Tribes, and not-for-profit corporations. The loans and grants fund the development of drinking water, wastewater, solid waste disposal, and storm wastewater disposal facilities in rural areas with populations of up to 10,000 residents. A rural area is defined in the CONACT as any city, town, or unincorporated area consisting of no more than 10,000 residents. In addition to the development costs, 7 CFR 1780.9, Eligible loan and grant purposes, defines the associated costs that are eligible for reimbursement, such as reasonable engineering and legal expenses. The agency uses information submitted by applicant entities to determine eligibility and evaluate project feasibility.

Need and Use of the Information: RD state and field offices collect the information from applicants, borrowers, and consultants. They use the information to determine applicant eligibility and project feasibility. They also use the information to ensure that borrowers operate on a sound basis and use the loan and grant funds for authorized purposes as defined in statute and regulation.

Description of Respondents: State, Local or Tribal Government; Not-for-profit institutions.

Number of Respondents: 656.

Frequency of Responses: Reporting: On occasion.

Total Burden Hours: 109,200.

Rural Utility Service

Title: Servicing of Water Programs Loans and Grants.

OMB Control Number: 0572–0137.

Summary of Collection: This information collection package covers the Servicing of Water Programs Loans and Grants regulation, 7 CFR part 1782. The regulation outlines the Rural Utilities Service's (RUS), an agency delivering the United States Department of Agriculture's (USDA) Rural Development Utilities Programs, hereinafter referred to as Rural Development (RD) and/or Agency, policies and procedures for servicing direct and insured Water and Waste Disposal loans and grants (WWLG); Watershed loans and advances (Watershed); Resource Conservation and Development loans (RCDL); Technical Assistance and Training grants (TAT); Emergency Community Water Assistance grants (ECWAG); Solid Waste Management grants (SWMG); and section 306C Water and Waste Facility loans and grants (Colonias/Tribal).

Need and Use of the Information: The Rural Utilities Service will collect information using various forms. The Agency provides forms and/or guidelines to assist in collection and submission of the information required to service loans and grants. In some cases, use of Agency forms is optional and the borrower may submit the information required on other forms. The Agency utilizes existing Rural Development forms to the greatest extent possible to continue to meet the needs of the program. The forms or related items completed by the borrower are submitted to and evaluated by the Agency servicing office. The information, mostly financial in nature, is required to determine if borrowers, based on their individual situations, qualify for the various servicing authorities.

Description of Respondents: State, Local, and Tribal Governments.

Number Of Respondents: 4,438.

Frequency Of Responses: Reporting: On occasion.

Total Burden Hours: 28,140.

Rural Utilities Service

Title: 7 CFR 1776, Household Water Well System Grant Program.

OMB Control Number: 0572–0139.

Summary of Collection: This program was formerly the Household Water Well System Grant Program, but its name was changed by the Agriculture and Nutrition Act of 2018. This regulation is used to administer grants made to private non-profit organizations under the DWS program. The Agency is authorized to make the grants under Section 306E of the Consolidated Farm and Rural Development Act (CONACT) 7 U.S.C. 1926e.

Need and Use of the Information: The grant applicants will provide information to be collected as part of the application and grant process through certain documentation, certifications, and completed forms. Grant applicants must show that the project will provide technical and financial assistance to eligible individuals to remedy household well problems. The grant recipients will establish a revolving loan fund lending program to provide water well loans to individuals who own or will own private wells in rural areas. The individual loan recipients may use the funds to construct, refurbish, and service their household well systems for an existing home.

Description of Respondents: Private Sector; Not-for-profit institutions.

Number of Respondents: 7.

Frequency of Responses: Reporting: On occasion.

Total Burden Hours: 652.

Rural Utilities Service

Title: Special Authority to Enable Funding of Broadband and Smart Utility Facilities Across Select Rural Development Programs.

OMB Control Number: 0572–0156.

Summary of Collection: The Rural Utilities Service, Rural Business-Cooperative Service, and Rural Housing Service, agencies that comprise the Rural Development Mission Area within the United States Department of Agriculture, are issuing this final rule to establish the authority authorized by Section 6210 of the Agriculture Improvement Act of 2018. This rule describes the procedures by which these agencies will consider projects eligible for special broadband authority and Smart Utility facilities.

On December 20, 2018, Congress passed The Agricultural Improvement Act of 2018 (2018 Farm Bill) (Pub. L. 115–334). In addition to sweeping changes in broadband program authorities, Congress provided for special use of funding from other RD programs for broadband deployment in Section 6210, ''Smart Utility Authority for Broadband.'' The provision granted the Secretary of Agriculture the discretion to allow recipients of grants, loans, or loan guarantees under RD programs to use not more than 10 percent of such funding to finance broadband infrastructure in areas not served by the minimum acceptable level of broadband service, as defined in this Part, and which will not result in competitive harm to a current RD loan, grant, or loan guarantee. While section 6210 only imposes the competitive harm restriction with respect to RUS loan, grant, and loan guarantee recipients, RD has determined to apply the restriction RD-wide, consistent with the statutory guidance on conflicts and duplications of awards provided in 7 U.S.C. 2204b(d)(2).

Rural community leaders, businesses and utilities must consider broadband availability and uses as they plan for, and implement, new and improved facilities and services to support community and economic development. While integration of communications technology into a planned investment can be used for internal purposes, it can also serve as a catalyst to rural broadband deployment efforts. For example, investment in health care, public safety and businesses can be enhanced or leveraged to expand the availability and utilization of advanced broadband in rural areas. Smart highways can facilitate vehicle to infrastructure communications to enhance driver safety; smart water systems can remotely detect contaminants before they pose a health risk; smart pipelines can report leaks and structural weaknesses before they become dangerous; and smart grid systems deliver enhanced security and energy efficiency, as well as speed recovery after an electric outage. Through this regulation, RD enables limited integration of broadband deployment with other rural investments funded through its broad suite of programs. It does so without adding the burden of seeking funding through separate program areas.

Need and Use of the Information: The collection of information is necessary for RD to determine an applicant's ability to borrow under the terms of the 2018 Farm Bill and included programs and that the applicant complies with statutory, regulatory, and administrative eligibility requirements for loan assistance. As part of that submission, applicants are required to provide a service area map, where applicable, of their entire service territory.

Description of Respondents: Private Sector; Businesses or other for-profits.

Number of Respondents: 53.

Frequency of Responses: Annually.

Total Burden Hours: 239.

Levi S. Harrell,

Departmental Information Collection Clearance Officer.

BILLING CODE 3410–15–P

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

The Department of Agriculture has submitted the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments are requested regarding; whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; ways to enhance the quality, utility and clarity of the information to be collected; and ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology. Comments regarding this information collection received by February 20, 2025 will be considered. Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Title: Web Forms for Research Data, Models, Materials, and Publications as Well as Study and Event Registration.

OMB Control Number: 0518–0032.

Summary of Collection: OMB Circular 130 Management of Federal Information Resources, establishes that ''agencies will use electronic media and formats . . . in order to make government information more easily accessible and useful to the public'' In order to provide information and services related to its program responsibilities defined at 7 CFR 2.65, the Agricultural Research Service (ARS) needs to obtain certain basic information from the public. Online forms allow the public to request from ARS research data, models, materials, and publications as well as registration for scientific studies and events.

Need and Use of the Information: ARS will use the information to respond to requests for specific services. The information will be collected electronically. If this collection is not conducted, ARS will be hindered from reducing the burden on its customers by providing them the most timely and efficient way to request services.

Description of Respondents: Individuals or households.

Number of Respondents: 14,400.

Frequency of Responses: Reporting: On occasion.

Total Burden Hours: 720.

Rachelle Ragland-Greene,

Departmental Information Collection Clearance Officer.

Submission for OMB Review; Comment Request

The Department of Agriculture has submitted the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments are requested regarding: whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; ways to enhance the quality, utility and clarity of the information to be collected; and ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Comments regarding this information collection received by February 20, 2025 will be considered. Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Rural Housing Service

Title: 7 CFR 1901–E, Civil Rights Compliance Requirements.

OMB Control Number: 0575–0018.

Summary of Collection: Rural Development (RD) is required to provide Federal financial assistance through its housing and community and business programs on an equal opportunity basis. The information collection requirements in this request are needed to comply with civil rights laws and Executive Orders that provide protection and prohibit discrimination on the basis of race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, political beliefs, reprisal or retaliation for prior civil rights activity.

Need and Use of the Information: RD will use the information to monitor a recipient's compliance with the civil rights laws, and to determine whether or not service and benefits are being provided to beneficiaries on an equal opportunity basis. This information is made available to USDA officials, officials of other Federal agencies and to Congress for reporting purposes. Without the required information, RD and its recipient will lack the necessary documentation to demonstrate that their programs are being administered in a nondiscriminatory manner and in full compliance with the civil rights laws.

Description of Respondents: Individuals or households.

Number of Respondents: 27,000.

Frequency of Responses: Recordkeeping; Reporting: On occasion.

Total Burden Hours: 458,363.

Rural Housing Service

Title: Fire and Rescue Loans—7 CFR 1942, Subpart C.

OMB Control Number: 0575–0120.

Summary of Collection: The Rural Housing Service (RHS) is authorized by Section 306 of the Consolidated Farm and Rural Development Act (7 U.S.C. 1926) to make loans to public agencies, nonprofit corporations, and Indian tribes for the development of essential community facilities primarily serving

rural residents. The primary regulation for administering this Community Facilities (CF) program is 7 CFR 1942–A (0575–0015). The procedures set out in 7 CFR 1942–A have been developed for determining eligibility, analyzing financial feasibility, taking security, monitoring the use of loan funds, monitoring the financial condition of borrowers, and otherwise assisting borrowers and applicants and protecting the Government's interest. This includes requirements for applicants to provide certain information and documents.

Need and Use of the Information: The information will be collected by Rural Development field offices from applicants/borrowers and consultants. This information will be used to determine applicant/borrower eligibility, project feasibility, and ensure borrowers operate on a sound basis and use loan funds for authorized purposes.

Description of Respondents: Private Sector; Not-for-profit institutions.

Number of Respondents: 1,000.

Frequency of Responses: Reporting: On occasion; Annually.

Total Burden Hours: 7,881.

Rural Housing Service

Title: 7 CFR part 3565, ''Guaranteed Rural Rental Housing Program'' and Its' Supporting Handbook.

OMB Control Number: 0575–0174.

Summary of Collection: On March 28, 1996, the Housing Opportunity Program Extension Act of 1996 was signed. One of the provisions of the Act was the authorization of the section 538 Guaranteed Rural Rental Housing Program (GRRHP), adding the program to the Housing Act of 1949. The purpose of the GRRHP is to increase the supply of affordable rural rental housing through the use of loan guarantees that encourage partnerships between the Rural Housing Service (RHS), private lenders and public agencies. RUS will approve qualified lenders to participate and monitor lender performance to ensure program requirements are met. RHS will collect information from lenders on the eligibility cost, benefits, feasibility, and financial performance of the proposed project.

Need and Use of the Information: RHS will collect information from lenders to manage, plan, evaluate, and account for Government resources and from time to time, propose demonstration programs that use loan guarantees or interest credit. The GRRHP regulation and handbook will provide lenders and agency staff with guidance on the origination, and servicing of GRRHP loans and the approval of qualified lenders. RHS will use the information to evaluate a lender's request and make determination that the interests of the government are protected. Failure to collect information could have an adverse impact on the agency ability to monitor lenders and assess program effectiveness and effectively guarantee loans.

Description of Respondents: Private Sector; Business or other for-profit; Not for-profit Institutions.

Number of Respondents: 150.

Frequency of Responses: Reporting: Monthly.

Total Burden Hours: 2,445.

Rural Housing Service

Title: Rural Community Development Initiative (RCDI).

OMB Control Number: 0575–0180.

Summary of Collection: Congress first authorized the Rural Community Development Initiative (RCDI) in 1999 with an appropriation of $6 million under the Rural Community Advancement Program (Pub. L. 106–78, which was amended by the Consolidated Appropriations Act, 2016 (Pub. L. 114–113)). The Community Facilities Division under the Rural Housing Service (RHS) administers this grant program. The intent of the RCDI grant program is to develop the capacity and ability of rural area recipients to undertake projects through a program of financial and technical assistance provided by qualified intermediary organizations. Intermediaries may be private or public (including tribal) organizations. Intermediaries are required to provide matching funds in an amount equal to the RCDI grant. Eligible recipients are nonprofit organizations, low-income rural communities, or federally recognized tribes.

Need and Use of the Information: The information will be collected from applicants/grantees (intermediary organizations applying for the grant), recipients (entities that receive assistance from the intermediary), and beneficiaries (entities or individuals that benefit from assistance provided by the recipient) by RHS staff in the National Office and Rural Development field offices. This information is used to determine applicant and recipient eligibility, project feasibility, and to ensure that grantees operate on a sound basis and use grant funds for authorized purposes. The Notice of Funding Availability (NOFA), published in the **Federal Register**, provides instructions for completing an application.

Description of Respondents: Private Sector; Not-for profit institutions.

Number of Respondents: 65.

Frequency of Responses: Reporting: Quarterly.

Total Burden Hours: 2,399.

Rural Housing Service

Title: RHS-Finance Office Forms.

OMB Control Number: 0575–0184.

Summary of Collection: Rural Development uses electronic methods for receiving and processing loan payments and collections. These electronic collection methods are approved by Treasury and include Customer Initiated Payments (CIP), FedWire, and Preauthorized Debits (PAD). The Agency that collects CIP information under this paperwork burden submission are Housing and Community Facilities and the Utilities Programs. The Agencies that collect FedWire and PAD information under this paperwork burden submission are the Housing and Community Facilities Programs, Business and Cooperative Programs, Water and Environmental Programs and Utilities Programs.

These electronic collection methods provide the borrower the ability to submit their loan payments the day prior to or the day of their installment due date. The benefits of these electronic payment methods include elimination of the mail time for submitting and receiving collections thereby giving borrowers use of their funds for a longer period; reduction in loan delinquencies; and improved efficiency for the Government and the borrower.

The following information is provided to comply with the Privacy Act of 1974 (Pub. L. 93–579). The information requested on the form is required under various provisions of title 15 U.S.C. 1601, 12 CFR 205, and 31 CFR 202, for the purpose of providing authority to the Department of Treasury to designate financial institutions to collect payments, by electronic means, from an account. The information will be used for identification with the records of the government agency and the financial institution to direct the payments to the point authorized. No deduction may be made unless a signed authorization form is received. Failure to furnish this information may delay or prevent the collection of these payments through the Automated Clearing House System.

To administer these electronic payment methods, Rural Development must collect the borrower's financial institution (FI) routing information (routing information includes the FI routing number and the borrower's account number). Rural Development uses Agency approved forms for collecting this FI routing information.

Need and Use of the Information: Rural Development requests that the borrower make payments electronically via CIP, FedWire, or PAD. In order to do this, Rural Development is seeking extension of Agency forms for collecting FI routing information for CIP, FedWire, and PAD collections. If the information were not collected, Rural Development would be unable to collect loan payments electronically.

Description of Respondents: Individuals and Households; Farms; Not-for-profit institutions; Business or other for-profit; State, Local or Tribal Government.

Number of Respondents: 11,062.

Frequency of Responses: Reporting: On occasion.

Total Burden Hours: 4,609.

Levi S. Harrell,

Departmental Information Collection Clearance Officer.

BILLING CODE 3410–XV–P

DEPARTMENT OF AGRICULTURE

Forest Service

Eleven Point Resource Advisory Committee

AGENCY: Forest Service, Agriculture (USDA).

ACTION: Notice of meeting.

SUMMARY: The Eleven Point Resource Advisory Committee (RAC) will hold a public meeting according to the details shown below. The committee is authorized under the Secure Rural Schools and Community Self-Determination Act (the Act) and operates in compliance with the Federal Advisory Committee Act. The purpose of the committee is to improve collaborative relationships and to provide advice and recommendations to the Forest Service concerning projects and funding consistent with title II of the Act, as well as make recommendations on recreation fee proposals for sites on the Mark Twain National Forest, consistent with the Federal Lands Recreation Enhancement Act.

DATES: An in-person and virtual meeting will be held on February 26, 2025, 1 p.m. to 3 p.m. central standard time.

Written and Oral Comments: Anyone wishing to provide in-person and/or virtual oral comments must pre-register by 4:30 p.m. central standard time on February 17, 2025. Written public comments will be accepted by 4:30 p.m. Central Standard Time on February 17, 2025. Comments submitted after this date will be provided by the Forest Service to the committee, but the committee may not have adequate time to consider those comments prior to the meeting.

All committee meetings are subject to cancellation. For status of the meeting prior to attendance, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

ADDRESSES: This meeting will be held in person at the Mark Twain National Forest Supervisor's Office, located at 401 Fairgrounds Road, Rolla, Missouri, 65401. The public may also join virtually via webcast, teleconference, videoconference and/or HSIN virtual meeting at *https://www.fs.usda.gov/main/mtnf/workingtogether/advisorycommittees.*

Written Comments: Written comments must be sent by email to *kimberly.houf@usda.gov or* via mail (postmarked) to Kimberly Houf, Mark Twain National Forest, 401 Fairgrounds Road, Rolla, MO 65401. The Forest Service strongly prefers comments be submitted electronically.

Oral Comments: Persons or organizations wishing to make in-person oral comments must pre-register by 4:30 p.m. central standard time on February 17, 2025, and speakers can only register for one speaking slot. Requests to pre-register for oral comments must be sent by email to *kimberly.houf@usda.gov* or via mail (postmarked) to Kimberly Houf, Mark Twain National Forest, 401 Fairgrounds Road, Rolla, MO 65401.

FOR FURTHER INFORMATION CONTACT: Michael Crump, Designated Federal Officer, by phone at (573) 341–7413 or email at *michael.crump@usda.gov;* or Kimberly Houf, RAC Coordinator at (573) 261–9714 or email at *kimberly.houf@usda.gov.*

SUPPLEMENTARY INFORMATION: The purpose of the meeting is to:

1. Hear from title II project proponents and discuss title II project proposals;
2. Make funding recommendations on title II projects; and
3. Approve meeting minutes.

The agenda will include time for individuals to make oral statements of three minutes or less. Individuals wishing to make an oral statement should make a request in writing at least three days prior to the meeting date to be scheduled on the agenda. Written comments may be submitted to the Forest Service up to 14 days after the meeting date listed under **DATES**.

Please contact the person listed under **FOR FURTHER INFORMATION CONTACT**, by or before the deadline, for all questions related to the meeting. All comments, including names and addresses when provided, are placed in the record and are available for public inspection and copying. The public may inspect comments received upon request.

Meeting Accommodations: The meeting location is compliant with the Americans with Disabilities Act, and the USDA provides reasonable accommodation to individuals with disabilities where appropriate. If you are a person requiring reasonable accommodation, please make requests in advance for sign language interpretation, assistive listening devices, or other reasonable accommodation to the person listed under the **FOR FURTHER INFORMATION CONTACT** section, or contact USDA's TARGET Center at (202) 720–2600 (voice and TTY) or USDA through the Federal Relay Service at (800) 877–8339. Additionally, program information may be made available in languages other than English.

USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Equal opportunity practices in accordance with USDA's policies will be followed in all appointments to the committee. To ensure that the recommendations of the committee have taken into account the needs of the diverse groups served by the USDA, membership shall include, to the extent practicable, individuals with demonstrated ability to represent the many communities, identities, races, ethnicities, backgrounds, abilities, cultures, and beliefs of the American people, including underserved communities. USDA is an equal opportunity provider, employer, and lender.

Dated: January 14, 2025.

Cikena Reid,

USDA Committee Management Officer.

[FR Doc. 2025–01285 Filed 1–17–25; 8:45 am]

BILLING CODE 3411–15–P

DEPARTMENT OF AGRICULTURE

Forest Service

Secure Rural Schools Resource Advisory Committees

AGENCY: Forest Service, Agriculture (USDA).

ACTION: Solicitation for members.

SUMMARY: The United States Department of Agriculture (USDA), Forest Service, is seeking nominations for the Secure Rural School Resource Advisory Committees (SRS RACs) pursuant to the Secure Rural Schools and Community Self-Determination Act (the Act) and the Federal Advisory Committee Act (FACA).

DATES: Written nominations must be received by April 17, 2025. A completed application packet includes the nominee's name, resume, and completed AD–755 Form (Advisory Committee or Research and Promotion Background Information). All completed application packets must be sent to one of the addresses below.

ADDRESSES: See **SUPPLEMENTARY INFORMATION** for the name and addresses of the SRS RAC Regional Coordinators accepting nominations.

Additional information on the SRS RACs can be found by visiting the SRS RACs website at *https://www.fs.usda.gov/working-with-us/secure-rural-schools.*

FOR FURTHER INFORMATION CONTACT: Brianna Gallegos, National Partnership Coordinator, National Partnership Office, USDA Forest Service, Yates Building, 1400 Independence Avenue, Mailstop 1158, Washington, DC 20250; or by email to *SM.FS.SRSInbox@usda.gov* or phone 505–218–1535. Individuals who use telecommunications devices for the hearing impaired may call 711 to reach the Telecommunications Relay Service, 24 hours a day, every day of the year, including holidays.

SUPPLEMENTARY INFORMATION:

Background

In accordance with the provisions of FACA, the Secretary of Agriculture is seeking nominations for the purpose of improving collaborative relationships among people who use and care for national forests and provide advice and recommendations to the Forest Service concerning projects and funding consistent with title II. The duties of SRS RACs include monitoring projects, advising the Secretary on the progress and results of monitoring efforts, and making recommendations to the Forest Service for any appropriate changes or adjustments to the projects being monitored by the SRS RACs.

SRS RACs Membership

The SRS RACs will be comprised of 15 members approved by the Secretary of Agriculture (or designee) where each will serve a 4-year term. SRS RACs memberships will be balanced in terms of the points of view represented and functions to be performed. The SRS RACs shall include representation from the following interest areas:

(1) Five persons who represent:

(a) Organized labor or non-timber forest product harvester groups;

(b) Developed outdoor recreation, off-highway vehicle users, or commercial recreation activities;

(c) Energy and mineral development, or commercial or recreational fishing groups;

(d) Commercial timber industry; and

(e) Federal grazing permit or other land use permit holders, or representative of non-industrial private forest land owners, within the area for which the committee is organized.

(2) Five persons who represent:

(a) Nationally or regionally recognized environmental organizations;

(b) Regionally or locally recognized environmental organizations;

(c) Dispersed recreational activities;

(d) Archaeology and history; and

(e) Nationally or regionally recognized wild horse and burro interest, wildlife hunting organizations, or watershed associations.

(3) Five persons who represent:

(a) State elected office holder;

(b) County or local elected office holder;

(c) American Indian Tribes within or adjacent to the area for which the committee is organized;

(d) Area school officials or teachers; and

(e) Affected public-at-large.

If a vacancy arises, the Designated Federal Officer (DFO) may consider recommending to the Secretary (or designee) to fill the vacancy as soon as it occurs with a candidate from the applicant pool provided an appropriate candidate is available. In accordance with the Act, members of the SRS RAC shall serve without compensation. SRS RAC members and replacements may be allowed travel expenses and per diem for attendance at committee meetings, subject to approval of the DFO responsible for administrative support to the SRS RAC.

Nomination and Application Information

The appointment of members to the SRS RACs will be made by the Secretary of Agriculture (or designee). The public is invited to submit nominations for membership on the SRS RACs, either as a self-nomination or a nomination of any qualified and interested person. Any individual or organization may nominate one or more qualified persons to represent the interest areas listed above.

To be considered for membership, nominees must:

1. Be a resident of the State in which the SRS RAC has jurisdiction,

2. Identify what interest group they would represent and how they are qualified to represent that interest group,

3. Provide a cover letter stating why they want to serve on the SRS RAC and what they can contribute,

4. Provide a resume showing their past experience in working successfully as part of a group working on forest management activities,

5. Complete Form AD–755, Advisory Committee or Research and Promotion Background Information. The Form AD–755 may be obtained from the Regional Coordinators listed below or from the following SRS RACs website: *https://www.fs.usda.gov/working-with-us/secure-rural-schools/title-2.* All nominations will be vetted by the Forest Service.

Nominations and completed applications for SRS RACs should be sent to the appropriate Forest Service Regional Offices listed below:

Northern Regional Office—Region 1

Helena-Lewis Clark RAC, Flathead RAC, Gallatin RAC, Idaho Panhandle RAC, Lincoln RAC, Mineral County RAC, Missoula RAC, North Central Idaho RAC, Ravalli RAC, Sanders RAC, Southern Montana RAC, Southwest Montana RAC, Tri-County RAC.

Jeffery Miller, Northern Regional Coordinator, Forest Service, 26 Fort Missoula Road, Missoula, Montana 59804, (406)-329–3576 or email *jeffrey.m.miller@usda.gov.*

Rocky Mountain Regional Office—Region 2

Black Hills RAC and Greater Rocky Mountain RAC.

Equal opportunity practices in accordance with USDA's policies will be followed in all appointments to the Committee. To ensure that the recommendations of the Committee have taken in account the needs of the diverse groups served by USDA, membership shall include, to the extent practicable, individuals with demonstrated ability to represent the many communities, identities, races, ethnicities, backgrounds, abilities, cultures, and beliefs of the American people, including underserved communities. USDA is an equal opportunity provider, employer, and lender.

USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Dated: January 14, 2025.

Cikena Reid,

USDA Committee Management Officer.

DEPARTMENT OF COMMERCE

International Trade Administration

[A–570–832]

Pure Magnesium From the People's Republic of China: Amended Final Results of Antidumping Duty Administrative Review; 2022–2023

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) is amending the final results of the administrative review of the antidumping duty order on pure magnesium from the People's Republic of China (China). The period of review is May 1, 2022, through April 30, 2023.

DATES: Applicable January 21, 2025.

FOR FURTHER INFORMATION CONTACT: John Conniff, AD/CVD Operations, Office III, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–1009.

SUPPLEMENTARY INFORMATION:

Background

On December 13, 2024, Commerce published the *Final Results* of the 2022–2023 administrative review of pure magnesium from China.[1] On December 13, 2024, Commerce received a timely filed allegation of ministerial errors from Tianjin Magnesium Metal Co., Ltd. (MMC) concerning the *Final Results.*[2] On December 16, 2024, we received comments concerning a ministerial error in the final margin calculation from US Magnesium LLC, (the petitioner).[3] The review covers MMC and its affiliate, Tianjin Magnesium International Co., Ltd. (TMI).[4]

Legal Framework

Section 751(h) of the Tariff Act of 1930, as amended (the Act) and 19 CFR 351.224(f) define a ''ministerial error'' as including ''errors in addition, subtraction, or other arithmetic function, clerical errors resulting from inaccurate copying, duplication, or the

[1] *See Pure Magnesium From the People's Republic of China: Final Results of Antidumping Duty Administrative Review; 2022–2023,* 89 FR 100967 (December 13, 2024) (*Final Results*), and accompanying Issues and Decision Memorandum (IDM).

[2] *See* MMC's Letter, ''Ministerial Error Allegations,'' dated December 13, 2024 (MMC Ministerial Allegation).

[3] *See* Petitioner's Letter, ''Petitioner's Submission of Ministerial Error Comments,'' dated December 16, 2024 (Petitioner Ministerial Allegation).

[4] In the 2011–2012 administrative review, Commerce collapsed both TMI and MMC into a single entity. *See Final Results* IDM at 2.

like, and any other unintentional error which the administering authority considers ministerial.'' With respect to final results of administrative reviews, 19 CFR 351.224(e) provides that Commerce ''will analyze any comments received and, if appropriate, correct any ministerial error by amending . . . the final results of review . . .''

Ministerial Errors

Commerce reviewed the record, and we agree that the errors alleged by MMC and the petitioner constitute ministerial errors within the meaning of section 751(h) of the Act and 19 CFR 351.224(f). Specifically, with regard to MMC's allegations, we find that we made inadvertent errors relating to the calculation of transportation costs for packing materials and for the calculation of revised brokerage and handling expenses.[5] We also agree with the petitioner that Commerce should have multiplied the labor fields by their relevant surrogate values.[6] Pursuant to 19 CFR 351.224(e), Commerce is amending the *Final Results* to reflect the correction of the ministerial errors, as described in the Ministerial Error Memorandum.[7] Based on the corrections, MMC's final dumping margin has changed from 32.60 percent to 25.26 percent. The amended estimated weighted-average dumping margins are listed in the ''Amended Final Results of Review'' section below. For a complete discussion of the ministerial error allegations, as well as Commerce's analysis, *see* the accompanying Ministerial Error Memorandum. The Ministerial Error Memorandum is on file electronically via ACCESS. ACCESS is available to registered users at *https://access.trade.gov.*

Amended Final Results of Review

As a result of correcting the ministerial errors, Commerce determines that the following weighted-average dumping margin exists for the period May 1, 2022, through April 30, 2023:

Exporter	Weighted-average dumping margin (percent)
Tianjin Magnesium International Co., Ltd./Tianjin Magnesium Metal Co., Ltd.	25.26

[5] *See* MMC Ministerial Allegation at 1–2.

[6] *See* Petitioner Ministerial Allegation at 1–2.

[7] *See* Memorandum, ''Analysis of Ministerial Error Allegations,'' dated concurrently with this notice (Ministerial Error Memorandum).

Disclosure

Commerce intends to disclose the calculations performed in connection with these amended final results of review to interested parties within five days after public announcement of the amended final results or, if there is no public announcement, within five days of the date of publication of the notice of amended final results in the **Federal Register**, in accordance with 19 CFR 351.224(b).

Assessment Rate

Pursuant to section 751(a)(2)(C) of the Act and 19 CFR 351.212(b)(1), Commerce has determined, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries of subject merchandise in accordance with these amended final results of the administrative review.

For MMC/TMI, which have a final amended weighted-average dumping margin that is not zero or *de minimis* (*i.e.,* less than 0.5 percent), we will calculate importer-specific assessment rates, in accordance with 19 CFR 351.212(b)(1). Pursuant to 19 CFR 351.212(b)(1), where the respondent reported the entered value of its U.S. sales, we will calculate importer-specific *ad valorem* assessment rates based on the ratio of the total amount of dumping calculated for the examined sales to the total entered value of the sales for which entered value was reported. Where the respondent did not report entered value, we will calculate importer-specific per-unit duty assessment rates based on the ratio of the total amount of antidumping duties calculated for the examined sales to the total quantity of those sales. To determine whether an importer-specific per-unit assessment rate is *de minimis* in accordance with 19 CFR 351.106(c)(2), we will also calculate an importer-specific *ad valorem* ratio based on estimated entered values.

Pursuant to a refinement in our non-market economy practice, for sales that were not reported in the U.S. sales data submitted by MMC/TMI, we will instruction CBP to liquidate entries associated with those sales at the rate for the China-wide entity (*i.e.,* 111.73 percent).[8]

The amended final results of this review shall be the basis for the assessment of antidumping duties on entries of merchandise covered by the amended final results of this review and for future deposits of estimated duties, where applicable.[9]

Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the amended final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.,* within 90 days of publication).

Cash Deposit Requirements

Upon publication of this notice in the **Federal Register** the following cash deposit requirements will be effective for all shipments of the subject merchandise from China entered, or withdrawn from warehouse, for consumption on or after December 13, 2024, the publication date of the *Final Results,* as provided by section 751(a)(2)(C) of the Act: (1) the amended cash deposit rate for MMC/TMI will be equal to the weighted-average dumping margin that is established in the amended final results of this review; (2) for previously investigated or reviewed Chinese and non-Chinese exporters not listed above that received a separate rate in a prior segment of this proceeding, the cash deposit rate will continue to be the existing exporter-specific rate published for the most recently completed segment of this proceeding; (3) for all Chinese exporters of subject merchandise that have not been found to be entitled to a separate rate, the cash deposit rate will be the rate for the China-wide entity; and (4) for all non-Chinese exporters of subject merchandise that have not received their own separate rate, the cash deposit rate will be the rate applicable to the Chinese exporter that supplied that non-Chinese exporter. These deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice also serves as a final reminder to importers of their responsibility under 19 CFR 351.402(f) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during the period of review. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of doubled antidumping duties.

[8] *See Pure Magnesium from the People's Republic of China: Final Results of the 2008–2009 Antidumping Duty Administrative Review of the Antidumping Duty Order,* 75 FR 80791 (December 23, 2010).

[9] *See* section 751(a)(2)(C) of the Act.

Administrative Protective Order

This notice also serves as a reminder to parties subject to an administrative protective order (APO) of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return or destruction of APO materials, or conversion to judicial protective order, is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

Notification to Interested Parties

We are issuing and publishing this notice in accordance with sections 751(h) and 777(i)(1) of the Act, and 19 CFR 351.224(e).

Dated: January 13, 2025.

Abdelali Elouaradia,

Deputy Assistant Secretary for Enforcement and Compliance.

[RTID 0648–XE382]

Nominations for the Western and Central Pacific Fisheries Commission Permanent Advisory Committee

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of request for nominations.

SUMMARY: NMFS is soliciting nominations (which may include self-nominations) to the Advisory Committee to the U.S. Section to the Permanent Advisory Committee (PAC) as established under the Western and Central Pacific Fisheries Convention (WCPFC) Implementation Act (Act). The PAC, composed of individuals from groups concerned with the fisheries covered by the Western and Central Pacific Fisheries Convention (Convention), provides recommendations to the U.S. Commissioners to the Western and Central Pacific Fisheries Commission (Commission) regarding the deliberations and decisions of the Commission.

DATES: Nominations must be received by March 24, 2025.

ADDRESSES: Nominations, including a letter of interest and a resume or curriculum vitae, should be sent via email to Katrina Poremba at *katrina.poremba@noaa.gov.* Include in the subject line the nomination for a position as an Advisory Committee member.

The following information should be included in the nomination documents: (1) full name, address, telephone, and email address of nominee; (2) nominee's organization(s) or professional affiliation(s) serving as the basis for the nomination, if any; and (3) a background statement, not to exceed one page in length, describing the nominee's qualifications, experience and interests, specifically as related to the fisheries covered by the Convention.

FOR FURTHER INFORMATION CONTACT: Katrina Poremba, NMFS Pacific Islands Regional Office; 1845 Wasp Blvd., Bldg. 176, Honolulu, HI 96818; email: *katrina.poremba@noaa.gov;* phone: (808) 725–5096.

SUPPLEMENTARY INFORMATION:

The Convention and the Commission

The objective of the Convention is to ensure, through effective management, the long-term conservation and sustainable use of highly migratory fish stocks in the western and central Pacific Ocean in accordance with the United Nations Convention on the Law of the Sea of 10 December 1982 (UNCLOS) and the Agreement for the Implementation of the Provisions of the UNCLOS Relating to the Conservation and Management of Straddling Fish Stocks and Highly Migratory Fish Stocks. The Convention establishes the Commission, the secretariat of which is based in Pohnpei, Federated States of Micronesia.

The Convention applies to all highly migratory fish stocks (defined as all fish stocks of the species listed in Annex I of the UNCLOS occurring in the Convention Area, and such other species of fish as the Commission may determine), except sauries.

The United States actively supported the negotiations and the development of the Convention and signed the Convention when it was opened for signature in 2000. It participated as a cooperating non-member of the Commission since it became operational in 2005. The United States became a Contracting Party to the Convention and a full member of the Commission when it ratified the Convention in January 2007. Under the Act, the United States is to be represented on the Commission by five U.S. Commissioners, appointed by the President.

Permanent Advisory Committee

The Act provides in section 6902(d) that the Secretary of Commerce, in consultation with the U.S. Commissioners to the Commission, will appoint individuals as members of the advisory committee established under the Act, referred to here as the PAC.

The appointed members of the Permanent Advisory Committee are to include not less than 15 nor more than 20 individuals selected from the various groups concerned with the fisheries covered by the Convention, providing, to the extent practicable, an equitable balance among such groups. On behalf of the Secretary of Commerce, NMFS is now seeking nominations for these appointments.

In addition to the 15–20 appointed members, the Permanent Advisory Committee includes the chair of the Western Pacific Fishery Management Council's Advisory Committee (or designee), and officials of the fisheries management authorities of American Samoa, Guam, and the Commonwealth of the Northern Mariana Islands (or their designees).

Members of the Permanent Advisory Committee will be invited to attend all non-executive meetings of the U.S. Commissioners to the Commission and at such meetings will be given the opportunity to examine and be heard on all proposed programs of investigation, reports, recommendations, and regulations of the Commission. Members of the Permanent Advisory Committee are also invited to participate in meetings of the Western and Central Pacific Fisheries Commission, as members of the United States' delegation.

Each appointed member of the Permanent Advisory Committee will serve for a term of 2 years and is eligible for reappointment. This request for nominations is for the term to begin on August 3, 2025, and is for a term of 2 consecutive years.

All members of the Advisory Committee are appointed in their individual professional capacity and undergo a background screening. Any individual appointed to the Committee who is unable to attend all or part of an Advisory Committee meeting may not appoint another person to attend such meetings as their proxy. Nominees should be able to fulfill the time and travel commitments required to participate in the Committee's meeting(s). The meetings are normally 2 to 3 days long and can be held virtually or in Honolulu, Hawaii.

The Secretaries of Commerce and State will furnish the Permanent Advisory Committee with relevant information concerning fisheries and international fishery agreements.

NMFS, on behalf of the Secretary of Commerce, will provide to the Permanent Advisory Committee administrative and technical support services as are necessary for its effective functioning.

Appointed members of the Permanent Advisory Committee will serve without pay, but while away from their homes or regular places of business in the performance of services for the advisory committee will be allowed travel expenses, including per diem in lieu of subsistence, in the same manner as persons employed intermittently in the Government service are allowed expenses under 5 U.S.C. 5703. They will not be considered Federal employees while performing service as members of the advisory committee except for the purposes of injury compensation or tort claims liability as provided in chapter 81 of title 5 and chapter 171 of title 28.

Procedure for Submitting Nominations

Nominations for the Permanent Advisory Committee should be submitted to NMFS (see **ADDRESSES**). This request for nominations is for first-time nominees as well as previous and current Permanent Advisory Committee members. Self-nominations are acceptable. Nominations should include a letter of interest and a resume or curriculum vitae that covers the following information: (1) full name, address, telephone, and email address of nominee; (2) nominee's organization(s) or professional affiliation(s) serving as the basis for the nomination, if any; and (3) a background statement, not to exceed one page in length, describing the nominee's qualifications, experience and interests, specifically as related to the fisheries covered by the Convention.

NMFS encourages nominations of diverse people including women and individuals from underserved communities that meet the knowledge, experience, and other requirements of the positions described in this notice. See Executive Order (E.O.) 13985 (Advancing Racial Equity and Support for Underserved Communities Through the Federal Government) section 2 (defining ''underserved communities'' as ''populations sharing a particular characteristic, as well as geographic communities, that have been systematically denied a full opportunity to participate in aspects of economic, social, and civic life,'' ''such as Black, Latino, and Indigenous and Native American persons, Asian Americans and Pacific Islanders and other persons of color; members of religious minorities; lesbian, gay, bisexual, transgender, and queer (LGBTQ+) persons; persons with disabilities; persons who live in rural areas; and persons otherwise adversely affected by persistent poverty or inequality.''). E.O. 13985 is available at *https://www.federalregister.gov/documents/2021/01/25/2021-01753/advancing-racial-equity-and-support-for-underserved-communities-through-the-federal-government.*

Authority: 16 U.S.C. 6902.

Dated: January 15, 2025.

Karen H. Abrams,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Office of Marine and Aviation Operations: Occupational Health, Safety, and Readiness Forms

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on November 12, 2024 during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: National Oceanic and Atmospheric Administration, Commerce.

Title: Office of Marine and Aviation Operations: Occupational Health, Safety, and Readiness Forms.

OMB Control Number: 0648–0824.

Form Number(s): Medical: 57–10–01, 57–10–02, 57–10–05. Safety: 57–17–02, 57–17–09. Small Boat: 57–19–04.

Type of Request: Regular submission [revision to an approved information collection].

Number of Respondents: 1,515.

Average Hours Per Response: Response time varies based on the form. Form may take as little as 5 minutes to complete or as long as 30 minutes.

Total Annual Burden Hours: 537.

Needs and Uses: This is a request for approval of a revision and extension to a collection currently in use with OMB approval. The NOAA Health Services Questionnaire NF 57–10–01 is being revised to include supportive questions to document previous sailing dates and clarifying medical information within NF 57–10–01 to ensure OMAO has a complete medical history for all personnel aboard NOAA vessels. These changes are not expected to change the burden response time.

The National Oceanic and Atmospheric Administration's (NOAA) Office of Marine and Aviation Operations (OMAO) manages and operates NOAA's fleet of 15 research and survey ships and nine specialized environmental data-collecting aircraft. Comprised of civilians and officers of the NOAA Commissioned Officer Corps, OMAO also manages the NOAA Diving Program, NOAA Small Boat Program, and NOAA Uncrewed Systems Operations Center.

The research and survey ships operated, managed, and maintained by OMAO comprise the largest fleet of federal research ships in the nation. Ranging from large oceanographic research vessels capable of exploring the world's deepest ocean, to smaller ships responsible for charting the shallow bays and inlets of the United States, the fleet supports a wide range of marine activities including fisheries surveys, nautical charting, and ocean and climate studies.

NOAA aircraft operate throughout the world providing a wide range of capabilities including hurricane reconnaissance and research, marine mammal and fisheries assessment, and coastal mapping. NOAA aircraft carry scientists and specialized instrument packages to conduct research for NOAA's missions.

Housed within the NOAA Office of Marine and Aviation Operations and staffed by the U.S. Public Health Service (USPHS) Commissioned Corps officers, the Office of Health Services (OHS) is charged with directly supporting all personnel within the National Oceanic and Atmospheric Administration (NOAA).

NOAA medical officers work to maximize deployment readiness and minimize medically related disruptions to fleet, aircraft, and diving operations. OHS programs assess and promote mental and physical readiness within their operational medical discipline.

Given the austere and geographically remote operational environments OHS supports, our officers are also responsible for preventing and containing disease in operational environments as subject matter experts in travel medicine. The forms contained in this collection will be used to make medical readiness recommendations for individuals and to key leadership in operational environments.

Affected Public: Individuals.

Frequency: As needed.

Respondent's Obligation: Required to Obtain or Retain Benefits.

Legal Authority: NAO 205–1, NOAA Records Management Program and 33 U.S.C. 941.

This information collection request may be viewed at *www.reginfo.gov.* Follow the instructions to view the Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function and entering the title of the collection.

Sheleen Dumas,

Departmental PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

BILLING CODE 3510–12–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XE614]

Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to U.S. Coast Guard Construction in Florence, Oregon

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; proposed incidental harassment authorization; request for comments on proposed authorization and possible renewal.

SUMMARY: NMFS has received a request from the United States Coast Guard (USCG) for authorization to take marine mammals incidental to the Station Siuslaw River construction project in Florence, Oregon. Pursuant to the Marine Mammal Protection Act (MMPA), NMFS is requesting comments on its proposal to issue an incidental harassment authorization (IHA) to incidentally take marine mammals during the specified activities. NMFS is also requesting comments on a possible one-time, 1-year renewal that could be issued under certain circumstances and if all requirements are met, as described in Request for Public Comments at the end of this notice. NMFS will consider public comments prior to making any final decision on the issuance of the requested MMPA authorization and agency responses will be summarized in the final notice of our decision.

DATES: Comments and information must be received no later than February 20, 2025.

ADDRESSES: Comments should be addressed to Jolie Harrison, Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service and should be submitted via email to *ITP.harlacher@noaa.gov.* Electronic copies of the application and supporting documents, as well as a list of the references cited in this document, may be obtained online at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-construction-activities.* In case of problems accessing these documents, please call the contact listed below.

Instructions: NMFS is not responsible for comments sent by any other method, to any other address or individual, or received after the end of the comment period. Comments, including all attachments, must not exceed a 25-megabyte file size. All comments received are a part of the public record and will generally be posted online at *https://www.fisheries.noaa.gov/permit/incidental-take-authorizations-under-marine-mammal-protection-act* without change. All personal identifying information (*e.g.,* name, address) voluntarily submitted by the commenter may be publicly accessible. Do not submit confidential business information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Jenna Harlacher, Office of Protected Resources, NMFS, (301) 427–8401.

SUPPLEMENTARY INFORMATION:

Background

The MMPA prohibits the ''take'' of marine mammals, with certain exceptions. Sections 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) direct the Secretary of Commerce (as delegated to NMFS) to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are proposed or, if the taking is limited to harassment, a notice of a proposed IHA is provided to the public for review.

Authorization for incidental takings shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s) and will not have an unmitigable adverse impact on the availability of the species or stock(s) for taking for subsistence uses (where relevant). Further, NMFS must prescribe the permissible methods of taking and other ''means of effecting the least practicable adverse impact'' on the affected species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of the species or stocks for taking for certain subsistence uses (referred to in shorthand as ''mitigation''); and requirements pertaining to the monitoring and reporting of the takings. The definitions of all applicable MMPA statutory terms used above are included in the relevant sections below and can be found in section 3 of the MMPA (16 U.S.C. 1362) and NMFS regulations at 50 CFR 216.103.

National Environmental Policy Act

To comply with the National Environmental Policy Act of 1969 (NEPA; 42 U.S.C. 4321 *et seq.*) and NOAA Administrative Order (NAO) 216–6A, NMFS must review our proposed action (*i.e.,* the issuance of an IHA) with respect to potential impacts on the human environment.

This action is consistent with categories of activities identified in Categorical Exclusion B4 (IHAs with no anticipated serious injury or mortality) of the Companion Manual for NAO 216–6A, which do not individually or cumulatively have the potential for significant impacts on the quality of the human environment and for which we have not identified any extraordinary circumstances that would preclude this categorical exclusion. Accordingly, NMFS has preliminarily determined that the issuance of the proposed IHA qualifies to be categorically excluded from further NEPA review.

Summary of Request

On October 26, 2023, NMFS received a request from the USCG for an IHA to take marine mammals incidental to pile

driving activity associated with the Station Siuslaw River construction project in Florence, Oregon. Following NMFS' review of the application, we received a revised version of the application on April 18, 2024. After finalizing construction details, the USCG submitted revised versions on July 16, 2024 and October 16, 2024, followed by a final revised version on November 18, 2024, which was deemed adequate and complete on December 5, 2024. USCG's request is for take of harbor seal, California sea lion, Steller sea lion, and harbor porpoise by Level B harassment, and for harbor seal and harbor porpoise, Level A harassment. Neither USCG nor NMFS expect serious injury or mortality to result from this activity and, therefore, an IHA is appropriate.

Description of Proposed Activity

Overview

The USCG requested an IHA to correct shoreline erosion and replace the covered mooring and appurtenant structures at USCG Station Siuslaw River in Florence, Oregon (Figure 1). This two-phased project entails both onshore and in-water construction activities including site preparation, demolition, shoreline stabilization measures, pile removal and installation, and overwater construction. Phase 1 includes onshore infrastructure improvements, sitework and shoreline stabilization, and phase 2 includes overwater and in-water construction including all pile install and removal.

The only part of the project that may result in Level A and Level B harassment, and further analyzed in this notice, are the in-water construction activities associated with vibratory and impact pile driving (Phase 2). The USCG proposes removal of 71 timber piles via vibratory driving and installation of 79 total piles via vibratory and impact driving with an estimated 48 total days of pile removal and install. USCG plans to install 16-inch (in) to 20-in steel pipe piles, and/or 14-in H-piles for their new infrastructure. Pile driving would only occur within the Oregon Department of Fish and Wildlife (ODFW) approved in-water work window; however the proposed IHA would have a 1-year period of effectiveness.

Dates and Duration

The IHA would be valid from November 1, 2025 to October 31, 2026; however, pile driving would only occur on approximately 48 days during the ODFW in-water work window from November 1, 2025 to February 29, 2026.

Specific Geographic Region

The project location is on the east river bank of the Siuslaw River, approximately 5 kilometers (km) northwest of the downtown waterfront of the City of Florence, Oregon (Figure 1). Vegetated dunes in the Oregon Dunes National Recreation Area, protected by a series of four rock groin structures, are located on the opposite bank of the Station Siuslaw River.

BILLING CODE 3510–22–P

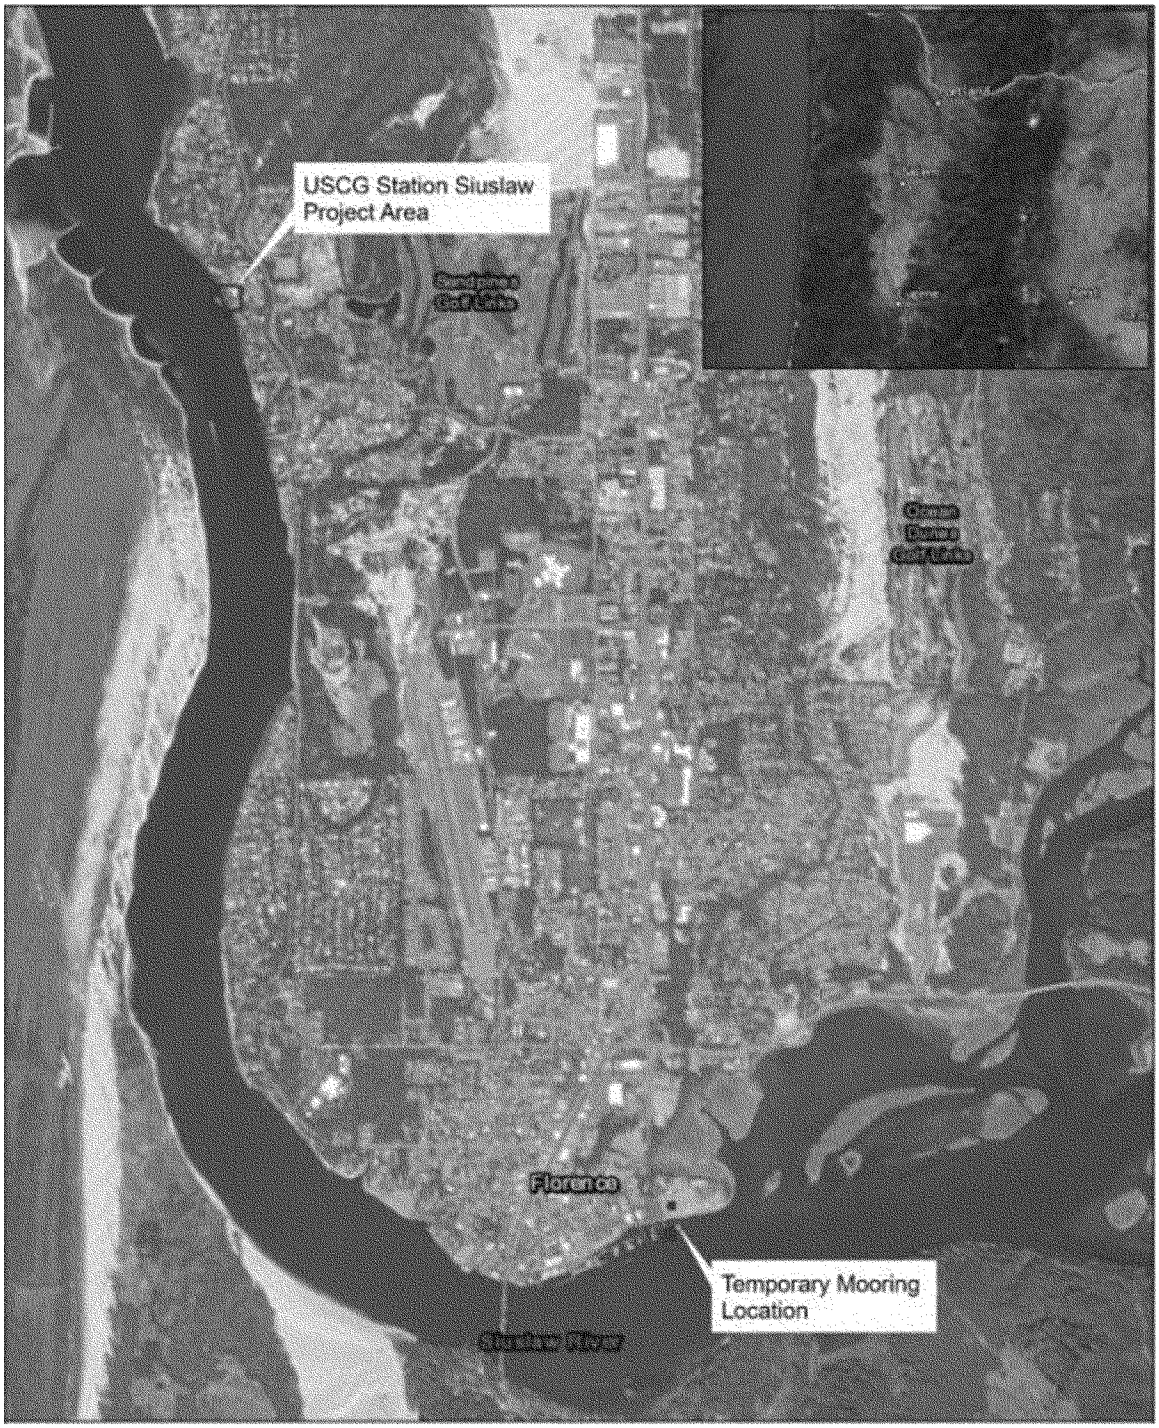

Figure 1—Project Location and Vicinity

BILLING CODE 3510–22–C

Detailed Description of the Specified Activity

Equipment and most materials needed to perform onshore infrastructure improvements, sitework, and shoreline stabilization would be from a barge or similar floating work platform which would also serve as the primary staging area. The overall project includes landslide improvements, waterside improvements, in-water construction, over-water construction, and upland construction. Phase 1, which would occur on approximately 48 days, includes only onshore infrastructure improvements, sitework, and shoreline stabilization. All of these activities would occur on land, and there are no haul-outs in the project's immediate vicinity; therefore we don't expect take incidental to these activities, and they are not discussed further. This IHA only covers in-water construction associated with pile installation and removal activities that could result in take of marine mammals.

Piles would be removed and installed during the in-water work window from

November 1, 2025 through February 28, 2026, using vibratory and impact hammers. USCG estimates up to three piles would be driven each 8 hour workday, and the actual driving time for each pile install could be as high as approximately 60 minutes or 15 minutes for removal. USCG would conduct an estimated 48 total days of pile driving activity (not all consecutive).

The proposed new piles would be 16-inch (-in) to 20-in steel pipe piles filled with concrete, and/or 14-in steel H-Piles, which would be installed by vibratory driving and driven to the final tip elevation by impact strikes after the initial vibratory set. The exact sizes and quantities of pipe piles are not certain at this time and would be determined through the remaining design iterations by the USCG. The modeled pile driving scenarios accounted for the energy needed to drive the piles and utilized 24-in diameter pile sizes for the model, as a worst case scenario option. USCG would only use a vibratory hammer for removal of the existing piles.

TABLE 1—PROPOSED PILE DRIVING

Method	Pile size and type	Activity duration	Number of piles	Estimated days of work
Impact install	24-in	45 blows per minute for 27 minutes (1,230 total blows)	79	28
	14 in H-pile	45 blows per minute for 13 minutes (570 total blows).		
Vibratory install	24-in	60 minutes	79	
Vibratory removal	24-in timber	15 minutes	71	20

The USCG has proposed in its description of the project that pile driving would occur only during daylight hours (no sooner than 30 minutes after sunrise through no later than 30 minutes before sunset). In addition, ODFW requires all in-water construction be limited to the months of November through February to minimize impacts to ESA listed fish species.

Proposed mitigation, monitoring, and reporting measures are described in detail later in this document (please see Proposed Mitigation and Proposed Monitoring and Reporting).

Description of Marine Mammals in the Area of Specified Activities

Sections 3 and 4 of the application summarize available information regarding status and trends, distribution and habitat preferences, and behavior and life history of the potentially affected species. NMFS fully considered all of this information, and we refer the reader to these descriptions, instead of reprinting the information. Additional information regarding population trends and threats may be found in NMFS' Stock Assessment Reports (SARs; *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments*) and more general information about these species (*e.g.,* physical and behavioral descriptions) may be found on NMFS' website (*https://www.fisheries.noaa.gov/find-species).*

Table 2 lists all species or stocks for which take is expected and proposed to be authorized for this activity and summarizes information related to the population or stock, including regulatory status under the MMPA and Endangered Species Act (ESA) and potential biological removal (PBR), where known. PBR is defined by the MMPA as the maximum number of animals, not including natural mortalities, that may be removed from a marine mammal stock while allowing that stock to reach or maintain its optimum sustainable population (as described in NMFS' SARs). While no serious injury or mortality is anticipated or proposed to be authorized here, PBR and annual serious injury and mortality (M/SI) from anthropogenic sources are included here as gross indicators of the status of the species or stocks and other threats.

Marine mammal abundance estimates presented in this document represent the total number of individuals that make up a given stock or the total number estimated within a particular study or survey area. NMFS' stock abundance estimates for most species represent the total estimate of individuals within the geographic area, if known, that comprises that stock. For some species, this geographic area may extend beyond U.S. waters. All managed stocks in this region are assessed in NMFS' U.S. Pacific Marine Mammal SARs. All values presented in table 2 are the most recent available at the time of publication (including from the draft 2023 SARs) and are available online at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments.*

TABLE 2—MARINE MAMMAL SPECIES [1] LIKELY TO OCCUR NEAR THE PROJECT AREA THAT MAY BE TAKEN BY USCG'S ACTIVITIES

Common name	Scientific name	Stock	ESA/MMPA status; strategic (Y/N) [2]	Stock abundance (CV, N_{min}, most recent abundance survey) [3]	PBR	Annual M/SI [4]
Odontoceti (toothed whales, dolphins, and porpoises)						
Family Phocoenidae (porpoises):						
Harbor Porpoise	*Phocoena phocoena*	Central Oregon [5]	-, -, N	7,492 (0.421, 5,332, 2022).	53	0
Order Carnivora—Pinnipedia						
Family Otariidae (eared seals and sea lions):						
CA Sea Lion	*Zalophus californianus*	U.S.	-, -, N	257,606 (N/A, 233,515, 2014).	14,011	>321

TABLE 2—MARINE MAMMAL SPECIES [1] LIKELY TO OCCUR NEAR THE PROJECT AREA THAT MAY BE TAKEN BY USCG'S ACTIVITIES—Continued

Common name	Scientific name	Stock	ESA/ MMPA status; strategic (Y/N) [2]	Stock abundance (CV, N_{min}, most recent abundance survey) [3]	PBR	Annual M/SI [4]
Steller Sea Lion [6]	*Eumetopias jubatus*	Eastern	-, -, N	36,308 (N/A, 36,308, 2022).	2,178	93.2
Family Phocidae (earless seals):						
Harbor Seal	*Phoca vitulina*	OR/WA Coastal	-, -, N	UNK (UNK, UNK, 1999)	UND	10.6

[1] Information on the classification of marine mammal species can be found on the web page for The Society for Marine Mammalogy's Committee on Taxonomy (https://marinemammalscience.org/science-and-publications/list-marine-mammal-species-subspecies/; Committee on Taxonomy (2022)).
[2] Endangered Species Act (ESA) status: Endangered (E), Threatened (T)/MMPA status: Depleted (D). A dash (-) indicates that the species is not listed under the ESA or designated as depleted under the MMPA. Under the MMPA, a strategic stock is one for which the level of direct human-caused mortality exceeds PBR or which is determined to be declining and likely to be listed under the ESA within the foreseeable future. Any species or stock listed under the ESA is automatically designated under the MMPA as depleted and as a strategic stock.
[3] NMFS marine mammal stock assessment reports online at: https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessment-reports-region. CV is coefficient of variation; N_{min} is the minimum estimate of stock abundance.
[4] These values, found in NMFS's SARs, represent annual levels of human-caused mortality plus serious injury from all sources combined (*e.g.,* commercial fisheries, ship strike). Annual M/SI often cannot be determined precisely and is in some cases presented as a minimum value or range. A CV associated with estimated mortality due to commercial fisheries is presented in some cases.
[5] New stock in 2023 SARs.
[6] Nest is best estimate of counts, which have not been corrected for animals at sea during abundance surveys. Estimates provided are for the U.S. only.

As indicated above, all four species (with four managed stocks) in table 2 temporally and spatially co-occur with the activity to the degree that take is reasonably likely to occur. All species that could potentially occur in the proposed survey areas are included in section 3 of the IHA application on page 12. While killer whales (*Orcinus orca*), humpback whales (*Megaptera novaeangliae*), and gray whales (*Eschrichtius robustus*) have been sighted off the Oregon coast, the USCG's project is located in the Siuslaw River where these species do not occur. Therefor the temporal and/or spatial occurrence of these species is such that take is not expected to occur, and they are not discussed further beyond the explanation provided here and in the USCG's application. For more details on the species that are likely to occur near the project area and may be taken by USCG's activities, see Sections 3 and 4 of USCG's IHA application, the SARs, and NMFS' website.

Marine Mammal Hearing

Hearing is the most important sensory modality for marine mammals underwater, and exposure to anthropogenic sound can have deleterious effects. To appropriately assess the potential effects of exposure to sound, it is necessary to understand the frequency ranges marine mammals are able to hear. Not all marine mammal species have equal hearing capabilities (*e.g.,* Richardson *et al.,* 1995; Wartzok and Ketten, 1999; Au and Hastings, 2008). To reflect this, Southall *et al.* (2007, 2019) recommended that marine mammals be divided into hearing groups based on directly measured (behavioral or auditory evoked potential techniques) or estimated hearing ranges (behavioral response data, anatomical modeling, *etc.*). Generalized hearing ranges were chosen based on the ~65 decibel (dB) threshold from composite audiograms, previous analyses in NMFS (2018), and/or data from Southall *et al.* (2007) and Southall *et al.* (2019). We note that the names of two hearing groups and the generalized hearing ranges of all marine mammal hearing groups have been recently updated (NMFS 2024) as reflected below in in table 3.

TABLE 3—MARINE MAMMAL HEARING GROUPS

[NMFS, 2024]

Hearing group	Generalized hearing range *
Low-frequency (LF) cetaceans (baleen whales)	7 Hz to 36 kHz.
High-frequency (HF) cetaceans (dolphins, toothed whales, beaked whales, bottlenose whales)	150 Hz to 160 kHz.
Very High-frequency (VHF) cetaceans (true porpoises, *Kogia,* river dolphins, Cephalorhynchid, *Lagenorhynchus cruciger* & *L. australis*).	200 Hz to 165 kHz.
Phocid pinnipeds (PW) (underwater) (true seals)	40 Hz to 90 kHz.
Otariid pinnipeds (OW) (underwater) (sea lions and fur seals)	60 Hz to 68 kHz.

* Represents the generalized hearing range for the entire group as a composite (*i.e.,* all species within the group), where individual species' hearing ranges may not be as broad. Generalized hearing range chosen based on ~65 dB threshold from composite audiogram, previous analysis in NMFS 2018, and/or data from Southall et al. 2007; Southall et al. 2019. Additionally, animals are able to detect very loud sounds above and below that ''generalized'' hearing range.

For more detail concerning these groups and associated frequency ranges, please see NMFS (2024) for a review of available information.

Potential Effects of Specified Activities on Marine Mammals and Their Habitat

This section provides a discussion of the ways in which components of the specified activity may impact marine mammals and their habitat. The Estimated Take of Marine Mammals section later in this document includes a quantitative analysis of the number of individuals that are expected to be taken by this activity. The Negligible Impact Analysis and Determination section considers the content of this section, the Estimated Take of Marine Mammals section, and the Proposed Mitigation section, to draw conclusions regarding

the likely impacts of these activities on the reproductive success or survivorship of individuals and whether those impacts are reasonably expected to, or reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.

Acoustic effects on marine mammals during the specified activity can occur from impact and vibratory pile driving. The effects of underwater noise from USCG's proposed activities have the potential to result in Level A or Level B harassment of marine mammals in the action area.

Description of Sound Sources

The marine soundscape is comprised of both ambient and anthropogenic sounds. Ambient sound is defined as the all-encompassing sound in a given place and is usually a composite of sound from many sources both near and far. The sound level of an area is defined by the total acoustical energy being generated by known and unknown sources. These sources may include physical (*e.g.,* waves, wind, precipitation, earthquakes, ice, atmospheric sound), biological (*e.g.,* sounds produced by marine mammals, fish, and invertebrates), and anthropogenic sound (*e.g.,* vessels, dredging, aircraft, construction).

The sum of the various natural and anthropogenic sound sources at any given location and time—which comprise ''ambient'' or ''background'' sound—depends not only on the source levels (as determined by current weather conditions and levels of biological and shipping activity) but also on the ability of sound to propagate through the environment. In turn, sound propagation is dependent on the spatially and temporally varying properties of the water column and sea floor, and is frequency-dependent. As a result of the dependence on a large number of varying factors, ambient sound levels can be expected to vary widely over both coarse and fine spatial and temporal scales. Sound levels at a given frequency and location can vary by 10–20 dB from day to day (Richardson *et al.,* 1995). The result is that, depending on the source type and its intensity, sound from the specified activity may be a negligible addition to the local environment or could form a distinctive signal that may affect marine mammals.

In-water construction activities associated with the project would include vibratory pile removal, and impact and vibratory pile driving. The sounds produced by these activities fall into one of two general sound types: impulsive and non-impulsive. Impulsive sounds (*e.g.,* explosions, gunshots, sonic booms, impact pile driving) are typically transient, brief (less than 1 second), broadband, and consist of high peak sound pressure with rapid rise time and rapid decay (ANSI, 1986; NIOSH, 1998; ANSI, 2005; NMFS, 2018a). Non-impulsive sounds (*e.g.,* aircraft, machinery operations such as drilling or dredging, vibratory pile driving, and active sonar systems) can be broadband, narrowband or tonal, brief or prolonged (continuous or intermittent), and typically do not have the high peak sound pressure with raid rise/decay time that impulsive sounds do (ANSI, 1995; NIOSH, 1998; NMFS, 2018a). The distinction between these two sound types is important because they have differing potential to cause physical effects, particularly with regard to hearing (*e.g.,* Ward 1997 in Southall *et al.,* 2007).

USCG proposes to use vibratory hammers to remove timber piles and impact and vibratory pile driving to install new steel pipe piles and/or H-piles associated with the Station Siuslaw River project. Impact hammers operate by repeatedly dropping a heavy piston onto a pile to drive the pile into the substrate. Sound generated by impact hammers is characterized by rapid rise times and high peak levels, a potentially injurious combination (Hastings and Popper, 2005). Vibratory hammers install piles by vibrating them and allowing the weight of the hammer to push them into the sediment. Vibratory hammers produce significantly less sound than impact hammers. Peak sound pressure levels (SPLs) may be 180 dB or greater, but are generally 10 to 20 dB lower than SPLs generated during impact pile driving of the same-sized pile (Oestman *et al.,* 2009). Rise time is slower, reducing the probability and severity of injury, and sound energy is distributed over a greater amount of time (Nedwell and Edwards, 2002; Carlson *et al.,* 2005).

The likely or possible impacts of USCG's proposed activity on marine mammals could involve both non-acoustic and acoustic stressors. Potential non-acoustic stressors could result from the physical presence of equipment and personnel; however, any impacts to marine mammals are expected to be primarily acoustic in nature. Acoustic stressors include effects of heavy equipment operation during pile installation and removal.

Acoustic Effects

The introduction of anthropogenic noise into the aquatic environment from pile driving and removal is the means by which marine mammals may be harassed from USCG's specified activity. In general, animals exposed to natural or anthropogenic sound may experience behavioral, physiological, and/or physical effects, ranging in magnitude from none to severe (Southall *et al.,* 2007, 2019). In general, exposure to pile driving noise has the potential to result in behavioral reactions (*e.g.,* avoidance, temporary cessation of foraging and vocalizing, changes in dive behavior) and, in limited cases, an auditory threshold shift (TS). Exposure to anthropogenic noise can also lead to non-observable physiological responses such an increase in stress hormones. Additional noise in a marine mammal's habitat can mask acoustic cues used by marine mammals to carry out daily functions such as communication and predator and prey detection. The effects of pile driving noise on marine mammals are dependent on several factors, including, but not limited to, sound type (*e.g.,* impulsive vs. non-impulsive), the species, age and sex class (*e.g.,* adult male vs. mom with calf), duration of exposure, the distance between the pile and the animal, received levels, behavior at time of exposure, and previous history with exposure (Wartzok *et al.,* 2004; Southall *et al.,* 2007). Here we discuss physical auditory effects (TSs) followed by behavioral effects and potential impacts on habitat.

NMFS defines a noise-induced TS as a change, usually an increase, in the threshold of audibility at a specified frequency or portion of an individual's hearing range above a previously established reference level (NMFS, 2018, 2024). The amount of TS is customarily expressed in dB. A TS can be permanent or temporary. As described in NMFS (2018, 2024), there are numerous factors to consider when examining the consequence of TS, including, but not limited to, the signal temporal pattern (*e.g.,* impulsive or non-impulsive), likelihood an individual would be exposed for a long enough duration or to a high enough level to induce a TS, the magnitude of the TS, time to recovery (seconds to minutes or hours to days), the frequency range of the exposure (*i.e.,* spectral content), the hearing and vocalization frequency range of the exposed species relative to the signal's frequency spectrum (*i.e.,* how animal uses sound within the frequency band of the signal; *e.g.,* Kastelein *et al.,* 2014), and the overlap between the animal and the source (*e.g.,* spatial, temporal, and spectral).

Auditory Injury and Permanent Threshold Shift (PTS)—NMFS defines auditory injury as ''damage to the inner ear that can result in destruction of

tissue . . . which may or may not result in PTS'' (NMFS, 2024). NMFS defines PTS as a permanent, irreversible increase in the threshold of audibility at a specified frequency or portion of an individual's hearing range above a previously established reference level (NMFS, 2024). PTS does not generally affect more than a limited frequency range, and an animal that has incurred PTS has incurred some level of hearing loss at the relevant frequencies; typically, animals with PTS are not functionally deaf (Au and Hastings, 2008; Finneran, 2016). Available data from humans and other terrestrial mammals indicate that a 40-dB threshold shift approximates PTS onset (see Ward *et al.,* 1958, 1959, 1960; Kryter *et al.,* 1966; Miller, 1974; Ahroon *et al.,* 1996; Henderson *et al.,* 2008). PTS levels for marine mammals are estimates, as with the exception of a single study unintentionally inducing PTS in a harbor seal (Kastak *et al.,* 2008), there are no empirical data measuring PTS in marine mammals largely due to the fact that, for various ethical reasons, experiments involving anthropogenic noise exposure at levels inducing PTS are not typically pursued or authorized (NMFS, 2018).

Temporary Threshold Shift (TTS)—TTS is a temporary, reversible increase in the threshold of audibility at a specified frequency or portion of an individual's hearing range above a previously established reference level (NMFS, 2018). Based on data from cetacean TTS measurements (Southall *et al.,* 2007), a TTS of 6 dB is considered the minimum TS clearly larger than any day-to-day or session-to-session variation in a subject's normal hearing ability (Schlundt *et al.,* 2000; Finneran *et al.,* 2000, 2002). As described in Finneran (2015), marine mammal studies have shown the amount of TTS increases with cumulative sound exposure level (SEL_{cum}) in an accelerating fashion: At low exposures with lower $SEL_{cum,}$ the amount of TTS is typically small and the growth curves have shallow slopes. At exposures with higher SEL_{cum}, the growth curves become steeper and approach linear relationships with the noise SEL.

Depending on the degree (elevation of threshold in dB), duration (*i.e.,* recovery time), and frequency range of TTS, and the context in which it is experienced, TTS can have effects on marine mammals ranging from discountable to serious (similar to those discussed in *Masking,* below). For example, a marine mammal may be able to readily compensate for a brief, relatively small amount of TTS in a non-critical frequency range that takes place during a time when the animal is traveling through the open ocean, where ambient noise is lower and there are not as many competing sounds present. Alternatively, a larger amount and longer duration of TTS sustained during time when communication is critical for successful mother/calf interactions could have more serious impacts. We note that reduced hearing sensitivity as a simple function of aging has been observed in marine mammals, as well as humans and other taxa (Southall *et al.,* 2007), so we can infer that strategies exist for coping with this condition to some degree, though likely not without cost.

Many studies have examined noise-induced hearing loss in marine mammals (see Finneran (2015) and Southall *et al.* (2019) for summaries). TTS is the mildest form of hearing impairment that can occur during exposure to sound (Kryter, 2013). While experiencing TTS, the hearing threshold rises, and a sound must be at a higher level in order to be heard. In terrestrial and marine mammals, TTS can last from minutes or hours to days (in cases of strong TTS). In many cases, hearing sensitivity recovers rapidly after exposure to the sound ends. For cetaceans, published data on the onset of TTS are limited to captive bottlenose dolphin (*Tursiops truncatus*), beluga whale, harbor porpoise, and Yangtze finless porpoise (*Neophocoena asiaeorientalis*) (Southall *et al.,* 2019). For pinnipeds in water, measurements of TTS are limited to harbor seals, elephant seals (*Mirounga angustirostris*), bearded seals (*Erignathus barbatus*) and California sea lions (*Zalophus californianus*) (Kastak *et al.,* 1999, 2007; Kastelein *et al.,* 2019b, 2019c, 2021, 2022a, 2022b; Reichmuth *et al.,* 2019; Sills *et al.,* 2020). TTS was not observed in spotted (*Phoca largha*) and ringed (*Pusa hispida*) seals exposed to single airgun impulse sounds at levels matching previous predictions of TTS onset (Reichmuth *et al.,* 2016). These studies examine hearing thresholds measured in marine mammals before and after exposure to intense or long-duration sound exposures. The difference between the pre-exposure and post-exposure thresholds can be used to determine the amount of threshold shift at various post-exposure times.

The amount and onset of TTS depends on the exposure frequency. Sounds at low frequencies, well below the region of best sensitivity for a species or hearing group, are less hazardous than those at higher frequencies, near the region of best sensitivity (Finneran and Schlundt, 2013). At low frequencies, onset-TTS exposure levels are higher compared to those in the region of best sensitivity (*i.e.,* a low frequency noise would need to be louder to cause TTS onset when TTS exposure level is higher), as shown for harbor porpoises and harbor seals (Kastelein *et al.,* 2019a, 2019c). Note that in general, harbor seals and harbor porpoises have a lower TTS onset than other measured pinniped or cetacean species (Finneran, 2015). In addition, TTS can accumulate across multiple exposures, but the resulting TTS will be less than the TTS from a single, continuous exposure with the same SEL (Mooney *et al.,* 2009; Finneran *et al.,* 2010; Kastelein *et al.,* 2014, 2015). This means that TTS predictions based on the total, cumulative SEL will overestimate the amount of TTS from intermittent exposures, such as sonars and impulsive sources. Nachtigall *et al.* (2018) describe measurements of hearing sensitivity of multiple odontocete species (bottlenose dolphin, harbor porpoise, beluga, and false killer whale (*Pseudorca crassidens*)) when a relatively loud sound was preceded by a warning sound. These captive animals were shown to reduce hearing sensitivity when warned of an impending intense sound. Based on these experimental observations of captive animals, the authors suggest that wild animals may dampen their hearing during prolonged exposures or if conditioned to anticipate intense sounds. Another study showed that echolocating animals (including odontocetes) might have anatomical specializations that might allow for conditioned hearing reduction and filtering of low-frequency ambient noise, including increased stiffness and control of middle ear structures and placement of inner ear structures (Ketten *et al.,* 2021). Data available on noise-induced hearing loss for mysticetes are currently lacking (NMFS, 2018). Additionally, the existing marine mammal TTS data come from a limited number of individuals within these species.

Relationships between TTS and PTS thresholds have not been studied in marine mammals, and there is no PTS data for cetaceans, but such relationships are assumed to be similar to those in humans and other terrestrial mammals. PTS typically occurs at exposure levels at least several decibels above that inducing mild TTS (*e.g.,* a 40-dB threshold shift approximates PTS onset (Kryter *et al.,* 1966; Miller, 1974), while a 6-dB threshold shift approximates TTS onset (Southall *et al.,* 2007, 2019). Based on data from

terrestrial mammals, a precautionary assumption is that the PTS thresholds for impulsive sounds (such as impact pile driving pulses as received close to the source) are at least 6 dB higher than the TTS threshold on a peak-pressure basis and PTS cumulative sound exposure level thresholds are 15 to 20 dB higher than TTS cumulative sound exposure level thresholds (Southall *et al.,* 2007, 2019). Given the higher level of sound or longer exposure duration necessary to cause PTS as compared with TTS, it is considerably less likely that PTS could occur.

Activities for this project include impact and vibratory pile driving and vibratory removal. There would likely be pauses in activities producing the sound during each day. Given these pauses and the fact that many marine mammals are likely moving through the project areas and not remaining for extended periods of time, the potential for TS declines.

Behavioral Harassment—Exposure to noise from pile driving also has the potential to behaviorally disturb marine mammals. Generally speaking, NMFS considers a behavioral disturbance that rises to the level of harassment under the MMPA a non-minor response—in other words, not every response qualifies as behavioral disturbance, and for responses that do, those of a higher level, or accrued across a longer duration, have the potential to affect foraging, reproduction, or survival. Behavioral disturbance may include a variety of effects, including subtle changes in behavior (*e.g.,* minor or brief avoidance of an area or changes in vocalizations), more conspicuous changes in similar behavioral activities, and more sustained and/or potentially severe reactions, such as displacement from or abandonment of high-quality habitat. Behavioral responses may include changing durations of surfacing and dives, changing direction and/or speed; reducing/increasing vocal activities; changing/cessation of certain behavioral activities (such as socializing or feeding); eliciting a visible startle response or aggressive behavior (such as tail/fin slapping or jaw clapping); avoidance of areas where sound sources are located. Pinnipeds may increase their haul out time, possibly to avoid in-water disturbance (Thorson and Reyff, 2006).

Behavioral responses to sound are highly variable and context-specific and any reactions depend on numerous intrinsic and extrinsic factors (*e.g.,* species, state of maturity, experience, current activity, reproductive state, auditory sensitivity, time of day), as well as the interplay between factors (*e.g.,* Richardson *et al.,* 1995; Wartzok *et al.,* 2004; Southall *et al.,* 2007, 2019; Weilgart, 2007; Archer *et al.,* 2010). Behavioral reactions can vary not only among individuals but also within an individual, depending on previous experience with a sound source, context, and numerous other factors (Ellison *et al.,* 2012), and can vary depending on characteristics associated with the sound source (*e.g.,* whether it is moving or stationary, number of sources, distance from the source). In general, pinnipeds seem more tolerant of, or at least habituate more quickly to, potentially disturbing underwater sound than do cetaceans, and generally seem to be less responsive to exposure to industrial sound than most cetaceans. Please see Appendices B and C of Southall *et al.* (2007) and Gomez *et al.* (2016) for reviews of studies involving marine mammal behavioral responses to sound.

Habituation can occur when an animal's response to a stimulus wanes with repeated exposure, usually in the absence of unpleasant associated events (Wartzok *et al.,* 2004). Animals are most likely to habituate to sounds that are predictable and unvarying. It is important to note that habituation is appropriately considered as a ''progressive reduction in response to stimuli that are perceived as neither aversive nor beneficial,'' rather than as, more generally, moderation in response to human disturbance (Bejder *et al.,* 2009). The opposite process is sensitization, when an unpleasant experience leads to subsequent responses, often in the form of avoidance, at a lower level of exposure.

As noted above, behavioral state may affect the type of response. For example, animals that are resting may show greater behavioral change in response to disturbing sound levels than animals that are highly motivated to remain in an area for feeding (Richardson *et al.,* 1995; Wartzok *et al.,* 2004; National Research Council (NRC), 2005). Controlled experiments with captive marine mammals have showed pronounced behavioral reactions, including avoidance of loud sound sources (Ridgway *et al.,* 1997; Finneran *et al.,* 2003). Observed responses of wild marine mammals to loud pulsed sound sources (*e.g.,* seismic airguns) have been varied but often consist of avoidance behavior or other behavioral changes (Richardson *et al.,* 1995; Morton and Symonds, 2002; Nowacek *et al.,* 2007).

Available studies show wide variation in response to underwater sound; therefore, it is difficult to predict specifically how any given sound in a particular instance might affect marine mammals perceiving the signal. If a marine mammal does react briefly to an underwater sound by changing its behavior or moving a small distance, the impacts of the change are unlikely to be significant to the individual, let alone the stock or population. However, if a sound source displaces marine mammals from an important feeding or breeding area for a prolonged period, impacts on individuals and populations could be significant (*e.g.,* Lusseau and Bejder, 2007; Weilgart, 2007; NRC, 2005). However, there are broad categories of potential response, which we describe in greater detail here, that include alteration of dive behavior, alteration of foraging behavior, effects to breathing, interference with or alteration of vocalization, avoidance, and flight.

Changes in dive behavior can vary widely and may consist of increased or decreased dive times and surface intervals as well as changes in the rates of ascent and descent during a dive (*e.g.,* Frankel and Clark, 2000; Costa *et al.,* 2003; Ng and Leung, 2003; Nowacek *et al.,* 2004; Goldbogen *et al.,* 2013a, 2013b). Variations in dive behavior may reflect interruptions in biologically significant activities (*e.g.,* foraging) or they may be of little biological significance. The impact of an alteration to dive behavior resulting from an acoustic exposure depends on what the animal is doing at the time of the exposure and the type and magnitude of the response.

Disruption of feeding behavior can be difficult to correlate with anthropogenic sound exposure, so it is usually inferred by observed displacement from known foraging areas, the appearance of secondary indicators (*e.g.,* bubble nets or sediment plumes), or changes in dive behavior. However, acoustic and movement bio-logging tools have been used in some cases, to infer responses of feeding to anthropogenic noise. For example, Blair *et al.* (2016) reported significant effects on humpback whale foraging behavior in Stellwagen Bank in response to ship noise including slower descent rates, and fewer side-rolling events per dive with increasing ship nose. In addition, Wisniewska *et al.* (2018) reported that tagged harbor porpoises demonstrated fewer prey capture attempts when encountering occasional high-noise levels resulting from vessel noise as well as more vigorous fluking, interrupted foraging, and cessation of echolocation signals observed in response to some high-noise vessel passes.

In response to playbacks of vibratory pile driving sounds, captive bottlenose dolphins showed changes in target detection and number of clicks used for

a trained echolocation task (Branstetter *et al.* 2018). Similarly, harbor porpoises trained to collect fish during playback of impact pile driving sounds also showed potential changes in behavior and task success, though individual differences were prevalent (Kastelein *et al.* 2019d). As for other types of behavioral response, the frequency, duration, and temporal pattern of signal presentation, as well as differences in species sensitivity, are likely contributing factors to differences in response in any given circumstance (*e.g.,* Croll *et al.,* 2001; Nowacek *et al.,* 2004; Madsen *et al.,* 2006; Yazvenko *et al.,* 2007). A determination of whether foraging disruptions incur fitness consequences would require information on or estimates of the energetic requirements of the affected individuals and the relationships among prey availability, foraging effort and success, and the life history stage(s) of the animal.

Variations in respiration naturally vary with different behaviors and alterations to breathing rate as a function of acoustic exposure can be expected to co-occur with other behavioral reactions, such as a flight response or an alteration in diving. However, respiration rates in and of themselves may be representative of annoyance or an acute stress response. Various studies have shown that respiration rates may either be unaffected or could increase, depending on the species and signal characteristics, again highlighting the importance in understanding species differences in the tolerance of underwater noise when determining the potential for impacts resulting from anthropogenic sound exposure (*e.g.,* Kastelein *et al.,* 2001, 2005, 2006; Gailey *et al.,* 2007). For example, harbor porpoise' respiration rate increased in response to pile driving sounds at and above a received broadband SPL of 136 dB (zero-peak SPL: 151 dB re 1 µPa; SEL of a single strike: 127 dB re 1 μPa^2 -s) (Kastelein *et al.,* 2013).

Avoidance is the displacement of an individual from an area or migration path as a result of the presence of a sound or other stressors, and is one of the most obvious manifestations of disturbance in marine mammals (Richardson *et al.,* 1995). For example, gray whales are known to change direction—deflecting from customary migratory paths—in order to avoid noise from seismic surveys (Malme *et al.,* 1984). Avoidance may be short-term, with animals returning to the area once the noise has ceased (*e.g.,* Bowles *et al.,* 1994; Goold, 1996; Stone *et al.,* 2000; Morton and Symonds, 2002; Gailey *et al.,* 2007). Longer-term displacement is possible, however, which may lead to changes in abundance or distribution patterns of the affected species in the affected region if habituation to the presence of the sound does not occur (*e.g.,* Blackwell *et al.,* 2004; Bejder *et al.,* 2006; Teilmann *et al.,* 2006).

A flight response is a dramatic change in normal movement to a directed and rapid movement away from the perceived location of a sound source. The flight response differs from other avoidance responses in the intensity of the response (*e.g.,* directed movement, rate of travel). Relatively little information on flight responses of marine mammals to anthropogenic signals exist, although observations of flight responses to the presence of predators have occurred (Connor and Heithaus, 1996; Bowers *et al.,* 2018). The result of a flight response could range from brief, temporary exertion and displacement from the area where the signal provokes flight to, in extreme cases, marine mammal strandings (England *et al.,* 2001). However, it should be noted that response to a perceived predator does not necessarily invoke flight (Ford and Reeves, 2008), and whether individuals are solitary or in groups may influence the response.

Behavioral disturbance can also impact marine mammals in more subtle ways. Increased vigilance may result in costs related to diversion of focus and attention (*i.e.,* when a response consists of increased vigilance, it may come at the cost of decreased attention to other critical behaviors such as foraging or resting). These effects have generally not been demonstrated for marine mammals, but studies involving fishes and terrestrial animals have shown that increased vigilance may substantially reduce feeding rates (*e.g.,* Beauchamp and Livoreil, 1997; Fritz *et al.,* 2002; Purser and Radford, 2011). In addition, chronic disturbance can cause population declines through reduction of fitness (*e.g.,* decline in body condition) and subsequent reduction in reproductive success, survival, or both (*e.g.,* Harrington and Veitch, 1992; Daan *et al.,* 1996; Bradshaw *et al.,* 1998). However, Ridgway *et al.* (2006) reported that increased vigilance in bottlenose dolphins exposed to sound over a 5-day period did not cause any sleep deprivation or stress effects.

Many animals perform vital functions, such as feeding, resting, traveling, and socializing, on a diel cycle (24-hour cycle). Disruption of such functions resulting from reactions to stressors such as sound exposure are more likely to be significant if they last more than one diel cycle or recur on subsequent days (Southall *et al.,* 2007). Consequently, a behavioral response lasting less than 1 day and not recurring on subsequent days is not considered particularly severe unless it could directly affect reproduction or survival (Southall *et al.,* 2007). Note that there is a difference between multi-day substantive (*i.e.,* meaningful) behavioral reactions and multi-day anthropogenic activities. For example, just because an activity lasts for multiple days does not necessarily mean that individual animals are either exposed to activity-related stressors for multiple days or, further, exposed in a manner resulting in sustained multi-day substantive behavioral responses.

Stress Responses—An animal's perception of a threat may be sufficient to trigger stress responses consisting of some combination of behavioral responses, autonomic nervous system responses, neuroendocrine responses, or immune responses (*e.g.,* Seyle, 1950; Moberg, 2000). In many cases, an animal's first and sometimes most economical (in terms of energetic costs) response is behavioral avoidance of the potential stressor. Autonomic nervous system responses to stress typically involve changes in heart rate, blood pressure, and gastrointestinal activity. These responses have a relatively short duration and may or may not have a significant long-term effect on an animal's fitness.

Neuroendocrine stress responses often involve the hypothalamus-pituitary-adrenal system. Virtually all neuroendocrine functions that are affected by stress—including immune competence, reproduction, metabolism, and behavior—are regulated by pituitary hormones. Stress-induced changes in the secretion of pituitary hormones have been implicated in failed reproduction, altered metabolism, reduced immune competence, and behavioral disturbance (*e.g.,* Moberg, 1987; Blecha, 2000). Increases in the circulation of glucocorticoids are also equated with stress (Romano *et al.,* 2004).

The primary distinction between stress (which is adaptive and does not normally place an animal at risk) and ''distress'' is the cost of the response. During a stress response, an animal uses glycogen stores that can be quickly replenished once the stress is alleviated. In such circumstances, the cost of the stress response would not pose serious fitness consequences. However, when an animal does not have sufficient energy reserves to satisfy the energetic costs of a stress response, energy resources must be diverted from other functions. This state of distress will last until the animal replenishes its

energetic reserves sufficient to restore normal function.

Relationships between these physiological mechanisms, animal behavior, and the costs of stress responses are well-studied through controlled experiments and for both laboratory and free-ranging animals (*e.g.,* Holberton *et al.,* 1996; Hood *et al.,* 1998; Jessop *et al.,* 2003; Krausman *et al.,* 2004; Lankford *et al.,* 2005). Stress responses due to exposure to anthropogenic sounds or other stressors and their effects on marine mammals have also been reviewed (Fair and Becker, 2000; Romano *et al.,* 2002b) and, more rarely, studied in wild populations (*e.g.,* Romano *et al.,* 2002a). For example, Rolland *et al.* (2012) found that noise reduction from reduced ship traffic in the Bay of Fundy was associated with decreased stress in North Atlantic right whales. These and other studies lead to a reasonable expectation that some marine mammals would experience physiological stress responses upon exposure to acoustic stressors and that it is possible that some of these would be classified as ''distress.'' In addition, any animal experiencing TTS would likely also experience stress responses (NRC, 2003), however distress is an unlikely result of this project based on observations of marine mammals during previous, similar projects in the area.

Auditory Masking—Since many marine mammals rely on sound to find prey, moderate social interactions, and facilitate mating (Tyack, 2008), noise from anthropogenic sound sources can interfere with these functions, but only if the noise spectrum overlaps with the hearing sensitivity of the receiving marine mammal (Southall *et al.,* 2007; Clark *et al.,* 2009; Hatch *et al.,* 2012). Chronic exposure to excessive, though not high-intensity, noise could cause masking at particular frequencies for marine mammals that utilize sound for vital biological functions (Clark *et al.,* 2009). Acoustic masking is when other noises such as from human sources interfere with an animal's ability to detect, recognize, or discriminate between acoustic signals of interest (*e.g.,* those used for intraspecific communication and social interactions, prey detection, predator avoidance, navigation) (Richardson *et al.,* 1995; Erbe *et al.,* 2016). Therefore, under certain circumstances, marine mammals whose acoustical sensors or environment are being severely masked could also be impaired from maximizing their performance fitness in survival and reproduction. The ability of a noise source to mask biologically important sounds depends on the characteristics of both the noise source and the signal of interest (*e.g.,* signal-to-noise ratio, temporal variability, direction), in relation to each other and to an animal's hearing abilities (*e.g.,* sensitivity, frequency range, critical ratios, frequency discrimination, directional discrimination, age or TTS hearing loss), and existing ambient noise and propagation conditions (Hotchkin and Parks, 2013).

Marine mammals vocalize for different purposes and across multiple modes, such as whistling, echolocation click production, calling, and singing. Changes in vocalization behavior in response to anthropogenic noise can occur for any of these modes and may result from a need to compete with an increase in background noise or may reflect increased vigilance or a startle response. For example, in the presence of potentially masking signals, humpback whales and killer whales have been observed to increase the length of their songs (Miller *et al.,* 2000; Fristrup *et al.,* 2003) or vocalizations (Foote *et al.,* 2004), respectively, while North Atlantic right whales (*Eubalaena glacialis*) have been observed to shift the frequency content of their calls upward while reducing the rate of calling in areas of increased anthropogenic noise (Parks *et al.,* 2007). Fin whales have also been documented lowering the bandwidth, peak frequency, and center frequency of their vocalizations under increased levels of background noise from large vessels (Castellote *et al.* 2012). Other alterations to communication signals have also been observed. For example, gray whales, in response to playback experiments exposing them to vessel noise, have been observed increasing their vocalization rate and producing louder signals at times of increased outboard engine noise (Dahlheim and Castellote, 2016). Alternatively, animals may cease sound production during production of aversive signals (Bowles *et al.,* 1994).

Under certain circumstances, marine mammals experiencing significant masking could also be impaired from maximizing their performance fitness in survival and reproduction. Therefore, when the coincident (masking) sound is human-made, it may be considered harassment when disrupting or altering critical behaviors. It is important to distinguish TTS and PTS, which persist after the sound exposure, from masking, which occurs during the sound exposure. Because masking (without resulting in TS) is not associated with abnormal physiological function, it is not considered a physiological effect, but rather a potential behavioral effect (though not necessarily one that would be associated with harassment).

The frequency range of the potentially masking sound is important in determining any potential behavioral impacts. For example, low-frequency signals may have less effect on high-frequency echolocation sounds produced by odontocetes but are more likely to affect detection of mysticete communication calls and other potentially important natural sounds such as those produced by surf and some prey species. The masking of communication signals by anthropogenic noise may be considered as a reduction in the communication space of animals (*e.g.,* Clark *et al.,* 2009) and may result in energetic or other costs as animals change their vocalization behavior (*e.g.,* Miller *et al.,* 2000; Foote *et al.,* 2004; Parks *et al.,* 2007; Di Iorio and Clark, 2010; Holt *et al.,* 2009). Masking can be reduced in situations where the signal and noise come from different directions (Richardson *et al.,* 1995), through amplitude modulation of the signal, or through other compensatory behaviors (Hotchkin and Parks, 2013). Masking can be tested directly in captive species (*e.g.,* Erbe, 2008), but in wild populations it must be either modeled or inferred from evidence of masking compensation. There are few studies addressing real-world masking sounds likely to be experienced by marine mammals in the wild (*e.g.,* Branstetter *et al.,* 2013).

Marine mammals at or near the proposed USCG project site may be exposed to anthropogenic noise which may be a source of masking. Vocalization changes may result from a need to compete with an increase in background noise and include increasing the source level, modifying the frequency, increasing the call repetition rate of vocalizations, or ceasing to vocalize in the presence of increased noise (Hotchkin and Parks, 2013). For example, in response to loud noise, beluga whales may shift the frequency of their echolocation clicks to prevent masking by anthropogenic noise (Tyack, 2000; Eickmeier and Vallarta, 2022).

Masking occurs in the frequency band or bands that animals utilize and is more likely to occur in the presence of broadband, relatively continuous noise sources such as vibratory pile driving. Energy distribution of pile driving covers a broad frequency spectrum, and sound from pile driving would be within the audible range of pinnipeds and cetaceans present in the proposed action area. While some construction during the USCG's activities may mask

some acoustic signals that are relevant to the daily behavior of marine mammals, the short-term duration and limited areas affected make it very unlikely that the fitness of individual marine mammals would be impacted.

Airborne Acoustic Effects—Pinnipeds that occur near the project site could be exposed to airborne sounds associated with construction activities that have the potential to cause behavioral harassment, depending on their distance from these activities. Airborne noise would primarily be an issue for pinnipeds that are swimming or hauled out near the project site within the range of noise levels elevated above airborne acoustic harassment criteria. Although pinnipeds are known to haul-out regularly on man-made objects, we believe that incidents of take resulting solely from airborne sound are unlikely given there are no known pinniped haulout or pupping sites within the close vicinity of the proposed project area; the nearest known pinniped haulout is located approximately 400 m from the project site for harbor seals. The USCG evaluated the potential for airborne acoustic effects and these known pinniped sites were outside the area of disturbance. Cetaceans are not expected to be exposed to airborne sounds that would result in harassment as defined under the MMPA.

We recognize that pinnipeds in the water could be exposed to airborne sound that may result in behavioral harassment when looking with their heads above water. Most likely, airborne sound would cause behavioral responses similar to those discussed above in relation to underwater sound. For instance, anthropogenic sound could cause hauled-out pinnipeds to exhibit changes in their normal behavior, such as reduction in vocalizations or cause them to temporarily abandon the area and move further from the source. However, these animals would previously have been ''taken'' because of exposure to underwater sound above the behavioral harassment thresholds, which are in all cases larger than those associated with airborne sound. Thus, the behavioral harassment of these animals is already accounted for in these estimates of potential take. Therefore, we do not believe that authorization of incidental take resulting from airborne sound for pinnipeds is warranted, and airborne sound is not discussed further.

Marine Mammal Habitat Effects

The project would occur near an active marine commercial and industrial area. Construction activities at the Station Siuslaw River could have localized, temporary impacts on marine mammal habitat and their prey by increasing in-water SPLs and slightly decreasing water quality. Increased noise levels may affect acoustic habitat (see *Auditory Masking* discussion above) and adversely affect marine mammal prey in the vicinity of the project area (see discussion below). During vibratory and impact pile driving, elevated levels of underwater noise would ensonify a portion of the Siuslaw River, where both fish and some mammals occur and could affect foraging success.

Construction activities are of short duration and would likely have temporary impacts on marine mammal habitat through increases in underwater and airborne sound. These sounds would not be detectable at the nearest known sea lion and harbor sea haulouts, which are beyond the maximum distance of predicted in-air acoustical disturbance.

Water Quality—Temporary and localized reduction in water quality would occur as a result of in-water construction activities. Most of this effect would occur during the installation and removal of piles when bottom sediments are disturbed. The installation and removal of piles would disturb bottom sediments and may cause a temporary increase in suspended sediment in the project area. During pile removal, sediment attached to the pile moves vertically through the water column until gravitational forces cause it to slough off under its own weight. The small resulting sediment plume is expected to settle out of the water column within a few hours. Studies of the effects of turbid water on fish (marine mammal prey) suggest that concentrations of suspended sediment can reach thousands of milligrams per liter before an acute toxic reaction is expected (Burton, 1993).

Effects to turbidity and sedimentation are expected to be short-term, minor, and localized. Suspended sediments in the water column should dissipate and quickly return to background levels in all construction scenarios. Turbidity within the water column has the potential to reduce the level of oxygen in the water and irritate the gills of prey fish species in the proposed project area. However, turbidity plumes associated with the project would be temporary and localized, and fish in the proposed project area would be able to move away from and avoid the areas where plumes may occur. Therefore, it is expected that the impacts on prey fish species from turbidity, and therefore on marine mammals, would be minimal and temporary. In general, the area likely impacted by the proposed construction activities is relatively small compared to the available marine mammal habitat off the Coast of Oregon, and does not include any areas of particular importance.

In-Water Construction Effects on Potential Prey—Sound may affect marine mammals through impacts on the abundance, behavior, or distribution of prey species (*e.g.,* crustaceans, cephalopods, fish, zooplankton). Marine mammal prey varies by species, season, and location and, for some, is not well documented. Here, we describe studies regarding the effects of noise on known marine mammal prey.

Fish utilize the soundscape and components of sound in their environment to perform important functions such as foraging, predator avoidance, mating, and spawning (*e.g.,* Zelick *et al.,* 1999; Fay, 2009). Depending on their hearing anatomy and peripheral sensory structures, which vary among species, fishes hear sounds using pressure and particle motion sensitivity capabilities and detect the motion of surrounding water (Fay *et al.,* 2008). The potential effects of noise on fishes depends on the overlapping frequency range, distance from the sound source, water depth of exposure, and species-specific hearing sensitivity, anatomy, and physiology. Key impacts to fishes may include behavioral responses, hearing damage, barotrauma (pressure-related injuries), and mortality.

Fish react to sounds which are especially strong and/or intermittent low-frequency sounds, and behavioral responses such as flight or avoidance are the most likely effects. Short duration, sharp sounds can cause overt or subtle changes in fish behavior and local distribution. The reaction of fish to noise depends on the physiological state of the fish, past exposures, motivation (*e.g.,* feeding, spawning, migration), and other environmental factors. Hastings and Popper (2005) identified several studies that suggest fish may relocate to avoid certain areas of sound energy. Additional studies have documented effects of pile driving on fish, although several are based on studies in support of large, multiyear bridge construction projects (*e.g.,* Scholik and Yan, 2001, 2002; Popper and Hastings, 2009). Several studies have demonstrated that impulse sounds might affect the distribution and behavior of some fishes, potentially impacting foraging opportunities or increasing energetic costs (*e.g.,* Fewtrell and McCauley, 2012; Pearson *et al.,* 1992; Skalski *et al.,* 1992; Santulli *et al.,* 1999; Paxton *et al.,* 2017). However, some studies have

shown no or slight reaction to impulse sounds (*e.g.,* Pena *et al.,* 2013; Wardle *et al.,* 2001; Jorgenson and Gyselman, 2009; Cott *et al.,* 2012). More commonly, though, the impacts of noise on fish are temporary.

SPLs of sufficient strength have been known to cause injury to fish and fish mortality. However, in most fish species, hair cells in the ear continuously regenerate and loss of auditory function likely is restored when damaged cells are replaced with new cells. Halvorsen *et al.* (2012a) showed that a TTS of 4–6 dB was recoverable within 24 hours for one species. Impacts would be most severe when the individual fish is close to the source and when the duration of exposure is long. Injury caused by barotrauma can range from slight to severe and can cause death, and is most likely for fish with swim bladders. Barotrauma injuries have been documented during controlled exposure to impact pile driving (Halvorsen *et al.,* 2012b; Casper *et al.,* 2013).

The greatest potential impact to fishes during construction would occur during impact pile installation of 24-in steel pipe piles, which is estimated to occur on up to 28 days for a maximum of 1,230 strikes per day. In-water construction activities would only occur during daylight hours, allowing fish to forage and transit the project area in the evening. Vibratory pile driving would possibly elicit behavioral reactions from fishes such as temporary avoidance of the area but is unlikely to cause injuries to fishes or have persistent effects on local fish populations. Construction also would have minimal permanent and temporary impacts on benthic invertebrate species, a marine mammal prey source. In addition, it should be noted that the area in question is low-quality habitat since it is already highly developed and experiences a high level of anthropogenic noise from normal operations and other vessel traffic. In general, any negative impacts on marine mammal prey species are expected to be minor and temporary.

Fish populations in the proposed project area that serve as marine mammal prey could be temporarily affected by noise from pile installation and removal. The frequency range in which fishes generally perceive underwater sounds is 50 to 2,000 Hz, with peak sensitivities below 800 Hz (Popper and Hastings, 2009). Fish behavior or distribution may change, especially with strong and/or intermittent sounds that could harm fishes. High underwater SPLs have been documented to alter behavior, cause hearing loss, and injure or kill individual fish by causing serious internal injury (Hastings and Popper, 2005).

The most likely impact to fish from pile driving activities in the project area would be temporary behavioral avoidance of the area. The duration of fish avoidance of an area after pile driving stops is unknown, but a rapid return to normal recruitment, distribution and behavior is anticipated. In general, impacts to marine mammal prey species are expected to be minor and temporary due to the expected short daily duration of individual pile driving events. Additionally, ODFW has a pile driving construction window (November 1, 2025 through February 28, 2026) to further reduce effects of the proposed project on fish species.

In-Water Construction Effects on Potential Foraging Habitat—The area likely impacted by the project is relatively small compared to the available habitat on the coast of Oregon and does not include any BIAs or ESA-designated critical habitat. The total area affected by pile installation and removal and the new footprint is small compared to the vast foraging area available to marine mammals in the area. Pile driving and removal at the project site would not obstruct long-term movements or migration of marine mammals.

Avoidance by potential prey (*i.e.,* fish) of the immediate area due to the temporary loss of this foraging habitat is also possible. The duration of fish and marine mammal avoidance of this area after pile driving stops is unknown, but a rapid return to normal recruitment, distribution, and behavior is anticipated. Any behavioral avoidance by fish or marine mammals of the disturbed area would still leave significantly large areas of fish and marine mammal foraging habitat in the nearby vicinity.

In summary, given the short daily duration of sound associated with individual pile driving events and the relatively small areas being affected, pile driving activities associated with the proposed action are not likely to have a permanent adverse effect on any fish habitat, or populations of fish species. Any behavioral avoidance by fish of the disturbed area would still leave significantly large areas of fish and marine mammal foraging habitat in the nearby vicinity. Thus, we conclude that impacts of the specified activity are not likely to have more than short-term adverse effects on any prey habitat or populations of prey species. Further, any impacts to marine mammal habitat are not expected to result in significant or long-term consequences for individual marine mammals, or to contribute to adverse impacts on their populations.

Estimated Take of Marine Mammals

This section provides an estimate of the number of incidental takes proposed for authorization through the IHA, which will inform NMFS' consideration of ''small numbers,'' the negligible impact determinations, and impacts on subsistence uses.

Harassment is the only type of take expected to result from these activities. Except with respect to certain activities not pertinent here, section 3(18) of the MMPA defines ''harassment'' as any act of pursuit, torment, or annoyance, which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment).

Authorized takes would primarily be by Level B harassment, as use of the acoustic sources (*i.e.,* pile driving) has the potential to result in disruption of behavioral patterns for individual marine mammals. There is also some potential for auditory injury (AUD INJ) (Level A harassment) to result, primarily for very high frequency species and phocids because predicted AUD INJ zones are larger than for high-frequency species and otariids. AUD INJ is unlikely to occur for high-frequency species and otariids. The proposed mitigation and monitoring measures are expected to minimize the severity of the taking to the extent practicable. As described previously, no serious injury or mortality is anticipated or proposed to be authorized for this activity. Below we describe how the proposed take numbers are estimated.

For acoustic impacts, generally speaking, we estimate take by considering: (1) acoustic criteria above which NMFS believes the best available science indicates marine mammals would likely be behaviorally harassed or incur some degree of AUD INJ; (2) the area or volume of water that would be ensonified above these levels in a day; (3) the density or occurrence of marine mammals within these ensonified areas; and, (4) the number of days of activities. We note that while these factors can contribute to a basic calculation to provide an initial prediction of potential takes, additional information that can qualitatively inform take estimates is also sometimes available (*e.g.,* previous monitoring results or average group

size). Below, we describe the factors considered here in more detail and present the proposed take estimates.

Acoustic Criteria

NMFS recommends the use of acoustic criteria that identify the received level of underwater sound above which exposed marine mammals would be reasonably expected to be behaviorally harassed (equated to Level B harassment) or to incur AUD INJ of some degree (equated to Level A harassment). We note that the criteria for AUD INJ, as well as the names of two hearing groups, have been recently updated (NMFS 2024) as reflected below in the Level A Harassment section.

Level B Harassment—Though significantly driven by received level, the onset of behavioral disturbance from anthropogenic noise exposure is also informed to varying degrees by other factors related to the source or exposure context (*e.g.,* frequency, predictability, duty cycle, duration of the exposure, signal-to-noise ratio, distance to the source), the environment (*e.g.,* bathymetry, other noises in the area, predators in the area), and the receiving animals (hearing, motivation, experience, demography, life stage, depth) and can be difficult to predict (*e.g.,* Southall *et al.,* 2007, 2021, Ellison *et al.,* 2012). Based on what the available science indicates and the practical need to use a threshold based on a metric that is both predictable and measurable for most activities, NMFS typically uses a generalized acoustic threshold based on received level to estimate the onset of behavioral harassment. NMFS generally predicts that marine mammals are likely to be behaviorally harassed in a manner considered to be Level B harassment when exposed to underwater anthropogenic noise above root-mean-squared pressure received levels (RMS SPL) of 120 dB (referenced to 1 micropascal (re 1 μPa)) for continuous (*e.g.,* vibratory pile driving, drilling) and above RMS SPL 160 dB re 1 μPa for non-explosive impulsive (*e.g.,* seismic airguns) or intermittent (*e.g.,* scientific sonar) sources. Generally speaking, Level B harassment take estimates based on these behavioral harassment thresholds are expected to include any likely takes by TTS as, in most cases, the likelihood of TTS occurs at distances from the source less than those at which behavioral harassment is likely. TTS of a sufficient degree can manifest as behavioral harassment, as reduced hearing sensitivity and the potential reduced opportunities to detect important signals (conspecific communication, predators, prey) may result in changes in behavior patterns that would not otherwise occur.

USCG's proposed activity includes the use of continuous (vibratory pile driving) and impulsive (impact pile driving) sources, and therefore the RMS SPL thresholds of 120 and 160 dB re 1 μPa are applicable.

Level A harassment—NMFS' Updated Technical Guidance for Assessing the Effects of Anthropogenic Sound on Marine Mammal Hearing (Version 3.0) (Updated Technical Guidance, 2024) identifies dual criteria to assess AUD INJ (Level A harassment) to five different underwater marine mammal groups (based on hearing sensitivity) as a result of exposure to noise from two different types of sources (impulsive or non-impulsive). USCG's proposed activity includes the use of impulsive (impact pile driving) and non-impulsive (vibratory pile driving) sources.

The 2024 Updated Technical Guidance criteria include both updated thresholds and updated weighting functions for each hearing group. The thresholds are provided in the table below. The references, analysis, and methodology used in the development of the criteria are described in NMFS' 2024 Updated Technical Guidance, which may be accessed at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-acoustic-technical-guidance-other-acoustic-tools.*

TABLE 4—THRESHOLDS IDENTIFYING THE ONSET OF AUDITORY INJURY

Hearing group	AUD INJ onset acoustic thresholds * (received level)	
	Impulsive	Non-impulsive
Low-Frequency (LF) Cetaceans	*Cell 1:* $L_{pk,flat}$: 222 dB; $L_{E,LF,24h}$: 183 dB	*Cell 2:* $L_{E,LF,24h}$: 197 dB.
High-Frequency (HF) Cetaceans	*Cell 3:* $L_{pk,flat}$: 230 dB; $L_{E,HF,24h}$: 193 dB	*Cell 4:* $L_{E,HF,24h}$: 201 dB.
Very High-Frequency (VHF) Cetaceans	*Cell 5:* $L_{pk,flat}$: 202 dB; $L_{E,VHF,24h}$: 159 dB	*Cell 6:* $L_{E,VHF,24h}$: 181 dB.
Phocid Pinnipeds (PW) (Underwater)	*Cell 7:* $L_{pk,flat}$: 223 dB; $L_{E,PW,24h}$: 183 dB	*Cell 8:* $L_{E,PW,24h}$: 195 dB.
Otariid Pinnipeds (OW) (Underwater)	*Cell 9:* $L_{pk,flat}$: 230 dB; $L_{E,OW,24h}$: 185 dB	*Cell 10:* $L_{E,OW,24h}$: 199 dB.

* Dual metric criteria for impulsive sounds: Use whichever criteria results in the larger isopleth for calculating AUD INJ onset. If a non-impulsive sound has the potential of exceeding the peak sound pressure level criteria associated with impulsive sounds, the PK SPL criteria are recommended for consideration for non-impulsive sources.

Note: Peak sound pressure level ($L_{p,0\text{-}pk}$) has a reference value of 1 μPa, and weighted cumulative sound exposure level ($L_{E,p}$) has a reference value of 1 μPa^2s. In this table, criteria are abbreviated to be more reflective of International Organization for Standardization (ISO) standards (ISO 2017; ISO 2020). The subscript "flat" is being included to indicate peak sound pressure are flat weighted or unweighted within the generalized hearing range of marine mammals underwater (*i.e.,* 7 Hz to 165 kHz). The subscript associated with cumulative sound exposure level criteria indicates the designated marine mammal auditory weighting function (LF, HF, and VHF cetaceans, and PW and OW pinnipeds) and that the recommended accumulation period is 24 hours. The weighted cumulative sound exposure level criteria could be exceeded in a multitude of ways (i.e., varying exposure levels and durations, duty cycle). When possible, it is valuable for action proponents to indicate the conditions under which these criteria will be exceeded.

Ensonified Area

Here, we describe operational and environmental parameters of the activity that are used in estimating the area ensonified above the acoustic thresholds, including source levels and transmission loss.

The USCG opted to perform its own acoustic modeling for the Level A and Level B harassment isopleths using dBSea, a software developed by Marshall Day Acoustics for the modeling of underwater sound propagation in a variety of environments. Use of this model allowed USCG to incorporate site-specific information, therefore providing more accurate results than other more generalized tools. dBSea was also used in a previous construction project by the USCG (88 FR 77985, November 11, 2023). NMFS has reviewed USCG's modeling and determined that it is acceptable for use here.

Marshall Day Acoustics built the model by importing bathymetry data and placing noise sources in the

environment. Each source can consist of equipment chosen from either the standard or the user-defined databases. Noise mitigation methods may also be included. The user has control over the seabed and water properties including sound speed profile, temperature, salinity, and current. To examine results in more detail, the model allows users to plot noise levels in cross sections, or extract a detailed spectrum at any point in the calculation area. USCG calculated noise levels to the deepest depth within the project area.

USCG derived representative acoustic modeling scenarios based on descriptions of the expected construction activities through consultations between the USCG project design and engineering teams. The team modeled activities that are expected to result in take of marine mammals (*i.e.,* in-water pile driving and removal) at a location with characteristics representative of the project site. The USCG modeled the full range of potential water depths in the project area at a single representative location. As described in the *Detailed Description of the Specified Activity* section above, USCG may install a variety of pile types and sizes, and the exact pile sizes have not yet been determined. However, in an effort to avoid underestimating potential impacts to marine mammals, USCG conducted its analysis using the maximum possible pile size for each project use. Table 5 lists the sound source levels for each activity that USCG incorporated into the model. Table 6 shows the model-estimated Level A and Level B harassment isopleths for the proposed activities. Please refer to the Acoustic Assessment included in USCG's IHA application for additional details on the modeling principles and assumptions and a summary of construction and operational scenarios included in the underwater acoustic modeling analysis.

TABLE 5—ESTIMATES OF UNDERWATER SOUND SOURCES * GENERATED DURING VIBRATORY AND IMPACT PILE INSTALLATION AND VIBRATORY PILE REMOVAL

Pile driving method	Pile type and size	db RMS	dB peak	db SEL	Reference
Impact installation	Steel pipe pile 24-in	194	207	178	Caltrans 2020.
	H-pile	178	200	166	Caltrans 2020.
Vibratory installation	Steel pipe pile 24-in	165	.....	.....	Caltrans 2020.
Vibratory removal	Timber	162	.....	.....	Caltrans 2020.

Note: dB peak = peak sound level; rms = root mean square; SEL = sound exposure level.
* All sound levels are referenced at 10 m.

TABLE 6—LEVEL A AND LEVEL B HARASSMENT ISOPLETHS

Size and type	Level A isopleth (m)			Level B isopleth (m)
	VHF	Phocids	Otariids	
Vibratory Installation and Removal				
24-in steel pipe pile installation	58	39	17	1,117
Timber removal	16	14	.....	1,106
Impact Installation				
24-in steel pipe pile	335	256	95	717
H-pile	96	35	18	110

Marine Mammal Occurrence and Take Calculation and Estimation

In this section, we provide information about the occurrence of marine mammals, including density or other relevant information which would inform the take calculations and describe how the information provided is synthesized to produce a quantitative estimate of the take that is reasonably likely to occur and proposed for authorization. The USCG proposed using marine mammal species densities from the Pacific Navy Marine Species Density Database to estimate take for marine mammals. This database incorporates analyzed literature and research for marine mammal density estimates per season for regions throughout the U.S., and the USCG based their take estimates on regionally available population density estimates and site-specific knowledge. Although this database provides densities for all species present in the action area, the densities are based on offshore abundance and not directly relevant to occurrence within in the Siuslaw River. Following careful review of the analysis presented by the USCG in its application, including marine mammal occurrence data, NMFS has determined that different information inputs than those selected by the USCG, represent the best available scientific information for marine mammal abundance in the action area. These selections are discussed in greater detail below.

For all species, the numbers of individuals are based on average group sizes from Bates *et al.,* 2023, that described marine mammal occurrences near Coos Bay, Oregon in 2014 and 2015. While Coos Bay is south of the action area, this area is more representative of the action area within the Siuslaw River than the offshore data in the application. We derived potential take estimates from the average group sizes recorded over the specified period in Bates *et al.,* 2023 and used the occurrences of these sightings during the surveys, along with sightings in OBIS–SEAMAP around the action area, to estimate our sighing rates in the project vicinity (table 7).

TABLE 7—SPECIES RATE IN THE ACTION AREA

Species	Average group size	Sighting rate for action area
California sea lion	1.4	Group every other day.
Steller sea lion	1.8	Group every other day.
Harbor seal	1	2 groups/day.
Harbor porpoise	1.3	Group every other day.

To calculate the total estimated takes by Level B harassment, we multiplied the estimated days of activity by the associated average group size and sighting rate for each species (table 7). There is also some potential for take by Level A harassment of harbor seal and harbor porpoise during impact pile driving due to the largest zones of each species being greater than the shutdown zones and because of the cryptic nature and assumed lower detectability of these species.

Based on the relative proportion of the area expected to be ensonified above the Level A harassment threshold for phocids from impact pile driving (approximately 0.14 square kilometers (km^2)) to the area ensonified above the Level B harassment threshold (0.59 km^2 for impact pile driving), we estimated that of the total number of harbor seals that may be located within the greater Level B harassment zone, approximately 24 percent would enter the smaller Level A harassment zone (256 m) and stay in the zone long enough to incur auditory injury. Thus, we assume that 24 percent of the total estimated takes of harbor seals (96 individuals; see table 8) would be by Level A harassment. Therefore, we are proposing to authorize 23 takes of harbor seals by Level A harassment and 73 takes by Level B harassment (table 8). Take by Level A harassment for harbor porpoise was calculated in the same way as for harbor seals. For otarrids, we are not proposing to authorize take by Level A harassment as the shutdown zones are much larger than the Level A harassment zones for most activities, and the likely occurrence of otariids in the action area is much lower than for harbor porpoise and harbor seals.

TABLE 8—PROPOSED TAKE OF MARINE MAMMALS BY LEVEL A AND LEVEL B HARASSMENT BY SPECIES AND STOCK AND PERCENT OF STOCK ABUNDANCE

Species	Stock	Proposed take by Level A harassment	Proposed take by Level B harassment	Total proposed take	Percent of stock taken
California sea lion	U.S	0	34	34	<0.1
Steller sea lion	Eastern	0	43	43	0.1
Harbor seal	Oregon/Washington Coast	23	73	96	0.4
Harbor porpoise	Central Oregon	11	20	31	0.4

Proposed Mitigation

In order to issue an IHA under section 101(a)(5)(D) of the MMPA, NMFS must set forth the permissible methods of taking pursuant to the activity, and other means of effecting the least practicable impact on the species or stock and its habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of the species or stock for taking for certain subsistence uses. NMFS regulations require applicants for incidental take authorizations to include information about the availability and feasibility (economic and technological) of equipment, methods, and manner of conducting the activity or other means of effecting the least practicable adverse impact upon the affected species or stocks, and their habitat (50 CFR 216.104(a)(11)).

In evaluating how mitigation may or may not be appropriate to ensure the least practicable adverse impact on species or stocks and their habitat, as well as subsistence uses where applicable, NMFS considers two primary factors:

1. The manner in which, and the degree to which, the successful implementation of the measure(s) is expected to reduce impacts to marine mammals, marine mammal species or stocks, and their habitat. This considers the nature of the potential adverse impact being mitigated (likelihood, scope, range). It further considers the likelihood that the measure would be effective if implemented (probability of accomplishing the mitigating result if implemented as planned), the likelihood of effective implementation (probability implemented as planned), and;

2. The practicability of the measures for applicant implementation, which may consider such things as cost, and impact on operations.

USCG must ensure that construction supervisors and crews, the monitoring team, and relevant USCG staff are trained prior to the start of all pile driving activity, so that responsibilities, communication procedures, monitoring protocols, and operational procedures are clearly understood. New personnel joining during the project must be trained prior to commencing work.

Pre- and Post-Activity Monitoring

- Monitoring must take place from 30 minutes prior to initiation of pile driving activity (*i.e.,* pre-clearance monitoring) through 30 minutes post-completion of pile driving activity;
- Pre-start clearance monitoring must be conducted during periods of visibility sufficient for the lead PSO to determine that the shutdown zones indicated in table 9 are clear of marine mammals. Pile driving may commence following 30 minutes of observation when the determination is made that the shutdown zones are clear of marine mammals;

Soft Start

- USCG must use soft start techniques when impact pile driving. Soft start requires contractors to provide an initial set of three strikes at reduced energy, followed by a 30 second waiting period, then two subsequent reduced-energy strike sets. A soft start must be implemented at the start of each day's impact pile driving and at any time

following cessation of impact pile driving for a period of 30 minutes or longer; and

Shutdown Zones

USCG would establish shutdown zones for all pile driving activities. The purpose of a shutdown zone is generally to define an area within which shutdown of the activity would occur upon sighting of a marine mammal (or in anticipation of an animal entering the defined area).

If a marine mammal is observed entering or within the shutdown zones indicated in table 9, pile driving must be delayed or halted. For in-water heavy machinery activities other than pile driving, if a marine mammal comes within 10 m, work would stop and vessels would reduce speed to the minimum level required to maintain steerage and safe working conditions. A 10 m shutdown zone would also serve to protect marine mammals from physical interactions with project vessels during pile driving and other construction activities, such as barge positioning or drilling. If an activity is delayed or halted due to the presence of a marine mammal, the activity may not commence or resume until either the animal has voluntarily exited and been visually confirmed beyond the shutdown zone indicated in table 9 or 15 minutes have passed without re-detection of the animal. Construction activities must be halted upon observation of a species for which incidental take is not authorized or a species for which incidental take has been authorized but the authorized number of takes has been met entering or within the harassment zone.

All marine mammals would be monitored in the Level B harassment zones and throughout the area as far as visual monitoring can take place. If a marine mammal enters the Level B harassment zone, in-water activities would continue and the animal's presence within the estimated harassment zone would be documented.

USCG would also establish shutdown zones for all marine mammals for which take has not been authorized or for which incidental take has been authorized but the authorized number of takes has been met. These zones are equivalent to the Level B harassment zones for each activity. If a marine mammal species for which take is not authorized by this IHA enters the shutdown zone, all in-water activities would cease until the animal leaves the zone or has not been observed for at least 15 minutes, and USCG would notify NMFS about the species and precautions taken. Pile driving would proceed if the non-IHA species is observed to leave the Level B harassment zone or if 15 minutes have passed since the last observation.

If shutdown and/or clearance procedures would result in an imminent safety concern, as determined by USCG or its designated officials, the in-water activity would be allowed to continue until the safety concern has been addressed, and the animal would be continuously monitored.

TABLE 9—SHUTDOWN ZONES AND LEVEL B HARASSMENT ZONES

Activity	Minimum shutdown zone (m)			Level B harassment zone (m)
	VHF cetaceans	Phocid	Otariid	
Vibratory Removal	20	20	10	1,110
Vibratory Installation	60	40	20	1,120
Impact Installation	200	100	100	720

Protected Species Observers (PSOs)

The placement of PSOs during all construction activities (described in the Monitoring and Reporting section) would ensure that the entire shutdown zone is visible. Should environmental conditions deteriorate such that the entire shutdown zone would not be visible (*e.g.,* fog, heavy rain), pile driving would be delayed until the PSO is confident marine mammals within the shutdown zone could be detected.

The USCG must employ PSOs and establish monitoring locations as described in the application and the IHA. PSOs would monitor the full shutdown zones and the Level B harassment zones to the extent practicable. Monitoring zones provide utility for observing by establishing monitoring protocols for areas adjacent to the shutdown zones. Monitoring zones enable observers to be aware of and communicate the presence of marine mammals in the project areas outside the shutdown zones and thus prepare for a potential cessation of activity should the animal enter the shutdown zone.

Bubble Curtain

A bubble curtain must be employed during all impact pile installation. The bubble curtain must be deployed in manner guaranteed to distribute air bubbles around 100 percent of the piling perimeter for the full depth of the water column. The lowest bubble ring must be in contact with the mudline for the full circumference of the ring. The weights attached to the bottom ring must ensure 100 percent mudline contact. No parts of the ring or other objects may prevent full mudline contact. Air flow to the bubblers must be balanced around the circumference of the pile.

Based on our evaluation of USCG's proposed measures, as well as other measures considered by NMFS, NMFS has preliminarily determined that the mitigation measures provide the means effecting the least practicable impact on the affected species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance.

Proposed Monitoring and Reporting

In order to issue an IHA for an activity, section 101(a)(5)(D) of the MMPA states that NMFS must set forth requirements pertaining to the monitoring and reporting of such taking. The MMPA implementing regulations at 50 CFR 216.104(a)(13) indicate that requests for authorizations must include the suggested means of accomplishing the necessary monitoring and reporting that would result in increased knowledge of the species and of the level of taking or impacts on populations of marine mammals that are expected to be present while conducting the activities. Effective reporting is critical both to compliance as well as ensuring that the most value is obtained from the required monitoring.

Monitoring and reporting requirements prescribed by NMFS should contribute to improved understanding of one or more of the following:

- Occurrence of marine mammal species or stocks in the area in which

take is anticipated (*e.g.,* presence, abundance, distribution, density);

- Nature, scope, or context of likely marine mammal exposure to potential stressors/impacts (individual or cumulative, acute or chronic), through better understanding of: (1) action or environment (*e.g.,* source characterization, propagation, ambient noise); (2) affected species (*e.g.,* life history, dive patterns); (3) co-occurrence of marine mammal species with the activity; or (4) biological or behavioral context of exposure (*e.g.,* age, calving or feeding areas);
- Individual marine mammal responses (behavioral or physiological) to acoustic stressors (acute, chronic, or cumulative), other stressors, or cumulative impacts from multiple stressors;
- How anticipated responses to stressors impact either: (1) long-term fitness and survival of individual marine mammals; or (2) populations, species, or stocks;
- Effects on marine mammal habitat (*e.g.,* marine mammal prey species, acoustic habitat, or other important physical components of marine mammal habitat); and,
- Mitigation and monitoring effectiveness.

Visual Monitoring

Marine mammal monitoring must be conducted in accordance with the conditions in this section and the IHA. Marine mammal monitoring during pile driving activities would be conducted by PSOs meeting the following requirements:

- PSOs must be independent of the activity contractor (for example, employed by a subcontractor) and have no other assigned tasks during monitoring periods;
- At least one PSO would have prior experience performing the duties of a PSO during construction activity pursuant to a NMFS-issued incidental take authorization;
- Other PSOs may substitute relevant experience, education (degree in biological science or related field), or training for prior experience performing the duties of a PSO during construction activity pursuant to a NMFS-issued incidental take authorization; and
- Where a team of three or more PSOs is required, a lead observer or monitoring coordinator would be designated. The lead observer would be required to have prior experience performing the duties of a PSO during construction activities pursuant to a NMFS-issued incidental take authorization.

PSOs must have the following additional qualifications:

- Ability to conduct field observations and collect data according to assigned protocols;
- Experience or training in the field identification of marine mammals, including the identification of behaviors;
- Sufficient training, orientation, or experience with the construction operation to provide for personal safety during observations;
- Writing skills sufficient to prepare a report of observations including but not limited to the number and species of marine mammals observed; dates and times when in-water construction activities were conducted; dates, times and reason for implementation of mitigation (or why mitigation was not implemented when required); and marine mammal behavior; and
- Ability to communicate orally, by radio or in person, with project personnel to provide real-time information on marine mammals observed in the area as necessary.

USCG must assign a minimum of two PSOs to monitor during pile driving. One PSO must be stationed at the pile driving site, and the second PSO must be stationed at the best practicable location for monitoring the Level A and Level B harassment zones. Possible PSOs locations include the staging barges, on shore at the project site, or at the entrance to the commercial dock area at ETP. All PSOs would have access to high-quality binoculars, range finders to monitor distances, and a compass to record bearing to animals as well as radios or cells phones for maintaining contact with work crews.

Monitoring would be conducted 30 minutes before, during, and 30 minutes after all in water construction activities. In addition, PSOs would record all incidents of marine mammal occurrence, regardless of distance from activity, and would document any behavioral reactions in concert with distance from piles being driven or removed. Pile driving activities include the time to install or remove a single pile or series of piles, as long as the time elapsed between uses of the pile driving equipment is no more than 30 minutes.

USCG shall conduct briefings between construction supervisors and crews, PSOs, USCG staff prior to the start of all pile driving activities and when new personnel join the work. These briefings would explain responsibilities, communication procedures, marine mammal monitoring protocol, and operational procedures.

Reporting

A draft marine mammal monitoring report will be submitted to NMFS within 90 days after the completion of pile driving and removal activities, or 60 days prior to a requested date of issuance from any future IHAs for projects at the same location, whichever comes first. The report would include an overall description of work completed, a narrative regarding marine mammal sightings, and associated PSO data sheets. Specifically, the report must include:

- Dates and times (begin and end) of all marine mammal monitoring;
- Construction activities occurring during each daily observation period, including the number and type of piles driven or removed and by what method (*i.e.,* impact) and the total equipment duration for vibratory removal for each pile or total number of strikes for each pile (impact driving);
- PSO locations during marine mammal monitoring;
- Environmental conditions during monitoring periods (at beginning and end of PSO shift and whenever conditions change significantly), including Beaufort sea state and any other relevant weather conditions including cloud cover, fog, sun glare, and overall visibility to the horizon, and estimated observable distance;
- Upon observation of a marine mammal, the following information: (1) Name of PSO who sighted the animal(s) and PSO location and activity at the time of sighting; (2) Time of sighting; (3) Identification of the animal(s) (*e.g.,* genus/species, lowest possible taxonomic level, or unidentifiable), PSO confidence in identification, and the composition of the group if there is a mix of species; (4) Distance and bearing of each marine mammal observed relative to the pile being driven for each sightings (if pile driving was occurring at time of sighting); (5) Estimated number of animals (min/max/best estimate); (6) Estimated number of animals by cohort (adults, juveniles, neonates, group composition, sex class, *etc.*); (7) Animal's closest point of approach and estimated time spent within the harassment zone; (8) Description of any marine mammal behavioral observations (*e.g.,* observed behaviors such as feeding or traveling), including an assessment of behavioral responses thought to have resulted from the activity (*e.g.,* no response or changes in behavioral state such as ceasing feeding, changing direction, flushing, or breaching);

• Number of marine mammals detected within the harassment zones and shutdown zones; by species; and

• Detailed information about any implementation of any mitigation triggered (*e.g.,* shutdowns and delays), a description of specific actions that ensured, and resulting changes in behavior of the animal(s), if any.

If no comments are received from NMFS within 30 days, the draft final report would constitute the final report. If comments are received, a final report addressing NMFS comments must be submitted within 30 days after receipt of comments.

Reporting Injured or Dead Marine Mammals

In the event that personnel involved in the construction activities discover an injured or dead marine mammal, the USCG must immediately cease the specified activities and report the incident to the Office of Protected Resources (OPR) (*PR.ITP.MonitoringReports@noaa.gov*), NMFS and to the West Coast Regional Stranding Coordinator as soon as feasible. If the death or injury was clearly caused by the specified activity, USCG must immediately cease the specified activities until NMFS is able to review the circumstances of the incident and determine what, if any, additional measures are appropriate to ensure compliance with the terms of the IHA. The USCG must not resume their activities until notified by NMFS. The report must include the following information:

• Time, date, and location (latitude/longitude) of the first discovery (and updated location information if known and applicable);

• Species identification (if known) or description of the animal(s) involved;

• Condition of the animal(s) (including carcass condition if the animal is dead);

• Observed behaviors of the animal(s), if alive;

• If available, photographs or video footage of the animal(s); and

• General circumstances under which the animal was discovered.

Negligible Impact Analysis and Determination

NMFS has defined negligible impact as an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival (50 CFR 216.103). A negligible impact finding is based on the lack of likely adverse effects on annual rates of recruitment or survival (*i.e.,* population-level effects). An estimate of the number of takes alone is not enough information on which to base an impact determination. In addition to considering estimates of the number of marine mammals that might be ''taken'' through harassment, NMFS considers other factors, such as the likely nature of any impacts or responses (*e.g.,* intensity, duration), the context of any impacts or responses (*e.g.,* critical reproductive time or location, foraging impacts affecting energetics), as well as effects on habitat, and the likely effectiveness of the mitigation. We also assess the number, intensity, and context of estimated takes by evaluating this information relative to population status. Consistent with the 1989 preamble for NMFS' implementing regulations (54 FR 40338, September 29, 1989), the impacts from other past and ongoing anthropogenic activities are incorporated into this analysis via their impacts on the baseline (*e.g.,* as reflected in the regulatory status of the species, population size and growth rate where known, ongoing sources of human-caused mortality, or ambient noise levels).

To avoid repetition, our analysis applies to all species listed in table 2 for which take could occur, given that NMFS expects the anticipated effects of the proposed pile driving and removal on different marine mammal stocks to be similar in nature. Where there are meaningful differences between species or stocks, or groups of species, in anticipated individual responses to activities, impact of expected take on the population due to differences in population status, or impacts on habitat, NMFS has identified species-specific factors to inform the analysis.

Pile driving activities associated with the USCG construction project have the potential to disturb or displace marine mammals. Specifically, the project activities may result in take, in the form of Level A and Level B harassment, from underwater sounds generated from pile driving and removal. Potential takes could occur if individuals are present in the ensonified zone when these activities are underway.

The takes by Level B harassment would be due to potential behavioral disturbance and TTS. Takes by Level A harassment would be due to auditory injury. No serious injury or mortality would be expected, even in the absence of required mitigation measures, given the nature of the activities. The potential for harassment would be further minimized through the construction method and the implementation of the planned mitigation measures (see Proposed Mitigation section). Take by Level A harassment is proposed for harbor seals and harbor porpoise to account for the possibility that an animal could enter a Level A harassment zone prior to detection, and remain within that zone for a duration long enough to incur auditory injury before being observed and the USCG shutting down pile driving activity. The Level A harassment zones identified in table 6 are based upon an animal's exposure to pile driving of up to three of the largest steel piles per day. Given the short duration to vibratory or impact drive each pile and break between pile installations (to reset equipment and move piles into place), an animal would have to remain within the area estimated to be ensonified above the Level A harassment threshold for multiple hours. This is highly unlikely given marine mammal movement in the area. The number of takes by Level A harassment proposed for authorization is very low for both marine mammal species. Any take by Level A harassment is expected to arise from, at most, a small degree of auditory injury, *i.e.,* minor degradation (likely only a few dB) of hearing capabilities within regions of hearing that align most completely with the energy produced by vibratory and impact pile driving (*i.e.* the low-frequency region below 2 kHz), not severe hearing impairment or impairment within the ranges of greatest hearing sensitivity. Animals would need to be exposed to higher levels and/or longer duration than are expected to occur here in order to incur any more than a small degree of auditory injury. Due to the small degree anticipated, any auditory injury incurred would not be expected to affect the reproductive success or survival of any individuals, much less result in adverse impacts on the species or stock.

Additionally, some subset of the individuals that are behaviorally harassed could also simultaneously incur some small degree of TTS for a short duration of time. However, since the hearing sensitivity of individuals that incur TTS is expected to recover completely within minutes to hours, it is unlikely that the brief hearing impairment would affect the individual's long-term ability to forage and communicate with conspecifics, and would therefore not likely impact reproduction or survival of any individual marine mammal, let alone adversely affect rates of recruitment or survival of the species or stock.

Behavioral responses of marine mammals to pile driving in the Siuslaw River are expected to be mild, short

term, and temporary. Marine mammals within the Level B harassment zones may not show any visual cues they are disturbed by activities or they could become alert, avoid the area, leave the area, or display other mild responses that are not observable, such as changes in vocalization patterns. Given that pile driving would occur for only a portion of the project's duration, any harassment occurring would be temporary. Additionally, many of the species present in region would only be present temporarily based on seasonal patterns or during transit between other habitats. These temporarily present species would be exposed to even smaller periods of noise-generating activity, further decreasing the impacts.

Any impacts on marine mammal prey that would occur during USCG's proposed activity would have, at most, short-term effects on foraging of individual marine mammals, and likely no effect on the populations of marine mammals as a whole. Indirect effects on marine mammal prey during the construction are expected to be minor, and these effects are unlikely to cause substantial effects on marine mammals at the individual level, with no expected effect on annual rates of recruitment or survival.

For all species and stocks, take would occur within a limited, confined area (adjacent to the project site) of the stock's range, and, there are no known BIAs near the project area that would be impacted by USCG's proposed activities. While harbor seal is the species most likely to occur within the immediate project area, the nearest haul out is outside of the ensonified areas. There are known haul out sites for harbor seals near the project area including across the river and upriver from the action area, the closest being 400 m from the project area. Although, the most recent survey taken of this area was in 2014. There are no other haul outs in the immediate project vicinity; the next closest haulout is 129 km away.

In addition, it is unlikely that minor noise effects in a small, localized area of habitat would have any effect on the reproduction or survival of any individuals, much less the stocks' annual rates of recruitment or survival. In combination, we believe that these factors, as well as the available body of evidence from other similar activities, demonstrate that the potential effects of the specified activities would have only minor, short-term effects on individuals. The specified activities are not expected to impact rates of recruitment or survival and would therefore not result in population-level impacts.

In summary and as described above, the following factors primarily support our preliminary determination that the impacts resulting from this activity are not expected to adversely affect any of the species or stocks through effects on annual rates of recruitment or survival:

- No serious injury or mortality is anticipated or proposed to be authorized;
- Take by Level A harassment is proposed for harbor seal and harbor porpoise only and would be very small amounts and of a low degree;
- For all species and stocks, the Siuslaw River is a very small and peripheral part of their range;
- The intensity of anticipated takes by Level B harassment is relatively low for all stocks. Level B harassment would be primarily in the form of behavioral disturbance, resulting in avoidance of the project areas around where impact or vibratory pile driving is occurring, with some low-level TTS that may limit the detection of acoustic cues for relatively brief amounts of time in relatively confined footprints of the activities;
- Effects on species that serve as prey for marine mammals from the activities are expected to be short-term and, therefore, any associated impacts on marine mammal feeding are not expected to result in significant or long-term consequences for individuals, or to accrue to adverse impacts on their populations;
- The project area does not overlap any areas of known important habitat for marine mammals;
- The ensonified areas are very small relative to the overall habitat ranges of all species and stocks; and
- The lack of anticipated significant or long-term negative effects to marine mammal habitat.

Based on the analysis contained herein of the likely effects of the specified activity on marine mammals and their habitat, and taking into consideration the implementation of the proposed monitoring and mitigation measures, NMFS preliminarily finds that the total marine mammal take from the proposed activities would have a negligible impact on all affected marine mammal species or stocks.

Small Numbers

As noted previously, only take of small numbers of marine mammals may be authorized under sections 101(a)(5)(A) and (D) of the MMPA for specified activities other than military readiness activities. The MMPA does not define small numbers and so, in practice, where estimated numbers are available, NMFS compares the number of individuals taken to the most appropriate estimation of abundance of the relevant species or stock in our determination of whether an authorization is limited to small numbers of marine mammals. When the predicted number of individuals to be taken is fewer than one-third of the species or stock abundance, the take is considered to be of small numbers. Additionally, other qualitative factors may be considered in the analysis, such as the temporal or spatial scale of the activities. For all species, the proposed take is below one third of the population for all marine mammal stocks (table 8).

Based on the analysis contained herein of the proposed activity (including the proposed mitigation and monitoring measures) and the anticipated take of marine mammals, NMFS preliminarily finds that small numbers of marine mammals would be taken relative to the population size of the affected species or stocks.

Unmitigable Adverse Impact Analysis and Determination

There are no relevant subsistence uses of the affected marine mammal stocks or species implicated by this action. Therefore, NMFS has determined that the total taking of affected species or stocks would not have an unmitigable adverse impact on the availability of such species or stocks for taking for subsistence purposes.

Endangered Species Act

Section 7(a)(2) of the ESA of 1973 (16 U.S.C. 1531 *et seq.*) requires that each Federal agency insure that any action it authorizes, funds, or carries out is not likely to jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of designated critical habitat. To ensure ESA compliance for the issuance of IHAs, NMFS consults internally whenever we propose to authorize take for endangered or threatened species.

No incidental take of ESA-listed species is proposed for authorization or expected to result from this activity. Therefore, NMFS has determined that formal consultation under section 7 of the ESA is not required for this action.

Proposed Authorization

As a result of these preliminary determinations, NMFS proposes to issue an IHA to USCG for conducting pile driving activities associated with the Station Siuslaw River project in Florence Oregon from November 1, 2025 through October 31, 2026, provided the previously mentioned mitigation,

monitoring, and reporting requirements are incorporated. A draft of the proposed IHA can be found at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-construction-activities.*

Request for Public Comments

We request comment on our analyses, the proposed authorization, and any other aspect of this notice of proposed IHA for the proposed construction project. We also request comment on the potential renewal of this proposed IHA as described in the paragraph below. Please include with your comments any supporting data or literature citations to help inform decisions on the request for this IHA or a subsequent renewal IHA.

On a case-by-case basis, NMFS may issue a one-time, 1-year renewal IHA following notice to the public providing an additional 15 days for public comments when (1) up to another year of identical or nearly identical activities as described in the Description of Proposed Activity section of this notice is planned or (2) the activities as described in the Description of Proposed Activity section of this notice would not be completed by the time the IHA expires and a renewal would allow for completion of the activities beyond that described in the *Dates and Duration* section of this notice, provided all of the following conditions are met:

- A request for renewal is received no later than 60 days prior to the needed renewal IHA effective date (recognizing that the renewal IHA expiration date cannot extend beyond 1 year from expiration of the initial IHA).
- The request for renewal must include the following:

(1) An explanation that the activities to be conducted under the requested renewal IHA are identical to the activities analyzed under the initial IHA, are a subset of the activities, or include changes so minor (*e.g.,* reduction in pile size) that the changes do not affect the previous analyses, mitigation and monitoring requirements, or take estimates (with the exception of reducing the type or amount of take).

(2) A preliminary monitoring report showing the results of the required monitoring to date and an explanation showing that the monitoring results do not indicate impacts of a scale or nature not previously analyzed or authorized.

- Upon review of the request for renewal, the status of the affected species or stocks, and any other pertinent information, NMFS determines that there are no more than minor changes in the activities, the mitigation and monitoring measures will remain the same and appropriate, and the findings in the initial IHA remain valid.

Dated: January 15, 2025.

Kimberly Damon-Randall,

Director, Office of Protected Resources, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XE618]

Marine Mammals; File Nos. 28286 and 22095

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; extension of comment period and proposed permit extension.

SUMMARY: Notice is hereby given that the National Marine Fisheries Service is extending the public comment period associated with the notice of receipt for an application for a permit (File No. 28286) to conduct research and enhancement activities on one stranded, non-releasable beluga whale (*Delphinapterus leucas*) from the endangered Cook Inlet distinct population segment (DPS). The application has been updated to reflect additional information received from the applicant. Additionally, we propose extending SeaWorld's current permit, No. 22095–01, under which the subject beluga whale is currently held, for six months to allow additional processing of the updated application (File No. 28286).

DATES: The comment period for the notice published December 17, 2024, at 89 FR 102117, is extended. Written comments must be received on or before March 3, 2025.

ADDRESSES: The application for a new permit and related documents are available for review by selecting ''Records Open for Public Comment'' from the ''Features'' box on the Applications and Permits for Protected Species home page, *https://apps.nmfs.noaa.gov,* and then selecting File No. 28286 from the list of available applications. These documents are also available upon written request via email to *NMFS.Pr1Comments@noaa.gov.*

Written comments on this application (File No. 28286) and the proposed extension to Permit No. 22095–01 should be submitted via email to *NMFS.Pr1Comments@noaa.gov.* Please include File Nos. 28286 and 22095, respectively, in the subject line of the email comment.

Those individuals requesting a public hearing should submit a written request via email to *NMFS.Pr1Comments@noaa.gov.* The request should set forth the specific reasons why a hearing on this application would be appropriate.

FOR FURTHER INFORMATION CONTACT: Courtney Smith, Ph.D., or Jennifer Skidmore, (301) 427–8401.

SUPPLEMENTARY INFORMATION: On December 17, 2024 (89 FR 102117), the National Marine Fisheries Service (NMFS) published notice of a permit application (File No. 28286) submitted by SeaWorld LLC, 6240 Sea Harbor Drive, Orlando, FL 32821 (Responsible Party: Chris Dold, DVM).

The applicant proposes to conduct research and enhancement activities on and provide long-term care for one male beluga whale (NOA0010477/''Tyonek'') from the depleted and endangered Cook Inlet DPS. The permit is requested for a 5-year period. NMFS received a request for an extension of the public comment period. Additionally, NMFS received updated information from the applicant in response to preliminary questions from the Marine Mammal Commission (MMC), clarifying research sampling and enhancement activity details in the take tables, educational programs, and captive breeding of the subject whale. These changes have been incorporated into the application in APPS (see also new uploaded document, ''28286_ Response to MMC Comments_ 1.2.2024.pdf''. In addition, NMFS is proposing to extend SeaWorld's current research and enhancement permit for Tyonek, No. 22095–01 (75 FR 27418, April 17, 2024), for six months to allow additional processing of the updated application (File No. 28286). That extended permit would expire on September 15, 2025. Thus, NMFS is extending the public comment period for an additional 30 days.

Dated: January 14, 2025.

Julia M. Harrison,

Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service.

Taking and Importing Marine Mammals; Taking Marine Mammals Incidental to Geophysical Surveys Related to Oil and Gas Activities in the Gulf of Mexico

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of issuance of letter of authorization.

SUMMARY: In accordance with the Marine Mammal Protection Act (MMPA), as amended, its implementing regulations, and NMFS' MMPA Regulations for Taking Marine Mammals Incidental to Geophysical Surveys Related to Oil and Gas Activities in the Gulf of Mexico, notification is hereby given that NMFS has issued a Letter of Authorization (LOA) to bp Exploration and Production, Inc., (bp) for the take of marine mammals incidental to geophysical survey activity in the Gulf of Mexico (GOM).

DATES: The LOA is effective from January 14, 2025, through December 31, 2025.

ADDRESSES: The LOA, LOA request, and supporting documentation are available online at: *https://www.fisheries.noaa.gov/action/incidental-take-authorization-oil-and-gas-industry-geophysical-survey-activity-gulf-mexico.* In case of problems accessing these documents, please call the contact listed below (see **FOR FURTHER INFORMATION CONTACT** section).

FOR FURTHER INFORMATION CONTACT: Ben Laws, Office of Protected Resources, NMFS, (301) 427–8401.

SUPPLEMENTARY INFORMATION:

Background

Sections 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) direct the Secretary of Commerce to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are issued or, if the taking is limited to harassment, a notice of a proposed authorization is provided to the public for review.

An authorization for incidental takings shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s), will not have an unmitigable adverse impact on the availability of the species or stock(s) for subsistence uses (where relevant), and if the permissible methods of taking and requirements pertaining to the mitigation, monitoring and reporting of such takings are set forth. NMFS has defined ''negligible impact'' in 50 CFR 216.103 as an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.

Except with respect to certain activities not pertinent here, the MMPA defines ''harassment'' as: any act of pursuit, torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment).

On January 19, 2021, we issued a final rule with regulations to govern the unintentional taking of marine mammals incidental to geophysical survey activities conducted by oil and gas industry operators, and those persons authorized to conduct activities on their behalf (collectively ''industry operators''), in U.S. waters of the GOM over the course of 5 years (86 FR 5322, January 19, 2021). The rule was based on our findings that the total taking from the specified activities over the 5-year period will have a negligible impact on the affected species or stock(s) of marine mammals and will not have an unmitigable adverse impact on the availability of those species or stocks for subsistence uses, and became effective on April 19, 2021.

The regulations at 50 CFR 217.180 *et seq.* allow for the issuance of LOAs to industry operators for the incidental take of marine mammals during geophysical survey activities and prescribe the permissible methods of taking and other means of effecting the least practicable adverse impact on marine mammal species or stocks and their habitat (often referred to as mitigation), as well as requirements pertaining to the monitoring and reporting of such taking. Under 50 CFR 217.186(e), issuance of an LOA shall be based on a determination that the level of taking will be consistent with the findings made for the total taking allowable under these regulations and a determination that the amount of take authorized under the LOA is of no more than small numbers.

NMFS subsequently discovered that the 2021 rule was based on erroneous take estimates. We conducted another rulemaking using correct take estimates and other newly available and pertinent information relevant to the analyses supporting some of the findings in the 2021 final rule and the taking allowable under the regulations. We issued a final rule in April 2024, effective May 24, 2024 (89 FR 31488, April 24, 2024).

The 2024 final rule made no changes to the specified activities or the specified geographical region in which those activities would be conducted, nor to the original 5-year period of effectiveness. In consideration of the new information, the 2024 rule presented new analyses supporting affirmance of the negligible impact determinations for all species, and affirmed that the existing regulations, which contain mitigation, monitoring, and reporting requirements, are consistent with the ''least practicable adverse impact'' standard of the MMPA.

Summary of Request and Analysis

Bp plans to conduct a field trial of a marine vibrator source (C–BASS) array in the Atlantis prospect area centered around Green Canyon block 743 for a duration of up to 14 days, with water depths ranging from approximately 1,300 to 2,200 m. See figure 1 of the LOA application for a map of the area.

The marine vibrator source was not included in the acoustic exposure modeling developed in support of the rule. However, our rule anticipated the possibility of new and unusual technologies (NUT) and determined they would be evaluated on a case-by case basis (see 86 FR 5322, 5442, January 19, 2021).

Marine vibrator sources represent an alternative to traditional airgun sources, and operate by displacing a volume of water with a vibrating plate or shell to create a pressure wave. In contrast to airgun sources, marine vibrators produce a long duration, low amplitude signal and operate at a lower peak intensity. The C–BASS source consists of two types of sweep units: six M72–15 and two M72–30, comprising eight total source units mounted on a tow body. Both sets of units (M72–15 and M72–30) will sweep for 8 seconds (s), with the two signals overlapping. The M72–30 signal will lag the M72–15 by 0.5 s. The total sweep cycle will be repeated every 16 s with a 7.5 s quiet period in between sweeps. The dominant frequencies of the C–BASS sweep are between 10–50 Hz, with minimal signal energy occurring above

100 Hz. Marine vibrator sources, including the C–BASS, produce signals with a relatively gentle rise and decay over time and are therefore considered to be non-impulsive. The usage characteristics described above, which equate to a duty cycle of 53 percent and allow for periods of silence between each signal, result in evaluation of the C–BASS as an intermittent source for purposes of the planned trial. Please see bp's application for additional detail.

Use of a relatively low-intensity, non-impulsive source such as the C–BASS is likely to result in significantly less take by Level B harassment than would occur for a similar survey using an airgun array as a sound source, and use of the C–BASS source is unlikely to result in any potential for Level A harassment. In order to demonstrate this, bp provided an exposure modeling report in association with its LOA application. The exposure modeling effort was performed using the same modeling approach as was used in support of the 2021 and 2024 rules. Modeling of the C–BASS source compared with the same 5,110 cubic inch (in^3) airgun array used for additional exposure modeling for the 2024 rule illustrates a reduction in estimated Level B harassment distance of over 98 percent, with acoustic exposures above harassment criteria associated with use of the C–BASS source generally less than 1 percent those associated with use of the airgun array. Please bp's exposure modeling report for more detail.

Based on this information we have determined there will be no effects of a magnitude or intensity different from those evaluated in support of the rules. NMFS therefore expects that use of modeling results supporting the final rule are conservative as a proxy for use in evaluating potential impacts of use of the marine vibrator source.

We also note that for the marine vibrator source, the Bureau of Ocean Energy Management (BOEM) determined that Endangered Species Act (ESA) section 7 step-down review was required under NMFS' 2020 Biological Opinion on Federally Regulated Oil and Gas Program Activities in the Gulf of Mexico. NMFS' ESA Interagency Consultation Division requested and received an analysis from BOEM that considered the effects associated with the source. As a result of this review, NMFS determined that use of the source is unlikely to result in additional effects beyond those previously considered in the 2020 Biological Opinion.

The survey effort proposed by bp in its LOA request was used to develop LOA-specific take estimates based on the acoustic exposure modeling results described in our rule preamble (89 FR 31488, April 24, 2024). In order to generate the appropriate take number for authorization, the following information was considered: (1) survey type; (2) location (by modeling zone [1]); (3) number of days; (4) source; and (5) month.[2] In this case, the 4,130 in^3 airgun array was selected, as its use for purposes of generating take numbers for authorization represents the least impactful airgun array (but remains conservative for use in estimating takes that are expected to result from use of the C–BASS source, as discussed above). The acoustic exposure modeling performed in support of the rule provides 24-hour exposure estimates for each species, specific to each modeled source and survey type in each zone and month.

Summary descriptions of modeled survey geometries are available in the preamble to the 2018 proposed rule (83 FR 29212, 29220, June 22, 2018). Coil was selected as the best available proxy survey type in this case because this selection minimizes over-estimation of take. Although bp is not proposing to perform a survey using the coil geometry, the coil proxy is most representative of the effort planned by bp in terms of predicted Level B harassment exposures.

The survey will include up to 14 days of sound source operation in zones 5 and 7. We assume equal distribution of survey effort over the two zones. Although the survey is currently planned to occur in March 2025, the actual timing is not known in advance, so take estimates for each species are based on the time period that produces the greatest value.

Based on the results of our analysis, NMFS has determined that the level of taking expected for this survey and authorized through the LOA is consistent with the findings made for the total taking allowable under the regulations. See table 1 in this notice and table 6 of the 2024 final rule (89 FR 31488, April 24, 2024).

Small Numbers Determination

Under the GOM rule, NMFS may not authorize incidental take of marine mammals in an LOA if it will exceed ''small numbers.'' In short, when an acceptable estimate of the individual marine mammals taken is available, if the estimated number of individual animals taken is up to, but not greater than, one-third of the best available abundance estimate, NMFS will determine that the numbers of marine mammals taken of a species or stock are small (89 FR 31535, April 24, 2024). For more information please see NMFS' discussion of small numbers in the 2021 final rule (86 FR 5438, January 19, 2021).

The take numbers for authorization, determined as described above in the Summary of Request and Analysis section, are used by NMFS in making the necessary small numbers determinations, through comparison with the best available abundance estimates (see discussion at 86 FR 5322, 5391, January 19, 2021). For this comparison, NMFS' approach is to use the maximum theoretical population, determined through review of current stock assessment reports (SAR; *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments*) and model-predicted abundance information (*https://seamap.env.duke.edu/models/Duke/GOM/*). Information supporting the small numbers determinations is provided in table 1.

TABLE 1—TAKE ANALYSIS [1]

Species	Authorized take	Abundance [2]	Percent abundance
Rice's whale	0	51	n/a
Sperm whale	102	3,007	3.4
Kogia spp.	[3] 50	980	5.1
Beaked whales	248	803	30.9
Rough-toothed dolphin	254	4,853	5.2

[1] For purposes of acoustic exposure modeling, the GOM was divided into seven zones. Zone 1 is not included in the geographic scope of the rule.

[2] Acoustic propagation modeling was performed for two seasons: winter (December-March) and summer (April-November). Marine mammal density data is generally available on a monthly basis, and therefore further refines take estimates temporally.

TABLE 1—TAKE ANALYSIS [1]—Continued

Species	Authorized take	Abundance [2]	Percent abundance
Bottlenose dolphin	210	165,125	0.1
Clymene dolphin	308	4,619	6.7
Atlantic spotted dolphin	62	21,506	0.3
Pantropical spotted dolphin	2,989	67,225	4.4
Spinner dolphin	[4] 152	5,548	2.7
Striped dolphin	892	5,634	15.8
Fraser's dolphin	102	1,665	6.1
Risso's dolphin	73	1,974	3.7
Blackfish [5]	704	6,113	11.5
Short-finned pilot whale	82	2,741	3.0

[1] Scalar ratios were not applied in this case due to brief survey duration.
[2] Best abundance estimate. For most taxa, the best abundance estimate for purposes of comparison with take estimates is considered here to be the model-predicted abundance (Garrison *et al.,* 2023). For Rice's whale, Atlantic spotted dolphin, and Risso's dolphin, the larger estimated SAR abundance estimate is used.
[3] Estimated takes include 3 takes by Level A harassment and 47 takes by Level B harassment. However, as the actual source planned for use is a non-impulsive source, no take by Level A harassment is likely to occur and all authorized takes are by Level B harassment.
[4] Modeled take of 53 increased to account for potential encounter with a group of average size (Maze-Foley and Mullin, 2006).
[5] The ''blackfish'' guild includes melon-headed whales, false killer whales, pygmy killer whales, and killer whales.

Based on the analysis contained herein of bp's proposed survey activity described in its LOA application and the anticipated take of marine mammals, NMFS finds that small numbers of marine mammals will be taken relative to the affected species or stock sizes (*i.e.,* less than one-third of the best available abundance estimate) and therefore the taking is of no more than small numbers.

Authorization

NMFS has determined that the level of taking for this LOA request is consistent with the findings made for the total taking allowable under the incidental take regulations and that the amount of take authorized under the LOA is of no more than small numbers. Accordingly, we have issued an LOA to bp authorizing the take of marine mammals incidental to its geophysical survey activity, as described above.

Dated: January 15, 2025.

Kimberly Damon-Randall,

Director, Office of Protected Resources, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF EDUCATION

Application for New Awards; Expanding Opportunity Through Quality Charter Schools Program (CSP)—Grants to State Entities (State Entity)

AGENCY: Office of Elementary and Secondary Education, Department of Education.

ACTION: Notice.

SUMMARY: The Department of Education is issuing a notice inviting applications for fiscal year (FY) 2025 for CSP Grants to State Entities.

DATES:

Applications Available: January 21, 2025.

Deadline for Transmittal of Applications: April 21, 2025.

Deadline for Intergovernmental Review: June 20, 2025.

ADDRESSES: For the addresses for obtaining and submitting an application, please refer to our Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on December 23, 2024 (89 FR 104528), and available at *https://www.federalregister.gov/documents/2024/12/23/2024-30488/common-instructions-for-applicants-to-department-of-education-discretionary-grant-programs.*

FOR FURTHER INFORMATION CONTACT: Sareeta Schmitt, U.S. Department of Education, 400 Maryland Avenue SW, Washington, DC 20202–5970. Telephone: (202) 205–0730. Email: *SE_Competition@ed.gov.*

If you are deaf, hard of hearing, or have a speech disability and wish to access telecommunications relay services, please dial 7–1–1.

SUPPLEMENTARY INFORMATION:

Full Text of Announcement

I. Funding Opportunity Description

Purpose of Program: The CSP State Entity program, ALN 84.282A, is authorized under Title IV, Part C of the Elementary and Secondary Education Act of 1965, as amended by the Every Student Succeeds Act (ESEA) (20 U.S.C. 7221–7221j). Through the CSP State Entity competition, the Department awards grants to *State entities* [1] that, in turn, award subgrants to *eligible applicants* for the purpose of opening and preparing for the operation of new *charter schools* and replicated *high-quality charter schools,* and expanding high-quality charter schools. State entities also may use grant funds to provide technical assistance to eligible applicants and *authorized public chartering agencies* in opening and preparing for the operation of new charter schools and replicated high-quality charter schools, and expanding high-quality charter schools; and to work with authorized public chartering agencies in the *State* to improve authorizing quality, including developing capacity for, and conducting, fiscal oversight and auditing of charter schools. State Entity grant funds may also be used for grant administration, which may include technical assistance and monitoring of subgrants for performance and fiscal and regulatory compliance, as required under 2 CFR 200.332(e).

The CSP State Entity program provides financial assistance to State entities to support charter schools that serve elementary and secondary school students in States with a specific State statute authorizing the granting of charters to schools. Charter schools receiving funds under the CSP State Entity program may also serve students in *early childhood education programs* or postsecondary students.

Assistance Listing Number: 84.282A.

OMB Control Number: 1810–0767.

Background: The major purposes of the CSP are to expand opportunities for

[1] Terms defined in this notice are italicized the first time they are used.

all students, particularly traditionally underserved students, to attend high-quality public charter schools and meet challenging State academic standards; provide financial assistance for the planning, program design, and initial implementation of charter schools; increase the number of high-quality charter schools available to students across the United States; evaluate the impact of charter schools on student achievement, families, and communities; share best practices between charter schools and other public schools; encourage States to provide facilities support to charter schools; and support efforts to strengthen the charter school authorizing process.

''Raise the Bar: Lead the World'' (RTB) is the Department's call to action to all stakeholders to transform pre-kindergarten through postsecondary education and unite around evidence-based strategies that advance educational equity and excellence for all students.[2] When we raise the bar in education, all our Nation's students will be able to build the skills to thrive inside and outside of school. As part of the RTB initiative, the Department is focusing on six strategies aimed at promoting academic excellence and wellness for every learner and better preparing our Nation for global competitiveness.[3] This competition advances several RTB strategies, most notably those intended to deliver a comprehensive and rigorous education for every student.

Further, on July 6, 2022 (87 FR 40406), the Department published in the **Federal Register** a notice of final priorities, requirements, definitions, and selection criteria (2022 NFP). The 2022 NFP supplements the program statute and is intended to help support the creation, replication, and expansion of high-quality charter schools that promote positive student outcomes, *educator* and community empowerment, promising practices, and school diversity. The 2022 NFP promotes greater fiscal and operational transparency and accountability for CSP-funded charter schools. The application requirements and assurances associated with subgrant monitoring and the review of subgrant applications help facilitate the proper peer review and evaluation of CSP grant applications. The priorities, application requirements, assurances, selection criteria, and definitions in this notice are designed to support access to high-quality, diverse, and equitable learning opportunities, which should be a goal of all public schools.

Priorities: This notice includes one absolute priority, five competitive preference priorities, and two invitational priorities. In accordance with 34 CFR 75.105(b)(2)(ii), the absolute priority and competitive preference priorities are from section 4303(g)(2) of the ESEA (20 U.S.C. 7221b(g)(2)).

Absolute Priority: For FY 2025, and any subsequent year in which we make awards from the list of unfunded applications from this competition, this priority is an absolute priority. Under 34 CFR 75.105(c)(3) we consider only applications that meet the absolute priority.

This priority is:

Best Practices for Charter School Authorizers.

To meet this priority, the State entity must demonstrate that it has taken steps to ensure that all authorized public chartering agencies[4] implement best practices for charter school authorizing.

Competitive Preference Priorities: For FY 2025, and any subsequent year in which we make awards from the list of unfunded applications from this competition, these priorities are competitive preference priorities. Under 34 CFR 75.105(c)(2)(i), we award 1 additional point to an application that meets Competitive Preference Priority 1; up to 2 additional points depending on how well an application meets Competitive Preference Priority 2; up to 2 additional points depending on how well an application meets Competitive Preference Priority 3; up to 2 additional points depending on how well an application meets Competitive Preference Priority 4; and up to 3 additional points depending on how well an application meets Competitive Preference Priority 5.

An applicant must identify in the abstract form and in the project narrative section of its application the priority or priorities it wishes the Department to consider for purposes of earning competitive preference priority points. The Department will not review or award points for any competitive preference priority that an applicant fails to clearly identify as a competitive preference priority that it wishes the Department to consider for purposes of awarding competitive preference priority points. An application may receive a maximum of 10 additional points under the competitive preference priorities.

These priorities are:

Competitive Preference Priority 1—At Least One Authorized Public Chartering Agency Other than a Local Educational Agency, or an Appeals Process (0 or 1 point).

To meet this priority, the State entity must demonstrate that it is located in a State that—

(a) Allows at least one entity that is not a local educational agency (LEA) to be an authorized public chartering agency for *developers* seeking to open a charter school in the State; or

(b) In the case of a State in which LEAs are the only authorized public chartering agencies, the State has an appeals process for the denial of an application for a charter school.

Competitive Preference Priority 2—Equitable Financing (up to 2 points).

To be eligible to receive points under this priority, the State entity must demonstrate that it is located in a State that ensures equitable financing, as compared to traditional public schools, for charter schools and students in a prompt manner.

Competitive Preference Priority 3—Best Practices to Improve Struggling Schools and LEAs (up to 2 points).

To be eligible to receive points under this priority, the State entity must demonstrate that it is located in a State that uses best practices from charter schools to help improve struggling schools and LEAs.

Competitive Preference Priority 4—Charter School Facilities (up to 2 points).

To be eligible to receive points under this priority, the State entity must demonstrate that it is located in a State that provides charter schools one or more of the following:

(a) Funding for facilities.

(b) Assistance with facilities acquisition.

(c) Access to public facilities.

(d) The ability to share in bonds or mill levies.

(e) The right of first refusal to purchase public school buildings.

(f) Low- or no-cost leasing privileges.

Competitive Preference Priority 5—Serving At-Risk Students (up to 3 points).

To be eligible to receive points under this priority, the State entity must demonstrate that it supports charter schools that serve at-risk students through activities such as dropout prevention, dropout recovery, or

[2] *https://www.ed.gov/about/ed-initiatives/raise-bar.*

[3] The six strategies of Raise the Bar include: accelerating learning, developing a well-rounded education, eliminating the *educator* shortage, investing in mental health, ensuring every student has a postsecondary pathway, and a pathway to multilingualism.

[4] Although section 4303(g)(2)(F) of the ESEA uses the term ''authorizing public chartering agencies,'' consistent with section 4310(1), the correct term is ''authorized public chartering agencies.''

comprehensive career counseling services.

Invitational Priorities: For FY 2025, and any subsequent year in which we make awards from the list of unfunded applications from this competition, these priorities are invitational priorities. Under 34 CFR 75.105(c)(1), we do not give an application that meets an invitational priority a competitive or absolute preference over other applications.

These priorities are:

Invitational Priority 1—Collaborations between Charter Schools and Traditional Public Schools or Districts that Benefit Students and Families across Schools.

(a) The Secretary is interested in funding applications that propose to encourage, but not require, eligible applicants for subgrants to propose projects that include a new collaboration, or the continuation of an existing collaboration, with at least one traditional public school or traditional school district that is designed to benefit students or families served by at least one member of the collaboration, is designed to lead to increased and improved educational opportunities for students served by at least one member of the collaboration, and includes implementation of one or more of the following:

(1) Co-developed or shared curricular and instructional resources or academic course offerings.

(2) Professional development opportunities for teachers and other *educators,* which may include professional learning communities, opportunities for teachers to earn additional certifications, such as in a high-need area or national board certification, and partnerships with educator preparation programs to support teaching residencies.

(3) Evidence-based (as defined in section 8101(21) of the ESEA) practices to improve academic performance for underserved students.

(4) Policies and practices to create safe, supportive, and inclusive learning environments, such as systems of positive behavioral intervention and support.

(5) Transparent enrollment and retention practices and processes that include clear and consistent disclosure to families of policies or requirements (*e.g.,* discipline policies, purchasing and wearing specific uniforms and other fees, or family participation), and any services that are or are not provided that could impact a family's ability to enroll or remain enrolled (*e.g.,* transportation services or participation in the National School Lunch Program).

(6) A shared transportation plan and system that reduces transportation costs for members of the collaboration and takes into consideration various transportation options, including public transportation and district-provided or shared transportation options, cost-sharing or free or reduced-cost fare options, and any distance considerations for prioritized bus services.

(7) A shared special education collaborative designed to address a significant barrier or challenge faced by participating charter schools and traditional public schools in improving academic or developmental outcomes and services for students with disabilities (as defined in section 8101 of the ESEA).

(8) A shared English learner collaborative designed to address a significant barrier or challenge faced by participating charter schools or traditional public schools in improving academic outcomes for English learners (as defined in section 8101 of the ESEA).

(9) Other collaborations, such as the sharing of innovative and best practices, designed to address a significant barrier or challenge faced by participating charter schools or traditional public schools and designed to improve academic outcomes for all students served by members of the collaboration.

(b) The State entity certifies that it will ask each eligible applicant that proposes a project that includes such a collaboration to—

(1) Provide in its subgrant application a description of the collaboration that—

(i) Describes each member of the collaboration and whether the collaboration would be a new or existing commitment;

(ii) States the purpose and duration of the collaboration;

(iii) Describes the anticipated roles and responsibilities of each member of the collaboration;

(iv) Describes how the collaboration will benefit one or more members of the collaboration, including how it will benefit students or families affiliated with a member and lead to increased or improved educational opportunities for students, and meet specific and measurable, if applicable, goals;

(vi) Describes the resources members of the collaboration will contribute; and

(vii) Contains any other relevant information; and

(2) Within 120 days of receiving a subgrant award or within 120 days of the date the collaboration is scheduled to begin, whichever is later, provide evidence of participation in the collaboration (which may include, but is not required to include, a memorandum of understanding).

Invitational Priority 2-Promoting Pathways to Multilingualism.

The Secretary is interested in funding applications that propose to encourage, but not require, eligible applicants for subgrants to propose projects with multilingual programming that is centered on the needs and assets of the community the schools serve and is designed to provide students, particularly underserved students, with pathways to multilingualism through any of the following-

(a) Dual language programs that offer academic instruction in two languages and are designed to enroll both English learners and native English speakers on an equitable basis and ensure all students become bilingual and biliterate in both languages.

(b) A mission and focus on supporting Native American language education and development, such as through dual language programs or other instructional models and teaching methods that reflect and preserve Native American language, culture, and history.

(c) A mission and focus on meeting the unique educational needs and celebrating the assets of English learners using evidence-based practices to support English language acquisition and promote academic excellence.

(d) Other innovative or evidence-based strategies to promote multilingualism, including approaches to recruit, support, and retain multilingual educators.

Application Requirements: The following application requirements are from section 4303(f) of the ESEA (20 U.S.C. 7221b(f)) and from the 2022 NFP. The Department will not fund an application that does not meet each application requirement.

In addressing the following application requirements, applicants must clearly identify which application requirement they are addressing. An applicant must address application requirements (a)(1)(i), (a)(1)(vii), (a)(1)(ix), (a)(2)(ii), and (a)(2)(iii) in its response to paragraph (a)(1) of the Quality of the Project Design selection criterion; application requirement (a)(8) in its response to paragraph (a)(4) of the Quality of the Project Design selection criterion; application requirements (a)(1)(ii), (a)(1)(xiii), (a)(3)(i), (a)(3)(ii), (a)(3)(iii), (a)(5), and (a)(7) in its response to the Quality of Eligible Subgrant Applicants selection criterion; application requirements (a)(1)(vi), (a)(1)(x), and (a)(9) in its response to paragraph (c)(1) of the State Plan selection criterion; application requirements (a)(1)(iii), (a)(1)(iv),

(a)(1)(viii), and (a)(1)(xi) in its response to paragraph (c)(3) of the State Plan selection criterion; and application requirement (a)(4) in its response to paragraph (d)(1) of the Quality of the Management Plan selection criterion. An applicant must respond to all other application requirements in paragraph (a) that are not listed above in the Project Narrative.

Applications for funding under the CSP State Entity program must contain the following:

(a) Description of Program—A description of the State entity's objectives in running a quality charter school program and how the objectives of the program will be carried out, including—

(1) A description of how the State entity will—

(i) Support the opening of charter schools through the startup of new charter schools and, if applicable, the replication of high-quality charter schools, and the expansion of high-quality charter schools (including the proposed number of new charter schools to be opened, high-quality charter schools to be opened as a result of the replication of a high-quality charter school, or high-quality charter schools to be expanded under the State entity's program);

(ii) Inform eligible charter schools, developers, and authorized public chartering agencies of the availability of funds under the program;

(iii) Work with eligible applicants to ensure that the eligible applicants access all Federal funds that such applicants are eligible to receive, and help the charter schools supported by the applicants and the students attending those charter schools—

(A) Participate in the Federal programs in which the schools and students are eligible to participate;

(B) Receive the commensurate share of Federal funds the schools and students are eligible to receive under such programs; and

(C) Meet the needs of students served under such programs, including students with disabilities and English learners;

(iv) Ensure that authorized public chartering agencies, in collaboration with surrounding LEAs where applicable, establish clear plans and procedures to assist students enrolled in a charter school that closes or loses its charter to attend other high-quality schools;

(v) In the case of a State entity that is not a State educational agency (SEA)—

(A) Work with the SEA and charter schools in the State to maximize charter school participation in Federal and State programs for which charter schools are eligible; and

(B) Work with the SEA to operate the State entity's program under section 4303 of the ESEA, if applicable;

(vi) Ensure that each eligible applicant that receives a subgrant under the State entity's program—

(A) Is using funds provided under this program for one of the activities described in section 4303(b)(1) of the ESEA; and

(B) Is prepared to continue to operate charter schools funded under section 4303 of the ESEA in a manner consistent with the eligible applicant's application for such subgrant once the subgrant funds under this program are no longer available;

(vii) Support—

(A) Charter schools in LEAs with a significant number of schools identified by the State for comprehensive support and improvement under section 1111(c)(4)(D)(i) of the ESEA; and

(B) The use of charter schools to improve struggling schools, or to turn around struggling schools;

(viii) Work with charter schools on—

(A) Recruitment and enrollment practices to promote inclusion of all students, including by eliminating any barriers to enrollment for *educationally disadvantaged students* (who include foster youth and unaccompanied homeless youth); and

(B) Supporting all students once they are enrolled to promote retention, including by reducing the overuse of discipline practices that remove students from the classroom;

(ix) Share best and promising practices between charter schools and other public schools;

(x) Ensure that charter schools receiving funds under the State entity's program meet the educational needs of their students, including children with disabilities and English learners;

(xi) Support efforts to increase charter school quality initiatives, including meeting the quality authorizing elements described in section 4303(f)(2)(E) of the ESEA;

(xii)(A) In the case of a State entity that is not a charter school support organization, a description of how the State entity will provide oversight of authorizing activity, including how the State will help ensure better authorizing, such as by establishing authorizing standards that may include approving, monitoring, and re-approving or revoking the authority of an authorized public chartering agency based on the performance of the charter schools authorized by such agency in the areas of student achievement, student safety, financial and operational management, and compliance with all applicable statutes and regulations; and

(B) In the case of a State entity that is a charter school support organization, a description of how the State entity will work with the State to support the State's system of technical assistance and oversight of the authorizing activity of authorized public chartering agencies, as described in application requirement (a)(1)(xii)(A); and

(xiii) Work with eligible applicants receiving a subgrant under the State entity's program to support the opening of new charter schools or charter school models described in application requirement (a)(1)(i) that are high schools (ESEA section 4303(f));

(2) A description of the extent to which the State entity—

(i) Is able to meet and carry out Competitive Preference Priorities 1 through 5; [5]

(ii) Is working to develop or strengthen a cohesive statewide system to support the opening of new charter schools and, if applicable, the replication of high-quality charter schools, and the expansion of high-quality charter schools; and

(iii) Is working to develop or strengthen a cohesive strategy to encourage collaboration between charter schools and LEAs on the sharing of best practices (ESEA section 4303(f));

(3) A description of how the State entity will award subgrants, on a competitive basis, including—

(i) A detailed description of how the State entity will review applications from eligible applicants, including –

(A) How eligibility will be determined;

(B) How peer reviewers will be recruited and selected, including efforts the applicant will make to recruit peer reviewers from diverse backgrounds and underrepresented groups;

(C) How subgrant applications will be reviewed and evaluated;

(D) How cost analyses and budget reviews will be conducted to ensure that costs are necessary, reasonable, and allocable to the subgrant;

(E) How applicants will be assessed for risk (*i.e.,* fiscal, programmatic, compliance); and

(F) How funding decisions will be made (2022 NFP);

[5] In accordance with 34 CFR 75.105(c)(2)(i), applications are not required to address competitive preference priorities but may receive additional points if they do so. However, to meet this application requirement, the State entity must describe the extent to which it is able to meet and carry out competitive preference priorities 1 through 5. If the State entity is unable to meet and carry out one or more of these competitive preference priorities, the description for that priority should state that the State entity is unable to meet or carry out the priority.

(ii) A description of the application each eligible applicant desiring to receive a subgrant will be required to submit, which application must include the following:

(A) A description of the roles and responsibilities of eligible applicants, partner organizations, and *charter management organizations* (CMOs), including the administrative and contractual roles and responsibilities of such partners (ESEA section 4303(f));

(*1*) For any existing or proposed contract between a charter school and a for-profit management organization (including a nonprofit management organization operated by or on behalf of a for-profit entity), without regard to whether the management organization or its related entities exercises full or substantial administrative control over the charter school or the CSP project, the applicant must provide the following information or equivalent information that the applicant has submitted to the authorized public chartering agency—

(*i*) A copy of the existing contract with the for-profit management organization or a description of the terms of the contract, including the name and contact information of the management organization; the cost (*i.e.,* fixed costs and estimates of any ongoing costs or fees), including the amount of CSP funds proposed to be used toward such cost, and the percentage such cost represents of the school's overall funding; the duration; roles and responsibilities of the management organization; and steps the applicant will take to ensure that it pays fair market value for any services or other items purchased or leased from the management organization, makes all programmatic decisions, maintains control over all CSP funds, and directly administers or supervises the administration of the grant in accordance with 34 CFR 75.701;

(*ii*) A description of any business or financial relationship between the charter school developer and the management organization, including payments, contract terms, and any property owned, operated, or controlled by the management organization or related individuals or entities that will be used by the charter school;

(*iii*) The name and contact information for each member of the governing board of the charter school and a list of the management organization's officers, chief administrator, or other administrators, and any staff involved in approving or executing the management contract; and a description of any actual or perceived conflicts of interest, including financial interests, and how the applicant resolved or will resolve any actual or perceived conflicts of interest to ensure compliance with 2 CFR 200.318(c);

(*iv*) A description of how the applicant will ensure that members of the governing board of the charter school are not selected, removed, controlled, or employed by the management organization and that the charter school's legal, accounting, and auditing services will be procured independently from the management organization;

(*v*) An explanation of how the applicant will ensure that the management contract is severable, severing the management contract will not cause the proposed charter school to close, the duration of the management contract will not extend beyond the expiration date of the school's charter, and renewal of the management contract will not occur without approval and affirmative action by the governing board of the charter school; and

(*vi*) A description of the steps the applicant will take to ensure that it maintains control over all student records and has a process in place to provide those records to another public school or school district in a timely manner upon the transfer of a student from the charter school to another public school, including due to closure of the charter school, in accordance with section 4308 of the ESEA (2022 NFP).

(B) A description of the quality controls agreed to between the eligible applicant and the authorized public chartering agency involved, such as a contract or performance agreement; how a school's performance in the State's accountability system and impact on student achievement (which may include student academic growth) will be one of the most important factors for renewal or revocation of the school's charter; and how the State entity and the authorized public chartering agency involved will reserve the right to revoke or not renew a school's charter based on financial, structural, or operational factors involving the management of the school (ESEA section 4303(f));

(C) A description of how the autonomy and flexibility granted to a charter school is consistent with the definition of charter school in section 4310 of the ESEA (ESEA section 4303(f));

(D) A description of how the eligible applicant will solicit and consider input from parents and other members of the community on the implementation and operation of each charter school that will receive funds under the State entity's program (ESEA section 4303(f));

(E) A description of the eligible applicant's planned activities and expenditures of subgrant funds to support opening and preparing for the operation of new charter schools, opening and preparing for the operation of replicated high-quality charter schools, or expanding high-quality charter schools, *and* how the eligible applicant will maintain financial sustainability after the end of the subgrant period (ESEA section 4303(f));

(F) A description of how the eligible applicant will support the use of effective parent, family, and community engagement strategies to operate each charter school that will receive funds under the State entity's program (ESEA section 4303(f)); and

(G) A needs analysis and description of the need for the proposed project, including how the proposed project would serve the interests and meet the needs of students and families in the communities the charter school intends to serve. The needs analysis, which may consist of information and documents previously submitted to an authorized public chartering agency to address need, must include, but is not necessarily limited to, the following:

(*1*) Descriptions of the local community support, including information that demonstrates interest in, and need for, the charter school; benefits to the community; and other evidence of demand for the charter school that demonstrates a strong likelihood the charter school will achieve and maintain its enrollment projections. Such information may include information on waiting lists for the proposed charter school or existing charter schools or traditional public schools, data on access to seats in high-quality public schools in the districts from which the charter school expects to draw students, and family interest in specialized instructional approaches proposed to be implemented at the charter school.

(*2*) Information on the proposed charter school's projected student enrollment and evidence to support the projected enrollment based on the needs analysis and other relevant data and factors, such as the methodology and calculations used.

(*3*) An analysis of the proposed charter school's projected student demographics and a description of the demographics of students attending public schools in the local community in which the charter school would be located and the school districts from which the students are, or would be, drawn to attend the charter school; a description of how the applicant plans to establish and maintain a racially and

socio-economically diverse student body, including proposed strategies (that are consistent with applicable legal requirements) to recruit, admit, enroll, and retain a diverse student body. An applicant that is unlikely to establish and maintain a racially and socio-economically diverse student body at the proposed charter school because the charter school would be located in a racially or socio-economically segregated or isolated community, or due to the charter school's specific educational mission, must describe—

(*i*) Why it is unlikely to be able to establish and maintain a racially and socio-economically diverse student body at the proposed charter school;

(*ii*) How the anticipated racial and socio-economic makeup of the student body would promote the purposes of the CSP to provide high-quality educational opportunities to all students, which may include a specialized educational program or mission; and

(*iii*) The anticipated impact of the proposed charter school on the racial and socio-economic diversity of the public schools and school districts from which students would be drawn to attend the charter school.

(*4*) A robust family and community engagement plan designed to ensure the active participation of families and the community that includes the following:

(*i*) How families and the community were, are, or will be engaged in determining the vision and design for the charter school, including specific examples of how families' and the community's input was, is, or is expected to be incorporated into the vision and design for the charter school.

(*ii*) How the charter school will meaningfully engage with both families and the community to create strong and ongoing partnerships.

(*iii*) How the charter school will foster a collaborative culture that involves the families of all students, including underserved students, in ensuring their ongoing input in school decision-making.

(*iv*) How the charter school's recruitment, admissions, enrollment, and retention processes will engage and accommodate families from various backgrounds, including English learners, students with disabilities, and students of color, including by holding enrollment and recruitment events on weekends or during non-standard work hours, making interpreters available, and providing enrollment and recruitment information in widely accessible formats (*e.g.,* hard copy and online in multiple languages; as appropriate, large print or braille for visually impaired individuals) through widely available and transparent means (*e.g.,* online and at community locations).

(*v*) How the charter school has engaged or will engage families and the community to develop an instructional model to best serve the targeted student population and their families, including students with disabilities and English learners.

(*5*) How the plans for the operation of the charter school will support and reflect the needs of students and families in the community, including consideration of district or *community assets* and how the school's location, or anticipated location if a facility has not been secured, will facilitate access for the targeted student population (*e.g.,* access to public transportation or other transportation options, the demographics of neighborhoods within walking distance of the school, and transportation plans and costs for students who are not able to walk or use public transportation to access the school).

(*6*) A description of the steps the applicant has taken or will take to ensure that the proposed charter school (A) would not hamper, delay, or negatively affect any desegregation efforts in the community in which the charter school would be located and the public school districts from which students are, or would be, drawn to attend the charter school, including efforts to comply with a court order, statutory obligation, or voluntary efforts to create and maintain desegregated public schools; and (B) to ensure that the proposed charter school would not otherwise increase racial or socio-economic segregation or isolation in the schools from which the students are, or would be, drawn to attend the charter school. (2022 NFP).

(iii)(A) A description of how the State entity, in awarding subgrants to eligible applicants, will—

(*1*) Give priority to eligible applicants that propose projects that include the creation, replication, or expansion of a high-quality charter school that is developed and implemented—

(*i*) With meaningful and ongoing engagement with current or former teachers and other *educators;* and

(*ii*) Using a community-centered approach that includes an assessment of community assets, informs the development of the charter school, and includes the implementation of protocols and practices designed to ensure that the charter school will use and interact with community assets on an ongoing basis to create and maintain strong community ties.

(B) In its application, an eligible applicant must provide a high-quality plan that demonstrates how its proposed project would meet the requirements in paragraph (G)(6)(iii)(A)(1) of these application requirements, accompanied by a timeline for key milestones that span the course of planning, development, and implementation of the charter school. (2022 NFP).

(iv) In the case of a State entity that partners with an outside organization to carry out the State entity's quality charter school program, in whole or in part, a description of the roles and responsibilities of the partner (ESEA section 4303(f));

(v) A description of how the State entity will ensure that each charter school receiving funds under the State entity's program has considered and planned for the transportation needs of the school's students (4303(f));

(vi) A description of how the State in which the State entity is located addresses charter schools in the State's open meetings and open records laws (ESEA section 4303(f));

(vii) A description of how the State entity will support diverse charter school models, including models that serve rural communities (ESEA section 4303(f));

(viii) Evidence to support the requested funds and projected enrollment, such as explanations regarding the methodology and calculations (2022 NFP); and

(ix) A description, including a timeline, of how the State entity will monitor and report on subgrant performance in accordance with 2 CFR 200.329, and address and mitigate subgrantee risk, including—

(A) How subgrantees will be selected for in-depth monitoring, including factors that indicate higher risk (*e.g.,* charter schools that have management contracts with for-profit education management organizations, virtual charter schools, and charter schools with a history of poor performance);

(B) How identified subgrantee risk will be addressed;

(C) How subgrantee expenditures will be monitored;

(D) How monitors will be trained;

(E) How monitoring findings will be shared with subgrantees;

(F) How corrective action plans will be used to resolve monitoring findings;

(G) How the State entity will ensure transparency so that monitoring findings and corrective action plans are available to families and the public; and

(H) How the State entity will work with authorized public chartering agencies to share information regarding

the monitoring of subgrantees, including in areas related to fiscal protocols and organizational governance, for the purpose of reducing the reporting burden on charter schools (2022 NFP).

(b) Assurances—Assurances by the State entity that—

(1) Each charter school receiving funds through the State entity's program will have a high degree of autonomy over budget and operations, including autonomy over personnel decisions (ESEA section 4303(f));

(2) The State entity will support charter schools in meeting the educational needs of their students, including children with disabilities and English learners (ESEA section 4303(f));

(3) The State entity will ensure that the authorized public chartering agency of any charter school that receives funds under the State entity's program adequately monitors each charter school under the authority of such agency in recruiting, enrolling, retaining, and meeting the needs of all students, including children with disabilities and English learners (ESEA section 4303(f));

(4) The State entity will provide adequate technical assistance to eligible applicants to meet the objectives described in application requirement (a)(1)(8) (ESEA section 4303(f));

(5) The State entity will promote quality authorizing, consistent with State law, such as through providing technical assistance to support each authorized public chartering agency in the State to improve such agency's ability to monitor the charter schools authorized by the agency, including by—

(i) Assessing annual performance data of the schools, including, as appropriate, graduation rates, student academic growth, and rates of student attrition;

(ii) Reviewing the schools' independent, annual audits of financial statements prepared in accordance with generally accepted accounting principles and ensuring that any such audits are publicly reported; and

(iii) Holding charter schools accountable to the academic, financial, and operational quality controls agreed to between the charter school and the authorized public chartering agency involved, such as renewal, non-renewal, or revocation of the school's charter (ESEA section 4303(f));

(6) The State entity will work to ensure that charter schools are included with the traditional public schools in decision-making about the public school system in the State (ESEA section 4303(f));

(7) The State entity will ensure that each charter school receiving funds under the State entity's program makes publicly available, consistent with the dissemination requirements of the annual State report card under section 1111(h) of the ESEA, including on the website of the school, information to help parents make informed decisions about the education options available to their children, including—

(i) Information on the educational program;

(ii) Student support services;

(iii) Parent contract requirements (as applicable), including any financial obligations or fees;

(iv) Enrollment criteria (as applicable); and

(v) Annual performance and enrollment data for each of the subgroups of students, as defined in section 1111(c)(2) of the ESEA, except that such disaggregation of performance and enrollment data must not be required in a case in which the number of students in a group is insufficient to yield statistically reliable information or the results would reveal personally identifiable information about an individual student (ESEA section 4303(f)).

(8) The State Entity will ensure that each charter school receiving CSP funding has not and will not enter into a contract with a for-profit management organization, including a nonprofit management organization operated by or on behalf of a for-profit entity, under which the management organization, or its related entities, exercises full or substantial administrative control over the charter school and, thereby, the CSP project (2022 NFP).

(9) Each charter school receiving CSP funding will provide an assurance that any management contract between the charter school and a for-profit management organization, including a nonprofit CMO operated by or on behalf of a for-profit entity, guarantees or will guarantee that—

(i) The charter school maintains control over all CSP funds, makes all programmatic decisions, and directly administers or supervises the administration of the subgrant;

(ii) The management organization does not exercise full or substantial administrative control over the charter school (and, thereby, the CSP project), except that this does not limit the ability of a charter school to enter into a contract with a management organization for the provision of services that do not constitute full or substantial control of the charter school project funded under the CSP (*e.g.,* food services or payroll services) and that otherwise comply with statutory and regulatory requirements;

(iii) The charter school's governing board has access to financial and other data pertaining to the charter school, the management organization, and any related entities; and

(iv) The charter school is in compliance with applicable Federal and State laws and regulations governing conflicts of interest, and there are no actual or perceived conflicts of interest between the charter school and the management organization (2022 NFP).

(10) Each charter school receiving CSP funding will post on its website, on an annual basis, a copy of any management contract between the charter school and a for-profit management organization, including a nonprofit management organization operated by or on behalf of a for-profit entity, and report information on such contract to the State entity, including—

(i) A copy of the existing contract with the for-profit organization or a detailed description of the terms of the contract, including the name and contact information of the management organization, the cost (*i.e.,* fixed costs and estimates of any ongoing cost), including the amount of CSP funds proposed to be used toward such cost, and the percentage such cost represents of the charter school's total funding, the duration, roles and responsibilities of the management organization, and the steps the charter school is taking to ensure that it makes all programmatic decisions, maintains control over all CSP funds, and directly administers or supervises the administration of the grant or subgrant in accordance with 34 CFR 76.701;

(ii) A description of any business or financial relationship between the charter school developer or CMO and the management organization, including payments, contract terms, and any property owned, operated, or controlled by the management organization or related individuals or entities to be used by the charter school;

(iii) The names and contact information for each member of the governing boards of the charter school and a list of management organization's officers, chief administrator, and other administrators, and any staff involved in approving or executing the management contract; and a description of any actual or perceived conflicts of interest, including financial interests, and how the applicant resolved or will resolve any actual or perceived conflicts of interest to ensure compliance with 2 CFR 200.318(c); and

(iv) A description of how the charter school ensured that such contract is severable and that a change in management companies will not cause

the proposed charter school to close (2022 NFP).

(11) Each charter school receiving CSP funding will disclose, as part of the enrollment process, any policies and requirements (*e.g.,* purchasing and wearing specific uniforms and other fees, or requirements for family participation), and any services that are or are not provided, that could impact a family's ability to enroll or remain enrolled in the school (*e.g.,* transportation services or participation in the National School Lunch Program) (2022 NFP).

(12) Each charter school receiving CSP funding will hold or participate in a public hearing in the local community in which the proposed charter school would be located to obtain information and feedback regarding the potential benefit of the charter school, which must at least include information about how the proposed charter school will increase the availability of high-quality public school options for underserved students, promote racial and socio-economic diversity in such community or have an educational mission to serve primarily underserved students, and not increase racial or socio-economic segregation or isolation in the school districts from which students would be drawn to attend the charter school (consistent with applicable laws). Applicants must ensure that the hearing (and notice thereof) is accessible to individuals with disabilities and limited English proficient individuals as required by law, actively solicit participation in the hearing (*i.e.,* provide widespread and timely notice of the hearing), make good faith efforts to accommodate as many people as possible (*e.g.,* hold the hearing at a convenient time for families or provide virtual participation options), and submit a summary of the comments received as part of the application. The hearing may be conducted as part of the charter authorizing process, provided that it meets the requirements above. (2022 NFP).

(13) No eligible applicant receiving funds under the State entity's program will use implementation funds for a charter school until after the charter school has received a charter from an authorized public chartering agency and has a contract, lease, mortgage, or other documentation indicating that it has a facility in which to operate. Consistent with sections 4303(b)(1), 4303(h)(1)(B), and 4310(6) of the ESEA, an eligible applicant may use CSP planning funds for post-award planning and design of the educational program of a proposed new or replicated high-quality charter school that has not yet opened, which may include hiring and compensating teachers, school leaders, and specialized instructional support personnel; providing training and professional development to staff; and other critical planning activities that need to occur prior to the charter school opening when such costs cannot be met from other sources. (2022 NFP).

Note: The Department recognizes that the charter approval process may exceed the 18-month planning period for CSP grants and subgrants, as prescribed under section 4303(d)(1)(B) of the ESEA. In such a case, applicants may request approval from the State entity to amend their application to request an extension of the 18-month planning period. Under section 4303(d)(5) of the ESEA, the Secretary, in his discretion, may waive any statutory or regulatory requirement over which he exercises administrative authority, except the requirements related to the definition of ''charter school'' in section 4310(2), provided that the waiver is requested in an approved application and the Secretary determines that granting the waiver will promote the purposes of the CSP. It is also worth noting that a subgrantee may request approval from the State entity to amend its approved application and budget to cover additional planning costs that it may incur due to an unexpected delay in the charter approval process.

(14) Within 120 days of the date of any subgrant award notifications, the grantee will post on its website a list of the charter schools slated to receive CSP funds, including the following for each school:

(i) The name, address, and grades served.

(ii) A description of the education model.

(iii) If the charter school has contracted with a for-profit management organization, the name of the management organization, the amount of CSP funding the management organization will receive from the school, and a description of the services to be provided.

(iv) The award amount, including any funding that has been approved for the current year and any additional years of the CSP grant for which the school will receive support.

(v) The grant or subgrant application (redacted as necessary).

(vi) The peer review materials, including reviewer comments and scores (redacted as necessary) from the subgrant competition (2022 NFP).

(c) Waivers—Requests for information about waivers, including—

(1) A request and justification for waivers of any Federal statutory or regulatory provisions that the State entity believes are necessary for the successful operation of the charter schools that will receive funds under the State entity's program under section 4303 of the ESEA or, in the case of a State entity that is a charter school support organization, a description of how the State entity will work with the State to request such necessary waivers, where applicable; and

(2) A description of any State or local rules, generally applicable to public schools, that will be waived or otherwise not apply to such schools.

Definitions: The following definitions are from sections 4303(a), 4310, and 8101 of the ESEA (20 U.S.C. 7221b(a), 7221i, and 7801); 34 CFR 77.1; and the 2022 NFP.

Ambitious means promoting continued, meaningful improvement for program participants or for other individuals or entities affected by the grant, or representing a significant advancement in the field of education research, practices, or methodologies. When used to describe a *performance target,* whether a performance target is ambitious depends upon the context of the relevant performance measure and the baseline for that measure (34 CFR 77.1).

Authorized public chartering agency means an SEA, LEA, or other public entity that has the authority pursuant to State law and approved by the Secretary to authorize or approve a charter school (section 4310(1) of the ESEA).

Baseline means the starting point from which performance is measured and targets are set (34 CFR 77.1).

Charter management organization means a nonprofit organization that operates or manages a network of charter schools linked by centralized support, operations, and oversight (section 4310(3) of the ESEA).

Charter school means a public school that—

(1) In accordance with a specific State statute authorizing the granting of charters to schools, is exempt from significant State or local rules that inhibit the flexible operation and management of public schools, but not from any rules relating to the other requirements of this definition;

(2) Is created by a developer as a public school, or is adapted by a developer from an existing public school, and is operated under public supervision and direction;

(3) Operates in pursuit of a specific set of educational objectives determined by the school's developer and agreed to by the authorized public chartering agency;

(4) Provides a program of elementary or secondary education, or both;

(5) Is nonsectarian in its programs, admissions policies, employment practices, and all other operations, and is not affiliated with a sectarian school or religious institution; [6]

(6) Does not charge tuition;

(7) Complies with the Age Discrimination Act of 1975, title VI of the Civil Rights Act of 1964, title IX of the Education Amendments of 1972, section 504 of the Rehabilitation Act of 1973, the Americans with Disabilities Act of 1990 (42 U.S.C. 12101 *et seq.*), section 444 of GEPA (20 U.S.C. 1232g) (commonly referred to as the ''Family Educational Rights and Privacy Act of 1974''), and part B of the Individuals with Disabilities Education Act (IDEA);

(8) Is a school to which parents choose to send their children, and that—

(i) Admits students on the basis of a lottery, consistent with section 4303(c)(3)(A) of the ESEA, if more students apply for admission than can be accommodated; or

(ii) In the case of a school that has an affiliated charter school (such as a school that is part of the same network of schools), automatically enrolls students who are enrolled in the immediate prior grade level of the affiliated charter school and, for any additional student openings or student openings created through regular attrition in student enrollment in the affiliated charter school and the enrolling school, admits students on the basis of a lottery as described in paragraph (i);

(9) Agrees to comply with the same Federal and State audit requirements as do other elementary schools and secondary schools in the State, unless such State audit requirements are waived by the State;

(10) Meets all applicable Federal, State, and local health and safety requirements;

(11) Operates in accordance with State law;

(12) Has a written performance contract with the authorized public chartering agency in the State that includes a description of how student performance will be measured in charter schools pursuant to State assessments that are required of other schools and pursuant to any other assessments mutually agreeable to the authorized public chartering agency and the charter school; and

(13) May serve students in early childhood education programs or postsecondary students (section 4310(2) of the ESEA).

Note: Pursuant to the definition of *authorized public chartering agency* in section 4310(1) of the ESEA, for a school to qualify as a charter school under section 4310(2) and receive Federal CSP funds, the entity that issues the charter or performance contract must be an SEA, LEA, or other *public* entity with authority pursuant to State law to approve a charter school.

Charter school support organization means a nonprofit, nongovernmental entity that is not an authorized public chartering agency and provides, on a statewide basis—

(1) Assistance to developers during the planning, program design, and initial implementation of a charter school; and

(2) Technical assistance to operating charter schools (section 4310(4) of the ESEA).

Child with a disability means—

(1) A child (i) with intellectual disabilities, hearing impairments (including deafness), speech or language impairments, visual impairments (including blindness), serious emotional disturbance (referred to as ''emotional disturbance''), orthopedic impairments, autism, traumatic brain injury, other health impairments, or specific learning disabilities; and (ii) who, by reason thereof, needs special education and related services.

(2) For a child aged 3 through 9 (or any subset of that age range, including ages 3 through 5), may, at the discretion of the State and the LEA, include a child (i) experiencing developmental delays, as defined by the State and as measured by appropriate diagnostic instruments and procedures, in one or more of the following areas: physical development, cognitive development, communication development, social or emotional development, or adaptive development; and (ii) who, by reason thereof, needs special education and related services (section 8101(4) of the ESEA).

Community assets means resources that can be identified and mobilized to improve conditions in the charter school and community. These assets may include—

(1) Human assets, including capacities, skills, knowledge base, and abilities of individuals within a community; and

(2) Social assets, including networks, organizations, businesses, and institutions that exist among and within groups and communities (2022 NFP).

Developer means an individual or group of individuals (including a public or private nonprofit organization), which may include teachers, administrators and other school staff, parents, or other members of the local community in which a charter school project will be carried out (section 4310(5) of the ESEA).

Disconnected youth means an individual, between the ages 14 and 24, who may be from a low-income background, experiences homelessness, is in foster care, is involved in the justice system, or is not working or not enrolled in (or at risk of dropping out of) an educational institution (2022 NFP).

Early childhood education program means—

(1) A Head Start program or an Early Head Start program carried out under the Head Start Act (42 U.S.C. 9831 *et seq.*), including a migrant or seasonal Head Start program, an Indian Head Start program, or a Head Start program or an Early Head Start program that also receives State funding;

(2) A State licensed or regulated child care program; or

(3) A program that (i) serves children from birth through age 6 that addresses the children's cognitive (including language, early literacy, and early mathematics), social, emotional, and physical development; and (ii) is (A) a State prekindergarten program, (B) a program authorized under section 619 (20 U.S.C. 1419) or part C of the IDEA, or (C) a program operated by an LEA (section 8101(16) of the ESEA).

Educator means an individual who is an early learning educator, teacher, principal or other school or district leader, specialized instructional support personnel (*e.g.,* school psychologist, counselor, school social worker, early intervention service personnel), paraprofessional, or faculty (2022 NFP).

Educationally disadvantaged student means a student in one or more of the categories described in section 1115(c)(2) of the ESEA, which include children who are economically disadvantaged, children with disabilities, migrant students, English learners, neglected or delinquent students, homeless students, and students who are in foster care (2022 NFP).

Eligible applicant means a developer that has—

(1) Applied to an authorized public chartering authority to operate a charter school; and

(2) Provided adequate and timely notice to that authority (section 4310(6) of the ESEA).

[6] The Department will apply this element of the definition of ''charter school'' consistent with applicable U.S. Supreme Court precedent, including *Trinity Lutheran Church of Columbia, Inc.* v. *Comer,* 137 S.Ct. 2012 (2017), *Espinoza* v. *Montana Department of Revenue,* 140 S.Ct. 2246 (2020), and *Carson* v. *Makin,* 142 S.Ct. 1987 (2022).

English learner, when used with respect to an individual, means an individual—

(1) Who is aged 3 through 21;

(2) Who is enrolled or preparing to enroll in an elementary school or secondary school;

(3)(i) Who was not born in the United States or whose native language is a language other than English;

(ii)(A) Who is a Native American or Alaska Native, or a native resident of the outlying areas; and

(B) Who comes from an environment where a language other than English has had a significant impact on the individual's level of English language proficiency; or

(iii) Who is migratory, whose native language is a language other than English, and who comes from an environment where a language other than English is dominant; and

(4) Whose difficulties in speaking, reading, writing, or understanding the English language may be sufficient to deny the individual—

(i) The ability to meet the challenging State academic standards;

(ii) The ability to successfully achieve in classrooms where the language of instruction is English; or

(iii) The opportunity to participate fully in society (section 8101(20) of the ESEA).

Expand, when used with respect to a high-quality charter school, means to significantly increase enrollment or add one or more grades to the high-quality charter school (section 4310(7) of the ESEA).

High-quality charter school means a charter school that—

(1) Shows evidence of strong academic results, which may include strong student academic growth, as determined by a State;

(2) Has no significant issues in the areas of student safety, financial and operational management, or statutory or regulatory compliance;

(3) Has demonstrated success in significantly increasing student academic achievement, including graduation rates where applicable, for all students served by the charter school; and

(4) Has demonstrated success in increasing student academic achievement, including graduation rates where applicable, for each of the subgroups of students, as defined in section 1111(c)(2) of the ESEA, except that such demonstration is not required in a case in which the number of students in a group is insufficient to yield statistically reliable information or the results would reveal personally identifiable information about an individual student (section 4310(8) of the ESEA).

Logic model (also referred to as theory of action) means a framework that identifies key *project components* of the proposed project (*i.e.,* the active ''ingredients'' that are hypothesized to be critical to achieving the *relevant outcomes*) and describes the theoretical and operational relationships among the key project components and relevant outcomes (34 CFR 77.1).

Parent includes a legal guardian or other person standing in loco parentis (such as a grandparent or stepparent with whom the child lives, or a person who is legally responsible for the child's welfare) (section 8101(38) of the ESEA).

Performance measure means any quantitative indicator, statistic, or metric used to gauge program or project performance (34 CFR 77.1).

Performance target means a level of performance that an applicant would seek to meet during the course of a project or as a result of a project (34 CFR 77.1).

Project component means an activity, strategy, intervention, process, product, practice, or policy included in a project. Evidence may pertain to an individual *project component* or to a combination of project components (*e.g.,* training teachers on instructional practices for English learners and follow-on coaching for these teachers) (34 CFR 77.1).

Public as applied to an agency, organization, or institution means that the agency, organization, or institution is under the administrative supervision or control of a government other than the Federal government. (34 CFR 77.1).

Relevant outcome means the student outcome(s) or other outcome(s) the key project component is designed to improve, consistent with the specific goals of the program (34 CFR 77.1).

Replicate, when used with respect to a high-quality charter school, means to open a new charter school, or a new campus of a high-quality charter school, based on the educational model of an existing high-quality charter school, under an existing charter or an additional charter, if permitted or required by State law (section 4310(9) of the ESEA).

State means each of the 50 States, the District of Columbia, the Commonwealth of Puerto Rico, and each of the outlying areas (section 8101(48) of the ESEA).

State educational agency means the agency primarily responsible for the State supervision of public elementary schools and secondary schools (section 8101(49) of the ESEA).

State entity means—

(1) A State educational agency;

(2) A State charter school board;

(3) A Governor of a State; or

(4) A charter school support organization (section 4303(a) of the ESEA).

Underserved student means a student in one or more of the following subgroups:

(1) A student who is living in poverty or is served by schools with high concentrations of students living in poverty.

(2) A student of color.

(3) A student who is a member of a federally recognized Indian Tribe.

(4) An English learner (as defined in section 8101 of the ESEA).

(5) A child or student with a disability (as defined in section 8101 of the ESEA).

(6) A *disconnected youth.*

(7) A migrant student.

(8) A student experiencing homelessness or housing insecurity.

(9) A student who is in foster care.

(10) A pregnant, parenting, or caregiving student.

(11) A student impacted by the justice system, including a formerly incarcerated student.

(12) A student performing significantly below grade level (2022 NFP).

Program Authority: Title IV, part C of the ESEA (20 U.S.C. 7221–7221j).

Note: Projects will be awarded and must be operated in a manner consistent with the nondiscrimination requirements contained in Federal civil rights laws.

Applicable Regulations: (a) The Education Department General Administrative Regulations in 34 CFR parts 75, 76, 77, 79, 81, 82, 84, 97, 98, and 99. (b) The Office of Management and Budget (OMB) Guidelines to Agencies on Governmentwide Debarment and Suspension (Nonprocurement) in 2 CFR part 180, as adopted and amended as regulations of the Department in 2 CFR part 3485. (c) The Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards in 2 CFR part 200 (Uniform Guidance), as adopted and amended as regulations of the Department in 2 CFR part 3474. (d) The 2022 NFP.

Note: As of October 1, 2024, grant applicants must follow the provisions stated in the updated Uniform Guidance (89 FR 30046, April 22, 2024) when preparing an application. For more information about these regulations please visit: *https://www.cfo.gov/resources-coffa/uniform-guidance/.*

II. Award Information

Type of Award: Discretionary grants.

Estimated Available Funds: The Administration has requested $400,000,000 for the CSP for FY 2025, of which we would use an estimated $107,000,000 for new awards under this competition. The actual level of funding, if any, depends on final congressional action. However, we are inviting applications to allow enough time to complete the grant process if Congress appropriates funds for this program.

Contingent upon the availability of funds and the quality of applications, we may make additional awards in subsequent years from the list of unfunded applications from this competition.

Estimated Range of Awards: $2,000,000 to $20,000,000 per year.

Estimated Average Size of Awards: $9,000,000 per year.

Maximum Award: See section III.4(a) of this notice, *Reasonable and Necessary Costs,* for information regarding the maximum amount of funds that State entities may award for each charter school receiving subgrant funds.

Estimated Number of Awards: 4–6.

Note: The Department is not bound by any estimates in this notice. The estimated range and average size of awards are based on a single 12-month budget period. We may use FY 2025 funds to support multiple 12-month budget periods for one or more grantees.

Project Period: Up to 60 months.

III. Eligibility Information

1. *Eligible Entities:* State entities in States with a specific State statute authorizing the granting of charters to schools.

Under section 4303(e)(1) of the ESEA, no State entity may receive a grant under this competition for use in a State in which a State entity is currently using a CSP State Entity grant. Thus, if multiple State entities in a State submit applications that receive high enough scores to be recommended for funding under this competition, only the highest scoring application among such State entities will be funded. Likewise, State entities located in States in which a State entity has a current CSP State Entity grant that is not in its final budget period (or is in its final budget period, but the grantee plans to request a one-time no-cost extension in accordance with 34 CFR 75.261 and 2 CFR 200.308(g)(2)[7]) (*i.e.,* Arizona, California, Colorado, Connecticut, District of Columbia, Florida, Georgia, Idaho, Illinois, Indiana, Louisiana, Maryland, Massachusetts, Minnesota, Mississippi, Missouri, New Jersey, New Mexico, New York, Oklahoma, Pennsylvania, Rhode Island, South Carolina, Tennessee, Texas, Utah, West Virginia, and Wisconsin) are ineligible to apply for a CSP State Entity grant under this competition.

State entities located in States in which a State entity has a current CSP State Entity grant that is operating under a no-cost extension (*i.e.,* Alabama, Arkansas, Delaware, New Hampshire, and Washington), or that is not operating under a no-cost extension but is in its final budget period and has notified the Department that it does not intend to request a no-cost extension (*i.e.,* Nevada), however, are eligible to apply for a CSP State Entity grant under this competition. The Department will accept applications from current State entity grantees located in these States as well as from State entities located in these States that do not have current grants.

Consistent with section 4303(e)(1), if a State entity is approved for a new CSP State Entity grant under this competition for use in a State in which a State entity has a current CSP State Entity grant that is operating under a no-cost extension (or that is in its final budget period and does not request a no-cost extension at least 10 calendar days before the end of the performance period specified in the Federal award in accordance with 2 CFR 200.308(g)(2)), the current State entity grantee must (a) obligate all grant funds; (b) complete all grant and subgrant activities; and (c) begin the grant closeout process (*i.e.,* liquidating the grant and not incurring new costs) prior to the expiration date of the no-cost extension (or the end of the performance period for a grantee that is in its final budget period and did not request a no-cost extension). In its application, a State entity that is applying for a new award and that has a current CSP State Entity grant under which the State entity has not yet completed all grant activities may request a waiver under section 4303(d)(5) of the ESEA to enable it to request a no-cost extension under its current CSP State Entity grant (*i.e.,* to complete grant activities) and to apply for a new CSP State Entity grant award. Additionally, if a current State entity grantee is eligible to apply for a new CSP State Entity grant but chooses not to do so, even though it has current subgrantees that will be unable to complete their subgrant activities before the current State Entity grant expires, another State entity applicant located in that State may request a waiver under section 4303(d)(5) of the ESEA to enable it to award a second subgrant within a five-year period to eligible applicants that previously received a subgrant from the current State entity grantee but were unable to complete their subgrant activities before the current State Entity grant expired, without requiring the eligible applicant to demonstrate three years of improved educational results as required under section 4303(e)(2) of the ESEA.

2. a. *Cost Sharing or Matching:* This program does not require cost sharing or matching.

b. *Indirect Cost Rate Information:* This program uses an unrestricted indirect cost rate. For more information regarding indirect costs, or to obtain a negotiated indirect cost rate, please see *https://www.ed.gov/about/ed-offices/ofo#Indirect-Cost-Division.*

c. *Administrative Cost Limitation:* A State entity receiving a grant under this section must not reserve more than 3 percent of funds for administrative costs, which may include technical assistance (ESEA section 4303(c)(1)(C)).

3. *Subgrantees:* (a) Under section 4303(b) and (c)(2) of the ESEA, a State entity may award subgrants to eligible applicants and technical assistance providers.

(b) Under section 4303(d)(2) of the ESEA, when awarding subgrants to eligible applicants, a State entity must use a peer review process to review applications.

Note: An eligible applicant (*i.e.,* charter school developer or charter school) in a State in which no State entity has an approved grant application under section 4303 of the ESEA may apply for funding directly from the Department under the CSP Grants to Charter School Developers for the Opening of New Charter Schools and for the Replication and Expansion of High-Quality Charter Schools (Developer) (ALN numbers 84.282B and 84.282E) program. Additional information about the CSP Developer program is available at *https://www.ed.gov/grants-and-programs/grants-birth-grade-12/charter-school-programs/charter-schools-program-csp-grants-to-charter-school-developers-for-the-opening-of-new-charter-schools-and-for-the-replication-and-expansion-of-high-quality-charter-schools.*

4. *Other:* (a) *Reasonable and Necessary Costs:* The Secretary may elect to impose maximum limits on the amount of subgrant funds that a State entity may award to an eligible applicant per new charter school created or replicated, per charter school

[7] Under 34 CFR 75.261, a grantee may extend the project period of an award one time for up to 12 months without the prior approval of the Department if the grantee meets the requirements for extension in 2 CFR 200.308(g)(2), and Department statutes, regulations, and the terms of the award do not prohibit the extension.

expanded, or per new school seat created.

For this competition, the maximum amount of subgrant funds a State entity may award to a subgrantee per new charter school, replicated high-quality charter school, or expanded high-quality charter school over a 5-year subgrant period is $2,000,000.

Note: Applicants must ensure that all costs included in the proposed budget are necessary and reasonable to meet the goals and objectives of the proposed project. Any costs determined by the Secretary to be unreasonable or unnecessary will be removed from the final approved budget.

(b) *Audits:* (i) A non-Federal entity that expends $1,000,000 or more during the non-Federal entity's fiscal year in Federal awards must have a single or program-specific audit conducted for that year in accordance with the provisions of 2 CFR part 200. (2 CFR 200.501(a))

(ii) A non-Federal entity that expends less than $1,000,000 during the non-Federal entity's fiscal year in Federal awards is exempt from Federal audit requirements for that year, except as noted in 2 CFR 200.503 (Relation to other audit requirements), but records must be available for review or audit by appropriate officials of the Federal agency, pass-through entity, and Government Accountability Office. (2 CFR 200.501(d)).

IV. Application and Submission Information

1. *Application Submission Instructions:* Applicants are required to follow the Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on December 23, 2024 (89 FR 104528) and available at *https://www.federalregister.gov/documents/2024/12/23/2024-30488/common-instructions-for-applicants-to-department-of-education-discretionary-grant-programs*, which contain requirements and information on how to submit an application.

2. *Submission of Proprietary Information:* Given the types of projects that may be proposed in applications for the CSP State Entity grant competition, your application may include business information that you consider proprietary. In 34 CFR 5.11, we define ''business information'' and describe the process we use in determining whether any of that information is proprietary and, thus, protected from disclosure under Exemption 4 of the Freedom of Information Act (5 U.S.C. 552, as amended).

Because we plan to make successful applications available to the public, you may wish to request confidentiality of business information.

Consistent with Executive Order 12600 (Predisclosure Notification Procedures for Confidential Commercial Information), please designate in your application any information that you believe is exempt from disclosure under Exemption 4. In the appropriate Appendix section of your application, under ''Other Attachments Form,'' please list the page number or numbers on which we can find this information. For additional information, please see 34 CFR 5.11(c).

3. *Intergovernmental Review:* This program is subject to Executive Order 12372 and the regulations in 34 CFR part 79. Information about Intergovernmental Review of Federal Programs under Executive Order 12372 is in the application package for this competition.

4. *Funding Restrictions:* In accordance with section 4303(c) of the ESEA, a State entity receiving a grant under this program must: (a) use not less than 90 percent of the grant funds to award subgrants to eligible applicants, in accordance with the quality charter school program described in the State entity's application pursuant to section 4303(f), for activities related to opening and preparing for the operation of new charter schools and replicated high-quality charter schools, or expanding high-quality charter schools; (b) reserve not less than 7 percent of the grant funds to provide technical assistance to eligible applicants and authorized public chartering agencies in carrying out such activities, and to work with authorized public chartering agencies in the State to improve authorizing quality, including developing capacity for, and conducting, fiscal oversight and auditing of charter schools; and (c) reserve not more than 3 percent of the grant funds for administrative costs, which may include technical assistance. The State entity's application should include a description of the State entity's objectives in providing technical assistance to eligible applicants and authorized public chartering agencies under section 4303(b)(2) of the ESEA, and the activities identified to provide such technical assistance, including any activities related to serving students with disabilities and English learners. A State entity may use a grant received under this program to provide technical assistance and to work with authorized public chartering agencies to improve authorizing quality under section 4303(b)(2) of the ESEA directly or through grants, contracts, or cooperative agreements.

Limitation on Grants and Subgrants: Under section 4303(d) of the ESEA, a grant awarded by the Secretary to a State entity under this competition must be for a period of not more than 5 years.

A subgrant awarded by a State entity under this program must be for a period of not more than 5 years, of which an eligible applicant may use not more than 18 months for planning and program design. An eligible applicant may not receive more than one subgrant under this program for each individual charter school for a 5-year period, unless the eligible applicant demonstrates to the State entity that such individual charter school has at least 3 years of improved educational results for students enrolled in such charter school, with respect to the elements described in section 4310(8)(A) and (D) of the ESEA.[8]

Other CSP Grants: A charter school that previously received funds for opening or preparing to operate a new charter school, or replicating or expanding a high-quality charter school, under the CSP State Entity program (ALN number 84.282A), the CSP Grants to Charter Management Organizations for the Replication and Expansion of High-Quality Charter Schools (CMO) program (ALN number 84.282M), or the CSP Developer program (ALN numbers 84.282B and 84.282E), may not use funds under this program to carry out the same or substantially similar activities. However, such charter school may be eligible to receive funds under this competition to expand the charter school beyond the existing grade levels or student count.

Likewise, a charter school that previously was awarded a subgrant by a State entity under this program (or the former CSP Grants for State Educational Agencies program) is ineligible to receive funds to carry out the same activities under the CMO program (ALN number 84.282M) or Developer program (ALN numbers 84.282B and 84.282E), including for opening or preparing to operate a new charter school, or for replication or expansion.

Uses of Subgrant Funds: Under section 4303(b) of the ESEA, State entities awarded grants under this competition must award subgrants to

[8] Section 4303(e)(2) of the ESEA prescribes the circumstances under which an eligible applicant may be eligible to apply to a State entity for a second subgrant for an individual charter school for a 5-year period. The eligible applicant still would have to meet all program requirements, including the requirements for replicating or expanding a high-quality charter school.

eligible applicants to enable such eligible applicants to—

(a) Open and prepare for the operation of new charter schools;

(b) Open and prepare for the operation of replicated high-quality charter schools; or

(c) Expand high-quality charter schools.

Under section 4303(h) of the ESEA, an eligible applicant receiving a subgrant under this program must use such funds to support activities related to opening and preparing for the operation of new charter schools or replicating or expanding high-quality charter schools, which must include one or more of the following:

(a) Preparing teachers, school leaders, and specialized instructional support personnel, including through paying costs associated with—

(i) Providing professional development; and

(ii) Hiring and compensating, during the eligible applicant's planning period specified in the application for subgrant funds, one or more of the following:

(A) Teachers.

(B) School leaders.

(C) Specialized instructional support personnel.

(b) Acquiring supplies, training, equipment (including technology), and educational materials (including developing and acquiring instructional materials).

(c) Carrying out necessary renovations to ensure that a new school building complies with applicable statutes and regulations, and minor facilities repairs (excluding construction).

(d) Providing one-time, startup costs associated with providing transportation to students to and from the charter school.

(e) Carrying out community engagement activities, which may include paying the cost of student and staff recruitment.

(f) Providing for other appropriate, non-sustained costs related to opening, replicating, or expanding high-quality charter schools when such costs cannot be met from other sources.

Diversity of Projects: Per section 4303(d)(4) of the ESEA, each State entity awarding subgrants under this competition must award subgrants in a manner that, to the extent practicable and applicable, ensures that such subgrants—

(a) Are distributed throughout different areas, including urban, suburban, and rural areas; and

(b) Will assist charter schools representing a variety of educational approaches.

Award Basis: In determining whether to approve a grant award and the amount of such award, the Department will consider, among other things, the applicant's performance and use of funds under a previous or existing award under any Department program (34 CFR 75.217(d)(3)(ii)) and any other financial resources available to the applicant (34 CFR 75.233(b)). In assessing the applicant's performance and use of funds under a previous or existing award, the Secretary will consider, among other things, the outcomes the applicant has achieved and the results of any Departmental grant monitoring, including the applicant's progress in remedying any deficiencies identified in such monitoring.

We reference additional regulations outlining funding restrictions in the *Applicable Regulations* section of this notice.

5. *Recommended Page Limit and English Language Requirement:* The application narrative (Part III of the application) is where you, the applicant, address the priorities, selection criteria, and application requirements that reviewers use to evaluate your application. We recommend that you (1) limit the application narrative to no more than 60 pages and (2) use the following standards:

- A ''page'' is 8.5″ x 11″, on one side only, with 1″ margins at the top, bottom, and both sides.
- Double-space (no more than three lines per vertical inch) all text in the application narrative, including titles, headings, footnotes, quotations, references, and captions, as well as all text in charts, tables, figures, and graphs.
- Use a font that is either 12 point or larger or no smaller than 10 pitch (characters per inch).
- Use one of the following fonts: Times New Roman, Courier, Courier New, or Arial.

Applications must be in English, and peer reviewers will only consider supporting documents submitted with the application that are in English.

The recommended page limit does not apply to Part I, the cover sheet; Part II, the budget section, including the narrative budget justification; Part IV, the assurances and certifications; or the one-page abstract, the resumes, the bibliography, or the letters of support. However, the recommended page limit does apply to all of the application narrative.

6. *Pre-Application Webinar Information:* The Department will hold a pre-application meeting via webinar designed to provide technical assistance to interested applicants. Detailed information regarding this webinar will be provided at *https://www.ed.gov/grants-and-programs/grants-birth-grade-12/charter-school-programs/expanding-opportunities-through-quality-charter-schools-program-csp-grants-to-state-entities,* on the *FY 2025 SE Grant Competition* tab. There is no registration fee for attending this meeting.

For further information about the pre-application meeting, contact Sareeta Schmitt, U.S. Department of Education, 400 Maryland Avenue SW, Washington, DC 20202–5970. Telephone: (202) 205–0730. Email: *SE_Competition@ed.gov.*

V. Application Review Information

1. *Selection Criteria:* The selection criteria for this competition are from section 4303(g)(1) of the ESEA (20 U.S.C. 7221b(g)(1)), the 2022 NFP, and 34 CFR 75.210. The maximum possible total score an application can receive for addressing the criteria is 100 points. The maximum possible score for addressing each criterion is indicated in parentheses following the criterion.

(a) *Quality of the Project Design (up to 35 points).* The Secretary considers the quality of the design of the proposed project. In determining the quality of the design of the proposed project, the Secretary considers:

(1) The quality of the logic model or other conceptual framework underlying the proposed project, including how inputs are related to outcomes. (34 CFR 75.210) (up to 5 points);

(2) The extent to which the methods of evaluation or other evidence-building include the use of objective *performance measures* that are clearly related to the intended outcomes of the project and will produce quality data that are quantitative and qualitative. (34 CFR 75.210) (up to 5 points);

(3) The *ambitious*ness of the State entity's objectives for the quality charter school program carried out under the CSP State Entity program (section 4303(g)(1)(B) of the ESEA (20 U.S.C. 7221b(g)(1)(B)) (up to 5 points);

(4) The extent to which the projected number of subgrant awards for each grant project year is supported by evidence of demand and need, and the extent to which the proposed average subgrant award amount is supported by evidence of the need of applicants (2022 NFP) (up to 20 points).

(b) *Quality of Eligible Applicants Receiving Subgrants (up to 15 points):* The likelihood that the eligible applicants receiving subgrants under the program will meet the State entity's objectives for the quality charter school program and improve educational results for students (section 4303(g)(1)(C) (20 U.S.C. 7221b(g)(1)(C))).

(c) *State Plan (up to 35 points):* The State entity's plan to—

(1) Adequately monitor the eligible applicants receiving subgrants under the State entity's program (section 4303(g)(1)(D)(i) (20 U.S.C. 7221b(g)(1)(D)(i))) (up to 10 points);

(2) Work with the authorized public chartering agencies involved to avoid duplication of work for the charter schools and authorized public chartering agencies (section 4303(g)(1)(D)(ii) (20 U.S.C. 7221b(g)(1)(D)(ii))) (up to 5 points);

(3) Provide technical assistance and support for—

(i) The eligible applicants receiving subgrants under the State entity's program; and

(ii) Quality authorizing efforts in the State (section 4303(g)(1)(D)(iii) of ESEA (20 U.S.C. 7221b(g)(1)(D)(iii))) (up to 10 points);

(4) The State entity's plan to solicit and consider input from parents and other members of the community on the implementation and operation of charter schools in the State (section 4303(g)(1)(E) of ESEA (20 U.S.C. 7221b(g)(1)(E))) (up to 5 points); and

(5) The degree of flexibility afforded by the State's charter school law and how the State entity will work to maximize the flexibility provided to charter schools under such law (section 4303(g)(1)(A) of ESEA (20 U.S.C. 7221b(g)(1)(A))) (up to 5 points).

(d) *Quality of the Management Plan (up to 15 points).* The Secretary considers the quality of the management plan for the proposed project. In determining the quality of the management plan for the proposed project, the Secretary considers:

(1) The feasibility of the management plan to achieve project objectives and goals on time and within budget, including clearly defined responsibilities, timelines, and milestones for accomplishing project tasks (34 CFR 75.210) (up to 10 points);

(2) The adequacy of plans for ensuring the use of quantitative and qualitative data, including meaningful community member and partner input, to inform continuous improvement in the operation of the proposed project (34 CFR 75.210) (up to 3 points); and

(3) The extent to which the time commitments of the project director and principal investigator and other key project personnel are appropriate and adequate to meet the objectives of the proposed project (34 CFR 75.210) (up to 2 points).

2. *Review and Selection Process:* We remind potential applicants that in reviewing applications in any discretionary grant competition, the Secretary may consider, under 34 CFR 75.217(d)(3), the past performance of the applicant in carrying out a previous award, such as the applicant's use of funds, completion of grant activities, achievement of project objectives, and compliance with grant conditions. The Secretary may also consider whether the applicant failed to submit a timely performance report or submitted a report of unacceptable quality.
