TABLE 2—PROJECT SUMMARY

Project title	Testing an EBP Lobster Trap.
Project start	06/01/2025.
Project end	05/31/2026.
Project objectives	To continue testing an early-benthic-phase lobster trap, which targets lobsters between 15- and 60-mm carapace lengths, to determine its feasibility for broader use in lobster surveys.
Project location	Offshore Gulf of Maine & Georges Bank; Statistical Areas 513, 522, 525, 526, 537, 561, and 562.
Number of vessels	Up to 5.
Number of trips	500.
Trip duration (days)	Up to 8.
Total number of days	Up to 4000.
Gear type(s)	Trap/pot (modified—see project narrative).
Number of tows or sets	Up to 4 per trip; up to 2000 total.
Duration of tows or sets	~ 4 days.

Project Narrative

The participants would place four EBP traps on two of their existing trawls (two EBP traps per trawl) and haul them up to twice per trip (for a total of up to four hauls per trip) during the course of the vessel's normal fishing activity. The EBP traps are 80-centimeter (cm) square traps based on a modified crawfish trap. They have four square openings, measuring less than 2 inches (5.08 cm), which lead to ramps that drop the lobsters into a baited kitchen. Inside the traps, there are additional ramps that lead the lobsters to four cylindrical parlors with vertical openings. The traps are attached to cement runners that provide weight and maintain proper orientation. The crews would rig the EBP traps within Atlantic Large Whale Take Reduction Plan-compliant commercial trawls, resulting in no additional end lines. Each vessel would fish four traps above their allocation, but would remain within the universal Exclusive Economic Zone Offshore Management Area 3 trap cap. At each haul, the crew would measure, sex, and promptly release all lobsters and Jonah crabs caught in the EBP traps; any bycatch would be recorded and immediately released. They would also sample catch from two standard traps per trawl (four total) as control data. Legal catch from standard traps would be landed for sale.

The goal of this project is to test the selectivity of the EBP trap (versus ventless traps that often catch eel and crab), and the scalability of its use. If successful, EBP traps could be used in lobster surveys to provide information

about larval-settlement patterns and juvenile nursery grounds. During the 2023 testing, 108 lobsters ranging from 28 to 67 mm CL were caught. The EBP collector was redesigned to target lobsters between 15–60 mm CL for the 2024 testing. Results are pending, as the 2024 testing is not complete.

If approved, the applicant may request minor modifications and extensions to the EFP throughout the year. EFP modifications and extensions may be granted without further notice if they are deemed essential to facilitate completion of the proposed research and have minimal impacts that do not change the scope or impact of the initially approved EFP request. Any fishing activity conducted outside the scope of the exempted fishing activity would be prohibited.
