m. The application is not ready for environmental analysis at this time.

n. The proposed RC Byrd Project would utilize the existing Corps' Robert C. Byrd Locks and Dam and would consist of the following new facilities: (1) two 142.5-foot-long, 110-foot-wide powerhouses each containing three 4.75-kilowatt turbine-generator units to be constructed within two decommissioned locks on the east side of the Corps' Robert C. Byrd Locks and Dam; (2) two intake channels; (3) two tailrace channels; (4) a 250-foot-long underground conduit carrying generator leads from the powerhouses to a step-up transformer contained in a substation; (5) a 69-kilovolt, 2.5-mile-long aboveground transmission line to the Apple Grove Substation, where project power would connect with the electrical grid; and (6) appurtenant facilities.

The proposed RC Byrd Project would operate in a run-of-release mode, whereby outflow from the project would approximate inflow made available for generation by the Corps. The RC Byrd Project would be projected to have an annual energy generation of about 165,169 megawatt-hours.
