I. Executive Summary

This proposed rule is intended to remove language in the Vinyl Chloride standard, 29 CFR 1910.1017, which is redundant with language in the Respiratory Protection standard. This would result in improved comprehensibility of the standard and avoid employer confusion and redundant efforts to comply with both standards. This proposal is also consistent with OSHA's intent, when it published the revised Respiratory Protection standard, to use it as a foundation for substance-specific standards.

II. Legal Authority and Preliminary Findings

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651 *et seq.*) (“the Act” or “the OSH Act”) is “to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources” (29 U.S.C. 651(b)). To achieve this goal, Congress authorized the Secretary of Labor (“the Secretary”) to promulgate standards to protect workers, including the authority “to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce” (29 U.S.C. 651(b)(3); *see also* 29 U.S.C. 654(a)(2) (requiring employers to comply with OSHA standards), 29 U.S.C. 655(a) (authorizing summary adoption of existing consensus and established federal standards within two years of the Act's enactment), 29 U.S.C. 655(b) (authorizing promulgation, modification or revocation of standards pursuant to notice and comment), and

29 U.S.C. 655(b)(7) (authorizing OSHA to include among a standard's requirements labeling, monitoring, medical testing, and other information-transmittal provisions)). An occupational safety and health standard is “. . . a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment” (29 U.S.C. 652(8)). The Secretary may also issue regulations requiring employers to keep records regarding their activities relating to the Act, as well as records of work-related deaths, injuries, and illnesses (29 U.S.C. 657(c)(1)–(2)).

Before OSHA may promulgate a health or safety standard, it must find that a standard is reasonably necessary or appropriate within the meaning of section 652(8) of the OSH Act, which OSHA did here in 1974 when it published the Vinyl Chloride standard (39 FR 35890). The Supreme Court, in its decision on OSHA's benzene standard, interpreted OSHA's obligation under section 652(8) as requiring it to evaluate “whether significant risks are present and can be eliminated or lessened by a change in practices” (*Indus. Union Dep't, AFL–CIO v. Am. Petroleum Inst.*, 448 U.S. 607, 642 (1980) (plurality opinion)). OSHA originally published this standard as an emergency temporary standard (ETS) and found that vinyl chloride posed a grave danger, which is a higher threshold than significant risk (39 FR 12342). When, as here, OSHA has previously determined that its standard substantially reduces a significant risk, it is unnecessary for the agency to make additional findings on risk for every provision of that standard (*see, e.g., Pub. Citizen Health Research Grp. v. Tyson*, 796 F.2d 1479, 1502 n.16 (D.C. Cir. 1986) (rejecting the argument that OSHA must “find that each and every aspect of its standard eliminates a significant risk”)). Rather, once OSHA makes a general significant risk finding in support of a standard, the next question is whether a particular requirement is reasonably related to the purpose of the standard as a whole (*see Asbestos Info. Ass'n/N. Am. v. Reich*, 117 F.3d 891, 894 (5th Cir. 1997); *Forging Indus. Ass'n v. Sec'y of Labor*, 773 F.2d 1436, 1447 (4th Cir. 1985); *United Steelworkers of Am., AFL–CIO–CLC v. Marshall*, 647 F.2d 1189, 1237–38 (D.C. Cir. 1980) (“*Lead I*”). Therefore, while OSHA is not making a preliminary finding of significant risk for this proposed rule, the agency has

made a preliminary determination that the proposed changes are reasonably related to the purpose of the Vinyl Chloride standard as a whole.

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that is reasonably expected to be developed (*see Am. Iron and Steel Inst. v. OSHA*, 939 F.2d 975, 980 (D.C. Cir. 1991)). Courts have also interpreted technological feasibility to mean that a typical firm in each affected industry or application group will reasonably be able to implement the requirements of the standard in most operations most of the time (*see, e.g., Public Citizen v. OSHA*, 557 F.3d 165, 170–71 (3d Cir. 2009) (citing *Lead I* at 1272)).

This proposed rule would not modify existing requirements for respiratory protection in workplaces; nor would it create new requirements. All employers in compliance with the existing standard would also be in compliance with the revised standard. Therefore, OSHA has made a preliminary determination that the proposed rule would be technologically feasible.

In evaluating economic feasibility, OSHA must consider the average cost of compliance in an industry rather than costs for individual employers. In its economic analyses, OSHA “must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms” (*Am. Iron and Steel Inst.*, 939 F.2d at 980, quoting *Lead I* at 1272). OSHA has made a preliminary finding that this proposal is economically feasible because it is deregulatory and is not expected to increase costs for employers. OSHA’s economic analysis is presented in Section V.

The Administrative Procedures Act directs agencies to include in each rule adopted “a concise general statement of [the rule’s] basis and purpose” (5 U.S.C. 553(c)); *cf.* 29 U.S.C. 655(e) (requiring the Secretary to publish a “statement of reasons” for any standard promulgated)). This notice satisfies this concise statement requirement.

III. Events Leading to the Proposed Rule

OSHA adopted a Vinyl Chloride standard in 1974 (39 FR 35890). OSHA also has a general Respiratory Protection standard, 29 CFR 1910.134, which it first promulgated in 1971 (39 FR 9835). OSHA published a revised Respiratory

Protection standard on January 8, 1998 (63 FR 1152). The Respiratory Protection standard contains worksite-specific requirements for program administration, as well as procedures for respirator selection, employee training, fit testing, medical evaluation, and respirator use, among other provisions. OSHA noted that the revised standard was to “serve as a ‘building block’ standard with respect to future standards that may contain respiratory protection requirements” (63 FR 1265). In 2006, OSHA revised the Respiratory Protection standard again to incorporate assigned protection factors (APFs) in the respirator selection process (71 FR 50122–01).

Several OSHA standards regulating exposure to toxic substances and harmful physical agents, including the Vinyl Chloride standard, require compliance with many provisions of 29 CFR 1910.134. However, when revising the respirator rule, the Agency decided to retain several special respirator selection provisions in the existing substance-specific standards. In this regard, OSHA noted that the respirator selection requirements retained in the substance-specific standards were developed in rulemakings to provide protection against a hazardous characteristic or condition unique to the regulated substance. Consequently, OSHA felt that preserving these provisions in the individual substance-specific standards would maintain the level of respiratory protection afforded to employees.

In this proposal, OSHA has identified a training provision in the Vinyl Chloride standard which can be eliminated in order to reduce redundancy with 29 CFR 1910.134 without compromising employee safety. The purpose of deleting this provision is to avoid an unintended result of employers duplicating their efforts to comply with the training provisions of both the Vinyl Chloride standard and the Respiratory Protection standard, as well as to reduce the burden associated with reviewing unnecessary provisions in standards.

OSHA expects that the rule would ultimately reduce the compliance burden on the regulated community. Therefore, OSHA believes this proposed rule is consistent with Executive Order (E.O.) 14219, “Ensuring Lawful Governance and Implementing the President’s ‘Department of Government Efficiency’ Deregulatory Initiative,” E.O. 14192, “Unleashing Prosperity Through Deregulation.”

IV. Summary and Explanation of the Proposed Requirements

OSHA is proposing to revise paragraph (j) of its general industry Vinyl Chloride standard (29 CFR 1910.1017) to remove redundant language and improve the comprehensibility of the requirements for respiratory protection programs. This revision would simplify compliance for employers by removing language in 1910.1017 that is duplicative with the requirements in 1910.134. This change would avoid the possibility of employers duplicating their efforts to comply with the training provisions of both the Vinyl Chloride standard and the Respiratory Protection standard, as well as reduce the burden associated with reviewing unnecessary provisions in standards. The Agency preliminarily concludes, therefore, that updating this rule is consistent with the goal of reducing undue burden.

OSHA has preliminarily determined that paragraph (j)(1)(iii) of the Vinyl Chloride standard, which requires training on “The purpose for, proper use, and limitations of respiratory protection devices,” unnecessarily duplicates the general provisions covered by the Respiratory Protection standard, at 1910.134(k), and is proposing to remove and reserve that paragraph.

OSHA recognizes that adopting this revision will also result in the revision of the respiratory protection requirements in OSHA’s shipyard employment, marine terminals, longshoring, and construction industry standards for vinyl chloride (*see* 29 CFR 1926.1117, 29 CFR 1917.1, 29 CFR 1918.1, and 29 CFR 1915.1017, which apply the requirements in 29 CFR 1910.1017 to construction, marine terminals, longshoring, and shipyards). OSHA requests comment regarding whether there are any considerations that are unique to the use of respirators for protection against vinyl chloride in shipyards, marine terminals, longshoring, or construction that OSHA should consider when finalizing this proposal. OSHA is in the process of appointing members to the Advisory Committee on Construction Safety and Health (ACCSH). The agency intends to present this proposed rule to ACCSH once that process is complete. The agency will put the Committee’s recommendations on the OSHA website and in the docket for this proposed rule prior to the close of the comment period to allow the public to provide comments on those recommendations.

OSHA requests comments on the following questions:

1. Are there any concerns that making the change described in this proposal will decrease worker safety?

2. Is there an alternative approach OSHA should consider?

V. Economic Analysis

This proposed rule would remove redundant training requirements in the Vinyl Chloride standard, 29 CFR 1910.1017, and therefore OSHA has preliminarily concluded that there will be no additional costs imposed by this proposed revision. OSHA also anticipates that there may be some cost savings associated with this rule, including a reduction of the burden associated with complying with and reviewing unnecessarily duplicative regulations. Because this rule would impose no new costs, OSHA has made a preliminary determination that the rule would be economically feasible.

The changes to the requirements for vinyl chloride may reduce the time necessary for employee training on respirators. OSHA estimates that 4,407 employees work at establishments affected by the vinyl chloride rule. Assuming a hiring rate of 30.6 percent annually,¹ a loaded wage of \$54.26 an hour, and that the changes to the standard may result in a decrease of 15 minutes per employee, this proposal could result in cost savings of \$18,292 (or \$136,117 over 10 years at a 3 percent discount rate).²

OSHA is seeking comments and data on this preliminary analysis, including on the following questions:

1. How many employers were likely to have been impacted by the redundant provisions and were providing duplicative training? How many employees were being provided duplicative training?

2. Are there any other savings for employers that would result from the proposed change?

2. Are there any benefits for worker protection that can be anticipated from this proposed change?

3. Are there any costs for employers that would result from this change that OSHA has not considered?

A. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies

that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

OSHA reviewed this proposed rule under the provisions of the Regulatory Flexibility Act. This rule would eliminate burdensome regulations. Therefore, OSHA initially concludes that the impacts of the revisions would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. OSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

B. Review Under Executive Order 12866

E.O. 12866, “Regulatory Planning and Review” (58 FR 51735 (Oct. 4, 1993)), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) for review. OIRA has determined that this proposed rule would not constitute a “significant regulatory action” under section 3(f) of E.O. 12866. Accordingly, this proposal was not submitted to OIRA for review under E.O. 12866.

VI. Additional Requirements

A. Requirements for States With OSHA-Approved State Plans

Under section 18 of the OSH Act (29 U.S.C. 651 *et seq.*), Congress expressly provides that States may adopt, with Federal approval, a plan for the development and enforcement of

occupational safety and health standards that are “at least as effective” as the Federal standards in providing safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved, State-administered occupational safety and health programs as “State Plans.”³

When Federal OSHA promulgates a new standard or a more stringent amendment to an existing standard, State Plans must either amend their standards to be identical to, or “at least as effective as,” the new Federal standard or amendment, or show that an existing State Plan standard covering this issue is “at least as effective” as the new Federal standard or amendment (29 CFR 1953.5(a)). However, when OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plans do not have to amend their standards, although they may opt to do so. OSHA has preliminarily determined this proposed rule does not impose additional or more stringent requirements than the existing standard, and therefore State Plans are not required to amend their standards. OSHA seeks comment on this assessment of its proposal.

B. OMB Review Under the Paperwork Reduction Act of 1995

The Paperwork Reduction Act (PRA) defines “collection of information” to mean “the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public, of facts or opinions by or for an agency, regardless of form or format” (44 U.S.C. 3502(3)(A)). Under the PRA, a Federal agency cannot conduct or sponsor a collection of information unless it is approved by OMB under the PRA and the agency displays a currently valid OMB control number (44 U.S.C. 3507). Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512(a)(1)). The process for OMB approval is found in 5 CFR part 1320.

³ Of the 29 States and U.S. territories with OSHA-approved State Plans, 22 cover public and private-sector employees: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. The remaining six States and one U.S. territory cover only State and local government employees: Connecticut, Illinois, Maine, Massachusetts, New Jersey, New York, and the Virgin Islands.

¹ Based on BLS JOLTs data.

² See Document ID OSHA–2011–0196–0015 for details on employment and wage estimates.

This proposed rule would impose no new information collection requirements. Because the revisions are deregulatory and affect only minor changes to the existing information collections in the Vinyl Chloride standards (OMB Control Number 1218–0010), OMB has waived the requirements of 5 CFR part 1320 and approved the modified Information Collection Request (ICR) under existing OMB Control Number 1218–0010 (*see* 5 CFR 1320.18(d)).

C. Environmental Impacts/National Environmental Policy Act (NEPA)

OSHA has reviewed this proposed rule according to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), as amended by the Fiscal Responsibility Act of 2023 (Pub. L. 118–5, 321, 137 Stat. 10), and the Department of Labor’s NEPA procedures (29 CFR part 11). OSHA has determined that this proposal would have no impact on the quality of the human environment.

D. Other Statutory and Executive Order Considerations

OSHA has considered its obligations under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*) and the Executive Orders on Consultation and Coordination With Indian Tribal Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), Federalism (E.O. 13132, 64 FR 43255 (Aug. 10, 1999)), and Protection of Children From Environmental Health Risks and Safety Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a proposed deregulatory action that involves the removal of duplicative requirements, that OSHA does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these statutes and executive orders. Furthermore, OSHA has determined that this proposal is consistent with the policies and directives outlined in E.O. 14192, “Unleashing Prosperity Through Deregulation” and is an Executive Order 14192 deregulatory action.

List of Subjects in 29 CFR Part 1910

Airborne contaminants, Health, Occupational safety and health, Respirators, Respirator selection

VII. Authority and Signature

This document was prepared under the direction of Amanda Laihow, Acting Assistant Secretary of Labor for Occupational Safety and Health. It is

issued under the authority of sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657), 5 U.S.C. 553, Secretary of Labor’s Order No. 8–2020 (85 FR 58393), and 29 CFR part 1911.

Dated: June 20, 2025.

Amanda Laihow,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

VIII. Regulatory Text

Proposed Amendments

For the reasons set forth in the preamble, OSHA is proposing to amend 29 CFR part 1910 as follows:

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Subpart Z—Toxic and Hazardous Substances

■ 1. The authority citation for subpart Z of part 1910 is revised to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor’s Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008), 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393); 29 CFR part 1911; and 5 U.S.C. 553, as applicable.

All of subpart Z issued under 29 U.S.C. 655(b), except those substances that have exposure limits listed in Tables Z–1, Z–2, and Z–3 of § 1910.1000. The latter were issued under 29 U.S.C. 655(a).

Section 1910.1000, Tables Z–1, Z–2, and Z–3 also issued under 5 U.S.C. 553, but not under 29 CFR part 1911, except for the arsenic (organic compounds), benzene, cotton dust, and chromium (VI) listings.

Section 1910.1001 also issued under 40 U.S.C. 3704 and 5 U.S.C. 553.

Section 1910.1002 also issued under 5 U.S.C. 553, but not under 29 U.S.C. 655 or 29 CFR part 1911.

Sections 1910.1018, 1910.1029, and 1910.1200 also issued under 29 U.S.C. 653.

Section 1910.1030 also issued under Public Law 106–430, 114 Stat. 1901.

Section 1910.1201 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

§ 1910.1017(j)(1)(iii) [Reserved]

■ 2. Remove and reserve § 1910.1017(j)(1)(iii).

[Docket No. OSHA–2025–0016]

RIN 1218–AD65

Inorganic Arsenic

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: This proposed rule revises some substance-specific respirator requirements to allow different types of respirators to be used under OSHA’s Inorganic Arsenic standard and better aligns this standard with OSHA’s Respiratory Protection standard.

DATES: Comments and other information, including requests for a hearing, must be received on or before September 2, 2025.

Informal public hearing: OSHA will schedule an informal public hearing on the rule if requested during the comment period. If a hearing is requested, the location and date of the hearing, procedures for interested parties to notify the agency of their intention to participate, and procedures for participants to submit their testimony and documentary evidence will be announced in the **Federal Register**.

ADDRESSES:

Written comments: You may submit comments and attachments, identified by Docket No. OSHA–2025–0016, electronically at <https://www.regulations.gov>, which is the Federal e-Rulemaking Portal. Follow the instructions online for making electronic submissions.

Instructions: All submissions must include the agency’s name and the docket number for this rulemaking (Docket No. OSHA–2025–0016). When uploading multiple attachments to <https://www.regulations.gov>, please number all of your attachments because [regulations.gov](https://www.regulations.gov) will not automatically number the attachments. This will be very useful in identifying all attachments. For example, Attachment 1—title of your document, Attachment 2—title of your document, Attachment 3—title of your document. For assistance with commenting and uploading documents, please see the Frequently Asked Questions on <https://www.regulations.gov>.

All comments, including any personal information you provide, are placed in the public docket without change and may be made available online at <https://www.regulations.gov>. Therefore, OSHA cautions commenters about submitting information they do not want made available to the public, or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.

Docket: The docket for this rulemaking (Docket No. OSHA–2025–0016) is available at <https://www.regulations.gov>, the Federal eRulemaking Portal. Most exhibits are available at <https://www.regulations.gov>; some exhibits (e.g., copyrighted material) are not available to download from that web page. However, all materials in the dockets are available for inspection at the OSHA Docket Office.

I. Executive Summary

This proposed rule is intended to provide greater compliance flexibility and clarify the policies and procedures employers must follow when implementing a respiratory protection program in conjunction with OSHA's Inorganic Arsenic standard (29 CFR 1910.1018). OSHA is proposing to revise some respirator-related provisions

where they are unnecessarily prescriptive, which would result in employers having greater flexibility in the respirators they select for exposed workers, while providing equivalent worker protection. This proposal is also consistent with OSHA's intent, when it published the revised Respiratory Protection standard (29 CFR 1910.134), to use it as a foundation for respirator selection in substance-specific standards.

Additionally, OSHA believes that this proposed rule appropriately incorporates advances in technology, which have made some provisions of the Inorganic Arsenic standard outdated. This proposed standard is intended to account for modern knowledge and technology and to streamline the selection of respirators.

II. Legal Authority and Preliminary Findings

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651 *et seq.*) ("the Act" or "the OSH Act") is "to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources" (29 U.S.C. 651(b)). To achieve this goal, Congress authorized the Secretary of Labor ("the Secretary") to promulgate standards to protect workers, including the authority "to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce" (29 U.S.C. 651(b)(3); *see also* 29 U.S.C. 654(a)(2) (requiring employers to comply with OSHA standards), 29 U.S.C. 655(a) (authorizing summary adoption of existing consensus and established federal standards within two years of the Act's enactment), 29 U.S.C. 655(b) (authorizing promulgation, modification or revocation of standards pursuant to notice and comment), and 29 U.S.C. 655(b)(7) (authorizing OSHA to include among a standard's requirements labeling, monitoring, medical testing, and other information-transmittal provisions)). An occupational safety and health standard is ". . . a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment" (29 U.S.C. 652(8)). The Secretary may also issue regulations requiring employers to keep records regarding their activities relating to the Act, as well as records of work-related deaths, injuries, and illnesses (29 U.S.C. 657(c)(1)–(2)).

Before OSHA may promulgate a health or safety standard, it must find that a standard is reasonably necessary or appropriate within the meaning of section 652(8) of the OSH Act, which OSHA did here in 1983 when it published a supplemental statement of reasons for the Inorganic Arsenic standard (48 FR 1864) (OSHA issued a standard in 1978 lowering the permissible exposure limit for inorganic arsenic (43 FR 19584), but was ordered by a court to make additional findings, including a significant risk determination, which it did in the supplemental statement). The Supreme Court, in its decision on OSHA's Benzene standard, interpreted OSHA's obligation under section 652(8) as requiring it to evaluate "whether significant risks are present and can be eliminated or lessened by a change in practices" (*Indus. Union Dep't, AFL–CIO v. Am. Petroleum Inst.*, 448 U.S. 607, 642 (1980) (plurality opinion)). When, as here, OSHA has previously determined that its standard substantially reduces a significant risk, it is unnecessary for the agency to make additional findings on risk for every provision of that standard (*see, e.g., Pub. Citizen Health Research Grp. v. Tyson*, 796 F.2d 1479, 1502 n.16 (D.C. Cir. 1986) (rejecting the argument that OSHA must "find that each and every aspect of its standard eliminates a significant risk")). Rather, once OSHA makes a general significant risk finding in support of a standard, the next question is whether a particular requirement is reasonably related to the purpose of the standard as a whole (*see Asbestos Info. Ass'n/N. Am. v. Reich*, 117 F.3d 891, 894 (5th Cir. 1997); *Forging Indus. Ass'n v. Sec'y of Labor*, 773 F.2d 1436, 1447 (4th Cir. 1985); *United Steelworkers of Am., AFL–CIO–CLC v. Marshall*, 647 F.2d 1189, 1237–38 (D.C. Cir. 1980) ("Lead I")). Therefore, while OSHA is not making a preliminary finding of significant risk for this proposed rule, the agency has made a preliminary determination that the proposed changes are reasonably related to the purpose of the Inorganic Arsenic standard as a whole.

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that is reasonably expected to be developed (*see Am. Iron and Steel Inst. v. OSHA*, 939 F.2d 975, 980 (D.C. Cir. 1991)). Courts have also interpreted technological feasibility to mean that a typical firm in each affected industry or application group will reasonably be

able to implement the requirements of the standard in most operations most of the time (*see, e.g., Public Citizen v. OSHA*, 557 F.3d 165, 170–71 (3d Cir. 2009) (citing *Lead I* at 1272)).

This proposed rule would not substantially modify existing requirements for respiratory protection in workplaces; nor would it create new requirements. All employers in compliance with the existing standard would also be in compliance with the revised standard. Therefore, OSHA has made a preliminary determination that the proposed rule would be technologically feasible.

In evaluating economic feasibility, OSHA must consider the average cost of compliance in an industry rather than costs for individual employers. In its economic analyses, OSHA “must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms” (*Am. Iron and Steel Inst.*, 939 F.2d at 980, quoting *Lead I* at 1272). OSHA has made a preliminary finding that this proposal is economically feasible because it is deregulatory and is expected to reduce costs for employers. OSHA’s economic analysis is presented in Section V.

The Administrative Procedures Act directs agencies to include in each rule adopted “a concise general statement of [the rule’s] basis and purpose” (5 U.S.C. 553(c)); *cf.* 29 U.S.C. 655(e) (requiring the Secretary to publish a “statement of reasons” for any standard promulgated)). This notice satisfies this concise statement requirement.

III. Events Leading to the Proposed Rule

OSHA adopted an Inorganic Arsenic standard in 1978 (43 FR 19584). OSHA also has a general Respiratory Protection standard, 29 CFR 1910.134, which it first promulgated in 1971 (39 FR 9835). OSHA published a revised Respiratory Protection standard on January 8, 1998 (63 FR 1152). The Respiratory Protection standard contains worksite-specific requirements for program administration, as well as procedures for respirator selection, employee training, fit testing, medical evaluation, and respirator use, among other provisions. OSHA noted that the revised standard was to “serve as a ‘building block’ standard with respect to future standards that may contain respiratory protection requirements” (63 FR 1265). In 2006, OSHA revised the Respiratory Protection standard again to incorporate assigned protection factors (APFs) in the

respirator selection process (71 FR 50122–01).

Several OSHA standards regulating exposure to toxic substances and harmful physical agents, including the Inorganic Arsenic standard, require compliance with many provisions of 29 CFR 1910.134. However, when revising the respirator rule, the Agency decided to retain several special respirator selection provisions in the existing substance-specific standards. In this regard, OSHA noted that the respirator selection requirements retained in the substance-specific standards were developed in rulemakings to provide protection against a hazardous characteristic or condition unique to the regulated substance. Consequently, OSHA felt that preserving these provisions in the individual substance-specific standards would maintain the level of respiratory protection afforded to employees.

In this proposal, OSHA is revisiting some of those determinations; the agency now believes that there are additional ways that substance-specific standards can rely on 29 CFR 1910.134 without compromising employee safety. The purpose of revising the respirator-related provisions of OSHA’s Inorganic Arsenic standard is to conform them, to the extent possible, with other substance-specific standards and to the revised 29 CFR 1910.134 in general. The proposed updates will also improve the Inorganic Arsenic standard because advances in technology have made that standard outdated in some areas. This revised Inorganic Arsenic standard is intended to take account of new knowledge and technology.

OSHA expects that the rule would ultimately reduce the compliance burden on the regulated community, without compromising worker safety. Therefore, OSHA believes this proposed rule is consistent with Executive Order (E.O.) 14219, “Ensuring Lawful Governance and Implementing the President’s ‘Department of Government Efficiency’ Deregulatory Initiative,” E.O. 14192, “Unleashing Prosperity Through Deregulation,” and the goal of removing regulations that harm the national interest by impeding technological innovation or private enterprise and entrepreneurship.

IV. Summary and Explanation of the Proposed Requirements

OSHA is proposing to revise paragraphs (h) and (o) of its general industry Inorganic Arsenic standard (29 CFR 1910.1018) to reduce compliance burdens, allow for the use of more up-to-date technology, and improve the comprehensibility of the requirements

for respiratory protection programs. These revisions would improve comprehensibility and simplify compliance for employers by removing requirements in 1910.1018 that are duplicative with the requirements in 1910.134 and updating respirator requirements to align with the revised NIOSH certification criteria in 42 CFR part 84. The revisions would also remove unnecessary restrictions on respirator selection where another equally protective option exists. Finally, these revisions would conform these standards, to the extent possible, to other substance-specific standards and to 29 CFR 1910.134. The Agency preliminarily concludes, therefore, that updating these rules is consistent with the goals of reducing undue burden and facilitating the use of new technology.

OSHA preliminarily determined that paragraphs (h)(1)(i) through (iv) of the Inorganic Arsenic standard, which specify when respirators must be used, unnecessarily duplicate the general provisions covered by 1910.134(a). Therefore, the agency is proposing to remove those paragraphs and add a cross reference to 1910.134(a)(2) in paragraph (h)(1).

Additionally, OSHA is proposing to remove paragraph (h)(3)(i)(C) of the Inorganic Arsenic standard, which requires HEPA filters for powered and non-powered air-purifying respirators. That requirement was included because it was originally part of NIOSH’s certification standards for respirators. However, NIOSH published revised requirements for testing and certification procedures and recodified the previous certification standards for other respirator classes as 42 CFR part 84 on June 8, 1995 (60 FR 30336). The HEPA filter requirement is not part of the revised 42 CFR part 84 anymore because additional types of filters have been certified for protection from particulates and can be used with powered and non-powered air-purifying respirators. OSHA believes that these testing and certification requirements ensure that all particulate filters certified under 42 CFR part 84, including HEPA filters, are efficient in preventing the penetration of submicron-sized particles; OSHA recognized this when the Agency’s revised Respiratory Protection standard was issued on January 8, 1998 (63 FR 1152). In fact, OSHA has issued other substance-specific regulations since the revised Respiratory Protection standard and NIOSH’s revised certification requirements were issued and has not incorporated a requirement for HEPA filters in similar respirator provisions in those rules.

OSHA is also proposing to remove paragraph (h)(3)(i)(D), which requires employers to provide respiratory protection based on employee exposure levels for inorganic arsenic and other gases. OSHA preliminarily determined that these respirator-selection provisions for inorganic arsenic are covered by 1910.134(d) and the standard can be streamlined by their removal. Similarly, OSHA is proposing to remove a portion of paragraph (h)(3)(ii) which specifies that employers must provide a combination dust and acid-gas respirator to employees who are exposed to gases over the relevant exposure limits. The agency has also preliminarily determined that this requirement is covered by 1910.134(d).

OSHA is also considering removing the other requirement in paragraph (h)(3)(ii), which requires employers to provide an employee with a powered air-purifying respirator (PAPR) when the employee chooses it, if a PAPR will provide proper protection. OSHA believes the removal of this provision would not compromise worker safety and health—this provision is about employee requests and, without it, workers would still be provided adequate protection. When OSHA updated the respiratory protection standard, the agency determined that it was appropriate to allow an employer to provide more protective respirators when requested by an employee, rather than mandate it (29 CFR 1910.134(c)(2)). Removing these requirements would therefore better align the Inorganic Arsenic standard with the general Respiratory Protection standard. However, the Agency acknowledges that user comfort affects employee compliance with requirements to wear respiratory protection and questions whether the existing requirements under the Respiratory Protection standard, 1910.134(c)(2) and Table 1, offer equivalent access to alternative styles of respiratory protection. OSHA therefore seeks comment on the merits of removing this provision.

Finally, OSHA preliminarily determined that paragraph (o)(1)(ii)(C) of the Inorganic Arsenic standard, which requires employers to provide training on the purpose, proper use, and limitations of respirators, unnecessarily duplicates the general provisions covered by the Respiratory Protection standard, 1910.134(k). OSHA therefore is proposing to remove and reserve that paragraph.

OSHA recognizes that adopting these revisions will also result in the revision of the respiratory protection requirements in OSHA's shipyard employment, marine terminals,

longshoring, and construction industry standards for inorganic arsenic (*see* 29 CFR 1926.1118, 29 CFR 1917.1, 29 CFR 1918.1, and 29 CFR 1915.1018, which apply the requirements in 29 CFR 1910.1018 to construction, marine terminals, longshoring, and shipyard work). OSHA requests comment regarding whether there are any considerations that are unique to the use of respirators for protection against inorganic arsenic hazards in shipyards, marine terminals, longshoring, or construction that OSHA should consider when finalizing this proposal. OSHA is in the process of appointing members to the Advisory Committee on Construction Safety and Health (ACCSH). The agency intends to present this proposed rule to ACCSH once that process is complete. The agency will put the Committee's recommendations on the OSHA website and in the docket for this proposed rule prior to the close of the comment period to allow the public to provide comments on those recommendations.

OSHA requests comments on this proposal, including responses regarding the following issues:

1. Are there any concerns that making the changes described in this proposal will decrease worker safety? If so, which provisions and why?
2. Are there alternative approaches OSHA should consider for any of these revisions?
3. Should OSHA remove the requirement for employers to provide PAPRs when they are requested by employees?
4. Are there any concerns that removing any of the substance-specific provisions in the Inorganic Arsenic standard and relying on the generic requirements of the Respiratory Protection standard will inadequately capture the content and requirements of the current substance-specific provisions?

V. Economic Analysis

This proposed rule would expand compliance options for employers under the Inorganic Arsenic standard, 29 CFR 1910.1018, and therefore OSHA has preliminarily concluded that there will be no additional costs imposed by this proposed revision. OSHA also anticipates that there would be some cost savings associated with this rule, including savings based on employers being able to choose more cost-effective respirators and a reduction of the burdens associated with reviewing unnecessarily duplicative regulations. Because this rule would impose no new costs, OSHA has made a preliminary

determination that the rule would be economically feasible.

Based on the Supporting Statement for the Information Collection Request for the Inorganic Arsenic standard, OSHA estimates that there are 407 employees exposed to inorganic arsenic in the U.S. above the PEL.¹ This proposed rule would, among other things, allow employers to provide N95 particulate filters rather than limiting employers to respirators equipped with HEPA filters. OSHA estimates that a 3M P100 particulate filter replaced every 40 hours of use (assumed to be weekly) results in an estimated cost of \$325 per employee per year (\$6.50 for 50 weeks per year). A 3M N95 particulate filter replaced at the same rate has an estimated cost of \$225 per employee per year (\$4.50 for 50 weeks). Switching to the N95 particulate filter would result in a cost savings of about \$100 per employee per year (assuming an employee works 40 hours per week, 50 weeks per year).

OSHA does not currently have sufficient information to quantify how many of the exposed employees would use an N95 particulate filter under the changes proposed in this rule. However, if 50 percent of the exposed employees were to use the N95 particulate filter instead of the P100 particulate filter, that could result in a savings, based on equipment alone, of approximately \$20,350 annually (or about \$151,000 over 10 years at a 3 percent discount rate).

OSHA is seeking comments and data on this preliminary analysis, including on the following questions:

1. How much do employers expect to save based on the increased flexibility in respirator selection?
2. Are there any other savings for employers that would result from the proposed change?
3. Are there any benefits for worker protection that can be anticipated from this proposed change?
4. Are there any costs for employers that would result from this change that OSHA has not considered?
5. Are there savings to employers outside of general industry related to this proposal? If so, would they be similar to what OSHA has estimated for general industry employers?

A. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule

¹ See Document ID OSHA-2011-0186-0013.

that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

OSHA reviewed this proposed rule under the provisions of the Regulatory Flexibility Act. This rule would eliminate burdensome regulations. Therefore, OSHA initially concludes that the impacts of the revisions would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. OSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

B. Review Under Executive Order 12866

E.O. 12866, “Regulatory Planning and Review” (58 FR 51735 (Oct. 4, 1993)), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) for review. OIRA has determined that this proposed rule would not constitute a “significant regulatory action” under section 3(f) of E.O. 12866. Accordingly, this proposal was not submitted to OIRA for review under E.O. 12866.

VI. Additional Requirements

A. Requirements for States With OSHA-Approved State Plans

Under section 18 of the OSH Act (29 U.S.C. 651 *et seq.*), Congress expressly provides that States may adopt, with

Federal approval, a plan for the development and enforcement of occupational safety and health standards that are “at least as effective” as the Federal standards in providing safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved, State-administered occupational safety and health programs as “State Plans.”²

When Federal OSHA promulgates a new standard or a more stringent amendment to an existing standard, State Plans must either amend their standards to be identical to, or “at least as effective as,” the new Federal standard or amendment, or show that an existing State Plan standard covering this issue is “at least as effective” as the new Federal standard or amendment (29 CFR 1953.5(a)). However, when OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plans do not have to amend their standards, although they may opt to do so. OSHA has preliminarily determined this proposed rule does not impose additional or more stringent requirements than the existing standard, and therefore State Plans are not required to amend their standards. OSHA seeks comment on this assessment of its proposal.

B. OMB Review Under the Paperwork Reduction Act of 1995

The Paperwork Reduction Act (PRA) defines “collection of information” to mean “the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public, of facts or opinions by or for an agency, regardless of form or format” (44 U.S.C. 3502(3)(A)). Under the PRA, a Federal agency cannot conduct or sponsor a collection of information unless it is approved by OMB under the PRA and the agency displays a currently valid OMB control number (44 U.S.C. 3507). Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512(a)(1)). The

² Of the 29 States and U.S. territories with OSHA-approved State Plans, 22 cover public and private-sector employees: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. The remaining six States and one U.S. territory cover only State and local government employees: Connecticut, Illinois, Maine, Massachusetts, New Jersey, New York, and the Virgin Islands.

process for OMB approval is found in 5 CFR part 1320.

This proposed rule would impose no new information collection requirements. Because the revisions are deregulatory and affect only minor changes to the existing information collections in the Inorganic Arsenic standards (OMB Control Number 1218–0104), OMB has waived the requirements of 5 CFR part 1320 and approved the modified Information Collection Request (ICR) under existing OMB Control Number 1218–0104 (*see* 5 CFR 1320.18(d)).

C. Environmental Impacts/National Environmental Policy Act (NEPA)

OSHA has reviewed this proposed rule according to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), as amended by the Fiscal Responsibility Act of 2023 (Pub. L. 118–5, 321, 137 Stat. 10), and the Department of Labor’s NEPA procedures (29 CFR part 11). OSHA has determined that this proposal would have no impact on the quality of the human environment.

D. Other Statutory and Executive Order Considerations

OSHA has considered its obligations under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*) and the Executive Orders on Consultation and Coordination With Indian Tribal Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), Federalism (E.O. 13132, 64 FR 43255 (Aug. 10, 1999)), and Protection of Children From Environmental Health Risks and Safety Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a proposed deregulatory action that involves the removal of requirements, that OSHA does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these statutes and executive orders. Furthermore, OSHA has determined that this proposal is consistent with the policies and directives outlined in E.O. 14192, “Unleashing Prosperity Through Deregulation” and is an Executive Order 14192 deregulatory action.

Assigned protection factors, Airborne contaminants, Health, Occupational safety and health, Respirators, Respirator selection

VII. Authority and Signature

This document was prepared under the direction of Amanda Laihow, Acting Assistant Secretary of Labor for Occupational Safety and Health. It is issued under the authority of sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657), 5 U.S.C. 553, Secretary of Labor's Order No. 8–2020 (85 FR 58393), and 29 CFR part 1911.

Dated: June 20, 2025

Amanda Laihow,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

VIII. Regulatory Text

Proposed Amendments

For the reasons set forth in the preamble, OSHA is amending 29 CFR part 1910 as follows:

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Subpart Z—Toxic and Hazardous Substances

■ 1. The authority for 29 CFR 1910 subpart Z is revised to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor's Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008); 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393); 29 CFR part 1911; and 5 U.S.C. 553, as applicable.

All of subpart Z issued under 29 U.S.C. 655(b), except those substances that have exposure limits listed in Tables Z–1, Z–2, and Z–3 of § 1910.1000. The latter were issued under 29 U.S.C. 655(a).

Section 1910.1000, Tables Z–1, Z–2 and Z–3 also issued under 5 U.S.C. 553, but not under 29 CFR part 1911 except for the arsenic (organic compounds), benzene, cotton dust, and chromium (VI) listings.

Section 1910.1001 also issued under 40 U.S.C. 3704 and 5 U.S.C. 553.

Section 1910.1002 also issued under 5 U.S.C. 553, but not under 29 U.S.C. 655 or 29 CFR part 1911.

Sections 1910.1018, 1910.1029, and 1910.1200 also issued under 29 U.S.C. 653.

Section 1910.1030 also issued under Public Law 106–430, 114 Stat. 1901.

Section 1910.1201 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

■ 2. § 1910.1018 is revised as follows:

■ a. Revise and republish paragraph

(h)(1)

■ b. Remove paragraphs (h)(3)(i)(C) and (D)

■ c. Revise and republish paragraph (h)(3)(ii)

■ d. Remove and reserve paragraph (o)(1)(ii)(C)

The revisions and additions read as follows:

(h) * * *

(1) *General.* For employees who use respirators required by this section, the employer must provide each employee an appropriate respirator that complies with the requirements of this paragraph. Respirators must be used when the employer determines that it is necessary to protect the health of an employee as required under 29 CFR 1910.134(a)(2)

* * * * *

(3) * * *

(i) * * *

(ii) Employees required to use respirators may choose, and the employer must provide, a powered air-purifying respirator if it will provide proper protection.

* * * * *

(o) * * *

(1) * * *

(ii) * * *

(A) * * *

(B) * * *

[Docket No. OSHA–2025–0012]

RIN 1218–AD67

Methylene Chloride

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: This proposed rule revises some substance-specific respirator requirements to allow different types of respirators to be used under OSHA's Methylene Chloride standard and better aligns this standard with OSHA's Respiratory Protection standard. It also includes two technical corrections.

DATES: Comments and other information, including requests for a hearing, must be received on or before September 2, 2025.

Informal public hearing: OSHA will schedule an informal public hearing on the rule if requested during the comment period. If a hearing is requested, the location and date of the hearing, procedures for interested parties to notify the agency of their intention to participate, and procedures for participants to submit their testimony and documentary evidence

will be announced in the **Federal Register**.

ADDRESSES:

Written comments: You may submit comments and attachments, identified by Docket No. OSHA–2025–0012, electronically at <https://www.regulations.gov>, which is the Federal eRulemaking Portal. Follow the instructions online for making electronic submissions.

Instructions: All submissions must include the agency's name and the docket number for this rulemaking (Docket No. OSHA–2025–0012). When uploading multiple attachments to [regulations.gov](https://www.regulations.gov), please number all of your attachments because [regulations.gov](https://www.regulations.gov) will not automatically number the attachments. This will be very useful in identifying all attachments. For example, Attachment 1—title of your document, Attachment 2—title of your document, Attachment 3—title of your document. For assistance with commenting and uploading documents, please see the Frequently Asked Questions on <https://www.regulations.gov>.

All comments, including any personal information you provide, are placed in the public docket without change and may be made available online at <https://www.regulations.gov>. Therefore, OSHA cautions commenters about submitting information they do not want made available to the public, or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.

Docket: The docket for this rulemaking (Docket No. OSHA–2025–0012) is available at <https://www.regulations.gov>, the Federal eRulemaking Portal. Most exhibits are available at <https://www.regulations.gov>; some exhibits (e.g., copyrighted material) are not available to download from that web page. However, all materials in the dockets are available for inspection at the OSHA Docket Office.

I. Executive Summary

This proposed rule is intended to provide greater compliance flexibility and remove duplicative language in OSHA's Methylene Chloride standard (29 CFR 1910.1052). It also includes two technical corrections. OSHA is proposing to revise a respirator-related provision which is unnecessarily prescriptive. OSHA anticipates this change would result in employers having greater flexibility in the respirators they select for exposed workers, while providing equivalent worker protection. This proposal is also consistent with OSHA's intent, when it published the revised Respiratory Protection standard (29 CFR 1910.134), to use it as a foundation for respirator selection in substance-specific standards.

II. Legal Authority and Preliminary Findings

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651 *et seq.*) ("the Act" or "the OSH Act") is "to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources" (29 U.S.C. 651(b)). To achieve this goal, Congress authorized the Secretary of Labor ("the Secretary") to promulgate standards to protect workers, including the authority "to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce" (29 U.S.C. 651(b)(3); *see also* 29 U.S.C. 654(a)(2) (requiring employers to comply with OSHA standards), 29 U.S.C. 655(a) (authorizing summary adoption of existing consensus and established federal standards within two years of the Act's enactment), 29 U.S.C. 655(b) (authorizing promulgation, modification or revocation of standards pursuant to notice and comment), and

29 U.S.C. 655(b)(7) (authorizing OSHA to include among a standard's requirements labeling, monitoring, medical testing, and other information-transmittal provisions)). An occupational safety and health standard is ". . . a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment" (29 U.S.C. 652(8)). The Secretary may also issue regulations requiring employers to keep records regarding their activities relating to the Act, as well as records of work-related deaths, injuries, and illnesses (29 U.S.C. 657(c)(1)–(2)).

Before OSHA may promulgate a health or safety standard, it must find that a standard is reasonably necessary or appropriate within the meaning of section 652(8) of the OSH Act, which OSHA did when it promulgated the Methylene Chloride standard in 1997 (62 FR 1494). The Supreme Court, in its decision on OSHA's benzene standard, interpreted OSHA's obligation under section 652(8) as requiring it to evaluate "whether significant risks are present and can be eliminated or lessened by a change in practices" (*Indus. Union Dep't, AFL-CIO v. Am. Petroleum Inst.*, 448 U.S. 607, 642 (1980) (plurality opinion)). OSHA determined that methylene chloride presented a significant risk to employees when it promulgated the Methylene Chloride standard in 1997 (62 FR 1494). When, as here, OSHA has previously determined that its standard substantially reduces a significant risk, it is unnecessary for the agency to make additional findings on risk for every provision of that standard (*see, e.g., Pub. Citizen Health Research Grp. v. Tyson*, 796 F.2d 1479, 1502 n.16 (D.C. Cir. 1986) (rejecting the argument that OSHA must "find that each and every aspect of its standard eliminates a significant risk")). Rather, once OSHA makes a general significant risk finding in support of a standard, the next question is whether a particular requirement is reasonably related to the purpose of the standard as a whole (*see Asbestos Info. Ass'n/N. Am. v. Reich*, 117 F.3d 891, 894 (5th Cir. 1997); *Forging Indus. Ass'n v. Sec'y of Labor*, 773 F.2d 1436, 1447 (4th Cir. 1985); *United Steelworkers of Am., AFL-CIO-CLC v. Marshall*, 647 F.2d 1189, 1237–38 (D.C. Cir. 1980) ("Lead I")). Therefore, while OSHA is not making a preliminary finding of significant risk for this proposed rule, the agency has made a preliminary determination that

the proposed changes are reasonably related to the purpose of the Methylene Chloride standard as a whole.

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that is reasonably expected to be developed (*see Am. Iron and Steel Inst. v. OSHA*, 939 F.2d 975, 980 (D.C. Cir. 1991)). Courts have also interpreted technological feasibility to mean that a typical firm in each affected industry or application group will reasonably be able to implement the requirements of the standard in most operations most of the time (*see, e.g., Public Citizen v. OSHA*, 557 F.3d 165, 170–71 (3d Cir. 2009) (citing *Lead I* at 1272)).

This proposed rule would not substantially modify existing requirements for respiratory protection in workplaces; nor would it create new requirements. All employers in compliance with the existing standard would also be in compliance with the revised standard. Therefore, OSHA has made a preliminary determination that the proposed rule would be technologically feasible.

In evaluating economic feasibility, OSHA must consider the average cost of compliance in an industry rather than costs for individual employers. In its economic analyses, OSHA "must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms" (*Am. Iron and Steel Inst.*, 939 F.2d at 980, quoting *Lead I* at 1272). OSHA has made a preliminary finding that this proposal is economically feasible because it is deregulatory and is expected to reduce costs for employers. OSHA's economic analysis is presented in Section V.

The Administrative Procedures Act directs agencies to include in each rule adopted "a concise general statement of [the rule's] basis and purpose" (5 U.S.C. 553(c)); *cf.* 29 U.S.C. 655(e) (requiring the Secretary to publish a "statement of reasons" for any standard promulgated). This notice satisfies this concise statement requirement.

III. Events Leading to the Proposed Rule

OSHA adopted a Methylene Chloride standard in 1997 (62 FR 1494). OSHA also has a general Respiratory Protection standard, 29 CFR 1910.134, which it first promulgated in 1971 (39 FR 9835). OSHA published a revised Respiratory Protection standard on January 8, 1998

(63 FR 1152). The Respiratory Protection standard contains worksite-specific requirements for program administration, as well as procedures for respirator selection, employee training, fit testing, medical evaluation, and respirator use, among other provisions. OSHA noted that the revised standard was to “serve as a ‘building block’ standard with respect to future standards that may contain respiratory protection requirements” (63 FR 1265). In 2006, OSHA revised the Respiratory Protection standard again to incorporate assigned protection factors (APFs) in the respirator selection process (71 FR 50122–01).

Several OSHA standards regulating exposure to toxic substances and harmful physical agents, including the Methylene Chloride standard, require compliance with many provisions of 29 CFR 1910.134. However, when revising the respirator rule, the Agency decided to retain several special respirator selection provisions in the existing substance-specific standards. In this regard, OSHA noted that the respirator selection requirements retained in the substance-specific standards were developed in rulemakings to provide protection against a hazardous characteristic or condition unique to the regulated substance. Consequently, OSHA felt that preserving these provisions in the individual substance-specific standards would maintain the level of respiratory protection afforded to employees.

In this proposal, OSHA is revisiting some of those determinations; the agency now believes that there are additional ways that substance-specific standards can rely on 29 CFR 1910.134 without compromising employee safety. The purpose of revising the respirator-related provisions of OSHA’s Methylene Chloride standard is to conform them, to the extent possible, with other substance-specific standards and to the revised 29 CFR 1910.134 in general. The proposed updates would improve the Methylene Chloride standard because it would remove unnecessarily specific respirator requirements and remove language that is duplicative with the requirements of the Respiratory Protection standard. Additionally, OSHA is proposing to make two technical corrections.

OSHA expects that the rule would ultimately reduce the compliance burden on the regulated community, without compromising worker safety. Therefore, OSHA believes this proposed rule is consistent with Executive Order (E.O.) 14219, “Ensuring Lawful Governance and Implementing the President’s ‘Department of Government

Efficiency’ Deregulatory Initiative,” E.O. 14192, “Unleashing Prosperity Through Deregulation,” and the goal of removing regulations that harm the national interest by impeding technological innovation or private enterprise and entrepreneurship.

IV. Summary and Explanation of the Proposed Requirements

OSHA is proposing to revise paragraph (g) of its general industry Methylene Chloride standard (29 CFR 1910.1052) to reduce compliance burdens, allow for the use of additional types of respirators, and improve the comprehensibility of the requirements for respiratory protection programs. These revisions would improve comprehensibility and simplify compliance for employers by removing requirements in 1910.1052 that are duplicative with the requirements in 1910.134. The proposed revisions would also remove unnecessary restrictions on respirator selection where another equally protective option exists. Finally, these revisions would also conform this standard, to the extent possible, to other substance-specific standards and to 29 CFR 1910.134. The Agency preliminarily concludes, therefore, that updating these rules is consistent with the goal of reducing undue burden and improving compliance with OSHA’s respiratory protection requirements.

OSHA has preliminarily determined that paragraphs (g)(1)(i) through (v) unnecessarily duplicate the general provisions covered by 1910.134(a) and is proposing to remove those paragraphs and add a cross reference to 1910.134(a) in paragraph (g)(1). OSHA does not intend for these changes to add to or change the regulatory burden on employers; actions that were in compliance with the requirements in 1910.1052(g) would also be in compliance with proposed paragraph (g).

Furthermore, OSHA is proposing to remove the requirement under paragraph (g)(3)(i) for employers to provide employees with full-face respiratory protection because methylene chloride may cause eye irritation or damage. Paragraph (h)(1) of the Methylene Chloride standard contains requirements for the use of personal protective equipment where skin or eye irritation from methylene chloride may occur and OSHA has preliminarily determined that those requirements are equally as protective against eye irritation or damage as the requirement for a full-face respirator in paragraph (g)(3)(i). Therefore, under the proposed revision, employers would be

able to provide half mask respirators if they also provide adequate eye protection to prevent eye irritation for employees. OSHA preliminarily concludes that this proposed change would increase compliance options without reducing worker protections.

OSHA is also considering (but not proposing) removing the requirement under paragraph (g)(3)(i) limiting employers to the use of atmosphere supplying respirators. OSHA recognizes that, at this time, there are no other available options for protection from methylene chloride. However, respirator technology is constantly evolving, and alternative respirators with equivalent protections may be available for use in the future. OSHA is interested in comments regarding how the agency could word this provision to allow for greater flexibility as technology changes.

OSHA has also preliminarily determined that paragraph (g)(4) on medical evaluations unnecessarily duplicates the general provisions covered by 1910.134(e) and is proposing to remove those paragraphs in their entirety. Since, under paragraph (g)(2)(i) of the Methylene Chloride standard, employers already have to comply with paragraph (e) in 1910.134, which is more comprehensive regarding medical evaluations, removing this language only reduces redundancy and does not remove any protections from employees.

OSHA is also proposing to make two technical corrections. Paragraph (e)(3) of the Methylene Chloride standard requires the employer to supply a respirator, selected in accordance with paragraph (h)(3) of that standard. However, the respirator selection criteria are contained in (g)(3) of the Methylene Chloride standard, and OSHA is proposing to amend paragraph (e)(3) to reflect that. In addition, paragraph (g)(2)(i) requires employers to implement a respiratory protection program in accordance with § 1910.13(b), which is an error. OSHA is proposing to amend paragraph (g)(2)(i) to refer to 1910.134(b) through (m) (except (d)(1)(iii)) instead.

OSHA recognizes that adopting these revisions will also result in the revision of the respiratory protection requirements in OSHA’s shipyard employment, marine terminals, longshoring, and construction industry standards for methylene chloride (*see* 29 CFR 1926.1152, 29 CFR 1915.1052, 29 CFR 1917.1, and 29 CFR 1918.1, which apply the requirements in 29 CFR 1910.1052 to shipyards, marine terminals, longshoring, and construction). OSHA requests comment regarding whether there are any considerations that are unique to the use

of respirators for protection against methylene chloride hazards in shipyards, marine terminals, longshoring, or construction that OSHA should consider when finalizing this proposal. OSHA is in the process of appointing members to the Advisory Committee on Construction Safety and Health (ACCSH). The agency intends to present this proposed rule to ACCSH once that process is complete. The agency will put the Committee's recommendations on the OSHA website and in the docket for this proposed rule prior to the close of the comment period to allow the public to provide comments on those recommendations.

OSHA requests comments on the following questions:

1. Are there any concerns that making the changes described in this proposal will decrease worker safety? In particular, are there any concerns that providing a half mask with eye protection will not ensure equal protection for workers as providing a full facepiece respirator for eye hazards associated with methylene chloride?

2. Are there alternative approaches OSHA should consider?

3. Should OSHA remove the language limiting employers to the use of atmosphere-supplying respirators from 1910.1052(g)(3)(i)? Why?

V. Economic Analysis

This proposed rule would expand compliance options for employers under the Methylene Chloride standard, 29 CFR 1910.1052, and therefore OSHA has preliminarily concluded that there would be no additional costs imposed by these proposed revisions. OSHA also anticipates that there would be some cost savings associated with this rule, including savings based on employers being able to choose more cost-effective respirators and a reduction of the burdens associated with reviewing unnecessarily duplicative regulations. Because this rule would impose no new costs, OSHA has made a preliminary determination that the rule would be economically feasible.

OSHA's economic analysis for the Methylene Chloride standard relied on extensive surveying activities by contractors. The agency is unable to recreate the profile with updated figures at this time. Instead, the agency estimated the number of exposed employees based on the number estimated in the Final Economic Analysis (237,509)¹ for the Methylene Chloride standard and the change in manufacturing employment between

1994 and 2018 (decline of 24.3%).² Based on these figures, OSHA estimates that, currently, 179,763 employees may be exposed to methylene chloride.

In the 1994 analysis, OSHA estimated that the cost of supplying pressure-demand full facepiece respirators (including capital, operating and maintenance, and increased air demand) was \$197.60 in 1994 dollars. Inflating that cost to 2024 dollars gives an annual cost per employee of \$377.42 per year (or \$1.51 per shift assuming an employee works 50 weeks and 5 shifts per week). OSHA estimates the cost of a half mask atmosphere-supplying respirator and eye protection is \$179 + \$10 = \$189 (or \$0.76 per shift assuming 50 weeks and 5 shifts per week).³

OSHA does not currently have sufficient information to quantify how many of the exposed employees would use a half mask atmosphere-supplying respirator. However, if 50 percent of the exposed employees were to use half mask atmosphere-supplying respirators instead of full facepiece atmosphere-supplying respirators, that could result in savings of approximately \$17 million annually (or \$127 million over 10 years at a 3 percent discount rate).

OSHA is seeking comments and data on this preliminary analysis, including on the following questions:

1. How much do employers expect to save based on the increased flexibility in respirator selection?

2. Are there any other savings for employers that would result from the proposed change?

3. Are there any benefits for worker protection that can be anticipated from this proposed change?

4. Are there any costs for employers that would result from this change that OSHA has not considered?

5. How many employees would employers expect to use half mask atmosphere-supplying respirators instead of a full facepiece under the proposed revisions?

6. How much familiarization time would employers who are new entrants

to the market expect to save based on the revisions?

7. Are there additional categories of cost savings that OSHA has not identified?

8. Would the savings to employers outside of general industry be similar to what OSHA has estimated for general industry employers?

A. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

OSHA reviewed this proposed rule under the provisions of the Regulatory Flexibility Act. This rule would eliminate burdensome regulations. Therefore, OSHA initially concludes that the impacts of the revisions would not have a "significant economic impact on a substantial number of small entities," and that the preparation of an IRFA is not warranted. OSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

B. Review Under Executive Order 12866

E.O. 12866, "Regulatory Planning and Review" (58 FR 51735 (Oct. 4, 1993)), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit "significant

² Katelynn Harris, "Forty years of falling manufacturing employment," *Beyond the Numbers: Employment & Unemployment*, vol. 9, no. 16 (U.S. Bureau of Labor Statistics, November 2020), <https://www.bls.gov/opub/btn/volume-9/forty-years-of-falling-manufacturing-employment.htm>. Accessed May 29, 2025.

¹ See Docket ID OSHA-H071B-2006-0839-0121.

regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) for review. OIRA has determined that this proposed rule would not constitute a “significant regulatory action” under section 3(f) of E.O. 12866. Accordingly, this proposal was not submitted to OIRA for review under E.O. 12866.

VI. Additional Requirements

A. Requirements for States With OSHA-Approved State Plans

Under section 18 of the OSH Act (29 U.S.C. 651 *et seq.*), Congress expressly provides that States may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards that are “at least as effective” as the Federal standards in providing safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved, State-administered occupational safety and health programs as “State Plans.”⁴

When Federal OSHA promulgates a new standard or a more stringent amendment to an existing standard, State Plans must either amend their standards to be identical to, or “at least as effective as,” the new Federal standard or amendment, or show that an existing State Plan standard covering this issue is “at least as effective” as the new Federal standard or amendment (29 CFR 1953.5(a)). However, when OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plans do not have to amend their standards, although they may opt to do so. OSHA has preliminarily determined this proposed rule does not impose additional or more stringent requirements than the existing standard, and therefore State Plans are not required to amend their standards. OSHA seeks comment on this assessment of its proposal.

B. OMB Review Under the Paperwork Reduction Act of 1995

The Paperwork Reduction Act (PRA) defines “collection of information” to mean “the obtaining, causing to be obtained, soliciting, or requiring the

disclosure to third parties or the public, of facts or opinions by or for an agency, regardless of form or format” (44 U.S.C. 3502(3)(A)). Under the PRA, a Federal agency cannot conduct or sponsor a collection of information unless it is approved by OMB under the PRA and the agency displays a currently valid OMB control number (44 U.S.C. 3507). Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512(a)(1)). The process for OMB approval is found in 5 CFR part 1320.

This proposed rule would impose no new information collection requirements. Because the revisions are deregulatory and affect only minor changes to the existing information collections in the Methylene Chloride standard (OMB Control Number 1218–0179), OMB has waived the requirements of 5 CFR part 1320 and approved the modified Information Collection Request (ICR) under existing OMB Control Number 1218–0179 (*see* 5 CFR 1320.18(d)).

C. Environmental Impacts/National Environmental Policy Act (NEPA)

OSHA has reviewed this proposed rule according to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), as amended by the Fiscal Responsibility Act of 2023 (Pub. L. 118–5, 321, 137 Stat. 10), and the Department of Labor’s NEPA procedures (29 CFR part 11). OSHA has determined that this proposal would have no impact on the quality of the human environment.

D. Other Statutory and Executive Order Considerations

OSHA has considered its obligations under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*) and the Executive Orders on Consultation and Coordination With Indian Tribal Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), Federalism (E.O. 13132, 64 FR 43255 (Aug. 10, 1999)), and Protection of Children From Environmental Health Risks and Safety Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a proposed deregulatory action that involves the removal of requirements, that OSHA does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these statutes and

executive orders. Furthermore, OSHA has determined that this proposal is consistent with the policies and directives outlined in E.O. 14192, “Unleashing Prosperity Through Deregulation” and is an Executive Order 14192 deregulatory action.

List of Subjects in 29 CFR Part 1910

Airborne contaminants, Health, Occupational safety and health, Respirators, Respirator selection.

VII. Authority and Signature

This document was prepared under the direction of Amanda Laihow, Acting Assistant Secretary of Labor for Occupational Safety and Health. It is issued under the authority of sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657), 5 U.S.C. 553, Secretary of Labor’s Order No. 8–2020 (85 FR 58393), and 29 CFR part 1911.

Dated: June 20, 2025.

Amanda Laihow,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

VIII. Regulatory Text

Proposed Amendments

For the reasons set forth in the preamble, OSHA is proposing to amend 29 CFR part 1910 as follows:

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Subpart Z—Toxic and Hazardous Substances

■ 1. The authority for 29 CFR 1910 subpart Z is revised to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor’s Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008); 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393); 29 CFR part 1911; and 5 U.S.C. 553, as applicable.

All of subpart Z issued under 29 U.S.C. 655(b), except those substances that have exposure limits listed in Tables Z–1, Z–2, and Z–3 of § 1910.1000. The latter were issued under 29 U.S.C. 655(a).

Section 1910.1000, Tables Z–1, Z–2 and Z–3 also issued under 5 U.S.C. 553, but not under 29 CFR part 1911 except for the arsenic (organic compounds), benzene, cotton dust, and chromium (VI) listings.

Section 1910.1001 also issued under 40 U.S.C. 3704 and 5 U.S.C. 553.

Section 1910.1002 also issued under 5 U.S.C. 553, but not under 29 U.S.C. 655 or 29 CFR part 1911.

Sections 1910.1018, 1910.1029, and 1910.1200 also issued under 29 U.S.C. 653.

Section 1910.1030 also issued under Public Law 106–430, 114 Stat. 1901.

⁴ Of the 29 States and U.S. territories with OSHA-approved State Plans, 22 cover public and private-sector employees: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. The remaining six States and one U.S. territory cover only State and local government employees: Connecticut, Illinois, Maine, Massachusetts, New Jersey, New York, and the Virgin Islands.

Section 1910.1201 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

■ 2. § 1910.1052 is revised as follows:

■ a. Revise and republish paragraph (e)(3)

■ b. Revise and republish paragraph (g)(1)

■ c. Revise and republish paragraph (g)(2)(i)

■ d. Revise and republish paragraph (g)(3)(i)

■ e. Remove and reserve paragraph (g)(4)

The revisions and additions read as follows:

(e) * * *

(3) The employer shall supply a respirator, selected in accordance with paragraph (g)(3) of this section, to each person who enters a regulated area and shall require each affected employee to use that respirator whenever MC exposures are likely to exceed the 8-hour TWA PEL or STEL.

Note to paragraph (e)(3): An employer who has implemented all feasible engineering, work practice and administrative controls (as required in paragraph (f) of this section), and who has established a regulated area (as required by paragraph (e)(1) of this section) where MC exposure can be reliably predicted to exceed the 8-hour TWA PEL or the STEL only on certain days (for example, because of work or process schedule) would need to have affected employees use respirators in that regulated area only on those days.

(g) * * *

(1) *General.* For employees who use respirators required by this section, the employer must provide each employee an appropriate respirator that complies with the requirements of this paragraph. Respirators must be used when the employer determines that it is necessary to protect the health of an employee as required under 29 CFR 1910.134(a)(2).

(2) * * *

(i) The employer must implement a respiratory protection program in accordance with § 1910.134(b) through (m) (except (d)(1)(iii)), which covers each employee required by this section to use a respirator.

(ii) * * *

(3) * * *

(i) Select, and provide to employees, the appropriate atmosphere-supplying respirator specified in paragraph (d)(3)(i)(A) of 29 CFR 1910.134.

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Parts 1910, 1915, 1917, 1918, and 1926

[Docket No. OSHA–2025–0022]

RIN 1218–AD66

Lead

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: This proposed rule revises some substance-specific respirator requirements to allow different types of respirators to be used under OSHA's Lead standards and better aligns the standards with OSHA's Respiratory Protection standard.

DATES: Comments and other information, including requests for a hearing, must be received on or before September 2, 2025.

Informal public hearing: OSHA will schedule an informal public hearing on the rule if requested during the comment period. If a hearing is requested, the location and date of the hearing, procedures for interested parties to notify the agency of their intention to participate, and procedures for participants to submit their testimony and documentary evidence will be announced in the **Federal Register**.

ADDRESSES:

Written comments: You may submit comments and attachments, identified by Docket No. OSHA–2025–0022, electronically at <https://www.regulations.gov>, which is the Federal e-Rulemaking Portal. Follow the instructions online for making electronic submissions.

Instructions: All submissions must include the agency's name and the docket number for this rulemaking (Docket No. OSHA–2025–0022). When uploading multiple attachments to [regulations.gov](https://www.regulations.gov), please number all of your attachments because <https://www.regulations.gov> will not automatically number the attachments. This will be very useful in identifying all attachments. For example, Attachment 1—title of your document, Attachment 2—title of your document, Attachment 3—title of your document. For assistance with commenting and uploading documents, please see the Frequently Asked Questions on <https://www.regulations.gov>.

All comments, including any personal information you provide, are placed in the public docket without change and may be made available online at <https://www.regulations.gov>. Therefore, OSHA cautions commenters about submitting information they do not want made available to the public, or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.

Docket: The docket for this rulemaking (Docket No. OSHA–2025–0022) is available at <https://www.regulations.gov>, the Federal eRulemaking Portal. Most exhibits are available at <https://www.regulations.gov>; some exhibits (e.g., copyrighted material) are not available to download from that web page. However, all materials in the dockets are available for inspection at the OSHA Docket Office.

I. Executive Summary

This proposed rule is intended to provide greater compliance flexibility and clarify the policies and procedures employers must follow when implementing a respiratory protection program in conjunction with OSHA's Lead standards (29 CFR 1910.1025 and 29 CFR 1926.62). OSHA is proposing to revise some respirator-related

provisions where they are unnecessarily prescriptive, which would result in employers having greater flexibility in the respirators they select for exposed workers, while providing equivalent worker protection. This proposal is also consistent with OSHA's intent, when it published the revised Respiratory Protection standard (29 CFR 1910.134), to use it as a foundation for respirator selection in substance-specific standards.

Additionally, OSHA believes that this proposed rule appropriately incorporates advances in technology, which have made some provisions of the Lead standard outdated, and would allow employers to take advantage of future technological advances. This proposed standard is intended to account for modern knowledge and technology and to streamline the selection of respirators.

II. Legal Authority and Preliminary Findings

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651 *et seq.*) (“the Act” or “the OSH Act”) is “to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources” (29 U.S.C. 651(b)). To achieve this goal, Congress authorized the Secretary of Labor (“the Secretary”) to promulgate standards to protect workers, including the authority “to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce” (29 U.S.C. 651(b)(3); *see also* 29 U.S.C. 654(a)(2) (requiring employers to comply with OSHA standards), 29 U.S.C. 655(a) (authorizing summary adoption of existing consensus and established federal standards within two years of the Act's enactment), 29 U.S.C. 655(b) (authorizing promulgation, modification or revocation of standards pursuant to notice and comment), and 29 U.S.C. 655(b)(7) (authorizing OSHA to include among a standard's requirements labeling, monitoring, medical testing, and other information-transmittal provisions)). An occupational safety and health standard is “. . . a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment” (29 U.S.C. 652(8)). The Secretary may also issue regulations requiring employers to keep records regarding their activities relating to the Act, as well as records of work-related

deaths, injuries, and illnesses (29 U.S.C. 657(c)(1)–(2)).

Before OSHA may promulgate a health or safety standard, it must find that a standard is reasonably necessary or appropriate within the meaning of section 652(8) of the OSH Act, which OSHA did here in 1978 when it published the Lead standard (43 FR 52952). The Supreme Court, in its decision on OSHA's Benzene standard, interpreted OSHA's obligation under section 652(8) as requiring it to evaluate “whether significant risks are present and can be eliminated or lessened by a change in practices” (*Indus. Union Dep't, AFL-CIO v. Am. Petroleum Inst.*, 448 U.S. 607, 642 (1980) (plurality opinion)). In its final rule, OSHA found that occupational exposure to lead posed a significant risk of harm to workers (43 FR 52952) (*see also United Steelworkers of Am., AFL-CIO-CLC v. Marshall*, 647 F.2d 1189, 1250 (D.C. Cir. 1980) (“*Lead I*”) (concluding OSHA “carried its burden under Section 3(8)”). When, as here, OSHA has previously determined that its standard substantially reduces a significant risk, it is unnecessary for the agency to make additional findings on risk for every provision of that standard (*see, e.g., Pub. Citizen Health Research Grp. v. Tyson*, 796 F.2d 1479, 1502 n.16 (D.C. Cir. 1986) (rejecting the argument that OSHA must “find that each and every aspect of its standard eliminates a significant risk”). Rather, once OSHA makes a general significant risk finding in support of a standard, the next question is whether a particular requirement is reasonably related to the purpose of the standard as a whole (*see Asbestos Info. Ass'n/N. Am. v. Reich*, 117 F.3d 891, 894 (5th Cir. 1997); *Forging Indus. Ass'n v. Sec'y of Labor*, 773 F.2d 1436, 1447 (4th Cir. 1985); *Lead I* at 1237–38). Therefore, while OSHA is not making a preliminary finding of significant risk for this proposed rule, the agency has made a preliminary determination that the proposed changes are reasonably related to the purpose of the Lead standards as a whole.

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that is reasonably expected to be developed (*see Am. Iron and Steel Inst. v. OSHA*, 939 F.2d 975, 980 (D.C. Cir. 1991)). Courts have also interpreted technological feasibility to mean that a typical firm in each affected industry or application group will reasonably be able to implement the requirements of the standard in most operations most of

the time (*see, e.g., Public Citizen v. OSHA*, 557 F.3d 165, 170–71 (3d Cir. 2009) (citing *Lead I* at 1272)).

This proposed rule would not substantially modify existing requirements for respiratory protection in workplaces; nor would it create new requirements. All employers in compliance with the existing standard would also be in compliance with the revised standard. Therefore, OSHA has made a preliminary determination that the proposed rule would be technologically feasible.

In evaluating economic feasibility, OSHA must consider the average cost of compliance in an industry rather than costs for individual employers. In its economic analyses, OSHA “must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms” (*Am. Iron and Steel Inst.*, 939 F.2d at 980, quoting *Lead I* at 1272). OSHA has made a preliminary finding that this proposal is economically feasible because it is deregulatory and is expected to reduce costs for employers. OSHA's economic analysis is presented in Section V.

The Administrative Procedures Act directs agencies to include in each rule adopted “a concise general statement of [the rule's] basis and purpose” (5 U.S.C. 553(c)); *cf.* 29 U.S.C. 655(e) (requiring the Secretary to publish a “statement of reasons” for any standard promulgated)). This notice satisfies this concise statement requirement.

III. Events Leading to the Proposed Rule

OSHA adopted a Lead standard in 1978 (43 FR 52952). OSHA also has a general Respiratory Protection standard, 29 CFR 1910.134, which it first promulgated in 1971 (39 FR 9835). OSHA published a revised Respiratory Protection standard on January 8, 1998 (63 FR 1152). The Respiratory Protection standard contains worksite-specific requirements for program administration, as well as procedures for respirator selection, employee training, fit testing, medical evaluation, and respirator use, among other provisions. OSHA noted that the revised standard was to “serve as a ‘building block’ standard with respect to future standards that may contain respiratory protection requirements” (63 FR 1265). In 2006, OSHA revised the Respiratory Protection standard again to incorporate assigned protection factors (APFs) in the respirator selection process (71 FR 50122–01).

Several OSHA standards regulating exposure to toxic substances and harmful physical agents, including the Lead standards, require compliance with many provisions of 29 CFR 1910.134. However, when revising the respirator rule, the Agency decided to retain several special respirator selection provisions in the existing substance-specific standards. In this regard, OSHA noted that the respirator selection requirements retained in the substance-specific standards were developed in rulemakings to provide protection against a hazardous characteristic or condition unique to the regulated substance. Consequently, OSHA felt that preserving these provisions in the individual substance-specific standards would maintain the level of respiratory protection afforded to employees.

In this proposal, OSHA is revisiting some of those determinations; the agency now believes that there are additional ways that substance-specific standards can rely on 29 CFR 1910.134 without compromising employee safety. The purpose of revising the respirator-related provisions of OSHA's Lead standards is to conform them, to the extent possible, with other substance-specific standards and to the revised 29 CFR 1910.134 in general. The proposed updates would improve the Lead standards, because they would allow employers to select from a wider range of equally protective respirators. OSHA also believes that advances in technology have made the substance-specific standards outdated in some areas. This revised standard is intended to take account of new knowledge and technology.

OSHA expects that the rule would ultimately reduce the compliance burden on the regulated community, without compromising worker safety. Therefore, OSHA believes this proposed rule is consistent with Executive Order (E.O.) 14219, "Ensuring Lawful Governance and Implementing the President's 'Department of Government Efficiency' Deregulatory Initiative," E.O. 14192, "Unleashing Prosperity Through Deregulation," and the goal of removing regulations that harm the national interest by impeding technological innovation or private enterprise and entrepreneurship.

IV. Summary and Explanation of the Proposed Requirements

OSHA is proposing to revise paragraph (f) and (l) of its general industry Lead standard (29 CFR 1910.1025) and its construction industry Lead standard (29 CFR 1926.62) to reduce compliance burdens, allow for

the use of more up-to-date technology, and improve the comprehensibility of the requirements for respiratory protection programs. These revisions would simplify compliance for employers by removing requirements in 1910.1025 and 1926.62 that are duplicative with the requirements in 1910.134 and updating respirator requirements to align with the revised NIOSH certification criteria in 42 CFR part 84. The proposed revisions also would remove unnecessary restrictions on respirator selection where another equally protective option exists. Finally, these revisions would conform these standards, to the extent possible, to other substance-specific standards and to 29 CFR 1910.134, which would simplify review of these regulations. The Agency preliminarily concludes, therefore, that updating these rules is consistent with the goals of facilitating technological innovation and reducing undue burden.

OSHA preliminarily determined that paragraphs (f)(1)(i) and (ii) of both the general industry standard and the construction standard for lead unnecessarily duplicate the general provisions covered by 1910.134(a). The agency is therefore proposing to remove those paragraphs and add a cross reference to 1910.134(a)(2) in paragraphs 1910.1925(f)(1) and 1926.62(f)(1). Employers in compliance with the current version of 1910.1025(f)(1) and 1926.62(f)(1) would not have to change any of their practices to remain in compliance with the changes OSHA is proposing.

OSHA is also proposing to remove the requirement in paragraph (f)(3)(i)(B) of the general industry and construction standards that limits employers to the use of full-facepiece respiratory protection where lead aerosols may cause eye or skin irritation at the use concentrations. Paragraph (g)(1) in both Lead standards contains requirements for the use of personal protective equipment where skin or eye irritation from lead may occur that OSHA has preliminarily determined are equally as protective as the requirement under paragraph (f)(3)(i)(B) in both standards. Removing the limitation to full facepiece respirators in paragraph (f)(3)(i)(B) of both Lead standards would provide greater compliance flexibility to employers, who would be able to provide half mask respirators and appropriate eye and face protection where the possibility of skin or eye irritation exists.

Additionally, OSHA is proposing to remove paragraph (f)(3)(i)(C) of both Lead standards, which requires HEPA filters for powered and non-powered

air-purifying respirators. That requirement was included when the Lead standards were promulgated because it was originally part of NIOSH's certification standards for respirators under 30 CFR part 11. However, NIOSH published revised requirements for testing and certification procedures and recodified the previous certification standards for other respirator classes as 42 CFR part 84 on June 8, 1995 (60 FR 30336). The HEPA filter requirement is not part of the revised 42 CFR part 84 because additional types of filters have been certified for protection from particulates and can be used with powered and non-powered air-purifying respirators. OSHA believes that these testing and certification requirements ensure that all particulate filters certified under 42 CFR part 84, including HEPA filters, are efficient in preventing the penetration of submicron-sized particles; OSHA recognized this when the Agency's revised Respiratory Protection standard was issued on January 8, 1998 (63 FR 1152). In fact, OSHA has issued other substance-specific regulations since the revised Respiratory Protection standard and NIOSH's revised certification requirements were issued and has not incorporated a requirement for HEPA filters in similar respirator provisions in those rules.

Additionally, OSHA has preliminarily determined that paragraphs 1910.1025(l)(1)(v)(C) and 1926.62(l)(2)(iii), which require that employees must be trained on the purpose, proper selection, fitting, use, and limitations of respirators, unnecessarily duplicate the general provisions covered by 1910.134(k) in the Respiratory Protection standard. OSHA therefore is proposing to remove and reserve those paragraphs.

OSHA is also considering (but not proposing) removing the requirements in paragraphs 1910.1025(f)(1)(iii) and 1926.62(f)(1)(iii) to provide an employee with a respirator during periods when the employee requests it. Similarly, OSHA is considering removing (but not proposing to remove) the requirements under paragraphs 1910.1025(f)(3)(ii) and 1926.62(f)(3)(ii) to provide an employee with a powered air-purifying respirator (PAPR) instead of a non-powered air-purifying respirator when the employee chooses to use a PAPR and the PAPR provides adequate protection. OSHA believes that the removal of these provisions would not compromise worker safety and health—both provisions are about employee requests and, without them, workers would still be provided adequate protection. When OSHA updated the Respiratory

Protection standard, it determined that it was appropriate to allow an employer to provide more protective respirators when requested by an employee, rather than mandate it (29 CFR 1910.134(c)(2)). Removing these requirements in the general industry standard and construction standard for lead would still allow for voluntary respirator use under some circumstances (*i.e.*, where the employer agrees to provide the equipment) and would better align with the general Respiratory Protection standard. However, the Agency acknowledges that user comfort affects workers' compliance with requirements to wear respiratory protection and questions whether the existing requirements under the Respiratory Protection standard, 1910.134(c)(2) and Table 1, offer equivalent access to alternative styles of respiratory protection. OSHA also understands that some employees may have come to rely on respiratory protection from lead at work, even when the standard does not require it. OSHA therefore seeks comment on the merits of removing these provisions.

OSHA recognizes that adopting these revisions will also result in the revision of the respiratory protection requirements in OSHA's shipyard employment, marine terminals, and longshoring standards for lead (*see* 29 CFR 1915.1025, 29 CFR 1917.1, and 29 CFR 1918.1, which apply the requirements in 1910.1025 to shipyards, marine terminals, and longshoring). OSHA requests comment regarding whether there are any considerations that are unique to the use of respirators for protection against lead hazards in shipyards, marine terminals, or longshoring that OSHA should consider when finalizing this proposal. OSHA is in the process of appointing members to the Advisory Committee on Construction Safety and Health (ACCSH). The agency intends to present this proposed rule to ACCSH once that process is complete. The agency will put the Committee's recommendations on the OSHA website and in the docket for this proposed rule prior to the close of the comment period to allow the public to provide comments on those recommendations.

OSHA requests comments on this proposal, including responses regarding the following issues:

1. Are there any concerns that making the changes described in this proposal will decrease worker safety? If so, which changes do you think would decrease worker safety and why?
2. Are there alternative approaches OSHA should consider to any of the proposed revisions?

3. Should OSHA remove the requirements for employers to provide PAPRs when they are requested by employees? In your experience, how often do employees request PAPRs when the Lead standards do not require them?

4. Should OSHA remove the requirement for employers to provide respirators when requested by an employee? In your experience, how often do employees request to use respirators when the Lead standards do not require them?

V. Economic Analysis

This proposed rule would expand compliance options for employers under the Lead standards, 29 CFR 1910.1025 and 29 CFR 1926.62, by allowing employers to provide half mask respirators rather than mandating full facepiece respirators. Therefore, OSHA has preliminarily concluded that there would be no additional costs imposed by this proposed revision. OSHA also anticipates that there would be some cost savings associated with this rule, including savings based on employers being able to choose more cost-effective respirators and a reduction of the burdens associated with reviewing unnecessarily duplicative regulations.

The Supporting Statement for the Information Collection Request for the general industry Lead standard estimates that there are 814,044 employees exposed to lead, with 346,894 of those exposed to levels above the action level (AL) but below the permissible exposure limit (PEL). OSHA assumes that 50 percent of those outside that group are exposed above the PEL (with the remaining 50 percent exposed below the AL).¹ The Supporting Statement for the Information Collection Request for the lead in construction standard does not give equivalent data, but does estimate that 158,422 employees are exposed above the AL. Assuming the ratio of workers exposed above the AL to those exposed above the PEL is the same in construction as in general industry, OSHA estimates that 52,807 employees in construction are exposed above the PEL.² OSHA estimates that there are 226,254 employees, between construction and general industry, exposed above the PEL and wearing respirators.

The cost of a full facepiece respirator is \$255³ and the cost of a half mask respirator is \$40.⁴ Employees using a

half mask respirator would also need safety goggles. OSHA determined that safety goggles cost \$2.25⁵ and need to be replaced 5 times a year (based on OSHA's 2007 PPE Payment FEA (72 FR 64342)), for an annual cost of \$11.25. Assuming that both types of respirators are replaced annually, that there is no difference in the price of canisters/cartridges, and that cleaning wipes would be used in equal amounts for either respirator, this results in a difference of \$203.75 per employee annually.

OSHA does not currently have sufficient information to quantify how many of the exposed employees would use a half mask respirator instead of a full facepiece respirator. However, if 50 percent of the exposed employees were to use half mask respirators instead of full facepiece respirators, that could result in savings, based on equipment alone, of approximately \$23 million annually (or about \$171.5 million over 10 years at a 3 percent discount rate).

OSHA is seeking comments and data on this preliminary analysis, including on the following questions:

1. How much do employers expect to save based on the increased flexibility in respirator selection?
2. How many employees would employers expect to use half mask respirators instead of a full facepiece under the proposed revisions?
3. Are there cost savings associated with no longer being restricted to HEPA filters for powered and non-powered air-purifying respirators?
4. How much familiarization time would employers who are new entrants to the market expect to save based on the revisions?
5. Are there additional categories of cost savings that OSHA has not identified?
6. Are there any benefits for worker protection that can be anticipated from this proposed change?
7. Would the savings to employers outside of general industry and construction be similar to what OSHA has estimated for those employers?

A. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

⁵ https://www.unicode.org/B/L_8952/Uline-Economy-Safety-Goggles. Accessed June 5, 2025.

¹ See Document ID OSHA-2012-0013-0015.

² See Document ID OSHA-2012-0014-0013.

³ https://www.unicode.org/B/L_992/3M-Full-Face-Respirators. Accessed June 5, 2025.

⁴ https://www.unicode.org/B/L_1092/3M-Half-Face-Respirators. Accessed June 5, 2025.

OSHA reviewed this proposed rule under the provisions of the Regulatory Flexibility Act. This rule would eliminate burdensome regulations. Therefore, OSHA initially concludes that the impacts of the revisions would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. OSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

B. Review Under Executive Order 12866

E.O. 12866, “Regulatory Planning and Review” (58 FR 51735 (Oct. 4, 1993)), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) for review. OIRA has determined that this proposed rule would not constitute a “significant regulatory action” under section 3(f) of E.O. 12866. Accordingly, this proposal was not submitted to OIRA for review under E.O. 12866.

VI. Additional Requirements

A. Requirements for States With OSHA-Approved State Plans

Under section 18 of the OSH Act (29 U.S.C. 651 *et seq.*), Congress expressly provides that States may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards that are “at least as effective” as the Federal standards in providing

safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved, State-administered occupational safety and health programs as “State Plans.”⁶

When Federal OSHA promulgates a new standard or a more stringent amendment to an existing standard, State Plans must either amend their standards to be identical to, or “at least as effective as,” the new Federal standard or amendment, or show that an existing State Plan standard covering this issue is “at least as effective” as the new Federal standard or amendment (29 CFR 1953.5(a)). However, when OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plans do not have to amend their standards, although they may opt to do so. OSHA has preliminarily determined this proposed rule does not impose additional or more stringent requirements than the existing standard, and therefore State Plans are not required to amend their standards. OSHA seeks comment on this assessment of its proposal.

B. OMB Review Under the Paperwork Reduction Act of 1995

The Paperwork Reduction Act (PRA) defines “collection of information” to mean “the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public, of facts or opinions by or for an agency, regardless of form or format” (44 U.S.C. 3502(3)(A)). Under the PRA, a Federal agency cannot conduct or sponsor a collection of information unless it is approved by OMB under the PRA and the agency displays a currently valid OMB control number (44 U.S.C. 3507). Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512(a)(1)). The process for OMB approval is found in 5 CFR part 1320.

This proposed rule would impose no new information collection requirements. Because the revisions are

deregulatory and affect only minor changes to the existing information collections in the Lead standards (OMB Control Numbers 1218–0189 and 1218–0092), OMB has waived the requirements of 5 CFR part 1320 and approved the modified Information Collection Request (ICR) under existing OMB Control Numbers 1218–0189 and 1218–0092 (*see* 5 CFR 1320.18(d)).

C. Environmental Impacts/National Environmental Policy Act (NEPA)

OSHA has reviewed this proposed rule according to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), as amended by the Fiscal Responsibility Act of 2023 (Pub. L. 118–5, 321, 137 Stat. 10), and the Department of Labor’s NEPA procedures (29 CFR part 11). OSHA has determined that this proposal would have no impact on the quality of the human environment.

D. Other Statutory and Executive Order Considerations

OSHA has considered its obligations under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*) and the Executive Orders on Consultation and Coordination With Indian Tribal Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), Federalism (E.O. 13132, 64 FR 43255 (Aug. 10, 1999)), and Protection of Children From Environmental Health Risks and Safety Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a proposed deregulatory action that involves the removal of requirements, that OSHA does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these statutes and executive orders. Furthermore, OSHA has determined that this proposal is consistent with the policies and directives outlined in E.O. 14192, “Unleashing Prosperity Through Deregulation” and is an Executive Order 14192 deregulatory action.

List of Subjects in 29 CFR Part 1910 and 29 CFR Part 1926

Assigned protection factors, Airborne contaminants, Health, Occupational safety and health, Respirators, Respirator selection.

VII. Authority and Signature

This document was prepared under the direction of Amanda Laihow, Acting Assistant Secretary of Labor for Occupational Safety and Health. It is issued under the authority of sections 4,

⁶ Of the 29 States and U.S. territories with OSHA-approved State Plans, 22 cover public and private-sector employees: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. The remaining six States and one U.S. territory cover only State and local government employees: Connecticut, Illinois, Maine, Massachusetts, New Jersey, New York, and the Virgin Islands.

6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657), 5 U.S.C. 553, Secretary of Labor's Order No. 8–2020 (85 FR 58393), and 29 CFR part 1911.

Dated: June 20, 2025.

Amanda Laihow,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

VIII. Regulatory Text

Proposed Amendments

For the reasons set forth in the preamble, OSHA is proposing to amend 29 CFR part 1910 and part 1926 as follows:

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Subpart Z—Toxic and Hazardous Substances

■ 1. The authority for 29 CFR 1910 subpart Z is revised to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor's Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008), 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393); 29 CFR part 1911; and 5 U.S.C. 553, as applicable.

All of subpart Z issued under 29 U.S.C. 655(b), except those substances that have exposure limits listed in Tables Z–1, Z–2, and Z–3 of § 1910.1000. The latter were issued under 29 U.S.C. 655(a).

Section 1910.1000, Tables Z–1, Z–2 and Z–3 also issued under 5 U.S.C. 553, but not under 29 CFR part 1911 except for the arsenic (organic compounds), benzene, cotton dust, and chromium (VI) listings.

Section 1910.1001 also issued under 40 U.S.C. 3704 and 5 U.S.C. 553.

Section 1910.1002 also issued under 5 U.S.C. 553, but not under 29 U.S.C. 655 or 29 CFR part 1911.

Sections 1910.1018, 1910.1029, and 1910.1200 also issued under 29 U.S.C. 653.

Section 1910.1030 also issued under Public Law 106–430, 114 Stat. 1901.

Section 1910.1201 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

■ 2. § 1910.1025 is revised as follows:

■ 1. Revise and republish paragraph (f)(1) and (f)(3)(i).

■ 2. Remove paragraphs (f)(1)(i)–(iii) and (f)(3)(i)(A)–(C).

■ 3. Remove and reserve paragraph (l)(1)(v)(C).

The revisions and additions read as follows:

(f) * * *

(1) *General.* For employees who use respirators required by this section, the employer must provide each employee an appropriate respirator that complies with the requirements of this paragraph.

Respirators must be used when the employer determines that they are necessary to protect the health of an employee as required under 29 CFR 1910.134(a)(2) and during periods when an employee requests a respirator.

(2) * * *

(3) * * *

(i) Employers must select, and provide to employees, the appropriate respirators specified in paragraph (d)(3)(i)(A) of 29 CFR 1910.134.

PART 1926—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Subpart D—Occupational Health and Environmental Controls

■ 1. The authority for 29 CFR 1926 subpart D continues to read as follows:

Authority: 40 U.S.C. 3704; 29 U.S.C. 653, 655, and 657; and Secretary of Labor's Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008), 5–2007 (72 FR 31159), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393), as applicable; and 29 CFR part 1911.

Sections 1926.59, 1926.60, and 1926.65 also issued under 5 U.S.C. 553 and 29 CFR part 1911.

Section 1926.61 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

Section 1926.62 also issued under sec. 1031, Public Law 102–550, 106 Stat. 3672 (42 U.S.C. 4853).

Section 1926.65 also issued under sec. 126, Public Law 99–499, 100 Stat. 1614 (reprinted at 29 U.S.C.A. 655 Note) and 5 U.S.C. 553.

■ 2. § 1926.62 is revised as follows:

■ a. Revise and republish paragraphs (f)(1) and (f)(3)(i).

■ b. Remove paragraphs (f)(1)(i)–(iv) and (f)(3)(i)(A)–(C).

■ c. Remove and reserve paragraph (l)(2)(iii).

The revisions and additions read as follows:

(f) * * *

(1) *General.* For employees who use respirators required by this section, the employer must provide each employee an appropriate respirator that complies with the requirements of this paragraph. Respirators must be used when the employer determines that they are

necessary to protect the health of an employee as required under 29 CFR 1910.134(a)(2) and during periods when an employee requests a respirator.

(2) * * *

(3) * * *

(i) Employers must select, and provide to employees, the appropriate respirators specified in paragraph (d)(3)(i)(A) of 29 CFR 1910.134.

BILLING CODE 4510–26–P

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Parts 1910 and 1915

[Docket No. OSHA–2025–0009]

RIN 1218–AD50

Safety Color Code for Marking Physical Hazards; Textiles; Sawmills; Safety Color Code for Marking Physical Hazards for Shipyard Employment

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: This proposed rule removes from the Code of Federal Regulations: OSHA's Safety Color Code for Marking Physical Hazards Standard, 29 CFR 1910.144; paragraph (c)(8) of OSHA's Textiles Standard, 29 CFR 1910.262; paragraph (c)(11) of OSHA's Sawmills Standard, 29 CFR 1910.265; and OSHA's Safety Color Code for Marking Physical Hazards for Shipyard Employment Standard, 29 CFR 1915.90.

DATES: Comments and other information, including requests for a hearing, must be received on or before September 2, 2025.

Informal public hearing: OSHA will schedule an informal public hearing on the rule if requested during the comment period. If a hearing is requested, the location and date of the hearing, procedures for interested parties to notify the agency of their intention to participate, and procedures for participants to submit their testimony and documentary evidence will be announced in the **Federal Register**.

ADDRESSES:

Written comments: You may submit comments and attachments, identified by Docket No. OSHA–2025–0009, electronically at <https://www.regulations.gov>, which is the Federal e-Rulemaking Portal. Follow the instructions online for making electronic submissions.

Instructions: All submissions must include the agency's name and the docket number for this rulemaking (Docket No. OSHA–2025–0009). When uploading multiple attachments to <https://www.regulations.gov>, please number all of your attachments because <https://www.regulations.gov> will not automatically number the attachments. This will be very useful in identifying all attachments. For example, Attachment 1—title of your document, Attachment 2—title of your document, Attachment 3—title of your document. For assistance with commenting and uploading documents, please see the Frequently Asked Questions on <https://www.regulations.gov>.

All comments, including any personal information you provide, are placed in the public docket without change and may be made available online at <https://www.regulations.gov>. Therefore, OSHA cautions commenters about submitting information they do not want made available to the public or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.

Docket: The docket for this rulemaking (Docket No. OSHA–2025–0009) is available at <https://www.regulations.gov>, the Federal eRulemaking Portal. Most exhibits are available at <https://www.regulations.gov>; some exhibits (e.g., copyrighted material) are not available to download from that web page. However, all materials in the dockets are available for inspection at the OSHA Docket Office.

FOR FURTHER INFORMATION CONTACT:

For press inquiries: Contact Frank Meilinger, Director, OSHA Office of Communications, Occupational Safety and Health Administration; telephone: (202) 693–1999; email: meilinger.francis2@dol.gov.

General information and technical inquiries: Contact Andrew Levinson, Director, OSHA Directorate of Standards and Guidance, Occupational Safety and Health Administration; telephone: (202) 693–1950; email: osha.dsg@dol.gov.

Copies of this Federal Register notice: Electronic copies are available at <https://www.regulations.gov>. This Federal Register notice, as well as news

releases and other relevant information, also are available at OSHA's web page at <https://www.osha.gov>. A "100-word summary" is also available on <https://www.regulations.gov>.

- VI. Additional Requirements
- VII. Authority and Signature
- VIII. Regulatory Text

I. Executive Summary

The intent of this proposed rule is to remove from the Code of Federal Regulations: OSHA's Safety Color Code for Marking Physical Hazards Standard, 29 CFR 1910.144; paragraph (c)(8) of OSHA's Textiles Standard, 29 CFR 1910.262; paragraph (c)(11) of OSHA's Sawmills Standard, 29 CFR 1910.265; and OSHA's Safety Color Code for Marking Physical Hazards for Shipyard Employment Standard, 29 CFR 1915.90. The hazards these standards are designed to address are sufficiently addressed in other Federal, State, and local requirements.

II. Legal Authority and Preliminary Findings

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651 *et seq.*) ("the Act" or "the OSH Act") is "to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources" (29 U.S.C. 651(b)). To achieve this goal Congress authorized the Secretary of Labor ("the Secretary") to promulgate standards to protect workers, including the authority "to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce" (29 U.S.C. 651(b)(3); see also 29 U.S.C. 654(a)(2) requiring employers to comply with OSHA standards), 29 U.S.C. 655(a) (authorizing summary adoption of existing consensus and established federal standards within two years of the Act's enactment), 29 U.S.C. 655(b) (authorizing promulgation, modification or revocation of standards pursuant to

notice and comment)), and 29 U.S.C. 655(b)(7) (authorizing OSHA to include among a standard's requirements labeling, monitoring, medical testing, and other information-transmittal provisions). An occupational safety and health standard is "... a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment" (29 U.S.C. 652(8)).

Before OSHA may promulgate a health or safety standard, it must find that a standard is reasonably necessary or appropriate within the meaning of section 652(8) of the OSH Act. Once OSHA makes a general significant risk finding in support of a standard, the next question is whether a particular requirement is reasonably related to the purpose of the standard as a whole. See *Asbestos Info. Ass'n/N. Am. v. Reich*, 117 F.3d 891, 894 (5th Cir. 1997); *Forging Indus. Ass'n v. Sec'y of Labor*, 773 F.2d 1436, 1447 (4th Cir. 1985); *United Steelworkers of Am., AFL-CIO-CLC v. Marshall*, 647 F.2d 1189, 1237–38 (D.C. Cir. 1980) ("Lead I").

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that is reasonably expected to be developed (see *Am. Iron and Steel Inst. v. OSHA*, 939 F.2d 975, 980 (D.C. Cir. 1991)). Courts have also interpreted technological feasibility to mean that a typical firm in each affected industry or application group will reasonably be able to implement the requirements of the standard in most operations most of the time (see, e.g., *Public Citizen v. OSHA*, 557 F.3d 165, 170–71 (3d Cir. 2009) (citing *Lead I*, 647 F.2d at 1272)).

Because this proposed rule would remove existing OSHA requirements from the CFR, OSHA anticipates employers would have no technological issues complying with the rule. Accordingly, the agency preliminarily finds that the proposed rule is technologically feasible for affected employers.

In determining economic feasibility, OSHA must consider the cost of compliance in an industry rather than on individual employers. In its economic analyses, OSHA "must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms" (*Am. Iron and Steel*

Inst., 939 F.2d at 980, quoting *Lead I*, 647 F.2d at 1272). OSHA has preliminarily determined that this proposed rule is economically feasible because this action is deregulatory and imposes no additional costs. OSHA's economic analysis of the cost savings are presented in Section V.

The Administrative Procedures Act directs agencies to include in each rule adopted "a concise general statement of [the rule's] basis and purpose" (5 U.S.C. 553(c)); cf. 29 U.S.C. 655(e) (requiring the Secretary to publish a "statement of reasons" for any standard promulgated)). This notice satisfies this concise statement requirement.

III. Background

OSHA's Safety Color Code for Marking Physical Hazards Standard, 29 CFR 1910.144, requires that red be the basic color for the identification of danger (*e.g.*, safety cans of certain portable containers, red lights at barricades, danger signs) and stop (*e.g.*, emergency stop bars on hazardous machines and stop buttons on certain electrical switches). The standard also requires that yellow be the basic color for designating caution and for marking physical hazards such as striking against, stumbling, falling, tripping, and caught-in-between.

Paragraph (c)(8) of OSHA's Textiles Standard, 29 CFR 1910.262 (which applies to the design, installation, processes, operation, and maintenance of textile machinery, equipment, and other plant facilities in all plants engaged in the manufacture and processing of textiles, except those processes used exclusively in the manufacture of synthetic fibers), requires that identification of physical hazards be in accordance with the requirements of 29 CFR 1910.144. Similarly, paragraph (c)(11) of OSHA's Sawmills Standard, 29 CFR 1910.265 (which applies to sawmill operations including, but not limited to, log and lumber handling, sawing, trimming, and planing; waste disposal; operation of dry kilns; finishing; shipping; storage; yard and yard equipment; and for power tools and affiliated equipment used in connection with such operations, but excluding the manufacture of plywood, cooperage, and veneer), requires that physical hazard marking be as specified in 29 CFR 1910.144. Finally, OSHA's Safety Color Code for Marking Physical Hazards for Shipyard Employment Standard, 29 CFR 1915.90 (which generally applies to ship repairing, shipbuilding, and shipbreaking employments and related employments), provides that the requirements applicable to shipyard

employment under 29 CFR 1915.90 are identical to the requirements set forth at 29 CFR 1910.144.

IV. Explanation of the Proposed Removal from the Code of Federal Regulations: OSHA's Safety Color Code for Marking Physical Hazards Standard, 29 CFR 1910.144; paragraph (c)(8) of OSHA's Textiles Standard, 29 CFR 1910.262; paragraph (c)(11) of OSHA's Sawmills Standard, 29 CFR 1910.265; and OSHA's Safety Color Code for Marking Physical Hazards for Shipyard Employment Standard, 29 CFR 1915.90.

In OSHA's preliminary judgment, OSHA's Safety Color Code for Marking Physical Hazards Standard, 29 CFR 1910.144, paragraph (c)(8) of OSHA's Textiles Standard, 29 CFR 1910.262, paragraph (c)(11) of OSHA's Sawmills Standard, 29 CFR 1910.265, and OSHA's Safety Color Code for Marking Physical Hazards for Shipyard Employment Standard, 29 CFR 1915.90, are designed to address hazards that are sufficiently addressed by other Federal, State, and local requirements. First, it is OSHA's understanding that the hazards these standards are designed to address are also addressed by state and local building and fire codes. Second, the hazards these standards are designed to address are also addressed by OSHA's Specifications for Accident Prevention Signs and Tags Standard, 29 CFR 1910.145, which addresses the design, application, and use of signs or symbols intended to indicate and, insofar as possible, to define specific hazards of a nature such that failure to designate them may lead to accidental injury to workers or the public, or both, or to property damage. Moreover, requiring the identification of hazards by color alone may be ineffective for those individuals with color vision deficiency (*i.e.*, color blindness). Finally, OSHA has cited these standards only about 4 times a year (on average) since 2012. For comparison, OSHA issues approximately 7,000 citations a year for fall protection violations. Therefore, OSHA is proposing to remove these standards from the Code of Federal Regulations.

Questions: OSHA seeks comment regarding whether the hazards these standards are designed to address are sufficiently addressed by other Federal, State, and local requirements; whether these standards are necessary to protect employees from occupational safety and health hazards; and whether removal of these standards from the CFR would compromise worker safety.

V. Preliminary Economic Analysis

Executive Orders 12866 and 13563, the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1532(a)) require that OSHA estimate the benefits, costs, and net benefits of regulations, and analyze the impacts of certain rules that OSHA promulgates. Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

This proposed rule is not a "significant regulatory action" under Executive Order 12866 or UMRA, or a "major rule" under the Congressional Review Act (5 U.S.C. 801 *et seq.*). Neither the benefits nor the costs of this proposed rule would exceed \$100 million in any given year. Furthermore, as discussed below in Review Under the Regulatory Flexibility Act, because the proposed rule would not impose any costs, OSHA certifies that it would not have a significant economic impact on a substantial number of small entities.

OSHA estimates that there are currently 7,452,757 establishments in general industry and shipyards affected by OSHA standards addressing safety color coding (U.S. Census Bureau, 2024) (See OSHA, 2025, for a list of affected industries). The proposed rescission of the standards addressing safety color coding will, among other things, eliminate the time necessary for new establishments and newly hired occupational health and safety specialists at existing establishments to familiarize themselves with the requirements of OSHA's Safety Color Code for Marking Physical Hazards Standard, 29 CFR 1910.144; paragraph (c)(8) of OSHA's Textiles Standard, 29 CFR 1910.262; paragraph (c)(11) of OSHA's Sawmills Standard, 29 CFR 1910.265; and OSHA's Safety Color Code for Marking Physical Hazards for Shipyard Employment Standard, 29 CFR 1915.90. Based on an average annual establishment entry rate of 10 percent (U.S. Census Bureau, 2025), an average hire rate of 43.9 percent (BLS, 2025) and 20 minutes less time spent on regulatory familiarization at a loaded hourly wage rate for an occupational health and safety specialist of \$65.41, OSHA estimates that this deregulatory action would mean about \$87.6 million in cost savings annually.

OSHA also estimated the impacts under an alternative scenario where only new entrants into the industry would be affected by the rescission of the safety color warning standards in general industry and shipyards. This scenario assumes that for non-entrant

(i.e., existing) establishments within an industry, the familiarization time saved for newly hired occupational health and safety specialists is negligible due to knowledge of the requirements in the safety color warning standards retained institutionally within the business entity by team leaders and other senior production staff. For this scenario, costs savings that result from rescinding the standards in general industry and shipyards addressing safety color warnings would be \$16.2 million.

A third impacts scenario, one that is likely closer to the real-world environment for retention and communication of safety and health information in most workplaces, would be the midpoint of the two extreme cases described above. Under this mid-range scenario, approximately half of affected establishments would retain staff whose complete knowledge of the rescinded standards would substitute for the familiarization time needed by the newly hired health and safety specialists. Viewed alternatively, under this mid-range scenario, all affected establishments retain veteran staff who can briefly inform the new safety and health specialist of the status of standards such as those found in the safety color warnings in less time (roughly ten minutes) than would be necessary in the absence of institutional knowledge (twenty minutes). OSHA estimates that this would result in cost savings of \$51.9 million annually.

OSHA's estimate of cost savings may underestimate total cost savings if the elimination of the labor burden for regulatory familiarization extends to the avoidance of unnecessary safety training of employees.

OSHA requests public comment on this preliminary analysis of the cost savings for employers affected by the rescission of the standards addressing safety color coding. Specifically, OSHA seeks comments and data on the following questions:

1. How much do employers expect to save as a consequence of the rescission of requirements in the current standard?
2. How much familiarization time would employers who are new entrants to the market expect to save based on the revisions?
3. Are there any benefits for worker protection that can be anticipated from this proposed change?
4. Are there any costs for employers that would result from this change that OSHA has not considered?

Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

OSHA reviewed this proposed rescission under the provisions of the Regulatory Flexibility Act. This rule eliminates a burdensome regulation. Therefore, OSHA preliminarily concludes that the rescission would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. OSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b). OSHA requests comment on this regulatory flexibility certification.

VI. Additional Requirements

A. Requirements for States With OSHA-Approved State Plans

Under section 18 of the OSH Act (29 U.S.C. 651 *et seq.*), Congress expressly provides that States may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards that are “at least as effective” as the Federal standards in providing safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved, State-administered occupational safety and health programs as “State Plans.”¹

¹ Of the 29 States and U.S. territories with OSHA-approved State Plans, 22 cover public and private-sector employees: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland,

When Federal OSHA promulgates a new standard or a more stringent amendment to an existing standard, State Plans must either amend their standards to be identical to, or “at least as effective as,” the new Federal standard or amendment, or show that an existing State Plan standard covering this issue is “at least as effective” as the new Federal standard or amendment (29 CFR 1953.5(a)). However, when OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plans do not have to amend their standards, although they may opt to do so. OSHA has preliminarily determined this proposed rule does not impose additional or more stringent requirements than the existing standard, and therefore State Plans are not required to amend their standards. OSHA seeks comment on this assessment of its proposal.

B. OMB Review Under the Paperwork Reduction Act of 1995

The Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*) defines “collection of information” to mean “the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public, of facts or opinions by or for an agency, regardless of form or format” (44 U.S.C. 3502(3)(A)). Under the PRA, a Federal agency cannot conduct or sponsor a collection of information unless it is approved by OMB under the PRA and the agency displays a currently valid OMB control number (44 U.S.C. 3507). Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512(a)(1)). The process for OMB approval is found in 5 CFR part 1320. This proposed rule would impose no new information collection requirements and does not affect the currently approved information collections in General Working Conditions in Shipyard Employment (29 CFR 1915 Subpt. F). Accordingly, OMB approval is not required for this proposed rule.

Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. The remaining six States and one U.S. territory cover only State and local government employees: Connecticut, Illinois, Maine, Massachusetts, New Jersey, New York, and the Virgin Islands.

C. Review Under Executive Order 12866

E.O. 12866, “Regulatory Planning and Review,” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) for review. OIRA has determined that this proposed rule would not constitute a “significant regulatory action” under section 3(f) of E.O. 12866. Accordingly, this proposed rule was not submitted to OIRA for review under E.O. 12866.

D. Environmental Impacts/National Environmental Policy Act (NEPA)

OSHA has reviewed this proposed rule according to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), as amended by the Fiscal Responsibility Act of 2023 (Pub. L. 118–5, 321, 137 Stat. 10), and the Department of Labor’s NEPA procedures (29 CFR part 11). OSHA has preliminarily determined that this proposed rule will have no impact on the quality of the human environment.

E. Other Statutory and Executive Order Considerations

OSHA has considered its obligations under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*) and the Executive Orders on Consultation and Coordination With Indian Tribal Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), Federalism (E.O. 13132, 64 FR 43255 (Aug. 10, 1999)), and Protection of Children From Environmental Health Risks and Safety

Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a proposed deregulatory action that involves the removal of requirements, that OSHA does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these statutes and executive orders. Furthermore, OSHA has determined that this proposed rule is consistent with the policies and directives outlined in E.O. 14192, “Unleashing Prosperity Through Deregulation” and is an Executive Order 14192 deregulatory action.

List of Subjects

29 CFR Part 1910

Health, Occupational safety and health, Safety, Signs and symbols.

29 CFR Part 1915

Health, Longshore and harbor workers, Occupational safety and health, Vessels.

VII. Authority and Signature

This document was prepared under the direction of Amanda Laihow, Acting Assistant Secretary of Labor for Occupational Safety and Health. It is issued under the authority of sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657); section 41 of the Longshore and Harbor Worker’s Compensation Act (33 U.S.C. 941); 5 U.S.C. 553; Secretary of Labor’s Order No. 8–2020 (85 FR 58383); and 29 CFR part 1911.

Dated: June 20, 2025.

Amanda Laihow,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

VIII. Regulatory Text

Proposed Amendments

For the reasons set forth in the preamble, OSHA is amending 29 CFR parts 1910 and 1915 as follows:

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Subpart J—General Environmental Controls

■ 1. The authority for 29 CFR 1910 subpart J is revised to read as follows:

Authority: 29 U.S.C. 653, 655, 657; Secretary of Labor’s Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2007 (72 FR 31159), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393), as applicable.

Sections 1910.141, 1910.142, 1910.145, 1910.146, and 1910.147 also issued under 29 CFR part 1911.

§ 1910.144 [Reserved]

■ 2. Remove and reserve § 1910.144.

* * * * *

Subpart R—Special Industries

■ 3. The authority for 29 CFR 1910 subpart R is revised to read as follows:

Authority: 29 U.S.C. 653, 655, 657; Secretary of Labor’s Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 5–2007 (72 FR 31159), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393), as applicable; and 29 CFR part 1911.

§ 1910.262(c)(8) [Reserved]

■ 4. Remove and reserve paragraph (c)(8) of § 1910.262.

§ 1910.265(c)(11) [Reserved]

■ 5. Remove and reserve paragraph (c)(11) of § 1910.265.

* * * * *

PART 1915—OCCUPATIONAL SAFETY AND HEALTH STANDARDS FOR SHIPYARD EMPLOYMENT

■ 6. The authority for 29 CFR part 1915 continues to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor’s Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008), 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393); 29 CFR part 1911; and 5 U.S.C. 553, as applicable.

Subpart F—General Working Conditions

§ 1915.90 [Reserved]

■ 7. Remove and reserve § 1915.90.

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Parts 1910, 1915, 1917, 1918, and 1926

[Docket No. OSHA–2025–0026]

RIN 1218–AD64

Formaldehyde

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: This proposed rule revises OSHA's Formaldehyde standard to eliminate duplicative respiratory protection requirements and better align this standard with OSHA's Respiratory Protection standard.

DATES: Comments and other information, including requests for a hearing, must be received on or before September 2, 2025.

Informal public hearing: OSHA will schedule an informal public hearing on the rule if requested during the comment period. If a hearing is requested, the location and date of the hearing, procedures for interested parties to notify the agency of their intention to participate, and procedures for participants to submit their testimony and documentary evidence will be announced in the **Federal Register**.

ADDRESSES:

Written comments: You may submit comments and attachments, identified by Docket No. OSHA–2025–0026, electronically at <https://www.regulations.gov>, which is the Federal e-Rulemaking Portal. Follow the instructions online for making electronic submissions.

Instructions: All submissions must include the agency's name and the docket number for this rulemaking (Docket No. OSHA–2025–0026). When uploading multiple attachments to <https://www.regulations.gov>, please number all of your attachments because [regulations.gov](https://www.regulations.gov) will not automatically number the attachments. This will be very useful in identifying all attachments. For example, Attachment 1—title of your document, Attachment 2—title of your document, Attachment 3—title of your document. For assistance with commenting and uploading documents, please see the Frequently Asked Questions on <https://www.regulations.gov>.

All comments, including any personal information you provide, are placed in the public docket without change and may be made available online at <https://www.regulations.gov>. Therefore, OSHA cautions commenters about submitting information they do not want made available to the public, or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.

Docket: The docket for this rulemaking (Docket No. OSHA–2025–0026) is available at <https://www.regulations.gov>, the Federal eRulemaking Portal. Most exhibits are available at <https://www.regulations.gov>; some exhibits

(e.g., copyrighted material) are not available to download from that web page. However, all materials in the dockets are available for inspection at the OSHA Docket Office.

- VI. Additional Requirements
- VII. Authority and Signature
- VIII. Regulatory Text

I. Executive Summary

This proposed rule is intended to clarify the policies and procedures employers must follow when implementing a respiratory protection program in conjunction with OSHA's Formaldehyde standard (29 CFR 1910.1048). OSHA is proposing to remove provisions that are duplicative with the requirements of the Respiratory Protection standard, which is consistent with OSHA's intent, when it published the revised Respiratory Protection standard (29 CFR 1910.134), to use it as a foundation for respirator selection in substance-specific standards.

II. Legal Authority and Preliminary Findings

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651 *et seq.*) (“the Act” or “the OSH Act”) is “to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources” (29 U.S.C. 651(b)). To achieve this goal, Congress authorized the Secretary of Labor (“the Secretary”) to promulgate

standards to protect workers, including the authority “to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce” (29 U.S.C. 651(b)(3); *see also* 29 U.S.C. 654(a)(2) (requiring employers to comply with OSHA standards), 29 U.S.C. 655(a) (authorizing summary adoption of existing consensus and established federal standards within two years of the Act's enactment), 29 U.S.C. 655(b) (authorizing promulgation, modification or revocation of standards pursuant to notice and comment), and 29 U.S.C. 655(b)(7) (authorizing OSHA to include among a standard's requirements labeling, monitoring, medical testing, and other information-transmittal provisions)). An occupational safety and health standard is “. . . a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment” (29 U.S.C. 652(8)). The Secretary may also issue regulations requiring employers to keep records regarding their activities relating to the Act, as well as records of work-related deaths, injuries, and illnesses (29 U.S.C. 657(c)(1)–(2)).

Before OSHA may promulgate a health or safety standard, it must find that a standard is reasonably necessary or appropriate within the meaning of section 652(8) of the OSH Act, which OSHA did here in 1987 when it published the Formaldehyde standard (52 FR 46168–01) and again in 1992 when the Agency reconsidered the record on remand from the D.C. Circuit Court of Appeals (57 FR 22290–01). The Supreme Court, in its decision on OSHA's Benzene standard, interpreted OSHA's obligation under section 652(8) as requiring it to evaluate “whether significant risks are present and can be eliminated or lessened by a change in practices” (*Indus. Union Dep't, AFL-CIO v. Am. Petroleum Inst.*, 448 U.S. 607, 642 (1980) (plurality opinion)). OSHA originally adopted a consensus standard to regulate formaldehyde in 1971 and revised the standard in 1987 because even at the initial permissible exposure limit there was significant risk to employees (52 FR 46168–01). When, as here, OSHA has previously determined that its standard substantially reduces a significant risk, it is unnecessary for the agency to make additional findings on risk for every provision of that standard (*see, e.g., Pub. Citizen Health Research Grp. v. Tyson*, 796 F.2d 1479, 1502 n.16 (D.C. Cir.

1986) (rejecting the argument that OSHA must “find that each and every aspect of its standard eliminates a significant risk”). Rather, once OSHA makes a general significant risk finding in support of a standard, the next question is whether a particular requirement is reasonably related to the purpose of the standard as a whole (see *Asbestos Info. Ass’n/N. Am. v. Reich*, 117 F.3d 891, 894 (5th Cir. 1997); *Forging Indus. Ass’n v. Sec’y of Labor*, 773 F.2d 1436, 1447 (4th Cir. 1985); *United Steelworkers of Am., AFL-CIO-CLC v. Marshall*, 647 F.2d 1189, 1237–38 (D.C. Cir. 1980) (“*Lead I*”). Therefore, while OSHA is not making a preliminary finding of significant risk for this proposed rule, the agency has made a preliminary determination that the proposed changes are reasonably related to the purpose of the Formaldehyde standard as a whole.

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that is reasonably expected to be developed (see *Am. Iron and Steel Inst. v. OSHA*, 939 F.2d 975, 980 (D.C. Cir. 1991)). Courts have also interpreted technological feasibility to mean that a typical firm in each affected industry or application group will reasonably be able to implement the requirements of the standard in most operations most of the time (see, e.g., *Public Citizen v. OSHA*, 557 F.3d 165, 170–71 (3d Cir. 2009) (citing *Lead I* at 1272)).

This proposed rule would not substantially modify existing requirements for respiratory protection in workplaces; nor would it create new requirements. All employers in compliance with the existing standard would also be in compliance with the revised standard. Therefore, OSHA has made a preliminary determination that the proposed rule would be technologically feasible.

In evaluating economic feasibility, OSHA must consider the average cost of compliance in an industry rather than costs for individual employers. In its economic analyses, OSHA “must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms” (*Am. Iron and Steel Inst.*, 939 F.2d at 980, quoting *Lead I* at 1272). OSHA has made a preliminary finding that this proposal is economically feasible because it is deregulatory and is not expected to increase costs for employers. OSHA’s

economic analysis is presented in Section V.

The Administrative Procedures Act directs agencies to include in each rule adopted “a concise general statement of [the rule’s] basis and purpose” (5 U.S.C. 553(c)); cf. 29 U.S.C. 655(e) (requiring the Secretary to publish a “statement of reasons” for any standard promulgated). This notice satisfies this concise statement requirement.

III. Events Leading to the Proposed Rule

OSHA adopted a Formaldehyde standard in 1987 (52 FR 46168–01) and revised the standard on remand from the D.C. Circuit Court of Appeals in 1992 (57 FR 22290–01). OSHA also has a general Respiratory Protection standard, 29 CFR 1910.134, which it first promulgated in 1971 (39 FR 9835). OSHA published a revised Respiratory Protection standard on January 8, 1998 (63 FR 1152). The Respiratory Protection standard contains worksite-specific requirements for program administration, as well as procedures for respirator selection, employee training, fit testing, medical evaluation, and respirator use, among other provisions. OSHA noted that the revised standard was to “serve as a ‘building block’ standard with respect to future standards that may contain respiratory protection requirements” (63 FR 1265). In 2006, OSHA revised the Respiratory Protection standard again to incorporate assigned protection factors (APFs) in the respirator selection process (71 FR 50122–01).

Several OSHA standards regulating exposure to toxic substances and harmful physical agents, including the Formaldehyde standard, require compliance with many provisions of 29 CFR 1910.134. However, when revising the respirator rule, the Agency decided to retain several special respirator selection provisions in the existing substance-specific standards. In this regard, OSHA noted that the respirator selection requirements retained in the substance-specific standards were developed in rulemakings to provide protection against a hazardous characteristic or condition unique to the regulated substance. Consequently, OSHA felt that preserving these provisions in the individual substance-specific standards would maintain the level of respiratory protection afforded to employees.

In this proposal, OSHA is revisiting some of those determinations; the agency now believes that there are additional ways that substance-specific standards can rely on 29 CFR 1910.134 without compromising employee safety.

The purpose of revising the respirator-related provisions of OSHA’s Formaldehyde standard is to conform them, to the extent possible, with other substance-specific standards and to the revised 29 CFR 1910.134 in general. The proposed updates will improve the Formaldehyde standard, because it would remove requirements that are duplicative of the Respiratory Protection standard.

OSHA expects that the rule would ultimately reduce the compliance burden on the regulated community. Therefore, OSHA believes this proposed rule is consistent with Executive Order (E.O.) 14219, “Ensuring Lawful Governance and Implementing the President’s ‘Department of Government Efficiency’ Deregulatory Initiative,” E.O. 14192, “Unleashing Prosperity Through Deregulation.”

IV. Summary and Explanation of the Proposed Requirements

OSHA is proposing to revise paragraph (g) of its general industry Formaldehyde standard (29 CFR 1910.1048) to reduce compliance burdens and improve the comprehensibility of the requirements for respiratory protection programs. These revisions would simplify compliance for employers by removing requirements in 1910.1048 that are duplicative of the requirements in 1910.134. Finally, these revisions would also conform this standard, to the extent possible, to other substance-specific standards and to 29 CFR 1910.134. The Agency preliminarily concludes, therefore, that updating these rules is consistent with the goal of reducing undue burden.

OSHA has preliminarily determined that paragraphs (g)(1)(i) through (iv) unnecessarily duplicate the general provisions in 1910.134(a) and is proposing to remove those paragraphs and add a cross reference to 1910.134(a)(2) in paragraph (g)(1) instead. OSHA does not intend for these changes to add to or change the regulatory burden on employers; actions that comply with the requirements in 1910.1048(g) would also be in compliance with proposed paragraph (g).

OSHA is also requesting comment on whether paragraph (g)(2)(ii) of the Formaldehyde standard provides greater worker protection than removing that provision and requiring employers to simply follow the generic requirements of paragraphs (d)(3)(iii)(B)(1) and (2) of the Respiratory Protection standard. The agency has received requests in the past to remove (g)(2)(ii) of the Formaldehyde standard, which requires employers

providing cartridges or canisters that do not have end-of-service-life indicators (ESLIs) to replace those cartridges or canisters as specified in paragraphs (d)(3)(iii)(B)(1) and (B)(2) of the Respiratory Protection standard or at the end of the workshift, whichever condition occurs first. While the agency currently believes that paragraph (g)(2)(ii) of the Formaldehyde standard is more protective than following the generic changeout provisions of 1910.134, and is not proposing the change at this time, it is interested in any data or information commenters can provide on this issue.

OSHA recognizes that adopting these revisions will also result in the revision of the respiratory protection requirements in OSHA's construction industry, marine terminals, longshoring, and shipyard industry standards for formaldehyde (*see* 29 CFR 1926.1148, 29 CFR 1917.1, 29 CFR 1918.1 and 29 CFR 1915.1048, which apply the requirements in 1910.1048 to construction, marine terminals, longshoring, and shipyards). OSHA requests comment regarding whether there are any considerations that are unique to the use of respirators for protection against formaldehyde hazards in shipyards, marine terminals, longshoring, or construction that OSHA should consider when finalizing this proposal. OSHA is in the process of appointing members to the Advisory Committee on Construction Safety and Health (ACCSH). The agency intends to present this proposed rule to ACCSH once that process is complete. The agency will put the Committee's recommendations on the OSHA website and in the docket for this proposed rule prior to the close of the comment period to allow the public to provide comments on those recommendations.

OSHA requests comments on this proposal, including responses regarding the following issues:

1. Are there any concerns that making the changes described in this proposal will decrease worker safety? If so, why?
2. Does cross-referencing 29 CFR 1910.134(a)(2) in 1910.1048(g)(1) correctly capture all of the material that was previously specified in paragraphs (g)(1)(i)–(iv) of 1910.1048?
3. Is there an alternative approach OSHA should consider for its proposed revision?
4. Should OSHA remove the filter cartridge and canister change schedule requirements under 1910.1048(g)(2)(ii)? Would following the performance-based approach in 1910.134 sufficiently protect workers and would it provide significant cost savings or other benefits?

V. Economic Analysis

This proposed rule would remove redundant requirements in the Formaldehyde standard, 29 CFR 1910.1048, and therefore OSHA has preliminarily concluded that there will be no additional costs imposed by this proposed revision. OSHA also anticipates that there may be some minor cost savings associated with this rule, including a reduction of the burden associated with reviewing unnecessarily duplicative regulations. Because this rule would impose no new costs, OSHA has made a preliminary determination that the rule would be economically feasible.

The proposed changes to the requirements for formaldehyde might reduce the time necessary for employers to familiarize themselves with the requirements for respirator use for formaldehyde exposure. Based on the Supporting Statement for the Information Collection Request for the Formaldehyde standard, OSHA estimates there are 5,108 new establishments annually.¹ Assuming a manager will spend 10 minutes less on rule familiarization due to the removal of duplicated requirements, OSHA estimates that this proposal could reduce costs by about \$40,000 per year (or about \$300,000 over 10 years at a 3 percent discount rate).

OSHA is seeking comments and data on this preliminary analysis, including on the following questions:

1. How many employers were likely to have been impacted by the redundant provisions between the Respiratory Protection standard and the Formaldehyde standard?
2. Are there any other savings for employers that would result from the proposed change?
3. Are there any benefits for worker protection that can be anticipated from this proposed change?
4. Are there any costs for employers that would result from this change that OSHA has not considered?
5. Would there be savings to employers outside of general industry related to this proposal? If so, would they be similar to what OSHA has estimated for general industry employers?

A. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule

that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

OSHA reviewed this proposed rule under the provisions of the Regulatory Flexibility Act. This rule would eliminate burdensome regulations. Therefore, OSHA initially concludes that the impacts of the revisions would not have a "significant economic impact on a substantial number of small entities," and that the preparation of an IRFA is not warranted. OSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

B. Review Under Executive Order 12866

E.O. 12866, "Regulatory Planning and Review" (58 FR 51735 (Oct. 4, 1993)), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit "significant regulatory actions" to the Office of Information and Regulatory Affairs (OIRA) for review. OIRA has determined that this proposed rule would not constitute a "significant regulatory action" under section 3(f) of E.O. 12866. Accordingly, this proposal was not submitted to OIRA for review under E.O. 12866.

VI. Additional Requirements

A. Requirements for States With OSHA-Approved State Plans

Under section 18 of the OSH Act (29 U.S.C. 651 *et seq.*), Congress expressly provides that States may adopt, with

¹ See Document ID OSHA-2009-0041-0014 for details on establishments and wage estimates.

Federal approval, a plan for the development and enforcement of occupational safety and health standards that are “at least as effective” as the Federal standards in providing safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved, State-administered occupational safety and health programs as “State Plans.”²

When Federal OSHA promulgates a new standard or a more stringent amendment to an existing standard, State Plans must either amend their standards to be identical to, or “at least as effective as,” the new Federal standard or amendment, or show that an existing State Plan standard covering this issue is “at least as effective” as the new Federal standard or amendment (29 CFR 1953.5(a)). However, when OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plans do not have to amend their standards, although they may opt to do so. OSHA has preliminarily determined this proposed rule does not impose additional or more stringent requirements than the existing standard, and therefore State Plans are not required to amend their standards. OSHA seeks comment on this assessment of its proposal.

B. OMB Review Under the Paperwork Reduction Act of 1995

The Paperwork Reduction Act (PRA) defines “collection of information” to mean “the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public, of facts or opinions by or for an agency, regardless of form or format” (44 U.S.C. 3502(3)(A)). Under the PRA, a Federal agency cannot conduct or sponsor a collection of information unless it is approved by OMB under the PRA and the agency displays a currently valid OMB control number (44 U.S.C. 3507). Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512(a)(1)). The

process for OMB approval is found in 5 CFR part 1320.

This proposed rule would impose no new information collection requirements. Because the revisions are deregulatory and affect no changes to the existing information collections in the Formaldehyde standards (OMB Control Number 1218–0145), OMB has waived the requirements of 5 CFR part 1320 and approved the modified Information Collection Request (ICR) under existing OMB Control Number 1218–0145 (*see* 5 CFR 1320.18(d)).

C. Environmental Impacts/National Environmental Policy Act (NEPA)

OSHA has reviewed this proposed rule according to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), as amended by the Fiscal Responsibility Act of 2023 (Pub. L. 118–5, 321, 137 Stat. 10), and the Department of Labor’s NEPA procedures (29 CFR part 11). OSHA has determined that this proposal would have no impact on the quality of the human environment.

D. Other Statutory and Executive Order Considerations

OSHA has considered its obligations under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*) and the Executive Orders on Consultation and Coordination With Indian Tribal Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), Federalism (E.O. 13132, 64 FR 43255 (Aug. 10, 1999)), and Protection of Children From Environmental Health Risks and Safety Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a proposed deregulatory action, that OSHA does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these statutes and executive orders. Furthermore, OSHA has determined that this proposal is consistent with the policies and directives outlined in E.O. 14192, “Unleashing Prosperity Through Deregulation” and is an Executive Order 14192 deregulatory action.

List of Subjects in 29 CFR Part 1910

Assigned protection factors, Airborne contaminants, Health, Occupational safety and health, Respirators, Respirator selection.

VII. Authority and Signature

This document was prepared under the direction of Amanda Laihow, Acting Assistant Secretary of Labor for Occupational Safety and Health. It is

issued under the authority of sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657), 5 U.S.C. 553, Secretary of Labor’s Order No. 8–2020 (85 FR 58393), and 29 CFR part 1911.

Dated: June 20, 2025.

Amanda Laihow,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

VIII. Regulatory Text

Proposed Amendments

For the reasons set forth in the preamble, OSHA is amending 29 CFR part 1910 as follows:

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Subpart Z—Toxic and Hazardous Substances

■ 1. The authority for 29 CFR 1910 subpart Z is revised to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor’s Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008); 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393); 29 CFR part 1911; and 5 U.S.C. 553, as applicable.

All of subpart Z issued under 29 U.S.C. 655(b), except those substances that have exposure limits listed in Tables Z–1, Z–2, and Z–3 of § 1910.1000. The latter were issued under 29 U.S.C. 655(a).

Section 1910.1000, Tables Z–1, Z–2 and Z–3 also issued under 5 U.S.C. 553, but not under 29 CFR part 1911 except for the arsenic (organic compounds), benzene, cotton dust, and chromium (VI) listings.

Section 1910.1001 also issued under 40 U.S.C. 3704 and 5 U.S.C. 553.

Section 1910.1002 also issued under 5 U.S.C. 553, but not under 29 U.S.C. 655 or 29 CFR part 1911.

Sections 1910.1018, 1910.1029, and 1910.1200 also issued under 29 U.S.C. 653.

Section 1910.1030 also issued under Public Law 106–430, 114 Stat. 1901.

Section 1910.1201 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

■ 2. § 1910.1048 is revised as follows:

■ a. Revise and republish paragraph (g)(1)

■ b. Remove paragraphs (g)(1)(i) through (iv)

The revisions and additions read as follows:

(g) * * *

(1) *General.* For employees who use respirators required by this section, the employer must provide each employee an appropriate respirator that complies with the requirements of this paragraph. Respirators must be used when the employer determines that they are

² Of the 29 States and U.S. territories with OSHA-approved State Plans, 22 cover public and private-sector employees: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. The remaining six States and one U.S. territory cover only State and local government employees: Connecticut, Illinois, Maine, Massachusetts, New Jersey, New York, and the Virgin Islands.

necessary to protect the health of an employee as required under 29 CFR 1910.134(a)(2).

29 CFR Parts 1910, 1915, 1917, 1918, 1926

[Docket No. OSHA–2025–0017]

RIN 1218–AD57

Acrylonitrile

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: This proposed rule revises some provisions of OSHA’s Acrylonitrile standard to better align it with OSHA’s Respiratory Protection standard.

DATES: Comments and other information, including requests for a hearing, must be received on or before September 2, 2025.

Informal public hearing: OSHA will schedule an informal public hearing on the rule if requested during the comment period. If a hearing is requested, the location and date of the hearing, procedures for interested parties to notify the agency of their intention to participate, and procedures for participants to submit their testimony and documentary evidence will be announced in the **Federal Register**.

ADDRESSES:

Written comments: You may submit comments and attachments, identified by Docket No. OSHA–2025–0017, electronically at <https://www.regulations.gov>, which is the Federal e-Rulemaking Portal. Follow the instructions online for making electronic submissions.

Instructions: All submissions must include the agency’s name and the docket number for this rulemaking (Docket No. OSHA–2025–0017). When uploading multiple attachments to <https://www.regulations.gov>, please number all of your attachments because [regulations.gov](https://www.regulations.gov) will not automatically number the attachments. This will be very useful in identifying all attachments. For example, Attachment 1—title of your document, Attachment 2—title of your document, Attachment

3—title of your document. For assistance with commenting and uploading documents, please see the Frequently Asked Questions on <https://www.regulations.gov>.

All comments, including any personal information you provide, are placed in the public docket without change and may be made available online at <https://www.regulations.gov>. Therefore, OSHA cautions commenters about submitting information they do not want made available to the public, or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.

Docket: The docket for this rulemaking (Docket No. OSHA–2025–0017) is available at <https://www.regulations.gov>, the Federal eRulemaking Portal. Most exhibits are available at <https://www.regulations.gov>; some exhibits (e.g., copyrighted material) are not available to download from that web page. However, all materials in the dockets are available for inspection at the OSHA Docket Office.

I. Executive Summary

This proposed rule is intended to remove duplicative language in OSHA’s Acrylonitrile standard (29 CFR 1910.1045) and clarify the policies and

procedures employers must follow when implementing a respiratory protection program in conjunction with the standard. This proposal is also consistent with OSHA’s intent, when it published the revised Respiratory Protection standard (29 CFR 1910.134), to use it as a foundation for respirator selection in substance-specific standards.

II. Legal Authority and Preliminary Findings

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651 *et seq.*) (“the Act” or “the OSH Act”) is “to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources” (29 U.S.C. 651(b)). To achieve this goal, Congress authorized the Secretary of Labor (“the Secretary”) to promulgate standards to protect workers, including the authority “to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce” (29 U.S.C. 651(b)(3); *see also* 29 U.S.C. 654(a)(2) (requiring employers to comply with OSHA standards), 29 U.S.C. 655(a) (authorizing summary adoption of existing consensus and established federal standards within two years of the Act’s enactment), 29 U.S.C. 655(b) (authorizing promulgation, modification or revocation of standards pursuant to notice and comment), and 29 U.S.C. 655(b)(7) (authorizing OSHA to include among a standard’s requirements labeling, monitoring, medical testing, and other information-transmittal provisions)). An occupational safety and health standard is “. . . a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment” (29 U.S.C. 652(8)). The Secretary may also issue regulations requiring employers to keep records regarding their activities relating to the Act, as well as records of work-related deaths, injuries, and illnesses (29 U.S.C. 657(c)(1)–(2)).

Before OSHA may promulgate a health or safety standard, it must find that a standard is reasonably necessary or appropriate within the meaning of section 652(8) of the OSH Act, which OSHA did here in 1978 when it published the Acrylonitrile standard (43 FR 45762). The Supreme Court, in its decision on OSHA’s Benzene standard, interpreted OSHA’s obligation under section 652(8) as requiring it to evaluate “whether significant risks are present

and can be eliminated or lessened by a change in practices” (*Indus. Union Dep’t, AFL-CIO v. Am. Petroleum Inst.*, 448 U.S. 607, 642 (1980) (plurality opinion)). OSHA originally published this standard as an emergency temporary standard (ETS) and found exposure to acrylonitrile posed a grave danger, which is a higher threshold than significant risk (43 FR 2586). When, as here, OSHA has previously determined that its standard substantially reduces a significant risk, it is unnecessary for the agency to make additional findings on risk for every provision of that standard (see, e.g., *Pub. Citizen Health Research Grp. v. Tyson*, 796 F.2d 1479, 1502 n.16 (D.C. Cir. 1986) (rejecting the argument that OSHA must “find that each and every aspect of its standard eliminates a significant risk”). Rather, once OSHA makes a general significant risk finding in support of a standard, the next question is whether a particular requirement is reasonably related to the purpose of the standard as a whole (see *Asbestos Info. Ass’n v. N. Am. v. Reich*, 117 F.3d 891, 894 (5th Cir. 1997); *Forging Indus. Ass’n v. Sec’y of Labor*, 773 F.2d 1436, 1447 (4th Cir. 1985); *United Steelworkers of Am., AFL-CIO-CLC v. Marshall*, 647 F.2d 1189, 1237–38 (D.C. Cir. 1980) (“*Lead I*”). Therefore, while OSHA is not making a preliminary finding of significant risk for this proposed rule, the agency has made a preliminary determination that the proposed changes are reasonably related to the purpose of the Acrylonitrile standard as a whole.

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that is reasonably expected to be developed (see *Am. Iron and Steel Inst. v. OSHA*, 939 F.2d 975, 980 (D.C. Cir. 1991)). Courts have also interpreted technological feasibility to mean that a typical firm in each affected industry or application group will reasonably be able to implement the requirements of the standard in most operations most of the time (see, e.g., *Public Citizen v. OSHA*, 557 F.3d 165, 170–71 (3d Cir. 2009) (citing *Lead I* at 1272)).

This proposed rule would not substantially modify existing requirements for respiratory protection in workplaces; nor would it create new requirements. All employers in compliance with the existing standard would also be in compliance with the revised standard. Therefore, OSHA has made a preliminary determination that the proposed rule would be technologically feasible.

In evaluating economic feasibility, OSHA must consider the average cost of compliance in an industry rather than costs for individual employers. In its economic analyses, OSHA “must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms” (*Am. Iron and Steel Inst.*, 939 F.2d at 980, quoting *Lead I* at 1272). OSHA has made a preliminary finding that this proposal is economically feasible because it is deregulatory and is expected to reduce costs for employers. OSHA’s economic analysis is presented in Section V.

The Administrative Procedures Act directs agencies to include in each rule adopted “a concise general statement of [the rule’s] basis and purpose” (5 U.S.C. 553(c)); cf. 29 U.S.C. 655(e) (requiring the Secretary to publish a “statement of reasons” for any standard promulgated)). This notice satisfies this concise statement requirement.

III. Events Leading to the Proposed Rule

OSHA adopted an Acrylonitrile standard in 1978 (43 FR 45762). OSHA also has a general Respiratory Protection standard, 29 CFR 1910.134, which it first promulgated in 1971 (39 FR 9835). OSHA published a revised Respiratory Protection standard on January 8, 1998 (63 FR 1152). The Respiratory Protection standard contains worksite-specific requirements for program administration, as well as procedures for respirator selection, employee training, fit testing, medical evaluation, and respirator use, among other provisions. OSHA noted that the revised standard was to “serve as a ‘building block’ standard with respect to future standards that may contain respiratory protection requirements” (63 FR 1265). In 2006, OSHA revised the Respiratory Protection standard again to incorporate assigned protection factors (APFs) in the respirator selection process (71 FR 50122–01).

Several OSHA standards regulating exposure to toxic substances and harmful physical agents, including the Acrylonitrile standard, require compliance with many provisions of 29 CFR 1910.134. However, when revising the respirator rule, the Agency decided to retain several special respirator selection provisions in the existing substance-specific standards. In this regard, OSHA noted that the respirator selection requirements retained in the substance-specific standards were developed in rulemakings to provide

protection against a hazardous characteristic or condition unique to the regulated substance. Consequently, OSHA felt that preserving these provisions in the individual substance-specific standards would maintain the level of respiratory protection afforded to employees.

In this proposal, OSHA is revisiting some of those determinations; the agency now believes that there are additional ways that substance-specific standards can rely on 29 CFR 1910.134 without compromising employee safety. The purpose of revising the respirator-related provisions of OSHA’s Acrylonitrile standard is to conform them, to the extent possible, with other substance-specific standards and to the revised 29 CFR 1910.134 in general. The proposed updates would improve the Acrylonitrile standard by reducing duplicative provisions.

OSHA expects that the rule would ultimately reduce the compliance burden on the regulated community, without compromising worker safety. Therefore, OSHA believes this proposed rule is consistent with Executive Order (E.O.) 14219, “Ensuring Lawful Governance and Implementing the President’s ‘Department of Government Efficiency’ Deregulatory Initiative,” E.O. 14192, “Unleashing Prosperity Through Deregulation,” and the goal of removing regulations that harm the national interest by impeding technological innovation or private enterprise and entrepreneurship.

IV. Summary and Explanation of the Proposed Requirements

OSHA is proposing to revise paragraphs (h) and (o) of its general industry Acrylonitrile standard (29 CFR 1910.1045) to reduce compliance burdens and improve the comprehensibility of the requirements for respiratory protection programs. These revisions would simplify compliance for employers by removing requirements in 1910.1045 that are duplicative with the requirements in 1910.134. The Agency preliminarily concludes, therefore, that updating these rules is consistent with the goal of reducing undue burden.

OSHA has preliminarily determined that paragraphs (h)(1)(i) through (iv) of the Acrylonitrile standard, which specify when respirators must be used, unnecessarily duplicate the general provisions covered by 1910.134(a). Therefore, the agency is proposing to remove those paragraphs and add a cross reference to 1910.134(a)(2) in paragraph (h)(1). OSHA does not intend for these changes to add to or change the regulatory burden on employers;

employers in compliance with the current version of 1910.1045(h)(1) would not have to change any of their practices to remain in compliance with the changes OSHA is proposing.

OSHA also preliminarily determined that the respiratory protection training requirements in paragraph (o)(1)(ii)(C) of the Acrylonitrile standard unnecessarily duplicate the general provisions in 1910.134(k). OSHA is proposing to remove the respiratory protection training provisions in paragraph (o)(1)(ii)(C), which require training on the purpose, proper use, and limitations of respirators, but intends to leave undisturbed the requirement for training on protective clothing, which is not duplicated in 1910.134.

OSHA is also considering (but not proposing) removing the requirements for specific schedule changes for canisters and cartridges under paragraph (h)(2)(ii)(A) in the Acrylonitrile standard and removing the exception that is in paragraph (h)(2)(i) of the Acrylonitrile standard for compliance with paragraphs (d)(3)(iii)(B)(1) and (2) of the Respiratory Protection standard. These changes would result in employers needing to comply with the generic cartridge and canister change schedules in the Respiratory Protection standard, rather than the specific change schedules in the Acrylonitrile standard. Paragraph (d)(3)(iii)(B) in the Respiratory Protection standard requires that an air-purifying respirator be equipped with an end-of-service-life indicator (ESLI) certified by NIOSH for the contaminant or, if there is no ESLI appropriate for the working conditions, the employer must implement a change schedule for canisters and cartridges based on objective information or data that would ensure canisters and cartridges would be changed before the end of their service life. The employer would also need to include the basis for their determination in their respirator program. Essentially, if OSHA made these changes it would result in a performance-based approach to cartridge and canister changes, rather than the prescriptive approach currently contained in the Acrylonitrile standard. OSHA believes this change could improve consistency with other substance-specific standards without reducing employee safety and health, but is specifically requesting comment on this issue.

OSHA recognizes that adopting these revisions will also result in the revision of the respiratory protection requirements in OSHA's shipyard employment, marine terminals, longshoring, and construction industry

standards for Acrylonitrile (*see* 29 CFR 1926.1145, 29 CFR 1917.1, 29 CFR 1918.1, and 29 CFR 1915.1045, which apply the requirements in 1910.1045 to construction, longshoring, marine terminals, and shipyards). OSHA requests comment regarding whether there are any considerations that are unique to the use of respirators for protection against acrylonitrile hazards in shipyards, marine terminals, longshoring, or construction that OSHA should consider when finalizing this proposal. OSHA is in the process of appointing members to the Advisory Committee on Construction Safety and Health (ACCSH). The agency intends to present this proposed rule to ACCSH once that process is complete. The agency will put the Committee's recommendations on the OSHA website and in the docket for this proposed rule prior to the close of the comment period to allow the public to provide comments on those recommendations.

OSHA requests comments on the following issues:

1. Are there any concerns that making the changes described in this proposal will decrease worker safety?
2. Is there an alternative approach OSHA should consider?
3. Are there any costs for employers resulting from this change that OSHA has not considered?
4. Should OSHA remove the cartridge and canister change schedule requirements contained in the Acrylonitrile standard at 1910.1045(h)(2)(ii)(A) and require compliance with the performance-oriented procedures outline under 1910.134(d)(3)(iii)(B)(1) and (2)?

V. Economic Analysis

This proposed rule would remove redundant requirements in the Acrylonitrile standard, 29 CFR 1910.1045, and therefore OSHA has preliminarily concluded that there would be no additional costs imposed by this proposed revision. OSHA also anticipates that there may be some cost savings associated with this rule, including a reduction of the burden associated with complying with and reviewing unnecessarily duplicative regulations. Because this rule would impose no new costs, OSHA has made a preliminary determination that the rule would be economically feasible.

The proposed changes to the requirements for acrylonitrile may reduce the time necessary for employee training on respirators. Based on the Supporting Statement for the Information Collection Request for the acrylonitrile standard, OSHA estimates that 12,713 employees work at

establishments affected by the acrylonitrile rule. Assuming a hiring rate of 30.6 percent annually, a loaded wage of \$32.57 an hour, and that the changes to the standard may result in a decrease of 15 minutes of training per employee, this proposal could result in cost savings of about \$32,000 (or about \$236,000 over 10 years at a 3 percent discount rate).¹

OSHA is seeking comments and data on this preliminary analysis, including on the following questions:

1. How many employers were likely to have been impacted by the redundant provisions and were providing duplicative training? How many employees were being provided duplicative training?
2. Are there any other savings for employers that would result from the proposed change?
3. Are there any benefits for worker protection that can be anticipated from this proposed change?
4. Are there any costs for employers that would result from this change that OSHA has not considered?
5. Would the savings to employers outside of general industry be similar to what OSHA has estimated for general industry employers?

A. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

OSHA reviewed this proposed rule under the provisions of the Regulatory Flexibility Act. This rule would eliminate burdensome regulations. Therefore, OSHA initially concludes that the impacts of the revisions would not have a "significant economic impact on a substantial number of small entities," and that the preparation of an IRFA is not warranted. OSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

B. Review Under Executive Order 12866

E.O. 12866, "Regulatory Planning and Review" (58 FR 51735 (Oct. 4, 1993)), requires agencies, to the extent permitted by law, to (1) propose or

¹ See Document ID OSHA-2011-0195-0014 for details on employment and wage estimates.

adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) for review. OIRA has determined that this proposed rule would not constitute a “significant regulatory action” under section 3(f) of E.O. 12866. Accordingly, this proposal was not submitted to OIRA for review under E.O. 12866.

VI. Additional Requirements

A. Requirements for States With OSHA-Approved State Plans

Under section 18 of the OSH Act (29 U.S.C. 651 *et seq.*), Congress expressly provides that States may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards that are “at least as effective” as the Federal standards in providing safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved, State-administered occupational safety and health programs as “State Plans.”²

When Federal OSHA promulgates a new standard or a more stringent amendment to an existing standard, State Plans must either amend their standards to be identical to, or “at least

as effective as,” the new Federal standard or amendment, or show that an existing State Plan standard covering this issue is “at least as effective” as the new Federal standard or amendment (29 CFR 1953.5(a)). However, when OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plans do not have to amend their standards, although they may opt to do so. OSHA has preliminarily determined this proposed rule does not impose additional or more stringent requirements than the existing standard, and therefore State Plans are not required to amend their standards. OSHA seeks comment on this assessment of its proposal.

B. OMB Review Under the Paperwork Reduction Act of 1995

The Paperwork Reduction Act (PRA) defines “collection of information” to mean “the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public, of facts or opinions by or for an agency, regardless of form or format” (44 U.S.C. 3502(3)(A)). Under the PRA, a Federal agency cannot conduct or sponsor a collection of information unless it is approved by OMB under the PRA and the agency displays a currently valid OMB control number (44 U.S.C. 3507). Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512(a)(1)). The process for OMB approval is found in 5 CFR part 1320.

This proposed rule would impose no new information collection requirements. Because the revisions are deregulatory and affect only minor changes to the existing information collections in the Acrylonitrile standards (OMB Control Number 1218–0126), OMB has waived the requirements of 5 CFR part 1320 and approved the modified Information Collection Request (ICR) under existing OMB Control Number 1218–0126 (*see* 5 CFR 1320.18(d)).

C. Environmental Impacts/National Environmental Policy Act (NEPA)

OSHA has reviewed this proposed rule according to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), as amended by the Fiscal Responsibility Act of 2023 (Pub. L. 118–5, 321, 137 Stat. 10), and the Department of Labor’s

NEPA procedures (29 CFR part 11). OSHA has determined that this proposal would have no impact on the quality of the human environment.

D. Other Statutory and Executive Order Considerations

OSHA has considered its obligations under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*) and the Executive Orders on Consultation and Coordination With Indian Tribal Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), Federalism (E.O. 13132, 64 FR 43255 (Aug. 10, 1999)), and Protection of Children From Environmental Health Risks and Safety Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a proposed deregulatory action that involves the removal of requirements, that OSHA does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these statutes and executive orders. Furthermore, OSHA has determined that this proposal is consistent with the policies and directives outlined in E.O. 14192, “Unleashing Prosperity Through Deregulation” and is an Executive Order 14192 deregulatory action.

List of Subjects in 29 CFR Part 1910

Assigned protection factors, Airborne contaminants, Health, Occupational safety and health, Respirators, Respirator selection.

VII. Authority and Signature

This document was prepared under the direction of Amanda Laihow, Acting Assistant Secretary of Labor for Occupational Safety and Health. It is issued under the authority of sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657), 5 U.S.C. 553, Secretary of Labor’s Order No. 8–2020 (85 FR 58393), and 29 CFR part 1911.

Dated: June 20, 2025.

Amanda Laihow,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

VIII. Regulatory Text

Proposed Amendments

For the reasons set forth in the preamble, OSHA is amending 29 CFR part 1910 as follows:

² Of the 29 States and U.S. territories with OSHA-approved State Plans, 22 cover public and private-sector employees: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. The remaining six States and one U.S. territory cover only State and local government employees: Connecticut, Illinois, Maine, Massachusetts, New Jersey, New York, and the Virgin Islands.

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS**Subpart Z—Toxic and Hazardous Substances**

■ 1. The authority for 29 CFR 1910 subpart Z is revised to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor's Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008); 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393); 29 CFR part 1911; and 5 U.S.C. 553, as applicable.

All of subpart Z issued under 29 U.S.C. 655(b), except those substances that have exposure limits listed in Tables Z–1, Z–2, and Z–3 of § 1910.1000. The latter were issued under 29 U.S.C. 655(a).

Section 1910.1000, Tables Z–1, Z–2 and Z–3 also issued under 5 U.S.C. 553, but not under 29 CFR part 1911 except for the arsenic (organic compounds), benzene, cotton dust, and chromium (VI) listings.

Section 1910.1001 also issued under 40 U.S.C. 3704 and 5 U.S.C. 553.

Section 1910.1002 also issued under 5 U.S.C. 553, but not under 29 U.S.C. 655 or 29 CFR part 1911.

Sections 1910.1018, 1910.1029, and 1910.1200 also issued under 29 U.S.C. 653.

Section 1910.1030 also issued under Public Law 106–430, 114 Stat. 1901.

Section 1910.1201 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

■ 2. 1910.1045 is revised as follows:

■ 1. Revise and republish paragraphs (h)(1) and (o)(1)(ii)(C)

■ 2. Remove paragraphs (h)(1)(i)–(iv)

The revisions and additions read as follows:

§ 1910.1045 Acrylonitrile.

(h) * * *

(1) General. For employees who use respirators required by this section, the employer must provide each employee an appropriate respirator that complies with the requirements of this paragraph. Respirators must be used when the employer determines that they are necessary to protect the health of an employee as required under 29 CFR 1910.134(a)(2).

BILLING CODE 4510–26–P

DEPARTMENT OF LABOR**Occupational Safety and Health Administration****29 CFR Parts 1910, 1915, 1917, 1918, and 1926**

[Docket No. OSHA–2025–0024]

RIN 1218–AD58

Asbestos

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: This proposed rule revises some substance-specific respirator requirements to allow different types of respirators to be used under OSHA's Asbestos standards and better aligns these standards with OSHA's Respiratory Protection standard.

DATES: Comments and other information, including requests for a hearing, must be received on or before September 2, 2025.

Informal public hearing: OSHA will schedule an informal public hearing on the rule if requested during the comment period. If a hearing is requested, the location and date of the hearing, procedures for interested parties to notify the agency of their intention to participate, and procedures for participants to submit their testimony and documentary evidence will be announced in the **Federal Register**.

ADDRESSES:

Written comments: You may submit comments and attachments, identified by Docket No. OSHA–2025–0024, electronically at <https://www.regulations.gov>, which is the Federal e-Rulemaking Portal. Follow the instructions online for making electronic submissions.

Instructions: All submissions must include the agency's name and the docket number for this rulemaking (Docket No. OSHA–2025–0024). When uploading multiple attachments to [regulations.gov](https://www.regulations.gov), please number all of your attachments because <https://www.regulations.gov> will not automatically number the attachments. This will be very useful in identifying all attachments. For example, Attachment 1—title of your document, Attachment 2—title of your document, Attachment 3—title of your document. For assistance with commenting and uploading documents, please see the Frequently Asked Questions on [regulations.gov](https://www.regulations.gov).

All comments, including any personal information you provide, are placed in the public docket without change and may be made available online at <https://www.regulations.gov>. Therefore, OSHA cautions commenters about submitting information they do not want made available to the public, or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.

Docket: The docket for this rulemaking (Docket No. OSHA–2025–0024) is available at <https://www.regulations.gov>, the Federal eRulemaking Portal. Most exhibits are available at <https://www.regulations.gov>; some exhibits (e.g., copyrighted material) are not available to download from that web page. However, all materials in the dockets are available for inspection at the OSHA Docket Office.

- III. Events Leading to the Proposed Rule
- IV. Summary and Explanation of the Proposed Requirements
- V. Economic Analysis
- VI. Additional Requirements
- VII. Authority and Signature
- VIII. Regulatory Text

I. Executive Summary

This proposed rule is intended to provide greater compliance flexibility and clarify the policies and procedures employers must follow when implementing a respiratory protection program in conjunction with OSHA's Asbestos standards (29 CFR 1910.1001, 29 CFR 1915.1001, and 29 CFR 1926.1101). OSHA is proposing to revise

some respirator-related provisions where they are unnecessarily prescriptive, which would result in employers having greater flexibility in the respirators they select for exposed workers, while providing equivalent worker protection. This proposal is also consistent with OSHA's intent, when it published the revised Respiratory Protection standard (29 CFR 1910.134), to use it as a foundation for respirator selection in substance-specific standards.

Additionally, OSHA believes that this proposed rule appropriately incorporates advances in technology, which have made some provisions of the Asbestos standards outdated, and would allow employers to take advantage of future technological advances. This proposed standard is intended to account for modern knowledge and technology and to streamline the selection of respirators.

II. Legal Authority and Preliminary Findings

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651 *et seq.*) (“the Act” or “the OSH Act”) is “to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources” (29 U.S.C. 651(b)). To achieve this goal, Congress authorized the Secretary of Labor (“the Secretary”) to promulgate standards to protect workers, including the authority “to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce” (29 U.S.C. 651(b)(3); *see also* 29 U.S.C. 654(a)(2) (requiring employers to comply with OSHA standards), 29 U.S.C. 655(a) (authorizing summary adoption of existing consensus and established federal standards within two years of the Act's enactment), 29 U.S.C. 655(b) (authorizing promulgation, modification or revocation of standards pursuant to notice and comment), and 29 U.S.C. 655(b)(7) (authorizing OSHA to include among a standard's requirements labeling, monitoring, medical testing, and other information-transmittal provisions)). An occupational safety and health standard is “. . . a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment” (29 U.S.C. 652(8)). The Secretary may also issue regulations requiring employers to keep records regarding their activities relating to the Act, as well as records of work-related

deaths, injuries, and illnesses (29 U.S.C. 657(c)(1)–(2)).

Before OSHA may promulgate a health or safety standard, it must find that a standard is reasonably necessary or appropriate within the meaning of section 652(8) of the OSH Act, which OSHA did here in 1972 when it published the Asbestos standard (37 FR 11318–02). The Supreme Court, in its decision on OSHA's Benzene standard, interpreted OSHA's obligation under section 652(8) as requiring it to evaluate “whether significant risks are present and can be eliminated or lessened by a change in practices” (*Indus. Union Dep't, AFL-CIO v. Am. Petroleum Inst.*, 448 U.S. 607, 642 (1980) (plurality opinion)). OSHA originally published this standard as an emergency temporary standard (ETS) and found that asbestos posed a grave danger, which is a higher threshold than significant risk (36 FR 23207). When, as here, OSHA has previously determined that its standard substantially reduces a significant risk, it is unnecessary for the agency to make additional findings on risk for every provision of that standard (*see, e.g., Pub. Citizen Health Research Grp. v. Tyson*, 796 F.2d 1479, 1502 n.16 (D.C. Cir. 1986) (rejecting the argument that OSHA must “find that each and every aspect of its standard eliminates a significant risk”). Rather, once OSHA makes a general significant risk finding in support of a standard, the next question is whether a particular requirement is reasonably related to the purpose of the standard as a whole (*see Asbestos Info. Ass'n/N. Am. v. Reich*, 117 F.3d 891, 894 (5th Cir. 1997); *Forging Indus. Ass'n v. Sec'y of Labor*, 773 F.2d 1436, 1447 (4th Cir. 1985); *United Steelworkers of Am., AFL-CIO-CLC v. Marshall*, 647 F.2d 1189, 1237–38 (D.C. Cir. 1980) (“*Lead I*”). Therefore, while OSHA is not making a preliminary finding of significant risk for this proposed rule, the agency has made a preliminary determination that the proposed changes are reasonably related to the purpose of the Asbestos standards as a whole.

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that is reasonably expected to be developed (*see Am. Iron and Steel Inst. v. OSHA*, 939 F.2d 975, 980 (D.C. Cir. 1991)). Courts have also interpreted technological feasibility to mean that a typical firm in each affected industry or application group will reasonably be able to implement the requirements of the standard in most operations most of the time (*see, e.g., Public Citizen v.*

OSHA, 557 F.3d 165, 170–71 (3d Cir. 2009) (citing *Lead I* at 1272)).

This proposed rule would not substantially modify existing requirements for respiratory protection in workplaces; nor would it create new requirements. All employers in compliance with the existing standards would also be in compliance with the revised standard. Therefore, OSHA has made a preliminary determination that the proposed rule would be technologically feasible.

In evaluating economic feasibility, OSHA must consider the average cost of compliance in an industry rather than costs for individual employers. In its economic analyses, OSHA “must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms” (*Am. Iron and Steel Inst.*, 939 F.2d at 980, quoting *Lead I* at 1272). OSHA has made a preliminary finding that this proposal is economically feasible because it is deregulatory and is expected to reduce costs for employers. OSHA's economic analysis is presented in Section V.

The Administrative Procedures Act directs agencies to include in each rule adopted “a concise general statement of [the rule's] basis and purpose” (5 U.S.C. 553(c)); *cf.* 29 U.S.C. 655(e) (requiring the Secretary to publish a “statement of reasons” for any standard promulgated)). This notice satisfies this concise statement requirement.

III. Events Leading to the Proposed Rule

OSHA adopted an Asbestos standard in 1972 (37 FR 11318–02). OSHA also has a general Respiratory Protection standard, 29 CFR 1910.134, which it first promulgated in 1971 (39 FR 9835). OSHA published a revised Respiratory Protection standard on January 8, 1998 (63 FR 1152). The Respiratory Protection standard contains worksite-specific requirements for program administration, as well as procedures for respirator selection, employee training, fit testing, medical evaluation, and respirator use, among other provisions. OSHA noted that the revised standard was to “serve as a ‘building block’ standard with respect to future standards that may contain respiratory protection requirements” (63 FR 1265). In 2006, OSHA revised the Respiratory Protection standard again to incorporate assigned protection factors (APFs) in the respirator selection process (71 FR 50122–01).

Several OSHA standards regulating exposure to toxic substances and harmful physical agents, including the Asbestos standards, require compliance with many provisions of 29 CFR 1910.134. However, when revising the respirator rule, the Agency decided to retain several special respirator selection provisions in the existing substance-specific standards. In this regard, OSHA noted that the respirator selection requirements retained in the substance-specific standards were developed in rulemakings to provide protection against a hazardous characteristic or condition unique to the regulated substance. Consequently, OSHA felt that preserving these provisions in the individual substance-specific standards would maintain the level of respiratory protection afforded to employees.

In this proposal, OSHA is revisiting some of those determinations; the agency now believes that there are additional ways that substance-specific standards can rely on 29 CFR 1910.134 without compromising employee safety. The purpose of revising the respirator-related provisions of OSHA's Asbestos standards is to conform them, to the extent possible, with other substance-specific standards and to the revised 29 CFR 1910.134 in general. The proposed updates would improve the Asbestos standards because they would refer to the Assigned Protection Factors (APFs) in the Respiratory Protection standard, which is based on current technology and practices for respirator use. OSHA also believes that advances in technology have made the Asbestos standards outdated in some areas. These revisions are intended to take account of new knowledge and technology.

OSHA expects that the rule would ultimately reduce the compliance burden on the regulated community, without compromising worker safety. Therefore, OSHA believes this proposed rule is consistent with Executive Order (E.O.) 14219, "Ensuring Lawful Governance and Implementing the President's 'Department of Government Efficiency' Deregulatory Initiative," E.O. 14192, "Unleashing Prosperity Through Deregulation," and the goal of removing regulations that harm the national interest by impeding technological innovation or private enterprise and entrepreneurship.

IV. Summary and Explanation of the Proposed Requirements

OSHA is proposing to revise paragraphs (g) and (j) of its general industry Asbestos standard (29 CFR 1910.1001), paragraphs (h) and (k) of its shipyard employment Asbestos

standard (29 CFR 1915.1001), and paragraphs (h) and (k) of its construction Asbestos standard (29 CFR 1926.1101) to reduce compliance burdens, allow for the use of more up-to-date technology, and improve the comprehensibility of the requirements for respiratory protection programs. These revisions would simplify compliance for employers by replacing requirements for specific respirator types with requirements for respirator selection based on APFs. The revisions would also conform the Asbestos standards, to the extent possible, to each other and to 29 CFR 1910.134 in general and would remove provisions in the Asbestos standards that are duplicative with the provisions of 1910.134. The Agency concludes, therefore, that updating these rules is consistent with the goals of facilitating technological innovation and reducing undue burden.

OSHA has preliminarily determined that paragraphs (g)(1)(i) through (iv) of the general industry Asbestos standard and paragraphs (h)(1)(i) through (viii) of the shipyard employment and construction industry Asbestos standards, which describe when respiratory protection must be used, unnecessarily duplicate the general provisions covered by 1910.134(a). OSHA is therefore proposing to remove those paragraphs and add a cross reference to 1910.134(a)(2) in paragraph (g)(1) of the general industry Asbestos standard and paragraphs (h)(1) of the shipyard employment and construction standards for Asbestos. OSHA does not intend for these changes to add to or change the regulatory burden on employers; actions that comply with the requirements in the existing standards would also be in compliance with the proposed amended standards.

OSHA is also proposing to make changes in paragraph (g) of the general industry Asbestos standard and paragraph (h) of the shipyard employment and construction Asbestos standards that would allow employers to choose respirators based on the APF factors from 1910.134, provide employers with more respirator options that are equally protective, and allow them to use respirators that may be developed in the future that are equally protective. The proposed changes are:

- In paragraph (g)(2)(ii) of the general industry Asbestos standard, paragraphs (h)(2)(iii)(A) and (B) of the shipyard employment Asbestos standard, and paragraph (h)(3)(ii) of the construction Asbestos standard, replace the requirement for employers to provide tight-fitting powered air-purifying respirators (PAPRs) when requested by employees with a requirement to

provide any PAPR that has a minimum APF of 50;

- In paragraph (h)(2)(v)(A) of the shipyard employment Asbestos standard and (h)(3)(iv)(A) of the construction industry Asbestos standard, replace the requirement for employers to provide a tight-fitting, powered air-purifying respirator or a full facepiece, supplied-air respirator operated in the pressure-demand mode and equipped with either HEPA egress cartridges or an auxiliary positive-pressure, self-contained breathing apparatus (SCBA) with a requirement to provide a respirator that has a minimum assigned protection factor (APF) of 50;

- In paragraph (h)(2)(iv) of the shipyard employment Asbestos standard and paragraph (h)(3)(iii) of the construction Asbestos standard, replace the requirement for employers to provide an air-purifying, half mask respirator with a requirement to provide a respirator that has a minimum APF of 10; and

- In paragraph (h)(3)(iv)(B) of the construction Asbestos standard, replace the requirement for employers to provide a full facepiece supplied-air respirator operated in the pressure-demand mode with a requirement to provide a respirator that has a minimum APF of 1,000.

These revisions would all allow employers to choose from a wider range of equally protective respirators. For example, under the proposed versions of paragraphs (g)(2)(ii) of the general industry Asbestos standard, (h)(2)(iii)(A) and (B) of the shipyards Asbestos standard, and (h)(3)(ii) of the construction Asbestos standard, employers would be able to choose alternate devices, such as PAPRs with helmets or hoods, that are at least as protective as tight-fitting PAPRs and do not require fit-testing, potentially saving employers significant time and money while increasing worker protections. In that example, however, the employer must have evidence provided by the respirator manufacturer that testing of these helmet or hood respirators demonstrates performance at a level of protection of 1,000 or greater to receive an APF of 1,000, as indicated in existing Footnote 4 of Table 1 in 29 CFR 1910.134.

Additionally, OSHA is proposing to remove paragraph (g)(3)(ii) of the general industry Asbestos standard, paragraph (h)(2)(ii) of the shipyard employment Asbestos standard, and paragraph (h)(3)(i)(B) of the construction Asbestos standard, which require HEPA filters for powered and non-powered air-purifying respirators. That requirement was included because

HEPA filters were originally part of NIOSH's certification standards for respirators under 30 CFR part 11. However, NIOSH published revised requirements for testing and certification procedures and recodified the previous certification standards for other respirator classes as 42 CFR part 84 on June 8, 1995 (60 FR 30336). The HEPA filter requirement is not part of the revised 42 CFR part 84 because additional types of filters have been certified for protection from particulates and can be used with powered and non-powered air-purifying respirators. OSHA believes that these testing and certification requirements ensure that all particulate filters certified under 42 CFR part 84, including HEPA filters, are efficient in preventing the penetration of submicron-sized particles; OSHA recognized this when the Agency's revised Respiratory Protection standard was issued on January 8, 1998 (63 FR 1152). In fact, OSHA has issued other substance-specific regulations since the revised Respiratory Protection standard and NIOSH's revised certification requirements were issued and has not incorporated a requirement for HEPA filters in similar respirator provisions in those rules.

Finally, OSHA has preliminarily determined that the respirator requirements in paragraph (j)(7)(iii)(F) of the general industry Asbestos standard, paragraph (k)(9)(viii)(E) of the shipyard employment Asbestos standard, and paragraph (k)(9)(viii)(E) of the construction Asbestos standard, which require employers to provide training on the purpose, proper use, fitting instructions, and limitations of respirators, unnecessarily duplicate the general provisions covered by the Respiratory Protection standard, 1910.134(k). OSHA therefore is proposing to revise paragraph (j)(7)(iii)(F) of the general industry standard (which would still require employers to provide training about protective clothing) and remove and reserve paragraphs (k)(9)(viii)(E) of the Asbestos standards for shipyard employment and construction (which do not have requirements related to protective clothing).

OSHA is also considering, but not proposing, removing the requirement under paragraph (g)(2)(ii) of the general industry Asbestos standard, paragraphs (h)(2)(iii)(A) and (h)(2)(iii)(B) of the shipyard employment Asbestos standard, and paragraph (h)(3)(ii) of the construction Asbestos standard, to provide an employee with a powered air-purifying respirator (PAPR) instead of a negative pressure respirator when the employee chooses to use a PAPR.

OSHA believes that the removal of these provisions would not compromise worker safety and health—the provisions are about employee requests and, without them, workers would still be provided adequate protection. When OSHA updated the Respiratory Protection standard, the agency determined that it was appropriate to allow an employer to provide additional respiratory protection when requested, rather than mandate it (29 CFR 1910.134(c)(2)). Removing these requirements in the Asbestos standards would still allow for voluntary respirator use under some circumstances (*i.e.*, where the employer agrees to provide the equipment) and would better align with the general Respiratory Protection standard. However, the Agency acknowledges that user comfort affects workers' compliance with requirements to wear respiratory protection and questions whether the existing requirements under 1910.134(c)(2) and Table 1 offer equivalent access to alternative styles of respiratory protection. OSHA also understands that some employees may have come to rely on certain types of respiratory protection from asbestos at work, even when the standard does not require that level of protection. OSHA therefore seeks comment on the merits of removing these provisions.

Similarly, OSHA is considering, but not proposing, revising paragraph (g)(3)(i) of the general industry Asbestos standard, paragraphs (h)(2)(i) and (h)(2)(iv) of the shipyard employment Asbestos standard, and paragraphs (h)(3)(i)(A) and (h)(3)(iii) of the construction Asbestos standard to remove the prohibition on using filtering facepiece respirators and to allow employees to use any respirator selected in accordance with paragraph (d)(3)(i)(A) of 29 CFR 1910.134. OSHA believes that the prohibition on filtering facepiece respirators may be based on outdated technology and certification data and that the use of filtering facepieces would therefore not reduce worker safety and health. OSHA seeks comments on whether or not removing that prohibition would decrease worker protections.

OSHA recognizes that adopting these revisions will also result in the revision of the respiratory protection provisions in OSHA's marine terminals and longshoring requirements for asbestos (*see* 29 CFR 1917.1 and 29 CFR 1918.1, which apply the requirements in 1910.1001 to marine terminals and longshoring). OSHA requests comment regarding whether there are any considerations that are unique to the use of respirators for protection against

asbestos hazards in marine terminals or longshoring that OSHA should consider when finalizing this proposal. OSHA is in the process of appointing members to the Advisory Committee on Construction Safety and Health (ACCSH). The agency intends to present this proposed rule to ACCSH once that process is complete. The agency will put the Committee's recommendations on the OSHA website and in the docket for this proposed rule prior to the close of the comment period to allow the public to provide comments on those recommendations.

OSHA requests comments on this proposal, including responses regarding the following issues:

1. Are there any concerns that making the changes described in this proposal will decrease worker safety? If so, which provisions and why?

2. Are there alternative approaches OSHA should consider for any of these revisions?

3. Should OSHA remove the requirement for employers to provide PAPRs when they are requested by employees? In your experience, how often do employees request to use PAPRs when the Asbestos standard does not require them?

4. Are there any concerns that removing any of the substance-specific provisions in the Asbestos standards and relying on the generic requirements of the Respiratory Protection standard will inadequately capture the content and requirements of the current substance-specific provisions? In particular, are there any specific provisions that would be important to retain rather than switching to selection based on APF factors?

5. Should OSHA maintain the prohibition on using filtering facepiece respirators for exposures to asbestos fibers?

6. How many employers are likely to have been impacted by the redundant provisions and were providing duplicative training?

V. Economic Analysis

This proposed rule would remove redundant requirements and expand compliance options in the Asbestos standards, 29 CFR 1910.1001, 29 CFR 1915.1001, and 1926.1101, and therefore OSHA has preliminarily concluded that there would be no additional costs imposed by the proposed revisions. OSHA also anticipates that there would be some cost savings associated with this rule, including savings based on employers being able to choose more cost-effective respirators and a reduction of the burdens associated with reviewing unnecessarily

duplicative regulations. Because this rule would impose no new costs, OSHA has made a preliminary determination that the rule would be economically feasible.

Based on the Supporting Statements for the Information Collection Requests (ICR) for the Asbestos in general industry¹ and construction standards,² there are 375,479 employees who are subject to exposure monitoring for asbestos exposure. In a 1990 economic analysis prepared for the proposed changes to the Asbestos standards for construction and general industry, OSHA estimated that “from four to 10 percent of total employment . . . are potentially exposed to asbestos each year.”³ Based on this, and given that the Asbestos standards require periodic monitoring when employees are expected to be exposed above the PEL, OSHA is estimating that 10 percent of employees, or 37,548 employees, subject to periodic monitoring are using respirators. OSHA further assumes that 50 percent of those employees—18,774 employees—will switch from tight-fitting respirators to loose-fitting PAPRs and therefore avoid the costs of fit testing.

In the Supporting Statement for the Information Collection Request for the Asbestos in Shipyard standard, OSHA stated that the “agency assumes that it will take 30 minutes (30/60 hour) of employee time and 30 minutes (30/60 hour) of supervisory time to conduct and record the results of each respirator fit testing, which occurs twice annually.” That ICR also estimated that 153 shipyard employees are fit tested.⁴ Like for general industry and construction, OSHA assumes for purposes of this analysis that 50 percent of those employees will switch from tight-fitting to loose-fitting PAPRs and their employers will therefore avoid the costs of fit testing.

Using the loaded wage rates for production employees and supervisors in the respective ICRs, OSHA estimates that the proposed changes could result in savings of about \$1.5 million annually among general industry, construction, and shipyard employers, just from savings on fit testing (or about \$11.3 million over 10 years at a 3 percent discount rate).

OSHA is seeking comments and data on this preliminary analysis, including on the following questions:

1. How much do employers expect to save based on the increased flexibility in respirator selection?

2. How many employees currently use respirators for protection against asbestos?

3. How many employees would employers expect to use helmet or hooded style respirators instead of a full facepiece under the proposed revisions?

4. Are there any other savings for employers that would result from the proposed change?

5. Are there any benefits for worker protection that can be anticipated from this proposed change?

6. Are there any costs for employers that would result from this change that OSHA has not considered?

7. Are there cost savings associated with no longer being restricted to HEPA filters for powered and non-powered air-purifying respirators?

8. How much familiarization time would employers who are new entrants to the market expect to save based on the revisions?

9. Are there additional categories of cost savings that OSHA has not identified?

10. Are there savings to employers outside of general industry, construction, and shipyards related to this proposal? If so, would they be similar to what OSHA has estimated for general industry, construction, and shipyard employers?

A. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

OSHA reviewed this proposed rule under the provisions of the Regulatory Flexibility Act. This rule would eliminate burdensome regulations. Therefore, OSHA initially concludes that the impacts of the revisions would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. OSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

B. Review Under Executive Order 12866

E.O. 12866, “Regulatory Planning and Review” (58 FR 51735 (Oct. 4, 1993)),

requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) for review. OIRA has determined that this proposed rule would not constitute a “significant regulatory action” under section 3(f) of E.O. 12866. Accordingly, this proposal was not submitted to OIRA for review under E.O. 12866.

VI. Additional Requirements

A. Requirements for States With OSHA-Approved State Plans

Under section 18 of the OSH Act (29 U.S.C. 651 *et seq.*), Congress expressly provides that States may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards that are “at least as effective” as the Federal standards in providing safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved, State-administered occupational safety and health programs as “State Plans.”⁵

When Federal OSHA promulgates a new standard or a more stringent amendment to an existing standard, State Plans must either amend their

⁵ Of the 29 States and U.S. territories with OSHA-approved State Plans, 22 cover public and private-sector employees: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. The remaining six States and one U.S. territory cover only State and local government employees: Connecticut, Illinois, Maine, Massachusetts, New Jersey, New York, and the Virgin Islands.

¹ See Document ID OSHA-2010-0018-0016.

² See Document ID OSHA-2012-0002-0027.

³ See Document ID OSHA-H033E-2006-0915-0627.

⁴ See Document ID OSHA-2012-0009-0014.

standards to be identical to, or “at least as effective as,” the new Federal standard or amendment, or show that an existing State Plan standard covering this issue is “at least as effective” as the new Federal standard or amendment (29 CFR 1953.5(a)). However, when OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plans do not have to amend their standards, although they may opt to do so. OSHA has preliminarily determined this proposed rule does not impose additional or more stringent requirements than the existing standard, and therefore State Plans are not required to amend their standards. OSHA seeks comment on this assessment of its proposal.

B. OMB Review Under the Paperwork Reduction Act of 1995

The Paperwork Reduction Act (PRA) defines “collection of information” to mean “the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public, of facts or opinions by or for an agency, regardless of form or format” (44 U.S.C. 3502(3)(A)). Under the PRA, a Federal agency cannot conduct or sponsor a collection of information unless it is approved by OMB under the PRA and the agency displays a currently valid OMB control number (44 U.S.C. 3507). Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512(a)(1)). The process for OMB approval is found in 5 CFR part 1320.

This proposed rule would impose no new information collection requirements. Because the revisions are deregulatory and affect only minor changes to the existing information collections in the Asbestos standard (OMB Control Numbers 1218–0195, 1218–0134, and 1218–0133), OMB has waived the requirements of 5 CFR part 1320 and approved the modified Information Collection Request (ICR) under existing OMB Control Numbers 1218–0195, 1218–0134, and 1218–0133 (see 5 CFR 1320.18(d)).

C. Environmental Impacts/National Environmental Policy Act (NEPA)

OSHA has reviewed this proposed rule according to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), as amended by the Fiscal Responsibility Act of 2023 (Pub. L. 118–5, 321, 137

Stat. 10), and the Department of Labor’s NEPA procedures (29 CFR part 11). OSHA has determined that this proposal would have no impact on the quality of the human environment.

D. Other Statutory and Executive Order Considerations

OSHA has considered its obligations under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*) and the Executive Orders on Consultation and Coordination With Indian Tribal Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), Federalism (E.O. 13132, 64 FR 43255 (Aug. 10, 1999)), and Protection of Children From Environmental Health Risks and Safety Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a proposed deregulatory action that involves the removal of requirements, that OSHA does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these statutes and executive orders. Furthermore, OSHA has determined that this proposal is consistent with the policies and directives outlined in E.O. 14192, “Unleashing Prosperity Through Deregulation” and is an Executive Order 14192 deregulatory action.

List of Subjects in 29 CFR Parts 1910, 1915, and 1926

Assigned protection factors, Airborne contaminants, Health, Occupational safety and health, Respirators, Respirator selection.

VII. Authority and Signature

This document was prepared under the direction of Amanda Laihow, Acting Assistant Secretary of Labor for Occupational Safety and Health. It is issued under the authority of sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657), 5 U.S.C. 553, Secretary of Labor’s Order No. 8–2020 (85 FR 58393), and 29 CFR part 1911.

Dated: June 20, 2025.

Amanda Laihow,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

VIII. Regulatory Text

Proposed Amendments

For the reasons set forth in the preamble, OSHA is amending 29 CFR part 1910 as follows:

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Subpart Z—Toxic and Hazardous Substances

■ 1. The authority for 29 CFR 1910 subpart Z is revised to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor’s Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008); 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393); 29 CFR part 1911; and 5 U.S.C. 553, as applicable.

All of subpart Z issued under 29 U.S.C. 655(b), except those substances that have exposure limits listed in Tables Z–1, Z–2, and Z–3 of § 1910.1000. The latter were issued under 29 U.S.C. 655(a).

Section 1910.1000, Tables Z–1, Z–2 and Z–3 also issued under 5 U.S.C. 553, but not under 29 CFR part 1911 except for the arsenic (organic compounds), benzene, cotton dust, and chromium (VI) listings.

Section 1910.1001 also issued under 40 U.S.C. 3704 and 5 U.S.C. 553.

Section 1910.1002 also issued under 5 U.S.C. 553, but not under 29 U.S.C. 655 or 29 CFR part 1911.

Sections 1910.1018, 1910.1029, and 1910.1200 also issued under 29 U.S.C. 653.

Section 1910.1030 also issued under Public Law 106–430, 114 Stat. 1901.

Section 1910.1201 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

■ 2. § 1910.1001 is revised as follows:

- 1. Revise and republish paragraph (g)(1), (g)(2)(ii), (g)(3) and (j)(7)(iii)(F)
- 2. Remove paragraphs (g)(1)(i)–(iv) and (g)(3)(i)–(ii)

The revisions and additions read as follows:

(g) * * *

(1) *General.* For employees who use respirators required by this section, the employer must provide each employee an appropriate respirator that complies with the requirements of this paragraph. Respirators must be used when the employer determines that they are necessary to protect the health of an employee as required under 29 CFR 1910.134(a)(2).

(2) * * *

(i) * * *

(ii) Employers must provide an employee with a powered air-purifying respirator (PAPR) that has a minimum assigned protection factor (APF) of 50 instead of a negative pressure respirator selected according to paragraph (g)(3) of this standard when the employee chooses to use a PAPR and it provides adequate protection to the employee.

(iii) * * *

(3) *Respirator selection.* Employers must select, and provide to employees, the appropriate respirators specified in

paragraph (d)(3)(i)(A) of 29 CFR 1910.134; however, employers must not select or use filtering facepiece respirators for protection against asbestos fibers.

* * * * *

- (j) * * *
- (1) * * *
- (2) * * *
- (3) * * *
- (4) * * *
- (5) * * *
- (6) * * *
- (7) * * *
- (i) * * *
- (ii) * * *
- (iii) * * *
- (A) * * *
- (B) * * *
- (C) * * *
- (D) * * *
- (E) * * *

(F) The purpose, proper use, and limitations of protective clothing, if appropriate;

* * * * *

PART 1915—OCCUPATIONAL SAFETY AND HEALTH STANDARDS FOR SHIPYARD EMPLOYMENT

■ 3. The authority for 29 CFR part 1915 continues to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor's Order No. 12-71 (36 FR 8754); 8-76 (41 FR 25059), 9-83 (48 FR 35736), 1-90 (55 FR 9033), 6-96 (62 FR 111), 3-2000 (65 FR 50017), 5-2002 (67 FR 65008), 5-2007 (72 FR 31160), 4-2010 (75 FR 55355), 1-2012 (77 FR 3912), or 8-2020 (85 FR 58393); 29 CFR part 1911; and 5 U.S.C. 553, as applicable.

Subpart Z—Toxic and Hazardous Substances

■ 4. § 1915.1001 is revised as follows:

■ a. Revise and republish paragraphs (h)(1), (h)(2)(iii)(A)–(B), (h)(2)(iv), and (h)(2)(v)(A)

■ b. Remove paragraphs (h)(1)(i)–(viii)

■ c. Remove and reserve paragraphs (h)(2)(ii) and (k)(9)(viii)(E)

The revisions and additions read as follows:

(h) * * *

(1) *General.* For employees who use respirators required by this section, the employer must provide each employee an appropriate respirator that complies with the requirements of this paragraph. Respirators must be used when the employer determines that they are necessary to protect the health of an employee as required under 29 CFR 1910.134(a)(2).

(2) * * *

(i) * * *

(ii) [Reserved]

(iii) * * *

(A) Inform employees that they may require the employer to provide a powered air-purifying respirator (PAPR) that has a minimum assigned protection factor (APF) of 50 and is permitted for use under paragraph (h)(2)(i) of this standard instead of a negative pressure respirator.

(B) Provide employees with a PAPR that has a minimum assigned protection factor (APF) of 50 instead of a negative pressure respirator when the employees choose to use a PAPR and it provides them with the required protection against asbestos.

(iv) Employers must provide employees with a respirator that has a minimum assigned protection factor (APF) of 10, other than a filtering facepiece respirator, whenever the employees perform:

(A) * * *

(B) * * *

(v) * * *

(A) A respirator that has a minimum assigned protection factor (APF) of 50 whenever the employees are in a regulated area performing Class I asbestos work for which a negative exposure assessment is not available and the exposure assessment indicates that the exposure level will be at or below 1 f/cc as an 8-hour time-weighted average (TWA).

PART 1926—SAFETY AND HEALTH REGULATIONS FOR CONSTRUCTION

■ 1. The authority for 29 CFR 1926 subpart Z is revised to read as follows:

Authority: 40 U.S.C. 3704; 29 U.S.C. 653, 655, 657; and Secretary of Labor's Order No. 12-71 (36 FR 8754), 8-76 (41 FR 25059), 9-83 (48 FR 35736), 1-90 (55 FR 9033), 6-96

(62 FR 111), 3-2000 (65 FR 50017), 5-2002 (67 FR 65008), 5-2007 (72 FR 31160), 4-2010 (75 FR 55355), 1-2012 (77 FR 3912), or 8-2020 (85 FR 58393), as applicable; and 29 CFR part 1911.

Section 1926.1102 not issued under 29 U.S.C. 655 or 29 CFR part 1911; also issued under 5 U.S.C. 553.

■ 2. § 1926.1101 is revised as follows:

■ a. Revise and republish paragraphs (h)(1), (h)(3)(i), (h)(3)(ii), (h)(3)(iii), and (h)(3)(iv)(A)–(B)

■ b. Remove paragraphs (h)(1)(i)–(viii) and (h)(3)(i)(A)–(B)

■ c. Remove and reserve paragraph (k)(9)(viii)(E)

The revisions and additions read as follows:

(h) * * *

(1) *General.* For employees who use respirators required by this section, the employer must provide each employee an appropriate respirator that complies with the requirements of this paragraph. Respirators must be used when the employer determines that they are necessary to protect the health of an employee as required under 29 CFR 1910.134(a)(2).

(2) * * *

(3) * * *

(i) Employers must select, and provide to employees, the appropriate respirators specified in paragraph (d)(3)(i)(A) of 29 CFR 1910.134; however, employers must not select or use filtering facepiece respirators for use against asbestos fibers.

(ii) Employers must provide an employee with a powered air-purifying respirator (PAPR) that has a minimum assigned protection factor (APF) of 50 instead of a negative pressure respirator selected according to paragraph (h)(3)(i)(A) of this standard when the employee chooses to use a PAPR and it provides adequate protection to the employee.

(iii) Employers must provide employees with a respirator that has a minimum assigned protection factor (APF) of 10, other than a filtering facepiece respirator, whenever the employees perform:

(A) * * *

(B) * * *

(iv) * * *

(A) A respirator that has a minimum APF of 50 whenever the employees are in a regulated area performing Class I asbestos work for which a negative exposure assessment is not available and the exposure assessment indicates that the exposure level will be at or below 1 f/cc as an 8-hour time-weighted average (TWA).

(B) A respirator that has a minimum APF of 1,000 and is equipped with an auxiliary positive-pressure SCBA

whenever the employees are in a regulated area performing Class I asbestos work for which a negative exposure assessment is not available and the exposure assessment indicates that the exposure level will be above 1 f/cc as an 8-hour TWA.

BILLING CODE 4510–26–P

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Parts 1910, 1915, 1917, 1918, and 1926

[Docket No. OSHA–2025–0020]

RIN 1218–AD55

TITLE: 1,3-Butadiene

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: This proposed rule revises some substance-specific respirator requirements to allow different types of respirators to be used under OSHA’s 1,3-Butadiene standard and better aligns this standard with OSHA’s respiratory protection standard.

DATES: Comments and other information, including requests for a hearing, must be received on or before September 2, 2025.

Informal public hearing: OSHA will schedule an informal public hearing on the rule if requested during the comment period. If a hearing is

requested, the location and date of the hearing, procedures for interested parties to notify the agency of their intention to participate, and procedures for participants to submit their testimony and documentary evidence will be announced in the Federal Register.

ADDRESSES:

Written comments: You may submit comments and attachments, identified by Docket No. OSHA–2025–0020, electronically at <https://www.regulations.gov>, which is the Federal e-Rulemaking Portal. Follow the instructions online for making electronic submissions.

Instructions: All submissions must include the agency’s name and the docket number for this rulemaking (Docket No. OSHA–2025–0020). When uploading multiple attachments to [regulations.gov](https://www.regulations.gov), please number all of your attachments because [regulations.gov](https://www.regulations.gov) will not automatically number the attachments. This will be very useful in identifying all attachments. For example, Attachment 1—title of your document, Attachment 2—title of your document, Attachment 3—title of your document. For assistance with commenting and uploading documents, please see the Frequently Asked Questions on <https://www.regulations.gov>.

All comments, including any personal information you provide, are placed in the public docket without change and may be made available online at <https://www.regulations.gov>. Therefore, OSHA cautions commenters about submitting information they do not want made available to the public, or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.

Docket: The docket for this rulemaking (Docket No. OSHA–2025–0020) is available at <https://www.regulations.gov>, the Federal eRulemaking Portal. Most exhibits are available at <https://www.regulations.gov>; some exhibits (e.g., copyrighted material) are not available to download from that web page. However, all materials in the dockets are available for inspection at the OSHA Docket Office.

FOR FURTHER INFORMATION CONTACT:

For press inquiries: Contact Frank Meilinger, Director, OSHA Office of Communications, Occupational Safety and Health Administration; telephone: (202) 693–1999; email: meilinger.francis2@dol.gov.

General information and technical inquiries: Contact Andrew Levinson, Director, OSHA Directorate of Standards

and Guidance, Occupational Safety and Health Administration; telephone: (202) 693–1950; email: osha.dsg@dol.gov.

Copies of this Federal Register notice: Electronic copies are available at <https://www.regulations.gov>. This Federal Register notice, as well as news releases and other relevant information, also are available at OSHA’s web page at <https://www.osha.gov>. A “100-word summary” is also available on <https://www.regulations.gov>.

SUPPLEMENTARY INFORMATION:

Table of Contents

- I. Executive Summary
- II. Legal Authority and Preliminary Findings
- III. Events Leading to the Proposed Rule
- IV. Summary and Explanation of the Proposed Requirements
- V. Economic Analysis
- VI. Additional Requirements
- VII. Authority and Signature
- VIII. Regulatory Text

I. Executive Summary

This proposed rule is intended to provide greater compliance flexibility and clarify the policies and procedures employers must follow when implementing a respiratory protection program in conjunction with OSHA’s 1,3-Butadiene standard (29 CFR 1910.1051). OSHA is proposing to revise some respirator-related provisions where they are unnecessarily prescriptive, which would result in employers having greater flexibility in the respirators they select for exposed workers, while providing equivalent worker protection. This proposal is also consistent with OSHA’s intent, when it published the revised Respiratory Protection standard (29 CFR 1910.134), to use it as a foundation for respirator selection in substance-specific standards.

Additionally, OSHA believes that this proposed rule appropriately incorporates advances in technology, which have made some provisions of the 1,3-Butadiene standard outdated, and would allow employers to take advantage of future technological advances. This proposed standard is intended to account for modern knowledge and technology and to streamline the selection of respirators.

II. Legal Authority and Preliminary Findings

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651 *et seq.*) (“the Act” or “the OSH Act”) is “to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources” (29 U.S.C. 651(b)). To achieve this goal,

Congress authorized the Secretary of Labor (“the Secretary”) to promulgate standards to protect workers, including the authority “to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce” (29 U.S.C. 651(b)(3); *see also* 29 U.S.C. 654(a)(2) (requiring employers to comply with OSHA standards), 29 U.S.C. 655(a) (authorizing summary adoption of existing consensus and established federal standards within two years of the Act’s enactment), 29 U.S.C. 655(b) (authorizing promulgation, modification or revocation of standards pursuant to notice and comment), and 29 U.S.C. 655(b)(7) (authorizing OSHA to include among a standard’s requirements labeling, monitoring, medical testing, and other information-transmittal provisions)). An occupational safety and health standard is “. . . a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment” (29 U.S.C. 652(8)). The Secretary may also issue regulations requiring employers to keep records regarding their activities relating to the Act, as well as records of work-related deaths, injuries, and illnesses (29 U.S.C. 657(c)(1)–(2)).

Before OSHA may promulgate a health or safety standard, it must find that a standard is reasonably necessary or appropriate within the meaning of section 652(8) of the OSH Act, which OSHA did here in 1971 when it published the 1,3-Butadiene standard (see 61 FR 56746). The Supreme Court, in its decision on OSHA’s benzene standard, interpreted OSHA’s obligation under section 652(8) as requiring it to evaluate “whether significant risks are present and can be eliminated or lessened by a change in practices” (*Indus. Union Dep’t, AFL–CIO v. Am. Petroleum Inst.*, 448 U.S. 607, 642 (1980) (plurality opinion)). OSHA originally adopted a consensus standard to regulate 1–3-Butadiene in 1971 and later revised it because the agency determined that at the permissible exposure limit set in 1971 there was still significant risk to employees (61 FR 56746). When, as here, OSHA has previously determined that its standard substantially reduces a significant risk, it is unnecessary for the agency to make additional findings on risk for every provision of that standard (*see, e.g., Pub. Citizen Health Research Grp. v. Tyson*, 796 F.2d 1479, 1502 n.16 (D.C. Cir. 1986) (rejecting the argument that

OSHA must “find that each and every aspect of its standard eliminates a significant risk”)). Rather, once OSHA makes a general significant risk finding in support of a standard, the next question is whether a particular requirement is reasonably related to the purpose of the standard as a whole (*see Asbestos Info. Ass’n/N. Am. v. Reich*, 117 F.3d 891, 894 (5th Cir. 1997); *Forging Indus. Ass’n v. Sec’y of Labor*, 773 F.2d 1436, 1447 (4th Cir. 1985); *United Steelworkers of Am., AFL–CIO–CLC v. Marshall*, 647 F.2d 1189, 1237–38 (D.C. Cir. 1980) (“*Lead I*”)). Therefore, while OSHA is not making a preliminary finding of significant risk for this proposed rule, the agency has made a preliminary determination that the proposed changes are reasonably related to the purpose of the 1,3-Butadiene standard as a whole.

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that is reasonably expected to be developed (*see Am. Iron and Steel Inst. v. OSHA*, 939 F.2d 975, 980 (D.C. Cir. 1991)). Courts have also interpreted technological feasibility to mean that a typical firm in each affected industry or application group will reasonably be able to implement the requirements of the standard in most operations most of the time (*see, e.g., Public Citizen v. OSHA*, 557 F.3d 165, 170–71 (3d Cir. 2009) (citing *Lead I* at 1272)).

This proposed rule would not substantially modify existing requirements for respiratory protection in workplaces; nor would it create new requirements. All employers in compliance with the existing standard would also be in compliance with the revised standard. Therefore, OSHA has made a preliminary determination that the proposed rule would be technologically feasible.

In evaluating economic feasibility, OSHA must consider the average cost of compliance in an industry rather than costs for individual employers. In its economic analyses, OSHA “must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms” (*Am. Iron and Steel Inst.*, 939 F.2d at 980, quoting *Lead I* at 1272). OSHA has made a preliminary finding that this proposal is economically feasible because it is deregulatory and is expected to reduce costs for employers. OSHA’s economic analysis is presented in Section V.

The Administrative Procedures Act directs agencies to include in each rule adopted “a concise general statement of [the rule’s] basis and purpose” (5 U.S.C. 553(c)); *cf.* 29 U.S.C. 655(e) (requiring the Secretary to publish a “statement of reasons” for any standard promulgated)). This notice satisfies this concise statement requirement.

III. Events Leading to the Proposed Rule

OSHA adopted its first 1,3-Butadiene standard in 1971 (*see* 61 FR 56746). OSHA also has a general Respiratory Protection standard, 29 CFR 1910.134, which it first promulgated in 1971 (39 FR 9835). OSHA published a revised Respiratory Protection standard on January 8, 1998 (63 FR 1152). The Respiratory Protection standard contains worksite-specific requirements for program administration, as well as procedures for respirator selection, employee training, fit testing, medical evaluation, and respirator use, among other provisions. OSHA noted that the revised standard was to “serve as a ‘building block’ standard with respect to future standards that may contain respiratory protection requirements” (63 FR 1265). In 2006, OSHA revised the Respiratory Protection standard again to incorporate assigned protection factors (APFs) in the respirator selection process (71 FR 50122–01).

Several OSHA standards regulating exposure to toxic substances and harmful physical agents, including the 1,3-Butadiene standard, require compliance with many provisions of 29 CFR 1910.134. However, when revising the respirator rule, the Agency decided to retain several special respirator selection provisions in the existing substance-specific standards. In this regard, OSHA noted that the respirator selection requirements retained in the substance-specific standards were developed in rulemakings to provide protection against a hazardous characteristic or condition unique to the regulated substance. Consequently, OSHA felt that preserving these provisions in the individual substance-specific standards would maintain the level of respiratory protection afforded to employees.

In this proposal, OSHA is revisiting some of those determinations; the agency now believes that there are additional ways that substance-specific standards can rely on 29 CFR 1910.134 without compromising employee safety. The purpose of revising the respirator-related provisions of OSHA’s 1,3-Butadiene standard is to conform them, to the extent possible, with other substance-specific standards and to the

revised 29 CFR 1910.134 in general. The proposed updates will improve the 1,3-Butadiene standard because it will now refer to the APFs in the Respiratory Protection standard, which is based on current technology and practices for respirator use. This revised standard is intended to take account of new knowledge and technology.

OSHA expects that the rule would ultimately reduce the compliance burden on the regulated community, without compromising worker safety. Therefore, OSHA believes this proposed rule is consistent with Executive Order (E.O.) 14219, “Ensuring Lawful Governance and Implementing the President’s ‘Department of Government Efficiency’ Deregulatory Initiative,” E.O. 14192, “Unleashing Prosperity Through Deregulation,” and the goal of removing regulations that harm the national interest by impeding technological innovation or private enterprise and entrepreneurship.

IV. Summary and Explanation of the Proposed Requirements

OSHA is proposing to revise paragraph (h) of its general industry 1,3-Butadiene standard (29 CFR 1910.1051) to reduce compliance burdens, allow for the use of more up-to-date technology, and improve the comprehensibility of the requirements for respiratory protection programs. These revisions would simplify compliance for employers by removing requirements in 1910.1051 that are duplicative with the requirements in 1910.134. The proposed revisions would also provide more compliance options by removing unnecessary restrictions on respirator selection where another equally protective option exists. Finally, these revisions would also conform this standard, to the extent possible, to other substance-specific standards and to 29 CFR 1910.134, which would simplify review of these regulations. The Agency preliminarily concludes, therefore, that updating these rules is consistent with the goal of facilitating the use of new technology and reducing undue burden.

OSHA has preliminarily determined that paragraphs (h)(1)(i) through (iv) of the 1,3-Butadiene standard unnecessarily duplicate the general provisions covered by 1910.134(a). The agency is therefore proposing to remove those paragraphs and add a cross reference to 1910.134(a)(2) in paragraph (h)(1). Employers in compliance with the current version of 1910.1051(h)(1) would not have to change any of their practices to remain in compliance with the changes OSHA is proposing.

OSHA is also proposing to remove many of the respiratory selection criteria

from 1910.1051(h)(3)(i) and Table 1. Specifically, OSHA is proposing to remove the phrase “appropriate respirators from Table 1 of this section” from paragraph (h)(3)(i) and instead include “and provide to employees, the appropriate respirators specified in paragraph (d)(3)(i)(A) of 29 CFR 1910.134” because the requirements of Table 1 duplicate the APF factors in 1910.134(d)(3)(i)(A) and would not allow for the use of new types of respirators with equivalent APFs. Additionally, in Table 1, OSHA is proposing to remove the specific types of respirators from each row, while leaving in the type of cartridge and canister with which the respirator must be equipped, along with the change schedules for the cartridge or canister where that is specified. Paragraphs (h)(2)(ii) and (h)(2)(iii) of the 1,3-Butadiene standard include language that makes selection of replacement schedules dependent on the “class of respirators listed in Table 1” so in the portions of the table where cartridge or canister changeout schedules are maintained, OSHA is also keeping an APF requirement so that there is a “class of respirator” listed in Table 1. For rows where there is no cartridge or canister changeout schedule, OSHA is proposing to delete those rows in their entirety. For the proposed version of Table 1, see Section VIII.

OSHA has preliminarily determined that these requirements unnecessarily duplicate the requirements in the Respiratory Protection standard, at 1910.134(d)(1)(i) and (ii) and 1910.134(d)(3)(i)(A), which employers are already required to follow. OSHA believes that these changes will improve consistency with other substance specific standards and allow employers to select from a wider range of equally protective respirators based on the APF of the respirator. OSHA does not intend for these changes to add to or change the regulatory burden on employers; actions that were in compliance with the requirements in 1910.1051(h)(3)(i) and Table 1 of the 1,3-Butadiene standard would also be in compliance with the standard as revised. However, this change does expand the options available for compliant respiratory protection based on exposure levels and APFs.

Additionally, OSHA is proposing to remove the sentence contained in the notes to Table 1 of the 1,3-Butadiene standard that requires the use of full facepiece respiratory protection when eye irritation is anticipated. OSHA has preliminarily determined that paragraph (i) of the standard contains requirements for the use of personal protective

equipment to prevent eye contact and limit dermal exposure to 1,3-butadiene that are equally as protective as the provision in the notes to Table 1. This would provide greater compliance flexibility to employers who would be able to provide half mask respirators along with appropriate eye and face protection when employees are experiencing eye irritation.

OSHA is also considering (but not proposing) removing the requirements for specific schedule changes for filter cartridges and canisters that are in Table 1 of the 1,3-Butadiene standard and, in paragraph (h)(2)(i), removing the exception for paragraphs (d)(3)(iii)(B)(1) and (2) of the 1910.134 standard, resulting in employers needing to comply with the generic cartridge and canister change schedules in the Respiratory Protection standard. That provision in the Respiratory Protection standard requires that an air-purifying respirator be equipped with an end-of-service-life indicator (ESLI) certified by NIOSH for the contaminant or, if there is no ESLI appropriate for the working conditions, the employer must implement a change schedule for canisters and cartridges based on objective information or data that would ensure canisters and cartridges would be changed before the end of their service life. The employer would also need to include the basis for their determination in their respirator program. Essentially, if OSHA made this change it would result in a performance-based approach to cartridge and canister changes, rather than a prescriptive approach. This would also result in Table 1 being deleted entirely if OSHA removed both the respirator specifications as proposed and the changeout schedules that it is currently proposing to leave in.

OSHA notes that employers are currently permitted to establish alternative schedules for filter replacement based on 90% of the service life (paragraph (h)(2)(iii) of the 1,3-Butadiene standard), and that the default replacement schedule outlined in Table 1 of the 1,3-Butadiene standard is based on worse-case scenario exposure conditions found in the workplace, since this provides the greatest margin for safety in using air purifying respirators with 1,3-Butadiene. OSHA questions whether the removal of Table 1 and requiring employers to rely on the procedures in 1910.134(d)(3)(iii)(B)(1) and (2), specifically its end of service life indicators (ESLI) or performance-based criteria, would be equally as protective while providing employers with increased options for compliance.

OSHA recognizes that adopting these revisions will also result in the revision of the respiratory protection requirements in OSHA's shipyard employment, marine terminals, longshoring, and construction industry standards for 1,3-butadiene (*see* 29 CFR 1915.1000 (Table Z), 29 CFR 1926.55 (Table 1), 29 CFR 1917.1, and 29 CFR 1918.1, which apply the requirements in 29 CFR 1910.1051 to construction, longshoring, marine terminals, and shipyard work). OSHA requests comment regarding whether there are any considerations that are unique to the use of respirators for protection against 1,3-butadiene hazards in shipyards, marine terminals, longshoring, or construction that OSHA should consider when finalizing this proposal. OSHA is in the process of appointing members to the Advisory Committee on Construction Safety and Health (ACCSH). The agency intends to present this proposed rule to ACCSH once that process is complete. The agency will put the Committee's recommendations on the OSHA website and in the docket for this proposed rule prior to the close of the comment period to allow the public to provide comments on those recommendations.

OSHA requests comments on the following issues:

1. Are there any concerns that making the changes described in this proposal will decrease worker safety?
2. Are there alternative approaches OSHA should consider?
3. Are there any aspects of the proposed cross references to 1910.134 that will insufficiently capture the existing provisions OSHA is proposing to remove in the 1,3-Butadiene standard?

3. Should OSHA remove the filter cartridges and canisters change schedule requirements under Table 1? Would following the performance-based approach in 1910.134 sufficiently protect workers and would it provide significant cost savings or other benefits?

V. Economic Analysis

This proposed rule would remove redundant requirements and expand compliance options for employers in the 1,3-Butadiene standard, 29 CFR 1910.1051, and therefore OSHA has preliminarily concluded that there would be no additional costs imposed by the proposed revisions. OSHA also anticipates that there may be some cost savings associated with this rule, including a reduction of the burden associated with complying with and reviewing unnecessarily duplicative regulations. Because this rule would

impose no new costs, OSHA has made a preliminary determination that the rule would be economically feasible.

Based on the Supporting Statement for the Information Collection Request for the 1,3-Butadiene standard, OSHA estimates that there are 53 employees using respirators for monitoring and emergency response activities involving exposure to 1,3-butadiene. Assuming 25 percent of those employees will switch from a full facepiece respirator to a hooded continuous flow respirator, which will eliminate fit testing costs for those employees,¹ OSHA estimates that this could result in about \$1,100 in savings annually (or about \$8,000 over 10 years at a 3 percent discount rate).²

OSHA is seeking comments and data on this preliminary analysis, including on the following questions:

1. How much do employers expect to save based on the increased flexibility in respirator selection?
2. How many employees would employers expect to use helmet or hooded style respirators instead of a full facepiece under the proposed revisions?
3. Are there any other savings for employers that would result from the proposed change?
4. Are there any benefits for worker protection that can be anticipated from this proposed change?
5. Are there any costs for employers that would result from this change that OSHA has not considered?
6. Would the savings to employers outside of general industry be similar to what OSHA has estimated for general industry employers?

A. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

OSHA reviewed this proposed rule under the provisions of the Regulatory Flexibility Act. This rule would eliminate burdensome regulations. Therefore, OSHA initially concludes that the impacts of the revisions would not have a "significant economic impact on a substantial number of small entities," and that the preparation of an IRFA is not warranted. OSHA will

¹ See Docket ID OSHA-2012-0027-0014 for additional detail.

² See Docket ID OSHA-2012-0027-0014 for information on employee and wage rate estimates.

transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

B. Review Under Executive Order 12866

E.O. 12866, "Regulatory Planning and Review" (58 FR 51735 (Oct. 4, 1993)), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit "significant regulatory actions" to the Office of Information and Regulatory Affairs (OIRA) for review. OIRA has determined that this proposed rule would not constitute a "significant regulatory action" under section 3(f) of E.O. 12866. Accordingly, this proposal was not submitted to OIRA for review under E.O. 12866.

VI. Additional Requirements

A. Requirements for States With OSHA-Approved State Plans

Under section 18 of the OSH Act (29 U.S.C. 651 *et seq.*), Congress expressly provides that States may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards that are "at least as effective" as the Federal standards in providing safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved, State-administered occupational safety and health programs as "State Plans."³

³ Of the 29 States and U.S. territories with OSHA-approved State Plans, 22 cover public and private-sector employees: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland,

When Federal OSHA promulgates a new standard or a more stringent amendment to an existing standard, State Plans must either amend their standards to be identical to, or “at least as effective as,” the new Federal standard or amendment, or show that an existing State Plan standard covering this issue is “at least as effective” as the new Federal standard or amendment (29 CFR 1953.5(a)). However, when OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plans do not have to amend their standards, although they may opt to do so. OSHA has preliminarily determined this proposed rule does not impose additional or more stringent requirements than the existing standard, and therefore State Plans are not required to amend their standards. OSHA seeks comment on this assessment of its proposal.

B. OMB Review Under the Paperwork Reduction Act of 1995

The Paperwork Reduction Act (PRA) defines “collection of information” to mean “the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public, of facts or opinions by or for an agency, regardless of form or format” (44 U.S.C. 3502(3)(A)). Under the PRA, a Federal agency cannot conduct or sponsor a collection of information unless it is approved by OMB under the PRA and the agency displays a currently valid OMB control number (44 U.S.C. 3507). Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512(a)(1)). The process for OMB approval is found in 5 CFR part 1320.

This proposed rule would impose no new information collection requirements. Because the revisions are deregulatory and affect only minor changes to the existing information collections in the 1,3-Butadiene standard (OMB Control Number 1218–0170), OMB has waived the requirements of 5 CFR part 1320 and approved the modified Information Collection Request (ICR) under existing

Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. The remaining six States and one U.S. territory cover only State and local government employees: Connecticut, Illinois, Maine, Massachusetts, New Jersey, New York, and the Virgin Islands.

OMB Control Number 1218–0170 (*see* 5 CFR 1320.18(d)).

C. Environmental Impacts/National Environmental Policy Act (NEPA)

OSHA has reviewed this proposed rule according to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), as amended by the Fiscal Responsibility Act of 2023 (Pub. L. 118–5, 321, 137 Stat. 10), and the Department of Labor’s NEPA procedures (29 CFR part 11). OSHA has determined that this proposal would have no impact on the quality of the human environment.

D. Other Statutory and Executive Order Considerations

OSHA has considered its obligations under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*) and the Executive Orders on Consultation and Coordination With Indian Tribal Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), Federalism (E.O. 13132, 64 FR 43255 (Aug. 10, 1999)), and Protection of Children From Environmental Health Risks and Safety Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a proposed deregulatory action that involves the removal of requirements, that OSHA does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these statutes and executive orders. Furthermore, OSHA has determined that this proposal is consistent with the policies and directives outlined in E.O. 14192, “Unleashing Prosperity Through Deregulation” and is an Executive Order 14192 deregulatory action.

VII. Authority and Signature

This document was prepared under the direction of Amanda Laihow, Acting Assistant Secretary of Labor for Occupational Safety and Health. It is issued under the authority of sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657), 5 U.S.C. 553, Secretary of Labor’s Order No. 8–2020 (85 FR 58393), and 29 CFR part 1911.

Dated: June 20, 2025.

Amanda Laihow,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

VIII. Regulatory Text

Proposed Amendments

For the reasons set forth in the preamble, OSHA is amending 29 CFR part 1910 as follows:

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Subpart Z—Toxic and Hazardous Substances

■ 1. The authority for 29 CFR 1910 subpart Z is revised to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor’s Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008); 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393); 29 CFR part 1911; and 5 U.S.C. 553, as applicable.

All of subpart Z issued under 29 U.S.C. 655(b), except those substances that have exposure limits listed in Tables Z–1, Z–2, and Z–3 of § 1910.1000. The latter were issued under 29 U.S.C. 655(a).

Section 1910.1000, Tables Z–1, Z–2 and Z–3 also issued under 5 U.S.C. 553, but not under 29 CFR part 1911 except for the arsenic (organic compounds), benzene, cotton dust, and chromium (VI) listings.

Section 1910.1001 also issued under 40 U.S.C. 3704 and 5 U.S.C. 553.

Section 1910.1002 also issued under 5 U.S.C. 553, but not under 29 U.S.C. 655 or 29 CFR part 1911.

Sections 1910.1018, 1910.1029, and 1910.1200 also issued under 29 U.S.C. 653.

Section 1910.1030 also issued under Public Law 106–430, 114 Stat. 1901.

Section 1910.1201 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

■ 2. § 1910.1051 is revised as follows:

■ a. Revise and republish paragraphs (h)(1), (h)(3)(i) and Table 1

The revisions and additions read as follows:

(h) * * *

(1) *General.* For employees who use respirators required by this section, the employer must provide each employee an appropriate respirator that complies with the requirements of this paragraph. Respirators must be used when the employer determines that it is necessary to protect the health of an employee as required under 29 CFR 1910.134(a)(2).

(3) * * *

(i) The employer must select and provide to employees the appropriate

respirators specified in paragraph (d)(3)(i)(A) of 29 CFR 1910.134.

TABLE 1—MINIMUM REQUIREMENTS FOR RESPIRATORY PROTECTION FOR AIRBORNE BD

Concentration of airborne BD (ppm) or condition of use	Minimum required respirator
Less than or equal to 5 ppm (5 times PEL)	(a) A respirator with a minimum assigned protection factor (APF) of 10, equipped with approved BD or organic vapor cartridges or canisters. Cartridges or canisters shall be replaced every 4 hours.
Less than or equal to 10 ppm (10 times PEL) ...	(a) A respirator with a minimum APF of 10, equipped with approved BD or organic vapor cartridges or canisters. Cartridges or canisters shall be replaced every 3 hours.
Less than or equal to 25 ppm (25 times PEL) ...	(a) A respirator with a minimum APF of 25, equipped with approved BD or organic vapor cartridges or canisters. Cartridges or canisters shall be replaced every 2 hours.
Less than or equal to 50 ppm (50 times PEL) ...	(a) A respirator with a minimum APF of 50, equipped with approved BD or organic vapor cartridges or canisters. Cartridges or canisters shall be replaced every (1) hour.

Notes:

Respirators approved for use in higher concentrations are permitted to be used in lower concentrations.

[Docket No. OSHA–2025–0018]

RIN 1218–AD63

Ethylene Oxide

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: This proposed rule revises some substance-specific respirator requirements to allow different types of respirators to be used under OSHA's Ethylene Oxide standard and better aligns this standard with OSHA's Respiratory Protection standard.

DATES: Comments and other information, including requests for a hearing, must be received on or before September 2, 2025.

Informal public hearing: OSHA will schedule an informal public hearing on the rule if requested during the comment period. If a hearing is requested, the location and date of the hearing, procedures for interested parties to notify the agency of their intention to participate, and procedures for participants to submit their testimony and documentary evidence will be announced in the **Federal Register**.

ADDRESSES:

Written comments: You may submit comments and attachments, identified by Docket No. OSHA–2025–0018,

electronically at <https://www.regulations.gov>, which is the Federal e-Rulemaking Portal. Follow the instructions online for making electronic submissions.

Instructions: All submissions must include the agency's name and the docket number for this rulemaking (Docket No. OSHA–2025–0018). When uploading multiple attachments to <https://www.regulations.gov>, please number all of your attachments because <https://www.regulations.gov> will not automatically number the attachments. This will be very useful in identifying all attachments. For example, Attachment 1—title of your document, Attachment 2—title of your document, Attachment 3—title of your document. For assistance with commenting and uploading documents, please see the Frequently Asked Questions on <https://www.regulations.gov>.

All comments, including any personal information you provide, are placed in the public docket without change and may be made available online at <https://www.regulations.gov>. Therefore, OSHA cautions commenters about submitting information they do not want made available to the public, or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.

Docket: The docket for this rulemaking (Docket No. OSHA–2025–0018) is available at <https://www.regulations.gov>, the Federal eRulemaking Portal. Most exhibits are available at <https://www.regulations.gov>; some exhibits (e.g., copyrighted material) are not available to download from that web page. However, all materials in the dockets are available for inspection at the OSHA Docket Office.

- V. Economic Analysis
- VI. Additional Requirements
- VII. Authority and Signature
- VIII. Regulatory Text

I. Executive Summary

This proposed rule is intended to provide greater compliance flexibility and clarify the policies and procedures employers must follow when implementing a respiratory protection program in conjunction with OSHA's Ethylene Oxide standard (29 CFR 1910.1047). OSHA is proposing to revise some respirator-related provisions where they are unnecessarily prescriptive, which would result in employers having greater flexibility in the respirators they select for exposed workers, while providing equivalent

worker protection. This proposal is also consistent with OSHA's intent, when it published the revised Respiratory Protection standard (29 CFR 1910.134), to use it as a foundation for respirator selection in substance-specific standards.

Additionally, OSHA believes that this proposed rule appropriately incorporates advances in technology, which have made some provisions of the Ethylene Oxide standard outdated, and would allow employers to take advantage of future technological advances. This proposed standard is intended to account for modern knowledge and technology and to streamline the selection of respirators.

II. Legal Authority and Preliminary Findings

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651 *et seq.*) (“the Act” or “the OSH Act”) is “to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources” (29 U.S.C. 651(b)). To achieve this goal, Congress authorized the Secretary of Labor (“the Secretary”) to promulgate standards to protect workers, including the authority “to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce” (29 U.S.C. 651(b)(3); *see also* 29 U.S.C. 654(a)(2) (requiring employers to comply with OSHA standards), 29 U.S.C. 655(a) (authorizing summary adoption of existing consensus and established federal standards within two years of the Act's enactment), 29 U.S.C. 655(b) (authorizing promulgation, modification or revocation of standards pursuant to notice and comment), and 29 U.S.C. 655(b)(7) (authorizing OSHA to include among a standard's requirements labeling, monitoring, medical testing, and other information-transmittal provisions)). An occupational safety and health standard is “. . . a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment” (29 U.S.C. 652(8)). The Secretary may also issue regulations requiring employers to keep records regarding their activities relating to the Act, as well as records of work-related deaths, injuries, and illnesses (29 U.S.C. 657(c)(1)–(2)).

Before OSHA may promulgate a health or safety standard, it must find that a standard is reasonably necessary or appropriate within the meaning of

section 652(8) of the OSH Act, which OSHA did here in 1974 when it published the air contaminants standard (39 FR 23502) and reaffirmed when it published a separate standard for Ethylene Oxide in 1984 (49 FR 25734–01). The Supreme Court, in its decision on OSHA's Benzene standard, interpreted OSHA's obligation under section 652(8) as requiring it to evaluate “whether significant risks are present and can be eliminated or lessened by a change in practices” (*Indus. Union Dep't, AFL-CIO v. Am. Petroleum Inst.*, 448 U.S. 607, 642 (1980) (plurality opinion)). OSHA originally adopted a consensus standard recommendation to regulate ethylene oxide in 1974 and later revised the standard because even at that permissible exposure limit there was significant risk to employees (49 FR 25734–01). When, as here, OSHA has previously determined that its standard substantially reduces a significant risk, it is unnecessary for the agency to make additional findings on risk for every provision of that standard (*see, e.g., Pub. Citizen Health Research Grp. v. Tyson*, 796 F.2d 1479, 1502 n.16 (D.C. Cir. 1986) (rejecting the argument that OSHA must “find that each and every aspect of its standard eliminates a significant risk”)). Rather, once OSHA makes a general significant risk finding in support of a standard, the next question is whether a particular requirement is reasonably related to the purpose of the standard as a whole (*see Asbestos Info. Ass'n/N. Am. v. Reich*, 117 F.3d 891, 894 (5th Cir. 1997); *Forging Indus. Ass'n v. Sec'y of Labor*, 773 F.2d 1436, 1447 (4th Cir. 1985); *United Steelworkers of Am., AFL-CIO-CLC v. Marshall*, 647 F.2d 1189, 1237–38 (D.C. Cir. 1980) (“*Lead I*”)). Therefore, while OSHA is not making a preliminary finding of significant risk for this proposed rule, the agency has made a preliminary determination that the proposed changes are reasonably related to the purpose of the Ethylene Oxide standard as a whole.

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that is reasonably expected to be developed (*see Am. Iron and Steel Inst. v. OSHA*, 939 F.2d 975, 980 (D.C. Cir. 1991)). Courts have also interpreted technological feasibility to mean that a typical firm in each affected industry or application group will reasonably be able to implement the requirements of the standard in most operations most of the time (*see, e.g., Public Citizen v.*

OSHA, 557 F.3d 165, 170–71 (3d Cir. 2009) (citing *Lead I* at 1272)).

This proposed rule would not substantially modify existing requirements for respiratory protection in workplaces; nor would it create new requirements. All employers in compliance with the existing standard would also be in compliance with the revised standard. Therefore, OSHA has made a preliminary determination that the proposed rule would be technologically feasible.

In evaluating economic feasibility, OSHA must consider the average cost of compliance in an industry rather than costs for individual employers. In its economic analyses, OSHA “must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms” (*Am. Iron and Steel Inst.*, 939 F.2d at 980, quoting *Lead I* at 1272). OSHA has made a preliminary finding that this proposal is economically feasible because it is deregulatory and is expected to reduce costs for employers. OSHA's economic analysis is presented in Section V.

The Administrative Procedures Act directs agencies to include in each rule adopted “a concise general statement of [the rule's] basis and purpose” (5 U.S.C. 553(c)); *cf.* 29 U.S.C. 655(e) (requiring the Secretary to publish a “statement of reasons” for any standard promulgated)). This notice satisfies this concise statement requirement.

III. Events Leading to the Proposed Rule

OSHA adopted the Ethylene Oxide standard in 1984 (49 FR 25734–01). OSHA also has a general Respiratory Protection standard, 29 CFR 1910.134, which it first promulgated in 1971 (39 FR 9835). OSHA published a revised Respiratory Protection standard on January 8, 1998 (63 FR 1152). The Respiratory Protection standard contains worksite-specific requirements for program administration, as well as procedures for respirator selection, employee training, fit testing, medical evaluation, and respirator use, among other provisions. OSHA noted that the revised standard was to “serve as a ‘building block’ standard with respect to future standards that may contain respiratory protection requirements” (63 FR 1265). In 2006, OSHA revised the Respiratory Protection standard again to incorporate assigned protection factors (APFs) in the respirator selection process (71 FR 50122–01).

Several OSHA standards regulating exposure to toxic substances and harmful physical agents, including the Ethylene Oxide standard, require compliance with many provisions of 29 CFR 1910.134. However, when revising the Respiratory Protection standard, the Agency decided to retain several special respirator selection provisions in the existing substance-specific standards. In this regard, OSHA noted that the respirator selection requirements retained in the substance-specific standards were developed in rulemakings to provide protection against a hazardous characteristic or condition unique to the regulated substance. Consequently, OSHA felt that preserving these provisions in the individual substance-specific standards would maintain the level of respiratory protection afforded to employees.

In this proposal, OSHA is revisiting some of those determinations; the agency now believes that there are additional ways that substance-specific standards can rely on 29 CFR 1910.134 without compromising employee safety. The purpose of revising the respirator-related provisions of OSHA's Ethylene Oxide standard is to conform them, to the extent possible, with other substance-specific standards and to the revised 29 CFR 1910.134 in general. The proposed updates would improve the Ethylene Oxide standard because they will remove unnecessarily specific respirator requirements as well as language that is duplicative of the requirements of the Respiratory Protection standard and allow for greater flexibility in the selection of equally protective respirators. OSHA also believes that advances in technology have made the Ethylene Oxide standard outdated in some areas. This revised standard is intended to take account of new knowledge and technology.

OSHA expects that the rule would ultimately reduce the compliance burden on the regulated community, without compromising worker safety. Therefore, OSHA believes this proposed rule is consistent with Executive Order (E.O.) 14219, "Ensuring Lawful Governance and Implementing the President's 'Department of Government Efficiency' Deregulatory Initiative," E.O. 14192, "Unleashing Prosperity Through Deregulation," and the goal of removing regulations that harm the national interest by impeding technological innovation or private enterprise and entrepreneurship.

IV. Summary and Explanation of the Proposed Requirements

OSHA is proposing to revise paragraph (g) of its general industry Ethylene Oxide standard (29 CFR 1910.1047) to reduce compliance burdens, allow for the use of more up-to-date technology, and improve the comprehensibility of the requirements for respiratory protection programs. These revisions would simplify compliance for employers by removing requirements in 1910.1047 that are duplicative with the requirements in 1910.134. The proposed revisions would also remove unnecessary restrictions on respirator selection where another equally protective option exists. Finally, these revisions conform the Ethylene Oxide standard, to the extent possible, to other substance-specific standards and to 29 CFR 1910.134. The Agency preliminarily concludes, therefore, that updating these rules is consistent with the goal of reducing undue burden and facilitating the use of new technology.

OSHA preliminarily determined that paragraphs (g)(1)(i) through (iv) of the Ethylene Oxide standard, which specify when respirators must be used, unnecessarily duplicate the general provisions in 1910.134(a). Therefore, the agency is proposing to remove those paragraphs and add a cross reference to 1910.134(a)(2) in paragraph (g)(1). OSHA does not intend for these changes to add to or change the regulatory burden on employers; actions that were in compliance with the requirements in 1910.1047(g) would also be in compliance with proposed paragraph (g).

Additionally, OSHA is proposing to remove provisions in paragraph (g)(3)(i) and paragraph (g)(3)(ii) of the Ethylene Oxide standard. Paragraph (g)(3)(i) prohibits the use of half masks because ethylene oxide may cause eye irritation or injury, but paragraph (g)(4) already requires employers to provide appropriate protective clothing or equipment when employees could have eye or skin contact. OSHA has preliminarily determined that removing paragraph (g)(3)(i)'s prohibition on half masks would provide greater compliance flexibility for employers because employers could newly select a half mask and then additionally provide eye protection or a face shield under paragraph (g)(4) to ensure equivalent protection for workers. OSHA has also preliminarily determined that paragraph (g)(3)(ii), which requires employers to equip each air-purifying, full facepiece respirator with a front- or back-mounted canister approved for protection against

ethylene oxide, is unnecessarily prescriptive and duplicates the general provisions in 1910.134(d) of the Respiratory Protection standard. The agency believes that, in the Respiratory Protection standard, paragraphs (d)(3)(ii), which requires the respirator selected is appropriate for the chemical state and physical form of the contaminant, and (d)(3)(iii), which has requirements related to the selection and use of cartridges and canisters for protection against gases and vapors, provide equivalent protection and the removal of this provision in the Ethylene Oxide standard would potentially provide more compliance options. Therefore, the agency is proposing to remove and reserve that paragraph.

OSHA recognizes that adopting these revisions will also result in the revision of the respiratory protection requirements in OSHA's construction, shipyard employment, marine terminals, and longshoring standards for ethylene oxide (*see* 29 CFR 1926.1147, 29 CFR 1917.1, 29 CFR 1918.1, and 29 CFR 1915.1047, which apply the requirements in 1910.1047 to construction, marine terminals, longshoring, and shipyards). OSHA requests comment regarding whether there are any considerations that are unique to the use of respirators for protection against ethylene oxide hazards in construction, shipyards, marine terminals, or longshoring that OSHA should consider when finalizing this proposal. OSHA is in the process of appointing members to the Advisory Committee on Construction Safety and Health (ACCSH). The agency intends to present this proposed rule to ACCSH once that process is complete. The agency will put the Committee's recommendations on the OSHA website and in the docket for this proposed rule prior to the close of the comment period to allow the public to provide comments on those recommendations.

OSHA requests comments on this proposal, including responses regarding the following issues:

1. Are there any concerns that making the changes described in this proposal will decrease worker safety? If so, which provisions and why?

2. Are there alternative approaches OSHA should consider for any of these revisions?

3. Are there any concerns that removing any of the substance-specific provisions in the Ethylene Oxide standard and relying on the generic requirements of the Respiratory Protection standard will inadequately capture the content and requirements of

the current substance-specific provisions?

V. Economic Analysis

This proposed rule would expand compliance options for employers under the Ethylene Oxide standard, 29 CFR 1910.1047, by allowing employers to provide half mask respirators rather than full facepiece respirators, and therefore OSHA has preliminarily concluded that there would be no additional costs imposed by the proposed revisions. OSHA also anticipates that there would be some cost savings associated with this rule, including savings based on employers being able to choose more cost-effective respirators and a reduction of the burdens associated with reviewing unnecessarily duplicative regulations.

Based on the Supporting Statement for the Information Collection Request (ICR) for the Ethylene Oxide standard, OSHA estimates that there are 30,906 employees exposed to ethylene oxide. In that ICR, OSHA also estimated that “6% of all facilities [. . .] will have exposures above the EL.”¹ Assuming that 6 percent applies to employees as well, OSHA estimates that 1,854 employees are exposed above the EL and are wearing respirators. The cost of a full-face respirator is \$255² and a half-face respirator costs \$40.³ Employees using a half mask respirator would also need safety goggles for eye protection. OSHA determined that safety goggles cost \$2.25⁴ and need to be replaced 5 times a year (based on OSHA’s 2007 PPE Payment FEA (72 FR 64342)), for an annual cost of \$11.25. Assuming that both types of respirators are replaced annually, that there is no difference in the price of canisters/cartridges, and that cleaning wipes would be used in equal amounts for either respirator, there is a difference in cost between the full facepiece respirator and the half mask plus goggles of \$203.75 per employee annually.

OSHA does not currently have sufficient information to quantify how many of the exposed employees would use a half mask respirator. However, if 50 percent of the exposed employees were to use half mask respirators plus goggles instead of full facepiece respirators, that could result in savings, based on equipment alone, of approximately \$189,000 annually (or

about \$1.4 million over 10 years at a 3 percent discount rate).

OSHA is seeking comments and data on this preliminary analysis, including on the following questions:

1. How much do employers expect to save based on the increased flexibility in respirator selection?

a. How many employees would employers expect to use half mask respirators instead of a full facepiece under the proposed revisions?

2. How much familiarization time would employers who are new entrants to the market expect to save based on the revisions?

3. Are there any other savings for employers that would result from the proposed change?

4. Are there any benefits for worker protection that can be anticipated from this proposed change?

5. Are there any costs for employers that would result from this change that OSHA has not considered?

6. Would there be savings to employers outside of general industry related to this proposal? If so, would they be similar to what OSHA has estimated for general industry employers?

A. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

OSHA reviewed this proposed rule under the provisions of the Regulatory Flexibility Act. This rule would eliminate burdensome regulations. Therefore, OSHA initially concludes that the impacts of the revisions would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. OSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

B. Review Under Executive Order 12866

E.O. 12866, “Regulatory Planning and Review” (58 FR 51735 (Oct. 4, 1993)), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2)

tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) for review. OIRA has determined that this proposed rule would not constitute a “significant regulatory action” under section 3(f) of E.O. 12866. Accordingly, this proposal was not submitted to OIRA for review under E.O. 12866.

VI. Additional Requirements

A. Requirements for States With OSHA-Approved State Plans

Under section 18 of the OSH Act (29 U.S.C. 651 *et seq.*), Congress expressly provides that States may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards that are “at least as effective” as the Federal standards in providing safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved, State-administered occupational safety and health programs as “State Plans.”⁵

When Federal OSHA promulgates a new standard or a more stringent amendment to an existing standard, State Plans must either amend their standards to be identical to, or “at least as effective as,” the new Federal standard or amendment, or show that an existing State Plan standard covering this issue is “at least as effective” as the new Federal standard or amendment (29

⁵ Of the 29 States and U.S. territories with OSHA-approved State Plans, 22 cover public and private-sector employees: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. The remaining six States and one U.S. territory cover only State and local government employees: Connecticut, Illinois, Maine, Massachusetts, New Jersey, New York, and the Virgin Islands.

¹ See Document ID OSHA–2009–0035–0015.

² https://www.uline.com/BL_992/3M-Full-Face-Respirators. Accessed June 5, 2025.

³ https://www.uline.com/BL_992/3M-Full-Face-Respirators. Accessed June 5, 2025.

⁴ https://www.uline.com/BL_8952/Uline-Economy-Safety-Goggles. Accessed June 5, 2025.

CFR 1953.5(a)). However, when OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plans do not have to amend their standards, although they may opt to do so. OSHA has preliminarily determined this proposed rule does not impose additional or more stringent requirements than the existing standard, and therefore State Plans are not required to amend their standards. OSHA seeks comment on this assessment of its proposal.

B. OMB Review Under the Paperwork Reduction Act of 1995

The Paperwork Reduction Act (PRA) defines “collection of information” to mean “the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public, of facts or opinions by or for an agency, regardless of form or format” (44 U.S.C. 3502(3)(A)). Under the PRA, a Federal agency cannot conduct or sponsor a collection of information unless it is approved by OMB under the PRA and the agency displays a currently valid OMB control number (44 U.S.C. 3507). Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512(a)(1)). The process for OMB approval is found in 5 CFR part 1320.

This proposed rule would impose no new information collection requirements. Because the revisions are deregulatory and affect only minor changes to the existing information collections in the Ethylene Oxide standards (OMB Control Number 1218–0108), OMB has waived the requirements of 5 CFR part 1320 and approved the modified Information Collection Request (ICR) under existing OMB Control Number 1218–0108 (*see* 5 CFR 1320.18(d)).

C. Environmental Impacts/National Environmental Policy Act (NEPA)

OSHA has reviewed this proposed rule according to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), as amended by the Fiscal Responsibility Act of 2023 (Pub. L. 118–5, 321, 137 Stat. 10), and the Department of Labor’s NEPA procedures (29 CFR part 11). OSHA has determined that this proposal would have no impact on the quality of the human environment.

D. Other Statutory and Executive Order Considerations

OSHA has considered its obligations under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*) and the Executive Orders on Consultation and Coordination With Indian Tribal Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), Federalism (E.O. 13132, 64 FR 43255 (Aug. 10, 1999)), and Protection of Children From Environmental Health Risks and Safety Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a proposed deregulatory action that involves the removal of requirements, that OSHA does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these statutes and executive orders. Furthermore, OSHA has determined that this proposal is consistent with the policies and directives outlined in E.O. 14192, “Unleashing Prosperity Through Deregulation” and is an Executive Order 14192 deregulatory action.

List of Subjects in 29 CFR Part 1910

Assigned protection factors, Airborne contaminants, Health, Occupational safety and health, Respirators, Respirator selection.

VII. Authority and Signature

This document was prepared under the direction of Amanda Laihow, Acting Assistant Secretary of Labor for Occupational Safety and Health. It is issued under the authority of sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657), 5 U.S.C. 553, Secretary of Labor’s Order No. 8–2020 (85 FR 58393), and 29 CFR part 1911.

Signed at Washington, DC, on June 20, 2025.

Amanda Laihow,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

VIII. Regulatory Text

Proposed Amendments

For the reasons set forth in the preamble, OSHA is amending 29 CFR part 1910 as follows:

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Subpart Z—Toxic and Hazardous Substances

■ 1. The authority for 29 CFR 1910 subpart Z is revised to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor’s Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008); 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393); 29 CFR part 1911; and 5 U.S.C. 553, as applicable.

All of subpart Z issued under 29 U.S.C. 655(b), except those substances that have exposure limits listed in Tables Z–1, Z–2, and Z–3 of § 1910.1000. The latter were issued under 29 U.S.C. 655(a).

Section 1910.1000, Tables Z–1, Z–2 and Z–3 also issued under 5 U.S.C. 553, but not under 29 CFR part 1911 except for the arsenic (organic compounds), benzene, cotton dust, and chromium (VI) listings.

Section 1910.1001 also issued under 40 U.S.C. 3704 and 5 U.S.C. 553.

Section 1910.1002 also issued under 5 U.S.C. 553, but not under 29 U.S.C. 655 or 29 CFR part 1911.

Sections 1910.1018, 1910.1029, and 1910.1200 also issued under 29 U.S.C. 653.

Section 1910.1030 also issued under Public Law 106–430, 114 Stat. 1901.

Section 1910.1201 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

■ 2. Section 1910.1047 is amended as follows:

- 1. Revise and republish paragraphs (g)(1) and (g)(3)(i)
- 2. Remove paragraphs (g)(1)(i) through (iv)
- 3. Remove and reserve paragraph (g)(3)(ii)

The revisions and additions read as follows:

§ 1910.1047 Ethylene oxide

(g) * * *

(1) *General.* For employees who use respirators required by this section, the employer must provide each employee an appropriate respirator that complies with the requirements of this paragraph. Respirators must be used when the employer determines that they are necessary to protect the health of an employee as required under 29 CFR 1910.134(a)(2).

(2) * * *

(3) * * *

(i) Select, and provide to employees, the appropriate respirators specified in paragraph (d)(3)(i)(A) of 29 CFR 1910.134.

(ii) [Reserved]

* * * * *

[FR Doc. 2025–11638 Filed 6–30–25; 8:45 am]

BILLING CODE 4510–26–P

DEPARTMENT OF LABOR**Occupational Safety and Health Administration****29 CFR Parts 1910, 1915, 1917, 1918, 1926****[Docket No. OSHA–2025–0013]****RIN 1218–AD56****13 Carcinogens (4-Nitrobiphenyl, etc.)****AGENCY:** Occupational Safety and Health Administration (OSHA), Labor.**ACTION:** Proposed rule; request for comments.

SUMMARY: This proposed rule revises some substance-specific respirator requirements to allow different types of respirators to be used under OSHA's 13 Carcinogens standard and better aligns this standard with OSHA's respiratory protection standard.

DATES: Comments and other information, including requests for a hearing, must be received on or before September 2, 2025.

Informal public hearing: OSHA will schedule an informal public hearing on the rule if requested during the comment period. If a hearing is requested, the location and date of the hearing, procedures for interested parties to notify the agency of their intention to participate, and procedures for participants to submit their testimony and documentary evidence will be announced in the **Federal Register**.

ADDRESSES:

Written comments: You may submit comments and attachments, identified by Docket No. OSHA–2025–0013, electronically at <https://www.regulations.gov>, which is the Federal e-Rulemaking Portal. Follow the instructions online for making electronic submissions.

Instructions: All submissions must include the agency's name and the docket number for this rulemaking (Docket No. OSHA–2025–0013). When uploading multiple attachments to [regulations.gov](https://www.regulations.gov), please number all of your attachments because [regulations.gov](https://www.regulations.gov) will not automatically number the attachments. This will be very useful in identifying all attachments. For example, Attachment 1—title of your document, Attachment 2—title of your document, Attachment 3—title of your document. For assistance with commenting and uploading documents, please see the Frequently Asked Questions on [regulations.gov](https://www.regulations.gov). All comments, including any personal information you

provide, are placed in the public docket without change and may be made available online at <https://www.regulations.gov>. Therefore, OSHA cautions commenters about submitting information they do not want made available to the public, or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.

Docket: The docket for this rulemaking (Docket No. OSHA–2025–0013) is available at <https://www.regulations.gov>, the Federal eRulemaking Portal. Most exhibits are available at <https://www.regulations.gov>; some exhibits (e.g., copyrighted material) are not available to download from that web page. However, all materials in the dockets are available for inspection at the OSHA Docket Office.

- IV. Summary and Explanation of the Proposed Requirements
- V. Economic Analysis
- VI. Additional Requirements
- VII. Authority and Signature
- VIII. Regulatory Text

I. Executive Summary

This proposed rule is intended to promote more effective use of respirators, provide greater compliance flexibility, and clarify the policies and procedures employers must follow when implementing a respiratory protection program in conjunction with OSHA's 13 Carcinogens standard (29 CFR 1910.1003). OSHA is proposing to revise some respirator-related

provisions where they are unnecessarily prescriptive, which would result in employers having greater flexibility in the respirators they select for exposed workers, while providing equivalent worker protection. This proposal is also consistent with OSHA's intent, when it published the revised respiratory protection standard (29 CFR 1910.134), to use it as a foundation for respirator selection in substance-specific standards.

Additionally, OSHA believes that this proposed rule appropriately incorporates advances in technology, which have made some provisions of the 13 Carcinogens standard outdated, and would allow employers to take advantage of future technological advances. This proposed standard is intended to account for modern knowledge and technology and to streamline the selection of respirators.

II. Legal Authority and Preliminary Findings

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651 *et seq.*) ("the Act" or "the OSH Act") is "to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources" (29 U.S.C. 651(b)). To achieve this goal, Congress authorized the Secretary of Labor ("the Secretary") to promulgate standards to protect workers, including the authority "to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce" (29 U.S.C. 651(b)(3); *see also* 29 U.S.C. 654(a)(2) (requiring employers to comply with OSHA standards), 29 U.S.C. 655(a) (authorizing summary adoption of existing consensus and established federal standards within two years of the Act's enactment), 29 U.S.C. 655(b) (authorizing promulgation, modification or revocation of standards pursuant to notice and comment), and 29 U.S.C. 655(b)(7) (authorizing OSHA to include among a standard's requirements labeling, monitoring, medical testing, and other information-transmittal provisions)). An occupational safety and health standard is ". . . a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment" (29 U.S.C. 652(8)). The Secretary may also issue regulations requiring employers to keep records regarding their activities relating to the Act, as well as records of work-related

deaths, injuries, and illnesses (29 U.S.C. 657(c)(1)–(2)).

Before OSHA may promulgate a health or safety standard, it must find that a standard is reasonably necessary or appropriate within the meaning of section 652(8) of the OSH Act, which OSHA did here in 1974 when it published the first Carcinogens standard (39 FR 3756). The Supreme Court, in its decision on OSHA's benzene standard, interpreted OSHA's obligation under section 652(8) as requiring it to evaluate “whether significant risks are present and can be eliminated or lessened by a change in practices” (*Indus. Union Dep't, AFL-CIO v. Am. Petroleum Inst.*, 448 U.S. 607, 642 (1980) (plurality opinion)). OSHA originally published this standard as an emergency temporary standard (ETS) and found that these carcinogens posed a grave danger, which is a higher threshold than significant risk (38 FR 10929). When, as here, OSHA has previously determined that its standard substantially reduces a significant risk, it is unnecessary for the agency to make additional findings on risk for every provision of that standard (see, e.g., *Pub. Citizen Health Research Grp. v. Tyson*, 796 F.2d 1479, 1502 n.16 (D.C. Cir. 1986) (rejecting the argument that OSHA must “find that each and every aspect of its standard eliminates a significant risk”)). Rather, once OSHA makes a general significant risk finding in support of a standard, the next question is whether a particular requirement is reasonably related to the purpose of the standard as a whole (see *Asbestos Info. Ass'n/N. Am. v. Reich*, 117 F.3d 891, 894 (5th Cir. 1997); *Forging Indus. Ass'n v. Sec'y of Labor*, 773 F.2d 1436, 1447 (4th Cir. 1985); *United Steelworkers of Am., AFL-CIO-CLC v. Marshall*, 647 F.2d 1189, 1237–38 (D.C. Cir. 1980) (“*Lead I*”)). Therefore, while OSHA is not making a preliminary finding of significant risk for this proposed rule, the agency has made a preliminary determination that the proposed changes are reasonably related to the purpose of the 13 Carcinogens standard as a whole.

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that is reasonably expected to be developed (see *Am. Iron and Steel Inst. v. OSHA*, 939 F.2d 975, 980 (D.C. Cir. 1991)). Courts have also interpreted technological feasibility to mean that a typical firm in each affected industry or application group will reasonably be able to implement the requirements of the standard in most operations most of the time (see, e.g., *Public Citizen v.*

OSHA, 557 F.3d 165, 170–71 (3d Cir. 2009) (citing *Lead I* at 1272)).

This proposed rule would not substantially modify existing requirements for respiratory protection in workplaces; nor would it create new requirements. All employers in compliance with the existing standard would also be in compliance with the revised standard. Therefore, OSHA has made a preliminary determination that the proposed rule would be technologically feasible.

In evaluating economic feasibility, OSHA must consider the average cost of compliance in an industry rather than costs for individual employers. In its economic analyses, OSHA “must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms” (*Am. Iron and Steel Inst.*, 939 F.2d at 980, quoting *Lead I* at 1272). OSHA has made a preliminary finding that this proposal is economically feasible because it is deregulatory and is expected to reduce costs for employers. OSHA's economic analysis is presented in Section V.

The Administrative Procedures Act directs agencies to include in each rule adopted “a concise general statement of [the rule's] basis and purpose” (5 U.S.C. 553(c)); cf. 29 U.S.C. 655(e) (requiring the Secretary to publish a “statement of reasons” for any standard promulgated)). This notice satisfies this concise statement requirement.

III. Events Leading to the Proposed Rule

OSHA adopted a carcinogens standard in 1974 (39 FR 3756). OSHA also has a general respiratory protection standard, 29 CFR 1910.134, which it first promulgated in 1971 (39 FR 9835). OSHA published a revised respiratory protection standard on January 8, 1998 (63 FR 1152). The respiratory protection standard contains worksite-specific requirements for program administration, as well as procedures for respirator selection, employee training, fit testing, medical evaluation, and respirator use, among other provisions. OSHA noted that the revised standard was to “serve as a ‘building block’ standard with respect to future standards that may contain respiratory protection requirements” (63 FR 1265). In 2006, OSHA revised the respiratory protection standard again to incorporate assigned protection factors (APFs) in the respirator selection process (71 FR 50122–01).

Several OSHA standards regulating exposure to toxic substances and harmful physical agents, including the 13 Carcinogens standard, require compliance with many provisions of 29 CFR 1910.134. However, when revising the respirator rule, the Agency decided to retain several special respirator selection provisions in the existing substance-specific standards. In this regard, OSHA noted that the respirator selection requirements retained in the substance-specific standards were developed in rulemakings to provide protection against a hazardous characteristic or condition unique to the regulated substance. Consequently, OSHA felt that preserving these provisions in the individual substance-specific standards would maintain the level of respiratory protection afforded to employees.

In this proposal, OSHA is revisiting some of those determinations; the agency now believes that there are additional ways that substance-specific standards can rely on 29 CFR 1910.134 without compromising employee safety. The purpose of revising the respirator-related provisions of OSHA's 13 Carcinogens standard is to conform them, to the extent possible, with other substance-specific standards and to the revised 29 CFR 1910.134 in general. The proposed updates will improve these substance-specific standards, including 13 Carcinogens, because they will now refer to the APFs in the respiratory protection standard, which is based on current technology and practices for respirator use. OSHA also believes that advances in technology have made the substance-specific standards outdated in some areas. This revised standard is intended to take account of new knowledge and technology.

OSHA expects that the rule would ultimately reduce the compliance burden on the regulated community, without compromising worker safety. Therefore, OSHA believes this proposed rule is consistent with Executive Order (E.O.) 14219, “Ensuring Lawful Governance and Implementing the President's ‘Department of Government Efficiency’ Deregulatory Initiative,” E.O. 14192, “Unleashing Prosperity Through Deregulation,” and the goal of removing regulations that harm the national interest by impeding technological innovation or private enterprise and entrepreneurship.

IV. Summary and Explanation of the Proposed Requirements

OSHA is proposing to revise paragraph (c)(4)(iv) of its general industry 13 Carcinogens standard (29 CFR 1910.1003) to reduce compliance

burdens, allow for the use of more up-to-date technology, and improve the comprehensibility of the requirements for respiratory protection programs. These revisions would provide more compliance options for employers by replacing requirements for specific respirator types with requirements for respirator selection based on APFs. The APFs in the respiratory protection standard are based on current knowledge about respirator use and updated technology. These revisions would also conform the 13 Carcinogens standard, to the extent possible, to other substance-specific standards and to 29 CFR 1910.134. The Agency has made a preliminary determination, therefore, that updating the 13 Carcinogens standard is consistent with the goal of facilitating technological innovation, reducing undue burden, and improving compliance with OSHA's respiratory protection requirements.

The proposed changes to paragraph (c)(4)(iv) of the 13 Carcinogens standard would replace two requirements for the use of respiratory protection. The first change would remove the requirement for employers to provide each employee engaged in handling operations involving the carcinogens 4-Nitrobiphenyl, alpha-Naphthylamine, 3,3'-Dichlorobenzidine (and its salts), beta-Naphthylamine, Benzidine, 4-Aminodiphenyl, 2-Acetylaminofluorene, 4-Dimethylaminoazo-benzene, and N-Nitrosodimethylamine with National Institute for Occupational Safety and Health (NIOSH) certified air-purifying, half-mask respirators with particulate filters. In place of the deleted requirement, this proposal would add a requirement to provide and ensure the use of a NIOSH-certified respirator for protection against particulates with an APF of 10 under those same working conditions. Second, the requirement for employers to ensure that each employee engaged in handling operations involving the carcinogens methyl chloromethyl ether, bis-Chloromethyl ether, Ethyleneimine, and beta-Propiolactone wears and uses any self-contained breathing apparatus that has a full facepiece would be replaced with a requirement to provide and ensure the use of any respirator with an APF of 10,000. The standard would continue to allow employers to substitute a respirator affording employees higher levels of protection than these respirators, but now would also allow them to use additional types of respirators that provide equivalent levels of protection (based on APFs in 29 CFR 1910.134) as the respirators

required under the existing 13 Carcinogens standard.

OSHA recognizes that adopting these revisions will also result in the revision of the respiratory protection requirements in OSHA's shipyard employment, marine terminals, longshoring, and construction industry standards for the 13 Carcinogens (*see* 29 CFR 1926.1103, 29 CFR 1915.1003, 29 CFR 1917.1, and 29 CFR 1918.1, which applies the requirements in 29 CFR 1910.1003 to construction, longshoring, marine terminals, and shipyards). OSHA requests comment regarding whether there are any considerations that are unique to the use of respirators for protection against hazards from the 13 carcinogens in shipyards, marine terminals, longshoring, or construction that OSHA should consider when finalizing this proposal. OSHA is in the process of appointing members to the Advisory Committee on Construction Safety and Health (ACCSH). The agency intends to present this proposed rule to ACCSH once that process is complete. The agency will put the Committee's recommendations on the OSHA website and in the docket for this proposed rule prior to the close of the comment period to allow the public to provide comments on those recommendations.

OSHA requests comments on this proposal, including responses regarding the following issues:

1. Are there any concerns that making this change would decrease worker safety?
2. In some other substance-specific standards OSHA currently limits the use of filtering facepiece respirators (*see, e.g.,* 29 CFR 1910.1001(g)(3)(i)). OSHA is interested in obtaining information from commenters about whether there are reasons to limit the use of filtering facepiece respirators in the 13 Carcinogens standard.
3. Is there an alternative approach OSHA should consider?

V. Economic Analysis

This proposed rule would expand compliance options for employers under the 13 Carcinogens standard, 29 CFR 1910.1003, and therefore OSHA has preliminarily concluded that there would be no additional costs imposed by the proposed revisions. OSHA also anticipates that there may be some cost savings associated with this rule, including a reduction of the burden associated with fit testing for those employees able to wear a loose fitting PAPR or similar. Because this rule would impose no new costs, OSHA has made a preliminary determination that the rule would be economically feasible.

The changes to the requirements for 13 carcinogens would expand compliance options for employers by allowing them to provide any respirator meeting the minimum assigned protection factor, including respirators with a helmet or hood, rather than mandating half mask respirators and full facepiece self-contained breathing apparatuses (SCBA). OSHA anticipates that the expanded compliance options may lead to some employers switching to types of respirators that do not require fit testing, eliminating costs for that procedure.

Based on the Supporting Statement for the Information Collection Request for the 13 Carcinogens standard,¹ OSHA estimates that 770 employees are exposed to the chemicals covered by the standard. For the sake of this analysis, OSHA assumes that all these employees will be wearing respirators. Switching from a half mask or a full facepiece SCBA to a hooded PAPR would eliminate fit testing costs for those employees. OSHA estimates that 50 percent of employees wearing respirators, or 385 employees, would use a different type of respirator as a result of this proposal. Based on the Supporting Statement for the Asbestos in Shipyards standard,² fit testing is assumed to take 30 minutes of both the employee's time and a supervisor's time and occur twice a year. This means that this proposal could result in savings of about \$31,500 annually (or about \$234,000 over 10 years annualized at a 3 percent discount rate).³

OSHA is seeking comments and data on this preliminary analysis, including on the following questions:

1. How much do employers expect to save based on the increased flexibility in respirator selection?
2. How many employees would employers expect to use helmet or hooded style respirators instead of a half mask respirator or full facepiece SCBA under the proposed revisions?
3. Are there any other savings for employers that would result from the proposed change?
4. Are there any benefits for worker protection that can be anticipated from this proposed change?
5. Are there any costs for employers that would result from this change that OSHA has not considered?
6. Would the savings to employers outside of general industry be similar to

¹ See Document ID OSHA-2011-0860-0013 for information about estimates of employees.

² See Document ID OSHA-2012-0009-0014.

³ See Document ID OSHA-2011-0860-0013 for information about wage rates used.

what OSHA has estimated for general industry employers?

A. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

OSHA reviewed this proposed rule under the provisions of the Regulatory Flexibility Act. This rule would eliminate burdensome regulations. Therefore, OSHA initially concludes that the impacts of the revisions would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. OSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

B. Review Under Executive Order 12866

E.O. 12866, “Regulatory Planning and Review” (58 FR 51735 (Oct. 4, 1993)), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) for review. OIRA has determined that this proposed rule would not constitute a “significant regulatory action” under section 3(f) of E.O. 12866. Accordingly, this proposal was not

submitted to OIRA for review under E.O. 12866.

VI. Additional Requirements

A. Requirements for States With OSHA-Approved State Plans

Under section 18 of the OSH Act (29 U.S.C. 651 *et seq.*), Congress expressly provides that States may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards that are “at least as effective” as the Federal standards in providing safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved, State-administered occupational safety and health programs as “State Plans.”⁴

When Federal OSHA promulgates a new standard or a more stringent amendment to an existing standard, State Plans must either amend their standards to be identical to, or “at least as effective as,” the new Federal standard or amendment, or show that an existing State Plan standard covering this issue is “at least as effective” as the new Federal standard or amendment (29 CFR 1953.5(a)). However, when OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plans do not have to amend their standards, although they may opt to do so. OSHA has preliminarily determined this proposed rule does not impose additional or more stringent requirements than the existing standard, and therefore State Plans are not required to amend their standards. OSHA seeks comment on this assessment of its proposal.

B. OMB Review Under the Paperwork Reduction Act of 1995

The Paperwork Reduction Act (PRA) defines “collection of information” to mean “the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public, of facts or opinions by or for an agency, regardless of form or format” (44 U.S.C. 3502(3)(A)). Under the PRA, a Federal agency cannot conduct or sponsor a collection of information unless it is approved by OMB under the PRA and

the agency displays a currently valid OMB control number (44 U.S.C. 3507). Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512(a)(1)). The process for OMB approval is found in 5 CFR part 1320.

This proposed rule would impose no new information collection requirements. Because the revisions are deregulatory and affect only minor changes to the existing information collections in the 13 Carcinogens standard (OMB Control Number 1218–0085), OMB has waived the requirements of 5 CFR part 1320 and approved the modified Information Collection Request (ICR) under existing OMB Control Number 1218–0085 (*see* 5 CFR 1320.18(d)).

C. Environmental Impacts/National Environmental Policy Act (NEPA)

OSHA has reviewed this proposed rule according to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), as amended by the Fiscal Responsibility Act of 2023 (Pub. L. 118–5, 321, 137 Stat. 10), and the Department of Labor’s NEPA procedures (29 CFR part 11). OSHA has determined that this proposal would have no impact on the quality of the human environment.

D. Other Statutory and Executive Order Considerations

OSHA has considered its obligations under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*) and the Executive Orders on Consultation and Coordination With Indian Tribal Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), Federalism (E.O. 13132, 64 FR 43255 (Aug. 10, 1999)), and Protection of Children From Environmental Health Risks and Safety Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a proposed deregulatory action that involves the removal of requirements, that OSHA does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these statutes and executive orders. Furthermore, OSHA has determined that this proposal is consistent with the policies and directives outlined in E.O. 14192, “Unleashing Prosperity Through Deregulation” and is an Executive Order 14192 deregulatory action.

⁴ Of the 29 States and U.S. territories with OSHA-approved State Plans, 22 cover public and private-sector employees: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. The remaining six States and one U.S. territory cover only State and local government employees: Connecticut, Illinois, Maine, Massachusetts, New Jersey, New York, and the Virgin Islands.

Assigned protection factors, Airborne contaminants, Health, Occupational safety and health, Respirators, Respirator selection.

VII. Authority and Signature

This document was prepared under the direction of Amanda Laihow, Acting Assistant Secretary of Labor for Occupational Safety and Health. It is issued under the authority of sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657), 5 U.S.C. 553, Secretary of Labor's Order No. 8–2020 (85 FR 58393), and 29 CFR part 1911.

Dated: June 20, 2025.

Amanda Laihow,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

VIII. Regulatory Text

Proposed Amendments

For the reasons set forth in the preamble, OSHA is amending 29 CFR part 1910 as follows:

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Subpart Z—Toxic and Hazardous Substances

■ 1. The authority for 29 CFR 1910 subpart Z is revised to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor's Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008); 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393); 29 CFR part 1911; and 5 U.S.C. 553, as applicable.

All of subpart Z issued under 29 U.S.C. 655(b), except those substances that have exposure limits listed in Tables Z–1, Z–2, and Z–3 of § 1910.1000. The latter were issued under 29 U.S.C. 655(a).

Section 1910.1000, Tables Z–1, Z–2 and Z–3 also issued under 5 U.S.C. 553, but not under 29 CFR part 1911 except for the arsenic (organic compounds), benzene, cotton dust, and chromium (VI) listings.

Section 1910.1001 also issued under 40 U.S.C. 3704 and 5 U.S.C. 553.

Section 1910.1002 also issued under 5 U.S.C. 553, but not under 29 U.S.C. 655 or 29 CFR part 1911.

Sections 1910.1018, 1910.1029, and 1910.1200 also issued under 29 U.S.C. 653.

Section 1910.1030 also issued under Public Law 106–430, 114 Stat. 1901.

Section 1910.1201 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

■ 2. 1910.1003(c)(4)(iv) is revised and republished to read as follows:

Employers must provide each employee engaged in handling

operations involving the carcinogens 4-Nitrophenyl, alpha-Naphthylamine, 3,3'-Dichlorobenzidine (and its salts), beta-Naphthylamine, Benzidine, 4-Aminodiphenyl, 2-Acetylaminofluorene, 4-Dimethylaminoazo-benzene, and N-Nitrosodimethylamine, addressed by this section, with, and ensure that each of these employees wears and uses, a NIOSH-certified respirator for particulates that has an assigned protection factor (APF) of 10. Employers also must provide each employee engaged in handling operations involving the carcinogens methyl chloromethyl ether, bis-Chloromethyl ether, Ethyleneimine, and beta-Propiolactone, addressed by this section, with, and ensure that each of these employees wears and uses a respirator that has an APF of 10,000. Employers may substitute a respirator affording employees higher levels of protection than these respirators.

RIN 1218–AD54

1,2-dibromo-3-chloropropane

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: This proposed rule revises some substance-specific respirator requirements to allow different types of respirators to be used under OSHA's 1,2-Dibromo-3-Chloropropane standard and better aligns this standard with OSHA's Respiratory Protection standard.

DATES: Comments and other information, including requests for a hearing, must be received on or before September 2, 2025.

Informal public hearing: OSHA will schedule an informal public hearing on the rule if requested during the comment period. If a hearing is requested, the location and date of the hearing, procedures for interested parties to notify the agency of their intention to participate, and procedures for participants to submit their testimony and documentary evidence

will be announced in the **Federal Register**.

ADDRESSES: *Written comments:* You may submit comments and attachments, identified by Docket No. OSHA–2025–0019, electronically at <https://www.regulations.gov>, which is the Federal e-Rulemaking Portal. Follow the instructions online for making electronic submissions.

Instructions: All submissions must include the agency's name and the docket number for this rulemaking (Docket No. OSHA–2025–0019). When uploading multiple attachments to [regulations.gov](https://www.regulations.gov), please number all of your attachments because [regulations.gov](https://www.regulations.gov) will not automatically number the attachments. This will be very useful in identifying all attachments. For example, Attachment 1—title of your document, Attachment 2—title of your document, Attachment 3—title of your document. For assistance with commenting and uploading documents, please see the Frequently Asked Questions on <https://www.regulations.gov>.

All comments, including any personal information you provide, are placed in the public docket without change and may be made available online at <https://www.regulations.gov>. Therefore, OSHA cautions commenters about submitting information they do not want made available to the public, or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.

Docket: The docket for this rulemaking (Docket No. OSHA–2025–0019) is available at <https://www.regulations.gov>, the Federal eRulemaking Portal. Most exhibits are available at <https://www.regulations.gov>;

some exhibits (e.g., copyrighted material) are not available to download from that web page. However, all materials in the dockets are available for inspection at the OSHA Docket Office.

I. Executive Summary

This proposed rule is intended to provide greater compliance flexibility and clarify the policies and procedures employers must follow when implementing a respiratory protection program in conjunction with OSHA's 1,2-Dibromo-3-Chloropropane standard (29 CFR 1910.1044). OSHA is proposing to revise some respirator-related provisions where they are unnecessarily prescriptive, which would result in employers having greater flexibility in the respirators they select for exposed workers, while providing equivalent worker protection. This proposal is also consistent with OSHA's intent, when it published the revised Respiratory Protection standard (29 CFR 1910.134), to use it as a foundation for respirator selection in substance-specific standards.

Additionally, OSHA believes that this proposed rule appropriately incorporates advances in technology, which have made some provisions of the 1,2-Dibromo-3-Chloropropane standard outdated, and would allow employers to take advantage of future technological advances. This proposed standard is intended to account for modern knowledge and technology and to streamline the selection of respirators.

II. Legal Authority and Preliminary Findings

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651 *et seq.*) ("the Act" or "the OSH Act") is "to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources" (29 U.S.C. 651(b)). To achieve this goal, Congress authorized the Secretary of Labor ("the Secretary") to promulgate standards to protect workers, including the authority "to set mandatory occupational safety and health

standards applicable to businesses affecting interstate commerce" (29 U.S.C. 651(b)(3); *see also* 29 U.S.C. 654(a)(2) (requiring employers to comply with OSHA standards), 29 U.S.C. 655(a) (authorizing summary adoption of existing consensus and established federal standards within two years of the Act's enactment), 29 U.S.C. 655(b) (authorizing promulgation, modification or revocation of standards pursuant to notice and comment), and 29 U.S.C. 655(b)(7) (authorizing OSHA to include among a standard's requirements labeling, monitoring, medical testing, and other information-transmittal provisions)). An occupational safety and health standard is ". . . a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment" (29 U.S.C. 652(8)). The Secretary may also issue regulations requiring employers to keep records regarding their activities relating to the Act, as well as records of work-related deaths, injuries, and illnesses (29 U.S.C. 657(c)(1)–(2)).

Before OSHA may promulgate a health or safety standard, it must find that a standard is reasonably necessary or appropriate within the meaning of section 652(8) of the OSH Act, which OSHA did here in 1978 when it published the 1,2-Dibromo-3-Chloropropane standard (43 FR 11514). The Supreme Court, in its decision on OSHA's Benzene standard, interpreted OSHA's obligation under section 652(8) as requiring it to evaluate "whether significant risks are present and can be eliminated or lessened by a change in practices" (*Indus. Union Dep't, AFL-CIO v. Am. Petroleum Inst.*, 448 U.S. 607, 642 (1980) (plurality opinion)). OSHA originally published this standard as an emergency temporary standard (ETS) and found that exposure to 1,2-Dibromo-3-Chloropropane posed a grave danger, which is a higher threshold than significant risk (42 FR 45536). When, as here, OSHA has previously determined that its standard substantially reduces a significant risk, it is unnecessary for the agency to make additional findings on risk for every provision of that standard (*see, e.g., Pub. Citizen Health Research Grp. v. Tyson*, 796 F.2d 1479, 1502 n.16 (D.C. Cir. 1986) (rejecting the argument that OSHA must "find that each and every aspect of its standard eliminates a significant risk")). Rather, once OSHA makes a general significant risk finding in support of a standard, the next

question is whether a particular requirement is reasonably related to the purpose of the standard as a whole (*see Asbestos Info. Ass'n/N. Am. v. Reich*, 117 F.3d 891, 894 (5th Cir. 1997); *Forging Indus. Ass'n v. Sec'y of Labor*, 773 F.2d 1436, 1447 (4th Cir. 1985); *United Steelworkers of Am., AFL-CIO-CLC v. Marshall*, 647 F.2d 1189, 1237–38 (D.C. Cir. 1980) ("*Lead I*"). Therefore, while OSHA is not making a preliminary finding of significant risk for this proposed rule, the agency has made a preliminary determination that the proposed changes are reasonably related to the purpose of the 1,2-Dibromo-3-Chloropropane standard as a whole.

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that is reasonably expected to be developed (*see Am. Iron and Steel Inst. v. OSHA*, 939 F.2d 975, 980 (D.C. Cir. 1991)). Courts have also interpreted technological feasibility to mean that a typical firm in each affected industry or application group will reasonably be able to implement the requirements of the standard in most operations most of the time (*see, e.g., Public Citizen v. OSHA*, 557 F.3d 165, 170–71 (3d Cir. 2009) (citing *Lead I* at 1272)).

This proposed rule would not substantially modify existing requirements for respiratory protection in workplaces; nor would it create new requirements. All employers in compliance with the existing standard would also be in compliance with the revised standard. Therefore, OSHA has made a preliminary determination that the proposed rule would be technologically feasible.

In evaluating economic feasibility, OSHA must consider the average cost of compliance in an industry rather than costs for individual employers. In its economic analyses, OSHA "must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms" (*Am. Iron and Steel Inst.*, 939 F.2d at 980, quoting *Lead I* at 1272). OSHA has made a preliminary finding that this proposal is economically feasible because it is deregulatory and is expected to reduce costs for employers. OSHA's economic analysis is presented in Section V.

The Administrative Procedures Act directs agencies to include in each rule adopted "a concise general statement of [the rule's] basis and purpose" (5 U.S.C.

553(c)); *cf.* 29 U.S.C. 655(e) (requiring the Secretary to publish a “statement of reasons” for any standard promulgated)). This notice satisfies this concise statement requirement.

III. Events Leading to the Proposed Rule

OSHA adopted a 1,2-Dibromo-3-chloropropane standard in 1978 (43 FR 11514). OSHA also has a general Respiratory Protection standard, 29 CFR 1910.134, which it first promulgated in 1971 (39 FR 9835). OSHA published a revised Respiratory Protection standard on January 8, 1998 (63 FR 1152). The Respiratory Protection standard contains worksite-specific requirements for program administration, as well as procedures for respirator selection, employee training, fit testing, medical evaluation, and respirator use, among other provisions. OSHA noted that the revised standard was to “serve as a ‘building block’ standard with respect to future standards that may contain respiratory protection requirements” (63 FR 1265). In 2006, OSHA revised the Respiratory Protection standard again to incorporate assigned protection factors (APFs) in the respirator selection process (71 FR 50122–01).

Several OSHA standards regulating exposure to toxic substances and harmful physical agents, including the 1,2-Dibromo-3-Chloropropane standard, require compliance with many provisions of 29 CFR 1910.134. However, when revising the respirator rule, the Agency decided to retain several special respirator selection provisions in the existing substance-specific standards. In this regard, OSHA noted that the respirator selection requirements retained in the substance-specific standards were developed in rulemakings to provide protection against a hazardous characteristic or condition unique to the regulated substance. Consequently, OSHA felt that preserving these provisions in the individual substance-specific standards would maintain the level of respiratory protection afforded to employees.

In this proposal, OSHA is revisiting some of those determinations; the agency now believes that there are additional ways that substance-specific standards can rely on 29 CFR 1910.134 without compromising employee safety. The purpose of revising the respirator-related provisions of OSHA’s 1,2-Dibromo-3-Chloropropane standard is to conform them, to the extent possible, with other substance-specific standards and to the revised 29 CFR 1910.134 in general. The proposed updates will improve the 1,2-Dibromo-3-Chloropropane standard because it will

now refer to the APFs in the Respiratory Protection standard, which is based on current technology and practices for respirator use. This revised standard is intended to take account of new knowledge and technology.

1,2-Dibromo-3-chloropropane is no longer commercially manufactured in the United States and was not reported to be produced for sale by any manufacturing plant worldwide in 2009. Nevertheless, 13 suppliers were identified in the U.S. in 2009. Since 1985, after the U.S. Environmental Protection Agency suspended registrations for uses of fumigant products containing the compound, 1,2-dibromo-3-chloropropane has been used in the United States only for research purposes and as an intermediate in organic synthesis, such as in the synthesis of a fire retardant called tris(2,3-dibromopropyl) phosphate. In 2009, no commercial manufacturers of tris(2,3-dibromopropyl) phosphate were identified, but it was available from six U.S. suppliers (*see* <https://www.ncbi.nlm.nih.gov/books/NBK590804/> for more details). Based on these facts, it is likely that usage of 1,2-Dibromo-3-chloropropane in the U.S. as well as the number of employees exposed to the chemical have declined drastically since the promulgation of the 1,2-Dibromo-3-chloropropane standard in 1978.

OSHA expects that the rule would ultimately reduce the compliance burden on the regulated community, without compromising worker safety. Therefore, OSHA believes this proposed rule is consistent with Executive Order (E.O.) 14219, “Ensuring Lawful Governance and Implementing the President’s ‘Department of Government Efficiency’ Deregulatory Initiative,” E.O. 14192, “Unleashing Prosperity Through Deregulation,” and the goal of removing regulations that harm the national interest by impeding technological innovation or private enterprise and entrepreneurship.

IV. Summary and Explanation of the Proposed Requirements

OSHA is proposing to revise paragraphs (h) and (n) of its general industry 1,2-dibromo-3-chloropropane standard (29 CFR 1910.1044) to reduce compliance burdens, allow for the use of more up-to-date technology, and improve the comprehensibility of the requirements for respiratory protection programs. These revisions would improve comprehensibility and simplify compliance for employers by removing requirements in 1910.1044 that are duplicative with the requirements in 1910.134. The revisions would also remove unnecessary restrictions on

respirator selection where another equally protective option exists. Finally, these revisions would conform this standard, to the extent possible, to other substance-specific standards and to 29 CFR 1910.134. The Agency preliminarily concludes, therefore, that updating this rule is consistent with the goals of reducing undue burden and facilitating the use of new technologies.

OSHA has preliminarily determined that paragraphs (h)(1)(i) through (iv) of the 1,2-dibromo-3-chloropropane standard unnecessarily duplicate the general provisions covered by 1910.134(a) and is proposing to remove those paragraphs and add a cross reference to 1910.134(a)(2) in paragraph (h)(1).

OSHA is also proposing changes to paragraph (h)(3)(ii)(A) of the 1,2-Dibromo-3-chloropropane standard. That paragraph currently requires employers to provide a combination respirator that includes a supplied-air respirator with a full facepiece operated in a pressure-demand or other positive-pressure or continuous-flow mode as well as an auxiliary self-contained breathing apparatus (SCBA) operated in a pressure-demand or positive-pressure mode. OSHA is proposing to replace that with a requirement to provide a combination respirator with a minimum APF of 1,000 that includes an auxiliary self-contained breathing apparatus (SCBA) operated in a pressure-demand or positive-pressure mode. Making this change would allow employers to choose respirators based on the APF factors from 1910.134 and would provide employers with more options.

Finally, OSHA has preliminarily determined that paragraph (n)(1)(ii)(c), which requires training on “The purpose, proper use, and limitations of respirators,” unnecessarily duplicates the general training provisions covered by 1910.134(k). OSHA is therefore proposing to remove and reserve this paragraph.

OSHA is also requesting comment on whether to remove 29 CFR 1910.1044 in its entirety. If OSHA did this, it would instead require any employers with exposed employees to comply with the more general standards contained in 29 CFR part 1910, including 1910 Subpart I on Personal Protective Equipment, which contains requirements for respiratory protection, and Subpart Z on Toxic and Hazardous Substances. As discussed previously, it is likely that only small amounts of 1,2-Dibromo-3-chloropropane are used in the U.S. and that the number of exposed workers is small.

OSHA recognizes that adopting these revisions will also result in the revision

of the respiratory protection requirements in OSHA's shipyard employment, marine terminals, longshoring, and construction industry standards for 1,2-dibromo-3-chloropropane (*see* 29 CFR 1926.1144, 29 CFR 1917.1, 29 CFR 1918.1, and 29 CFR 1915.1044, which apply the requirements in 1910.1044 to construction, longshoring, marine terminals, and shipyards.). OSHA requests comment regarding whether there are any considerations that are unique to the use of respirators for protection against 1,2-dibromo-3-chloropropane hazards in shipyards, marine terminals, longshoring, or construction that OSHA should consider when finalizing this proposal. OSHA is in the process of appointing members to the Advisory Committee on Construction Safety and Health (ACCSH). The agency intends to present this proposed rule to ACCSH once that process is complete. The agency will put the Committee's recommendations on the OSHA website and in the docket for this proposed rule prior to the close of the comment period to allow the public to provide comments on those recommendations.

OSHA requests comments on the following questions:

1. Are there any concerns that making the changes described in this proposal will decrease worker safety?
2. Are there alternative approaches OSHA should consider to the proposed revisions?
3. Should OSHA remove the 1,2-Dibromo-3-Chloropropane standard? Would following the standards under 29 CFR part 1910 (*e.g.*, 29 CFR part 1910, subparts I and Z) sufficiently protect workers?

V. Economic Analysis

This proposed rule would remove redundant training requirements and expand compliance options for employers under the 1,2-Dibromo-3-Chloropropane standard, 29 CFR 1910.1044. The changes to the requirements for 1,2-dibromo-3-chloropropane would expand compliance options for employers by allowing them to provide respirators with a helmet or hood rather than mandating full facepiece respirators. Because the proposal would simply provide more options, OSHA has preliminarily concluded that there would be no additional costs imposed by the proposed revisions. Therefore, OSHA has made a preliminary determination that the rule would be economically feasible.

As discussed in Section III. Events Leading to the Proposed Rule, it is likely

that only small amounts of 1,2-Dibromo-3-chloropropane are currently used for chemical synthesis and research purposes. 1,2-Dibromo-3-chloropropane is no longer commercially produced in the U.S., according to the National Institutes of Health.¹ Therefore, the regulated community, and number of exposed workers, is likely small. While this proposal would allow employees to switch from a full facepiece respirator to a hooded continuous flow respirator, which would eliminate the need for fit testing and reduce costs, OSHA estimates no cost savings from this proposal due to a lack of information on the extent to which employees are still exposed to 1,2-Dibromo-3-chloropropane. OSHA welcomes data identifying any current uses of 1,2-dibromo-3-chloropropane in this country as well as information on the number of exposed employees and respirator usage for exposed employees.

To the extent 1,2-Dibromo-3-chloropropane is used, OSHA seeks comments and data in response to the following questions:

1. How much do employers expect to save based on the increased flexibility in respirator selection?
2. How many employees would employers expect to use helmet or hooded style respirators instead of a full facepiece under the proposed revisions?
3. Are there any other savings for employers that would result from the proposed change?
4. Are there any benefits for worker protection that can be anticipated from this proposed change?
5. Are there any costs for employers that would result from this change that OSHA has not considered?
6. Are there additional categories of cost savings that OSHA has not identified?
7. Is 1,2-Dibromo-3-chloropropane used outside of general industry? If so, for what purpose?

A. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

OSHA reviewed this proposed rule under the provisions of the Regulatory Flexibility Act. This rule would

eliminate burdensome regulations. Therefore, OSHA initially concludes that the impacts of the revisions would not have a "significant economic impact on a substantial number of small entities," and that the preparation of an IRFA is not warranted. OSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

B. Review Under Executive Order 12866

E.O. 12866, "Regulatory Planning and Review" (58 FR 51735 (Oct. 4, 1993)), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit "significant regulatory actions" to the Office of Information and Regulatory Affairs (OIRA) for review. OIRA has determined that this proposed rule would not constitute a "significant regulatory action" under section 3(f) of E.O. 12866. Accordingly, this proposal was not submitted to OIRA for review under E.O. 12866.

VI. Additional Requirements

A. Requirements for States With OSHA-Approved State Plans

Under section 18 of the OSH Act (29 U.S.C. 651 *et seq.*), Congress expressly provides that States may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards that are "at least as effective" as the Federal standards in providing safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved,

¹ See <https://www.ncbi.nlm.nih.gov/books/NBK590804/> for details.

State-administered occupational safety and health programs as “State Plans.”²

When Federal OSHA promulgates a new standard or a more stringent amendment to an existing standard, State Plans must either amend their standards to be identical to, or “at least as effective as,” the new Federal standard or amendment, or show that an existing State Plan standard covering this issue is “at least as effective” as the new Federal standard or amendment (29 CFR 1953.5(a)). However, when OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plans do not have to amend their standards, although they may opt to do so. OSHA has preliminarily determined this proposed rule does not impose additional or more stringent requirements than the existing standard, and therefore State Plans are not required to amend their standards. OSHA seeks comment on this assessment of its proposal.

B. OMB Review Under the Paperwork Reduction Act of 1995

The Paperwork Reduction Act (PRA) defines “collection of information” to mean “the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public, of facts or opinions by or for an agency, regardless of form or format” (44 U.S.C. 3502(3)(A)). Under the PRA, a Federal agency cannot conduct or sponsor a collection of information unless it is approved by OMB under the PRA and the agency displays a currently valid OMB control number (44 U.S.C. 3507). Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512(a)(1)). The process for OMB approval is found in 5 CFR part 1320.

This proposed rule would impose no new information collection requirements. Because the revisions are deregulatory and affect only minor changes to the existing information collections in the 1,2-Dibromo-3-

Chloropropane standard (OMB Control Number 1218–0101), OMB has waived the requirements of 5 CFR part 1320 and approved the modified Information Collection Request (ICR) under existing OMB Control Number 1218–0101 (*see* 5 CFR 1320.18(d)).

C. Environmental Impacts/National Environmental Policy Act (NEPA)

OSHA has reviewed this proposed rule according to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), as amended by the Fiscal Responsibility Act of 2023 (Pub. L. 118–5, 321, 137 Stat. 10), and the Department of Labor’s NEPA procedures (29 CFR part 11). OSHA has determined that this proposal would have no impact on the quality of the human environment.

D. Other Statutory and Executive Order Considerations

OSHA has considered its obligations under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*) and the Executive Orders on Consultation and Coordination With Indian Tribal Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), Federalism (E.O. 13132, 64 FR 43255 (Aug. 10, 1999)), and Protection of Children From Environmental Health Risks and Safety Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a proposed deregulatory action that involves the removal of requirements, that OSHA does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these statutes and executive orders. Furthermore, OSHA has determined that this proposal is consistent with the policies and directives outlined in E.O. 14192, “Unleashing Prosperity Through Deregulation” and is an Executive Order 14192 deregulatory action.

List of Subjects in 29 CFR Part 1910

Assigned protection factors, Airborne contaminants, Health, Occupational safety and health, Respirators, Respirator selection.

VII. Authority and Signature

This document was prepared under the direction of Amanda Laihow, Acting Assistant Secretary of Labor for Occupational Safety and Health. It is issued under the authority of sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657), 5 U.S.C. 553, Secretary of

Labor’s Order No. 8–2020 (85 FR 58393), and 29 CFR part 1911.

Dated: June 20, 2025

Amanda Laihow,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

VIII. Regulatory Text

Proposed Amendments

For the reasons set forth in the preamble, OSHA is amending 29 CFR part 1910 as follows:

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Subpart Z—Toxic and Hazardous Substances

■ 1. The authority for 29 CFR 1910 subpart Z is revised to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor’s Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008); 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393); 29 CFR part 1911; and 5 U.S.C. 553, as applicable.

All of subpart Z issued under 29 U.S.C. 655(b), except those substances that have exposure limits listed in Tables Z–1, Z–2, and Z–3 of § 1910.1000. The latter were issued under 29 U.S.C. 655(a).

Section 1910.1000, Tables Z–1, Z–2, and Z–3 also issued under 5 U.S.C. 553, but not under 29 CFR part 1911 except for the arsenic (organic compounds), benzene, cotton dust, and chromium (VI) listings.

Section 1910.1001 also issued under 40 U.S.C. 3704 and 5 U.S.C. 553.

Section 1910.1002 also issued under 5 U.S.C. 553, but not under 29 U.S.C. 655 or 29 CFR part 1911.

Sections 1910.1018, 1910.1029, and 1910.1200 also issued under 29 U.S.C. 653.

Section 1910.1030 also issued under Public Law 106–430, 114 Stat. 1901.

Section 1910.1201 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

■ 2. § 1910.1044 is revised as follows:

■ a. Revise paragraph (h)(1);

■ b. Remove paragraphs (h)(1)(i) through (iv);

■ c. Revise paragraph (h)(3)(ii)(A); and

■ d. Remove and reserve paragraph (n)(1)(ii)(c).

The revisions and additions read as follows:

(h) * * *

(1) *General.* For employees who are required to use respirators by this section, the employer must provide each employee an appropriate respirator that complies with the requirements of this paragraph. Respirators must be used when the employer determines that they are necessary to protect the health of an employee as required under 29 CFR 1910.134(a)(2).

² Of the 29 States and U.S. territories with OSHA-approved State Plans, 22 cover public and private-sector employees: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. The remaining six States and one U.S. territory cover only State and local government employees: Connecticut, Illinois, Maine, Massachusetts, New Jersey, New York, and the Virgin Islands.

- (2) * * *
- (3) * * *
- (i) * * *
- (ii) * * *

(A) A combination respirator that has a minimum APF of 1,000 that includes an auxiliary self-contained breathing apparatus (SCBA) operated in a pressure-demand or positive-pressure mode.

[Docket No. OSHA–2025–0023]

RIN 1218–AD59

Benzene

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: This proposed rule would revise some substance-specific respirator requirements to allow different types of respirators to be used under OSHA's Benzene standard and would better align this standard with OSHA's Respiratory Protection standard.

DATES: Comments and other information, including requests for a hearing, must be received on or before September 2, 2025.

Informal public hearing: OSHA will schedule an informal public hearing on the rule if requested during the comment period. If a hearing is requested, the location and date of the hearing, procedures for interested parties to notify the agency of their intention to participate, and procedures for participants to submit their testimony and documentary evidence will be announced in the **Federal Register**.

ADDRESSES:

Written comments: You may submit comments and attachments, identified by Docket No. OSHA–2025–0023, electronically at <https://www.regulations.gov>, which is the

Federal e-Rulemaking Portal. Follow the instructions online for making electronic submissions.

Instructions: All submissions must include the agency's name and the docket number for this rulemaking (Docket No. OSHA–2025–0023). When uploading multiple attachments to <https://www.regulations.gov>, please number all of your attachments because [regulations.gov](https://www.regulations.gov) will not automatically number the attachments. This will be very useful in identifying all attachments. For example, Attachment 1—title of your document, Attachment 2—title of your document, Attachment 3—title of your document. For assistance with commenting and uploading documents, please see the Frequently Asked Questions on [regulations.gov](https://www.regulations.gov).

All comments, including any personal information you provide, are placed in the public docket without change and may be made available online at <https://www.regulations.gov>. Therefore, OSHA cautions commenters about submitting information they do not want made available to the public, or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.

Docket: The docket for this rulemaking (Docket No. OSHA–2025–0023) is available at <https://www.regulations.gov>, the Federal eRulemaking Portal. Most exhibits are available at <https://www.regulations.gov>; some exhibits (e.g., copyrighted material) are not available to download from that web page. However, all materials in the dockets are available for inspection at the OSHA Docket Office.

I. Executive Summary

This proposed rule is intended to provide greater compliance flexibility and clarify the policies and procedures employers must follow when implementing a respiratory protection program in conjunction with OSHA's Benzene standard (29 CFR 1910.1028). OSHA is proposing to revise some respirator-related provisions where they are unnecessarily prescriptive, which would result in employers having greater flexibility in the respirators they select for exposed workers, while providing equivalent worker protection. This proposal is also consistent with OSHA's intent, when it published the revised Respiratory Protection standard (29 CFR 1910.134), to use it as a foundation for respirator selection in substance-specific standards.

Additionally, OSHA believes that this proposed rule appropriately incorporates advances in technology, which have made some provisions of the Benzene standard outdated, and would allow employers to take advantage of future technological advances. This proposed standard is intended to account for modern knowledge and technology and to streamline the selection of respirators.

II. Legal Authority and Preliminary Findings

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651 *et seq.*) (“the Act” or “the OSH Act”) is “to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources” (29 U.S.C. 651(b)). To achieve this goal, Congress authorized the Secretary of Labor (“the Secretary”) to promulgate standards to protect workers, including the authority “to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce” (29 U.S.C. 651(b)(3); *see also* 29 U.S.C. 654(a)(2) (requiring employers to comply with OSHA standards), 29 U.S.C. 655(a) (authorizing summary adoption of existing consensus and established federal standards within two years of the Act's enactment), 29 U.S.C. 655(b) (authorizing promulgation,

modification or revocation of standards pursuant to notice and comment), and 29 U.S.C. 655(b)(7) (authorizing OSHA to include among a standard's requirements labeling, monitoring, medical testing, and other information-transmittal provisions)). An occupational safety and health standard is “. . . a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment” (29 U.S.C. 652(8)). The Secretary may also issue regulations requiring employers to keep records regarding their activities relating to the Act, as well as records of work-related deaths, injuries, and illnesses (29 U.S.C. 657(c)(1)–(2)).

Before OSHA may promulgate a health or safety standard, it must find that a standard is reasonably necessary or appropriate within the meaning of section 652(8) of the OSH Act, which OSHA did here in 1987 when it published a final rule updating the Benzene standard (52 FR 34460). The Supreme Court, in its decision on an earlier version (1978) of OSHA's Benzene standard, interpreted OSHA's obligation under section 652(8) as requiring it to evaluate “whether significant risks are present and can be eliminated or lessened by a change in practices” (*Indus. Union Dep't, AFL-CIO v. Am. Petroleum Inst.*, 448 U.S. 607, 642 (1980) (plurality opinion)). In the 1987 final rule, OSHA concluded workers were facing a significant risk of adverse health effects (52 FR 34460). When, as here, OSHA has previously determined that its standard substantially reduces a significant risk, it is unnecessary for the agency to make additional findings on risk for every provision of that standard (*see, e.g., Pub. Citizen Health Research Grp. v. Tyson*, 796 F.2d 1479, 1502 n.16 (D.C. Cir. 1986) (rejecting the argument that OSHA must “find that each and every aspect of its standard eliminates a significant risk”)). Rather, once OSHA makes a general significant risk finding in support of a standard, the next question is whether a particular requirement is reasonably related to the purpose of the standard as a whole (*see Asbestos Info. Ass'n v. N. Am. v. Reich*, 117 F.3d 891, 894 (5th Cir. 1997); *Forging Indus. Ass'n v. Sec'y of Labor*, 773 F.2d 1436, 1447 (4th Cir. 1985); *United Steelworkers of Am., AFL-CIO-CLC v. Marshall*, 647 F.2d 1189, 1237–38 (D.C. Cir. 1980) (“*Lead I*”). Therefore, while OSHA is not making a preliminary finding of significant risk

for this proposed rule, the agency has made a preliminary determination that the proposed changes are reasonably related to the purpose of the Benzene standard as a whole.

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that is reasonably expected to be developed (*see Am. Iron and Steel Inst. v. OSHA*, 939 F.2d 975, 980 (D.C. Cir. 1991)). Courts have also interpreted technological feasibility to mean that a typical firm in each affected industry or application group will reasonably be able to implement the requirements of the standard in most operations most of the time (*see, e.g., Public Citizen v. OSHA*, 557 F.3d 165, 170–71 (3d Cir. 2009) (citing *Lead I* at 1272)).

This proposed rule would not substantially modify existing requirements for respiratory protection in workplaces; nor would it create new requirements. All employers in compliance with the existing standard would also be in compliance with the revised standard. Therefore, OSHA has made a preliminary determination that the proposed rule would be technologically feasible.

In evaluating economic feasibility, OSHA must consider the average cost of compliance in an industry rather than costs for individual employers. In its economic analyses, OSHA “must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms” (*Am. Iron and Steel Inst.*, 939 F.2d at 980, quoting *Lead I* at 1272). OSHA has made a preliminary finding that this proposal is economically feasible because it is deregulatory and is expected to reduce costs for employers. OSHA's economic analysis is presented in Section V.

The Administrative Procedures Act directs agencies to include in each rule adopted “a concise general statement of [the rule's] basis and purpose” (5 U.S.C. 553(c)); *cf.* 29 U.S.C. 655(e) (requiring the Secretary to publish a “statement of reasons” for any standard promulgated)). This notice satisfies this concise statement requirement.

III. Events Leading to the Proposed Rule

OSHA adopted the current Benzene standard in 1987 (52 FR 34460). OSHA also has a general Respiratory Protection standard, 29 CFR 1910.134, which it first promulgated in 1971 (39 FR 9835).

OSHA published a revised Respiratory Protection standard on January 8, 1998 (63 FR 1152). The Respiratory Protection standard contains worksite-specific requirements for program administration, as well as procedures for respirator selection, employee training, fit testing, medical evaluation, and respirator use, among other provisions. OSHA noted that the revised standard was to “serve as a ‘building block’ standard with respect to future standards that may contain respiratory protection requirements” (63 FR 1265). In 2006, OSHA revised the Respiratory Protection standard again to incorporate assigned protection factors (APFs) in the respirator selection process (71 FR 50122–01).

Several OSHA standards regulating exposure to toxic substances and harmful physical agents, including the Benzene standard, require compliance with many provisions of 29 CFR 1910.134. However, when revising the respirator rule, the Agency decided to retain several special respirator selection provisions in the existing substance-specific standards. In this regard, OSHA noted that the respirator selection requirements retained in the substance-specific standards were developed in rulemakings to provide protection against a hazardous characteristic or condition unique to the regulated substance. Consequently, OSHA felt that preserving these provisions in the individual substance-specific standards would maintain the level of respiratory protection afforded to employees.

In this proposal, OSHA is revisiting some of those determinations; the agency now believes that there are additional ways that substance-specific standards can rely on 29 CFR 1910.134 without compromising employee safety. The purpose of revising the respirator-related provisions of OSHA's Benzene standard is to conform them, to the extent possible, with other substance-specific standards and to the revised 29 CFR 1910.134 in general. The proposed updates would improve the Benzene standard because they facilitate the use of new technology and better align with the Respiratory Protection standard, which is based on current technology and practices for respirator use. OSHA also believes that advances in technology have made the Benzene standard outdated in some areas. This revised standard is intended to take account of new knowledge and technology.

OSHA expects that the rule would ultimately reduce the compliance burden on the regulated community, without compromising worker safety.

Therefore, OSHA believes this proposed rule is consistent with Executive Order (E.O.) 14219, "Ensuring Lawful Governance and Implementing the President's 'Department of Government Efficiency' Deregulatory Initiative," E.O. 14192, "Unleashing Prosperity Through Deregulation," and the goal of removing regulations that harm the national interest by impeding technological innovation or private enterprise and entrepreneurship.

IV. Summary and Explanation of the Proposed Requirements

OSHA is proposing to revise paragraph (g) of its general industry Benzene standard (29 CFR 1910.1028) to reduce compliance burdens, allow for the use of more up-to-date technology, and improve the comprehensibility of the requirements for respiratory protection programs. These revisions would improve comprehensibility and simplify compliance for employers by removing requirements in 1910.1028 that are duplicative of the requirements in 1910.134. The revisions would also provide more compliance options by removing unnecessary restrictions on respirator selection where another equally protective option exists. Finally, these revisions conform these standards, to the extent possible, to other substance-specific standards and to 29 CFR 1910.134. The Agency preliminarily concludes, therefore, that updating these rules is consistent with the goals of reducing undue burden and facilitating the use of new technology.

OSHA preliminarily determined that paragraphs (g)(1)(i) through (iv) of the Benzene standard, which specify when respirators must be used, unnecessarily duplicate the general provisions covered by 1910.134(a). Therefore, the agency is proposing to remove those paragraphs and add a cross reference to 1910.134(a)(2) in paragraph (g)(1). OSHA does not intend for these changes to add to or change the regulatory burden on employers; actions that comply with the requirements in 1910.1028(g) would also be in compliance with proposed paragraph (g).

Additionally, OSHA is proposing to remove paragraph (g)(3)(i)(C) of the Benzene standard, which specifies what type of respirator cartridge or canister must be used with particular types of respirators. OSHA preliminarily determined that these respirator-selection provisions duplicate the general provisions covered by 1910.134(d) of the Respiratory Protection standard and are unnecessarily restrictive by limiting employers who use full facepiece gas

masks to chin-style canisters only. Removing these provisions would allow employers to select from a wider range of respirators that provide equivalent worker protection.

OSHA is also considering (but not proposing) removing the requirements for replacement schedules of air-purifying elements in air-purifying respirators in the Benzene standard. Paragraphs (g)(2)(ii) and (iii) of the Benzene standard require the use of an end-of-service-life indicator or replacement of the air-purifying element at the expiration of its service life or at the beginning of each shift, whichever comes first. These provisions are similar to provisions contained in the Respiratory Protection standard at 1910.134(d)(3)(iii)(B), which requires that an air-purifying respirator be equipped with an end-of-service-life indicator (ESLI) certified by NIOSH for the contaminant or, if there is no ESLI appropriate for the working conditions, the employer must implement a change schedule for canisters and cartridges based on objective information or data that would ensure canisters and cartridges would be changed before the end of their service life. The employer would also need to include the basis for their determination in their respirator program. Essentially, if OSHA made this change it would result in a performance-based approach to cartridge and canister changes, rather than the prescriptive approach currently contained in the Benzene standard. OSHA believes that this change could improve consistency with other substance-specific standards without reducing employee safety and health, but is specifically requesting comment on this issue.

OSHA recognizes that adopting these revisions will also result in the revision of the respiratory protection requirements in OSHA's construction industry, shipyard employment industry, marine terminals, and longshoring standards for benzene (see 29 CFR 1926.1128, 29 CFR 1917.1, 29 CFR 1918.1, and 29 CFR 1915.1028, which apply the requirements in 1910.1028 to construction, marine terminals, longshoring, and shipyards). OSHA requests comment regarding whether there are any considerations that are unique to the use of respirators for protection against benzene hazards in shipyards, marine terminals, construction, or longshoring that OSHA should consider when finalizing this proposal. OSHA is in the process of appointing members to the Advisory Committee on Construction Safety and Health (ACCSH). The agency intends to present this proposed rule to ACCSH once that process is complete. The

agency will put the Committee's recommendations on the OSHA website and in the docket for this proposed rule prior to the close of the comment period to allow the public to provide comments on those recommendations.

OSHA requests comments on this proposal, including responses regarding the following issues:

1. Are there any concerns that making the changes described in this proposal will decrease worker safety? If so, which provisions and why?

2. What equally protective respirator options will be available to employers based on the proposed revisions?

2. Are there alternative approaches OSHA should consider for any of these revisions?

3. Are there any concerns that removing any of the substance-specific provisions in the Benzene standard and relying on the generic requirements of the Respiratory Protection standard will inadequately capture the content and requirements of the current substance-specific provisions?

4. Should OSHA remove the requirements contained in the Benzene standard at (g)(2)(ii) and (g)(2)(iii) and require employers to instead comply with 1910.134(d)(3)(iii)(B)(1) and (2), specifically the provisions for ESLIs or the performance-based criteria for cartridge and canister changes? Would following the performance-based approach in 1910.134 sufficiently protect workers and would it provide significant cost savings or other benefits?

V. Economic Analysis

This proposed rule would eliminate redundant requirements for employers under the Benzene standard, 29 CFR 1910.1028, and therefore OSHA has preliminarily concluded that there will be no additional costs imposed by this proposed revision. OSHA also anticipates that there would be some cost savings associated with this rule, including savings based on a reduction of the burdens associated with reviewing unnecessarily duplicative regulations. Because this rule would impose no new costs, OSHA has made a preliminary determination that the rule would be economically feasible.

Based on the Supporting Statement for the Information Collection Request for the Benzene standard, OSHA estimates that there are 12,270 establishments affected by this standard.¹ This proposed rule would, among other things, simplify the regulatory text and may reduce the time

¹ See Document ID OSHA-2012-0005-0014 for additional detail.

necessary for employers to become familiar with the requirements for respirator use for employees exposed to benzene. Assuming a new entrant rate of 10 percent annually and 10 minutes less time spent on regulatory familiarization, at a loaded wage rate for a manager of \$48.98, this could mean about \$10,000 in saving annually (or about \$74,000 over 10 years at a 3 percent discount rate). OSHA is seeking comments and data on this preliminary analysis, including on the following questions:

1. How many employers were likely to have been impacted by the redundant provisions between the Respiratory Protection standard and the Benzene standard?
2. Are there any other savings for employers that would result from the proposed change?
3. Are there any benefits for worker protection that can be anticipated from this proposed change?
4. Are there any costs for employers that would result from this change that OSHA has not considered?
5. Would there be savings to employers outside of general industry related to this proposal? If so, would they be similar to what OSHA has estimated for general industry employers?

A. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

OSHA reviewed this proposed rule under the provisions of the Regulatory Flexibility Act. This rule would eliminate burdensome regulations. Therefore, OSHA initially concludes that the impacts of the revisions would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. OSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

B. Review Under Executive Order 12866

E.O. 12866, “Regulatory Planning and Review” (58 FR 51735 (Oct. 4, 1993)), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its

costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) for review. OIRA has determined that this proposed rule would not constitute a “significant regulatory action” under section 3(f) of E.O. 12866. Accordingly, this proposal was not submitted to OIRA for review under E.O. 12866.

VI. Additional Requirements

A. Requirements for States With OSHA-Approved State Plans

Under section 18 of the OSH Act (29 U.S.C. 651 *et seq.*), Congress expressly provides that States may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards that are “at least as effective” as the Federal standards in providing safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved, State-administered occupational safety and health programs as “State Plans.”²

When Federal OSHA promulgates a new standard or a more stringent amendment to an existing standard, State Plans must either amend their standards to be identical to, or “at least as effective as,” the new Federal standard or amendment, or show that an existing State Plan standard covering

this issue is “at least as effective” as the new Federal standard or amendment (29 CFR 1953.5(a)). However, when OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plans do not have to amend their standards, although they may opt to do so. OSHA has preliminarily determined this proposed rule does not impose additional or more stringent requirements than the existing standard, and therefore State Plans are not required to amend their standards. OSHA seeks comment on this assessment of its proposal.

B. OMB Review Under the Paperwork Reduction Act of 1995

The Paperwork Reduction Act (PRA) defines “collection of information” to mean “the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public, of facts or opinions by or for an agency, regardless of form or format” (44 U.S.C. 3502(3)(A)). Under the PRA, a Federal agency cannot conduct or sponsor a collection of information unless it is approved by OMB under the PRA and the agency displays a currently valid OMB control number (44 U.S.C. 3507). Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512(a)(1)). The process for OMB approval is found in 5 CFR part 1320.

This proposed rule would impose no new information collection requirements. Because the revisions are deregulatory and affect only minor changes to the existing information collections in the Benzene standards (OMB Control Number 1218–0129), OMB has waived the requirements of 5 CFR part 1320 and approved the modified Information Collection Request (ICR) under existing OMB Control Number 1218–0129 (*see* 5 CFR 1320.18(d)).

C. Environmental Impacts/National Environmental Policy Act (NEPA)

OSHA has reviewed this proposed rule according to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), as amended by the Fiscal Responsibility Act of 2023 (Pub. L. 118–5, 321, 137 Stat. 10), and the Department of Labor’s NEPA procedures (29 CFR part 11). OSHA has determined that this proposal would have no impact on the quality of the human environment.

² Of the 29 States and U.S. territories with OSHA-approved State Plans, 22 cover public and private-sector employees: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. The remaining six States and one U.S. territory cover only State and local government employees: Connecticut, Illinois, Maine, Massachusetts, New Jersey, New York, and the Virgin Islands.

D. Other Statutory and Executive Order Considerations

OSHA has considered its obligations under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*) and the Executive Orders on Consultation and Coordination With Indian Tribal Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), Federalism (E.O. 13132, 64 FR 43255 (Aug. 10, 1999)), and Protection of Children From Environmental Health Risks and Safety Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a proposed deregulatory action that involves the removal of requirements, that OSHA does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these statutes and executive orders. Furthermore, OSHA has determined that this proposal is consistent with the policies and directives outlined in E.O. 14192, “Unleashing Prosperity Through Deregulation” and is an Executive Order 14192 deregulatory action.

List of Subjects in 29 CFR Part 1910

Assigned protection factors, Airborne contaminants, Health, Occupational safety and health, Respirators, Respirator selection.

VII. Authority and Signature

This document was prepared under the direction of Amanda Laihow, Acting Assistant Secretary of Labor for Occupational Safety and Health. It is issued under the authority of sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657), 5 U.S.C. 553, Secretary of Labor’s Order No. 8–2020 (85 FR 58393), and 29 CFR part 1911.

Dated: June 20, 2025.

Amanda Laihow,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

VIII. Regulatory Text

Proposed Amendments

For the reasons set forth in the preamble, OSHA is amending 29 CFR part 1910 as follows:

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Subpart Z—Toxic and Hazardous Substances

■ 1. The authority for 29 CFR 1910 subpart Z is revised to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor’s Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008); 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393); 29 CFR part 1911; and 5 U.S.C. 553, as applicable.

All of subpart Z issued under 29 U.S.C. 655(b), except those substances that have exposure limits listed in Tables Z–1, Z–2, and Z–3 of § 1910.1000. The latter were issued under 29 U.S.C. 655(a).

Section 1910.1000, Tables Z–1, Z–2 and Z–3 also issued under 5 U.S.C. 553, but not under 29 CFR part 1911 except for the arsenic (organic compounds), benzene, cotton dust, and chromium (VI) listings.

Section 1910.1001 also issued under 40 U.S.C. 3704 and 5 U.S.C. 553.

Section 1910.1002 also issued under 5 U.S.C. 553, but not under 29 U.S.C. 655 or 29 CFR part 1911.

Sections 1910.1018, 1910.1029, and 1910.1200 also issued under 29 U.S.C. 653.

Section 1910.1030 also issued under Public Law 106–430, 114 Stat. 1901.

Section 1910.1201 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

■ 2. § 1910.1028 is revised as follows:

■ a. Revise and republish paragraph (g)(1);

■ b. Remove paragraphs (g)(1)(i) through (iv);

■ c. Remove and reserve paragraph (g)(3)(i)(C).

The revisions and additions read as follows:

(g) * * *

(1) General. For employees who use respirators required by this section, the employer must provide each employee an appropriate respirator that complies with the requirements of this paragraph. Respirators must be used when the employer determines that they are necessary to protect the health of an employee as required under 29 CFR 1910.134(a)(2).

* * * * *

(3) * * *

(i) * * *

(A) * * *

(B) * * *

(C) [Reserved]

[Docket No. OSHA–2025–0025]

RIN 1218–AD68

Methylenedianiline

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: This proposed rule revises some substance-specific respirator requirements to allow different types of respirators to be used under OSHA’s Methylenedianiline standards and better aligns these standards with OSHA’s Respiratory Protection standard.

DATES: Comments and other information, including requests for a hearing, must be received on or before September 2, 2025.

Informal public hearing: OSHA will schedule an informal public hearing on the rule if requested during the comment period. If a hearing is requested, the location and date of the hearing, procedures for interested parties to notify the agency of their intention to participate, and procedures for participants to submit their testimony and documentary evidence will be announced in the **Federal Register**.

ADDRESSES:

Written comments: You may submit comments and attachments, identified by Docket No. OSHA–2025–0025, electronically at <https://www.regulations.gov>, which is the Federal e-Rulemaking Portal. Follow the instructions online for making electronic submissions.

Instructions: All submissions must include the agency’s name and the docket number for this rulemaking (Docket No. OSHA–2025–0025). When uploading multiple attachments to <https://www.regulations.gov>, please number all of your attachments because <https://www.regulations.gov> will not automatically number the attachments. This will be very useful in identifying all attachments. For example, Attachment 1—title of your document, Attachment 2—title of your document, Attachment 3—title of your document. For assistance with commenting and uploading documents, please see the Frequently Asked Questions on <https://www.regulations.gov>.

All comments, including any personal information you provide, are placed in the public docket without change and may be made available online at <https://www.regulations.gov>. Therefore, OSHA cautions commenters about submitting information they do not want made available to the public, or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.

Docket: The docket for this rulemaking (Docket No. OSHA–2025–0025) is available at <https://www.regulations.gov>, the Federal eRulemaking Portal. Most exhibits are available at <https://www.regulations.gov>; some exhibits (e.g., copyrighted material) are not available to download from that web page. However, all materials in the dockets are available for inspection at the OSHA Docket Office.

I. Executive Summary

This proposed rule is intended to provide greater compliance flexibility and clarify the policies and procedures employers must follow when implementing a respiratory protection program in conjunction with OSHA's Methylenedianiline standards (29 CFR 1910.1050 and 29 CFR 1926.60). OSHA is proposing to revise some respirator-

related provisions where they are unnecessarily prescriptive, which would result in employers having greater flexibility in the respirators they select for exposed workers, while providing equivalent worker protection. This proposal is also consistent with OSHA's intent, when it published the revised Respiratory Protection standard (29 CFR 1910.134), to use it as a foundation for respirator selection in substance-specific standards.

Additionally, OSHA believes that this proposed rule appropriately incorporates advances in technology, which have made some provisions of the Methylenedianiline standard outdated, and would allow employers to take advantage of future technological advances. This proposed standard is intended to account for modern knowledge and technology and to streamline the selection of respirators.

II. Legal Authority and Preliminary Findings

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651 *et seq.*) ("the Act" or "the OSH Act") is "to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources" (29 U.S.C. 651(b)). To achieve this goal, Congress authorized the Secretary of Labor ("the Secretary") to promulgate standards to protect workers, including the authority "to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce" (29 U.S.C. 651(b)(3); *see also* 29 U.S.C. 654(a)(2) (requiring employers to comply with OSHA standards), 29 U.S.C. 655(a) (authorizing summary adoption of existing consensus and established federal standards within two years of the Act's enactment), 29 U.S.C. 655(b) (authorizing promulgation, modification or revocation of standards pursuant to notice and comment), and 29 U.S.C. 655(b)(7) (authorizing OSHA to include among a standard's requirements labeling, monitoring, medical testing, and other information-transmittal provisions)). An occupational safety and health standard is ". . . a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment" (29 U.S.C. 652(8)). The Secretary may also issue regulations requiring employers to keep records regarding their activities relating to the Act, as well as records of work-related

deaths, injuries, and illnesses (29 U.S.C. 657(c)(1)–(2)).

Before OSHA may promulgate a health or safety standard, it must find that a standard is reasonably necessary or appropriate within the meaning of section 652(8) of the OSH Act, which OSHA did here in 1992 when it published the Methylenedianiline standards for general industry and construction (57 FR 35630–01). The Supreme Court, in its decision on OSHA's Benzene standard, interpreted OSHA's obligation under section 652(8) as requiring it to evaluate "whether significant risks are present and can be eliminated or lessened by a change in practices" (*Indus. Union Dep't, AFL–CIO v. Am. Petroleum Inst.*, 448 U.S. 607, 642 (1980) (plurality opinion)). OSHA concluded there was significant risk associated with occupational exposure to methylenedianiline when it published the Methylenedianiline standards (57 FR 35630–01, 35640). When, as here, OSHA has previously determined that its standard substantially reduces a significant risk, it is unnecessary for the agency to make additional findings on risk for every provision of that standard (*see, e.g., Pub. Citizen Health Research Grp. v. Tyson*, 796 F.2d 1479, 1502 n.16 (D.C. Cir. 1986) (rejecting the argument that OSHA must "find that each and every aspect of its standard eliminates a significant risk")). Rather, once OSHA makes a general significant risk finding in support of a standard, the next question is whether a particular requirement is reasonably related to the purpose of the standard as a whole (*see Asbestos Info. Ass'n/N. Am. v. Reich*, 117 F.3d 891, 894 (5th Cir. 1997); *Forging Indus. Ass'n v. Sec'y of Labor*, 773 F.2d 1436, 1447 (4th Cir. 1985); *United Steelworkers of Am., AFL–CIO–CLC v. Marshall*, 647 F.2d 1189, 1237–38 (D.C. Cir. 1980) ("*Lead I*"). Therefore, while OSHA is not making a preliminary finding of significant risk for this proposed rule, the agency has made a preliminary determination that the proposed changes are reasonably related to the purpose of the Methylenedianiline standards as a whole.

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that is reasonably expected to be developed (*see Am. Iron and Steel Inst. v. OSHA*, 939 F.2d 975, 980 (D.C. Cir. 1991)). Courts have also interpreted technological feasibility to mean that a typical firm in each affected industry or application group will reasonably be

able to implement the requirements of the standard in most operations most of the time (*see, e.g., Public Citizen v. OSHA*, 557 F.3d 165, 170–71 (3d Cir. 2009) (citing *Lead I* at 1272)).

This proposed rule would not substantially modify existing requirements for respiratory protection in workplaces; nor would it create new requirements. All employers in compliance with the existing standard would also be in compliance with the revised standard. Therefore, OSHA has made a preliminary determination that the proposed rule would be technologically feasible.

In evaluating economic feasibility, OSHA must consider the average cost of compliance in an industry rather than costs for individual employers. In its economic analyses, OSHA “must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms” (*Am. Iron and Steel Inst.*, 939 F.2d at 980, quoting *Lead I* at 1272). OSHA has made a preliminary finding that this proposal is economically feasible because it is deregulatory and is expected to reduce costs for employers. OSHA’s economic analysis is presented in Section V.

The Administrative Procedures Act directs agencies to include in each rule adopted “a concise general statement of [the rule’s] basis and purpose” (5 U.S.C. 553(c)); *cf.* 29 U.S.C. 655(e) (requiring the Secretary to publish a “statement of reasons” for any standard promulgated)). This notice satisfies this concise statement requirement.

III. Events Leading to the Proposed Rule

OSHA adopted general industry and construction standards regulating occupational exposure to methylenedianiline in 1992 (57 FR 35630–01). OSHA also has a general Respiratory Protection standard, 29 CFR 1910.134, which it first promulgated in 1971 (39 FR 9835). OSHA published a revised Respiratory Protection standard on January 8, 1998 (63 FR 1152). The Respiratory Protection standard contains worksite-specific requirements for program administration, as well as procedures for respirator selection, employee training, fit testing, medical evaluation, and respirator use, among other provisions. OSHA noted that the revised standard was to “serve as a ‘building block’ standard with respect to future standards that may contain respiratory protection requirements” (63 FR 1265). In 2006, OSHA revised the

Respiratory Protection standard again to incorporate assigned protection factors (APFs) in the respirator selection process (71 FR 50122–01).

Several OSHA standards regulating exposure to toxic substances and harmful physical agents, including the Methylenedianiline standards, require compliance with many provisions of 29 CFR 1910.134. However, when revising the respirator rule, the Agency decided to retain several special respirator selection provisions in the existing substance-specific standards. In this regard, OSHA noted that the respirator selection requirements retained in the substance-specific standards were developed in rulemakings to provide protection against a hazardous characteristic or condition unique to the regulated substance. Consequently, OSHA felt that preserving these provisions in the individual substance-specific standards would maintain the level of respiratory protection afforded to employees.

In this proposal, OSHA is revisiting some of those determinations; the agency now believes that there are additional ways that substance-specific standards can rely on 29 CFR 1910.134 without compromising employee safety. The purpose of revising the respirator-related provisions of OSHA’s Methylenedianiline standards is to conform them, to the extent possible, with other substance-specific standards and to the revised 29 CFR 1910.134 in general. The proposed updates would improve the Methylenedianiline standards by removing unnecessarily specific respirator requirements that have, since OSHA last updated the standards, become outdated based on current technology, National Institute for Occupational Safety and Health (NIOSH) certification requirements, and knowledge about respirator technology. These revised standards are intended to take account of new knowledge and technology.

OSHA expects that the rule would ultimately reduce the compliance burden on the regulated community, without compromising worker safety. Therefore, OSHA believes this proposed rule is consistent with Executive Order (E.O.) 14219, “Ensuring Lawful Governance and Implementing the President’s ‘Department of Government Efficiency’ Deregulatory Initiative,” E.O. 14192, “Unleashing Prosperity Through Deregulation,” and the goal of removing regulations that harm the national interest by impeding technological innovation or private enterprise and entrepreneurship.

IV. Summary and Explanation of the Proposed Requirements

OSHA is proposing to revise paragraph (h) of its Methylenedianiline general industry standard (29 CFR 1910.1050) and paragraph (i) of its Methylenedianiline construction standard (29 CFR 1926.60) to reduce compliance burdens, allow for the use of more up-to-date technology, and improve the comprehensibility of the requirements for respiratory protection programs. These revisions would simplify compliance for employers by removing requirements in 1910.1050 and 1926.60 that are duplicative with the requirements in 1910.134 and updating respirator requirements to align with the revised NIOSH certification criteria in 42 CFR part 84. The proposed revisions would also provide more compliance options by removing unnecessary restrictions on respirator selection where another equally protective option exists. Finally, these revisions would conform these standards, to the extent possible, to other substance-specific standards and to 29 CFR 1910.134, which would simplify review of these regulations for employers. The Agency preliminarily concludes, therefore, that updating these rules is consistent with the goals of facilitating technological innovation and reducing undue burden.

OSHA has preliminarily determined that 1910.1050(h)(1)(i) through (iv) and 1926.60(i)(1)(i) through (iv), which describe when respiratory protection must be used, unnecessarily duplicate the general provisions covered by 1910.134(a). OSHA is therefore proposing to remove those paragraphs and add a cross reference to 1910.134(a)(2) in paragraph 1910.1050(h)(1) and 1926.60(i)(1). Employers in compliance with the current version of 1910.1050 and 1926.60 would not have to change any of their practices to remain in compliance with the changes OSHA is proposing.

Additionally, OSHA is proposing to remove and reserve paragraphs 1910.1050(h)(3)(i)(B) and 1926.60(i)(3)(i)(B) of the Methylenedianiline standards, which require HEPA filters for powered and non-powered air-purifying respirators. That requirement was included because HEPA filters were originally part of NIOSH’s certification standards for respirators. However, NIOSH published revised requirements for testing and certification procedures and recodified the previous certification standards for other respirator classes as 42 CFR part 84 on June 8, 1995 (60 FR 30336). The

HEPA filter requirement is not part of the revised 42 CFR part 84 because additional types of filters have been certified for protection from particulates and can be used with powered and non-powered air-purifying respirators. OSHA believes that these testing and certification requirements ensure that all particulate filters certified under 42 CFR part 84, including HEPA filters, are efficient in preventing the penetration of submicron-sized particles. OSHA recognized this when the Agency's revised Respiratory Protection standard was issued on January 8, 1998 (63 FR 1152). In fact, OSHA has issued other substance-specific regulations since the revised Respiratory Protection standard and NIOSH's revised certification requirements were issued and has not incorporated a requirement for HEPA filters in similar respirator provisions in those rules.

OSHA recognizes that adopting these revisions will also result in the revision of the respiratory protection requirements in OSHA's shipyard employment, marine terminals, and longshoring requirements for methylenedianiline (*see* 29 CFR 1915.1050, 29 CFR 1917.1, and 29 CFR 1918.1, which apply the requirements in 1910.1050 to shipyards, marine terminals, and longshoring). OSHA requests comment regarding whether there are any considerations that are unique to the use of respirators for protection against methylenedianiline hazards in shipyards, marine terminals, and longshoring that OSHA should consider when finalizing this proposal. With respect to the proposed changes to the construction standard for methylenedianiline (29 CFR 1926.60), OSHA is in the process of appointing members to the Advisory Committee on Construction Safety and Health (ACCSH). The agency intends to present this proposed rule to ACCSH once that process is complete. The agency will put the Committee's recommendations on the OSHA website and in the docket for this proposed rule prior to the close of the comment period to allow the public to provide comments on those recommendations.

OSHA requests comments on this proposal, including responses regarding the following issues:

1. Are there any concerns that making the changes described in this proposal will decrease worker safety? If so, which changes do you think would decrease worker safety and why?

2. Are there alternative approaches OSHA should consider?

3. Are there any concerns that removing any of the substance-specific provisions in the Methylenedianiline

standards and relying on the generic requirements of the Respiratory Protection standard will inadequately capture the content and requirements of the current substance-specific provisions?

V. Economic Analysis

This proposed rule would remove redundant requirements and expand compliance options for employers in the Methylenedianiline standards for general industry and construction, 29 CFR 1910.1050 and 29 CFR 1926.60. OSHA has preliminarily concluded that there would be no additional costs imposed by this proposed revision. OSHA also anticipates that there would be some cost savings associated with this rule, including savings based on employers being able to choose more cost-effective filters and a reduction of the burdens associated with complying with and reviewing unnecessarily duplicative regulations. Because this rule would impose no new costs, OSHA has made a preliminary determination that the rule would be economically feasible.

Based on the Supporting Statement for the Information Collection Request for the Methylenedianiline standards, OSHA estimates there are 100 employees exposed to this chemical in general industry¹ and 200 exposed in the construction industry.² Under this proposal, employers could provide employees with P95 filters rather than P100 filters. OSHA determined that P95 filters are \$2 cheaper than P100 filters.^{3 4} Assuming that filters are replaced weekly over the course of a year (and that an employee works 5 shifts per week and 50 weeks per year) this means an annual difference in per-employee costs of \$100. If 50 percent of employers opt for P95 filters for their employees, the cost savings could be \$15,000 annually, based solely on equipment costs (or about \$112,000 over 10 years at a 3 percent discount rate).

OSHA is seeking comments and data on this preliminary analysis, including on the following questions:

1. How much do employers expect to save based on the increased flexibility in respirator selection?

2. Are there any other savings for employers that would result from the proposed change?

3. Are there any benefits for worker protection that can be anticipated from this proposed change?

4. Are there any costs for employers that would result from this change that OSHA has not considered?

5. Would there be savings to employers outside of general industry and construction related to this proposal? If so, would they be similar to what OSHA has estimated for general industry and construction employers?

A. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

OSHA reviewed this proposed rule under the provisions of the Regulatory Flexibility Act. This rule would eliminate burdensome regulations. Therefore, OSHA initially concludes that the impacts of the revisions would not have a "significant economic impact on a substantial number of small entities," and that the preparation of an IRFA is not warranted. OSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

B. Review Under Executive Order 12866

E.O. 12866, "Regulatory Planning and Review" (58 FR 51735 (Oct. 4, 1993)), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing

information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) for review. OIRA has determined that this proposed rule would not constitute a “significant regulatory action” under section 3(f) of E.O. 12866. Accordingly, this proposal was not submitted to OIRA for review under E.O. 12866.

VI. Additional Requirements

A. Requirements for States With OSHA-Approved State Plans

Under section 18 of the OSH Act (29 U.S.C. 651 *et seq.*), Congress expressly provides that States may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards that are “at least as effective” as the Federal standards in providing safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved, State-administered occupational safety and health programs as “State Plans.”⁵

When Federal OSHA promulgates a new standard or a more stringent amendment to an existing standard, State Plans must either amend their standards to be identical to, or “at least as effective as,” the new Federal standard or amendment, or show that an existing State Plan standard covering this issue is “at least as effective” as the new Federal standard or amendment (29 CFR 1953.5(a)). However, when OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plans do not have to amend their standards, although they may opt to do so. OSHA has preliminarily determined this proposed rule does not impose additional or more stringent requirements than the existing standard, and therefore State Plans are not required to amend their standards. OSHA seeks comment on this assessment of its proposal.

B. OMB Review Under the Paperwork Reduction Act of 1995

The Paperwork Reduction Act (PRA) defines “collection of information” to mean “the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public, of facts or opinions by or for an agency, regardless of form or format” (44 U.S.C. 3502(3)(A)). Under the PRA, a Federal agency cannot conduct or sponsor a collection of information unless it is approved by OMB under the PRA and the agency displays a currently valid OMB control number (44 U.S.C. 3507). Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512(a)(1)). The process for OMB approval is found in 5 CFR part 1320.

This proposed rule would impose no new information collection requirements. Because the revisions are deregulatory and affect only minor changes to the existing information collections in the Methylenedianiline standards (OMB Control Numbers 1218–0183 and 1218–0184), OMB has waived the requirements of 5 CFR part 1320 and approved the modified Information Collection Request (ICR) under existing OMB Control Numbers 1218–0183 and 1218–0184 (*see* 5 CFR 1320.18(d)).

C. Environmental Impacts/National Environmental Policy Act (NEPA)

OSHA has reviewed this proposed rule according to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), as amended by the Fiscal Responsibility Act of 2023 (Pub. L. 118–5, 321, 137 Stat. 10), and the Department of Labor’s NEPA procedures (29 CFR part 11). OSHA has determined that this proposal would have no impact on the quality of the human environment.

D. Other Statutory and Executive Order Considerations

OSHA has considered its obligations under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*) and the Executive Orders on Consultation and Coordination With Indian Tribal Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), Federalism (E.O. 13132, 64 FR 43255 (Aug. 10, 1999)), and Protection of Children From Environmental Health Risks and Safety Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a proposed deregulatory action that involves the removal of requirements, that OSHA

does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these statutes and executive orders. Furthermore, OSHA has determined that this proposal is consistent with the policies and directives outlined in E.O. 14192, “Unleashing Prosperity Through Deregulation” and is an Executive Order 14192 deregulatory action.

List of Subjects in 29 CFR Part 1910 and 29 CFR Part 1926

Assigned protection factors, Airborne contaminants, Health, Occupational safety and health, Respirators, Respirator selection.

VII. Authority and Signature

This document was prepared under the direction of Amanda Laihow, Acting Assistant Secretary of Labor for Occupational Safety and Health. It is issued under the authority of sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657), 5 U.S.C. 553, Secretary of Labor’s Order No. 8–2020 (85 FR 58393), and 29 CFR part 1911.

Dated: June 20, 2025.

Amanda Laihow,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

VIII. Regulatory Text

Proposed Amendments

For the reasons set forth in the preamble, OSHA proposes to amend 29 CFR parts 1910 and 1926 as follows:

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Subpart Z—Toxic and Hazardous Substances

■ 1. The authority for 29 CFR 1910 subpart Z is revised to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor’s Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008); 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393); 29 CFR part 1911; and 5 U.S.C. 553, as applicable.

All of subpart Z issued under 29 U.S.C. 655(b), except those substances that have exposure limits listed in Tables Z–1, Z–2, and Z–3 of § 1910.1000. The latter were issued under 29 U.S.C. 655(a).

Section 1910.1000, Tables Z–1, Z–2 and Z–3 also issued under 5 U.S.C. 553, but not under 29 CFR part 1911 except for the

⁵ Of the 29 States and U.S. territories with OSHA-approved State Plans, 22 cover public and private-sector employees: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. The remaining six States and one U.S. territory cover only State and local government employees: Connecticut, Illinois, Maine, Massachusetts, New Jersey, New York, and the Virgin Islands.

arsenic (organic compounds), benzene, cotton dust, and chromium (VI) listings.

Section 1910.1001 also issued under 40 U.S.C. 3704 and 5 U.S.C. 553.

Section 1910.1002 also issued under 5 U.S.C. 553, but not under 29 U.S.C. 655 or 29 CFR part 1911.

Sections 1910.1018, 1910.1029, and 1910.1200 also issued under 29 U.S.C. 653.

Section 1910.1030 also issued under Public Law 106–430, 114 Stat. 1901.

Section 1910.1201 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

■ 2. § 1910.1050 is revised as follows

■ a. Revise and republish paragraph (h)(1)

■ b. Remove paragraphs (h)(1)(i)–(iv)

■ c. Remove and reserve paragraph (h)(3)(i)(B)

The revisions and additions read as follows:

(h) * * *

(1) *General.* For employees who use respirators required by this section, the employer must provide each employee an appropriate respirator that complies with the requirements of this paragraph. Respirators must be used when the employer determines that they are necessary to protect the health of an employee as required under 29 CFR 1910.134(a)(2).

(2) * * *

(3) * * *

(i) * * *

(A) * * *

(B) [Reserved]

* * * * *

PART 1926—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Subpart D—Occupational Health and Environmental Controls

■ 3. The authority for 29 CFR 1926 subpart D continues to read as follows:

Authority: 40 U.S.C. 3704; 29 U.S.C. 653, 655, and 657; and Secretary of Labor's Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008), 5–2007 (72 FR 31159), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393), as applicable; and 29 CFR part 1911.

Sections 1926.59, 1926.60, and 1926.65 also issued under 5 U.S.C. 553 and 29 CFR part 1911.

Section 1926.61 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

Section 1926.62 also issued under sec. 1031, Public Law 102–550, 106 Stat. 3672 (42 U.S.C. 4853).

Section 1926.65 also issued under sec. 126, Public Law 99–499, 100 Stat. 1614 (reprinted at 29 U.S.C.A. 655 Note) and 5 U.S.C. 553.

■ 4. § 1926.60 is revised as follows:

■ a. Revise and republish paragraph (i)(1)

■ b. Remove paragraphs (i)(1)(i)–(iv)

■ c. Remove and reserve paragraph (i)(3)(i)(B)

The revisions and additions read as follows:

(i) * * *

(1) *General.* For employees who use respirators required by this section, the employer must provide each employee an appropriate respirator that complies with the requirements of this paragraph. Respirators must be used when the employer determines that they are necessary to protect the health of an employee as required under 29 CFR 1910.134(a)(2).

(2) * * *

(3) * * *

(i) * * *

(A) * * *

(B) [Reserved]

* * * * *

[Docket No. OSHA–2025–0021]

RIN 1218–AD60

Cadmium

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: This proposed rule revises some substance-specific respirator requirements to allow different types of respirators to be used under OSHA's Cadmium standards and better aligns these standards with OSHA's Respiratory Protection standard.

DATES: Comments and other information, including requests for a hearing, must be received on or before September 2, 2025.

Informal public hearing: OSHA will schedule an informal public hearing on the rule if requested during the comment period. If a hearing is requested, the location and date of the hearing, procedures for interested parties to notify the agency of their intention to participate, and procedures for participants to submit their testimony and documentary evidence will be announced in the **Federal Register**.

ADDRESSES:

Written comments: You may submit comments and attachments, identified

by Docket No. OSHA–2025–0021, electronically at <https://www.regulations.gov>, which is the Federal e-Rulemaking Portal. Follow the instructions online for making electronic submissions.

Instructions: All submissions must include the agency's name and the docket number for this rulemaking (Docket No. OSHA–2025–0021). When uploading multiple attachments to <https://www.regulations.gov>, please number all of your attachments because <https://www.regulations.gov> will not automatically number the attachments. This will be very useful in identifying all attachments. For example, Attachment 1—title of your document, Attachment 2—title of your document, Attachment 3—title of your document. For assistance with commenting and uploading documents, please see the Frequently Asked Questions on <https://www.regulations.gov>.

All comments, including any personal information you provide, are placed in the public docket without change and may be made available online at <https://www.regulations.gov>. Therefore, OSHA cautions commenters about submitting information they do not want made available to the public, or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.

Docket: The docket for this rulemaking (Docket No. OSHA–2025–0021) is available at <https://www.regulations.gov>, the Federal eRulemaking Portal. Most exhibits are available at <https://www.regulations.gov>; some exhibits (e.g., copyrighted material) are not available to download from that web page. However, all materials in the dockets are available for inspection at the OSHA Docket Office.

I. Executive Summary

This proposed rule is intended to provide greater compliance flexibility and clarify the policies and procedures employers must follow when implementing a respiratory protection program in conjunction with OSHA’s Cadmium standards (29 CFR 1910.1027 and 1926.1127). OSHA is proposing to revise some respirator-related provisions where they are unnecessarily prescriptive, which would result in employers having greater flexibility in the respirators they select for exposed workers, while providing equivalent worker protection. This proposal is also consistent with OSHA’s intent, when it published the revised Respiratory Protection standard (29 CFR 1910.134), to use it as a foundation for respirator selection in substance-specific standards.

Additionally, OSHA believes that this proposed rule appropriately incorporates advances in technology, which have made some provisions of the Cadmium standards outdated, and would allow employers to take advantage of future technological advances. This proposed standard is intended to account for modern knowledge and technology and to streamline the selection of respirators.

II. Legal Authority and Preliminary Findings

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651 *et seq.*) (“the Act” or “the OSH Act”) is “to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources” (29 U.S.C. 651(b)). To achieve this goal, Congress authorized the Secretary of Labor (“the Secretary”) to promulgate standards to protect workers, including the authority “to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce” (29 U.S.C. 651(b)(3); *see also* 29 U.S.C. 654(a)(2) (requiring employers to comply with OSHA standards), 29

U.S.C. 655(a) (authorizing summary adoption of existing consensus and established federal standards within two years of the Act’s enactment), 29 U.S.C. 655(b) (authorizing promulgation, modification or revocation of standards pursuant to notice and comment), and 29 U.S.C. 655(b)(7) (authorizing OSHA to include among a standard’s requirements labeling, monitoring, medical testing, and other information-transmittal provisions)). An occupational safety and health standard is “. . . a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment” (29 U.S.C. 652(8)). The Secretary may also issue regulations requiring employers to keep records regarding their activities relating to the Act, as well as records of work-related deaths, injuries, and illnesses (29 U.S.C. 657(c)(1)–(2)).

Before OSHA may promulgate a health or safety standard, it must find that a standard is reasonably necessary or appropriate within the meaning of section 652(8) of the OSH Act, which OSHA did here in 1992 when it issued the Cadmium standard (57 FR 42102). The Supreme Court, in its decision on OSHA’s Benzene standard, interpreted OSHA’s obligation under section 652(8) as requiring it to evaluate “whether significant risks are present and can be eliminated or lessened by a change in practices” (*Indus. Union Dep’t, AFL-CIO v. Am. Petroleum Inst.*, 448 U.S. 607, 642 (1980) (plurality opinion)). OSHA originally adopted a consensus standard to regulate cadmium in 1971 and later revised the standard because, even at the permissible exposure limit set in 1971, there was significant risk to employees (57 FR 42102). When, as here, OSHA has previously determined that its standard substantially reduces a significant risk, it is unnecessary for the agency to make additional findings on risk for every provision of that standard (*see, e.g., Pub. Citizen Health Research Grp. v. Tyson*, 796 F.2d 1479, 1502 n.16 (D.C. Cir. 1986) (rejecting the argument that OSHA must “find that each and every aspect of its standard eliminates a significant risk”)). Rather, once OSHA makes a general significant risk finding in support of a standard, the next question is whether a particular requirement is reasonably related to the purpose of the standard as a whole (*see Asbestos Info. Ass’n/N. Am. v. Reich*, 117 F.3d 891, 894 (5th Cir. 1997); *Forging Indus. Ass’n v. Sec’y of Labor*, 773 F.2d 1436, 1447 (4th Cir. 1985);

United Steelworkers of Am., AFL-CIO-CLC v. Marshall, 647 F.2d 1189, 1237–38 (D.C. Cir. 1980) (“*Lead I*”)). Therefore, while OSHA is not making a preliminary finding of significant risk for this proposed rule, the agency has made a preliminary determination that the proposed changes are reasonably related to the purpose of the Cadmium standard as a whole.

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that is reasonably expected to be developed (*see Am. Iron and Steel Inst. v. OSHA*, 939 F.2d 975, 980 (D.C. Cir. 1991)). Courts have also interpreted technological feasibility to mean that a typical firm in each affected industry or application group will reasonably be able to implement the requirements of the standard in most operations most of the time (*see, e.g., Public Citizen v. OSHA*, 557 F.3d 165, 170–71 (3d Cir. 2009) (citing *Lead I* at 1272)).

This proposed rule would not substantially modify existing requirements for respiratory protection in workplaces; nor would it create new requirements. All employers in compliance with the existing standard would also be in compliance with the revised standard. Therefore, OSHA has made a preliminary determination that the proposed rule would be technologically feasible.

In evaluating economic feasibility, OSHA must consider the average cost of compliance in an industry rather than costs for individual employers. In its economic analyses, OSHA “must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms” (*Am. Iron and Steel Inst.*, 939 F.2d at 980, quoting *Lead I* at 1272). OSHA has made a preliminary finding that this proposal is economically feasible because it is deregulatory and is expected to reduce costs for employers. OSHA’s economic analysis is presented in Section V.

The Administrative Procedures Act directs agencies to include in each rule adopted “a concise general statement of [the rule’s] basis and purpose” (5 U.S.C. 553(c)); *cf.* 29 U.S.C. 655(e) (requiring the Secretary to publish a “statement of reasons” for any standard promulgated)). This notice satisfies this concise statement requirement.

III. Events Leading to the Proposed Rule

OSHA adopted its Cadmium standards in 1992 (57 FR 42102). OSHA also has a general Respiratory Protection standard, 29 CFR 1910.134, which it first promulgated in 1971 (39 FR 9835). OSHA published a revised Respiratory Protection standard on January 8, 1998 (63 FR 1152). The Respiratory Protection standard contains worksite-specific requirements for program administration, as well as procedures for respirator selection, employee training, fit testing, medical evaluation, and respirator use, among other provisions. OSHA noted that the revised standard was to “serve as a ‘building block’ standard with respect to future standards that may contain respiratory protection requirements” (63 FR 1265). In 2006, OSHA revised the Respiratory Protection standard again to incorporate assigned protection factors (APFs) in the respirator selection process (71 FR 50122–01).

Several OSHA standards regulating exposure to toxic substances and harmful physical agents, including the Cadmium standards, require compliance with many provisions of 29 CFR 1910.134. However, when revising the respirator rule, the Agency decided to retain several special respirator selection provisions in the existing substance-specific standards. In this regard, OSHA noted that the respirator selection requirements retained in the substance-specific standards were developed in rulemakings to provide protection against a hazardous characteristic or condition unique to the regulated substance. Consequently, OSHA felt that preserving these provisions in the individual substance-specific standards would maintain the level of respiratory protection afforded to employees.

In this proposal, OSHA is revisiting some of those determinations; the agency now believes that there are additional ways that substance-specific standards can rely on 29 CFR 1910.134 without compromising employee safety. The purpose of revising the respirator-related provisions of OSHA’s Cadmium standards is to conform them, to the extent possible, with other substance-specific standards and to the revised 29 CFR 1910.134 in general. The proposed updates would improve the Cadmium standards, because they would allow employers to select from a wider range of equally protective respirators and would incorporate additional references to the Respiratory Protection standard, which is based on current technology and practices for respirator use. OSHA

also believes that advances in technology have made the Cadmium standards outdated in some areas. This revised standard is intended to take account of new knowledge and technology.

OSHA expects that the rule would ultimately reduce the compliance burden on the regulated community, without compromising worker safety. Therefore, OSHA believes this proposed rule is consistent with Executive Order (E.O.) 14219, “Ensuring Lawful Governance and Implementing the President’s ‘Department of Government Efficiency’ Deregulatory Initiative,” E.O. 14192, “Unleashing Prosperity Through Deregulation,” and the goal of removing regulations that harm the national interest by impeding technological innovation or private enterprise and entrepreneurship.

IV. Summary and Explanation of the Proposed Requirements

OSHA is proposing to revise paragraph (g) of its general industry Cadmium standard (29 CFR 1910.1027) and paragraph (g) of its Construction Industry standard (29 CFR 1926.1127) to reduce compliance burdens, allow for the use of more up-to-date technology, and improve the comprehensibility of the requirements for respiratory protection programs. These revisions would simplify compliance for employers by removing requirements in 1910.1027 and 1926.1127 that are duplicative with the requirements in 1910.134, and update respirator requirements to align with the revised National Institute for Occupational Safety and Health (NIOSH) certification criteria in 42 CFR part 84. The revisions also would remove unnecessary restrictions on respirator selection where another equally protective option exists. Finally, these revisions would conform these standards, to the extent possible, to other substance-specific standards and to 29 CFR 1910.134. The Agency preliminarily concludes, therefore, that updating these rules is consistent with the goals of facilitating technological innovation and reducing undue burden.

OSHA has preliminarily determined that paragraphs (g)(1)(i) through (vii) of both the general industry and construction Cadmium standards, which describe when respiratory protection must be used, unnecessarily duplicate the general provisions covered by 1910.134(a). OSHA is therefore proposing to remove those paragraphs and add a cross reference to 1910.134(a)(2) in paragraph (g)(1) of both the general industry and construction standards. OSHA does not

intend for these changes to add to or change the regulatory burden on employers; actions that comply with the requirements in 1910.1027(g) would also be in compliance with proposed paragraph (g).

Additionally, OSHA is proposing to remove the requirements, in paragraph (g)(3)(i)(B) of both the general industry and construction standards, limiting employers to the use of full facepiece respirators when employees are experiencing eye irritation. OSHA has preliminarily determined that the requirement in paragraph (i)(1) in both standards for the use of personal protective equipment where skin or eye irritation from cadmium may occur is equally as protective as the requirement under paragraph (g)(3)(i)(B). As such, OSHA is proposing to remove paragraph (g)(3)(i)(B). This would provide greater compliance flexibility to employers, who could provide half mask respirators and appropriate eye protection where employees are experiencing eye irritation, which would be equally protective for workers.

OSHA is also proposing to remove paragraph (g)(3)(i)(C) of both the general industry and construction industry Cadmium standards, which require HEPA filters for powered and non-powered air-purifying respirators. That requirement was included when the Cadmium standards were promulgated because it was originally part of NIOSH’s certification standards for respirators. However, NIOSH published revised requirements for testing and certification procedures and recodified the previous certification standards for other respirator classes as 42 CFR part 84 on June 8, 1995 (60 FR 30336). The HEPA filter requirement is not part of the revised 42 CFR part 84 because additional types of filters have been certified for protection from particulates and can be used with powered and non-powered air-purifying respirators. OSHA believes that these testing and certification requirements ensure that all particulate filters certified under 42 CFR part 84, including HEPA filters, are efficient in preventing the penetration of submicron-sized particles; OSHA recognized this when the Agency’s revised Respiratory Protection standard was issued on January 8, 1998 (63 FR 1152). In fact, OSHA has issued other substance-specific regulations since the revised Respiratory Protection standard and NIOSH’s revised certification requirements were issued and has not incorporated a requirement for HEPA filters in similar respirator provisions in those rules.

OSHA has also preliminarily determined that paragraph (m)(4)(iii)(E)

in both the general industry and construction industry Cadmium standards, which require training regarding the purpose, proper selection, fitting, proper use, and limitations of respirators and protective clothing, unnecessarily duplicate the provisions for training on respirators covered by 1910.134(k) in the Respiratory Protection standard. OSHA therefore is proposing to remove the respirator language from those paragraphs while retaining the training requirements on protective clothing.

OSHA is also considering (but not proposing) removing the requirement under paragraph (g)(3)(ii) of both the general industry and construction Cadmium standards to provide an employee with a powered air-purifying respirator (PAPR) instead of a negative-pressure respirator when the employee chooses to use a PAPR and it provides adequate protection. OSHA believes that the removal of this provision would not compromise worker safety and health—the provision is about employee requests and, without it, workers would still be provided adequate protection. When OSHA updated the Respiratory Protection standard, the agency determined that it was appropriate to allow an employer to provide additional respiratory protection when requested, rather than mandate it (29 CFR 1910.134(c)(2)). Removing these requirements in the Cadmium standards would still allow for voluntary respirator use under some circumstances (*i.e.*, where the employer agrees to provide the equipment) and would better align with the general Respiratory Protection standard. However, the Agency acknowledges that user comfort affects workers' compliance with requirements to wear respiratory protection and questions whether the existing requirements in the Respiratory Protection standard, 1910.134(c)(2) and Table 1, offer equivalent access to alternative styles of respiratory protection. OSHA therefore seeks comment on the merits of removing these provisions.

OSHA recognizes that adopting these revisions will also result in the revision of the respiratory protection requirements in OSHA's shipyard employment, marine terminals, longshoring, and agriculture standards for cadmium (*see* 29 CFR 1915.1027, 29 CFR 1917.1, 29 CFR 1918.1, and 29 CFR 1928.1027, which apply the requirements in 1910.1027 to shipyards, marine terminals, longshoring, and agriculture). OSHA requests comment regarding whether there are any considerations that are unique to the use of respirators for protection against

cadmium hazards in shipyards, marine terminals, longshoring, or agriculture that OSHA should consider when finalizing this proposal.

OSHA notes that, per current and longstanding Appropriations Act limitations, OSHA's existing agricultural standard for cadmium does not cover "any person who is engaged in a farming operation which does not maintain a temporary labor camp and employs 10 or fewer employees" (*see* Further Consolidated Appropriations Act, 2024, Pub. L. 118–47, Div. D, Title I (2024)).¹ In accordance with these limitations, OSHA's proposed revisions would also not cover any such persons. OSHA is in the process of appointing members to the Advisory Committee on Construction Safety and Health (ACCSH). The agency intends to present this proposed rule to ACCSH once that process is complete. The agency will put the Committee's recommendations on the OSHA website and in the docket for this proposed rule prior to the close of the comment period to allow the public to provide comments on those recommendations.

OSHA requests comments on the following issues:

1. Are there any concerns that making the changes described in this proposal will decrease worker safety?
2. Are there alternative approaches OSHA should consider to any of the proposed revisions?
3. Are there any concerns that removing any of the substance-specific provisions in the Cadmium standards and relying on the generic requirements of the Respiratory Protection standard will inadequately capture the content and requirements of the current substance-specific provisions?
4. Should OSHA remove the requirement for employers to provide PAPRs when they are requested by employees?

V. Economic Analysis

This proposed rule would expand compliance options for employers under the Cadmium standards, 29 CFR 1910.1027 and 29 CFR 1926.1127, and therefore OSHA has preliminarily concluded that there will be no additional costs imposed by the proposed revisions. OSHA also anticipates that there would be some cost savings associated with this rule, including savings based on employers being able to choose more cost-effective respirators and a reduction of the burdens associated with reviewing unnecessarily duplicative regulations. Because this rule would impose no new costs, OSHA has made a preliminary

determination that the rule would be economically feasible.

Based on the Supporting Statement for the Information Collection Request for the Cadmium standard, OSHA estimates that there are 39,153 employees exposed to cadmium above the PEL in the U.S. in general industry and another 5,090 in construction.¹ This proposed rule would, among other things, allow employers to provide filtering facepiece respirators plus eye protection or half mask respirators plus eye protection rather than requiring full facepiece respirators. OSHA estimates that a 3M 6000 series respirator replaced annually, a 3M P100 particulate filter replaced every 40 hours of use (assumed to be weekly), and one cleaning wipe per shift results in an estimated per-use cost of \$2.61 for a full facepiece respirator. OSHA estimates that a 3M 5000 series half mask respirator replaced annually, a 3M P100 particulate filter replaced every 40 hours of use (assumed to be weekly), one pair of Uline safety goggles replaced every two months, and one cleaning wipe per shift results in an estimated per-use cost of \$1.96.² A 3M disposable N100 filtering facepiece mask replaced every 5 shifts and one pair of Uline safety goggles replaced every two months results in an estimated per-use cost of \$1.94.³ These mean a difference of \$0.65 and \$0.67 per use, respectively. Over the course of a year (assuming an employee works 5 shifts per week and 50 weeks per year) this means a difference in per-employee costs of \$167.50 and \$163, respectively.

OSHA does not currently have sufficient information to quantify how many of the exposed employees would use a half mask respirator. However, if 50 percent of the exposed employees were to use the N100 filtering facepiece respirators instead of the 3M 6000 Series full facepiece respirators, that could result in a savings, based on equipment alone, of approximately \$3.7 million annually (or \$27.6 million over 10 years at a 3 percent discount rate).

OSHA is seeking comments and data on this preliminary analysis, including on the following questions:

1. How much do employers expect to save based on the increased flexibility in respirator selection?

¹ See Document ID OSHA–2012–0005–0014, OSHA–2012–0004–0017 for additional detail.

² See Document ID OSHA–2012–0005–0014, OSHA–2012–0004–0017 for additional detail.

³ Based on price of \$170 for a case of 20 found at <https://safety-services-inc.com/3M-particulate-respirator-8233-n100-20-ea-case/>. Accessed June 3, 2025.

2. Are there any other savings for employers that would result from the proposed change?

3. Are there any benefits for worker protection that can be anticipated from this proposed change?

4. Are there any costs for employers that would result from this change that OSHA has not considered?

5. Are there cost savings associated with no longer being restricted to HEPA filters for powered and non-powered air-purifying respirators?

6. How much familiarization time would employers who are new entrants to the market expect to save based on the revisions?

7. Are there additional categories of cost savings that OSHA has not identified?

8. Would the savings to employers outside of general industry and construction be similar to what OSHA has estimated for general industry and construction employers?

A. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

OSHA reviewed this proposed rule under the provisions of the Regulatory Flexibility Act. This rule would eliminate burdensome regulations. Therefore, OSHA initially concludes that the impacts of the revisions would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. OSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

B. Review Under Executive Order 12866

E.O. 12866, “Regulatory Planning and Review” (58 FR 51735 (Oct. 4, 1993)), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in

choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) for review. OIRA has determined that this proposed rule would not constitute a “significant regulatory action” under section 3(f) of E.O. 12866. Accordingly, this proposal was not submitted to OIRA for review under E.O. 12866.

VI. Additional Requirements

A. Requirements for States With OSHA-Approved State Plans

Under section 18 of the OSH Act (29 U.S.C. 651 *et seq.*), Congress expressly provides that States may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards that are “at least as effective” as the Federal standards in providing safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved, State-administered occupational safety and health programs as “State Plans.”⁴

When Federal OSHA promulgates a new standard or a more stringent amendment to an existing standard, State Plans must either amend their standards to be identical to, or “at least as effective as,” the new Federal standard or amendment, or show that an existing State Plan standard covering this issue is “at least as effective” as the new Federal standard or amendment (29 CFR 1953.5(a)). However, when OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plans do not have to amend their

standards, although they may opt to do so. OSHA has preliminarily determined this proposed rule does not impose additional or more stringent requirements than the existing standard, and therefore State Plans are not required to amend their standards. OSHA seeks comment on this assessment of its proposal.

B. OMB Review Under the Paperwork Reduction Act of 1995

The Paperwork Reduction Act (PRA) defines “collection of information” to mean “the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public, of facts or opinions by or for an agency, regardless of form or format” (44 U.S.C. 3502(3)(A)). Under the PRA, a Federal agency cannot conduct or sponsor a collection of information unless it is approved by OMB under the PRA and the agency displays a currently valid OMB control number (44 U.S.C. 3507). Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512(a)(1)). The process for OMB approval is found in 5 CFR part 1320.

This proposed rule would impose no new information collection requirements. Because the revisions are deregulatory and affect only minor changes to the existing information collections in the Cadmium standards (OMB Control Numbers 1218–0185 and 1218–0186), OMB has waived the requirements of 5 CFR part 1320 and approved the modified Information Collection Request (ICR) under existing OMB Control Numbers 1218–0185 and 1218–0186 (*see* 5 CFR 1320.18(d)).

C. Environmental Impacts/National Environmental Policy Act (NEPA)

OSHA has reviewed this proposed rule according to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), as amended by the Fiscal Responsibility Act of 2023 (Pub. L. 118–5, 321, 137 Stat. 10), and the Department of Labor’s NEPA procedures (29 CFR part 11). OSHA has determined that this proposal would have no impact on the quality of the human environment.

D. Other Statutory and Executive Order Considerations

OSHA has considered its obligations under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*) and the Executive Orders on Consultation and Coordination With Indian Tribal

⁴ Of the 29 States and U.S. territories with OSHA-approved State Plans, 22 cover public and private-sector employees: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. The remaining six States and one U.S. territory cover only State and local government employees: Connecticut, Illinois, Maine, Massachusetts, New Jersey, New York, and the Virgin Islands.

Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), Federalism (E.O. 13132, 64 FR 43255 (Aug. 10, 1999)), and Protection of Children From Environmental Health Risks and Safety Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a proposed deregulatory action that involves the removal of requirements, that OSHA does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these statutes and executive orders. Furthermore, OSHA has determined that this proposal is consistent with the policies and directives outlined in E.O. 14192, “Unleashing Prosperity Through Deregulation” and is an Executive Order 14192 deregulatory action.

List of Subjects in 29 CFR Part 1910 and 29 CFR Part 1926

Assigned protection factors, Airborne contaminants, Health, Occupational safety and health, Respirators, Respirator selection.

VII. Authority and Signature

This document was prepared under the direction of Amanda Laihow, Acting Assistant Secretary of Labor for Occupational Safety and Health. It is issued under the authority of sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657), 5 U.S.C. 553, Secretary of Labor’s Order No. 8–2020 (85 FR 58393), and 29 CFR part 1911.

Dated: June 20, 2025.

Amanda Laihow,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

VIII. Regulatory Text

Proposed Amendments

For the reasons set forth in the preamble, OSHA is amending 29 CFR parts 1910 and 1926 as follows:

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Subpart Z—Toxic and Hazardous Substances

■ 1. The authority for 29 CFR 1910 subpart Z is revised to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor’s Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008); 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020

(85 FR 58393); 29 CFR part 1911; and 5 U.S.C. 553, as applicable.

All of subpart Z issued under 29 U.S.C. 655(b), except those substances that have exposure limits listed in Tables Z–1, Z–2, and Z–3 of § 1910.1000. The latter were issued under 29 U.S.C. 655(a).

Section 1910.1000, Tables Z–1, Z–2 and Z–3 also issued under 5 U.S.C. 553, but not under 29 CFR part 1911 except for the arsenic (organic compounds), benzene, cotton dust, and chromium (VI) listings.

Section 1910.1201 also issued under 40 U.S.C. 3704 and 5 U.S.C. 553.

Section 1910.1002 also issued under 5 U.S.C. 553, but not under 29 U.S.C. 655 or 29 CFR part 1911.

Sections 1910.1018, 1910.1029, and 1910.1200 also issued under 29 U.S.C. 653.

Section 1910.1030 also issued under Public Law 106–430, 114 Stat. 1901.

Section 1910.1201 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

■ 2. § 1910.1027 is revised as follows:

■ a. Revise and republish paragraphs (g)(1), (g)(3)(i), and (m)(4)(iii)(E)

■ b. Remove paragraphs (g)(1)(i)–(vii) and (g)(3)(i)(A)–(C).

The revisions and additions read as follows:

§ 1910.1027 Cadmium.

(g) * * *

(1) General. For employees who use respirators required by this section, the employer must provide each employee an appropriate respirator that complies with the requirements of this paragraph. Respirators must be used when the employer determines that they are necessary to protect the health of an employee as required under 29 CFR 1910.134(a)(2).

(2) * * * * *

(3) * * *

(i) Employers must select, and provide to employees, the appropriate respirators specified in paragraph (d)(3)(i)(A) of 29 CFR 1910.134.

* * * * *

(m) * * *

(1) * * * * *

(2) * * * * *

(3) * * * * *

(4) * * *

(i) * * * * *

(ii) * * * * *

(iii) * * *

(A) * * * * *

(B) * * * * *

(C) * * * * *

(D) * * * * *

(E) The purpose, proper selection, fitting, proper use, and limitations of protective clothing;

* * * * *

PART 1926—SAFETY AND HEALTH REGULATIONS FOR CONSTRUCTION

Subpart Z—Toxic and Hazardous Substances

■ 1. The authority for 29 CFR 1926 subpart Z continues to read as follows:

Authority: 40 U.S.C. 3704; 29 U.S.C. 653, 655, 657; and Secretary of Labor’s Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008), 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393), as applicable; and 29 CFR part 1911.

Section 1926.1102 not issued under 29 U.S.C. 655 or 29 CFR part 1911; also issued under 5 U.S.C. 553.

■ 2. § 1926.1127 is revised as follows:

■ a. Revise and republish paragraphs (g)(1), (g)(3)(i), and (m)(4)(iii)(E).

■ b. Remove paragraphs (g)(1)(i)–(vii) and (g)(3)(i)(A)–(C).

The revisions and additions read as follows:

(g) * * *

(1) *General.* For employees who use respirators required by this section, the employer must provide each employee an appropriate respirator that complies with the requirements of this paragraph. Respirators must be used when the employer determines that they are necessary to protect the health of an employee as required under 29 CFR 1910.134(a)(2).

(2) * * * * *

(3) * * *

(i) Employers must select, and provide to employees, the appropriate respirators specified in paragraph (d)(3)(i)(A) of 29 CFR 1910.134.

* * * * *

(m) * * *

(1) * * * * *

(2) * * * * *

(3) * * * * *

(4) * * *

(i) * * * * *

(ii) * * * * *

(iii) * * *

(A) * * * * *

(B) * * * * *

(C) * * * * *

(D) * * * * *

(E) The purpose, proper selection, fitting, proper use, and limitations of protective clothing;

BILLING CODE 4510–26–P

DEPARTMENT OF LABOR**Occupational Safety and Health Administration****29 CFR Parts 1910, 1915, 1917, 1918, 1926, and 1928****[Docket No. OSHA–2020–0004]****RIN 1218–AD36****Occupational Exposure to COVID–19 in Healthcare Settings****AGENCY:** Occupational Safety and Health Administration (OSHA), Labor.**ACTION:** Proposed rule; request for comments.**SUMMARY:** OSHA is proposing to remove OSHA's COVID–19 Emergency Temporary Standard and its associated recordkeeping and reporting provisions from the Code of Federal Regulations.**DATES:** *Comments:* Comments in response to OSHA's proposal must be submitted in Docket No. OSHA–2020–0004 on or before September 2, 2025.**ADDRESSES:***Written comments:* You may submit comments and attachments, identified by Docket No. OSHA–2020–0004, electronically at <http://www.regulations.gov>, which is the Federal e-Rulemaking Portal. Follow the instructions online for making electronic submissions.*Instructions:* All submissions must include the agency's name and the docket number for this rulemaking (Docket No. OSHA–2020–0004). All comments, including any personal information that is provided, are placed in the public docket without change and may be made available online at <http://www.regulations.gov>. Therefore, OSHA cautions commenters about submitting information they do not want made available to the public, or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.When uploading multiple attachments to <http://www.regulations.gov>, please number all of your attachments because <http://www.regulations.gov> will not automatically number the attachments. This numbering will be very useful in identifying all attachments. For example, Attachment 1—title of your document, Attachment 2—title of your document, Attachment 3—title of your document. For assistance with commenting and uploading documents, please see the Frequently Asked Questions on <http://www.regulations.gov>.*Docket:* To read or download comments or other materials in the docket, go to Docket No. OSHA–2020–0004 at <http://www.regulations.gov>. All comments and submissions are listed in the <http://www.regulations.gov> index; however, some information (e.g., copyrighted material) is not publicly available to read or download through that website. All comments and submissions, including copyrighted material, are available for inspection through the OSHA Docket Office. Documents submitted to the docket by OSHA or stakeholders are assigned document identification numbers (Document ID) for easy identification and retrieval. The full Document ID is the docket number plus a unique four-digit code. For example, the Document ID number for OSHA's COVID–19 Healthcare ETS is OSHA–2020–0004–1033. Some Document ID numbers also include one or more attachments.When citing exhibits in the docket, OSHA includes the term “Document ID” followed by the last four digits of the Document ID number. For example, document OSHA–2020–0004–1033 would appear as “Document ID 1033.” Citations also include the attachment number or tab number, if applicable. In a citation that contains two or more Document ID numbers, the Document ID numbers are separated by semi-colons (e.g., “Document ID 1231, Attachment 1; 1383, Attachment 1”). OSHA may also cite items that appear in another docket. When that is the case, OSHA includes the full document ID for the corresponding docket entry. For example, a citation to OSHA's notice seeking public comments on its proposal to extend the approval of the information collection requirements in the COVID–19 Emergency Temporary standard, which is document number 0004 in Docket No. OSHA–2021–0003, would read “Document ID OSHA–2021–0003–0004.” This information can be used to search for a supporting document in the docket at www.regulations.gov. Contact the OSHA Docket Office at (202) 693–2350 (TTY number: 877–889–5627) for assistance in locating docket submissions.**FOR FURTHER INFORMATION CONTACT:***For press inquiries:* Contact Frank Meilinger, Office of Communications, Occupational Safety and Health Administration, U.S. Department of Labor; telephone (202) 693–1999; email oshacomms@dol.gov.*For general information:* Contact Andrew Levinson, Director, Directorate of Standards and Guidance, Occupational Safety and Health Administration, U.S. Department ofLabor; telephone (202) 693–1950; email: osha.dsg@dol.gov.*For copies of this Federal Register document:* Electronic copies of this Federal Register notice are available at <http://www.regulations.gov>. This notice, as well as news releases and other relevant information, are also available at OSHA's web page at www.osha.gov. I. Executive Summary

OSHA is proposing to remove from the Code of Federal Regulations (CFR), the recordkeeping and reporting provisions in 29 CFR 1910 subpart U that are still in effect (specifically 29 CFR 1910.502(q)(2)(ii), (q)(3)(ii)–(iv), and (r)). OSHA requests comment on the proposed removal. OSHA estimates annual cost savings of \$1,587,494 from the removal of these provisions. OSHA also intends to remove the rest of 29 CFR 1910 subpart U from the CFR upon finalization of this rulemaking. This is a deregulatory action per Executive Order 14192, “Unleashing Prosperity Through Deregulation” (90 FR 9065, Feb. 6, 2025).

II. Pertinent Legal Authority

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651 *et seq.*) (“the Act” or “the OSH Act”) is “to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources” (29 U.S.C. 651(b)). To achieve this goal

Congress authorized the Secretary of Labor (“the Secretary”) to promulgate standards to protect workers, including the authority “to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce” (29 U.S.C. 651(b)(3); *see also* 29 U.S.C. 654(a)(2) (requiring employers to comply with OSHA standards), 29 U.S.C. 655(a) (authorizing summary adoption of existing consensus and established federal standards within two years of the Act’s enactment), 29 U.S.C. 655(b) (authorizing promulgation, modification or revocation of standards pursuant to notice and comment), and 29 U.S.C. 655(b)(7) (authorizing OSHA to include among a standard’s requirements labeling, monitoring, medical testing, and other information-transmittal provisions)). An occupational safety and health standard is “. . . a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, *reasonably necessary or appropriate* to provide safe or healthful employment and places of employment” (29 U.S.C. 652(8) (emphasis added)). The Secretary may also issue regulations requiring employers to keep records regarding their activities related to the Act, as well as records of work-related deaths, injuries, and illnesses (29 U.S.C. 657(c)(1)–(2)).

In addition, section 6(c) of the Act gives OSHA the authority to issue Emergency Temporary Standards where it finds a standard is necessary to protect workers from a grave danger (29 U.S.C. 665(c)). As described in more detail in the Background section, below, OSHA issued the bulk of the Emergency Temporary Standard (“ETS”) for COVID-19 pursuant to this rarely used provision. However, the recordkeeping and reporting provisions associated with the ETS were issued under OSHA’s authority to prescribe recordkeeping and reporting requirements in section 8(c)(1)–(3) of the Act (29 U.S.C. 657(c)(1)–(3)). OSHA is engaging in notice and comment rulemaking to remove the recordkeeping and reporting provisions pursuant to the Administrative Procedure Act (APA) (5 U.S.C. 553(b)–(c)). Rulemaking actions that require notice and comment under the APA include repealing a rule (5 U.S.C. 551(5)).

III. Background

On June 21, 2021, OSHA issued an ETS to protect workers in healthcare settings from exposure to SARS-CoV-2, the virus that causes COVID-19 (86 FR

32376, June 21, 2021).¹ At that time, OSHA found that COVID-19 presented a grave danger to healthcare and healthcare support workers and that the ETS was necessary to protect those workers from that grave danger. The ETS was codified at 29 CFR 1910 subpart U. It also served as a proposed rule for a rulemaking on occupational exposure to COVID-19 in healthcare settings, per section 6(c)(3) of the OSH Act (29 U.S.C. 655(c)(3)), so OSHA accepted comments and held an informal rulemaking hearing on the proposed rule (*see* 86 FR 32376; 87 FR 16426, Mar. 23, 2022).

In the same June 2021 **Federal Register** document in which OSHA issued the ETS, OSHA also promulgated COVID-19 recordkeeping and reporting provisions pursuant to a different provision of the OSH Act, section 8(c) (29 U.S.C. 657(c)). For these recordkeeping and reporting provisions, OSHA invoked an independent exemption from the notice and comment requirements of the APA (5 U.S.C. 553(b)(B)),² finding good cause to forgo notice and comment given the grave danger presented by the pandemic (*see* 86 FR 32559). These provisions, which require employers to establish, maintain, and provide copies of a COVID-19 log and to report COVID-19 fatalities and hospitalizations among their staff, were codified at 29 CFR 1910.502(q)(2)(ii), (q)(3)(ii)–(iv), and (r).

On December 27, 2021, OSHA announced on its website that the agency would be unable to finalize a COVID-19 standard for healthcare “in a timeframe approaching the one contemplated by the OSH Act” (*see* Document ID 2491) and stopped enforcing all of 29 CFR 1910 subpart U except for the recordkeeping and reporting provisions. At that time, OSHA also announced that the recordkeeping and reporting requirements in 29 CFR 1910.502 would remain in effect (*see* Document ID 2491). Several years later, on January 15, 2025, OSHA terminated the rulemaking that was initiated by OSHA’s issuance of the ETS and the related recordkeeping and reporting obligations, on the basis that the COVID-19 public

health emergency was over and any ongoing COVID-19 hazards would be better addressed in a rulemaking focusing on the broader hazard of infectious diseases (*see* 90 FR 3665, 3666). Terminating the rulemaking process, however, did not affect the status of either the recordkeeping and reporting requirements or the other provisions, all of which remain in the CFR. Subsequently, on February 5, 2025, OSHA issued a memo temporarily staying enforcement of the recordkeeping and reporting requirements (*see* Document ID 2888). Therefore, at this time, OSHA is not enforcing any of the COVID-19-related requirements that were promulgated in the initial June 2021 notice, although they remain in the text of the CFR at 29 CFR 1910 subpart U.

IV. Explanation of Agency Action

A. Explanation of the Proposed Removal of the Recordkeeping and Reporting Provisions From the Code of Federal Regulations

OSHA is proposing to remove the COVID-19 recordkeeping and reporting provisions that are in 29 CFR 1910 subpart U, specifically 29 CFR 1910.502(q)(2)(ii), (q)(3)(ii)–(iv), and (r). OSHA requests comment on this proposed action.

When these recordkeeping and reporting provisions were promulgated in June 2021, they were promulgated pursuant to section 8(c) of the OSH Act (29 U.S.C. 657(c)), which governs records and other information regarding occupational illnesses and injuries. While OSHA normally engages in notice and comment rulemaking before promulgating regulations pursuant to section 8(c), the agency invoked the “good cause” exemption in the APA (*see* 5 U.S.C. 553(b)(B)), which permitted OSHA to forgo notice and comment for these provisions given the grave danger posed by COVID-19 in the settings covered by the regulations (*see* 86 FR 32376, 32559).

The COVID-19 recordkeeping and reporting provisions require covered healthcare employers to: (1) establish and maintain a COVID-19 log to record all cases of COVID-19 among their employees, regardless of whether the cases are work-related (29 CFR 1910.502(q)(2)(ii)); (2) make the COVID-19 log or some version of it available to their employees, employee representatives, and OSHA (29 CFR 1910.502(q)(3)(ii)–(iv)); and (3) report work-related COVID-19 fatalities and hospitalizations among employees to OSHA, regardless of how much time passed between the work-related

¹ OSHA uses the terms SARS-CoV-2 and COVID-19 interchangeably in this notice.

² The APA notice requirement does not apply “when the agency for good cause finds (and incorporates the finding and a brief statement of reasons therefor in the rules issued) that notice and public procedure thereon are impracticable, unnecessary, or contrary to the public interest” (5 U.S.C. 553(b)(B)). Because of ambiguity in the structure of this APA provision, this “good cause” exemption has sometimes been cited as 5 U.S.C. 553(b)(3)(B), as it was in OSHA’s June 2021 **Federal Register** document.

exposure to COVID-19 and the employer learning about the fatality or hospitalization (29 CFR 1910.502(r)). These provisions were important adjuncts to the COVID-19 ETS and were designed to work hand-in-hand with the ETS's requirements in order to prevent cases of COVID-19 among workers in the covered establishments. For example, under the health screening and management provisions of the ETS, 29 CFR 1910.502(l), employers had to screen their employees for COVID-19 symptoms as well as require employees to report COVID-19 symptoms and infections to their employers; infections would then be recorded on the COVID-19 log, per 29 CFR 1910.502(q)(2)(ii), to assist employers in quickly identifying potential exposures and outbreaks among staff. As OSHA stated in the ETS, "the requirement to establish and maintain a COVID-19 log will ultimately assist employers in preventing workplace transmission [of COVID-19]" (86 FR 32607).

After OSHA stopped enforcing the bulk of 29 CFR 1910 subpart U at the end of 2021, however, the recordkeeping and reporting provisions were no longer part of an integrated regulatory scheme. For instance, without the requirement for employee screening and notification of symptoms and infections in 29 CFR 1910.502(l), the recordkeeping and reporting provisions are of lesser utility, especially now that COVID-19 vaccines are widely available and the public health emergency has ended. COVID-19 cases and reporting are now treated by the Centers for Disease Control and Prevention (CDC) and medical professionals more like flu and other respiratory illnesses than when the ETS was promulgated. For example, in September of 2022 the CDC revised its prior guidance by removing previously recommended work restrictions for asymptomatic healthcare providers who experience "higher risk exposures," negating some of the purpose of tracking COVID-19 cases in healthcare workplaces (see Document ID 2411).

Further, detection of COVID-19 cases and the public health surveillance mechanisms for COVID-19 have changed dramatically since the recordkeeping and reporting provisions were promulgated in 2021. While cases of COVID-19 were initially detected solely through testing conducted by certified laboratories, which were required to report positive cases, most COVID-19 testing is now through self-administered tests at home and there is no requirement to report positive test results (see Document ID OSHA-2021-0003-0008). Commenting on OSHA's

October 9, 2024, **Federal Register** notice soliciting comments on the extension of the information collection requirements in the recordkeeping and reporting provisions ("ICR extension notice"; 89 FR 81949), the Association for Professionals in Infection Control and Epidemiology (APIC) stated that, for these reasons, the accuracy of the data collected by employers under the COVID-19 log provision has declined. "[W]ith the ending of the COVID-19 pandemic and the public health emergency, collection of COVID-19 infection data is not providing the value it once did. Routine workplace testing is not required, and employees are not reliably self-reporting COVID-19 infections, which results in incomplete and unreliable data" (Document ID OSHA-2021-0003-0008).

Even if the data obtained from employee self-reporting was sufficient for an employer to determine which of its employees might be exposed to COVID-19 at work, it is no longer as clear that it is important to provide this additional recordkeeping tool solely for this disease. OSHA notes that if 29 CFR 1910.502(q)(2)(ii) and (q)(3)(ii)-(iv) are removed, some employers that were covered by those requirements would still have an obligation to record work-related cases of COVID-19 on their OSHA Forms 300, 300A, and 301, per OSHA's standard recordkeeping regulations in 29 CFR part 1904 (see 29 CFR 1904 subparts B, C, and E). However, withdrawal of 29 CFR 1910.502(q)(2)(ii) and (q)(3)(ii)-(iv) would relieve employers of the burden of recording some cases of COVID-19 (the work-related ones) on two separate sets of forms (the standard OSHA injury and illness forms as well as the COVID-19 log). APIC urged OSHA to do just that in treating COVID-19 the same as other occupationally acquired illnesses, noting that "other respiratory illnesses which may yield similar outcomes and issues for healthcare workers are not singled out for reporting purposes, so OSHA does not have an accurate assessment of the actual impact of viral respiratory illnesses on the healthcare workforce" (Document ID OSHA-2021-0003-0008).

Similarly, removing the reporting requirements in 29 CFR 1910.502(r) does not eliminate the requirement to report work-related cases of COVID-19 to OSHA. Under OSHA's standard recordkeeping and reporting provisions in 29 CFR part 1904, employers are required to report hospitalizations and deaths that occur as a result of work-related incidents within 24 hours or 30 days, respectively, of an employee's exposure in the work environment (see

29 CFR 1904.39(b)(6)). The reporting requirements associated with the ETS eliminated those time limits, making deaths and hospitalizations caused by workplace exposures to COVID-19 reportable regardless of the time that elapsed between the exposure and the reportable event (see 29 CFR 1910.502(r)(1)-(2)). Returning to the requirements in part 1904, therefore, would mean that employers would have to report fatalities and hospitalizations related to workplace exposures to COVID-19 only if the fatality occurs within 30 days of the exposure or the hospitalization occurs within 24 hours of the exposure; fatalities or hospitalizations occurring outside of these time periods would not have mandatory reporting.

While this reversion is likely to reduce the number of COVID-19 cases reported to OSHA because the incubation time for COVID-19 would make it uncommon to cause hospitalization within 24 hours of exposure, the same is true for the vast majority of other respiratory illnesses. Moreover, this result does not seem inappropriate for COVID-19. OSHA's reporting provisions are primarily designed to assist the agency in its enforcement work; they provide OSHA with information to determine whether it is necessary for the agency to conduct an immediate investigation at the establishment that makes the report (86 FR 32611). Given the changed circumstances since the ETS COVID-19 reporting provisions were promulgated, the requirement to report COVID-19-related fatalities and hospitalizations has lost importance and no longer warrants a separate reporting system beyond that required for other diseases. And, as discussed above with respect to the recordkeeping provisions, employers' knowledge about COVID-19 cases among their employees is now much more limited, so reporting of hospitalizations and fatalities to OSHA would, similarly, be constrained. In addition, several other factors noted previously—the end of the COVID-19 public health emergency, the availability of COVID-19 vaccines, the treatment of COVID-19 more like other respiratory illnesses by medical professionals, and the elimination by the CDC of many COVID-19-related recommendations for healthcare facilities—indicate that the need for a COVID-19-specific reporting provision to trigger immediate OSHA inspections has declined.

Based on the reasons above, the agency believes it is no longer appropriate to apply recording and reporting regulations to COVID-19 that

are more burdensome than those already required for other infectious illnesses under OSHA's generally applicable reporting and recordkeeping requirements in 29 CFR part 1904. To the extent additional reporting or recordkeeping tools are necessary and appropriate, they could be considered as part of a broader rulemaking that would facilitate employer adoption of more cohesive and consistent recordkeeping and reporting policies to address workplace-transmissible diseases. But in the absence of additional evidence that recording and reporting continue to provide meaningful assistance to employers to an extent warranted by the burdens they place on those employers, OSHA proposes to remove these COVID-19-specific requirements. Therefore, OSHA has made a preliminary determination that 29 CFR 1910.502(q)(2)(ii), (q)(3)(ii)–(iv), and (r) should be removed from the CFR. OSHA requests comment on the proposed action.

B. Explanation of the Removal of the Non-Recordkeeping and Reporting Provisions From the Code of Federal Regulations

If OSHA finalizes this rulemaking by removing the recordkeeping and reporting provisions as proposed, OSHA also intends to remove the remaining provisions of 29 CFR 1910 subpart U (*i.e.*, the ones not discussed in section IV.A, above) from the CFR. OSHA is not requesting comment on this aspect of this notice because, as explained below, removing these provisions is simply an administrative formality, the purpose of which is to avoid confusion among the regulated community.

As noted above, OSHA issued the COVID-19 ETS in June 2021 pursuant to section 6(c) of the OSH Act (29 U.S.C. 655(c)), which allows OSHA to bypass the usual notice and comment rulemaking process. Section 6(c)(3) of the Act (29 U.S.C. 655(c)(2), (3)), however, provides that an ETS serves as a proposal for a permanent standard under the OSH Act, and indicates that a permanent standard should be promulgated within six months of publication of the ETS. Approximately six months after issuing the ETS, on December 27, 2021, OSHA announced that it could not complete a final rule “in a timeframe approaching the one contemplated by the OSH Act” and stopped enforcing the non-recordkeeping portions of the healthcare ETS (*see* Document ID 2491). OSHA specified, however, that “the COVID-19 log and reporting provisions, 29 CFR 1910.502(q)(2)(ii), (q)(3)(ii)–(iv), and (r), remain in effect” (*Id.*). Subsequently, in

January 2025, OSHA terminated the rulemaking process that was initiated by issuance of the ETS (*see* 90 FR 3665).

OSHA intends to remove the non-recordkeeping and reporting provisions of the ETS from the CFR upon finalization of this action, but removal of those provisions does not require public notice or comment. OSHA terminated the rulemaking that would have finalized these provisions and, because requirements issued under the OSH Act's ETS authority are time-limited (*see* 29 U.S.C. 655(c)(3)), OSHA can no longer enforce them. Thus, the removal of that language is a purely administrative action for which notice and comment is unnecessary (*see* 5 U.S.C. 553(b)(B)). Accordingly, any comments on removal of the non-recordkeeping and reporting provisions will be considered outside the scope of the rulemaking. If, as discussed in section IV.A, above, OSHA finalizes this action by removing the recordkeeping and reporting provisions as well, this would result in the removal from the CFR of all of 29 CFR 1910 subpart U, namely 29 CFR 1910.501[reserved], .502, .504, .505, and .509.

OSHA also intends to remove outdated references to 29 CFR 1910.501 as part of finalizing this rulemaking. Those references, in 29 CFR 1915.1501, 1917.31, 1918 subpart K, 1926.58, and 1928.21(a)(8) are outdated because they refer to provisions in the CFR which were removed when OSHA withdrew its ETS on COVID-19 Vaccination and Testing (*see* 87 FR 3928, Jan. 26, 2022). Because these references do not point to an existing regulation, they need to be removed from the CFR. As this is a purely administrative action for which notice and comment is unnecessary (*see* 5 U.S.C. 553(b)(B)), any comments on this issue will be considered outside the scope of this rulemaking.

V. Preliminary Economic Analysis

A. Introduction

This section presents OSHA's preliminary economic analysis of the cost savings and foregone benefits anticipated to result from OSHA's proposal to remove from the CFR the recordkeeping and reporting provisions in 29 CFR 1910 subpart U (specifically 29 CFR 1910.502(q)(2)(ii), (q)(3)(ii)–(iv), and (r)), as described in section IV above. OSHA estimates that the proposal to remove these provisions would result in annual cost savings of \$1,587,494 (2024 dollars) and present value cost savings of \$22,678,488 (2024 dollars, at 7 percent discount rate) to employers. This analysis demonstrates that this proposed rule is economically

feasible, as required by section 6(b)(5) of the OSH Act (29 U.S.C. 655(b)(5)); *see Am. Textile Mfrs. Inst., Inc. v. Donovan*, 452 U.S. 490, 513 n. 31 (1981), *United Steelworkers of Am. v. Marshall*, 647 F.2d 1189, 1272 (D.C. Cir. 1981)).

B. Cost Savings

I. Introduction

This section presents OSHA's preliminary estimated cost savings from the proposal to remove the COVID-19 recordkeeping and reporting provisions in 29 CFR 1910 subpart U. OSHA estimates that the proposal will result in annual cost savings of \$1,587,494 (2024 dollars) and present value cost savings of \$22,678,488 (2024 dollars, at 7 percent discount rate) to employers (*see* Document ID 2884 for calculations).³

II. Inputs for Cost Savings Analysis

This section presents the inputs used in the cost savings analysis.

a. Affected Entities, Establishments, and Employees

Table V.B.1. reproduces the industry profile of affected entities, establishments, and employees, by industry and entity size (all sizes, Small Business Administration (SBA)/Regulatory Flexibility Act (RFA)-defined small,⁴ and very small (fewer than 20 employees), respectively) from the preliminary economic analysis for the COVID-19 Healthcare ETS (86 FR 32376, 32483–32558). In that analysis, OSHA estimated that 562,510 entities, 748,816, establishments, and 10,338,353 employees were affected by the COVID-19 ETS and would be impacted by this proposed rule.⁵ OSHA notes that it has not attempted to account for growth in the number of entities and establishments that would be affected

³ Present value of cost savings is calculated using a 7 percent end-of-period discount rate per guidance from the Office of Management and Budget (Document ID 2886).

⁴ There are three types of small entities under the RFA definitions: (1) small businesses; (2) small non-profit organizations; and (3) small governmental jurisdictions. The SBA uses characteristics of businesses classified by NAICS industry as a basis for determining whether businesses are small. SBA-defined small entity size criteria vary by industry but are usually based on either number of employees or revenue. A non-profit organization is considered small if it is independently owned and operated and not dominant in its field (which suggests that some nonprofits might not be small entities, but in this preliminary economic analysis, as OSHA customarily does, all nonprofits are assumed to be small). A small governmental jurisdiction is a government of a city, county, town, township, village, school district, or special district with a population of less than 50,000.

⁵ Cost savings for the recordkeeping provision exclude employers with 10 or fewer employees because they were exempt from this requirement (*see* 29 CFR 1910.502(q)(2)).

by the removal of the COVID-19 recordkeeping and reporting	requirements, so these estimates do not	reflect cost savings realized by new entrants into the market since 2021.

TABLE V.B.1—NUMBER OF AFFECTED ENTITIES, ESTABLISHMENTS, AND EMPLOYEES, BY ENTITY SIZE
[2021]

Source: Preliminary economic analysis for the COVID-19 Healthcare ETS (86 FR 32376, 32483-32558).

Notes: NAICS 922160 includes government and volunteer firefighters, including those cross-trained as EMTs. OSHA obtains estimates of the number of public firefighter-EMT entities and employees from the U.S. Fire Administration (USFA) National Fire Department Registry, rather than a NAICS-based data source.

Due to rounding, figures in the columns may not sum to the totals shown.

b. Compliance Rates

Table V.B.2. presents the rates of baseline compliance with the COVID-19 recordkeeping and reporting provisions estimated in the preliminary economic analysis of the COVID-19 Healthcare ETS (hereafter “pre-ETS rates of compliance”). Depending on the

provision, estimated pre-ETS rates of compliance (*i.e.*, share of establishments in compliance) vary by entity size. For reporting of hospitalizations and recordkeeping, estimated pre-ETS rates of compliance were zero for all affected establishments regardless of entity size.⁶ For reporting of fatalities, estimated pre-ETS rates of compliance were 50

percent for establishments of very small entities and 75 percent for all others. OSHA’s estimated cost savings from this proposal would result from the reduction in the share of establishments that are performing the relevant recordkeeping and reporting activities, from 100 percent of employers to pre-ETS rates of these activities.

TABLE V.B.2—PRE-ETS RATES OF COMPLIANCE BY PROVISION

Provision	Very small (<20 employees) (%)	SBA/RFA-defined small and not very small (%)	Large (%)
Recordkeeping	0	0	0
Reporting COVID-19 fatalities to OSHA	50	75	75
Reporting COVID-19 hospitalizations to OSHA	0	0	0

Source: Preliminary economic analysis for the COVID-19 Healthcare ETS (86 FR 32376, 32483–32558).

c. COVID-19 Cases

Per the preliminary economic analysis of the COVID-19 Healthcare ETS (86 FR 32376, 32483–32558), OSHA assumes that the following COVID-19 positive cases would no longer need to be recorded in the COVID-19 log and that the related hospitalizations and fatalities would no longer need to be reported to OSHA (*see* Document ID 1031, Attachment 4,

“Recordkeeping(Cur)” and “Reporting(Cur)” tabs):

- COVID-19 positive cases: 0.95 percent of employees per establishment⁷
- COVID-19 fatalities: 0.001 percent of employees per establishment
- COVID-19 hospitalizations: 8.4 hospitalizations per fatality

d. Unit Labor Burden

Table V.B.3. presents the unit labor burden estimates for General and

Operations Managers (SOC 11–1020) and Information and Records Clerks (SOC 43–4000) (*e.g.*, per COVID-19 case per establishment) for complying with the COVID-19 recordkeeping and reporting provisions. OSHA assumes that the unit labor burden and job categories have not changed from the preliminary economic analysis of the COVID-19 Healthcare ETS (86 FR 32376, 32483–32558).

TABLE V.B.3—UNIT LABOR BURDEN

Provision	Occupation	Unit	Labor burden
Recordkeeping	Information and Records Clerk	Hours per COVID-19 positive case per establishment.	0.17
Reporting COVID-19 fatalities and hospitalizations to OSHA.	General and Operations Manager	Hours per COVID-19 fatality or hospitalization per establishment.	0.75

Source: Preliminary economic analysis for the COVID-19 Healthcare ETS (86 FR 32376, 32483–32558).

e. Wage Rates

To estimate monetized cost savings from the proposal, OSHA took the loaded hourly wage rates (*i.e.*, base wages plus fringe benefits plus overhead) for General and Operations Manager (SOC 11–1020) and Information and Records Clerk (SOC 43–4000) from the preliminary

economic analysis for the COVID-19 Healthcare ETS (86 FR 32376, 32483–32558) and the accompanying spreadsheet (Document ID 1031, Attachment 4, “Labor Rates” tab) and adjusted these figures from 2018 dollars to 2024 dollars using the Bureau of Economic Analysis’s GDP deflator (Document ID 2885). Table V.B.4.

presents the loaded hourly wage rates (2024 dollars) for General and Operations Managers (SOC 11–1020) and Information and Records Clerks (SOC 43–4000) by industry.

⁶ The recordkeeping provision at 1910.502(q)(2)(ii) requires employers to “establish” (*i.e.*, create) as well as “maintain” a COVID-19 log. OSHA’s estimated annual total cost savings do not include savings for establishing a COVID-19 log because those costs have already been incurred (*see* Document ID 2886) for more detail on sunk costs). To the extent that employers newly entering the market would also incur the cost of establishing the COVID-19 log in absence of the proposed removal, OSHA’s estimated annual total cost savings would be an underestimate. Assuming that establishing the COVID-19 log incurs 0.5 hours of one-time labor

from a General and Operations Manager (SOC 11–1020) per establishment whose entity has more than 10 employees (as assumed in the preliminary economic analysis for the COVID-19 Healthcare ETS (86 FR 32376, 32483–32558)), an average newly entering employer (with more than 10 employees) would save \$54.75 per establishment (2024 dollars) due to no longer being required to establish a COVID-19 log.

⁷ For both the COVID-19 positive case rate and the fatality rate, the estimates from the COVID-19 Healthcare ETS were for a 6-month period, because that rule was only expected to be in effect for

approximately 6 months. In its calculations for this proposal, OSHA doubled the COVID-19 rates presented in the ETS in order to represent a full year of cost savings from removal of these provisions and provide consistency with how OSHA normally presents its regulatory cost figures.

⁸ OSHA used the COVID-19 positive case and fatality numbers from the COVID-19 Healthcare ETS because the CDC database upon which it relied for those numbers in 2021 is not currently providing equivalent data due to a number of factors, one of which is that most COVID-19 tests are performed at home and do not get reported.

TABLE V.B.4—LOADED WAGE RATES
[2024\$]

NAICS code	NAICS title	Setting	Loaded hourly wage (2024\$)	
			General and operations manager (SOC Code 11–1020)	Information and records clerk (SOC Code 43–4000)

Sources: Preliminary economic analysis for the COVID–19 Healthcare ETS (86 FR 32376, 32483–32558); Document ID 1031, Attachment 4, “Labor Rates” tab; Document ID 2885.

Note: For NAICS 922160—Public Firefighter-EMT wages, OSHA assigns the same values estimated for Ambulance Services, as these values are judged to be more representative of wages for this specific service versus wages based on NAICS 922160 data.

III. Total Cost Savings

This section presents a preliminary estimate of annual total cost savings that would result from the proposal. Total cost savings are a product of the number of covered employees in the affected establishments (presented above in *Affected Entities, Establishments, and Employees*, Section V.B.II.a); the associated unit labor burden (presented above in *Unit Labor Burden*, Section V.B.II.d); the rates of COVID–19 cases (presented above in *COVID–19 Cases*, Section V.B.II.c); and the reduction in employers’ compliance, from 100%

current compliance to pre-ETS rates of compliance (presented above in *Compliance Rates*, Section V.B.II.b). Total cost savings in hours are monetized by the associated wage rates (presented above in *Wage Rates*, Section V.B.II.e).

Tables V.B.5., V.B.6., and V.B.7. present OSHA’s preliminary estimates of the annual total cost savings of the proposal (by industry, provision, and overall). OSHA estimates that the proposal will result in annual total cost savings of \$1,587,494 (2024 dollars). OSHA requests comments on all aspects of this preliminary economic analysis,

including whether OSHA should update the aspects of its analysis that were taken from the economic analysis for the COVID–19 Healthcare ETS to reflect more recent data (e.g., establishment numbers, COVID–19 case rate, COVID–19 fatality rate). OSHA also welcomes comment on data sources and methodologies that would be useful for allowing the most clear and direct comparison between the cost estimates in the COVID–19 Healthcare ETS and an analysis of cost savings for removing the recordkeeping and reporting requirements.

TABLE V.B.5—ANNUAL TOTAL COST SAVINGS—RECORDKEEPING
[2024\$]

C. Economic Feasibility

This section presents OSHA's preliminary findings on the economic feasibility of the proposal for affected industries. Because the proposal would remove existing recordkeeping and reporting requirements in 29 CFR 1910 subpart U, this proposed rule would not impose new costs on employers. Instead, as discussed above in *Cost Savings* (Section V.B. of this preamble) OSHA estimates the proposal would result in annual total cost savings of \$1,587,494 (2024 dollars), spread out among affected employers, and would impose no additional costs on employers. Because this proposal would result in cost savings, OSHA preliminarily finds that the proposal would be economically feasible for all affected industries.

D. Benefits

This section discusses potential foregone benefits that would stem from OSHA's proposal to remove the

recordkeeping and reporting provisions in 29 CFR 1910 subpart U.⁹

As discussed in *Explanation of Agency Action* (Section IV. of this preamble), the recordkeeping and reporting provisions in 29 CFR 1910 subpart U were intended to supplement the non-recordkeeping and reporting provisions in the COVID-19 Healthcare ETS and assist employers in effectively preventing workplace transmission of COVID-19 among employees in covered settings. In the COVID-19 Healthcare ETS, OSHA's benefits calculations were therefore performed on a per-case-prevented basis for the standard as a whole, with no attempt to quantify the specific benefits attributable to any particular provision of the standard. As a result, OSHA is unable to quantify any

⁹ In a typical regulatory impact analysis, strictly speaking, reduced costs to employers would be presented as a benefit of a rule while any potential negative impacts from removing requirements that resulted in those lower costs would be a cost of a rule. For the sake of maintaining comparability with the preliminary economic analysis that accompanied the ETS, OSHA is presenting cost savings in the cost section and potential foregone benefits in this benefits section.

benefit reduction, consistent with the 2021 analysis, from the removal of just the recordkeeping and reporting provisions of subpart U. OSHA welcomes comment on this determination.

E. Review Under Executive Order 12866

Executive Order (E.O.) 12866, "Regulatory Planning and Review" (58 FR 51735 (Oct. 4, 1993)), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated

entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit “significant regulatory actions” to OIRA for review. OIRA has determined that this proposed rule does not constitute a “significant regulatory action” under section 3(f) of E.O. 12866. Accordingly, this proposed rule was not submitted to OIRA for review under E.O. 12866.

F. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

OSHA reviewed this proposed rule under the provisions of the Regulatory Flexibility Act. This rule proposes to eliminate burdensome regulations. Therefore, OSHA initially concludes that the impacts of the rescission would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. OSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

VI. Technological Feasibility

This proposed rule would remove recordkeeping and reporting requirements related to COVID-19 in the workplace. Workplaces that were covered by the COVID-19 Healthcare ETS and the related recordkeeping and reporting requirements in 29 CFR 1910 subpart U will no longer have to maintain a COVID-19 log, record cases of COVID-19 on the log, or report to OSHA some fatalities and hospitalizations caused by COVID-19. Because this rule would remove regulatory requirements, OSHA anticipates employers would have no technological issues complying with the rule. Accordingly, the agency preliminarily concludes that the proposed rule would be technologically feasible for affected employers.

VII. Additional Requirements

A. State Plans

Under section 18 of the OSH Act, 29 U.S.C. 651 *et seq.*, Congress expressly provides that States may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards that are “at least as effective” as the Federal standards in providing safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved, State-administered occupational safety and health programs as “State Plans.”¹⁰ Once approved, State Plans have an ongoing obligation to maintain an occupational safety and health program that is at least as effective as Federal OSHA’s program (*see* 29 CFR 1953.1(b)).

When Federal OSHA makes a significant change to the Federal program that would have an adverse impact on the “at least as effective” status of the State program if a parallel State program modification were not made, State adoption of a change in response to the Federal program change is required (29 CFR 1953.4(b)(1)). However, a change to the Federal program that would not result in any diminution of the effectiveness of a State Plan compared to Federal OSHA generally would not require adoption by the State (29 CFR 1953.4(b)(1)).

As explained previously in this preamble, OSHA is proposing a deregulatory action to remove the recordkeeping and reporting provisions in 29 CFR 1910 subpart U that are still in effect (specifically 29 CFR 1910.502(q)(2)(ii), (q)(3)(ii)–(iv), and (r)). OSHA has preliminarily determined the proposed change to the Federal program would not result in any diminution of the effectiveness of a State Plan compared to Federal OSHA, and therefore State Plans are not required to amend their regulations. OSHA seeks comment on this assessment of its proposal.

B. OMB Review Under Paperwork Reduction Act of 1995

The proposed standard would remove regulatory provisions that contain collection-of-information requirements

that have been reviewed and approved by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*) and OMB’s regulations at 5 CFR part 1320. The existing collection-of-information requirements were approved under OMB Control Number 1218–0277. OMB last renewed its approval of the requirements on April 22, 2025.

If OSHA removes 29 CFR 1910.502(q)(2)(ii), (q)(3)(ii)–(iv), and (r), as proposed, the underlying requirements for the information collections would no longer exist. In OSHA’s most recent supporting statement for the information collection requirements contained in these recordkeeping and reporting provisions, the burden on employers of complying with those provisions is 23,714 hours, with an associated cost of \$707,355. This rulemaking, if finalized, would therefore result in the removal of the burden and associated costs in those amounts. OSHA requests comment on this analysis.

C. Other Statutory and Executive Order Considerations

OSHA has considered its obligations under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*), the National Environmental Policy Act (NEPA) (42 U.S.C. 4321 *et seq.*), and the Executive Orders on Consultation and Coordination With Indian Tribal Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), Federalism (E.O. 13132, 64 FR 43255 (Aug. 10, 1999)), and Protection of Children From Environmental Health Risks and Safety Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a deregulatory action that involves the removal of recordkeeping and reporting requirements, that OSHA does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these statutes and executive orders.

List of Subjects in 29 CFR Parts 1910, 1915, 1917, 1918, 1926, and 1928

COVID-19, Disease, Health facilities, Health, Health care, Occupational health and safety, Public health, Quarantine, Reporting and recordkeeping requirements, Respirators, SARS-CoV-2, Telework, Vaccines, Viruses.

VIII. Authority and Signature

Amanda Laihow, Acting Assistant Secretary of Labor for Occupational

¹⁰ Of the 29 States and U.S. territories with OSHA-approved State Plans, 22 cover public and private-sector employees: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. The remaining six States and one U.S. territory cover only State and local government employees: Connecticut, Illinois, Maine, Massachusetts, New Jersey, New York, and the Virgin Islands.

Safety and Health, authorized the preparation of this document under the authority granted by sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, 657); section 107 of the Contract Work Hours and Safety Standards Act (the Construction Safety Act) (40 U.S.C. 333); section 41 of the Longshore and Harbor Worker's Compensation Act (33 U.S.C. 941); 5 U.S.C. 553, Secretary of Labor's Order No. 8–2020 (85 FR 58393), and 29 CFR part 1911.

Dated: June 20, 2025.

Amanda Laihow,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

Proposed Amendments

For the reasons stated in the preamble, OSHA proposes to amend 29 CFR parts 1910, 1915, 1917, 1918, 1926, and 1928 as follows:

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Subpart U—COVID–19

■ 1. The authority for 29 CFR part 1910, subpart U, continues to read as follows:

Authority: 29 U.S.C. 653, 655, and 657; Secretary of Labor's Order No. 8–2020 (85 FR 58393); 29 CFR part 1911; and 5 U.S.C. 553.

■ 2. Remove Subpart U—COVID–19

PART 1915—OCCUPATIONAL SAFETY AND HEALTH STANDARDS FOR SHIPYARD EMPLOYMENT

■ 3. The authority citation for 29 CFR part 1915 continues to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor's Order No. 12–71 (36 FR 8754); 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008), 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393); 29 CFR part 1911; and 5 U.S.C. 553, as applicable.

Subpart Z—Toxic and Hazardous Substances

■ 4. Remove § 1915.1501

PART 1917—MARINE TERMINALS

■ 5. The authority citation for 29 CFR part 1917 continues to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor's Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008), 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393), as applicable; and 29 CFR part 1911.

Sections 1917.28 and 1917.31 also issued under 5 U.S.C. 553.

Section 1917.29 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

[Docket No. OSHA–2025–0011]

RIN 1218–AD62

Cotton Dust

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: This proposed rule revises some substance-specific respirator requirements to allow different types of respirators to be used under OSHA's Cotton Dust standard and better aligns this standard with OSHA's Respiratory Protection standard.

DATES: Comments and other information, including requests for a hearing, must be received on or before September 2, 2025.

Informal public hearing: OSHA will schedule an informal public hearing on the rule if requested during the comment period. If a hearing is requested, the location and date of the hearing, procedures for interested parties to notify the agency of their intention to participate, and procedures for participants to submit their testimony and documentary evidence will be announced in the **Federal Register**.

ADDRESSES:

Written comments: You may submit comments and attachments, identified by Docket No. OSHA–2025–0011, electronically at <https://www.regulations.gov>, which is the Federal e-Rulemaking Portal. Follow the instructions online for making electronic submissions.

Instructions: All submissions must include the agency's name and the docket number for this rulemaking (Docket No. OSHA–2025–0011). When uploading multiple attachments to

regulations.gov, please number all of your attachments because *regulations.gov* will not automatically number the attachments. This will be very useful in identifying all attachments. For example, Attachment 1—title of your document, Attachment 2—title of your document, Attachment 3—title of your document. For assistance with commenting and uploading documents, please see the Frequently Asked Questions on <https://www.regulations.gov>.

All comments, including any personal information you provide, are placed in the public docket without change and may be made available online at <https://www.regulations.gov>. Therefore, OSHA cautions commenters about submitting information they do not want made available to the public, or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.

Docket: The docket for this rulemaking (Docket No. OSHA–2025–0011) is available at <https://www.regulations.gov>, the Federal eRulemaking Portal. Most exhibits are available at <https://www.regulations.gov>; some exhibits (e.g., copyrighted material) are not available to download from that web page. However, all materials in the dockets are available for inspection at the OSHA Docket Office.

- VII. Authority and Signature
- VIII. Regulatory Text

I. Executive Summary

This proposed rule is intended to provide greater compliance flexibility and remove duplicative language in OSHA's Cotton Dust standard (29 CFR 1910.1043). OSHA is proposing to revise some respirator-related provisions where they are unnecessarily prescriptive, which would result in employers having greater flexibility in the respirators they select for exposed workers, while providing equivalent worker protection. This proposal is also consistent with OSHA's intent, when it published the revised Respiratory Protection standard (29 CFR 1910.134), to use it as a foundation for respirator selection in substance-specific standards.

Additionally, OSHA believes that this proposed rule appropriately incorporates advances in technology, which have made some provisions of the Cotton Dust standard outdated. This proposed standard is intended to account for modern knowledge and technology and to streamline the selection of respirators.

II. Legal Authority and Preliminary Findings

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651 *et seq.*) ("the Act" or "the OSH Act") is "to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources" (29 U.S.C. 651(b)). To achieve this goal, Congress authorized the Secretary of Labor ("the Secretary") to promulgate standards to protect workers, including the authority "to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce" (29 U.S.C. 651(b)(3); *see also* 29 U.S.C. 654(a)(2) (requiring employers to comply with OSHA standards), 29 U.S.C. 655(a) (authorizing summary adoption of existing consensus and established federal standards within two years of the Act's enactment), 29 U.S.C. 655(b) (authorizing promulgation, modification or revocation of standards pursuant to notice and comment), and 29 U.S.C. 655(b)(7) (authorizing OSHA to include among a standard's requirements labeling, monitoring, medical testing, and other information-transmittal provisions)). An occupational safety and health standard is ". . . a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably

necessary or appropriate to provide safe or healthful employment and places of employment" (29 U.S.C. 652(8)). The Secretary may also issue regulations requiring employers to keep records regarding their activities relating to the Act, as well as records of work-related deaths, injuries, and illnesses (29 U.S.C. 657(c)(1)–(2)).

Before OSHA may promulgate a health or safety standard, it must find that a standard is reasonably necessary or appropriate within the meaning of section 652(8) of the OSH Act, which OSHA did here in 1978 when it published the first Cotton Dust standard (43 FR 27394). The Supreme Court, in its decision on OSHA's benzene standard, interpreted OSHA's obligation under section 652(8) as requiring it to evaluate "whether significant risks are present and can be eliminated or lessened by a change in practices" (*Indus. Union Dep't, AFL–CIO v. Am. Petroleum Inst.*, 448 U.S. 607, 642 (1980) (plurality opinion)). OSHA determined that cotton dust presented a significant risk to employees when it first promulgated the standard (43 FR 27350). When, as here, OSHA has previously determined that its standard substantially reduces a significant risk, it is unnecessary for the agency to make additional findings on risk for every provision of that standard (*see, e.g., Pub. Citizen Health Research Grp. v. Tyson*, 796 F.2d 1479, 1502 n.16 (D.C. Cir. 1986) (rejecting the argument that OSHA must "find that each and every aspect of its standard eliminates a significant risk")). Rather, once OSHA makes a general significant risk finding in support of a standard, the next question is whether a particular requirement is reasonably related to the purpose of the standard as a whole (*see Asbestos Info. Ass'n/N. Am. v. Reich*, 117 F.3d 891, 894 (5th Cir. 1997); *Forging Indus. Ass'n v. Sec'y of Labor*, 773 F.2d 1436, 1447 (4th Cir. 1985); *United Steelworkers of Am., AFL–CIO–CLC v. Marshall*, 647 F.2d 1189, 1237–38 (D.C. Cir. 1980) ("Lead I")). Therefore, while OSHA is not making a preliminary finding of significant risk for this proposed rule, the agency has made a preliminary determination that the proposed changes are reasonably related to the purpose of the Cotton Dust standard as a whole.

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that is reasonably expected to be developed (*see Am. Iron and Steel Inst. v. OSHA*, 939 F.2d 975, 980 (D.C. Cir. 1991)). Courts have also interpreted

technological feasibility to mean that a typical firm in each affected industry or application group will reasonably be able to implement the requirements of the standard in most operations most of the time (*see, e.g., Public Citizen v. OSHA*, 557 F.3d 165, 170–71 (3d Cir. 2009) (citing *Lead I* at 1272)).

This proposed rule would not substantially modify existing requirements for respiratory protection in workplaces; nor would it create new requirements. All employers in compliance with the existing standard would also be in compliance with the revised standard. Therefore, OSHA has made a preliminary determination that the proposed rule would be technologically feasible.

In evaluating economic feasibility, OSHA must consider the average cost of compliance in an industry rather than costs for individual employers. In its economic analyses, OSHA “must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms” (*Am. Iron and Steel Inst.*, 939 F.2d at 980, quoting *Lead I* at 1272). OSHA has made a preliminary finding that this proposal is economically feasible because it is deregulatory and is expected to reduce costs for employers. OSHA’s economic analysis is presented in Section V.

The Administrative Procedures Act directs agencies to include in each rule adopted “a concise general statement of [the rule’s] basis and purpose” (5 U.S.C. 553(c)); *cf.* 29 U.S.C. 655(e) (requiring the Secretary to publish a “statement of reasons” for any standard promulgated)). This notice satisfies this concise statement requirement.

III. Events Leading to the Proposed Rule

OSHA adopted a Cotton Dust standard in 1978 (43 FR 27394). OSHA also has a general Respiratory Protection standard, 29 CFR 1910.134, which it first promulgated in 1971 (39 FR 9835). OSHA published a revised Respiratory Protection standard on January 8, 1998 (63 FR 1152). The Respiratory Protection standard contains worksite-specific requirements for program administration, as well as procedures for respirator selection, employee training, fit testing, medical evaluation, and respirator use, among other provisions. OSHA noted that the revised standard was to “serve as a ‘building block’ standard with respect to future standards that may contain respiratory protection requirements” (63 FR 1265).

In 2006, OSHA revised the Respiratory Protection standard again to incorporate assigned protection factors (APFs) in the respirator selection process (71 FR 50122–01).

Several OSHA standards regulating exposure to toxic substances and harmful physical agents, including the Cotton Dust standard, require compliance with many provisions of 29 CFR 1910.134. However, when revising the respirator rule, the Agency decided to retain several special respirator selection provisions in the existing substance-specific standards. In this regard, OSHA noted that the respirator selection requirements retained in the substance-specific standards were developed in rulemakings to provide protection against a hazardous characteristic or condition unique to the regulated substance. Consequently, OSHA felt that preserving these provisions in the individual substance-specific standards would maintain the level of respiratory protection afforded to employees.

In this proposal, OSHA is revisiting some of those determinations; the agency now believes that there are additional ways that substance-specific standards can rely on 29 CFR 1910.134 without compromising employee safety. The purpose of revising the respirator-related provisions of OSHA’s Cotton Dust standard is to conform them, to the extent possible, with other substance-specific standards and to the revised 29 CFR 1910.134 in general. The proposed updates would improve the Cotton Dust standard by removing unnecessarily specific respirator requirements that have, since OSHA last updated the standard, become outdated based on current technology, NIOSH certification requirements, and knowledge about respirator technology. This revised standard is intended to take account of new knowledge and technology.

OSHA expects that the rule would ultimately reduce the compliance burden on the regulated community, without compromising worker safety. Therefore, OSHA believes this proposed rule is consistent with Executive Order (E.O.) 14219, “Ensuring Lawful Governance and Implementing the President’s ‘Department of Government Efficiency’ Deregulatory Initiative,” E.O. 14192, “Unleashing Prosperity Through Deregulation,” and the goal of removing regulations that harm the national interest by impeding technological innovation or private enterprise and entrepreneurship.

IV. Summary and Explanation of the Proposed Requirements

OSHA is proposing to revise paragraph (f) of its general industry Cotton Dust standard (29 CFR 1910.1043) to reduce compliance burdens, allow for the use of more up-to-date technology, and improve the comprehensibility of the requirements for respiratory protection programs. These revisions would simplify compliance for employers by removing requirements in 1910.1043 that are duplicative with the requirements in 1910.134 and updating respirator requirements to align with the revised NIOSH certification criteria in 42 CFR part 84. The proposed revisions would also provide more compliance options by removing unnecessary restrictions on respirator selection where another equally protective option exists. Finally, these revisions would also conform this standard, to the extent possible, to other substance-specific standards and to 29 CFR 1910.134, which would simplify review of these regulations and improve comprehensibility. The Agency preliminarily concludes, therefore, that updating these rules is consistent with the goal of facilitating technological innovation and reducing undue burden.

OSHA has preliminarily determined that paragraphs (f)(1)(i) through (iii) unnecessarily duplicate the general provisions covered by 1910.134(a) and is proposing to remove and reserve those paragraphs and add a cross reference to 1910.134(a) in paragraph (f)(1). Employers in compliance with the current version of 1910.1043(f)(1) would not have to change any of their practices to remain in compliance with the changes OSHA is proposing.

Additionally, OSHA is proposing to revise paragraph (f)(3)(i)(A) to remove the prohibition on using filtering facepieces at cotton dust concentrations more than five times the PEL and to allow employees to use any respirator selected in accordance with paragraph (d)(3)(i)(A) of 29 CFR 1910.134. OSHA has preliminarily determined that the prohibition on filtering facepieces was based on outdated technology and certification data and the use of filtering facepieces will not reduce worker safety and health. OSHA is also proposing to remove paragraph (f)(3)(i)(B), which requires HEPA filters for powered and non-powered air-purifying respirators used at cotton dust concentrations greater than ten times the PEL. That requirement was included because HEPA filters were originally part of NIOSH’s certification standards for respirators under 30 CFR part 11. However, NIOSH published revised

requirements for testing and certification procedures and recodified the previous certification standards for other respirator classes as 42 CFR part 84 on June 8, 1995 (60 FR 30336). The HEPA filter requirement is not part of the revised 42 CFR part 84 anymore because additional types of filters have been certified for protection from particulates. OSHA believes that these testing and certification requirements ensure that all particulate filters certified under 42 CFR part 84 are efficient in preventing the penetration of submicron-sized particles and OSHA recognized this when the Agency's revised Respiratory Protection standard was issued on January 8, 1998 (63 FR 1152). In fact, OSHA has issued other substance-specific regulations since the revised Respiratory Protection standard and NIOSH's revised certification requirements were issued and has not incorporated a requirement for HEPA filters in similar respirator provisions in those rules.

OSHA is also considering removing the requirement under paragraph (f)(1)(v) to provide a respirator when an employee requests it. Similarly, OSHA is considering removing the requirement in paragraph (f)(3)(ii) for employers to provide an employee with a powered air-purifying respirator (PAPR) instead of a non-powered air-purifying respirator when the employee chooses to use a PAPR. OSHA believes that the removal of these provisions would not compromise worker safety and health—both provisions are about employee requests and without them workers would still be provided adequate protection. When OSHA updated the Respiratory Protection standard, it determined that it was appropriate to allow an employer to provide additional respiratory protection when requested, rather than mandate it (29 CFR 1910.134(c)(2)). Removing these requirements in the Cotton Dust standard would still allow for voluntary respirator use under some circumstances (*i.e.*, where the employer agrees to provide the equipment) and would better align with the general Respiratory Protection standard. However, the Agency acknowledges that user comfort affects workers' compliance with requirements to wear respiratory protection and questions whether the existing requirements under 1910.134(c)(2) and Table 1 offer equivalent access to alternative styles of respiratory protection. OSHA also understands that some employees may have come to rely on respiratory protection from cotton dust at work, even when the standard does not

require it. OSHA therefore seeks comment on the merits of removing these provisions.

OSHA recognizes that adopting these revisions will also result in the revision of the respiratory protection requirements in OSHA's marine terminals and longshoring standards for cotton dust (*see* 29 CFR 1917.1 and 29 CFR 1918.1, which apply the requirements in 1910.1043 to longshoring and marine terminals). OSHA requests comment regarding whether there are any considerations that are unique to the use of respirators for protection against cotton dust hazards in marine terminals or longshoring, that OSHA should consider when finalizing this proposal.

OSHA requests comments on this proposal, including responses regarding the following issues:

1. Are there any concerns that making the changes described in this proposal will decrease worker safety? If so, which changes do you think would decrease worker safety and why?

2. Is there an alternative approach OSHA should consider?

3. Should OSHA remove the requirements for employers to provide PAPRs when they are requested by employees? In your experience, how often do employees request PAPRs when the Cotton Dust standard does not require them?

4. Should OSHA remove the requirement for employers to provide respirators when requested by an employee? In your experience, how often do employees request to use respirators when the Cotton Dust standard does not require them?

5. Should OSHA maintain the prohibition on using filtering facepiece respirators at cotton dust concentrations more than five times the PEL?

6. Does cross-referencing 29 CFR 1910.134(a) in 1910.1043(f)(1) correctly capture all of the material that was previously specified in paragraphs (f)(1)(i)–(iii) of 1910.1043?

V. Economic Analysis

This proposed rule would expand compliance options for employers under the Cotton Dust standard, 29 CFR 1910.1043, and therefore OSHA has preliminarily concluded that there would be no additional costs imposed by this proposed revision. OSHA also anticipates that there would be some cost savings associated with this rule, including savings based on employers being able to choose more cost-effective respirators and a reduction of the burdens associated with reviewing unnecessarily duplicative regulations. Because this rule would impose no new

costs, OSHA has made a preliminary determination that the rule would be economically feasible.

Based on the Supporting Statement for the Information Collection Request for the Cotton Dust standard, OSHA estimates that there are 3,810 employees exposed to cotton dust in the U.S.¹ This proposed rule would, among other things, allow employers to provide filtering facepiece respirators for exposures up to 10 times the permissible exposure limit (PEL), which would result in employers being able to select a more cost-effective respirator in some cases. For instance, OSHA estimates that a 3M 5000 Series half mask respirator, replaced annually, a 3M P100 particulate filter replaced every 40 hours of use (assumed to be weekly), and one cleaning wipe per shift results in an estimated per-use cost of \$1.72. A 3M industrial N95 filtering facepiece respirator costs \$1.15 and is assumed to be used for one shift.² Switching to the N95 filtering facepiece respirator would result in a difference of about \$0.57 per use or \$142 per employee per year (assuming an employee works 5 shifts per week, 50 weeks per year) (\$429.50 versus \$287.50 per employee per year).

OSHA does not currently have sufficient information to quantify how many of the exposed employees would use an N95 filtering facepiece respirator under the changes proposed in this rule. However, if 50 percent of the exposed employees were to use the N95 filtering facepiece respirators instead of the 3M 5000 Series half mask respirators, that could result in a savings, based on equipment alone, of approximately \$270,510 annually (or about \$2 million over 10 years at a 3 percent discount rate).

OSHA is seeking comments and data on this preliminary analysis, including on the following questions:

1. How much do employers expect to save based on the increased flexibility in respirator selection?

- a. How many employees would employers expect to use filtering facepiece respirators instead of a different respirator under the proposed revisions?

- b. Are there cost savings associated with no longer being restricted to HEPA filters for powered and non-powered air-purifying respirators?

2. Are there any other savings for employers that would result from the proposed change?

¹ See Document ID OSHA–2011–0194–0014 for additional detail.

² All prices based on those listed on uline.com, May 30, 2025.

3. Are there any benefits for worker protection that can be anticipated from this proposed change?

4. How much familiarization time would employers who are new entrants to the market expect to save based on the revisions?

5. Are there any costs for employers that would result from this change that OSHA has not considered?

6. Would the savings to employers outside of general industry be similar to what OSHA has estimated for general industry employers?

A. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

OSHA reviewed this proposed rule under the provisions of the Regulatory Flexibility Act. This rule would eliminate burdensome regulations. Therefore, OSHA initially concludes that the impacts of the revisions would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. OSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

B. Review Under Executive Order 12866

E.O. 12866, “Regulatory Planning and Review” (58 FR 51735 (Oct. 4, 1993)), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or

marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) for review. OIRA has determined that this proposed rule would not constitute a “significant regulatory action” under section 3(f) of E.O. 12866. Accordingly, this proposal was not submitted to OIRA for review under E.O. 12866.

VI. Additional Requirements

A. Requirements for States With OSHA-Approved State Plans

Under section 18 of the OSH Act (29 U.S.C. 651 *et seq.*), Congress expressly provides that States may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards that are “at least as effective” as the Federal standards in providing safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved, State-administered occupational safety and health programs as “State Plans.”³

When Federal OSHA promulgates a new standard or a more stringent amendment to an existing standard, State Plans must either amend their standards to be identical to, or “at least as effective as,” the new Federal standard or amendment, or show that an existing State Plan standard covering this issue is “at least as effective” as the new Federal standard or amendment (29 CFR 1953.5(a)). However, when OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plans do not have to amend their standards, although they may opt to do so. OSHA has preliminarily determined this proposed rule does not impose additional or more stringent requirements than the existing standard, and therefore State Plans are not required to amend their standards. OSHA seeks comment on this assessment of its proposal.

³ Of the 29 States and U.S. territories with OSHA-approved State Plans, 22 cover public and private-sector employees: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. The remaining six States and one U.S. territory cover only State and local government employees: Connecticut, Illinois, Maine, Massachusetts, New Jersey, New York, and the Virgin Islands.

B. OMB Review Under the Paperwork Reduction Act of 1995

The Paperwork Reduction Act (PRA) defines “collection of information” to mean “the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public, of facts or opinions by or for an agency, regardless of form or format” (44 U.S.C. 3502(3)(A)). Under the PRA, a Federal agency cannot conduct or sponsor a collection of information unless it is approved by OMB under the PRA and the agency displays a currently valid OMB control number (44 U.S.C. 3507). Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512(a)(1)). The process for OMB approval is found in 5 CFR part 1320.

This proposed rule would impose no new information collection requirements. Because the revisions are deregulatory and affect only minor changes to the existing information collections in the Cotton Dust standard (OMB Control Number 1218–0061), OMB has waived the requirements of 5 CFR part 1320 and approved the modified Information Collection Request (ICR) under existing OMB Control Number 1218–0061 (*see* 5 CFR 1320.18(d)).

C. Environmental Impacts/National Environmental Policy Act (NEPA)

OSHA has reviewed this proposed rule according to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), as amended by the Fiscal Responsibility Act of 2023 (Pub. L. 118–5, 321, 137 Stat. 10), and the Department of Labor’s NEPA procedures (29 CFR part 11). OSHA has determined that this proposal would have no impact on the quality of the human environment.

D. Other Statutory and Executive Order Considerations

OSHA has considered its obligations under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*) and the Executive Orders on Consultation and Coordination With Indian Tribal Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), Federalism (E.O. 13132, 64 FR 43255 (Aug. 10, 1999)), and Protection of Children From Environmental Health Risks and Safety Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a proposed deregulatory action that involves the removal of requirements, that OSHA

does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these statutes and executive orders. Furthermore, OSHA has determined that this proposal is consistent with the policies and directives outlined in E.O. 14192, “Unleashing Prosperity Through Deregulation” and is an Executive Order 14192 deregulatory action.

List of Subjects in 29 CFR Part 1910

Airborne contaminants, Health, Occupational safety and health, Respirators, Respirator selection.

VII. Authority and Signature

This document was prepared under the direction of Amanda Laihow, Acting Assistant Secretary of Labor for Occupational Safety and Health. It is issued under the authority of sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657), 5 U.S.C. 553, Secretary of Labor’s Order No. 8–2020 (85 FR 58393), and 29 CFR part 1911.

Dated: June 20, 2025.

Amanda Laihow,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

VIII. Regulatory Text

Proposed Amendments

For the reasons set forth in the preamble, OSHA is amending 29 CFR part 1910 as follows:

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Subpart Z—Toxic and Hazardous Substances

■ 1. The authority for 29 CFR 1910 subpart Z is revised to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor’s Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008); 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393); 29 CFR part 1911; and 5 U.S.C. 553, as applicable.

All of subpart Z issued under 29 U.S.C. 655(b), except those substances that have exposure limits listed in Tables Z–1, Z–2, and Z–3 of § 1910.1000. The latter were issued under 29 U.S.C. 655(a).

Section 1910.1000, Tables Z–1, Z–2 and Z–3 also issued under 5 U.S.C. 553, but not under 29 CFR part 1911 except for the arsenic (organic compounds), benzene, cotton dust, and chromium (VI) listings.

Section 1910.1001 also issued under 40 U.S.C. 3704 and 5 U.S.C. 553.

Section 1910.1002 also issued under 5 U.S.C. 553, but not under 29 U.S.C. 655 or 29 CFR part 1911.

Sections 1910.1018, 1910.1029, and 1910.1200 also issued under 29 U.S.C. 653.

Section 1910.1030 also issued under Public Law 106–430, 114 Stat. 1901.

Section 1910.1201 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

■ 2. § 1910.1043 is revised as follows:

■ a. Revise and republish paragraph (f)(1) and (f)(3).

■ b. Reserve paragraphs (f)(1)(i)–(iii).

■ c. Remove paragraphs (f)(3)(i)(A) and (B).

The revisions and additions read as follows:

(f) * * *

(1) *General.* For employees who are required to use respirators by this section, the employer must provide each employee an appropriate respirator that complies with the requirements of this paragraph. Respirators must be used when the employer determines that it is necessary to protect the health of an employee as required under 29 CFR 1910.134(a) and during:

(i) [Reserved]

(ii) [Reserved]

(iii) [Reserved]

(iv) Work operations specified under paragraph (g)(1) of this section.

(v) Periods for which an employee requests a respirator.

(2) * * *

(3) * * *

(i) Employers must select, and provide to employees, the appropriate respirators specified in paragraph (d)(3)(i)(A) of 29 CFR 1910.134.

(ii) * * *

* * * * *

[Docket No. OSHA–2025–0014]

RIN 1218–AD61

Coke Oven Emissions

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: This proposed rule would revise some substance-specific respirator requirements to allow different types of respirators to be used

under OSHA’s Coke Oven Emissions standard and better align this standard with OSHA’s Respiratory Protection standard.

DATES: Comments and other information, including requests for a hearing, must be received on or before September 2, 2025.

Informal public hearing: OSHA will schedule an informal public hearing on the rule if requested during the comment period. If a hearing is requested, the location and date of the hearing, procedures for interested parties to notify the agency of their intention to participate, and procedures for participants to submit their testimony and documentary evidence will be announced in the **Federal Register**.

ADDRESSES:

Written comments: You may submit comments and attachments, identified by Docket No. OSHA–2025–0014, electronically at <https://www.regulations.gov>, which is the Federal e-Rulemaking Portal. Follow the instructions online for making electronic submissions.

Instructions: All submissions must include the agency’s name and the docket number for this rulemaking (Docket No. OSHA–2025–0014). When uploading multiple attachments to [regulations.gov](https://www.regulations.gov), please number all of your attachments because [regulations.gov](https://www.regulations.gov) will not automatically number the attachments. This will be very useful in identifying all attachments. For example, Attachment 1—title of your document, Attachment 2—title of your document, Attachment 3—title of your document. For assistance with commenting and uploading documents, please see the Frequently Asked Questions on <https://www.regulations.gov>.

All comments, including any personal information you provide, are placed in the public docket without change and may be made available online at <https://www.regulations.gov>. Therefore, OSHA cautions commenters about submitting information they do not want made available to the public, or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.

Docket: The docket for this rulemaking (Docket No. OSHA–2025–0014) is available at <https://www.regulations.gov>, the Federal eRulemaking Portal. Most exhibits are available at <https://www.regulations.gov>; some exhibits (e.g., copyrighted material) are not available to download from that web

page. However, all materials in the dockets are available for inspection at the OSHA Docket Office.

I. Executive Summary

This proposed rule is intended to provide greater compliance flexibility and clarify the policies and procedures employers must follow when implementing a respiratory protection program in conjunction with OSHA's Coke Oven Emissions standard (29 CFR 1910.1029). OSHA is proposing to revise a respirator-related provision that is unnecessarily prescriptive, which would result in employers having greater flexibility in the respirators they select for exposed workers, while providing equivalent worker protection. This proposal is also consistent with OSHA's intent, when it published the revised Respiratory Protection standard (29 CFR 1910.134), to use it as a foundation for respirator selection in substance-specific standards.

Additionally, OSHA believes that this proposed rule appropriately incorporates advances in technology, which have made some provisions of the Coke Oven Emissions standard outdated. This proposed standard is intended to account for modern knowledge and technology and to streamline the selection of respirators.

II. Legal Authority and Preliminary Findings

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651 *et seq.*) ("the Act" or "the OSH Act") is "to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources" (29 U.S.C. 651(b)). To achieve this goal, Congress authorized the Secretary of Labor ("the Secretary") to promulgate standards to protect workers, including the authority "to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce" (29 U.S.C. 651(b)(3); *see also* 29 U.S.C. 654(a)(2) (requiring employers to comply with OSHA standards)), 29 U.S.C. 655(a) (authorizing summary adoption of existing consensus and established federal standards within two years of the Act's enactment), 29 U.S.C. 655(b) (authorizing promulgation, modification or revocation of standards pursuant to notice and comment), and 29 U.S.C. 655(b)(7) (authorizing OSHA to include among a standard's requirements labeling, monitoring, medical testing, and other information-transmittal provisions). An occupational safety and health standard is "... a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment" (29 U.S.C. 652(8)). The Secretary may also issue regulations requiring employers to keep records regarding their activities relating to the Act, as well as records of work-related deaths, injuries, and illnesses (29 U.S.C. 657(c)(1)-(2)).

Before OSHA may promulgate a health or safety standard, it must find that a standard is reasonably necessary or appropriate within the meaning of section 652(8) of the OSH Act, which OSHA did here in 1976 when it published the Coke Oven Emissions standard (41 FR 46742). The Supreme Court, in its decision on OSHA's Benzene standard, interpreted OSHA's obligation under section 652(8) as requiring it to evaluate "whether significant risks are present and can be eliminated or lessened by a change in practices" (*Indus. Union Dep't, AFL-CIO v. Am. Petroleum Inst.*, 448 U.S. 607, 642 (1980) (plurality opinion)). In the 1976 final rule, OSHA determined that coke oven emissions posed a significant risk of cancer to exposed workers (41 FR 46744). When, as here, OSHA has previously determined that

its standard substantially reduces a significant risk, it is unnecessary for the agency to make additional findings on risk for every provision of that standard (*see, e.g., Pub. Citizen Health Research Grp. v. Tyson*, 796 F.2d 1479, 1502 n.16 (D.C. Cir. 1986) (rejecting the argument that OSHA must "find that each and every aspect of its standard eliminates a significant risk")). Rather, once OSHA makes a general significant risk finding in support of a standard, the next question is whether a particular requirement is reasonably related to the purpose of the standard as a whole (*see Asbestos Info. Ass'n/N. Am. v. Reich*, 117 F.3d 891, 894 (5th Cir. 1997); *Forging Indus. Ass'n v. Sec'y of Labor*, 773 F.2d 1436, 1447 (4th Cir. 1985); *United Steelworkers of Am., AFL-CIO-CLC v. Marshall*, 647 F.2d 1189, 1237-38 (D.C. Cir. 1980) ("*Lead I*"). Therefore, while OSHA is not making a preliminary finding of significant risk for this proposed rule, the agency has made a preliminary determination that the proposed changes are reasonably related to the purpose of the Coke Oven Emissions standard as a whole.

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that is reasonably expected to be developed (*see Am. Iron and Steel Inst. v. OSHA*, 939 F.2d 975, 980 (D.C. Cir. 1991)). Courts have also interpreted technological feasibility to mean that a typical firm in each affected industry or application group will reasonably be able to implement the requirements of the standard in most operations most of the time (*see, e.g., Public Citizen v. OSHA*, 557 F.3d 165, 170-71 (3d Cir. 2009) (citing *Lead I* at 1272)).

This proposed rule would not substantially modify existing requirements for respiratory protection in workplaces; nor would it create new requirements. All employers in compliance with the existing standard would also be in compliance with the revised standard. Therefore, OSHA has made a preliminary determination that the proposed rule would be technologically feasible.

In evaluating economic feasibility, OSHA must consider the average cost of compliance in an industry rather than costs for individual employers. In its economic analyses, OSHA "must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms" (*Am. Iron and Steel*

Inst., 939 F.2d at 980, quoting *Lead I* at 1272). OSHA has made a preliminary finding that this proposal is economically feasible because it is deregulatory and is expected to reduce costs for employers. OSHA's economic analysis is presented in Section V.

The Administrative Procedures Act directs agencies to include in each rule adopted "a concise general statement of [the rule's] basis and purpose" (5 U.S.C. 553(c)); *cf.* 29 U.S.C. 655(e) (requiring the Secretary to publish a "statement of reasons" for any standard promulgated)). This notice satisfies this concise statement requirement.

III. Events Leading to the Proposed Rule

OSHA adopted a Coke Oven Emissions standard in 1976 (41 FR 46742). OSHA also has a general Respiratory Protection standard, 29 CFR 1910.134, which it first promulgated in 1971 (39 FR 9835). OSHA published a revised Respiratory Protection standard on January 8, 1998 (63 FR 1152). The Respiratory Protection standard contains worksite-specific requirements for program administration, as well as procedures for respirator selection, employee training, fit testing, medical evaluation, and respirator use, among other provisions. OSHA noted that the revised standard was to "serve as a 'building block' standard with respect to future standards that may contain respiratory protection requirements" (63 FR 1265). In 2006, OSHA revised the Respiratory Protection standard again to incorporate assigned protection factors (APFs) in the respirator selection process (71 FR 50122–01).

Several OSHA standards regulating exposure to toxic substances and harmful physical agents, including the Coke Oven Emissions standard, require compliance with many provisions of 29 CFR 1910.134. However, when revising the respirator rule, the Agency decided to retain several special respirator selection provisions in the existing substance-specific standards. In this regard, OSHA noted that the respirator selection requirements retained in the substance-specific standards were developed in rulemakings to provide protection against a hazardous characteristic or condition unique to the regulated substance. Consequently, OSHA felt that preserving these provisions in the individual substance-specific standards would maintain the level of respiratory protection afforded to employees.

In this proposal, OSHA is revisiting some of those determinations; the agency now believes that there are additional ways that substance-specific

standards can rely on 29 CFR 1910.134 without compromising employee safety. The purpose of revising the respirator-related provisions of OSHA's Coke Oven Emissions standard is to conform them, to the extent possible, with other substance-specific standards and to the revised 29 CFR 1910.134 in general. The proposed updates would improve these substance-specific standards, including Coke Oven Emissions, because they will allow employers to select from a wider range of respirators, based on current technology and practices for respirator use, to protect workers. OSHA also believes that advances in technology have made the substance-specific standards outdated in some areas. This revised standard is intended to take account of new knowledge and technology.

OSHA expects that the rule would ultimately reduce the compliance burden on the regulated community, without compromising worker safety. Therefore, OSHA believes this proposed rule is consistent with Executive Order (E.O.) 14219, "Ensuring Lawful Governance and Implementing the President's 'Department of Government Efficiency' Deregulatory Initiative," E.O. 14192, "Unleashing Prosperity Through Deregulation," and the goal of removing regulations that harm the national interest by impeding technological innovation or private enterprise and entrepreneurship.

IV. Summary and Explanation of the Proposed Requirements

OSHA is proposing to revise paragraphs (g) and (k) of its general industry Coke Oven Emissions standard (29 CFR 1910.1029) to reduce compliance burdens, allow for the use of more up-to-date technology, and improve the comprehensibility of the requirements for respiratory protection programs. These revisions would improve comprehensibility and simplify compliance for employers by removing requirements in 1910.1029 that are duplicative with the requirements in 1910.134. The proposed revisions would also provide more compliance options by removing unnecessary restrictions on respirator selection where another equally protective option exists. Finally, these revisions would also conform this standard, to the extent possible, to other substance-specific standards and to 29 CFR 1910.134, which would simplify review of these regulations by employers. The Agency preliminarily concludes, therefore, that updating these rules is consistent with the goal of facilitating the use of new technology and reducing undue burden.

OSHA has preliminarily determined that paragraphs (g)(1)(i) through (iv) of the Coke Oven Emissions standard unnecessarily duplicate the general provisions covered by 1910.134(a) and is proposing to remove those paragraphs and add a cross reference to 1910.134(a)(2) in paragraph (g)(1). OSHA does not intend for these changes to add to or change the regulatory burden on employers; actions that comply with the requirements in 1910.1029(g) would also be in compliance with proposed paragraph (g).

OSHA is also proposing to remove the portion of paragraph (g)(3) requiring employers to provide a filtering facepiece respirator "only when it functions as a filter respirator for coke oven emissions particulates." OSHA has preliminarily determined that the respirator-selection provisions for coke oven emissions are covered by 1910.134(d), the prohibition on filtering facepieces was based on outdated technology and certification data, and the use of filtering facepieces will not reduce worker safety and health.

Finally, the agency has preliminarily determined that two respiratory protection training requirements in the Coke Oven Emissions standard are unnecessary. First, OSHA is proposing to remove a provision in paragraph (k)(1)(iii) that requires more frequent employee training on the hazards of exposure to coke oven emissions, which expired in 1978. Second, paragraph (k)(1)(iv)(b) of the Coke Oven Emissions standard, which requires training on "The purpose, proper use, and limitations of respiratory protection devices," unnecessarily duplicates the training requirements in the Respiratory Protection standard at 1910.134(k). OSHA is therefore proposing to remove and reserve paragraph (k)(1)(iv)(b).

OSHA recognizes that adopting these revisions will also result in the revision of the respiratory protection requirements in OSHA's marine terminals and longshoring standards for coke oven emissions (*see* 29 CFR 1917.1 and 29 CFR 1918.1, which apply the requirements in 1910.1029 to longshoring and marine terminals). OSHA requests comment regarding whether there are any considerations that are unique to the use of respirators for protection against coke oven emissions hazards in marine terminals or longshoring, that OSHA should consider when finalizing this proposal.

OSHA requests comments on the following issues:

1. Are there any concerns that making the changes described in this proposal will decrease worker safety?

2. Should OSHA retain the prohibition on using filtering facepiece respirators unless they function as a filter respirator for coke oven emissions particulates?

3. Will references to 1910.134 adequately capture the material in the current provisions that OSHA is proposing to remove?

4. Are there alternative approaches OSHA should consider to the revisions it is proposing?

V. Economic Analysis

This proposed rule would expand compliance options for employers under the Coke Oven Emissions standard, 29 CFR 1910.1029, and therefore OSHA has preliminarily concluded that there will be no additional costs imposed by this proposed revision. OSHA also anticipates that there would be some cost savings associated with this rule, including savings based on employers being able to choose more cost-effective respirators and a reduction of the burdens associated with reviewing unnecessarily duplicative regulations. Because this rule would impose no new costs, OSHA has made a preliminary determination that the rule would be economically feasible.

Based on the Supporting Statement for the Information Collection Request for the Coke Oven Emissions standard, OSHA estimates that there are 1,196 employees exposed to coke oven emissions in the U.S.¹ This proposed rule would, among other things, remove the limitations on employees using filtering facepiece respirators under the standard. Assuming that employers were previously providing half face respirators, OSHA estimates that a 3M model 5000 half face respirator replaced annually, a 3M P100 particulate filter replaced every 40 hours of use (assumed to be weekly), and one cleaning wipe per shift results in an estimated per-use cost of about \$1.72.² An N95 respirator replaced every shift costs of \$1.15.³ Over the course of a year (assuming an employee works 5 shifts per week and 50 weeks per year) this means a difference in per-employee costs of \$142. Assuming 50 percent of employers opt for disposable N95 respirators, the cost savings could be \$85,000 annually (or about \$632,000 over 10 years at a 3 percent discount rate).

¹ See Document ID OSHA–2011–0181–0014 for additional detail.

² Prices based on those listed on *uline.com*, accessed June 3, 2025.

³ Prices based on those listed on *uline.com*, accessed June 3, 2025.

OSHA is seeking comments and data on this preliminary analysis, including on the following questions:

1. How much do employers expect to save based on the increased flexibility in respirator selection?

2. Are there any other savings for employers that would result from the proposed change?

3. Are there any benefits for worker protection that can be anticipated from this proposed change?

4. Are there any costs for employers that would result from this change that OSHA has not considered?

A. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

OSHA reviewed this proposed rule under the provisions of the Regulatory Flexibility Act. This rule would eliminate burdensome regulations. Therefore, OSHA initially concludes that the impacts of the revisions would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. OSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

B. Review Under Executive Order 12866

E.O. 12866, “Regulatory Planning and Review” (58 FR 51735 (Oct. 4, 1993)), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the

desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) for review. OIRA has determined that this proposed rule would not constitute a “significant regulatory action” under section 3(f) of E.O. 12866. Accordingly, this proposal was not submitted to OIRA for review under E.O. 12866.

VI. Additional Requirements

A. Requirements for States With OSHA-Approved State Plans

Under section 18 of the OSH Act (29 U.S.C. 651 *et seq.*), Congress expressly provides that States may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards that are “at least as effective” as the Federal standards in providing safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved, State-administered occupational safety and health programs as “State Plans.”⁴

When Federal OSHA promulgates a new standard or a more stringent amendment to an existing standard, State Plans must either amend their standards to be identical to, or “at least as effective as,” the new Federal standard or amendment, or show that an existing State Plan standard covering this issue is “at least as effective” as the new Federal standard or amendment (29 CFR 1953.5(a)). However, when OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plans do not have to amend their standards, although they may opt to do so. OSHA has preliminarily determined this proposed rule does not impose additional or more stringent requirements than the existing standard, and therefore State Plans are not required to amend their standards. OSHA seeks comment on this assessment of its proposal.

⁴ Of the 29 States and U.S. territories with OSHA-approved State Plans, 22 cover public and private-sector employees: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. The remaining six States and one U.S. territory cover only State and local government employees: Connecticut, Illinois, Maine, Massachusetts, New Jersey, New York, and the Virgin Islands.

B. OMB Review Under the Paperwork Reduction Act of 1995

The Paperwork Reduction Act (PRA) defines “collection of information” to mean “the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public, of facts or opinions by or for an agency, regardless of form or format” (44 U.S.C. 3502(3)(A)). Under the PRA, a Federal agency cannot conduct or sponsor a collection of information unless it is approved by OMB under the PRA and the agency displays a currently valid OMB control number (44 U.S.C. 3507). Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512(a)(1)). The process for OMB approval is found in 5 CFR part 1320.

This proposed rule would impose no new information collection requirements. Because the revisions are deregulatory and affect only minor changes to the existing information collections in the Coke Oven Emissions standard (OMB Control Number 1218–0128), OMB has waived the requirements of 5 CFR part 1320 and approved the modified Information Collection Request (ICR) under existing OMB Control Number 1218–0128 (*see* 5 CFR 1320.18(d)).

C. Environmental Impacts/National Environmental Policy Act (NEPA)

OSHA has reviewed this proposed rule according to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), as amended by the Fiscal Responsibility Act of 2023 (Pub. L. 118–5, 321, 137 Stat. 10), and the Department of Labor’s NEPA procedures (29 CFR part 11). OSHA has determined that this proposal would have no impact on the quality of the human environment.

D. Other Statutory and Executive Order Considerations

OSHA has considered its obligations under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*) and the Executive Orders on Consultation and Coordination With Indian Tribal Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), Federalism (E.O. 13132, 64 FR 43255 (Aug. 10, 1999)), and Protection of Children From Environmental Health Risks and Safety Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a proposed deregulatory action that involves the removal of requirements, that OSHA

does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these statutes and executive orders. Furthermore, OSHA has determined that this proposal is consistent with the policies and directives outlined in E.O. 14192, “Unleashing Prosperity Through Deregulation” and is an Executive Order 14192 deregulatory action.

List of Subjects in 29 CFR Part 1910

Assigned protection factors, Airborne contaminants, Health, Occupational safety and health, Respirators, Respirator selection.

VII. Authority and Signature

This document was prepared under the direction of Amanda Laihow, Acting Assistant Secretary of Labor for Occupational Safety and Health. It is issued under the authority of sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657), 5 U.S.C. 553, Secretary of Labor’s Order No. 8–2020 (85 FR 58393), and 29 CFR part 1911.

Dated: June 20, 2025.

Amanda Laihow,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

VIII. Regulatory Text

Proposed Amendments

For the reasons set forth in the preamble, OSHA is amending 29 CFR part 1910 as follows:

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Subpart Z—Toxic and Hazardous Substances

■ 1. The authority for 29 CFR 1910 subpart Z is revised to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor’s Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008); 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393); 29 CFR part 1911; and 5 U.S.C. 553, as applicable.

All of subpart Z issued under 29 U.S.C. 655(b), except those substances that have exposure limits listed in Tables Z–1, Z–2, and Z–3 of § 1910.1000. The latter were issued under 29 U.S.C. 655(a).

Section 1910.1000, Tables Z–1, Z–2 and Z–3 also issued under 5 U.S.C. 553, but not under 29 CFR part 1911 except for the arsenic (organic compounds), benzene, cotton dust, and chromium (VI) listings.

Section 1910.1001 also issued under 40 U.S.C. 3704 and 5 U.S.C. 553.

Section 1910.1002 also issued under 5 U.S.C. 553, but not under 29 U.S.C. 655 or 29 CFR part 1911.

Sections 1910.1018, 1910.1029, and 1910.1200 also issued under 29 U.S.C. 653.

Section 1910.1030 also issued under Public Law 106–430, 114 Stat. 1901.

Section 1910.1201 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

■ 2. § 1910.1029 is revised as follows:

■ a. Revise and republish paragraphs (g)(1), (g)(3), and (k)(1)(iii)

■ b. Remove paragraphs (g)(1)(i)–(iv)

■ c. Remove and reserve paragraph (k)(1)(iv)(b).

The revisions and additions read as follows:

(g) * * *

(1) *General.* For employees who use respirators required by this section, the employer must provide each employee with an appropriate respirator that complies with the requirements of this paragraph. Respirators must be used when the employer determines that they are necessary to protect the health of an employee as required under 29 CFR 1910.134(a)(2).

(2) * * *

(3) *Respirator selection.* Employers must select, and provide to employees, the appropriate respirators specified in paragraph (d)(3)(i)(A) of 29 CFR 1910.134.

* * * * *

(k) * * *

(1) * * *

(i) * * *

(ii) * * *

(iii) The training program shall be provided at least annually for all employees who are employed in the regulated area.

(iv) * * *

(a) * * *

(b) [Reserved]

* * * * *

BILLING CODE 4510–26–P

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Part 1917

[Docket No. OSHA–2025–0008]

RIN 1218–AD52

House Falls in Marine Terminals

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: This proposed rule removes OSHA's House Falls in Marine Terminals Standard from the Code of Federal Regulations.

DATES: Comments and other information, including requests for a hearing, must be received on or before September 2, 2025.

Informal public hearing: OSHA will schedule an informal public hearing on the rule if requested during the comment period. If a hearing is requested, the location and date of the hearing, procedures for interested parties to notify the agency of their intention to participate, and procedures for participants to submit their testimony and documentary evidence will be announced in the **Federal Register**.

ADDRESSES:

Written comments: You may submit comments and attachments, identified by Docket No. OSHA-2025-0008, electronically at <https://www.regulations.gov>, which is the Federal e-Rulemaking Portal. Follow the instructions online for making electronic submissions.

Instructions: All submissions must include the agency's name and the docket number for this rulemaking (Docket No. OSHA-2025-0008). When uploading multiple attachments to <https://www.regulations.gov>, please number all of your attachments because <https://www.regulations.gov> will not automatically number the attachments. This will be very useful in identifying all attachments. For example, Attachment 1—title of your document, Attachment 2—title of your document, Attachment 3—title of your document. For assistance with commenting and uploading documents, please see the Frequently Asked Questions on <https://www.regulations.gov>.

All comments, including any personal information you provide, are placed in the public docket without change and may be made available online at <https://www.regulations.gov>. Therefore, OSHA cautions commenters about submitting information they do not want made available to the public or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.

Docket: The docket for this rulemaking (Docket No. OSHA-2025-0008) is available at <https://www.regulations.gov>, the Federal eRulemaking Portal. Most exhibits are available at <https://www.regulations.gov>; some exhibits (e.g., copyrighted material) are not available to download from that web

page. However, all materials in the dockets are available for inspection at the OSHA Docket Office.

FOR FURTHER INFORMATION CONTACT:

For press inquiries: Contact Frank Meilinger, Director, OSHA Office of Communications, Occupational Safety and Health Administration; telephone: (202) 693-1999; email: meilinger.francis2@dol.gov.

General information and technical inquiries: Contact Andrew Levinson, Director, OSHA Directorate of Standards and Guidance, Occupational Safety and Health Administration; telephone: (202) 693-1950; email: osha.dsg@dol.gov.

Copies of this Federal Register notice: Electronic copies are available at <https://www.regulations.gov>. This **Federal Register** notice, as well as news releases and other relevant information, also are available at OSHA's web page at <https://www.osha.gov>. A "100-word summary" is also available on <https://www.regulations.gov>.

SUPPLEMENTARY INFORMATION:

Table of Contents

- I. Executive Summary
- II. Legal Authority and Preliminary Findings
- III. Background
- IV. Explanation of the Proposed Removal of the House Falls in Marine Terminals Standard From the Code of Federal Regulations
- V. Preliminary Economic Analysis
- VI. Additional Requirements
- VII. Authority and Signature

I. Executive Summary

The intent of this proposed rule is to remove the House Falls in Marine Terminals Standard, 29 CFR 1917.41 ("House Falls Standard"), from the Code of Federal Regulations because that standard is no longer necessary to protect employees working in marine terminals from occupational safety and health hazards. This is a deregulatory action per Executive Order 14192, "Unleashing Prosperity Through Deregulation" (90 FR 9065, Feb. 6, 2025).

II. Legal Authority and Preliminary Findings

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651 *et seq.*) ("the Act" or "the OSH Act") is "to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources" (29 U.S.C. 651(b)). To achieve this goal Congress authorized the Secretary of Labor ("the Secretary") to promulgate standards to protect workers, including the authority "to set mandatory occupational safety and health

standards applicable to businesses affecting interstate commerce" (29 U.S.C. 651(b)(3); see also 29 U.S.C. 654(a)(2) requiring employers to comply with OSHA standards), 29 U.S.C. 655(a) (authorizing summary adoption of existing consensus and established federal standards within two years of the Act's enactment), and 29 U.S.C. 655(b) (authorizing promulgation, modification or revocation of standards pursuant to notice and comment)). An occupational safety and health standard is ". . . a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment" (29 U.S.C. 652(8)).

Before OSHA may promulgate a health or safety standard, it must find that a standard is reasonably necessary or appropriate within the meaning of section 652(8) of the OSH Act. As required by the OSH Act, OSHA originally determined that the Standards for Marine Terminals would substantially reduce a significant risk of material harm when promulgating those standards (see 48 FR 30886, 30887 (July 5, 1983)). Once OSHA makes a general significant risk finding in support of a standard, the next question is whether a particular requirement is reasonably related to the purpose of the standard as a whole. See *Asbestos Info. Ass'n/N. Am. v. Reich*, 117 F.3d 891, 894 (5th Cir. 1997); *Forging Indus. Ass'n v. Sec'y of Labor*, 773 F.2d 1436, 1447 (4th Cir. 1985); *United Steelworkers of Am., AFL-CIO-CLC v. Marshall*, 647 F.2d 1189, 1237-38 (D.C. Cir. 1980) ("*Lead I*").

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that is reasonably expected to be developed (see *Am. Iron and Steel Inst. v. OSHA*, 939 F.2d 975, 980 (D.C. Cir. 1991)).

Courts have also interpreted technological feasibility to mean that a typical firm in each affected industry or application group will reasonably be able to implement the requirements of the standard in most operations most of the time (see, e.g., *Public Citizen v. OSHA*, 557 F.3d 165, 170-71 (3d Cir. 2009) (citing *Lead I*, 647 F.2d at 1272)).

Because this proposed rule would remove an existing OSHA requirement from the CFR, OSHA anticipates employers would have no technological issues complying with the rule. Accordingly, the agency preliminarily finds that the proposed rule is

technologically feasible for affected employers.

In determining economic feasibility, OSHA must consider the cost of compliance in an industry rather than on individual employers. In its economic analyses, OSHA “must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms” (*Am. Iron and Steel Inst.*, 939 F.2d at 980, quoting *Lead I*, 647 F.2d at 1272). OSHA has preliminarily determined that this proposed rule is economically feasible because this action is deregulatory and imposes no additional costs. OSHA’s economic analysis of the cost savings are presented in Section V.

The Administrative Procedures Act directs agencies to include in each rule adopted “a concise general statement of [the rule’s] basis and purpose” (5 U.S.C. 553(c)); cf. 29 U.S.C. 655(e) (requiring the Secretary to publish a “statement of reasons” for any standard promulgated)). This notice satisfies this concise statement requirement.

III. Background

OSHA first adopted the House Falls Standard in 1983, as part of its Marine Terminals rulemaking, to address serious occupational safety and health hazards in the marine terminals industry (see 48 FR 30886 (July 5, 1983)). The House Falls Standard requires that: span beams be secured to prevent accidental dislodgement; a safe means of access be provided for employees working with house fall blocks; and designated employees inspect chains, links, shackles, swivels, blocks and other loose gear used in house fall operations before each day’s use. Defective gear is not to be used (29 CFR 1917.41). House falls are spans and supporting members, winches, blocks, and standing and running rigging forming part of a marine terminal and used with a vessel’s cargo gear to load or unload by means of married falls (29 CFR 1917.2).

The House Falls standard is one of several that protects employees working in marine terminals from the occupational safety and health hazards to which they are exposed (see 29 CFR pt. 1917). For example, in addition to containing the House Falls Standard, the Marine Terminals Standards contain standards protecting employees from slippery conditions (29 CFR 1917.12) and hazardous cargo (29 CFR 1917.22). The Marine Terminals Standards apply to work such as loading, unloading,

movement or other handling of cargo in marine terminals (29 CFR 1917.1).

Marine terminals are wharves, bulkheads, quays, piers, docks and other berthing locations and adjacent storage or adjacent areas and structures associated with the primary movement of cargo or materials from vessel to shore or shore to vessel including structures which are devoted to receiving, handling, holding, consolidating and loading or delivery of waterborne shipments or passengers, including areas devoted to the maintenance of the terminal or equipment.

IV. Explanation of the Proposed Removal of the House Falls in Marine Terminals Standard From the Code of Federal Regulations

OSHA is proposing to remove the House Falls Standard from the CFR because that standard is no longer necessary to protect employees working in marine terminals from occupational safety and health hazards. When OSHA first promulgated the Marine Terminals Standards in 1983, house falls were generally employed by the marine terminals industry to load and unload cargo. It is OSHA’s understanding that the marine terminals industry does not currently employ house falls because most cargo has been containerized and is moved by cranes. Moreover, OSHA has not issued a citation for a violation of this standard since 2012 or earlier. Therefore, consistent with Executive Order (E.O.) 14219, “Ensuring Lawful Governance and Implementing the President’s ‘Department of Government Efficiency’ Deregulatory Initiative,” E.O. 14192, “Unleashing Prosperity Through Deregulation,” and the goal of significantly reducing the private expenditures required to comply with Federal regulations to secure America’s economic prosperity and national security and the highest possible quality of life for each citizen, OSHA preliminarily concludes that removing the House Falls Standard from the CFR will reduce the compliance burden on the regulated community, without compromising worker safety.

Questions:

1. Is the House Falls Standard still necessary to protect employees working in marine terminals from occupational safety and health hazards? Will removal of the House Falls Standard from the CFR compromise worker safety? Please explain.

2. Is OSHA’s understanding correct that the marine terminals industry does not currently employ house falls because most cargo has been

containerized and is moved by cranes? Please explain.

V. Preliminary Economic Analysis

Executive Orders 12866 and 13563, the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1532(a)) require that OSHA estimate the benefits, costs, and net benefits of regulations, and analyze the impacts of certain rules that OSHA promulgates. Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

This proposed rule is not a “significant regulatory action” under Executive Order 12866 or UMRA, or a “major rule” under the Congressional Review Act (5 U.S.C. 801 *et seq.*). Neither the benefits nor the costs of this proposed rule would exceed \$100 million in any given year. This proposal would, however, result in a net cost savings for employers in marine terminal and longshoring operations, which are the only industries throughout OSHA’s jurisdiction affected by the rescission of 29 CFR 1917.41.

Furthermore, as discussed below in Review Under the Regulatory Flexibility Act, because the proposed rule would not impose any costs, OSHA certifies that it would not have a significant economic impact on a substantial number of small entities.

OSHA estimates that there are currently 2,617 establishments in maritime affected by OSHA standards addressing house falls (U.S. Census Bureau, 2024). Those establishments are found in the following industries: Port and Harbor Operations (NAICS 488310), Marine Cargo Handling (NAICS 488320), Navigational Services to Shipping (NAICS 488330), and Other Support Activities for Water Transportation (NAICS 488390). The proposed rescission of the standards addressing house falls will, among other things, eliminate the time necessary for new establishments and newly hired occupational health and safety specialists at existing establishments to familiarize themselves with the requirements found in 29 CFR 1917.41. Based on an average annual establishment entry rate of 10 percent (U.S. Census Bureau, 2025), an average hire rate of 43.9 percent (BLS, 2025), and 10 minutes less time spent on regulatory familiarization at a loaded hourly wage rate for an occupational health and safety specialist of \$65.41, OSHA estimates that this deregulatory action would result in \$15,377 in cost savings annually.

OSHA also estimated the impacts under an alternative scenario where only new entrants into the industry would be affected by the rescission of 29 CFR 1917.41. This scenario assumes that for non-entrant (*i.e.*, existing) establishments within an industry, the familiarization time saved for newly hired occupational health and safety specialists is negligible due to knowledge of the requirements in section 1917.41 retained institutionally within the business entity by team leaders and other senior staff. For this scenario, costs savings that result from rescinding section 1917.41 would be \$2,853 annually.

A third impacts scenario, one that is likely closer to the real-world environment for the retention and communication of safety and health information in most workplaces, would be the midpoint of the two extreme cases described above. Under this mid-range scenario, approximately half of affected establishments would retain staff whose complete knowledge of the rescinded standards would substitute for the familiarization time needed by the newly hired health and safety specialists. Viewed alternatively, under this mid-range scenario, all affected establishments retain veteran staff who can briefly inform the new safety and health specialist of the status of standards such as section 1917.41 in less time (roughly five minutes) than would be necessary in the absence of institutional knowledge (ten minutes). OSHA estimates that this would result in cost savings of \$9,115 annually.

OSHA's estimate of cost savings may underestimate total cost savings if the elimination of the labor burden for regulatory familiarization extends to the avoidance of unnecessary safety training of employees.

OSHA requests public comment on this preliminary analysis of the cost savings for employers affected by the rescission of the standards addressing house falls in maritime industries under OSHA's jurisdiction. Specifically, OSHA seeks comments and data on the following questions:

1. How much do employers expect to save as a consequence of the rescission of requirements in the current standard?
2. How much familiarization time would employers who are new entrants to the market expect to save based on the revisions?
3. Are there any benefits for worker protection that can be anticipated from this proposed change?
4. Are there any costs for employers that would result from this change that OSHA has not considered?

Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

OSHA reviewed this proposed rescission under the provisions of the Regulatory Flexibility Act. This rule eliminates a burdensome regulation. Therefore, OSHA preliminarily concludes that the rescission would not have a "significant economic impact on a substantial number of small entities," and that the preparation of an IRFA is not warranted. OSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

VI. Additional Requirements

A. Requirements for States With OSHA-Approved State Plans

Under section 18 of the OSH Act (29 U.S.C. 651 *et seq.*), Congress expressly provides that States may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards that are "at least as effective" as the Federal standards in providing safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved, State-administered occupational safety and health programs as "State Plans."¹

¹ Of the 29 States and U.S. territories with OSHA-approved State Plans, 22 cover public and private-sector employees: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina,

When Federal OSHA promulgates a new standard or a more stringent amendment to an existing standard, State Plans must either amend their standards to be identical to, or "at least as effective as," the new Federal standard or amendment, or show that an existing State Plan standard covering this issue is "at least as effective" as the new Federal standard or amendment (29 CFR 1953.5(a)). However, when OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plans do not have to amend their standards, although they may opt to do so. OSHA has preliminarily determined this proposed rule does not impose additional or more stringent requirements than the existing standard, and therefore State Plans are not required to amend their standards. OSHA seeks comment on this assessment of its proposal.

B. OMB Review Under the Paperwork Reduction Act of 1995

The Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*) defines "collection of information" to mean "the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public, of facts or opinions by or for an agency, regardless of form or format" (44 U.S.C. 3502(3)(A)). Under the PRA, a Federal agency cannot conduct or sponsor a collection of information unless it is approved by OMB under the PRA and the agency displays a currently valid OMB control number (44 U.S.C. 3507). Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512(a)(1)). The process for OMB approval is found in 5 CFR part 1320. This proposed rule would impose no new information collection requirements and does not affect the currently approved information collections in Marine Terminals (29 CFR pt. 1917) and Longshoring (29 CFR pt. 1918) (OMB Control Number 1218–0196). Accordingly, OMB approval is not required for this proposed rule.

Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. The remaining six States and one U.S. territory cover only State and local government employees: Connecticut, Illinois, Maine, Massachusetts, New Jersey, New York, and the Virgin Islands.

C. Review Under Executive Order 12866

E.O. 12866, “Regulatory Planning and Review,” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) for review. OIRA has determined that this proposed rule would not constitute a “significant regulatory action” under section 3(f) of E.O. 12866. Accordingly, this proposed rule was not submitted to OIRA for review under E.O. 12866.

D. Environmental Impacts/National Environmental Policy Act (NEPA)

OSHA has reviewed this proposed rule according to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), as amended by the Fiscal Responsibility Act of 2023 (Pub. L. 118–5, 321, 137 Stat. 10), and the Department of Labor’s NEPA procedures (29 CFR part 11). OSHA has preliminarily determined that this proposed rule will have no impact on the quality of the human environment.

E. Other Statutory and Executive Order Considerations

OSHA has considered its obligations under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*) and the Executive Orders on Consultation and Coordination With Indian Tribal Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), Federalism (E.O. 13132, 64 FR 43255 (Aug. 10, 1999)), and Protection of Children From Environmental Health Risks and Safety

Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a proposed deregulatory action that involves the removal of requirements, that OSHA does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these statutes and executive orders. Furthermore, OSHA has determined that this proposed rule is consistent with the policies and directives outlined in E.O. 14192, “Unleashing Prosperity Through Deregulation” and is an Executive Order 14192 deregulatory action.

List of Subjects in 29 CFR 1917

Health, Longshore and Harbor workers, Occupational safety and health.

VII. Authority and Signature

This document was prepared under the direction of Amanda Laihow, Acting Assistant Secretary of Labor for Occupational Safety and Health. It is issued under the authority of sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657); section 41 of the Longshore and Harbor Worker’s Compensation Act (33 U.S.C. 941); Secretary of Labor’s Order No. 8–2020 (85 FR 58383); and 29 CFR part 1911.

Dated: June 20, 2025

Amanda Laihow,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

Proposed Amendments

For the reasons set forth in the preamble, OSHA is amending 29 CFR part 1917 as follows:

PART 1917—MARINE TERMINALS

■ 1. The authority for part 1917 continues to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor’s Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008), 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393), as applicable; and 29 CFR part 1911.

Sections 1917.28 and 1917.31 also issued under 5 U.S.C. 553.

Section 1917.29 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

Subpart C—Cargo Handling Gear and Equipment

§ 1917.41 [Removed and reserved]

■ 2. Remove and reserve § 1917.41.

BILLING CODE 4510–26–P

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Part 1917

[Docket No. OSHA–2025–0007]

RIN 1218–AD51

Open Fires in Marine Terminals

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: This proposed rule removes OSHA’s Open Fires in Marine Terminals Standard from the Code of Federal Regulations.

DATES: Comments and other information, including requests for a hearing, must be received on or before September 2, 2025.

Informal public hearing: OSHA will schedule an informal public hearing on the rule if requested during the comment period. If a hearing is requested, the location and date of the hearing, procedures for interested parties to notify the agency of their intention to participate, and procedures for participants to submit their testimony and documentary evidence will be announced in the **Federal Register**.

ADDRESSES:

Written comments: You may submit comments and attachments, identified by Docket No. OSHA–2025–0007, electronically at <https://www.regulations.gov>, which is the Federal e-Rulemaking Portal. Follow the instructions online for making electronic submissions.

Instructions: All submissions must include the agency’s name and the docket number for this rulemaking (Docket No. OSHA–2025–0007). When uploading multiple attachments to <https://www.regulations.gov>, please number all of your attachments because <https://www.regulations.gov> will not automatically number the attachments. This will be very useful in identifying all attachments. For example, Attachment 1—title of your document, Attachment 2—title of your document,

Attachment 3—title of your document. For assistance with commenting and uploading documents, please see the Frequently Asked Questions on <https://www.regulations.gov>.

All comments, including any personal information you provide, are placed in the public docket without change and may be made available online at <https://www.regulations.gov>. Therefore, OSHA cautions commenters about submitting information they do not want made available to the public or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.

Docket: The docket for this rulemaking (Docket No. OSHA–2025–0007) is available at <https://www.regulations.gov>, the Federal eRulemaking Portal. Most exhibits are available at <https://www.regulations.gov>; some exhibits (e.g., copyrighted material) are not available to download from that web page. However, all materials in the dockets are available for inspection at the OSHA Docket Office.

FOR FURTHER INFORMATION CONTACT:

For press inquiries: Contact Frank Meilinger, Director, OSHA Office of Communications, Occupational Safety and Health Administration; telephone: (202) 693–1999; email: meilinger.francis2@dol.gov.

General information and technical inquiries: Contact Andrew Levinson, Director, OSHA Directorate of Standards and Guidance, Occupational Safety and Health Administration; telephone: (202) 693–1950; email: osha.dsg@dol.gov.

Copies of this Federal Register notice: Electronic copies are available at <https://www.regulations.gov>. This Federal Register notice, as well as news releases and other relevant information, also are available at OSHA's web page at <https://www.osha.gov>. A “100-word summary” is also available on <https://www.regulations.gov>.

SUPPLEMENTARY INFORMATION:

Table of Contents

- I. Executive Summary
- II. Legal Authority and Preliminary Findings
- III. Background
- IV. Explanation of the Proposed Removal of the Open Fires in Marine Terminals Standard From the Code of Federal Regulations
- V. Preliminary Economic Analysis
- VI. Additional Requirements
- VII. Authority and Signature
- VIII. Regulatory Text

I. Executive Summary

The intent of this proposed rule is to remove the Open Fires in Marine

Terminals Standard, 29 CFR 1917.21 (“Open Fires Standard”), from the Code of Federal Regulations because that standard is no longer necessary to protect employees working in marine terminals from occupational safety and health hazards. This is a deregulatory action per Executive Order 14192, “Unleashing Prosperity Through Deregulation” (90 FR 9065, Feb. 6, 2025).

II. Legal Authority and Preliminary Findings

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651 *et seq.*) (“the Act” or “the OSH Act”) is “to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources” (29 U.S.C. 651(b)). To achieve this goal Congress authorized the Secretary of Labor (“the Secretary”) to promulgate standards to protect workers, including the authority “to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce” (29 U.S.C. 651(b)(3); see also 29 U.S.C. 654(a)(2) requiring employers to comply with OSHA standards), 29 U.S.C. 655(a) (authorizing summary adoption of existing consensus and established federal standards within two years of the Act’s enactment), and 29 U.S.C. 655(b) (authorizing promulgation, modification or revocation of standards pursuant to notice and comment)). An occupational safety and health standard is “. . . a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment” (29 U.S.C. 652(8)).

Before OSHA may promulgate a health or safety standard, it must find that a standard is reasonably necessary or appropriate within the meaning of section 652(8) of the OSH Act. As required by the OSH Act, OSHA originally determined that the Standards for Marine Terminals would substantially reduce a significant risk of material harm when promulgating those standards (see 48 FR 30886, 30887 (July 5, 1983)). Once OSHA makes a general significant risk finding in support of a standard, the next question is whether a particular requirement is reasonably related to the purpose of the standard as a whole. See *Asbestos Info. Ass’n/N. Am. v. Reich*, 117 F.3d 891, 894 (5th Cir. 1997); *Forging Indus. Ass’n v. Sec’y of Labor*, 773 F.2d 1436, 1447 (4th Cir. 1985); *United Steelworkers of Am., AFL–CIO–CLC v. Marshall*, 647 F.2d

1189, 1237–38 (D.C. Cir. 1980) (“*Lead I*”).

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that is reasonably expected to be developed (see *Am. Iron and Steel Inst. v. OSHA*, 939 F.2d 975, 980 (D.C. Cir. 1991)). Courts have also interpreted technological feasibility to mean that a typical firm in each affected industry or application group will reasonably be able to implement the requirements of the standard in most operations most of the time (see, e.g., *Public Citizen v. OSHA*, 557 F.3d 165, 170–71 (3d Cir. 2009) (citing *Lead I*, 647 F.2d at 1272)).

Because this proposed rule would remove an existing OSHA requirement from the CFR, OSHA anticipates employers would have no technological issues complying with the rule. Accordingly, the agency preliminarily finds that the proposed rule is technologically feasible for affected employers.

In determining economic feasibility, OSHA must consider the cost of compliance in an industry rather than on individual employers. In its economic analyses, OSHA “must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms” (*Am. Iron and Steel Inst.*, 939 F.2d at 980, quoting *Lead I*, 647 F.2d at 1272). OSHA has preliminarily determined that this proposed rule is economically feasible because this action is deregulatory and imposes no additional costs. OSHA’s economic analysis of the cost savings are presented in Section V.

The Administrative Procedures Act directs agencies to include in each rule adopted “a concise general statement of [the rule’s] basis and purpose” (5 U.S.C. 553(c)); cf. 29 U.S.C. 655(e) (requiring the Secretary to publish a “statement of reasons” for any standard promulgated)). This notice satisfies this concise statement requirement.

III. Background

OSHA first adopted the Open Fires Standard in 1983, as part of its Marine Terminals rulemaking, to address serious occupational safety and health hazards in the marine terminals industry (see 48 FR 30886 (July 5, 1983)). The Open Fires Standard prohibits open fires and fires in drums and similar containers (29 CFR 1917.21). The standard is one of several

that protects employees working in marine terminals from the occupational safety and health hazards to which they are exposed (see 29 CFR pt. 1917). For example, in addition to containing the Open Fires Standard, the Marine Terminals Standards contain standards protecting employees from slippery conditions (29 CFR 1917.12) and hazardous cargo (29 CFR 1917.22). The Marine Terminals Standards apply to work such as loading, unloading, movement or other handling of cargo in marine terminals (29 CFR 1917.1). Marine terminals are wharves, bulkheads, quays, piers, docks and other berthing locations and adjacent storage or adjacent areas and structures associated with the primary movement of cargo or materials from vessel to shore or shore to vessel including structures which are devoted to receiving, handling, holding, consolidating and loading or delivery of waterborne shipments or passengers, including areas devoted to the maintenance of the terminal or equipment.

IV. Explanation of the Proposed Removal of the Open Fires in Marine Terminals Standard From the Code of Federal Regulations

OSHA is proposing to remove the Open Fires Standard from the CFR because that standard is no longer necessary to protect employees working in marine terminals from occupational safety and health hazards. When OSHA first promulgated the Marine Terminals Standards in 1983, affected employees made open fires in drums or similar containers to stay warm when they were exposed to the elements. It is OSHA's understanding that this is no longer a typical practice. Because of containerization and technology improvements in the marine terminals industry, employees today are not exposed to the elements as they once were. Moreover, to the extent employees are still exposed to the elements, they can wear heated jackets, which were not available when the Open Fires Standard was issued. Moreover, OSHA has not issued a citation for a violation of this standard since 2012 or earlier. Therefore, consistent with Executive Order (E.O.) 14219, "Ensuring Lawful Governance and Implementing the President's 'Department of Government Efficiency' Deregulatory Initiative," E.O. 14192, "Unleashing Prosperity Through Deregulation," and the goal of significantly reducing the private expenditures required to comply with Federal regulations to secure America's economic prosperity and national security and the highest possible quality

of life for each citizen, OSHA preliminarily concludes that removing the Open Fires Standard from the CFR will reduce the compliance burden on the regulated community, without compromising worker safety.

Questions

1. Is the Open Fires Standard still necessary to protect employees working in marine terminals from occupational safety and health hazards? Will removal of the Open Fires Standard from the CFR compromise worker safety? Please explain.

2. Is OSHA's understanding correct that employees are no longer exposed to the elements as they once were in the marine terminals industry because of containerization and technology improvements? Please explain.

3. Is OSHA's understanding correct that, to the extent employees are exposed to the elements, they now can wear heated jackets, which were not available when the Open Fires Standard was issued? Please explain.

4. Even if OSHA's understanding regarding questions 2 and 3 is correct, is there some other reason why employees in the marine terminals industry would want to make open fires and fires in drums or similar containers? Please explain.

V. Preliminary Economic Analysis

Executive Orders 12866 and 13563, the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1532(a)) require that OSHA estimate the benefits, costs, and net benefits of regulations, and analyze the impacts of certain rules that OSHA promulgates. Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

This proposed rule is not a "significant regulatory action" under Executive Order 12866 or UMRA, or a "major rule" under the Congressional Review Act (5 U.S.C. 801 *et seq.*). Neither the benefits nor the costs of this proposed rule would exceed \$100 million in any given year. This proposal would, however, result in a net cost savings for employers in marine terminal and longshoring operations, which are the only industries throughout OSHA's jurisdiction affected by the rescission of 29 CFR 1917.21.

Furthermore, as discussed below in Review Under the Regulatory Flexibility Act, because the proposed rule would not impose any costs, OSHA certifies that it would not have a significant economic impact on a substantial number of small entities.

OSHA estimates that there are currently 2,617 establishments in maritime affected by OSHA standards addressing open fires (U.S. Census Bureau, 2024). These establishments are found in the following industries: Port and Harbor Operations (NAICS 488310), Marine Cargo Handling (NAICS 488320), Navigational Services to Shipping (NAICS 488330), Other Support Activities for Water Transportation (NAICS 488390). The proposed rescission of the standards addressing open fires will, among other things, eliminate the time necessary for new establishments and newly hired occupational health and safety specialists at existing establishments to familiarize themselves with the requirements found in 29 CFR 1917.21. Based on an average annual establishment entry rate of 10 percent (U.S. Census Bureau, 2025), an average hire rate of 43.9 percent (BLS, 2025), and 10 minutes less time spent on regulatory familiarization at a loaded hourly wage rate for an occupational health and safety specialist of \$65.41, OSHA estimates that this deregulatory action would mean \$15,377 in cost savings annually.

OSHA also estimated the impacts under an alternative scenario where only new entrants into the industry would be affected by the rescission of 29 CFR 1917.21. This scenario assumes that for non-entrant (*i.e.*, existing) establishments within an industry, the familiarization time saved for newly hired occupational health and safety specialists is negligible due to knowledge of the requirements in section 1917.21 retained institutionally within the business entity by team leaders and other senior production staff. For this scenario, costs savings that result from rescinding section 1917.21 would be \$2,853 annually.

A third impacts scenario, one that is likely closer to the real-world environment for the retention and communication of safety and health information in most workplaces, would be the midpoint of the two extreme cases described above. Under this mid-range scenario, approximately half of affected establishments would retain staff whose complete knowledge of the rescinded standards would substitute for the familiarization time needed by the newly hired health and safety specialists. Viewed alternatively, under this mid-range scenario, all affected establishments retain veteran staff who can briefly inform the new safety and health specialist of the status of standards such as section 1917.21 in less time (roughly five minutes) than would be necessary in the absence of

institutional knowledge (ten minutes). OSHA estimates that this would result in cost savings of \$9,115 annually.

OSHA's estimate of cost savings may underestimate total cost savings if the elimination of the labor burden for regulatory familiarization extends to the avoidance of unnecessary safety training of employees.

OSHA requests public comment on this analysis of the cost savings for marine terminal and longshoring operations from the rescission of the standards addressing open fires in 29 CFR 1917.21. Specifically, OSHA seeks comments and data on the following questions:

1. How much do employers expect to save as a consequence of the rescission of requirements in the current standard?
2. How much familiarization time would employers who are new entrants to the market expect to save based on the revisions?
3. Are there any benefits for worker protection that can be anticipated from this proposed change?
4. Are there any costs for employers that would result from this change that OSHA has not considered?

Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

OSHA reviewed this proposed rescission under the provisions of the Regulatory Flexibility Act. This rule eliminates a burdensome regulation. Therefore, OSHA preliminarily concludes that the rescission would not have a “significant economic impact on a substantial number of small entities,”

and that the preparation of an IRFA is not warranted. OSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

VI. Additional Requirements

A. Requirements for States With OSHA-Approved State Plans

Under section 18 of the OSH Act (29 U.S.C. 651 *et seq.*), Congress expressly provides that States may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards that are “at least as effective” as the Federal standards in providing safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved, State-administered occupational safety and health programs as “State Plans.”¹

When Federal OSHA promulgates a new standard or a more stringent amendment to an existing standard, State Plans must either amend their standards to be identical to, or “at least as effective as,” the new Federal standard or amendment, or show that an existing State Plan standard covering this issue is “at least as effective” as the new Federal standard or amendment (29 CFR 1953.5(a)). However, when OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plans do not have to amend their standards, although they may opt to do so. OSHA has preliminarily determined this proposed rule does not impose additional or more stringent requirements than the existing standard, and therefore State Plans are not required to amend their standards. OSHA seeks comment on this assessment of its proposal.

B. OMB Review Under the Paperwork Reduction Act of 1995

The Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*) defines “collection of information” to mean “the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public, of facts or

opinions by or for an agency, regardless of form or format” (44 U.S.C.

3502(3)(A)). Under the PRA, a Federal agency cannot conduct or sponsor a collection of information unless it is approved by OMB under the PRA and the agency displays a currently valid OMB control number (44 U.S.C. 3507). Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512(a)(1)). The process for OMB approval is found in 5 CFR part 1320. This proposed rule would impose no new information collection requirements and does not affect the currently approved information collections in Marine Terminals (29 CFR pt. 1917) and Longshoring (29 CFR pt. 1918) (OMB Control Number 1218–0196). Accordingly, OMB approval is not required for this proposed rule.

C. Review Under Executive Order 12866

E.O. 12866, “Regulatory Planning and Review,” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) for review. OIRA has determined that this proposed rule would not constitute a “significant regulatory action” under section 3(f) of E.O. 12866. Accordingly, this proposed rule was not submitted to OIRA for review under E.O. 12866.

¹ Of the 29 States and U.S. territories with OSHA-approved State Plans, 22 cover public and private-sector employees: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. The remaining six States and one U.S. territory cover only State and local government employees: Connecticut, Illinois, Maine, Massachusetts, New Jersey, New York, and the Virgin Islands.

D. Environmental Impacts/National Environmental Policy Act (NEPA)

OSHA has reviewed this proposed rule according to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), as amended by the Fiscal Responsibility Act of 2023 (Pub. L. 118–5, 321, 137 Stat. 10), and the Department of Labor's NEPA procedures (29 CFR part 11). OSHA has preliminarily determined that this proposed rule will have no impact on the quality of the human environment.

E. Other Statutory and Executive Order Considerations

OSHA has considered its obligations under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*) and the Executive Orders on Consultation and Coordination With Indian Tribal Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), Federalism (E.O. 13132, 64 FR 43255 (Aug. 10, 1999)), and Protection of Children From Environmental Health Risks and Safety Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a proposed deregulatory action that involves the removal of requirements, that OSHA does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these statutes and executive orders. Furthermore, OSHA has determined that this proposed rule is consistent with the policies and directives outlined in E.O. 14192, “Unleashing Prosperity Through Deregulation” and is an Executive Order 14192 deregulatory action.

List of Subjects in 29 CFR Part 1917

Health, Longshore and harbor workers, Occupational safety and health.

VII. Authority and Signature

This document was prepared under the direction of Amanda Laihow, Acting Assistant Secretary of Labor for Occupational Safety and Health. It is issued under the authority of sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657); section 41 of the Longshore and Harbor Worker's Compensation Act (33 U.S.C. 941); Secretary of Labor's Order No. 8–2020 (85 FR 58383); and 29 CFR part 1911.

Dated: June 20, 2025.

Amanda Laihow,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

VIII. Regulatory Text

Proposed Amendments

For the reasons set forth in the preamble, OSHA is amending 29 CFR part 1917 as follows:

PART 1917—MARINE TERMINALS

■ 1. The authority for part 1917 continues to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor's Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008), 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393), as applicable; and 29 CFR part 1911.

Sections 1917.28 and 1917.31 also issued under 5 U.S.C. 553.

Section 1917.29 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

Subpart B—Marine Terminal Operations

§ 1917.21 [Reserved]

■ 2. Remove and reserve § 1917.21.

BILLING CODE 4510–26–P

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Part 1926

[Docket No. OSHA–2025–0040]

RIN 1218–AD70

Construction Illumination

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Notice of Proposed Rulemaking (NPRM); request for comments.

SUMMARY: The Occupational Safety and Health Administration (OSHA) is proposing to rescind the construction illumination requirements, codified in 29 CFR 1926.26 and 1926.56.

DATES: Comments must be received on or before September 2, 2025.

ADDRESSES:

Written comments: You may submit comments and attachments, identified by Docket No. OSHA–2025–0040, electronically at <https://www.regulations.gov>, which is the Federal e-Rulemaking Portal. Follow the

instructions online for making electronic submissions.

Instructions: All submissions must include the agency's name and the docket number for this rulemaking (Docket No. OSHA–2025–0040). When uploading multiple attachments to [regulations.gov](https://www.regulations.gov), please number all of your attachments because [regulations.gov](https://www.regulations.gov) will not automatically number the attachments. This will be very useful in identifying all attachments. For example, Attachment 1—title of your document, Attachment 2—title of your document, Attachment 3—title of your document. For assistance with commenting and uploading documents, please see the Frequently Asked Questions on <https://www.regulations.gov>.

All comments, including any personal information you provide, are placed in the public docket without change and may be made available online at <https://www.regulations.gov>. Therefore, OSHA cautions commenters about submitting information they do not want made available to the public or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.

Docket: The docket for this rulemaking (Docket No. OSHA–2025–0040) is available at <https://www.regulations.gov>, the Federal eRulemaking Portal. Most exhibits are available at <https://www.regulations.gov>; some exhibits (e.g., copyrighted material) are not available to download from that web page. However, all materials in the dockets are available for inspection at the OSHA Docket Office.

For press inquiries: Contact Frank Meilinger, Director, OSHA Office of Communications, Occupational Safety and Health Administration; telephone: (202) 693–1999; email: meilinger.francis2@dol.gov.

General information and technical inquiries: Contact Andrew Levinson, Director, OSHA Directorate of Standards and Guidance, Occupational Safety and Health Administration; telephone: (202) 693–1950; email: osha.dsg@dol.gov.

Copies of this Federal Register notice: Electronic copies are available at <https://www.regulations.gov>. This **Federal Register** notice, as well as news releases and other relevant information, also are available at OSHA's web page at <https://www.osha.gov>. A “100-word summary” is also available on <https://www.regulations.gov>.

SUPPLEMENTARY INFORMATION: 29 CFR 1926.26 requires construction areas,

aisles, stairs, ramps, runways, corridors, offices, shops, and storage areas where work is in progress to be lighted with either natural or artificial illumination. 29 CFR 1926.56 states that construction areas, ramps, runways, corridors, offices, shops, and storage areas must “be lighted to not less than the minimum illumination intensities listed” in a table. The table sets out minimum illumination intensities in foot candles for various areas of operation. 29 CFR 1926.56(a). For areas not covered by the table, the regulation directs employers to use the “American National Standard A11.1–1965, R1970, Practice for Industrial Lighting. 29 CFR 1926.56(b). The requirements of 29 CFR 1926.56 are incorporated by reference in 29 CFR 1926.800, Underground Construction, and 29 CFR 1926.1204, Permit-required confined space program. The incorporation by reference is noted in 29 CFR 1926.6(e)(4), Incorporation by Reference.

OSHA proposes rescinding sections 1926.26 and 1926.56 in their entirety and removing all cross-references to those sections. OSHA seeks all comment on that proposal. OSHA’s statutory authority for the proposed rescissions can be found in 40 U.S.C. 3704 and 29 U.S.C. 655 and 657.

OSHA is in the process of appointing members to the Advisory Committee on Construction Safety and Health (ACCSH). The agency intends to present this proposed rule to ACCSH once that process is complete. The agency will put the Committee’s recommendations on the OSHA website and in the docket for this proposed rule prior to the close of the comment period to allow the public to provide comments on those recommendations.

- VI. Authority and Signature
- VII. Regulatory Text

I. Executive Summary

The intent of this proposed rule is to remove from the Code of Federal Regulations OSHA’s Construction Illumination Standard, 29 CFR 1926.26 and 1926.56. OSHA’s Illumination Standard, 29 CFR 1926.26, requires that construction areas, aisles, stairs, ramps, runways, corridors, offices, shops, and storage areas where work is in progress are lighted with either natural or artificial illumination. The minimum illumination requirements for work areas are contained in Subpart D, 29

CFR 1926.56.¹ OSHA proposes to remove the Construction Illumination Standard because it has determined that the standard is not reasonably necessary or appropriate under section 3(8) of the OSH Act, 29 U.S.C. 652, because it does not reduce a significant risk to workers.

II. Pertinent Legal Authority

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651, *et seq.*) (“the Act” or “the OSH Act”) is “to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources” (29 U.S.C. 651(b)). To achieve this goal Congress authorized the Secretary of Labor (“the Secretary”) to promulgate standards to protect workers, including the authority “to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce” (29 U.S.C. 651(b)(3); *see also* 29 U.S.C. 654(a)(2) requiring employers to comply with OSHA standards), 29 U.S.C. 655(a) (authorizing summary adoption of existing consensus and established federal standards within two years of the Act’s enactment), 29 U.S.C. 655(b) (authorizing promulgation, modification or revocation of standards pursuant to notice and comment)). An occupational safety and health standard is “. . . a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, *reasonably necessary or appropriate* to provide safe or healthful employment and places of employment” (29 U.S.C. 652(8) (emphasis added)).

Before OSHA may promulgate a health or safety standard, it must find that a standard is reasonably necessary or appropriate within the meaning of section 652(8) of the OSH Act. To impose a safety or health standard “the Secretary is required to make a threshold finding that a place of employment is unsafe—in the sense that significant risks are present and can be eliminated or lessened by a change in practices.” *Indus. Union Dep’t, AFL–CIO v. Am. Petroleum Inst.*, 448 U.S. 607, 642 (1980) (“Benzene”). OSHA exercises significant discretion in carrying out its responsibilities under the Act. Indeed, “[a] number of terms of the statute give OSHA almost unlimited

discretion to devise means to achieve the congressionally mandated goal” of ensuring worker safety and health. *See* Lead I, 647 F.2d at 1230 (citation omitted). Thus, where OSHA has chosen some measures to address a significant risk over other measures, parties challenging the OSHA standard must “identify evidence that their [alternative] proposals would be feasible and generate more than a de minimis benefit to worker health.” *N. Am.’s Bldg. Trades Unions v. OSHA*, 878 F.3d 271, 282 (D.C. Cir. 2017).

OSHA standards must be both technologically and economically feasible. A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that is reasonably expected to be developed (*see Am. Iron and Steel Inst. v. OSHA*, 939 F.2d 975, 980 (D.C. Cir. 1991)). Courts have also interpreted technological feasibility to mean that a typical firm in each affected industry or application group will reasonably be able to implement the requirements of the standard in most operations most of the time (*see, e.g., Pub. Citizen v. OSHA*, 557 F.3d 165, 170–71 (3d Cir. 2009) (citing *United Steelworkers of Am.*, 647 F.2d 1189, 1272)). Because this proposed rule would remove existing OSHA requirements from the CFR, OSHA anticipates employers would have no technological issues complying with the rule. Accordingly, the agency finds that the proposed rule is technologically feasible for affected employers.

In determining economic feasibility, OSHA must consider the cost of compliance in an industry rather than on individual employers. In its economic analyses, OSHA “must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms” (*Am. Iron and Steel Inst.*, 939 F.2d at 980, quoting *United Steelworkers of Am.*, 647 F.2d at 1272)). OSHA has determined that this proposed rule is economically feasible because this action is deregulatory and imposes no additional costs.

The Administrative Procedures Act directs agencies to include in each rule adopted “a concise general statement of [the rule’s] basis and purpose” (5 U.S.C. 553(c)); cf. 29 U.S.C. 655(e) (requiring the Secretary to publish a “statement of reasons” for any standard promulgated)). This notice satisfies this concise statement requirement.

¹ These requirements are incorporated by reference in 29 CFR 1926.800, Underground Construction, and 29 CFR 1926.1204, Permit-required confined space program. They are also cross-referenced in an explanatory note to section 1926.967 of the Electric Power Transmission and Distribution Standard (*see* 29 CFR 1926.967(d) Note).

III. Explanation of the Proposed Rescission

In OSHA's judgment, the Construction Illumination Standard is not reasonably necessary or appropriate under section 3(8) of the OSH Act because it does not substantially reduce a significant risk to workers. The OSHA standard does not provide significant protection beyond what would exist without the standard because the hazard—lack of illumination—is obvious to employers and employees, as is the means to address it.

Because adequate illumination is important to performing work well, OSHA expects that employers would identify and correct working conditions where inadequate illumination exists, eliminating any potential risk. However, if employers do not identify and correct the working conditions on their own, OSHA may still issue citations for this hazard under the General Duty Clause of the OSH Act, 29 U.S.C. 654(a)(1) (employers “shall furnish to each of his employees employment and a place of employment which are free from recognized hazards which are causing or likely to cause death or serious physical harm”). A specific standard for illumination is not necessary because a lack of illumination is a prototypical “recognized hazard . . . likely to cause serious death or serious physical injury” under the General Duty Clause. Moreover, OSHA has cited the illumination standard only 79 times since October 1, 2012 (for comparison, OSHA issues approximately 7,000 citations a year for fall protection violations).

For these reasons, OSHA finds that the standard is neither necessary nor appropriate under section 3(8) of the OSH Act.

IV. Preliminary Economic Analysis

Executive Orders 12866 and 13563, the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1532(a)) require that OSHA estimate the benefits, costs, and net benefits of regulations, and analyze the impacts of certain rules that OSHA promulgates. Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

This proposed rule is not a “significant regulatory action” under Executive Order 12866 or UMRA, or a “major rule” under the Congressional Review Act (5 U.S.C. 801 *et seq.*). Neither the benefits nor the costs of this proposed rule would exceed \$100 million in any given year. Furthermore,

as discussed below in Review Under the Regulatory Flexibility Act, because the proposed rule would not impose any costs, OSHA certifies that it would not have a significant economic impact on a substantial number of small entities.

For this analysis, OSHA considered the cost savings associated with no longer having to review these standards post-rescission. To estimate this annual cost savings, OSHA first estimated the number of establishments affected by these standards. The construction illumination standards impact all construction entities in the U.S. OSHA used 2022 County Business Patterns data (U.S. Census Bureau, 2024a) to represent the total number of establishments in the Construction sector. In total, there are 800,651 construction establishments as of 2022 (See OSHA, 2025, for a list of affected industries).

The proposed rescission of the standards addressing illumination will, among other things, eliminate the time necessary for new establishments and newly hired occupational health and safety specialists at existing establishments to familiarize themselves with the requirements of OSHA's Construction Illumination Standard, 29 CFR 1926.26 and 1926.56. Based on an average annual establishment entry rate of 10 percent (U.S. Census Bureau, 2024b), an average hire rate of 43.9 percent (BLS, 2025a) and 20 minutes less time spent on regulatory familiarization at a loaded hourly wage rate for a construction manager of \$81.49, OSHA estimates that this deregulatory action would mean about \$11.7 million in cost savings annually.

OSHA also estimated the impacts under an alternative scenario where only new entrants into the industry would be affected by the rescission of the illumination standards in construction. This scenario assumes that for non-entrant (*i.e.*, existing) establishments within an industry, the familiarization time saved for newly hired construction managers is negligible due to knowledge of the requirements in the illumination standards retained institutionally within the business entity by team leaders and other senior production staff. For this scenario, cost savings that result from rescinding the standards in construction addressing illumination would be \$2.2 million.

A third impacts scenario, one that is likely closer to the real-world environment for retention and communication of safety and health information in most workplaces, would be the midpoint of the two extreme cases described above. Under this mid-

range scenario, approximately half of affected establishments would retain staff whose complete knowledge of the rescinded standards would substitute for the familiarization time needed by the newly hired construction managers. Viewed alternatively, under this mid-range scenario, all affected establishments retain veteran staff who can briefly inform the new construction manager of the status of standards such as the illumination standards in less time (roughly ten minutes) than would be necessary in the absence of institutional knowledge (twenty minutes). OSHA estimates that this would result in cost savings of \$6.9 million annually.

OSHA's estimate of cost savings may underestimate total cost savings if the elimination of the labor burden for regulatory familiarization extends to the avoidance of unnecessary safety training of employees.

OSHA requests public comment on this preliminary analysis of the cost savings for employers affected by the rescission of the standards addressing illumination. Specifically, OSHA seeks comments and data on the following questions:

1. How much do employers expect to save as a consequence of the rescission of requirements in the current standard?
2. How much familiarization time would employers who are new entrants to the market be expected to save based on the revisions?
3. Are there any benefits for worker protection that can be anticipated from this proposed change?
4. Are there any costs for employers that would result from this change that OSHA has not considered?

Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

OSHA reviewed this proposed rescission under the provisions of the Regulatory Flexibility Act. This rule eliminates a burdensome regulation. Therefore, OSHA preliminarily concludes that the rescission would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. OSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b). OSHA requests comment on this regulatory flexibility certification.

V. Additional Requirements

i. OMB Review Under the Paperwork Reduction Act of 1995

The Paperwork Reduction Act of 1995 (“PRA”) defines “collection of information” to mean “the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public, of facts or opinions by or for an agency, regardless of form or format” (44 U.S.C. 3502(3)(A)). Under the PRA, a Federal agency cannot conduct or sponsor a collection of information unless it is approved by OMB under the PRA and the agency displays a currently valid OMB control number (44 U.S.C. 3507). Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512(a)(1)). The process for OMB approval is found in 5 CFR part 1320. This proposed rule would impose no new information

collection requirements because it is a deregulatory action. Accordingly, OMB review under the PRA is not required.

ii. State Plans

Under section 18 of the OSH Act, 29 U.S.C. 651 *et seq.*, Congress expressly provides that States may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards that are “at least as effective” as the Federal standards in providing safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved, State-administered occupational safety and health programs as “State Plans.”²

When federal OSHA promulgates a new standard or a more stringent amendment to an existing standard, State Plans must either amend their standards to be identical to, or “at least as effective as” the new Federal standard or amendment, or show that an existing State Plan standard covering this issue is “at least as effective” as the new Federal standard or amendment (29 CFR 1953.5(a)). However, when OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plans do not have to amend their standards, although they may opt to do so. OSHA has preliminarily determined this proposed rule does not impose additional or more stringent requirements than the existing standard, and therefore State Plans are not required to amend their standards. OSHA seeks comment on this assessment of its proposal.

iii. Environmental Impacts/National Environmental Policy Act (NEPA)

OSHA has reviewed the proposed rule according to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), as amended by the Fiscal Responsibility Act of 2023 (Pub. L. 118–5, 321, 137 Stat. 10), and the Department of Labor’s NEPA procedures (29 CFR part 11). Under the Department’s NEPA regulations, the “[p]romulgation, modification or revocation of any [OSHA] safety standard” is categorically

² Of the 29 States and U.S. territories with OSHA-approved State Plans, 22 cover public and private-sector employees: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. The remaining six States and one U.S. territory cover only State and local government employees: Connecticut, Illinois, Maine, Massachusetts, New Jersey, New York, and the Virgin Islands.

excluded from the requirement to prepare an environmental assessment absent extraordinary circumstances indicating the potential for significant environmental effects (29 CFR 11.10(a)(1)). OSHA has preliminarily determined that no such extraordinary circumstances exist, and that this proposal would have no impact on the quality of the human environment.

iv. Other Statutory and Executive Order Considerations

OSHA has examined this proposed rule and has determined that it is consistent with the policies and directives outlined in E.O. 14192, “Unleashing Prosperity Through Deregulation.” This proposed rule is expected to be an Executive Order 14192 deregulatory action.

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. OSHA reviewed this proposed rule under the provisions of the Regulatory Flexibility Act. This rule would eliminate burdensome regulations. Therefore, OSHA initially concludes that the impacts of the rescission would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. OSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

Executive Order (E.O.) 12866, “Regulatory Planning and Review,” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct

regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public. Section 6(a) of E.O. 12866 also requires agencies to submit “significant regulatory actions” to OIRA for review. OIRA has determined that this proposed rule does not constitute a “significant regulatory action” under section 3(f) of E.O. 12866. Accordingly, this proposed rule was not submitted to OIRA for review under E.O. 12866.

OSHA has considered its obligations under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*), and the Executive Orders on Consultation and Coordination With Indian Tribal Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), Federalism (E.O. 13132, 64 FR 43255 (Aug. 10, 1999)), and Protection of Children From Environmental Health Risks and Safety Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a proposed deregulatory action, that OSHA does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these statutes and executive orders.

VI. Authority and Signature

This document was prepared under the direction of Amanda Laihow, Acting Assistant Secretary of Labor for Occupational Safety and Health. It is issued under the authority of sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657); 5 U.S.C. 553; Secretary of Labor’s Order No. 8–2020 (85 FR 58383); and 29 CFR part 1911.

Dated: June 20, 2025.

Amanda Laihow,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

List of Subjects in 29 CFR Part 1926

Construction industry, Occupational Safety and Health, Lighting.

VII. Proposed Regulatory Text

Amendments

For the reasons set forth in the preamble, OSHA is proposing to amend 29 CFR part 1926 as follows:

PART 1926—SAFETY AND HEALTH REGULATIONS FOR CONSTRUCTION

■ 1. The authority citation for part 1926 continues to read in part as follows:

Authority: 40 U.S.C. 3704; 29 U.S.C. 653, 655, and 657; and Secretary of Labor’s Order

No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008), 5–2007 (72 FR 31159), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 8–2020 (85 FR 58393), as applicable; and 29 CFR part 1911, unless otherwise noted

Subpart A—General

■ 2. In § 1926.6, reserve paragraph (e)(4) to read as follows:

§ 1926.6 Incorporation by reference.

(e) * * *

(4) [Reserved]

* * * * *

Subpart C—General Safety and Health Provisions

■ 3. Section 1926.26 is removed and reserved to read as follows:

§ 1926.26 [Reserved]

* * * * *

Subpart D—Occupational Health and Environmental Controls

■ 4. Section 1926.56 is removed and reserved to read as follows:

§ 1926.56 [Reserved]

* * * * *

Subpart S—Underground Construction, Caissons, Cofferdams and Compressed Air

■ 5. Section 1926.800 is amended by revising paragraph (l) to read as follows:

§ 1926.800 Underground construction.

* * * * *

(l) Illumination. Only acceptable portable lighting equipment shall be used within 50 feet (15.24 m) of any underground heading during explosives handling.

* * * * *

Subpart V—Electric Power Transmission and Distribution

■ 6. Section 1926.967 is amended by removing the note to paragraph (d).

Subpart AA—Confined Spaces in Construction

■ 7. Section 1926.1204 is amended by revising paragraph (d)(5) to read as follows:

§ 1926.1204 Permit-required confined space program.

(d) * * *

(5) Lighting equipment that is approved for the ignitable or combustible properties of the specific gas, vapor, dust, or fiber that will be present, and that is sufficient to enable employees to see well enough to work

safely and to exit the space quickly in an emergency;

* * * * *

BILLING CODE 4510–26–P

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Part 1975

[Docket No. OSHA–2025–0041]

RIN 1218–AD71

Occupational Safety and Health Standards; Interpretation of the General Duty Clause: Limitation for Inherently Risky Professional Activities

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: OSHA proposes to clarify its interpretation of the General Duty Clause, 29 U.S.C. 654(a)(1), to exclude from enforcement known hazards that are inherent and inseparable from the core nature of a professional activity or performance.

DATES: Comments must be received on or before September 2, 2025.

ADDRESSES:

Written comments: You may submit comments and attachments, identified by Docket No. OSHA–2025–0041, electronically at <https://www.regulations.gov>, which is the Federal e-Rulemaking Portal. Follow the instructions online for making electronic submissions.

Instructions: All submissions must include the agency’s name and the docket number for this rulemaking (Docket No. OSHA–2025–0041). When uploading multiple attachments to <https://www.regulations.gov>, please number all of your attachments because <https://www.regulations.gov> will not automatically number the attachments. This will be very useful in identifying all attachments. For example, Attachment 1—title of your document, Attachment 2—title of your document, Attachment 3—title of your document. For assistance with commenting and uploading documents, please see the Frequently Asked Questions on <https://www.regulations.gov>.

All comments, including any personal information you provide, are placed in the public docket without change and may be made available online at <https://www.regulations.gov>. Therefore, OSHA

cautions commenters about submitting information they do not want made available to the public or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.

Docket: The docket for this rulemaking (Docket No. OSHA–2025–0041) is available at <https://www.regulations.gov>; the Federal eRulemaking Portal. Most exhibits are available at <https://www.regulations.gov>; some exhibits (e.g., copyrighted material) are not available to download from that web page. However, all materials in the dockets are available for inspection at the OSHA Docket Office.

I. Background

Section 5(a)(1) of the Occupational Safety and Health Act (OSH Act)—commonly referred to as the General Duty Clause—requires that each employer furnish a workplace “free from recognized hazards that are causing or are likely to cause death or serious physical harm.” 29 U.S.C. 654(a)(1). This provision has historically functioned as an enforcement mechanism when no specific OSHA standard applies to a particular hazard.

In *SeaWorld of Florida, LLC v. Perez*, 748 F.3d 1202 (D.C. Cir. 2014), OSHA relied on the General Duty Clause to prohibit SeaWorld from exposing its trainers to the recognized hazard of close contact with orca whales during live performances. The D.C. Circuit upheld the citation, holding that SeaWorld was required to abate the hazard by requiring a barrier or minimum distance between trainers and orcas. *Id.* at 1215. But then-Judge Brett Kavanaugh dissented, arguing that the General Duty Clause does not authorize OSHA to regulate hazards arising from normal activities that are intrinsic to professional, athletic, or entertainment occupations. *Id.* at 1217 (Kavanaugh, J., dissenting).

In light of the issues raised in that dissent and subsequent developments in administrative and constitutional law, OSHA has reexamined its authority under Section 5(a)(1). The agency now preliminarily concurs with the dissent's concerns. This Notice of Proposed Rulemaking (NPRM) responds to those concerns and codifies the principle that the General Duty Clause does not authorize OSHA to prohibit, restrict, or penalize inherently risky activities that are intrinsic to professional, athletic, or entertainment occupations.

II. Discussion

Then-Judge Brett Kavanaugh's *SeaWorld* dissent argued that OSHA's attempt to regulate the inherent risks of SeaWorld's animal performances raised serious questions about the scope of the agency's delegated authority under the Occupational Safety and Health (OSH) Act. He concluded:

The Congress that enacted the Act in 1970 was certainly aware of the hazards in many popular sports such as football, baseball, ice hockey, and boxing. It was also well aware of the hazards in entertainment shows such as the circus. Yet . . . Congress did not in any way indicate or even hint that the Clause's vague terms encompassed an implicit grant of authority to the Department of Labor to regulate and re-make some undefined swath of America's sports and entertainment behemoth. In the real world, it is simply not plausible to assert that

Congress, when passing the Occupational Safety and Health Act, silently intended to authorize the Department of Labor to eliminate familiar sports and entertainment practices, such as punt returns in the NFL, speeding in NASCAR, or the whale show at SeaWorld. *See FDA v. Brown & Williamson Tobacco Corp.*, 529 U.S. 120, 160 (2000) (“[W]e are confident that Congress could not have intended to delegate a decision of such economic and political significance to an agency in so cryptic a fashion.”).

This reasoning presaged what has since become binding Supreme Court doctrine. In *National Federation of Independent Business v. OSHA*, 142 S. Ct. 661 (2022), the Supreme Court invalidated OSHA's vaccine-or-test mandate, holding that the agency had exceeded its statutory authority under the OSH Act. The Court emphasized that OSHA was asserting regulatory power over a question of vast “economic and political significance” without a clear congressional mandate.

This principle—now known as the major questions doctrine—requires that Congress speak clearly when authorizing an agency to decide issues of significant national consequence. The Court reaffirmed this doctrine in *West Virginia v. EPA*, 142 S. Ct. 2587 (2022), striking down EPA's Clean Power Plan, and *Biden v. Nebraska*, 600 U.S. 477 (2023), striking down the Department of Education's loan-forgiveness plan. As applied here, OSHA's use of the General Duty Clause to regulate professional activities that are inherently risky and central to entire sectors of the economy (e.g., professional sports, marine shows, stunt performance) and could implicate the major questions doctrine if that authority were broadly exercised. These are not ordinary workplace hazards, but policy-sensitive judgments with far-reaching consequences for culture, commerce, and individual liberty.

The General Duty Clause, enacted in 1970, contains no specific delegation or language suggesting that Congress intended OSHA to prohibit the core design of performances or sports through a general phrase like “recognized hazards.” OSHA acknowledges that regulating such activities under § 5(a)(1) could constitute an unlawful extension of authority absent a clear congressional directive.

Accordingly, in light of the Supreme Court's recent jurisprudence, OSHA believes it must reassess and appropriately narrow its interpretation of the General Duty Clause to remain within lawful bounds. This NPRM is intended to codify that understanding.

Proposed Section 1975.7(a) states that the General Duty Clause does not

authorize citations against employers for hazards arising from inherently risky activities that are integral to the essential function of a professional or performance-based occupation and the hazard cannot be eliminated without fundamentally altering the activity. Proposed Section 1975.7(b) contains a non-exhaustive list of sectors where this limitation may apply. The agency seeks public comment on whether and how the regulatory text could be revised to make it clearer or more specific. The agency also seeks public comments on, and asks the following questions in connection with, its proposed approach:

- (1) What are examples of workplace conditions in the industry sectors identified in Section 1975.7(b) that are inherently risky and integral to the essential function of a professional or performance-based occupation, where the hazard cannot be addressed without fundamentally altering the activity? Please provide information and data, including injury, illness, or fatality data, on why the hazard cannot be addressed without fundamentally altering the activity, and information and data on measures taken to protect employees from these hazards.
- (2) What are examples of workplace conditions in the industry sectors identified in Section 1975.7(b) that are inherently risky but either: (a) are not integral to the essential function of the occupation; or (b) the hazard can be addressed without fundamentally

- altering the activity? Please provide information and data, including injury, illness, or fatality data and information and data on measures taken to protect employees from these hazards.
- (3) Which professional and performance-based occupations perform inherently risky activities that are integral to the essential function of the occupation? Please provide information and data to support your response.
- (4) In its economic analysis, below, OSHA identifies industry sectors (identified by North American Industry Classification System (NAICS) code) and occupations (identified by Standard Occupation Classification (SOC) code) to which, it has preliminarily concluded, proposed section 1975.7 would apply. Are there any other potential industry sectors or occupations to which the proposed provision may apply? Please identify those industry sectors and occupations by description, as well as NAICS and SOC codes, as applicable, and include information and data about the nature of the risks in those industry sectors and occupations, how the hazards in those industry sectors and occupations arise from inherently risky activities that are integral to the essential function of a professional or performance-based occupation, and how these hazards cannot be addressed without fundamentally altering the activity.
- (5) Should OSHA consider limiting the application of this proposed rule to

only those industries identified in the regulatory text? If so, should the list of industries be expanded to reflect that it is exclusive rather than illustrative.

(6) OSHA did not define key terms in the regulatory text and welcomes comment on which terms could benefit from definition as well as potential definitions for such terms.

III. Economic Analysis

This proposed rule would provide that the General Duty Clause does not require employers to remove hazards arising from inherently risky employment activities, where: the activity is integral to the essential function of a professional or performance-based occupation; and the hazard cannot be eliminated without fundamentally altering or prohibiting the activity. This proposal would impose no new burden on employers and therefore OSHA has preliminarily concluded that there would be no additional costs imposed by the proposed rule. OSHA also preliminarily concludes that there would be cost savings associated with this proposed rule. Because this rule would impose no new costs, OSHA has made a preliminary determination that the rule would be economically feasible.

The agency preliminarily concludes that the following arts and entertainment occupations would be affected by this proposed rule.

ENTERTAINERS AND PERFORMERS, SPORTS AND RELATED WORKERS
[SOC 27–2000]

Code	Title	Employees
27–2021	Athletes and Sports Competitors	14,370
27–2011	Actors	38,800
27–2031	Dancers	9,060
27–2042	Musicians and Singers	38,350
27–2099	Entertainers and Performers, Sports and Related Workers, All Other	15,040
		115,620

Source: BLS Occupational Employment and Wage Statistics (OEWS), May 2024. Accessed June 17, 2025.

However, in OSHA’s preliminary judgment, the vast majority of employees in these occupations are not engaged in the inherently risky employment activities that are within the scope of the proposed rule. Moreover, many employees in these occupations are engaged in employment activities that are covered by existing OSHA standards. Thus, OSHA preliminarily estimates that this proposal would affect one percent of employees in affected occupations, or about 1,100 employees who are entertainers and performers, sports and

related workers. This estimate does not include individuals who are independent contractors who are outside OSHA’s jurisdiction, nor does it include sole proprietorships with no employees.

OSHA also believes that this proposal would apply to employers in NAICS 71 Arts, Entertainment, and Recreation, who employ SOC 39–2000 Animal Care and Service Workers of which there are 22,120, employers in NAICS 71390 All Other Amusement and Recreation Industries who employ SOC 39–9032 Recreation Workers of which there are

26,900, employers in NAICS 611699 All Other Miscellaneous Schools and Instruction who employ SOC 25–3099 Teachers and Instructors, All Other of which there are 12,030, and employers in NAICS 51300 Publishing Industries who employ 27–3023 News Analysts, Reporters, and Journalists of which there are 15,880.¹ As with entertainers and performers, sports and related workers, employees engaged in the inherently risky employment activities

¹ All employment figures from BLS OEWS, May 2024. Accessed June 17, 2025.

that are within the scope of the proposed rule and whose activities are not covered by existing OSHA standards are likely to be only a very small minority of employees. For this group, OSHA estimates that 0.5 percent of employees, or 385 employees, in these occupations and NAICS industries are engaged in such activities. As with entertainers and performers, sports and related workers, this number does not include independent contractors, nor does it include sole proprietorships with no employees.

OSHA is unable to determine at this time precisely how many employers this would represent and must thus estimate this number. OSHA preliminarily concludes, based on agency judgment, that affected employers employ multiple employees who would be engaged in the inherently risky employment activities that are within the scope of the proposed rule and whose activities are not covered by existing OSHA standards. OSHA preliminarily estimates that each affected employer would have, on average, three employees that meet this definition, meaning that about 514 employers would be affected by this proposed rule. The agency also examines the potential cost savings if employers have one or ten employees affected by this proposal, below.

Given the inherent difficulty in determining the number of employers affected by this proposed standard, OSHA is also unable to precisely estimate the number of small employers who may be affected, and therefore must estimate this number as well. The size standards set by the Small Business Administration define small entities in NAICS 711 Performing Arts, Spectator Sports, and Related Industries at the six-digit NAICS level and based on revenue. For these industries, small entities are defined as those with revenues of less than between \$9 million and \$47 million, depending on the industry. Based on these definitions, OSHA estimates that about 97 percent of entities in the industries potentially affected by this proposal are small entities based on SBA definitions. This means that about 499 small employers might be affected by this proposed rule.

It is difficult to estimate the potential burden reduction from this proposed rule. Many General Duty Clause citations to employers who may employ employees in the previously mentioned occupations are for violations that do not involve inherently risky employment activities that are within the scope of the proposed rule (e.g., grounds maintenance employees exposed to hazardous machinery,

struck-by, or other physical hazards; employees exposed to hazards related to improper use of forklifts or employee transport vehicles like cargo vans or golf carts). Therefore, OSHA preliminarily assumes that this proposed rule might result in cost savings of \$1,000 annually per affected employer. Based on this estimate, the agency estimates this rule might result in cost savings of about \$514,000 annually, based on the assumption that 514 employers would be affected by this proposed rule (see above analysis).

The rule may also result in costs for rule familiarization. OSHA estimates that it would take 15 minutes for a manager to review this rule. This cost would only be incurred one time upon promulgation of the rule. OSHA estimates that the fully loaded wage for a manager (SOC code 11-0000) would be \$112.49 an hour (\$69.20 base wage² plus fringe benefits representing 31.3 percent of total compensation³ plus overhead representing 17 percent of base wages⁴). Based on this, OSHA estimates that there may be one-time familiarization costs of about \$14,500 for all affected employers. Adding this to the previously estimated cost savings yield potential total cost savings of about \$499,500 in the first year (or about \$3.8 million over ten years at a three percent discount rate).

Assuming only one employee who is engaged in the inherently risky employment activities that are within the scope of the proposed rule and whose activities are not covered by existing OSHA standards is employed by each affected employer, about 1,541 employers would be affected and cost savings would be about \$1.46 million annually (or about \$11.1 million over ten years at a three percent discount rate). Were employers to have, on average, ten employees who met this definition, this rule would affect 154 employers and result in about \$150,000 in annual savings (or about \$1.1 million over ten years at a three percent discount rate).

OSHA is seeking comments and data on this preliminary analysis, including on the following questions:

1. How many employees would this rule affect? In which industries are those employees employed?

2. How many employers are affected by this rule? In which industries are those employers?

3. How many affected employees are employed by each affected employer?

4. Based on the language of the proposal, are there other occupations and industries OSHA should include in this analysis?

5. OSHA welcomes information on data sources, trade associations representing the employers in potentially affected industries, or unions representing potentially affected employees who could offer OSHA assistance in refining the estimates in this analysis.

6. How much do employers expect to save based on this proposed rule?

7. Would this proposed rule impose any costs on employers that OSHA has not considered?

8. OSHA did not attempt to estimate benefits for this proposed rule. Are there any benefits that OSHA should attempt to quantify?

IV. Procedural Issues and Regulatory Review

A. Review Under Executive Orders 12866

Executive Order (E.O.) 12866, “Regulatory Planning and Review,” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit “significant regulatory actions” to OIRA for review. OIRA has determined that this proposed rule is a “significant regulatory action” under the criteria in section 3(f) of E.O. 12866. Accordingly, this proposed rule was submitted to OIRA for review under E.O. 12866.

² Based on BLS Occupational Employment and Wage Statistics, Cross-industry, Private Ownership Only, SOC occupation—Management Occupations (11-0000), available at <https://data.bls.gov/oes/#/home>. Accessed June 25, 2025.

³ Based on BLS’ Employer Costs for Employee Compensation data for December 2024.

⁴ Based on EPA’s Revised Economic Analysis for the Amended Inventory Update Rule: Final report. August, 2002. Docket ID: EPA-HQ-OPPT-2002-0054-0260.

OSHA has examined this proposed rule and has determined that it is consistent with the policies and directives outlined in E.O. 14192, "Unleashing Prosperity Through Deregulation."

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

DOL reviewed this proposed rule under the provisions of the Regulatory Flexibility Act. This rule proposes to eliminate burdensome regulations. Therefore, DOL initially concludes that the impacts of the rule would not have a "significant economic impact on a substantial number of small entities," and that the preparation of an IRFA is not warranted. DOL will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act

This proposed rule would impose no new information or record-keeping requirements. (44 U.S.C. 3501 *et seq.*)

D. Review Under Executive Order 13132

E.O. 13132, "Federalism," 64 FR 43255 (August 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The Executive order requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The Executive order also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.

DOL has examined this proposed rule and has determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O. 12988, "Civil Justice Reform," imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity, (2) write regulations to minimize litigation, (3) provide a clear legal standard for affected conduct rather than a general standard, and (4) promote simplification and burden reduction. 61 FR 4729 (Feb. 7, 1996). Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any, (2) clearly specifies any effect on existing Federal law or regulation, (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction, (4) specifies the retroactive effect, if any, (5) adequately defines key terms, and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Section 3(c) of E.O. 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. DOL has completed the required review and determined that, to the extent permitted by law, this proposed rule meets the relevant standards of E.O. 12988.

F. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104-4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. 2 U.S.C. 1532(a), (b)). The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a "significant intergovernmental

mandate," and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them.

DOL examined this proposed rule according to UMRA and its statement of policy and determined that the rule does not contain a Federal intergovernmental mandate, nor is it expected to require expenditures of \$100 million or more in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. As a result, the analytical requirements of UMRA do not apply.

G. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105-277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This proposed rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, DOL has concluded that it is not necessary to prepare a Family Policymaking Assessment.

H. Review Under Executive Order 12630

Pursuant to E.O. 12630, "Governmental Actions and Interference with Constitutionally Protected Property Rights," 53 FR 8859 (March 18, 1988), DOL has determined that this proposed rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

I. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB's guidelines were published at 67 FR 8452 (Feb. 22, 2002). DOL has reviewed this proposed rule under the OMB guidelines and has concluded that it is consistent with applicable policies in those guidelines.

J. Requirements for States With OSHA-Approved State Plans

Under section 18 of the OSH Act (29 U.S.C. 651 *et seq.*), Congress expressly provides that States may adopt, with Federal approval, a plan for the

development and enforcement of occupational safety and health standards that are “at least as effective” as the Federal standards in providing safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved, State-administered occupational safety and health programs as “State Plans.”⁵ Once approved, State Plans have an ongoing obligation to maintain an occupational safety and health program that is at least as effective as Federal OSHA’s program (*see* 29 CFR 1953.1(b)).

When Federal OSHA makes a significant change to the Federal program that would have an adverse impact on the “at least as effective” status of the State program if a parallel State program modification were not made, State adoption of a change in response to the Federal program change is required (29 CFR 1953.4(b)(1)). However, a change to the Federal program that would not result in any diminution of the effectiveness of a State Plan compared to Federal OSHA generally would not require adoption by the State (29 CFR 1953.4(b)(1)). OSHA has preliminarily determined this proposed rule would not result in any diminution of the effectiveness of a State Plan compared to Federal OSHA, and therefore State Plans are not required to amend their program. OSHA seeks comment on this assessment of its proposal.

K. Environmental Impacts/National Environmental Policy Act (NEPA)

OSHA has reviewed this proposed rule according to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), as amended by the Fiscal Responsibility Act of 2023 (Pub. L. 118–5, 321, 137 Stat. 10), and the Department of Labor’s NEPA procedures (29 CFR part 11). OSHA has preliminarily determined that this proposed rule will have no impact on the quality of the human environment.

L. Review Under Additional Executive Orders and Presidential Memoranda

This proposed rule is expected to be an Executive Order 14192 deregulatory action. It also implements Presidential

Memorandum *Directing the Repeal of Unlawful Regulations*, dated April 9, 2025.

OSHA has considered its obligations under the Executive Orders on Consultation and Coordination With Indian Tribal Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), and Protection of Children From Environmental Health Risks and Safety Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a proposed deregulatory action, that OSHA does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these executive orders.

List of Subjects in 29 CFR 1975

Occupational safety and health.

V. Authority and Signature

This document was prepared under the direction of Amanda Laihow, Acting Assistant Secretary of Labor for Occupational Safety and Health. It is issued under the authority of sections 2, 3, 4, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 651, 652, 653, and 657); 5 U.S.C. 552; and Secretary of Labor’s Order No. 8–2020 (85 FR 58383).

Signed at Washington, DC, on June 26, 2025.

Amanda Laihow,
Acting Assistant Secretary of Labor for Occupational Safety and Health.

VI. Regulatory Text

Proposed Amendments

For the reasons set forth in the preamble, OSHA proposes to amend 29 CFR part 1975 as follows:

PART 1975—COVERAGE OF EMPLOYERS UNDER THE WILLIAMS–STEIGER OCCUPATIONAL SAFETY AND HEALTH ACT OF 1970

■ 1. The authority citation for part 1975 is revised to read as follows:

Authority: Secs. 2, 3, 4, 8, Occupational Safety and Health Act of 1970 (29 U.S.C. 651, 652, 653, 657); Secretary of Labor’s Order No. 12–71 (36 FR 8754) or 8–2020 (85 FR 58383), as applicable. Section 1975.7 also issued under 5 U.S.C. 552.

■ 2. Add § 1975.7 to read as follows:

§ 1975.7 Application of the General Duty Clause to Inherently Risky Professional Activities.

(a) The General Duty Clause does not require employers to remove hazards arising from inherently risky employment activities, where:

(1) the activity is integral to the essential function of a professional or performance-based occupation; and

(2) the hazard cannot be eliminated without fundamentally altering or prohibiting the activity; and

(3) the employer has made reasonable efforts that do not alter the nature of the activity to control the hazard (*e.g.*, through engineering controls, administrative controls, personal protective equipment).

(b) Such sectors may include, but are not limited to:

(1) Live entertainment and performing arts;

(2) Animal handling and performance;

(3) Professional and extreme sports;

(4) Motorsports and high-risk recreation;

(5) Tactical, defense, and combat simulation training; and

(6) Hazard-based media and journalism activities.

[FR Doc. 2025–12236 Filed 6–30–25; 8:45 am]

BILLING CODE 4510–26–P

DEPARTMENT OF LABOR

Mine Safety and Health Administration

30 CFR part 47

[Docket No. MSHA–2025–0077]

RIN 1219–AC08

Improving and Eliminating Regulations; Hazardous Communication

AGENCY: Mine Safety and Health Administration (MSHA), Department of Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: MSHA is proposing to revise 30 CFR part 47 to allow electronic access to all Hazard Communication (HazCom) materials at no cost to miners. This change would ensure miners have access to information about the chemical hazards where they work while reducing paperwork burdens for operators.

DATES: Comments must be received on or before July 31, 2025.

ADDRESSES: All submissions must include RIN 1219–AC08 or Docket No. MSHA–2025–0077. You should not include personal or proprietary information that you do not wish to disclose publicly. If you mark parts of a comment as “business confidential” information, MSHA will not post those parts of the comment. Otherwise, MSHA will post all comments without change,

⁵ Of the 29 States and U.S. territories with OSHA-approved State Plans, 22 cover public and private-sector employees: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. The remaining six States and one U.S. territory cover only State and local government employees: Connecticut, Illinois, Maine, Massachusetts, New Jersey, New York, and the Virgin Islands.

including any personal information provided. MSHA cautions against submitting personal information.

You may submit comments and informational materials, clearly identified by RIN 1219-AC08 or Docket No. MSHA-2025-0077, by any of the following methods:

1. *Federal E-Rulemaking Portal*: <https://www.regulations.gov>. Follow the online instructions for submitting comments.

2. *Email*: zzMSHA-comments@dol.gov. Include “RIN 1219-AC08” in the subject line of the message.

3. *Regular Mail or Hand Delivery*: MSHA, Office of Standards, Regulations, and Variances, 200 Constitution Avenue NW, Room C3522, Washington, DC 20210. Before visiting MSHA in person, call 202-693-9440 to make an appointment. No telefacsimiles (“faxes”) will be accepted.

FOR FURTHER INFORMATION CONTACT: Jessica D. Senk, Acting Director, Office of Standards, Regulations, and Variances, MSHA at 202-693-9440 (voice). This is not a toll-free number.

SUPPLEMENTARY INFORMATION:

I. Background

MSHA is proposing to remove existing provisions from title 30 of the Code of Federal Regulations (30 CFR). The existing MSHA standard in 30 CFR 47.71, requires mine operators, upon request, to provide access to all hazard communication (HazCom) materials required by part 47 to the miners and designated representative. The existing standard in § 47.72 requires operators to provide the first copy of each revision of the hazard communication materials without a cost to the miners, and all fees for subsequent copies of materials to be non-discriminatory and reasonable. Amending these provisions would not reduce protections afforded to miners.

The proposed changes would decrease paperwork burdens on mine operators while also maintaining the current protections miners receive by accessing information on hazardous chemicals.

II. Discussion

MSHA proposes to revise § 47.71 to allow mine operators to make HazCom materials available to miners electronically, without cost to miners. Under the Agency’s proposed revision, a new paragraph (a) would be added to allow operators to choose to make HazCom materials available either electronically or as hard copies in paper form. The language in proposed paragraph (a) is substantially similar to the existing language in this section

with the addition of allowing electronic access. This is a change from existing § 47.71 which requires operators to provide hard copies of HazCom materials. Section 47.71 would be further revised by adding a new paragraph (b) which would, if the operator chooses, make HazCom material available as hard copies and require the operator to provide the first copy and each revision of the HazCom material without cost. Paragraph (b) would also allow operators to charge fees that are non-discriminatory and reasonable for subsequent hard copies of HazCom material. This proposed addition to existing § 47.71 is substantially similar to the language in existing § 47.72. As a result of the proposed revisions and additions to § 47.71, MSHA proposes to remove § 47.72 as it would no longer be necessary.

The proposed changes would decrease paperwork burdens on mine operators while also maintaining the current protections miners receive by accessing information on hazardous chemicals. These actions reflect MSHA’s experience and ongoing review of existing regulations to ensure they remain necessary, effective, and aligned with current technologies and mining practices.

MSHA seeks comment on any aspect of this proposed rule.

III. Procedural Issues and Regulatory Review

A. Review Under Executive Orders 12866 and 13563

Executive Order (E.O.) 12866, “Regulatory Planning and Review” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing

information upon which choices can be made by the public.

E.O. 13563, “Improving Regulation and Regulatory Review” 76 FR 3821 (Jan. 21, 2011), requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. E.O. 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation’s regulatory system to promote predictability, reduce uncertainty, and use the best, most innovative, and least burdensome tools for achieving regulatory ends.

E.O. 12866 and E.O. 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. E.O. 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

Under section 3(f) of E.O. 12866, a “significant regulatory action” is a regulatory action that is likely to result in a rule that may:

- (1) have an annual effect on the economy of \$100 million or more, or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities (also referred to as economically significant);
- (2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;
- (3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or
- (4) raise novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in the E.O.

Background

The proposed regulations would allow all mine operators to provide electronic access to HazCom materials to miners and designated representatives, at their request. The existing standard in 30 CFR 47.72 requires operators to provide the first copy of each revision of the hazard communication materials without a cost to the miners. The proposed changes would decrease paperwork burdens on mine operators while also maintaining the current protections miners receive by accessing information on hazardous chemicals.

On average, each year there are 12,529 mine operations and mining contractors that employ 138,586 miners affected by

this proposed rule. All estimated figures are expressed in 2024 dollars.

Benefits

This proposed rule would allow mine operators to provide electronic access to HazCom materials to the miners and designated representatives. The proposal would provide miners and their designated representatives easy access to information about chemical hazards and the measures they can take to protect themselves from these hazards. Electronic copies (instead of paper copies) would reduce the time needed to access HazCom materials and increase efficiency in mine operations, without diminishing safety in underground mines.

Costs Savings

The Agency estimates that each year there are an average of 12,529 mine operations and mining contractors that employ 138,586 miners, that would be affected by this proposed rule. MSHA assumes that approximately 2 percent of these miners (including their designated representatives) request HazCom information each year, meaning there are 2,772 copies being provided to miners. MSHA estimates that, under this proposed rule, 75 percent of these requested copies, or 2,079, would be provided electronically.

MSHA used data from the May 2024 Occupational Employment and Wage Statistics (OEWS) published by the Bureau of Labor Statistics (BLS) for hourly wage rates¹ and adjusted the

rates for benefits,² wage inflation,³ and overhead costs.⁴

The total cost savings associated with this proposed rule would result from allowing mine operators to provide electronic copies of HazCom materials, instead of hard copies. The cost savings include:

1. Providing Copies of HazCom Materials to Miners

On average, MSHA estimates that it takes a clerk, earning \$45.33 per hour, 12 minutes to prepare a physical copy in response to a request for HazCom information, while the time needed to provide an electronic copy is deemed de minimis. Under the proposed rule, mine operators' annual time burden would be reduced by 416 hours, creating a cost saving of \$18,848.⁵

2. Printing Copies of HazCom Materials

Additionally, there are cost savings from reduced materials costs to the mine operator or contractor if electronic and not printed copies are provided. On average, each HazCom safety data sheet set is 20 pages. Assuming printing costs are \$0.15 per page, MSHA estimates that mine operators and contractors would save \$6,237⁶ in printing costs annually.

Summary

The total compliance cost that would have been incurred during the 10-year

² The benefit multiplier comes from BLS Employer Costs for Employee Compensation accessed by menu at <http://data.bls.gov/cgi-bin/srgate> or directly at <http://download.bls.gov/pub/time.series/cm/cm.data.0.Current>. Insert the data series CMU2030000405000D and CMU2030000405000P, Private Industry Total benefits for Construction, extraction, farming, fishing, and forestry occupations, which is divided by 100 to convert to a decimal value. MSHA uses the latest 4-quarter moving average 2024Q1–2024Q4 to determine that 31.2 percent of total loaded wages are benefits. MSHA computes the benefit multiplier with a number of detailed calculations, but it may be approximated with the formula $1 + (\text{benefit percentage} / (1 - \text{benefit percentage}))$. The benefit multiplier is $1.453 = 1 + (0.312 / (1 - 0.312))$.

³ Wage inflation is the change in Series ID: CIS2020000405000I; Seasonally adjusted; Series Title: Wages and salaries for Private industry workers in Construction, extraction, farming, fishing, and forestry occupations, Index. (<https://data.bls.gov/cgi-bin/srgate>; Inflation Multiplier = (Current Quarter Cost Index Value/OEWS Wage Base Quarter Index Value). The inflation multiplier is determined by using the employment price index from the most current quarter, 2024Q4, divided by the base year and quarter of the OEWS employment and wage statistics, 2024Q2. The inflation multiplier is $1.022 = 166.7/163.1$.

⁴ MSHA uses an overhead rate of 17 percent. This overhead rate is based on a 2002 EPA report by Cody Rice, "Wage Rates for Economic Analysis of the Toxics Release Inventory Program", available at <https://www.regulations.gov/document/EPA-HQ-OPPT-2016-0387-0064>.

⁵ \$18,848 = 2,079 hard copies that are now electronic $\times$ 0.2 hours per copy $\times$ \$45.33 per hour.

⁶ \$6,237 = 2,079 hard copies that are now electronic $\times$ 20 pages per copy $\times$ \$0.15 per page.

analysis period is \$0.25 million, undiscounted. For this proposed rule, the Agency estimates that the annualized cost saving across the three discount rates of 0 percent, 3 percent, and 7 percent would be \$25,085.

Significant Rules

Under section 6(a) of E.O. 12866, the Office of Management and Budget's (OMB's) Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and whether Agencies are required to submit significant regulatory actions to OIRA for review. Under this proposed rule, mine operators are required to provide miners and designated representatives with access to HazCom material electronically or in hardcopy. The annualized cost saving of \$25,085 is far below the threshold of \$100 million put forth in E.O. 12866. This proposed rule is determined to not constitute a "significant regulatory action" because it does not meet any of the four "significant regulatory action" criteria under section 3(f) of E.O. 12866. Accordingly, this proposed rule was not submitted to OIRA for review under E.O. 12866.

No alternatives were considered for this proposed deregulatory action.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) of 1980, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996, requires preparation of an Initial Regulatory Flexibility Analyses (IRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. The RFA defines small entities to include small businesses, small organizations, including not-for-profit organizations, and small governmental jurisdictions.

MSHA reviewed this proposed rule under the provisions of the RFA, which eliminates burdensome regulations.

MSHA initially concludes that the impacts of this proposed rule would not have a 'significant economic impact on a substantial number of small entities,' and that the preparation of an IRFA is not warranted. MSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

¹ To obtain OEWS data, follow BLS's directions in its Frequently Asked Questions: "E. How to get OEWS data. 4. What are the different ways to obtain OEWS estimates from this website?" at https://www.bls.gov/oes/oes_ques.htm.

C. Review Under the Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) provides for the Federal Government's collection, use, and dissemination of information. The goals of the PRA include minimizing paperwork and reporting burdens and ensuring the maximum possible utility from the information that is collected under 5 CFR part 1320. The Paperwork Reduction Act requires Federal agencies to obtain approval from OMB before requesting or requiring "a collection of information" from the public.

This proposed rule does not create new information collections, but results in substantive changes to one currently approved information collection request under OMB Control Number 1219–0133 titled "Hazard Communication." The currently approved information collection request covers requirements in 30 CFR 47.71 and 47.72, which mandate mine operators and contractors provide all HazCom materials to miners and their designated representatives upon request, without cost to miners.

Under this proposed rule, MSHA amends 30 CFR 47.71 and 47.72 to allow mine operators and contractors to make HazCom information available to miners electronically. This proposed change would decrease paperwork burden and cost to mine operators and contractors when providing miners with copies of HazCom information, while maintaining protection for miners from hazardous chemicals. MSHA proposes to revise the supporting statement for the information collection request 1219–0133 to reflect these changes and seek public comment on these changes.

Type of Review: Substantive Change to currently approved information collection.

OMB Control Number: 1219–0133.

Title: Hazard Communication.

Description of the ICR:

Background

Under 30 CFR 47.71 and 47.72, MSHA's standards require mine operators to provide information to miners concerning chemical hazards by means of a written HazCom program including a list of all hazardous chemicals.

MSHA estimates that there are 15,021 mining operations impacted by this information collection, of which 1,913 are coal mine operations and 13,108 are MNM mine operations. Among 15,021 coal and MNM mines, there are 12,235 mines with 1 to 19 employees and 2,786 mines employed 20 or more workers.

Summary of Changes

This substantive change request will change the supporting statement for this information collection request due to a modification in the recordkeeping requirements in 30 CFR 47.71 and 47.72. The existing standards require contractors and operators to provide, upon request, access to all HazCom materials required by part 47 to miners and designated representatives. The first copy and each revision of the HazCom material must be provided without cost. Operators and contractors may charge fees for subsequent copies of the HazCom material if the fees are non-discriminatory and reasonable. The proposed revisions would allow mine operators to provide HazCom materials to miners and their designated representatives in both electronic and physical form. This change does not modify the authority or number of affected mine operators and contractors, but it decreases the paperwork burden and costs associated with providing copies of HazCom materials to miners as captured by this information collection request.

The number of respondents, frequency of response, annual hour burden, and recordkeeping cost are described in this section.

1–1. Developing New HazCom Programs (30 CFR 47.31(a) and 47.32)

Under 30 CFR 47.31(a), operators must develop and implement written HazCom programs for as long as a hazardous chemical is known to be at the mine. 30 CFR 47.32(a) requires programs to include hazard determination, labels and other forms of warning, MSDSs, and miner training. Under 30 CFR 47.32(b), operators must have a list or other records identifying all hazardous chemicals known to be at the mine. The list must use a chemical identity that permits cross-referencing between the list, a chemical's label, and its MSDS; and be compiled for the whole mine or by individual work areas.

All new mine operators are required to develop HazCom programs under this provision. MSHA estimates that 518 new operations that employ between 1 to 19 employees and 22 operations that employ 20 or more employees will need develop new HazCom programs annually.

On average, the estimated time to develop a HazCom program is 8 hours of a mining supervisor's time and 4 hours of a clerical worker's time for operations that employ between 1 to 19 employees, and 16 hours of a mining supervisor's time and 8 hours of a

clerical worker's time for operations that employ 20 or more employees.

MSHA estimates that it takes a mining supervisor, earning \$82.31 per hour, 8 hours for operations employing between 1 to 19 employees and 16 hours for operations with 20 or more employees to develop a HazCom program. MSHA estimates that it takes a clerk, earning \$45.33 per hour, 4 hours for operations employing between 1 to 19 employees and 8 hours for operations with 20 or more employees to record and file to a new HazCom program.

Additionally, mine operators need to mail the new HazCom programs to MSHA. Material costs, copying, and distribution for developing the HazCom program are estimated to be \$2.40 per operation for that employ between 1 to 19 employees and \$4 per operation that employing 20 or more employees.

The proposed rule does not impact this information collection cost. The number of annual respondents is 540, the number of annual responses is 540, the annual burden hours is 6,744, and the annual recordkeeping cost to respondents is \$1,331 to develop new HazCom programs.

1–2. Updating Existing HazCom Programs (30 CFR 47.31(b) and 47.32)

Under 30 CFR 47.31(b), operators are required to maintain written HazCom programs for as long as a hazardous chemical is known to be at the mine. Under 30 CFR 47.32(a), programs must include hazard determination, labels and other forms of warning, MSDSs, and miner training. Mine operators (which includes contractors) working on mine property periodically need to update their HazCom programs including creating lists of all hazardous chemicals. Under 30 CFR 47.31(c), operators must share relevant HazCom information with other on-site operators whose miners can be affected.

MSHA estimates that there are 12,235 mining operations that employ between 1 to 19 employees and 2,786 mining operations that employ 20 or more employees. MSHA estimates that every mine will update their HazCom programs at least annually.

MSHA estimates that it takes a mining supervisor, earning \$82.31 per hour, 1 hour for operations employing 1 to 19 employees and 2 hours for operations with 20 or more employees to update an existing HazCom program. MSHA estimates that it takes a clerk, earning \$45.33 per hour, 30 minutes for operations employing between 1 to 19 employees and 1 hour for operations with 20 or more employees to record and file updates to an existing HazCom program.

The proposed rule does not impact this information collection cost. The number of annual respondents is 15,021, the number of annual responses is 15,021, the annual burden hours is 26,711, and the annual recordkeeping cost to respondents is \$0 to update existing HazCom programs.

1–3. Recordkeeping HazCom Training (30 CFR 47.32(a)(4))

Under 30 CFR 47.32(a)(4), miner must complete training for the HazCom program. Mine operators need time to manage and administer HazCom training programs each year. The administrative time requirements include preparing, copying, distributing, and maintaining training certificates, transcripts, maintaining the list of hazardous chemicals known at the mine, and other associated records. MSHA estimates that 12,235 mining operations that employ between 1 to 19 employees and 2,786 mining operations that employ 20 or more employees will need to administer HazCom training programs annually.

MSHA estimates that it takes a mining supervisors, earning \$82.31 per hour, 15 minutes for operations employing between 1 to 19 employees and 30 minutes for operations with 20 or more employees to update any changes to and certify that miners have received HazCom training. MSHA estimates that it takes a clerk, earning \$45.33 per hour, 30 minutes for operations employing between 1 to 19 employees and 1 hour for operations with 20 or more employees to record and file and update records of HazCom training. The proposed rule does not impact this information collection cost. The number of annual respondents is 15,021, the number of annual responses is 15,021, the annual burden hours is 13,355, and the annual recordkeeping cost to respondents is \$0 to make records of HazCom training.

2. Labeling Containers (30 CFR 47.41, 47.43, and 47.44)

Under 30 CFR 47.41(a), operators are required to ensure that each container of a hazardous chemical has a label. Under 30 CFR 47.41(b), for each hazardous chemical produced at the mine, operators must prepare a container label and update this label with any significant, new information about the chemical's hazards within 3 months of becoming aware of this information. Under 30 CFR 47.41(c), for each hazardous chemical brought to the mine, operators must replace an outdated label when a revised label is received from the chemical's manufacturer or supplier.

Under 30 CFR 47.43, operators are allowed to use signs, placards, process sheets, batch tickets, operating procedures, or other label alternatives for individual, stationary process containers provided that the alternative identifies the container to which it applies, communicates the same information as required on the label, and is readily available throughout each work shift to miners in the work area.

Under 30 CFR 47.44, operators need to label temporary, portable containers if miners using the portable container do not know what is in the container or if the container is not empty at the end of the shift.

Mine operators are required to ensure that all containers of hazardous chemicals are appropriately labeled. MSHA estimates that 12,235 mining operations that employ between 1 to 19 employees and 2,786 mining operations that employ 20 or more employees will need to label containers annually as well as revise and update them.

On average, there are 5 containers, on-site, at mining operations that employ between 1 to 19 employees, and 62 containers, on-site, at mining operations that employ 20 or more employees. MSHA estimates that 50 percent of the containers at mining operations employing between 1 to 19 employees and 33 percent of the containers at operations employing 20 or more employees will need new or updated labeling. This leads to 30,588 labels ($=12,235 \text{ mines} \times 5 \text{ containers} \times 50\%$) at mining operations employing between 1 to 19 employees, and 57,002 labels ($=2,786 \text{ mines} \times 62 \text{ containers} \times 33\%$) at mining operations employing 20 or more employees.

For all operations, MSHA estimates it takes a mining supervisor, earning \$82.31 per hour, 12 minutes to verify or fill-out the label information and apply it to a container.

MSHA estimate that at mines with 1–19 employees, 50 percent of containers will need new labels created, and mines with 20 or more employees, thirty-three percent of containers will need new labels created. This leads to 7,563 labels ($=3,025 \text{ mines} \times 5 \text{ containers} \times 50\%$) to be printed at mining operations employing between 1 to 19 employees, and 16,839 labels ($=823 \text{ mines} \times 62 \text{ containers} \times 33\%$) mining operations employing 20 or more employees.

Material costs for labeling are estimated to be \$0.10 per container labeled and do not differ for an initial label or a label update. These material costs include copying costs (including any special copy media such as plasticized or weather-proof material) and distribution costs.

The proposed rule does not impact this information collection cost. The number of annual respondents is 15,021, the number of annual responses is 87,590, the annual burden hours is 17,518, and the annual recordkeeping cost to respondents is \$2,440 to make records of HazCom training.

3–1. Developing New MSDS (30 CFR 47.51(a) and 47.53)

Under 30 CFR 47.51(a), operators must develop a Material Safety Data Sheet (MSDS) for each hazardous chemical which they produce or use. If the mine produces or uses hazardous waste, under 30 CFR 47.53, operators must provide potentially exposed miners and designated representatives access to available information for the hazardous waste that identifies its hazardous chemical components, describes its physical or health hazards, or specifies appropriate protective measures.

Mine operators must create an MSDS for each hazardous chemical produced at a new mine site. MSHA estimates that 518 mining operations employing between 1 to 19 employees and 22 mining operations employing 20 or more employees will begin producing chemicals annually.

On average, MSHA estimates that operations that employ between 1 to 19 employees create, annually, one new chemical; and operations that employ 20 or more employees create, annually, four new chemicals. MSHA estimates that it takes a mining supervisor, earning \$82.31 per hour, 2 hours to develop an MSDS and a clerical worker, earning \$45.33 per hour, 1 hour to prepare the sheet. Material costs for developing MSDS are estimated to be \$2 per MSDS. Materials costs include copying costs (including any special copy media such as plasticized or weather-proof material etc.) and distribution costs.

The proposed rule does not impact this information collection cost. The number of annual respondents is 540, the number of annual responses is 606, the annual burden hours is 1,818, and the annual recordkeeping cost to respondents is \$1,212 to develop new MSDS.

3–2. Updating MSDS (30 CFR 47.51(c))

Although operators are not responsible for an inaccurate MSDS obtained from the chemical's manufacturer, supplier, or other source, under 30 CFR 47.51(c) operators are required to replace an outdated MSDS upon receipt of an updated revision and obtain an accurate MSDS as soon as

possible after becoming aware of an inaccuracy.

MSHA estimates that 12,235 mining operations employing between 1 to 19 employees and 2,786 mining operations employing 20 or more employees will need to update MSDS for the chemicals they produce or use at the mine annually.

MSHA estimates that 25 percent of mines with 1 to 19 employees that and 75 percent of mines with 20 or more employees will need to update for chemicals produced at the mine site.

On average, MSHA estimates that it takes a mining supervisor, earning \$82.31 per hour, 1 hour and a clerk, earning \$45.33 per hour, 30 minutes to update an MSDS.

MSHA estimates that 6,196 mining operations employing between 1 to 19 employees and 1,306 mining operations employing 20 or more employees will need to update MSDS annually using physical copies as opposed to electronic versions. Material costs for updating MSDS are estimated to be \$1 per MSDS. The material costs include copying costs (including any special copy media such as plasticized or weather-proof material etc.) and distribution costs.

The proposed rule does not impact this information collection cost. The number of annual respondents is 15,021, the number of annual responses is 5,149, the annual burden hours is 7,724, and the annual recordkeeping cost to respondents is \$2,529 to update MSDS.

3-3. Providing Hazardous Waste Information to Miners (30 CFR 47.53)

If the mine produces or uses hazardous waste, under 30 CFR 47.53, operators must provide potentially exposed miners and designated representatives access to available information that identifies the hazardous chemical components for the hazardous waste, describes its physical or health hazards, or specifies appropriate protective measures. The burden for this is de minimis.

The proposed rule does not impact this information collection cost. The number of annual respondents is 15,021, the number of annual responses is 0, the annual burden hours is 0, and the annual recordkeeping cost to respondents is \$0 to provide hazardous waste information to miners.

3-4. Providing MSDS Copies to Miners (30 CFR 47.54)

Under 30 CFR 47.54, operators must have copies of MSDS for all hazardous chemicals present at the mine and to maintain availability of those MSDS for all affected miners. OSHA and other

federal and state regulatory agencies require chemical manufacturers to supply one or more copies of applicable MSDS on purchase and delivery of their products.

Therefore, MSHA has determined that there is no additional burden to operators that has not been addressed by the requirements to develop, update, and maintain a HazCom Program.

The proposed rule does not impact this information collection cost. The number of annual respondents is 15,021, the number of annual responses is 0, the annual burden hours is 0, and the annual recordkeeping cost to respondents is \$0 to provide hazardous waste information to miners.

Under 30 CFR 47.55(a), operators must retain its MSDS for as long as the hazardous chemical is known to be at the mine. Part of retaining a mine's MSDS. MSHA also estimates that the cost burden of maintaining a mine's MSDS differs between mines with internet access versus without.

3-5A. Maintaining MSDS With Internet (30 CFR 47.55(a))

MSHA estimates that 11,272 mining operations will need to maintain MSDS annually through internet. In addition, MSHA estimates that it takes a clerk, earning \$45.33 per hour, 3 minutes to maintain the MSDS.

The proposed rule does not impact this information collection cost. The number of annual respondents is 11,272, the number of annual responses is 11,272, the annual burden hours is 564, and the annual recordkeeping cost to respondents is \$0 to maintain MSDS with internet.

3-5B. Maintaining MSDS Without Internet (30 CFR 47.55(a))

With respect to mining operations without internet access, MSHA estimates that 3,680 operations employing between 1 to 19 employees and 69 operations employing 20 or more employees will need to maintain MSDS annually without internet. On average, the MSHA estimates there are 40 MSDS per mining operation that employs between 1 to 19 employees and 70 MSDS per operation that employs 20 or more employees that need maintenance.

For all mining operations without internet access in all mine size categories, MSHA estimates that it takes a clerk, earning \$45.33 per hour, 3 minutes to maintain the MSDS.

The proposed rule does not impact this information collection cost. The number of annual respondents is 3,749, the number of annual responses is 152,030, the annual burden hours is 7,602, and the annual recordkeeping

cost to respondents is \$0 to maintain MSDS without internet.

3-6. Removing MSDS (30 CFR 47.55(b))

Under 30 CFR 47.55(b), operators are required to notify miners at least 3 months before disposing of the MSDS.

MSHA assumes that only some operators without internet access will remove MSDS every year. Operations with internet access are assumed to retain all the MSDS in their electronic database and any burden for that is de minimis.

With respect to mining operations without internet access, MSHA estimates that 1,272 operations that employ between 1 to 19 employees will prepare, on average, 10 MSDS removal announcements annually. In addition, MSHA estimates that 24 operations employing 20 or more employees will prepare, on average, 18 MSDS removal announcements annually.

For all operations without internet access in all size categories, MSHA estimates that it takes a mining supervisor, earning \$82.31 per hour, 3 minutes to remove the MSDS.

The proposed rule does not impact this information collection cost. The number of annual respondents is 1,296, the number of annual responses is 13,152, the annual burden hours is 658, and the annual recordkeeping cost to respondents is \$0 to remove MSDS.

4. Making HazCom Available (30 CFR 47.71)

Under 30 CFR 47.71, operations must provide the first copy and each revision of the HazCom material without cost to miners and designated representatives.

MSHA estimates that 10,563 mining operations employing between 1 to 19 employees, 1,966 mining operations employing 20 or more employees will need to provide copies of HazCom information to employees that request them annually. MSHA estimates that 2 percent of miners (including designated representatives) will request such information. The average numbers of miners per operation are as follows: 4 miners per mining operation employing between 1 to 19 employees; 49 miners per mining operation employing 20 or more employees. This results in on average 845 requests ($=10,563 \text{ mins} \times 4 \text{ miners} \times 2\%$) per mining operation employing between 1 to 19 employees and 1,927 requests ($=1,966 \text{ mines} \times 49 \text{ miners} \times 2\%$) per mining operation employing 20 or more employees, for a total of 2,772 requests annually.

Under the proposed rule mine operators will be able to provide electronic copies of the HazCom to miners instead of physical copies.

MSHA assumes that 75 percent of the 2,772 requests (2,079 requests) will receive electronic copies due to the proposed rule. MSHA assumes that the cost to mine operators to provide these electronic copies is *de minimis*. For the 693 requests that will receive physical copies, MSHA assumes that it takes a clerk, earning \$45.33 per hour, 12 minutes to process each physical HazCom information request.

Photocopy costs are estimated to be \$3 per request while the copies that are provided electronically don't incur any additional costs.

This proposed rule would result in a reduction of information collection cost. The number of annual respondents remains unchanged at 12,529, the number of annual responses decreases from 2,772 to 693, the annual burden hour decreases from 555 to 139 hours, and the annual recordkeeping cost to respondents decreases from \$8,316 to \$2,079 to make HazCom available.

5. Providing Copies of Label Information and MSDS to Customers (30 CFR 47.73)

For a hazardous chemical produced at the mine, under 30 CFR 47.73, operators must provide customers, upon request, with the chemical's label or a copy of the label information, and the chemical's MSDS.

MSHA estimates that 10,714 operations that employ between 1 to 19 employees and 1,966 mining operations that employ 20 or more employees need to provide copies of HazCom labeling information and MSDS to customers annually.

On average, MSHA estimates 22 customers make requests per operation employing between 1 to 19 employees, and 42 customers per operation employing 20 or more employees. MSHA assumes there will be 58,927, for mines with 1 to 19 employees, and 20,643, for mines with 20 or more employees, requests for physical HazCom copies.

On average, MSHA estimates that it takes a clerk, earning \$45.33 per hour, 12 minutes to copy and distribute HazCom labeling information or MSDS to a customer. Photocopy costs are estimated to be \$0.60 per request.

The proposed rule does not impact this information collection cost. The number of annual respondents is 12,680, the number of annual responses is 318,280, the annual burden hours is 63,656 and the annual recordkeeping cost to respondents is \$47,742 to provide copies of label information and MSDS to customers.

6. Withholding Trade Secrets (30 CFR 47.81, 47.82, and 47.84)

Under 30 CFR 47.81, operators are allowed to withhold the identity of a trade secret chemical, including the name and other specific identification, from the written list of hazardous chemicals, the label, and the MSDS, provided that operators can support the claim that the chemical's identity is a trade secret, identifies the chemical in a way that it can be referred to without disclosing the secret, indicates in the MSDS that the chemical's identity is withheld as a trade secret, and discloses in the MSDS information on the properties and effects of the hazardous chemical.

Under 30 CFR 47.82, operators must make the chemical's identity available to miners, the miner's designated representatives, and health professionals in accordance with the provisions listed in 30 CFR 47.84.

MSHA is aware that most operators produce single substances that are not proprietary. Furthermore, there are few if any requests to mines to withhold or disclose trade secrets. MSHA assumes the burden for this is *de minimis*.

The proposed rule does not impact this information collection cost. The number of annual respondents is 0, the number of annual responses is 0, the annual burden hours is 0, and the annual recordkeeping cost to respondents is \$0 for withholding trade secrets.

7. Denying Requests To Disclose Trade Secrets (30 CFR 47.86)

Under 30 CFR 47.86(a), operators can deny a request to disclose the identity of trade secret chemicals.

MSHA is aware that most operators produce single substances that are not proprietary. Furthermore, there are few if any denials to disclose trade secrets by mine operators. MSHA assumes the burden for this is *de minimis*.

The proposed rule does not impact this information collection cost. The number of annual respondents is 0, the number of annual responses is 0, the annual burden hours is 0, and the annual recordkeeping cost to respondents is \$0 to deny a request to disclose trade secrets.

8. Submitting to MSHA To Appeal Denial of Request To Disclose Trade Secrets (30 CFR 47.87)

Under 30 CFR 47.87(a), the health professional, miner, or designated representative may refer the written denial to MSHA for review.

Since MSHA assumes there are no requests for mines to disclose trade

secrets there would be no denials to disclose this information or appeals. MSHA thus assumes that the burden for this is *de minimis*.

The proposed rule does not impact this information collection cost. The number of annual respondents is 0, the number of annual responses is 0, the annual burden hours is 0, and the annual recordkeeping cost to respondents is \$0 to appeal a denial of a request to disclose trade secrets.

Summary of the Collection of Information

Under the proposed rule, the estimated number of responses, burden hours and recordkeeping costs to respondents would decrease from the currently approved information collection request. The reduction in information collection cost comes from making HazCom available electronically.

Affected Public: Businesses or For-Profit.

Estimated Number of Respondents: 15,021 (0 from this proposed rule).

Frequency: On occasion.

Estimated Number of Responses: 619,354 (– 2,079 from this proposed rule).

Estimated Number of Burden Hours: 146,487 (– 416 from this proposed rule).

Estimated Recordkeeping Costs to Respondents: \$57,333 (– \$6,237 from this proposed rule).

D. Review Under Executive Order 13132

E.O. 13132, "Federalism" 64 FR 43255 (August 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The E.O. requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The E.O. also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.

MSHA has examined this proposed rule and has determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of

new regulations, section 3(a) of E.O. 12988, “Civil Justice Reform” 61 FR 4729 (Feb. 7, 1996) imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Section 3(c) of E.O. 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. MSHA has completed the required review and determined that, to the extent permitted by law, this proposed rule meets the relevant standards of E.O. 12988.

F. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)). The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a “significant intergovernmental mandate,” and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing

any requirements that might significantly or uniquely affect them.

MSHA examined this proposed rule according to UMRA and its statement of policy and determined that the proposal does not contain a Federal intergovernmental mandate, nor is it expected to require expenditures of \$100 million or more in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. As a result, the analytical requirements of UMRA do not apply.

G. Review Under the National Environmental Policy Act

The National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*), requires each Federal agency to consider the environmental effects of regulatory actions and to prepare an environmental impact statement on Agency actions that would significantly affect the quality of the environment; unless the action is considered categorically excluded under 29 CFR 11.10. MSHA has reviewed the proposed rule in accordance with NEPA requirements and the Department of Labor’s NEPA procedures (29 CFR part 11). As a result of this review, MSHA has determined that this proposed rule would not impact air, water, or soil quality, plant or animal life, the use of land or other aspects of the human environment. Therefore, MSHA has not conducted an environmental assessment nor provided an environmental impact statement.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This proposed rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, MSHA has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to E.O. 12630, “Governmental Actions and Interference with Constitutionally Protected Property Rights” 53 FR 8859 (March 18, 1988), MSHA has determined that this proposed rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB’s guidelines were published at 67 FR 8452 (Feb. 22, 2002). MSHA has reviewed this proposed rule and has concluded that it is consistent with applicable policies in the OMB guidelines.

K. Review Under Executive Order 13175

E.O. 13175, “Consultation and Coordination With Indian Tribal Governments” 65 FR 67249 (Nov. 9, 2000), requires agencies to consult with tribal officials when developing policies that may have “tribal implications.” This proposed rule does not have “tribal implications” because it will not “have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.” Accordingly, under E.O. 13175, no further Agency action or analysis is required.

L. Review Under Executive Order 13211

E.O. 13211, “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” 66 FR 28355 (May 22, 2001), requires agencies to publish a statement of energy effects when a rule has a significant energy action that adversely affects energy supply, distribution, or use. MSHA has reviewed this proposed rule for its energy effects. For the energy analysis, this proposed rule will not exceed the relevant criteria for adverse impact.

M. Review Under Additional Executive Orders and Presidential Memoranda

MSHA has examined this proposed rule and has determined that it is consistent with the policies and directives outlined in E.O. 14154, “Unleashing American Energy” 90 FR 8353 (Jan. 29, 2025); E.O. 14192, “Unleashing Prosperity Through Deregulation” 90 FR 9065 (Feb. 6, 2025); and the Presidential Memorandum, “Delivering Emergency Price Relief for American Families and Defeating the Cost-of-Living Crisis” 90 FR 8245 (Jan. 28, 2025). This proposed rule is expected to be an E.O. 14192 deregulatory action.

List of Subjects in 30 CFR Part 47

Chemicals, Hazardous substances, Labeling, Mine safety and health, Reporting and recordkeeping requirements.

For the reasons discussed in the preamble, and under the authority of the Federal Mine Safety and Health Act of 1977, as amended by the Mine Improvement and New Emergency Response Act of 2006, MSHA proposes to amend chapter I of title 30 of the Code of Federal Regulations as follows:

PART 47—HAZARD COMMUNICATION (HazCom)**Subpart H—Making HazCom Information Available**

- 1. The authority citation for part 47 continues to read as follows:

Authority: 30 U.S.C. 811, 825.

- 2. Revise § 47.71 to read as follows:

§ 47.71 Access to HazCom materials.

(a) Upon request, the operator must provide access electronically or in hardcopy to all HazCom materials required by this part to miners and designated representatives without cost, except as provided in § 47.81 through § 47.87 (provisions for trade secrets).

(b) If the mine operator provides access for miners and designated representatives to HazCom materials in hardcopy:

- (1) The operator must provide the first copy and each revision of the HazCom material without cost; and
- (2) Fees for a subsequent copy of the HazCom material must be non-discriminatory and reasonable.

§ 47.72 [Removed and Reserved]

- 3. Remove and reserve § 47.72.

James P. McHugh,

Deputy Assistant Secretary for Policy Mine Safety and Health Administration.

[FR Doc. 2025–11617 Filed 6–30–25; 8:45 am]

DEPARTMENT OF LABOR**Mine Safety and Health Administration****30 CFR Part 48**

[Docket No. MSHA–2025–0085]

RIN 1219–AC19

Training and Retraining of Miners

AGENCY: Mine Safety and Health Administration (MSHA), Department of Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: MSHA proposes to revise its regulations to eliminate provisions that allow District Managers to require changes in, or additions to, training programs. The current regulations appear to violate statutory authority; the Appointments Clause, by vesting significant regulatory authority in District Managers; and the Administrative Procedure Act (APA), by skipping notice and comment related to undesignated and unpredictable requirements.

DATES: Comments must be received on or before July 31, 2025.

ADDRESSES: All submissions must include RIN 1219–AC19 or Docket No. MSHA–2025–0085. You should not include personal or proprietary information that you do not wish to disclose publicly. If you mark parts of a comment as “business confidential” information, MSHA will not post those parts of the comment. Otherwise, MSHA will post all comments without change, including any personal information provided. MSHA cautions against submitting personal information.

You may submit comments and informational materials, clearly identified by RIN 1219–AC19 or Docket No. MSHA–2025–0085, by any of the following methods:

1. *Federal E-Rulemaking Portal:* <https://www.regulations.gov>. Follow the online instructions for submitting comments for MSHA–2025–0085. A brief summary of this document will be available at <https://www.regulations.gov/docket/MSHA-2025-0085>.

2. *Email:* zzMSHA-comments@dol.gov. Include “RIN 1219–AC19” in the subject line of the message.

3. *Regular Mail or Hand Delivery:* MSHA, Office of Standards, Regulations, and Variances, Room C3522, 200 Constitution Avenue NW, Washington, DC 20210. Before visiting MSHA in person, call 202–693–9440 to make an appointment.

FOR FURTHER INFORMATION CONTACT: Jessica D. Senk, Acting Director, Office of Standards, Regulations, and Variances, MSHA at 202–693–9440 (voice). This is not a toll-free number.

SUPPLEMENTARY INFORMATION:**I. Background**

By statute, “[e]ach operator of a coal or other mine shall have a health and safety training program which shall be approved by the Secretary.” 30 U.S.C. 825(a). Further, by statute, the Secretary of Labor must set out “mandatory health

or safety standards for the protection of life and prevention of injuries in coal or other mines.” 30 U.S.C. 811(a).

MSHA has adopted regulations to implement 30 U.S.C.825(a) to include the mandatory requirements for submitting and obtaining approval of programs for training and retraining miners working in underground mines. 30 CFR 48.1. Each mine operator must “have an MSHA approved plan containing programs for training new miners, training experienced miners, training miners for new tasks, annual refresher training, and hazard training for miners. . . .” 30 CFR 48.3(a).

MSHA regulations also set out detailed criteria for the information required in training programs. For example, each operator must submit “the name and position of the person designated by the operator who is responsible for health and safety training at the mine.” 30 CFR 48.3(c)(2). “The operator shall furnish to the representative of the miners a copy of the training plan two weeks prior to its submission to the District Manager.” 30 CFR 48.3 (d). “The training shall include instruction in the health and safety aspects and the safe operating procedures related to the assigned tasks, including information about the physical and health hazards of chemicals in the miner’s work area, the protective measures a miner can take against these hazards, and the contents of the mine’s HazCom program.” 30 CFR 48.7(a)(1). “The annual refresher training program for all miners shall include the following courses of instruction: Mandatory health and safety standard; Transportation Controls and communication systems; Barricading; Roof or ground control, ventilation, emergency evacuation and firefighting plans; First aid, Electrical hazards; Prevention of accidents; Self-rescue and respiratory devices; Explosives; Mine gases, Health.” 30 CFR 48.8(b)(1)–(11).

The regulations also include detailed requirements for instruction including, for example, hazard recognition and avoidance; emergency and evacuation procedures; health and safety standards, safety rules, and safe working procedures; and use of self-rescue and respiratory devices. 30 CFR 48.11(a)(1)–(4). Miners must receive instruction on these subjects “at least once every 12 months.” 30 CFR 48.11(b). The training and retraining plan has the force and effect of “law” at the mine. The mine may be cited for violation of the training and retraining plan and mine personnel may be held personally liable, civilly and criminally for violations of the training and retraining plan.

Various regulations in Part 48 also give the District Manager broad authority to add regulatory requirements to the training plan, which are neither described, nor required, by regulations or 30 U.S.C. 825. Specifically, several regulations currently state, without limitation, that mine operators must include in the training and retraining plan “[s]uch other courses as may be required by the District Manager based on circumstances and conditions at the mine.” 30 CFR 48.5(b)(14), 48.6(b)(13), 48.8(b)(12), 48.7(a)(4), 48.11(a)(5), 48.25(b)(13), 48.26(b)(12), 48.27(a)(4), 48.28(b)(11) and 48.31(a)(5). Moreover, 30 CFR 48.3 provides: “If it is deemed necessary, the District Manager may require changes in, or additions to, programs.” 30 CFR 48.3.

II. Discussion

MSHA is proposing to remove the power of District Managers to require additional courses to training and retraining plans, beyond the criteria set out in 30 U.S.C. 825, and 30 CFR part 48. MSHA has reevaluated its regulations and tentatively concluded that the significant authority and discretion granted to District Managers in 30 CFR 48.5(b)(14), 48.6(b)(13), 48.8(b)(12), 48.7(a)(4), 48.11(a)(5), 48.25(b)(13), 48.26(b)(12), 48.27(a)(4), 48.28(b)(11), 48.31(a)(5) and 30 CFR 48.3, to require undesignated additions to training plans, violates 30 U.S.C. 825, the Appointments Clause and the APA.

While mine operators are required by statute to prepare and submit “training plans,” and while MSHA has promulgated regulations setting forth specific contents and requirements for training plans, nothing in the plain text of the underlying statutes, including 30 U.S.C. 825 and 30 U.S.C. 811(a), can be read to permit the unfettered addition of “[s]uch other courses as may be required by the District Manager based on circumstances and conditions at the mine” or undesignated additions to the safety training programs, simply because they are deemed necessary by the District Manager. This lack of statutory authority is contrary to *Loper Bright Enterprises v. Raimondo*, 603 U.S. 369 (2024) and is an adequate reason to rescind these regulatory clauses.

Government officials that exercise significant discretion when carrying out important functions are officers of the United States, and thus subject to the Appointments Clause. See *Lucia v. SEC*, 585 U.S. 237, 248 (2018); U.S. Const. Art. II, § 2, cl. 2. Under §§ 48.5(b)(14), 48.6(b)(13), 48.7(a)(4), 48.25(b)(13), 48.26(b)(12), and 48.27(a)(4), District Managers are granted nearly unlimited

discretion to add additional courses to training and retraining plans as they deem appropriate. Accordingly, because District Managers are not appointed pursuant to the Appointments Clause, that substantial authority is unlawful.

Independently, the significant discretion in §§ 30 CFR 48.5(b)(14), 48.6(b)(13), 48.8(b)(12), 48.7(a)(4), 48.11(a)(5), 48.25(b)(13), 48.26(b)(12), 48.27(a)(4), 48.28(b)(11) and 48.31(a)(5) appear to violate the APA. The authority given to District Managers to add courses essentially amounts to the unfettered ability to draft and create “laws” which are civilly and criminally enforceable, without bicameral presentment, and without notice and comment rulemaking. Various statutory provisions, including 30 U.S.C. 811 and 825 give the Secretary authority to issue health and safety regulations for mines including requirements for mines to have a health and safety training program which must be approved by the Secretary. When these regulations are substantive rules, with “general or particular applicability and future effect designed to implement, interpret, or prescribe law or policy,” 5 U.S.C. 551(4), they are subject to the notice and comment process. MSHA must present the rulemaking to the public for comment, then issue a final rule responding to any comments. See 5 U.S.C. 553. 30 CFR 48.5(b)(14), 48.6(b)(13), 48.7(a)(4), 48.25(b)(13), 48.26(b)(12), 48.27(a)(4) and 48.28(b)(11) skip this process entirely when they vest District Managers with the authority to require undesignated training plan provisions. The District Manager, by adding additional courses for training and retraining plans, is promulgating new substantive rules of particular applicability, without any of the necessary process. Thus, §§ 30 CFR 48.5(b)(14), 48.6(b)(13), 48.8(b)(12), 48.7(a)(4), 48.11(a)(5), 48.25(b)(13), 48.26(b)(12), 48.27(a)(4), 48.28(b)(11) and 48.31(a)(5) appear to violate the APA.

MSHA seeks comment on any aspects of this proposed rule, including the statutory authority, appointments clause issues and APA requirements, and the costs and benefits of the District Manager’s vague authority.

III. Procedural Issues and Regulatory Review

A. Review Under Executive Order 12866 and 13563

Executive Order (E.O.) 12866, “Regulatory Planning and Review,” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only

upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

E.O. 13563, “Improving Regulation and Regulatory Review,” 76 FR 3821 (Jan. 21, 2011), requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. E.O. 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation’s regulatory system to promote predictability, reduce uncertainty, and use the best, most innovative, and least burdensome tools for achieving regulatory ends.

E.O. 12866 and E.O. 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. E.O. 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

Background

The proposed rule would apply to all underground and surface mines. The existing rule allows the District Manager to add courses as deemed necessary and not specified in statute or regulations to training and retraining programs, while the proposed rule would rescind the power of District Managers to do so. The proposed change would decrease the burden currently faced by mine operators of having to add extra courses not specified in the statute or regulations to their training programs when required by the District Manager.

On average each year, MSHA reports that there are 1,719 underground mines that employ 97,158 miners (excluding office employees). Additionally, there are 3,213 contractor companies that employ 45,867 miners who work at

underground mines. For surface mines, there are 11,969 mines that employ 151,322 miners (excluding office employees). Additionally, there are 5,496 contractor companies that employ 78,552 miners who worked at surface mines. Therefore, MSHA estimates that there would be each year a total of 4,932 underground mines/contractor companies employing 143,025 underground miners, and 17,465 surface mines/contractor companies employing 229,874 surface mining workers be impacted by this proposed rule.¹ All estimated figures below are expressed in 2024 dollars.

Under the baseline scenario mine operators would continue their current practice of making changes to their training programs as deemed necessary by their District Manager, not required elsewhere in existing regulations. Under the proposed rule mine operators would no longer need to add courses as deemed necessary by the District Manager and not specified in statute or regulations to training and retraining programs.

Benefits

Under this proposed rule mine operators would no longer be required to make additional changes to their training programs at the discretion of the District Manager. This change does not impact the existing requirements for the training programs that mine operators are required to implement. This action will remove improper regulatory burden from and reduce arbitrary and unforeseen demands on mine operators.

The benefits associated with the proposed rule cannot be easily quantified due to existing information gaps and challenges with quantifying the incremental shifts in costs and benefits under the proposed rule. However, benefits are discussed in a qualitative manner as described below. The potential benefits of the proposed rule include:

(1) reduced production delays for mines—faster plan approval can enable earlier initiation or resumption of mining operations, reducing downtime, and increasing operational efficiency;

(2) improved resource allocation—predictable and consistent plan requirements reduce the need for mine operators to hire consultants or devote engineering resources to anticipate or respond to unpredictable District Managers' additional criteria;

(3) regulatory certainty—by aligning plan requirements strictly with the regulations, operators can better plan capital expenditures, staffing, and compliance investments, improving long-term planning and cost efficiency;

(4) increased domestic energy production—more predictable plan approval processes may allow mines to optimize coal output, supporting national energy goals and supply chain stability; and;

(5) prevents unauthorized rulemaking—preventing extra-statutory, unaccountable and unauthorized rulemaking restores confidence in the administrative process.

MSHA requests public comments on potential benefits associated with this proposed rule.

Cost Savings

MSHA estimates that mine operators would accrue a cost reduction from no longer having to add courses or subjects, not specifically identified in the standard, to training programs at the request of the District Manager. The Agency estimates that each year 351 new training plans and 140 revised training plans are submitted to MSHA. Of which, 50 percent (246² new and revised plans) would need to be revised specifically at the discretion of the District Manager. MSHA requests comments on the estimated number of plans that would be impacted by this proposal.

MSHA used data from the May 2024 Occupational Employment and Wage Statistics (OEWS) published by the Bureau of Labor Statistics (BLS) for hourly wage rates³ and adjusted the rates for benefits,⁴ wage inflation,⁵ and

² 246 = (351 new training plans + 140 revised training plans) × 50% (Rounded).

³ To obtain OEWS data, follow BLS's directions in its Frequently Asked Questions: "E. How to get OEWS data. 4. What are the different ways to obtain OEWS estimates from this website?" at https://www.bls.gov/oes/oes_ques.htm.

⁴ The benefit multiplier comes from BLS Employer Costs for Employee Compensation accessed by menu at <http://data.bls.gov/cgi-bin/srgate> or directly at <http://download.bls.gov/pub/time.series/cm/cm.data.0.Current>. Insert the data series CMU2030000405000D and CMU2030000405000P, Private Industry Total benefits for Construction, extraction, farming, fishing, and forestry occupations, which is divided by 100 to convert to a decimal value. MSHA uses the latest 4-quarter moving average 2024Q1–2024Q4 to determine that 31.2 percent of total loaded wages are benefits. MSHA computes the benefit multiplier with a number of detailed calculations, but it may be approximated with the formula $1 + (\text{benefit percentage} / (1 - \text{benefit percentage}))$. The benefit multiplier is $1.453 = 1 + (0.312 / (1 - 0.312))$.

⁵ Wage inflation is the change in Series ID: CIS2020000405000I; Seasonally adjusted; Series Title: Wages and salaries for Private industry workers in Construction, extraction, farming, fishing, and forestry occupations, Index. (<https://>

overhead costs.⁶ The analysis period is 10 years.

The cost savings generated by the proposed rule consists of the following:

1. Revising Training Plans Required by the District Manager

MSHA assumes that under the baseline each year there are 246 new and revised training plans that are revised at the District Managers discretion. MSHA estimates that it takes a mine supervisor, earning \$82.31 per hour, 1 hour to make the requested revisions. Under the proposed rule these revisions would no such revisions, creating an annual cost saving of \$20,248.⁷

2. Providing Copies of Revised Plans to Miners, Their Representatives, or Posting at the Mine Sites After District Manager's Requirements

MSHA assumes mine operators provide miners or their representatives with one copy of the training plan at each stage of the approval process. Currently, the mine operator needs to provide a copy of the plan to miners or their representatives prior to submitting it to the District Manager for approval and another copy after the plan is approved. Under the baseline, if the District Manager requires revisions, mine operators would have to provide a further copy before resubmitting the plan to the District Manager, after the requested changes have been made. Under the proposed rule mine operators would still need to provide a copy of the training plan to miners or their representatives before submission to MSHA and after MSHA approval. However they would no longer be resubmitting them in order to address the District Manager's requirements, and would thus no longer need to provide a copy before that resubmission.

MSHA estimates that it takes a clerk, earning \$45.33 per hour, 5 minutes to generate a copy of the training plan, provide it to miners or their representatives, or post it on the mine's bulletin boards. Under the proposed rule, this step would not be necessary

data.bls.gov/cgi-bin/srgate; Inflation Multiplier = (Current Quarter Cost Index Value/OEWS Wage Base Quarter Index Value). The inflation multiplier is determined by using the employment price index from the most current quarter, 2024Q4, divided by the base year and quarter of the OEWS employment and wage statistics, 2024Q2. The inflation multiplier is $1.022 = 166.7/163.1$.

⁶ MSHA uses an overhead rate of 17 percent. This overhead rate is based on a 2002 EPA report by Cody Rice, "Wage Rates for Economic Analysis of the Toxics Release Inventory Program", available at <https://www.regulations.gov/document/EPA-HQ-OPPT-2016-0387-0064>.

⁷ $\$20,248 = 246 \text{ revisions} \times \$82.13 \text{ per hour} \times 1 \text{ hour}$.

¹ Number of mines inspected at least once in 2024 and the mine's current status is listed as active, intermittent, or nonproducing active on April 14, 2025.

for the 246 plans that would have to be revised at the District Manager's distraction. Thus, the required time would be reduced by 20.5⁸ hours and there would be an annual cost saving of \$929.⁹

MSHA also assumes that an average copy would have a materials cost of \$0.50. The proposed rule would reduce mine operators' costs by \$123¹⁰ per year by no longer requiring them to provide physical copies of training plans that have been revised as requested by the District Manager.

3. Copying and Mailing Training Plans

In the process of submitting training plans to MSHA, the operator is expected to incur a cost to mail in any physical new plans or revisions. Under the baseline, MSHA assumes that 65 percent of plans and plan revisions are submitted to MSHA electronically and have no associated copying or mailing costs. The remaining 35 percent would be mailed in. This translates to 86 of the 246¹¹ plans that are revised at the District Manager's request. At a cost of \$2 per plan for copying and mailing, by removing this requirement regarding the District Manager, would lead to a cost saving of \$172¹² every year.

Summary

Removing the provisions concerning District Manager requirements for training programs would result in cost savings to mine operators through avoided revisions to training plans that would have been requested by the District Manager under the existing regulation. Under the proposed rule, incremental cost savings are estimated at \$0.213 million over 10 years undiscounted. These cost savings include no longer revising training plans to meet non-statutory or regulatory requirements imposed by the District Manager, providing copies of revised plans to miners and their representatives, and the avoided costs of copying and mailing revised training plans. For this proposed rule, the Agency estimates that the annualized cost saving across the three discount rates of 0 percent, 3 percent, and 7 percent would be \$21,473.

While the potential cost savings are quantified, potential benefits such as reduced production delays, improved resource allocation, regulatory certainty, and increased domestic energy

production, ore and minerals production, and unauthorized rulemaking are addressed qualitatively. More efficient approval of training plans is expected to result in other cost savings, including earlier initiation (or resumption) of production and revenue due to simplified plan and amendment approvals, lower costs associated with subject matter expert consultants and trainers hired by mine operators in response to unanticipated Agency requirements, and other efficiencies generated by increased regulatory predictability resulting from this action. Benefits of the proposed rule could also result from a more efficient Agency review and approval of training plans for mines. Mine operators are expected to benefit from the proposed rule that clarifies the information and provisions required in training plans. This is expected to help ease operator confusion regarding what content is required when developing training plans for MSHA approval and to result in an increase in the time value of revenues generated by mine production. Another potential benefit to the public is the increased opportunity to improve production of ore and minerals, including critical minerals, and coal which would improve American energy production. The proposed rule is deregulatory because it reduces qualitative burdens for mine operators. Additionally, the Agency's experience supports further cost savings that are not yet quantified. MSHA requests comments on potential disbenefits or costs associated with this proposed action.

Significance Determination

Under section 6(a) of E.O. 12866, the Office of Management and Budget's (OMB's) Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and whether Agencies are required to submit the regulatory action to OIRA for review. Under section 3(f) of E.O. 12866, a "significant regulatory action" is a regulatory action that is likely to result in a rule that may:

(1) have an annual effect on the economy of \$100 million or more, or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities (also referred to as economically significant);

(2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) materially alter the budgetary impact of entitlements, grants, user fees,

or loan programs or the rights and obligations of recipients; or

(4) raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the E.O.

OIRA has determined that the proposed rule constitutes a "significant regulatory action" under section 3(f) of E.O. 12866. Accordingly, it will be reviewed by OMB.

No alternatives are considered for this proposed deregulatory action. MSHA requests public comments on alternatives to this proposal within the Agency's authority that would generate similar or greater benefits.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) of 1980, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996, requires preparation of an Initial Regulatory Flexibility Analysis (IRFA) for any rule that, by law, must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. The RFA defines small entities to include small businesses, small organizations, including not-for-profit organizations, and small governmental jurisdictions.

Under the RFA, MSHA uses the Small Business Administration's (SBA) definition to set thresholds for small business sizes for the mining industry defined at the 6-digit North American Industry Classification System (NAICS) level. For MNM mines the thresholds range from 500–1,500 employees depending on the specific commodity. For underground coal mines the threshold is 1,500 employees, and for surface coal mines the threshold is 1,250 employees. MSHA estimates that there are 5,984 small mines, including 5,232 small MNM mines and 752 small coal mines.

MSHA estimates the total annual revenues for MNM commodities to be \$105.6 billion. This was calculated using the 2024 production values for all metal and industrial minerals reported in U.S. Geological Survey' Mineral Commodity Summaries 2025 Report. Using MSHA internal data the agency estimates that \$44.0 billion of total revenues were generated by small MNM mines.

MSHA evaluated data routinely provided by mine operators related to the number of mines, employment, and production from MSHA's Standardized Information System (MSIS) for underground coal mines. MSHA

⁸ 20.5 hours = 5 minutes per plan × 246 plans.

⁹ \$929 = 20.5 hours × \$45.33 per hour.

¹⁰ \$123 = \$.50 cost per copy × 246 plans.

¹¹ 86 mailed plans = 246 plans × 35 percent (Rounded).

¹² \$172 = 86 mailed in training plan revisions × \$2 mailing cost per revision.

calculated revenue as production times the average price of coal. Using internal data, MSHA estimates that small coal mines produce roughly 92.1 million tons of coal annually. Using U.S Energy Information Administration Annual Coal Report 2023 Table 28, Average Sales Price of Coal by State and Mine Type, the average coal price for was \$54.04 per short ton in 2023. The price was then adjusted to 2024 dollars using CPI-U, \$55.63 per short ton, to estimate that national coal revenues generated by small coal mines of \$5.1 billion in revenue.

MSHA assesses the impacts on small entities by comparing the estimated costs, in this case cost saving, of the proposed rule on small entities affected by the rule to the estimated revenues for those small entities. When estimated compliance costs are less than 1 percent of the estimated revenues, the Agency believes it is generally appropriate to conclude that there is no significant economic impact on a substantial number of small entities. When estimated compliance costs exceed 1 percent of revenues, MSHA investigates whether further analysis is required. The impact of the proposed rule, as a percentage of revenues, is essentially zero: for small mine operators the total annualized cost is estimated to be \$21,473, while their annual revenue is estimated at \$49.1 billion (MNM and coal mines combined), resulting in the ratio of 0.00004 percent. This proposed rule has little impact on revenues for small mine operators. Thus, no further analysis is required.

MSHA considered the compliance costs on small mines when developing the proposed rule and reviewed this proposed rule under the provisions of the RFA. The proposed rule eliminates burdensome regulations and results in cost savings of less than 1 percent of annual revenues. Therefore, MSHA certifies that the proposed rule would not have a 'significant economic impact on a substantial number of small entities'. MSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) provides for the Federal Government's collection, use, and dissemination of information. The goals of the Paperwork Reduction Act include minimizing paperwork and reporting burdens and ensuring the maximum possible utility from the

information that is collected under 5 CFR part 1320. The Paperwork Reduction Act requires Federal agencies to obtain approval from the Office of Management and Budget (OMB) before requesting or requiring "a collection of information" from the public.

Background

By no longer requiring mine operators to add courses to training plans at the sole discretion of the District Manager this proposed rule imposes no new information or record-keeping requirements. It does result in substantive changes to a currently approved information collection request, OMB Control Number 1219-0009 "Training Plans and Records of Training for Underground Miners and Miners Working at Surface Mines and Surface Areas of Underground Mines."

Summary of Changes

On average, MSHA estimates that under the proposed rule that annually there would be 1,719 underground mines employing 97,158 miners (excluding office employees). Additionally, MSHA estimates that there would be 3,213 contractor companies employing 45,867 miners who work at underground mines. For surface mines, MSHA estimates that there would be 11,969 mines employing 151,322 miners (excluding office employees). Additionally, MSHA estimates that there would be 5,496 contractor companies employing 78,552 miners who worked at surface mines. Therefore, MSHA estimates that there would be each year a total of 4,932 underground mines/contractor companies employing 143,025 underground miners, and 17,465 surface mines/contractor companies employing 229,874 surface mining workers be impacted by this proposed rule, totaling 22,397 operations employing 372,899 miners.

The number of respondents, frequency of response, annual hour burden, and recordkeeping cost are described below.

1. Developing and Revising Training Plans (30 CFR 48.3 and 48.23)

Under 30 CFR 48.3 and 48.23, underground and surface mine operators are required to have an MSHA-approved training plan. When new task training is required, mine operators must revise their training plan to include each new task. This revision must include a complete list of task assignments, the titles of personnel conducting the training, the outline of training procedures used, and the evaluation procedures used to

determine the effectiveness of the training.

MSHA assumes 491 training plan submissions annually, including 351 new training plans and 140 revised training plans. MSHA estimates that 35 percent of the new training plans (123 plans) will be submitted by paper and 65 percent (228 plans) electronically. MSHA assumes that the District Manager requires revisions for 246 training plans including new and revised plans.

The plans are usually prepared by mine operator personnel. Although the burden on the mine operator is dependent to some degree upon a particular mine's size, MSHA estimates that on average it takes a mine safety specialist, earning \$78.46, 8 hours to prepare and submit a new paper plan, 2.25 hours to complete a new plan online, and 1 hour to revise any existing plan.

This proposed rule would decrease the burden related to developing and revising training plans as requested by the District Manager. There would be a decrease the number of new plans from 351 to 175 and the number of revised plans would drop from 140 to 70, which corresponds to a decrease of time burden of 815 hours. This proposed rule would result in a reduction of information collection costs. The annual number of respondents would decrease from 491 to 245, the annual number of responses would decrease from 491 to 245, the annual burden hour would decrease from 1,637 to 815 hours, and the annual recordkeeping cost to respondents would remain unchanged at \$0 to develop and revise training plans.

2. Providing Copies of Training Records to Miners—MSHA Form 5000-23 (30 CFR 48.9 and 48.29)

Under 30 CFR 48.9 & 48.29, upon a miner completing each MSHA-approved training program, the operator must record and certify that the miner has received the specified training. The mine operator uses MSHA Form 5000-23, Certificate of Training, to record and certify that the miner has received the specified training. The form is completed by the instructor after the completion of each training program. All training courses completed within the miner's 12-month training cycle may be recorded on one form, including the courses required by the District Manager.

A copy of the form is given to the miner at the end of the 12-month cycle. Additionally, a copy of the form is given to the miner after the completion of a training program at the miner's request.

MSHA assumes that the copies of these training certificates are provided electronically to miners and that operators incur no cost associated with producing copies of training certificates.

MSHA estimates that 45 percent of the miners' training (64,361 out of 143,025 miners) is conducted by an employee of the mine operator. Another 25 percent of the training (35,776 miners) is conducted by independent training contractors hired by the mine operator. The remaining 30 percent of the training is conducted by State trainers funded by sources that include Federal grants and incur no cost to main operators.

Although all the training completed by a miner within a one-year period may be recorded on one form, training specialists estimate that for each miner, 2 forms will probably be completed annually. If the training program is conducted by an employee of the mine operator, MSHA estimates that it takes a safety specialist, earning \$78.46 per hour, 5 minutes to prepare and complete the form. If the training is conducted by independent training contractors hired by the mine operator, MSHA estimates that it takes a safety specialist, earning \$69.32 per hour, 5 minutes to prepare and complete the form.

The proposed rule does not impact this information collection cost. The number of annual respondents would remain 64,361 miners; a mine employee, the annual number of responses is 128,722 (2 forms per respondent), the annual burden hours is 10,727, and the annual recordkeeping cost to respondents is \$413,101.

3. Providing Copies of Plans to Miners, Their Representatives, or Posting at the Mine Bulletin Boards (30 CFR 48.3 and 48.23)

Under 30 CFR 48.3 & 48.23, the operator is required to provide the representative of the miners a copy of the training plan or post a copy on the mine bulletin board at different stages of a plan: before its submission to the District Manager, after MSHA approval, and MSHA revisions and decision.

MSHA estimates that each year under the proposed rule there are 175 new training plans and 70 revised training plans are submitted. MSHA assumes an operator would produce one copy of the training plan on average at each stage of the plan. MSHA estimates that it takes a clerk, earning \$45.33 per hour, 5 minutes to provide a copy of the training plan or post a copy on the mine bulletin board. Each of these copies is estimated to cost \$0.50 to make. Using the above parameters from rescinding

the power of the District Manager, the number of annual respondents would decrease from 491 to 245, the number of annual responses decreases from 842 to 420, and the annual burden hours would decrease from 70 to 35, and the associated annual recordkeeping cost to respondents decreases from \$421 to \$123.

4. Copying and Mailing Training Plans to MSHA (30 CFR 48.3 and 48.23)

The operator is also expected to incur a cost to produce one copy of the training plans prior to submission to MSHA, after MSHA approval, and MSHA revisions and decision. Operators also need to provide the representative of the miners a copy of the training plan or post a copy on the mine bulletin board. Upon submitting the training plan to MSHA, operators and contractors may incur a cost to copy and mail their plan to MSHA Headquarters. MSHA estimates that under the proposed rule 35 percent of the 245 new and revised training plans, or 86 will be submitted by mail. This is a decrease from the 172 copies that would be submitted by mail under the current rule. The estimated mailing cost is \$2.00 per training plan by paper. Thus, the annual recordkeeping cost to respondents is anticipated to fall from \$344 to \$172.

Summary of the Collection of Information: Under the proposed rule, the estimated number of respondents, responses, burden hours, and recordkeeping cost to respondents would decrease from the currently approved information collection request. The reduction in information collection cost comes from eliminating provisions that allow District Managers to require changes in training programs.

Type of Review: Substantive Change to currently approved information collection.

OMB Control Number: 1219-0009.

Title: Training Plans and Records of Training, for Underground Miners and Miners Working at Surface Mines and Surface Areas of Underground Mines.

Summary of the Collection of Information: The calculated burden shows a decrease in burden hours, and recordkeeping costs from the currently approved information collection request.

Affected Public: Businesses or For-Profit.

Estimated Number of Respondents: 64,606 (– 246 due to this proposed rule).

Frequency: On occasion.

Estimated Number of Responses: 129,387 (– 668 due to this proposed rule).

Estimated Number of Burden Hours: 11,576 (– 858 due to this proposed rule).

Estimated Recordkeeping Costs to Respondents: \$413,395 (– \$471 due to this proposed rule).

D. Review Under Executive Order 13132

E.O. 13132, "Federalism," 64 FR 43255 (August 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The E.O. requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The E.O. also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.

MSHA has examined this proposed rule and has determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O. 12988, "Civil Justice Reform," imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. 61 FR 4729 (Feb. 7, 1996). Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Section 3(c) of E.O. 12988 requires Executive agencies to review regulations in light of applicable standards in

section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. MSHA has completed the required review and determined that, to the extent permitted by law, this proposed rule meets the relevant standards of E.O. 12988.

F. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. 2 U.S.C. 1532(a), (b)). The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a “significant intergovernmental mandate,” and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them.

MSHA examined this proposed rule according to UMRA and determined that the proposal rule does not contain a Federal intergovernmental mandate, nor is it expected to require expenditures of \$100 million or more in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. As a result, the analytical requirements of UMRA do not apply.

G. Review Under the National Environmental Policy Act

The National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*), requires each Federal agency to consider the environmental effects of regulatory actions and to prepare an environmental impact statement on Agency actions that would significantly affect the quality of the environment; unless the action is considered categorically excluded under 29 CFR 11.10. MSHA has reviewed the proposed rule in accordance with NEPA requirements and the Department of Labor’s NEPA procedures (29 CFR part 11). As a result of this review, MSHA has determined that this proposed rule

would not impact air, water, or soil quality, plant or animal life, the use of land or other aspects of the human environment. Therefore, MSHA has not conducted an environmental assessment nor provided an environmental impact statement.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This proposed rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, MSHA has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to E.O. 12630, “Governmental Actions and Interference with Constitutionally Protected Property Rights,” 53 FR 8859 (March 18, 1988), MSHA has determined that this proposed rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB’s guidelines were published at 67 FR 8452 (Feb. 22, 2002). MSHA has reviewed this proposed rule under the OMB and has concluded that it is consistent with applicable policies in the OMB guidelines.

K. Review Under Executive Order 13175

E.O. 13175, “Consultation and Coordination With Indian Tribal Governments” 65 FR 67249 (Nov. 9, 2000), requires agencies to consult with tribal officials when developing policies that may have “tribal implications.” This proposed rule does not have “tribal implications” because it will not “have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.” Accordingly, under E.O. 13175, no

further Agency action or analysis is required.

L. Review Under Executive Order 13211

E.O. 13211, “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” 66 FR 28355 (May 22, 2001), requires agencies to publish a statement of energy effects when a rule has a significant energy action that adversely affects energy supply, distribution, or use. MSHA has reviewed this proposed rule for its energy effects. For the energy analysis, this proposed rule will not exceed the relevant criteria for adverse impact.

M. Review Under Additional Executive Orders and Presidential Memoranda

MSHA has examined this proposed and has determined that it is consistent with the policies and directives outlined in E.O. 14154, “Unleashing American Energy” 90 FR 8353 (Jan. 29, 2025); E.O. 14192, “Unleashing Prosperity Through Deregulation” 90 FR 9065 (Feb. 6, 2025); and the Presidential Memorandum, “Delivering Emergency Price Relief for American Families and Defeating the Cost-of-Living Crisis” 90 FR 8245 (Jan. 28, 2025). This rescission is expected to be an E.O. 14192 deregulatory action.

List of Subjects in 30 CFR Part 48

Education, Mine safety and health, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, and under the authority of the Federal Mine Safety and Health Act of 1977, as amended by the Mine Improvement and New Emergency Response Act of 2006, MSHA proposes to amend chapter I of title 30 of the Code of Federal Regulations as follows:

PART 48—TRAINING AND RETRAINING OF MINERS

■ 1. The authority citation for part 48 continues to read as follows:

Authority: 30 U.S.C. 811, 825.

■ 2. In § 48.3, revise paragraph (e) to read as follows:

§ 48.3 Training plans; time of submission; where filed; information required; time for approval; method for disapproval; commencement of training; approval of instructors.

* * * * *

(e) All training required by the training plan submitted to and approved by the District Manager as required by this subpart A shall be subject to evaluation by the District Manager to determine the effectiveness of the training programs. Upon request from

the District Manager the operator shall make available for evaluation the instructional materials, handouts, visual aids and other teaching accessories used or to be used in the training programs. Upon request from the District Manager the operator shall provide information concerning the schedules of upcoming training.

* * * * *

§ 48.5 [Amended]

■ 3. Amend § 48.5 by removing paragraph (b)(14).

§ 48.6 [Amended]

■ 4. Amend § 48.6 by removing paragraph (b)(13).

§ 48.7 [Amended]

■ 5. Amend § 48.7 by removing paragraph (a)(4).

§ 48.8 [Amended]

■ 6. Amend § 48.8 by removing paragraph (b)(12).

§ 48.11 [Amended]

■ 7. Amend § 48.11 by removing paragraph (a)(5).

§ 48.25 [Amended]

■ 8. Amend § 48.25 by removing paragraph (b)(13).

§ 48.26 [Amended]

■ 9. Amend § 48.26 by removing paragraph (b)(12).

§ 48.27 [Amended]

■ 10. Amend § 48.27 by removing paragraph (a)(4).

§ 48.28 [Amended]

■ 11. Amend § 48.28 by removing paragraph (b)(11).

§ 48.31 [Amended]

■ 12. Amend § 48.31 by removing paragraph (a)(5).

James P. McHugh,

Deputy Assistant Secretary for Policy, Mine Safety and Health Administration.

[FR Doc. 2025–12231 Filed 6–30–25; 8:45 am]

BILLING CODE 4520–43–P

DEPARTMENT OF LABOR

Mine Safety and Health Administration

30 CFR Part 56

[Docket No. MSHA–2025–0081]

RIN 1219–AC12

Aerial Tramways

AGENCY: Mine Safety and Health Administration (MSHA), Department of Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: MSHA proposes to revise title 30 of the Code of Federal Regulations (30 CFR) part 56 by removing duplicative requirements for aerial tramways. Removing these provisions would not reduce protections afforded to miners because they are unnecessary and duplicative of information elsewhere in 30 CFR part 56.

DATES: Comments must be received on or before July 31, 2025.

ADDRESSES: All submissions must include RIN 1219–AC12 or Docket No. MSHA–2025–0081. You should not include personal or proprietary information that you do not wish to disclose publicly. If you mark parts of a comment as “business confidential” information, MSHA will not post those parts of the comment. Otherwise, MSHA will post all comments without change, including any personal information provided. MSHA cautions against submitting personal information.

You may submit comments and informational materials, clearly identified by RIN 1219–AC12 or Docket No. MSHA–2025–0081, by any of the following methods:

1. *Federal E-Rulemaking Portal:* <https://www.regulations.gov>. Follow the online instructions for submitting comments for MSHA–2025–0081.

2. *Email:* zzMSHA-comments@dol.gov. Include “RIN 1219–AC12” in the subject line of the message.

3. *Regular Mail or Hand Delivery:* MSHA, Office of Standards, Regulations, and Variances, Room C3522, 200 Constitution Avenue NW, Washington, DC 20210. Before visiting MSHA in person, call 202–693–9440 to make an appointment.

No telefacsimiles (“faxes”) will be accepted.

FOR FURTHER INFORMATION CONTACT:

Jessica D. Senk, Acting Director, Office of Standards, Regulations, and Variances, MSHA at 202–693–9440 (voice). This is not a toll-free number.

SUPPLEMENTARY INFORMATION:

I. Background

MSHA is proposing to remove existing provisions from title 30 of the Code of Federal Regulations (30 CFR). 30 CFR 56.10002 requires that inspection and maintenance of carriers (including loading and unloading mechanisms), ropes and supports, and brakes be performed by competent persons according to the recommendations of the manufacturer. Section 56.10003 requires that any hazardous defects be corrected before

the equipment is used. MSHA is proposing to remove and reserve §§ 56.10002 and 56.10003. Removing these provisions would not reduce protections afforded to miners because they are duplicative of requirements elsewhere in part 56.

II. Discussion

MSHA proposes to remove the existing provisions in §§ 56.10002 and 56.10003, which currently establish requirements for the inspection, maintenance and correction of defects of aerial tramways. Removing these provisions would not reduce protections afforded to miners because they are unnecessary and duplicative of requirements in §§ 56.14100(b) through (c) and 56.18002. This proposed action reflects MSHA’s experience and ongoing review of existing regulations to ensure they remain necessary, effective, and aligned with current technologies and mining practices.

MSHA seeks comment on any aspects of this proposed rule.

III. Procedural Issues and Regulatory Review

A. Review Under Executive Order 12866 and 13563

Executive Order (E.O.) 12866, “Regulatory Planning and Review” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

E.O. 13563, “Improving Regulation and Regulatory Review” 76 FR 3821 (Jan. 21, 2011), requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. E.O. 13563 reaffirms the principles of E.O.

12866 while calling for improvements in the nation's regulatory system to promote predictability, reduce uncertainty, and use the best, most innovative, and least burdensome tools for achieving regulatory ends.

E.O. 12866 and E.O. 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. E.O. 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

Under section 3(f) of E.O. 12866, a "significant regulatory action" is a regulatory action that is likely to result in a rule that may:

(1) have an annual effect on the economy of \$100 million or more, or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities (also referred to as economically significant);

(2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients; or

(4) raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the E.O. Under section 6(a) of E.O. 12866, the Office of Management and Budget's (OMB's) Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and whether Agencies are required to submit the regulatory action to OIRA for review. Removing the provisions concerning duplicative requirements for aerial tramways would not impose new compliance costs to surface metal and nonmetal mine operators or reduce the protections afforded to miners. This proposed rule is determined to not constitute a "significant regulatory action" because it does not meet any of the four "significant regulatory action" criteria under section 3(f) of E.O. 12866. Accordingly, this proposed rule was not submitted to OIRA for review under E.O. 12866.

No alternatives were considered for this proposed deregulatory action.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) of 1980, as amended by the Small Business Regulatory Enforcement

Fairness Act (SBREFA) of 1996, requires preparation of an Initial Regulatory Flexibility Analysis (IRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. The RFA defines small entities to include small businesses, small organizations, including not-for-profit organizations, and small governmental jurisdictions.

MSHA reviewed this proposed rule under the provisions of the RFA, which eliminated burdensome regulations. MSHA initially concludes that the impacts of the proposed rule would not have a "significant economic impact on a substantial number of small entities," and that the preparation of an IRFA is not warranted. MSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) provides for the Federal Government's collection, use, and dissemination of information. The goals of the Paperwork Reduction Act include minimizing paperwork and reporting burdens and ensuring the maximum possible utility from the information that is collected under 5 CFR part 1320. The Paperwork Reduction Act requires Federal agencies to obtain approval from OMB before requesting or requiring "a collection of information" from the public.

This proposed rule imposes no new information collection or record-keeping requirements. Accordingly, OMB clearance is not required under the Paperwork Reduction Act.

D. Review Under Executive Order 13132

E.O. 13132, "Federalism" 64 FR 43255 (August 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The E.O. requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The E.O. also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.

MSHA has examined this proposed rule and has determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O. 12988, "Civil Justice Reform" 61 FR 4729 (Feb. 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Section 3(c) of E.O. 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. MSHA has completed the required review and determined that, to the extent permitted by law, this proposed rule meets the relevant standards of E.O. 12988.

F. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104-4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that

estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)). The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a “significant intergovernmental mandate,” and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them.

MSHA examined this proposed rule according to UMRA and its statement of policy and determined that the proposal does not contain a Federal intergovernmental mandate, nor is it expected to require expenditures of \$100 million or more in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. As a result, the analytical requirements of UMRA do not apply.

G. Review Under the National Environmental Policy Act

The National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*), requires each Federal agency to consider the environmental effects of regulatory actions and to prepare an environmental impact statement on Agency actions that would significantly affect the quality of the environment; unless the action is considered categorically excluded under 29 CFR 11.10. MSHA has reviewed the proposed rule in accordance with NEPA requirements and the Department of Labor’s NEPA procedures (29 CFR part 11). As a result of this review, MSHA has determined that this proposed rule would not impact air, water, or soil quality, plant or animal life, the use of land or other aspects of the human environment. Therefore, MSHA has not conducted an environmental assessment nor provided an environmental impact statement.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This proposed rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, MSHA has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to E.O. 12630, “Governmental Actions and Interference with Constitutionally Protected Property Rights,” 53 FR 8859 (March 18, 1988), MSHA has determined that this proposed rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB’s guidelines were published at 67 FR 8452 (Feb. 22, 2002). MSHA has reviewed this proposed rule and has preliminarily concluded that it is consistent with applicable policies in the OMB guidelines.

K. Review Under Executive Order 13175

E.O. 13175, “Consultation and Coordination With Indian Tribal Governments” 65 FR 67249 (Nov. 9, 2000), requires agencies to consult with tribal officials when developing policies that may have “tribal implications.” This proposed rule does not have “tribal implications” because it will not “have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.” Accordingly, under E.O. 13175, no further Agency action or analysis is required.

L. Review Under Executive Order 13211

E.O. 13211, “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” 66 FR 28355 (May 22, 2001), requires agencies to publish a statement of energy effects when a rule has a significant energy action that adversely affects energy supply, distribution, or use. MSHA has reviewed this proposed rule for its energy effects. For the energy analysis, this proposed rule will not exceed the relevant criteria for adverse impact.

M. Review Under Additional Executive Orders and Presidential Memoranda

MSHA has examined this rescission and has determined that it is consistent with the policies and directives outlined in E.O. 14154, “Unleashing American

Energy” 90 FR 8353 (Jan. 29, 2025); E.O. 14192, “Unleashing Prosperity Through Deregulation” 90 FR 9065 (Feb. 6, 2025); and the Presidential Memorandum, “Delivering Emergency Price Relief for American Families and Defeating the Cost-of-Living Crisis” 90 FR 8245 (Jan. 28, 2025). This proposed rule is expected to be an E.O. 14192 deregulatory action.

List of Subjects in 30 CFR Part 56

Chemicals, Electric power, Explosives, Fire prevention, Hazardous substances, Incorporation by reference, Metal and nonmetal mining, Mine safety and health, Noise control, Reporting and recordkeeping requirements, Surface mining.

For the reasons set forth in the preamble, and under the authority of the Federal Mine Safety and Health Act of 1977, as amended by the Mine Improvement and New Emergency Response Act of 2006, MSHA proposes to amend chapter I of title 30 of the Code of Federal Regulations as follows:

SUBCHAPTER K—METAL AND NONMETAL MINE SAFETY AND HEALTH

PART 56—SAFETY AND HEALTH STANDARDS—SURFACE METAL AND NONMETAL MINES

- 1. The authority citation for part 56 continues to read as follows:

Authority: 30 U.S.C. 811.

Subpart I—Aerial Tramways

§ 56.10002 [Removed and Reserved].

§ 56.10003 [Removed and Reserved].

- 2. Remove and reserve §§ 56.10002 and 56.10003.

James P. McHugh,

Deputy Assistant Secretary for Policy, Mine Safety and Health Administration.

[FR Doc. 2025–11620 Filed 6–30–25; 8:45 am]

BILLING CODE 4520–43–P

DEPARTMENT OF LABOR

Mine Safety and Health Administration

30 CFR Part 56

[Docket No. MSHA–2025–0082]

RIN 1219–AC13

Drilling

AGENCY: Mine Safety and Health Administration (MSHA), Department of Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: MSHA is proposing to rescind requirements for the maintenance of drill equipment and inspection of drilling areas before starting drilling operations at surface metal and nonmetal mines. Removing these provisions would not reduce protections afforded to miners because the requirements are duplicative and covered elsewhere in 30 CFR part 56.

DATES: Comments must be received on or before July 31, 2025.

ADDRESSES: All submissions must include RIN 1219-AC13 or Docket No. MSHA-2025-0082. You should not include personal or proprietary information that you do not wish to disclose publicly. If you mark parts of a comment as “business confidential” information, MSHA will not post those parts of the comment. Otherwise, MSHA will post all comments without change, including any personal information provided. MSHA cautions against submitting personal information.

You may submit comments and informational materials, clearly identified by RIN 1219-AC13 or Docket No. MSHA-2025-0082, by any of the following methods:

1. *Federal E-Rulemaking Portal:* <https://www.regulations.gov>. Follow the online instructions for submitting comments for MSHA-2025-0082.

2. *Email:* zzMSHA-comments@dol.gov. Include “RIN 1219-AC13” in the subject line of the message.

3. *Regular Mail or Hand Delivery:* MSHA, Office of Standards, Regulations, and Variances, Room C3522, 200 Constitution Avenue NW, Washington, DC 20210. Before visiting MSHA in person, call 202-693-9440 to make an appointment.

No telefacsimiles (“faxes”) will be accepted.

FOR FURTHER INFORMATION CONTACT: Jessica D. Senk, Acting Director, Office of Standards, Regulations, and Variances, MSHA at 202-693-9440 (voice). This is not a toll-free number.

SUPPLEMENTARY INFORMATION:

I. Background

MSHA is proposing to remove existing provisions from title 30 of the Code of Federal Regulations (30 CFR) part 56. Existing § 56.7002 requires mine operators to correct any safety related equipment defects on drilling equipment before using the equipment in surface metal and nonmetal mines. Existing § 56.7003 requires that a drilling area is inspected for hazards before drilling operations begin in surface metal and nonmetal mines. MSHA is proposing to remove and reserve §§ 56.7002 and 56.7003.

Removing these provisions would not reduce protections afforded to miners.

II. Discussion

In this proposed rule, MSHA is removing the existing provisions in §§ 56.7002 and 56.7003. Section 56.7002 requires mine operators to correct any safety related equipment defects on drilling equipment before using the equipment in surface metal and nonmetal mines. Section 56.7003 currently requires that a drilling area is inspected for hazards before drilling operations begin in surface metal and nonmetal mines. The proposed removal of §§ 56.7002 and 56.7003 would not reduce protection to miners because they are duplicative requirements already addressed §§ 56.14100 and 56.18002. This proposed action reflects MSHA’s experience and ongoing review of existing regulations to ensure they remain necessary, effective, and aligned with current technologies and mining practices.

MSHA seeks comment on any aspects of this proposed rule.

III. Procedural Issues and Regulatory Review

A. Review Under Executive Order 12866 and 13563

Executive Order (E.O.) 12866, “Regulatory Planning and Review” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

E.O. 13563, “Improving Regulation and Regulatory Review” 76 FR 3821 (Jan. 21, 2011), requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. E.O.

13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation’s regulatory system to promote predictability, reduce uncertainty, and use the best, most innovative, and least burdensome tools for achieving regulatory ends.

E.O. 12866 and E.O. 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. E.O. 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

Under section 3(f) of E.O. 12866, a “significant regulatory action” is a regulatory action that is likely to result in a rule that may:

(1) have an annual effect on the economy of \$100 million or more, or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities (also referred to as economically significant);

(2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients; or

(4) raise novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in the E.O.

Under section 6(a) of E.O. 12866, the Office of Management and Budget’s (OMB’s) Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and whether Agencies are required to submit the regulatory action to OIRA for review. Removing the provisions concerning the maintenance of drill equipment and inspection of drilling areas before starting drilling operations would not impose new compliance cost to surface metal and nonmetal mine operators or reduce the protection afforded to miners. This proposed rule is determined to not constitute a “significant regulatory action” because it does not meet any of the four “significant regulatory action” criteria under section 3(f) of E.O. 12866. Accordingly, this proposed rule was not submitted to OIRA for review under E.O. 12866.

No alternatives are considered for this proposed deregulatory action.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) of 1980, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996, requires preparation of an Initial Regulatory Flexibility Analysis (IRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. The RFA defines small entities to include small businesses, small organizations, including not-for-profit organizations, and small governmental jurisdictions.

MSHA reviewed this proposed rule under the provisions of the RFA, which eliminates burdensome regulations. Therefore, MSHA initially concludes that the impacts of the proposed rule would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. MSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) provides for the Federal Government’s collection, use, and dissemination of information. The goals of the Paperwork Reduction Act include minimizing paperwork and reporting burdens and ensuring the maximum possible utility from the information that is collected under 5 CFR part 1320. The Paperwork Reduction Act requires Federal agencies to obtain approval from the Office of Management and Budget (OMB) before requesting or requiring “a collection of information” from the public.

This proposed rule imposes no new information collection or record-keeping requirements. Accordingly, OMB clearance is not required under the Paperwork Reduction Act.

D. Review Under Executive Order 13132

E.O. 13132, “Federalism” 64 FR 43255 (August 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The E.O. requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States

and to carefully assess the necessity for such actions. The E.O. also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.

MSHA has examined this proposed rescission and has determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O. 12988, “Civil Justice Reform” 61 FR 4729 (Feb. 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Section 3(c) of E.O. 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. MSHA has completed the required review and determined that, to the extent permitted by law, this proposed rescission meets the relevant standards of E.O. 12988.

F. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a

rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)). The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a “significant intergovernmental mandate,” and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them.

MSHA examined this proposed rescission according to UMRA and its statement of policy and determined that the rescission does not contain a Federal intergovernmental mandate, nor is it expected to require expenditures of \$100 million or more in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. As a result, the analytical requirements of UMRA do not apply.

G. Review Under the National Environmental Policy Act

The National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*), requires each Federal agency to consider the environmental effects of regulatory actions and to prepare an environmental impact statement on Agency actions that would significantly affect the quality of the environment; unless the action is considered categorically excluded under 29 CFR 11.10. MSHA has reviewed the proposed rule in accordance with NEPA requirements and the Department of Labor’s NEPA procedures (29 CFR part 11). As a result of this review, MSHA has determined that this proposed rule would not impact air, water, or soil quality, plant or animal life, the use of land or other aspects of the human environment. Therefore, MSHA has not conducted an environmental assessment nor provided an environmental impact statement.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This proposed rule would not have any

impact on the autonomy or integrity of the family as an institution. Accordingly, MSHA has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to E.O. 12630, “Governmental Actions and Interference with Constitutionally Protected Property Rights” 53 FR 8859 (March 18, 1988), MSHA has determined that this proposed rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB’s guidelines were published at 67 FR 8452 (Feb. 22, 2002). MSHA has reviewed this proposed rule under the OMB guidelines and has concluded that it is consistent with applicable policies in those guidelines.

K. Review Under Executive Order 13175

E.O. 13175, “Consultation and Coordination With Indian Tribal Governments” 65 FR 67249 (Nov. 9, 2000), requires agencies to consult with tribal officials when developing policies that may have “tribal implications.” This proposed rule does not have “tribal implications” because it will not “have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.” Accordingly, under E.O. 13175, no further Agency action or analysis is required.

L. Review Under Executive Order 13211

E.O. 13211, “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” 66 FR 28355 (May 22, 2001), requires agencies to publish a statement of energy effects when a rule has a significant energy action that adversely affects energy supply, distribution, or use. MSHA has reviewed this proposed rule for its energy effects. For the energy analysis, this proposed rule will not exceed the relevant criteria for adverse impact.

M. Review Under Additional Executive Orders and Presidential Memoranda

MSHA has examined this rescission and has determined that it is consistent with the policies and directives outlined in E.O. 14154, “Unleashing American Energy” 90 FR 8353 (Jan. 29, 2025); E.O. 14192, “Unleashing Prosperity Through Deregulation” 90 FR 9065 (Feb. 6, 2025); and the Presidential Memorandum, “Delivering Emergency Price Relief for American Families and Defeating the Cost-of-Living Crisis” 90 FR 8245 (Jan. 28, 2025). This proposed rule is expected to be an E.O. 14192 deregulatory action.

List of Subjects in 30 CFR Part 56

Chemicals, Electric power, Explosives, Fire prevention, Hazardous substances, Metals, Mines, Mine safety and health, Reporting and recordkeeping requirements, Surface mining.

For the reasons set forth in the preamble, and under the authority of the Federal Mine Safety and Health Act of 1977, as amended by the Mine Improvement and New Emergency Response Act of 2006, MSHA proposes to amend chapter I of title 30 of the Code of Federal Regulations as follows:

SUBCHAPTER K—METAL AND NONMETAL MINE SAFETY AND HEALTH

PART 56—SAFETY AND HEALTH STANDARDS—SURFACE METAL AND NONMETAL MINES

- 1. The authority citation for part 56 continues to read as follows:

Authority: 30 U.S.C. 811.

Subpart F—Drilling and Rotary Jet Piercing

§ 56.7002 [Removed and Reserved]

- 2. Remove and reserve § 56.7002.

§ 56.7003 [Removed and Reserved]

- 3. Remove and reserve § 56.7003.

James P. McHugh,

Deputy Assistant Secretary for Policy Mine Safety and Health Administration.

[FR Doc. 2025–11621 Filed 6–30–25; 8:45 am]

BILLING CODE 4520–43–P

DEPARTMENT OF LABOR

Mine Safety and Health Administration

30 CFR Parts 56, 57, 75, and 77

[Docket No. MSHA–2025–0086]

RIN 1219–AC20

Trolleys

AGENCY: Mine Safety and Health Administration (MSHA), Department of Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: MSHA is proposing to remove and revise provisions for metal and nonmetal (MNM) mines and coal mines regarding the use of trolleys for transportation of mined ore, coal, material, and personnel. Trolleys are an outdated technology that have been replaced by more efficient belt conveyor haulage systems for transporting mined ore and coal. Diesel and battery-operated mobile equipment are now used to transport personnel and equipment. Trolleys are no longer used in MNM or coal mines and there is no anticipated future use of this legacy equipment in MNM and coal mines.

DATES: Comments must be received on or before July 31, 2025.

ADDRESSES: All submissions must include RIN 1219–AC20 or Docket No. MSHA–2025–0086. You should not include personal or proprietary information that you do not wish to disclose publicly. If you mark parts of a comment as “business confidential” information, MSHA will not post those parts of the comment. Otherwise, MSHA will post all comments without change, including any personal information provided. MSHA cautions against submitting personal information.

You may submit comments and informational materials, clearly identified by RIN 1219–AC20 or Docket No. MSHA–2025–0086, by any of the following methods:

1. *Federal E-Rulemaking Portal:* <https://www.regulations.gov>. Follow the online instructions for submitting comments for MSHA–2025–0086.

2. *Email:* zzMSHA-comments@dol.gov. Include “RIN 1219–AC20” in the subject line of the message.

3. *Regular Mail or Hand Delivery:* MSHA, Office of Standards, Regulations, and Variances, Room C3522, 200 Constitution Avenue NW, Washington, DC 20210. Before visiting MSHA in person, call 202–693–9440 to make an appointment.

No telefacsimiles (“faxes”) will be accepted.

FOR FURTHER INFORMATION CONTACT:

Jessica D. Senk, Acting Director, Office of Standards, Regulations, and Variances, MSHA, at 202-693-9440 (voice). This is not a toll-free number.

SUPPLEMENTARY INFORMATION:**I. Background**

Trolleys were historically used in metal and nonmetal (MNM) and coal mines for transportation of mined ore, coal, equipment, and personnel. Trolleys typically consisted of a low carriage, mounted on wheels having a fixed in bearings trolley pole, pressing upward in rolling contact with an overhead trolley wire to take off electric current for operating a locomotive or other motorized equipment. The trolley wire was typically hung from the roof and this energized conductor was a constant source of danger to miners. Coverings of insulating materials were used to guard miners from direct contact with the wire. Energized trolley wires exposed miners to electrical hazards.

While various forms of trolleys were once common in mines, this equipment is no longer used and has been replaced by more efficient belt conveyor haulage systems, and diesel and battery-operated mobile equipment. Therefore, MSHA proposes to remove all references to trolleys in title 30 of the Code of Federal Regulations (30 CFR) parts 56, 57, 75, and 77. These proposed changes do not reduce protection for miners because miners no longer work on or around trolleys.

II. Discussion**A. Part 56—Safety and Health Standards—Surface Metal and Nonmetal Mines**

In 30 CFR part 56, MSHA proposes to remove the following sections because trolleys are no longer in use at surface MNM mines; therefore, these sections are no longer necessary to protect the safety and health of miners. MSHA proposes to remove §§ 56.12042, 56.12050, 56.12053, and 56.14216.

Also, MSHA proposes to revise the following sections to remove references to trolleys. MSHA proposes to revise §§ 56.6203, 56.12065, 56.12066, and 56.12071.

B. Part 57—Safety and Health Standards—Underground Metal and Nonmetal Mines

In 30 CFR part 57, MSHA proposes to remove the following sections because trolleys are no longer used at underground MNM mines; therefore, these sections are no longer necessary to protect the safety and health of miners. MSHA proposes to remove

§§ 57.6160(a)(6), 57.12042, 57.12050, 57.12053, 57.12081, 57.12086, 57.14160, and 57.14216.

Also, MSHA proposes to revise the following sections to remove references to trolleys. MSHA proposes to revise §§ 57.6160(a)(5), 57.6203, 57.12065, 57.12066, 57.12071, and 57.12080.

C. Part 75—Mandatory Safety Standards—Underground Coal Mines

In 30 CFR part 75, MSHA proposes to remove the following sections because trolleys are no longer used at underground coal mines; therefore, these sections are no longer necessary to protect the safety and health of miners. MSHA proposes to remove §§ 75.327, 75.360(b)(7), 75.371(v), 75.508–1, 75.510, 75.510–1, 75.518–2, 75.1000, 75.1001, 75.1001–1, 75.1003, 75.1003–1, 75.1003–2, 75.1106–2(b), 75.1311(b)(4), 75.1403–7(m), 75.1902(d)(2), and 75.1906(j).

MSHA proposes to revise the title of Subpart K to remove references to trolleys. MSHA also proposes to revise the following sections to remove references to trolleys: §§ 75.333(b)(4), 75.380(f)(2)(iii), 75.380(g), 75.508, 75.516–2(c), 75.517, 75.807, 75.1600–2, 75.1707–1, and 75.1902(d)(2).

D. Part 77—Mandatory Safety Standards, Surface Coal Mines and Surface Work Areas of Underground Coal Mines

In 30 CFR part 77, MSHA proposes to remove the following sections because trolleys are no longer used at surface coal mines and surface work areas of underground coal mines; therefore, these sections are no longer necessary to protect the safety and health of miners. MSHA proposes to remove subpart S, consisting of §§ 77.1800 through 77.1802.

MSHA seeks comment on any aspects of this proposed rule including whether MSHA should prohibit the use of trolleys.

III. Procedural Issues and Regulatory Review**A. Review Under Executive Orders 12866 and 13563**

Executive Order (E.O.) 12866, “Regulatory Planning and Review” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among

other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

E.O. 13563, “Improving Regulation and Regulatory Review” 76 FR 3821 (Jan. 21, 2011), requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. E.O. 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation’s regulatory system to promote predictability, reduce uncertainty, and use the best, most innovative, and least burdensome tools for achieving regulatory ends.

E.O. 12866 and E.O. 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. E.O. 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

Under section 3(f) of E.O. 12866, a “significant regulatory action” is a regulatory action that is likely to result in a rule that may:

(1) have an annual effect on the economy of \$100 million or more, or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities (also referred to as economically significant);

(2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients; or

(4) raise novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in the E.O.

Under section 6(a) of E.O. 12866, the Office of Management and Budget’s (OMB’s) Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is

significant and whether Agencies are required to submit the regulatory action to OIRA for review. Removing the provisions concerning the use of trolleys in mines would not impose new compliance costs to mine operators or reduce the protections afforded to miners. This proposed rule is determined to not constitute a “significant regulatory action” because it does not meet any of the four “significant regulatory action” criteria under section 3(f) of E.O. 12866. Accordingly, this proposed rule was not submitted to OIRA for review under E.O. 12866.

No alternatives were considered for this proposed deregulatory action.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) of 1980, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996, requires preparation of an Initial Regulatory Flexibility Analysis (IRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. The RFA defines small entities to include small businesses, small organizations, including not-for-profit organizations, and small governmental jurisdictions.

MSHA reviewed this proposed rule under the provisions of the RFA, which eliminates burdensome regulations. Therefore, MSHA initially concludes that the impacts of the proposed rule would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. MSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) provides for the Federal Government’s collection, use, and dissemination of information. The goals of the Paperwork Reduction Act include minimizing paperwork and reporting burdens and ensuring the maximum possible utility from the information that is collected under 5 CFR part 1320. The Paperwork Reduction Act requires Federal agencies to obtain approval from OMB before requesting or requiring “a collection of information” from the public.

This proposed rule imposes no new information collection or record-keeping requirements. Accordingly, OMB clearance is not required under the Paperwork Reduction Act.

D. Review Under Executive Order 13132

E.O. 13132, “Federalism” 64 FR 43255 (August 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The E.O. requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The E.O. also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.

MSHA has examined this proposal and has determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O. 12988, “Civil Justice Reform” 61 FR 4729 (Feb. 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Section 3(c) of E.O. 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to

determine whether they are met or it is unreasonable to meet one or more of them. MSHA has completed the required review and determined that, to the extent permitted by law, this proposal meets the relevant standards of E.O. 12988.

F. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)). The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a “significant intergovernmental mandate,” and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them.

MSHA examined this proposed rule according to UMRA and its statement of policy and determined that the proposal does not contain a Federal intergovernmental mandate, nor is it expected to require expenditures of \$100 million or more in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. As a result, the analytical requirements of UMRA do not apply.

G. Review Under the National Environmental Policy Act

The National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*), requires each Federal agency to consider the environmental effects of regulatory actions and to prepare an environmental impact statement on Agency actions that would significantly affect the quality of the environment; unless the action is considered categorically excluded under 29 CFR 11.10. MSHA has reviewed the proposed rule in accordance with NEPA requirements and the Department of Labor’s NEPA procedures (29 CFR part 11). As a result of this review, MSHA has determined that this proposed rule

would not impact air, water, or soil quality, plant or animal life, the use of land or other aspects of the human environment. Therefore, MSHA has not conducted an environmental assessment nor provided an environmental impact statement.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This proposal would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, MSHA has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to E.O. 12630, “Governmental Actions and Interference with Constitutionally Protected Property Rights” 53 FR 8859 (March 18, 1988), MSHA has determined that this proposal would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB’s guidelines were published at 67 FR 8452 (Feb. 22, 2002). MSHA has reviewed this proposal and has concluded that it is consistent with applicable policies in the OMB guidelines.

K. Review Under Executive Order 13175

E.O. 13175, “Consultation and Coordination With Indian Tribal Governments” 65 FR 67249 (Nov. 9, 2000), requires agencies to consult with tribal officials when developing policies that may have “tribal implications.” This proposed rule does not have “tribal implications” because it will not “have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.” Accordingly, under E.O. 13175, no

further Agency action or analysis is required.

L. Review Under Executive Order 13211

E.O. 13211, “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” 66 FR 28355 (May 22, 2001), requires agencies to publish a statement of energy effects when a rule has a significant energy action that adversely affects energy supply, distribution, or use. MSHA has reviewed this proposed rule for its energy effects. For the energy analysis, this proposed rule will not exceed the relevant criteria for adverse impact.

K. Review Under Additional Executive Orders and Presidential Memoranda

MSHA has examined this proposal and has determined that it is consistent with the policies and directives outlined in E.O. 14154, “Unleashing American Energy” 90 FR 8353 (Jan. 29, 2025); E.O. 14192, “Unleashing Prosperity Through Deregulation” 90 FR 9065 (Feb. 6, 2025); and the Presidential Memorandum, “Delivering Emergency Price Relief for American Families and Defeating the Cost-of-Living Crisis” 90 FR 8245 (Jan. 28, 2025). This proposal is expected to be an E.O. 14192 deregulatory action.

List of Subjects

30 CFR Part 56

Chemicals, Electric power, Explosives, Fire prevention, Hazardous substances, Metal and nonmetal mining, Mine safety and health, Noise control, Reporting and recordkeeping requirements, Surface mining.

30 CFR Part 57

Chemicals, Electric power, Explosives, Fire prevention, Gases, Hazardous substances, Metal and nonmetal mining, Mine safety and health, Noise control, Radiation protection, Reporting and recordkeeping requirements, Underground mining.

30 CFR Part 75

Electric power, Mandatory safety standards, Mine safety and health, Reporting and recordkeeping requirements, Training, Underground coal mines.

30 CFR Part 77

Communications equipment, Electric power, Emergency medical services, Explosives, Fire prevention, Mine safety and health, Mines, Reporting and recordkeeping requirements, Surface mining, Underground mining.

For the reasons set forth in the preamble, and under the authority of the

Federal Mine Safety and Health Act of 1977, as amended by the Mine Improvement and New Emergency Response Act of 2006, MSHA proposes to amend chapter I of title 30 of the Code of Federal Regulations as follows:

SUBCHAPTER K—METAL AND NONMETAL MINE SAFETY AND HEALTH

PART 56—SAFETY AND HEALTH STANDARDS—SURFACE METAL AND NONMETAL MINES

- 1. The authority citation for part 56 continues to read as follows:

Authority: 30 U.S.C. 811

Subpart E—Explosives

- 2. Revise § 56.6203 to read as follows:

§ 56.6203 Locomotives.

Explosive material shall not be transported on a locomotive.

Subpart K—Electricity

§ 56.12042 [Removed and Reserved]

- 3. Remove and reserve § 56.12042.

§ 56.12050 [Removed and Reserved]

- 4. Remove and reserve § 56.12050.

§ 56.12053 [Removed and Reserved]

- 5. Remove and reserve § 56.12053.

- 6. Revise § 56.12065 to read as follows:

§ 56.12065 Short circuit and lightning protection.

Powerlines and telephone circuits shall be protected against short circuits and lightning.

- 7. Revise the heading and text for § 56.12066 to read as follows:

§ 56.12066 Guarding bare powerlines.

Where metallic tools or equipment can come in contact with bare powerlines, the lines shall be guarded or deenergized.

- 8. Revise § 56.12071 to read as follows:

§ 56.12071 Movement or operation of equipment near high-voltage power lines.

When equipment must be moved or operated near energized high-voltage powerlines and the clearance is less than 10 feet, the lines shall be deenergized or other precautionary measures shall be taken.

Subpart M—Machinery and Equipment

§ 56.14216 [Removed and Reserved]

- 9. Remove and reserve § 56.14216.

PART 57—SAFETY AND HEALTH STANDARDS—UNDERGROUND METAL AND NONMETAL MINES

■ 10. The authority citation for part 57 continues to read as follows:

Authority: 30 U.S.C. 811.

Subpart E—Explosives

- 11. Amend § 57.6160 by:
 - a. Revising paragraph (a)(5), and
 - b. Removing and reserving paragraph (a)(6).

The revision reads as follows:

§ 57.6160 Main facilities.

- (a) * * *
- (5) At least 50 feet from electric substations; and
- (6) [Reserved]

* * * * *

- 12. Revise § 57.6203 to read as follows:

§ 57.6203 Locomotives.

Explosive material shall not be transported on a locomotive.

Subpart K—Electricity

§ 57.12042 [Removed and Reserved]

- 13. Remove and reserve § 57.12042.

§ 57.12050 [Removed and Reserved]

- 14. Remove and reserve § 57.12050.

§ 57.12053 [Removed and Reserved]

- 15. Remove and reserve § 57.12053.
- 16. Revise § 57.12065 to read as follows:

§ 57.12065 Short circuit and lightning protection.

Powerlines and telephone circuits shall be protected against short circuits and lightning.

- 17. Revise the heading and text for § 57.12066 to read as follows:

§ 57.12066 Guarding bare powerlines.

Where metallic tools or equipment can come in contact with bare powerlines, the lines shall be guarded or deenergized.

- 18. Revise § 57.12071 to read as follows:

§ 57.12071 Movement or operation of equipment near high-voltage power lines.

When equipment must be moved or operated near energized high-voltage powerlines and the clearance is less than 10 feet, the lines shall be deenergized or other precautionary measures shall be taken.

- 19. Revise § 57.12080 to read as follows:

§ 57.12080 Bare conductor guards.

Bare power conductors shall be guarded at mantrip loading and

unloading points, and at shaft stations. Where such bare power conductors are less than 7 feet above the rail, they shall be guarded at all points where persons work or pass regularly beneath.

§ 57.12081 [Removed and Reserved]

- 20. Remove and reserve § 57.12081.

§ 57.12086 [Removed and Reserved]

- 21. Remove and reserve § 57.12086.

Subpart M—Machinery and Equipment

§ 57.14160 [Removed and Reserved]

- 22. Remove and reserve § 57.14160.

§ 57.14216 [Removed and Reserved]

- 23. Remove and reserve § 57.14216.

SUBCHAPTER O—COAL MINE SAFETY AND HEALTH

PART 75—MANDATORY SAFETY STANDARDS—UNDERGROUND COAL MINES

- 24. The authority citation for part 75 continues to read as follows:

Authority: 30 U.S.C. 811, 813(h), and 957.

Subpart D—Ventilation

§ 75.327 [Removed and Reserved]

- 25. Remove and reserve § 75.327.
- 26. In § 75.333, revise paragraph (b)(4) to read as follows:

§ 75.333 Ventilation controls.

* * * * *

- (b) * * *

(4) To separate the primary escapeway from belt haulage entries, as required by § 75.380(g). For the purposes of § 75.380(g), the loading point for a continuous haulage system shall be the outby most point of travel of the dolly or 600 feet from the point of deepest penetration, whichever distance is less; and

* * * * *

§ 75.360 [Amended]

- 27. In § 75.360, remove and reserve paragraph (b)(7).

§ 75.371 [Amended].

- 28. In § 75.371, remove and reserve paragraph (v).
- 29. In § 75.380, revise paragraphs (f)(2)(iii) and (g) to read as follows:

§ 75.380 Escapeways; bituminous and lignite mines.

* * * * *

- (f) * * *

- (2) * * *

(iii) Effective as of June 10, 1997, to all areas of the primary escapeway developed prior to March 30, 1970 where separation of the belt haulage

entries from the primary escapeway existed prior to November 16, 1992.

* * * * *

(g) Except where separation of belt haulage entries from designated escapeways did not exist before November 15, 1992, and except as provided in § 75.350(c), the primary escapeway must be separated from belt haulage entries for its entire length, to and including the first connecting crosscut outby each loading point except when a greater or lesser distance for this separation is specified and approved in the mine ventilation plan and does not pose a hazard to miners.

* * * * *

Subpart F—Electrical Equipment—General

- 30. Revise § 75.508 to read as follows:

§ 75.508 Map of electrical system.

[Statutory Provisions]

The location and the electrical rating of all stationary electric apparatus in connection with the mine electric system, including permanent cables, switchgear, rectifying substations, transformers, and permanent pumps, shall be shown on a mine map. Any changes made in a location, electric rating, or setting shall be promptly shown on the map when the change is made. Such map shall be available to an authorized representative of the Secretary and to the miners in such mine.

§ 75.508–1 [Removed and Reserved]

- 31. Remove and reserve § 75.508–1.

§ 75.510 [Removed and Reserved]

- 32. Remove and reserve § 75.510.

§ 75.510–1 [Removed and Reserved]

- 33. Remove and reserve § 75.510–1.
- 34. In § 75.516–2, revise paragraph (c) to read as follows:

§ 75.516–2 Communication wires and cables; installation; insulation; support.

* * * * *

(c) Additional insulation shall be provided for communication circuits at points where they pass over or under any power conductor.

* * * * *

- 35. Revise § 75.517 to read as follows:

§ 75.517 Power wires and cables; insulation and protection.

[Statutory Provisions]

Power wires and cables shall be insulated adequately and fully protected.

§ 75.518–2 [Removed and Reserved]

- 36. Remove and reserve § 75.518–2.

Subpart I—Underground High-Voltage Distribution

- 37. Revise § 75.807 to read as follows:

§ 75.807 Installation of high-voltage transmission cables.**[Statutory Provisions]**

All underground high-voltage transmission cables shall be installed only in regularly inspected air courses and haulageways, and shall be covered, buried, or placed so as to afford protection against damage, guarded where people regularly work or pass under them unless they are 6½ feet or more above the floor or rail, securely anchored, properly insulated, and guarded at ends, and covered, insulated, or placed to prevent contact with low-voltage circuits.

- 38. Revise the title of Subpart K to read as follows:

Subpart K—Electrical Equipment—Pillar Workings and Longwalls**§ 75.1000 [Removed and reserved]****§ 75.1001 [Removed and reserved]****§ 75.1001–1 [Removed and reserved]****§ 75.1003 [Removed and reserved]****§ 75.1003–1 [Removed and reserved]****§ 75.1003–2 [Removed and reserved]**

- 39. Remove and reserve §§ 75.1000, 75.1001, 75.1001–1, 75.1003, 75.1003–1, and 75.1003–2.

Subpart L—Fire Protection**§ 75.1106–2 [Amended]**

- 40. In § 75.1106–2, remove and reserve paragraph (b).

Subpart N—Explosives and Blasting**§ 75.1311 [Amended]**

- 41. In § 75.1311, remove paragraph (b)(4).

Subpart O—Hoisting and Mantrips**§ 75.1403–7 [Amended]**

- 42. In § 75.1403–7, remove and reserve paragraph (m).

Subpart Q—Communications

- 43. Amend § 75.1600–2 by:
 ■ a. Revising paragraph (c); and
 ■ b. Removing and reserving paragraph (d).

The revision reads as follows:

§ 75.1600–2 Communication facilities; working sections; installation and maintenance requirements; audible or visual alarms.

* * * * *

(c) If a communication system other than telephones is used and its operation depends entirely upon power from the mine electric system, means shall be provided to permit continued communication in the event the mine electric power fails or is cut off.

(d) [Reserved]

* * * * *

Subpart T—Diesel-Powered Equipment

- 44. Revise § 75.1902(d)(2) to read as follows.:

§ 75.1902 Underground diesel fuel storage—general requirements.

* * * * *

(d) * * *

(2) At least 25 feet from power cables, or electric equipment not necessary for the operation of the storage facilities or areas; and

* * * * *

§ 75.1906 [Amended]

- 45. In § 75.1906, remove and reserve paragraph (j).

PART 77—MANDATORY SAFETY STANDARDS, SURFACE COAL MINES AND SURFACE WORK AREAS OF UNDERGROUND COAL MINES

- 46. The authority citation for part 77 continues to read as follows:

Authority: 30 U.S.C. 811.

Subpart S—[Removed and Reserved]

- 47. Remove and reserve Subpart S, consisting of §§ 77.1800 through 77.1802.

James P. McHugh,

Deputy Assistant Secretary for Policy, Mine Safety and Health Administration.

[FR Doc. 2025–11738 Filed 6–30–25; 8:45 am]

BILLING CODE 4520–43–P

DEPARTMENT OF LABOR**Mine Safety and Health Administration****30 CFR Part 57**

[Docket No. MSHA–2025–0076]

RIN 1219–AC07

Improving and Eliminating Regulations; Blacksmith Shops

AGENCY: Mine Safety and Health Administration (MSHA), Department of Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: MSHA is proposing to revise 30 CFR part 57 to remove outdated requirements regarding blacksmith shops located at surface metal and nonmetal mines. Removal of this standard would not result in a reduction of safety protection for miners at surface metal and nonmetal mines.

DATES: Comments must be received on or before July 31, 2025.

ADDRESSES: All submissions must include RIN 1219–AC07 or Docket No. MSHA–2025–0076. You should not include personal or proprietary information that you do not wish to disclose publicly. If you mark parts of a comment as “business confidential” information, MSHA will not post those parts of the comment. Otherwise, MSHA will post all comments without change, including any personal information provided. MSHA cautions against submitting personal information.

You may submit comments and informational materials, clearly identified by RIN 1219–AC07 or Docket No. MSHA–2025–0076, by any of the following methods:

1. *Federal E-Rulemaking Portal:* <https://www.regulations.gov>. Follow the online instructions for submitting comments for MSHA–2025–0076.

2. *Email:* zzMSHA-comments@dol.gov. Include “RIN 1219–AC07” in the subject line of the message.

3. *Regular Mail or Hand Delivery:* MSHA, Office of Standards, Regulations, and Variances, Room C3522, 200 Constitution Avenue NW, Washington, DC 20210. Before visiting MSHA in person, call 202–693–9440 to make an appointment.

No telefacsimiles (“faxes”) will be accepted.

FOR FURTHER INFORMATION CONTACT:

Jessica D. Senk, Acting Director, Office of Standards, Regulations, and Variances, MSHA, at 202–693–9440 (voice). This is not a toll-free number.

SUPPLEMENTARY INFORMATION:**I. Background**

MSHA is proposing to remove existing provisions from title 30 of the Code of Federal Regulations (30 CFR). The existing MSHA standard in 30 CFR 57.4532 outlines requirements for when blacksmith shops are located on the surface at underground metal and nonmetal mines. Removing these provisions would not reduce protections afforded to miners.

II. Discussion

In MSHA’s experience, blacksmith shops are no longer located on the

surface at underground metal and nonmetal mines. Removing these provisions would not reduce protections afforded to miners because the standard is no longer applicable. For these reasons, MSHA believes that § 57.4532 is unnecessary. This action reflects MSHA's experience and ongoing review of existing regulations to ensure they remain necessary, effective, and aligned with current technologies and mining practices.

MSHA seeks comment on any aspect of this proposed rule.

III. Procedural Issues and Regulatory Review

A. Review Under Executive Orders 12866 and 13563

Executive Order (E.O.) 12866, "Regulatory Planning and Review" 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

E.O. 13563, "Improving Regulation and Regulatory Review" 76 FR 3821 (Jan. 21, 2011), requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. E.O. 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation's regulatory system to promote predictability, reduce uncertainty, and use the best, most innovative, and least burdensome tools for achieving regulatory ends.

E.O. 12866 and E.O. 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. E.O. 13563 emphasizes the importance of quantifying both costs

and benefits, reducing costs, harmonizing rules, and promoting flexibility.

Under section 3(f) of E.O. 12866, a "significant regulatory action" is a regulatory action that is likely to result in a rule that may:

(1) have an annual effect on the economy of \$100 million or more, or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities (also referred to as economically significant);

(2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients; or

(4) raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the E.O.

Under section 6(a) of E.O. 12866, the Office of Management and Budget's (OMB's) Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and whether Agencies are required to submit the regulatory action to OIRA for review. Removing the provisions for blacksmith shops would not impose new compliance costs to surface metal and nonmetal mine operators or reduce the protections afforded to miners. This proposed rule is determined to not constitute a "significant regulatory action" because it does not meet any of the four "significant regulatory action" criteria under section 3(f) of E.O. 12866. Accordingly, this proposed rule was not submitted to OIRA for review under E.O. 12866.

No alternatives were considered for this proposed deregulatory action.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) of 1980, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996, requires preparation of an Initial Regulatory Flexibility Analysis (IRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. The RFA defines small entities to include small businesses, small organizations, including not-for-profit organizations, and small governmental jurisdictions.

MSHA reviewed this proposed rule under the provisions of the RFA, which eliminates burdensome regulations. MSHA initially concludes that the impacts of the proposed rule would not have a "significant economic impact on a substantial number of small entities," and that the preparation of an IRFA is not warranted. MSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) provides for the Federal Government's collection, use, and dissemination of information. The goals of the Paperwork Reduction Act include minimizing paperwork and reporting burdens and ensuring the maximum possible utility from the information that is collected under 5 CFR part 1320. The Paperwork Reduction Act requires Federal agencies to obtain approval from OMB before requesting or requiring "a collection of information" from the public.

This proposed rule imposes no new information collection or record-keeping requirements. Accordingly, OMB clearance is not required under the Paperwork Reduction Act.

D. Review Under Executive Order 13132

E.O. 13132, "Federalism," 64 FR 43255 (August 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The E.O. requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The E.O. also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.

MSHA has examined this proposed rule and has determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O.

12988, “Civil Justice Reform” 61 FR 4729 (Feb. 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Section 3(c) of E.O. 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. MSHA has completed the required review and determined that, to the extent permitted by law, this proposed rule meets the relevant standards of E.O. 12988.

F. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)). The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a “significant intergovernmental mandate,” and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing

any requirements that might significantly or uniquely affect them.

MSHA examined this proposed rule according to UMRA and its statement of policy and determined that the proposal does not contain a Federal intergovernmental mandate, nor is it expected to require expenditures of \$100 million or more in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. As a result, the analytical requirements of UMRA do not apply.

G. Review Under the National Environmental Policy Act

The National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*), requires each Federal agency to consider the environmental effects of regulatory actions and to prepare an environmental impact statement on Agency actions that would significantly affect the quality of the environment; unless the action is considered categorically excluded under 29 CFR 11.10. MSHA has reviewed the proposed rule in accordance with NEPA requirements and the Department of Labor’s NEPA procedures (29 CFR part 11). As a result of this review, MSHA has determined that this proposed rule would not impact air, water, or soil quality, plant or animal life, the use of land or other aspects of the human environment. Therefore, MSHA has not conducted an environmental assessment nor provided an environmental impact statement.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This proposed rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, MSHA has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to E.O. 12630, “Governmental Actions and Interference with Constitutionally Protected Property Rights” 53 FR 8859 (March 18, 1988), MSHA has determined that this proposed rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB’s guidelines were published at 67 FR 8452 (Feb. 22, 2002). MSHA has reviewed this proposed rule and has concluded that it is consistent with applicable policies in the OMB guidelines.

K. Review Under Executive Order 13175

E.O. 13175, “Consultation and Coordination With Indian Tribal Governments” 65 FR 67249 (Nov. 9, 2000), requires agencies to consult with tribal officials when developing policies that may have “tribal implications.” This proposed rule does not have “tribal implications” because it will not “have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.” Accordingly, under E.O. 13175, no further Agency action or analysis is required.

L. Review Under Executive Order 13211

E.O. 13211, “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” 66 FR 28355 (May 22, 2001), requires agencies to publish a statement of energy effects when a rule has a significant energy action that adversely affects energy supply, distribution, or use. MSHA has reviewed this proposed rule for its energy effects. For the energy analysis, this proposed rule will not exceed the relevant criteria for adverse impact.

M. Review Under Additional Executive Orders and Presidential Memoranda

MSHA has examined this proposed rule and has determined that it is consistent with the policies and directives outlined in E.O. 14154, “Unleashing American Energy” 90 FR 8353 (Jan. 29, 2025); E.O. 14192, “Unleashing Prosperity Through Deregulation” 90 FR 9065 (Feb. 6, 2025); and the Presidential Memorandum, “Delivering Emergency Price Relief for American Families and Defeating the Cost-of-Living Crisis” 90 FR 8245 (Jan. 28, 2025). This proposed rule is expected to be an E.O. 14192 deregulatory action.

List of Subjects in 30 CFR Part 57

Chemicals, Electric power, Explosives, Fire prevention, Gases, Hazardous substances, Metal and nonmetal mining, Mine safety and health, Noise control, Radiation protection, Reporting and recordkeeping requirements, Underground mining.

For the reasons set forth in the preamble, and under the authority of the Federal Mine Safety and Health Act of 1977, as amended by the Mine Improvement and New Emergency Response Act of 2006, MSHA proposes to amend chapter I of title 30 of the Code of Federal Regulations as follows:

SUBCHAPTER K—METAL AND NONMETAL MINE SAFETY AND HEALTH**PART 57—SAFETY AND HEALTH STANDARDS—UNDERGROUND METAL AND NONMETAL MINES**

■ 1. The authority citation for part 57 continues to read as follows:

Authority: 30 U.S.C. 811.

Subpart C—Fire Prevention and Control

§ 57.4532 [Removed and Reserved].

■ 2. Remove and reserve § 57.4532.

James P. McHugh,

Deputy Assistant Secretary for Policy, Mine Safety and Health Administration.

[FR Doc. 2025–11616 Filed 6–30–25; 8:45 am]

BILLING CODE 4520–43–P

DEPARTMENT OF LABOR**Mine Safety and Health Administration****30 CFR Part 57**

[Docket No. MSHA–2025–0079]

RIN 1219–AC10

Improving and Eliminating Regulations; Limit on Exposure to Diesel Particulate Matter in Underground Metal and Nonmetal Mines

AGENCY: Mine Safety and Health Administration (MSHA), Department of Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: MSHA is proposing to revise 30 CFR part 57 by removing outdated requirements for miners' exposures to diesel particulate matter (DPM) in underground metal and nonmetal mines (MNM). These revisions would streamline the requirements for DPM for underground MNM mine operators

while maintaining the same level of protection for miners.

DATES: Comments must be received on or before July 31, 2025.

ADDRESSES: All submissions must include RIN 1219–AC10 or Docket No. MSHA–2025–0079. You should not include personal or proprietary information that you do not wish to disclose publicly. If you mark parts of a comment as “business confidential” information, MSHA will not post those parts of the comment. Otherwise, MSHA will post all comments without change, including any personal information provided. MSHA cautions against submitting personal information.

You may submit comments and informational materials, clearly identified by RIN 1219–AC10 or Docket No. MSHA–2025–0079, by any of the following methods:

1. *Federal E-Rulemaking Portal:* <https://www.regulations.gov>. Follow the online instructions for submitting comments for MSHA–2025–0079.

2. *Email:* zzMSHA-comments@dol.gov. Include “RIN 1219–AC10” in the subject line of the message.

3. *Regular Mail or Hand Delivery:* MSHA, Office of Standards, Regulations, and Variances, Room C3522, 200 Constitution Avenue NW, Washington, DC 20210. Before visiting MSHA in person, call 202–693–9440 to make an appointment.

No telefacsimiles (“faxes”) will be accepted.

FOR FURTHER INFORMATION CONTACT:

Jessica D. Senk, Acting Director, Office of Standards, Regulations, and Variances, MSHA at 202–693–9440 (voice). This is not a toll-free number.

SUPPLEMENTARY INFORMATION:**I. Background**

MSHA is proposing to remove provisions from 30 CFR part 57. Existing MSHA standards in §§ 57.5060(a), 57.5060(b)(1), and 57.5060(b)(2) contain requirements for the emission limits for permissible diesel-powered equipment and on a miner's personal exposure to DPM. These provisions contain outdated effective dates that are no longer necessary. Removing these provisions would not reduce protections afforded to miners because the requirements are no longer applicable to underground MNM mines.

II. Discussion

Existing paragraph (a) of § 57.5060 contains the interim permissible exposure limit (PEL) of 308_{EC} µg/m³ which is no longer in effect. It also mentions that the interim PEL remains in effect until MSHA publishes a notice

in the **Federal Register** that the final DPM exposure limit is effective. MSHA published a notice of enforcement of the DPM final limit of 160_{TC} µg/m³ in the **Federal Register** on May 20, 2008 (73 FR 29058). Existing paragraphs (b)(1) and (b)(2) of § 57.5060 list outdated effective dates and PELs for a miner's limit on exposure to DPM in underground MNM mines.

MSHA proposes to revise § 57.5060. Specifically, the Agency is proposing to reserve paragraphs (a), (b)(1), and (b)(2) and revise the language in paragraph (b)(3). These proposed actions reflect MSHA's experience and ongoing review of existing regulations to ensure they remain necessary, effective, and aligned with current technologies and mining practices.

MSHA seeks comment on any aspect of this proposed rule.

III. Procedural Issues and Regulatory Review**A. Review Under Executive Orders 12866 and 13563**

Executive Order (E.O.) 12866, “Regulatory Planning and Review” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

E.O. 13563, “Improving Regulation and Regulatory Review” 76 FR 3821 (Jan. 21, 2011), requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. E.O. 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation's regulatory system to promote predictability, reduce uncertainty, and use the best, most

innovative, and least burdensome tools for achieving regulatory ends.

E.O. 12866 and E.O. 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. E.O. 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

Under section 3(f) of E.O. 12866, a “significant regulatory action” is a regulatory action that is likely to result in a rule that may:

(1) have an annual effect on the economy of \$100 million or more, or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities (also referred to as economically significant);

(2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients; or

(4) raise novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in the E.O.

Under section 6(a) of E.O. 12866, the Office of Management and Budget’s (OMB’s) Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and whether Agencies are required to submit the regulatory action to OIRA for review. Removing the provisions concerning outdated requirements for DPM emission limits would not impose new compliance costs to underground MNM mine operators or reduce the protections afforded to miners. This proposed rule is determined to not constitute a “significant regulatory action” because it does not meet any of the four “significant regulatory action” criteria under section 3(f) of E.O. 12866. Accordingly, this proposed rule was not submitted to OIRA for review under E.O. 12866.

No alternatives were considered for this proposed deregulatory action.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) of 1980, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996, requires preparation of an Initial Regulatory Flexibility Analysis (IRFA) for any rule

that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. The RFA defines small entities to include small businesses, small organizations, including not-for-profit organizations, and small governmental jurisdictions.

MSHA reviewed this proposed rule under the provisions of the RFA which eliminates burdensome regulations. Therefore, MSHA initially concludes that the impacts of the proposed rule would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. MSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) provides for the Federal Government’s collection, use, and dissemination of information. The goals of the Paperwork Reduction Act include minimizing paperwork and reporting burdens and ensuring the maximum possible utility from the information that is collected under 5 CFR part 1320. The Paperwork Reduction Act requires Federal agencies to obtain approval from OMB before requesting or requiring “a collection of information” from the public.

This proposed rule imposes no new information collection or record-keeping requirements. Accordingly, OMB clearance is not required under the Paperwork Reduction Act.

D. Review Under Executive Order 13132

E.O. 13132, “Federalism” 64 FR 43255 (August 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The E.O. requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The E.O. also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.

MSHA has examined this proposed rule and has determined that it would not have a substantial direct effect on

the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O. 12988, “Civil Justice Reform” 61 FR 4729 (Feb. 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Section 3(c) of E.O. 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. MSHA has completed the required review and determined that, to the extent permitted by law, this proposed rule meets the relevant standards of E.O. 12988.

F. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)). The

UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a “significant intergovernmental mandate,” and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them.

MSHA examined this proposed rule according to UMRA and its statement of policy and determined that the proposal does not contain a Federal intergovernmental mandate, nor is it expected to require expenditures of \$100 million or more in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. As a result, the analytical requirements of UMRA do not apply.

G. Review Under the National Environmental Policy Act

The National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*), requires each Federal agency to consider the environmental effects of regulatory actions and to prepare an environmental impact statement on Agency actions that would significantly affect the quality of the environment; unless the action is considered categorically excluded under 29 CFR 11.10. MSHA has reviewed the proposed rule in accordance with NEPA requirements and the Department of Labor’s NEPA procedures (29 CFR part 11). As a result of this review, MSHA has determined that this proposed rule would not impact air, water, or soil quality, plant or animal life, the use of land or other aspects of the human environment. Therefore, MSHA has not conducted an environmental assessment nor provided an environmental impact statement.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This proposed rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, MSHA has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to E.O. 12630, “Governmental Actions and Interference

with Constitutionally Protected Property Rights” 53 FR 8859 (March 18, 1988), MSHA has determined that this proposed rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB’s guidelines were published at 67 FR 8452 (Feb. 22, 2002). MSHA has reviewed this proposed rule and has concluded that it is consistent with applicable policies in the OMB guidelines.

K. Review Under Executive Order 13175

E.O. 13175, “Consultation and Coordination With Indian Tribal Governments” 65 FR 67249 (Nov. 9, 2000), requires agencies to consult with tribal officials when developing policies that may have “tribal implications.” This proposed rule does not have “tribal implications” because it will not “have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.” Accordingly, under E.O. 13175, no further Agency action or analysis is required.

L. Review Under Executive Order 13211

E.O. 13211, “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” 66 FR 28355 (May 22, 2001), requires agencies to publish a statement of energy effects when a rule has a significant energy action that adversely affects energy supply, distribution, or use. MSHA has reviewed this proposed rule for its energy effects. For the energy analysis, this proposed rule will not exceed the relevant criteria for adverse impact.

M. Review Under Additional Executive Orders and Presidential Memoranda

MSHA has examined this proposed rule and has determined that it is consistent with the policies and directives outlined in E.O. 14154, “Unleashing American Energy” 90 FR 8353 (Jan. 29, 2025); E.O. 14192,

“Unleashing Prosperity Through Deregulation” 90 FR 9065 (Feb. 6, 2025); and the Presidential Memorandum, “Delivering Emergency Price Relief for American Families and Defeating the Cost-of-Living Crisis” 90 FR 8245 (Jan. 28, 2025). This proposed rule is expected to be an E.O. 14192 deregulatory action.

List of Subjects in 30 CFR Part 57

Chemicals, Electric power, Explosives, Fire prevention, Gases, Hazardous substances, Metal and nonmetal mining, Mine safety and health, Noise control, Radiation protection, Reporting and recordkeeping requirements, Underground mining.

For the reasons set forth in the preamble, and under the authority of the Federal Mine Safety and Health Act of 1977, as amended by the Mine Improvement and New Emergency Response Act of 2006, MSHA proposes to amend chapter I of title 30 of the Code of Federal Regulations as follows:

SUBCHAPTER K—METAL AND NONMETAL MINE SAFETY AND HEALTH

PART 57—SAFETY AND HEALTH STANDARDS—UNDERGROUND METAL AND NONMETAL MINES

- 1. The authority citation for part 57 continues to read as follows:

Authority: 30 U.S.C. 811.

Subpart D—Air Quality, Radiation, Physical Agents, and Diesel Particulate Matter

- 2. Amend § 57.5060 by removing and reserving paragraphs (a), (b)(1), and (b)(2), and revising paragraph (b)(3) to read as follows:

§ 57.5060 [Amended]

* * * * *

(b) * * *

(3) A miner’s personal exposure to diesel particulate matter (DPM) in an underground mine must not exceed an average eight-hour equivalent full shift airborne concentration of 160 micrograms of total carbon per cubic meter of air (160_{TC} µg/m³).

* * * * *

James P. McHugh,

Deputy Assistant Secretary for Policy Mine Safety and Health Administration.

[FR Doc. 2025–11619 Filed 6–30–25; 8:45 am]

BILLING CODE 4520–43–P

DEPARTMENT OF LABOR**Mine Safety and Health Administration****30 CFR Parts 57 and 75**

[Docket No. MSHA–2025–0089]

RIN 1219–AC17

Powered Air Purifying Respirators (PAPRs) in Underground Mines**AGENCY:** Mine Safety and Health Administration (MSHA), Labor.**ACTION:** Proposed rule; request for comments.

SUMMARY: MSHA is proposing to allow the use of non-permissible Powered Air Purifying Respirators (PAPRs) in specified underground areas of mines, if the equipment meets certain technical specifications and is operated under specific conditions. This proposed rule would codify technical specifications and working conditions to allow the use of non-permissible PAPRs in underground gassy mines. This proposed rule would reduce burden because mine operators would no longer need to submit a petition for modification to use non-permissible PAPRs.

DATES: Comments must be received on or before July 31, 2025.

ADDRESSES: All submissions must include RIN 1219–AC17 or Docket No. MSHA–2025–0089. You should not include personal or proprietary information that you do not wish to disclose publicly. If you mark parts of a comment as “business confidential” information, MSHA will not post those parts of the comment. Otherwise, MSHA will post all comments without change, including any personal information provided. MSHA cautions against submitting personal information.

You may submit comments and informational materials, clearly identified by RIN 1219–AC17 or Docket No. MSHA–2025–0089, by any of the following methods:

1. *Federal E-Rulemaking Portal:* <https://www.regulations.gov>. Follow the online instructions for submitting comments for MSHA–2025–0089.

2. *Email:* zzMSHA-comments@dol.gov. Include “RIN 1219–AC17” in the subject line of the message.

3. *Regular Mail or Hand Delivery:* MSHA, Office of Standards, Regulations, and Variances, Room C3522, 200 Constitution Avenue NW, Washington, DC 20210. Before visiting MSHA in person, call 202–693–9440 to make an appointment.

No telefacsimiles (“faxes”) will be accepted.

FOR FURTHER INFORMATION CONTACT:

Jessica D. Senk, Acting Director, Office of Standards, Regulations, and Variances, MSHA at 202–693–9440 (voice). This is not a toll-free number.

SUPPLEMENTARY INFORMATION:**I. Background***Approved Electrical Products*

PAPRs are electric, reusable respirators that protect against a variety of respirable contaminants when equipped with the appropriate filter, cartridge, or canister. PAPRs use a battery-powered fan to pull air through the attached filter, cartridge, or canister.

The Federal Mine Safety and Health Act of 1977 (30 U.S.C. 801) (Mine Act) requires MSHA to establish requirements for the technical design, construction, and testing of electrical products, including PAPRs, that must be approved by MSHA prior to use in gassy mines. In underground gassy mines, flammable or explosive gases such as methane, and/or float coal dust can form explosive mixtures when combined with air. Before PAPRs can be used in gassy mines in the U.S., they must first be approved by MSHA.

MSHA’s requirements in title 30, Code of Federal Regulations (30 CFR) part 18 ensure electric motor-driven products are designed and manufactured so that they will not emit a spark strong enough, or temperature sufficient to cause a fire or explosion. Those seeking MSHA approval (applicants) are typically product designers and manufacturers of electrical products such as PAPRs. MSHA’s approval process includes testing and evaluating the electrical product to determine whether it performs according to certain technical and safety requirements. MSHA issues an approval if the electrical product passes all the tests and evaluations. Once the electrical product is approved by MSHA, it must display an MSHA approval marking indicating that the product is approved for use in gassy mines. MSHA refers to electrical products approved for use in gassy areas of mines as “permissible.” To continue to use the MSHA approval marking, the approval holder must maintain the quality of the electrical product according to the technical requirements upon which its approval was based.

Currently, there are no permissible PAPRs commercially available in the U.S. market. Mine operators must seek MSHA approval for the use of PAPRs in underground mines by filing petitions for modification under 30 CFR part 44.

Petitions for Modification

Section 101(c) of the Mine Act allows mine operators or representatives of miners to file a petition, or request, to modify the application of any mandatory safety standard to a mine. MSHA reviews petitions for modification to determine whether the petitioner’s alternative method of achieving the result of the standard will at all times guarantee no less than the same measure of protection afforded by the standard, or the application of the standard will result in a diminution of safety to the miners.

30 CFR part 44 establishes the procedures and rules of practice for filing a petition for modification under section 101(c) of the Mine Act. Once a petition has been filed by a mine operator or representative of miners, a notice requesting comment on the petition is published in the **Federal Register** and MSHA personnel investigate to promptly determine whether to grant or deny the petition. Taking into consideration the alternative methods proposed by the petitioner and any additional requirements, MSHA will grant the petition for modification if the Agency determines that the alternative method of achieving the result of the standard will at all times guarantee no less than the same measure of protection afforded by the standard, or the application of the standard will result in a diminution of safety to the miners. The granted modification, together with any conditions, will have the same effect as a mandatory safety standard.

Since 2021, MSHA has received more than 150 petitions for modification requesting MSHA allow the use of non-permissible PAPRs in areas of underground mines where the use of approved equipment is required. These petitions for modification generally propose very similar alternative methods, or conditions and terms, for the safe use of non-permissible PAPRs in gassy areas of underground mines to ensure that miners are at all times afforded the same measure of protection as when using permissible equipment.

II. Discussion

MSHA proposes to codify certain technical specifications and working conditions to allow the use of PAPRs in specified underground areas of underground metal and nonmetal (MNM) and coal mines, so that mine operators no longer need to file petitions for modification. This proposed rule would allow mine operators to safely use the best and most current

technology available, while not reducing miner safety.

This proposed rule would not revise the language of any Proposed Decisions and Orders granted by MSHA for PAPRs. Operators with granted petitions would decide between complying with the terms of their Proposed Decision and Order or complying with the requirements proposed in this rule and dismissing their petitions.

Under the proposed rule, there would be no change to existing ventilation requirements, methane monitoring requirements, de-energization requirements, or rock-dusting requirements. The Agency has preliminarily determined that this proposed rule, including the protective requirements that are generally consistent with the terms in granted petitions, would not reduce existing protections for miners.

MSHA seeks comments on any aspects of this proposed rule, including what records are appropriate for mine operators to maintain to ensure compliance.

III. Section-by-Section Analysis

A. Sections 57.22316 and 75.530—Non-Permissible Powered Air-Purifying Respirators (PAPRs): Purpose and Scope

This proposed rule would allow non-permissible PAPRs that have not been evaluated and approved by MSHA using the 30 CFR part 18 requirements to be used in specified underground areas of gassy mines. The proposed rule would also establish requirements for the features and maintenance of non-permissible PAPRs and the mining conditions where non-permissible PAPRs can be used.

B. Sections 57.22316–1 and 75.531—Non-Permissible PAPRs: Definitions

The proposed rule would define *commercially available*, *Powered Air Purifying Respirators (PAPRs)*, *production activities*, and *specified underground areas* for MNM mines in part 57 and coal mines in part 75.

The definitions for *commercially available* and *Powered Air Purifying Respirators (PAPRs)* are the same in parts 57 and 75. However, the definitions for *production activities* and *specified underground area* are different in parts 57 and 75 because of differences in the commodities mined, mining methods, geology, and construction of MNM mines compared to coal mines.

C. Sections 57.22316–2 and 75.532—Non-Permissible PAPRs: Approval and Certification Requirements

Proposed §§ 57.22316–2 and 75.532 would require that non-permissible

PAPRs taken into specified underground areas meet certain conditions. Non-permissible PAPRs must meet the appropriate UL (formerly Underwriters Laboratories) voluntary consensus safety standard.

Proposed paragraphs §§ 57.22316–2(a)(2) and 75.532(a)(2) would require non-permissible PAPRs to be certified to the American National Standards Institute (ANSI)/UL 60079–11, Standard for Safety for Explosive Atmospheres—Part 11: Equipment Protection by Intrinsic Safety “i”, Sixth Edition, Dated February 15, 2013, including revisions through September 14, 2018 (ANSI/UL 60079–11).

Certification to the ANSI/UL 60079–11 standard must be conducted by organizations meeting the requirements of the Occupational Safety and Health Administration’s (OSHA) Nationally Recognized Testing Laboratory (NRTL) program. A NRTL is a private-sector organization that OSHA has recognized as meeting the requirements in 29 CFR 1910.7 to perform testing and certification of products using consensus-based test standards. To receive OSHA’s recognition as an NRTL, an organization must have the necessary capability both as a product safety testing laboratory and as a product certification body.

Proposed paragraph (b) lists the eight voluntary consensus standards that MSHA would incorporate by reference in parts 57 and 75. While MSHA would require certification for non-permissible PAPRs only to ANSI/UL 60079–11, the Agency is incorporating by reference seven additional ANSI-approved standards because these are referenced throughout ANSI/UL 60079–11.

The proposed incorporation by reference of the eight voluntary consensus standards is consistent with the Office of Management and Budget’s (OMB) Circular A–119 (Jan. 27, 2016 (81 FR 4673)), which establishes policy guidance for Federal agencies. Circular A–119, based on the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 3701 *et seq.*), section 12(d), directs Federal agencies to use technical standards developed or adopted by voluntary consensus standards bodies to carry out policies or activities. Additionally, Circular A–119 directs agencies to use voluntary consensus standards in lieu of government-unique standards, except where inconsistent with law or otherwise impractical. The intent of the policy guidance in Circular A–119 is to minimize agency reliance on government-unique standards to decrease the burden of complying with agency regulations and promote

efficiency and economic competition through harmonization of standards. (See <https://www.whitehouse.gov/wp-content/uploads/2017/11/Circular-119-1.pdf>).

D. Sections 57.22316–3 and 75.533—Non-Permissible PAPRs: Requirements Before Use

Proposed §§ 57.22316–3 and 75.533 would specify the requirements for examination of non-permissible PAPRs to ensure they are in a safe condition before being used in the specified areas of an underground mine.

E. Sections 57.22316–4 and 75.534—Non-Permissible PAPRs: Continuous Monitoring During Operation

Proposed §§ 57.22316–4 and 75.534 would require a competent person, for MNM mines, or qualified person, for coal mines, to monitor for methane. Proposed paragraphs (c) and (d) would require methane detectors to meet certain requirements to ensure their safe operation. Proposed paragraph (e) would require immediately de-energizing and removing non-permissible PAPRs from the specified underground area if a certain percentage of methane is detected.

The timely detection of methane gas and the immediate removal of the non-permissible PAPRs out of the specified underground areas would be the primary method of protection against ignitions and explosions.

F. Sections 57.22316–5 and 75.535—Non-Permissible PAPRs: Requirements for Batteries

Proposed §§ 57.22316–5 and 75.535 would address requirements for the batteries used in non-permissible PAPRs to ensure their safe operation if methane or float coal dust is present.

I. Sections 57.22316–6 and 75.536—Non-Permissible PAPRs: Maintenance and Examination

Proposed §§ 57.22316–6 and 75.536 would address the maintenance and examination requirements for non-permissible PAPRs to ensure their safe operating condition. All non-permissible PAPRs would be required to be withdrawn from specified underground areas if a potentially dangerous condition was found.

J. Sections 57.22316–7 and 75.537—Non-Permissible PAPRs: Training

Proposed §§ 57.22316–7 and 75.537 would address the importance of training miners on safety practices where new technologies are utilized and would require specific training for those who will be using non-permissible

PAPRs. In addition to 30 CFR part 48 training requirements, MSHA is proposing to require specific training to address concerns regarding the use of non-permissible PAPRs in specified underground areas.

K. Incorporation by Reference

In proposed §§ 57.22305–3 and 75.532, MSHA would incorporate by reference the following voluntary consensus standards.

(1) ANSI/International Society of Automation (ISA) 60079–11 (12.02.01)-2014, Standard for Explosive Atmospheres—Part 11: Equipment protection by intrinsic safety “i” (Group I, Level of Protection ‘ia’), Edition 6.2, dated March 28, 2014, that specifies the construction and testing of intrinsically safe apparatus intended for use in an explosive atmosphere and for associated apparatus that is intended for connection to intrinsically safe circuits which enter such atmospheres. This standard is also applicable to electrical equipment or parts of electrical equipment located outside the explosive atmosphere or protected where the intrinsic safety of the electrical circuits in the explosive atmosphere may depend upon the design and construction of such electrical equipment or parts of such electrical equipment. The electrical circuits exposed to the explosive atmosphere are evaluated for use in such an atmosphere by applying this standard.

(2) ANSI/ISA 60079–25 (12.02.05)-2011, Standard for Explosive Atmospheres—Part 25: Intrinsically safe electrical systems (Group I, Level of protection ‘ia’), dated December 2, 2011, which contains the specific requirements for construction and assessment of intrinsically safe electrical systems, type of protection “i”, intended for use, as a whole or in part, in Class I, Zone 0, 1, or 2, or Zone 20, 21, or 22 hazardous (classified) locations as defined by the NEC®, ANSI/NFPA 70®.

(3) ANSI/UL 60079–0, Standard for Explosive Atmospheres—Part 0: Equipment—General Requirements (Group I), Seventh Edition, dated March 26, 2019, which specifies the general requirements for construction, testing and marking of Ex Equipment and Ex Components intended for use in explosive atmospheres. This standard is an adoption of IEC 60079–0, Explosive atmospheres—Part 0: Equipment—General requirements, (seventh edition issued by IEC December 2017) as a new IEC-based UL standard with U.S. national differences.

(4) ANSI/UL 60079–1, Standard for Explosive Atmospheres—Part 1:

Equipment Protection by Flameproof Enclosures “d” (Group I, Level of protection ‘da’), Seventh Edition, dated September 18, 2015, which contains specific requirements for the construction and testing of electrical equipment with the type of protection flameproof enclosure “d”, intended for use in explosive gas atmospheres. This standard is an adoption of IEC 60079–1, Explosive Atmospheres—Part 1: Equipment Protection by Flameproof Enclosures “d” (seventh edition, issued June 2014) with U.S. national differences.

(5) ANSI/UL 60079–11, Standard for Explosive Atmospheres—Part 11: Equipment Protection by Intrinsic Safety “i” (Group I, Level of protection ‘ia’), Sixth Edition, dated February 15, 2013, including revisions through September 14, 2018 (ANSI/UL 60079–11), which specifies the construction and testing of intrinsically safe apparatus intended for use in an explosive atmosphere and for associated apparatus, which is intended for connection to intrinsically safe circuits which enter such atmospheres. This standard is also applicable to electrical equipment or parts of electrical equipment located outside the explosive atmosphere or protected where the intrinsic safety of the electrical circuits in the explosive atmosphere may depend upon the design and construction of such electrical equipment or parts of such electrical equipment. The electrical circuits exposed to the explosive atmosphere are evaluated for use in such an atmosphere by applying this standard. This standard incorporates all of the U.S. national differences for UL 60079–11 and is based on IEC 60079–11, Edition 6, published in 2011.

(6) ANSI/UL 60079–18, Standard for Explosive Atmospheres—Part 18: Equipment Protection by Encapsulation “m” (Group I, Level of Protection ‘ma’), Fourth Edition, dated December 14, 2015, which provides the specific requirements for the construction, testing and marking of electrical equipment, parts of electrical equipment and Ex components with the type of protection encapsulation “m” intended for use in explosive gas atmospheres or explosive dust atmospheres. This standard applies only for encapsulated electrical equipment, encapsulated parts of electrical equipment, and encapsulated Ex components where the rated voltage does not exceed 11 kV. This standard incorporates all of the U.S. national differences and is based on IEC 60079–18, Explosive Atmospheres—Part 18: Equipment

Protection by Encapsulation “m”, (fourth edition issued December 2014).

(7) ANSI/UL 60079–25, Standard for Explosive Atmospheres—Part 25: Intrinsically Safe Electrical Systems (Group I, Level of Protection ‘ia’), Second Edition, Dated December 2, 2011, which contains the specific requirements for construction and assessment of intrinsically safe electrical systems, type of protection “i”, intended for use, as a whole or in part, in Class I, Zone 0, 1, or 2 hazardous (classified) locations as defined by the NEC®, ANSI/NFPA 70®. This standard is an adoption of ANSI/ISA 60079–25, Standard for Explosive Atmospheres—Part 25: Intrinsically Safe Electrical Systems.

(8) ANSI/UL 60079–28 Ed. 2–2017, Standard for Explosive Atmospheres—Part 28: Protection of Equipment and Transmission Systems Using Optical Radiation (Group I, Equipment Protection Level ‘Ma’), dated September 15, 2017, which specifies the requirements, testing and marking of equipment emitting optical radiation intended for use in explosive atmospheres. It also covers equipment located outside the explosive atmosphere or protected, but which generates optical radiation that is intended to enter an explosive atmosphere. This standard incorporates all of the U.S. national differences for UL 60079–28 and is based on IEC 60079–28, Edition 2.0 published May 2015.

Availability of Standards To Be Incorporated by Reference

MSHA proposes to incorporate by reference two ISA standards. ISA provides free online public access to read-only copies of its standards that are incorporated into Federal regulations through an agreement with ANSI. These standards are available to the public for free viewing online in the ANSI Incorporated by Reference Portal website at: <https://ibr.ansi.org/Standards/isa.aspx>. In addition to the free online availability of these standards for viewing on the ANSI website, hardcopies and printable versions are available for purchase from ISA. The ISA website address to purchase standards is: www.isa.org/standards-and-publications/isastandards/find-isa-standards-innumerical-order. Interested persons may also contact ISA directly at International Society of Automation (ISA), 67 T.W. Alexander Drive, P.O. Box 12277, Research Triangle Park, NC 27709, Tel: (919) 549–8411. In addition, during the comment period and rulemaking process, ISA standards will

be available for review, free of charge, at MSHA, Office of Standards, Regulations, and Variances, Room C3522, 200 Constitution Avenue NW, Washington, DC 20210 and at MSHA's Approval and Certification Center (A&CC) at 765 Technology Drive, Triadelphia, WV 26059 (304-547-0400).

There are six ANSI/UL standards that would be incorporated by reference in this proposed rule. These standards are available online and may be purchased on UL's website at:

www.shopulstandards.com. Interested persons may also contact UL directly at UL Solutions, Comm 2000, 151 Eastern Avenue, Bensenville, IL 60106, Tel: (888) 853-3503. In addition, during the comment period and rulemaking process, UL standards will be available for review, free of charge, at MSHA, Office of Standards, Regulations, and Variances, Room C3522, 200 Constitution Avenue NW, Washington, DC 20210 and at MSHA's A&CC at 765 Technology Drive, Triadelphia, WV 26059 (304-547-0400).

IV. Procedural Issues and Regulatory Review

A. Review Under Executive Orders 12866 and 13563

Executive Order (E.O.) 12866, "Regulatory Planning and Review" 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

E.O. 13563, "Improving Regulation and Regulatory Review" 76 FR 3821 (Jan. 21, 2011), requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. E.O. 13563 reaffirms the principles of E.O.

12866 while calling for improvements in the nation's regulatory system to promote predictability, reduce uncertainty, and use the best, most innovative, and least burdensome tools for achieving regulatory ends.

E.O. 12866 and E.O. 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. E.O. 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

Background

Currently, there are no permissible PAPRs commercially available on the U.S. market. Mine operators have to file petitions for modification to use PAPRs in underground mine environments and are only granted permission for their use if the petition is approved. Under the proposed rule, mine operators would be allowed to use PAPRs in specified underground areas of underground mines without filing petitions. This proposed rule would allow mine operators to safely use the best and most current technology available, while not reducing miner safety.

Based on MSHA internal data, the Agency estimates there will be approximately 197 underground metal and nonmetal (MNM) mines and 215 underground coal mines operating each year that would be impacted by this proposed rule.¹ All estimated figures are expressed in 2024 dollars.

Under the baseline scenario, coal mine operators would continue their current practice of filing petitions to be able to use PAPRs in underground mines and would purchase and use the PAPRs if their petition is approved. Under the proposed rule, mine operators would no longer need to file petitions to use PAPRs. There would be no change to the existing requirements placed on mine operators using PAPRs: methane monitoring, regular PAPR equipment inspection, and hazard awareness training for miners. These requirements would continue to be applied to all underground mines that use PAPRs under the proposed rule.

Benefits

This proposed rule would codify new standards for using non-permissible PAPRs in underground mines, based on technical specifications and working conditions. The proposed rule would

substantially reduce future costs and delays related to filing petitions for modification. MSHA received 150 petitions for PAPRs between 2021 and 2024. These petitions show that, despite the costs associated with filing petitions, a substantial number of mines find that using PAPRs is beneficial to their operations. Being able to use PAPRs without having to file a petition would allow mine operators to safely use the latest technology without diminishing safety in underground mines.

Compliance Costs of Using PAPRs

The total compliance costs associated with using PAPRs would result from allowing underground mine operators to purchase and use PAPRs without filing a petition for modification. MSHA assumes the cost of filing a petition currently presents a barrier to the use of PAPRs, and when that barrier is removed the purchase and use of PAPRs would be economically feasible for more mine operators.

The total compliance costs of using PAPRs include the following:

1. *Equipment purchases:* MSHA estimates that over the 10-year analysis period, each underground MNM mine operator would purchase 10 PAPRs per mine and each underground coal mine operator would purchase 50 PAPRs per mine. At a cost of \$3,000 per PAPR, the 10-year total cost would be \$36.0 million undiscounted.

2. *Methane monitoring by competent or qualified persons:* MSHA estimates that in underground MNM mines over the 10-year analysis period, mining supervisors earning \$75.63 per hour would spend a total of 12,549 hours monitoring methane; and over that same time period in underground coal mines, mining supervisors earning \$95.72 per hour would spend a total of 125,488 hours monitoring methane. This yields a total cost over 10 years of \$13.1 million.

3. *Examination of non-permissible PAPR equipment:*

a. *Pre-use examinations:* MSHA estimates that, over 10 years, mining supervisors would need to conduct 2,150 pre-use examinations in underground MNM mines (1 examination per mine per year) and 3,940 examinations in underground coal mines (2 examinations per mine per year). At a unit cost of \$5.51 per examination, the 10-year total cost would be \$33,556 undiscounted covering 6,090 pre-use examinations.

b. *Weekly examinations:* MSHA estimates mining supervisors would conduct 4 weekly examinations per mine each year for 215 underground

¹ Number of mines inspected at least once in 2024 and the mine's current status is listed as active, intermittent, or nonproducing active on April 14, 2025.

MNM mines and 197 underground coal mines. This results in a 10-year total of 16,480 examinations. At a unit cost of \$9.48 per examination, the 10-year cost of weekly examinations would be \$0.2 million undiscounted.

4. Hazard awareness training for miners: MSHA estimates mine operators would train 2 MNM miners and 20 coal miners per mine each year on the hazards involved in using PAPRs. Assuming the training takes 1 hour to complete and using an estimated wage rate of \$49.78 per hour for MNM miners and \$57.85 per hour for coal miners, the 10-year cost of training would be \$12,566 undiscounted over 10 years.

Cost Savings

Under the baseline scenario, MSHA believes mine operators would continue to file petitions to use PAPRs, while no new petitions would be filed under the proposed rule. Over the 10-year analysis period, MSHA estimates that under the baseline there would be 20 petitions filed and approved without revision, 330 petitions filed and approved with revisions, and 30 petitions litigated. MSHA assumes that the cost of petitions is \$6,367 per petition approved without revision, \$25,468 per petition approved with revisions, and \$397,943 per litigated petition.² Under the proposed rule, mine operators would not have to file petitions and thus would avoid petition associated costs of \$20.47 million undiscounted over 10 years. The annualized cost savings would be \$2.05 million at a 0 percent discount rate, \$2.25 million at a 3 percent discount rate, and \$2.52 million at a 7 percent discount rate.

Summary

To use PAPRs, mine operators would incur compliance costs of \$4 million undiscounted over 10 years, under both the baseline scenario (filing a petition in order to use PAPRs) or the proposed rule (using PAPRs without having to file a petition). Therefore, compliance costs are not considered incremental costs under the proposed rule.

Under the proposed rule, there would be incremental cost savings from avoided costs associated with filing petitions and potentially going through litigation of \$20.47 million. MSHA estimates that the annualized cost savings for this proposed rule at discount rates of 0 percent, 3 percent, and 7 percent would be \$2.05 million, \$2.25 million, and \$2.52 million, respectively.

Significance Determination

Under section 3(f) of E.O. 12866, a “significant regulatory action” is a regulatory action that is likely to result in a rule that may:

(1) have an annual effect on the economy of \$100 million or more, or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities (also referred to as economically significant);

(2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients; or

(4) raise novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in the E.O.

Under section 6(a) of E.O. 12866, the Office of Management and Budget’s (OMB’s) Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and whether Agencies are required to submit the regulatory action to OIRA for review. Adding the provisions concerning the use of PAPRs in specified underground areas of mines would not impose new compliance costs to underground mine operators or reduce the protections afforded to miners. This proposed rule is determined to not constitute a “significant regulatory action” because it does meet any of the four “significant regulatory action” criteria under section 3(f) of E.O. 12866. Accordingly, this proposed rule was not submitted to OIRA for review under E.O. 12866.

No alternatives were considered for this proposed deregulatory action.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) of 1980, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996, requires preparation of an Initial Regulatory Flexibility Analysis (IRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. The RFA defines small entities to include small businesses, small organizations, including not-for-profit organizations, and small governmental jurisdictions. MSHA reviewed this proposed rule under the provisions of

the RFA, which eliminates burdensome regulations.

Under the RFA, MSHA uses the Small Business Administration’s (SBA) definition to set thresholds for small business sizes for the MNM and coal mining industries defined at the 6-digit North American Industry Classification System (NAICS) level. For underground MNM mines the threshold ranges from 500–1,500 employees depending on the specific commodity being mined. For underground coal mines the threshold is 1,500 employees.

MSHA estimates the total annual revenues for MNM commodities to be \$105.6 billion. This was calculated using the 2024 production values for all metal and industrial minerals reported in U.S. Geological Survey’s Mineral Commodity Summaries 2025 Report. Using MSHA internal data the agency estimates that \$44.0 billion of the total revenues were generated by small MNM mines.

MSHA evaluated data routinely provided by mine operators related to the number of mines, employment, and production from MSHA’s Standardized Information System (MSIS) for underground coal mines. MSHA calculated revenue as production times the average price of coal. Using internal data, MSHA estimates that small coal mines produce roughly 92.1 million tons of coal annually. Using U.S. Energy Information Administration Annual Coal Report 2023 Table 28, Average Sales Price of Coal by State and Mine Type, the average coal price was \$54.04 per short ton in 2023. The price was then adjusted to 2024 dollars using CPI–U, \$55.63 per short ton, to estimate national coal revenues of \$5.1 billion generated by small coal mines.

MSHA assesses the impacts on small entities by comparing the estimated compliance costs of the proposed rule for small entities affected by the rule to the estimated revenues for the affected sector. When estimated compliance costs are less than 1 percent of the estimated revenues, the Agency believes it is generally appropriate to conclude that there is no significant economic impact on a substantial number of small entities. When estimated compliance costs exceed 1 percent of revenues, MSHA investigates whether further analysis is required. The impact as a percentage of revenue is essentially zero under the proposed rule: for small MNM and coal mine operators total annualized cost is \$4.93 million while total annual revenue is \$49.1 billion, resulting in the ratio of 0.010 percent. Thus, no further analysis is required.

MSHA considered the compliance costs on small mines when developing

² The litigation of a petition by a mine operator can take several years to resolve, which could amount to hundreds, and possibly even thousands of legal hours.

the proposed rule, MSHA reviewed this proposed rule under the provisions of the RFA, which eliminates burdensome regulations. Therefore, MSHA initially concludes that the impacts of the proposed rule would not have a “significant economic impact on a substantial number of small entities,” and the preparation of an IRFA is not warranted. MSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) provides for the Federal Government’s collection, use, and dissemination of information. The goals of the Paperwork Reduction Act include minimizing paperwork and reporting burdens and ensuring the maximum possible utility from the information that is collected under 5 CFR part 1320. The Paperwork Reduction Act requires Federal agencies to obtain approval from OMB before requesting or requiring “a collection of information” from the public.

This proposed rule imposes no new information collection or recordkeeping requirements. The requirements for training recordkeeping are fully covered in a currently approved information collection request, OMB Control Number 1219–0009 “Training Plans and Records of Training for Underground Miners and Miners Working at Surface Mines and Surface Areas of Underground Mines.” There is no change to this information collection request.

However, this proposed rule would result in substantive changes to another currently approved information collection request, OMB Control Number 1219–0065 “Petitions for Modification of Mandatory Safety Standards.” The currently approved information collection request covers requirements in 30 CFR part 44, which set forth the procedures and rules to govern petitions for modification of mandatory safety standards filed under section 101(c) of the Mine Act.

Under this proposed rule, MNM and coal mine operators would no longer have to file petitions for modification to use PAPRs in underground mine environments. This proposed change would decrease the paperwork burden and costs to mine operators as they would no longer file petitions for using PAPRs in underground MNM and coal mines. MSHA proposes to revise the supporting statement for the

information collection request 1219–0065 to reflect these changes and seeks public comment on these changes.

Type of Review: Substantive Change to currently approved information collection.

OMB Control Number: 1219–0065.

Title: Petitions for Modifications of Mandatory Safety Standards.

Description of the ICR:

Background

Under 30 CFR 44.4, mine operators can file a petition for modification to use an alternative method of achieving the same result of an existing standard that will at all times guarantee no less than the same measure of protection afforded by the standard. Currently, this is the only way mine operators are able to use non-permissible PAPRs. Under the proposed rule, the requirements for using such equipment would be codified and mine operators would no longer have to file a petition for their use.

Based on MSHA records of petitions for modification received between 2021 through 2023, there were an average of 46 petitions each year. Of these submitted petitions, there was an average of 26 submissions that requested the use of PAPRs. Under this proposed rule, the Agency estimates that the average annual petitions would be reduced from 46 to 20 petitions, as the 26 petitions concerning PAPRs would no longer need to be filed. MSHA assumes that 24 petitions for PAPRS would have been filed by underground coal mines and 2 by underground MNM mines. Additionally, it is assumed that under the proposed rule, of the remaining 20 petitions filed each year, 19 petitions would be from coal mines and 1 would be from a MNM mine.

Summary of Changes

This substantive change request will change the supporting statement for this information collection request due to an addition in the recordkeeping requirements in the proposed 30 CFR 57.22316 through 57.22316–7 and 75.530 through 75.537. Forty-six mines are currently impacted under 1219–0065 and under the proposed rule this figure would decrease to 20. This change does not modify the authority or number of affected mine operators and contractors, but it does decrease the paperwork burden and costs associated with filing petitions as captured by this information collection request.

The number of respondents, frequency of response, annual hour burden, and recordkeeping cost are described below.

1. Preparing and Filing Petitions for Modification (30 FR 44.10 and 44.11(a))

Under 30 CFR 44.10 and 44.11(a), a mine operator or any representative of miners may file a petition for modification of the application of a mandatory safety standard. MSHA assumes that petitions will either be filed by mine operators or by third-party sources on behalf of mine operators. Under the proposed rule, MSHA assumes that each year 16 petitions would be prepared by mine operators, 15 from coal mines and 1 from a MNM mine. MSHA estimates that it takes 40 hours to prepare and file a petition, which will be completed by a coal or MNM mining supervisor, earning \$95.72 or \$75.63 per hour, respectively.

As related to these requirements, the proposed rule would reduce the number of annual respondents from 37 to 16, the number of annual responses from 37 to 16, and the annual burden hours from 1,480 to 640.

Additionally, MSHA assumes that 4 petitions are prepared by third-party sources (independent legal counsel) each year. MSHA estimates that it takes an independent counsel, earning \$182.79 per hour, approximately 16 hours to prepare a petition. This will be a total of \$11,699 spent preparing the 4 petitions. This would be a decrease from the previous recordkeeping cost estimate of \$24,814.

The prepared petitions must be submitted to MSHA for review and approval. Each year, MSHA estimates only 1 petition would be submitted by mail and 19 would be submitted electronically. MSHA assumes that there is no filing cost if submitted electronically. MSHA estimates the mailing costs for a petition for modification is \$8.00 if using certified mail from USPS. This proposed rule would reduce the recordkeeping cost burden from \$16 to \$8.

2. Posting Copies of Petitions on the Mine Bulletin Boards (30 CFR 44.9)

Under 30 CFR 44.9, a mine operator must, when there is no representative of miners, post a copy of each petition for modification concerning the mine on the mine bulletin board and must maintain the posting until a ruling on the petition becomes final. MSHA assumes that all mine operators will post the petition for modification on the mine’s bulletin board.

MSHA assumes each year there will be 19 petitions from coal mines and 1 from a MNM mine. MSHA estimates that it takes 10 minutes to make copies of the petition and post the petition to the mine bulletin board. This will be

done by a coal or MNM clerk, earning \$44.53 or \$45.42 per hour, respectively.

As related to this item, the proposed rule would reduce the number of annual respondents from 46 to 20, the number of annual responses from 46 to 20, and the annual burden hours from 7.67 to 3.33.

Additionally, MSHA assumes that on average a petition for modification is 3 pages long and the printing cost is \$0.15 per page, so the material cost of printing a copy of the petition would be \$0.45. By reducing the number of petitions to be posted on the mine bulletin board by 26, this proposed rule reduces the annual recordkeeping cost to respondents by \$11.70.

In summary, this proposed rule would reduce the number of annual respondents from 46 to 20, the number of annual responses from 46 to 20, and the annual burden hours from 7.67 to 3.33. The annual recordkeeping cost to respondents would decrease from \$20.70 to \$9.00.

3. Serving Representatives of Miners With Petitions (30 CFR 44.10)

Under 30 CFR 44.10, if a petition is filed by a mine operator, a copy of the petition must be served to a representative of miners at the affected mine. MSHA assumes that 20 petitions would be filed each year, 19 from coal mines and 1 from a MNM mine. MSHA estimates that it takes 10 minutes to make copies of the petition and serve the petition to a representative of miners. A coal or MNM clerk earns \$44.53 or \$45.42 per hour, respectively.

As related to this item, the proposed rule would reduce the number of annual respondents from 46 to 20, the number of annual responses from 46 to 20, and the annual burden hours from 7.67 to 3.33.

Additionally, MSHA assumes that on average a petition for modification is 3 pages long and the printing cost is \$0.15 per page, so the material cost of printing a copy of the petition would be \$0.45. By reducing the number of petitions to be served to miners' representatives by 26 this proposed rule reduces the annual other cost burden by \$11.70.

In summary, this proposed rule would reduce the number of annual respondents from 46 to 20, the number of annual responses from 46 to 20, and the annual burden hours from 7.67 to 3.33. The annual recordkeeping cost to respondents would decrease from \$20.70 to \$9.00.

4. Serving Miners' Representative With Copies of the Final Actions Granting Petitions and Posting Copies to the Mine Bulletin Boards (30 CFR 44.5(b))

Under 30 CFR 44.5(b), every final action granting a petition for modification must be posted by the operator on the mine bulletin board at the affected mine and remain posted as long as the modification is effective. If a summary of the final action is posted on the mine bulletin board, a copy of the full decision must be kept at the affected mine office and made available to the miners.

Under the baseline, MSHA estimates that each year 46 petitions would be submitted. Of the 46, 26 would be related to PAPRs, 3 of which would be denied and 23 approved. The proposed rule removes the need for the 26 petitions. Of the remaining 20 petitions submitted annually, MSHA estimates 12 would be approved, 11 from coal mines and 1 from a MNM mine. MSHA estimates that it takes 10 minutes to make copies of the final action and then to serve them to the miners' representative or post on the mine bulletin board. This will be done by a coal or MNM clerk, earning \$44.53 or \$45.42 per hour, respectively.

As related to this item, the proposed rule would reduce the number of annual respondents from 46 to 20, the number of annual responses from 46 to 20, and the annual burden hours from 7.67 to 3.33.

Additionally, MSHA assumes that a mine operator will make 2 copies of each final actions granting petitions: 1 copy to be posted on the bulletin board and 1 copy available to miners. MSHA assumes that on average a petition for modification is 3 pages long and the printing cost is \$0.15 per page, so the cost of printing a copy of the petition would be \$0.45. This rescission would reduce the number of copies of final actions made by 46 (23 served to miners' representatives and 23 posted to mine bulletin boards). This rescission reduces the annual other cost burden from \$31.50 to \$10.80.

This portion of the PRA requirements would reduce the number of annual respondents from 35 to 12, the number of annual responses from 35 to 12, and the annual burden hours from 5.83 to 2.00. The annual recordkeeping cost to respondents would decrease from \$31.50 to \$10.80.

Summary of the Collection of Information

Under the proposed rule, the estimated number of respondents, responses, burden hours, and

recordkeeping costs to respondents would decrease from the currently approved information collection request.

Affected Public: Businesses or For-Profit.

Estimated Number of Respondents: 20 (– 26 from proposed rule).

Frequency: On occasion.

Estimated Number of Responses: 68 (– 96 from proposed rule).

Estimated Number of Burden Hours: 649 (– 853 from proposed rule).

Estimated Recordkeeping Costs to Respondents: \$11,735 (– \$13,095 from proposed rule).

D. Review Under Executive Order 13132

E.O. 13132, "Federalism," 64 FR 43255 (August 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The E.O. requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The E.O. also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.

MSHA has determined that the proposed rule would not have federalism implications because it would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Accordingly, E.O. 13132 requires no further action or analysis.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O. 12988, "Civil Justice Reform" 61 FR 4729 (Feb. 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on

existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Section 3(c) of E.O. 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. MSHA has completed the required review and determined that, to the extent permitted by law, this proposed rule meets the relevant standards of E.O. 12988.

F. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)). The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a “significant intergovernmental mandate,” and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them.

MSHA examined this proposed rule according to UMRA and its statement of policy and determined that the proposed rule does not contain a Federal intergovernmental mandate, nor is it expected to require expenditures of \$100 million or more in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. As a result, no further Agency action or analysis is required.

G. Review Under the National Environmental Policy Act

The National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et*

seq.), requires each Federal agency to consider the environmental effects of regulatory actions and to prepare an environmental impact statement on Agency actions that would significantly affect the quality of the environment; unless the action is considered categorically excluded under 29 CFR 11.10. MSHA has reviewed the proposed rule in accordance with NEPA requirements and the Department of Labor’s NEPA procedures (29 CFR part 11). As a result of this review, MSHA has determined that this proposed rule would not impact air, water, or soil quality, plant or animal life, the use of land or other aspects of the human environment. Therefore, MSHA has not conducted an environmental assessment nor provided an environmental impact statement.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This proposed rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, MSHA has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to E.O. 12630, “Governmental Actions and Interference with Constitutionally Protected Property Rights” 53 FR 8859 (March 18, 1988), MSHA has determined that this proposed rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB’s guidelines were published at 67 FR 8452 (Feb. 22, 2002). MSHA has reviewed this proposed rule and has concluded that it is consistent with applicable policies in the OMB guidelines.

K. Review Under Executive Order 13175

E.O. 13175, “Consultation and Coordination With Indian Tribal Governments” 65 FR 67249 (Nov. 9, 2000), requires agencies to consult with tribal officials when developing policies that may have “tribal implications.” This proposed rule does not have “tribal implications” because it will not “have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.” Accordingly, under E.O. 13175, no further Agency action or analysis is required.

L. Review Under Executive Order 13211

E.O. 13211, “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” 66 FR 28355 (May 22, 2001), requires agencies to publish a statement of energy effects when a rule has a significant energy action that adversely affects energy supply, distribution, or use. MSHA has reviewed this proposed rule for its energy effects. For the energy analysis, this proposed rule will not exceed the relevant criteria for adverse impact.

M. Plain Language

E.O. 12866 and E.O. 13563 require regulations to be written in a manner that is easy to understand. MSHA has drafted the proposed rule in plain language.

N. Review Under Additional Executive Orders and Presidential Memoranda

MSHA has examined this proposed rule and has determined that it is consistent with the policies and directives outlined in E.O. 14154, “Unleashing American Energy” 90 FR 8353 (Jan. 29, 2025); E.O. 14192, “Unleashing Prosperity Through Deregulation” 90 FR 9065 (Feb. 6, 2025); and the Presidential Memorandum, “Delivering Emergency Price Relief for American Families and Defeating the Cost of Living Crisis” 90 FR 8245 (Jan. 28, 2025). This proposed rule is expected to be an E.O. 14192 deregulatory action.

List of Subjects

30 CFR Part 57

Chemicals, Electric power, Explosives, Fire prevention, Gases, Hazardous substances, Incorporation by reference, Metals, Mine safety and health, Mines, Noise control, Radiation protection, Reporting and recordkeeping requirements, Underground mining.

30 CFR Part 75

Communications equipment, Electric power, Emergency medical services, Incorporation by reference, Mandatory safety standards, Explosives, Fire prevention, Mine safety and health, Reporting and recordkeeping requirements, Training, Underground coal mines.

For the reasons set forth in the preamble, and under the authority of the Federal Mine Safety and Health Act of 1977, as amended by the Mine Improvement and New Emergency Response Act of 2006, MSHA proposes to amend chapter I of title 30 of the Code of Federal Regulations as follows:

PART 57—SAFETY AND HEALTH STANDARDS—UNDERGROUND METAL AND NONMETAL MINES

■ 1. The authority citation for part 57 continues to read as follows:

Authority: 30 U.S.C. 811.

Subpart T—Safety Standards for Methane in Metal and Nonmetal Mines

■ 2. Add §§ 57.22316 through 57.22316–7 to read as follows:

§ 57.22316 Non-permissible powered air purifying respirators (PAPRs): Purpose and scope.

§ 57.22316–1 Non-permissible PAPRs: Definitions.

§ 57.22316–2 Non-permissible PAPRs: Approval and certification requirements.

§ 57.22316–3 Non-permissible PAPRs: Requirements before use.

§ 57.22316–4 Non-permissible PAPRs: Continuous monitoring during operation.

§ 57.22316–5 Non-permissible PAPRs: Requirements for batteries.

§ 57.22316–6 Non-permissible PAPRs: Maintenance and examination.

§ 57.22316–7 Non-permissible PAPRs: Training.

§ 57.22316 Non-permissible powered air purifying respirators (PAPRs): Purpose and scope.

(a) Non-permissible PAPRs meeting the provisions in §§ 57.22316–1 through 57.22316–7 are permitted when no MSHA-approved PAPRs are commercially available.

(b) In the event that an operator implements a non-permissible PAPR at a mine, the operator must replace non-permissible PAPRs with approved PAPRs at the end of the non-permissible PAPR useful life or 2 years after the date of manufacture, whichever is sooner, if approved PAPRs become commercially available.

(c) PAPRs which are not MSHA-approved may be taken into and operated in specified underground areas: in or beyond the last open

crosscut and in areas where methane may enter the air current, such as pillar recovery workings, longwall faces and shortwall faces, when PAPRs that meet the permissibility requirements in part 18 of this chapter do not exist.

(d) Sections 57.22316–1 through 57.22316–7 establish requirements for the features, use, and maintenance of non-permissible PAPRs, and the training of the personnel using such equipment when production activities are occurring and when production activities cease.

§ 57.22316–1 Non-permissible PAPRs: Definitions.

The following definitions apply:

Commercially available. Currently being manufactured and available for sale in the U.S.

Powered air purifying respirators (PAPRs). Battery-powered devices certified by the National Institute for Occupational Safety and Health (NIOSH) equipped with a facepiece, hood, or helmet, breathing tube, canister, cartridge, filter, canister with filter, or cartridge with filter, and a blower.

Production activities. Activities that generate dust containing volatile matter or combustible gases including but not limited to cutting, drilling, blasting, transporting, cleaning, loading, and unloading.

Specified underground area. An underground area located in or beyond the last open crosscut and areas where methane may enter the air current, such as pillar recovery workings, longwall faces and shortwall faces or any underground area requiring electrical equipment that is approved by MSHA under the applicable requirements of 30 CFR parts 18 through 36. These areas are considered where explosive concentrations of methane gas are most likely to occur.

§ 57.22316–2 Non-permissible PAPRs: Approval and certification requirements.

(a) PAPRs which are not MSHA-approved and taken into specified underground areas must meet the following conditions:

(1) Non-permissible PAPRs, including batteries when assembled for use, must be approved by the National Institute for Occupational Safety and Health (NIOSH) under 42 CFR part 84.

(2) Non-permissible PAPRs must be certified to the ANSI/UL 60079–11 standard listed in § 57.22316–2(b)(1)(i) by a Nationally Recognized Testing Laboratory (NRTL) in accordance with 29 CFR 1910.7. Certification allows the manufacturer to mark the device as “Ex ia I”, meaning that the unit is certified

to be used in hazardous locations (“Ex”), has met the most onerous level of intrinsic safety protection (“ia”), the Equipment Protection Level (“very high”), and is acceptable for use in mines susceptible to firedamp (“I”).

(b) The material listed in this paragraph (b) is incorporated by reference into this section with the approval of the Director of the Federal Register under 5 U.S.C. 552(a) and 1 CFR part 51. All approved incorporation by reference (IBR) material is available for inspection at the U.S. Department of Labor, Mine Safety and Health Administration (MSHA) and at the National Archives and Records Administration (NARA). Contact MSHA at 200 Constitution Avenue NW, Washington, DC 20210. For information on the availability of this material at NARA, visit www.archives.gov/federal-register/cfr/ibr-locations or email fr.inspection@nara.gov. The material is available as follows:

(1) International Society of Automation (ISA), 67 T.W. Alexander Drive, P.O. Box 12277, Research Triangle Park, NC 27709; phone: (919) 549–8411; website: www.isa.org.

(i) ANSI/ISA 60079–11 (12.02.01)–2014, American National Standard for Explosive Atmospheres—Part 11: Equipment protection by intrinsic safety “i”, Edition 6.2, Approved March 28, 2014.

(ii) ANSI/ISA 60079–25 (12.02.05)–2011, American National Standard for Explosive Atmospheres—Part 25: Intrinsically safe electrical systems, Approved December 2, 2011.

(i) ANSI/UL 60079–0, Standard for Safety for Explosive Atmospheres—Part 0: Equipment—General Requirements, Seventh Edition, Dated March 26, 2019, including revisions through April 15, 2020 (ANSI/UL 60079–0).

(ii) ANSI/UL 60079–1, Standard for Safety for Explosive Atmospheres—Part 1: Equipment Protection by Flameproof Enclosures “d”, Seventh Edition, Dated September 18, 2015, including revisions through January 23, 2020 (ANSI/UL 60079–1).

(iii) ANSI/UL 60079–11, Standard for Safety for Explosive Atmospheres—Part 11: Equipment Protection by Intrinsic Safety “i”, Sixth Edition, Dated February 15, 2013, including revisions through September 14, 2018 (ANSI/UL 60079–11).

(iv) ANSI/UL 60079–18, Standard for Safety for Explosive Atmospheres—Part 18: Equipment Protection by Encapsulation “m”, Fourth Edition,

Dated December 14, 2015, including revisions through February 7, 2019 (ANSI/UL 60079–18).

(v) ANSI/UL 60079–25, Standard for Safety for Explosive Atmospheres—Part 25: Intrinsically Safe Electrical Systems, Second Edition, Dated December 2, 2011, including revisions through June 12, 2020 (ANSI/UL 60079–25).

(vi) ANSI/UL 60079–28 Ed. 2–2017, Standard for Safety for Explosive Atmospheres—Part 28: Protection of Equipment and Transmission Systems Using Optical Radiation, Second Edition, Dated September 15, 2017, including revisions through December 7, 2021 (ANSI/UL 60079–28).

Note 1 to § 57.22316–2: The voluntary consensus standards listed in this section may also be obtained from the American National Standards Institute (ANSI), 1899 L Street NW, 11th Floor, Washington, DC 20036; phone: (202) 293–8020; website: www.ansi.org.

§ 57.22316–3 Non-permissible PAPRs: Requirements before use.

(a) Prior to being taken into specified underground areas, each non-permissible PAPR shall be:

(1) Physically examined by a competent person as defined in § 57.22002.

(i) The examination shall include the battery pack, and all associated wiring and connections to determine if there are any observable defects or damage that could negatively impact intrinsic safety.

(ii) If any defect or damage is found, the non-permissible PAPR shall be removed from service.

(2) Examined by the user in accordance with the manufacturer's instructions to ensure the equipment is used according to the manufacturer's recommendations and maintained in a safe operating condition.

(b) The examination under (a)(1) and (a)(2) shall include:

(1) Checking the equipment for any physical damage and the integrity of the case;

(2) Removing the battery (if removable/accessible) and examining for corrosion;

(3) Inspecting the electrical contact points to ensure a secure connection to the battery (if removable/accessible);

(4) Reinserting the battery (if removable/accessible) and powering up and shutting down to ensure proper connections;

(5) Checking the battery compartment cover or battery attachment (if removable/accessible) to ensure that it is securely fastened, and for ingress of dust or moisture; and

(6) For equipment utilizing lithium type cells, ensuring that lithium cells

and/or packs are not damaged or swollen.

§ 57.22316–4 Non-permissible PAPRs: Continuous monitoring during operation.

(a) Prior to energizing the non-permissible PAPR in the specified underground areas, tests for methane shall be conducted in the mine atmosphere of the specified area by a competent person.

(b) A competent person shall continuously monitor for methane in the specified underground area immediately before and while non-permissible PAPRs are present.

(c) All hand-held methane detectors shall be MSHA-approved and maintained in permissible and proper operating condition.

(d) All methane detectors must provide visual and audible warnings when the percent methane listed in §§ 57.22232 through 57.22236 for the corresponding mine categories in § 57.22003 is detected.

(e) When the percent methane listed in §§ 57.22232 through 57.22236 for the corresponding mine categories in § 57.22003 is detected while the non-permissible PAPR is being used in the specified underground areas, the equipment shall be de-energized immediately and withdrawn from the area to outby the last open crosscut, out of areas where methane may enter the air current, such as pillar recovery workings, longwall faces and shortwall faces.

§ 57.22316–5 Non-permissible PAPRs: Requirements for batteries.

(a) Before each shift, all batteries for the non-permissible PAPRs must be charged sufficiently to function the entire shift.

(b) Replacement batteries for non-permissible PAPRs must not be taken into the specified underground areas.

(c) Batteries contained in the non-permissible PAPRs must be changed in intake air outside of the specified underground areas.

(d) No batteries may be charged underground.

(e) The following maintenance and use conditions must apply to equipment containing lithium-type batteries:

(1) Neither the battery pack nor the power unit may be disassembled or modified by anyone other than permitted by the equipment manufacturer.

(2) The battery must only be charged using the manufacturer's recommended battery charger.

(3) Neither the battery pack nor the power unit, which contain the internal battery, shall be exposed to water,

allowed to get wet, or immersed in liquid. This does not preclude incidental exposure of the battery pack nor the power unit assembly.

(4) The non-permissible PAPR, including the internal battery, must not be used, charged, or stored in locations where the manufacturer's recommended temperature limits are exceeded. The non-permissible PAPR must not be placed in direct sunlight nor stored near a source of heat.

(f) Follow the manufacturer's recommendations and instructions. Check and monitor each non-permissible PAPR's run time.

(1) Routinely check the battery's charge status according to the manufacturer's recommendation.

(2) Remove the battery from service when the battery fails to meet the manufacturer's specifications including, but not limited to, run time, temperature, and charging time.

(g) Follow the storage instructions as recommended by the manufacturer. If the instructions are not followed for a battery stored or otherwise unused for an extended period or the battery has no charge remaining, consider it to be damaged and do not recharge it or use it. Remove it from service and replace it with a new battery.

§ 57.22316–6 Non-permissible PAPRs: Maintenance and examination.

(a) All non-permissible PAPRs must be maintained to ensure safe operating condition. When a potentially dangerous condition is found with the equipment, such equipment must be immediately withdrawn from the specified underground areas, taken out of service, and must be repaired before returning to service.

(b) As specified under § 57.22316–3, non-permissible PAPRs must be examined according to the manufacturer's recommendations to ensure safe operating condition.

(c) The mine operator must ensure that all non-permissible PAPRs are serviced according to the manufacturer's recommendations.

§ 57.22316–7 Non-permissible PAPRs: Training.

(a) Miners who will use non-permissible PAPRs must be trained on the requirements in §§ 57.22316–1 through 57–22316–7 before the non-permissible PAPRs can be used.

(b) Mine operators must train new miners under § 48.5, train experienced miners under § 48.6, and train miners assigned new work tasks under § 48.7, on the requirements in §§ 57.22316–1 through 57–22316–7. The training must include hazard recognition specific to the mine.

(c) Mine operators must provide annual retraining to all miners who may use non-permissible PAPRs under § 48.8.

(d) Mine operators must include the following in their training:

(1) The proper use and maintenance of the non-permissible PAPRs, in accordance with established manufacturer guidelines.

(2) How to recognize the hazards and limitations associated with the use of non-permissible PAPRs in the areas where methane could be present.

(3) That the PAPR is not approved under 30 CFR part 18 and must be de-energized when 1.0 or more percent methane is detected.

(4) The proper procedures to safely de-energize the non-permissible PAPR.

(5) How to examine the non-permissible PAPR before use to identify any damage that could negatively impact intrinsic safety, or any of the stipulations in §§ 57.22316–1 through 57–22316–7.

(6) How to recognize non-permissible PAPR filter replacement indicators.

(7) How to change filters when indicated.

(8) The proper procedures for transferring to self-rescue devices during a mine emergency while wearing the non-permissible PAPR.

(e) Records of training required under this part must comply with part 48.

(f) Mine operators must provide such records to MSHA upon request.

PART 75—MANDATORY SAFETY STANDARDS—UNDERGROUND COAL MINES

■ 3. The authority citation for part 75 continues to read as follows:

Authority: 30 U.S.C. 811, 813(h), 957.

Subpart F—Electrical Equipment—General.

■ 4. Add §§ 75.530 through 75.537 to read as follows:

§ 75.530 Non-permissible powered air purifying respirators (PAPRs): Purpose and scope.

§ 75.531 Non-permissible PAPRs: Definitions.

§ 75.532 Non-permissible PAPRs: Approval and certification requirements.

§ 75.533 Non-permissible PAPRs: Requirements before use.

§ 75.534 Non-permissible PAPRs: Continuous monitoring during operation.

§ 75.535 Non-permissible PAPRs: Requirements for batteries.

§ 75.536 Non-permissible PAPRs: Maintenance and examination.

§ 75.537 Non-permissible PAPRs: Training.

§ 75.530 Non-permissible powered air purifying respirators (PAPRs): Purpose and scope.

(a) Non-permissible PAPRs meeting the provisions in §§ 75.531 through 75.537 are permitted when no MSHA-approved PAPRs are commercially available.

(b) In the event that an operator implements a non-permissible PAPR at a mine, the operator must replace non-permissible PAPRs with approved PAPRs at the end of the non-permissible PAPR useful life or 2 years after the date of manufacture, whichever is sooner, if approved PAPRs become commercially available.

(c) PAPRs which are not MSHA-approved may be taken into and operated in specified underground areas: in or inby the last open crosscut, § 75.500(d), in the return air outby the last open crosscut, § 75.507–1(a), or within 150 feet of the pillar workings or longwall faces, § 75.1002(a), when PAPRs that meet the permissibility requirements in part 18 of this chapter do not exist.

(d) Sections 75.531 through 75.537 also establish requirements for the features, use, and maintenance of non-permissible PAPRs, and the training of the personnel using such equipment when production activities are occurring and when production activities cease.

§ 75.531 Non-permissible PAPRs: Definitions.

The following definitions apply:
Commercially available. Currently being manufactured and available for sale in the U.S.

Powered air purifying respirators (PAPRs). Battery-powered devices certified by the National Institute for Occupational Safety and Health (NIOSH) equipped with a facepiece, hood, or helmet, breathing tube, canister, cartridge, filter, canister with filter, or cartridge with filter, and a blower.

Production activities. Activities that generate coal dust or methane gas including but not limited to cutting, drilling, blasting, transporting, cleaning, loading, and unloading.

Specified underground area. An underground area located in or inby the last open crosscut, in the return air outby the last open crosscut, or within 150 feet of the pillar workings or longwall faces.

§ 75.532 Non-permissible PAPRs: Approval and certification requirements.

(a) PAPRs which are not MSHA-approved and taken into specified underground areas must meet the following conditions:

(1) Non-permissible PAPRs, including batteries when assembled for use must be approved by the National Institute for Occupational Safety and Health (NIOSH) under 42 CFR part 84.

(2) Non-permissible PAPRs must be certified to the ANSI/UL 60079–11 standard listed in this section by a Nationally Recognized Testing Laboratory (NRTL) in accordance with 29 CFR 1910.7. Certification allows the manufacturer to mark the device as “Ex ia I”, meaning that the unit is certified to be used in hazardous locations (“Ex”), has met the most onerous level of intrinsic safety protection (“ia”), the Equipment Protection Level (“very high”), and is acceptable for use in mines susceptible to firedamp (“I”).

(b) The material listed in this paragraph (b) is incorporated by reference into this section with the approval of the Director of the Federal Register under 5 U.S.C. 552(a) and 1 CFR part 51. All approved incorporation by Reference (IBR) material is available for inspection at the U.S. Department of Labor, Mine Safety and Health Administration (MSHA) and at the National Archives and Records Administration (NARA). Contact MSHA at 200 Constitution Avenue NW, Washington, DC 20210. For information on the availability of this material at NARA, visit www.archives.gov/federal-register/cfr/ibr-locations or email fr.inspection@nara.gov. The material may be obtained from the following sources in this paragraph (b).

(1) International Society of Automation (ISA), 67 T.W. Alexander Drive, P.O. Box 12277, Research Triangle Park, NC 27709; phone: (919) 549–8411; website: www.isa.org.

(i) ANSI/ISA 60079–11 (12.02.01)–2014, American National Standard for Explosive Atmospheres—Part 11: Equipment protection by intrinsic safety “i”, Edition 6.2, Approved March 28, 2014.

(ii) ANSI/ISA 60079–25 (12.02.05)–2011, American National Standard for Explosive Atmospheres—Part 25: Intrinsically safe electrical systems, Approved December 2, 2011.

(ii) ANSI/UL 60079–1, Standard for Safety for Explosive Atmospheres—Part 1: Equipment Protection by Flameproof Enclosures “d”, Seventh Edition, Dated

September 18, 2015, including revisions through January 23, 2020 (ANSI/UL 60079–1).

(iii) ANSI/UL 60079–11, Standard for Safety for Explosive Atmospheres—Part 11: Equipment Protection by Intrinsic Safety “i”, Sixth Edition, Dated February 15, 2013, including revisions through September 14, 2018 (ANSI/UL 60079–11).

(iv) ANSI/UL 60079–18, Standard for Safety for Explosive Atmospheres—Part 18: Equipment Protection by Encapsulation “m”, Fourth Edition, Dated December 14, 2015, including revisions through February 7, 2019 (ANSI/UL 60079–18).

(v) ANSI/UL 60079–25, Standard for Safety for Explosive Atmospheres—Part 25: Intrinsically Safe Electrical Systems, Second Edition, Dated December 2, 2011, including revisions through June 12, 2020 (ANSI/UL 60079–25).

(vi) ANSI/UL 60079–28, Standard for Safety for Explosive Atmospheres—Part 28: Protection of Equipment and Transmission Systems Using Optical Radiation, Second Edition, Dated September 15, 2017, including revisions through December 7, 2021 (ANSI/UL 60079–28).

Note 1 to § 75.532: The voluntary consensus standards listed in this section may also be obtained from the American National Standards Institute (ANSI), 1899 L Street NW, 11th Floor, Washington, DC 20036; phone: (202) 293–8020; website: www.ansi.org.

§ 75.533 Non-permissible PAPRs: Requirements before use.

(a) Prior to being taken into specified underground areas, each non-permissible PAPR shall be:

(1) Physically examined by a qualified person as defined in § 75.153.

(i) The examination shall include the battery pack, and all associated wiring and connections to determine if there are any observable defects or damage that could negatively impact intrinsic safety.

(ii) If any defect or damage is found, the non-permissible PAPR shall be removed from service.

(2) Examined by the user in accordance with the manufacturer's instructions to ensure the equipment is used according to the manufacturer's recommendations and maintained in a safe operating condition.

(b) The examination under (a)(1) and (a)(2) shall include:

(1) Checking the equipment for any physical damage and the integrity of the case;

(2) Removing the battery (if removable/accessible) and examining for corrosion;

(3) Inspecting the contact points to ensure a secure connection to the battery (if removable/accessible);

(4) Reinserting the battery (if removable/accessible) and powering up and shutting down to ensure proper connections;

(5) Checking the battery compartment cover or battery attachment (if removable/accessible) to ensure that it is securely fastened, and for ingress of dust or moisture; and

(6) For equipment utilizing lithium type cells, ensuring that lithium cells and/or packs are not damaged or swollen.

§ 75.534 Non-permissible PAPRs: Continuous monitoring during operation.

(a) Prior to energizing the non-permissible PAPR in the specified underground areas, methane tests must be made in accordance with § 75.323(a).

(b) A qualified person shall continuously monitor for methane immediately before and while non-permissible PAPRs are present in the specified underground area.

(c) All hand-held methane detectors shall be MSHA-approved and maintained in permissible and proper operating condition.

(d) All methane detectors must provide visual and audible warnings when methane is detected in concentrations at or above 1.0 percent.

(e) When 1.0 percent or more methane is detected while the non-permissible PAPR is being used in the specified underground areas, the equipment shall be de-energized immediately and withdrawn from the area to outby the last open crosscut, out of the return air outby the last open crosscut, or more than 150 feet from pillar workings or longwall faces.

§ 75.535 Non-permissible PAPRs: Requirements for batteries.

(a) Before each shift, all batteries for the non-permissible PAPRs must be charged sufficiently to function the entire shift.

(b) Replacement batteries for non-permissible PAPRs must not be taken into the specified underground areas.

(c) Batteries contained in the non-permissible PAPRs must be changed out in intake air outside of the specified underground areas.

(d) No batteries may be charged underground.

(e) The following maintenance and use conditions must apply to equipment containing lithium-type batteries:

(1) Neither the battery pack nor the power unit may be disassembled or modified by anyone other than permitted by the equipment manufacturer.

(2) The battery must only be charged using the manufacturer's recommended battery charger.

(3) Neither the battery pack nor the power unit, which contain the internal battery, shall be exposed to water, allowed to get wet, or immersed in liquid. This does not preclude incidental exposure of the battery pack nor the power unit assembly.

(4) The non-permissible PAPR, including the internal battery, must not be used, charged, or stored in locations where the manufacturer's recommended temperature limits are exceeded. The non-permissible PAPR must not be placed in direct sunlight nor stored near a source of heat.

(f) Follow the manufacturer's recommendations and instructions. Check and monitor each non-permissible PAPR's run time.

(1) Routinely check the battery's charge status according to the manufacturer's recommendation.

(2) Remove the battery from service when the battery fails to meet the manufacturer's specifications, including, but not limited to, run time, temperature, and charging time.

(g) Follow the storage instructions as recommended by the manufacturer. If the instructions are not followed for a battery stored or otherwise unused for an extended period or the battery has no charge remaining, consider it to be damaged and do not recharge it or use it. Remove it from service and replace it with a new battery.

§ 75.536 Non-permissible PAPRs: Maintenance and examination.

(a) All non-permissible PAPRs must be maintained to ensure safe operating condition. When a potentially dangerous condition is found with the equipment, such equipment must be immediately withdrawn from the specified underground areas, taken out of service, and must be repaired before returning to service.

(b) As specified under § 75.533, non-permissible PAPRs must be examined according to the manufacturer's instructions to ensure safe operating condition.

(c) The mine operator must ensure that all non-permissible PAPRs are serviced according to the manufacturer's recommendations.

§ 75.537 Non-permissible PAPRs: Training.

(a) Miners who will use non-permissible PAPRs must be trained on the requirements in §§ 75.531 through 75.537 before the non-permissible PAPRs can be used.

(b) Mine operators must train new miners under § 48.5, train experienced

miners under § 48.6, and train miners assigned new work tasks under § 48.7, on the requirements in §§ 75.531 through 75.537. The training must include hazard recognition specific to the mine.

(c) Mine operators must provide annual retraining to all miners who may use non-permissible PAPRs under § 48.8.

(d) Mine operators must include the following in their training:

(1) The proper use and maintenance of the non-permissible PAPRs, in accordance with established manufacturer guidelines.

(2) How to recognize the hazards and limitations associated with the use of non-permissible PAPRs in the areas where methane could be present.

(3) That the PAPR is not approved under 30 CFR part 18 and must be de-energized when 1.0 or more percent methane is detected.

(4) The proper procedures to safely de-energize the non-permissible PAPR.

(5) How to examine the non-permissible PAPR before use to identify any damage that could negatively impact intrinsic safety, or any of the stipulations in §§ 75.531 through 75.537.

(6) How to recognize non-permissible PAPR filter replacement indicators.

(7) How to change filters when indicated.

(8) How to properly position their Proximity Detection System's (PDS) miner wearable component (MWC) at least six inches from their non-permissible PAPR's battery/motor blower or battery/power unit to prevent interference.

(9) The proper procedures for donning Self-Contained Self Rescuers (SCSRs) during a mine emergency while wearing the non-permissible PAPR.

(e) Records of training required under this part must comply with part 48.

(f) Mine operators must provide such records to MSHA upon request.

James P. McHugh,

Deputy Assistant Secretary for Policy, Mine Safety and Health Administration.

BILLING CODE 4520-43-P

DEPARTMENT OF LABOR

Mine Safety and Health Administration

30 CFR Part 72

[Docket No. MSHA-2025-0074]

RIN 1219-AC05

Improving and Eliminating Regulations; Diesel Particulate Matter Emission Limits in Underground Coal Mines

AGENCY: Mine Safety and Health Administration (MSHA), Department of Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: MSHA is proposing to revise 30 CFR part 72 by removing outdated requirements for diesel particulate matter (DPM) emission limits for permissible diesel-powered equipment and non-permissible heavy-duty diesel-powered equipment operated in underground coal mines. These revisions would streamline the current requirements for underground coal mine operators while maintaining the same level of protections for miners who work with such equipment.

DATES: Comments must be received on or before July 31, 2025.

ADDRESSES: All submissions must include RIN 1219-AC05 or Docket No. MSHA-2025-0074. You should not include personal or proprietary information that you do not wish to disclose publicly. If you mark parts of a comment as "business confidential" information, MSHA will not post those parts of the comment. Otherwise, MSHA will post all comments without change, including any personal information provided. MSHA cautions against submitting personal information.

You may submit comments and informational materials, clearly identified by RIN 1219-AC05 or Docket No. MSHA-2025-0074, by any of the following methods:

1. *Federal E-Rulemaking Portal:* <https://www.regulations.gov>. Follow the online instructions for submitting comments for MSHA-2025-0074.

2. *Email:* zzMSHA-comments@dol.gov. Include "RIN 1219-AC05" in the subject line of the message.

3. *Regular Mail or Hand Delivery:* MSHA, Office of Standards, Regulations, and Variances, Room C3522, 200 Constitution Avenue NW, Washington, DC 20210. Before visiting MSHA in person, call 202-693-9440 to make an appointment.

No telefacsimiles ("faxes") will be accepted.

FOR FURTHER INFORMATION CONTACT:

Jessica D. Senk, Acting Director, Office of Standards, Regulations, and Variances, MSHA at 202-693-9440 (voice). This is not a toll-free number.

SUPPLEMENTARY INFORMATION:

I. Background

MSHA is proposing to remove existing provisions from 30 CFR part 72. Existing provisions in §§ 72.500 and 72.501 contain outdated requirements for DPM emission limits for permissible diesel-powered equipment and non-permissible heavy-duty diesel-powered equipment. The provisions in §§ 72.500(a), 72.501(a), and 72.501(b) contain outdated effective dates that are no longer relevant. Removing these provisions would not reduce protections afforded to miners because the requirements are outdated and are no longer applicable to underground coal mines.

II. Discussion

Existing paragraph (a) of § 72.500 and existing paragraphs (a) and (b) of § 72.501 list outdated effective dates for DPM emission limits for permissible diesel-powered equipment and non-permissible heavy-duty diesel-powered equipment in underground coal mines. MSHA proposes to amend § 72.500 to remove existing paragraph (a). MSHA also proposes to revise paragraph (b) which would contain the current DPM emission limit for permissible diesel-powered equipment in underground coal mines to remove the no longer necessary compliance date. MSHA also proposes to amend § 72.501 to remove existing paragraphs (a) and (b). MSHA also proposed to revise paragraph (c) of § 72.501 which would contain the current DPM emission limit for non-permissible heavy-duty diesel-powered equipment, generators and compressors in underground coal mines to remove the no longer necessary compliance date. Removing these provisions would not reduce protections afforded to miners because they are outdated. As a result of removing §§ 72.500(a), 72.501(a), and 72.501(b), MSHA also proposes conforming amendments to § 72.503(e) to remove references to §§ 72.500(a) and 72.501(a). These proposed actions reflect MSHA's experience and ongoing review of existing regulations to ensure they remain necessary, effective, and aligned with current technologies and mining practices.

MSHA seeks comments on any aspects of this proposed rule.

III. Procedural Issues and Regulatory Review

A. Review Under Executive Orders 12866 and 13563

Executive Order (E.O.) 12866, “Regulatory Planning and Review” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

E.O. 13563, “Improving Regulation and Regulatory Review” 76 FR 3821 (Jan. 21, 2011), requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. E.O. 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation’s regulatory system to promote predictability, reduce uncertainty, and use the best, most innovative, and least burdensome tools for achieving regulatory ends.

E.O. 12866 and E.O. 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. E.O. 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

Under section 3(f) of E.O. 12866, a “significant regulatory action” is a regulatory action that is likely to result in a rule that may:

(1) have an annual effect on the economy of \$100 million or more, or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or

communities (also referred to as economically significant);

(2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients; or

(4) raise novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in the E.O.

Under section 6(a) of E.O. 12866, the Office of Management and Budget’s (OMB’s) Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and whether Agencies are required to submit the regulatory action to OIRA for review. Removing the provisions concerning outdated requirements for DPM emission limits would not impose new compliance costs to underground coal mine operators or reduce the protections afforded to miners. This proposed rule is determined to not constitute a “significant regulatory action” because it does not meet any of the four “significant regulatory action” criteria under section 3(f) of E.O. 12866. Accordingly, this proposed rule was not submitted to OIRA for review under E.O. 12866.

No alternatives were considered for this proposed deregulatory action.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) of 1980, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996, requires preparation of an Initial Regulatory Flexibility Analysis (IRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. The RFA defines small entities to include small businesses, small organizations, including not-for-profit organizations, and small governmental jurisdictions. MSHA reviewed this proposed rule under the provisions of the RFA, which eliminates burdensome regulations. Therefore, MSHA initially concludes that the impacts of the proposed rule would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. MSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business

Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) provides for the Federal Government’s collection, use, and dissemination of information. The goals of the Paperwork Reduction Act include minimizing paperwork and reporting burdens and ensuring the maximum possible utility from the information that is collected under 5 CFR part 1320. The Paperwork Reduction Act requires Federal agencies to obtain approval from OMB before requesting or requiring “a collection of information” from the public.

This proposed rule imposes no new information collection or record-keeping requirements. Accordingly, OMB clearance is not required under the Paperwork Reduction Act.

D. Review Under Executive Order 13132

E.O. 13132, “Federalism” 64 FR 43255 (August 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The E.O. requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The E.O. also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.

MSHA has examined this proposed rule and has determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O. 12988, “Civil Justice Reform” 61 FR 4729 (Feb. 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. Regarding the review required by section 3(a), section 3(b) of E.O. 12988

specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Section 3(c) of E.O. 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. MSHA has completed the required review and determined that, to the extent permitted by law, this proposed rule meets the relevant standards of E.O. 12988.

F. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)). The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a “significant intergovernmental mandate,” and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them.

MSHA examined this proposed rule according to UMRA and its statement of policy and determined that the proposal does not contain a Federal intergovernmental mandate, nor is it expected to require expenditures of \$100 million or more in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. As a result, the analytical requirements of UMRA do not apply.

G. Review Under the National Environmental Policy Act

The National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*), requires each Federal agency to consider the environmental effects of regulatory actions and to prepare an environmental impact statement on Agency actions that would significantly affect the quality of the environment; unless the action is considered categorically excluded under 29 CFR 11.10. MSHA has reviewed the proposed rule in accordance with NEPA requirements and the Department of Labor’s NEPA procedures (29 CFR part 11). As a result of this review, MSHA has determined that this proposed rule would not impact air, water, or soil quality, plant or animal life, the use of land or other aspects of the human environment. Therefore, MSHA has not conducted an environmental assessment nor provided an environmental impact statement.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This proposed rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, MSHA has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to E.O. 12630, “Governmental Actions and Interference with Constitutionally Protected Property Rights” 53 FR 8859 (March 18, 1988), MSHA has determined that this proposed rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB’s guidelines were published at 67 FR 8452 (Feb. 22, 2002). MSHA has reviewed this proposed rule and has concluded that it is consistent with

applicable policies in the OMB guidelines.

K. Review Under Executive Order 13175

E.O. 13175, “Consultation and Coordination With Indian Tribal Governments” 65 FR 67249 (Nov. 9, 2000), requires agencies to consult with tribal officials when developing policies that may have “tribal implications.” This proposed rule does not have “tribal implications” because it will not “have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.” Accordingly, under E.O. 13175, no further Agency action or analysis is required.

L. Review Under Executive Order 13211

E.O. 13211, “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” 66 FR 28355 (May 22, 2001), requires agencies to publish a statement of energy effects when a rule has a significant energy action that adversely affects energy supply, distribution, or use. MSHA has reviewed this proposed rule for its energy effects. For the energy analysis, this proposed rule will not exceed the relevant criteria for adverse impact.

M. Review Under Additional Executive Orders and Presidential Memoranda

MSHA has examined this proposed rule and has determined that it is consistent with the policies and directives outlined in E.O. 14154, “Unleashing American Energy” 90 FR 8353 (Jan. 29, 2025); E.O. 14192, “Unleashing Prosperity Through Deregulation” 90 FR 9065 (Feb. 6, 2025); and the Presidential Memorandum, “Delivering Emergency Price Relief for American Families and Defeating the Cost-of-Living Crisis” 90 FR 8245 (Jan. 28, 2025). This proposed rule is expected to be an E.O. 14192 deregulatory action.

List of Subjects in 30 CFR Part 72

Coal; Mine safety and health.

For the reasons set forth in the preamble, and under the authority of the Federal Mine Safety and Health Act of 1977, as amended by the Mine Improvement and New Emergency Response Act of 2006, MSHA proposes to amend chapter I of title 30 of the Code of Federal Regulations as follows:

SUBCHAPTER O—COAL MINE SAFETY AND HEALTH**PART 72—HEALTH STANDARDS FOR COAL MINES**

■ 1. The authority citation for part 72 continues to read as follows:

Authority: 30 U.S.C. 811, 813(h), 957.

Subpart D—Diesel Particulate Matter—Underground Areas of Underground Coal Mines

■ 2. Amend § 72.500 by removing and reserving paragraph (a) and revising paragraph (b) to read as follows:

§ 72.500 [Amended].

(a) [Reserved]

(b) Each piece of permissible diesel-powered equipment operated in an underground area of an underground coal mine must emit no more than 2.5 grams per hour of diesel particulate matter.

■ 3. Amend § 72.501 by removing and reserving paragraphs (a) and (b) and revising paragraph (c) to read as follows:

§ 72.501 [Amended].

(a) [Reserved]

(b) [Reserved]

(c) Each piece of nonpermissible heavy-duty diesel-powered equipment (as defined by § 75.1908(a) of this part), generator or compressor operated in an underground area of an underground coal mine must emit no more than 2.5 grams per hour of diesel particulate matter.

* * * * *

■ 4. Revise § 72.503(e) to read as follows:

§ 72.503 Determination of emissions; filter maintenance; definition of “introduced”.

* * * * *

(e) For purposes of § 72.502(a), the term “introduced” means any piece of equipment whose engine is a new addition to the underground inventory of engines of the mine in question, including newly purchased equipment, used equipment, and equipment receiving a replacement engine that has a different serial number than the engine it is replacing. “Introduced” does not include a piece of equipment whose engine was previously part of the mine inventory and rebuilt.

James P. McHugh,

Deputy Assistant Secretary for Policy, Mine Safety and Health Administration.

[FR Doc. 2025–11647 Filed 6–30–25; 8:45 am]

BILLING CODE 4520–43–P

DEPARTMENT OF LABOR**Mine Safety and Health Administration****30 CFR Part 75**

[Docket No. MSHA–2025–0073]

RIN 1219–AC04

Improving and Eliminating Regulations; Use of Permissible Flame Safety Lamps in Underground Coal Mines

AGENCY: Mine Safety and Health Administration (MSHA), Department of Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: MSHA is proposing to revise 30 CFR part 75 by removing flame safety lamps from the list of permissible electric face equipment that can be operated in underground coal mines. This revision would maintain the same level of protection for miners because it removes outdated technology that is no longer used in underground coal mines.

DATES: Comments must be received on or before July 31, 2025.

ADDRESSES: All submissions must include RIN 1219–AC04 or Docket No. MSHA–2025–0073. You should not include personal or proprietary information that you do not wish to disclose publicly. If you mark parts of a comment as “business confidential” information, MSHA will not post those parts of the comment. Otherwise, MSHA will post all comments without change, including any personal information provided. MSHA cautions against submitting personal information.

You may submit comments and informational materials, clearly identified by RIN 1219–AC04 or Docket No. MSHA–2025–0073, by any of the following methods:

1. *Federal E-Rulemaking Portal:* <https://www.regulations.gov>. Follow the online instructions for submitting comments for MSHA–2025–0073.

2. *Email:* zzMSHA-comments@dol.gov. Include “RIN 1219–AC04” in the subject line of the message.

3. *Regular Mail or Hand Delivery:* MSHA, Office of Standards, Regulations, and Variances, Room C3522, 200 Constitution Avenue NW, Washington, DC 20210. Before visiting MSHA in person, call 202–693–9440 to make an appointment.

No telefacsimiles (“faxes”) will be accepted.

FOR FURTHER INFORMATION CONTACT:

Jessica D. Senk, Acting Director, Office of Standards, Regulations, and

Variances, MSHA at 202–693–9440 (voice). This is not a toll-free number.

SUPPLEMENTARY INFORMATION:**I. Background**

MSHA is proposing to remove an existing provision from title 30 of the Code of Federal Regulations (30 CFR). 30 CFR 75.506(d) lists permissible electric face equipment that can be used in underground coal mines. Paragraph (d)(4) lists Flame Safety Lamps as permissible. Removing § 75.506(d)(4), flame safety lamps, would not reduce protections afforded to miners because it addresses outdated technology that is no longer used in underground coal mines.

II. Discussion

MSHA proposes to amend § 75.506 to remove paragraph (d)(4). MSHA experience indicates flame safety lamps are outdated technology and are no longer used in underground coal mines. MSHA believes that § 75.506(d)(4) is unnecessary and that its removal would not reduce protections afforded to miners. This action is supported by MSHA experience and furthers ongoing Agency review of existing regulations to ensure they remain necessary, effective, and aligned with current technologies and mining practices.

MSHA seeks comment on any aspects of this proposed rule.

III. Procedural Issues and Regulatory Review**A. Review Under Executive Orders 12866 and 13563**

Executive Order (E.O.) 12866, “Regulatory Planning and Review” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing

information upon which choices can be made by the public.

E.O. 13563, “Improving Regulation and Regulatory Review” 76 FR 3821 (Jan. 21, 2011), requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. E.O. 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation’s regulatory system to promote predictability, reduce uncertainty, and use the best, most innovative, and least burdensome tools for achieving regulatory ends.

E.O. 12866 and E.O. 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. E.O. 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

Under section 3(f) of E.O. 12866, a “significant regulatory action” is a regulatory action that is likely to result in a rule that may:

- (1) have an annual effect on the economy of \$100 million or more, or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities (also referred to as economically significant);
- (2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;
- (3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients; or
- (4) raise novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in the E.O.

Under section 6(a) of E.O. 12866, the Office of Management and Budget’s (OMB’s) Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and whether Agencies are required to submit the regulatory action to OIRA for review. Removing the provisions concerning flame safety lamps from the list of permissible electric face equipment that can be operated would not impose new compliance cost to underground coal mine operators or reduce the protection afforded to miners. This proposed rule is determined to not constitute a “significant regulatory action” because it does not meet any of the four “significant regulatory action” criteria under section 3(f) of E.O. 12866.

Accordingly, this proposed rule was not submitted to OIRA for review under E.O. 12866.

No alternatives were considered for this proposed deregulatory action.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) of 1980, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996, requires preparation of an Initial Regulatory Flexibility Analysis (IRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. The RFA defines small entities to include small businesses, small organizations, including not-for-profit organizations, and small governmental jurisdictions.

MSHA reviewed this proposed rule under the provisions of the RFA, which eliminates burdensome regulations. MSHA initially concludes that the impacts of the proposed rule would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. MSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) provides for the Federal Government’s collection, use, and dissemination of information. The goals of the Paperwork Reduction Act include minimizing paperwork and reporting burdens and ensuring the maximum possible utility from the information that is collected under 5 CFR part 1320. The Paperwork Reduction Act requires Federal agencies to obtain approval from OMB before requesting or requiring “a collection of information” from the public.

This proposed rule imposes no new information collection or record-keeping requirements. Accordingly, OMB clearance is not required under the Paperwork Reduction Act.

D. Review Under Executive Order 13132

E.O. 13132, “Federalism” 64 FR 43255 (August 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The E.O. requires agencies

to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The E.O. also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.

MSHA has examined this proposed rule and has preliminarily determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O. 12988, “Civil Justice Reform” 61 FR 4729 (Feb. 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Section 3(c) of E.O. 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. MSHA has completed the required review and preliminarily determined that, to the extent permitted by law, this proposed rule meets the relevant standards of E.O. 12988.

F. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects

of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)). The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a “significant intergovernmental mandate,” and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them.

MSHA examined this proposed rule according to UMRA and its statement of policy and preliminarily determined that the proposal does not contain a Federal intergovernmental mandate, nor is it expected to require expenditures of \$100 million or more in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. As a result, the analytical requirements of UMRA do not apply.

G. Review Under the National Environmental Policy Act

The National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*), requires each Federal agency to consider the environmental effects of regulatory actions and to prepare an environmental impact statement on Agency actions that would significantly affect the quality of the environment; unless the action is considered categorically excluded under 29 CFR 11.10. MSHA has reviewed the proposed rule in accordance with NEPA requirements and the Department of Labor’s NEPA procedures (29 CFR part 11). As a result of this review, MSHA has preliminarily determined that this proposed rule would not impact air, water, or soil quality, plant or animal life, the use of land or other aspects of the human environment. Therefore, MSHA has not conducted an environmental assessment nor provided an environmental impact statement.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This proposed rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, MSHA has preliminarily concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to E.O. 12630, “Governmental Actions and Interference with Constitutionally Protected Property Rights” 53 FR 8859 (March 18, 1988), MSHA has preliminarily determined that this proposed rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB’s guidelines were published at 67 FR 8452 (Feb. 22, 2002). MSHA has reviewed this proposed rule and has preliminarily concluded that it is consistent with applicable policies in the OMB guidelines.

K. Review Under Executive Order 13175

E.O. 13175, “Consultation and Coordination With Indian Tribal Governments” 65 FR 67249 (Nov. 9, 2000), requires agencies to consult with tribal officials when developing policies that may have “tribal implications.” This proposed rule does not have “tribal implications” because it will not “have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.” Accordingly, under E.O. 13175, no further Agency action or analysis is required.

L. Review Under Executive Order 13211

E.O. 13211, “Actions Concerning Regulations That Significantly Affect

Energy Supply, Distribution, or Use” 66 FR 28355 (May 22, 2001), requires agencies to publish a statement of energy effects when a rule has a significant energy action that adversely affects energy supply, distribution, or use. MSHA has reviewed this proposed rule for its energy effects. For the energy analysis, this proposed rule will not exceed the relevant criteria for adverse impact.

M. Review Under Additional Executive Orders and Presidential Memoranda

MSHA has examined this proposed rule and has determined that it is consistent with the policies and directives outlined in E.O. 14154, “Unleashing American Energy” 90 FR 8353 (Jan. 29, 2025); E.O. 14192, “Unleashing Prosperity Through Deregulation” 90 FR 9065 (Feb. 6, 2025); and the Presidential Memorandum, “Delivering Emergency Price Relief for American Families and Defeating the Cost-of-Living Crisis” 90 FR 8245 (Jan. 28, 2025). This proposed rule is expected to be an E.O. 14192 deregulatory action.

List of Subjects in 30 CFR Part 75

Coal, Mine safety and health, Reporting and recordkeeping requirements, Underground coal mines, Ventilation.

For the reasons set forth in the preamble, and under the authority of the Federal Mine Safety and Health Act of 1977, as amended by the Mine Improvement and New Emergency Response Act of 2006, MSHA proposes to amend chapter I of title 30 of the Code of Federal Regulations as follows:

SUBCHAPTER O—COAL MINE SAFETY AND HEALTH

PART 75—MANDATORY SAFETY STANDARDS—UNDERGROUND COAL MINES

- 1. The authority citation for part 75 continues to read as follows:

Authority: 30 U.S.C. 811, 813(h), 957.

Subpart F—Electrical Equipment—General

§ 75.506 [Amended].

- 2. Amend § 75.506 by removing and reserving paragraph (d)(4).

James P. McHugh,

Deputy Assistant Secretary for Policy, Mine Safety and Health Administration.

[FR Doc. 2025–11646 Filed 6–30–25; 8:45 am]

BILLING CODE 4520–43–P

DEPARTMENT OF LABOR**Mine Safety and Health Administration****30 CFR Part 75**

[Docket No. MSHA–2025–0075]

RIN 1219–AC06

Improving and Eliminating Regulations; Approved Conveyor Belts in Underground Coal Mines

AGENCY: Mine Safety and Health Administration (MSHA), Department of Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: MSHA is proposing to revise 30 CFR part 75 by removing outdated requirements for the approval process for conveyor belts used in underground coal mines. These revisions would streamline the current requirements for underground coal operators while maintaining the same level of protections for miners who work with such equipment.

DATES: Comments must be received on or before July 31, 2025.

ADDRESSES: All submissions must include RIN 1219–AC06 or Docket No. MSHA–2025–0075. You should not include personal or proprietary information that you do not wish to disclose publicly. If you mark parts of a comment as “business confidential” information, MSHA will not post those parts of the comment. Otherwise, MSHA will post all comments without change, including any personal information provided. MSHA cautions against submitting personal information.

You may submit comments and informational materials, clearly identified by RIN 1219–AC06 or Docket No. MSHA–2025–0075, by any of the following methods:

1. *Federal E-Rulemaking Portal:* <https://www.regulations.gov>. Follow the online instructions for submitting comments for MSHA–2025–0075.

2. *Email:* zzMSHA-comments@dol.gov. Include “RIN 1219–AC06” in the subject line of the message.

3. *Regular Mail or Hand Delivery:* MSHA, Office of Standards, Regulations, and Variances, Room C3522, 200 Constitution Avenue NW, Washington, DC 20210. Before visiting MSHA in person, call 202–693–9440 to make an appointment.

No telefacsimiles (“faxes”) will be accepted.

FOR FURTHER INFORMATION CONTACT:

Jessica D. Senk, Acting Director, Office of Standards, Regulations, and

Variances, MSHA at 202–693–9440 (voice). This is not a toll-free number.

SUPPLEMENTARY INFORMATION:**I. Background**

MSHA is proposing to remove existing provisions from 30 CFR part 75. Existing provisions in § 75.1108 contain outdated requirements for how conveyor belts will be approved for use in underground coal mines. The provisions in §§ 75.1108(a) and 75.1108(b) contain outdated effective dates and requirements that are no longer relevant. Existing provision § 75.1108(c) contains the current requirements for all conveyor belts to be approved under Part 14. Removing these provisions would not reduce protections afforded to miners because the requirements are outdated and are no longer applicable to underground coal mines.

II. Discussion

Existing provisions in §§ 75.1108(a) and 75.1108(b) list the outdated effective dates and requirements for approval of conveyor belts in underground coal mines. MSHA proposes to revise and republish § 75.1108. Specifically, the Agency is proposing to remove existing paragraphs (a) and (b); revise the language of existing paragraph (c); and remove the designation for paragraph (c). The revised section would contain the current requirements for the approval process for the use of conveyor belts in underground coal mines. Removing these provisions would not reduce protections afforded to miners. This proposal reflects MSHA’s experience and ongoing review of existing regulations to ensure they remain necessary, effective, and aligned with current technologies and mining practices.

MSHA seeks comments on any aspect of this proposed rule.

III. Procedural Issues and Regulatory Review**A. Review Under Executive Orders 12866 and 13563**

Executive Order (E.O.) 12866, “Regulatory Planning and Review” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent

practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

E.O. 13563, “Improving Regulation and Regulatory Review” 76 FR 3821 (Jan. 21, 2011), requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. E.O. 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation’s regulatory system to promote predictability, reduce uncertainty, and use the best, most innovative, and least burdensome tools for achieving regulatory ends.

E.O. 12866 and E.O. 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. E.O. 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

Under section 3(f) of E.O. 12866, a “significant regulatory action” is a regulatory action that is likely to result in a rule that may:

(1) have an annual effect on the economy of \$100 million or more, or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities (also referred to as economically significant);

(2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients; or

(4) raise novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in the E.O.

Under section 6(a) of E.O. 12866, the Office of Management and Budget’s (OMB’s) Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and whether Agencies are

required to submit the regulatory action to OIRA for review. Removing the provisions concerning outdated requirements for the approval process for conveyor belts would not impose new compliance costs on underground coal operators or reduce the protections afforded to miners. This proposed rule is determined to not constitute a “significant regulatory action” because it does not meet any of the four “significant regulatory action” criteria under section 3(f) of E.O. 12866. Accordingly, this proposed rule was not submitted to OIRA for review under E.O. 12866.

No alternatives were considered for this proposed deregulatory action.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) of 1980, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996, requires preparation of an Initial Regulatory Flexibility Analysis (IRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. The RFA defines small entities to include small businesses, small organizations, including not-for-profit organizations, and small governmental jurisdictions. MSHA reviewed this proposed rule under the provisions of the RFA, which eliminates burdensome regulations. MSHA initially concludes that the impacts of the proposed rule would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. MSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) provides for the Federal Government’s collection, use, and dissemination of information. The goals of the Paperwork Reduction Act include minimizing paperwork and reporting burdens and ensuring the maximum possible utility from the information that is collected under 5 CFR part 1320. The Paperwork Reduction Act requires Federal agencies to obtain approval from OMB before requesting or requiring “a collection of information” from the public.

This proposed rule imposes no new information collection or record-keeping

requirements. Accordingly, OMB clearance is not required under the Paperwork Reduction Act.

D. Review Under Executive Order 13132

E.O. 13132, “Federalism” 64 FR 43255 (August 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The E.O. requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The E.O. also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.

MSHA has examined this proposed rule and has determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O. 12988, “Civil Justice Reform” 61 FR 4729 (Feb. 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Section 3(c) of E.O. 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of

them. MSHA has completed the required review and determined that, to the extent permitted by law, this proposed rule meets the relevant standards of E.O. 12988.

F. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)). The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a “significant intergovernmental mandate,” and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them.

MSHA examined this proposed rule according to UMRA and its statement of policy and determined that the proposal does not contain a Federal intergovernmental mandate, nor is it expected to require expenditures of \$100 million or more in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. As a result, the analytical requirements of UMRA do not apply.

G. Review Under the National Environmental Policy Act

The National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*), requires each Federal agency to consider the environmental effects of regulatory actions and to prepare an environmental impact statement on Agency actions that would significantly affect the quality of the environment; unless the action is considered categorically excluded under 29 CFR 11.10. MSHA has reviewed the proposed rule in accordance with NEPA requirements and the Department of Labor’s NEPA procedures (29 CFR part 11). As a result of this review, MSHA has determined that this proposed rule would not impact air, water, or soil quality, plant or animal life, the use of

land or other aspects of the human environment. Therefore, MSHA has not conducted an environmental assessment nor provided an environmental impact statement.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This proposed rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, MSHA has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to E.O. 12630, “Governmental Actions and Interference with Constitutionally Protected Property Rights” 53 FR 8859 (March 18, 1988), MSHA has determined that this proposed rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB’s guidelines were published at 67 FR 8452 (Feb. 22, 2002). MSHA has reviewed this proposed rule and has concluded that it is consistent with applicable policies in the OMB guidelines.

K. Review Under Executive Order 13175

E.O. 13175, “Consultation and Coordination with Indian Tribal Governments” 65 FR 67249 (Nov. 9, 2000), requires agencies to consult with tribal officials when developing policies that may have “tribal implications.” This proposed rule does not have “tribal implications” because it will not “have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.” Accordingly, under E.O. 13175, no further Agency action or analysis is required.

L. Review Under Executive Order 13211

E.O. 13211, “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” 66 FR 28355 (May 22, 2001), requires agencies to publish a statement of energy effects when a rule has a significant energy action that adversely affects energy supply, distribution, or use. MSHA has reviewed this proposed rule for its energy effects. For the energy analysis, this proposed rule will not exceed the relevant criteria for adverse impact.

M. Review Under Additional Executive Orders and Presidential Memoranda

MSHA has examined this rule and has determined that it is consistent with the policies and directives outlined in E.O. 14154, “Unleashing American Energy” 90 FR 8353 (Jan. 29, 2025); E.O. 14192, “Unleashing Prosperity Through Deregulation” 90 FR 9065 (Feb. 6, 2025); and the Presidential Memorandum, “Delivering Emergency Price Relief for American Families and Defeating the Cost-of-Living Crisis” 90 FR 8245 (Jan. 28, 2025). This proposed rule is expected to be an E.O. 14192 deregulatory action.

List of Subjects in 30 CFR Part 75

Coal, Mine safety and health, Reporting and recordkeeping requirements, Underground coal mines, Ventilation.

For the reasons set forth in the preamble, and under the authority of the Federal Mine Safety and Health Act of 1977, as amended by the Mine Improvement and New Emergency Response Act of 2006, MSHA proposes to amend chapter I of title 30 of the Code of Federal Regulations as follows:

SUBCHAPTER O—COAL MINE SAFETY AND HEALTH

PART 75—MANDATORY SAFETY STANDARDS—UNDERGROUND COAL MINES

- 1. The authority citation for part 75 continues to read as follows:

Authority: 30 U.S.C. 811, 813(h), 957.

Subpart L—Fire Protection

- 2. Revise and republish § 75.1108 to read as follows:

§ 75.1108 Approved conveyor belts.

All conveyor belts used in underground coal mines shall be approved under Part 14.

James P. McHugh,

Deputy Assistant Secretary for Policy, Mine Safety and Health Administration.

[FR Doc. 2025–11648 Filed 6–30–25; 8:45 am]

BILLING CODE 4520–43–P

DEPARTMENT OF LABOR

Mine Safety and Health Administration

30 CFR Part 75

[Docket No. MSHA–2025–0090]

RIN 1219–AC16

Photometers

AGENCY: Mine Safety and Health Administration (MSHA), Department of Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: MSHA proposes to revise title 30 of the Code of Federal Regulations (30 CFR) part 75 by removing requirements for methods in measuring luminous intensity with a photometer. Removing this provision would provide greater flexibility in measurement procedures while maintaining protection for miners.

DATES: Comments must be received on or before July 31, 2025.

ADDRESSES: All submissions must include RIN 1219–AC16 or Docket No. MSHA–2025–0090. You should not include personal or proprietary information that you do not wish to disclose publicly. If you mark parts of a comment as “business confidential” information, MSHA will not post those parts of the comment. Otherwise, MSHA will post all comments without change, including any personal information provided. MSHA cautions against submitting personal information.

You may submit comments and informational materials, clearly identified by RIN 1219–AC16 or Docket No. MSHA–2025–0090, by any of the following methods:

1. *Federal E-Rulemaking Portal:* <https://www.regulations.gov>. Follow the online instructions for submitting comments for MSHA–2025–0090.

2. *Email:* zzMSHA-comments@dol.gov. Include “RIN 1219–AC16” in the subject line of the message.

3. *Regular Mail or Hand Delivery:* MSHA, Office of Standards, Regulations, and Variances, Room C3522, 200 Constitution Avenue NW,

Washington, DC 20210. Before visiting MSHA in person, call 202–693–9440 to make an appointment.

No telefacsimiles (“faxes”) will be accepted.

FOR FURTHER INFORMATION CONTACT:

Jessica D. Senk, Acting Director, Office of Standards, Regulations, and Variances, MSHA at 202–693–9440 (voice). This is not a toll-free number.

SUPPLEMENTARY INFORMATION:

I. Background

MSHA is proposing to remove an existing provision from 30 CFR part 75. The standard in § CFR 75.1719–3 specifies the methods required when measuring luminous intensity to ensure mines are safely illuminated. MSHA is proposing to remove and reserve § 75.1719–3. Removing this provision would not reduce protections afforded to miners.

II. Discussion

MSHA proposes to remove the existing provision in § 75.1719–3. Removing this provision would eliminate the prescriptive measurement methods and design requirements of light measurement devices, but not the minimum illumination requirements under § 75.1719–1(d). This change provides greater flexibility in measurement procedures and would not reduce protections afforded to miners. As a result of removing § 75.1719–3, MSHA also proposes a conforming amendment to § 75.1719–1(d) to remove the reference to § 75.1719–3. The proposed action reflects MSHA’s experience and ongoing review of existing regulations to ensure they remain necessary, effective, and aligned with available technologies and mining practices.

MSHA seeks comment on any aspect of this proposed rule.

III. Procedural Issues and Regulatory Review

A. Review Under Executive Order 12866 and 13563

Executive Order (E.O.) 12866, “Regulatory Planning and Review” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing

among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

E.O. 13563, “Improving Regulation and Regulatory Review” 76 FR 3821 (Jan. 21, 2011), requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. E.O. 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation’s regulatory system to promote predictability, reduce uncertainty, and use the best, most innovative, and least burdensome tools for achieving regulatory ends.

E.O. 12866 and E.O. 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. E.O. 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

Under section 3(f) of E.O. 12866, a “significant regulatory action” is a regulatory action that is likely to result in a rule that may:

- (1) have an annual effect on the economy of \$100 million or more, or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities (also referred to as economically significant);
- (2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;
- (3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients; or
- (4) raise novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in the E.O.

Under section 6(a) of E.O. 12866, the Office of Management and Budget’s (OMB’s) Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and whether Agencies are required to submit the regulatory action to OIRA for review. Removing the

provisions concerning methods in measuring luminous intensity with a photometer would not impose new compliance cost to underground coal mine operators or reduce the protection afforded to miners. This proposed rule is determined to not constitute a “significant regulatory action” because it does not meet any of the four “significant regulatory action” criteria under section 3(f) of E.O. 12866. Accordingly, this proposed rule was not submitted to OIRA for review under E.O. 12866.

No alternatives were considered for this proposed deregulatory action.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) of 1980, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996, requires preparation of an Initial Regulatory Flexibility Analysis (IRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. The RFA defines small entities to include small businesses, small organizations, including not-for-profit organizations, and small governmental jurisdictions.

MSHA reviewed this proposed rule under the provisions of the RFA, which eliminates burdensome regulations. Therefore, MSHA initially concludes that the impacts of this proposed rule would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. MSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) provides for the Federal Government’s collection, use, and dissemination of information. The goals of the Paperwork Reduction Act include minimizing paperwork and reporting burdens and ensuring the maximum possible utility from the information that is collected under 5 CFR part 1320. The Paperwork Reduction Act requires Federal agencies to obtain approval from OMB before requesting or requiring “a collection of information” from the public.

This proposed rule imposes no new information collection or record-keeping requirements. Accordingly, OMB

clearance is not required under the Paperwork Reduction Act.

D. Review Under Executive Order 13132

E.O. 13132, “Federalism” 64 FR 43255 (August 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The E.O. requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The E.O. also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.

MSHA has examined this proposed rule and has determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O. 12988, “Civil Justice Reform” 61 FR 4729 (Feb. 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Section 3(c) of E.O. 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. MSHA has completed the

required review and determined that, to the extent permitted by law, this proposed rule meets the relevant standards of E.O. 12988.

F. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)). The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a “significant intergovernmental mandate,” and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them.

MSHA examined this proposed rule according to UMRA and its statement of policy and determined that the proposal does not contain a Federal intergovernmental mandate, nor is it expected to require expenditures of \$100 million or more in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. As a result, the analytical requirements of UMRA do not apply.

G. Review Under the National Environmental Policy Act

The National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*), requires each Federal agency to consider the environmental effects of regulatory actions and to prepare an environmental impact statement on Agency actions that would significantly affect the quality of the environment; unless the action is considered categorically excluded under 29 CFR 11.10. MSHA has reviewed the proposed rule in accordance with NEPA requirements and the Department of Labor’s NEPA procedures (29 CFR part 11). As a result of this review, MSHA has determined that this proposed rule would not impact air, water, or soil quality, plant or animal life, the use of land or other aspects of the human

environment. Therefore, MSHA has not conducted an environmental assessment nor provided an environmental impact statement.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This proposed rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, MSHA has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to E.O. 12630, “Governmental Actions and Interference with Constitutionally Protected Property Rights,” 53 FR 8859 (March 18, 1988), MSHA has determined that this proposed rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB’s guidelines were published at 67 FR 8452 (Feb. 22, 2002). MSHA has reviewed this proposed rule and has concluded that it is consistent with applicable policies in the OMB guidelines.

K. Review Under Executive Order 13175

E.O. 13175, “Consultation and Coordination With Indian Tribal Governments” 65 FR 67249 (Nov. 9, 2000), requires agencies to consult with tribal officials when developing policies that may have “tribal implications.” This proposed rule does not have “tribal implications” because it will not “have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.” Accordingly, under E.O. 13175, no further Agency action or analysis is required.

L. Review Under Executive Order 13211

E.O. 13211, “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” 66 FR 28355 (May 22, 2001), requires agencies to publish a statement of energy effects when a rule has a significant energy action that adversely affects energy supply, distribution, or use. MSHA has reviewed this proposed rule for its energy effects. For the energy analysis, this proposed rule will not exceed the relevant criteria for adverse impact.

M. Review Under Additional Executive Orders and Presidential Memoranda

MSHA has examined this proposed rule and has determined that it is consistent with the policies and directives outlined in E.O. 14154, “Unleashing American Energy” 90 FR 8353 (Jan. 29, 2025); E.O. 14192, “Unleashing Prosperity Through Deregulation” 90 FR 9065 (Feb. 6, 2025); and the Presidential Memorandum, “Delivering Emergency Price Relief for American Families and Defeating the Cost-of-Living Crisis” 90 FR 8245 (Jan. 28, 2025). This proposed rule is expected to be an E.O. 14192 deregulatory action.

List of Subjects in 30 CFR Part 75

Communications equipment, Electric power, Emergency medical services, Explosives, Fire prevention, Mine safety and health, Reporting and recordkeeping.

For the reasons set forth in the preamble, and under the authority of the Federal Mine Safety and Health Act of 1977, as amended by the Mine Improvement and New Emergency Response Act of 2006, MSHA proposes to amend chapter I of title 30 of the Code of Federal Regulations as follows:

SUBCHAPTER O—COAL MINE SAFETY AND HEALTH**PART 75—MANDATORY SAFETY STANDARDS—UNDERGROUND COAL MINES**

■ 1. The authority citation for part 75 continues to read as follows:

Authority: 30 U.S.C. 811, 813(h), and 957.

Subpart R—Miscellaneous

■ 2. Revise § 75.1719–1(d) to read as follows:

§ 75.1719–1 Illumination in working places.

* * * * *

(d) The luminous intensity (surface brightness) of surfaces that are in a miner’s normal field of vision of areas in working places that are required to be

lighted shall be not less than 0.06 footlamberts when measured.

* * * * *

§ 75.1719–3 [Removed and Reserved].

■ 3. Remove and reserve § 75.1719–3.

James P. McHugh,

Deputy Assistant Secretary for Policy, Mine Safety and Health Administration.

[FR Doc. 2025–11623 Filed 6–30–25; 8:45 am]

BILLING CODE 4520–43–P

DEPARTMENT OF LABOR**Mine Safety and Health Administration****30 CFR Part 75**

[Docket No. MSHA–2025–0088]

RIN 1219–AC15

Mining of Pillars

AGENCY: Mine Safety and Health Administration (MSHA), Department of Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: MSHA proposes to rescind requirements for the final mining of pillars. This practice is outdated and no longer used due to safety concerns.

DATES: Comments must be received on or before July 31, 2025.

ADDRESSES: All submissions must include RIN 1219–AC15 or Docket No. MSHA–2025–0088. You should not include personal or proprietary information that you do not wish to disclose publicly. If you mark parts of a comment as “business confidential” information, MSHA will not post those parts of the comment. Otherwise, MSHA will post all comments without change, including any personal information provided. MSHA cautions against submitting personal information.

You may submit comments and informational materials, clearly identified by RIN 1219–AC15 or Docket No. MSHA–2025–0088, by any of the following methods:

1. *Federal E-Rulemaking Portal:* <https://www.regulations.gov>. Follow the online instructions for submitting comments for MSHA–2025–0088.

2. *Email:* zzMSHA-comments@dol.gov. Include “RIN 1219–AC15” in the subject line of the message.

3. *Regular Mail or Hand Delivery:* MSHA, Office of Standards, Regulations, and Variances, Room C3522, 200 Constitution Avenue NW, Washington, DC 20210. Before visiting MSHA in person, call 202–693–9440 to make an appointment.

No telefacsimiles (“faxes”) will be accepted.

FOR FURTHER INFORMATION CONTACT:

Jessica D. Senk, Acting Director, Office of Standards, Regulations, and Variances, MSHA at 202–693–9440 (voice). This is not a toll-free number.

SUPPLEMENTARY INFORMATION:**I. Background**

MSHA is proposing to remove an existing provision from title 30 of the Code of Federal Regulations (30 CFR). The existing standard in 30 CFR 75.386 requires that when there is only one mine opening available due to final mining of pillars, no more than 20 miners at a time shall be allowed in the mine, and the distance between the mine opening and working face shall not exceed 500 feet. MSHA is proposing to remove § 75.386 because mines do not practice mining at the working section with only one mine opening. Instead, mine operators follow the requirements in § 75.380 which requires two separate escapeways to be provided from the working section. Removing § 75.386 would not reduce protections afforded to miners because § 75.380 would still apply and requires two separate distinct travelable passageways to be designated as escapeways from each working section.

II. Discussion

MSHA proposes to remove the existing provision in 30 CFR 75.386. Removing this provision would not reduce protections afforded to miners because the practice of final mining of pillars with one mine opening is no longer used in the mining industry due to safety concerns; instead, mine operators provide two separate distinct travelable passageways to be designated as escapeways from each working section as required under § 75.380. As a result of removing § 75.386, MSHA also proposes conforming amendments to §§ 75.380(a) and 75.381(a) to remove references to § 75.386. These proposed actions reflect MSHA’s experience and ongoing review of existing regulations to ensure that they remain necessary, effective, and aligned with current mining practices.

MSHA seeks comment on any aspect of this proposed rule.

III. Procedural Issues and Regulatory Review*A. Review Under Executive Orders 12866 and 13563*

Executive Order (E.O.) 12866, “Regulatory Planning and Review” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law,

to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

E.O. 13563, “Improving Regulation and Regulatory Review” 76 FR 3821 (Jan. 21, 2011), requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. E.O. 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation’s regulatory system to promote predictability, reduce uncertainty, and use the best, most innovative, and least burdensome tools for achieving regulatory ends.

E.O. 12866 and E.O. 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. E.O. 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

Under section 3(f) of E.O. 12866, a “significant regulatory action” is a regulatory action that is likely to result in a rule that may:

(1) have an annual effect on the economy of \$100 million or more, or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities (also referred to as economically significant);

(2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients; or

(4) raise novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in the E.O.

Under section 6(a) of E.O. 12866, the Office of Management and Budget’s (OMB’s) Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and whether Agencies are required to submit the regulatory action to OIRA for review. Removing the provisions concerning requirements for the final mining of pillars would not impose new compliance cost to underground coal mine operators or reduce the protection afforded to miners. This proposed rule is determined to not constitute a “significant regulatory action” because it does not meet any of the four “significant regulatory action” criteria under section 3(f) of E.O. 12866. Accordingly, this proposed rule was not submitted to OIRA for review under E.O. 12866.

No alternatives were considered for this proposed deregulatory action.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) of 1980, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996, requires preparation of an Initial Regulatory Flexibility Analysis (IRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. The RFA defines small entities to include small businesses, small organizations, including not-for-profit organizations, and small governmental jurisdictions.

MSHA reviewed this proposed rule under the provisions of the RFA, which eliminates burdensome regulations. Therefore, MSHA initially concludes that the impacts of the proposed rule would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. MSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) provides for the Federal Government’s collection, use, and dissemination of information. The goals of the Paperwork Reduction Act

include minimizing paperwork and reporting burdens and ensuring the maximum possible utility from the information that is collected under 5 CFR part 1320. The Paperwork Reduction Act requires Federal agencies to obtain approval from OMB before requesting or requiring “a collection of information” from the public.

This proposed rule imposes no new information collection or record-keeping requirements. Accordingly, OMB clearance is not required under the Paperwork Reduction Act.

D. Review Under Executive Order 13132

E.O. 13132, “Federalism” 64 FR 43255 (August 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The E.O. requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The E.O. also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.

MSHA has examined this proposed rule and has determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O. 12988, “Civil Justice Reform” 61 FR 4729 (Feb. 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5)

adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Section 3(c) of E.O. 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. MSHA has completed the required review and determined that, to the extent permitted by law, this proposed rule meets the relevant standards of E.O. 12988.

F. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)). The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a “significant intergovernmental mandate,” and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them.

MSHA examined this proposed rule according to UMRA and its statement of policy and determined that the proposal does not contain a Federal intergovernmental mandate, nor is it expected to require expenditures of \$100 million or more in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. As a result, the analytical requirements of UMRA do not apply.

G. Review Under the National Environmental Policy Act

The National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*), requires each Federal agency to consider the environmental effects of regulatory actions and to prepare an environmental impact statement on Agency actions that would significantly

affect the quality of the environment; unless the action is considered categorically excluded under 29 CFR 11.10. MSHA has reviewed the proposed rule in accordance with NEPA requirements and the Department of Labor’s NEPA procedures (29 CFR part 11). As a result of this review, MSHA has determined that this proposed rule would not impact air, water, or soil quality, plant or animal life, the use of land or other aspects of the human environment. Therefore, MSHA has not conducted an environmental assessment nor provided an environmental impact statement.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This proposed rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, MSHA has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to E.O. 12630, “Governmental Actions and Interference with Constitutionally Protected Property Rights” 53 FR 8859 (March 18, 1988), MSHA has determined that this proposed rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB’s guidelines were published at 67 FR 8452 (Feb. 22, 2002). MSHA has reviewed this proposed rule and has concluded that it is consistent with applicable policies in the OMB guidelines.

K. Review Under Executive Order 13175

E.O. 13175, “Consultation and Coordination With Indian Tribal Governments” 65 FR 67249 (Nov. 9, 2000), requires agencies to consult with tribal officials when developing policies that may have “tribal implications.”

This proposed rule does not have “tribal implications” because it will not “have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.” Accordingly, under E.O. 13175, no further Agency action or analysis is required.

L. Review Under Executive Order 13211

E.O. 13211, “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” 66 FR 28355 (May 22, 2001), requires agencies to publish a statement of energy effects when a rule has a significant energy action that adversely affects energy supply, distribution, or use. MSHA has reviewed this proposed rule for its energy effects. For the energy analysis, this proposed rule will not exceed the relevant criteria for adverse impact.

M. Review Under Additional Executive Orders and Presidential Memoranda

MSHA has examined this proposed rule and has determined that it is consistent with the policies and directives outlined in E.O. 14154, “Unleashing American Energy” 90 FR 8353 (Jan. 29, 2025); E.O. 14192, “Unleashing Prosperity Through Deregulation” 90 FR 9065 (Feb. 6, 2025); and the Presidential Memorandum, “Delivering Emergency Price Relief for American Families and Defeating the Cost-of-Living Crisis” 90 FR 8245 (Jan. 28, 2025). This proposed rule is expected to be an E.O. 14192 deregulatory action.

List of Subjects in 30 CFR Part 75

Communications equipment, Electric power, Emergency medical services, Explosives, Fire prevention, Mine safety and health, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, and under the authority of the Federal Mine Safety and Health Act of 1977, as amended by the Mine Improvement and New Emergency Response Act of 2006, MSHA proposes to amend chapter I of title 30 of the Code of Federal Regulations as follows:

SUBCHAPTER O—COAL MINE SAFETY AND HEALTH

PART 75—MANDATORY SAFETY STANDARDS—UNDERGROUND COAL MINES

■ 1. The authority citation for part 75 continues to read as follows:

Authority: 30 U.S.C. 811, 813(h), and 957.

Subpart D—Ventilation

■ 2. Revise § 75.380(a) to read as follows:

§ 75.380 Escapeways; bituminous and lignite mines.

(a) Except in situations addressed in §§ 75.381 and 75.385, at least two separate and distinct travelable passageways shall be designated as escapeways and shall meet the requirements of this section.

* * * * *

■ 3. Revise § 75.381(a) to read as follows:

§ 75.381 Escapeways; anthracite mines.

(a) Except as provided in § 75.385, at least two separate and distinct travelable passageways shall be designated as escapeways and shall meet the requirements of this section.

* * * * *

§ 75.386 [Removed and Reserved]

■ 4. Remove and reserve § 75.386.

James P. McHugh,

Deputy Assistant Secretary for Policy, Mine Safety and Health Administration.

[FR Doc. 2025–11740 Filed 6–30–25; 8:45 am]

BILLING CODE 4520–43–P

DEPARTMENT OF LABOR**Mine Safety and Health Administration****30 CFR Part 75**

[Docket No. MSHA–2025–0072]

RIN 1219–AC18

Roof Control Plan Approval Criteria

AGENCY: Mine Safety and Health Administration (MSHA), Department of Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: MSHA is proposing to revise its roof control plan regulations to eliminate the provision that allows the District Manager to require additional measures to be included in plans. The current regulation may violate statutory authority; the Appointments Clause, by vesting significant regulatory authority in District Managers; and the Administrative Procedure Act (APA), by skipping notice and comment.

DATES: Comments must be received on or before July 31, 2025.

ADDRESSES: All submissions must include RIN 1219–AC18 or Docket No. MSHA–2025–0072. You should not include personal or proprietary information that you do not wish to

disclose publicly. If you mark parts of a comment as “business confidential” information, MSHA will not post those parts of the comment. Otherwise, MSHA will post all comments without change, including any personal information provided. MSHA cautions against submitting personal information.

You may submit comments and informational materials, clearly identified by RIN 1219–AC18 or Docket No. MSHA–2025–0072, by any of the following methods:

1. *Federal E-Rulemaking Portal:* <https://www.regulations.gov>. Follow the online instructions for submitting comments for MSHA–2025–0072. A brief summary of this document will be available at <https://www.regulations.gov/docket/MSHA-2025-0072>.

2. *Email:* zzMSHA-comments@dol.gov. Include “RIN 1219–AC18” in the subject line of the message.

3. *Regular Mail or Hand Delivery:* MSHA, Office of Standards, Regulations, and Variances, Room C3522, 200 Constitution Avenue NW, Washington, DC 20210. Before visiting MSHA in person, call 202–693–9440 to make an appointment.

No telefacsimiles (“faxes”) will be accepted.

FOR FURTHER INFORMATION CONTACT:

Jessica D. Senk, Acting Director, Office of Standards, Regulations, and Variances, MSHA at 202–693–9440 (voice). This is not a toll-free number.

SUPPLEMENTARY INFORMATION:**I. Background**

By statute Congress prescribed an interim standard requiring that “[e]ach operator shall undertake to carry out on a continuing basis a program to improve the roof control system of each coal mine . . .” and shall adopt a “roof control plan” subject to bi-annual review of the Secretary. 30 U.S.C. 862(a). Further, Congress instructed the Secretary of Labor to “develop, promulgate, and revise as may be appropriate, improved mandatory health and safety standards for the protection of life and prevention of injuries in coal or other mines.” 30 U.S.C. 811(a). The interim statutory “roof control” standard was to be superseded by improved mandatory standards. 30 U.S.C. 861(a). Pursuant to 30 U.S.C. 811(a), MSHA has adopted regulations to implement 30 U.S.C. 862(a) and these standards include a roof control plan requirement. 30 CFR 75.220–223. Each mine operator must “develop and follow a roof control plan” which is “approved by the District Manager.” 30 CFR 75.220(a). No

roof control plan may be implemented before it is approved. 30 CFR 75.220(c).

MSHA regulations also set out detailed criteria for the approval of roof control plans. 30 CFR 75.222. For example, roof bolts generally “should be installed on centers not exceeding 5 feet lengthwise and crosswise.” 30 CFR 75.222(b)(1). “When tensioned roof bolts are used as a means of roof support, the torque or tension range should be capable of supporting roof bolt loads of at least 50 percent of either the yield point of the bolt or anchorage capacity of the strata, whichever is less.” 30 CFR 75.222(b)(2). “Any opening that is more than 20 feet wide should be supported by a combination of roof bolts and conventional supports.” 30 CFR 75.222(b)(3). “In any opening more than 20 feet wide[,]” posts “should be installed to limit each roadway to 16 feet wide where straight and 18 feet wide where curved” and a “row of posts should be set for each 5 feet of space between the roadway posts and the ribs.” 30 CFR 75.222(b)(4). “Openings should not be more than 30 feet wide.” 30 CFR 75.222(b)(5).

The regulations also include detailed requirements for installation of roof support using mining machines with integral roof bolters, pillar recovery, unsupported openings at intersections, Automated Temporary Roof Supports (ATRS) systems in working sections where the mining height is below 30 inches, and longwall mining systems. 30 CFR 75.222(c)–(g). These criteria must be “considered on a mine-by-mine basis in the formulation and approval of roof control plans and revisions.” 30 CFR 75.222(a). The Roof Control Plan has the force and effect of “law” at the mine, the mine may be cited for violation of the Plan, and mine personnel may be held personally liable, civilly and criminally, for violations of the Plan.

Title 30 CFR 75.222, however, also gives the District Manager broad authority to add regulatory criteria for the approval of roof control plans which are neither described or required by the regulations or 30 U.S.C. 862(a). Specifically, the regulations currently state, without limitation, that: “[a]dditional measures may be required in plans by the District Manager.” *Id.*

II. Discussion

MSHA is proposing to rescind the power of District Managers to add additional measures to roof control plans, beyond the reticulated criteria set out in 30 CFR 75.222 and the other requirements set forth in 30 CFR 75.220–223. MSHA has reevaluated its regulations and tentatively concluded that the significant authority and

discretion granted to District Managers in 30 CFR 75.222(a), to add “additional measures,” not identified in the statute or improved mandatory safety standards, is not supported by statute, violates the Appointments Clause and the APA.

While mine operators are required by statute to prepare and submit a roof control plan, and while MSHA has promulgated regulations setting forth specific criteria and requirements for roof control plans, nothing in the plain text of the underlying statute, including 30 U.S.C. 862 and 30 U.S.C. 811(a), can be read to permit the unfettered addition of “additional measures [as] may be required in plans by District Managers.” 30 CFR 75.222(a). This lack of statutory authority is contrary to *Loper Bright Enterprises v. Raimondo*, 603 U.S. 369 (2024) and is an adequate reason to rescind the sentence “Additional measures may be required in plans by District Managers.”

Government officials that exercise significant discretion when carrying out important functions are officers of the United States, and thus subject to the Appointments Clause. *See Lucia v. SEC*, 585 U.S. 237, 248 (2018); U.S. Const. Art. II, § 2, cl. 2. Under 30 CFR 75.222(a), District Managers are granted nearly unlimited discretion to add additional measures to roof control plans as they deem appropriate, an important function. Accordingly, because District Managers are not appointed pursuant to the Appointments Clause, that substantial authority is unlawful.

Independently, the significant discretion in 30 CFR 75.222(a) appears to violate the APA. This regulation essentially amounts to the unfettered ability of the District Manager to draft and create “laws” which are civilly and criminally enforceable, without bicameral presentment, and without notice and comment rulemaking. Various statutory provisions, including 30 U.S.C. 811, give the Secretary authority to issue health and safety regulations for mines. But, when these regulations are substantive rules, with “general or particular applicability and future effect designed to implement, interpret, or prescribe law or policy,” 5 U.S.C. 551(4), they are subject to the notice and comment process. MSHA must present the rulemaking to the public for comment, then issue a final rule responding to any comments. *See* 5 U.S.C. 553. Title 30 CFR 75.222(a) skips this process entirely when it vests District Managers with the authority to require undesignated roof control plan provisions. The District Manager, by adding additional criteria for roof

control plans, is promulgating a new substantive rule of particular applicability, without any of the necessary process. Thus, 30 CFR 75.222(a) violates the APA.

MSHA seeks comments on any aspects of this proposed rule, including the statutory authority, appointments clause issues and APA requirements, and the costs and benefits of the District Manager’s vague authority.

III. Procedural Issues and Regulatory Review

A. Review Under Executive Orders 12866 and 13563

Executive Order (E.O.) 12866, “Regulatory Planning and Review,” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

E.O. 13563, “Improving Regulation and Regulatory Review,” 76 FR 3821 (Jan. 21, 2011), requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. E.O. 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation’s regulatory system to promote predictability, reduce uncertainty, and use the best, most innovative, and least burdensome tools for achieving regulatory ends.

E.O. 12866 and E.O. 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. E.O. 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

Background

The proposed rule would apply to all underground coal mines. The existing rule allows the District Manager to require mine operators to include plan requirements not specified in the statute or regulations, while the proposed rule would rescind the power of District Managers to do so. The proposed change would decrease the burden currently faced by mine operators of having to revise their roof control plans to include plan requirements not specified in the statute or regulations when required by the District Manager. The proposed rule would maintain the roof control plans requirements, except for the District Manager’s discretion to include plan requirements not specified in the statute or regulations.

Based on MSHA internal data, the Agency estimates there will be approximately 215 underground coal mines operating each year that would be impacted by this proposed rule.¹ All estimated figures are expressed in 2024 dollars.

Under the baseline scenario mine operators would continue their current practice of making changes to their roof control plans as deemed necessary by their District Manager, not required elsewhere in existing regulations. Under the proposed rule mine operators would no longer need to include plan requirements not specified in the statute or regulations.

Benefits

Under this proposed rule mine operators would no longer be required to incorporate novel or unspecified provisions into roof control plans at the discretion of the District Manager. This change does not impact the existing requirements for the roof control plans that mine operators are required to implement. This action will remove improper regulatory burden and reduce arbitrary and unforeseen demands on mine operators.

The benefits associated with the proposed rule cannot be easily quantified due to existing information gaps and challenges with quantifying the incremental shifts in costs and benefits under the proposed rule. However, benefits are discussed in a qualitative manner as described below. The potential benefits of the proposed rule include:

(1) reduced production delays for mines—faster plan approval can enable earlier initiation or resumption of

¹ Number of mines inspected at least once in 2024 and the mine’s current status is listed as active, intermittent, or nonproducing active on April 14, 2025.

mining operations, reducing downtime, and increasing operational efficiency;

(2) improved resource allocation—predictable and consistent plan requirements reduce the need for mine operators to hire consultants or devote engineering resources to anticipate or respond to unpredictable District Managers' additional criteria;

(3) regulatory certainty—by aligning plan requirements strictly with the regulations, operators can better plan capital expenditures, staffing, and compliance investments, improving long-term planning and cost efficiency; and

(4) increased domestic energy production—more predictable plan approval processes may allow mines to optimize coal output, supporting national energy goals and supply chain stability.

(5) prevents unauthorized rulemaking—preventing extra-statutory, unaccountable and unauthorized rulemaking restores confidence in the administrative process. MSHA requests public comments on potential benefits associated with this proposed rule.

Cost Savings

MSHA estimates that mine operators would accrue a cost reduction from efficiencies associated with specific and consistent roof control plan requirements, both for initial plans and revisions. Removing the provision asserting broad District Manager discretion with respect to roof control plan requirements would result in cost savings to mine operators who would be better able to anticipate required plan revisions and receive plan approval more quickly. MSHA estimates that mine operators would accrue a cost reduction from no longer having to revise roof control plans at the request of the District Manager. The Agency estimates that each year there are 84 new roof control plans, and 482 revised roof control plans submitted to MSHA. Of which, 50 percent (283 plans)² would need to be revised specifically at the discretion of the District Manager. MSHA requests comment on the number of plans that would be impacted by this proposal.

MSHA used data from the May 2024 Occupational Employment and Wage Statistics (OEWS) published by the Bureau of Labor Statistics (BLS) for hourly wage rates³ and adjusted the

rates for benefits,⁴ wage inflation,⁵ and overhead costs.⁶ The analysis period is 10 years.

The cost savings generated by the proposed rule consists of the following:

1. Revisions to Roof Control Plans Required by the District Manager

MSHA assumes that under the baseline each year there are 283 new and revised roof control plans that are revised at the District Managers discretion. MSHA estimates that it takes a coal mine supervisor, earning \$95.72 per hour, 4 hours to make the requested revisions. Under the proposed rule these revisions would no longer need to be made, creating an annual cost saving of \$108,355.⁷

2. Copying and Mailing Roof Control Plans

In the process of submitting roof control plans to MSHA, the operator is expected to incur a cost to mail in any physical plans or revisions. MSHA assumes that 100 percent of new plans and plan revisions are submitted to MSHA physically via the mail. Under the baseline the 283 plans that would have had to be resubmitted with revisions to meet the District Manager's requirements. At a cost of \$6 per plan for copying (20 pages per plan, \$0.15 per page) and mailing (\$3.00 per plan),

OEWS estimates from this website?" at https://www.bls.gov/oes/oes_ques.htm.

⁴ The benefit multiplier comes from BLS Employer Costs for Employee Compensation accessed by menu at <http://data.bls.gov/cgi-bin/srgate> or directly at <http://download.bls.gov/pub/time.series/cm/cm.data.0.Current>. Insert the data series CMU2030000405000D and CMU2030000405000P, Private Industry Total benefits for Construction, extraction, farming, fishing, and forestry occupations, which is divided by 100 to convert to a decimal value. MSHA uses the latest 4-quarter moving average 2024Q1–2024Q4 to determine that 31.2 percent of total loaded wages are benefits. MSHA computes the benefit multiplier with a number of detailed calculations, but it may be approximated with the formula $1 + (\text{benefit percentage} / (1 - \text{benefit percentage}))$. The benefit multiplier is $1.453 = 1 + (0.312 / (1 - 0.312))$.

⁵ Wage inflation is the change in Series ID: CIS2020000405000I; Seasonally adjusted; Series Title: Wages and salaries for Private industry workers in Construction, extraction, farming, fishing, and forestry occupations, Index. (<https://data.bls.gov/cgi-bin/srgate>; Inflation Multiplier = (Current Quarter Cost Index Value/OEWS Wage Base Quarter Index Value). The inflation multiplier is determined by using the employment price index from the most current quarter, 2024Q4, divided by the base year and quarter of the OEWS employment and wage statistics, 2024Q2. The inflation multiplier is $1.022 = 166.7/163.1$.

⁶ MSHA uses an overhead rate of 17 percent. This overhead rate is based on a 2002 EPA report by Cody Rice, "Wage Rates for Economic Analysis of the Toxics Release Inventory Program", available at <https://www.regulations.gov/document/EPA-HQ-OPPT-2016-0387-0064>.

⁷ $\$108,355 = 283 \text{ plans} \times \$95.72 \text{ per hour} \times 4 \text{ hours}$.

by removing this requirement regarding the District Manager would lead to an annual cost saving of \$1,698.⁸

Summary

Removing the provisions concerning the District Manager's requirements for roof control plans would result in cost savings to mine operators through avoided revisions to roof control plans that would have been requested by the District Manager under the existing regulation. Under the proposed rule, incremental cost savings are estimated at \$1.1 million over 10 years undiscounted. These cost savings include no longer revising roof control plans to meet non-statutory or regulatory requirements by the District Manager and the avoided costs of copying and mailing revised roof control plans. For this proposed rule, the Agency estimates that the annualized cost saving across the three discount rates of 0 percent, 3 percent, and 7 percent would be \$110,053.

While cost savings are quantified, some benefits are addressed in a qualitative manner, such as reduced production delays, improved resource allocation, regulatory certainty, increased domestic energy production, and prevention of unauthorized rulemaking. More efficient approval of roof control plans is expected to result in other cost savings, including earlier initiation (or resumption) of production and revenue due to simplified plan and amendment approvals, lower costs associated with subject matter expert consultants hired by mine operators in response to unanticipated Agency requirements, and other efficiencies generated by increased regulatory predictability resulting from this action. Benefits of the proposed rule could result from a more efficient Agency review and approval of roof control plans for underground coal mines. Underground coal mine operators are expected to benefit from the proposed rule that clarifies the information and provisions required in roof control plans. This is expected to help ease operator confusion regarding what content is required when developing roof control plans for MSHA approval and to result in an increase in the time value of revenues generated by coal production. Another potential benefit to the public is the increased opportunity to produce coal, which would improve American energy production. The proposed rule is deregulatory because it reduces qualitative burdens for mine operators. Additionally, the Agency

⁸ $\$1,698 = ((20 \text{ pages} \times \$0.15 \text{ cost per page}) + \$3 \text{ mailing cost}) \times 283 \text{ plans}$.

² 283 revised plans at the request of the District Manager = $(84 \text{ new plans} + 482 \text{ revised plans}) \times 50\%$.

³ To obtain OEWS data, follow BLS's directions in its Frequently Asked Questions: "E. How to get OEWS data. 4. What are the different ways to obtain

experience supports cost savings that are not yet quantified.

MSHA requests comments on potential benefits or costs associated with this proposed action.

Significance Determination

Under section 6(a) of E.O. 12866, the Office of Management and Budget's (OMB's) Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and whether the Agencies are required to submit the regulatory action to OIRA for review. Under section 3(f) of E.O. 12866, a "significant regulatory action" is a regulatory action that is likely to result in a rule that may:

(1) have an annual effect on the economy of \$100 million or more, or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities (also referred to as economically significant);

(2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients; or

(4) raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the E.O.

OIRA has designated this rule a "significant regulatory action" under section 3(f) of E.O. 12866. Accordingly, it will be reviewed by OMB.

No alternatives are considered for this proposed deregulatory action. MSHA requests comments on alternatives within the Agency's authority that would generate similar or greater benefits.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) of 1980, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996, requires preparation of an Initial Regulatory Flexibility Analysis (IRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. The RFA defines small entities to include small businesses, small organizations, including not-for-profit organizations, and small governmental jurisdictions.

Under the RFA, MSHA uses the Small Business Administration's (SBA)

definition to set thresholds for small business sizes for the MNM and coal mining industries defined at the 6-digit North American Industry Classification System (NAICS) level. For underground coal mines the threshold is 1,500 employees and MSHA estimated that 115 underground coal mines are defined as small.

MSHA evaluated data routinely provided by mine operators related to the number of mines, employment, and production from MSHA's Standardized Information System (MSIS) for underground coal mines. MSHA calculated revenue as production times the average price of coal. Using internal data, MSHA estimates that small coal mines produce roughly 92.1 million tons of coal annually. Using U.S Energy Information Administration Annual Coal Report 2023 Table 28, Average Sales Price of Coal by State and Mine Type, the average coal price for was \$54.04 per short ton in 2023. The price was then adjusted to 2024 dollars using CPI-U, \$55.63 per short ton, to estimate national coal revenues generated by small coal mines of \$5.1 billion.

MSHA assesses the impact on small entities by comparing the estimated costs, in this case cost savings, of the proposed rule on small entities affected by the rule to the estimated revenues for those small entities. When estimated compliance costs are less than 1 percent of the estimated revenues, the Agency believes it is generally appropriate to conclude that there is no significant economic impact on a substantial number of small entities. When estimated compliance costs exceed 1 percent of revenues, MSHA investigates whether further analysis is required. The impact of the proposed rule, as a percentage of revenues, is essentially zero: for small coal mine operators the total annualized cost is \$0.11 million while total annual revenue is \$5.1 billion, resulting in a ratio of 0.002 percent. Thus, no further analysis is required.

MSHA considered the costs on small mines when developing the proposed rule. MSHA reviewed this proposed rule, which eliminates burdensome regulations, under the provisions of the RFA. MSHA initially concludes that the impacts of this proposed rule would not have a 'significant economic impact on a substantial number of small entities,' and that the preparation of an IRFA is not warranted. MSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) provides for the Federal Government's collection, use, and dissemination of information. The goals of the Paperwork Reduction Act include minimizing paperwork and reporting burdens and ensuring the maximum possible utility from the information that is collected under 5 CFR part 1320. The Paperwork Reduction Act requires Federal agencies to obtain approval from OMB before requesting or requiring "a collection of information" from the public.

This proposed rule imposes no new information collection or record-keeping requirements. However, this proposed rule would result in substantive changes to another currently approved information collection request, OMB Control Number 1219-0004 "Roof Control Plan for Underground Coal Mines." The currently approved information collection request covers requirements in 30 CFR part 75, which sets forth the procedures and rules to govern the submission and approval of roof control plans.

Type of Review: Substantive Change to currently approved information collection.

OMB Control Number: 1219-0004.

Title: Roof Control Plan for Underground Coal Mines.

Description of the ICR:

Background

The proposed rule would apply to all underground coal mines. The existing rule allows the District Manager the discretion to revise roof control plans, while the proposed rule would decrease the burden currently faced by mine operators of having to revise their roof control plans when required by the District Manager.

Based on MSHA's records, there were 167 active underground coal mines from December 2022 to November 2023.

1. New Roof Control Plans and Revisions (30 CFR 75.215, 75.220(a)(1), and 30 CFR 75.221(a), 30 CFR 75.223(a))

1-1. New Roof Control Plans (30 CFR 75.215, 75.220(a)(1), and 30 CFR 75.221(a))

Under 30 CFR 75.220, each underground coal mine operator must develop a roof control plan that includes the information specified in 30 CFR 75.221(a). Under 30 CFR 75.215, mine operators must specify the methods in the roof control plan that will be used to maintain a safe travelway out of the longwall mining section through the tailgate side of the

longwall and the procedures that will be followed if a ground failure prevents travel out of the section through the tailgate side of the longwall.

On average, 84 new roof control plans were submitted annually by 58 of the 167 underground coal mines. Of which, 50 percent (42 new plans) would need to be revised specifically at the discretion of the District Manager. While roof control plans vary according to the size and complexity of each individual mine, MSHA estimates that on average it takes a mine supervisor, earning \$95.72 per hour, approximately 12 hours to prepare a new roof control plan. MSHA employees with experience preparing roof control plans while employed by industry have helped the Agency substantiate the time required to produce roof control plans.

This proposed rule would result in a reduction of information collection costs. The number of annual respondents would remain unchanged at 58, the number of annual responses decreases from 84 to 42, the annual burden hour would decrease from 1,008 to 504 hours, and the annual recordkeeping cost to respondents would remain unchanged at \$0.

1–2. Revised Roof Control Plans (30 CFR 75.223(a))

Under 30 CFR 75.223(a), a mine operator must propose revisions to the roof control plan when conditions indicate that the plan is not suitable or when accident and injury experience at the mine indicates the plan is inadequate. Revisions may be required as a response to an existing problem, or when instituting new technology, or as a cost savings to the mine operator.

MSHA estimates that each mine operator may need to submit plan revisions. An operator may submit more than one revision per year if conditions require it. In 2023, MSHA received 482 plan revisions submitted by 167 underground coal mines. Of which, 50 percent (241 revised plans) would need to be revised specifically at the discretion of the District Manager. MSHA estimates that it takes a mine supervisor, earning \$95.72 per hour, approximately 4 hours to draft a plan revision.

This proposed rule would result in a reduction in information collection costs. The number of annual respondents remains unchanged at 167, the number of annual responses would decrease from 482 to 241, the annual burden hour would decrease from 1,928 to 964 hours, and the annual recordkeeping cost to respondents would remain unchanged at \$0.

Copy and Mail New and Revised Roof Control Plans

Mine operators are expected to mail every new (42) and revised (241) roof control plan to MSHA. MSHA estimates that the average copying and mailing cost for the 283 new roof control plans or plan revisions is \$6.

This proposed rule would result in a reduction in information collection costs. The number of annual respondents would remain unchanged at 167, the number of annual responses would decrease from 566 to 283, and the annual recordkeeping cost to respondents would decrease from \$3,369 to \$1,698.

2. Unplanned Roof or Rib Fall and Coal or Rock Burst (30 CFR 75.223(b))

Underground coal mine operators are also required to plot each unplanned roof fall, rib fall, and coal rock burst on a mine map when such incidents meet the criteria specified in 30 CFR 75.223(b). MSHA estimates that it takes a mine supervisor, earning \$95.72 per hour, 5 minutes to plot a roof fall or a coal or rock burst on a map. There were approximately 453 unplanned roof falls and coal or rock bursts which met such specified criteria and that occurred in underground coal mines in 2023.

This proposed rule would not impact this information collection cost. The number of annual respondents would remain unchanged at 167, the number of annual responses would remain unchanged at 453, the annual burden hour would remain unchanged at 38 hours, and the annual recordkeeping cost to respondents would remain unchanged at \$0.

Summary of the Collection of Information

Under the proposed rule, the estimated number of respondents, responses, burden hours and recordkeeping costs to respondents would decrease from the currently approved information collection request. The reduction in information collection costs comes from removing the requirement of revising roof control plans at the discretion of the District Manager.

Affected Public: Businesses or For-Profit.

Estimated Number of Respondents: 167 (0 due to this proposed rule).

Frequency: On occasion.

Estimated Number of Responses: 736 (– 283 due to this proposed rule).

Estimated Number of Burden Hours: 1,506 (– 1,468 hours due to this proposed rule).

Estimated Recordkeeping Costs to Respondents: \$1,698 (– \$1,698 due to this proposed).

D. Review Under Executive Order 13132

E.O. 13132, “Federalism,” 64 FR 43255 (August 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The Executive Order requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The Executive Order also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.

MSHA has examined this proposed rule and has determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O. 12988, “Civil Justice Reform,” imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. 61 FR 4729 (Feb. 7, 1996). Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Section 3(c) of E.O. 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is

unreasonable to meet one or more of them. MSHA has completed the required review and determined that, to the extent permitted by law, this proposed rule meets the relevant standards of E.O. 12988.

F. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. 2 U.S.C. 1532(a), (b)). The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a “significant intergovernmental mandate,” and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them.

MSHA examined this proposed rule according to UMRA and determined that the proposed rule does not contain a Federal intergovernmental mandate, nor is it expected to require expenditures of \$100 million or more in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. As a result, the analytical requirements of UMRA do not apply.

G. Review Under the National Environmental Policy Act

The National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*), requires each Federal agency to consider the environmental effects of regulatory actions and to prepare an environmental impact statement on Agency actions that would significantly affect the quality of the environment; unless the action is considered categorically excluded under 29 CFR 11.10. MSHA has reviewed the proposed rule in accordance with NEPA requirements and the Department of Labor’s NEPA procedures (29 CFR part 11). As a result of this review, MSHA has determined that this proposed rule would not impact air, water, or soil quality, plant or animal life, the use of

land or other aspects of the human environment. Therefore, MSHA has not conducted an environmental assessment nor provided an environmental impact statement.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This proposed rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, MSHA has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to E.O. 12630, “Governmental Actions and Interference with Constitutionally Protected Property Rights,” 53 FR 8859 (March 18, 1988), MSHA has determined that this proposed rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB’s guidelines were published at 67 FR 8452 (Feb. 22, 2002). MSHA has reviewed this proposed rule under the OMB and has concluded that it is consistent with applicable policies in the OMB guidelines.

K. Review Under Executive Order 13175

E.O. 13175, “Consultation and Coordination With Indian Tribal Governments” 65 FR 67249 (Nov. 9, 2000), requires agencies to consult with tribal officials when developing policies that may have “tribal implications.” This proposed rule does not have “tribal implications” because it will not “have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.” Accordingly, under E.O. 13175, no further Agency action or analysis is required.

L. Review Under Executive Order 13211

E.O. 13211, “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” 66 FR 28355 (May 22, 2001), requires agencies to publish a statement of energy effects when a rule has a significant energy action that adversely affects energy supply, distribution, or use. MSHA has reviewed this proposed rule for its energy effects. For the energy analysis, this proposed rule will not exceed the relevant criteria for adverse impact.

M. Review Under Additional Executive Orders and Presidential Memoranda

MSHA has examined this proposed rule and has determined that it is consistent with the policies and directives outlined in E.O. 14154, “Unleashing American Energy” 90 FR 8353 (Jan. 29, 2025); E.O. 14192, “Unleashing Prosperity Through Deregulation” 90 FR 9065 (Feb. 6, 2025); and the Presidential Memorandum, “Delivering Emergency Price Relief for American Families and Defeating the Cost-of-Living Crisis” 90 FR 8245 (Jan. 28, 2025). This proposed rule is expected to be an E.O. 14192 deregulatory action.

List of Subjects in 30 CFR Part 75

Mine safety and health; Underground coal mines; Roof control plans; District Managers.

For the reasons set forth in the preamble, and under the authority of the Federal Mine Safety and Health Act of 1977, as amended by the Mine Improvement and New Emergency Response Act of 2006, MSHA proposes to amend chapter I of title 30 of the Code of Federal Regulations as follows:

PART 75—MANDATORY SAFETY STANDARDS—UNDERGROUND COAL MINES

- 1. The authority citation for part 75 continues to read as follows:

Authority: 30 U.S.C. 811, 813(h), 957.

Subpart C—Roof Control

- 2. In § 75.222, revise paragraph (a) to read as follows:

§ 75.222 Roof control plan-approval criteria.

(a) This section sets forth the criteria that shall be considered on a mine-by-mine basis in the formulation and approval of roof control plans and revisions. Roof control plans that do not conform to the applicable criteria in this section may be approved by the District Manager, provided that effective control

of the roof, face and ribs can be maintained.

BILLING CODE 4520–43–P

DEPARTMENT OF LABOR

Mine Safety and Health Administration

30 CFR Part 75

[Docket No. MSHA–2025–0078]

RIN 1219–AC09

Improving and Eliminating Regulations; Permissible Lamps in Underground Coal Mines

AGENCY: Mine Safety and Health Administration (MSHA), Department of Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: MSHA is proposing to revise 30 CFR part 75 by removing duplicative requirements for electric cap lamps and other electric lamps in underground coal mines. These changes would clarify the permissibility requirements for electric cap lamps and other lamps while maintaining safety protections for miners using such equipment.

DATES: Comments must be received on or before July 31, 2025.

ADDRESSES: All submissions must include RIN 1219–AC09 or Docket No. MSHA–2025–0078. You should not include personal or proprietary information that you do not wish to disclose publicly. If you mark parts of a comment as “business confidential” information, MSHA will not post those parts of the comment. Otherwise, MSHA will post all comments without change, including any personal information provided. MSHA cautions against submitting personal information.

You may submit comments and informational materials, clearly identified by RIN 1219–AC09 or Docket No. MSHA–2025–0078, by any of the following methods:

1. *Federal E-Rulemaking Portal:* <https://www.regulations.gov>. Follow the online instructions for submitting comments for MSHA–2025–0078.

2. *Email:* zzMSHA-comments@dol.gov. Include “RIN 1219–AC09” in the subject line of the message.

3. *Regular Mail or Hand Delivery:* MSHA, Office of Standards, Regulations, and Variances, Room

C3522, 200 Constitution Avenue NW, Washington, DC 20210. Before visiting MSHA in person, call 202–693–9440 to make an appointment.

No telefacsimiles (“faxes”) will be accepted.

FOR FURTHER INFORMATION CONTACT: Jessica D. Senk, Office of Standards, Regulations, and Variances, MSHA at 202–693–9440 (voice). This is not a toll-free number.

SUPPLEMENTARY INFORMATION:

I. Background

MSHA is proposing to remove an existing provision from title 30 of the Code of Federal Regulations (30 CFR). MSHA is proposing to remove 30 CFR 75.1703–1. Removing this provision would not reduce protections afforded to miners.

II. Discussion

Section 75.1703–1 identifies that lamps approved by the Bureau of Mines or MSHA under part 19 or part 20 are approved as permissible portable electric lamps under § 75.1703. “Permissible” is defined in § 75.2 and covers the permissible electric lamps mentioned in § 75.1703. Therefore, MSHA proposes to remove and reserve § 75.1703–1. This action reflects MSHA’s experience and ongoing review of existing regulations to ensure they remain necessary, effective, and aligned with current technologies and mining practices.

MSHA seeks comment on any aspect of this proposed rule.

III. Procedural Issues and Regulatory Review

A. Review Under Executive Orders 12866 and 13563

Executive Order (E.O.) 12866, “Regulatory Planning and Review” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct

regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

E.O. 13563, “Improving Regulation and Regulatory Review” 76 FR 3821 (Jan. 21, 2011), requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. E.O. 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation’s regulatory system to promote predictability, reduce uncertainty, and use the best, most innovative, and least burdensome tools for achieving regulatory ends.

E.O. 12866 and E.O. 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. E.O. 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

Under section 3(f) of E.O. 12866, a “significant regulatory action” is a regulatory action that is likely to result in a rule that may:

(1) have an annual effect on the economy of \$100 million or more, or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities (also referred to as economically significant);

(2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients; or

(4) raise novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in the E.O.

Under section 6(a) of E.O. 12866, the Office of Management and Budget’s (OMB’s) Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and whether Agencies are required to submit the regulatory action to OIRA for review. Removing duplicative requirements for electric cap lamps and other electric lamps in underground coal mines would not impose new compliance costs to underground coal mine operators or reduce the protections afforded to miners. This proposed rule is determined to not constitute a

“significant regulatory action” because it does not meet any of the four “significant regulatory action” criteria under section 3(f) of E.O. 12866. Accordingly, this proposed rule was not submitted to OIRA for review under E.O. 12866.

No alternatives were considered for this proposed deregulatory action.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) of 1980, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996, requires preparation of an Initial Regulatory Flexibility Analysis (IRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. The RFA defines small entities to include small businesses, small organizations, including not-for-profit organizations, and small governmental jurisdictions.

MSHA reviewed this proposed rule under the provisions of the RFA, which eliminates burdensome regulations. MSHA initially concludes that the impacts of this proposed rule would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. MSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) provides for the Federal Government’s collection, use, and dissemination of information. The goals of the Paperwork Reduction Act include minimizing paperwork and reporting burdens and ensuring the maximum possible utility from the information that is collected under 5 CFR part 1320. The Paperwork Reduction Act requires Federal agencies to obtain approval from OMB before requesting or requiring “a collection of information” from the public.

This proposed rule imposes no new information collection or record-keeping requirements. Accordingly, OMB clearance is not required under the Paperwork Reduction Act.

D. Review Under Executive Order 13132

E.O. 13132, “Federalism” 64 FR 43255 (August 10, 1999), imposes certain requirements on Federal

agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The E.O. requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The E.O. also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.

MSHA has examined this proposed rule and has determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O. 12988, “Civil Justice Reform” 61 FR 4729 (Feb. 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Section 3(c) of E.O. 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. MSHA has completed the required review and determined that, to the extent permitted by law, this proposed rule meets the relevant standards of E.O. 12988.

F. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)). The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a “significant intergovernmental mandate,” and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them.

MSHA examined this proposed rule according to UMRA and its statement of policy and determined that the proposal does not contain a Federal intergovernmental mandate, nor is it expected to require expenditures of \$100 million or more in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. As a result, the analytical requirements of UMRA do not apply.

G. Review Under the National Environmental Policy Act

The National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*), requires each Federal agency to consider the environmental effects of regulatory actions and to prepare an environmental impact statement on Agency actions that would significantly affect the quality of the environment; unless the action is considered categorically excluded under 29 CFR 11.10. MSHA has reviewed the proposed rule in accordance with NEPA requirements and the Department of Labor’s NEPA procedures (29 CFR part 11). As a result of this review, MSHA has determined that this proposed rule would not impact air, water, or soil quality, plant or animal life, the use of land or other aspects of the human environment. Therefore, MSHA has not conducted an environmental assessment nor provided an environmental impact statement.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This proposed rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, MSHA has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to E.O. 12630, “Governmental Actions and Interference with Constitutionally Protected Property Rights” 53 FR 8859 (March 18, 1988), MSHA has determined that this proposed rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB’s guidelines were published at 67 FR 8452 (Feb. 22, 2002). MSHA has reviewed this proposed rule and has preliminarily concluded that it is consistent with applicable policies in the OMB guidelines.

K. Review Under Executive Order 13175

E.O. 13175, “Consultation and Coordination with Indian Tribal Governments” 65 FR 67249 (Nov. 9, 2000), requires agencies to consult with tribal officials when developing policies that may have “tribal implications.” This proposed rule does not have “tribal implications” because it will not “have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.” Accordingly, under E.O. 13175, no further Agency action or analysis is required.

L. Review Under Executive Order 13211

E.O. 13211, “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” 66 FR 28355 (May 22, 2001), requires

agencies to publish a statement of energy effects when a rule has a significant energy action that adversely affects energy supply, distribution, or use. MSHA has reviewed this proposed rule for its energy effects. For the energy analysis, this proposed rule will not exceed the relevant criteria for adverse impact.

M. Review Under Additional Executive Orders and Presidential Memoranda

MSHA has examined this proposed rule and has determined that it is consistent with the policies and directives outlined in E.O. 14154, “Unleashing American Energy” 90 FR 8353 (Jan. 29, 2025); E.O. 14192, “Unleashing Prosperity Through Deregulation” 90 FR 9065 (Feb. 6, 2025); and the Presidential Memorandum, “Delivering Emergency Price Relief for American Families and Defeating the Cost-of-Living Crisis” 90 FR 8245 (Jan. 28, 2025). This proposed rule is expected to be an E.O. 14192 deregulatory action.

List of Subjects in 30 CFR Part 75

Coal, Mine safety and health, Reporting and recordkeeping requirements, Respirable dust.

For the reasons set forth in the preamble, and under the authority of the Federal Mine Safety and Health Act of 1977, as amended by the Mine Improvement and New Emergency Response Act of 2006, MSHA proposes to amend chapter I of title 30 of the Code of Federal Regulations as follows:

SUBCHAPTER O—COAL MINE SAFETY AND HEALTH

PART 75—MANDATORY SAFETY STANDARDS—UNDERGROUND COAL MINES

- 1. The authority citation for part 75 continues to read as follows:

Authority: 30 U.S.C. 811, 813(h), 957.

Subpart R—Miscellaneous

§ 75.1703–1 [Removed and Reserved]

- 2. Remove and reserve § 75.1703–1.

James P. McHugh,

Deputy Assistant Secretary for Policy, Mine Safety and Health Administration.

[FR Doc. 2025–11618 Filed 6–30–25; 8:45 am]

BILLING CODE 4520–43–P

DEPARTMENT OF LABOR

Mine Safety and Health Administration

30 CFR Part 75

[Docket No. MSHA–2025–0083]

RIN 1219–AC14

Electrical Equipment for Coal Seams Above the Water Table

AGENCY: Mine Safety and Health Administration (MSHA), Department of Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: MSHA proposes to revise title 30 of the Code of Federal Regulations (30 CFR) part 75 by removing requirements for the use of permissible electric face equipment in coal seams above the water table. Removing these provisions would not reduce protections afforded to miners.

DATES: Comments must be received on or before July 31, 2025.

ADDRESSES: All submissions must include RIN 1219–AC14 or Docket No. MSHA–2025–0083. You should not include personal or proprietary information that you do not wish to disclose publicly. If you mark parts of a comment as “business confidential” information, MSHA will not post those parts of the comment. Otherwise, MSHA will post all comments without change, including any personal information provided. MSHA cautions against submitting personal information.

You may submit comments and informational materials, clearly identified by RIN 1219–AC14 or Docket No. MSHA–2025–0083, by any of the following methods:

1. *Federal E-Rulemaking Portal:* <https://www.regulations.gov>. Follow the online instructions for submitting comments for MSHA–2025–0083.

2. *Email:* zzMSHA-comments@dol.gov. Include “RIN 1219–AC14” in the subject line of the message.

3. *Regular Mail or Hand Delivery:* MSHA, Office of Standards, Regulations, and Variances, Room C3522, 200 Constitution Avenue NW, Washington, DC 20210. Before visiting MSHA in person, call 202–693–9440 to make an appointment.

No telefacsimiles (“faxes”) will be accepted.

FOR FURTHER INFORMATION CONTACT: Jessica D. Senk, Acting Director, Office of Standards, Regulations, and Variances, MSHA at 202–693–9440 (voice). This is not a toll-free number.

SUPPLEMENTARY INFORMATION:

I. Background

MSHA is proposing to remove existing provisions from 30 CFR part 75. The existing MSHA standards in §§ 75.501, 75.501-1, 75.501-2, 75.501-3, and 75.502 establish requirements for permissible electric face equipment used in mines with coal seams above the water table. MSHA is proposing to remove and reserve §§ 75.501, 75.501-1, 75.501-2, 75.501-3, and 75.502. Removing these provisions would not reduce protections afforded to miners.

II. Discussion

MSHA proposes to remove the existing provisions in §§ 75.501, 75.501-1, 75.501-2, 75.501-3, and 75.502 which contain references to “coal seams above the water table.” All coal mines are now considered gassy, regardless of location relative to the water table. Therefore, this definition is no longer relevant. Removing these provisions would not reduce protections afforded to miners because the requirements for permissibility of electric equipment used in underground mines are already covered in other parts of 30 CFR part 75. As a result of removing §§ 75.501, 75.501-1, 75.501-2, 75.501-3, and 75.502, MSHA also proposes conforming amendments to §§ 75.500(d), 75.503, and 75.504 to remove references to the removed provisions. These proposed actions reflect MSHA’s experience and ongoing review of existing regulations to ensure they remain necessary, effective, and aligned with current technologies and mining practices.

MSHA seeks comments on any aspect of this proposed rule.

III. Procedural Issues and Regulatory Review

A. Review Under Executive Order 12866 and 13563

Executive Order (E.O.) 12866, “Regulatory Planning and Review” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or

manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

E.O. 13563, “Improving Regulation and Regulatory Review” 76 FR 3821 (Jan. 21, 2011), requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. E.O. 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation’s regulatory system to promote predictability, reduce uncertainty, and use the best, most innovative, and least burdensome tools for achieving regulatory ends.

E.O. 12866 and E.O. 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. E.O. 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

Under section 3(f) of E.O. 12866, a “significant regulatory action” is a regulatory action that is likely to result in a rule that may:

(1) have an annual effect on the economy of \$100 million or more, or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities (also referred to as economically significant);

(2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients; or

(4) raise novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in the E.O.

Under section 6(a) of E.O. 12866, the Office of Management and Budget’s (OMB’s) Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and whether Agencies are required to submit the regulatory action to OIRA for review. Removing the provisions for the use of permissible electric face equipment in coal seams above the water table would not impose new compliance costs to underground coal mine operators or reduce the

protections afforded to miners. This proposed rule is determined to not constitute a “significant regulatory action” because it does not meet any of the four “significant regulatory action” criteria under section 3(f) of E.O. 12866. Accordingly, this proposed rule was not submitted to OIRA for review under E.O. 12866.

No alternatives were considered for this proposed deregulatory action.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) of 1980, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996, requires preparation of an Initial Regulatory Flexibility Analysis (IRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. The RFA defines small entities to include small businesses, small organizations, including not-for-profit organizations, and small governmental jurisdictions.

MSHA reviewed this proposed rule under the provisions of the RFA, which eliminates burdensome regulations. Therefore, MSHA initially concludes that the impacts of the proposed rule would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. MSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) provides for the Federal Government’s collection, use, and dissemination of information. The goals of the Paperwork Reduction Act include minimizing paperwork and reporting burdens and ensuring the maximum possible utility from the information that is collected under 5 CFR part 1320. The Paperwork Reduction Act requires Federal agencies to obtain approval from the Office of Management and Budget (OMB) before requesting or requiring “a collection of information” from the public.

This proposed rule imposes no new information collection or record-keeping requirements. Accordingly, OMB clearance is not required under the Paperwork Reduction Act.

D. Review Under Executive Order 13132

E.O. 13132, “Federalism” 64 FR 43255 (August 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The E.O. requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The E.O. also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.

MSHA has examined this proposed rule and has determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O. 12988, “Civil Justice Reform” 61 FR 4729 (Feb. 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Section 3(c) of E.O. 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. MSHA has completed the required review and determined that, to the extent permitted by law, this

proposed rule meets the relevant standards of E.O. 12988.

F. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)). The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a “significant intergovernmental mandate,” and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them.

MSHA examined this proposed rule according to UMRA and its statement of policy and determined that the proposal does not contain a Federal intergovernmental mandate, nor is it expected to require expenditures of \$100 million or more in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. As a result, the analytical requirements of UMRA do not apply.

G. Review Under the National Environmental Policy Act

The National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*), requires each Federal agency to consider the environmental effects of regulatory actions and to prepare an environmental impact statement on Agency actions that would significantly affect the quality of the environment; unless the action is considered categorically excluded under 29 CFR 11.10. MSHA has reviewed the proposed rule in accordance with NEPA requirements and the Department of Labor’s NEPA procedures (29 CFR part 11). As a result of this review, MSHA has determined that this proposed rule would not impact air, water, or soil quality, plant or animal life, the use of land or other aspects of the human environment. Therefore, MSHA has not conducted an environmental assessment

nor provided an environmental impact statement.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This proposed rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, MSHA has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to E.O. 12630, “Governmental Actions and Interference with Constitutionally Protected Property Rights” 53 FR 8859 (March 18, 1988), MSHA has determined that this proposed rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB’s guidelines were published at 67 FR 8452 (Feb. 22, 2002). MSHA has reviewed this proposed rule and has concluded that it is consistent with applicable policies in the OMB guidelines.

K. Review Under Executive Order 13175

E.O. 13175, “Consultation and Coordination With Indian Tribal Governments” 65 FR 67249 (Nov. 9, 2000), requires agencies to consult with tribal officials when developing policies that may have “tribal implications.” This proposed rule does not have “tribal implications” because it will not “have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.” Accordingly, under E.O. 13175, no further Agency action or analysis is required.

L. Review Under Executive Order 13211

E.O. 13211, “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” 66 FR 28355 (May 22, 2001), requires agencies to publish a statement of energy effects when a rule has a significant energy action that adversely affects energy supply, distribution, or use. MSHA has reviewed this proposed rule for its energy effects. For the energy analysis, this proposed rule will not exceed the relevant criteria for adverse impact.

M. Review Under Additional Executive Orders and Presidential Memoranda

MSHA has examined this proposed rule and has determined that it is consistent with the policies and directives outlined in E.O. 14154, “Unleashing American Energy” 90 FR 8353 (Jan. 29, 2025); E.O. 14192, “Unleashing Prosperity Through Deregulation” 90 FR 9065 (Feb. 6, 2025); and the Presidential Memorandum, “Delivering Emergency Price Relief for American Families and Defeating the Cost-of-Living Crisis” 90 FR 8245 (Jan. 28, 2025). This proposed rule is expected to be an E.O. 14192 deregulatory action.

List of Subjects in 30 CFR Part 75

Coal mines, Mine safety and health, Reporting and recordkeeping requirements, Safety, Training programs, Underground mining.

For the reasons set forth in the preamble, and under the authority of the Federal Mine Safety and Health Act of 1977, as amended by the Mine Improvement and New Emergency Response Act of 2006, MSHA proposes to amend chapter I of title 30 of the Code of Federal Regulations as follows:

SUBCHAPTER O—COAL MINE SAFETY AND HEALTH**PART 75—MANDATORY SAFETY STANDARDS—UNDERGROUND COAL MINES**

■ 1. The authority citation for part 75 continues to read as follows:

Authority: 30 U.S.C. 811, 813(h), and 957.

Subpart F—Electrical Equipment—General

■ 2. Revise § 75.500(d) to read as follows:

§ 75.500 Permissible electric equipment.

* * * * *

(d) All other electric face equipment which is taken into or used in by the last crosscut of any coal mine, which has not been classified under any provision

of law as a gassy mine prior to March 30, 1970, shall be permissible.

§ 75.501 [Removed and Reserved].**§ 75.501–1 [Removed and Reserved].****§ 75.501–2 [Removed and Reserved].****§ 75.501–3 [Removed and Reserved].****§ 75.502 [Removed and Reserved].**

■ 3. Remove and reserve §§ 75.501, 75.501–1, 75.501–2, 75.501–3, and 75.502.

■ 4. Revise § 75.503 to read as follows:

§ 75.503 Permissible electric face equipment; maintenance.

The operator of each coal mine shall maintain in permissible condition all electric face equipment required by §§ 75.500 and 75.504 to be permissible which is taken into or used in by the last open crosscut of any such mine.

■ 5. Revise § 75.504 to read as follows:

§ 75.504 Permissibility of new, replacement, used, reconditioned, additional, and rebuilt electric face equipment.

All new, replacement, used, reconditioned, and additional electric face equipment used in any mine referred to in §§ 75.500 and 75.503 shall be permissible and shall be maintained in a permissible condition, and in the event of any major overhaul of any item of electric face equipment, such equipment shall be put in, and thereafter maintained in, a permissible condition, unless in the opinion of the Secretary, such equipment or necessary replacement parts are not available.

James P. McHugh,

Deputy Assistant Secretary for Policy, Mine Safety and Health Administration.

[FR Doc. 2025–11622 Filed 6–30–25; 8:45 am]

BILLING CODE 4520–43–P

DEPARTMENT OF LABOR**Mine Safety and Health Administration****30 CFR Part 75**

[Docket No. MSHA–2025–0084]

RIN 1219–AC21

Ventilation Plan Approval Criteria

AGENCY: Mine Safety and Health Administration (MSHA), Department of Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: MSHA proposes to revise requirements for the contents in mine ventilation plans to eliminate the

authority given to the District Manager to require additional provisions. The current standard may violate statutory authority; the Appointments Clause, by vesting significant regulatory authority in District Managers; and the Administrative Procedure Act (APA), by skipping notice and comment.

DATES: Comments must be received on or before July 31, 2025.

ADDRESSES: All submissions must include RIN 1219–AC21 or Docket No. MSHA–2025–0084. You should not include personal or proprietary information that you do not wish to disclose publicly. If you mark parts of a comment as “business confidential” information, MSHA will not post those parts of the comment. Otherwise, MSHA will post all comments without change, including any personal information provided. MSHA cautions against submitting personal information.

You may submit comments and informational materials, clearly identified by RIN 1219–AC21 or Docket No. MSHA–2025–0084, by any of the following methods:

1. *Federal E-Rulemaking Portal:* <https://www.regulations.gov>. Follow the online instructions for submitting comments for MSHA–2025–0084. A brief summary of this document will be available at <https://www.regulations.gov/docket/MSHA-2025-0084>.

2. *Email:* zzMSHA-comments@dol.gov. Include “RIN 1219–AC21” in the subject line of the message.

3. *Regular Mail or Hand Delivery:* MSHA, Office of Standards, Regulations, and Variances, Room C3522, 200 Constitution Avenue NW, Washington, DC 20210. Before visiting MSHA in person, call 202–693–9440 to make an appointment.

No telefacsimiles (“faxes”) will be accepted.

FOR FURTHER INFORMATION CONTACT:

Jessica D. Senk, Acting Director, Office of Standards, Regulations, and Variances, MSHA at 202–693–9440 (voice). This is not a toll-free number.

SUPPLEMENTARY INFORMATION:**I. Background**

By statute, Congress prescribed an interim standard requiring that “[a]ll coal mines shall be ventilated by mechanical ventilation equipment installed and operated in a manner approved by an authorized representative of the Secretary.” 30 U.S.C. 863(a). Further, by statute, the Secretary of Labor must set out “mandatory health or safety standards for the protection of life and prevention of injuries in coal or other mines.” 30

U.S.C. 811(a). In the Mine Act, Congress prescribed very specific interim ventilation standards. 30 U.S.C. 863(b)–(c) and (h)–(m). Congress likewise required every operator to prepare “A ventilation system and methane and dust control plan and revisions suitable to the conditions and the mining system of the coal mine . . .” 30 U.S.C. 863(o). MSHA has adopted regulations to implement 30 U.S.C. 863 and these standards include submission and approval of mine ventilation plans. 30 CFR 75.370. Each mine operator must “develop and follow a ventilation plan” which is “approved by the District Manager.” 30 CFR 75.370(a)(1). No proposed ventilation plan may be implemented before it is approved by the District Manager. 30 CFR 75.370(d).

MSHA regulations also set out detailed contents for the mine ventilation plans. 30 CFR 75.371. For example, ventilation plans must include “planned main mine fan stoppages, other than those scheduled for testing, maintenance or adjustment, including procedures to be followed during these stoppages and subsequent restarts and the type of device to be used for monitoring main mine fan pressure, if other than a pressure recording device.” 30 CFR 75.371(b), “Section and face ventilation systems used and the minimum quantity of air that will be delivered to the working section . . .” 30 CFR 75.371(f), “Locations where air quantities must be greater than 3,000 cubic feet per minute.” 30 CFR 75.371(g), and many other specific requirements. 30 CFR 75.371. The ventilation plan has the force and effect of “law” at the mine. The mine may be cited for violation of the plan and mine personnel may be held personally liable, civilly and criminally, for violations of the plan.

Title 30 CFR 75.371 also gives the District Manager broad authority to add regulatory requirements to the Ventilation Plan which are neither described, nor required, by the regulations or 30 U.S.C. 863. Specifically, the regulations currently state, without limitation, that “[t]he mine ventilation plan shall contain the information described below *and any additional provisions required by the district manager.*” 30 CFR 75.371 (emphasis added).

II. Discussion

MSHA is proposing to rescind the power of District Managers to require additional provisions in ventilation control plans, beyond the reticulated criteria set out in 30 CFR 75.371 and other requirements set forth in 30 CFR 75.370–371. MSHA has reevaluated its

regulations and tentatively concluded that the significant authority and discretion granted to District Managers in 30 CFR 75.371 to add “*and any additional provisions required by the district manager,*” not identified in the statute or improved mandatory safety standards is not supported by statute and violates the Appointments Clause and the APA.

While mine operators are required by statute to prepare and submit a “ventilation system and methane and dust control plan,” and while MSHA has promulgated regulations setting forth specific contents and requirements for ventilation plans, nothing in the plain text of the underlying statute including 30 U.S.C. 863 and 30 U.S.C. 811(a), can be read to permit the unfettered addition of “*and any additional provisions required by the district manager.*” 30 CFR 75.371. This lack of statutory authority is contrary to *Loper Bright Enterprises v. Raimondo*, 603 U.S. 369 (2024) and is an adequate reason to rescind the clause “*and any additional provisions required by the district manager.*”

Government officials that exercise significant discretion when carrying out important functions are officers of the United States, and thus subject to the Appointments Clause. *See Lucia v. SEC*, 585 U.S. 237, 248 (2018); U.S. Const. Art. II, § 2, cl. 2. Under Section 75.371, District Managers are granted nearly unlimited discretion to include additional provisions in mine ventilation plans as they deem appropriate. Accordingly, because District Managers are not appointed pursuant to the Appointments Clause, that substantial authority is unlawful.

Independently, the significant discretion in section 75.371 appears to violate the APA. The introductory text in 30 CFR 75.371 essentially amounts to the unfettered ability of the District Manager to draft and create “laws” which are civilly and criminally enforceable, without bicameral presentment, and without notice and comment rulemaking. Various statutory provisions, including 30 U.S.C. 811, give the Secretary authority to issue health and safety regulations for mines. When these regulations are substantive rules, with “general or particular applicability and future effect designed to implement, interpret, or prescribe law or policy,” 5 U.S.C. 551(4), they are subject to the notice and comment process. MSHA must present the rulemaking to the public for comment, then issue a final rule responding to any comments. *See* 5 U.S.C. 553. 30 CFR 75.371 skips this process entirely when it vests District Managers with the

authority to require undesignated ventilation plan provisions. Giving the District Manager authority to include additional provisions in ventilation plans, is promulgating a new substantive rule of particular applicability, without any of the necessary process. Thus, 30 CFR 75.371 violates the APA.

MSHA seeks all comments on any aspects of the proposed rule, including the statutory authority, appointments clause issues and APA requirements, and the costs and benefits of the District Manager’s vague authority.

III. Procedural Issues and Regulatory Review

A. Review Under Executive Orders 12866 and 13563

Executive Order (E.O.) 12866, “Regulatory Planning and Review,” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

E.O. 13563, “Improving Regulation and Regulatory Review,” 76 FR 3821 (Jan. 21, 2011), requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. E.O. 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation’s regulatory system to promote predictability, reduce uncertainty, and use the best, most innovative, and least burdensome tools for achieving regulatory ends.

E.O. 12866 and E.O. 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. E.O. 13563 emphasizes the

importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

Under section 6(a) of E.O. 12866, the Office of Management and Budget's (OMB's) Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and whether Agencies are required to submit the regulatory action to OIRA for review. Under section 3(f) of E.O. 12866, a "significant regulatory action" is a regulatory action that is likely to result in a rule that may:

(1) have an annual effect on the economy of \$100 million or more, or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities (also referred to as economically significant);

(2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients; or

(4) raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the E.O.

Background

The proposed rule would apply to all underground coal mines. The existing rule allows the District Manager to require mine operators to include plan requirements not specified in the statute or regulations, while the proposed rule would rescind the power of District Managers to do so. The proposed change would decrease the burden currently faced by mine operators of having to revise their ventilation plans to include plan requirements not specified in the statute or regulations when required by the District Manager. The proposed rule would maintain the existing ventilation plan requirements, except for the District Manager's discretion to include plan requirements not specified in the statute or regulations.

Based on MSHA internal data, the Agency estimates there will be approximately 215 underground coal mines operating each year that would be impacted by this proposed rule.¹ All estimated figures are expressed in 2024 dollars.

Under the baseline scenario mine operators would continue their current

practice of making changes to their ventilation plans as deemed necessary by their District Manager, but not required elsewhere in existing regulations. Under the proposed rule mine operators would no longer need to include plan requirements not specified in the statute or regulations.

Benefits

Under this proposed rule mine operators would no longer be required to incorporate novel or unspecified provisions into their ventilation plans at the discretion of the District Manager. This change does not impact any other existing requirements for ventilation plans. This action will remove improper regulatory burden and reduce arbitrary and unforeseen demands on mine operators.

The benefits associated with the proposed rule cannot be easily quantified due to existing information gaps and challenges with quantifying the incremental shifts in costs and benefits under the proposed rule. However, some benefits are discussed in a qualitative manner below. The potential benefits of the proposed rule include:

(1) reduced production delays for mines—faster plan approval can enable earlier initiation or resumption of mining operations, reducing downtime, and increasing operational efficiency;

(2) improved resource allocation—predictable and consistent plan requirements reduce the need for mine operators to hire consultants or devote engineering resources to anticipate or respond to unpredictable District Managers' additional criteria;

(3) regulatory certainty—by aligning plan requirements strictly with the regulations, operators can better plan capital expenditures, staffing, and compliance investments, improving long-term planning and cost efficiency;

(4) increased domestic energy production—more predictable plan approval processes may allow mines to optimize coal output, supporting national energy goals and supply chain stability; and,

(5) prevents unauthorized rulemaking—preventing extra-statutory, unaccountable and unauthorized rulemaking restores confidence in the administrative process.

MSHA requests public comments on potential benefits associated with this proposal.

Cost Savings

MSHA estimates that mine operators would accrue a cost reduction from efficiencies associated with specific and consistent ventilation plan

requirements, both for initial plans and revisions. Removing the provision asserting broad District Manager discretion with respect to ventilation plan requirements would result in cost savings to mine operators who would be better able to anticipate required plan revisions and receive plan approval more quickly. MSHA estimates that mine operators would accrue a cost reduction from no longer having to revise ventilation plans at the request of the District Manager. The Agency estimates that each year 14 new ventilation plans, and 760 revised ventilation plans are submitted to MSHA. Of which, 50 percent (387 plans)² would need to be revised specifically at the discretion of the District Manager. MSHA requests comments on the estimated number of plans impacted by this proposal.

MSHA used data from the May 2024 Occupational Employment and Wage Statistics (OEWS) published by the Bureau of Labor Statistics (BLS) for hourly wage rates³ and adjusted the rates for benefits,⁴ wage inflation,⁵ and overhead costs.⁶ The analysis period is 10 years.

The cost savings generated by the proposed rule consists of the following:

² 387 revised plans at the request of the District Manager = (14 new plans + 760 revised plans) × 50 percent.

³ To obtain OEWS data, follow BLS's directions in its Frequently Asked Questions: "E. How to get OEWS data. 4. What are the different ways to obtain OEWS estimates from this website?" at https://www.bls.gov/oes/oes_ques.htm.

⁴ The benefit multiplier comes from BLS Employer Costs for Employee Compensation accessed by menu at <http://data.bls.gov/cgi-bin/srgate> or directly at <http://download.bls.gov/pub/time.series/cm/cm.data.0.Current>. Insert the data series CMU2030000405000D and CMU2030000405000P, Private Industry Total benefits for Construction, extraction, farming, fishing, and forestry occupations, which is divided by 100 to convert to a decimal value. MSHA uses the latest 4-quarter moving average 2024Q1–2024Q4 to determine that 31.2 percent of total loaded wages are benefits. MSHA computes the benefit multiplier with a number of detailed calculations, but it may be approximated with the formula $1 + (\text{benefit percentage} / (1 - \text{benefit percentage}))$. The benefit multiplier is $1.453 = 1 + (0.312 / (1 - 0.312))$.

⁵ Wage inflation is the change in Series ID: CIS2020000405000I; Seasonally adjusted; Series Title: Wages and salaries for Private industry workers in Construction, extraction, farming, fishing, and forestry occupations, Index. (<https://data.bls.gov/cgi-bin/srgate>; Inflation Multiplier = (Current Quarter Cost Index Value/OEWS Wage Base Quarter Index Value). The inflation multiplier is determined by using the employment price index from the most current quarter, 2024Q4, divided by the base year and quarter of the OEWS employment and wage statistics, 2024Q2. The inflation multiplier is $1.022 = 166.7/163.1$.

⁶ MSHA uses an overhead rate of 17 percent. This overhead rate is based on a 2002 EPA report by Cody Rice, "Wage Rates for Economic Analysis of the Toxics Release Inventory Program", available at <https://www.regulations.gov/document/EPA-HQ-OPPT-2016-0387-0064>.

¹ The Number of mines inspected at least once in 2024 and whose 'current status' is listed as active, intermittent, or nonproducing active on April 14, 2025.

1. Revisions to Ventilation Plans Required by the District Manager

MSHA assumes that under the baseline each year there are 387 new and revised ventilation plans that are revised at the District Managers discretion. MSHA estimates that it takes a coal mine supervisor, earning \$95.72 per hour, 1 hour to make the requested revisions. Under the proposed rule these revisions would no longer need to be made, creating an annual cost saving of \$37,044.⁷

2. Providing Notifications of Denials

Currently when MSHA denies a ventilation plan or a revision to a plan the mine operator must notify the miner's representative of this denial. MSHA estimates that the 387 plans that under the baseline would require revisions to meet the District Manager's requirements would receive such a denial upon their first submission. It is assumed that it takes a clerical worker, earning \$44.53 per hour 15 minutes to make such notifications. The proposed rule would remove the need for these notifications, creating an annual cost saving of \$4,308.⁸

3. Notification of Resubmission of Ventilation Plan and Provide a Copy of Resubmission

When a mine operator submits a ventilation plan or a revision to a plan, they must notify the miner's representative of the submission and provide them with a copy. MSHA estimates that the 387 plans that would under the baseline require revisions to meet the District Manager's requirements would have to be revised and then resubmitted to MSHA. It is assumed that it takes a clerical worker earning \$44.53, 15 minutes to make such notifications. The proposed rule would remove the need for these notifications, creating an annual cost saving of \$4,308.⁹

It is assumed that each resubmission is approximately 3 pages long and the cost to print per page is \$0.15. Under the proposed rule mine operators would no longer need to generate these copies creating an annual cost saving of \$174.¹⁰

4. Copying and Mailing Ventilation Plans

In submitting ventilation plans to MSHA, the operator is expected to incur a cost to mail in any physical plans or

revisions. MSHA assumes that 100 percent of plans and plan revisions are submitted to MSHA physically via the mail. Under the baseline 387 plans that would have had to be resubmitted with revisions to meet the District Manager's requirements. At a cost of \$1.45 per plan for copying (3 pages per plan, \$0.15 per page) and mailing (\$1.00 per plan), removing this requirement would lead to an annual cost saving of \$561.¹¹

Summary

Removing the provisions concerning the District Manager's requirements for ventilation plans would result in cost savings to mine operators through avoided revisions to ventilation plans that under the existing regulation, would have been requested by the District Manager. Under the proposed rule, incremental cost savings are estimated at \$0.464 million over 10 years undiscounted. These cost savings include no longer revising ventilation plans to meet non-statutory or regulatory requirements by the District Manager, providing copies of revised plans to miners and their representatives, and the avoided costs of copying and mailing revised ventilation plans. For this proposed rule, the Agency estimates that the annualized cost saving across the three discount rates of 0 percent, 3 percent, and 7 percent would be \$46,395.

While cost savings are quantified, potential benefits of the proposed rule have been addressed in a qualitative manner and include: reduced production delays, improved resource allocation, regulatory certainty, increased domestic energy production and unauthorized rulemaking. Additionally, more efficient approval of ventilation plans is expected to result in other cost savings, including earlier initiation (or resumption) of production and revenue due to simplified plan and amendment approvals, lower costs associated with subject matter expert consultants hired by mine operators in response to unanticipated Agency requirements, and other efficiencies generated by increased regulatory predictability resulting from this action. Benefits of the proposed rule could also result from a more efficient Agency review and approval of ventilation plans for underground coal mines. Underground coal mine operators are expected to benefit from the proposed rule that clarifies the information and provisions required in ventilation plans. This is expected to help ease operator confusion regarding what content is

required when developing ventilation plans for MSHA approval and to result in an increase in the time value of revenues generated by coal production. Another potential benefit to the public is the increased opportunity to produce coal, which would improve American energy production. The proposed rule is deregulatory because it reduces qualitative burdens for mine operators. Additionally, the Agency experience supports cost savings that are not yet quantified.

Significance Determination

Under section 6(a) of E.O. 12866, the Office of Management and Budget's (OMB's) Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and whether Agencies are required to submit the regulatory action to OIRA for review. Under section 3(f) of E.O. 12866, a "significant regulatory action" is a regulatory action that is likely to result in a rule that may:

(1) have an annual effect on the economy of \$100 million or more, or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities (also referred to as economically significant);

(2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients; or

(4) raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the E.O.

OIRA has designated this rule a "significant regulatory action" under section 3(f) of E.O. 12866. Accordingly, it will be reviewed by OMB.

No alternatives are considered for this proposed deregulatory action. MSHA requests comments on alternatives within the Agency's authority that would generate similar or greater benefits.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) of 1980, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996, requires preparation of an Initial Regulatory Flexibility Analysis (IRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on

⁷ \$37,044 = 387 plans × \$95.72 per hour × 1 hour.

⁸ \$4,308 = 387 plans × \$44.53 per hour × 15 minutes.

⁹ \$4,308 = 387 plans × \$44.53 per hour × 15 minutes.

¹⁰ \$174 = 387 plans × (3 pages × \$.15 cost per page).

¹¹ \$561 = 387 plans × ((3 pages × \$.15 cost per page) + \$1 mailing cost).

a substantial number of small entities. The RFA defines small entities to include small businesses, small organizations, including not-for-profit organizations, and small governmental jurisdictions.

Under the RFA, MSHA uses the Small Business Administration's (SBA) definition to set thresholds for small business sizes for the MNM and coal mining industries defined at the 6-digit North American Industry Classification System (NAICS) level. For underground coal mines the threshold is 1,500 employees and MSHA estimates that there are 115 underground coal mines that meet the definition of small.

MSHA evaluated data routinely provided by mine operators related to the number of mines, employment, and production from MSHA's Standardized Information System (MSIS) for underground coal mines. MSHA calculated revenues as production of coal in short tons times the average price of coal. Using internal data, MSHA estimates that small coal mines produce roughly 92.1 million tons of coal annually. Using U.S. Energy Information Administration Annual Coal Report 2023 Table 28, Average Sales Price of Coal by State and Mine Type, the average coal price for was \$54.04 per short ton in 2023. The price was then adjusted to 2024 dollars using CPI-U, \$55.63 per short ton, to estimate national coal revenues generated by small coal mines of \$5.1 billion.

MSHA assesses the impacts on small entities by comparing the estimated costs, in this case cost savings, of the proposed rule to the estimated revenues for those small entities. When estimated compliance costs are less than 1 percent of the estimated revenues, the Agency believes it is generally appropriate to conclude that there is no significant economic impact on a substantial number of small entities. When estimated compliance costs exceed 1 percent of revenues, MSHA investigates whether further analysis is required. The impact of the proposed rule, as a percentage of revenue, is essentially zero: for small coal mine operators the total annualized cost is \$46,395 while total annual revenue is \$5.1 billion, resulting in a ratio of 0.001 percent. Thus, no further analysis is required.

MSHA considered the costs on small mines when developing the proposed rule. MSHA reviewed this proposed rule, which eliminates burdensome regulations, under the provisions of the RFA. MSHA initially concludes that this proposed rule would not have a 'significant economic impact on a substantial number of small entities,' and that the preparation of an IRFA is

not warranted. MSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) provides for the Federal Government's collection, use, and dissemination of information. The goals of the Paperwork Reduction Act include minimizing paperwork and reporting burdens and ensuring the maximum possible utility from the information that is collected under 5 CFR part 1320. The Paperwork Reduction Act requires Federal agencies to obtain approval from OMB before requesting or requiring "a collection of information" from the public.

This proposed rule imposes no new information collection or record-keeping requirements. However, this proposed rule would result in substantive changes to another currently approved information collection request, OMB Control Number 1219-0088 "Ventilation Plans, Tests, and Examinations in Underground Coal Mines." The currently approved information collection request covers requirements in 30 CFR part 75, which sets forth the procedures and rules to govern the submission and approval of ventilation plans.

Type of Review: Substantive Change to currently approved information collection.

OMB Control Number: 1219-0088.

Title: Ventilation Plans, Tests, and Examinations in Underground Coal Mines.

Description of the ICR:

Background

The proposed rule would apply to all underground coal mines. The existing rule allows the District Manager the discretion to revise ventilation plans, while the proposed rule would decrease the burden currently faced by mine operators of having to revise their ventilation plans when required by the District Manager.

Based on MSHA internal data, there were 225 underground coal mines in the calendar year 2023 affected by this information collection request (70 mines with 1-19 employees, 146 mines with 20-500 employees, and 9 mines with more than 500 employees). On average, there is 1 fan, 1 working section, and 1 shift per day at mines with 1-19 employees; 1.5 fans, 2.5 working sections, and 2 shifts per day at mines with 20-500 employees; and 1.5 fans,

2.5 working sections, and 3 shifts per day at mines with more than 500 employees. MSHA estimates that there are on average of 200 working days/50 weeks of operation in mines with 1-19 employees; 300 working days/52 weeks of operation in mines with 20-500 employees; and 350 working days/52 weeks of operation in mines with more than 500 employees. The burden hour estimates are based on the total number of weeks mines operate yearly, rather than on the average number of work weeks.

Summary of Changes

This change request will change the supporting statement for this information collection request. Currently 225 underground coal mines are impacted under 1219-0088 under the proposed rule. This change does not modify the authority or number of affected mine operators and contractors, but it does decrease the paperwork burden and costs associated with ventilation plans as captured by this information collection request.

The number of respondents, frequency of response, annual hour burden, and recordkeeping cost are described below.

1. Installation of Main Mine Fans (30 CFR 75.310(a))

Under 30 CFR 75.310, each mine is required to be ventilated by one or more main mine fans. This section sets forth requirements and specifications for the installation of main mine fans. Under 30 CFR 75.310(a)(4), mine operators are required to equip each main mine fan with a pressure recording device, which may be a part of a fan monitoring system, and to maintain the resulting records for one year.

The record, a pressure recording chart, will be generated an average of 50 weeks per year at mines with 1-19 employees, and every week (52 weeks per year) at mines with 20-500 employees and mines with more than 500 employees. MSHA assumes that mines with 1-19 employees will have 1 mine fan, while mines with 20 or more employees will average 1.5 mine fans per mine. The number of responses per respondent is thus 50 for mines with 1-19 employees and 78 for mines with 20 or more employees. MSHA estimates that it takes 7 minutes per week to generate and maintain the record for each fan. A miner earning \$47.97 per hour typically performs this task.

This proposed rule does not impact this information collection cost. The number of annual respondents is 225, the number of annual responses is 15,590, the annual burden hours is

1,819, and the annual recordkeeping cost to respondents is \$0.

2. Main Mine Fan Examinations and Records (30 CFR 75.312)

2–1. Main Mine Fan Examination and Certification (30 CFR 75.312(a), (b), and (f))

Under 30 CFR 75.312(a) and (b), mine operators are required to conduct daily examinations on main mine fans not using a monitoring system to ensure electrical and mechanical reliability. For mines with a monitoring system, the data provided by the fan monitoring system must be reviewed at least once each day to assure that the fan and the fan monitoring system are operating properly. Fan examinations are not required on days when no one enters the mine. Although production may not occur, people do enter the mine for maintenance and examinations 240 days per year at mines with 1–19 employees, 365 days per year at mines with 20–500 employees, and 365 days at mines with more than 500 employees. MSHA assumes that mines with 1–19 employees will have 1 mine fan, while mines with 20 or more employees will average 1.5 mine fans. The number of responses per respondent is thus 240 for mines with 1–19 employees and 547.5 for mines with 20 or more employees.

Under 30 CFR 75.312(f)(1) and 75.321(f)(2), persons making main mine fan examinations must certify that the examinations were made. The fan examination certification time is estimated at 1 minute. A certified person earning \$62.39 per hour typically performs this task.

This proposed rule does not impact this information collection cost. The number of annual respondents is 225, the number of annual responses is 101,663, the annual burden hours is 1,694, and the annual recordkeeping cost to respondents is \$0.

2–2. Automatic Fan Signal Device Testing (30 CFR 75.312(c), (d), and (g)(3))

Under 30 CFR 75.312(c), the automatic fan signal device for each main mine fan must be tested at least once every 31 days. Under 30 CFR 75.312(d), automatic closing doors in multiple main mine fan systems must be tested at least once every 31 days. A record of these tests is required under 30 CFR 75.312(g)(3), taking 5 minutes per mine, done 12 times yearly. MSHA assumes that mines with 1–19 employees will have 1 mine fan, while mines with 20 or more employees will average 1.5 mine fans. The number of responses per respondent is thus 12 for

mines with 1–19 employees and 18 for mines with 20 or more employees. This record can be performed by a certified person earning \$62.39 per hour.

This proposed rule does not impact this information collection cost. The number of annual respondents is 225, the number of annual responses is 3,630, the annual burden hours is 303, and the annual recordkeeping cost to respondents is \$0.

2–3. Records of Uncorrected Defects (30 CFR 75.312(g)(1) and (2))

Under 30 CFR 75.312(g)(1), a record of uncorrected defects found during an examination must be kept. Estimated recordkeeping is 5 minutes and MSHA estimates that 90 mines will have uncorrected defects requiring a record each month. This record can be performed by a certified person earning \$62.39 per hour.

Under 30 CFR 75.312(g)(2)(ii), mines using monitoring systems to monitor fan pressure must make a record concerning monitoring system malfunctions and electrical or mechanical deficiencies, and any sudden increase or loss in mine ventilating pressure. MSHA estimates 20 mines will be required to make a record of monitoring system malfunctions. MSHA estimates the recordkeeping to take 10 minutes. This record can be performed by a certified person earning \$62.39 per hour.

This proposed rule does not impact this information collection cost. The number of annual respondents is 110, the number of annual responses is 1,320, the annual burden hours is 130, and the annual recordkeeping cost to respondents is \$0.

3. Methane Monitors (30 CFR 75.342(a))

Under 30 CFR 75.342(a)(1), mine operators must install MSHA approved methane monitors on all face cutting machines, continuous miners, longwall face equipment, loading machines, and other mechanized equipment used to extract or load coal in the working place. In addition, methane monitors must be maintained in permissible and proper operating condition and be calibrated with a known methane-air mixture at least once every 31 days. Under 30 CFR 75.342(a)(4)(ii) and (iii), operators are required to keep records of calibration tests for 1 year from the date of the test. Estimated time to make a record is 5 minutes per month for mines with 1–19 employees, and 8 minutes for mines with 20–500 and more than 500 employees. The record can be made by a qualified electrician earning \$59.34 per hour.

This proposed rule does not impact this information collection cost. The

number of annual respondents is 225, the number of annual responses is 2,700, the annual burden hours is 318, and the annual recordkeeping cost to respondents is \$0.

4. Atmospheric Monitoring Systems (30 CFR 75.351)

Under 30 CFR 75.351(o), when an atmospheric monitoring system is used to comply with 30 CFR 75.323(d)(1)(ii), 75.340(a)(1)(ii), 75.340(a)(2)(ii), 75.350(b), 75.350(d), or 75.362(f), individuals designated by the mine operator must make the following records by the end of the shift in which the following event(s) occur:

(i) If an alert or alarm signal occurs, a record of the date, time, location and type of sensor, and the cause for the activation.

(ii) If an AMS malfunctions, a record of the date, the extent and cause of the malfunction, and the corrective action taken to return the system to proper operation.

(iii) A record of the seven-day tests of alert and alarm signals; calibrations; and maintenance of the AMS must be made by the person(s) performing these actions.

It is estimated that 32 mines have these monitoring systems averaging 7 alarm activations annually. MSHA estimates that it will take 2 minutes to make a record of the occurrence. The record can be made by a certified person earning \$62.39 per hour.

This proposed rule does not impact this information collection cost. The number of annual respondents is 32, the number of annual responses is 224, the annual burden hours is 7, and the annual recordkeeping cost to respondents is \$0.

5. Preshift Examinations at Fixed Intervals (30 CFR 75.360)

Under 30 CFR 75.360(a)(1), preshift examinations are required to be conducted within 3 hours prior to the beginning of each shift. MSHA estimates that the number of workdays per year is: 200 days for mines with 1–19 employees; 300 days for mines with 20–500 employees; and 350 days for mines with more than 500 employees. On average, a mine with 1–19 employees will conduct 1 examination per day, mines with 20–500 employees will conduct 2 examinations per day, and mines with more than 500 employees will conduct 3 examinations per day. The number of responses per respondent is thus 200 for mines with 1–19 employees, 600 for mines with 20–500 employees, and 1,050 for mines with more than 500 employees.

Under 30 CFR 75.360(g) records of the results of preshift examinations, including hazardous conditions observed during the examinations and their locations, are required to be made. Mine operators are also required to record violations of mine specific mandatory health or safety standards found during these examinations. These mine standards represent the conditions or practices that, if uncorrected, present the greatest unsafe conditions and the most serious risks to miners. Records are also required to be made of the action taken to correct hazardous conditions and violations of the mine standards observed during the preshift examination.

MSHA estimates the recordkeeping activity to take 18 minutes per record in mines with 1–19 employees and 33 minutes per record in mines with 20 or more employees. Records are typically made by a certified person earning \$62.39 per hour. Countersigning by the mine supervisor, earning \$79.76 per hour, is required, and takes an estimated 5 minutes per record for mines with 1–19 employees, 10 minutes per record for mines with 20–500 employees, and 15 minutes per record for mines with more than 500 or more employees.

This proposed rule does not impact this information collection cost. The number of annual respondents is 225, the number of annual responses is 222,100, the annual burden hours is 75,707, and the annual recordkeeping cost to respondents is \$0.

6. On-Shift Examination (30 CFR 75.362)

6–1. On-Shift Examination for Hazardous Conditions (30 CFR 75.362(a)(1))

The recordkeeping requirement for hazardous conditions and violations of the mine mandatory health or safety standards found during on-shift examinations under 30 CFR 75.362(a)(1) are accounted for in 30 CFR 75.363. The records that are accounted under 30 CFR 75.363 pertain to records recorded in a mine's book in accordance with 30 CFR 75.363(b).

Recordkeeping requirements under 30 CFR 75.362(g)(1), 75.362(g)(3) and (g)(4) pertain to violations under 75.362(a)(3)(i)–(vi). Under 30 CFR 75.362(g)(1), mine operators are required to have a certified person certify by initials, date, and time the examination was made and at enough locations to show the entire area has been examined for hazards under 30 CFR 75.362(a)(3)(i)–(vi), and in accordance with the recordkeeping requirements of 30 CFR 75.362(g)(1),

75.362(g)(3) and (g)(4). The estimated burden of this recordkeeping required under 30 CFR 75.362(g)(1), 75.362(g)(3) and (g)(4) are shown below.

These requirements include that a person designated by the operator must conduct an examination and record the results and the corrective actions taken to ensure compliance with 30 CFR 75.362(a)(3). The examinations are made on the sections and these sections include MMUs.

MSHA estimates that a certified person earning \$62.39 per hour, takes 3 minutes to make a record of the examination for the average mine in all mine sizes. MSHA estimates that there are 43 MMUs in mines with 1–19 employees, which average 1 shift per day; 360 MMUs in mines with 20–500 employees, which average 2 shifts per day; and 62 MMUs in mines with more than 500 employees, which average 3 shifts per day. Records of the examinations will need to be made of these shifts each working day. MSHA estimates that the number of workdays per year is: 200 days for mines with 1–19 employees; 300 days for mines with 20–500 employees; and 350 days for mines with more than 500 employees.

Under 30 CFR 75.362(g)(3), that at each mine the mine supervisor (foreman) or equivalent official must countersign each examination record under 30 CFR 75.362(a)(3) after it is certified by a certified person in accordance with 30 CFR 75.362(g)(2)(ii). MSHA estimates that it takes 1 minute for a mine supervisor or equivalent mine official earning \$79.79 per hour to review and countersign the record.

This proposed rule does not impact this information collection cost. The number of annual respondents is 225, the number of annual responses is 579,400, the annual burden hours is 19,313, and the annual recordkeeping cost to respondents is \$0.

6–2. On-Shift Examination for Respirable Dust (30 CFR 75.362(a)(2))

Under 30 CFR 75.362(a)(2), a person designated by the operator must conduct an examination and record the results and the corrective actions taken to assure compliance with the respirable dust control parameters specified in the mine ventilation plan. MSHA estimates that on average, there is 1 fan, 1 working section, and 1 shift per day at mines with 1–19 employees; 1.5 fans, 2.5 working sections, and 2 shifts per day at mines with 20–500 employees; 1.5 fans, 2.5 working sections, and 3 shifts per day at mines with 501+ employees. Additionally, MSHA estimates that there are 43 MMUs in mines with 1–19 employees, which average 1 shift per

day; 360 MMUs in mines with 20–500 employees, which average 2 shifts per day; and 62 MMUs in mines with 501+ employees, which average 3 shifts per day. Records of the examinations will need to be made of these shifts each working day. MSHA estimates that the number of workdays per year is: 200 days for mines with 1–19 employees; 300 days for mines with 20–500 employees; and 350 days for mines with more than 500 employees.

MSHA estimates that a mine supervisor, earning \$79.76 per hour, takes 3 minutes to make a record of the examination for the average mine in all mine sizes.

Under 30 CFR 75.362(g)(2)(i), the record required under 75.362(a)(2) must be certified by initials, date, and time on a board maintained at the section load out or similar location showing that the examination was made prior to resuming production. This standard does not add any additional burden because the record is already required under 30 CFR 75.362(a)(2).

Under 30 CFR 75.362(g)(2)(ii), records required under 30 CFR 75.362(a)(2) must be verified by initials, date, and time, by the certified person directing the on-shift examination. Under 30 CFR 75.362(g)(3), the mine supervisor (foreman) or equivalent official must countersign each examination record under 30 CFR 75.362(a)(2) after it is verified by a certified person in accordance with 30 CFR 75.362(g)(2)(ii). MSHA estimates that it takes 1 minute for a certified person earning \$62.39 per hour to verify the record; and another 1 minute for a mine supervisor or equivalent mine official earning \$79.76 per hour to review and countersign the record.

This proposed rule does not impact this information collection cost. The number of annual respondents is 225, the number of annual responses is 869,100, the annual burden hours is 24,142, and the annual recordkeeping cost to respondents is \$0.

7. Supplemental Examination for Hazardous Conditions and Violations of Mandatory Health or Safety Standards (30 CFR 75.361 and 75.363)

7–1. Supplemental Examination for Hazardous Conditions (30 CFR 75.361 and 75.363(a))

Under 30 CFR 75.363(b), a record of any hazardous conditions found, including any found during examinations under 30 CFR 75.361 supplemental examinations and any violation of the mine mandatory health or safety standards found during 30 CFR 75.362 on-shift examinations, must be

recorded by a certified person along with corrective actions taken to abate the conditions. This record must be countersigned by the mine supervisor. This record must be maintained in a secure book at the mine in accordance with 30 CFR 75.363(c). The time to record a hazard is estimated to be 5 minutes, and 3 minutes to countersign the record. The record can be made by a certified person earning \$62.39 per hour and signed by the mine supervisor earning \$79.76 per hour. MSHA estimates that 100 hazards per year will be recorded at mines with at least 20 employees and 50 hazards per year will be recorded in mines with fewer than 20 employees.

Under 30 CFR 75.361(a), a certified person is required to make a supplemental examination for hazardous conditions and violations of the mandatory health or safety standards referenced in paragraph (a)(2) of that section before any person enters an area of the mine that has not had a preshift examined. Under 30 CFR 75.361(b), at each working place examined, the person making the supplemental examination must certify by initials, date, and the time, that the examination was made. MSHA estimates that it takes 1 minute for a certified person earning \$62.39 per hour to make the certification.

Additionally, if a hazard is found or a violation of one or more of the mine specific health or safety standards is identified, then a record must be kept under 30 CFR 75.363.

This proposed rule does not impact this information collection cost. The number of annual respondents is 225, the number of annual responses is 57,000, the annual burden hours is 2,850, and the annual recordkeeping cost to respondents is \$0.

7–2. Violations of Mandatory Health or Safety Standards (30 CFR 75.363(b))

Under 30 CFR 75.363, operators must record any violations of mine mandatory health or safety standards found on supplemental and on-shift examinations and any corrective actions taken. The mandatory health and safety standards represent the conditions or practices that, if uncorrected, present the greatest unsafe conditions and the most serious risks to miners. The supplemental (30 CFR 75.361) and on-shift (30 CFR 75.362) standards contain recordkeeping requirements if a violation of any of the standards is found.

During fiscal years 2021 through 2023, MSHA inspectors found an annual average of 12,057 violations of the mine standards MSHA believes

these violations are most likely to be identified during preshift, supplemental, on-shift, and weekly examinations. Because conditions resulting in these violations can occur and require corrective action multiple times during the year (e.g., insufficient rock dust), MSHA multiplied the 12,057 violations found by MSHA inspectors by a factor of 1.5 to arrive at an estimated 18,085 violations. MSHA assumes that half of these violations—9,043 violations—would be identified on the preshift (30 CFR 75.360) and weekly examinations (30 CFR 75.364) and the other half, 9,042 violations, would be identified on supplemental and on-shift examinations.

MSHA estimates that 80 percent of these (7,234 violations out of 9,043 violations) would be found during on-shift examinations and 20 percent (1,809 violations out of 9,043 violations) would be found during the supplemental examinations. MSHA estimates that it would take 3 minutes to record any violations identified and corrective actions taken. Mine supervisors earning \$79.76 an hour perform on-shift exams and certified persons earning \$62.39 perform supplemental exams.

This proposed rule does not impact this information collection cost. The number of annual respondents is 225, the number of annual responses is 9,043, the annual burden hours is 452, and the annual recordkeeping cost to respondents is \$0.

8. Weekly Examination (30 CFR 75.364)

8–1. Weekly Examination of Worked-Out Areas (30 CFR 75.364(a) and (h))

Under 30 CFR 75.364(a), at least every 7 days, a certified person must examine unsealed worked-out areas where no pillars have been recovered by traveling to the area of deepest penetration; measuring methane and oxygen concentrations and air quantities and making tests to determine if the air is moving in the proper direction in the area.

Under 30 CFR 75.364(h), at the completion of any shift during which a portion of a weekly examination is conducted, a record of the results of each weekly examination, including a record of hazardous conditions and violations of the nine mandatory health or safety standards found during each examination and their locations, the corrective action taken, and the results and location of air and methane measurements, must be made.

MSHA estimates the time required to make the record to be 35 minutes per record in mines with 1–19 employees

and 60 minutes per record in mines with 20 or more employees. Records are completed by a certified person earning \$62.39 per hour. The time needed to review and countersign the record by a mine supervisor earning \$79.76 per hour is 5 minutes per record at mines with 1–19 employees and 10 minutes per record at mines with 20 or more employees. MSHA also estimates that, on average, mines with 1–19 employees operate for 50 weeks out of the year and mines with 20+ employees operate 52 weeks out of the year.

This proposed rule does not impact this information collection cost. The number of annual respondents is 225, the number of annual responses is 23,120, the annual burden hours is 11,737, and the annual recordkeeping cost to respondents is \$0.

8–2. Weekly Examination of Hazardous Conditions (30 CFR 75.364(b) and (h))

Under 30 CFR 75.364(b), at least every 7 days, an examination for hazardous conditions and violations of the mandatory health or safety standards, as listed in 30 CFR 75.364(b)(8), must be made by a certified person designated by the mine operator. The mandatory health and safety standards represent the conditions or practices that, if uncorrected, present the greatest unsafe conditions and the most serious risks to miners.

Under 30 CFR 75.364(h), at the completion of any shift during which a portion of a weekly examination is conducted, a record of the results of each weekly examination, including a record of hazardous conditions and violations of the nine mandatory health or safety standards found during each examination and their locations, the corrective action taken, and the results and location of air and methane measurements, must be made.

MSHA estimates that it would take a certified person 3 minutes to record violations along with any corrective actions taken. A certified person conducting these examinations earns a wage of \$62.39 per hour. MSHA also estimates that, on average, mines with 1–19 employees operate for 50 weeks out of the year and mines with 20+ employees operate 52 weeks out of the year.

This proposed rule does not impact this information collection cost. The number of annual respondents is 225, the number of annual responses is 11,560, the annual burden hours is 578, and the annual recordkeeping cost to respondents is \$0.

9. Mine Ventilation Plan; Submission and Approval (30 CFR 75.370 and 75.371)

9–1. Mine Ventilation Plans (30 CFR 75.370(a)(1) and (2))

Under 30 CFR 75.370, the mine operator must submit a proposed ventilation plan in writing to the District Manager for approval and that plan must be reviewed by MSHA every 6 months. However, once a ventilation plan is approved, the operator needs to submit only the revised pages, sketches, and drawings of the plan when proposing revisions, unless the District Manager requests in writing that the mine operator submit a new fully revised plan. The operator must update the plan as often as necessary to ensure in the mine. The mine operator must notify the representative of miners of any proposed and approved ventilation plan or plan revision, and upon request, provide a copy.

MSHA estimates that new ventilation plans will be developed and submitted in writing to the District Manager by new or newly active mines, which are estimated to be 6 percent of the total (4 mines with 1–19 employees, 9 mines with 20–500 employees, and 1 mine with more than 500 employees), and will each take 32 hours each. New plans, plan revisions, and maps are prepared by a mine supervisor earning \$79.76 per hour and copies are made by a clerical employee earning \$34.66 per hour. Under 30 CFR 75.370(b), following receipt of the proposed plan or proposed revision, the representative of miners may submit timely comments to the district manager, in writing, for consideration during the review process. A copy of these comments must also be provided to the operator by the district manager upon request. MSHA assumes this will rarely take place. The annual burden cost for this provision is thus assumed to be ‘de minimis’. Under 30 CFR 75.370(c)(1), the district manager notifies the operator in writing of the approval or denial of approval of a proposed ventilation plan or proposed revision. A copy of this notification must be sent to the representative of miners by the district manager.

MSHA assumes that mines with 1–19 employees will receive 2 such notifications from MSHA each year, while mines with 20 or more employees will receive 4 such notifications. MSHA estimates that a clerical employee earning \$34.66 per hour will take 15 minutes to send a copy of this notification to the representative of miners for both proposed ventilation plans (only new mines: 6 percent of underground coal mines, equal to 4

mines with 1–19 employees, 9 mines with 20–500 employees, and 1 mine with more than 500 employees) or proposed revision (all underground coal mines).

Contractor Labor Cost

Under 30 CFR 75.370, mine operators must submit a proposed ventilation plan in writing to the District Manager for approval and that plan must be reviewed by MSHA every 6 months. However, once a ventilation plan is approved, the operator needs to submit only the revised pages, sketches, and drawings of the plan when proposing revisions, unless the District Manager requests in writing that the mine operator submit a new fully revised plan. The operator must update the plan as often as necessary to ensure that the plan is suitable to current conditions in the mine.

Mines with 1–19 employees will generally contract out for this service. MSHA estimates that under the proposed rule 6 percent of these mines (4) will submit a new ventilation plan and all mines with 1–19 employees (70) will submit 2 updates annually. MSHA further estimates that new plans will require 8 hours each, revised plans will require 4 hours each, and 3 maps will require 1 hour each. MSHA estimates that these tasks will be carried out by a contractor equivalent to a mine supervisor, earning \$79.76 per hour.

In addition, 3 copies of the mine ventilation map must be submitted annually or with each update (the assumption is that they will be submitted twice annually), including supplemental information listed in 30 CFR 75.372, requiring a total of 30 minutes. MSHA estimates that this task will be carried out by a contractor equivalent to a clerical employee, earning \$34.66 per hour.

This proposed rule would result in a reduction of annual recordkeeping cost to respondents from \$66,394 to \$34,473.

Copying and Postage Costs

MSHA estimates that under the proposed rule 6 percent of underground coal mine operators (4 mines with 1–19 employees, 9 mines with 20–500 employees, and 1 mine more than 500 employees) will create new ventilation plans each year. Under 30 CFR 75.370(a)(2), underground coal mines may revise approved ventilation plans. Additionally, MSHA estimates that under the proposed rule underground coal mines with 1–19 employees will revise and submit their ventilation plans to MSHA twice each year, and mines with 20 or more employees will revise and submit their ventilation to MSHA

plans 4 times each year. On average, MSHA estimates that a new plan or plan revision will be three pages. Copying will cost \$0.15 per page and \$1.00 for postage, for a total cost of \$1.45 per new plan or plan revision.

Under 30 CFR 75.370(a)(3)(i) and (f)(1), underground coal mine operators that revise their ventilation plans are required to notify the miners’ representative at least 5 days prior to submission of a mine ventilation plan revision and, if requested, provide a copy of the revisions to the miners’ representative under 30 CFR 75.370(a)(3)(i) and (f)(1). Under the proposed rule MSHA assumes that a copy of the revisions will always be requested. The number of copies provided equals the number of revisions noted above. MSHA estimates that the cost of copying will be \$0.45 for three pages.

Under 30 CFR 75.370(a)(3)(iii) and (f)(3), underground coal mine operators that revise their ventilation plans must post a copy of the revisions of the mine ventilation plan under 30 CFR 75.370(a)(3)(iii) and (f)(3). The number of postings is equal to the number of revisions noted above. MSHA estimates that the cost of copying will be \$0.45 for three pages.

This proposed rule would result in a reduction of annual recordkeeping cost to respondents from \$3,472 to \$1,819.

This proposed rule would result in a reduction in information collection costs. The number of annual respondents remains unchanged at 225, the number of annual responses would decrease from 2,499 to 957, the annual burden hours would decrease from 11,056 to 5,614 hours, and the annual recordkeeping cost to respondents would decrease from \$69,865 to \$36,292.

9–2. Mine Ventilation Plan Contents for Diesel-Powered Equipment (30 CFR 75.371)

Under 30 CFR 75.371(f), (j), (r), (kk), (ll), (mm), (nn), (oo), and (pp), certain information required in 30 CFR 75.325 and 70.1900 must be recorded in the mine operator’s ventilation plan as required by 30 CFR 75.370. MSHA estimates that under the proposed rule 15 mines annually will need to provide and record certain information with ventilation plans under 30 CFR 75.325 and 70.1900. MSHA estimates that the time required to record the additional information in the ventilation plan will be 15 minutes. The information is recorded by a mine supervisor earning \$79.76 per hour.

This proposed rule would result in a reduction in information collection

costs. The number of annual respondents would decrease from 29 to 15, the number of annual responses would decrease from 29 to 15, the annual burden hours would decrease from 7 to 4 hours, and the annual recordkeeping cost to respondents would remain unchanged at \$0.

9–3. Miner Notification and Copies of Ventilation Plan Revisions (30 CFR 75.370(a)(3) and (f))

Under 30 CFR 75.370(a)(3)(i) and (f)(1), underground coal mine operators are required to notify the miners' representative at least 5 days prior to submission of a mine ventilation plan or plan revision for MSHA approval and, if requested, provide a copy of the proposed and approved revisions to the miners' representative. Under the proposed rule MSHA assumes that a copy of the plan or plan revisions will be requested each time they are submitted. MSHA assumes underground coal mines with 1–19 employees will revise and submit their ventilation plans to MSHA twice each year, and mines with 20 or more employees will revise and submit their ventilation to MSHA plans 4 times each year. The number of copies of new plans provided to miners' representatives is estimated to be 6 percent of underground coal mines (4 mines with 1–19 employees, 9 mines with 20–500 employees, and 1 mine with more than 500 employees). MSHA estimates that it takes a clerical employee, earning \$34.66 per hour, 15 minutes to notify and provide a copy of the plan or plan revisions.

Under 30 CFR 75.370(a)(3)(iii) and (f)(3), underground coal operators must post a copy of the revisions of the mine ventilation plan. The number of postings is equal to the number of new plans and plan revisions, including ones created by contractors: 6 percent of all underground coal mines for new plans (4 mines with 1–19 employees, 9 mines with 20–500 employees, and 1 mine with more than 500 employees) and 100 percent of all underground coal mines, including new mines, for revised plans (2 times per year in mines with 1–9 employees and 4 times per year in mines with at least 20 employees). MSHA estimates that it takes a clerical employee earning \$34.66 per hour 15 minutes to post a copy of the plan or plan revisions to the mine ventilation plan.

This proposed rule would result in a reduction in information collection costs. The number of annual respondents would remain unchanged at 225, the number of annual responses would decrease from 1,548 to 253, the annual burden hours would decrease

from 387 to 63 hours, and the annual recordkeeping cost to respondents would remain unchanged at \$0.

10. Mechanical Escape Facilities (30 CFR 75.382)

Under 30 CFR 75.382(c), mines employing mechanical escape facilities must conduct a weekly examination to ensure that the facility is in proper operating condition. Under 30 CFR 75.382(g), mine operators are required to have a certified person certify by date, time, and initials, that the examination was conducted. It is estimated that 201 such facilities are in use at mines with 20 or more employees operating 52 weeks per year and that the certification will take 1 minute. The certification can be conducted by a certified person earning \$62.39 per hour.

This proposed rule does not impact this information collection cost. The number of annual respondents is 201, the number of annual responses is 10,452, the annual burden hours is 174, and the annual recordkeeping cost to respondents is \$0.

Summary of the Collection of Information

Under the proposed rule, the estimated number of respondents, responses, burden hours and recordkeeping costs to respondents would decrease from the currently approved information collection request. The reduction in information collection costs comes from removing the requirement of revising ventilation plans at the discretion of the District Manager.

Affected Public: Businesses or For-Profit.

Estimated Number of Respondents: 225 (0 due to this proposed rule).

Frequency: On occasion.

Estimated Number of Responses: 1,908,126 (– 2,852 due to this proposed rule).

Estimated Number of Burden Hours: 144,904 (– 5,770 due to this proposed rule).

Estimated Recordkeeping Costs to Respondents: \$36,292 (– \$33,574 due to this proposed rule).

D. Review Under Executive Order 13132

E.O. 13132, "Federalism," 64 FR 43255 (August 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The Executive Order requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the

States and to carefully assess the necessity for such actions. The Executive Order also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.

MSHA has examined this proposed rule and has determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O. 12988, "Civil Justice Reform," imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. 61 FR 4729 (Feb. 7, 1996). Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Section 3(c) of E.O. 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. DOL has completed the required review and determined that, to the extent permitted by law, this proposed rule meets the relevant standards of E.O. 12988.

F. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a

regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)). The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a “significant intergovernmental mandate,” and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them.

MSHA examined this proposed rule according to UMRA and determined that the proposed rule does not contain a Federal intergovernmental mandate, nor is it expected to require expenditures of \$100 million or more in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. As a result, the analytical requirements of UMRA do not apply.

G. Review Under the National Environmental Policy Act

The National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*), requires each Federal agency to consider the environmental effects of regulatory actions and to prepare an environmental impact statement on Agency actions that would significantly affect the quality of the environment; unless the action is considered categorically excluded under 29 CFR 11.10. MSHA has reviewed the proposed rule in accordance with NEPA requirements and the Department of Labor’s NEPA procedures (29 CFR part 11). As a result of this review, MSHA has determined that this proposed rule would not impact air, water, or soil quality, plant or animal life, the use of land or other aspects of the human environment. Therefore, MSHA has not conducted an environmental assessment nor provided an environmental impact statement.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family

Policymaking Assessment for any rule that may affect family well-being. This proposed rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, MSHA has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to E.O. 12630, “Governmental Actions and Interference with Constitutionally Protected Property Rights,” 53 FR 8859 (March 18, 1988), DOL has determined that this proposed rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB’s guidelines were published at 67 FR 8452 (Feb. 22, 2002). MSHA has reviewed this proposed rule under the OMB and has concluded that it is consistent with applicable policies in those guidelines.

K. Review Under Executive Order 13175

E.O. 13175, “Consultation and Coordination With Indian Tribal Governments” 65 FR 67249 (Nov. 9, 2000), requires agencies to consult with tribal officials when developing policies that may have “tribal implications.” This proposed rule does not have “tribal implications” because it will not “have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.” Accordingly, under E.O. 13175, no further Agency action or analysis is required.

L. Review Under Executive Order 13211

E.O. 13211, “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” 66 FR 28355 (May 22, 2001), requires agencies to publish a statement of energy effects when a rule has a significant energy action that adversely affects energy supply, distribution, or

use. MSHA has reviewed this proposed rule for its energy effects. For the energy analysis, this proposed rule will not exceed the relevant criteria for adverse impact.

M. Review Under Additional Executive Orders and Presidential Memoranda

MSHA has examined this proposed rule and has determined that it is consistent with the policies and directives outlined in E.O. 14154, “Unleashing American Energy” 90 FR 8353 (Jan. 29, 2025); E.O. 14192, “Unleashing Prosperity Through Deregulation” 90 FR 9065 (Feb. 6, 2025); and the Presidential Memorandum, “Delivering Emergency Price Relief for American Families and Defeating the Cost-of-Living Crisis” 90 FR 8245 (Jan. 28, 2025). This proposed rule is expected to be an E.O. 14192 deregulatory action.

List of Subjects in 30 CFR Part 75

Coal, Mine safety and health, Reporting and recordkeeping requirements, Underground coal mines, Ventilation.

For the reasons set forth in the preamble, and under the authority of the Federal Mine Safety and Health Act of 1977, as amended by the Mine Improvement and New Emergency Response Act of 2006, MSHA proposes to amend chapter I of title 30 of the Code of Federal Regulations as follows:

SUBCHAPTER O—COAL MINE SAFETY AND HEALTH

PART 75—MANDATORY SAFETY STANDARDS—UNDERGROUND COAL MINES

- 1. The authority citation for part 75 continues to read as follows:

Authority: 30 U.S.C. 811, 813(h), 957.

Subpart D—Ventilation

- 2. In § 75.371, revise the introductory text to read as follows:

§ 75.371 Mine ventilation plan; contents.

The mine ventilation plan shall contain the information described below:

* * * * *

James P. McHugh,

Deputy Assistant Secretary for Policy, Mine Safety and Health Administration.

[FR Doc. 2025–12232 Filed 6–30–25; 8:45 am]

BILLING CODE 4520–43–P

DEPARTMENT OF LABOR**Mine Safety and Health Administration****30 CFR Part 75**

[Docket No. MSHA–2025–0087]

RIN 1219–AB89

Electronic Surveying Equipment in Underground Mines

AGENCY: Mine Safety and Health Administration (MSHA), Department of Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: MSHA is proposing to allow the use of electronic surveying equipment in high-hazard areas of underground coal mines, if the equipment meets certain technical specifications and is operated under specific conditions. This proposed rule would codify technical specifications and working conditions in MSHA standards to allow the use of electronic surveying equipment in underground gassy mines. This proposed rule would reduce burdens on underground coal mine operators because mine operators would no longer need to submit a petition for modification to use non-permissible electronic surveying equipment.

DATES: Comments must be received on or before July 31, 2025.

ADDRESSES: All submissions must include RIN 1219–AB89 or Docket No. MSHA–2025–0087. You should not include personal or proprietary information that you do not wish to disclose publicly. If you mark parts of a comment as “business confidential” information, MSHA will not post those parts of the comment. Otherwise, MSHA will post all comments without change, including any personal information provided. MSHA cautions against submitting personal information.

You may submit comments and informational materials, clearly identified by RIN 1219–AB89 or Docket No. MSHA–2025–0087, by any of the following methods:

1. *Federal E-Rulemaking Portal:* <http://www.regulations.gov>. Follow the online instructions for submitting comments for MSHA–2025–0087.

2. *Email:* zzMSHA-comments@dol.gov. Include “RIN 1219–AB89” in the subject line of the message.

3. *Regular Mail or Hand Delivery:* MSHA, Office of Standards, Regulations, and Variances, Room C3522, 200 Constitution Avenue NW, Washington, DC 20210. Before visiting

MSHA in person, call 202–693–9440 to make an appointment.

No telefacsimiles (“faxes”) will be accepted.

FOR FURTHER INFORMATION CONTACT:

Jessica D. Senk, Acting Director, Office of Standards, Regulations, and Variances, MSHA at 202–693–9440 (voice). This is not a toll-free number.

SUPPLEMENTARY INFORMATION:**I. Background***Electronic Surveying Equipment*

Safe underground mining depends heavily on accurate and up-to-date mapping. Not having accurate mine maps has been a contributing factor for several mine accidents in the United States. For instance, in 2002, there was a non-fatal entrapment accident at Quecreek Mine in Pennsylvania, caused by a water inundation due to the use of an undated and uncertified map that did not show the complete and final mine workings of the abandoned mine.¹ Through accurate maps, miners can avoid mining at the intersections of a mine with the abandoned workings of another mine which may contain explosive gas or a large quantity of water.

An integral part of creating maps in underground mining is surveying—measuring distances, angles, and elevations, relative to known positions. To carry out accurate mine surveying and mapping, operators need access to the most precise surveying technology that can be used safely in underground mine environments, where fire and explosion dangers abound. Modern surveying instruments are almost universally electronic and are powered by batteries, which can ignite a fire or explosion in a gassy mine.

The Federal Mine Safety and Health Act of 1977, as amended, (30 U.S.C. 801 *et seq.*) (Mine Act) requires MSHA to establish requirements for the technical design, construction, and testing of electrical products, including surveying equipment, that must be approved by MSHA prior to use in gassy mines. In underground gassy mines, flammable or explosive gases such as methane and/or float coal dust can form explosive mixtures when combined with air. Before electronic surveying equipment can be used in gassy mines in the U.S., it must first be approved by MSHA.

MSHA’s requirements in title 30, Code of Federal Regulations (30 CFR)

part 18 ensure electric motor-driven products are designed and manufactured so that they will not emit a spark strong enough, or temperature sufficient to cause a fire or explosion. Those seeking MSHA approval (applicants) are typically product designers and manufacturers of electrical products such as surveying equipment. MSHA’s approval process includes testing and evaluating the electrical product to determine whether it performs according to certain technical and safety requirements. MSHA issues an approval if the electrical product passes all the tests and evaluations. Once the electrical product is approved by MSHA, it must display an MSHA approval marking indicating that the product is approved for use in gassy mines. MSHA sometimes refers to electrical products approved for use in gassy areas of mines as “permissible.” To continue to use the MSHA approval marking, the approval holder must maintain the quality of the electrical product according to the technical requirements upon which its approval was based.

Currently, there is no permissible electronic surveying equipment commercially available in the U.S. market. Mine operators must seek MSHA approval for the use of electronic surveying equipment in underground mines by filing petitions for modification under 30 CFR part 44.

Petitions for Modification

Section 101(c) of the Mine Act, 30 U.S.C. 811(c), allows mine operators or representatives of miners to file a petition, or request, to modify the application of any mandatory safety standard to a mine. MSHA reviews petitions for modification to determine whether the petitioner’s alternative method of achieving the result of the standard will at all times guarantee no less than the same measure of protection afforded by the standard, or the application of the standard will result in a diminution of safety to miners.

30 CFR part 44 establishes the procedures and rules of practice for filing a petition for modification under section 101(c) of the Mine Act. Once a petition has been filed by a mine operator or representative of miners, a notice requesting comment on the petition is published in the **Federal Register**, and MSHA personnel investigate to promptly determine whether to grant or deny the petition. Taking into consideration the alternative methods proposed by the petitioner and any additional requirements, MSHA will grant the petition for modification if the Agency

¹ Mine Safety and Health Administration (MSHA). 2003. *Report of investigation: Underground coal mine nonfatal entrapment on July 22, 2002*. Retrieved at: https://www.msha.gov/sites/default/files/Data_Reports/QuecreekInvestigationReport.pdf.

determines that the alternative method of achieving the result of the standard will at all times guarantee no less than the same measure of protection afforded by the standard, or the application of the standard will result in a diminution of safety to miners. The granted modification, together with any conditions, will have the same effect as a mandatory safety standard.

Through the petition for modification process, MSHA sometimes grants the use of non-permissible surveying equipment in areas of underground mines where the use of approved equipment is required. The granted petitions for modification generally propose very similar alternative methods, or conditions and terms, for the safe use of non-permissible surveying equipment in gassy areas of underground mines to ensure that miners are at all times afforded the same measure of protection if using permissible equipment.

II. Discussion

In 2008, mine operators filed various petitions seeking to use non-permissible electronic surveying equipment in high-hazard areas of underground coal mines where otherwise only permissible equipment was allowed. MSHA did not grant these petitions. Two rounds of litigation ensued, one ending in a 2016 ruling by the D.C. Circuit Court of Appeals (*Rosebud Mining Co. & Parkwood Res., Inc. v. Mine Safety & Health Admin.*, 827 F.3d 1090 (D.C. Cir. 2016)) and the other ending with a 2018 Consent Order by the Assistant Secretary (In the Matter of Buchanan Minerals LLC, Consol PA and Southeastern Land LLC, 2018). While each of these litigation tracks involved different mines with unique and specific circumstances, a general set of terms and conditions for these petitions can be distinguished, such that, when these terms and conditions are met, non-permissible surveying equipment could be used without reducing the existing protections afforded to miners.

MSHA proposes to codify certain technical specifications and working conditions to allow the use of electronic surveying equipment in specified underground areas of underground coal mines, so that mine operators would no longer need to file petitions for modification. This proposed rule would allow mine operators to safely use the best and most current technology available, while not reducing miner safety.

This proposed rule would not revise the language of any Proposed Decisions and Orders granted by MSHA for non-permissible surveying equipment.

Operators with petitions granted would decide between complying with the terms of their Proposed Decision and Order or complying with the requirements proposed in this rule and dismissing their petitions.

Under the proposed rule, there would be no change to existing ventilation requirements, methane monitoring requirements, de-energization requirements, and rock-dusting requirements. The Agency has preliminarily determined that this proposed rule, including the protective requirements that are generally consistent with the terms in granted petitions, would not reduce existing protection for miners.

MSHA seeks comments on any aspects of this proposed rule, including what records are appropriate to maintain to ensure compliance.

III. Section-by-Section Analysis

A. Section 75.1800—Purpose and Scope

This proposed rule would allow electronic surveying equipment that does not meet the requirements in part 18 to be used in high-hazard locations of a gassy mine. The proposed rule also establishes requirements for the features and maintenance of electronic surveying equipment and mandates the mining conditions where electronic surveying equipment can be used.

B. Section 75.1801—Definitions

The proposed rule defines *electronic surveying equipment* as battery-powered equipment essential for surveying (*i.e.*, total stations and theodolites). This does not include electronic devices or accessories that are not essential for surveying, such as keyboards, spare batteries, and remote controls. This standard is specifically limited in scope to apply only to two essential types of instruments, total stations and theodolites, and is consistent with the scope of litigation between MSHA and operators, which did not include other instruments.

The proposed rule defines *production activities* as activities that generate coal dust or methane gas including, but not limited to, cutting, drilling, blasting, transporting, cleaning, loading, and unloading.

The proposed rule defines *specified underground area* as an underground area located in or inby the last open crosscut, in the return air outby the last open crosscut, or within 150 feet of the pillar workings or longwall faces. These areas are considered the areas where explosive concentrations of methane gas are most likely to occur.

The proposed rule defines *underground mine surveyor* as a

qualified person for testing for methane under § 75.151 (Tests for methane; qualified person; additional requirement) and for testing air flow under § 75.152 (Tests of air flow; qualified person) and who also has experience or training in underground mine surveying.

C. Section 75.1802—Electronic Surveying Equipment

Proposed § 75.1802 would require that electronic surveying equipment taken into specified underground areas meet certain conditions. All petitions for modification granted since September 2018 for electronic surveying equipment in underground coal mines include a list of surveying equipment with less than an 8-volt operating voltage range. Since many types of “low-voltage” surveying equipment exist, MSHA sees no need to permit electronic surveying equipment operating at or above 8 volts.

Proposed paragraph (d) lists the nine voluntary consensus standards that MSHA would incorporate by reference in part 75 to be applicable to electronic surveying equipment taken into specified underground areas.

The proposed incorporation by reference of the nine voluntary consensus standards is consistent with the Office of Management and Budget’s (OMB) Circular A–119 (Jan. 27, 2016 (81 FR 4673)), which establishes policy guidance for Federal agencies. Circular A–119, based on the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 3701 *et seq.*), section 12(d), directs Federal agencies to use technical standards developed or adopted by voluntary consensus standards bodies to carry out policies or activities. Additionally, Circular A–119 directs agencies to use voluntary consensus standards in lieu of government-unique standards, except where inconsistent with law or otherwise impractical. The intent of the policy guidance in Circular A–119 is to minimize agency reliance on government-unique standards to decrease the burden of complying with agency regulations and promote efficiency and economic competition through harmonization of standards. (See <https://www.whitehouse.gov/wp-content/uploads/2017/11/Circular-119-1.pdf>).

D. Section 75.1803—Requirements Before the Use of Electronic Surveying Equipment

Proposed § 75.1803 would specify requirements to assure that surveying equipment be in a safe condition before

being used in the specified areas of an underground mine.

E. Section 75.1804—Continuous Monitoring During Electronic Surveying Equipment Operation

Proposed § 75.1804 would require surveyors to monitor with two portable methane detectors because of the risk of false negative readings or failures to detect methane entirely. Using two methane detectors would improve the safety of the surveyors and other miners in gassy mines because it offers an increased likelihood of detecting methane gas around the non-permissible equipment. Having two detectors lessens the likelihood of inadequate methane gas detection due to: sensor poisoning; physical damage from bumping or dropping; blockage of the sensor from dust, debris, and water; and any internal faults of the detector.

F. Section 75.1805—Requirements for the Use of Electronic Surveying Equipment on a Mechanized Mining Unit Where Production Activities Are Occurring

Proposed § 75.1805 specifies the requirements for the use of electronic surveying equipment on a mechanized mining unit where production activities are occurring. Because production activities may present conditions which are most hazardous in combination with non-permissible equipment (*i.e.*, total stations and theodolites), there would be more stringent requirements for any surveying during production. Because production generates methane and coal dust from the working face, surveying should not be downwind of their discharge under any circumstances, in the ventilation path used by the mine, including the specified ventilation controls.

G. Section 75.1806—Requirements for Batteries Contained in Electronic Surveying Equipment

Proposed § 75.1806 addresses requirements for the batteries used in electronic surveying equipment to ensure their safe operation if methane or float coal dust is present.

H. Section 75.1807—Electronic Surveying Equipment Maintenance and Examination

Proposed § 75.1807 addresses the maintenance and examination requirements for electronic surveying equipment.

I. Section 75.1808—Training

Proposed § 75.1809 addresses the importance of training miners and underground surveyors on safety

practices where new technologies are utilized and would require specific training for those who would be involved with or affected by the use of electronic surveying equipment. In addition to 30 CFR part 48 training requirements, MSHA is requiring specific training under this proposed rule to address concerns regarding the use of this electronic surveying equipment in the specified underground areas.

J. Incorporation by Reference

In proposed § 75.1802(a), MSHA would incorporate by reference the following voluntary consensus standards.

(1) American National Standards Institute (ANSI)/International Electrotechnical Commission (IEC) 60529–2020 Degrees of Protection Provided by Enclosures (IP Code) (Identical National Adoption of IEC 60529: 1989/AMD2:2013/COR1:2019), dated September 23, 2020.

(2) Underwriters Laboratories (UL) 1642 Standard for Safety, Lithium Batteries, Sixth Edition, September 29, 2020.

(3) UL 1642, Standard for Safety for Lithium Batteries, Fifth Edition, March 13, 2012.

(4) UL 1642, Standard for Safety for Lithium Batteries, Fourth Edition, September 19, 2005.

(5) UL 1642, Standard for Safety for Lithium Batteries, Third Edition, April 26, 1995.

(6) UL 1642, Standard for Lithium Batteries, Second Edition, November 18, 1992.

(7) UL 1642, Standard for Lithium Batteries, First Edition, October 24, 1985.

(8) UL 62133, Secondary Cells and Batteries Containing Alkaline or Other Non-Acid Electrolytes—Safety Requirements for Portable Sealed Secondary Cells, and for Batteries Made From Them, for Use in Portable Applications, Edition 2 Published Date: September 5, 2017; and

(9) UL 62133–2, Secondary Cells and Batteries Containing Alkaline or Other Non-Acid Electrolytes—Safety Requirements for Portable Sealed Secondary Cells, and for Batteries Made from Them, for Use in Portable Applications—Part 2: Lithium Systems, May 31, 2024.

The ANSI/IEC sometimes interpreted as Ingress Protection Marking, classifies and rates the degree of protection provided against intrusion (body parts such as hands and fingers), dust, accidental contact, and water by mechanical casings and electrical enclosures. UL 1642 (Ed. 1–6) addresses

standards for non-rechargeable and secondary (rechargeable) lithium batteries for use as power sources in products. UL 62133 and UL 62133–2 are the most well-known lithium battery standards for safe use.

Availability of Standards To Be Incorporated by Reference

MSHA proposes to incorporate by reference one ANSI standard. This standard is available for purchase at: www.webstore.ansi.org. Copies of standards produced by the voluntary consensus standards listed in this section may also be obtained from the American National Standards Institute (ANSI), 1899 L Street NW, 11th Floor, Washington, DC 20036, phone: (202) 293–8020; website: (www.ansi.org). In addition, during the comment period and rulemaking process, the ANSI/IEC standard will be available for review, free of charge, at MSHA, Office of Standards, Regulations, and Variances, Room C3522, 200 Constitution Avenue NW, Washington, DC 20210 and at MSHA's Approval and Certification Center (A&CC) at 765 Technology Drive, Triadelphia, WV 26059 (304–547–0400).

There are eight UL standards that would be incorporated by reference in this proposed rule. These standards are available online and may be purchased on UL's website at:

www.shopulstandards.com. They may also be obtained from UL Solutions (UL), Comm 2000, 151 Eastern Avenue, Bensenville, IL 60106, Tel: (888) 853–3503. In addition, during the comment period and rulemaking process, the UL standards will be available for review, free of charge, at MSHA, Office of Standards, Regulations, and Variances, Room C3522, 200 Constitution Avenue NW, Washington, DC 20210 and at MSHA's A&CC at 765 Technology Drive, Triadelphia, WV 26059 (304–547–0400).

IV. Procedural Issues and Regulatory Review

A. Review Under Executive Orders 12866 and 13563

Executive Order (E.O.) 12866, “Regulatory Planning and Review” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing

among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

E.O. 13563, “Improving Regulation and Regulatory Review” 76 FR 3821 (Jan. 21, 2011), requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. E.O. 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation’s regulatory system to promote predictability, reduce uncertainty, and use the best, most innovative, and least burdensome tools for achieving regulatory ends.

E.O. 12866 and E.O. 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility.

Under section 3(f) of E.O. 12866, a “significant regulatory action” is a regulatory action that is likely to result in a rule that may:

(1) have an annual effect on the economy of \$100 million or more, or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities (also referred to as economically significant);

(2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients; or

(4) raise novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in the E.O.

Under section 6(a) of E.O. 12866, the Office of Management and Budget’s (OMB’s) Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and whether Agencies are required to submit the regulatory action to OIRA for review. Revising the

provisions concerning the use of electronic surveying equipment in high-hazard areas of underground coal mines would not impose new compliance cost to underground coal mine operators or reduce the protection afforded to miners. This proposed rule is determined to not constitute a “significant regulatory action” because it does meet any of the four “significant regulatory action” criteria under section 3(f) of E.O. 12866. Accordingly, this proposed rule was not submitted to OIRA for review under E.O. 12866.

No alternatives were considered for this proposed deregulatory action.

Background

Currently coal mine operators have to file petitions for modification in order to use electronic surveying equipment in underground mine environments and are only granted permission for their use if the petition is approved. MSHA assumes that, without this proposed rule, 111 mine operators without existing petitions would file petitions over the next 5-years. Under the proposed rule, the mine operators would no longer need to file petitions to use electronic surveying equipment. Under currently approved petitions for electronic surveying equipment, MSHA already requires mine operators to monitor methane levels, inspect surveying equipment regularly, and provide hazard awareness training to miners. These requirements would continue to be in place under the proposed rule and mine operators would be required to comply.

On average, each year there are 185 active underground coal mines that employ roughly 26,294 miners (excluding office workers) and produce an estimated 102.5 million tons of coal. All estimated figures are expressed in 2024 dollars.

Under the baseline scenario, coal mine operators would continue their current practice of filing petitions to be able to use electronic surveying equipment in underground mine environments if the petition is approved. Under the proposed rule, mine operators would no longer need to file petitions to use electronic surveying equipment. There would be no change to the existing requirements for mine operators using electronic surveying equipment: methane monitoring, regular surveying equipment inspection, and hazard awareness training to miners. These requirements would continue to be applied to all underground coal mines that use electronic surveying equipment under the proposed rule.

Benefits

This proposed rule would codify new standards for using electronic surveying equipment underground, based on technical specifications and working conditions. The proposed rule would substantially reduce future costs and delays related to filing and litigating petitions for modification. Out of 185 active underground coal mines, 42 mines held petitions concerning this type of equipment that had been granted by MSHA. These petitions show that, despite having to incur costs associated with filing a petition, a substantial number of mines find that using electronic surveying equipment is beneficial to their operations. Being able to use electronic surveying equipment (instead of non-electronic surveying equipment) would reduce the time needed for surveying underground mines, thus providing mine operators with both increased efficiency and accuracy in mine mapping, without diminishing safety.

Compliance Costs of Using Electronic Surveying Equipment

The total compliance costs associated with using electronic surveying equipment would result from allowing underground coal mine operators to purchase and use electronic surveying equipment without having to file a petition for modification. MSHA assumes the cost of filing a petition currently presents a barrier to the use of electronic surveying equipment, and when that barrier is removed the purchase and use of electronic surveying equipment would be economically feasible for more mine operators. The total compliance costs of using non-permissible electronic surveying equipment consist of the following:

1. *Equipment purchases:* MSHA estimates that mine operators would need to purchase 113 total stations over 10 years at a cost of \$7,374 apiece. This results in a 10-year total cost of \$0.83 million.

2. *Methane monitoring by surveyors:* MSHA estimates that surveyors in coal mines earning \$65.99 per hour would spend a total of 125,488 hours over 10 years monitoring for methane, with a total cost of \$8.28 million.

3. *Examination of surveying equipment:*

a. *Pre-use examinations:* MSHA estimates that surveyors would need to conduct 40,216 pre-use electronic surveying equipment examinations over 10 years at a unit cost of \$5.51, resulting in a total cost of \$0.22 million for pre-use examinations.

b. *Weekly examinations:* MSHA estimates mine operators would conduct 45,700 weekly examinations over 10 years at a unit cost of \$9.48 per weekly examination, resulting in a total examination cost of \$0.43 million.

4. *Hazard awareness training for miners and surveyors:* MSHA estimates mine operators would train 1,634 miners each year on the hazards involved in working with and around electronic surveying equipment. At an average wage of \$57.85 per hour for coal miners and 1 hour for the training, the 10-year cost of training would be \$0.9 million over 10 years.

Cost Savings

MSHA estimates that mine operators would accrue a cost reduction from no longer having to file petitions for modification. Under the baseline scenario, MSHA believes mine operators would continue to file petitions to use electronic surveying equipment, while no new petitions would be filed under the proposed rule. Over the 10-year analysis period, MSHA estimates that there would be 6 petitions filed and approved without revision, 110 filed and approved with revisions, and 13 petitions litigated. MSHA assumes that the associated costs are \$6,367 per petition approved without revision, \$25,468 per petition approved with revisions, and \$397,943 per litigated petition.² Under the proposed rule, mine operators would not have to file petitions and would thus avoid petition associated costs of \$8.01 million undiscounted over 10 years. The annualized cost savings would be \$0.80 million at a 0 percent discount rate, \$0.88 million at a 3 percent discount rate, and \$0.99 million at a 7 percent discount rate.

Summary

To use electronic surveying equipment, mine operators would incur compliance costs of \$10.71 million undiscounted over 10 years, under both the baseline scenario (filing a petition in order to use electronic surveying equipment) or the proposed rule (using electronic surveying equipment without having to file a petition). Therefore, compliance costs are not considered incremental costs under the proposed rule.

Under the proposed rule, there would be incremental cost savings from avoiding petition and litigation costs that would be \$8.01 million, when compared with the baseline scenario.

MSHA estimates that the annualized cost savings for this proposed rule at discount rates of 0 percent, 3 percent, and 7 percent would be \$0.80 million, \$0.88 million, and \$0.99 million, respectively.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) of 1980, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996, requires preparation of an Initial Regulatory Flexibility Analysis (IRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, would not have a significant economic impact on a substantial number of small entities. The RFA defines small entities to include small businesses, small organizations, including not-for-profit organizations, and small governmental jurisdictions.

Under the RFA, MSHA uses the Small Business Administration's (SBA) definition to set thresholds for small business sizes for the coal mining industry defined at the 6-digit North American Industry Classification System (NAICS) level. For underground coal mines the threshold is 1,500 employees.

MSHA evaluated data routinely provided by mine operators related to the number of mines, employment, and production from MSHA's Standardized Information System (MSIS) for underground coal mines. MSHA calculated revenue as production times the average price of coal. Using internal data, MSHA estimates that small coal mines produce roughly 92.1 million tons of coal annually. Using U.S. Energy Information Administration Annual Coal Report 2023 Table 28, Average Sales Price of Coal by State and Mine Type, the average coal price was \$54.04 per short ton in 2023. The price was then adjusted to 2024 dollars using CPI-U, \$55.63 per short ton, to estimate national coal revenues of \$5.1 billion generated by small coal mines.

MSHA assesses the impacts on small entities by comparing the estimated compliance costs of the proposed rule for small entities affected by the rule to the estimated revenues for the affected sector. When estimated compliance costs are less than 1 percent of the estimated revenues, the Agency believes it is generally appropriate to conclude that there is no significant economic impact on a substantial number of small entities. When estimated compliance costs exceed 1 percent of revenues, MSHA investigates whether further analysis is required. The impact as a

percentage of revenue is essentially zero under the proposed rule: for small coal mine operators average annualized cost is \$1.07 million while annual revenue is \$5,121 million, resulting in the ratio of 0.021 percent. Thus, no further analysis is required.

MSHA considered the compliance costs on small mines when developing the proposed rule. MSHA reviewed this proposed rule under the provisions of the RFA, which eliminates burdensome regulations. Therefore, MSHA initially concludes that the impacts of the proposed rule would not have a "significant economic impact on a substantial number of small entities," and the preparation of an IRFA is not warranted. MSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) provides for the Federal Government's collection, use, and dissemination of information. The goals of the Paperwork Reduction Act include minimizing paperwork and reporting burdens and ensuring the maximum possible utility from the information that is collected under 5 CFR part 1320. The Paperwork Reduction Act requires Federal agencies to obtain approval from OMB before requesting or requiring "a collection of information" from the public.

This proposed rule imposes no new information collection or recordkeeping requirements. The requirements for training recordkeeping are fully covered in a currently approved information collection request, OMB Control Number 1219-0009 "Training Plans and Records of Training for Underground Miners and Miners Working at Surface Mines and Surface Areas of Underground Mines." There is no change to this information collection request.

However, this proposed rule would result in substantive changes to another currently approved information collection request, OMB Control Number 1219-0065 "Petitions for Modification of Mandatory Safety Standards." The currently approved information collection request covers requirements in 30 CFR part 44, which set forth the procedures and rules to govern petitions for modification of mandatory safety standards filed under section 101(c) of the Mine Act.

Under this proposed rule, coal mine operators would no longer have to file

² The litigation of a petition by a mine operator can take several years to resolve, which could amount to hundreds, and possibly even thousands of legal hours.

petitions to use electronic surveying equipment in underground mine environments. This proposed change would decrease the paperwork burden and costs to mine operators as they would no longer file petitions for modification for using electronic surveying equipment in underground coal mines. MSHA proposes to revise the supporting statement for the information collection request 1219–0065 to reflect this and to seek public comment on these changes.

Type of Review: Substantive Change to currently approved information collection.

OMB Control Number: 1219–0065.

Title: Petitions for Modifications of Mandatory Safety Standards.

Description of the ICR:

Background

Under 30 CFR 44.4, mine operators can file a petition for modification to use an alternative method of achieving the same result of an existing standard that will at all times guarantee no less than the same measure of protection afforded by the standard. Currently, this is the only way mine operators are able to use electronic surveying equipment underground. Under the proposed rule, the requirements for using such equipment would be codified and mine operators would no longer have to file a petition for their use.

Based on MSHA records of petitions for modification received between 2021 through 2023, on average there were 46 total petitions submitted each year. Of these petitions, roughly 6 were requests to use non-permissible surveying equipment. Under this proposed rule, the Agency estimates that the average annual petitions would be reduced from current submissions of 46 to 40 petitions, as the 6 petitions for the use of non-permissible surveying equipment would no longer be needed. MSHA assumes that all 6 of those petitions would have been filed by underground coal mines, and that therefore, there would be a decrease in petitions from coal mines from 43 to 37 and no change in the number of petitions from MNM mines, 3.

Summary of Changes

This substantive change request will change the supporting statement for this information collection request due to an addition in the recordkeeping requirements in 30 CFR 75.1800 through 75.1808. Forty-six mines are affected by the existing standards and 40 mines would be required to provide information by the proposed rule. This change does not modify the authority or number of affected mine operators and

contractors, but it decreases the paperwork burden and costs associated with filing petitions as captured by this information collection request.

The number of respondents, frequency of response, annual hour burden, and recordkeeping cost are described below.

1. Preparing and Filing Petitions for Modification (30 FR 44.10 and 44.11(a))

Under 30 CFR 44.10 and 44.11(a), a mine operator or any representative of miners may file a petition for modification of the application of a mandatory safety standard. MSHA assumes that all petitions will be filed by mine operators or by third-party sources on behalf of mine operators. MSHA assumes that approximately 31 of the annually submitted petitions would be prepared by mine operators, 29 petitions from coal mines and 2 from MNM mines. MSHA estimates that it takes 40 hours to prepare and file a petition, which will be completed by a coal or MNM mining supervisor, earning \$95.72 or \$75.63 per hour, respectively.

As related to these requirements the proposed rule would reduce the number of annual respondents from 37 to 31, the number of annual responses from 37 to 31, and the annual burden hours from 1,480 to 1,240.

Additionally, MSHA assumes that the 9 remaining petitions would be prepared by third-party sources (independent legal counsel) each year. MSHA estimates that it takes an independent counsel, earning \$182.79 per hour, approximately 16 hours to prepare a petition. This will be a total of \$26,322 spent preparing the 9 petitions. MSHA assumes that due to their simplicity all the non-permissible surveying equipment related petitions would have been prepared by mine operators and not third parties, therefore this rescission does not impact the costs related to third-party preparations of petitions. There is an increase over the previous estimate of \$24,814 however, it is due to an increase in wages and not the proposed rule.

The prepared petitions must be submitted to MSHA for review and approval. MSHA estimates that each year only 2 petitions are submitted by mail and 38 are submitted electronically. MSHA assumes that there is no filing cost if submitted electronically. MSHA estimates the mailing costs for petitions for modification is \$8.00 for a certified mail from USPS, for a total cost of \$16.00 to mail in petitions, this is unchanged from the previous estimate of recordkeeping costs.

2. Posting Copies of Petitions on the Mine Bulletin Boards (30 CFR 44.9)

Under 30 CFR 44.9, a mine operator must, when there is no representative of miners, post a copy of each petition for modification concerning the mine on the mine bulletin board and must maintain the posting until a ruling on the petition becomes final. MSHA assumes that all mine operators will post the petition for modification on the mine's bulletin board.

MSHA assumes that 37 petitions would come from coal mines and 3 from MNM mines. MSHA estimates that it takes 10 minutes to make copies of the petition and to post the petition to the mine bulletin board. This will be done by a coal or MNM clerk, earning \$44.53 or \$45.42 per hour, respectively.

As related to this item the proposed rule would result in a reduction of information collection cost. It would reduce the number of annual respondents from 46 to 40, the number of annual responses from 46 to 40, and the annual burden hours from 7.67 to 6.67.

Additionally, MSHA assumes that on average a petition for modification is 3 pages long and the printing cost is \$0.15 per page, so the material cost of printing a copy of the petition would be \$0.45. By reducing the number of petitions to be posted at the mine bulletin board by 6 this rescission reduces the annual recordkeeping cost to respondents by \$2.70. The annual recordkeeping cost to respondents would decrease from \$20.70 to \$18.00.

3. Serving Representatives of Miners With Petitions (30 CFR 44.10)

Under 30 CFR 44.10, if a petition is filed by a mine operator, a copy of the petition must be served to a representative of miners at the affected mine. MSHA assumes 40 petitions would be filed each year, 37 from coal mines and 3 from MNM mines. MSHA estimates that it takes 10 minutes to make copies of the petition and serve the petition to a representative of miners. A coal or MNM clerk earns \$44.53 or \$45.42 per hour, respectively. For a total cost of \$297, this is an increase from the previous figure of \$267 because while the decrease in the number of petitions submitted lowers the estimated cost an increase in wages more than offsets the decrease.

As related to this item the proposed rule would result in a reduction of information collection cost. It would reduce the number of annual respondents from 46 to 40, the number of annual responses from 46 to 40, and the annual burden hours from 7.67 to

6.67. The annual burden cost increases from \$267 to \$297, however this is due to an increase in wages and not the proposed rule.

Additionally, MSHA assumes that on average a petition for modification is 3 pages long and the printing cost is \$0.15 per page, so the material cost of printing a copy of the petition would be \$0.45. By reducing the number of petitions to be served to miners' representatives by 6 this rescission reduces the annual other cost burden by \$2.70. The annual recordkeeping cost to respondents would decrease from \$20.70 to \$18.00.

4. Serving Miners' Representative With Copies of the Final Actions Granting Petitions and Posting Copies to the Mine Bulletin Boards (30 CFR 44.5(b))

Under 30 CFR 44.5(b), every final action granting a petition for modification must be posted by the operator on the mine bulletin board at the affected mine and remain posted as long as the modification is effective. If a summary of the final action is posted on the mine bulletin board, a copy of the full decision must be kept at the affected mine office and made available to the miners.

MSHA assumes that 30 petitions would be approved each year, including 28 from coal mines and 2 from MNM mines. For the 6 annual petitions concerning the use of non-permissible surveying equipment, MSHA assumes on average 1 would have been denied petition and 5 approved. MSHA estimates that it takes 10 minutes to make copies of the final action and then to serve them to the miners' representative or post on the mine bulletin board. This will be done by a coal or MNM clerk, earning \$44.53 or \$45.42 per hour, respectively.

As related to this item the proposed rule would result in a reduction of information collection cost. It would reduce the number of annual respondents from 46 to 40, the number of annual responses from 35 to 30, and the annual burden hours from 5.83 to 5.00.

Additionally, MSHA assumes that a mine operator will make 2 copies of each final actions granting petitions: 1 to be posted on the bulletin board and 1 copy available to miners. MSHA assumes that on average a petition for modification is 3 pages long and the printing cost is \$0.15 per page, so the cost of printing a copy of the petition would be \$0.45. This rescission would reduce the number of copies of final actions made by 10 (5 served to miners' representatives and 5 to posted to mine bulletin boards). This rescission reduces the annual other cost burden from \$32

to \$27. The annual recordkeeping cost to respondents would decrease from \$31.50 to \$27.00.

Summary of the Collection of Information

Under the proposed rule, the estimated number of respondents, responses and annual burden hours would decrease from the currently approved information collection request. The reduction comes from the decrease in the number of petitions being submitted. Annual recordkeeping costs to respondents would increase slightly due to increases in wage rates, not the proposed rule.

Affected Public: Businesses or For-Profit.

Estimated Number of Respondents: 40 (– 6 from proposed rule).

Frequency: On occasion.

Estimated Number of Responses: 141 (– 23 from proposed rule).

Estimated Number of Burden Hours: 1,258 (– 243 from proposed rule).

Estimated Recordkeeping Costs to Respondents: \$26,401 (\$1,571 from wage increases).

D. Review Under Executive Order 13132

E.O. 13132, "Federalism" 64 FR 43255 (August 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The E.O. requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The E.O. also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.

MSHA has determined that the proposed rule would not have federalism implications because it would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Accordingly, E.O. 13132 requires no further action or analysis.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O. 12988, "Civil Justice Reform" 61 FR 4729 (Feb. 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1)

eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Section 3 of E.O. 12988 contains requirements for Federal agencies promulgating new regulations or reviewing existing regulations to minimize litigation by eliminating drafting errors and ambiguity, providing a clear legal standard for affected conduct rather than a general standard, promoting simplification, and reducing burden. MSHA has reviewed the proposed rule and has determined that it would meet the applicable standards provided in E.O. 12988 to minimize litigation and undue burden on the Federal court system.

F. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)). The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a "significant intergovernmental mandate," and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing

any requirements that might significantly or uniquely affect them.

MSHA examined this proposed rule according to UMRA and its statement of policy and determined that the proposed rule does not contain a Federal intergovernmental mandate, nor is it expected to require expenditures of \$100 million or more in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. As a result, no further Agency action or analysis is required.

G. Review Under the National Environmental Policy Act.

The National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*), requires each Federal agency to consider the environmental effects of regulatory actions and to prepare an environmental impact statement on Agency actions that would significantly affect the quality of the environment; unless the action is considered categorically excluded under 29 CFR 11.10. MSHA has reviewed the proposed rule in accordance with NEPA requirements and the Department of Labor's NEPA procedures (29 CFR part 11). As a result of this review, MSHA has determined that this proposed rule would not impact air, water, or soil quality, plant or animal life, the use of land or other aspects of the human environment. Therefore, MSHA has not conducted an environmental assessment nor provided an environmental impact statement.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This proposed rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, MSHA has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to E.O. 12630, “Governmental Actions and Interference with Constitutionally Protected Property Rights” 53 FR 8859 (March 18, 1988), MSHA has determined that this proposed rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB's guidelines were published at 67 FR 8452 (Feb. 22, 2002). MSHA has reviewed this proposed rule under the OMB and has concluded that it is consistent with applicable policies in the OMB guidelines.

K. Review Under Executive Order 13175

E.O. 13175, “Consultation and Coordination With Indian Tribal Governments” 65 FR 67249 (Nov. 9, 2000), requires agencies to consult with tribal officials when developing policies that may have “tribal implications.” This proposed rule does not have “tribal implications” because it will not “have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.” Accordingly, under E.O. 13175, no further Agency action or analysis is required.

L. Review Under Executive Order 13211.

E.O. 13211, “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” 66 FR 28355 (May 22, 2001), requires agencies to publish a statement of energy effects when a rule has a significant energy action that adversely affects energy supply, distribution, or use. MSHA has reviewed this proposed rule for its energy effects. For the energy analysis, this proposed rule will not exceed the relevant criteria for adverse impact.

M. Plain Language

Executive Orders 12866 and 13563 require regulations to be written in a manner that is easy to understand. MSHA has drafted the proposed rule in plain language.

N. Review Under Additional Executive Orders and Presidential Memoranda

MSHA has examined this proposed rule and has determined that it is consistent with the policies and directives outlined in E.O. 14154, “Unleashing American Energy” 90 FR 8353 (Jan. 29, 2025); E.O. 14192, “Unleashing Prosperity Through Deregulation” 90 FR 9065 (Feb. 6, 2025);

and the Presidential Memorandum, “Delivering Emergency Price Relief for American Families and Defeating the Cost-of-Living Crisis” 90 FR 8245 (Jan. 28, 2025). This proposed rule is expected to be an E.O. 14192 deregulatory action.

List of Subjects in 30 CFR Part 75

Electric power, Incorporation by reference, Mandatory safety standards, Mine safety and health, Reporting and recordkeeping requirements, Training, Underground coal mines.

For the reasons set out in the preamble, and under the authority of the Federal Mine Safety and Health Act of 1977, as amended by the Mine Improvement and New Emergency Response (MINER) Act of 2006, MSHA is proposing to amend chapter I of title 30 of the Code of Federal Regulations as follows:

PART 75—MANDATORY SAFETY STANDARDS—UNDERGROUND COAL MINES

■ 1. The authority citation for part 75 continues to read as follows:

Authority: 30 U.S.C. 811, 813(h), 957.

■ 2. Add Subpart S, consisting of §§ 75.1800 through 75.1808, to read as follows:

Subpart S—Electronic Surveying Equipment

§ 75.1800 Purpose and Scope.

§ 75.1801 Definitions.

§ 75.1802 Electronic surveying equipment.

§ 75.1803 Requirements before the use of electronic surveying equipment.

§ 75.1804 Continuous monitoring during electronic surveying equipment operation.

§ 75.1805 Requirements for the use of electronic surveying equipment on a mechanized mining unit where production activities are occurring.

§ 75.1806 Requirements for batteries contained in electronic surveying equipment.

§ 75.1807 Electronic surveying equipment maintenance and examination.

§ 75.1808 Training.

§ 75.1800 Purpose and Scope.

(a) This subpart establishes requirements for electronic surveying equipment taken into and operated in or inby the last open crosscut, § 75.500(d), in the return air outby the last open crosscut, § 75.507–1(a), or within 150 feet of the pillar workings or longwall faces, § 75.1002(a), when electronic

surveying equipment that meets the permissibility requirements in part 18 of this chapter does not exist.

(b) This subpart also establishes requirements for the features, use, and maintenance of electronic surveying equipment and the training of the personnel using such equipment. This part includes requirements for the use of electronic surveying equipment when production activities are occurring and when production activities cease.

§ 75.1801 Definitions.

The following definitions apply to this subpart:

Electronic surveying equipment.

Battery-powered equipment essential for surveying, (*i.e.*, total stations and theodolites). This definition does not include electronic devices or accessories that are not essential for surveying, such as keyboards, spare batteries, and remote controls.

Production activities. Activities that generate coal dust or methane gas including but are not limited to cutting, drilling, blasting, transporting, cleaning, loading, and unloading.

Specified underground area. An underground area located in or inby the last open crosscut, in the return air outby the last open crosscut, or within 150 feet of the pillar workings or longwall faces.

Underground mine surveyor. A qualified person for testing for methane under § 75.151 and for testing air flow under § 75.152 and who also has experience or training in underground mine surveying.

§ 75.1802 Electronic surveying equipment.

Electronic surveying equipment taken into specified underground areas must meet the following conditions:

(a) Electronic surveying equipment, including batteries when assembled for use, must have an ingress protection (IP) rating of 66 or greater under ANSI/IEC 60529–2020 and must operate at a voltage of less than 8 volts DC. Lithium batteries must also meet the Underwriters Laboratories (UL) 1642 safety standards for lithium batteries. Surveying equipment must only have onboard or integrated battery packs and no external battery packs.

(b) A theodolite must be no older than 5 years from the date of manufacture.

(c) A total station must be no older than 10 years from the date of manufacture.

(d) The material listed in this paragraph (d) is incorporated by reference into this section with the approval of the Director of the Federal Register under 5 U.S.C. 552(a) and 1 CFR part 51. All approved incorporation

by reference (IBR) material is available for inspection at U.S. Department of Labor, Mine Safety and Health Administration (MSHA) and at the National Archives and Records Administration (NARA). Contact MSHA at 200 Constitution Avenue NW, Washington, DC 20210. For information on the availability of this material at NARA, visit www.archives.gov/federal-register/cfr/ibr-locations or email fr.inspection@nara.gov. The material may be obtained from the following sources in this paragraph (d).

§ 75.1803 Requirements before the use of electronic surveying equipment.

(a) The underground mine surveyor must conduct a safety examination of electronic surveying equipment prior to taking it into the specified underground areas. The examination must include:

(1) Checking the equipment for any physical damage and integrity of the case;

(2) Examining all contact points to ensure a secure connection to the battery;

(3) Inspecting the battery pack for debris or corrosion;

(4) For equipment utilizing lithium type cells, ensuring that the lithium cells are not damaged and have not swelled in size;

(5) Reinserting the battery pack and powering up and shutting down the equipment to ensure proper connections;

(6) Checking the battery pack to ensure that it is securely fastened, with no dust or water ingress into the battery compartment; and

(7) Conducting all manufacturer-recommended checks and tests to ensure proper operations.

(b) If the approved mine ventilation plan requires a minimum air quantity in a specified underground area, then an underground mine surveyor will measure the air quantity immediately before taking the surveying equipment into that area.

(c) An underground mine surveyor must test for methane in the areas to be surveyed, in accordance with § 75.323. If excessive methane is found, then the mine operator must take actions specified under § 75.323 before surveying equipment is taken into a specified underground area.

(d) Prior to setting up and energizing the electronic surveying equipment in the specified underground areas:

(1) A certified person must conduct a visual examination to determine compliance under § 75.402, and to check the presence of accumulated float coal dust.

(2) The equipment may not be energized until rock dust has been applied under §§ 75.401–1, 75.400–2, and 75.403.

(e) Surveyors must be able to effectively communicate with the section foreman or equivalent mine official and miners on the working section at all times while the surveyor is conducting the surveying in a specified underground area.

§ 75.1804 Continuous monitoring during electronic surveying equipment operation.

(a)

(1) Underground mine surveyors must continuously monitor for methane immediately before and during the use of electronic surveying equipment in the specified underground areas. The underground mine surveyor(s) must monitor for methane with two portable detectors. All portable methane

detectors must be MSHA-approved and maintained in permissible and proper operating condition as required under § 75.320.

(2) All methane detectors must provide visual and audible warning signals when methane is detected at or above 1.0 percent.

(b) When 1.0 percent or more of methane is detected, the electronic surveying equipment must not be energized or must be immediately deenergized if in use and immediately withdrawn from specified underground areas to outby the last open crosscut, out of the return, or more than 150 feet from pillar workings or longwall faces under § 75.323.

§ 75.1805 Requirements for the use of electronic surveying equipment on a mechanized mining unit where production activities are occurring.

On a mechanized mining unit where production activities are occurring, the following requirements must be met.

(a) Electronic surveying equipment may be used except as provided in paragraphs (a)(1) and (a)(2) of this section:

(1) Electronic surveying equipment must not be used downwind of the discharge point of any face ventilation controls, such as tubing or curtains.

(2) Electronic surveying equipment must not be used in a split of air ventilating a mechanized mining unit.

(b) Electronic surveying equipment must not be used within 150 feet of pillar workings or longwall faces.

(c) When surveying cannot be completed with ventilation controls in place, the underground mine surveyor must notify the mine operator for approval of any changes. All changes must comply with approved ventilation plans.

(1) Before and while any ventilation controls are changed, all production activities must cease in areas affected by the change.

(2) Once production activities cease and approved ventilation changes have been completed, a certified person must notify underground mine surveyors when surveying may resume.

(3) Ventilation controls must be reestablished immediately after the change is no longer necessary.

(4) Production activities may resume only after all ventilation controls are reestablished and are in compliance with the approved ventilation plan.

§ 75.1806 Requirements for batteries contained in electronic surveying equipment.

(a) Before each shift of surveying, all batteries for the electronic surveying

equipment must be charged sufficiently to function the entire shift.

(b) Replacement batteries for electronic surveying equipment must be carried underground only in the compartment provided for a spare battery pack in the electronic surveying equipment carrying case. Replacement batteries must not be taken into the specified underground areas.

(c) Batteries contained in the electronic surveying equipment must be changed out in intake air outside of the specified underground areas.

(d) No batteries may be charged underground.

§ 75.1807 Electronic surveying equipment maintenance and examination.

(a) All electronic surveying equipment must be maintained to ensure safe operating condition. When a potentially dangerous condition is found with the equipment, such equipment must be immediately withdrawn from the specified underground areas and taken out of service and must be repaired before returning to service.

(b) As specified under § 75.1803(a), electronic surveying equipment must be examined weekly by a qualified person as defined by § 75.153 to assure safe operating condition.

(c) The mine operator must ensure that all electronic surveying equipment is serviced according to the manufacturer's recommendations.

§ 75.1808 Training.

(a) Miners and underground mine surveyors who will be involved with or affected by electronic surveying operations must be trained on the requirements of this subpart before the electronic surveying equipment can be used.

(b) Mine operators must train new miners and underground mine surveyors under § 48.5, train experienced miners and surveyors, under § 48.6, and train miners and surveyors assigned new work tasks under § 48.7 on the requirements of this subpart. The training must include hazard recognition specific to the mine.

(c) Mine operators must provide annual retraining to all miners and underground mine surveyors involved with or affected by surveying operations under § 48.8.

(d) Miners and underground mine surveyors using electronic surveying equipment must be trained to recognize the hazards and limitations associated with the use of electronic surveying equipment in the areas where methane could be present.

(e) Records of training required under this part must comply with part 48.

(f) Mine operators must provide such records to MSHA upon request.

James P. McHugh,

Deputy Assistant Secretary for Policy, Mine Safety and Health Administration.

BILLING CODE 4520–43–P

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Part 1910

[Docket # OSHA–2025–0006]

RIN 1218–AD48

Amending the Medical Evaluation Requirements in the Respiratory Protection Standard for Certain Types of Respirators

AGENCY: Occupational Safety and Health Administration, Department of Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: OSHA is proposing to remove some medical evaluation requirements in the Respiratory Protection Rule for certain types of respirators. This proposed change would only impact filtering facepiece respirators and loose-fitting powered air-purifying respirators.

DATES: Comments must be received on or before September 2, 2025.

Informal public hearing: OSHA will schedule an informal public hearing on the proposed rule if requested during the comment period. If a hearing is requested, the location and date of the hearing, procedures for interested parties to notify the agency of their intention to participate, and procedures for participants to submit their testimony and documentary evidence will be announced in the **Federal Register**.

ADDRESSES:

Written comments: You may submit comments and attachments, identified by Docket No. OSHA–2025–0006, electronically at <http://www.regulations.gov>, which is the *Federal e-Rulemaking Portal*. Follow the instructions online for making electronic submissions.

Instructions: All submissions must include the agency's name and the docket number for this rulemaking (Docket No. OSHA–2025–0006). All comments, including any personal information that is provided, are placed in the public docket without change and may be made available online at <http://www.regulations.gov>. Therefore, OSHA

cautions commenters about submitting information they do not want made available to the public, or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.

When uploading multiple attachments to <http://www.regulations.gov>, please number all of your attachments because <http://www.regulations.gov> will not automatically number the attachments. This numbering will be very useful in identifying all attachments in the preamble for the final rule. For example, Attachment 1—title of your document, Attachment 2—title of your document, Attachment 3—title of your document. For assistance with commenting and uploading documents, please see the Frequently Asked Questions on <http://www.regulations.gov>.

Docket: To read or download comments or other materials in the docket, go to Docket No. OSHA–2025–0006 at <http://www.regulations.gov> the <http://www.regulations.gov> index; however, some information (e.g., copyrighted material) is not publicly available to read or download through that website. All comments and submissions, including copyrighted material, are available for inspection through the OSHA Docket Office. Documents submitted to the docket by OSHA or stakeholders are assigned document identification numbers (Document ID) for easy identification and retrieval. The full Document ID is the docket number plus a unique four-digit code. Some Document ID numbers also include one or more attachments.

When citing exhibits in the docket, OSHA includes the term “Document ID” followed by the last four digits of the Document ID number. For example, document OSHA–2025–0006 would appear as “Document ID 0006.” Citations also include the attachment number or tab number, if applicable. In a citation that contains two or more Document ID numbers, the Document ID numbers are separated by semi-colons (e.g., “Document ID 1231, Attachment 1; 1383, Attachment 1”). OSHA may also cite items that appear in another docket. When that is the case, OSHA includes the full document ID for the corresponding docket entry.

This information can be used to search for a supporting document in the docket at <http://www.regulations.gov>. Contact the OSHA Docket Office at (202) 693–2350 (TTY number: 877–889–5627) for assistance in locating docket submissions.

FOR FURTHER INFORMATION CONTACT:

For press inquiries: Contact Frank Meilinger, Office of Communications, Occupational Safety and Health Administration, U.S. Department of Labor; telephone (202) 693–1999; email oshacomms@dol.gov.

For general information: Contact Andrew Levinson, Director, Directorate of Standards and Guidance, Occupational Safety and Health Administration, U.S. Department of Labor; telephone (202) 693–1950; email: osha.dsg@dol.gov.

*For copies of this **Federal Register** document:* Electronic copies of this **Federal Register** notice are available at <http://www.regulations.gov>. This notice, as well as news releases and other relevant information, are also available at OSHA’s web page at www.osha.gov. A 100-word summary of this proposed rule is available on <http://www.regulations.gov>.

I. Background

A. Executive Summary

In 1971, the Occupational Safety and Health Administration (OSHA) adopted the American National Standards Institute (ANSI) standard Z88.2 1969, “Practices for Respiratory Protection,” as well as ANSI Standard K13.1 1969, “Identification of Gas Mask Canisters” as its standard for respiratory protection. In April of 1971, OSHA promulgated 29 CFR 1926.103, the initial respiratory protection standard for the construction industry. On February 9, 1979, OSHA announced that 29 CFR 1910.134 would be formally recognized as also being applicable to the construction industry (44 FR 8577). On November 15, 1994, OSHA issued a Notice of Proposed Rulemaking to revise 29 CFR 1910.134 (59 FR 58884). On January 8, 1998, OSHA issued a Final Rule in the **Federal Register** (63 FR 1152) revising 29 CFR 1910.134. The prior respirator standard was redesignated as 1910.139 and applied only to respiratory protection against M.

tuberculosis (TB). On December 31, 2003, OSHA withdrew 1910.139 and made compliance with 1910.134 effective immediately (68 FR 75776). On August 24, 2006, OSHA published revisions to the 1910.134 Final Rule, to add definitions and requirements for Assigned Protection Factors (APFs) and Maximum Use Concentrations (MUCs) (71 FR 50122). The revisions also supersede the respirator selection provisions of existing substance-specific standards with these new APFs (except for the respirator selection provisions of the 1,3-Butadiene Standard).

The current OSHA Respiratory Protection Standard (29 CFR 1910.134) aims to protect workers from inhaling hazardous airborne contaminants (e.g., dusts, fogs, fumes, mists, gases, smokes, sprays, vapors) in the workplace by requiring employers to establish a comprehensive written respiratory protection program that includes procedures for respirator use, training, and fit testing. A key component of this program is medical evaluation, which determines whether employees are physically able to wear respirators safely. Before using a respirator, employees must be evaluated by a physician or other licensed health care professional (PLHCP), using the mandatory OSHA medical questionnaire or an equivalent method, to assess medical conditions that could interfere with respirator use, such as cardiovascular or pulmonary diseases. A medical evaluation helps ensure that any employee required to use a respirator can tolerate the physiological burden associated with respirator use which is crucial to ensure worker safety. Additionally, the standard mandates fit testing for tight-fitting facepiece respirators, training on proper use and maintenance, and ongoing monitoring of workplace conditions to ensure the selected respirators provide adequate protection. The program must be regularly evaluated for compliance and effectiveness, with records maintained for medical evaluations, fit testing, and training, to reduce the risk of respiratory-related occupational illnesses.

OSHA is proposing an update to the Respiratory Protection Standard to amend the medical evaluation requirements specified in paragraph (e) where an employee is required to wear either a filtering facepiece respirator (FFR) or loose-fitting powered air-purifying respirator (PAPR) and seeks comment on all aspects of this proposal. Using a respirator may place a physiological burden on employees that varies with the type of respirator worn, the job and workplace conditions in

which the respirator is used, and the medical status of the employee. OSHA has preliminarily determined this burden differs based on the type of respirator worn and therefore proposes an amendment to the medical evaluation requirements of the standard for FFRs and loose-fitting PAPRs.

B. Health Literature Background

Introduction

In this section, OSHA provides an overview of the agency's evidence to determine whether this proposed rule impacts material impairment of health. The Secretary's material impairment determinations must be made "on the basis of the best available evidence" and must consider the "latest available scientific data in the field" (29 U.S.C. 655(b)(5)). This overview briefly acknowledges the original basis for the determination of a need for medical evaluations before using FFRs and loose fitting PAPRs as well as considers research published after the promulgation of that rule.

OSHA concludes that the data available for health effects are lacking and insufficient to establish that medical evaluations meaningfully reduce material impairment caused by wearing an FFR or a loose fitting PAPR. Even though "OSHA is not required to state with scientific certainty or precision the exact point at which each type of [harm] becomes a material impairment" (*AFL-CIO v. OSHA*, 965 F.2d 962, 975 (11th Cir. 1992)), the level of evidence in the following discussion is unconvincing as it pertains to the ability of medical evaluations to prevent material impairment induced by the wearing of FFRs or PAPRs. The Occupational Safety and Health Act (29 U.S.C. 651, *et seq.*) ("the Act" or "the OSH Act") charges OSHA with addressing all forms of material impairment, not just death or serious physical harm (*Id.*). The agency acknowledges that respirators may negatively impact some workers' health due to extreme exertion while wearing one, impact on communication or ability to see, triggering mental health concerns (*e.g.*, claustrophobia), and other impacts on their quality of life. However, medical evaluation before use of an FFR or loose fitting PAPR is not well evidenced to prevent these outcomes.

Original Basis of the Medical Questionnaire Requirement

When OSHA developed the respiratory protection standard in the 1990s, the use of medical evaluations to identify underlying conditions where

respirator use could cause material impairment was a well-accepted best practice. This process was "derived from studies of Navy SCUBA (self-contained underwater breathing apparatus) or military users under conditions unlike most current use" (Harber et al., 2025). For the proposed standard ("Respiratory Protection Standard; Proposed Rule, 59 FR 58884), OSHA gathered information and presented for comment several alternatives ranging from in-person medical evaluations by physicians, exempting workers who use respirators for less than five hours a week, or using medical questionnaires presented by a PLCHP as a screening tool before a medical evaluation would be required. From this robust stakeholder engagement process, OSHA concluded that medical questionnaires would be permitted as a screening tool to identify individuals for whom an in-person medical examination would then be required in the final rule (63 FR 1152–1300). The questionnaire was adapted from ANSI Z88.6–1984.

In the 1998 final rule (63 FR 1210), OSHA determined that there existed "the potential for adverse health effects resulting from respirator use, even for healthy employees using respirators designed for low breathing resistance and used for short durations." OSHA also found that "respirator use would impose a substantial risk of material impairment to the health of employees who have preexisting respiratory and cardiovascular impairments." Based on the results of studies in the record as well as the comments received, OSHA determined "the use of any respirator requires a prior medical evaluation to determine fitness."

OSHA now believes that the requirement for medical evaluations before the use of any type of respirator is too broad in practice; specifically with respect to the use of FFRs and loose fitting PAPRs. Even the 1998 final rule included two commenters who expressed that medical limitations on their workforce were fairly limited with Organization Resources Counselors, Inc (Ex. 54–424) noting that 2% of their workforce were limited based on claustrophobia, asthma, and heavy smoking and Boeing (Ex. 54–445) reporting that 1–2% of their workforce was limited due to not undergoing the evaluation or because of employee preference (63 FR 1213, 1219). While 2% of the workforce is a small yet significant number, it does not identify actual avoided adverse outcomes from wearing a respirator. While it may have been reasonable to avoid this increased risk at the time, the agency concludes

that it is important to consider new evidence in the years since the rule was published.

Lack of Data Showing Material Impairment Avoided by Medical Evaluations

i. Lack of large scale epidemiological studies.

The use of medical evaluations in respiratory protection programs as a prospective measure to avoid adverse health outcomes remains a well-accepted best practice. However, the agency is not aware of any epidemiological studies that evaluate their efficacy for FFRs and loose fitting PAPRs.

Many workers currently use FFRs and loose fitting PAPRs without medical evaluations. For instance, NIOSH found that in the immediate wake of the publishing of the 1998 Respiratory Protection Standard 51.2% of an estimated 281,776 establishments may not have performed medical evaluations to determine fitness for wearing a respirator (Doney et al., 2005). A 2015 study (Brousseau et al., 2015) reported that 14% of hospital workers in Illinois and 23% in Minnesota did not receive a medical evaluation. Medical evaluations are likely far less prevalent in many industries with smaller and more dispersed workforces. For instance, workers in hog farms commonly wear respirators, predominantly N95s, when performing some tasks, but are generally not subject to the Respiratory Protection Standard and are likely not following it (Gibbs et al., 2020). The agency knows of no data related to these worker populations showing that the lack of medical evaluations is causing adverse health effects. OSHA requests comment on the extent to which medical evaluations are effective at preventing adverse health outcomes resulting from the use of FFRs and loose-fitting PAPRs.

ii. Despite large increases in respirator usage after the emergence of COVID–19, no evidence has surfaced illustrating the need for medical evaluations for FFR and PAPR usage.

FFR and PAPR usage increased immensely after the emergence of COVID–19. Workers across industries performing a wide variety of tasks were suddenly wearing these respirators, often for their entire shifts every work day. Despite this sudden increase and widespread usage of these respirators, often without a medical evaluation, the agency is not aware of any data identifying adverse outcomes from individuals with underlying medical conditions during the COVID–19 pandemic. OSHA requests comment on

the extent to which workers have worn FFRs and loose-fitting PAPRs without medical evaluations since the emergence of COVID-19 in 2020.

With this lack of data about medical evaluation efficacy for FFRs and loose fitting PAPRs, it is difficult to reaffirm that medical evaluations are either necessary or appropriate for preventing adverse health outcomes.

iii. Few workers are refused respirators.

As noted earlier, the data reported in the final rule for Respiratory Protection (29 CFR 1910.134) found that 2% or fewer workers did not pass the medical evaluation. That proportion appears to be fairly consistent with more recent studies. A 1999 study (Pappas et al.) found that out of 5,569 workers who had a medical evaluation only 1.3% had limitations placed upon their work and 0.2% were denied use. Pregnancy was the reason for denial and the researchers found that physical examination and spirometry added nothing to the analysis. A 2017 study (Desai et al.) found that only 1.48% of 337 subjects who passed the medical questionnaire evaluation failed the spirometry test under the American Thoracic Society criteria. In a survey of 35 clinics or clinic groups, Harber et al. (2025) found that nearly all workers were approved without restrictions and it was considered very unusual to decline approval.

In practice, few workers have their respirator use limited. Additionally, we currently have no ability to estimate, to the agency's knowledge, how many adverse events are being avoided by restricting the use of FFRs and PAPRs by workers. As such, it is difficult to ascertain whether there is material impairment in these scenarios if a worker who should be restricted is permitted to use a respirator. OSHA requests comment on how many adverse events are being avoided by restricting the use of FFRs and PAPRs by workers.

iv. Workers are able to respond quickly when symptoms arise.

In the apparently rare circumstance that a worker develops symptoms from wearing an FFR or loose-fitting PAPR, these scenarios are not Immediately Dangerous to Life or Health (IDLH) situations. This is so because FFRs and loose fitting PAPRs are not permitted to protect employees in IDLH environments. Therefore, the worker should be able to seek safety with an exposure well below expected thresholds for adverse health outcomes. This is in contrast to other respirators—(e.g., self-contained breathing apparatus (SCBA))—that would be required in more dangerous exposure environments.

v. Available data on effects largely shows minimal impact on health.

As noted in the original rule (63 FR 1152–1300), self-contained breathing apparatus (SCBA) respirators require a great deal of exertion given the weight of that apparatus. However, the body of literature does largely agree that any physiological effects from wearing much lighter FFRs and PAPRs are minimal during low to moderate exertion. In studies assessing cardiovascular parameters, FFRs and PAPRs did not significantly impact health in low to moderate exercise scenarios that would be typical of the vast majority of workplaces (Epstein et al., 2020; Anil et al., 2023). Similarly, Rothstein et al. studied 42 individuals who did not have a history of claustrophobia or metabolic disease and found that individuals who wore N-95 respirators displayed minor changes in respiratory and metabolic effects, but those “physiological parameters remained within normal ranges at rest and would not impact daily functioning” (Rothstein et al., 2025). A limitation on these studies is that they are performed on populations that screen out unhealthy individuals (e.g., smokers, known cardiovascular issues), but one would surmise that changes in physiological parameters would be observable even in healthy individuals and this does not seem to be the case. It is reasonable to assume that work that requires high exertion could impact the health of a wearer, but that high exertion work likely self-selects for individuals who would be medically fit to wear an FFR or a PAPR.

The 1998 final rule also noted some concern about non-physiological impacts, specifically noting claustrophobia. A more recent look into the evidence found that the notion of large numbers of workers experiencing claustrophobia is unfounded (Harber and Beckett, 2023). In a letter to the editor, McClellan (2020) found that full-shift work using an FFR could cause issues, such as psychological stresses, that result in the wearer feeling compelled to remove their respirator in potentially unsafe situations. While psychological stressors have been observed and can induce physiological impairment, the agency is unable to adequately qualify the degree to which this occurs in the affected workplaces. And, as noted above, if a worker wearing an FFR or loose fitting PAPR had to remove their respirator due to psychological distress, the worker would necessarily not be exposed to an IDLH atmosphere but would rather be able to seek safety with an exposure

well below expected thresholds for adverse health outcomes.

Conclusion

The agency preliminarily concludes that there is not sufficient evidence to conclude that wearing FFRs and loose fitting PAPRs without a prior medical evaluation can result in unavoidable adverse outcomes, and that the assumption that medical evaluation effectively detects risk for adverse effects from the occupational use of FFRs and loose fitting PAPRs is unproven.

II. Discussion

A. Pertinent Legal Authority

The purpose of the OSH Act is “to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources” (29 U.S.C. 651(b)). To achieve this goal Congress authorized the Secretary of Labor (“the Secretary”) to promulgate standards to protect workers, including the authority “to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce” (29 U.S.C. 651(b)(3); *see also* 29 U.S.C. 654(a)(2) (requiring employers to comply with OSHA standards), 29 U.S.C. 655(a) (authorizing summary adoption of existing consensus and established federal standards within two years of the Act’s enactment), 29 U.S.C. 655(b) (authorizing promulgation, modification or revocation of standards pursuant to notice and comment), and 29 U.S.C. 655(b)(7) (authorizing OSHA to include among a standard’s requirements labeling, monitoring, medical testing, and other information-transmittal provisions)). An occupational safety and health standard is “. . . a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, *reasonably necessary or appropriate* to provide safe or healthful employment and places of employment” (29 U.S.C. 652(8) (emphasis added)). A standard is reasonably necessary or appropriate

within the meaning of section 652(8) if it substantially reduces or eliminates significant risk or prevents it from developing, and is economically and technologically feasible, cost effective, consistent with prior Agency action or supported by a reasoned justification for departing from prior Agency actions, and supported by substantial evidence. *See Am. Textile Mfrs. Institute, Inc. v. Donovan*, 452 U.S. 490 (1981); 58 FR 16612–16616. The Secretary may also issue regulations requiring employers to keep records regarding their activities relating to the Act, as well as records of work-related deaths, injuries, and illnesses (29 U.S.C. 657(c)(1)–(2)).

As required by the OSH Act, OSHA originally determined that the respiratory protection standard would substantially reduce a significant risk of material harm when promulgating the standard. For the changes in this proposed rule, OSHA has not made a new finding of significant risk but is making changes that are reasonably related to the purpose of the respiratory protection standard as a whole. When, as here, OSHA has previously determined that its standard substantially reduces a significant risk, it is unnecessary for the agency to make additional findings on risk for every provision of that standard. *See, e.g., Pub. Citizen Health Research Grp. v. Tyson*, 796 F.2d 1479, 1502 n.16 (D.C. Cir. 1986) (rejecting the argument that OSHA must “find that each and every aspect of its standard eliminates a significant risk”). Rather, once OSHA makes a general significant risk finding in support of a standard, the next question is whether a particular requirement is reasonably related to the purpose of the standard as a whole. *See Asbestos Info. Ass’n/N. Am. v. Reich*, 117 F.3d 891, 894 (5th Cir. 1997); *Forging Indus. Ass’n v. Sec’y of Labor*, 773 F.2d 1436, 1447 (4th Cir. 1985); *United Steelworkers of Am., AFL–CIO–CLC v. Marshall*, 647 F.2d 1189, 1237–38 (D.C. Cir. 1980) (“*Lead I*”).

The Act also provides that in promulgating standards dealing with toxic materials or harmful physical agents, OSHA must set the standard that “most adequately assures, to the extent feasible, on the basis of the best available evidence, that no employee will suffer material impairment of health or functional capacity even if such employee has regular exposure to the hazard dealt with by such standard for the period of his working life” (29 U.S.C. 655(b)(5)). As discussed in Section IB, Health Literature Background, OSHA concludes that the data available for health effects are lacking and insufficient to establish that

medical evaluations effectively prevent material impairment caused by wearing an FFR or a loose fitting PAPR.

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that is reasonably expected to be developed (*see Am. Iron and Steel Inst. v. OSHA*, 939 F.2d 975, 980 (D.C. Cir. 1991)). Courts have also interpreted technological feasibility to mean that a typical firm in each affected industry or application group will reasonably be able to implement the requirements of the standard in most operations most of the time (*see, e.g., Pub. Citizen v. OSHA*, 557 F.3d 165, 170–71 (3d Cir. 2009) (citing *United Steelworkers of Am.*, 647 F.2d 1189, 1272)).

OSHA has determined that this proposed rule does not impose any new feasibility burdens on employers. All employers in compliance with the existing standard will also be in compliance with the proposed revisions. This proposed rule simply removes some requirements for the use of medical evaluations for loose-fitting PAPRs and FFRs. Therefore, OSHA has determined that the proposed changes to 29 CFR 1910.134 are technologically feasible.

In determining economic feasibility, OSHA must consider the cost of compliance in an industry rather than on individual employers. In its economic analyses, OSHA “must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms” (*Am. Iron and Steel Inst.*, 939 F.2d at 980, quoting *United Steelworkers of Am.*, 647 F.2d at 1272). OSHA has determined that this proposed rule is economically feasible because this action is deregulatory and imposes no additional costs.

The Administrative Procedures Act directs agencies to include in each rule adopted “a concise general statement of [the rule’s] basis and purpose” (5 U.S.C. 553(c)); cf. 29 U.S.C. 655(e) (requiring the Secretary to publish a “statement of reasons” for any standard promulgated)). This notice satisfies this concise statement requirement.

Estimated Cost Savings From Eliminating Requirement for Medical Evaluation for Filtering Facepiece Respirators and Loose-Fitting PAPRs

OSHA estimated the potential cost savings associated with removing the medical evaluation requirement for

certain classes of respirators from CFR 1910.134 (Respiratory Protection) and potential reductions in the number of employees receiving follow-up medical exams. This required estimating the number of employees that would no longer receive the medical questionnaire for the specific type of respirators used as well as the number of employees that would no longer receive follow-up medical exams. A general description of the approach used to develop these estimates is presented below.

Annual Medical Questionnaire Cost Savings

To estimate the number of employees that would no longer receive a medical questionnaire, OSHA used data from the National Institute for Occupational Safety and Health (NIOSH) survey on Respirator Usage in Private Sector Firms for 2001 (NIOSH, 2003). This survey represents the most recent and complete dataset on respirator usage available at present. The dataset includes estimates of the number of employees using certain types of respirators by broad industry division. Based on the estimates of employees using certain types of respirators, OSHA calculated the percentage of all employees across industry groups that use these types of respirators, comparing these estimates to employment figures in the County Business Patterns (CBP) dataset for 2001. OSHA then applied these percentages to the number of employees across industry groups estimated in the CBP dataset for 2022, which represents the most recent CBP dataset available. The NIOSH survey included mining employees in its population sample. Because mining is not covered by OSHA, an adjustment was made to the total number of potentially affected employees by subtracting employees within the Mining, Quarrying, and Oil and Gas Extraction sector (NAICS 21) that are outside of the following industries:

- 1—Crude Petroleum Extraction (NAICS 211120)
- 2—Natural Gas Extraction (NAICS 211130)
- 3—Drilling Oil and Gas Wells (NAICS 213111)
- 4—Support Activities for Oil and Gas Operations (NAICS 213112)

One final adjustment that OSHA made for this analysis is to account for the specific type of respirator that employees use. Only those employees using either a filtering facepiece respirator (FFR) or loose-fitting powered air purifying respirator (PAPR) will no longer have to complete a medical questionnaire or receive a medical

evaluation. According to the 2022 County Business Patterns survey, there were approximately 136 million employees in the private sector. The NIOSH respirator survey found that about 1.939 percent of employees wore filtering facepieces, indicating that, assuming the profile remained the same, approximately 2.6 million employees wear filtering facepieces currently. Another 0.098 percent reported using loose-fitting PAPRs, which accounts for an additional 133,266 workers. These groups together would total 2.038 percent of employees, or 2,733,069 employees in private industry who currently use either an FFR or loose-fitting PAPR in their work. The spreadsheet detailing these calculations is available in the rulemaking docket on [regulations.gov](https://www.regulations.gov) (Docket No. OSHA–2025–0006).

Since the medical questionnaire is only required for new employees, OSHA estimates the number of questionnaires that are no longer required by multiplying the number of covered employees in non-mining private industry that use either an FFR or loose-fitting PAPR in the course of their work by the Bureau of Labor Statistics' (BLS') Job Openings and Labor Turnover Survey (JOLTS) annual total separations rate (43.9 percent). This approach results in an estimated 1,199,817 questionnaires that are no longer required annually.

The medical questionnaire is estimated to take an employee 15 minutes¹ on average to complete, which means that this new rule saves approximately 299,954 hours of labor time.

OSHA estimates the cost savings of this proposed rule using BLS' Occupational Employment and Wage Statistics data. Specifically, OSHA pulled the cross-industry median hourly wage for all occupations (\$23.80) and calculated the loaded hourly wage to account for fringe benefits. According to BLS' Employer Costs for Employee Compensation (ECEC) data for December 2024, the fringe rate was 31.1 percent. OSHA also accounts for indirect expenses that cannot be tied to producing a specific product or service, called overhead costs. OSHA used an overhead rate of 17 percent of base wages (EPA, 2002; Rice, 2002). This 17

percent rate is based on an estimate of overhead costs for safety and health professionals in large private organizations. A rate of 17 percent of base wages is equivalent to 11.71 percent of the hourly wage rate with fringe applied. To calculate the fully loaded hourly labor cost, OSHA added the three components together: base wages + fringe benefits (31.1 percent of total compensation) + applicable overhead (17 percent of base wages). OSHA estimates a fully loaded wage of \$38.59. Multiplying this wage by the total number of labor hours saved (approximately 299,954) results in total annual cost savings of \$11,575,237. The total cost savings over a 10-year time period would equal roughly \$115.8 million. The present value of these cost savings using a 3 and 7 percent discount rate would equal \$98.7 and \$81.3 million, respectively.

Annual Follow-Up Medical Exam Cost Savings

OSHA has previously estimated that 23 percent of all questionnaire recipients receive follow-up medical exams under the requirements of this standard.² OSHA estimates that, with the medical questionnaire no longer required, paralleling the earlier preamble discussion, only about 2 percent of the original questionnaire recipients would still receive follow-up medical exams (see Section I.B., Health Literature Background). These employees are expected to be referred for medical exams after undergoing training as required under paragraph (k) of the existing respiratory protection standard.

Using these estimates, OSHA calculated cost savings associated with medical exams no longer performed. OSHA multiplied the difference in pre- and post-standard revision required exams outlined above (21 percent) by the number of questionnaires estimated in Section 1 (1,199,817), which yields 251,962 employees that would no longer receive follow-up medical exams. The follow-up medical exams are estimated to take one hour to complete.³ Therefore, a total of 251,962 burden hours are avoided. Using a fully loaded worker wage of \$38.59 (derived previously), the total annual labor-based cost savings associated with medical exams equals \$9,723,199.

OSHA also estimated the cost savings associated with not administering the medical exam itself. Using price data

¹ This estimate of workers' time was used most recently in OSHA's estimates of cost of a respirator program in the COVID ETS rulemaking. See Document ID OSHA–2020–0004–1031. Arguably, a complementary amount of time would be required by the a PLHCP to review the questionnaire, but this cost may overlap with that already included in the cost of the exam. For simplicity this element has been left out of the calculation and therefore may be an underestimate.

² See the Supporting Statement for the PRA Information Collection Request (ICR) for 29 CFR 1910.134, Document ID OSHA–2011–0027–0020.

³ *Id.*

from the Centers for Medicare & Medicaid Services (CMS) (<https://www.cms.gov/medicare/physician-fee-schedule/search>), OSHA estimates that these follow-up medical exams cost \$193.75 each.⁴ Multiplying this unit cost by the number of medical exams previously estimated (251,962), OSHA calculates an additional \$48,817,566 in annual cost savings.

In total, OSHA estimates annual medical exam cost savings of \$58,540,765.

Annual Recordkeeping Cost Savings

This proposed regulatory revision also impacts the cost to maintain medical records and provide employees access to these records upon request. OSHA estimates that there are 1,199,817 medical questionnaires and 251,962 follow-up medical exams that will no longer be required and thus will also no longer have records maintained. OSHA has previously estimated that each medical record takes a secretary five minutes on average to record in their entity's recordkeeping system.⁵ Therefore, this recordkeeping task is estimated to take secretaries a total of 120,982 hours annually. OSHA also has estimated that 10 percent of employees will request their medical records, with each request requiring five minutes of secretarial time to process and deliver medical records to the requesting employee, totaling 12,098 hours of total burden time.⁶

In aggregate, this regulatory revision is expected to save 133,080 burden hours of annual recordkeeping activities. Using a fully loaded wage for secretaries (SOC 43-6010) (based on BLS' Occupational Employment and Wage Statistics) of \$37.00 yields \$4.9 million in annual cost savings, with a present value using both 3 and 7 percent discount rates equaling \$42.0 and \$34.6 million, respectively.

Questionnaire Cost Savings if Baseline Compliance Were To Increase

As part of this regulatory revision, OSHA also accounts for employees that have not yet received medical

questionnaires that should have in the absence of this regulatory revision. The resulting effects will be presented as though they occur in a concentrated period of time; however, there is uncertainty about whether the existing non-compliance would ever be addressed, and even if so, the timing is even more hypothetical.

OSHA calculated the number of employees that have not yet received medical questionnaires by first subtracting the number of Mining, Quarrying, and Oil and Gas Extraction sector employees using FFRs from the total projected number of employees using these respirators using the same methodology as outlined in Section 1 (2,599,807 employees). (Note that this does not include those employees wearing loose-fitting PAPRs (133,262).) Next, OSHA assumed that 30 percent of these employees started wearing respirators during the COVID-19 pandemic but were never properly evaluated during this period. As a result, OSHA estimates that, in the absence of this regulatory revision, there are 779,942 employees that would still need to receive the medical questionnaire. Assuming the same 15 minutes of burden time per medical questionnaire used in Section 1, OSHA calculates total burden savings of 194,986 hours of workers' time. OSHA multiplied this burden savings estimate by the fully loaded worker wage (\$38.59; derived previously) to estimate cost savings of \$7,524,491. Annualizing this savings over 10 years using 3 and 7 percent discount rates equals \$882,100 and \$1,071,318, respectively.

Medical Exam Cost Savings if Baseline Compliance Were To Increase

OSHA assumes that 23 percent of the employees that have not received a medical questionnaire identified in Section 4 will also not receive follow-up medical exams and does not require a further adjustment from 23 percent to 2 percent as was done in Section 2. Therefore, OSHA estimates that 179,387 current employees will not receive a follow-up medical exam given this

regulatory revision. Given an assumed one hour to complete these follow-up medical exams, OSHA estimates an additional 179,387 hours of burden time saved by this regulatory revision. Using a fully loaded worker wage of \$38.59, the one-time labor-based cost savings associated with these medical exams equals \$6,922,532. Again, using the CMS-based unit cost for medical exams (\$193.75), cost savings from the medical exams themselves equals \$34,756,170. Total one-time medical exam cost savings equal \$41,678,702. Annualizing these savings over 10 years using 3 and 7 percent discount rates equals \$4,886,015 and \$5,934,109, respectively.

Recordkeeping Cost Savings if Baseline Compliance Were To Increase

OSHA also considers cost savings associated with the medical records for those employees who should have but who did not receive a medical questionnaire or follow-up exam under the existing standard, for whom medical records will not be recorded and maintained due to this proposed revision. OSHA estimates that a total of 959,329 medical records (779,942 medical questionnaires and 179,387 follow-up medical exams) will no longer be needed to comply with this standard. OSHA assumes each medical record would have taken five minutes to record in recordkeeping systems. OSHA also assumes that 10 percent of employees would have requested access to these medical records, taking an additional five minutes per records request. These recordkeeping tasks are estimated to take 87,936 burden hours in total. Using a secretary's fully loaded wage of \$37.00, OSHA estimates one-time recordkeeping cost savings of \$3,253,723. Using discount rates of 3 and 7 percent and a time period of ten years, annualized cost savings equal \$381,436 and \$463,257, respectively.

Total Cost Savings

Table 1 shows the total annualized cost savings associated with regulatory revisions to this standard.

TABLE 1—TOTAL COST SAVINGS FROM RESPIRATORY PROTECTION STANDARD REVISIONS

Item	One-time cost savings*	Annual cost savings	Annualized one-time cost savings		Total annualized cost savings	
			3%	7%	3%	7%
Questionnaires	\$7,524,491	\$11,575,237	\$882,100	\$1,071,318	\$12,457,337	\$12,646,556
Medical Exams	41,678,702	58,540,765	4,886,015	5,934,109	63,426,781	64,474,875

⁴ This estimate uses the costs for an office visit (HCPCS 99203), spirometry (94010), chest x-ray (71048), and EKG (93000).

⁵ See the Supporting Statement for the PRA Information Collection Request (ICR) for 29 CFR 1910.134, Document ID OSHA-2011-0027-0020.

⁶ *Id.*

TABLE 1—TOTAL COST SAVINGS FROM RESPIRATORY PROTECTION STANDARD REVISIONS—Continued

Item	One-time cost savings *	Annual cost savings	Annualized one-time cost savings		Total annualized cost savings	
			3%	7%	3%	7%
Recordkeeping	3,253,723	4,923,950	381,436	463,257	5,305,386	5,387,207
Total	52,456,917	75,039,953	6,149,551	7,468,685	81,189,504	82,508,638

* The underlying assumption for these estimates is that, in the absence of the proposed rule, existing non-compliance would be addressed in a concentrated period of time. However, there is substantial uncertainty about the accrual of these savings and, if such accrual occurs, about the timing.

Source: OSHA DSG Office of Regulatory Analysis.

As indicated in Table 1, OSHA estimates the annualized cost savings would be approximately \$81 million at a 3 percent discount rate, or \$83 million at a 7 percent discount rate. The agency further estimates that the present value of those savings over the next 10 years would be \$693 million at a 3 percent discount rate, or \$704 million at a 7 percent discount rate. The agency has estimated these cost savings will be spread across 131,089 firms, of which 127,351 are considered “small” by the Small Business Administration.

Uncertainties and Request for Comment

The agency recognizes there is uncertainty in several areas in this calculation. One is the estimate of current respirator usage, which relies heavily on as a baseline from NIOSH’s 2001 respirator survey, adjusted for growth in employment.⁷ The agency has reasonable grounds for believing that the use of FFRs has likely increased in the interim, in part because of their common usage during the COVID–19 pandemic. If this is the case, the cost savings from this regulatory change could potentially be larger.

Another source of uncertainty is the percentage of potential respirator wearers who are referred for medical exams currently, based on their answers to the questionnaire. A long-standing assumption, used in the agency’s Information Collection Requests, based on earlier information originally used in its 1998 rulemaking, indicated that 23 percent of users of all respirator types would be referred for further medical evaluation based on the questionnaire. But given both the low rates of employees being placed on restrictions for respirator use, and the relatively modest physiological demands of the type of respirators in question, suggests the percentage may be much smaller for this subgroup of respirator wearers (*i.e.*,

those using FFRs and loose-fitting PAPRs).

A third potential factor of uncertainty is the assumption that all employees newly hired will need to receive a new medical assessment for their fitness to wear a respirator. This may have been a useful assumption initially for establishing the economic feasibility of the Respiratory Protection rule in 1998 and the agency believes that frequently employers will err on the side of caution. However, under some circumstances an employer may rely on the written medical evaluation from a prior employer’s PLHCP if the work conditions and type and weight of the respirator remains the same (see Section IX.E of OSHA’s Respiratory Protection Directive, CPL 02–00–158 (June 26, 2014), but OSHA lacks information on how often that might occur so cannot account for this possibility in these estimates.

These various sources of uncertainty will offset each other to some degree, and there are no doubt other parts of this cost-savings calculation that could be modified based on new information. The agency welcomes comment on the various assumptions and data sources used for this calculation.

B. Additional Requirements

i. OMB Review Under the Paperwork Reduction Act of 1995

The Paperwork Reduction Act of 1995 (“PRA”) defines “collection of information” to mean “the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public, of facts or opinions by or for an agency, regardless of form or format” (44 U.S.C. 3502(3)(A)). Under the PRA, a Federal agency cannot conduct or sponsor a collection of information unless it is approved by OMB under the PRA and the agency displays a currently valid OMB control number (44 U.S.C. 3507). Also, notwithstanding any other provisions of law, no person shall be subject to penalty for failing to comply with a collection of information if the

collection of information does not display a currently valid OMB control number (44 U.S.C. 3512(a)(1)). The process for OMB approval is found in 5 CFR part 1320. This proposed rule would impose no new information collection requirements. Because the revisions would affect only minor changes to the existing information collections in 29 CFR 1910.134 (OMB Control Number 1218–0099), OMB has waived the requirements of 5 CFR part 1320 pursuant to 5 CFR 1320.18(d).

ii. State Plans

Under section 18 of the OSH Act, 29 U.S.C. 651 *et seq.*, Congress expressly provides that States may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards that are “at least as effective” as the Federal standards in providing safe and healthful employment and places of employment (29 U.S.C. 667). OSHA refers to these OSHA-approved, State-administered occupational safety and health programs as “State Plans.”¹

When federal OSHA promulgates a new standard or a more stringent amendment to an existing standard, State Plans must either amend their standards to be identical to, or “at least as effective as” the new Federal standard or amendment, or show that an existing State Plan standard covering this issue is “at least as effective” as the new Federal standard or amendment (29 CFR 1953.5(a)). However, when OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than an existing standard, State Plans do not have to amend their standards, although they may opt to do so. OSHA has preliminarily determined this proposed rule does not impose additional or more stringent requirements than the existing standard, and therefore State Plans are not required to amend their standards. OSHA seeks comment on this assessment of its proposal.

⁷ In 2023, NIOSH was commissioned to develop and administer and updated respirator usage survey. That effort is still underway and the results are not available at this time.

iii. Environmental Impacts/National Environmental Policy Act (NEPA)

OSHA has reviewed the proposed rule according to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), as amended by the Fiscal Responsibility Act of 2023 (Pub. L. 118–5, 321, 137 Stat. 10), and the Department of Labor's NEPA procedures (29 CFR part 11). OSHA has preliminarily determined that this proposal would have no impact on the quality of the human environment.

iv. Other Statutory and Executive Order Considerations

OSHA has examined this proposed rule and has determined that it is consistent with the policies and directives outlined in E.O. 14192, “Unleashing Prosperity Through Deregulation.” This proposed rule is expected to be an Executive Order 14192 deregulatory action.

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. OSHA reviewed this proposed rule under the provisions of the Regulatory Flexibility Act. This rule would eliminate burdensome regulations. Therefore, OSHA certifies that the rescission would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not required. OSHA will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

Executive Order (E.O.) 12866, “Regulatory Planning and Review,” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives,

rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit “significant regulatory actions” to OIRA for review. OIRA has determined that this proposed rule is a “significant regulatory action” under the criteria in section 3(f)(4) of E.O. 12866. Accordingly, this proposed rule was submitted to OIRA for review under E.O. 12866.⁸

OSHA has considered its obligations under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*), and the Executive Orders on Consultation and Coordination With Indian Tribal Governments (E.O. 13175, 65 FR 67249 (Nov. 6, 2000)), Federalism (E.O. 13132, 64 FR 43255 (Aug. 10, 1999)), and Protection of Children From Environmental Health Risks and Safety Risks (E.O. 13045, 62 FR 19885 (Apr. 23, 1997)). Given that this is a proposed deregulatory action that involves the removal of medical evaluation requirements for employees required to use PAPRs and FFRs, that OSHA does not foresee economic impacts of \$100 million or more, and that the action does not constitute a policy that has federalism or tribal implications, OSHA has determined that no further agency action or analysis is required to comply with these statutes and executive orders.

C. Summary and Explanation of the Proposed Rule

In this NPRM, OSHA proposes to remove medical evaluation requirements for employees required to use filtering facepiece respirators (FFRs) or loose-fitting powered air-purifying respirators (PAPRs), as specified in paragraph (e). As defined in paragraph (b), a *filtering facepiece respirator* means a negative pressure particulate respirator with a filter as an integral part of the facepiece or with the entire facepiece composed of the filtering medium. Paragraph (b) also defines *loose-fitting* to mean a respiratory inlet covering that is designed to form a partial seal with the face and *powered air-purifying respirator* to mean an air-purifying respirator that uses a blower to force the ambient air through air-purifying elements to the inlet covering.

⁸ OIRA has determined that this proposed rule is not an economically significant regulatory action under section 3(f)(1) of E.O. 12866.

OSHA proposes that the initial medical evaluation requirements would only be removed for FFRs and loose fitting PAPRs and the medical evaluation requirements for any other air-purifying or supplied-air respirator would not be impacted and still apply. All other required provisions under the Respiratory Protection Standard (29 CFR 1910.134), including the hazard assessment; selection of respiratory protection equipment; fit testing; training and education; and maintenance and care continue to apply under this proposal. OSHA anticipates that this approach will allow employers to focus medical evaluations on employees for whom those evaluations are likely to be beneficial.

Currently, paragraph (e)(1) requires the medical evaluation of employees required to wear a respirator and a determination that those employees are able to use the respirators selected by the employer. Medical evaluation of employees prior to respirator use avoids exposing employees to the physiological stresses associated with such use. In the 1998 final rule revising the Respiratory Protection Standard (63 FR 1152), OSHA found that adverse health effects can result, in some cases, even from short duration use of respirators. Through extensive literature review, the agency previously concluded there is a potential for adverse health effects resulting from respirator use, even for healthy employees using respirators designed for low breathing resistance and used for short durations. As such, the agency determined that respirator use would impose a substantial risk of material impairment to the health of employees who have preexisting respiratory and cardiovascular impairments.

The proposed revision to the standard, as noted above, provides an exception for employees who use FFRs or loose-fitting PAPRs from the requirement that employers must medically evaluate employees required to wear a respirator. OSHA believes these revisions are appropriate due to the lack of data illustrating material impairment from wearing FFRs and loose-fitting PAPRs and the lack of data demonstrating that medical evaluations effectively predict adverse outcomes for workers wearing FFRs and loose-fitting PAPRs, as discussed in the *Health Literature Background* (Section IB. of this preamble). This lack of data is combined with widespread usage of FFRs and loose fitting PAPRs, especially in the wake of the COVID-19 pandemic. Ultimately, the agency preliminarily concludes that a finding that medical evaluations prevent adverse outcomes

from the occupational use of FFRs and loose-fitting PAPRs is unwarranted. While the agency does not question the need for medical evaluations for other types of respirators, the literature does not support their efficacy when using FFRs and loose-fitting PAPRs in environments that are not immediately dangerous to life or health. As such, proposed paragraph (e)(1)(ii) exempts employees required to use FFRs or loose-fitting PAPRs from the requirements of paragraph (e). The agency seeks comments on all aspects of this proposed change, including the submission of information and data on the efficacy of medical evaluations preventing adverse health outcomes when using FFRs or loose-fitting PAPRs. OSHA also seeks comment on voluntary respirator use, specifically if there are any concerns with the voluntary use of FFRs and loose-fitting PAPRs and the actions of this NPRM.

Paragraph(s) (e)(2) through (e)(7) would not be impacted by the proposed exemption in paragraph (e)(1) for FFRs and loose-fitting PAPRs. If medical evaluation is required under paragraph (e)(1), the employer must comply with all requirements of paragraph (e). OSHA seeks comment on whether paragraph (e)(7) should remain applicable to FFR and loose-fitting PAPR use and require the employer to provide medical evaluations whenever symptoms arise that may be related to this use as well as any information or data on the current frequency of medical reevaluations as required by paragraph (e)(7).

OSHA recognizes that adopting these revisions will also result in the revision of the respiratory protection requirements in OSHA's construction and maritime industry standards, which apply the requirements in 29 CFR 1910.134 to construction and maritime work. (See 29 CFR 1926.103 (construction); 29 CFR 1915.154, 29 CFR 1917.92, and 29 CFR 1918.102 (maritime)). OSHA is in the process of appointing members to the Advisory Committee on Construction Safety and Health (ACCSH). The agency intends to present this proposed rule to ACCSH once that process is complete. The agency will put the Committee's recommendations on the OSHA website and in the docket for this proposed rule prior to the close of the comment period to allow the public to provide comments on those recommendations.

III. Authority and Signature

Amanda Laihow, Acting Assistant Secretary of Labor for Occupational Safety and Health, authorized the preparation of this document under the

authority granted by sections 4 and 6 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, 657); section 107 of the Contract Work Hours and Safety Standards Act (the Construction Safety Act) (40 U.S.C. 3704); section 41 of the Longshore and Harbor Worker's Compensation Act (33 U.S.C. 941); 5 U.S.C. 553, Secretary of Labor's Order No. 8–2020 (85 FR 58393), and 29 CFR part 1911.

Signed at Washington, DC, on June 26, 2025.

Amanda Laihow,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

List of Subjects in 29 CFR 1910

Health, Occupational safety and health, Respirators, Respirator selection.

IV. Proposed Regulatory Text

Amendments

For the reasons set forth in the preamble, OSHA is proposing to amend 29 CFR part 1910 as follows:

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

- 1. The authority citation for part 1910 continues to read:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor's Order No. 12–71 (36 FR 8754); 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008), 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), 1–2012 (77 FR 3912), or 08–2020 (85 FR 58393); 29 CFR part 1911; and 5 U.S.C. 553, as applicable.

Subpart I—Personal Protective Equipment.

- 2. Amend § 1910.134 by revising paragraph (e)(1) to read as follows:

§ 1910.134 Respiratory Protection.

* * * * *

(e) * * *

(1) *General.* (i) Except as otherwise provided in this paragraph, the employer shall provide a medical evaluation to determine the employee's ability to use a respirator, before the employee is fit tested or required to use the respirator in the workplace. The employer may discontinue an employee's medical evaluations when the employee is no longer required to use a respirator.

(ii) The medical evaluation requirements of this paragraph do not apply to the following:

(A) The required use of filtering facepiece respirators.

(B) The required use of loose-fitting powered air-purifying respirators.

[Docket No. OFCCP–2025–0001]

RIN 1250–AA17

Rescission of Executive Order 11246 Implementing Regulations

AGENCY: Office of Federal Contract Compliance Programs, Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: The U.S. Department of Labor (DOL) proposes to rescind the regulations for Executive Order (E.O.) 11246, as amended. E.O. 11246 was revoked by E.O. 14173 on January 21, 2025. The E.O. 11246 regulations prohibited covered Federal contractors and subcontractors from discriminating in employment based on race, color, religion, sex, sexual orientation, gender identity, and national origin and required them to take affirmative action on those bases. They also prohibited these employers from taking adverse employment actions against applicants or employees because they inquired about, discussed, or disclosed information about their pay or their co-workers' pay, subject to certain limitations.

DATES: Comments must be received by September 2, 2025.

ADDRESSES: Comments must be submitted in one of the following two ways (please choose only one of the ways listed):

- Electronically at <https://www.regulations.gov>. Follow the “Submit a comment” instructions. If you are reading this document on [federalregister.gov](https://www.federalregister.gov), you may use the green “SUBMIT A PUBLIC COMMENT” button beneath this rulemaking's title to submit a comment to the [regulations.gov](https://www.regulations.gov) docket.

- You may mail written comments to the following address: Catherine L. Eschbach, Director, Office of Federal Contract Compliance Programs, 200 Constitution Avenue NW, Washington, DC 20210. Mailed comments must be received by the close of the comment period.

Do not include any personally identifiable information (such as name, address, or other contact information) or

confidential business information that you do not want publicly disclosed. All comments are public records; they are publicly displayed exactly as received, and will not be deleted, modified, or redacted. Comments may be submitted anonymously.

Follow the search instructions on <https://www.regulations.gov> to view public comments. A brief summary of this document will be available on <https://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT:

Catherine L. Eschbach, Director, Office of Federal Contract Compliance Programs, 200 Constitution Avenue NW, Washington, DC 20210. Telephone: 202-693-0101. Email: ofccp_guidance@dol.gov.

SUPPLEMENTARY INFORMATION:

I. Discussion

A. Overview of Current Regulations

1. Affirmative Action Requirements

The E.O. 11246 regulations require covered contractors and subcontractors (“contractors”) to develop and undertake affirmative action programs. The regulations also require non-discrimination so that applicants are employed, and that employees are treated during employment, without regard to their race, color, religion, sex, sexual orientation, gender identity, or national origin. The regulations include different affirmative action requirements for nonconstruction and construction contractors. 41 CFR 60–1.4(a)(1).

The affirmative action requirements for nonconstruction contractors are found at 41 CFR part 60–2. DOL first codified these regulations in February 1970. *See* 35 FR 2586 (Feb. 5, 1970). As amended in 2000, by 65 FR 68042, these regulations prescribe the contents of nonconstruction Federal contractors’ affirmative action programs (AAPs) and standards and procedures for evaluating the compliance of those programs. 41 CFR 60–2.1(a). These regulations only require affirmative action regarding women and minorities. In effect, these regulations may act to incentivize and induce these nonconstruction Federal contractors to create policies and programs designed to account for race and sex in hiring and personnel decisions.

Specifically, the regulations require nonconstruction Federal contractors with 50 or more employees to develop and maintain a written AAP for each of their establishments. 41 CFR 60–2.1(b). The regulations specify that any contractor that fails to develop and maintain a written AAP for each of its establishments is not in full compliance

with Executive Order 11246, as amended. *Id.* 60.2–2(a). Noncompliance, according to these regulations, may result in a prospective contractor being deemed “nonresponsible” by procuring agencies or administrative enforcement. *Id.* 60–2.2(b), (c).

These regulations also specify the purpose and contents of AAPs. 41 CFR 60–2.10. Among other things, such programs must be “action-oriented,” meaning they must include specific practical steps designed to address situations where these regulations deem that women and minorities are not being employed at a rate to be expected given their availability in the relevant labor pool under the calculations set forth in the regulations. *Id.* 60–2.10(a)(1). The regulations likewise mandate that, when the percentage of minorities or women employed in a particular job group is less than would reasonably be expected given their availability percentage in that particular job group, the contractor must establish a placement goal. *Id.* 60–2.15(b). This, in essence, requires that regulated contractors take steps to achieve a representation of minorities and women in their workforce that reflects the estimated availability of minorities and women qualified to be employed. *Id.* 60–2.12 to 60–2.15.

The affirmative action requirements for construction contractors are found at 41 CFR part 60–4. This part applies to all contractors, subcontractors, contracting agencies, and applicants, as defined in 41 CFR 60–1.3, that are party to or seek to enter Federal and federally assisted construction contracts in excess of \$10,000, as well as certain Federal nonconstruction contractors awarding construction contracts. Nonconstruction contractors and subcontractors are required to comply with these requirements if, as a part of their Federal contract or subcontract, construction work is necessary in whole or in part to the performance of a nonconstruction contract or subcontract. *See* 41 CFR 60–4.1. Part 60–4 defines coverage, specifies clauses to be included in contracts, provides a procedure to ensure compliance by covered contractors, and specifies certain recordkeeping and reporting requirements.

Notable provisions include Sections 60–4.2, 60–4.3, and 60–4.6. Section 60–4.2 requires all contracting officers, applicants for construction contracts, and covered nonconstruction contractors to include a “Notice of Requirement for Affirmative Action to Ensure Equal Employment Opportunity (Executive Order 11246)” in solicitations for offers and bids on all Federal and federally assisted

construction contracts or subcontracts. The notice includes information on minority and female participation goals applicable to the contractor’s workforce.

Section 60–4.2 also provides that construction contractors, contracting officers, applicants for construction contracts, and covered nonconstruction contractors must notify DOL’s Office of Federal Contract Compliance Programs with written notification within 10 working days of the award of a covered contract in excess of \$10,000. The Section 60–4.3 regulations further require these entities to incorporate the “Standard Federal Equal Employment Opportunity Construction Contract Specifications (Executive Order 11246)” set forth in Section 60–4.3 into all nonexempt Federal contracts and subcontracts. These standards describe the female and minority participation goal requirements (discussed in more detail below) and outline specific actions covered contractors must take to ensure equal employment opportunity in their work sites. For example, covered contractors must maintain a working environment free of harassment, intimidation, and coercion at all sites and must establish and maintain a current list of minority and female recruitment sources. *See* 41 CFR 60–4.3(a)(7)(a) and (b).

Section 60–4.6 outlines participation goals and timetables for minority and female utilization on construction projects. For women, the participation goal is set to 6.9% of the total hours worked by the contractor’s construction workforce in each trade. For minorities, there are participation goals for each geographic area in the United States. These goals apply to minority groups in the aggregate and include those groups enumerated in the definition of “minority” at 41 CFR 60–4.3(a)1.d. Covered contractors are required to apply the goals to each construction trade in their workforce in the relevant geographic area.

2. Nondiscrimination Provisions and Other Requirements

The 41 CFR part 60–1 regulations describe various obligations of contractors pursuant to E.O. 11246. One key provision is Section 60–1.4, which describes the equal opportunity clause that must be included in government contracts. This section includes the requirement that contractors state in all solicitations or advertisements for employment that applicants will receive consideration without regard to one or more of the protected bases and that contractors notify labor organizations of their obligations under E.O. 11246.

Contractors who meet the requirements set forth in Section 60–1.7 must file an annual Employer Information Report (EEO–1 Report) with the U.S. Equal Employment Opportunity Commission. In this report, covered contractors include information on their workforce demographics, including data by job category, sex, race, and ethnicity.

Section 60–1.10 requires the contractor to notify the Department of State and the Director of DOL’s Office of Federal Contract Compliance Programs when an employee or potential employee is denied a visa of entry to a country in which or with which it is doing business and it believes the denial was due to one, or more, of the protected bases covered by E.O. 11246.

Section 60–1.12 outlines the record retention requirements that apply to covered contractors under E.O. 11246. These regulations require contractors to preserve any personnel or employment record made or kept for a period of not less than two years from the date of the making of the record or the personnel action involved, whichever occurs later. However, if the contractor has fewer than 150 employees or does not have a contract of at least \$150,000, the record retention period is one year from the date of the making of the record or the personnel action involved, whichever occurs later. This section also provides that the contractor must be able to identify the gender, race and ethnicity of each employee for any record the contractor maintains. Where possible, the contractor must also identify the gender, race, and ethnicity of each applicant or internet Applicant, as defined at 41 CFR 60–1.3.

Section 60–1.20 outlines the investigative methods DOL uses to evaluate a contractor’s compliance with the E.O. 11246 regulations. A compliance evaluation may consist of one or any combination of the investigative procedures listed in the regulations, *i.e.*, a compliance review, an off-site review of records, a compliance check, and/or a focused review. This section also provides that if a contractor fails to submit an AAP and the supporting documents within 30 calendar days of DOL’s request, DOL may initiate enforcement procedures.

Section 60–1.40 requires the development and maintenance of an AAP under E.O. 11246. This section requires each contractor with 50 or more employees and contracts of \$50,000 or more to develop an annual AAP for each of their establishments. Pursuant to these regulations, contractors undertake the specific equal employment opportunity efforts set forth in 41 CFR

part 60–2 (such as analyses of the contractor’s employment processes) and document these efforts in a written AAP.

The regulations at 41 CFR part 60–3 contain the Uniform Guidelines on Employee Selection Procedures (UGESP). UGESP applies to tests and other selection procedures used to make employment decisions. When a test or other selection procedure is determined to have an adverse impact, UGESP requires the contractor to validate the test or procedure and to retain the validation documentation. Under UGESP, each contractor must maintain records and other information for each job sufficient to permit analyses of the impact of its selection procedures on the employment opportunities of people based on race, sex, or ethnic group. Using this information, the contractor and DOL identify and evaluate the contractor’s selection procedures for adverse impact. In this proposed rescission, DOL is proposing to rescind the 41 CFR part 60–3 regulations, as they are codified in the E.O. 11246 regulations. This action does not impact other agencies’ interpretation and application of UGESP.

The regulations at 41 CFR part 60–20 set forth DOL’s interpretations and guidelines for enforcing its sex discrimination protections. The regulations at 41 CFR part 60–30 provide the administrative procedures for instituting enforcement proceedings pursuant to E.O. 11246, Section 503 of the Rehabilitation Act of 1973 (Section 503), as amended, and the Vietnam Era Veterans’ Readjustment Assistance Act of 1974 (VEVRAA), as amended.

The regulations at 41 CFR part 60–40 describe the rules and restrictions the agency has in place for providing public access to its records. The 41 CFR part 60–50 regulations set forth DOL’s interpretations and guidelines for enforcing its religion and national origin discrimination protections.

Lastly, the regulations at 41 CFR part 60–999 provide information on Office and Management and Budget (OMB) approved information collections relevant to the regulations. The information in this part is outdated and refers to regulatory provisions that DOL is proposing to rescind through this rulemaking.

B. Rescission of E.O. 11246 Implementing Regulations

On January 21, 2025, President Trump issued E.O. 14173, “Ending Illegal Discrimination and Restoring Merit-Based Opportunity,” 90 FR 8633 (Jan. 31, 2025). In addition to revoking E.O. 11246, E.O. 14173 directed DOL to

immediately cease the following: promoting “diversity,” holding Federal contractors and subcontractors responsible for taking “affirmative action,” and allowing or encouraging Federal contractors and subcontractors to engage in workforce balancing based on race, color, sex, sexual preference, religion, or national origin. *Id.* at 8634. Accordingly, DOL has determined that it must rescind the regulations at 41 CFR parts 60–1, 60–2, 60–3, 60–4, 60–20, 60–40, and 60–50 which were promulgated under the authority of E.O. 11246.

DOL is also proposing to modify the administrative enforcement proceeding procedures at 41 CFR part 60–30 to remove the E.O. 11246 components. In addition to E.O. 11246, these procedures also apply to VEVRAA and Section 503. DOL is pursuing separate rulemaking to incorporate these procedures directly into the VEVRAA and Section 503 implementing regulations (which would make the 41 CFR part 60–30 regulations unnecessary). To implement these changes, DOL is first proposing to modify 41 CFR part 60–30 to remove the E.O. 11246 components and retain the Section 503 and VEVRAA components. If the VEVRAA and Section 503 rulemakings take effect, DOL will then rescind the 41 CFR part 60–30 regulations in their entirety.

DOL is also proposing to rescind the 41 CFR part 60–999 regulations, which provide information on OMB-approved information collections relevant to the regulations. As described earlier, the information in this part is outdated and refers to regulatory provisions that DOL is proposing to rescind through this rulemaking. Further, retaining the 41 CFR part 60–999 regulations is unnecessary, as DOL fulfills the 44 U.S.C. 3507 requirement to display its current control numbers through other means (*e.g.*, displaying the control numbers on the information collections).

As a further separate and independent reason for rescission, in light of recent course-corrections in Federal civil rights law, DOL has concerns that the affirmative action regulations are vulnerable to legal challenge as unlawful and should be rescinded. As recently explained by the Supreme Court, “[d]istinctions between citizens solely because of their ancestry are by their very nature odious to a free people whose institutions are founded upon the doctrine of equality.” *Students for Fair Admissions v. Pres. & Fellows of Harv. Coll.*, 600 U.S. 181, 208 (*SFFA*). This principle, according to the Supreme Court, “cannot be overridden except in the most extraordinary case.” *Ibid.* Yet,

the E.O. 11246 affirmative action regulations do just that. Indeed, the 41 CFR part 60–2 regulations explicitly require covered nonconstruction Federal contractors to create personnel programs that include specific practical steps, *i.e.*, affirmative actions, designed to result in the contractors employing women and minorities. 41 CFR 60–2.10(a)(1). These regulatory requirements to take affirmative action as to women and minorities are based on statistical assumptions about how employment demographics should look without consideration of non-discriminatory reasons why statistical disparities might exist in employment demographics compared to an available labor pool. The regulatory requirements to take affirmative actions are also imposed without any showing that discriminatory practices towards women and minorities do in fact exist at the employer. The premise that the mere existence of statistical disparities is evidence of underutilization of women and minorities is based on the fundamentally flawed assumption that each and every federal contractor's workforce may harbor discrimination if it does not mirror the available labor pool for women or minorities. There are many non-discriminatory reasons that a particular contractor might attract more female or male applicants or applicants of a particular race and why that might be reflected in the contractor's workforce. For example, a woman-owned business may offer a company culture that women find more appealing than men do when considering employment opportunities leading to a larger number of women applying and also therefore being hired by that contractor at a greater rate than available in the general workforce. Similarly, a company that produces products targeted towards male demographics for sales might also naturally attract more male than female applicants in employment. That occurring is not evidence of discrimination or underutilization of a particular race or sex but of labor and product market forces at work. The E.O. 11246 regulations failed to take account of other factors that might influence the composition of a contractor's labor force and instead imposed uniform requirements that assumed without evidence that but for discrimination there would be no statistical demographic disparities between a contractor's workforce and the available area labor force.

E.O. 11246 required non-discrimination and the regulations expressly prohibit using placement

goals as quotas or set asides. 41 CFR 60–2.16(e). As such, it would have been improper for covered contractors to claim that OFCCP's regulations permitted them to engage in illegal discrimination. No part of E.O. 11246's regulatory scheme permits or requires illegal discrimination or engaging in unlawful disparate treatment in order to fully comply with E.O. 11246's regulatory requirements. However, in practice, contractors may have wrongly tried to ensure that they did not incur costly and lengthy audits or serious enforcement penalties that could jeopardize their ability to obtain and maintain federal contracts by taking and making legally impermissible hiring and employment actions and decisions.

The 41 CFR part 60–4 regulations similarly require covered construction Federal contractors to set participation goals for women and minorities based on labor market demographics without consideration of non-discriminatory reasons for the contractor's workforce utilization and without any showing that discriminatory practices exist at the contractor's worksites. *See* 41 CFR 60–4.6.

Though the regulations state that contractors must make employment decisions in a nondiscriminatory manner, the regulations may have induced and incentivized these entities to consider characteristics like race and sex when making such decisions to try to avoid, if scheduled for a compliance evaluation, becoming entangled in a costly audit process or to try to avoid DOL enforcement actions or conciliation procedures—scenarios which could potentially result in the contractor's debarment or the contractor incurring other penalties or sanctions, including back pay liability. *See* 41 CFR 60–1.4(a), 41 CFR 60–1.27 and 41 CFR 60–2.16(e)(2).

Affirmative action requirements like these that place a finger on the scale for an applicant based on their race or sex—without any showing of actual discrimination potentially meriting remedial action—are more legally vulnerable after the Supreme Court found certain universities' affirmative action systems violated the Equal Protection Clause of the Fourteenth Amendment in *FFA*. 600 U.S. at 215–16; 231 (invalidating college affirmative action programs that “concluded, wrongly, that the touchstone of an individual's identity is not challenges bested, skills built, or lessons learned but the color of their skin.”). Regulations that incentivize and induce adopting practices that can induce or incentivize disparate treatment in employment decisions based on race or

sex, “cannot be reconciled with the guarantees of the Equal Protection Clause.” *Id.* at 230. As such, they must be rescinded. *See id.* at 232 (Thomas, J. concurring) (“[A]ll forms of discrimination based on race—including so-called affirmative action—are prohibited under the Constitution[.]”).

Moreover, DOL's rationale for why it was constitutionally permitted to impose these affirmative action requirements has relied on the theory that, in the absence of discrimination, an employer's workforce should look like the available area labor force, even absent any express showing that discrimination caused the differences in rates of employment based on race or sex. DOL's rationale does not support imposing affirmative action requirements under the standards in recent case law, much less only for women and minorities but not men or white persons. And, even if the use of placement goals or action-oriented measures could potentially be justified on a theory of underutilization of employees of a particular race or sex, there is no legal justification for limiting the placement goals and action-oriented measures to only women and minorities. As Justice Jackson's opinion in *Ames v. Ohio Department of Youth*, No. 23–1039, 05 U.S. ___, (2025) (slip op.), explains, Supreme Court caselaw has long been “clear that the standard for proving disparate treatment under Title VII does not vary based on whether or not the plaintiff is a member of a majority group.” *Id.* at *6. Similarly, nothing in E.O. 11246's text justified creating different standards or regulatory requirements for women or minorities where the text simply imposed non-discrimination and affirmative action requirements as to race and sex. Additionally, nothing on the face of E.O. 11246's text justified treating race and sex differently in the regulations from the other protected categories of religion and national origin. If men, whites, or persons of a particular religion or national origin were also being underutilized based on the DOL's statistical regulatory formula, the regulations failed to impose any affirmative action measures or require placement goals to ensure persons with those characteristics were entitled to equal opportunity in employment.

These regulations and the imposition of placement goals and action-oriented items based on this reasoning relies on the unsupported assumptions. There are many non-discriminatory reasons why an employer's workforce may look different than the available labor force, but these regulations impose

requirements including placement goals and obligations to make good faith efforts towards meeting those goals without regard to non-discriminatory reasons why disparities may exist. And even apart from the issues with the foundational premise, the regulations rely on the arbitrary grouping of all minorities together for purposes of the affirmative action regulations' required statistical analyses.

The statistical analyses that contractors are required to undertake in determining whether placement goals and other action-oriented programs are required by regulation also rely on arbitrary line drawing in determining what is the correct area labor force against which to compare the contractor's labor force and arbitrary line drawing in the creation of job categories. That contractors and not DOL are the ones who determine the job categories and relevant geographic areas pursuant to the regulations does not make this exercise any less arbitrary. It is actually more arbitrary given that two similarly situated contractors in the same geographic area could select different job groups for substantially the same jobs and different geographic lines for the local area labor force analysis despite the same recruiting practices—and as a result as between two similarly situated contractors, one contractor could conclude based on their arbitrary categorization that placement goals and action oriented measures are regulatorily required and the other contractor could conclude those measures are not regulatorily required. This potential for unlike outcomes as between similarly situated contractors violates the fundamental principle that regulations should lead to like outcomes as between regulated entities.

Rescinding these regulations will also improve the efficiency of the Federal contracting process and decrease employer burden, as Federal contractors will no longer be required to undertake the E.O. 11246 requirements described in detail above. Rescinding these regulations will also provide regulatory certainty to Federal contractors and other stakeholders by aligning the regulations with the most recent executive orders. In addition to ensuring compliance with E.O. 14173, rescinding these regulations is also consistent with E.O. 14168, "Defending Women from Gender Ideology Extremism and Restoring Biological Truth to the Federal Government," 90 FR 8615 (Jan. 30, 2025), which directed Federal agencies to modify regulations or policies that use the terms "gender" and "gender identity." Gender identity and sexual orientation were added as

protected bases to E.O. 11246 with the issuance of E.O. 13672, 79 FR 42971 (July 21, 2014), *revoked by* E.O. 14173, Sec. 3(a)(iii), 90 FR 8633 (Jan. 31, 2025). These bases were then added to the E.O. 11246 implementing regulations pursuant to the "Implementation of Executive Order 13672 Prohibiting Discrimination Based on Sexual Orientation and Gender Identity by Contractors and Subcontractors" rule, 79 FR 72985 (Dec. 9, 2014).

Further, the proposed rescission supports the objectives of E.O. 14192, "Unleashing Prosperity Through Deregulation," 90 FR 9065 (Feb. 6, 2025) and E.O. 14267, "Reducing Anti-Competitive Regulatory Barriers," 90 FR 15629 (Apr. 15, 2025) by alleviating unnecessary regulatory burdens and removing regulatory requirements that could have created barriers to entry for contractors who are new market participants.

Finally, pursuant to E.O. 14173, DOL has halted enforcement of the E.O. 11246 regulations. DOL believes that even though the E.O. 11246 regulations are null and void as there is no source of valid legal authority supporting the regulations, formal rescission of the regulations will avoid any potential for misunderstanding regarding the status of the regulations by covered contractors and the general public by removing these regulations from the **Federal Register**.

DOL has determined that each of these independent reasons justify the rescission of the E.O. 11246 regulations.

II. Authority

E.O. 14173, 90 FR 8633 (Jan. 31, 2025).

III. Procedural Issues and Regulatory Review

A. Review Under Executive Order 12866

E.O. 12866, "Regulatory Planning and Review," 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated

entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit "significant regulatory actions" to the Office of Information and Regulatory Affairs (OIRA) for review. In accordance with E.O. 12866, DOL has determined that this proposed rescission constitutes a "significant regulatory action" because it would have an annual effect on the economy of \$100 million or more. *See* E.O. 12866 sec. 3(f)(1). Accordingly, this proposed rescission was submitted to OIRA for review under E.O. 12866. Below is an overview of DOL's regulatory impact analysis conducted pursuant to E.O. 12866:

(1) Need for the Regulatory Action

As discussed in detail earlier, the proposed rescission is necessary to implement President Trump's mandate in E.O. 14173, which revoked the E.O. 11246 authority. Further, the proposal will align DOL's regulations with recent case law and will provide regulatory certainty to Federal contractors and other stakeholders by aligning the regulations with the most recent executive orders. *See* Discussion in Section I(B) above.

(2) Regulatory Alternatives

This proposed rescission imposes the least regulatory burden on Federal contractors, as it would be rescinding all the E.O. 11246 requirements (see estimated costs savings below). Alternatives include maintaining the E.O. 11246 implementing regulations or rescinding the affirmative action provisions while maintaining the nondiscrimination provisions. The Department considered these alternatives but concluded that these alternatives were not permissible because E.O. 14173 revoked the underlying E.O. 11246 authority in its entirety. E.O. 14173 also only provided for a 90-day period in which Federal contractors could continue to comply with the current regulatory scheme. *See* E.O. 14173 at Sec. 3(b)(i). As of April 21, 2025, this 90-day period has since passed. As such, rescinding the E.O. 11246 implementing regulations is the most appropriate regulatory action, as it aligns the regulations with the agency's legal authority and will provide clarity to stakeholders about their current obligations.

(3) Affected Entities & Cost-Benefits Analysis

The basic requirements in E.O. 11246 apply to any business or organization that (1) holds a single Federal contract, subcontract, or federally assisted construction contract in excess of \$10,000; (2) has Federal contracts or subcontracts that combined total in excess of \$10,000 in any 12-month period; or (3) holds Government bills of lading, serves as a depository of Federal funds, or is an issuing and paying agency for U.S. savings bonds and notes in any amount. Supply and service contractors with 50 or more employees and a single Federal contract or subcontract of \$50,000 or more also must develop and maintain an AAP that complies with 41 CFR part 60–2. Covered construction contractors are subject to the different affirmative action requirements under E.O. 11246 at 41 CFR part 60–4.

DOL estimates that approximately 107,165 supply & service establishments and 9,982 construction contractors are subject to the E.O. 11246 requirements. These estimates are derived from available EEO–1 and USA Spending data. See EEO–1 Reports at <https://www.eeoc.gov/data/eo-1-employer-information-report-statistics> and USA Spending Database at <https://www.usaspending.gov/> (estimates based on available 2020–2022 EEO–1 data and 2021–2023 USA Spending data). Based on case data from the previous three fiscal years, DOL estimates an annual time burden of 9,875,221 hours and \$996,373,735 in annual monetary costs associated with the E.O. 11246 requirements (e.g., recordkeeping, reporting, and compliance costs). Most of the costs (\$955,034,466) stem from the AAP obligations described above. Using these estimates, the 10-year cost savings related with the proposed rescission amount to \$8,499,270,061 at a 3% discount rate or \$6,998,112,173 at a 7% discount rate.

As illustrated by this analysis, a major benefit of the proposed rescission is the potential cost savings for covered contractors. As noted earlier, another benefit of the proposed rescission is that it would alleviate unnecessary regulatory burdens and remove regulatory requirements that could create barriers to entry for contractors who are new market participants. With the revocation of the E.O. 11246 authority, rescinding the E.O. 11246 implementing regulations will also reduce confusion about contractors' current regulatory obligations.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

DOL reviewed this proposed rescission under the provisions of the Regulatory Flexibility Act. This proposed rescission would eliminate burdensome regulations. DOL has determined that the burden largely applies to larger contractors who meet the AAP thresholds and are scheduled for a compliance review (which subjects contractors to additional reporting requirements). Therefore, DOL has concluded that the impacts of the proposed rescission would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an IRFA is not warranted. DOL will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b). DOL welcomes comments on this topic.

C. Review Under the Paperwork Reduction Act

The purpose of the Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501 *et seq.*, includes minimizing the paperwork burden on affected entities. The PRA requires certain actions before an agency can adopt or revise a collection of information, including publishing for public comment a summary of the collection of information and a brief description of the need for and proposed use of the information.

As part of its continuing effort to reduce paperwork and respondent burden, the Department conducts a preclearance consultation program to provide the public and Federal agencies with an opportunity to comment on proposed and continuing collections of information in accordance with the PRA. See 44 U.S.C. 3506(c)(2)(A). This activity helps to ensure that the public understands the Department's collection instructions, respondents can provide the requested data in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the Department can properly assess the

impact of collection requirements on respondents.

A Federal agency may not conduct or sponsor a collection of information unless it is approved by the Office of Management and Budget (OMB) under the PRA and it displays a currently valid OMB control number. The public is also not required to respond to a collection of information unless it displays a currently valid OMB control number. In addition, notwithstanding any other provisions of law, no person will be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512).

This rulemaking potentially affects specific information collections related to E.O. 11246 such as OMB Control # 1250–0002, *Complaint Involving Employment Discrimination by a Federal Contractor or Subcontractor*, which includes the Department's complaint and pre-complaint inquiry forms. Any changes will be communicated through separate **Federal Register** Notices.

D. Review Under Executive Order 13132

E.O. 13132, “Federalism,” 64 FR 43255 (Aug. 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The Executive Order requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The Executive Order also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.

DOL has examined this proposed rescission and has determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O. 12988, “Civil Justice Reform,” imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity, (2) write regulations to minimize litigation, (3) provide a clear legal standard for affected conduct

rather than a general standard, and (4) promote simplification and burden reduction. 61 FR 4729 (Feb. 7, 1996). Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any, (2) clearly specifies any effect on existing Federal law or regulation, (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction, (4) specifies the retroactive effect, if any, (5) adequately defines key terms, and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Section 3(c) of E.O. 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. DOL has completed the required review and determined that, to the extent permitted by law, this proposed rescission meets the relevant standards of E.O. 12988.

F. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. 2 U.S.C. 1532(a), (b)). The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a “significant intergovernmental mandate,” and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them.

DOL examined this proposed rescission according to UMRA and its statement of policy and determined that the rescission does not contain a Federal intergovernmental mandate, nor is it expected to require expenditures of

\$100 million or more in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. As a result, the analytical requirements of UMRA do not apply.

G. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This proposed rescission would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, DOL has concluded that it is not necessary to prepare a Family Policymaking Assessment.

H. Review Under Executive Order 12630

Pursuant to E.O. 12630, “Governmental Actions and Interference with Constitutionally Protected Property Rights,” 53 FR 8859 (March 18, 1988), DOL has determined that this proposed rescission would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

I. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB’s guidelines were published at 67 FR 8452 (Feb. 22, 2002). DOL has reviewed this proposed rescission under the OMB guidelines and has concluded that it is consistent with applicable policies in those guidelines.

J. Review Under Executive Order 13175

DOL has examined this proposed rescission and determined that it does not have tribal implications under E.O. 13175 that would require a tribal summary impact statement. It does not “have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.”

K. Review Under Additional Executive Orders and Presidential Memoranda

As detailed in Part I, this proposed rescission ensures compliance with E.O.

14173 and is consistent with E.O. 14168, “Defending Women from Gender Ideology Extremism and Restoring Biological Truth to the Federal Government,” which directed Federal agencies to modify regulations or policies that use the terms “gender” and “gender identity.” Further, it supports the objectives of E.O. 14192, “Unleashing Prosperity Through Deregulation,” and E.O. 14267, “Reducing Anti-Competitive Regulatory Barriers,” by alleviating unnecessary regulatory burdens and removing regulatory requirements that could have created barriers to entry for contractors who are new market participants. This proposed rescission, if finalized as proposed, is expected to be an E.O. 14192 deregulatory action.

List of Subjects

Civil rights, Construction industry, Employment, Equal employment opportunity, Government contracts, Investigations, Labor, OMB control numbers, Paperwork Reduction Act, Reporting and recordkeeping requirements, Religious discrimination, Reporting and recordkeeping requirements, Sex discrimination, Women.

For the reasons stated in the preamble, and under the authority of E.O. 14173, 90 FR 8633 (Jan. 31, 2025), DOL proposes to amend chapter 60 in title 41 of the Code of Federal Regulations by removing and reserving parts 60–1, 60–2, 60–3, 60–4, 60–20, 60–40, 60–50 and 60–999, and by revising part 60–30 as follows:

PART 60–1 [REMOVED AND RESERVED]

- 1. Remove and reserve 41 CFR part 60–1.

PART 60–2 [REMOVED AND RESERVED]

- 2. Remove and reserve 41 CFR part 60–2.

PART 60–3 [REMOVED AND RESERVED]

- 3. Remove and reserve 41 CFR part 60–3.

PART 60–4 [REMOVED AND RESERVED]

- 4. Remove and reserve 41 CFR part 60–4.

PART 60–20 [REMOVED AND RESERVED]

- 5. Remove and reserve 41 CFR part 60–20.

■ 6. Revise 41 CFR part 60–30 to read as follows:

PART 60–30—RULES OF PRACTICE FOR ADMINISTRATIVE PROCEEDINGS

Authority: 29 U.S.C. 793, as amended and 38 U.S.C. 4212, as amended.

General Provisions

§ 60–30.1 Applicability of rules.

This part provides the rules of practice for all administrative proceedings instituted by the Office of Federal Contract Compliance Programs (OFCCP), including but not limited to proceedings instituted against construction contractors or subcontractors, which relate to the enforcement of equal opportunity under the Vietnam Era Veterans' Readjustment Assistance Act of 1974 (VEVRAA), as amended, and Section 503 of the Rehabilitation Act of 1973 (Section 503), as amended. In the absence of a specific provision, procedures shall be in accordance with the Federal Rules of Civil Procedure.

§ 60–30.2 Waiver, modification.

Upon notice to all parties, the Administrative Law Judge may, with respect to matters pending before him, modify or waive any rule herein upon a determination that no party will be prejudiced and that the ends of justice will be served thereby.

§ 60–30.3 Computation of time.

In computing any period of time under these rules or in an order issued hereunder, the time begins with the day following the act, event, or default, and includes the last day of the period, unless it is a Saturday, Sunday, or legal holiday observed by the Federal Government in which event it includes the next business day.

§ 60–30.4 Form, filing, service of pleadings and papers.

(a) Form. The original of all pleadings and papers in a proceeding conducted under the regulations in this part shall be filed with the Administrative Law Judge assigned to the case or with the Chief Administrative Law Judge if the case has not been assigned. Every pleading and paper filed in the proceeding shall contain a caption setting forth the name of the agency instituting the proceeding, the title of the action, the case file number assigned by the Administrative Law Judge, and a designation of the pleading or paper (e.g., complaint, motion to dismiss, etc.). The pleading or papers shall be signed and shall contain the address and telephone number of the person

representing the party or the person on whose behalf the pleading or paper was filed. Unless otherwise ordered for good cause by the Administrative Law Judge regarding specific papers and pleadings in a specific case, all such papers and pleadings are public documents.

(b) Service. Service upon any party shall be made by the party filing the pleading or document in accordance with 29 CFR part 26. When a party is represented by an attorney, the service shall be upon the attorney.

(c) Proof of service. A certificate of the person serving the pleading or other document, setting forth the manner of service, shall be proof of the service.

Prehearing Procedures

§ 60–30.5 Administrative complaint.

(a) Filing. The Solicitor of Labor, Associate Solicitor for Labor Relations and Civil Rights Regional Solicitors and Regional Attorney upon referral from OFCCP, are authorized to institute enforcement proceedings by filing a complaint and serving the complaint upon the contractor which shall be designated as the defendant. The Department of Labor, OFCCP, shall be designated as the plaintiff.

(b) Contents. The complaint shall contain a concise jurisdictional statement, and a clear and concise statement sufficient to put the defendant on notice of the acts or practices it is alleged to have committed in violation of the order, the regulations, or its contractual obligations. The complaint shall also contain a prayer regarding the relief being sought, a statement of whatever sanctions the Government will seek to impose and the name and address of the attorney who will represent the Government.

(c) Amendment. The complaint may be amended once as a matter of course before an answer is filed, and the defendant may amend its answer once as a matter of course not later than 10 days after the filing of the original answer. Other amendments of the complaint or of the answer to the complaint shall be made only by leave of the Administrative Law Judge or by written consent of the adverse party; and leave shall be freely given where justice so requires. An amended complaint shall be answered within 14 days of its service, or within the time for filing an answer to the original complaint, whichever period is longer. An amended answer shall be responded to within 14 days of its service.

§ 60–30.6 Answer.

(a) Filing and service. Within 20 days after the service of the complaint, the defendant shall file an answer with the

Chief Administrative Law Judge if the case has not been assigned to an Administrative Law Judge. The answer shall be signed by the defendant or its attorney, and served on the Government in accordance with § 60–30.4(b).

(b) Contents; failure to file. The answer shall (1) contain a statement of the facts which constitute the grounds of defense, and shall specifically admit, explain, or deny, each of the allegations of the complaint unless the defendant is without knowledge, in which case the answer shall so state; or (2) state that the defendant admits all the allegations of the complaint. The answer may contain a waiver of hearing; and if not, a separate paragraph in the answer shall request a hearing. The answer shall contain the name and address of the defendant, or of the attorney representing the defendant. Failure to file an answer or to plead specifically to any allegation of the complaint shall constitute an admission of such allegation.

(c) Procedure, upon admission of facts. The admission, in the answer or by failure to file an answer, of all the material allegations of fact contained in the complaint shall constitute a waiver of hearing. Upon such admission, the Administrative Law Judge, without further hearing, may prepare his decision in which he shall adopt as his proposed findings of fact the material facts alleged in the complaint. The parties shall be given an opportunity to file exceptions to his decision and to file briefs in support of the exceptions.

§ 60–30.7 Notice of prehearing conference.

The Administrative Law Judge shall respond to defendant's request for a hearing within 15 days and shall serve a notice of prehearing conference on the parties. The notice shall contain the time and place of the conference.

§ 60–30.8 Motions; disposition of motions.

(a) Motions. Motions shall state the relief sought, the authority relied upon and the facts alleged, and shall be filed with the Administrative Law Judge. If made before or after the hearing itself, the motions shall be in writing. If made at the hearing, motions may be stated orally; but the Administrative Law Judge may require that they be reduced to writing and filed and served on all parties in the same manner as a formal motion. Unless otherwise ordered by the Administrative Law Judge, written motions shall be accompanied by a supporting memorandum. Within 10 days after a written motion is served, or such other time period as may be fixed, any party may file a response to a motion.

(b) Disposition of motions. The Administrative Law Judge may not grant a written motion prior to expiration of the time for filing responses thereto, except upon consent of the parties or following a hearing, but may overrule or deny such motion without awaiting response: Provided, That prehearing conferences, hearings, and decisions need not be delayed pending disposition of motions.

§ 60–30.9 Interrogatories, and admissions as to facts and documents.

(a) Interrogatories. Not later than 25 days prior to the date of the hearing, except for good cause shown, or not later than 14 days prior to such earlier date as the Administrative Law Judge may order, any party may serve upon an opposing party written interrogatories. Each interrogatory shall be answered separately and fully in writing under oath, unless objected to. Answers are to be signed by the person making them and objections by the attorney or by whoever is representing the party. Answers and objections shall be filed and served within 25 days of service of the interrogatory.

(b) Admissions. Not later than 14 days prior to the date of the hearing, except for good cause shown, or not later than 14 days prior to such earlier date as the Administrative Law Judge may order, any party may serve upon an opposing party a written request for the admission of the genuineness and authenticity of any relevant documents described in and exhibited with the request, or for the admission of the truth of any relevant matters of fact stated in the request. Each of the matters as to which an admission is requested shall be deemed admitted, unless within 25 days after service, the party to whom the request is directed serves upon the requesting party a sworn statement either (1) denying specifically the matter as to which an admission is requested, or (2) setting forth in detail the reasons why he cannot truthfully either admit or deny such matters.

(c) Objections or failures to respond. The party submitting the interrogatory or request may move for an order with respect to any objection or other failure to respond.

§ 60–30.10 Production of documents and things and entry upon land for inspection and other purposes.

(a) After commencement of the action, any party may serve on any other party a request to produce and/or permit the party, or someone acting on his behalf, to inspect and copy any unprivileged documents, phonorecords, and other compilations, including computer tapes

and printouts which contain or may lead to relevant information and which are in the possession, custody, or control of the party upon whom the request is served. If necessary, translation of data compilations shall be done by the party furnishing the information.

(b) After commencement of the action, any party may serve on any other party a request to permit entry upon designated property which may be relevant to the issues in the proceeding and, which is in the possession or control of the party upon whom the request is served for the purpose of inspection, measuring, surveying or photographing, testing, or sampling the property or any designated object or area.

(c) Each request shall set forth with reasonable particularity the items to be inspected and shall specify a reasonable time and place for making the inspection and performing the related acts.

(d) The party upon whom the request is served shall respond within 25 days after the service of the request. The response shall state, with respect to each item, that inspection and related activities will be permitted as requested, unless there are objections, in which case the reasons for each objection shall be stated. The party submitting the request may move for an order with respect to any objection or to other failure to respond.

§ 60–30.11 Depositions upon oral examination.

(a) Depositions; notice of examination. After commencement of the action, any party may take the testimony of any person, including a party, having personal or expert knowledge of the matters in issue, by deposition upon oral examination. A party desiring to take a deposition shall give reasonable notice in writing to every other party to the proceeding, and may use an administrative subpoena. The notice shall state the time and place for taking the deposition and the name and address of each person to be examined, if known, and, if the name is not known, a general description sufficient to identify him or the particular class or group to which he belongs. The notice shall also set forth the categories of documents the witness is to bring with him to the deposition, if any. A copy of the notice shall be furnished to the person to be examined unless his name is unknown.

(b) Production of witnesses; obligation of parties; objections. It shall be the obligation of each party to produce for examination any person, along with

such documents as may be requested, at the time and place, and on the date, set forth in the notice, if that party has control over such person. Each party shall be deemed to have control over its officers, agents, employees, and members. Unless the parties agree otherwise, depositions shall be held within the county in which the witness resides or works. The party or prospective witness may file with the Administrative Law Judge an objection within 5 days after notice of production of such witness is served, stating with particularity the reasons why the party cannot or ought not to produce a requested witness. The party serving the notice may move for an order with respect to such objection or failure to produce a witness. All errors or irregularities in compliance with the provisions of this section shall be deemed waived unless a motion to suppress the deposition or some part thereof is made with reasonable promptness after such defect is or, with due diligence, might have been ascertained.

(c) Before whom taken; scope of examination; failure to answer. Depositions may be taken before any officer authorized to administer oaths by the laws of the United States or of the place where the deposition is held. At the time and place specified in the notice, each party shall be permitted to examine and cross-examine the witness under oath upon any matter which is relevant to the subject matter of the proceeding, or which is reasonably calculated to lead to the production of relevant and otherwise admissible evidence. All objections to questions, except as to the form thereof, and all objections to evidence are reserved until the hearing. A refusal or failure on the part of any person under the control of a party to answer a question shall operate to create a presumption that the answer, if given, would be unfavorable to the controlling party, unless the question is subsequently ruled improper by the Administrative Law Judge or the Administrative Law Judge rules that there was valid justification for the witness' failure or refusal to answer the question: Provided, That the examining party shall note on the record during the deposition the question which the deponent has failed, or refused to answer, and state his intention to invoke the presumption if no answer is forthcoming.

(d) Subscription; certification; filing. The testimony shall be reduced to typewriting, either by the officer taking the deposition or under his direction, and shall be submitted to the witness for examination and signing. If the

deposition is not signed by the witness because he is ill, dead, cannot be found, or refuses to sign it, such fact shall be noted in the certificate of the officer and the deposition may then be used as fully as though signed. The officer shall immediately deliver the original copy of the transcript, together with his certificate, in person or by mail to the Administrative Law Judge. Copies of the transcript and certificate shall be furnished to all persons desiring them, upon payment of reasonable charges, unless distribution is restricted by order of the Administrative Law Judge for good cause shown.

(e) Rulings on admissibility; use of deposition. Subject to the provisions of this section, objection may be made at the hearing to receiving in evidence any deposition or part thereof for any reason which would require the exclusion of the evidence if the witness were then present and testifying. Any part or all of a deposition, so far as admissible in the discretion of the Administrative Law Judge, may be used against any party who was present or represented at the taking of the deposition or who had reasonable notice, in accordance with the following provisions:

(1) Any deposition may be used by any party for the purpose of contradicting or impeaching the testimony of the deponent as a witness.

(2) The deposition of a party or of any one who at the time of taking the deposition was an officer, director, or managing agent, or was designated to testify on behalf of a public or private corporation, partnership, association, or governmental agency which is a party may be used by the adverse party for any purpose.

(3) The deposition of a witness, whether or not a party, may be used by any party for any purpose if the administrative law judge finds: (i) That the witness is dead; or (ii) that the witness is unable to attend or testify because of age, illness, infirmity, or imprisonment; or (iii) that the party offering the deposition has been unable to procure the attendance of the witness by subpoena; or (iv) upon application and notice, that such exceptional circumstances exist as to make it desirable to allow the deposition to be used.

(4) If only part of a deposition is introduced in evidence by a party, any party may introduce any other parts by way of rebuttal and otherwise.

(f) Stipulations. If the parties so stipulate in writing, depositions may be taken before any person at any time or place, upon any notice and in any manner, and when so taken may be used like other depositions.

§ 60–30.12 Prehearing conferences.

(a) Upon his own motion or the motion of the parties, the Administrative Law Judge may direct the parties or their counsel to meet with him for a conference to consider:

(1) Simplification of the issues;

(2) Necessity or desirability of amendments to pleadings for purposes of clarification, simplification, or limitation;

(3) Stipulations, admissions of fact and of contents and authenticity of documents;

(4) Limitation of number of witnesses;

(5) Scheduling dates for the exchange of witness lists and of proposed exhibits;

(6) Such other matters as may tend to expedite the disposition of the proceedings.

(b) The record shall show the matters disposed of by order and by agreement in such pretrial conferences. The subsequent course of the proceeding shall be controlled by such action.

§ 60–30.13 Consent findings and order.

(a) General. At any time after the issuance of a complaint and prior to or during the reception of evidence in any proceeding, the parties may jointly move to defer the receipt of any evidence for a reasonable time to permit negotiation of an agreement containing consent findings and an order disposing of the whole or any part of the proceeding. The allowance of such deferment and the duration thereof shall be in the discretion of the Administrative Law Judge after consideration of the nature of the proceeding, the requirements of the public interest, the representations of the parties, and the probability of an agreement being reached which will result in a just disposition of the issues involved.

(b) Content. Any agreement containing consent findings and an order disposing of a proceeding shall also provide:

(1) That the order shall have the same force and effect as an order made after full hearing;

(2) That the entire record on which any order may be based shall consist solely of the complaint and the agreement;

(3) That any further procedural steps are waived; and

(4) That any right to challenge or contest the validity of the findings and order entered into in accordance with the agreement is waived.

(c) Submission. On or before the expiration of the time granted for negotiations, the parties or their counsel may:

(1) Submit the proposed agreement to the Administrative Law Judge for his consideration;

(2) Inform the Administrative Law Judge that agreement cannot be reached.

(d) Disposition. In the event an agreement containing consent findings and an order is submitted within the time allowed, the Administrative Law Judge, within 30 days, shall accept such agreement by issuing his decision based upon the agreed findings, and his decision shall constitute the final Administrative order.

Hearings and Related Matters

§ 60–30.14 Designation of Administrative Law Judges.

Hearings shall be held before an Administrative Law Judge of the Department of Labor who shall be designated by the Chief Administrative Law Judge of the Department of Labor. After commencement of the proceeding but prior to the designation of an Administrative Law Judge, pleadings and papers shall be filed with the Chief Administrative Law Judge.

§ 60–30.15 Authority and responsibilities of Administrative Law Judges.

The Administrative Law Judge shall propose findings and conclusions to the Secretary on the basis of the record. In order to do so, he shall have the duty to conduct a fair hearing, to take all necessary action to avoid delay, and to maintain order. He shall have all powers necessary to those ends, including, but not limited to, the power to:

(a) Hold conferences to settle, simplify, or fix the issues in a proceeding, or to consider other matters that may aid in the expeditious disposition of the proceeding by consent of the parties or upon his own motion;

(b) Require parties to state their position with respect to the various issues in the proceeding;

(c) Require parties to produce for examination those relevant witnesses and documents under their control; and require parties to answer interrogatories and requests for admissions in full;

(d) Administer oaths;

(e) Rule on motions, and other procedural items or matters pending before him;

(f) Regulate the course of the hearing and conduct of participants therein;

(g) Examine and cross-examine witnesses, and introduce into the record documentary or other evidence;

(h) Receive, rule on, exclude, or limit evidence and limit lines of questioning or testimony which are irrelevant, immaterial, or unduly repetitious;

(i) Fix time limits for submission of written documents in matters before

him and extend any time limits established by this part upon a determination that no party will be prejudiced and that the ends of justice will be served thereby;

(j) Impose appropriate sanctions against any party or person failing to obey an order under these rules which may include:

(1) Refusing to allow the disobedient party to support or oppose designated claims or defenses, or prohibiting it from introducing designated matters in evidence;

(2) Excluding all testimony of an unresponsive or evasive witness, or determining that the answer of such witness, if given, would be unfavorable to the party having control over him; and

(3) Expelling any party or person from further participation in the hearing;

(k) Take official notice of any material fact not appearing in evidence in the record, which is among the traditional matters of judicial notice;

(l) Recommend whether the respondent is in current violation of the order, regulations, or its contractual obligations, as well as the nature of the relief necessary to insure the full enjoyment of the rights secured by the order;

(m) Issue subpoenas; and

(n) Take any action authorized by these rules.

§ 60–30.16 Appearances.

(a) Representation. The parties or other persons or organizations participating pursuant to this part 60–30 have the right to be represented by counsel.

(b) Failure to appear. In the event that a party appears at the hearing and no party appears for the opposing side, the party who is present shall have an election to present his evidence in whole or such portion thereof sufficient to make a prima facie case before the Administrative Law Judge. Failure to appear at the hearing shall not be deemed to be a waiver of the right to be served with a copy of the Administrative Law Judge's recommended decision and to file exceptions to it.

§ 60–30.17 Appearance of witnesses.

(a) A party wishing to procure the appearance at the hearing of any person having personal or expert knowledge of the matters in issue shall serve on the prospective witness a notice, which may be accomplished by an administrative subpoena, setting forth the time, date, and place at which he is to appear for the purpose of giving testimony. The notice shall also set forth the categories

of documents the witness is to bring with him to the hearing, if any. A copy of the notice shall be filed with the Administrative Law Judge and additional copies shall be served upon the opposing parties.

(b) It shall be the obligation of each party to produce for examination any person, along with such documents as may be requested, at the time and place, and on the date, set forth in the notice, if that party has control over such person. Each party shall be deemed to have control over its officers, agents, employees, and members. Due regard shall be given to the convenience of witnesses in scheduling their testimony so that they will be detained no longer than reasonably necessary.

(c) The party or prospective witness may file an objection within 5 days after notice of production of such witness is served stating with particularity the reasons why the party cannot produce a requested witness. The party serving the notice may move for an order with respect to such objection or failure to produce a witness.

§ 60–30.18 Rules of evidence.

In any hearing, decision, or administrative review conducted pursuant to this part, all evidentiary matters shall be governed by Office of Administrative Law Judges' Rules of evidence at 29 CFR part 18, subpart B.

§ 60–30.19 Objections; exceptions; offer of proof.

(a) Objections. If a party objects to the admission or rejection of any evidence or to the limitation of the scope of any examination or cross-examination or the failure to limit such scope, he shall state briefly the grounds for such objection. Rulings on all objections shall appear in the record. Only objections made on the record may be relied upon subsequently in the proceedings.

(b) Exceptions. Formal exception to an adverse ruling is not required. Rulings by the Administrative Law Judge shall not be appealed prior to the transfer of the case to the Secretary, but shall be considered by the Secretary upon filing exceptions to the Administrative Law Judge's recommendations and conclusions.

(c) Offer of proof. An offer of proof made in connection with an objection taken to any ruling excluding proffered oral testimony shall consist of a statement of the substance of the evidence which counsel contends would be adduced by such testimony; and, if the excluded evidence consists of evidence in written form or consists of reference to documents, a copy of such evidence shall be marked for

identification and shall accompany the record as the offer of proof.

§ 60–30.20 Ex parte communications.

The Administrative Law Judge shall not consult any person, or party, on any fact in issue unless upon notice and opportunity for all parties to participate. No employee or agent of the Federal Government engaged in the investigation and prosecution of this case shall participate or advise in the rendering of the recommended or final decision in the case, except as witness or counsel in the proceeding.

§ 60–30.21 Oral argument.

Any party shall be entitled upon request to a reasonable period between the close of evidence and termination of the hearing for oral argument. Oral arguments shall be included in the official transcript of the hearing.

§ 60–30.22 Official transcript.

The official transcripts of testimony taken, together with any exhibits, briefs, or memorandums of law, shall be filed with the Administrative Law Judge. Transcripts of testimony may be obtained from the official reporter by the parties and the public as provided in section 11(a) of the Federal Advisory Committee Act (86 Stat. 770). Upon notice to all parties, the Administrative Law Judge may authorize such corrections to the transcript as are necessary to reflect accurately the testimony.

§ 60–30.23 Summary judgment.

(a) For the Government. At any time after the expiration of 20 days from the commencement of the action, or after service of a motion for summary judgment by the respondent, the Government may move with or without supporting affidavits for a summary judgment upon all claims or any part.

(b) For defendant. The defendant may, at any time after commencement of the action, move with or without supporting affidavits for summary judgment in its favor as to all claims or any part.

(c) Other parties. Any other party to a formal proceeding under this part may support or oppose motions for summary judgment made by the Government or respondent, in accordance with this section, but may not move for a summary judgment in his own behalf.

(d) Statement of uncontested facts. All motions for summary judgment shall be accompanied by a "Statement of Uncontested Facts" in which the moving party sets forth all alleged uncontested material facts which shall provide the basis for its motion. At least 5 days prior to the time fixed for hearing

on the motion, any party contending that any material fact regarding the matter covered by the motion is in dispute, shall file a "Statement of Disputed Facts." Failure to file a "Statement of Disputed Facts" shall be deemed as an admission to the "Statement of Uncontested Facts."

(e) Motion and proceedings. The motion shall be served upon all parties at least 15 days before the time fixed for the hearing on the motion. The adverse party or parties may serve opposing affidavits prior to the day of hearing. The judgment sought shall be rendered forthwith if the complaint and answer, depositions, and admissions on file, together with the affidavits, if any, show that there is no genuine issue as to any material fact and that the moving party is entitled to a judgment as a matter of law. Summary judgment rendered for or against the Government or the respondent shall constitute the findings and recommendations on the issues involved. Hearings on motions made under this section shall be scheduled by the Administrative Law Judge.

(f) Case not fully adjudicated on motion. If on motion under this section judgment is not rendered upon the whole case or for all the relief asked and a final hearing is necessary, the Administrative Law Judge at the hearing of the motion, by examining the notice and answer and the evidence before him and by interrogating counsel, shall, if practicable, ascertain what material facts exist without substantial controversy and what material facts are actually and in good faith controverted. He shall thereupon make an order specifying the facts that appear without substantial controversy, including the extent to which relief is not in controversy, and directing such further proceedings as are just. At the hearing on the merits, the facts so specified shall be deemed established, and the final hearing shall be conducted accordingly.

§ 60–30.24 Participation by interested persons.

(a) (1) To the extent that proceedings hereunder involve employment of persons covered by a collective bargaining agreement, and compliance may necessitate a revision of such agreement, any labor organization which is a signatory to the agreement shall have the right to participate as a party.

(2) Other persons or organizations shall have the right to participate as parties if the final Administrative order could adversely affect them or the class they represent, and such participation may contribute materially to the proper disposition of the proceedings.

(3) Any person or organization wishing to participate as a party under this section shall file with the Administrative Law Judge and serve on all parties a petition within 25 days after the commencement of the action or at such other time as ordered by the Administrative Law Judge, so long as it does not disrupt the proceeding. Such petition shall concisely state: (i) Petitioner's interest in the proceedings; (ii) who will appear for petitioner; (iii) the issues on which petitioner wishes to participate; and (iv) whether petitioner intends to present witnesses.

(4) The Administrative Law Judge shall determine whether each petitioner has the requisite interest in the proceedings and shall permit or deny participation accordingly. Where petitions to participate as parties are made by individuals or groups with common interest, the Administrative Law Judge may request all such petitioners to designate a single representative to represent all such petitioners: Provided, That the representative of a labor organization qualifying to participate under paragraph (a)(1) of the section must be permitted to participate in the proceedings. The Administrative Law Judge shall give each petitioner written notice of the decision on his petition; and if the petition is denied, he shall briefly state the grounds for denial and shall then treat the petition as a request for participation as amicus curiae. The Administrative Law Judge shall give written notice to each party of each petition granted.

(b) (1) Any other interested person or organization wishing to participate as amicus curiae shall file a petition before the commencement of the final hearing with the Administrative Law Judge. Such petition shall concisely state: (i) The petitioner's interest in the hearing; (ii) who will represent the petitioner; and (iii) the issues on which petitioner intends to present argument. The Administrative Law Judge may grant the petition if he finds that the petitioner has a legitimate interest in the proceedings, and that such participation may contribute materially to the proper disposition of the issues. An amicus curiae is not a party but may participate as provided in this section.

(2) An amicus curiae may present a brief oral statement at the hearing at the point in the proceeding specified by the Administrative Law Judge. He may submit a written statement of position to the Administrative Law Judge prior to the beginning of a hearing and shall serve a copy on each party. He may also submit a brief or written statement at such time as the parties submit briefs

and exceptions, and he shall serve a copy on each party.

Post-Hearing Procedures

§ 60–30.25 Proposed findings of fact and conclusions of law.

Within 20 days after receipt of the transcript of the testimony, each party and amicus may file a brief. Such briefs shall be served simultaneously on all parties and amici, and a certificate of service shall be furnished to the Administrative Law Judge. Requests for additional time in which to file a brief shall be made in writing, and copies shall be served simultaneously on the other parties. Requests for extensions shall be received not later than 3 days before the date such briefs are due. No reply brief may be filed except by special permission of the Administrative Law Judge.

§ 60–30.26 Record for recommended decision.

The transcript of testimony, exhibits, and all papers, documents, and requests filed in the proceedings, including briefs, but excepting the correspondence section of the docket, shall constitute the record for decision.

§ 60–30.27 Recommended decision.

Within a reasonable time after the filing of briefs, the Administrative Law Judge shall recommend findings, conclusions, and a decision. These recommendations shall be certified, together with the record for recommended decision, to the Administrative Review Board, United States Department of Labor, for a final Administrative order. The recommended findings, conclusions, and decision shall be served on all parties and amici to the proceeding.

§ 60–30.28 Exceptions to recommended decisions.

Within 14 days after receipt of the recommended findings, conclusions, and decision, any party may submit exceptions to said recommendation. These exceptions may be responded to by other parties within 14 days of their receipt by said parties. All exceptions and responses shall be filed with the Administrative Review Board, United States Department of Labor. Service of such briefs or exceptions and responses shall be made simultaneously on all parties to the proceeding. Requests to the Administrative Review Board, United States Department of Labor, for additional time in which to file exceptions and responses shall be in writing and copies shall be served simultaneously on other parties. Requests for extensions must be

received no later than 3 days before the exceptions are due.

§ 60–30.29 Record.

After expiration of the time for filing briefs and exceptions, the Administrative Review Board, United States Department of Labor, shall make a decision, which shall be the Administrative order, on the basis of the record. The record shall consist of the record for recommended decision, the rulings and recommended decision of the Administrative Law Judge and the exceptions and briefs filed subsequent to the Administrative Law Judge's decision.

§ 60–30.30 Administrative Order.

After expiration of the time for filing, the Administrative Review Board, United States Department of Labor, shall make a decision which shall be served on all parties. If the Administrative Review Board, United States Department of Labor, concludes that the defendant has violated VEVRAA, Section 503, the equal opportunity clauses at 41 CFR 60–300.5 or 41 CFR 60–741.5, or the VEVRAA or Section 503 regulations, an Administrative Order shall be issued enjoining the violations, and requiring the contractor to provide whatever remedies are appropriate, and imposing whatever sanctions are appropriate, or any of the above. In any event, failure to comply with the Administrative Order shall result in the immediate cancellation, termination, and suspension of the respondent's contracts and/or debarment of the respondent from further contracts.

Expedited Hearing Procedures

§ 60–30.31 Expedited hearings—when appropriate.

Expedited Hearings may be used, inter alia, when a contractor or subcontractor has violated a conciliation agreement; has not adopted and implemented an acceptable affirmative action program; has refused to give access to or to supply records or other information as required by the equal opportunity clause; or has refused to allow an on-site compliance review to be conducted.

§ 60–30.32 Administrative complaint and answer.

(a) Expedited hearings shall be commenced by filing an administrative complaint in accordance with 41 CFR 60–30.5. The complaint shall state that the hearing is subject to these expedited hearing procedures.

(b) The answer shall be filed in accordance with 41 CFR 60–30.6(a) and (b).

(c) Failure to request a hearing within the 20 days provided by 41 CFR 60–30.6(a) shall constitute a waiver of hearing, and all the material allegations of fact contained in the complaint shall be deemed to be admitted. If a hearing is not requested or is waived, within 25 days of the complaint's filing, the Administrative Law Judge shall adopt as findings of fact the material facts alleged in the complaint, and shall order the appropriate sanctions and/or penalties sought in the complaint. The Administrative Law Judge's findings and order shall constitute a final Administrative order, unless the Office of the Solicitor, U.S. Department of Labor, files exceptions to the findings and order within 10 days of receipt thereof. If the Office of the Solicitor, U.S. Department of Labor, files exceptions, the matter shall proceed in accordance with § 60–30.36 of this part.

(d) If a request for a hearing is received within 20 days as provided by 41 CFR 60–30.6(a), the hearing shall be convened within 45 days of receipt of the request and shall be completed within 15 days thereafter, unless more hearing time is required.

§ 60–30.33 Discovery.

(a) Any party may serve requests for admissions in accordance with § 60–30.9(b) and (c).

(b) Witness lists and hearing exhibits will be exchanged at least 10 days in advance of the hearing.

(c) For good cause shown, and upon motion made in accordance with § 60–30.8, the Administrative Law Judge may allow the taking of depositions. Other discovery will not be permitted.

§ 60–30.34 Conduct of hearing.

(a) At the hearing, the Government shall be given an opportunity to demonstrate the basis for the request for sanctions and/or remedies, and the contractor shall be given an opportunity to show that the violation complained of did not occur and/or that good cause or good faith efforts excuse the alleged violations. Both parties shall be allowed to present evidence and argument and to cross-examine witnesses.

(b) The hearing shall be informal in nature, and the Administrative Law Judge shall not be bound by formal rules of evidence.

§ 60–30.35 Recommended decision after hearing.

Within 15 days after the hearing is concluded, the Administrative Law Judge shall recommend findings,

conclusions, and a decision. The Administrative Law Judge may permit the parties to file written post-hearing briefs within this time period, but the Administrative Law Judge's recommendations shall not be delayed pending receipt of such briefs. These recommendations shall be certified, together with the record, to the Administrative Review Board, United States Department of Labor, for a final Administrative order. The recommended decision shall be served on all parties and amici to the proceeding.

§ 60–30.36 Exceptions to recommendations.

Within 10 days after receipt of the recommended findings, conclusions and decision, any party may submit exceptions to said recommendations. Exceptions may be responded to by other parties within 7 days after receipt by said parties of the exceptions. All exceptions and responses shall be filed with the Administrative Review Board, United States Department of Labor. Briefs or exceptions and responses shall be served simultaneously on all parties to the proceeding.

§ 60–30.37 Final Administrative Order.

After expiration of the time for filing exceptions, the Administrative Review Board, United States Department of Labor, shall issue an Administrative Order which shall be served on all parties. Unless the Administrative Review Board, United States Department of Labor, issues an Administrative Order within 30 days after the expiration of the time for filing exceptions, the Administrative Law Judge's recommended decision shall become a final Administrative Order which shall become effective on the 31st day after expiration of the time for filing exceptions. Except as to specific time periods required in this subsection, 41 CFR 60–30.30 shall be applicable to this section.

§ 60–30.38 Severability.

Should a court of competent jurisdiction hold any provision(s) of this part to be invalid, such action will not affect any other provision of this part.

PART 60–40 [REMOVED AND RESERVED]

■ 1. Remove and reserve 41 CFR part 60–40.

PART 60–50 [REMOVED AND RESERVED]

■ 2. Remove and reserve 41 CFR part 60–50.

PART 60–999 [REMOVED AND RESERVED]**■ 3. Remove and reserve 41 CFR part 60–999.**

BILLING CODE 4510–CM–P

DEPARTMENT OF LABOR**Office of Federal Contract Compliance Programs****41 CFR Part 60–300**

[Docket No. OFCCP–2025–0002]

RIN 1250–AA19

Modifications to the Regulations Implementing the Vietnam Era Veterans' Readjustment Assistance Act of 1974, as Amended

AGENCY: Office of Federal Contract Compliance Programs, Labor.

ACTION: Proposed rule; request for comments.

SUMMARY: The U.S. Department of Labor is proposing to revise its implementing regulations for the Vietnam Era Veterans' Readjustment Assistance Act of 1974, as amended, 38 U.S.C. 4212. The proposed revisions will better align the regulations with recent case law and executive orders, including Executive Order 14173, “Ending Illegal Discrimination and Restoring Merit-Based Opportunity,” and Executive Order 14219, “Ensuring Lawful Governance and Implementing the President's ‘Department of Government Efficiency’ Deregulatory Initiative.”

DATES: Comments must be received by September 2, 2025.

ADDRESSES: Comments must be submitted in one of the following two ways (please choose only one of the ways listed):

- Electronically at <https://www.regulations.gov>. Follow the “Submit a comment” instructions. If you are reading this document on [federalregister.gov](https://www.federalregister.gov), you may use the green “SUBMIT A PUBLIC COMMENT” button beneath this rulemaking's title to submit a comment to the [regulations.gov](https://www.regulations.gov) docket.

- You may mail written comments to the following address: Catherine L. Eschbach, Director, Office of Federal Contract Compliance Programs, 200 Constitution Avenue NW, Washington, DC 20210. Mailed comments must be

received by the close of the comment period.

Do not include any personally identifiable information (such as name, address, or other contact information) or confidential business information that you do not want publicly disclosed. All comments are public records; they are publicly displayed exactly as received, and will not be deleted, modified, or redacted. Comments may be submitted anonymously.

Follow the search instructions on <https://www.regulations.gov> to view public comments.

FOR FURTHER INFORMATION CONTACT: Catherine L. Eschbach, Director, OFCCP, 200 Constitution Avenue NW, Washington, DC 20210. Telephone: 202–693–0101. Email: ofccp_guidance@dol.gov.

SUPPLEMENTARY INFORMATION:**I. Legal Authority**

DOL enforces the Vietnam Era Veterans' Readjustment Assistance Act of 1974 (VEVRAA), as amended, 38 U.S.C. 4212, and its implementing regulations at 41 CFR 60–300. The VEVRAA regulations prohibit Federal contractors and subcontractors (“contractors”) from discriminating against employees and applicants because of their status as a protected veteran (defined by the statute to include disabled veterans, recently separated veterans, Armed Forces Service Medal Veterans, and active duty wartime or campaign badge veterans). VEVRAA also requires covered contractors to take steps to employ and advance in employment these veterans. The basic requirements in VEVRAA generally apply to any business or organization that holds a single Federal contract or subcontract in excess of \$150,000. Effective October 1, 2015, the coverage threshold under VEVRAA increased from \$100,000 to \$150,000, in accordance with the inflationary adjustment requirements in 41 U.S.C. 1908. *See Federal Acquisition Regulation; Inflation Adjustment of Acquisition-Related Thresholds*, 80 FR 38293 (July 2, 2015). The \$150,000 dollar threshold is subject to Federal Acquisition Regulation inflationary adjustments.

Under the current regulations, contractors with 50 or more employees and a single Federal contract or subcontract of \$150,000 or more are also required to develop and maintain an affirmative action program, where they must implement and document their equal employment opportunity efforts on an annual basis, as provided in 41 CFR part 60–300, subpart C. As

discussed below, DOL is proposing to revise these regulations to better align them with recent case law and executive orders.

II. Discussion

Prior to January 21, 2025, DOL's Office of Federal Contract Compliance Programs enforced three authorities: Executive Order (E.O.) 11246, as amended, Section 503 of the Rehabilitation Act of 1973 (Section 503), as amended, and VEVRAA. On January 21, 2025, President Trump issued E.O. 14173, “Ending Illegal Discrimination and Restoring Merit-Based Opportunity,” 90 FR 8633 (Jan. 31, 2025). E.O. 14173 revoked E.O. 11246, which prohibited covered contractors from discriminating in employment based on race, color, religion, sex, sexual orientation, gender identity, and national origin and required them to take affirmative action. E.O. 11246 also prohibited covered contractors from taking adverse employment actions against applicants or employees because they inquired about, discussed, or disclosed information about their pay or the pay of their co-workers, subject to certain limitations.

While VEVRAA remains in effect, the VEVRAA regulations adopt and cross-reference the E.O. 11246 administrative enforcement proceeding procedures at 41 CFR 60–30. Specifically, the VEVRAA regulations provide, in part, that “[a]ll hearings conducted under [VEVRAA and part 60–300] shall be governed by the Rules of Practice for Administrative Proceedings to Enforce Equal Opportunity Under Executive Order 11246 contained in 41 CFR part 60–30...” 41 CFR 60–300.65(b)(1). With the revocation of E.O. 11246, DOL is proposing to remove this cross-reference and add the administrative enforcement proceeding provisions to 41 CFR part 60–300, except where duplicative of current part 60–300 provisions (e.g., the severability clause). Specifically, DOL is proposing to add these regulatory provisions to 41 CFR 60–300.65.¹

In addition to these changes, DOL also proposes to remove a reference to 41 CFR part 60–3 that is included in 41 CFR 60–300.21(g)(2). DOL is proposing to remove this citation because 41 CFR part 60–3 is part of the revoked E.O. 11246 authority.

¹ In a separate rulemaking, DOL is proposing similar changes to the Section 503 regulations. If these proposed changes become final, the 41 CFR part 60–30 regulations will be duplicative and unnecessary as they will be incorporated into 41 CFR parts 60–300 and 60–741. As such, as part of the Section 503 proposed rule, DOL is also proposing to rescind 41 CFR part 60–30 using a delayed effective date.

DOL also proposes to remove the 29 U.S.C. 793 reference in the authority citation of the VEVRAA regulations. The 29 U.S.C. 793 reference refers to the Section 503 authority and is unnecessary.

III. Procedural Issues and Regulatory Review

A. Review Under Executive Order 12866

E.O. 12866, “Regulatory Planning and Review,” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) for review. OIRA has determined that this proposed rule does not constitute a “significant regulatory action” under section 3(f) of E.O. 12866. Accordingly, this proposed rule was not submitted to OIRA for review under E.O. 12866.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

DOL reviewed this proposed rule under the provisions of the Regulatory Flexibility Act. This proposed rule would eliminate burdensome regulations. Therefore, DOL has concluded that the impacts of the

proposed rule would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an FRFA is not warranted. DOL will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act

The purpose of the Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501 *et seq.*, includes minimizing the paperwork burden on affected entities. The PRA requires certain actions before an agency can adopt or revise a collection of information, including publishing for public comment a summary of the collection of information and a brief description of the need for and proposed use of the information.

As part of its continuing effort to reduce paperwork and respondent burden, the Department conducts a preclearance consultation program to provide the public and Federal agencies with an opportunity to comment on proposed and continuing collections of information in accordance with the PRA. See 44 U.S.C. 3506(c)(2)(A). This activity helps to ensure that the public understands the Department’s collection instructions, respondents can provide the requested data in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the Department can properly assess the impact of collection requirements on respondents.

A Federal agency may not conduct or sponsor a collection of information unless it is approved by the Office of Management and Budget (OMB) under the PRA and it displays a currently valid OMB control number. The public is also not required to respond to a collection of information unless it displays a currently valid OMB control number. In addition, notwithstanding any other provisions of law, no person will be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512).

This rulemaking does not result in any changes to existing information collections. Accordingly, OMB clearance is not required under the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*).

D. Review Under Executive Order 13132

E.O. 13132, “Federalism,” 64 FR 43255 (Aug. 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The Executive Order requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The Executive Order also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.

DOL has examined this proposed rule and has determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O. 12988, “Civil Justice Reform,” imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity, (2) write regulations to minimize litigation, (3) provide a clear legal standard for affected conduct rather than a general standard, and (4) promote simplification and burden reduction. 61 FR 4729 (Feb. 7, 1996). Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any, (2) clearly specifies any effect on existing Federal law or regulation, (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction, (4) specifies the retroactive effect, if any, (5) adequately defines key terms, and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Section 3(c) of E.O. 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. DOL has completed the required review and determined that, to the extent permitted by law, this proposed

rule meets the relevant standards of E.O. 12988.

F. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. 2 U.S.C. 1532(a), (b)). The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a “significant intergovernmental mandate,” and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them.

DOL examined this proposed rule according to UMRA and its statement of policy and determined that the proposed rule does not contain a Federal intergovernmental mandate, nor is it expected to require expenditures of \$100 million or more in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. As a result, the analytical requirements of UMRA do not apply.

G. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This proposed rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, DOL has concluded that it is not necessary to prepare a Family Policymaking Assessment.

H. Review Under Executive Order 12630

Pursuant to E.O. 12630, “Governmental Actions and Interference with Constitutionally Protected Property Rights,” 53 FR 8859 (March 18, 1988), DOL has determined that this proposed rule would not result in any takings that

might require compensation under the Fifth Amendment to the U.S. Constitution.

I. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB’s guidelines were published at 67 FR 8452 (Feb. 22, 2002). DOL has reviewed this proposed rule under the OMB guidelines and has concluded that it is consistent with applicable policies in those guidelines.

J. Review Under Executive Order 13175

DOL has examined this proposed rule and determined that it does not have tribal implications under E.O. 13175 that would require a tribal summary impact statement. It does not “have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.”

K. Review Under Additional Executive Orders and Presidential Memoranda

DOL has examined this proposed rule and has determined that it is consistent with the policies and directives outlined in E.O. 14173, “Ending Illegal Discrimination and Restoring Merit-Based Opportunity” and E.O. 14219, “Ensuring Lawful Governance and Implementing the President’s ‘Department of Government Efficiency’ Deregulatory Initiative.” This proposed rule, if finalized as proposed, is expected to be an E.O. 14192 deregulatory action.

List of Subjects

Administrative practice and procedure, Civil rights, Employment, Equal employment opportunity, Government contracts, Government procurement, Investigations, Labor, Veterans.

For the reasons set forth in the preamble, DOL amends 41 CFR part 60–300, as set forth below:

PART 60–300—AFFIRMATIVE ACTION AND NONDISCRIMINATION OBLIGATIONS OF FEDERAL CONTRACTORS AND SUBCONTRACTORS REGARDING DISABLED VETERANS, RECENTLY SEPARATED VETERANS, ACTIVE DUTY WARTIME OR CAMPAIGN BADGE VETERANS, AND ARMED FORCES SERVICE MEDAL VETERANS

■ 1. Revise the authority citation for 41 CFR part 60–300 to read as follows:

Authority: 38 U.S.C. 4211 and 4212; E.O. 11758 (3 CFR, 1971–1975 Comp., p. 841).

■ 2. Revise § 60–300.21(g)(2) to read as follows:

§ 60–300.21 Prohibitions.

* * * * *

(g) * * *

(1) * * *

(2) The Uniform Guidelines on Employee Selection Procedures do not apply to 38 U.S.C. 4212 and are similarly inapplicable to this part.

* * * * *

■ 3. Revise § 60–300.65 to read as follows:

§ 60–300.65 Enforcement proceedings.

(a) *General.*

(1) If a compliance evaluation, complaint investigation or other review by OFCCP finds a violation of the Act or this part, and the violation has not been corrected in accordance with the conciliation procedures in this part, or OFCCP determines that referral for consideration of formal enforcement (rather than settlement) is appropriate, OFCCP may refer the matter to the Solicitor of Labor with a recommendation for the institution of enforcement proceedings to enjoin the violations, to seek appropriate relief, and to impose appropriate sanctions, or any of the above in this sentence. OFCCP may seek back pay and other make whole relief for aggrieved individuals identified during a complaint investigation or compliance evaluation. Such individuals need not have filed a complaint as a prerequisite to OFCCP seeking such relief on their behalf. Interest on back pay shall be calculated from the date of the loss and compounded quarterly at the percentage rate established by the Internal Revenue Service for the underpayment of taxes.

(2) In addition to the administrative proceedings set forth in this section, the Director may, within the limitations of applicable law, seek appropriate judicial action to enforce the contractual provisions set forth in § 60–300.5, including appropriate injunctive relief.

(b) *Hearing practice and procedure.*

(1) In administrative enforcement proceedings the contractor shall be provided an opportunity for a formal hearing. All hearings conducted under the Act and this part shall be governed by the regulations at 41 CFR 60–300.65(c) to (mm) and the Rules of Evidence set out in the Rules of Practice and Procedure for Administrative Hearings Before the Office of Administrative Law Judges contained in 29 CFR part 18, subpart B: *Provided*, That a final administrative order shall be issued within one year from the date of the issuance of the recommended findings, conclusions and decision of the Administrative Law Judge, or the submission of exceptions and responses to exceptions to such decision (if any), whichever is later.

(2) Complaints may be filed by the Solicitor, the Associate Solicitor for Civil Rights and Labor-Management, Regional Solicitors, and Associate Regional Solicitors.

(3) [Reserved]

(c) *Applicability of rules of practice for administrative proceedings.*

The regulations at 41 CFR 60–300.65(c) to (mm) provide the rules of practice for all administrative proceedings that relate to the enforcement of the Vietnam Era Veterans' Readjustment Assistance Act of 1974 (VEVRAA), as amended, including but not limited to proceedings instituted against contractors or subcontractors covered by 41 CFR 60–300. In the absence of a specific provision, procedures shall be in accordance with the Federal Rules of Civil Procedure.

(d) *Waiver, modification.*

Upon notice to all parties, the Administrative Law Judge may, with respect to matters pending before him modify or waive any rule herein upon a determination that no party will be prejudiced and that the ends of justice will be served thereby.

(e) *Computation of time.*

In computing any period of time under these rules or in an order issued hereunder, the time begins with the day following the act, event, or default, and includes the last day of the period, unless it is a Saturday, Sunday, or legal holiday observed by the Federal Government in which event it includes the next business day.

(f) *Form, filing, service of pleadings and papers.*

(1) *Form.* The original of all pleadings and papers in a proceeding conducted under the 41 CFR 60–300.65 regulations shall be filed with the Administrative Law Judge assigned to the case or with the Chief Administrative Law Judge if the case has not been assigned. Every

pleading and paper filed in the proceeding shall contain a caption setting forth the name of the agency instituting the proceeding, the title of the action, the case file number assigned by the Administrative Law Judge, and a designation of the pleading or paper (e.g., complaint, motion to dismiss, etc.). The pleading or papers shall be signed and shall contain the address and telephone number of the person representing the party or the person on whose behalf the pleading or paper was filed. Unless otherwise ordered for good cause by the Administrative Law Judge regarding specific papers and pleadings in a specific case, all such papers and pleadings are public documents.

(2) *Service.* Service upon any party shall be made by the party filing the pleading or document in accordance with 29 CFR part 26. When a party is represented by an attorney, the service shall be upon the attorney.

(3) *Proof of service.* A certificate of the person serving the pleading or other document, setting forth the manner of service, shall be proof of the service.

(g) *Prehearing procedures: Administrative complaint.*

(1) *Filing.* The Solicitor of Labor, Associate Solicitor for Labor Relations and Civil Rights Regional Solicitors and Regional Attorney upon referral from the Office of Federal Contract Compliance Programs, are authorized to institute enforcement proceedings by filing a complaint and serving the complaint upon the contractor which shall be designated as the defendant. The Department of Labor, OFCCP, as shall be designated on plaintiff.

(2) *Contents.* The complaint shall contain a concise jurisdictional statement, and a clear and concise statement sufficient to put the defendant on notice of the acts or practices it is alleged to have committed in violation of the order, the regulations, or its contractual obligations. The complaint shall also contain a prayer regarding the relief being sought, a statement of whatever sanctions the Government will seek to impose and the name and address of the attorney who will represent the Government.

(3) *Amendment.* The complaint may be amended once as a matter of course before an answer is filed, and the defendant may amend its answer once as a matter of course not later than 10 days after the filing of the original answer. Other amendments of the complaint or of the answer to the complaint shall be made only by leave of the Administrative Law Judge or by written consent of the adverse party; and leave shall be freely given where justice so requires. An amended

complaint shall be answered within 14 days of its service, or within the time for filing an answer to the original complaint, whichever period is longer. An amended answer shall be responded to within 14 days of its service.

(h) *Prehearing procedures: Answer.*

(1) *Filing and service.* Within 20 days after the service of the complaint, the defendant shall file an answer with the Chief Administrative Law Judge if the case has not been assigned to an Administrative Law Judge. The answer shall be signed by the defendant or its attorney and served on the Government in accordance with § 60–300.65(f)(2).

(2) *Contents; failure to file.* The answer shall (i) contain a statement of the facts which constitute the grounds of defense, and shall specifically admit, explain, or deny, each of the allegations of the complaint unless the defendant is without knowledge, in which case the answer shall so state; or (ii) state that the defendant admits all the allegations of the complaint. The answer may contain a waiver of hearing; and if not, a separate paragraph in the answer shall request a hearing. The answer shall contain the name and address of the defendant, or of the attorney representing the defendant. Failure to file an answer or to plead specifically to any allegation of the complaint shall constitute an admission of such allegation.

(3) *Procedure, upon admission of facts.* The admission, in the answer or by failure to file an answer, of all the material allegations of fact contained in the complaint shall constitute a waiver of hearing. Upon such admission, the Administrative Law Judge, without further hearing, may prepare his decision in which he shall adopt as his proposed findings of fact the material facts alleged in the complaint. The parties shall be given an opportunity to file exceptions to his decision and to file briefs in support of the exceptions.

(i) *Prehearing procedures: Notice of prehearing conference.*

The Administrative Law Judge shall respond to defendant's request for a hearing within 15 days and shall serve a notice of prehearing conference on the parties. The notice shall contain the time and place of the conference.

(j) *Prehearing procedures: Motions; disposition of motions.*

(1) *Motions.* Motions shall state the relief sought, the authority relied upon and the facts alleged, and shall be filed with the Administrative Law Judge. If made before or after the hearing itself, the motions shall be in writing. If made at the hearing, motions may be stated orally; but the Administrative Law Judge may require that they be reduced

to writing and filed and served on all parties in the same manner as a formal motion. Unless otherwise ordered by the Administrative Law Judge, written motions shall be accompanied by a supporting memorandum. Within 10 days after a written motion is served, or such other time period as may be fixed, any party may file a response to a motion.

(2) *Disposition of motions.* The Administrative Law Judge may not grant a written motion prior to expiration of the time for filing responses thereto, except upon consent of the parties or following a hearing, but may overrule or deny such motion without awaiting response: *Provided*, That prehearing conferences, hearings, and decisions need not be delayed pending disposition of motions.

(k) *Prehearing procedures: Interrogatories and admissions as to facts and documents.*

(1) *Interrogatories.* Not later than 25 days prior to the date of the hearing, except for good cause shown, or not later than 14 days prior to such earlier date as the Administrative Law Judge may order, any party may serve upon an opposing party written interrogatories. Each interrogatory shall be answered separately and fully in writing under oath, unless objected to. Answers are to be signed by the person making them and objections by the attorney or by whoever is representing the party. Answers and objections shall be filed and served within 25 days of service of the interrogatory.

(2) *Admissions.* Not later than 14 days prior to the date of the hearing, except for good cause shown, or not later than 14 days prior to such earlier date as the Administrative Law Judge may order, any party may serve upon an opposing party a written request for the admission of the genuineness and authenticity of any relevant documents described in and exhibited with the request, or for the admission of the truth of any relevant matters of fact stated in the request. Each of the matters as to which an admission is requested shall be deemed admitted, unless within 25 days after service, the party to whom the request is directed serves upon the requesting party a sworn statement either (i) denying specifically the matter as to which an admission is requested, or (ii) setting forth in detail the reasons why he cannot truthfully either admit or deny such matters.

(3) *Objections or failures to respond.* The party submitting the interrogatory or request may move for an order with respect to any objection or other failure to respond.

(l) *Prehearing procedures: Production of documents and things and entry upon land for inspection and other purposes.*

(1) After commencement of the action, any party may serve on any other party a request to produce and/or permit the party, or someone acting on his behalf, to inspect and copy any unprivileged documents, phonorecords, and other compilations, including computer tapes and printouts which contain or may lead to relevant information and which are in the possession, custody, or control of the party upon whom the request is served. If necessary, translation of data compilations shall be done by the party furnishing the information.

(2) After commencement of the action, any party may serve on any other party a request to permit entry upon designated property which may be relevant to the issues in the proceeding and, which is in the possession or control of the party upon whom the request is served for the purpose of inspection, measuring, surveying or photographing, testing, or sampling the property or any designated object or area.

(3) Each request shall set forth with reasonable particularity the items to be inspected and shall specify a reasonable time and place for making the inspection and performing the related acts.

(4) The party upon whom the request is served shall respond within 25 days after the service of the request. The response shall state, with respect to each item, that inspection and related activities will be permitted as requested, unless there are objections, in which case the reasons for each objection shall be stated. The party submitting the request may move for an order with respect to any objection or to other failure to respond.

(m) *Prehearing procedures: Depositions upon oral examination.*

(1) *Depositions; notice of examination.* After commencement of the action, any party may take the testimony of any person, including a party, having personal or expert knowledge of the matters in issue, by deposition upon oral examination. A party desiring to take a deposition shall give reasonable notice in writing to every other party to the proceeding, and may use an administrative subpoena. The notice shall state the time and place for taking the deposition and the name and address of each person to be examined, if known, and, if the name is not known, a general description sufficient to identify him or the particular class or group to which he

belongs. The notice shall also set forth the categories of documents the witness is to bring with him to the deposition, if any. A copy of the notice shall be furnished to the person to be examined unless his name is unknown.

(2) *Production of witnesses; obligation of parties; objections.* It shall be the obligation of each party to produce for examination any person, along with such documents as may be requested, at the time and place, and on the date, set forth in the notice, if that party has control over such person. Each party shall be deemed to have control over its officers, agents, employees, and members. Unless the parties agree otherwise, depositions shall be held within the county in which the witness resides or works. The party or prospective witness may file with the Administrative Law Judge an objection within 5 days after notice of production of such witness is served, stating with particularity the reasons why the party cannot or ought not to produce a requested witness. The party serving the notice may move for an order with respect to such objection or failure to produce a witness. All errors or irregularities in compliance with the provisions of this section shall be deemed waived unless a motion to suppress the deposition or some part thereof is made with reasonable promptness after such defect is or, with due diligence, might have been ascertained.

(3) *Before whom taken; scope of examination; failure to answer.* Depositions may be taken before any officer authorized to administer oaths by the laws of the United States or of the place where the deposition is held. At the time and place specified in the notice, each party shall be permitted to examine and cross-examine the witness under oath upon any matter which is relevant to the subject matter of the proceeding, or which is reasonably calculated to lead to the production of relevant and otherwise admissible evidence. All objections to questions, except as to the form thereof, and all objections to evidence are reserved until the hearing. A refusal or failure on the part of any person under the control of a party to answer a question shall operate to create a presumption that the answer, if given, would be unfavorable to the controlling party, unless the question is subsequently ruled improper by the Administrative Law Judge or the Administrative Law Judge rules that there was valid justification for the witness' failure or refusal to answer the question: *Provided*, That the examining party shall note on the record during the deposition the question which the

deponent has failed, or refused to answer, and state his intention to invoke the presumption if no answer is forthcoming.

(4) *Subscription; certification; filing.*

The testimony shall be reduced to typewriting, either by the officer taking the deposition or under his direction, and shall be submitted to the witness for examination and signing. If the deposition is not signed by the witness because he is ill, dead, cannot be found, or refuses to sign it, such fact shall be noted in the certificate of the officer and the deposition may then be used as fully as though signed. The officer shall immediately deliver the original copy of the transcript, together with his certificate, in person or by mail to the Administrative Law Judge. Copies of the transcript and certificate shall be furnished to all persons desiring them, upon payment of reasonable charges, unless distribution is restricted by order of the Administrative Law Judge for good cause shown.

(5) *Rulings on admissibility; use of deposition.* Subject to the provisions of this section, objection may be made at the hearing to receiving in evidence any deposition or part thereof for any reason which would require the exclusion of the evidence if the witness were then present and testifying. Any part or all of a deposition, so far as admissible in the discretion of the Administrative Law Judge, may be used against any party who was present or represented at the taking of the deposition or who had reasonable notice, in accordance with the following provisions:

(i) Any deposition may be used by any party for the purpose of contradicting or impeaching the testimony of the deponent as a witness.

(ii) The deposition of a party or of any one who at the time of taking the deposition was an officer, director, or managing agent, or was designated to testify on behalf of a public or private corporation, partnership, association, or governmental agency which is a party may be used by the adverse party for any purpose.

(iii) The deposition of a witness, whether or not a party, may be used by any party for any purpose if the administrative law judge finds: (A) That the witness is dead; or (B) that the witness is unable to attend or testify because of age, illness, infirmity, or imprisonment; or (C) that the party offering the deposition has been unable to procure the attendance of the witness by subpoena; or (D) upon application and notice, that such exceptional circumstances exist as to make it desirable to allow the deposition to be used.

(iv) If only part of a deposition is introduced in evidence by a party, any party may introduce any other parts by way of rebuttal and otherwise.

(6) *Stipulations.* If the parties so stipulate in writing, depositions may be taken before any person at any time or place, upon any notice and in any manner, and when so taken may be used like other depositions.

(n) *Prehearing procedures: Prehearing conferences.*

(1) Upon his own motion or the motion of the parties, the Administrative Law Judge may direct the parties or their counsel to meet with him for a conference to consider:

(i) Simplification of the issues;

(ii) Necessity or desirability of amendments to pleadings for purposes of clarification, simplification, or limitation;

(iii) Stipulations, admissions of fact and of contents and authenticity of documents;

(iv) Limitation of number of witnesses;

(v) Scheduling dates for the exchange of witness lists and of proposed exhibits;

(vi) Such other matters as may tend to expedite the disposition of the proceedings.

(2) The record shall show the matters disposed of by order and by agreement in such pretrial conferences. The subsequent course of the proceeding shall be controlled by such action.

(o) *Prehearing procedures: Consent findings and order.*

(1) *General.* At any time after the issuance of a complaint and prior to or during the reception of evidence in any proceeding, the parties may jointly move to defer the receipt of any evidence for a reasonable time to permit negotiation of an agreement containing consent findings and an order disposing of the whole or any part of the proceeding. The allowance of such deferment and the duration thereof shall be in the discretion of the Administrative Law Judge after consideration of the nature of the proceeding, the requirements of the public interest, the representations of the parties, and the probability of an agreement being reached which will result in a just disposition of the issues involved.

(2) *Content.* Any agreement containing consent findings and an order disposing of a proceeding shall also provide:

(i) That the order shall have the same force and effect as an order made after full hearing;

(ii) That the entire record on which any order may be based shall consist

solely of the complaint and the agreement;

(iii) That any further procedural steps are waived; and

(iv) That any right to challenge or contest the validity of the findings and order entered into in accordance with the agreement is waived.

(3) *Submission.* On or before the expiration of the time granted for negotiations, the parties or their counsel may:

(i) Submit the proposed agreement to the Administrative Law Judge for his consideration;

(ii) Inform the Administrative Law Judge that agreement cannot be reached.

(4) *Disposition.* In the event an agreement containing consent findings and an order is submitted within the time allowed, the Administrative Law Judge, within 30 days, shall accept such agreement by issuing his decision based upon the agreed findings, and his decision shall constitute the final Administrative order.

(p) *Hearings and Related Matters: Designation of Administrative Law Judges.*

Hearings shall be held before an Administrative Law Judge of the Department of Labor who shall be designated by the Chief Administrative Law Judge of the Department of Labor. After commencement of the proceeding but prior to the designation of an Administrative Law Judge, pleadings and papers shall be filed with the Chief Administrative Law Judge.

(q) *Hearings and Related Matters: Authority and responsibilities of Administrative Law Judges.*

The Administrative Law Judge shall propose findings and conclusions to the Secretary on the basis of the record. In order to do so, he shall have the duty to conduct a fair hearing, to take all necessary action to avoid delay, and to maintain order. He shall have all powers necessary to those ends, including, but not limited to, the power to:

(1) Hold conferences to settle, simplify, or fix the issues in a proceeding, or to consider other matters that may aid in the expeditious disposition of the proceeding by consent of the parties or upon his own motion;

(2) Require parties to state their position with respect to the various issues in the proceeding;

(3) Require parties to produce for examination those relevant witnesses and documents under their control; and require parties to answer interrogatories and requests for admissions in full;

(4) Administer oaths;

(5) Rule on motions, and other procedural items or matters pending before him;

(6) Regulate the course of the hearing and conduct of participants therein;

(7) Examine and cross-examine witnesses, and introduce into the record documentary or other evidence;

(8) Receive, rule on, exclude, or limit evidence and limit lines of questioning or testimony which are irrelevant, immaterial, or unduly repetitious;

(9) Fix time limits for submission of written documents in matters before him and extend any time limits established by this part upon a determination that no party will be prejudiced and that the ends of justice will be served thereby;

(10) Impose appropriate sanctions against any party or person failing to obey an order under these rules which may include:

(i) Refusing to allow the disobedient party to support or oppose designated claims or defenses, or prohibiting it from introducing designated matters in evidence;

(ii) Excluding all testimony of an unresponsive or evasive witness, or determining that the answer of such witness, if given, would be unfavorable to the party having control over him; and

(iii) Expelling any party or person from further participation in the hearing;

(11) Take official notice of any material fact not appearing in evidence in the record, which is among the traditional matters of judicial notice;

(12) Recommend whether the respondent is in current violation of the order, regulations, or its contractual obligations, as well as the nature of the relief necessary to insure the full enjoyment of the rights secured by the order;

(13) Issue subpoenas; and

(14) Take any action authorized by these rules.

(r) Hearings and Related Matters: Appearances.

(1) *Representation.* The parties or other persons or organizations participating pursuant to 41 CFR 60–300.65 have the right to be represented by counsel.

(2) *Failure to appear.* In the event that a party appears at the hearing and no party appears for the opposing side, the party who is present shall have an election to present his evidence in whole or such portion thereof sufficient to make a prima facie case before the Administrative Law Judge. Failure to appear at the hearing shall not be deemed to be a waiver of the right to be served with a copy of the Administrative Law Judge's recommended decision and to file exceptions to it.

(s) Hearings and Related Matters: Appearance of witnesses.

(1) A party wishing to procure the appearance at the hearing of any person having personal or expert knowledge of the matters in issue shall serve on the prospective witness a notice, which may be accomplished by an administrative subpoena, setting forth the time, date, and place at which he is to appear for the purpose of giving testimony. The notice shall also set forth the categories of documents the witness is to bring with him to the hearing, if any. A copy of the notice shall be filed with the Administrative Law Judge and additional copies shall be served upon the opposing parties.

(2) It shall be the obligation of each party to produce for examination any person, along with such documents as may be requested, at the time and place, and on the date, set forth in the notice, if that party has control over such person. Each party shall be deemed to have control over its officers, agents, employees, and members. Due regard shall be given to the convenience of witnesses in scheduling their testimony so that they will be detained no longer than reasonably necessary.

(3) The party or prospective witness may file an objection within 5 days after notice of production of such witness is served stating with particularity the reasons why the party cannot produce a requested witness. The party serving the notice may move for an order with respect to such objection or failure to produce a witness.

(t) Hearings and Related Matters: Rules of evidence.

In any hearing, decision, or administrative review conducted pursuant to this part, all evidentiary matters shall be governed by Office of Administrative Law Judges' Rules of Evidence at 29 CFR part 18, subpart B, *Provided however*, That the provision at 29 CFR 18.1104 which delays the effective date of the rule with respect to certain investigations does not apply.

(u) Hearings and Related Matters: Objections; exceptions; offer of proof.

(1) *Objections.* If a party objects to the admission or rejection of any evidence or to the limitation of the scope of any examination or cross-examination or the failure to limit such scope, he shall state briefly the grounds for such objection. Rulings on all objections shall appear in the record. Only objections made on the record may be relied upon subsequently in the proceedings.

(2) *Exceptions.* Formal exception to an adverse ruling is not required. Rulings by the Administrative Law Judge shall not be appealed prior to the transfer of the case to the Secretary, but

shall be considered by the Secretary upon filing exceptions to the Administrative Law Judge's recommendations and conclusions.

(3) *Offer of proof.* An offer of proof made in connection with an objection taken to any ruling excluding proffered oral testimony shall consist of a statement of the substance of the evidence which counsel contends would be adduced by such testimony; and, if the excluded evidence consists of evidence in written form or consists of reference to documents, a copy of such evidence shall be marked for identification and shall accompany the record as the offer of proof.

(v) Hearings and Related Matters: Ex parte communications.

The Administrative Law Judge shall not consult any person, or party, on any fact in issue unless upon notice and opportunity for all parties to participate. No employee or agent of the Federal Government engaged in the investigation and prosecution of this case shall participate or advise in the rendering of the recommended or final decision in the case, except as witness or counsel in the proceeding.

(w) Hearings and Related Matters: Oral argument.

Any party shall be entitled upon request to a reasonable period between the close of evidence and termination of the hearing for oral argument. Oral arguments shall be included in the official transcript of the hearing.

(x) Hearings and Related Matters: Official transcript.

The official transcripts of testimony taken, together with any exhibits, briefs, or memorandums of law, shall be filed with the Administrative Law Judge. Transcripts of testimony may be obtained from the official reporter by the parties and the public as provided in section 11(a) of the Federal Advisory Committee Act (86 Stat. 770). Upon notice to all parties, the Administrative Law Judge may authorize such corrections to the transcript as are necessary to reflect accurately the testimony.

(y) Hearings and Related Matters: Summary judgment.

(1) *For the Government.* At any time after the expiration of 20 days from the commencement of the action, or after service of a motion for summary judgment by the respondent, the Government may move with or without supporting affidavits for a summary judgment upon all claims or any part.

(2) *For defendant.* The defendant may, at any time after commencement of the action, move with or without supporting affidavits for summary

judgment in its favor as to all claims or any part.

(3) *Other parties.* Any other party to a formal proceeding under this part may support or oppose motions for summary judgment made by the Government or respondent, in accordance with this section, but may not move for a summary judgment in his own behalf.

(4) *Statement of uncontested facts.* All motions for summary judgment shall be accompanied by a "Statement of Uncontested Facts" in which the moving party sets forth all alleged uncontested material facts which shall provide the basis for its motion. At least 5 days prior to the time fixed for hearing on the motion, any party contending that any material fact regarding the matter covered by the motion is in dispute, shall file a "Statement of Disputed Facts." Failure to file a "Statement of Disputed Facts" shall be deemed as an admission to the "Statement of Uncontested Facts."

(5) *Motion and proceedings.* The motion shall be served upon all parties at least 15 days before the time fixed for the hearing on the motion. The adverse party or parties may serve opposing affidavits prior to the day of hearing. The judgment sought shall be rendered forthwith if the complaint and answer, depositions, and admissions on file, together with the affidavits, if any, show that there is no genuine issue as to any material fact and that the moving party is entitled to a judgment as a matter of law. Summary judgment rendered for or against the Government or the respondent shall constitute the findings and recommendations on the issues involved. Hearings on motions made under this section shall be scheduled by the Administrative Law Judge.

(6) *Case not fully adjudicated on motion.* If on motion under this section judgment is not rendered upon the whole case or for all the relief asked and a final hearing is necessary, the Administrative Law Judge at the hearing of the motion, by examining the notice and answer and the evidence before him and by interrogating counsel, shall, if practicable, ascertain what material facts exist without substantial controversy and what material facts are actually and in good faith controverted. He shall thereupon make an order specifying the facts that appear without substantial controversy, including the extent to which relief is not in controversy, and directing such further proceedings as are just. At the hearing on the merits, the facts so specified shall be deemed established, and the final hearing shall be conducted accordingly.

(z) *Hearings and Related Matters: Participation by interested persons.*

(1) To the extent that proceedings hereunder involve employment of persons covered by a collective bargaining agreement, and compliance may necessitate a revision of such agreement, any labor organization which is a signatory to the agreement shall have the right to participate as a party.

(2) Other persons or organizations shall have the right to participate as parties if the final Administrative order could adversely affect them or the class they represent, and such participation may contribute materially to the proper disposition of the proceedings.

(3) Any person or organization wishing to participate as a party under this section shall file with the Administrative Law Judge and serve on all parties a petition within 25 days after the commencement of the action or at such other time as ordered by the Administrative Law Judge, so long as it does not disrupt the proceeding. Such petition shall concisely state: (i) Petitioner's interest in the proceedings; (ii) who will appear for petitioner; (iii) the issues on which petitioner wishes to participate; and (iv) whether petitioner intends to present witnesses.

(4) The Administrative Law Judge shall determine whether each petitioner has the requisite interest in the proceedings and shall permit or deny participation accordingly. Where petitions to participate as parties are made by individuals or groups with common interest, the Administrative Law Judge may request all such petitioners to designate a single representative to represent all such petitioners: *Provided*, That the representative of a labor organization qualifying to participate under paragraph (1) of the section must be permitted to participate in the proceedings. The Administrative Law Judge shall give each petitioner written notice of the decision on his petition; and if the petition is denied, he shall briefly state the grounds for denial and shall then treat the petition as a request for participation as amicus curiae. The Administrative Law Judge shall give written notice to each party of each petition granted.

(5) Any other interested person or organization wishing to participate as amicus curiae shall file a petition before the commencement of the final hearing with the Administrative Law Judge. Such petition shall concisely state: (i) The petitioner's interest in the hearing; (ii) who will represent the petitioner; and (iii) the issues on which petitioner intends to present argument. The Administrative Law Judge may grant the petition if he finds that the petitioner

has a legitimate interest in the proceedings, and that such participation may contribute materially to the proper disposition of the issues. An amicus curiae is not a party but may participate as provided in this section.

(6) An amicus curiae may present a brief oral statement at the hearing at the point in the proceeding specified by the Administrative Law Judge. He may submit a written statement of position to the Administrative Law Judge prior to the beginning of a hearing and shall serve a copy on each party. He may also submit a brief or written statement at such time as the parties submit briefs and exceptions, and he shall serve a copy on each party.

(aa) *Post-Hearing Procedures: Proposed findings of fact and conclusions of law.*

Within 20 days after receipt of the transcript of the testimony, each party and amicus may file a brief. Such briefs shall be served simultaneously on all parties and amici, and a certificate of service shall be furnished to the Administrative Law Judge. Requests for additional time in which to file a brief shall be made in writing, and copies shall be served simultaneously on the other parties. Requests for extensions shall be received not later than 3 days before the date such briefs are due. No reply brief may be filed except by special permission of the Administrative Law Judge.

(bb) *Post-Hearing Procedures: Record for recommended decision.*

The transcript of testimony, exhibits, and all papers, documents, and requests filed in the proceedings, including briefs, but excepting the correspondence section of the docket, shall constitute the record for decision.

(cc) *Post-Hearing Procedures: Recommended decision.*

Within a reasonable time after the filing of briefs, the Administrative Law Judge shall recommend findings, conclusions, and a decision. These recommendations shall be certified, together with the record for recommended decision, to the Administrative Review Board, United States Department of Labor, for a final Administrative order. The recommended findings, conclusions, and decision shall be served on all parties and amici to the proceeding.

(dd) *Post-Hearing Procedures: Exceptions to recommended decisions.*

Within 14 days after receipt of the recommended findings, conclusions, and decision, any party may submit exceptions to said recommendation. These exceptions may be responded to by other parties within 14 days of their receipt by said parties. All exceptions

and responses shall be filed with the Administrative Review Board, United States Department of Labor. Service of such briefs or exceptions and responses shall be made simultaneously on all parties to the proceeding. Requests to the Administrative Review Board, United States Department of Labor, for additional time in which to file exceptions and responses shall be in writing and copies shall be served simultaneously on other parties. Requests for extensions must be received no later than 3 days before the exceptions are due.

(ee) *Post-Hearing Procedures: Record.*

After expiration of the time for filing briefs and exceptions, the Administrative Review Board, United States Department of Labor, shall make a decision, which shall be the Administrative order, on the basis of the record. The record shall consist of the record for recommended decision, the rulings and recommended decision of the Administrative Law Judge and the exceptions and briefs filed subsequent to the Administrative Law Judge's decision.

(ff) *Post-Hearing Procedures: Administrative Order.*

After expiration of the time for filing, the Administrative Review Board, United States Department of Labor, shall make a decision which shall be served on all parties. If the Administrative Review Board, United States Department of Labor, concludes that the defendant has violated VEVRAA, the equal opportunity clause, or the regulations, an Administrative Order shall be issued enjoining the violations, and requiring the contractor to provide whatever remedies are appropriate, and imposing whatever sanctions are appropriate, or any of the above. In any event, failure to comply with the Administrative Order shall result in the immediate cancellation, termination, and suspension of the respondent's contracts and/or debarment of the respondent from further contracts.

(gg) *Expedited Hearing Procedures: Expedited hearings—when appropriate.*

Expedited Hearings may be used, *inter alia*, when a contractor or subcontractor has violated a conciliation agreement; has not adopted and implemented an acceptable affirmative action program; has refused to give access to or to supply records or other information as required by the equal opportunity clause; or has refused to allow an on-site compliance review to be conducted.

(hh) *Expedited Hearing Procedures: Administrative complaint and answer.*

(1) Expedited hearings shall be commenced by filing an administrative complaint in accordance with 41 CFR 60–300.65(g). The complaint shall state that the hearing is subject to these expedited hearing procedures.

(2) The answer shall be filed in accordance with 41 CFR 300.65(h)(1) and (2).

(3) Failure to request a hearing within the 20 days provided by 41 CFR 60–300.65(h)(1) shall constitute a waiver of hearing, and all the material allegations of fact contained in the complaint shall be deemed to be admitted. If a hearing is not requested or is waived, within 25 days of the complaint's filing, the Administrative Law Judge shall adopt as findings of fact the material facts alleged in the complaint, and shall order the appropriate sanctions and/or penalties sought in the complaint. The Administrative Law Judge's findings and order shall constitute a final Administrative order, unless the Office of the Solicitor, U.S. Department of Labor, files exceptions to the findings and order within 10 days of receipt thereof. If the Office of the Solicitor, U.S. Department of Labor, files exceptions, the matter shall proceed in accordance with 41 CFR 60–300.65(ll).

(4) If a request for a hearing is received within 20 days as provided by 41 CFR 60–300.65(h)(1), the hearing shall be convened within 45 days of receipt of the request and shall be completed within 15 days thereafter, unless more hearing time is required.

(ii) *Discovery.*

(1) Any party may serve requests for admissions in accordance with 41 CFR 60–300.65(k)(2) and (3).

(2) Witness lists and hearing exhibits will be exchanged at least 10 days in advance of the hearing.

(3) For good cause shown, and upon motion made in accordance with 41 CFR 60–300.65(j), the Administrative Law Judge may allow the taking of depositions. Other discovery will not be permitted.

(jj) *Conduct of hearing.*

(1) At the hearing, the Government shall be given an opportunity to demonstrate the basis for the request for sanctions and/or remedies, and the contractor shall be given an opportunity to show that the violation complained of did not occur and/or that good cause or good faith efforts excuse the alleged violations. Both parties shall be allowed to present evidence and argument and to cross-examine witnesses.

(2) The hearing shall be informal in nature, and the Administrative Law

Judge shall not be bound by formal rules of evidence.

(kk) *Recommended decision after hearing.*

Within 15 days after the hearing is concluded, the Administrative Law Judge shall recommend findings, conclusions, and a decision. The Administrative Law Judge may permit the parties to file written post-hearing briefs within this time period, but the Administrative Law Judge's recommendations shall not be delayed pending receipt of such briefs. These recommendations shall be certified, together with the record, to the Administrative Review Board, United States Department of Labor, for a final Administrative order. The recommended decision shall be served on all parties and amici to the proceeding.

(ll) *Exceptions to recommendations.*

Within 10 days after receipt of the recommended findings, conclusions and decision, any party may submit exceptions to said recommendations. Exceptions may be responded to by other parties within 7 days after receipt by said parties of the exceptions. All exceptions and responses shall be filed with the Administrative Review Board, United States Department of Labor. Briefs or exceptions and responses shall be served simultaneously on all parties to the proceeding.

(mm) *Final Administrative Order.*

After expiration of the time for filing exceptions, the Administrative Review Board, United States Department of Labor, shall issue an Administrative Order which shall be served on all parties. Unless the Administrative Review Board, United States Department of Labor, issues an Administrative Order within 30 days after the expiration of the time for filing exceptions, the Administrative Law Judge's recommended decision shall become a final Administrative Order which shall become effective on the 31st day after expiration of the time for filing exceptions. Except as to specific time periods required in this subsection, 41 CFR 60–300.65(ff) shall be applicable to this section.

Dated: June 25, 2025.

Catherine Eschbach,

Director, Office of Federal Contract Compliance Programs.

[FR Doc. 2025–12006 Filed 6–30–25; 8:45 am]

BILLING CODE 4510-CM-P

DEPARTMENT OF LABOR**Federal Contract Compliance Program Office****41 CFR Parts 60–30 and 60–741****[Docket No. OFCCP–2025–0003]****RIN 1250–AA18****Modifications to the Regulations Implementing Section 503 of the Rehabilitation Act of 1973, as Amended****AGENCY:** Office of Federal Contract Compliance Programs, Labor.**ACTION:** Proposed rule; request for comments.

SUMMARY: The U.S. Department of Labor proposes to revise its implementing regulations for Section 503 of the Rehabilitation Act of 1973, as amended. The proposed revisions will better align the regulations with recent case law and executive orders, including Executive Order 14173, “Ending Illegal Discrimination and Restoring Merit-Based Opportunity” and Executive Order 14219, “Ensuring Lawful Governance and Implementing the President’s ‘Department of Government Efficiency’ Deregulatory Initiative.”

DATES: Comments must be received by September 2, 2025.

ADDRESSES: Comments must be submitted in one of the following two ways (please choose only one of the ways listed):

- Electronically at <https://www.regulations.gov>. Follow the “Submit a comment” instructions. If you are reading this document on [federalregister.gov](https://www.federalregister.gov), you may use the green “SUBMIT A PUBLIC COMMENT” button beneath this rulemaking’s title to submit a comment to the *regulations.gov* docket.

- You may mail written comments to the following address: Catherine L. Eschbach, Director, Office of Federal Contract Compliance Programs, 200 Constitution Avenue NW, Washington, DC 20210. Mailed comments must be received by the close of the comment period.

Do not include any personally identifiable information (such as name, address, or other contact information) or confidential business information that you do not want publicly disclosed. All comments are public records; they are publicly displayed exactly as received, and will not be deleted, modified, or redacted. Comments may be submitted anonymously.

Follow the search instructions on <http://www.regulations.gov> to view

public comments. A brief summary of this document will be available on <https://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT: Catherine L. Eschbach, Director, OFCCP, 200 Constitution Avenue NW, Washington, DC 20210. Telephone: 202–693–0101. Email: ofccp_guidance@dol.gov.

SUPPLEMENTARY INFORMATION:**I. Legal Authority**

The U.S. Department of Labor (DOL) enforces Section 503 of the Rehabilitation Act of 1973 (Section 503), as amended, and its implementing regulations at 41 CFR part 60–741, which together prohibit Federal contractors and subcontractors (“contractors”) from discriminating against employees and applicants because of their disability status. Section 503 also requires contractors to take affirmative action to employ and advance in employment qualified individuals with disabilities. Its basic requirements apply to contractors with a government contract in excess of \$15,000, as effective October 1, 2010, the coverage threshold under Section 503 increased from \$10,000 to \$15,000, in accordance with the inflationary adjustment requirements in 41 U.S.C. 1908. *See*, Federal Acquisition Regulation; Inflation Adjustment of Acquisition-Related Thresholds, 75 CFR 53129 (Aug. 30, 2010).

Under the current regulations, contractors with 50 or more employees and a single Federal contract or subcontract of \$50,000 or more are also required to develop and maintain an affirmative action program, where they must implement and document their equal employment opportunity efforts on an annual basis, as provided in 41 CFR part 60–741, subpart C. As discussed below, DOL is proposing to revise these regulations to better align them with recent case law and executive orders.

II. Discussion

Prior to January 21, 2025, DOL’s Office of Federal Contract Compliance Programs enforced three authorities: Executive Order (E.O.) 11246, as amended, Section 503, and the Vietnam Era Veterans’ Readjustment Assistance Act of 1974 (VEVRAA), as amended. On January 21, 2025, President Trump issued E.O. 14173, “Ending Illegal Discrimination and Restoring Merit-Based Opportunity,” 90 FR 8633 (Jan. 31, 2025). E.O. 14173 revoked E.O. 11246, which prohibited covered contractors from discriminating in employment based on race, color,

religion, sex, sexual orientation, gender identity, and national origin and required them to take affirmative action. E.O. 11246 also prohibited covered contractors from taking adverse employment actions against applicants or employees because they inquired about, discussed, or disclosed information about their pay or the pay of their co-workers, subject to certain limitations.

While Section 503 remains in effect, the Section 503 regulations adopt and cross-reference the E.O. 11246 administrative enforcement proceeding procedures at 41 CFR part 60–30. Specifically, the Section 503 regulations provide, in part, that “[a]ll hearings conducted under [Section 503 and part 60–741] shall be governed by the Rules of Practice for Administrative Proceedings to Enforce Equal Opportunity Under Executive Order 11246 contained in 41 CFR part 60–30 . . .” 41 CFR 60–741.65(b)(1). With the revocation of E.O. 11246, DOL is proposing to remove this cross-reference and add the administrative enforcement proceeding provisions to part 60–741, except where duplicative of current part 60–741 provisions (e.g., the severability clause). Specifically, DOL is proposing to add these regulatory provisions to 41 CFR 60–741.65. In a separate rulemaking, DOL is proposing similar changes to the VEVRAA regulations. If these proposed changes become final, the 41 CFR part 60–30 regulations will be duplicative and unnecessary as they will be incorporated into 41 CFR parts 60–300 and 60–741. As such, DOL is also proposing to rescind 41 CFR part 60–30 using a delayed effective date.

DOL is also proposing to rescind the regulations at 41 CFR 60–741.42, which require contractors to invite applicants and employees to self-identify their disability status, as well as the utilization goal requirements at 41 CFR 60–741.45. The regulations at 41 CFR 60–741.45(a) require contractors to apply a seven percent utilization goal for employment of qualified individuals with disabilities to each of their job groups, or to their entire workforce if the contractor has 100 or fewer employees. The regulations also require covered contractors to conduct a utilization analysis, where they evaluate the representation of individuals with disabilities in each job group within their workforce (or across the entire workforce if they have 100 or fewer employees) with the seven percent utilization goal. 41 CFR 60–741.45(d). When the percentage is less than the utilization goal established, the contractor must take steps to determine whether and where impediments to

equal employment opportunity exist. 41 CFR 60–741.45(e). When making this determination, the contractor must assess its personnel processes, the effectiveness of its outreach and recruitment efforts, the results of its affirmative action program audit, and any other areas that might affect the success of its affirmative action program. *Id.*

While the Section 503 regulations state that the use of quotas is prohibited, contractors may, in practice, be induced to using quotas to meet the utilization goal. DOL has concerns that the self-identification and utilization goal regulations are inconsistent with the ADA. Section 60–741.45 sets out utilization goals for persons with disabilities, as well as requiring outreach and recruitment of individuals with disabilities. Inherent in any utilization goal, however, is the need for applicants with disabilities to identify their conditions to the employer. But the ADA is clear; an employer may not, prior to an offer of employment, make any disability-related inquiries, even if that inquiry is related to the job. 42 U.S.C. 12112(d)(2)(A). And even after an employee starts a job, an employer may make disability-related inquiries only if such inquiries are job-related and consistent with business necessity. 42 U.S.C. 12112(d)(4)(A).

OFCCP's previous reliance in the 2016 rulemaking on an August 8, 2013 letter provided by the U.S. Equal Employment Opportunity Commission (EEOC) Legal Counsel to the OFCCP Director does not reflect a binding view of the EEOC on the permissibility of inviting employment candidates to self-identify as individuals with disabilities under the ADA. That letter merely reflected the opinion of one legal officer at the EEOC over ten years ago. It was not issued by any EEOC Commissioner or voted on by the EEOC Commission. Moreover, in the ADA context, even a formal opinion letter issued by the EEOC is of limited authority. Unlike a Title VII EEOC opinion letter, EEOC ADA opinion letters cannot provide employers with a defense to liability. Thus, the 2013 letter reflects the opinion of one lawyer at the Commission and not the Commission itself as to whether this practice was permissible under the ADA.

Nothing in the statutory text of Section 503 requires use of a utilization goal. Given the coercive effect of the placement goals and the inducement on federal contractors to trespass the ADA's restrictions on pre-conditional job offer disability inquiries in order to avoid regulatory issues with DOL, DOL has determined that it is no longer

appropriate to seek a regulatory exception to what the ADA otherwise prohibits. The ADA expressly states that: “a covered entity shall not conduct a medical examination or make inquiries of a job applicant as to whether such applicant is an individual with a disability or as to the nature or severity of such disability.” 42 U.S.C. 12112(d)(2)(A). This text says “shall not” make inquiries as to whether an applicant has a disability and does not include any exception for pre-employment offer inquiries about disability status as part of affirmative action requirements, regardless of whether or not disclosure by the applicant is voluntary. Where Congress wanted to create an exception to this text it knew how to do so and in fact did so in 42 U.S.C. 12112(d)(3). Moreover, to the extent that DOL or EEOC regulations had previously created an exception to this clear statutory command prohibiting pre-employment inquiries about disabilities for affirmative action-related purposes, that regulatory interpretation of the text is now unlikely to survive scrutiny under *Loper Bright Enterprises v. Raimondo*, 603 U.S. 369 (2023).

Further, DOL is proposing to rescind 41 CFR 60–741.45 because the Section 503 utilization analysis required therein is dependent on the E.O. 11246 requirements, which no longer have the force of law. Specifically, the Section 503 regulations require contractors to conduct the utilization analysis using the same job groups established for their analyses under E.O. 11246. *See* 41 CFR 60–741.45(d)(2). However, with the revocation of E.O. 11246, contractors no longer conduct E.O. 11246 analyses. These changes have created confusion and uncertainty for covered contractors and have made the current regulatory framework for the Section 503 utilization analysis unworkable. DOL will not impose new requirements for conducting the Section 503 analyses, as doing so would be contrary to E.O. 14219, which directs Federal agencies to implement deregulatory measures and reduce undue burden on businesses. *See* E.O. 14219, “Ensuring Lawful Governance and Implementing the President’s ‘Department of Government Efficiency’ Deregulatory Initiative,” 90 FR 10583 (Feb. 25, 2025).

DOL also notes that the self-identification and utilization analysis requirements are not required by the Section 503 statute. *See* 29 U.S.C. 793. By rescinding these burdensome requirements, DOL would be fulfilling E.O. 14219’s mandate to rescind or modify regulations that are not authorized by clear statutory authority.

See E.O. 14219, “Ensuring Lawful Governance and Implementing the President’s ‘Department of Government Efficiency’ Deregulatory Initiative,” 90 FR 10583 (Feb. 25, 2025).

In addition to these changes, DOL also proposes to remove cross-references and language related to the self-identification requirement that are included in 41 CFR 60–741.23(c), 41 CFR 741.41, 41 CFR 741.44(f)(3), 41 CFR 60–741.44(k), 41 CFR 60–741.46(a)(2), 41 CFR 741.80(b), and Appendix A to Part 60–741, paragraph 2. With the rescission of 41 CFR 60–741.42, these provisions will no longer be applicable. DOL welcomes comments on these proposed changes, particularly comments on whether any form of data collection on an applicant or employee’s disability status could be maintained consistent with the ADA requirements at 42 U.S.C. 12112(d)(2)(A) and 42 U.S.C. 12112(d)(4)(A).

DOL is also proposing to remove a reference to 41 CFR part 60–3 that is included in 41 CFR 60–741.21(a)(7)(iii) and a reference to E.O. 11246 that is included in 41 CFR 741.46(d). DOL is proposing to remove these references because they are related to the revoked E.O. 11246 authority. DOL is also proposing to correct a typographical error in 41 CFR 741.46(d) (correcting the spelling of “Veterans”).

III. Procedural Issues and Regulatory Review

A. Review Under Executive Order 12866

E.O. 12866, “Regulatory Planning and Review,” 58 FR 51735 (Oct. 4, 1993), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits; (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

Section 6(a) of E.O. 12866 also requires agencies to submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) for review. OIRA has determined that this proposed rule does not constitute a “significant regulatory action” under section 3(f) of E.O. 12866. Accordingly, this proposed rule was not submitted to OIRA for review under E.O. 12866.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

DOL reviewed this proposed rule under the provisions of the Regulatory Flexibility Act. To the extent that the proposed changes may result in cost savings for covered contractors, those cost savings would largely apply large contractors who meet the affirmative action program thresholds and are scheduled for compliance reviews (which impose additional reporting requirements). Therefore, DOL has concluded that the impacts of the proposed rule would not have a “significant economic impact on a substantial number of small entities,” and that the preparation of an FRFA is not warranted. DOL will transmit this certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act (PRA)

The purpose of the Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501 *et seq.*, includes minimizing the paperwork burden on affected entities. The PRA requires certain actions before an agency can adopt or revise a collection of information, including publishing for public comment a summary of the collection of information and a brief description of the need for and proposed use of the information.

As part of its continuing effort to reduce paperwork and respondent burden, DOL conducts a preclearance consultation program to provide the public and Federal agencies with an opportunity to comment on proposed and continuing collections of information in accordance with the

PRA. *See* 44 U.S.C. 3506(c)(2)(A). This activity helps to ensure that the public understands DOL’s collection instructions, respondents can provide the requested data in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and DOL can properly assess the impact of collection requirements on respondents.

A Federal agency may not conduct or sponsor a collection of information unless it is approved by the Office of Management and Budget (OMB) under the PRA and it displays a currently valid OMB control number. The public is also not required to respond to a collection of information unless it displays a currently valid OMB control number. In addition, notwithstanding any other provisions of law, no person will be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512).

This rulemaking potentially affects specific information collections, such as OMB Control Number 1250–0005, which includes the form contractors currently use to invite applicants and employees to self-identify their disability. Any changes to DOL’s collections will be communicated through an upcoming 60-day **Federal Register** Notice.

D. Review Under Executive Order 13132

E.O. 13132, “Federalism,” 64 FR 43255 (Aug. 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The Executive Order requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The Executive Order also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.

DOL has examined this proposed rule and has determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O.

12988, “Civil Justice Reform,” imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity, (2) write regulations to minimize litigation, (3) provide a clear legal standard for affected conduct rather than a general standard, and (4) promote simplification and burden reduction. 61 FR 4729 (Feb. 7, 1996). Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any, (2) clearly specifies any effect on existing Federal law or regulation, (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction, (4) specifies the retroactive effect, if any, (5) adequately defines key terms, and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Section 3(c) of E.O. 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. DOL has completed the required review and determined that, to the extent permitted by law, this proposed rule meets the relevant standards of E.O. 12988.

F. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. 2 U.S.C. 1532(a) and (b). The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a “significant intergovernmental mandate,” and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing

any requirements that might significantly or uniquely affect them.

DOL examined this proposed rule according to UMRA and its statement of policy and determined that the proposed rule does not contain a Federal intergovernmental mandate, nor is it expected to require expenditures of \$100 million or more in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. As a result, the analytical requirements of UMRA do not apply.

G. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This proposed rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, DOL has concluded that it is not necessary to prepare a Family Policymaking Assessment.

H. Review Under Executive Order 12630

Pursuant to E.O. 12630, “Governmental Actions and Interference with Constitutionally Protected Property Rights,” 53 FR 8859 (March 18, 1988), DOL has determined that this proposed rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

I. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB’s guidelines were published at 67 FR 8452 (Feb. 22, 2002). DOL has reviewed this proposed rule under the OMB guidelines and has concluded that it is consistent with applicable policies in those guidelines.

J. Review Under Executive Order 13175

DOL has examined this proposed rule and determined that it does not have tribal implications under E.O. 13175 that would require a tribal summary impact statement. It does not “have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of

power and responsibilities between the Federal Government and Indian tribes.”

K. Review Under Additional Executive Orders and Presidential Memoranda

As detailed above, DOL has examined this proposed rule and has determined that it is consistent with the policies and directives outlined in E.O. 14173, “Ending Illegal Discrimination and Restoring Merit-Based Opportunity” and E.O. 14219, “Ensuring Lawful Governance and Implementing the President’s ‘Department of Government Efficiency’ Deregulatory Initiative.” This proposed rule, if finalized as proposed, is expected to be an E.O. 14192 deregulatory action.

List of Subjects in 41 CFR Parts 60–30 and 60–741

Administrative practice and procedure, Civil rights, Employment, Equal employment opportunity, Government contracts, Government procurement, Individuals with disabilities, Investigations, Labor.

For the reasons set forth in the preamble, and under the authority of E.O. 14173 and 29 U.S.C. 793, as amended, DOL proposes to amend chapter 60 in title 41 of the Code of Federal Regulations by removing and reserving 41 CFR part 60–30 and by revising 41 CFR part 60–741, as set forth below:

PART 60–30 [REMOVED AND RESERVED]

- 1. Effective March 31, 2026, remove and reserve 41 CFR part 60–30.

PART 60–741—AFFIRMATIVE ACTION AND NONDISCRIMINATION OBLIGATIONS OF FEDERAL CONTRACTORS AND SUBCONTRACTORS REGARDING INDIVIDUALS WITH DISABILITIES

- 2. The authority citation for part 60–741 continues to read as follows:

Authority: 29 U.S.C. 705 and 793; E.O. 11758 (3 CFR, 1971–1975 Comp., p. 841).

- 3. Revise § 60–741.21(a)(7)(iii) to read as follows:

§ 60–741.21 Prohibitions.

- (a) * * *
- (7) * * *
- (i) * * *
- (ii) * * *

(iii) The Uniform Guidelines on Employee Selection Procedures do not apply to the Rehabilitation Act and are similarly inapplicable to this part.

* * * * *

- 4. Revise § 60–741.23 to read as follows:

§ 60–741.23 Medical Examinations and Inquiries.

* * * * *

- (c) [Reserved]

(d) *Confidentiality and use of medical information.* (1) Information obtained under this section regarding the medical condition or history of any applicant or employee shall be collected and maintained on separate forms and in separate medical files and treated as a confidential medical record, except that:

(i) Supervisors and managers may be informed regarding necessary restrictions on the work or duties of the applicant or employee and necessary accommodations;

(ii) First aid and safety personnel may be informed, when appropriate, if the disability might require emergency treatment; and

(iii) Government officials engaged in enforcing the laws administered by OFCCP, including this part, or enforcing the Americans with Disabilities Act, as amended, shall be provided relevant information on request.

(2) Information obtained under this section regarding the medical condition or history of any applicant or employee shall not be used for any purpose inconsistent with this part.

- 5. Revise § 60–741.41 to read as follows:

§ 60–741.41 Availability of affirmative action program.

The full affirmative action program shall be available to any employee or applicant for employment for inspection upon request. The location and hours during which the program may be obtained shall be posted at each establishment.

§ 60–741.42 [REMOVED AND RESERVED]

- 6. Remove and reserve § 60–741.42.

- 7. Amend § 60–741.44 by revising paragraph (f)(3) and paragraph (k) to read as follows:

§ 60–741.44 Required contents of affirmative action programs.

* * * * *

- (f) * * *

- (1) * * *

- (2) * * *

(3) *Assessment of external outreach and recruitment efforts.* The contractor shall, on an annual basis, review the outreach and recruitment efforts it has taken over the previous twelve months to evaluate their effectiveness in identifying and recruiting qualified individuals with disabilities. The contractor shall document each evaluation, including at a minimum the criteria it used to evaluate the effectiveness of each effort and the

contractor's conclusion as to whether each effort was effective. The contractor's conclusion as to the effectiveness of its outreach efforts must be reasonable as determined by OFCCP in light of these regulations. If the contractor concludes the totality of its efforts were not effective in identifying and recruiting qualified individuals with disabilities, it shall identify and implement alternative efforts listed in paragraphs (f)(1) or (f)(2) of this section in order to fulfill its obligations.

(4) * * *

(g) * * *

(h) * * *

(i) * * *

(j) * * *

(k) [Reserved]

§ 60–741.45 [REMOVED AND RESERVED]

■ 8. Remove and reserve § 60–741.45.

■ 9. Amend § 60–741.46 by revising paragraph (a)(2) and paragraph (d) to read as follows:

§ 60–741.46 Voluntary affirmative action programs for employees with disabilities.

(a) * * *

(1) * * *

(2) [Reserved]

(b) * * *

(c) * * *

(d) These voluntary training and development programs should not result in discrimination against other groups and do not relieve a contractor from liability for discrimination under this act or the Vietnam Era Veterans' Readjustment Assistance Act.

■ 10. Revise § 60–741.65 to read as follows:

§ 60–741.65 Enforcement proceedings.

(a) *General.* (1) If a compliance evaluation, complaint investigation, or other review by OFCCP finds a violation of the act or this part, and the violation has not been corrected in accordance with the conciliation procedures in this part, or OFCCP determines that referral for consideration of formal enforcement (rather than settlement) is appropriate, OFCCP may refer the matter to the Solicitor of Labor with a recommendation for the institution of enforcement proceedings to enjoin the violations, to seek appropriate relief, and to impose appropriate sanctions, or any combination of these outcomes. OFCCP may seek back pay and other make whole relief for aggrieved individuals identified during a complaint investigation or compliance review. Such individuals need not have filed a complaint as a prerequisite to OFCCP seeking such relief on their behalf. Interest on back pay shall be calculated from the date of the loss and

compounded quarterly at the percentage rate established by the Internal Revenue Service (IRS) for the underpayment of taxes.

(2) In addition to the administrative proceedings set forth in this section, the Director may, within the limitations of applicable law, seek appropriate judicial action to enforce the contractual provisions set forth in § 60–741.5, including appropriate injunctive relief.

(b) *Hearing practice and procedure.* (1) In administrative enforcement proceedings the contractor shall be provided an opportunity for a formal hearing. All hearings conducted under the act and this part shall be governed by the regulations at 41 CFR 60–741.65(c) to (mm) and the Rules of Evidence set out in the Rules of Practice and Procedure for Administrative Hearings Before the Office of Administrative Law Judges contained in 29 CFR part 18, subpart B: *Provided*, That a final administrative order shall be issued within one year from the date of the issuance of the recommended findings, conclusions, and decision of the Administrative Law Judge, or the submission of any exceptions and responses to exceptions to such decision (if any) whichever is later.

(2) Complaints may be filed by the Solicitor, the Associate Solicitor for Civil Rights and Labor-Management, Regional Solicitors and Associate Regional Solicitors.

(3) [Reserved]

(c) *Applicability of rules of practice for administrative proceedings.*

The regulations at 41 CFR 60–741.65(c) to (mm) provide the rules of practice for all administrative proceedings that relate to the enforcement of Section 503 of the Rehabilitation Act of 1973 (Section 503), as amended, including but not limited to proceedings instituted against contractors or subcontractors covered by 41 CFR part 60–741. In the absence of a specific provision, procedures shall be in accordance with the Federal Rules of Civil Procedure.

(d) *Waiver, modification.*

Upon notice to all parties, the Administrative Law Judge may, with respect to matters pending before him modify or waive any rule herein upon a determination that no party will be prejudiced and that the ends of justice will be served thereby.

(e) *Computation of time.*

In computing any period of time under these rules or in an order issued hereunder, the time begins with the day following the act, event, or default, and includes the last day of the period, unless it is a Saturday, Sunday, or legal holiday observed by the Federal

Government in which event it includes the next business day.

(f) *Form, filing, service of pleadings and papers.*

(1) *Form.* The original of all pleadings and papers in a proceeding conducted under the 41 CFR 60–741.65 regulations shall be filed with the Administrative Law Judge assigned to the case or with the Chief Administrative Law Judge if the case has not been assigned. Every pleading and paper filed in the proceeding shall contain a caption setting forth the name of the agency instituting the proceeding, the title of the action, the case file number assigned by the Administrative Law Judge, and a designation of the pleading or paper (e.g., complaint, motion to dismiss, etc.). The pleading or papers shall be signed and shall contain the address and telephone number of the person representing the party or the person on whose behalf the pleading or paper was filed. Unless otherwise ordered for good cause by the Administrative Law Judge regarding specific papers and pleadings in a specific case, all such papers and pleadings are public documents.

(2) *Service.* Service upon any party shall be made by the party filing the pleading or document in accordance with 29 CFR part 26. When a party is represented by an attorney, the service shall be upon the attorney.

(3) *Proof of service.* A certificate of the person serving the pleading or other document, setting forth the manner of service, shall be proof of the service.

(g) *Prehearing procedures:*

Administrative complaint.

(1) Filing. The Solicitor of Labor, Associate Solicitor for Labor Relations and Civil Rights Regional Solicitors and Regional Attorney upon referral from the Office of Federal Contract Compliance Programs, are authorized to institute enforcement proceedings by filing a complaint and serving the complaint upon the contractor which shall be designated as the defendant. The Department of Labor, OFCCP, as shall be designated on plaintiff.

(2) *Contents.* The complaint shall contain a concise jurisdictional statement, and a clear and concise statement sufficient to put the defendant on notice of the acts or practices it is alleged to have committed in violation of the order, the regulations, or its contractual obligations. The complaint shall also contain a prayer regarding the relief being sought, a statement of whatever sanctions the Government will seek to impose and the name and address of the attorney who will represent the Government.

(3) *Amendment.* The complaint may be amended once as a matter of course

before an answer is filed, and the defendant may amend its answer once as a matter of course not later than 10 days after the filing of the original answer. Other amendments of the complaint or of the answer to the complaint shall be made only by leave of the Administrative Law Judge or by written consent of the adverse party; and leave shall be freely given where justice so requires. An amended complaint shall be answered within 14 days of its service, or within the time for filing an answer to the original complaint, whichever period is longer. An amended answer shall be responded to within 14 days of its service.

(h) *Prehearing procedures: Answer.*

(1) *Filing and service.* Within 20 days after the service of the complaint, the defendant shall file an answer with the Chief Administrative Law Judge if the case has not been assigned to an Administrative Law Judge. The answer shall be signed by the defendant or its attorney and served on the Government in accordance with § 60–741.65(f)(2).

(2) *Contents; failure to file.* The answer shall (i) contain a statement of the facts which constitute the grounds of defense, and shall specifically admit, explain, or deny, each of the allegations of the complaint unless the defendant is without knowledge, in which case the answer shall so state; or (ii) state that the defendant admits all the allegations of the complaint. The answer may contain a waiver of hearing; and if not, a separate paragraph in the answer shall request a hearing. The answer shall contain the name and address of the defendant, or of the attorney representing the defendant. Failure to file an answer or to plead specifically to any allegation of the complaint shall constitute an admission of such allegation.

(3) *Procedure, upon admission of facts.* The admission, in the answer or by failure to file an answer, of all the material allegations of fact contained in the complaint shall constitute a waiver of hearing. Upon such admission, the Administrative Law Judge, without further hearing, may prepare his decision in which he shall adopt as his proposed findings of fact the material facts alleged in the complaint. The parties shall be given an opportunity to file exceptions to his decision and to file briefs in support of the exceptions.

(i) *Prehearing procedures: Notice of prehearing conference.*

The Administrative Law Judge shall respond to defendant's request for a hearing within 15 days and shall serve a notice of prehearing conference on the parties. The notice shall contain the time and place of the conference.

(j) *Prehearing procedures: Motions; disposition of motions.*

(1) *Motions.* Motions shall state the relief sought, the authority relied upon and the facts alleged, and shall be filed with the Administrative Law Judge. If made before or after the hearing itself, the motions shall be in writing. If made at the hearing, motions may be stated orally; but the Administrative Law Judge may require that they be reduced to writing and filed and served on all parties in the same manner as a formal motion. Unless otherwise ordered by the Administrative Law Judge, written motions shall be accompanied by a supporting memorandum. Within 10 days after a written motion is served, or such other time period as may be fixed, any party may file a response to a motion.

(2) *Disposition of motions.* The Administrative Law Judge may not grant a written motion prior to expiration of the time for filing responses thereto, except upon consent of the parties or following a hearing, but may overrule or deny such motion without awaiting response: *Provided*, That prehearing conferences, hearings, and decisions need not be delayed pending disposition of motions.

(k) *Prehearing procedures: Interrogatories and admissions as to facts and documents.*

(1) *Interrogatories.* Not later than 25 days prior to the date of the hearing, except for good cause shown, or not later than 14 days prior to such earlier date as the Administrative Law Judge may order, any party may serve upon an opposing party written interrogatories. Each interrogatory shall be answered separately and fully in writing under oath, unless objected to. Answers are to be signed by the person making them and objections by the attorney or by whoever is representing the party. Answers and objections shall be filed and served within 25 days of service of the interrogatory.

(2) *Admissions.* Not later than 14 days prior to the date of the hearing, except for good cause shown, or not later than 14 days prior to such earlier date as the Administrative Law Judge may order, any party may serve upon an opposing party a written request for the admission of the genuineness and authenticity of any relevant documents described in and exhibited with the request, or for the admission of the truth of any relevant matters of fact stated in the request. Each of the matters as to which an admission is requested shall be deemed admitted, unless within 25 days after service, the party to whom the request is directed serves upon the requesting party a sworn statement

either (i) denying specifically the matter as to which an admission is requested, or (ii) setting forth in detail the reasons why he cannot truthfully either admit or deny such matters.

(3) *Objections or failures to respond.* The party submitting the interrogatory or request may move for an order with respect to any objection or other failure to respond.

(l) *Prehearing procedures: Production of documents and things and entry upon land for inspection and other purposes.*

(1) After commencement of the action, any party may serve on any other party a request to produce and/or permit the party, or someone acting on his behalf, to inspect and copy any unprivileged documents, phonorecords, and other compilations, including computer tapes and printouts which contain or may lead to relevant information and which are in the possession, custody, or control of the party upon whom the request is served. If necessary, translation of data compilations shall be done by the party furnishing the information.

(2) After commencement of the action, any party may serve on any other party a request to permit entry upon designated property which may be relevant to the issues in the proceeding and, which is in the possession or control of the party upon whom the request is served for the purpose of inspection, measuring, surveying or photographing, testing, or sampling the property or any designated object or area.

(3) Each request shall set forth with reasonable particularity the items to be inspected and shall specify a reasonable time and place for making the inspection and performing the related acts.

(4) The party upon whom the request is served shall respond within 25 days after the service of the request. The response shall state, with respect to each item, that inspection and related activities will be permitted as requested, unless there are objections, in which case the reasons for each objection shall be stated. The party submitting the request may move for an order with respect to any objection or to other failure to respond.

(m) *Prehearing procedures: Depositions upon oral examination.*

(1) *Depositions; notice of examination.* After commencement of the action, any party may take the testimony of any person, including a party, having personal or expert knowledge of the matters in issue, by deposition upon oral examination. A party desiring to take a deposition shall

give reasonable notice in writing to every other party to the proceeding, and may use an administrative subpoena. The notice shall state the time and place for taking the deposition and the name and address of each person to be examined, if known, and, if the name is not known, a general description sufficient to identify him or the particular class or group to which he belongs. The notice shall also set forth the categories of documents the witness is to bring with him to the deposition, if any. A copy of the notice shall be furnished to the person to be examined unless his name is unknown.

(2) *Production of witnesses; obligation of parties; objections.* It shall be the obligation of each party to produce for examination any person, along with such documents as may be requested, at the time and place, and on the date, set forth in the notice, if that party has control over such person. Each party shall be deemed to have control over its officers, agents, employees, and members. Unless the parties agree otherwise, depositions shall be held within the county in which the witness resides or works. The party or prospective witness may file with the Administrative Law Judge an objection within 5 days after notice of production of such witness is served, stating with particularity the reasons why the party cannot or ought not to produce a requested witness. The party serving the notice may move for an order with respect to such objection or failure to produce a witness. All errors or irregularities in compliance with the provisions of this section shall be deemed waived unless a motion to suppress the deposition or some part thereof is made with reasonable promptness after such defect is or, with due diligence, might have been ascertained.

(3) *Before whom taken; scope of examination; failure to answer.* Depositions may be taken before any officer authorized to administer oaths by the laws of the United States or of the place where the deposition is held. At the time and place specified in the notice, each party shall be permitted to examine and cross-examine the witness under oath upon any matter which is relevant to the subject matter of the proceeding, or which is reasonably calculated to lead to the production of relevant and otherwise admissible evidence. All objections to questions, except as to the form thereof, and all objections to evidence are reserved until the hearing. A refusal or failure on the part of any person under the control of a party to answer a question shall operate to create a presumption that the

answer, if given, would be unfavorable to the controlling party, unless the question is subsequently ruled improper by the Administrative Law Judge or the Administrative Law Judge rules that there was valid justification for the witness' failure or refusal to answer the question: *Provided*, That the examining party shall note on the record during the deposition the question which the deponent has failed, or refused to answer, and state his intention to invoke the presumption if no answer is forthcoming.

(4) *Subscription; certification; filing.* The testimony shall be reduced to typewriting, either by the officer taking the deposition or under his direction, and shall be submitted to the witness for examination and signing. If the deposition is not signed by the witness because he is ill, dead, cannot be found, or refuses to sign it, such fact shall be noted in the certificate of the officer and the deposition may then be used as fully as though signed. The officer shall immediately deliver the original copy of the transcript, together with his certificate, in person or by mail to the Administrative Law Judge. Copies of the transcript and certificate shall be furnished to all persons desiring them, upon payment of reasonable charges, unless distribution is restricted by order of the Administrative Law Judge for good cause shown.

(5) *Rulings on admissibility; use of deposition.* Subject to the provisions of this section, objection may be made at the hearing to receiving in evidence any deposition or part thereof for any reason which would require the exclusion of the evidence if the witness were then present and testifying. Any part or all of a deposition, so far as admissible in the discretion of the Administrative Law Judge, may be used against any party who was present or represented at the taking of the deposition or who had reasonable notice, in accordance with the following provisions:

(i) Any deposition may be used by any party for the purpose of contradicting or impeaching the testimony of the deponent as a witness.

(ii) The deposition of a party or of any one who at the time of taking the deposition was an officer, director, or managing agent, or was designated to testify on behalf of a public or private corporation, partnership, association, or governmental agency which is a party may be used by the adverse party for any purpose.

(iii) The deposition of a witness, whether or not a party, may be used by any party for any purpose if the administrative law judge finds: (A) That the witness is dead; or (B) that the

witness is unable to attend or testify because of age, illness, infirmity, or imprisonment; or (C) that the party offering the deposition has been unable to procure the attendance of the witness by subpoena; or (D) upon application and notice, that such exceptional circumstances exist as to make it desirable to allow the deposition to be used.

(iv) If only part of a deposition is introduced in evidence by a party, any party may introduce any other parts by way of rebuttal and otherwise.

(6) *Stipulations.* If the parties so stipulate in writing, depositions may be taken before any person at any time or place, upon any notice and in any manner, and when so taken may be used like other depositions.

(n) *Prehearing procedures: Prehearing conferences.*

(1) Upon his own motion or the motion of the parties, the Administrative Law Judge may direct the parties or their counsel to meet with him for a conference to consider:

(i) Simplification of the issues;

(ii) Necessity or desirability of amendments to pleadings for purposes of clarification, simplification, or limitation;

(iii) Stipulations, admissions of fact and of contents and authenticity of documents;

(iv) Limitation of number of witnesses;

(v) Scheduling dates for the exchange of witness lists and of proposed exhibits;

(vi) Such other matters as may tend to expedite the disposition of the proceedings.

(2) The record shall show the matters disposed of by order and by agreement in such pretrial conferences. The subsequent course of the proceeding shall be controlled by such action.

(o) *Prehearing procedures: Consent findings and order.*

(1) *General.* At any time after the issuance of a complaint and prior to or during the reception of evidence in any proceeding, the parties may jointly move to defer the receipt of any evidence for a reasonable time to permit negotiation of an agreement containing consent findings and an order disposing of the whole or any part of the proceeding. The allowance of such deferment and the duration thereof shall be in the discretion of the Administrative Law Judge after consideration of the nature of the proceeding, the requirements of the public interest, the representations of the parties, and the probability of an agreement being reached which will

result in a just disposition of the issues involved.

(2) *Content.* Any agreement containing consent findings and an order disposing of a proceeding shall also provide:

(i) That the order shall have the same force and effect as an order made after full hearing;

(ii) That the entire record on which any order may be based shall consist solely of the complaint and the agreement;

(iii) That any further procedural steps are waived; and

(iv) That any right to challenge or contest the validity of the findings and order entered into in accordance with the agreement is waived.

(3) *Submission.* On or before the expiration of the time granted for negotiations, the parties or their counsel may:

(i) Submit the proposed agreement to the Administrative Law Judge for his consideration;

(ii) Inform the Administrative Law Judge that agreement cannot be reached.

(4) *Disposition.* In the event an agreement containing consent findings and an order is submitted within the time allowed, the Administrative Law Judge, within 30 days, shall accept such agreement by issuing his decision based upon the agreed findings, and his decision shall constitute the final Administrative order.

(p) *Hearings and Related Matters: Designation of Administrative Law Judges.*

Hearings shall be held before an Administrative Law Judge of the Department of Labor who shall be designated by the Chief Administrative Law Judge of the Department of Labor. After commencement of the proceeding but prior to the designation of an Administrative Law Judge, pleadings and papers shall be filed with the Chief Administrative Law Judge.

(q) *Hearings and Related Matters: Authority and responsibilities of Administrative Law Judges.*

The Administrative Law Judge shall propose findings and conclusions to the Secretary on the basis of the record. In order to do so, he shall have the duty to conduct a fair hearing, to take all necessary action to avoid delay, and to maintain order. He shall have all powers necessary to those ends, including, but not limited to, the power to:

(1) Hold conferences to settle, simplify, or fix the issues in a proceeding, or to consider other matters that may aid in the expeditious disposition of the proceeding by consent of the parties or upon his own motion;

(2) Require parties to state their position with respect to the various issues in the proceeding;

(3) Require parties to produce for examination those relevant witnesses and documents under their control; and require parties to answer interrogatories and requests for admissions in full;

(4) Administer oaths;

(5) Rule on motions, and other procedural items or matters pending before him;

(6) Regulate the course of the hearing and conduct of participants therein;

(7) Examine and cross-examine witnesses, and introduce into the record documentary or other evidence;

(8) Receive, rule on, exclude, or limit evidence and limit lines of questioning or testimony which are irrelevant, immaterial, or unduly repetitious;

(9) Fix time limits for submission of written documents in matters before him and extend any time limits established by this part upon a determination that no party will be prejudiced and that the ends of justice will be served thereby;

(10) Impose appropriate sanctions against any party or person failing to obey an order under these rules which may include:

(i) Refusing to allow the disobedient party to support or oppose designated claims or defenses, or prohibiting it from introducing designated matters in evidence;

(ii) Excluding all testimony of an unresponsive or evasive witness, or determining that the answer of such witness, if given, would be unfavorable to the party having control over him; and

(iii) Expelling any party or person from further participation in the hearing;

(11) Take official notice of any material fact not appearing in evidence in the record, which is among the traditional matters of judicial notice;

(12) Recommend whether the respondent is in current violation of the order, regulations, or its contractual obligations, as well as the nature of the relief necessary to insure the full enjoyment of the rights secured by the order;

(13) Issue subpoenas; and

(14) Take any action authorized by these rules.

(r) *Hearings and Related Matters: Appearances.*

(1) Representation. The parties or other persons or organizations participating pursuant to 41 CFR 60–741.65 have the right to be represented by counsel.

(2) *Failure to appear.* In the event that a party appears at the hearing and no

party appears for the opposing side, the party who is present shall have an election to present his evidence in whole or such portion thereof sufficient to make a prima facie case before the Administrative Law Judge. Failure to appear at the hearing shall not be deemed to be a waiver of the right to be served with a copy of the Administrative Law Judge's recommended decision and to file exceptions to it.

(s) *Hearings and Related Matters: Appearance of witnesses.*

(1) A party wishing to procure the appearance at the hearing of any person having personal or expert knowledge of the matters in issue shall serve on the prospective witness a notice, which may be accomplished by an administrative subpoena, setting forth the time, date, and place at which he is to appear for the purpose of giving testimony. The notice shall also set forth the categories of documents the witness is to bring with him to the hearing, if any. A copy of the notice shall be filed with the Administrative Law Judge and additional copies shall be served upon the opposing parties.

(2) It shall be the obligation of each party to produce for examination any person, along with such documents as may be requested, at the time and place, and on the date, set forth in the notice, if that party has control over such person. Each party shall be deemed to have control over its officers, agents, employees, and members. Due regard shall be given to the convenience of witnesses in scheduling their testimony so that they will be detained no longer than reasonably necessary.

(3) The party or prospective witness may file an objection within 5 days after notice of production of such witness is served stating with particularity the reasons why the party cannot produce a requested witness. The party serving the notice may move for an order with respect to such objection or failure to produce a witness.

(t) *Hearings and Related Matters: Rules of evidence.*

In any hearing, decision, or administrative review conducted pursuant to this part, all evidentiary matters shall be governed by Office of Administrative Law Judges' Rules of evidence at 29 CFR part 18, subpart B.

(u) *Hearings and Related Matters: Objections; exceptions; offer of proof.*

(1) *Objections.* If a party objects to the admission or rejection of any evidence or to the limitation of the scope of any examination or cross-examination or the failure to limit such scope, he shall state briefly the grounds for such objection. Rulings on all objections shall appear in

the record. Only objections made on the record may be relied upon subsequently in the proceedings.

(2) *Exceptions.* Formal exception to an adverse ruling is not required. Rulings by the Administrative Law Judge shall not be appealed prior to the transfer of the case to the Secretary, but shall be considered by the Secretary upon filing exceptions to the Administrative Law Judge's recommendations and conclusions.

(3) *Offer of proof.* An offer of proof made in connection with an objection taken to any ruling excluding proffered oral testimony shall consist of a statement of the substance of the evidence which counsel contends would be adduced by such testimony; and, if the excluded evidence consists of evidence in written form or consists of reference to documents, a copy of such evidence shall be marked for identification and shall accompany the record as the offer of proof.

(v) *Hearings and Related Matters: Ex parte communications.*

The Administrative Law Judge shall not consult any person, or party, on any fact in issue unless upon notice and opportunity for all parties to participate. No employee or agent of the Federal Government engaged in the investigation and prosecution of this case shall participate or advise in the rendering of the recommended or final decision in the case, except as witness or counsel in the proceeding.

(w) *Hearings and Related Matters: Oral argument.*

Any party shall be entitled upon request to a reasonable period between the close of evidence and termination of the hearing for oral argument. Oral arguments shall be included in the official transcript of the hearing.

(x) *Hearings and Related Matters: Official transcript.*

The official transcripts of testimony taken, together with any exhibits, briefs, or memorandums of law, shall be filed with the Administrative Law Judge. Transcripts of testimony may be obtained from the official reporter by the parties and the public as provided in section 11(a) of the Federal Advisory Committee Act (86 Stat. 770). Upon notice to all parties, the Administrative Law Judge may authorize such corrections to the transcript as are necessary to reflect accurately the testimony.

(y) *Hearings and Related Matters: Summary judgment.*

(1) *For the Government.* At any time after the expiration of 20 days from the commencement of the action, or after service of a motion for summary judgment by the respondent, the

Government may move with or without supporting affidavits for a summary judgment upon all claims or any part.

(2) *For defendant.* The defendant may, at any time after commencement of the action, move with or without supporting affidavits for summary judgment in its favor as to all claims or any part.

(3) *Other parties.* Any other party to a formal proceeding under this part may support or oppose motions for summary judgment made by the Government or respondent, in accordance with this section, but may not move for a summary judgment in his own behalf.

(4) *Statement of uncontested facts.* All motions for summary judgment shall be accompanied by a "Statement of Uncontested Facts" in which the moving party sets forth all alleged uncontested material facts which shall provide the basis for its motion. At least 5 days prior to the time fixed for hearing on the motion, any party contending that any material fact regarding the matter covered by the motion is in dispute, shall file a "Statement of Disputed Facts." Failure to file a "Statement of Disputed Facts" shall be deemed as an admission to the "Statement of Uncontested Facts."

(5) *Motion and proceedings.* The motion shall be served upon all parties at least 15 days before the time fixed for the hearing on the motion. The adverse party or parties may serve opposing affidavits prior to the day of hearing. The judgment sought shall be rendered forthwith if the complaint and answer, depositions, and admissions on file, together with the affidavits, if any, show that there is no genuine issue as to any material fact and that the moving party is entitled to a judgment as a matter of law. Summary judgment rendered for or against the Government or the respondent shall constitute the findings and recommendations on the issues involved. Hearings on motions made under this section shall be scheduled by the Administrative Law Judge.

(6) *Case not fully adjudicated on motion.* If on motion under this section judgment is not rendered upon the whole case or for all the relief asked and a final hearing is necessary, the Administrative Law Judge at the hearing of the motion, by examining the notice and answer and the evidence before him and by interrogating counsel, shall, if practicable, ascertain what material facts exist without substantial controversy and what material facts are actually and in good faith controverted. He shall thereupon make an order specifying the facts that appear without substantial controversy, including the extent to which relief is not in

controversy, and directing such further proceedings as are just. At the hearing on the merits, the facts so specified shall be deemed established, and the final hearing shall be conducted accordingly.

(z) *Hearings and Related Matters: Participation by interested persons.*

(1) To the extent that proceedings hereunder involve employment of persons covered by a collective bargaining agreement, and compliance may necessitate a revision of such agreement, any labor organization which is a signatory to the agreement shall have the right to participate as a party.

(2) Other persons or organizations shall have the right to participate as parties if the final Administrative order could adversely affect them or the class they represent, and such participation may contribute materially to the proper disposition of the proceedings.

(3) Any person or organization wishing to participate as a party under this section shall file with the Administrative Law Judge and serve on all parties a petition within 25 days after the commencement of the action or at such other time as ordered by the Administrative Law Judge, so long as it does not disrupt the proceeding. Such petition shall concisely state: (i) Petitioner's interest in the proceedings; (ii) who will appear for petitioner; (iii) the issues on which petitioner wishes to participate; and (iv) whether petitioner intends to present witnesses.

(4) The Administrative Law Judge shall determine whether each petitioner has the requisite interest in the proceedings and shall permit or deny participation accordingly. Where petitions to participate as parties are made by individuals or groups with common interest, the Administrative Law Judge may request all such petitioners to designate a single representative to represent all such petitioners: Provided, That the representative of a labor organization qualifying to participate under paragraph (1) of the section must be permitted to participate in the proceedings. The Administrative Law Judge shall give each petitioner written notice of the decision on his petition; and if the petition is denied, he shall briefly state the grounds for denial and shall then treat the petition as a request for participation as *amicus curiae*. The Administrative Law Judge shall give written notice to each party of each petition granted.

(5) Any other interested person or organization wishing to participate as *amicus curiae* shall file a petition before the commencement of the final hearing with the Administrative Law Judge.

Such petition shall concisely state: (i) The petitioner's interest in the hearing; (ii) who will represent the petitioner; and (iii) the issues on which petitioner intends to present argument. The Administrative Law Judge may grant the petition if he finds that the petitioner has a legitimate interest in the proceedings, and that such participation may contribute materially to the proper disposition of the issues. An amicus curiae is not a party but may participate as provided in this section.

(6) An amicus curiae may present a brief oral statement at the hearing at the point in the proceeding specified by the Administrative Law Judge. He may submit a written statement of position to the Administrative Law Judge prior to the beginning of a hearing and shall serve a copy on each party. He may also submit a brief or written statement at such time as the parties submit briefs and exceptions, and he shall serve a copy on each party.

(aa) Post-Hearing Procedures: Proposed findings of fact and conclusions of law.

Within 20 days after receipt of the transcript of the testimony, each party and amicus may file a brief. Such briefs shall be served simultaneously on all parties and amici, and a certificate of service shall be furnished to the Administrative Law Judge. Requests for additional time in which to file a brief shall be made in writing, and copies shall be served simultaneously on the other parties. Requests for extensions shall be received not later than 3 days before the date such briefs are due. No reply brief may be filed except by special permission of the Administrative Law Judge.

(bb) Post-Hearing Procedures: Record for recommended decision.

The transcript of testimony, exhibits, and all papers, documents, and requests filed in the proceedings, including briefs, but excepting the correspondence section of the docket, shall constitute the record for decision.

(cc) Post-Hearing Procedures: Recommended decision.

Within a reasonable time after the filing of briefs, the Administrative Law Judge shall recommend findings, conclusions, and a decision. These recommendations shall be certified, together with the record for recommended decision, to the Administrative Review Board, United States Department of Labor, for a final Administrative order. The recommended findings, conclusions, and decision shall be served on all parties and amici to the proceeding.

(dd) Post-Hearing Procedures: Exceptions to recommended decisions.

Within 14 days after receipt of the recommended findings, conclusions, and decision, any party may submit exceptions to said recommendation. These exceptions may be responded to by other parties within 14 days of their receipt by said parties. All exceptions and responses shall be filed with the Administrative Review Board, United States Department of Labor. Service of such briefs or exceptions and responses shall be made simultaneously on all parties to the proceeding. Requests to the Administrative Review Board, United States Department of Labor, for additional time in which to file exceptions and responses shall be in writing and copies shall be served simultaneously on other parties. Requests for extensions must be received no later than 3 days before the exceptions are due.

(ee) Post-Hearing Procedures: Record.

After expiration of the time for filing briefs and exceptions, the Administrative Review Board, United States Department of Labor, shall make a decision, which shall be the Administrative order, on the basis of the record. The record shall consist of the record for recommended decision, the rulings and recommended decision of the Administrative Law Judge and the exceptions and briefs filed subsequent to the Administrative Law Judge's decision.

(ff) Post-Hearing Procedures: Administrative Order.

After expiration of the time for filing, the Administrative Review Board, United States Department of Labor, shall make a decision which shall be served on all parties. If the Administrative Review Board, United States Department of Labor, concludes that the defendant has violated Section 503, the equal opportunity clause, or the regulations, an Administrative Order shall be issued enjoining the violations, and requiring the contractor to provide whatever remedies are appropriate, and imposing whatever sanctions are appropriate, or any of the above. In any event, failure to comply with the Administrative Order shall result in the immediate cancellation, termination, and suspension of the respondent's contracts and/or debarment of the respondent from further contracts.

(gg) Expedited Hearing Procedures: Expedited hearings—when appropriate.

Expedited Hearings may be used, *inter alia*, when a contractor or subcontractor has violated a conciliation agreement; has not adopted and implemented an acceptable affirmative action program; has refused to give access to or to supply records or other information as required by the equal

opportunity clause; or has refused to allow an on-site compliance review to be conducted.

(hh) Expedited Hearing Procedures: Administrative complaint and answer.

(1) Expedited hearings shall be commenced by filing an administrative complaint in accordance with 41 CFR 60–741.65(g). The complaint shall state that the hearing is subject to these expedited hearing procedures.

(2) The answer shall be filed in accordance with 41 CFR 741.65(h)(1) and (2).

(3) Failure to request a hearing within the 20 days provided by 41 CFR 60–741.65(h)(1) shall constitute a waiver of hearing, and all the material allegations of fact contained in the complaint shall be deemed to be admitted. If a hearing is not requested or is waived, within 25 days of the complaint's filing, the Administrative Law Judge shall adopt as findings of fact the material facts alleged in the complaint, and shall order the appropriate sanctions and/or penalties sought in the complaint. The Administrative Law Judge's findings and order shall constitute a final Administrative order, unless the Office of the Solicitor, U.S. Department of Labor, files exceptions to the findings and order within 10 days of receipt thereof. If the Office of the Solicitor, U.S. Department of Labor, files exceptions, the matter shall proceed in accordance with 41 CFR 60–741.65(l).

(4) If a request for a hearing is received within 20 days as provided by 41 CFR 60–741.65(h)(1), the hearing shall be convened within 45 days of receipt of the request and shall be completed within 15 days thereafter, unless more hearing time is required.

(ii) Discovery.

(1) Any party may serve requests for admissions in accordance with 41 CFR 60–741.65(k)(2) and (3).

(2) Witness lists and hearing exhibits will be exchanged at least 10 days in advance of the hearing.

(3) For good cause shown, and upon motion made in accordance with 41 CFR 60–741.65(j), the Administrative Law Judge may allow the taking of depositions. Other discovery will not be permitted.

(jj) Conduct of hearing.

(1) At the hearing, the Government shall be given an opportunity to demonstrate the basis for the request for sanctions and/or remedies, and the contractor shall be given an opportunity to show that the violation complained of did not occur and/or that good cause or good faith efforts excuse the alleged violations. Both parties shall be allowed to present evidence and argument and to cross-examine witnesses.

(2) The hearing shall be informal in nature, and the Administrative Law Judge shall not be bound by formal rules of evidence.

(kk) *Recommended decision after hearing.*

Within 15 days after the hearing is concluded, the Administrative Law Judge shall recommend findings, conclusions, and a decision. The Administrative Law Judge may permit the parties to file written post-hearing briefs within this time period, but the Administrative Law Judge's recommendations shall not be delayed pending receipt of such briefs. These recommendations shall be certified, together with the record, to the Administrative Review Board, United States Department of Labor, for a final Administrative order. The recommended decision shall be served on all parties and amici to the proceeding.

(ll) *Exceptions to recommendations.*

Within 10 days after receipt of the recommended findings, conclusions and decision, any party may submit exceptions to said recommendations. Exceptions may be responded to by other parties within 7 days after receipt by said parties of the exceptions. All exceptions and responses shall be filed with the Administrative Review Board, United States Department of Labor. Briefs or exceptions and responses shall be served simultaneously on all parties to the proceeding.

(mm) *Final Administrative Order.*

After expiration of the time for filing exceptions, the Administrative Review Board, United States Department of Labor, shall issue an Administrative Order which shall be served on all parties. Unless the Administrative Review Board, United States Department of Labor, issues an Administrative Order within 30 days after the expiration of the time for filing exceptions, the Administrative Law Judge's recommended decision shall become a final Administrative Order which shall become effective on the 31st day after expiration of the time for filing exceptions. Except as to specific time periods required in this subsection, 41 CFR 60-741.65(ff) shall be applicable to this section.

■ 11. Revise § 60-741.80 to read as follows:

§ 60-741.80 Recordkeeping.

(a) *General requirements.* Except as set forth in paragraph (b) of this section, any personnel or employment record made or kept by the contractor shall be preserved by the contractor for a period of two years from the date of the making of the record or the personnel action

involved, whichever occurs later. However, if the contractor has fewer than 150 employees or does not have a Government contract of at least \$150,000, the minimum record retention period shall be one year from the date of the making of the record or the personnel action involved, whichever occurs later, except as set forth in paragraph (b) of this section. Such records include, but are not necessarily limited to, records relating to requests for reasonable accommodation; the results of any physical examination; job advertisements and postings; applications and resumes; tests and test results; interview notes; and other records having to do with hiring, assignment, promotion, demotion, transfer, lay-off or termination, rates of pay or other terms of compensation, and selection for training or apprenticeship. In the case of involuntary termination of an employee, the personnel records of the individual terminated shall be kept for a period of two years from the date of the termination, except that contractors that have fewer than 150 employees or that do not have a Government contract of at least \$150,000 shall keep such records for a period of one year from the date of the termination. Where the contractor has received notice that a complaint of discrimination has been filed, that a compliance evaluation has been initiated, or that an enforcement action has been commenced, the contractor must preserve all personnel records relevant to the complaint, compliance evaluation, or action until final disposition of the complaint, compliance evaluation or action. The term "personnel records relevant to the complaint, compliance evaluation, or action" will include, for example, personnel or employment records relating to the aggrieved person and to all other employees holding positions similar to that held or sought by the aggrieved person and application forms or test papers completed by an unsuccessful applicant and by all other candidates for the same position as that for which the aggrieved person applied and was rejected.

(b) *Records with three-year retention requirement.* Records required by § 60-741.44(f)(4) shall be maintained by all contractors for a period of three years from the date of the making of the record.

(c) *Failure to preserve records.* Failure to preserve complete and accurate records as required by this part constitutes noncompliance with the contractor's obligations under the act and this part. Where the contractor has destroyed or failed to preserve records

as required by this section, there may be a presumption that the information destroyed or not preserved would have been unfavorable to the contractor: *Provided*, That this presumption shall not apply where the contractor shows that the destruction or failure to preserve records results from circumstances that are outside of the contractor's control.

■ 12. Amend Appendix A to Part 60-741 by revising paragraph 2 to read as follows:

Appendix A to Part 60-741—Guidelines on a Contractor's Duty To Provide Reasonable Accommodation

* * * * *

2. Although the contractor would not be expected to accommodate disabilities of which it is unaware, the contractor has an affirmative obligation to provide reasonable accommodation for applicants and employees of whose disabilities the contractor has actual knowledge. Section 60-741.44(d) provides that if an employee with a known disability is having significant difficulty performing his or her job and it is reasonable to conclude that the performance problem may be related to the disability, the contractor is required to confidentially inquire whether the problem is disability related and if the employee is in need of a reasonable accommodation.

BILLING CODE 4510-CM-P

DEPARTMENT OF TRANSPORTATION

Maritime Administration

46 CFR Part 327

[Docket Number MARAD-2025-0089]

RIN 2133-AC02

Deregulatory—Seamen's Claims; Administrative Action and Litigation

AGENCY: Maritime Administration (MARAD), Department of Transportation (DOT).

ACTION: Notice of proposed rulemaking, request for comments.

SUMMARY: MARAD is proposing to revise its regulations pertaining to the filing of claims and the administrative allowance or disallowance of claims filed by officers or members of crew employed on vessels owned, operated, or chartered by MARAD. The rule is intended (1) to correct numerous citations in accordance with the

codification of Title 46 of the United States Code; (2) to improve accessibility by modernizing text and updating agency contact information; and (3) to remove obsolete references.

DATES: Comments should be filed on or before September 2, 2025. Late-filed comments will be considered to the extent practicable.

ADDRESSES: You may submit comments identified by DOT Docket Number MARAD–2025–0089 by any of the following methods:

- *Federal eRulemaking Portal:* www.regulations.gov. Search using the DOT Docket Number (see above) and follow the instructions for submitting comments.
- *Email:* Rulemakings.MARAD@dot.gov. Include the docket number in the subject line of the message.
- *Mail/Hand-Delivery/Courier:* Docket Management Facility; U.S. Department of Transportation, 1200 New Jersey Avenue SE, Room W12–140, Washington, DC 20590. If you would like to know that your comments reached the facility, please enclose a stamped, self-addressed postcard or envelope. The Docket Management Facility is open 9:00 a.m. to 5:00 p.m., Monday through Friday, except on federal holidays.

Note: We recommend that you include your name and a mailing address, an email address, or a telephone number in the body of your document so that we can contact you if we have questions regarding your submission. If you submit your inputs by mail or hand-delivery, they must be submitted in an unbound format, no larger than 8½ by 11 inches, single-sided, suitable for copying and electronic filing. All submissions received should include the agency name and docket number or Regulation Identifier Number (RIN) for this rulemaking.

Instructions: All comments received will be posted without change to the docket at www.regulations.gov, including any personal information provided. For detailed instructions on submitting comments and additional information on the rulemaking process, see the section entitled Public Participation.

Privacy Act: Anyone can search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). For information on DOT's compliance with the Privacy Act, please visit <https://www.transportation.gov/privacy>.

FOR FURTHER INFORMATION CONTACT: Mitch Hudson, Office of the Chief Counsel, Division of Legislation and

Regulation, (202) 366–9373 or via email at Mitch.Hudson@dot.gov. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 to contact the above individual during business hours. The FIRS is available twenty-four hours a day, seven days a week, to leave a message or question. You will receive a reply during normal business hours. You may send mail to Department of Transportation, Maritime Administration, Office of the Chief Counsel, Division of Legislation and Regulations, W24–220, 1200 New Jersey Avenue SE, Washington, DC 20590–0001.

SUPPLEMENTARY INFORMATION:

Electronic Access and Filing

As required by 5 U.S.C. 553(b)(4), this document, including a summary of the rule, and all comments may be viewed online through the Federal eRulemaking portal at www.regulations.gov. An electronic copy of this document may also be downloaded by accessing the Office of the Federal Register's home page at: www.federalregister.gov.

Background

Improvement of regulations is a continuous focus for DOT and MARAD. For that reason, DOT/MARAD regularly and deliberately review their rules in accordance with DOT Order 2100.6B, Policies and Procedures for Rulemakings, Executive Order (E.O.) 12866, Regulatory Planning and Review (Oct. 4, 1993), and section 610 of the Regulatory Flexibility Act. That process is summarized in Appendix D of DOT's semi-annual regulatory agenda. In addition, E.O. 14192, Unleashing Prosperity Through Deregulation (Feb. 6, 2025), and E.O. 14219, Ensuring Lawful Governance and Implementing the President's "Department of Government Efficiency" Deregulatory Initiative (Feb. 19, 2025), directed agencies to further scrutinize their regulations to reduce unnecessary costs, clear barriers to emerging technology, and alleviate unnecessary regulatory burdens.

Accordingly, MARAD has identified its Seamen's Claims regulations governing claims and administrative procedures for consideration. In this proposed rule, MARAD seeks comments to ensure that the program remains current, modern, and the least burdensome to the public. MARAD welcomes your comments to ensure that agency programs benefit from current and comprehensive best practices.

Public Participation

How long do I have to submit comments?

We are providing a 60-day comment period.

How do I prepare and submit comments?

To ensure that your comments are correctly filed in the Docket, please include the Docket Number shown at the beginning of this document in your comments.

Comments may be submitted to the docket electronically by logging onto the Docket Management System website at <http://www.regulations.gov>. Search using the docket number and follow the online instructions for submitting comments.

Please note that pursuant to the Data Quality Act, for substantive data to be relied upon and used by the agency, it must meet the information quality standards set forth in the Office of Management and Budget (OMB) and DOT Data Quality Act guidelines. Accordingly, we encourage you to consult the guidelines in preparing your comments. OMB's guidelines may be accessed at <http://www.whitehouse.gov/omb/fedreg/reproducible.html>. DOT's guidelines may be accessed at http://www.bts.gov/programs/statistical_policy_and_research/data_quality_guidelines.

How can I be sure that my comments were received?

If you wish Docket Management to notify you upon its receipt of your comments, enclose a self-addressed, stamped postcard in the envelope containing your comments. Upon receiving your comments, Docket Management will return the postcard by mail.

Will the agency consider late comments?

MARAD will consider all comments that Docket Management receives before the close of business on the comment closing date indicated above under **DATES**. To the extent possible, we will also consider comments that Docket Management receives after that date. If Docket Management receives a comment too late for us to consider in developing any follow-on action, we will consider that comment as an informal suggestion for future rulemaking action.

How can I read the comments submitted by other people?

You may read the comments received by Docket Management at the address given above under **ADDRESSES**. The

hours of the Docket are indicated above in the same location. You may also see the comments on the internet. To read the comments on the internet, go to <http://www.regulations.gov>. Follow the online instructions for accessing the dockets.

Please note that, even after the comment closing date, MARAD will continue to file relevant information in the Docket as it becomes available. Further, some people may submit late comments. Accordingly, we recommend that you periodically check the docket for new material.

Section by Section Analysis

Section 327.1 Purpose.

MARAD is proposing to make minor, non-substantive edits to this section for clarity.

Section 327.2 Statutory provisions.

MARAD is proposing to revise the statutory provisions for accuracy.

Section 327.3 Required claims submission.

MARAD is proposing to revise citations for accuracy.

Section 327.4 Claim requirements.

MARAD is proposing to make minor, non-substantive edits to this section for clarity and to improve accessibility.

Section 327.5 Filing claims.

MARAD is proposing to make minor, non-substantive edits to this section for clarity and to improve accessibility.

Section 327.6 Notice of allowance or disallowance.

MARAD is proposing to make minor, non-substantive edits to this section for clarity.

Section 327.7 Administrative disallowance presumption.

MARAD is proposing to revise citations for accuracy.

Section 327.8 Court action.

MARAD is proposing to revise minor, non-substantive edits to this section for clarity.

Section 327.20 Admiralty Jurisdiction Extension Claims: Required claims.

MARAD is proposing to make minor, non-substantive edits to this section for clarity.

Section 327.21 Definitions.

MARAD is proposing to make minor, non-substantive edits to this section for clarity.

Section 327.22 Who may present claims.

MARAD is proposing to make minor, non-substantive edits to this section for clarity.

Section 327.23 Insurance and other subrogated claims.

MARAD is proposing to make minor, non-substantive edits to this section for clarity.

Section 327.24 Actions by claimant. MARAD is making contact information updates.

Section 327.25 Contents of claim.

MARAD is proposing to make minor, non-substantive edits to this section for clarity.

Section 327.26 Evidence supporting a claim.

No change is being proposed.

Section 327.27 Proof of amount claimed for personal injury.

No change is being proposed.

Section 327.28 Proof of amount claimed for loss of, or damage to, property.

No change is being proposed.

Section 327.29 Effect of other payments to claimant.

No change is being proposed.

Section 327.30 Statute of limitations for AEA and claim requirements.

MARAD is proposing to make minor, non-substantive edits to this section for clarity.

Section 327.31 Statute of limitations not tolled by administrative consideration of claims.

MARAD is proposing to make minor, non-substantive edits to this section for clarity.

Section 327.32 Notice of claim acceptance or denial.

MARAD is proposing to make minor, non-substantive edits to this section for clarity.

Section 327.33 Claim denial presumption.

MARAD is proposing to make minor, non-substantive edits to this section for clarity.

Section 327.34 Court action.

MARAD is proposing to make minor, non-substantive edits to this section for clarity.

Section 327.40 Other Admiralty claims.

MARAD is proposing to update citations for accuracy.

Section 327.41 Definitions.

No change is being proposed.

Section 327.42 Who may present claims.

No change is being proposed.

Section 327.43 Insurance and other subrogated claims.

No change is being proposed.

Section 327.44 Actions by claimant. MARAD is proposing to update contact information.

Section 327.45 Contents of a claim.

No change is being proposed.

Section 327.46 Evidence supporting a claim.

No change is being proposed.

Section 327.47 Proof of amount claimed for personal injury.

No change is being proposed.

Section 327.48 Proof of amount claimed for loss of, or damage to, property.

No change is being proposed.

Section 327.49 Effect of other payments to claimant.

MARAD is proposing to make minor, non-substantive edits to this section for clarity.

Section 327.50 Statute of limitations for other admiralty claims and claim requirements.

MARAD is proposing to make minor, non-substantive edits to this section for clarity.

Section 327.51 Statute of limitations not tolled by administrative consideration of claims.

MARAD is proposing to make minor, non-substantive edits to this section for clarity.

Section 327.52 Notice of claim acceptance or denial.

MARAD is proposing to make minor, non-substantive edits to this section for clarity.

Rulemaking Analysis and Notices

Executive Orders 12866 and DOT Rulemaking Procedures

This rule is not a significant regulatory action under Executive Order (E.O.) 12866 and DOT Order 2100.6B and, therefore it was not reviewed by the Office of Management and Budget. It is also not considered a major rule for purposes of Congressional review under Public Law 104–121. This rule is limited to updating the citations, addresses, and modernizing text.

Executive Order 14192 (Deregulation)

E.O. 14192 requires that for “each new [E.O. 14192 regulatory action] issued, at least ten prior regulations be identified for elimination.” Implementation guidance for E.O. 14192, issued by OMB (Memorandum M–25–20, March 26, 2025), defines an E.O. 14192 deregulatory action as “an action that has been finalized and has total costs less than zero.” This rule will have total costs less than zero, and therefore is an E.O. 14192 deregulatory action.

Executive Order 13132 (Federalism)

MARAD analyzed this rulemaking in accordance with the principles and criteria contained in Executive Order 13132 (“Federalism”) and has determined that it has no substantial effect on the States, on the current Federal-State relationship, or on the current distribution of power and responsibilities among the various local officials. Nothing in this document preempts any State law or regulation. Therefore, MARAD did not consult with State and local officials on this rulemaking and did not prepare a Federalism summary impact statement.

Executive Order 13175 (Consultation and Coordination With Indian Tribal Governments)

This rulemaking will not significantly or uniquely affect the communities of Indian tribal governments when analyzed under the principles and criteria contained in Executive Order 13175 (Consultation and Coordination with Indian Tribal Governments). Therefore, the funding and consultation requirements of this Executive Order do not apply.

Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 requires MARAD to assess whether this rulemaking would have a significant economic impact on a substantial number of small entities and to minimize any adverse impact. The revisions to the regulations are only clerical and should result in no substantive change to the regulation. MARAD certifies that this rulemaking will not have a significant economic impact on a substantial number of small entities.

Privacy Impact Assessment

Section 522(a)(5) of the Transportation, Treasury, Independent Agencies, and General Government Appropriations Act, 2005 (Pub. L. 108–447, div. H, 118 Stat. 2809 at 3268) requires the Department of Transportation and certain other federal agencies to conduct a privacy impact assessment of each proposed rule that will affect the privacy of individuals.

Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act of 1995 requires agencies to evaluate whether an agency action would result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of \$206 million or more (as adjusted for inflation) in any 1 year, and if so, to take steps to minimize these unfunded mandates. This rulemaking will not impose unfunded mandates under the Unfunded Mandates Reform Act of 1995. It will not result in costs of \$206 million or more to either State, local, or tribal governments, in the aggregate, or to the private sector, and is the least burdensome alternative that achieves the objectives of the rule.

Regulation Identifier Number (RIN)

A regulation identifier number (RIN) is assigned to each regulatory action listed in the Unified Agenda of Federal Regulations. The Regulatory Information Service Center publishes the Unified Agenda in April and October of each year. The RIN number contained in the

heading of this document can be used to cross-reference this action with the Unified Agenda.

Paperwork Reduction Act

Under the Paperwork Reduction Act of 1995 (PRA), a person is not required to respond to a collection of information by a federal agency unless the collection displays a valid OMB control number. This rulemaking includes no new collection of information.

List of Subjects in 46 CFR Part 327

Administrative practice and procedure, claims, national defense, Seamen.

For the reasons described in the preamble, MARAD proposes to revise 46 CFR part 327 as set forth below:

PART 327—SEAMEN'S CLAIMS; ADMINISTRATIVE ACTION AND LITIGATION

Subpart A—Clarification Act Claims: Seamen's Claims; Administrative Action and Litigation.

Sec.

- 327.1 Purpose.
- 327.2 Statutory provisions.
- 327.3 Required claims submission.
- 327.4 Claim requirements.
- 327.5 Filing claims.
- 327.6 Notice of allowance or disallowance.
- 327.7 Administrative disallowance presumption.
- 327.8 Court action.

Subpart B—Admiralty Extension Act Claims; Administrative Action and Litigation

Sec.

- 327.20 Admiralty Jurisdiction Extension Claims: Required claims.
- 327.21 Definitions.
- 327.22 Presentation of claims.
- 327.23 Insurance and other subrogated claims.
- 327.24 Actions by claimant.
- 327.25 Contents of a claim.
- 327.26 Evidence supporting a claim.
- 327.27 Proof of amount claimed for personal injury.
- 327.28 Proof of amount claimed for loss of, or damage to, property.
- 327.29 Effect of other payments to claimant.
- 327.30 Statute of limitations for AEA and claim requirements.
- 327.31 Statute of limitations not tolled by administrative consideration of claims.
- 327.32 Notice of claim acceptance or denial.
- 327.33 Claim denial presumption.
- 327.34 Court action.

Subpart C—Other Admiralty Claims

Sec.

- 327.40 Other Admiralty claims.
- 327.41 Definitions.
- 327.42 Presentation of claims.
- 327.43 Insurance and other subrogated claims.
- 327.44 Actions by claimant.

- 327.45 Contents of a claim.
- 327.46 Evidence supporting a claim.
- 327.47 Proof of amount claimed for personal injury.
- 327.48 Proof of amount claimed for loss of, or damage to, property.
- 327.49 Effect of other payments to claimant.
- 327.50 Statute of limitations for other admiralty claims and claim requirements.
- 327.51 Statute of limitations not tolled by administrative consideration of claims.
- 327.52 Notice of claim acceptance or denial.

PART 327—SEAMEN'S CLAIMS; ADMINISTRATIVE ACTION AND LITIGATION

Authority: 46 U.S.C. Chapters 301–309, 49 CFR 1.93(b).

Subpart A—Clarification Act Claims: Seamen's Claims; Administrative Action and Litigation

§ 327.1 Purpose.

This part prescribes rules and regulations pertaining to the filing of claims designated in section 327.3 and the administrative allowance, or disallowance (actual and presumed), of such claims, in whole or in part, filed by officers and members of crews (hereafter referred to as “seamen”) employed on vessels owned, operated, or chartered by the Maritime Administration (MARAD), or successor.

§ 327.2 Statutory provisions.

These regulations are enacted to implement the administrative claims procedures set forth in 50 U.S.C.A. 4701(a).

§ 327.3 Required claims submission.

All claims specified in 50 U.S.C.A. 4701(a) must be submitted for administrative consideration, as provided in sections 327.4 and 327.5, prior to institution of court action thereon.

§ 327.4 Claim requirements.

(a) *Form.* The claim must be in writing, in any form, and must provide the following:

- (1) Designated as a claim,
 - (2) Disclose that the object sought is the administrative allowance of the claim,
 - (3) Comply with the requirements of this part, and
 - (4) Filed as provided in section 327.5.
- (5) The claim must be signed or attested to by the claimant. The statements made in the claim should be made to the best of the knowledge of the claimant and are subject to the provision of 18 U.S.C. 287 and 1001 and all other penalty provisions for making

false, fictitious, or fraudulent claims, statements or entries, or falsifying, concealing, or covering up a material fact in any matter within the jurisdiction of any department or agency of the United States.

(b) *Contents.* Each claim must include the following information:

(1) With respect to the seaman:

- (i) Name;
- (ii) Mailing address;
- (iii) Email address;
- (iv) Date of birth;
- (v) Legal residence address;
- (vi) Place of birth; and
- (vii) Merchant mariner license or document number and last four digits of the seaman's social security number.

(2) With respect to the basis for the claim:

- (i) Name of vessel on which the seaman was serving when the incident occurred that is the basis for the claim;
- (ii) Place where the incident occurred;
- (iii) Time of incident—year, month and day, and the precise time of day, to the minute, where possible;
- (iv) Narrative of the facts and circumstances surrounding the incident, including a statement explaining why the United States is liable for this claim;
- (v) Pictures, video recordings and other physical evidence related to the case and
- (vi) The names, addresses, and telephone numbers, if available, of others who can supply factual information about the incident and its consequences.

(3) A sum certain dollar amount of claim, which includes a total for all amounts sought. The claim must explain the amounts sought for:

- (i) Past loss of earnings or earning capacity;
- (ii) Future loss of earnings or earning capacity;
- (iii) Medical expenses paid out of pocket;
- (iv) Pain and suffering; and
- (v) Any other loss arising out of the incident (describe).

(4) All medical and clinical records of physicians and hospitals related to a seaman's claim for injury, illness, or death must be attached. If the claimant does not have a copy of each record, the claimant must identify every physician and hospital having records relating to the seaman and provide written authorization for MARAD to obtain all such records. The claim must also include the number of days the seaman worked as a merchant mariner and the earnings received for the current calendar year, as well as for the two preceding calendar years.

(5) If the claim does not involve a seaman's death, the following

information must be submitted with the claim:

- (i) Date the seaman signed a reemployment register as a merchant mariner;
- (ii) Copy of the medical fit-for-duty certificate issued to the seaman;
- (iii) Date and details of next employment as a seaman; and
- (iv) Date and details of next employment as other than a seaman.

(6) If the claim is for other than personal injury, illness or death, the claim must provide all supporting information concerning the nature and dollar amount of the loss.

§ 327.5 Filing claims.

(a) Claims may be filed by or on behalf of seamen or their surviving dependents or beneficiaries, or by their legal representatives.

(b) Claims may be filed either by personal delivery or by registered mail to the Maritime Administration, Attn: Marine Insurance, Department of Transportation, 1200 New Jersey Avenue SE, Washington, DC 20590.

(c) A copy of each claim must be filed with the Ship Manager or General Agent of the vessel with respect to which such claim arose.

§ 327.6 Notice of allowance or disallowance.

MARAD will give prompt notice in writing of the allowance or disallowance of each claim, in whole or in part, by mail to the last known address of, by personal delivery, or by email to, the claimant or the claimant's legal representative. In the case of administrative disallowance, in whole or in part, such notice will contain a brief statement of the reason for such disallowance.

§ 327.7 Administrative disallowance presumption.

If MARAD fails to give written notice of allowance or disallowance of a claim in accordance with section 327.6 within sixty calendar days following the date of the receipt of such claim by the proper person designated in section 327.5, such claim will be presumed to have been "administratively disallowed," within the meaning in section 1(a) of 50 U.S.C.A. 4701(a).

§ 327.8 Court action.

No seamen, their surviving dependents and beneficiaries, or their legal representatives may institute a court action unless such claim has been prepared and filed in accordance with sections 327.4 and 327.5 and was administratively disallowed in accordance with section 327.6 or section 327.7.

Subpart B—Admiralty Extension Act Claims; Administrative Action and Litigation

§ 327.20 Admiralty Jurisdiction Extension Claims: Required claims.

(a) Pursuant to 46 U.S.C. 30101(c) of the Admiralty Extension Act (AEA), administrative claims involving the extension of admiralty jurisdiction to cases of damage or injury on land caused by a MARAD vessel on navigable waters must be presented in writing to MARAD in accordance with sections 327.20 through 327.34 prior to institution of a court action thereon.

(b) A civil action against the United States for injury or damage done or consummated on land by a vessel on navigable waters may not be brought until the earlier occurrence of either the denial of the claim by MARAD or the presumptive denial of the claim which arises 6 months after the claim has been presented in writing to MARAD. 46 U.S.C. 30101(c)(2). Note that the six month period of review will not begin until a valid claim is filed pursuant to section 327.25.

(c) Proceedings against the United States pursuant to the requirements of the AEA and these regulations is the exclusive remedy available against the United States of America, acting by and through MARAD, with respect to such injuries and damages.

§ 327.21 Definitions.

The following definitions apply to this subpart:

(a) *Accrual date.* The day on which the alleged wrongful act or omission results in injury or damage for which a claim is made.

(b) *Claim.* A written notification of an incident, signed by the claimant, describing the incident, and explaining why the United States is liable.

§ 327.22 Presentation of claims.

(a) A claim for property loss or damage may be presented by anyone having an interest in the property, including an insurer or other subrogee.

(b) A claim for personal injury may be presented by the person injured.

(c) A claim based on death may be presented by the executor or administrator of the decedent's estate, or any other person legally entitled to assert such a claim under local law. The claimant's status must be stated in the claim.

(d) A claim for medical, hospital, or burial expenses may be presented by any person who by reason of family relationship has, in fact, incurred the expenses.

(e) A joint claim must be presented in the names of and signed by, the joint

claimants, and the settlement will be made payable to the joint claimants.

(f) A claim may be presented by a duly authorized agent, legal representative, or survivor, if it is presented in the name of the claimant. If the claim is not signed by the claimant, the agent, legal representative, or survivor must indicate their title or legal capacity and provide evidence of their authority to present the claim.

(g) Where the same claimant has a claim for damage to or loss of property and a claim for personal injury or a claim based on death arising out of the same incident, they must be combined into one claim.

§ 327.23 Insurance and other subrogated claims.

(a) The claims of an insured (subrogor) and an insurer (subrogee) for damages arising out of the same incident constitute a single claim.

(b) An insured (subrogor) and an insurer (subrogee) may file a claim jointly or separately. If the insurer has fully reimbursed the insured, payment will only be made to the insurer. If separate claims are filed, the settlement will be made payable to each claimant to the extent of that claimant's undisputed interest. If joint claims are filed, the settlement will be sent to the insurer.

(c) Each claimant must include with a claim, a written disclosure concerning insurance coverage including:

- (1) The names and addresses of all insurers;
- (2) The kind and amount of insurance;
- (3) The policy number;
- (4) Whether a claim has been or will be presented to an insurer, and, if so, the amount of that claim; and whether the insurer has paid the claim in whole or in part, or has indicated payment will be made.

(d) Each subrogee must substantiate an interest or right to file a claim by appropriate documentary evidence and support the claim as to liability and measure of damages in the same manner as required of any other claimant. Documentary evidence of payment to a subrogor does not constitute evidence of liability of the United States or conclusive evidence of the amount of damages. MARAD will make an independent determination on the issues of fact and law based upon the evidence of record.

§ 327.24 Actions by claimant.

(a) *Form of claim.* The claim must meet the requirements of this section.

(b) *Presentation.* The claim must be presented in writing to the Maritime Administration, Attn: Marine Insurance,

1200 New Jersey Avenue SE, Washington, DC 20590-0001.

§ 327.25 Contents of a claim.

(a) A valid claim will contain the following:

(1) Identification of MARAD as the agency whose act or omission gave rise to the claim;

(2) The full name, mailing address, and email address of the claimant. If the mailing address is not claimant's residence, the claimant must also include a residence address;

(3) The date, time, and place of the incident giving rise to the claim;

(4) The amount claimed, in a sum certain, supported by independent evidence of property damage or loss, personal injury, or death, as applicable together with supporting medical records and a HIPPA compliant medical waiver for each treating physician or hospital;

(5) A detailed description of the incident giving rise to the claim and the factual basis upon which it is claimed MARAD is liable for the claim;

(6) A description of any property damage or loss, including the identity of the owner, if other than the claimant, as applicable;

(7) The nature and extent of the injury, as applicable;

(8) The full name, title, if any, and address of any witness to the incident and a brief statement of the witness' knowledge of the incident;

(9) A description of any insurance carried by the claimant or owner of the property and the status of any insurance claim arising from the incident; and

(10) An agreement by the claimant to accept the total amount claimed in full satisfaction and final settlement of the claim, lien or subrogation claim on the claimed amount, or any assignment of the claim.

(b) A claimant or duly authorized agent or legal representative must sign in ink a claim and any amendment to that claim. The claim must include a statement that the information provided is true and correct to the best of the claimant's knowledge, information, and belief. If the person's signature does not include the first name, middle initial, if any, and surname, that information must be included in the claim. A married woman must sign her claim in her given name, e.g., "Mary A. Doe," rather than "Mrs. John Doe."

§ 327.26 Evidence supporting a claim.

(a) The claimant must present any evidence in the claimant's possession that supports the claim. This evidence must include, if available, statements of witnesses, accident or casualty reports, photographs, and drawings.

(b) Notwithstanding anything in the regulations in this part, the claimant must provide such additional reasonable documents and evidence as requested by MARAD with respect to the claim. Failure to respond to reasonable requests for additional information and documentation can result in a determination that a valid claim has not been submitted.

§ 327.27 Proof of amount claimed for personal injury.

The following evidence must be presented when appropriate in claims:

(a) Itemized medical, hospital, and burial bills.

(b) A written report by the attending physician including:

(1) The nature and extent of the injury and the treatment;

(2) The necessity and reasonableness of the various medical expenses incurred;

(3) Duration of time injuries prevented or limited employment;

(4) Past, present, and future limitations on employment;

(5) Duration and extent of pain and suffering and of any disability or physical disfigurement;

(6) A current prognosis;

(7) Any anticipated medical expenses;

(8) Any past medical history of the claimant relevant to the injury alleged; and

(9) If required by MARAD, an examination by an independent medical facility or physician to provide independent medical evidence against which to evaluate the written report of the claimant's physician. If MARAD determines the need for this examination, it will make mutually convenient arrangements for such an examination and will bear the costs thereof.

(c) All hospital records or other medical documents from either this injury or any relevant past injury.

(d) If the claimant is employed, a written statement by the claimant's employer certifying the claimant's:

(1) Age;

(2) Occupation;

(3) Hours of employment;

(4) Hourly rate of pay or weekly salary;

(5) Time lost from work because of the incident; and

(6) Claimant's actual period of employment, full-time or part-time, and any effect of the injury upon such employment to support claims for lost earnings.

(e) If the claimant is self-employed, written statements, or other evidence showing:

(1) The amount of earnings actually lost; and

(2) The federal tax return if filed for the three previous years.

(f) If the claim arises out of injuries to a person providing services to the claimant, statement of the cost necessarily incurred to replace the services to which claimant is entitled under law.

§ 327.28 Proof of amount claimed for loss of, or damage to, property.

The following evidence must be presented when appropriate:

(a) For each lost item, evidence of its value such as a bill of sale and a written appraisal, or two written appraisals, from separate disinterested dealers or brokers, market quotations, commercial catalogs, or other evidence of the price at which like property can be obtained in the community. MARAD may waive these requirements when circumstances warrant. The reasonable cost of any appraisal may be included as an element of damage if not deductible from any bill submitted to claimant.

(b) For each damaged item which can be economically repaired, evidence of cost of repairs such as a receipted bill and one estimate, or two estimates, from separate disinterested repairmen. MARAD may waive these requirements when circumstances warrant. The reasonable cost of any estimate may be included as an element of damage if not deductible from any repair bill submitted to claimant.

(c) For any claim for property damage which may result in payment in excess of \$20,000.00, a survey or appraisal must be performed as soon as practicable after the damage accrues, and, unless waived in writing, be performed jointly with a government representative.

(d) If the item is so severely damaged that it cannot be economically repaired or used, it must be treated as a lost item.

(e) If a claim includes loss of earnings or use during repairs to the damaged property, the following must also be furnished and supported by competent evidence:

(1) The date the property was damaged;

(2) The name and location of the repair facility;

(3) The beginning and ending dates of repairs and an explanation of any delay between the date of damage and the beginning date;

(4) A complete description of all repairs performed, segregating any work performed for the owner's account and not attributable to the incident involved, and the costs thereof;

(5) The date and place the property was returned to service after completion of repairs, and an explanation, if applicable, of any delay;

(6) Whether or not a substitute for the damaged property was available. If a substitute was used by the claimant during the time of repair, an explanation of the necessity of using the substitute, how it was used, and for how long, and the costs involved. Any costs incurred that would have been similarly incurred by the claimant in using the damaged property must be identified;

(7) Whether or not during the course of undergoing repairs the property would have been used, and an explanation submitted showing the identity of the person who offered that use, the terms of the offer, time of prospective service, and rate of compensation; and

(8) If at the time of damage, the property was under charter or hire, or was otherwise employed, or would have been employed, the claimant must submit a statement of operating expenses that were, or would have been, incurred. This statement must include wages and all bonuses which would have been paid, the value of fuel and the value of consumable stores, separately stated, which would have been consumed, and all other costs of operation which would have been incurred including, but not limited to, license and parking fees, personnel expenses, harbor fees, wharfage, dockage, shedding, stevedoring, towage, pilotage, inspection, tolls, lockage, anchorage and moorage, grain elevation, storage, and customs fees.

(f) For each item which is lost, actual or constructive, proof of ownership.

§ 327.29 Effect of other payments to claimant.

The total amount to which the claimant may be entitled is normally computed as follows:

(a) The total amount of the loss, damage, or personal injury suffered for which the United States is liable, less any payment the claimant has received from the following sources:

(1) The military member or civilian employee who caused the incident;

(2) The military member's or civilian employee's insurer; and

(3) Any joint tort-feasor or insurer.

(b) No deduction is generally made for any payment the claimant has received by way of voluntary contributions, such as donations of charitable organizations.

§ 327.30 Statute of limitations for AEA and claim requirements.

A civil suit must be filed within two years of the Accrual Date. No civil suit may be brought until the earlier occurrence of either the denial of a claim or the presumptive denial of the claim after six months from the date the

claim was properly presented in writing to MARAD.

§ 327.31 Statute of limitations not tolled by administrative consideration of claims.

The statute of limitations for filing a civil action under 46 U.S.C. 30101(b) is not tolled by MARAD's administrative consideration of a claim.

§ 327.32 Notice of claim acceptance or denial.

MARAD will give prompt notice in writing of the acceptance or denial of each claim in whole or in part, by mail to the last known address of, by personal delivery to, or by email to the claimant or the claimant's legal representative. In the case of denial, such notice will contain a brief statement of the reason for such a denial.

§ 327.33 Claim denial presumption.

If MARAD fails to give written notice of acceptance or denial of a claim in accordance with section 327.30 within six months following the date of receipt of such a claim by the proper person designated in section 327.24(b), such claim will be presumed to have been denied by MARAD.

§ 327.34 Court action.

No person, surviving dependent or beneficiary, or legal representative, having a claim specified under 46 U.S.C. 30101(a) against MARAD, may institute a court action against MARAD unless an administrative claim has previously been properly presented and filed in accordance with sections 327.22, 327.23, and 327.24, and such administrative claim has been subsequently denied in accordance with section 327.32 or section 327.33.

Subpart C—Other Admiralty Claims

§ 327.40 Other Admiralty claims.

(a) Admiralty claims caused by United States owned and operated vessels on navigable waters or otherwise that are not covered under the Clarification Act (50 U.S.C.A. 4701(a)), the Admiralty Extension Act (46 U.S.C. 30101) or the Contracts Disputes Act (41 U.S.C. 601 *et seq.*) may be filed with MARAD in accordance with sections 327.40 through 327.52.

(b) A civil action against the United States for admiralty claims caused by United States owned and operated vessels on navigable waters or otherwise that are not covered under the Clarification Act (50 U.S.C.A. 4701(a)), the Admiralty Extension Act (46 U.S.C. 30101) or the Contracts Disputes Act (41 U.S.C. 601 *et seq.*) may be brought without the filing of an administrative

claim. This Part III sets forth the optional procedure for filing such claims with MARAD in advance of litigation. Once litigation is filed, the authority to handle such claims is vested with the Justice Department, not the agency.

(c) Proceeding against the United States pursuant to the requirements this Part III is not a requirement for filing suit against the United States of America, acting by and through MARAD, with respect to such admiralty claims.

§ 327.41 Definitions.

The following definitions apply to this subpart:

(a) *Accrual date.* The day on which the alleged wrongful act or omission results in injury or damage for which a claim is made.

(b) *Claim.* A written notification of an incident, signed by the claimant, describing the incident, and explaining why the United States is liable. The claim must be accompanied by a demand for the payment of a sum certain of money, with a statement as to how that sum certain was calculated and all documents supporting the amount claimed. Where damages for medical injuries are made, the doctor's statement relating the injuries to the accident should be attached as well as medical release forms for each treating physician, hospital, and medical care provider.

§ 327.42 Presentation of claims.

(a) A claim for property loss or damage may be presented by anyone having an interest in the property, including an insurer or other subrogee.

(b) A claim for personal injury may be presented by the person injured.

(c) A claim based on death may be presented by the executor or administrator of the decedent's estate, or any other person legally entitled to assert such a claim under local law. The claimant's status must be stated in the claim.

(d) A claim for medical, hospital, or burial expenses may be presented by any person who by reason of family relationship has, in fact, incurred the expenses.

(e) A joint claim must be presented in the names of and signed by, the joint claimants, and the settlement must be made payable to the joint claimants.

(f) A claim may be presented by a duly authorized agent, legal representative, or survivor, if it is presented in the name of the claimant. If the claim is not signed by the claimant, the agent, legal representative, or survivor must indicate their title or

legal capacity and provide evidence of their authority to present the claim.

(g) Where the same claimant has a claim for damage to or loss of property and a claim for personal injury or a claim based on death arising out of the same incident, they must be combined in one claim.

§ 327.43 Insurance and other subrogated claims.

(a) The claims of an insured (subrogor) and an insurer (subrogee) for damages arising out of the same incident constitute a single claim.

(b) An insured (subrogor) and an insurer (subrogee) may file a claim jointly or separately. If the insurer has fully reimbursed the insured, payment will only be made to the insurer. If separate claims are filed, the settlement will be made payable to each claimant to the extent of that claimant's undisputed interest. If joint claims are filed, the settlement will be sent to the insurer.

(c) Each claimant must include with a claim, a written disclosure concerning insurance coverage including:

- (1) The names and addresses of all insurers;
- (2) The kind and amount of insurance;
- (3) The policy number; and
- (4) Whether a claim has been or will be presented to an insurer, and, if so, the amount of that claim; and whether the insurer has paid the claim in whole or in part, or has indicated payment will be made.

(d) Each subrogee must substantiate an interest or right to file a claim by appropriate documentary evidence and support the claim as to liability and measure of damages in the same manner as required of any other claimant. Documentary evidence of payment to a subrogor does not constitute evidence of liability of the United States or conclusive evidence of the amount of damages. MARAD will make an independent determination on the issues of fact and law based upon the evidence of record.

§ 327.44 Actions by claimant.

(a) *Form of claim.* The claim should meet the requirements of section 327.44.

(b) *Presentation.* The claim must be presented in writing to the Maritime Administration, Attn: Marine Insurance, 1200 New Jersey Avenue SE, Washington, DC 20590-0001.

§ 327.45 Contents of a claim.

(a) A properly filed claim must include the following, however, any of the following requirements may be waived by MARAD:

(1) Identification of MARAD as the agency whose act or omission gave rise to the claim;

(2) The full name, mailing address, and email address of the claimant. If this mailing address is not claimant's residence, the claimant must also include a residence address;

(3) The date, time, and place of the incident giving rise to the claim;

(4) The amount claimed, in a sum certain, supported by independent evidence of property damage or loss, personal injury, or death, as applicable together with supporting medical records and a HIPPA compliant medical waiver for each treating physician, hospital, or medical provider;

(5) A detailed description of the incident giving rise to the claim and the factual basis upon which it is claimed the United States is liable for the claim;

(6) A description of any property damage or loss, including the identity of the owner, if other than the claimant, as applicable;

(7) The nature and extent of the injury, as applicable;

(8) The full name, title, if any, and address of any witness to the incident and a brief statement of the witness' knowledge of the incident;

(9) A description of any insurance carried by the claimant or owner of the property and the status of any insurance claim arising from the incident; and

(10) An agreement by the claimant to accept the total amount claimed in full satisfaction and final settlement of the claim, lien, or subrogation claim on the claimed amount, or any assignment of the claim.

(b) A claimant or duly authorized agent or legal representative must sign in ink a claim and any amendment to that claim. The claim must include a statement that the information provided is true and correct to the best of the claimant's knowledge, information, and belief. If the person's signature does not include the first name, middle initial, if any, and surname, that information must be included in the claim. A married woman must sign her claim in her given name, e.g., "Mary A. Doe," rather than "Mrs. John Doe."

§ 327.46 Evidence supporting a claim.

(a) The claimant should present any evidence in the claimant's possession that supports the claim. This evidence must include, if available, statements of witnesses, accident or casualty reports, photographs, and drawings.

Notwithstanding anything in the regulations in this subpart, the claimant must provide such additional documents and evidence as requested by MARAD with respect to the claim.

Failure to respond to reasonable requests for additional information and documentation can result in a determination that a proper claim has not been submitted.

§ 327.47 Proof of amount claimed for personal injury.

The following evidence must be presented when appropriate in claims:

- (a) Itemized medical, hospital, and burial bills.
- (b) A written report by the attending physician including:
 - (1) The nature and extent of the injury and the treatment;
 - (2) The necessity and reasonableness of the various medical expenses incurred;
 - (3) Duration of time injuries prevented or limited employment;
 - (4) Past, present, and future limitations on employment;
 - (5) Duration and extent of pain and suffering and of any disability or physical disfigurement;
 - (6) A current prognosis;
 - (7) Any anticipated medical expenses;
 - (8) Any past medical history of the claimant relevant to the injury alleged; and
 - (9) At the request of MARAD, an examination by an independent medical facility or physician may be required to provide independent medical evidence against which to evaluate the written report of the claimant's physician. If MARAD determines the need for this examination, it will make mutually convenient arrangements for such an examination and bears the costs thereof.
- (c) All hospital records or other medical documents from either this injury or any relevant past injury.
- (d) If the claimant is employed, a written statement by the claimant's employer certifying the claimant's:
 - (1) Age;
 - (2) Occupation;
 - (3) Hours of employment;
 - (4) Hourly rate of pay or weekly salary;
 - (5) Time lost from work because of the incident; and
 - (6) Claimant's actual period of employment, full-time or part-time, and any effect of the injury upon such employment to support claims for lost earnings.
- (e) If the claimant is self-employed, written statements, or other evidence showing:
 - (1) The amount of earnings actually lost, and
 - (2) The federal tax return, if filed, for the three previous years.
- (f) If the claim arises out of injuries to a person providing services to the claimant, statement of the cost

necessarily incurred to replace the services to which claimant is entitled under law.

§ 327.48 Proof of amount claimed for loss of, or damage to, property.

The following evidence should be presented when appropriate:

- (a) For each lost item, evidence of its value such as a bill of sale and a written appraisal, or two written appraisals, from separate disinterested dealers or brokers, market quotations, commercial catalogs, or other evidence of the price at which like property can be obtained in the community. MARAD may waive these requirements when circumstances warrant. The reasonable cost of any appraisal may be included as an element of damage if not deductible from any bill submitted to claimant.
- (b) For each damaged item which can be economically repaired, evidence of cost of repairs such as a receipted bill and one estimate, or two estimates, from separate disinterested repairmen. MARAD may waive these requirements when circumstances warrant. The reasonable cost of any estimate may be included as an element of damage if not deductible from any repair bill submitted to claimant.
- (c) For any claim which may result in payment in excess of \$20,000.00, a survey or appraisal shall be performed as soon as practicable after the damage accrues, and, unless waived in writing, must be performed jointly with a government representative.
- (d) If the item is so severely damaged that it cannot be economically repaired or used, it must be treated as a lost item.
- (e) If a claim includes loss of earnings or use during repairs to the damaged property, the following must also be furnished and supported by competent evidence:
 - (1) The date the property was damaged;
 - (2) The name and location of the repair facility;
 - (3) The beginning and ending dates of repairs and an explanation of any delay between the date of damage and the beginning date;
 - (4) A complete description of all repairs performed, segregating any work performed for the owner's account and not attributable to the incident involved, and the costs thereof;
 - (5) The date and place the property was returned to service after completion of repairs, and an explanation, if applicable, of any delay;
 - (6) Whether or not a substitute for the damaged property was available. If a substitute was used by the claimant during the time of repair, an explanation of the necessity of using the substitute,

how it was used, and for how long, and the costs involved. Any costs incurred that would have been similarly incurred by the claimant in using the damaged property must be identified;

(7) Whether or not during the course of undergoing repairs the property would have been used, and an explanation submitted showing the identity of the person who offered that use, the terms of the offer, time of prospective service, and rate of compensation; and

(8) If at the time of damage, the property was under charter or hire, or was otherwise employed, or would have been employed, the claimant must submit a statement of operating expenses that were, or would have been, incurred. This statement must include wages and all bonuses which would have been paid, the value of fuel and the value of consumable stores, separately stated, which would have been consumed, and all other costs of operation which would have been incurred including, but not limited to, license and parking fees, personnel expenses, harbor fees, wharfage, dockage, shedding, stevedoring, towage, pilotage, inspection, tolls, lockage, anchorage and moorage, grain elevation, storage, and customs fees.

(f) For each item which is lost, actual or constructive, proof of ownership.

§ 327.49 Effect of other payments to claimant.

The total amount to which the claimant may be entitled is normally computed as follows:

(a) The total amount of the loss, damage, or personal injury suffered for which the United States is liable, less any payment the claimant has received from the following sources:

- (1) The military member or civilian employee who caused the incident;
 - (2) The military member's or civilian employee's insurer; and
 - (3) Any joint tort-feasor or insurer.
- (b) No deduction is generally made for any payment the claimant has received by way of voluntary contributions, such as donations of charitable organizations.

§ 327.50 Statute of limitations for other admiralty claims and claim requirements.

A civil suit must be filed within the statute of limitations of the specific admiralty claim. The start date for such statute of limitations determinations must be the Accrual Date.

§ 327.51 Statute of limitations not tolled by administrative consideration of claims.

The statute of limitations for filing a civil action under 46 U.S.C. 30101(b) is not tolled by the MARAD's administrative consideration of a claim.

§ 327.52 Notice of claim acceptance or denial.

MARAD will give prompt notice in writing of the acceptance or denial of each claim in whole or in part, by mail to the last known address of, or by personal delivery to, the claimant or the claimant's legal representative. In the case of denial, such notice will contain a brief statement of the reason for such a denial.

By order of the Maritime Administration.

T. Mitchell Hudson, Jr.,

Secretary, Maritime Administration.

DEPARTMENT OF TRANSPORTATION**Maritime Administration****46 CFR Part 355**

[Docket Number MARAD–2025–0087]

RIN 2133–AB90

Deregulatory-Establishing United States Citizenship for MARAD Program Participation; Simplifying the Application Process

AGENCY: Maritime Administration (MARAD), Department of Transportation (DOT).

ACTION: Notice of proposed rulemaking, request for comments.

SUMMARY: On May 1, 2019, MARAD published in the **Federal Register** an Advanced Notice of Proposed Rulemaking (ANPRM), titled “How to Best Evidence Corporate Citizenship: Policy and Regulatory Review,” soliciting public comment on steps MARAD could take to simplify and modernize the process for evidencing U.S. citizenship. Consistent with the comments MARAD received, the proposed rule would simplify and modernize the process for establishing United States citizenship of corporations and other business formations participating in MARAD programs. In the interest of minimizing the unnecessary disclosure of personally identifiable information, the proposed rule would also eliminate the requirement to provide dates and places of birth of corporate executives, directors, and stock owners as required in the current form of affidavit of citizenship. The proposed rule would also amend the form of affidavit with respect to publicly traded entities by eliminating the requirement to provide certain information regarding registered owners of stock, eliminate the notarization requirement, and provide a

simple and streamlined process for recertification.

DATES: Comments should be filed on or before September 2, 2025. Late-filed comments will be considered to the extent practicable.

ADDRESSES: You may submit comments identified by DOT Docket Number MARAD–2025–0087 by any one of the following methods:

- **Federal eRulemaking Portal:** Go to <http://www.regulations.gov>. Search using the DOT Docket Number (see above) and follow the instructions for submitting comments.
- **Email:** Rulemakings.MARAD@dot.gov. Include the DOT Docket Number in the subject line of the message and provide your comments in the body of the email or as an attachment.

- **Mail or Hand Delivery:** The Docket Management Facility is in the West Building, Ground Floor of the U.S. Department of Transportation. The Docket Management Facility location address is U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building, Room W12–140, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except on federal holidays.

Note: We recommend that you include your name and a mailing address, an email address, or a telephone number in the body of your document so that we can contact you if we have questions regarding your submission. If you submit your inputs by mail or hand-delivery, they must be submitted in an unbound format, no larger than 8½ by 11 inches, single-sided, suitable for copying and electronic filing. All submissions received should include the agency name and docket number or Regulation Identifier Number (RIN) for this rulemaking.

Instructions: All comments received will be posted without change to the docket at www.regulations.gov, including any personal information provided. For detailed instructions on submitting comments and additional information on the rulemaking process, see the section entitled Public Participation.

Privacy Act: Anyone can search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). For information on DOT's compliance with the Privacy Act, please visit <https://www.transportation.gov/privacy>.

FOR FURTHER INFORMATION CONTACT: Michael C. Pucci, Office of the Chief Counsel, Division of Maritime Programs,

(202) 366–5167 or via email at Michael.Pucci@dot.gov. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 to contact the above individual during business hours. The FIRS is available twenty-four hours a day, seven days a week, to leave a message or question. You will receive a reply during normal business hours. You may send mail to Department of Transportation, Maritime Administration, Office of the Chief Counsel, Division of Legislation and Regulations, W24–220, 1200 New Jersey Avenue SE, Washington, DC 20590–0001.

SUPPLEMENTARY INFORMATION:**Electronic Access and Filing**

As required by 5 U.S.C. 553(b)(4), this document, including a summary of the rule, and all comments may be viewed online through the Federal eRulemaking portal at www.regulations.gov. An electronic copy of this document may also be downloaded by accessing the Office of the Federal Register's home page at: www.federalregister.gov.

Background

On May 1, 2019, MARAD published an Advanced Notice of Proposed Rulemaking (ANPRM), titled “How to Best Evidence Corporate Citizenship: Policy and Regulatory Review,” in the **Federal Register** (84 FR 18468) soliciting public comment on steps MARAD could take to simplify and modernize the process for evidencing U.S. citizenship in order to reduce the regulatory burden for parties participating directly, or indirectly through corporate ownership, in MARAD's maritime programs. MARAD has developed this NPRM by incorporating many of the comments and recommendations we received. MARAD welcomes your comments to ensure that agency programs benefit from current and comprehensive best practices.

Scope of Comments

MARAD is interested in learning how it could reduce or remove regulatory burdens on the public. Accordingly, commenters may want to focus on the following: (1) recognition of modern business forms in addition to corporations (e.g., limited liability companies and limited partnerships) and modern securities ownership practices (e.g., street name securities); (2) aligning with current best business practices; (3) reducing the cost of compliance; and (4) revising the corporate citizenship affidavit.

Content of Comments

MARAD is interested in information on how any changes to 46 CFR part 355 could impact small businesses, either positively or negatively. In describing a burden placed on your organization by our regulations or potential changes to the regulations, direct experience and quantifiable data are more useful than anecdotal descriptions. Likewise, if the commenter believes that there is a less burdensome alternative, the commenter should describe that alternative in detail.

Discussion of Comments Received on the ANPRM

In response to the agency's ANPRM seeking public comment on ways to simplify annual requirements to evidence corporate citizenship, MARAD received one comment from The Maritime Law Association of the United States (MLA), which included several recommendations developed by the MLA's standing committee on Marine Financing. The agency responds to the MLA's recommendations as follows:

The MLA first recommended MARAD consider regulatory changes to make compliance more efficient and assured by eliminating the inclusion of birth dates and places of birth on the form of affidavit of U.S. citizenship.

MARAD agrees. Inclusion of this information in the affidavit of U.S. citizenship does not significantly improve U.S. citizenship certainty and creates an unnecessary risk of release of personally identifiable information. In any instance of doubt, MARAD would retain the authority to request that information from submitting parties. The proposed form of affidavit at section 355.2 eliminates that requirement.

MLA next asked MARAD to consider permitting streamlined certifications for follow-on affidavits when there has been no material change to the information contained in the earlier affidavit rather than having each affidavit repeat all the required information under the current regulation, which requires annual submission of affidavits.

MARAD agrees with this recommendation. Permitting an optional streamlined certification would reduce the burden of annual filing for those entities whose ownership information has not changed since the last affidavit was filed without impacting MARAD's ability to make annual U.S. citizenship determinations. In the proposed section 355.4(b), MARAD includes a provision for optional annual certification of citizenship information.

The MLA further recommended that MARAD revise its regulations to take into account the current state of public stock ownership and other factors affecting the ability of any public company to prove its U.S. citizenship. In particular, the MLA provided the following five recommendations concerning public companies:

1. The MLA asked that MARAD consider coordinating with the Coast Guard to provide the affected industry guidance that is practical and adequately implements the intent of U.S. maritime citizenship laws. The MLA further suggested that the U.S. Coast Guard's November 26, 2012, **Federal Register** Notice, "Mechanisms of Compliance with United States Citizenship Requirements for the Ownership of Vessels Eligible to Engage in Restricted Trades by Publicly Traded Companies" (77 FR 70453), would be a good starting point for developing a regulation that both agencies would promulgate.

MARAD agrees. The guidance contained in the U.S. Coast Guard's November 2012 Notice serves as the basis for MARAD's proposed revisions to the form of affidavit of U.S. citizenship to be used by publicly traded corporations and other business formations whose ownership interests are publicly traded. Adoption of this guidance in the proposed rule will harmonize the agencies' approaches to evidencing citizenship. In particular, the proposed rule at section 355.3(d) would provide publicly traded entities flexibility in applying several reasonably available methods to ensure ongoing compliance with U.S. ownership requirements without sacrificing the accuracy of ownership information upon which such entities must rely upon to affirm their citizenship status.

2. The MLA recommends that further improvements might be considered with respect to the fair inference rule including relaxing the percentages and making it clear that address lists made available by financial intermediaries can be relied upon.

MARAD agrees that the "fair inference rule," as applied to publicly traded corporations, must be updated because it relies upon stock records that are no longer controlled by the issuing corporation since the advent of electronic trading. MARAD proposes a modified fair inference rule under which a publicly traded corporation may rely upon reasonably available shareholder residence information, including geographic surveys and statistical sampling. However, at this time, MARAD will not adjust the

current non-citizen ownership percentage limits of the fair inference rule until such time that we have confidence that reducing such limits will not result in an unreasonable risk of submitters breaching the statutory non-citizen ownership levels.

3. The MLA recommends that MARAD review methods adopted by other federal agencies for establishing U.S.-citizen citizenship.

MARAD agrees. The proposed rule was informed by our review of guidance and rules of other agencies, including the Federal Communications Commission's Review of Foreign Ownership Policies for Broadcast, Common Carrier, and Aeronautical Radio Licensees under Section 310(b)(4) of the Communications Act of 1934, as Amended (Sep. 30, 2016); Federal Aviation Administration regulations; and USCG's November 2012 Notice (discussed above). MARAD's proposed rule would afford submitters flexibility in selecting the methods they use to determine ownership while maintaining compliance with annual filing requirements.

4. The MLA recommends that MARAD work with the Securities and Exchange Commission and the Depository Trust Company to improve the SEG-100 system to make it an even more reliable indicator of U.S. citizen stock ownership.

In light of the obsolescence of the current form of affidavit, MARAD has accepted annual filers' participation in the SEG-100 system as a basis for affirming U.S. stock ownership. The proposed rule includes participation in the SEG-100 system as an acceptable method for maintaining and evidencing U.S. ownership. MARAD is not proposing to make participation in SEG-100 mandatory.

5. The MLA recommends that MARAD, in coordination with the U.S. Coast Guard, adopt a process by which companies can present their citizenship compliance plans for approval by the two agencies and, if acting on the basis of those plans for approval by the two agencies, have the benefit of a presumption that they satisfy the applicable citizenship standard and the benefit of a grace period to come back into compliance if the maximum permissible non-citizenship threshold is exceeded due to market trading.

MARAD agrees that submitters should be permitted to submit their citizenship compliance plans for MARAD's review and approval. MARAD's proposed rule includes an option for submitting compliance methods for MARAD review and approval. As noted above, MARAD's proposed rule is intended to

harmonize its compliance procedures with the guidance from U.S. Coast Guard's November 2012 Notice. Upon request from submitters, MARAD will share such determinations with the U.S. Coast Guard.

The proposed rule adopts the changes described above and updates statutory authorities, which have changed since the current rule was published on July 18, 1970.

Public Participation

How long do I have to submit comments?

We are providing a 60-day comment period.

How do I prepare and submit comments?

To ensure that your comments are correctly filed in the Docket, please include the Docket Number shown at the beginning of this document in your comments.

Comments may be submitted to the docket electronically by logging onto the Docket Management System website at <http://www.regulations.gov>. Search using the docket number and follow the online instructions for submitting comments.

Please note that pursuant to the Data Quality Act, for substantive data to be relied upon and used by the agency, it must meet the information quality standards set forth in the OMB and DOT Data Quality Act guidelines. Accordingly, we encourage you to consult the guidelines in preparing your comments. OMB's guidelines may be accessed at <http://www.whitehouse.gov/omb/fedreg/reproducible.html>. DOT's guidelines may be accessed at http://www.bts.gov/programs/statistical_policy_and_research/data_quality_guidelines.

How can I be sure that my comments were received?

If you wish Docket Management to notify you upon its receipt of your comments, enclose a self-addressed, stamped postcard in the envelope containing your comments. Upon receiving your comments, Docket Management will return the postcard by mail.

How do I submit confidential business information?

Confidential business information (CBI) is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to the proposed

rule contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this proposed rule, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission that constitutes CBI as "PROPIN" to indicate it contains proprietary information. MARAD will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this proposed rule. Submissions containing CBI should be sent to the email address provided in the **FOR FURTHER INFORMATION CONTACT** section. In addition, you should submit two copies, from which you have deleted the claimed confidential business information, to Docket Management at the address given above under **ADDRESSES**. Any comments MARAD receives which are not specifically designated as CBI will be placed in the public docket for this rulemaking.

Will the agency consider late comments?

MARAD will consider all comments that Docket Management receives before the close of business on the comment closing date indicated above under **DATES**. To the extent possible, we will also consider comments that Docket Management receives after that date. If Docket Management receives a comment too late for us to consider in developing any follow-on action, we will consider that comment as an informal suggestion for future rulemaking action.

How can I read the comments submitted by other people?

You may read the comments received by Docket Management at the address given above under **ADDRESSES**. The hours of the Docket Management Unit are indicated above in the same location. You may also see the comments on the internet. To read the comments on the internet, go to <http://www.regulations.gov>. Follow the online instructions for accessing the dockets.

Please note that, even after the comment closing date, MARAD will continue to file relevant information in the Docket as it becomes available. Further, some people may submit late comments. Accordingly, we recommend that you periodically check the Docket for new material.

Rulemaking Analysis and Notices

Executive Orders 12866 and DOT Rulemaking Procedures

Executive Order (E.O.) 12866 and the Department of Transportation's administrative rulemaking procedures set forth in 49 CFR part 5, subpart B, provide for making determinations whether a regulatory action is "significant" and therefore subject to Office of Management and Budget (OMB) review and to the requirements of E.O. 12866.

This rule will streamline the process for establishing United States citizenship of corporations and other business formations participating in MARAD programs by removing the unnecessary disclosure of personally identifiable information. It also amends the form of affidavit with respect to publicly traded entities to eliminate the requirement to provide certain information regarding registered owners of stock, which is no longer consistent with how stocks are traded in U.S. equity markets today.

This rule is not a significant regulatory action under E.O. 12866 and DOT Order 2100.6B and, therefore it was not reviewed by OMB. It is also not considered a major rule for purposes of Congressional review under Public Law 104-121.

Executive Order 14192 (Deregulation)

E.O. 14192 requires that for "each new [E.O. 14192 regulatory action] issued, at least ten prior regulations be identified for elimination." Implementation guidance for E.O. 14192, issued by OMB (Memorandum M-25-20, March 26, 2025), defines an E.O. 14192 deregulatory action as "an action that has been finalized and has total costs less than zero." This rule will have total costs less than zero, and therefore is an E.O. 14192 deregulatory action.

Executive Order 13132 (Federalism)

MARAD analyzed this rulemaking in accordance with the principles and criteria contained in Executive Order 13132 ("Federalism") and has determined that it does not have sufficient Federalism implications to warrant the preparation of a Federalism summary impact statement. This rulemaking has no substantial effect on the States, or on the current Federal-State relationship, or on the current distribution of power and responsibilities among the various local officials. Nothing in this document preempts any State law or regulation. Therefore, MARAD did not consult with

State and local officials because it was not necessary.

Executive Order 13175 (Consultation and Coordination With Indian Tribal Governments)

MARAD does not believe that this rulemaking will significantly or uniquely affect the communities of Indian tribal governments when analyzed under the principles and criteria contained in Executive Order 13175 (Consultation and Coordination with Indian Tribal Governments). Therefore, the funding and consultation requirements of this Executive Order do not apply.

Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 requires MARAD to assess whether this rulemaking would have a significant economic impact on a substantial number of small entities and to minimize any adverse impact. The proposed rule would simplify and modernize the process for establishing United States citizenship of corporations and other business formations participating in MARAD programs. The proposed rule would also eliminate the requirement to provide dates and places of birth of corporate executives, directors, and stock owners as required in the current form of affidavit of citizenship. Lastly, the proposed rule would amend the form of affidavit with respect to publicly traded entities by eliminating the requirement to provide certain information regarding registered owners of stock, eliminate the notarization requirement, and provide a simple and streamlined process for recertification. MARAD certifies that this rulemaking will not have a significant economic impact on a substantial number of small entities.

Privacy Impact Assessment

Section 522(a)(5) of the Transportation, Treasury, Independent Agencies, and General Government Appropriations Act, 2005 (Pub. L. 108–447, div. H, 118 Stat. 2809 at 3268) requires the Department of Transportation and certain other federal agencies to conduct a privacy impact assessment of each proposed rule that will affect the privacy of individuals.

Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act of 1995 requires Agencies to evaluate whether an agency action would result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of \$206 million or more (as adjusted for inflation) in any 1 year, and if so, to take steps to minimize these unfunded mandates. This

rulemaking will not impose unfunded mandates under the Unfunded Mandates Reform Act of 1995. It will not result in costs of \$206 million or more to either State, local, or tribal governments, in the aggregate, or to the private sector, and is the least burdensome alternative that achieves the objectives of the rule.

Regulation Identifier Number (RIN)

A regulation identifier number (RIN) is assigned to each regulatory action listed in the Unified Agenda of Federal Regulations. The Regulatory Information Service Center publishes the Unified Agenda in April and October of each year. The RIN number contained in the heading of this document can be used to cross-reference this action with the Unified Agenda.

Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520) (PRA) requires that DOT consider the impact of paperwork and other information collection burdens imposed on the public. This proposed rule would likely result in a reduction in the burden hours required for information collection 2133–0012, Requirements for Establishing U.S. Citizenship—46 CFR 355, because changes to the regulation will shorten the time and effort to evidence citizenship for many first-time applicants as well as those that must recertify. We expect that the information collection requirement under this proposed rule would reduce the “hours per response” from 5 hours to 4 hours resulting in a 20% reduction in burden hours annually and having a net cost saving of \$24,756 annually across 550 respondents. We request comments on this issue.

Notwithstanding any other provision of law, a person is not required to respond to a collection of information by a federal agency unless the collection displays a valid OMB control number.

List of Subjects in 46 CFR Part 355

Citizenship and naturalization, Maritime carriers, Reporting and recordkeeping requirements.

For the reasons described in the preamble, MARAD proposes to revise 46 CFR part 355 to read as follows:

PART 355—REQUIREMENTS FOR ESTABLISHING UNITED STATES CITIZENSHIP

Sec.

355.1 General.

355.2 Evidencing U.S. citizenship; affidavit guide.

355.3 Criteria to be applied in support of stock data in affidavit.

355.4 Changes in citizenship data.

355.5 Additional material.

PART 355—REQUIREMENTS FOR ESTABLISHING UNITED STATES CITIZENSHIP

Authority: Secs. 2, 204, 39 Stat. 729, as amended, 49 Stat. 1987, as amended, 73 Stat. 597; 46 U.S.C. 50501, 50502.

§ 355.1 General.

(a) Under 46 U.S.C. 50501, no corporation is deemed to be a citizen of the United States unless (1) it is organized under the laws of the United States or of a State, Territory, District, or possession thereof; (2) its president or other chief executive officer, and the chairman of its board of directors are citizens of the United States, and no more of its directors than a minority of the number necessary to constitute a quorum are non-citizens; and (3) the controlling interest therein is owned by citizens of the United States or, in the case of a corporation operating any vessel in the coastwise trade, on the Great Lakes, or inland lakes of the United States, 75 per centum of the interest in such corporation is owned by citizens of the United States.

(b) As used in this regulation, the term *primary corporation* includes, but not exclusively, participants in certain transactions or programs under Title 46 of the U.S. Code, such as Owner Trustees and certain vessel owners and contractors under 46 U.S.C. 53102 or Capital Construction Fund holders under 46 U.S.C. 53501 *et seq.*

(c) To satisfy the statutory requirements, an Affidavit of U.S. Citizenship of a primary corporation by one of its officers duly authorized to execute such Affidavit, should be submitted. This Affidavit should contain facts from which the corporation's citizenship can be determined.

§ 355.2 Evidencing U.S. citizenship; affidavit guide.

(a) In order to establish that a corporation is a citizen of the United States within the meaning of 46 U.S.C. 50501, as amended, the form of affidavit to be used as a guide is hereby prescribed for execution on behalf of the primary corporation and filing with an application or, if required, subsequent filing within 30 days after the annual meeting of the stockholders (if the primary corporation is a wholly owned subsidiary and contrary to the bylaw provision does not hold the annual meeting of stockholders, the subsequent filing should be annually and related to the date of the original filing) as

evidence of the continuing U.S. citizenship of a filing entity:

Affidavit of U.S. Citizenship
(NAME OF CORPORATION)

State of ____
) ss.:
County of ____

I, (Name), of (Physical residence address, city, and state), being duly sworn, depose and say:

1. That I am the (Title of office(s) held) of (Name of Corporation), a corporation organized and existing under the laws of

the State of ____ (hereinafter called the "Corporation"), with offices at (Business address), in evidence of which incorporation a certified copy of the Articles or Certificate of Incorporation (or Association) is filed herewith (or has been filed) together with a certified copy of the corporate Bylaws. [Evidence of continuing U.S. citizenship status, including amendments to said Articles or Certificate and Bylaws, should be filed within 30 days after the annual meeting of the stockholders or annually, within 30 days after the original

affidavit if there has been no meeting of the stockholders prior to that time.];

2. That I am authorized by and on behalf of the Corporation to execute and deliver this Affidavit of U.S. Citizenship;

3. That the names of the Chief Executive Officer, by whatever title, Vice Presidents or other individuals who are authorized to act in the absence or disability of the Chief Executive Officer, by whatever title, the Chairman of the Board of Directors, and the Directors of the Corporation are as follows:

Name	Title	Citizen of the United States
Name	Title	Yes/No

[Note: The foregoing list should include the officers, whether or not they are also directors, and all directors, whether or not they are also officers] and that each of said individuals is a citizen of the United States by virtue of birth in the United States, birth abroad of U.S. citizen parents, by naturalization, by naturalization during minority through the naturalization of a parent, by marriage (if a woman) to a U.S. citizen prior to September 22, 1922, or as otherwise authorized by law, except (give name and nationality of all Non-Citizen officers and directors, if any); however, the By-laws of the Corporation provide that (Number) of the directors are necessary to constitute a quorum; therefore, the alien directors named represent no more than a minority of the number necessary to constitute a quorum;

[Select and complete the applicable paragraph 4 describing the Corporation's stock ownership and strike inapplicable paragraphs 4]

4. Information as to stock, where a non-publicly traded Corporation has 30 or more stockholders:

That I have access to the stock books and records of the Corporation; that said stock books and records have been examined and disclose (a) that, as of (Date), the Corporation had issued and outstanding (Number) shares of (Class or series), the only class or series of stock of the Corporation has issued and outstanding [if such is the case], owned

of record by (Number) stockholders, said number of stockholders representing the ownership of the entire issued and outstanding stock of the Corporation, and (b) that no stockholder owned of record as of said date five per centum (5%) or more of the issued and outstanding stock of the Corporation of any class. [If different classes or series of stock exist, give the same information for each class or series issued and outstanding, showing the monetary value and voting rights per share in each class or series. If there is an exception to the statement in clause (b), the name, address, and citizenship of the stockholder and the amount and class or series of stock owned should be stated.]

That the registered addresses of (Number) owners of record of (Number) shares of the issued and outstanding (Class or series) stock of the Corporation are shown on the stock books and records of the Corporation as being within the United States, said ____ shares being ____ per centum (____%) of the total number of shares of said stock (each class or series). [The exact figure as disclosed by the stock books of the corporation must be given and the per centum figure must not be less than 65 per centum, except that for a corporation operating a vessel in the coastwise trade, the per centum figure must be not less than 95 per centum. These per centum figures apply to corporate stockholders as well as to the primary corporation.]

(The same statement should be made with reference to each class or series of stock, if there is more than one class.)

4. Information as to stock, where Corporation's shares are publicly traded on a U.S. stock exchange:

That the Corporation has diligently employed, administered, and adhered to methods such as those identified at 46 CFR 355.3(d) to monitor the Corporation's stock ownership.

[In the case of Corporation seeking to demonstrate controlling interest ownership (greater than 50% U.S. Citizen ownership) use the following]:

That, based on the foregoing, the percentage of shares of the Corporation owned by U.S. citizens eligible to document vessels in their own right is greater than 50 per centum.

[In the case of a Corporation seeking to demonstrate eligibility for a coastwise endorsement (at least 75% U.S. ownership), use the following]:

That, based on the foregoing, the percentage of shares of the Corporation owned by U.S. citizens eligible to document vessels in their own right is 75% or greater.

4. Information as to stock, where Corporation has less than 30 stockholders:

That the information as to stock ownership, upon which the Corporation relies to establish that the required percentage¹ of the stock ownership is vested in Citizens of the United States, is as follows:

Name of Stockholder	Number of shares owned (each class)	Percentage of shares owned (each class or series)
Name	Number and Class	Number and Class

¹ 75% if Corporation is operating in the coastwise trade, on the Great Lakes, or on bays, sounds, rivers,

harbors, or inland lakes of the United States; and controlling interest if Corporation is operating

solely in the foreign trade, both terms as defined in 46 U.S.C. 50501.

and that each of said individual stockholders is a Citizen of the United States by virtue of birth in the United States, birth abroad of U.S. citizen parents, by naturalization during minority through the naturalization of a parent, by marriage (if a woman) to a U.S. citizen prior to September 22, 1922, or as otherwise authorized by law.

5. That the controlling interest (or 75% of the interest)² in (each) said Corporation, as established by the data hereinbefore set forth, is owned by citizens of the United States; that the title to a majority (or 75%)² of the stock of (each) said Corporation is vested in Citizens of the United States free from any trust or fiduciary obligation in favor of any person not a citizen of the United States; that such proportion of the voting power of (each) said Corporation is vested in citizens of the United States; that through no contract or understanding is it so arranged that the majority (or more than 25%)² of the voting power of (each) said Corporation may be exercised, directly or indirectly, on behalf of any person who is not a Citizen of the United States; and that by no means whatsoever, is control of (each) said Corporation (or any interest in said Corporation in excess of 25%) conferred upon or permitted to be exercised by any person who is not a citizen of the United States; and

6. That affiant has carefully examined this Affidavit and asserts that all the statements and representations contained therein are true to the best of their knowledge, information, and belief.

Dated: _____

(Name and title of affiant)

Penalty for False Statement: A fine or imprisonment, or both, are provided for violation of the proscriptions contained in 18 U.S.C. 1001 (*see also*, 18 U.S.C. 286, 287).

§ 355.3 Criteria to be applied in support of stock data in affidavit.

(a) The same criteria should be observed in obtaining information to be furnished for stockholders named (direct ownership of required percentage of shares of stock of each class or series) in the Affidavit as those observed for the primary corporation. If, on the other hand, the “fair inference rule” is applied with respect to stock ownership (*see Collier Advertising Service, Inc. v. Hudson River Day Line*, 14 Fed. Supp. 335), the extent of U.S. citizen ownership of stock should be ascertained in the requisite percentage

(65 percent for foreign operation and 95 percent for coastwise operation) in order that the veracity of the statutory statements made in the Affidavit (paragraph 5) may be relied upon by the Maritime Administration.

(b) When applying the fair inference rule (where there are more than 30 stockholders, except where one or more of such number actually owns the controlling or 75 percent interest) in order to prove U.S. citizen ownership in the required percentages:

(1) for non-publicly traded corporations (i) for foreign operation, 65 percent of the shares of stock of each class or series must be shown to be held by persons with registered addresses within the United States to prove that 51 percent or controlling interest is vested in citizens of the United States and (ii) for coastwise operation, 95 percent of the shares of stock of each class or series must be shown to be held by persons having registered addresses within the United States to prove that 75 percent of the interest in the corporation is vested in citizens of the United States; and

(2) for publicly traded corporations (i) at least 95% of the stock (each class) of the corporation be held directly or beneficially by Persons having a U.S. address in order to infer at least 75% ownership by U.S. Citizens, or (ii) at least 65% of the stock (each class) of the corporation be held directly or beneficially by Persons having a U.S. address in order to infer at least 51% ownership by U.S. Citizens; and

(3) For determining the requisite percentage of stockholders with U.S. addresses, the corporation may rely on the methods outlined in § 355.3(d); and

(c) If the primary corporation is consecutively owned by several “parent” corporations (holders of 100 percent of the stock of each or all classes or series of stock issued and outstanding), the facts should be given in proper sequence either by chart or in narrative form, revealing the facts of stock ownership. The information with respect to the ultimate parent should include data relative to the basis upon which controlling or 75 percent (depending upon whether the primary corporation operates in the domestic or foreign commerce) is established, together with the names of the owners of record or beneficial owners of 5 percent or more of each class or series of stock, if more than one class or series, and a statement that such owners are citizens of the United States. In any case where different classes or series of stock exist, each class or series will be treated depending upon whether “closely held” or “publicly held,” individually in

applying the fair inference rule, if applicable, or giving the relevant information with respect to United States citizens owning of record 51 percent or 75 percent of the interest.

(d) If the corporation is publicly traded, the corporation may employ the following methods to measure, monitor, determine, and affirm the required percentage U.S. citizen share ownership for the primary corporation:

(1) Use of the Depository Trust Company segregated account (or “SEG-100”) system;

(2) Monitoring SEC filings for 5% holders (Schedules 13D, 13G, Form 13F) and follow-up requests for information from filers;

(3) Use of protective provisions in organizational documents in order to guard against and rectify the possibility of what are referred to as excess shares;

(4) Communications with Non-Objecting Beneficial Owners (or “NOBOs”);

(5) Geographic surveys or statistical analyses of shareholder residences;

(6) Use of dual stock certificates; and

(7) Alternative methods upon written Maritime Administration approval.

§ 355.4 Changes in citizenship data.

(a) It is incumbent upon the parties filing affidavits under this part to apprise the Maritime Administration promptly in writing relative to changes in data last furnished with respect to officers, directors, and stockholders holding 5 percent or more of the issued and outstanding stock of each class or series, together with statements concerning the citizenship status thereof.

(b) If the information contained in a party’s most recent affidavit of citizenship filing has not changed materially, as an alternative to submitting an annual affidavit of citizenship under this part, a party may file a certification with the Maritime Administration. The certification should be substantially in the following format:

“I, _____, [Title] of [Name of Corporation] (“Corporation”), being duly authorized by the Corporation, certify to you that there have been no changes to the ownership information contained in the Affidavit of Citizenship filed with the Maritime Administration on [DATE].”

§ 355.5 Additional material.

If additional material is determined to be essential to clarify or support the evidence of U.S. citizenship, such material must be furnished by the primary corporation upon request by the Maritime Administration.

² Strike inapplicable language.

[Docket Number MARAD–2025–0091]

RIN 2133–AB91

Deregulatory—American Fisheries Act Program Update; Simplifying the Application Process

AGENCY: Maritime Administration (MARAD), Department of Transportation (DOT)

ACTION: Notice of proposed rulemaking, request for comments.

SUMMARY: On May 1, 2019, MARAD published an Advanced Notice of Proposed Rulemaking (ANPRM), titled “How Best to Simplify Filing Statements of American Fisheries Act Citizenship: Policy and Regulatory Review,” soliciting public comment on steps MARAD could take to simplify and modernize the process for evidencing U.S. citizenship for owners of U.S.-flag fishing industry vessels of 100 feet or greater in registered length. In response to public support for updating our regulations, MARAD is soliciting public comments on this Notice of Proposed Rulemaking (NPRM). Consistent with comments received, the proposed rule would simplify the annual citizenship filing procedures under the American Fisheries Act (AFA) program in order to reduce costs or administrative burdens placed on owners of fishing industry vessels. MARAD proposes (1) to simplify and streamline annual renewal filing for vessel owners whose citizenship information has not changed since their affidavit of U.S. citizenship (AFA Affidavit) filing; (2) to update acceptable methods for evidencing citizenship of publicly traded entities; and (3) to eliminate requirements to provide personally identifiable information (*i.e.*, social security numbers and dates and places of birth for corporate officers and directors) in affidavits of AFA citizenship.

DATES: Comments should be filed on or before September 2, 2025. Late-filed comments filed will be considered to the extent practicable.

ADDRESSES: You may submit comments identified by DOT Docket Number MARAD–2025–0091 by any of the following methods:

- **Federal eRulemaking Portal:** www.regulations.gov. Search using the DOT Docket Number (see above) and follow the instructions for submitting comments.
- **Email:** Rulemakings.MARAD@dot.gov. Include the DOT Docket Number in the subject line of the message.
- **Mail/Hand-Delivery/Courier:** Docket Management Facility; U.S. Department of Transportation, 1200 New Jersey Avenue SE, Room W12–140, Washington, DC 20590. If you would like to know that your comments reached the facility, please enclose a stamped, self-addressed postcard or envelope. The Docket Management Facility is open 9:00 a.m. to 5:00 p.m., Monday through Friday, except on federal holidays.

Note: We recommend that you include your name and a mailing address, an email address, or a telephone number in the body of your document so that we can contact you if we have questions regarding your submission. If you submit your inputs by mail or hand-delivery, they must be submitted in an unbound format, no larger than 8½ by 11 inches, single-sided, suitable for copying and electronic filing. All submissions received should include the agency name and docket number or Regulation Identifier Number (RIN) for this rulemaking.

Instructions: All comments received will be posted without change to the docket at www.regulations.gov, including any personal information provided. For detailed instructions on submitting comments and additional information on the rulemaking process, see the section entitled Public Participation.

Privacy Act: Anyone can search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). For information on DOT’s compliance with the Privacy Act, please visit <https://www.transportation.gov/privacy>.

FOR FURTHER INFORMATION CONTACT: Michael C. Pucci, Office of the Chief Counsel, Division of Maritime Programs, (202) 366–5167 or via email at Michael.Pucci@dot.gov. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 to contact the above individual during business hours. The FIRS is available twenty-four hours a

day, seven days a week, to leave a message or question. You will receive a reply during normal business hours. You may send mail to Department of Transportation, Maritime Administration, Office of the Chief Counsel, Division of Legislation and Regulations, W24–220, 1200 New Jersey Avenue SE, Washington, DC 20590–0001.

SUPPLEMENTARY INFORMATION:

Electronic Access and Filing

As required by 5 U.S.C. 553(b)(4), this document, including a summary of the rule, and all comments may be viewed online through the Federal eRulemaking portal at www.regulations.gov. An electronic copy of this document may also be downloaded by accessing the Office of the Federal Register’s home page at: www.federalregister.gov.

Background

On May 1, 2019, MARAD published an Advanced Notice of Proposed Rulemaking (ANPRM), titled “How Best to Simplify Filing Statements of American Fisheries Act Citizenship: Policy and Regulatory Review,” in the **Federal Register** (84 FR 18469) soliciting public comment on steps MARAD could take to simplify and modernize the process for evidencing U.S. citizenship for owners of U.S.-flag fishing industry vessels of 100 feet or greater in registered length in order to reduce the regulatory burden for annual filers. MARAD has developed this NPRM based on recommendations we received in response to our request for comments to that ANPRM as well as recommendations we received in response to our ANPRM on reforming our Maritime Programs citizenship requirements titled “How to Best Evidence Corporate Citizenship: Policy and Regulatory Review” (Corporate Citizenship ANPRM) published in the **Federal Register** (84 FR 18468) on the same day.

MARAD welcomes your comments to ensure that agency programs benefit from current and comprehensive best practices.

Scope of Comments

MARAD is interested in learning how it could reduce or remove regulatory burdens on the public. Accordingly, commenters may want to focus on the following: (1) whether there are less burdensome methods to evidence corporate citizenship annually; (2) how those alternatives may be applied to improve MARAD program administration; and (3) how program participants will benefit from a revision of our AFA regulations.

Content of Comments

MARAD is interested in information on how any changes to these regulations could impact small businesses, either positively or negatively. In describing a burden placed on your organization by our regulations or potential changes to the regulations; direct experience and quantifiable data are more useful than anecdotal descriptions. If the commenter believes that there is a less burdensome alternative, the commenter should describe that alternative in detail.

Discussion of Comments Received on the ANPRM

In response to the agency's ANPRM seeking public comment on ways to simplify annual requirements to evidence citizenship under the American Fisheries Act, MARAD received one comment from Mr. William N. Myhre of K & L Gates, which included several recommendations. The agency responds as follows to the commenter's recommendations.

The commenter recommended MARAD consider permitting streamlined certifications for annual citizenship renewals when there has been no material change to the information contained in the prior year's AFA Affidavit.

MARAD agrees with this recommendation. Permitting an optional certification would reduce the burden of annual filing for those entities whose ownership information has not changed since the last AFA Affidavit was filed while not impacting MARAD's ability to make U.S. citizenship determinations. MARAD finds that such a certification would be consistent with the requirements of 46 U.S.C. 12113(e)(1) by incorporating by reference and certifying the citizenship information contained in the last AFA Affidavit submitted by the filer. In the proposed section 356.5(g), MARAD includes a provision for optional annual certification of citizenship information. MARAD proposes to enclose a copy of our form of annual certification with each annual fishery endorsement eligibility approval letter it issues to filers.

The commenter further suggested MARAD reconsider the regulatory requirements (46 CFR 356.5(g) and 356.13(b), respectively) for vessel owners to notify the Citizenship Approval Officer within 30 days of any change in the information set forth in the AFA Affidavit or with respect to documents required to be filed pursuant to 46 CFR 356.13. The commenter argued that these requirements place a

significant burden on the vessel owner to review each of the various regulatory requirements on a monthly basis to ensure timely compliance and avoid risking loss of the fishing vessel's eligibility to operate in the domestic fishing industry.

MARAD disagrees. As the commenter notes, most AFA vessel owners are closely-held entities whose ownership does not change on an annual basis. Additionally, MARAD has not found that compliance with these requirements has affected owners' ability to maintain fishery endorsement eligibility for their vessels. As such, MARAD does not find the 30-day notification requirements to be burdensome or to represent an undue risk of loss of fishery endorsement eligibility.

The commenter also recommended updating the existing regulations to reflect current statutory citations that have changed since the regulations were implemented in 2000 and including a chart containing the documentary requirements for regulated transactions.

MARAD agrees. MARAD is proposing to amend part 356 to update its statutory citations. MARAD is planning to develop a chart of documentary requirements as guidance for publication on our AFA web page.

Additional Amendments

In response to the comments received in response to the May 1, 2019, Corporate Citizenship ANPRM (84 FR 18468), MARAD similarly proposes to amend the form of AFA Affidavit found at 46 CFR 356.5 with respect to those paragraphs (Nos. 4 and 5) applicable to direct and indirect owners that are publicly traded entities. Pursuant to 46 U.S.C. 12113(e)(2), the form of AFA Affidavit must conform to the extent practicable to the form of affidavit found at 46 CFR 355.2, which is the form used by participants to satisfy citizenship requirements of MARAD's promotional programs (e.g., Capital Construction Fund, Maritime Security Program, and vessel finance guarantees). As MARAD has found the form of affidavit at 46 CFR 355.2 to be outdated with respect to its provisions for publicly traded entities, MARAD is proposing to update that form of affidavit in a separate Notice of Proposed Rulemaking under Docket Number MARAD-2025-0087.

The proposed rule at section 356.7 would provide publicly traded entities flexibility in applying several reasonably available methods to ensure ongoing compliance with AFA ownership requirements, including satisfying the U.S. address requirement of the fair inference rule for determining

the requisite percentage of U.S. ownership of outstanding stock. MARAD is not adjusting the current non-citizen ownership percentage limits of the fair inference method.

MARAD proposes eliminating requirements to provide social security numbers and dates and places of birth of corporate officers and directors in the affidavit of AFA citizenship provided at 46 CFR 356.5. Inclusion of this information in the affidavit of AFA citizenship does not significantly improve U.S. ownership certainty and creates an unnecessary risk of release of personally identifiable information. In any instance of doubt, MARAD still retains the authority to request such information from submitting parties.

Public Participation

How long do I have to submit comments?

We are providing a 60-day comment period.

How do I prepare and submit comments?

To ensure that your comments are correctly filed in the Docket, please include the Docket Number shown at the beginning of this document in your comments.

Comments may be submitted to the docket electronically by logging onto the Docket Management System website at <http://www.regulations.gov>. Search using the MARAD docket number and follow the online instructions for submitting comments.

Please note that pursuant to the Data Quality Act, for substantive data to be relied upon and used by the agency, it must meet the information quality standards set forth in the OMB and DOT Data Quality Act guidelines. Accordingly, we encourage you to consult the guidelines in preparing your comments. OMB's guidelines may be accessed at <http://www.whitehouse.gov/omb/fedreg/reproducible.html>. DOT's guidelines may be accessed at http://www.bts.gov/programs/statistical_policy_and_research/data_quality_guidelines.

How can I be sure that my comments were received?

If you wish Docket Management to notify you upon its receipt of your comments, enclose a self-addressed, stamped postcard in the envelope containing your comments. Upon receiving your comments, Docket Management will return the postcard by mail.

How do I submit confidential business information?

Confidential business information (CBI) is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to the proposed rule contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this proposed rule, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission that constitutes CBI as “PROPIN” to indicate it contains proprietary information. MARAD will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this proposed rule. Submissions containing CBI should be sent to the email address provided in the **FOR FURTHER INFORMATION CONTACT** section. In addition, you should submit two copies, from which you have deleted the claimed confidential business information, to Docket Management at the address given above under **ADDRESSES**. Any comments MARAD receives which are not specifically designated as CBI will be placed in the public docket for this rulemaking.

Will the agency consider late comments?

MARAD will consider all comments that Docket Management receives before the close of business on the comment closing date indicated above under **DATES**. To the extent possible, we will also consider comments that Docket Management receives after that date. If Docket Management receives a comment too late for us to consider in developing any follow-on action, we will consider that comment as an informal suggestion for future rulemaking action.

How can I read the comments submitted by other people?

You may read the comments received by Docket Management at the address given above under **ADDRESSES**. The hours of the Docket are indicated above in the same location. You may also see the comments on the internet. To read the comments on the internet, go to <http://www.regulations.gov>. Follow the online instructions for accessing the dockets.

Please note that, even after the comment closing date, MARAD will continue to file relevant information in

the Docket as it becomes available. Further, some people may submit late comments. Accordingly, we recommend that you periodically check the Docket for new material.

Rulemaking Analysis and Notices

Executive Orders 12866 and DOT Rulemaking Procedures

Executive Order (E.O.) 12866 and the Department of Transportation’s administrative rulemaking procedures set forth in 49 CFR part 5, subpart B, provide for making determinations whether a regulatory action is “significant” and therefore subject to Office of Management and Budget (OMB) review and to the requirements of E.O. 12866.

This rule is limited to streamlining annual renewal filing for vessel owners whose citizenship information has not changed since their most recent annual affidavit of U.S. citizenship (AFA Affidavit) filing, updating acceptable methods for evidencing citizenship of publicly traded entities, and eliminating requirements to provide personally identifiable information (*i.e.*, social security numbers and dates and places of birth for corporate officers and directors) in affidavits of AFA citizenship.

This NPRM is not a significant regulatory action under Executive Order (E.O.) 12866 and DOT Order 2100.6B and, therefore it was not reviewed by OMB. It is also not considered a major rule for purposes of Congressional review under Public Law 104–121. This rule is limited to updating the citations, addresses, and modernizing text.

Executive Order 14192 (Deregulation)

E.O. 14192 requires that for “each new [E.O. 14192 regulatory action] issued, at least ten prior regulations be identified for elimination.” Implementation guidance for E.O. 14192, issued by OMB (Memorandum M–25–20, March 26, 2025), defines an E.O. 14192 deregulatory action as “an action that has been finalized and has total costs less than zero.” This rule will have total costs less than zero, and therefore is an E.O. 14192 deregulatory action.

Executive Order 13132 (Federalism)

MARAD analyzed this rulemaking in accordance with the principles and criteria contained in Executive Order 13132 (“Federalism”) and has determined that it does not have sufficient Federalism implications to warrant the preparation of a Federalism summary impact statement. This rulemaking has no substantial effect on

the States, or on the current Federal-State relationship, or on the current distribution of power and responsibilities among the various local officials. Nothing in this document preempts any State law or regulation. Therefore, MARAD did not consult with State and local officials because it was not necessary.

Executive Order 13175 (Consultation and Coordination With Indian Tribal Governments)

MARAD does not believe that this rulemaking will significantly or uniquely affect the communities of Indian tribal governments when analyzed under the principles and criteria contained in Executive Order 13175 (Consultation and Coordination with Indian Tribal Governments). Therefore, the funding and consultation requirements of this Executive Order do not apply.

Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 requires MARAD to assess whether this rulemaking would have a significant economic impact on a substantial number of small entities and to minimize any adverse impact. This revision proposes to (1) simplify and streamline annual renewal filing for vessel owners whose citizenship information has not changed since their affidavit of U.S. citizenship (AFA Affidavit) filing; (2) update acceptable methods for evidencing citizenship of publicly traded entities; and (3) eliminate requirements to provide personally identifiable information (*i.e.*, social security numbers and dates and places of birth for corporate officers and directors) in affidavits of AFA citizenship. These changes should be limited to decreasing the administrative burden for program applicants. MARAD certifies that this rulemaking will not have a significant economic impact on a substantial number of small entities.

Privacy Impact Assessment

Section 522(a)(5) of the Transportation, Treasury, Independent Agencies, and General Government Appropriations Act, 2005 (Pub. L. 108–447, div. H, 118 Stat. 2809 at 3268) requires the Department of Transportation and certain other federal agencies to conduct a privacy impact assessment of each proposed rule that will affect the privacy of individuals.

Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act of 1995 requires Agencies to evaluate whether an agency action would result in the expenditure by State, local, and

tribal governments, in the aggregate, or by the private sector, of \$206 million or more (as adjusted for inflation) in any 1 year, and if so, to take steps to minimize these unfunded mandates. This rulemaking will not impose unfunded mandates under the Unfunded Mandates Reform Act of 1995. It will not result in costs of \$206 million or more to either State, local, or tribal governments, in the aggregate, or to the private sector, and is the least burdensome alternative that achieves the objectives of the rule.

Regulation Identifier Number (RIN)

A regulation identifier number (RIN) is assigned to each regulatory action listed in the Unified Agenda of Federal Regulations. The Regulatory Information Service Center publishes the Unified Agenda in April and October of each year. The RIN number contained in the heading of this document can be used to cross-reference this action with the Unified Agenda.

Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520) (PRA) requires that DOT consider the impact of paperwork and other information collection burdens imposed on the public. This proposed rule would likely result in a reduction in the burden hours required for information collection 2133–0530, Requirements for Vessels of 100 Feet or Greater in Registered Length to Obtain a Fishery Endorsement to the Vessel's Documentation—46 CFR 356, because changes to the regulation will shorten the time and effort to evidence citizenship for many first-time applicants as well as those that must recertify. We expect that the information collection requirement under this proposed rule would reduce the “hours per response” from 11 hours to 8.5 hours resulting in a 23% reduction in burden hours annually and having a net cost saving of \$22,086.40 annually across 500 respondents. We request comments on this issue.

Notwithstanding any other provision of law, a person is not required to respond to a collection of information by a federal agency unless the collection displays a valid OMB control number.

List of Subjects in 46 CFR Part 356

Citizenship and naturalization, Fishery endorsement, Fishing vessels, Mortgages, Mortgage trustee, Penalties, Preferred mortgages, Reporting and recordkeeping requirements, Vessels.

For the reasons described in the preamble, MARAD proposes to amend 46 CFR part 356 as set forth below:

PART 356—REQUIREMENTS FOR VESSELS OF 100 FEET OR GREATER IN REGISTERED LENGTH TO OBTAIN A FISHERY ENDORSEMENT TO THE VESSEL'S DOCUMENTATION

■ 1. The authority for part 356 continues to read as follows:

Authority: 46 U.S.C. 12102; 46 U.S.C. 12151; 46 U.S.C. 31322; Pub. L. 105–277, division C, title II, subtitle I, section 203 (46 U.S.C. 12102 note), section 210(e), and section 213(g), 112 Stat. 2681; Pub. L. 107–20, section 2202, 115 Stat. 168–170; Pub. L. 114–74; 49 CFR 1.93.

Subpart A—General Provisions

§ 356.3 [Amended]

■ 2A. In 46 CFR 356.3

■ a. Remove paragraph (a).

■ b. Paragraphs (b) through (z) are redesignated as paragraphs (a) through (y).

■ c. In paragraph (d)(1), remove “46 U.S.C. 12102(c) and section 2(c) of the 1916 Act, 46 App. U.S.C. 802(c)” and add, in its place, “46 U.S.C. 12113 and 46 U.S.C. 50501(d)”.

■ d. In paragraph (d)(iv)(C), remove “46 U.S.C. 12102(c)” and add, in its place, “46 U.S.C. 12113(c)”.

■ e. In paragraph (e), remove “Maritime Administration, United States Department of Transportation, Citizenship Approval Officer, MAR–220, Room 7232, 400 7th Street SW, Washington, DC 20590” and add, in its place, “Citizenship Approval Officer, Office of Chief Counsel, Maritime Administration, United States Department of Transportation, 1200 New Jersey Avenue SE, Washington, DC 20590.”

■ f. In paragraph (g)(1), remove “section 2(b) of the 1916 Act, 46 App. U.S.C. 802(b)” and add, in its place, “46 U.S.C. 50501(c)”.

■ g. In paragraph (q), remove “46 U.S.C. 12102(c) and section 2(c) of the 1916 Act, 46 App. U.S.C. 802(c)” and add, in its place, “46 U.S.C. 12113(c) and 46 U.S.C. 50501(d)”.

■ h. In paragraph (t)(1), remove “46 U.S.C. 12102(c)” and add, in its place, “46 U.S.C. 12113(c)”.

■ i. In paragraph (t)(5), remove “46 U.S.C. 12102(a)” and add, in its place, “46 U.S.C. 12103”.

* * * * *

§ 356.5 [Amended]

■ 2. In § 356.5

■ a. In paragraph (a), remove “section 2(c) of the 1916 Act, or where applicable, section 2(b) of the 1916 Act” and add, in its place, “46 U.S.C. 50501(d), or where applicable, 46 U.S.C. 50501(c)”.

■ b. In paragraph (c), remove “section 2(c) of the 1916 Act and 46 App. U.S.C. 12102(c)” and add, in its place, “46 U.S.C. 50501(d) and 46 U.S.C. 12113(c)”.

■ 3. In § 356.5(d) revise as follows:

§ 356.5(d) The prescribed form of the Affidavit of U.S. Citizenship is as follows:

State of _____)
) ss.:

County of _____)

I, (*Name*), of (*Physical residence address, city, and state*), being duly sworn, depose and say:

1. That I am the (*Title of office(s) held*) of (*Name of Corporation*), a corporation organized and existing under the laws of the State of _____ (hereinafter called the “Corporation”), with offices at (*Business address*), in evidence of which incorporation a certified copy of the Articles or Certificate of Incorporation (or Association) is filed herewith (or has been filed) together with a certified copy of the corporate Bylaws. [Evidence of continuing U.S. citizenship status, including amendments to said Articles or Certificate and Bylaws, should be filed within 45 days of the annual documentation renewal date for vessel owners. Other parties required to provide evidence of U.S. citizenship status must file within 30 days after the annual meeting of the stockholders or annually, within 30 days after the original affidavit if there has been no meeting of the stockholders prior to that time.];

2. That I am authorized by and in behalf of the Corporation to execute and deliver this Affidavit of U.S. Citizenship;

3. That the names of the Chief Executive Officer, by whatever title, the Chairman of the Board of Directors, all Vice Presidents, or other individuals who are authorized to act in the absence or disability of the Chief Executive Officer or Chairman of the Board of Directors, and the Directors of the Corporation are as follows:¹

Name	Title

Name	Title

(The foregoing list should include the officers, whether or not they are also directors, and all directors, whether or not they are also officers.) Each of said individuals is a Citizen of the United States by virtue of birth in the United States, birth abroad of U.S. citizen parents, by naturalization, or as otherwise authorized by law, except

¹ Offices that are currently vacant should be noted when listing Officers and Directors in the Affidavit.

(give name and nationality of all Non-Citizen officers and directors, if any). The By-laws of the Corporation provide that (Number) of the directors are necessary to constitute a quorum; therefore, the Non-Citizen directors named represent no more than a minority of the number necessary to constitute a quorum.

[Note: Select and complete the applicable paragraph 4 describing the Corporation's stock ownership and strike inapplicable paragraphs 4.]

4. Information as to stock, where Corporation has 30 or more stockholders:

That I have access to the stock books and records of the Corporation; that said stock books and records have been examined and disclose (a) that, as of (Date), the Corporation had issued and outstanding (Number) shares of (Class), the only class of stock of the Corporation issued and outstanding [if such is the case], owned of record by (Number) stockholders, said number of

stockholders representing the ownership of the entire issued and outstanding stock of the Corporation, and (b) that no stockholder owned of record as of said date five per centum (5%) or more of the issued and outstanding stock of the Corporation of any class. [If different classes of stock exist, give the same information for each class issued and outstanding, showing the monetary value and voting rights per share in each class. If there is an exception to the statement in clause (b), the name, address, and citizenship of the stockholder and the amount and class of stock owned should be stated and the required citizenship information on such stockholder must be submitted.] That the registered addresses of (Number) owners of record of (Number) shares of the issued and outstanding (Class) stock of the Corporation are shown on the stock books and records of the Corporation as being within the United States, said _____ shares being _____ per centum

(____%) of the total number of shares of said stock (each class). [The exact figure as disclosed by the stock books of the corporation must be given and the per centum figure must not be less than 65 per centum for a state or federally chartered financial institution holding a Preferred Mortgage, or not less than 95 per centum for an entity that is demonstrating ownership in a vessel for which a fishery endorsement is sought or a Mortgage Trustee. These per centum figures apply to corporate stockholders as well as to the primary corporation.] (The same statement should be made with reference to each class of stock, if there is more than one class.);

4. Information as to stock, where Corporation has less than 30 stockholders: That the information as to stock ownership, upon which the Corporation relies to establish that 75% of the stock ownership is vested in Citizens of the United States, is as follows:

Name of Stockholder	Number of shares owned (each class)	Percentage of shares owned (each class)
Name	Number and Class	Number and Class

and that each of said individual stockholders is a Citizen of the United States by virtue of birth in the United States, birth abroad of U.S. citizen parents, by naturalization during minority through the naturalization of a parent, by marriage (if a woman) to a U.S. citizen prior to September 22, 1922, or as otherwise authorized by law. *Note:* If a corporate stockholder, give information with respect to State of incorporation, the names of the officers, directors, and stockholders and the appropriate percentage of shares held, with statement that they are all U.S. citizens. Nominee holders of record of 5% or more of any class of stock and the beneficial owners thereof should be named and their U.S. citizenship information submitted to MARAD.

4. Information as to stock, where Corporation's shares are publicly traded on a U.S. stock exchange:

That the Corporation has diligently employed, administered, and adhered to methods such as those identified at 46 CFR 356.5(g) to monitor the Corporation's stock ownership; and that, based on the foregoing, the percentage of shares of the Corporation owned by Citizens of the United States is 75% or greater.

5. That 75% of the interest in (each) said Corporation, as established by the information hereinbefore set forth, is

owned by Citizens of the United States; that the title to 75% of the stock of (each) class of the stock of (each) said Corporation is vested in Citizens of the United States free from any trust or fiduciary obligation in favor of any person not a Citizen of the United States; that such proportion of the voting power of (each) said Corporation is vested in Citizens of the United States; that through no contract or understanding is it so arranged that more than 25% of the voting power of (each) said Corporation may be exercised, directly or indirectly, in behalf of any person who is not a Citizen of the United States; and that by no means whatsoever, is any interest in said Corporation in excess of 25% conferred upon or permitted to be exercised by any person who is not a Citizen of the United States; and

[Note: For state or federally chartered financial institutions acting as Preferred Mortgagees, the Controlling Interest language, which is set forth below, is applicable.]

5. That the Controlling Interest in (each) said Corporation, as established by the information hereinbefore set forth, is owned by Citizens of the United States; that the title to a majority of the stock of (each) said Corporation is vested in Citizens of the United States free from any trust or fiduciary

obligation in favor of any person not a Citizen of the United States; that such proportion of the voting power of (each) said Corporation is vested in Citizens of the United States; that through no contract or understanding is it so arranged that the majority of the voting power of (each) said Corporation may be exercised, directly or indirectly, in behalf of any person who is not a Citizen of the United States; and that by no means whatsoever, is control of (each) said Corporation conferred upon or permitted to be exercised by any person who is not a Citizen of the United States; and

6. That the affiant has submitted all the necessary documentation required under 46 CFR 356.13 in connection with this Affidavit of U.S. Citizenship for the following vessel(s):

Vessel Name: Official Number:

- 1.
- 2.

[Note: Paragraph 6 should be included in the Affidavit of U.S. Citizenship submitted by an entity that owns a Fishing Industry Vessel.]

7. That affiant has carefully examined this Affidavit and asserts that all the statements and representations contained therein are true to the best of their knowledge, information, and belief.

(Name and title of affiant)

(Signature of affiant)

Date

Penalty for False Statement: A fine or imprisonment, or both, are provided for violation of the proscriptions contained in 18 U.S.C. 1001 (*see also*, 18 U.S.C. 286, 287 and 46 U.S.C. 12151).

■ 4. In § 356.5 revise paragraph (g) to read as follows:

§ 356.5(g) It is incumbent upon the parties filing affidavits under this part to notify the Citizenship Approval Officer in writing within 30 calendar days of any changes in information last furnished with respect to the officers, directors, and stockholders, including 5 percent or more stockholders of the issued and outstanding stock of each class, together with information concerning their citizenship status. If other than a corporation, comparable information must be filed by other entities owning the Fishing Industry Vessel, including any entity whose ownership interest is being relied upon to establish 75% ownership by Citizens of the United States; (2) if the information contained in an owner's most recent affidavit of citizenship filing has not changed, as an alternative to submitting an annual affidavit of citizenship under this part, a party may file a certification with the Maritime Administration. The certification should be substantially in the following format: "I, _____, [Title] of [Name of Corporation] ("Corporation"), being duly authorized by the Corporation, certify to you that there have been no changes to the ownership information contained in the affidavit of citizenship filed with the Maritime Administration on [Date]."

This certification is subject to penalty for false statement. A fine or imprisonment, or both, are provided for violation of the proscriptions contained in 18 U.S.C. 1001 (*see also*, 18 U.S.C. 286, 287 and 46 U.S.C. 12151).

§ 356.7 [Amended]

■ 5. In § 356.7

(a) Revise paragraph (c) to read as follows:

§ 356.7(c):

(c) The "fair inference method" is used by corporations whose stock is publicly traded or is held by more than 30 stockholders.

(1) Use of the fair inference method for a publicly traded corporation requires that:

(i) At least 95 percent of the stock (each class) of the corporation be held directly or beneficially by Persons having a U.S. address in order to infer

at least 75 percent ownership by U.S. Citizens; and

(ii) For determining the requisite percentage of stockholders with U.S. addresses, the corporation may rely on the methods outlined in § 356.7(e);

(2) Use of the fair inference method for a non-publicly traded corporation with more than 30 stockholders requires that:

(i) At least 95 percent of the stock (each class) of the corporation be held by Persons having a registered U.S. address in order to infer at least 75 percent ownership by U.S. Citizens; and

(ii) Disclosure be made in the Affidavit of U.S. Citizenship of the names and citizenship of any stockholders who hold five percent or more of the corporation's stock (including all classes of stock, voting and non-voting), officers, and directors.

(b) Add a paragraph (e) to read as follows:

§ 356.7(e) If the corporation is publicly traded, the corporation may employ any number or combination of methods to measure, monitor, determine, and affirm the required percentage of U.S. citizen share ownership for the primary corporation, including the following:

(i) Use of the Depository Trust Company segregated account (or "SEG-100") system;

(ii) Monitoring Securities and Exchange Commission filings for 5% holders (Schedules 13D, 13G, Form 13F) and requesting citizenship information from those filers;

(iii) Use of protective provisions in organizational documents in order to guard against and rectify the possibility of excess non-citizen share ownership;

(iv) Communications with Non-Objecting Beneficial Owners (or "NOBOs");

(v) Geographic surveys of shareholder addresses provided by proxy service providers;

(vi) Analysis of registered stockholders and use of dual stock certificates; and

(vii) Alternative methods upon written approval of the Citizenship Approval Officer.

§ 356.19 [Amended]

■ 7. In § 356.19:

■ (a) In paragraph (a)(5), remove "12102(a)" and, in its place, add "12103".

■ (b) In paragraph (b)(1), remove "46 U.S.C. 12102(c) and section 2(c) of the 1916 Act" and, in its place, add "46 U.S.C. 12113 and 46 U.S.C. 50501(d)".

■ (c) In paragraph (b)(6), remove "12102(c)" and, in its place, add "12113".

§ 356.25 [Amended]

■ 8. In § 356.25:

■ (a) In paragraph (e), remove "section 2(c) of the 1916 Act, 46 App. U.S.C. 802(c) and 46 U.S.C. 12102(c)" and, in its place, add "46 U.S.C. 12113 and 46 U.S.C. 50501(d)".

§ 356.51 [Amended]

■ 9. In § 356.51(a), remove "12102(c)" and, in its place, add "12113".

§ 356.53 [Amended]

■ 10. In § 356.53, remove "Room 7228, 400 7th Street, SW" and in its place, add "Mail Stop #4, 1200 New Jersey Avenue SE".

(Authority: 46 U.S.C. 12113(e), 12151, 31322, 49 CFR 1.93)

By order of the Maritime Administration.

T. Mitchell Hudson, Jr.,

Secretary, Maritime Administration.

BILLING CODE 4910-81-P

DEPARTMENT OF TRANSPORTATION

Pipeline and Hazardous Materials Safety Administration

49 CFR Part 107

[Docket No. PHMSA-2025-0095 (HM-268G)]

RIN 2137-AG09

Hazardous Materials: Improving Efficiencies for Special Permits and Approvals Renewals

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), Department of Transportation (DOT).

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This NPRM streamlines the Hazardous Materials Regulations by allowing a grantee to file an application to renew a special permit or approval any time before its expiration date rather than requiring the application to be filed 60 days in advance.

DATES: Comments must be received on or before September 2, 2025.

ADDRESSES: You may submit comments identified by the Docket Number PHMSA-2025-0095 using any of the following methods:

E-Gov Web: <https://www.regulations.gov>. This site allows the public to enter comments on any **Federal Register** notice issued by any agency. Follow the online instructions for submitting comments.

Mail: Docket Management System: U.S. Department of Transportation, 1200

New Jersey Avenue SE, West Building Ground Floor, Room W12-140, Washington, DC 20590-0001.

Hand Delivery: U.S. DOT Docket Management System: West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Fax: 1-202-493-2251.

Instructions: Please include the docket number PHMSA-2025-0095 at the beginning of your comments. If you submit your comments by mail, submit two copies. If you wish to receive confirmation that PHMSA received your comments, include a self-addressed stamped postcard. Internet users may submit comments at <https://www.regulations.gov>.

Note: Comments are posted without changes or edits to <https://www.regulations.gov>, including any personal information provided. There is a privacy statement published on <https://www.regulations.gov>.

Privacy Act: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to <https://www.regulations.gov>, as described in the system of records notice (DOT/ALL-14 FDMS), which can be reviewed at <https://www.dot.gov/privacy>.

Confidential Business Information: Confidential Business Information (CBI) is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA, 5 U.S.C. 552), CBI is exempt from public disclosure. It is important that you clearly designate the comments submitted as CBI if: your comments responsive to this document contain commercial or financial information that is customarily treated as private; you actually treat such information as private; and your comment is relevant or responsive to this notice. You may ask PHMSA to provide confidential treatment to information you give to the agency by taking the following steps: (1) mark each page of the original document submission containing CBI as "Confidential"; (2) send PHMSA, along with the original document, a second copy of the original document with the CBI deleted; and (3) explain why the information that you are submitting is CBI. Submissions containing CBI should be sent to Steven Andrews, Standards and Rulemaking Division, Pipeline and Hazardous Materials Safety Administration (PHMSA), 2nd Floor,

1200 New Jersey Avenue SE, Washington, DC 20590-0001, or by email at steven.andrews@dot.gov. Any materials PHMSA receives that is not specifically designated as CBI will be placed in the public docket.

Docket: For access to the docket to read background documents or comments received, go to <http://www.regulations.gov>. Follow the online instructions for accessing the docket. Alternatively, you may review the documents in person at the street address listed above.

FOR FURTHER INFORMATION CONTACT: Steven Andrews, Transportation Regulations Specialist, 1200 New Jersey Avenue SE, Washington, DC 20590, 202-366-8553, steven.andrews@dot.gov.

I. General Discussion

PHMSA is proposing to revise certain provisions in Part 107 of Chapter I of Title 49 of the Code of Federal Regulations (CFR) to eliminate unnecessary regulatory burdens. Specifically, PHMSA is proposing to revise the filing requirements in §§ 107.109(b) and 107.705(c) for special permits and approvals. The current requirements in § 107.109(b) for special permits and § 107.705(c) for approvals state that an applicant must apply for a renewal at least 60 days before an existing special permit or approval expires. This proposed revision would streamline the renewal process by allowing for the grantee to apply for a renewal any time up until the expiration of the current special permit.

PHMSA has made a preliminary determination that the current 60-day requirement is overly burdensome and no longer necessary. When PHMSA originally codified that requirement into §§ 107.109(b) and 107.705(c), the application process relied on postal correspondence and a manual paper document system. A 60-day filing period was incorporated into the regulations to allow for mail delivery and manual typing of correspondence. That 60-day period is no longer necessary as the filing process is now completed electronically via the internet and longer relies on mail delivery and paper correspondence.

For these reasons, PHMSA is proposing to revise § 107.109(b) to change "at least 60 days before an existing special permit expires" to "before an existing special permit expires." PHMSA also is proposing to revise § 107.705(c) to change "at least 60 days before an existing approval expires" to "before an existing approval expires," and to change "not filed within 60 days of the expiration date" to "not filed before the expiration date."

PHMSA does not expect that the proposed revisions will have any adverse impact on transportation safety.

II. Regulatory Analysis and Notices

A. Legal Authority

This proposed rule is published under the authority of the Secretary of Transportation set forth in the Federal Hazardous Materials Transportation Laws (49 U.S.C. 5101 *et seq.*) and delegated to the PHMSA Administrator pursuant to 49 CFR 1.97.

B. Executive Orders 12866; Regulatory Planning and Review

Executive Order (E.O.) 12866 ("Regulatory Planning and Review"),¹ as implemented by DOT Order 2100.6B ("Policies and Procedures for Rulemaking"), requires agencies to regulate in the "most cost-effective manner," to make a "reasoned determination that the benefits of the intended regulation justify its costs," and to develop regulations that "impose the least burden on society." DOT Order 2100.6B specifies that regulations should generally "not be issued unless their benefits are expected to exceed their costs." In arriving at those conclusions, E.O. 12866 requires that agencies should consider "both quantifiable measures . . . and qualitative measures of costs and benefits that are difficult to quantify" and "maximize net benefits . . . unless a statute requires another regulatory approach." E.O. 12866 also requires that "agencies should assess all costs and benefits of available regulatory alternatives, including the alternative of not regulating." DOT Order 2100.6B directs that PHMSA and other Operating Administrations must generally choose the "least costly regulatory alternative that achieves the relevant objectives" unless required by law or compelling safety need.

E.O. 12866 and DOT Order 2100.6B also require that PHMSA submit "significant regulatory actions" to the Office of Information and Regulatory Affairs (OIRA) within the Executive Office of the President's Office of Management and Budget (OMB) for review. This proposed rule is a not significant regulatory action pursuant to E.O. 12866; it also has not designated this rule as a "major rule" as defined by the Congressional Review Act (5 U.S.C. 801 *et seq.*).

PHMSA has complied with the requirements in E.O. 12866 as implemented by DOT Order 2100.6B and preliminarily determined that this

¹ 58 FR 51735 (Oct. 4, 1993).

proposed rule will result in cost savings by reducing regulatory burdens and regulatory uncertainty for affected entities by simplifying the special permit and approval renewal procedures. PHMSA expects those cost savings will also result in reduced costs for the public to whom those entities generally transfer a portion of their compliance costs.

C. Executive Orders 14192 and 14219

This proposed rule, if finalized as proposed, is expected to be an E.O. 14192 deregulatory action.² PHMSA seeks data that would be helpful to generate an estimate of the cost savings from this rule. PHMSA's initial estimates are that the total costs of the rule on the regulated community will be less than zero. Nor does this proposed rule does implicate any of the factors identified in section 2(a) of E.O. 14219 indicative of a regulation that is "unlawful . . . [or] that undermine[s] the national interest."³

D. Energy-Related Executive Orders 13211, 14154, and 14156

The President has declared in E.O. 14156 ("Declaring a National Energy Emergency")⁴ a national emergency to address the United States's inadequate energy development production, transportation, refining, and generation capacity. Similarly, E.O. 14154 ("Unleashing American Energy")⁵ asserts a Federal policy to unleash American energy by ensuing access to abundant supplies of reliable, affordable energy from (inter alia) the removal of "undue burden[s]" on the identification, development, or use of domestic energy resources such as PHMSA-jurisdictional shippers and carriers of hazardous materials. PHMSA preliminarily finds this proposed rule is consistent with each of E.O. 14156 and E.O. 14154. The proposed rule will give affected entities greater flexibility for renewing special permits and permits by reducing the time period required for submitting their renewal. PHMSA therefore expects the regulatory amendments in this proposed rule will contribute to the ability of hazardous material shippers and carriers to provide abundant, reliable, affordable energy-related products in response to residential, commercial, and industrial demand.

However, this proposed rule is not a "significant energy action" under E.O. 13211 ("Actions Concerning Regulations That Significantly Affect

Energy Supply, Distribution, or Use"), which requires Federal agencies to prepare a Statement of Energy Effects for any "significant energy action." Because this proposed rule is not a significant action under E.O. 12866, it will not have a significant adverse effect on supply, distribution, or energy use; and OIRA has therefore not designated this proposed rule as a significant energy action.

E. Executive Order 13132: Federalism

PHMSA analyzed this proposed rule in accordance with the principles and criteria contained in E.O. 13132 ("Federalism")⁶ and the Presidential Memorandum ("Preemption") published in the **Federal Register** on May 22, 2009.⁷ E.O. 13132 requires agencies to assure meaningful and timely input by State and local officials in the development of regulatory policies that may have "substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government." The Federal Hazardous Materials Transportation laws contain an express preemption provision at 49 U.S.C. 5125(b) that preempts state, local, and tribal requirements on certain covered subjects, unless the non-federal requirements are "substantively the same" as the federal requirements, including the following:

- (1) The designation, description, and classification of hazardous material;
- (2) The packing, repacking, handling, labeling, marking, and placarding of hazardous material;
- (3) The preparation, execution, and use of shipping documents related to hazardous material and requirements related to the number, contents, and placement of those documents;
- (4) The written notification, recording, and reporting of the unintentional release in transportation of hazardous material; and
- (5) The design, manufacture, fabrication, inspection, marking, maintenance, recondition, repair, or testing of a packaging or container represented, marked, certified, or sold as qualified for use in transporting hazardous material in commerce.

This proposed rule addresses covered subject items paragraph I above and would preempt state, local, and Tribal requirements not meeting the "substantively the same" standard.

While the proposed rule may operate to

preempt some State requirements, it would not impose any regulation that has substantial direct effects on the States, the relationship between the National Government and the States, or the distribution of power and responsibilities among the various levels of government. The preemptive effect of the regulatory amendments in this proposed rule is limited to the minimum level necessary to achieve the objectives of the Federal Hazardous Materials Transportation laws. Therefore, the consultation and funding requirements of E.O. 13132 do not apply.

F. Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires Federal agencies to conduct an Initial Regulatory Flexibility Analysis (IRFA) for a proposed rule subject to notice-and-comment rulemaking under the APA unless the agency head certifies that the proposed rule in the rulemaking will not have a significant economic impact on a substantial number of small entities. E.O. 13272 ("Proper Consideration of Small Entities in Agency Rulemaking")⁸ obliges agencies to establish procedures promoting compliance with the Regulatory Flexibility Act. DOT posts its implementing guidance on a dedicated web page.⁹ This proposed rule was developed in accordance with E.O. 13272 and DOT implementing guidance to ensure compliance with the Regulatory Flexibility Act. The proposed rule is expected to reduce burdens. Therefore, PHMSA certifies the proposed rule does not have a significant impact on a substantial number of small entities.

G. Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act (UMRA, 2 U.S.C. 1501 *et seq.*) requires agencies to assess the effects of Federal regulatory actions on State, local, and Tribal governments, and the private sector. For any proposed or direct final rule that includes a Federal mandate that may result in the expenditure by state, local, and Tribal governments, in the aggregate of \$100 million or more (in 1996 dollars) in any given year, the agency must prepare, amongst other things, a written statement that qualitatively and quantitatively assesses the costs and benefits of the Federal mandate.

³ 90 FR 10583 (Feb. 19, 2025).

⁴ 90 FR 8353 (Jan. 29, 2025).

⁵ 90 FR 8353 (Jan. 29, 2025).

⁶ 64 FR 43255 (Aug. 10, 1999).

⁷ 74 FR 24693 (May 22, 2009).

⁸ 67 FR 53461 (Aug. 16, 2002).
⁹ DOT, "Rulemaking Requirements Related to Small Entities," <https://www.transportation.gov/regulations/rulemaking-requirements-concerning-small-entities> (last accessed Sept 3, 2024).

This proposed rule does not impose unfunded mandates under UMRA because it does not result in costs of \$100 million or more (in 1996 dollars) per year for either State, local, or Tribal governments, or to the private sector.

H. National Environmental Policy Act

The National Environmental Policy Act (NEPA, 42 U.S.C. 4321 *et seq.*) requires that Federal agencies assess and consider the impact of major Federal actions on the human and natural environment.

PHMSA analyzed this proposed rule in accordance with NEPA and has preliminarily determined that the rulemaking will not adversely affect safety and therefore will not significantly affect the quality of the human and natural environment. The public is invited to comment on the impact of the proposed action.

I. Executive Order 13175

PHMSA analyzed this proposed rule according to the principles and criteria in E.O. 13175 (“Consultation and Coordination with Indian Tribal Governments”) ¹⁰ and DOT Order 5301.1A (“Department of Transportation Tribal Consultation Policies and Procedures”). E.O. 13175 requires agencies to assure meaningful and timely input from Tribal government representatives in the development of rules that significantly or uniquely affect Tribal communities by imposing “substantial direct compliance costs” or “substantial direct effects” on such communities or the relationship or distribution of power between the Federal government and Tribes.

PHMSA assessed the impact of the proposed rule and determined that it will not significantly or uniquely affect Tribal communities or Indian Tribal governments. The rulemaking’s regulatory amendments have a broad, national scope; therefore, this proposed rule will not significantly or uniquely affect Tribal communities, much less impose substantial compliance costs on Native American Tribal governments or mandate Tribal action. For these reasons, PHMSA has concluded that the funding and consultation requirements of E.O. 13175 and DOT Order 5301.1A do not apply.

J. Paperwork Reduction Act

The Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*) and its implementing regulations at 5 CFR 1320.8(d) requires that PHMSA provide interested members of the public and affected agencies with an opportunity to

comment on information collection and recordkeeping requests. This rulemaking will not create, amend, or rescind any existing information collections.

K. Executive Order 13609 and International Trade Analysis

E.O. 13609 (“Promoting International Regulatory Cooperation”) ¹¹ requires agencies consider whether the impacts associated with significant variations between domestic and international regulatory approaches are unnecessary or may impair the ability of American business to export and compete internationally. In meeting shared challenges involving health, safety, labor, security, environmental, and other issues, international regulatory cooperation can identify approaches that are at least as protective as those that are or would be adopted in the absence of such cooperation. International regulatory cooperation can also reduce, eliminate, or prevent unnecessary differences in regulatory requirements.

Similarly, the Trade Agreements Act of 1979 (Pub. L. 96–39), as amended by the Uruguay Round Agreements Act (Pub. L. 103–465), prohibits Federal agencies from establishing any standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the United States. For purposes of these requirements, Federal agencies may participate in the establishment of international standards, so long as the standards have a legitimate domestic objective, such as providing for safety, and do not operate to exclude imports that meet this objective. The statute also requires consideration of international standards and, where appropriate, that they be the basis for U.S. standards.

PHMSA engages with international standards setting bodies to protect the safety of the American public. PHMSA has assessed the effects of the proposed rule and has determined that its regulatory amendments will not cause unnecessary obstacles to foreign trade.

L. Cybersecurity and Executive Order 14028

E.O. 14028 (“Improving the Nation’s Cybersecurity”) ¹² directed the Federal government to improve its efforts to identify, deter, and respond to “persistent and increasingly sophisticated malicious cyber campaigns.” PHMSA has considered the effects of the proposed and has determined that its regulatory

amendments would not materially affect the cybersecurity risk profile for affected entities.

List of Subjects in 49 CFR Part 107

Administrative practice and procedure, Hazardous materials transportation, Penalties, Reporting and recordkeeping requirements.

For the reasons set forth above, PHMSA proposes to amend 49 CFR part 107 as follows:

PART 107—HAZARDOUS MATERIALS PROGRAM PROCEDURES

- 1. The authority citation for part 107 continues to read as follows:

Authority: 49 U.S.C. 5101–5128, 44701; Pub. L. 101–410 Section 4; Pub. L. 104–121 Sections 212–213; Pub. L. 104–134 Section 31001; Pub. L. 114–74 Section 701 (28 U.S.C. 2461 note); 49 CFR 1.81 and 1.97; 33 U.S.C. 1321.

- 2. In § 107.109, revise paragraph (b) to read as follows:

§ 107.109 Application for renewal.

* * * * *

(b) If the holder submits a complete renewal application meeting the requirements outlined in this section before the expiration of an existing special permit, the special permit will not expire until final administrative action on the renewal application has been taken.

* * * * *

- 3. In § 107.705, revise paragraph (c) to read as follows:

§ 107.705 Registrations, reports, and applications for approval.

* * * * *

(c) For an approval with an expiration date, each application for renewal or modification must be filed in the same manner as an original application. If, before an existing approval expires the holder files an application for renewal that is complete and conforms to the requirements of this section, the approval will not expire until final administrative action on the application for renewal has been taken. Operation under an expired approval not filed before the expiration date is prohibited. This paragraph does not limit the authority of the Associate Administrator to modify, suspend, or terminate an approval under § 107.713.

* * * * *

Issued in Washington, DC, on June 26, 2025, under the authority delegated in 49 CFR 1.97.

Benjamin D. Kochman,
Acting Administrator.

DEPARTMENT OF TRANSPORTATION**Pipeline and Hazardous Materials
Safety Administration****49 CFR Part 107****[Docket No. PHMSA–2025–0096 (HM–268H)]****RIN 2137–AG10****Hazardous Materials: Modernizing
Payments To and From America's
Bank Account****AGENCY:** Pipeline and Hazardous Materials Safety Administration (PHMSA), Department of Transportation (DOT).**ACTION:** Notice of Proposed Rulemaking (NPRM).

SUMMARY: PHMSA proposes to modernize the payment system for hazardous materials registration to require electronic submissions via the Department of Transportation (DOT) e-Commerce internet site and eliminate the option to pay using a paper check. This revision is intended to increase government efficiency by eliminating the burdens associated with processing paper checks from the regulatory community.

DATES: Comments must be received on or before September 2, 2025.

ADDRESSES: You may submit comments identified by the Docket Number PHMSA–2025–0096 using any of the following methods:

E-Gov Web: <https://www.regulations.gov>. This site allows the public to enter comments on any Federal Register notice issued by any agency. Follow the online instructions for submitting comments.

Mail: Docket Management System: U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building Ground Floor, Room W12–140, Washington, DC 20590–0001.

Hand Delivery: U.S. DOT Docket Management System: West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Fax: 1–202–493–2251.

Instructions: Please include the docket number PHMSA–2025–0096 at the beginning of your comments. If you submit your comments by mail, submit two copies. If you wish to receive confirmation that PHMSA received your comments, include a self-addressed stamped postcard. Internet users may submit comments at <https://www.regulations.gov>.

Note: Comments are posted without changes or edits to <https://www.regulations.gov>.

www.regulations.gov, including any personal information provided. There is a privacy statement published on <https://www.regulations.gov>.

Privacy Act: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to <https://www.regulations.gov>, as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at <https://www.dot.gov/privacy>.

Confidential Business Information: Confidential Business Information (CBI) is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA, 5 U.S.C. 552), CBI is exempt from public disclosure. It is important that you clearly designate the comments submitted as CBI if: your comments responsive to this document contain commercial or financial information that is customarily treated as private; you actually treat such information as private; and your comment is relevant or responsive to this notice. You may ask PHMSA to provide confidential treatment to information you give to the agency by taking the following steps: (1) mark each page of the original document submission containing CBI as “Confidential”; (2) send PHMSA, along with the original document, a second copy of the original document with the CBI deleted; and (3) explain why the information that you are submitting is CBI. Submissions containing CBI should be sent to Yul B. Baker Jr., Office Hazardous Materials Safety, Pipeline and Hazardous Materials Safety Administration (PHMSA), 2nd Floor, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, or by email at yul.baker@dot.gov. Any materials PHMSA receives that is not specifically designated as CBI will be placed in the public docket.

Docket: For access to the docket to read background documents or comments received, go to <http://www.regulations.gov>. Follow the online instructions for accessing the docket. Alternatively, you may review the documents in person at the street address listed above.

FOR FURTHER INFORMATION CONTACT: Yul B. Baker Jr., Transportation Regulation Specialist, 1200 New Jersey Avenue SE, Washington, DC 20590, 202–366–8553, yul.baker@dot.gov.

I. General Discussion

In accordance with Executive Order (E.O.) 14247, “Modernizing Payments

To and From America's Bank Account,”¹ PHMSA proposes to revise a payment provision for its registration and fee program at Title 49, Chapter I, Part 107, Subpart G of the Code of Federal Regulations (CFR). Specifically, PHMSA proposes to revise § 107.616 “Payment procedures” to require electronic only payment and eliminate the option to pay registration fees using a paper check.

E.O. 14247 provides that, as soon as practicable and to the extent permitted by law, all payment to the Federal Government must be processed electronically. E.O. 14247 further states that the Secretary of the Treasury must take appropriate action to eliminate the need for the Department of the Treasury's (“Treasury”) physical lockbox services, and to expedite requirements to receive the payment of Federal receipts, including fees, through electronic means.

PHMSA has historically used the lockbox system for collecting checks for its registration program fee payments. The Treasury has indicated that it will soon no longer be servicing the PHMSA lockbox because of the continually decreasing number of check payments using the system. The increased use of electronic payments made online to PHMSA versus mailed paper checks greatly minimizes the need to maintain a lockbox. To meet the Treasury's lockbox closure initiative, PHMSA is proposing that payments for hazardous materials registration fees will only be accepted electronically moving forward.

Currently, § 107.616(a) instructs each person subject to the registration requirements to either mail their payment in full to the U.S. Department of Transportation or submit the statement and payment electronically through the Department's e-Commerce internet site. Section 107.616(b) also instructs a person to make a payment by certified check, cashier's check, personal check, or money order in U.S. funds and drawn on a U.S. bank that is payable to the U.S. Department of Transportation” or by completing an authorization for payment by credit card or other electronic means of payment acceptable to the Department.

Consistent with the requirements and Treasury's efforts to implement E.O. 14247, PHMSA proposes to revise the payment method for the registration program and fee in § 107.616 to electronic only. PHMSA does not expect the proposed revisions to have any adverse impact on safety.

¹ 90 FR 14001 (Mar. 25, 2025).

II. Regulatory Analysis and Notices

A. Legal Authority

This proposed rulemaking is published under the authority of the Secretary of Transportation set forth in the Federal Hazardous Materials Transportation Laws (49 U.S.C. 5101 *et seq.*) and delegated to the PHMSA Administrator pursuant to 49 CFR 1.97.

B. Executive Orders 12866; Regulatory Planning and Review

Executive Order (E.O.) 12866 (“Regulatory Planning and Review”),² as implemented by DOT Order 2100.6B (“Policies and Procedures for Rulemaking”), requires agencies to regulate in the “most cost-effective manner,” to make a “reasoned determination that the benefits of the intended regulation justify its costs,” and to develop regulations that “impose the least burden on society.” DOT Order 2100.6B specifies that regulations should generally “not be issued unless their benefits are expected to exceed their costs.” In arriving at those conclusions, E.O. 12866 requires that agencies should consider “both quantifiable measures . . . and qualitative measures of costs and benefits that are difficult to quantify” and “maximize net benefits . . . unless a statute requires another regulatory approach.” E.O. 12866 also requires that “agencies should assess all costs and benefits of available regulatory alternatives, including the alternative of not regulating.” DOT Order 2100.6B directs that PHMSA and other Operating Administrations must generally choose the “least costly regulatory alternative that achieves the relevant objectives” unless required by law or compelling safety need.

E.O. 12866 and DOT Order 2100.6B also require that PHMSA submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) within the Executive Office of the President’s Office of Management and Budget (OMB) for review. This proposed rule is a not significant regulatory action pursuant to E.O. 12866; it also has not designated this proposed rule as a “major rule” as defined by the Congressional Review Act (5 U.S.C. 801 *et seq.*).

PHMSA has complied with the requirements in E.O. 12866 as implemented by DOT Order 2100.6B and made a preliminary determination that the proposed rule for electronic-only payments will not generate significant economic costs but will enhance efficiency. PHMSA anticipates

a small, but not significant, cost savings to government due to the change to electronic-only payment in the amended 49 CFR 107.616, primarily as a result of no longer having to dedicate resources to processing paper forms and checks. For regulated parties that have previously chosen to pay by mailing in a check with their registration statement, PHMSA expects the cost of adjusting to the electronic system would be negligible.

C. Executive Orders 14192 and 14219

This proposed rule, if finalized as proposed, is expected to be an E.O. 14192 deregulatory action.³ PHMSA seeks data that would be helpful to generate an estimate of the cost savings from this rule. PHMSA’s initial estimates are that the total costs of the rule on the regulated community will be less than zero. Nor does this proposed rule does implicate any of the factors identified in section 2(a) of E.O. 14219 indicative of a regulation that is “unlawful . . . [or] that undermine[s] the national interest.”⁴

D. Energy-Related Executive Orders 13211, 14154, and 14156

PHMSA has analyzed this proposed rulemaking in accordance with the principles and criteria contained in E.O. 14156 (“Declaring a National Energy Emergency”) ⁵ and E.O. 14154 (“Unleashing American Energy”).⁶ Respectively, the President has declared a national emergency to address the United States’s inadequate energy development production, transportation, refining, and generation capacity and asserts a Federal policy to unleash American energy by ensuring access to abundant supplies of reliable, affordable energy from (inter alia) the removal of “undue burden[s]” on the identification, development, or use of domestic energy resources. PHMSA preliminarily finds this proposed rule is consistent with each of E.O. 14156 and E.O. 14154 because it will not hinder or unduly burden the transportation or production of energy or energy-related products.

However, this proposed rule is not a “significant energy action” under E.O. 13211 (“Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use”), which requires Federal agencies to prepare a Statement of Energy Effects for any “significant energy action.” Because this proposed rule is not a significant

action under E.O. 12866, it will not have a significant adverse effect on supply, distribution, or energy use; and OIRA has therefore not designated this proposed rule as a significant energy action.

E. Executive Order 13132: Federalism

PHMSA analyzed this proposed rulemaking in accordance with the principles and criteria contained in E.O. 13132 (“Federalism”) ⁷ and the Presidential Memorandum (“Preemption”) published in the **Federal Register** on May 22, 2009.⁸ E.O. 13132 requires agencies to assure meaningful and timely input by State and local officials in the development of regulatory policies that may have “substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government.” The Federal Hazardous Materials Transportation laws contain an express preemption provision at 49 U.S.C. 5125(b) that preempts state, local, and tribal requirements on certain covered subjects, unless the non-federal requirements are “substantively the same” as the federal requirements, including the following:

- (1) The designation, description, and classification of hazardous material;
- (2) The packing, repacking, handling, labeling, marking, and placarding of hazardous material;
- (3) The preparation, execution, and use of shipping documents related to hazardous material and requirements related to the number, contents, and placement of those documents;
- (4) The written notification, recording, and reporting of the unintentional release in transportation of hazardous material; and
- (5) The design, manufacture, fabrication, inspection, marking, maintenance, recondition, repair, or testing of a packaging or container represented, marked, certified, or sold as qualified for use in transporting hazardous material in commerce.

This proposed rulemaking does not address any of the covered subject items above that would preempt state, local, and Tribal requirements not meeting the “substantively the same” standard. Therefore, the consultation and funding requirements of E.O. 13132 do not apply.

³ 90 FR 9065 (Jan. 31, 2025).

⁴ 90 FR 10583 (Feb. 19, 2025).

⁵ 90 FR 8353 (Jan. 29, 2025).

⁶ 90 FR 8353 (Jan. 29, 2025).

⁷ 64 FR 43255 (Aug. 10, 1999).

⁸ 74 FR 24693 (May 22, 2009).

² 58 FR 51735 (Oct. 4, 1993).

F. Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires Federal agencies to conduct an Initial Regulatory Flexibility Analysis (IRFA) for a proposed rule subject to notice-and-comment rulemaking under the APA unless the agency head certifies that the proposed change in the rulemaking will not have a significant economic impact on a substantial number of small entities. E.O. 13272 (“Proper Consideration of Small Entities in Agency Rulemaking”)⁹ obliges agencies to establish procedures promoting compliance with the Regulatory Flexibility Act. DOT posts its implementing guidance on a dedicated web page.¹⁰ This proposed rule was developed in accordance with E.O. 13272 and DOT implementing guidance to ensure compliance with the Regulatory Flexibility Act and that the potential impacts of the rulemaking on small entities has been properly considered. The number of entities currently paying registration fees with paper checks is currently less than 1,000 per year, and PHMSA believes the majority of small businesses would be able to make electronic payments without incurring significant costs. PHMSA certifies the proposed rule (if finalized) will not have a significant impact on a substantial number of small entities.

G. Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act (UMRA, 2 U.S.C. 1501 *et seq.*) requires agencies to assess the effects of Federal regulatory actions on State, local, and Tribal governments, and the private sector. For any proposed rule that includes a Federal mandate that may result in the expenditure by state, local, and Tribal governments, in the aggregate of \$100 million or more (in 1996 dollars) in any given year, the agency must prepare, amongst other things, a written statement that qualitatively and quantitatively assesses the costs and benefits of the Federal mandate.

This proposed rule does not impose unfunded mandates under UMRA because it does not result in costs of \$100 million or more (in 1996 dollars) per year for either State, local, or Tribal governments, or to the private sector.

H. National Environmental Policy Act

The National Environmental Policy Act (NEPA, 42 U.S.C. 4321 *et seq.*) requires that Federal agencies assess and consider the impact of major Federal actions on the human and natural environment.

PHMSA analyzed this proposed rule in accordance with NEPA and has preliminarily determined that the rulemaking will not adversely affect safety and, therefore, will not significantly affect the quality of the human and natural environment. The public is invited to comment on the impact of the proposed action.

I. Executive Order 13175

PHMSA analyzed this proposed rule according to the principles and criteria in E.O. 13175 (“Consultation and Coordination with Indian Tribal Governments”)¹¹ and DOT Order 5301.1A (“Department of Transportation Tribal Consultation Policies and Procedures”). E.O. 13175 requires agencies to assure meaningful and timely input from Tribal government representatives in the development of rules that significantly or uniquely affect Tribal communities by imposing “substantial direct compliance costs” or “substantial direct effects” on such communities or the relationship or distribution of power between the Federal government and Tribes.

PHMSA assessed the impact of the proposed rule and determined that it will not significantly or uniquely affect Tribal communities or Indian Tribal governments. The rulemaking’s regulatory amendments have a broad, national scope; therefore, this proposed rule will not significantly or uniquely affect Tribal communities, much less impose substantial compliance costs on Native American Tribal governments or mandate Tribal action. For these reasons, PHMSA has concluded that the funding and consultation requirements of E.O. 13175 and DOT Order 5301.1A do not apply.

J. Paperwork Reduction Act

The Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*) and its implementing regulations at 5 CFR 1320.8(d) requires that PHMSA provide interested members of the public and affected agencies with an opportunity to comment on information collection and recordkeeping requests. This proposed rulemaking will not create, amend, or rescind any existing information collections.

K. Cybersecurity and Executive Order 14028

E.O. 14028 (“Improving the Nation’s Cybersecurity”)¹² directed the Federal government to improve its efforts to identify, deter, and respond to “persistent and increasingly sophisticated malicious cyber campaigns.” PHMSA has considered the effects of the proposed rule and has determined that its regulatory amendments would not materially affect the cybersecurity risk profile for affected entities.

List of Subjects in 49 CFR Part 107

Administrative practice and procedure, Hazardous materials transportation, Packaging and containers, Penalties, Reporting and recordkeeping requirements.

In consideration of the foregoing, PHMSA proposes to amend 49 CFR Chapter I as follows:

PART 107—HAZARDOUS MATERIALS PROGRAM AND PROCEDURES

■ 1. The authority citation for part 107 continues to read as follows:

Authority: 49 U.S.C. 5101–5128, 44701; Pub. L. 101–410 Section 4; Pub. L. 104–121 Sections 212–213; Pub. L. 104–134 Section 31001; Pub. L. 114–74 Section 701 (28 U.S.C. 2461 note); 49 CFR 1.81 and 1.97; 33 U.S.C. 1321.

■ 2. Revise § 107.616 to read as follows:

§ 107.616 Payment procedures.

(a) Each person subject to the requirements of this subpart must submit the registration statement and payment electronically in full through the Department’s e-Commerce internet site. Access to this service is provided at <https://www.phmsa.dot.gov/registration/registration-overview>. A registrant required to file an amended registration statement under § 107.608(c) of this subpart must submit it through the same internet site.

(b) Payment must be made by completing an authorization for payment by credit card or other electronic means of payment acceptable to the U.S. Department of Transportation as part of an internet registration as provided in paragraph (a) of this section.

(c) Payment must correspond to the total fees properly calculated in the “Amount Due” block of the DOT form F 5800.2. A person may elect to register and pay the required fees for up to three registration years by filing one complete and accurate registration statement.

Pipeline and Hazardous Materials Safety Administration

49 CFR Part 107

[Docket No. PHMSA–2025–0097 (HM–2681)]

RIN 2137–AG11

Hazardous Materials: Reducing Recordkeeping Requirements for Domestic Carriers

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), Department of Transportation (DOT).

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This NPRM proposes to revise the hazardous materials program procedures to allow motor and vessel carriers the option to carry their PHMSA certificate of registration in electronic form.

DATES: Comments must be received on or before September 2, 2025.

ADDRESSES: You may submit comments identified by the Docket Number PHMSA–2025–0097 using any of the following methods:

E-Gov Web: <https://www.regulations.gov>. This site allows the public to enter comments on any Federal Register notice issued by any agency. Follow the online instructions for submitting comments.

Mail: Docket Management System: U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building Ground Floor, Room W12–140, Washington, DC 20590–0001.

Hand Delivery: U.S. DOT Docket Management System: West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Fax: 1–202–493–2251.

Instructions: Please include the docket number PHMSA–2025–0097 at the beginning of your comments. If you submit your comments by mail, submit two copies. If you wish to receive confirmation that PHMSA received your comments, include a self-addressed stamped postcard. Internet users may submit comments at <https://www.regulations.gov>.

Note: Comments are posted without changes or edits to <https://www.regulations.gov>, including any personal information provided. There is a privacy statement published on <https://www.regulations.gov>.

Privacy Act: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to <https://www.regulations.gov>, as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at <https://www.dot.gov/privacy>.

Confidential Business Information: Confidential Business Information (CBI) is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA, 5 U.S.C. 552), CBI is exempt from public disclosure. It is important that you clearly designate the comments submitted as CBI if: your comments responsive to this document contain commercial or financial information that is customarily treated as private; you actually treat such information as private; and your comment is relevant or responsive to this notice. You may ask PHMSA to provide confidential treatment to information you give to the agency by taking the following steps: (1) mark each page of the original document submission containing CBI as “Confidential”; (2) send PHMSA, along with the original document, a second copy of the original document with the CBI deleted; and (3) explain why the information that you are submitting is CBI. Submissions containing CBI should be sent to Yul B. Baker Jr., Office of Hazardous Materials Safety, Pipeline and Hazardous Materials Safety Administration (PHMSA), 2nd Floor, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, or by email at yul.baker@dot.gov. Any materials PHMSA receives that is not specifically designated as CBI will be placed in the public docket.

Docket: For access to the docket to read background documents or comments received, go to <http://www.regulations.gov>. Follow the online instructions for accessing the docket. Alternatively, you may review the documents in person at the street address listed above.

SUPPLEMENTARY INFORMATION:

I. General Discussion

PHMSA proposes to revise certain outdated and unduly burdensome recordkeeping provisions for its registration program found at Title 49 Chapter I, Part 107 of the Code of Federal Regulations (CFR). Currently, § 107.620 requires motor carriers and vessel carriers to carry a copy of their current PHMSA issued Certificate of Registration (“certificate”), or another document bearing the registration number identified as the “U.S. DOT Hazmat Reg. No.”, onboard each truck or vessel transporting hazardous materials. Carriers must also make the copy of their certificate or the document bearing the registration number available to enforcement personnel upon request. Historically, it had been understood that the documentation must be in hard copy paper form.

On January 17, 2023, PHMSA issued an interpretation¹ explaining that Part 107, Subpart G does not require that a paper copy of the certificate or other document be carried onboard the motor vehicle when that vehicle transports hazardous materials. Rather, the requirements specify that a motor carrier must “carry a copy of its current Certificate of Registration issued by PHMSA or another document bearing the registration number identified as the ‘U.S. DOT Hazmat Reg. No.’ onboard each truck and truck tractor.” That requirement, as PHMSA explained in the interpretation, can be satisfied by carrying the necessary documentation in electronic form.

Consistent with that clarification, PHMSA proposes to revise paragraph (b) to explicitly state that a copy of the certificate or document bearing the registration number in either electronic or paper form is acceptable, provided the certificate can be made available upon request to authorized enforcement personnel. PHMSA is also proposing a similar revision for carriage by vessel in § 107.620(c) as well as revisions to paragraphs (a) and (d) to allow for the information pertaining to the registration to be in an electronic format. PHMSA does not expect that these proposed revisions will have any adverse impact on safety because current technology allows documents to be just as readily available to inspectors and first responders via electronic means as hard copy printed on paper.

¹ Letter of interpretation Ref. No. 22–0133 (Jan. 17, 2023).

II. Regulatory Analysis and Notices

A. Legal Authority

This proposed rule is published under the authority of the Secretary of Transportation set forth in the Federal Hazardous Materials Transportation laws (49 U.S.C. 5101 *et seq.*) and delegated to the PHMSA Administrator pursuant to 49 CFR 1.97.

B. Executive Orders 12866; Regulatory Planning and Review

Executive Order (E.O.) 12866 (“Regulatory Planning and Review”),² as implemented by DOT Order 2100.6B (“Policies and Procedures for Rulemaking”), requires agencies to regulate in the “most cost-effective manner,” to make a “reasoned determination that the benefits of the intended regulation justify its costs,” and to develop regulations that “impose the least burden on society.” DOT Order 2100.6B specifies that regulations should generally “not be issued unless their benefits are expected to exceed their costs.” In arriving at those conclusions, E.O. 12866 requires that agencies should consider “both quantifiable measures . . . and qualitative measures of costs and benefits that are difficult to quantify” and “maximize net benefits . . . unless a statute requires another regulatory approach.” E.O. 12866 also requires that “agencies should assess all costs and benefits of available regulatory alternatives, including the alternative of not regulating.” DOT Order 2100.6B directs that PHMSA and other Operating Administrations must generally choose the “least costly regulatory alternative that achieves the relevant objectives” unless required by law or compelling safety need.

E.O. 12866 and DOT Order 2100.6B also require that PHMSA submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) within the Executive Office of the President’s Office of Management and Budget (OMB) for review. This proposed rule is a not significant regulatory action pursuant to E.O. 12866; it also has not designated this rule as a “major rule” as defined by the Congressional Review Act (5 U.S.C. 801 *et seq.*).

PHMSA has complied with the requirements in E.O. 12866 as implemented by DOT Order 2100.6B and made a preliminary determination that the proposed revisions to allow carriage of a copy of the Certificate of Registration or other document bearing the registration number in electronic

form will not generate significant economic costs, but they will enhance efficiency. PHMSA expects those cost savings will also result in reduced costs for the public to whom those entities generally transfer a portion of their compliance costs.

C. Executive Orders 14192 and 14219

This proposed rule, if finalized as proposed, is expected to be an E.O. 14192 deregulatory action.³ PHMSA seeks data that would be helpful to generate an estimate of the cost savings from this rule. PHMSA’s initial estimates are that the total costs of the rule on the regulated community will be less than zero. Nor does this proposed rule does implicate any of the factors identified in section 2(a) of E.O. 14219 indicative of a regulation that is “unlawful . . . [or] that undermine[s] the national interest.”⁴

D. Energy-Related Executive Orders 13211, 14154, and 14156

PHMSA has analyzed this proposed rulemaking in accordance with the principles and criteria contained in E.O. 14156 (“Declaring a National Energy Emergency”) ⁵ and E.O. 14154 (“Unleashing American Energy”).⁶ Respectively, the President declared a national emergency to address the United States’s inadequate energy development production, transportation, refining, and generation capacity and asserts a Federal policy to unleash American energy by ensuing access to abundant supplies of reliable, affordable energy from (inter alia) the removal of “undue burden[s]” on the identification, development, or use of domestic energy resources. PHMSA preliminarily finds this proposed rule is consistent with each of E.O. 14156 and E.O. 14154 because it will not hinder or unduly burden the transportation or production of energy or energy-related products.

However, this proposed rule is not a “significant energy action” under E.O. 13211 (“Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use”),⁷ which requires Federal agencies to prepare a Statement of Energy Effects for any “significant energy action.” Because this proposed rule is not a significant action under E.O. 12866, it will not have a significant adverse effect on supply, distribution, or energy use, as further discussed in the RIA; OIRA has

therefore not designated this proposed rule as a significant energy action.

E. Executive Order 13132: Federalism

PHMSA analyzed this proposed rule in accordance with the principles and criteria contained in E.O. 13132 (“Federalism”) ⁸ and the Presidential Memorandum (“Preemption”) published in the **Federal Register** on May 22, 2009.⁹ E.O. 13132 requires agencies to assure meaningful and timely input by State and local officials in the development of regulatory policies that may have “substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government.” The Federal Hazardous Materials Transportation Laws contain an express preemption provision at 49 U.S.C. 5125(b) that preempts State, local, and Tribal requirements on certain covered subjects, unless the non-federal requirements are “substantively the same” as the federal requirements, including the following:

- (1) The designation, description, and classification of hazardous material;
- (2) The packing, repacking, handling, labeling, marking, and placarding of hazardous material;
- (3) The preparation, execution, and use of shipping documents related to hazardous material and requirements related to the number, contents, and placement of those documents;
- (4) The written notification, recording, and reporting of the unintentional release in transportation of hazardous material; and
- (5) The design, manufacture, fabrication, inspection, marking, maintenance, recondition, repair, or testing of a packaging or container represented, marked, certified, or sold as qualified for use in transporting hazardous material in commerce.

This proposed rule addresses covered subject items paragraph (3) above and would preempt State, local, and Tribal requirements not meeting the “substantively the same” standard. While the proposed rule may operate to preempt some State requirements, it would not impose any regulation that has substantial direct effects on the States, the relationship between the National Government and the States, or the distribution of power and responsibilities among the various levels of government. The preemptive effect of the regulatory amendments in

³ 90 FR 9065 (Jan. 31, 2025).

⁴ 90 FR 10583 (Feb. 19, 2025).

⁵ 90 FR 8353 (Jan. 29, 2025).

⁶ 90 FR 8353 (Jan. 29, 2025).

⁷ 66 FR 28355 (May 22, 2001).

⁸ 64 FR 43255 (Aug. 10, 1999).

⁹ 74 FR 24693 (May 22, 2009).

² 58 FR 51735 (Oct. 4, 1993).

this proposed rule is limited to the minimum level necessary to achieve the objectives of the Federal Hazardous Materials Transportation Laws. Therefore, the consultation and funding requirements of E.O. 13132 do not apply.

F. Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires Federal agencies to conduct an Initial Regulatory Flexibility Analysis (IRFA) for a proposed rule subject to notice-and-comment rulemaking under the APA unless the agency head certifies that the proposed rule in the rulemaking will not have a significant economic impact on a substantial number of small entities. E.O. 13272 (“Proper Consideration of Small Entities in Agency Rulemaking”) ¹⁰ obliges agencies to establish procedures promoting compliance with the Regulatory Flexibility Act. DOT posts its implementing guidance on a dedicated web page.¹¹ This proposed rule was developed in accordance with E.O. 13272 and DOT implementing guidance to ensure compliance with the Regulatory Flexibility Act. The proposed rule is expected to reduce burdens. Therefore, PHMSA certifies the proposed rule does not have a significant impact on a substantial number of small entities.

G. Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act (UMRA, 2 U.S.C. 1501 *et seq.*) requires agencies to assess the effects of Federal regulatory actions on State, local, and Tribal governments, and the private sector. For any proposed or direct final rule that includes a Federal mandate that may result in the expenditure by state, local, and Tribal governments, in the aggregate of \$100 million or more (in 1996 dollars) in any given year, the agency must prepare, amongst other things, a written statement that qualitatively and quantitatively assesses the costs and benefits of the Federal mandate.

This proposed does not impose unfunded mandates under UMRA because it does not result in costs of \$100 million or more (in 1996 dollars) per year for either State, local, or Tribal governments, or to the private sector.

H. National Environmental Policy Act

The National Environmental Policy Act (NEPA, 42 U.S.C. 4321 *et seq.*) requires that Federal agencies assess and consider the impact of major Federal actions on the human and natural environment.

PHMSA analyzed this proposed rule in accordance with NEPA and has preliminarily determined that the rulemaking will not adversely affect safety and, therefore, will not significantly affect the quality of the human and natural environment. The public is invited to comment on the impact of the proposed action.

I. Executive Order 13175

PHMSA analyzed this proposed rule according to the principles and criteria in E.O. 13175 (“Consultation and Coordination with Indian Tribal Governments”) ¹² and DOT Order 5301.1A (“Department of Transportation Tribal Consultation Policies and Procedures”). E.O. 13175 requires agencies to assure meaningful and timely input from Tribal government representatives in the development of rules that significantly or uniquely affect Tribal communities by imposing “substantial direct compliance costs” or “substantial direct effects” on such communities or the relationship or distribution of power between the Federal government and Tribes.

PHMSA assessed the impact of the proposed rule and determined that it will not significantly or uniquely affect Tribal communities or Indian Tribal governments. The rulemaking’s regulatory amendments have a broad, national scope; therefore, this proposed rule will not significantly or uniquely affect Tribal communities, much less impose substantial compliance costs on Native American Tribal governments or mandate Tribal action. For these reasons, PHMSA has concluded that the funding and consultation requirements of E.O. 13175 and DOT Order 5301.1A do not apply.

J. Paperwork Reduction Act

The Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*) and its implementing regulations at 5 CFR 1320.8(d) requires that PHMSA provide interested members of the public and affected agencies with an opportunity to comment on information collection and recordkeeping requests. This rulemaking will not create, amend, or rescind any existing information collections.

K. Executive Order 13609 and International Trade Analysis

E.O. 13609 (“Promoting International Regulatory Cooperation”) ¹³ requires agencies consider whether the impacts associated with significant variations between domestic and international regulatory approaches are unnecessary or may impair the ability of American business to export and compete internationally. In meeting shared challenges involving health, safety, labor, security, environmental, and other issues, international regulatory cooperation can identify approaches that are at least as protective as those that are or would be adopted in the absence of such cooperation. International regulatory cooperation can also reduce, eliminate, or prevent unnecessary differences in regulatory requirements.

Similarly, the Trade Agreements Act of 1979 (Pub. L. 96–39), as amended by the Uruguay Round Agreements Act (Pub. L. 103–465), prohibits Federal agencies from establishing any standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the United States. For purposes of these requirements, Federal agencies may participate in the establishment of international standards, so long as the standards have a legitimate domestic objective, such as providing for safety, and do not operate to exclude imports that meet this objective. The statute also requires consideration of international standards and, where appropriate, that they be the basis for U.S. standards.

PHMSA engages with international standards setting bodies to protect the safety of the American public. PHMSA has assessed the effects of the proposed rule and has determined that its regulatory amendments will not cause unnecessary obstacles to foreign trade.

L. Cybersecurity and Executive Order 14028

E.O. 14028 (“Improving the Nation’s Cybersecurity”) ¹⁴ directed the Federal government to improve its efforts to identify, deter, and respond to “persistent and increasingly sophisticated malicious cyber campaigns.” PHMSA has considered the effects of the proposed rule and has determined that its regulatory amendments would not materially affect the cybersecurity risk profile for affected entities.

List of Subjects in 49 CFR Part 107

Administrative practice and procedure, Hazardous materials transportation, Packaging and containers, Penalties, Reporting and recordkeeping requirements.

In consideration of the foregoing, PHMSA proposes to amend 49 CFR Chapter I as follows:

PART 107—HAZARDOUS MATERIALS PROGRAM AND PROCEDURES

- 1. The authority citation for part 107 continues to read as follows:

Authority: 49 U.S.C. 5101–5128, 44701; Pub. L. 101–410 Section 4; Pub. L. 104–121 Sections 212–213; Pub. L. 104–134 Section 31001; Pub. L. 114–74 Section 701 (28 U.S.C. 2461 note); 49 CFR 1.81 and 1.97; 33 U.S.C. 1321.

- 2. Revise § 107.620 to read as follows:

§ 107.620 Recordkeeping requirements.

(a) Each person subject to the requirements of this subpart, or its agent designated under § 107.608(e), must maintain at its principal place of business in electronic or paper form for a period of three years from the date of issuance of each Certificate of Registration:

(1) A copy of the registration statement filed with PHMSA; and
(2) The Certificate of Registration issued to the registrant by PHMSA.

(b) Each motor carrier subject to the requirements of this subpart must carry a copy of its current Certificate of Registration issued by PHMSA or another document bearing the registration number identified as the “U.S. DOT Hazmat Reg. No.” onboard each truck and truck tractor (not including trailers and semi-trailers) used to transport hazardous materials subject to the requirements of this subpart. The Certificate of Registration or document bearing the registration number may be carried in electronic or paper form and must be made available, upon request, to authorized enforcement personnel.

(c) Each person who transports by vessel a hazardous material subject to the requirements of this subpart must carry onboard the vessel a copy of its current Certificate of Registration or another document bearing the current registration number identified as the “U.S. DOT Hazmat Reg. No.” The Certificate of Registration or document bearing the registration number may be carried in electronic or paper form and must be made available, upon request, to authorized enforcement personnel.

(d) Each person subject to this subpart must furnish its Certificate of

Registration (or a copy thereof) and all other records and information pertaining to the information contained in the registration statement to authorized DOT personnel upon request. The Certificate of Registration and all other records and information may be furnished in electronic or paper form.

Issued in Washington, DC, on June 26, 2025, under the authority delegated in 49 CFR 1.97.

Benjamin D. Kochman,
Acting Administrator.

[Docket No. PHMSA–2025–0105 (HM–268Q)]

RIN 2137–AG19

Hazardous Materials: Allowing Fireworks Certification Agencies (FCAs) To Approve Professional Fireworks

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), Department of Transportation (DOT).

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This NPRM proposes to expand the Fireworks Certification Agency’s (FCA) authority to approve fireworks constructed to the APA 87–1A standard to include those fireworks constructed to the APA 87–1B and APA 87–1C standards. PHMSA is also proposing to revise its procedural regulations to facilitate new FCA authorizations. These proposed actions are intended to streamline PHMSA’s fireworks approval process and provide the industry with regulatory flexibility.

DATES: Comments must be received on or before September 2, 2025.

ADDRESSES: You may submit comments identified by the Docket Number PHMSA–2025–0105 using any of the following methods:

E-Gov Web: <https://www.regulations.gov>. This site allows the public to enter comments on any **Federal Register** notice issued by any agency. Follow the online instructions for submitting comments.

Mail: Docket Management System: U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building

Ground Floor, Room W12–140, Washington, DC 20590–0001.

Hand Delivery: U.S. DOT Docket Management System: West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Fax: 1–202–493–2251.

Instructions: Please include the docket number PHMSA–2025–0105 at the beginning of your comments. If you submit your comments by mail, submit two copies. If you wish to receive confirmation that PHMSA received your comments, include a self-addressed stamped postcard. Internet users may submit comments at <https://www.regulations.gov>.

Note: Comments are posted without changes or edits to <https://www.regulations.gov>, including any personal information provided. There is a privacy statement published on <https://www.regulations.gov>.

Privacy Act: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to <https://www.regulations.gov>, as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at <https://www.dot.gov/privacy>.

Confidential Business Information: Confidential Business Information (CBI) is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA, 5 U.S.C. 552), CBI is exempt from public disclosure. It is important that you clearly designate the comments submitted as CBI if: your comments responsive to this document contain commercial or financial information that is customarily treated as private; you actually treat such information as private; and your comment is relevant or responsive to this notice. You may ask PHMSA to provide confidential treatment to information you give to the agency by taking the following steps: (1) mark each page of the original document submission containing CBI as “Confidential”; (2) send PHMSA, along with the original document, a second copy of the original document with the CBI deleted; and (3) explain why the information that you are submitting is CBI. Submissions containing CBI should be sent to T. Glenn Foster, Standards and Rulemaking Division, Pipeline and Hazardous Materials Safety Administration (PHMSA), 2nd Floor, 1200 New Jersey Avenue SE,

Washington, DC 20590–0001, or by email at glenn.foster@dot.gov. Any materials PHMSA receives that is not specifically designated as CBI will be placed in the public docket.

Docket: For access to the docket to read background documents or comments received, go to <http://www.regulations.gov>. Follow the online instructions for accessing the docket. Alternatively, you may review the documents in person at the street address listed above.

FOR FURTHER INFORMATION CONTACT: T. Glenn Foster, Chief, Regulatory Review and Reinvention Branch, Standards and Rulemaking Division, 1200 New Jersey Avenue SE, Washington, DC 20590, or by email at glenn.foster@dot.gov.

I. General Discussion

The pyrotechnic industry relies on a global logistics supply chain comprised of primarily foreign fireworks manufacturers and domestic importers, retailers, distributors, and consumers. The Hazardous Materials Regulations (HMR) require that prior to being transported into, out of, and throughout the United States, all explosives are classed, approved, and issued a DOT classification approval number (*i.e.*, EX number) by PHMSA, or—for consumer fireworks only—a DOT-approved Fireworks Certification Agency (FCA) Certification number (*i.e.*, FC number). The EX number or FC number is a unique identifier indicating that a firework device has been classed and approved for transportation into, out of, and throughout the United States. The FCAs are currently only authorized to issue FC numbers for consumer fireworks under American Pyrotechnics Association's (APA) 87–1A standard.

In this NPRM, PHMSA is proposing to expand this authorization beyond consumer fireworks designed and manufactured in accordance with the APA 87–1A standard. Under this proposal, PHMSA and the FCAs would continue to apply the same standard in reviewing the design and materials of the fireworks under the APA 87–1 standard, which is divided into three components—APA 87–1A (Standard for the Construction, Classification, Approval, and Transportation of Consumer Fireworks), APA 87–1B (Standard for Construction, Classification, Approval, and Transportation of Display Fireworks), and APA 87–1C (Standard for the Construction, Classification, Approval, and Transportation of Entertainment Industry and Technical (EI&T)

Pyrotechnics).¹ PHMSA is proposing to allow FCAs to certify compliance for each of the three components, rather than just for consumer fireworks (*see* APA 87–1A). This revision would allow fireworks manufacturers the flexibility to choose between paying FCAs for expedited review and certification, or relying on PHMSA's free, but sometimes longer, approval process.

PHMSA is also proposing to revise procedural regulations pertaining to new FCA authorizations. These proposed actions would help to streamline PHMSA's fireworks approval process and provide the regulated community with flexibility in seeking authorization for the transportation of display and technical pyrotechnics. To accommodate the expansion of fireworks approvals under all three parts of the APA 87–1 standard, PHMSA is proposing edits to Parts 107, 171, 172, and 173. In Part 107, PHMSA is proposing to revise § 107.402 to reference all three parts of APA 87–1. In Part 171, PHMSA is proposing to revise the definition for “FC number.” In Part 172, PHMSA is proposing to add a new Special Provision 200 to state that fireworks may be certified for transportation by a DOT-approved fireworks certification agency in accordance with the provisions of § 173.65. PHMSA is also proposing to revise three entries in the § 172.101 Hazardous Material Table (HMT) to reference the revised Special Provision 200 and proposing a conforming amendment to § 172.320 “Explosive hazardous materials.” Finally, in Part 173, PHMSA is proposing to revise § 173.64 “Exceptions for Division 1.3 and 1.4 fireworks” to reference provisions applicable to FCA's and revise § 173.65 “Exceptions for Division 1.4G consumer fireworks” to retitle “Exceptions for Division 1.3G or 1.4G fireworks certification by a Fireworks Certification Agency” and facilitate the approval of professional fireworks by FCAs. PHMSA does not expect the proposed revisions to have any adverse impact on safety.

II. Regulatory Analysis and Notices

A. Legal Authority

This proposed rule is published under the authority of the Secretary of Transportation set forth in the Federal Hazardous Materials Transportation Laws (49 U.S.C. 5101 *et seq.*) and delegated to the PHMSA Administrator pursuant to 49 CFR 1.97.

¹ These standards are currently incorporated by reference in § 171.7 of the HMR.

B. Executive Orders 12866; Regulatory Planning and Review

Executive Order (E.O.) 12866 (“Regulatory Planning and Review”),² as implemented by DOT Order 2100.6B (“Policies and Procedures for Rulemaking”), requires agencies to regulate in the “most cost-effective manner,” to make a “reasoned determination that the benefits of the intended regulation justify its costs,” and to develop regulations that “impose the least burden on society.” DOT Order 2100.6B specifies that regulations should generally “not be issued unless their benefits are expected to exceed their costs.” In arriving at those conclusions, E.O. 12866 requires that agencies should consider “both quantifiable measures . . . and qualitative measures of costs and benefits that are difficult to quantify” and “maximize net benefits . . . unless a statute requires another regulatory approach.” E.O. 12866 also requires that “agencies should assess all costs and benefits of available regulatory alternatives, including the alternative of not regulating.” DOT Order 2100.6B directs that PHMSA and other Operating Administrations must generally choose the “least costly regulatory alternative that achieves the relevant objectives” unless required by law or compelling safety need.

E.O. 12866 and DOT Order 2100.6B also require that PHMSA submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) within the Executive Office of the President's Office of Management and Budget (OMB) for review. This proposed rule is a not significant regulatory action pursuant to E.O. 12866; it also has not designated this rule as a “major rule” as defined by the Congressional Review Act (5 U.S.C. 801 *et seq.*).

PHMSA has complied with E.O. 12866 as implemented by DOT Order 2100.6B and made a preliminarily determination that this proposed rule would result in cost savings by providing industry with more options for the expedited processing of display and technical fireworks. PHMSA expects those cost savings would also result in reduced costs for the public to whom those entities generally transfer a portion of their compliance costs.

C. Executive Orders 14192 and 14219

This proposed rule, if finalized as proposed, is expected to be an E.O. 14192 deregulatory action.³ PHMSA

² 58 FR 51735 (Oct. 4, 1993).

³ 90 FR 9065 (Jan. 31, 2025).

seeks data that would be helpful to generate an estimate of the cost savings from this rule. PHMSA's initial estimates are that the total costs of the rule on the regulated community would be less than zero. Nor does this proposed rule does implicate any of the factors identified in section 2(a) of E.O. 14219 indicative of a regulation that is "unlawful . . . [or] that undermine[s] the national interest."⁴

D. Energy-Related Executive Orders 13211, 14154, and 14156

The President has declared in E.O. 14156 ("Declaring a National Energy Emergency")⁵ a national emergency to address the United States's inadequate energy development production, transportation, refining, and generation capacity. Similarly, E.O. 14154 ("Unleashing American Energy")⁶ asserts a Federal policy to unleash American energy by ensuring access to abundant supplies of reliable, affordable energy from (inter alia) the removal of "undue burden[s]" on the identification, development, or use of domestic energy resources such as PHMSA-jurisdictional firework manufacturers and FCAs. PHMSA preliminarily finds this proposed rule is consistent with each of E.O. 14156 and E.O. 14154 because it imposes no new burdens on the transportation of energy or energy-related products.

This proposed rule is not a "significant energy action" under E.O. 13211 ("Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use"),⁷ which requires Federal agencies to prepare a Statement of Energy Effects for any "significant energy action." Because this proposed rule is not a significant action under E.O. 12866, it would not have a significant adverse effect on supply, distribution, or energy use, as further discussed in the RIA; OIRA has therefore not designated this proposed rule as a significant energy action.

E. Executive Order 13132: Federalism

PHMSA analyzed this proposed rule in accordance with the principles and criteria contained in E.O. 13132 ("Federalism")⁸ and the Presidential Memorandum ("Preemption") published in the **Federal Register** on May 22, 2009.⁹ E.O. 13132 requires agencies to assure meaningful and timely input by State and local officials

in the development of regulatory policies that may have "substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government." The Federal Hazardous Materials Transportation Laws contain an express preemption provision at 49 U.S.C. 5125(b) that preempts state, local, and tribal requirements on certain covered subjects, unless the non-federal requirements are "substantively the same" as the federal requirements, including the following:

(1) The designation, description, and classification of hazardous material;

(2) The packing, repacking, handling, labeling, marking, and placarding of hazardous material;

(3) The preparation, execution, and use of shipping documents related to hazardous material and requirements related to the number, contents, and placement of those documents;

(4) The written notification, recording, and reporting of the unintentional release in transportation of hazardous material; and

(5) The design, manufacture, fabrication, inspection, marking, maintenance, recondition, repair, or testing of a packaging or container represented, marked, certified, or sold as qualified for use in transporting hazardous material in commerce.

This proposed rule addresses covered subject items paragraph (1) above and would preempt state, local, and Tribal requirements not meeting the "substantively the same" standard. While the proposed rule may (when finalized) operate to preempt some State requirements, it would not impose any regulation that has substantial direct effects on the States, the relationship between the National Government and the States, or the distribution of power and responsibilities among the various levels of government. The preemptive effect of the regulatory amendments in this proposed rule is limited to the minimum level necessary to achieve the objectives of the Federal Hazardous Materials Transportation Laws. Therefore, the consultation and funding requirements of E.O. 13132 do not apply.

F. Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires Federal agencies to conduct an Initial Regulatory Flexibility Analysis (IRFA) for a proposed rule subject to notice-and-comment rulemaking under the APA unless the agency head certifies

that the proposed rule in the rulemaking would not have a significant economic impact on a substantial number of small entities. E.O. 13272 ("Proper Consideration of Small Entities in Agency Rulemaking")¹⁰ obliges agencies to establish procedures promoting compliance with the Regulatory Flexibility Act. DOT posts its implementing guidance on a dedicated web page.¹¹ This proposed rule was developed in accordance with E.O. 13272 and DOT implementing guidance to ensure compliance with the Regulatory Flexibility Act. The proposed rule is expected to reduce burdens. Therefore, PHMSA certifies the proposed rule does not have a significant impact on a substantial number of small entities.

G. Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act (UMRA, 2 U.S.C. 1501 *et seq.*) requires agencies to assess the effects of Federal regulatory actions on State, local, and Tribal governments, and the private sector. For any proposed or final rule that includes a Federal mandate that may result in the expenditure by state, local, and Tribal governments, in the aggregate of \$100 million or more (in 1996 dollars) in any given year, the agency must prepare, amongst other things, a written statement that qualitatively and quantitatively assesses the costs and benefits of the Federal mandate.

This proposed rule does not impose unfunded mandates under UMRA. PHMSA does not expect the proposed rule would result in costs of \$100 million or more (in 1996 dollars) per year for either State, local, or Tribal governments, or to the private sector.

H. National Environmental Policy Act

The National Environmental Policy Act (NEPA, 42 U.S.C. 4321 *et seq.*) requires that Federal agencies assess and consider the impact of major Federal actions on the human and natural environment.

PHMSA analyzed this proposed rule in accordance with NEPA and has preliminarily determined that the rulemaking would not adversely affect safety and therefore would not significantly affect the quality of the human and natural environment. The public is invited to comment on the impact of the proposed action.

¹⁰ 67 FR 53461 (Aug. 16, 2002).

¹¹ DOT, "Rulemaking Requirements Related to Small Entities," <https://www.transportation.gov/regulations/rulemaking-requirements-concerning-small-entities> (last accessed Sept 3, 2024).

⁴ 90 FR 10583 (Feb. 19, 2025).

⁵ 90 FR 8353 (Jan. 29, 2025).

⁶ 90 FR 8353 (Jan. 29, 2025).

⁷ 66 FR 28355 (May 22, 2001).

⁸ 64 FR 43255 (Aug. 10, 1999).

⁹ 74 FR 24693 (May 22, 2009).

I. Executive Order 13175

PHMSA analyzed this proposed rule according to the principles and criteria in E.O. 13175 (“Consultation and Coordination with Indian Tribal Governments”) ¹² and DOT Order 5301.1A (“Department of Transportation Tribal Consultation Policies and Procedures”). E.O. 13175 requires agencies to assure meaningful and timely input from Tribal government representatives in the development of rules that significantly or uniquely affect Tribal communities by imposing “substantial direct compliance costs” or “substantial direct effects” on such communities or the relationship or distribution of power between the Federal government and Tribes.

PHMSA assessed the impact of the proposed rule and determined that it would not significantly or uniquely affect Tribal communities or Indian Tribal governments. The rulemaking’s regulatory amendments have a broad, national scope; therefore, this proposed rule would not significantly or uniquely affect Tribal communities, much less impose substantial compliance costs on Native American Tribal governments or mandate Tribal action. For these reasons, PHMSA has concluded that the funding and consultation requirements of E.O. 13175 and DOT Order 5301.1A do not apply.

J. Paperwork Reduction Act

The Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*) and its implementing regulations at 5 CFR 1320.8(d) requires that PHMSA provide interested members of the public and affected agencies with an opportunity to comment on information collection and recordkeeping requests. This rulemaking would not create, amend, or rescind any existing information collections.

K. Executive Order 13609 and International Trade Analysis

E.O. 13609 (“Promoting International Regulatory Cooperation”) ¹³ requires agencies consider whether the impacts associated with significant variations between domestic and international regulatory approaches are unnecessary or may impair the ability of American business to export and compete internationally. In meeting shared challenges involving health, safety, labor, security, environmental, and other issues, international regulatory cooperation can identify approaches that are at least as protective as those that are or would be adopted in the

absence of such cooperation. International regulatory cooperation can also reduce, eliminate, or prevent unnecessary differences in regulatory requirements.

Similarly, the Trade Agreements Act of 1979 (Pub. L. 96–39), as amended by the Uruguay Round Agreements Act (Pub. L. 103–465), prohibits Federal agencies from establishing any standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the United States. For purposes of these requirements, Federal agencies may participate in the establishment of international standards, so long as the standards have a legitimate domestic objective, such as providing for safety, and do not operate to exclude imports that meet this objective. The statute also requires consideration of international standards and, where appropriate, that they be the basis for U.S. standards.

PHMSA engages with international standards setting bodies to protect the safety of the American public. PHMSA has assessed the effects of the proposed rule and has determined that its regulatory amendments would not cause unnecessary obstacles to foreign trade.

L. Cybersecurity and Executive Order 14028

E.O. 14028 (“Improving the Nation’s Cybersecurity”) ¹⁴ directed the Federal government to improve its efforts to identify, deter, and respond to “persistent and increasingly sophisticated malicious cyber campaigns.” PHMSA has considered the effects of the proposed rule and has determined that its regulatory amendments would not materially affect the cybersecurity risk profile for affected entities.

List of Subjects

49 CFR Part 107

Administrative practice and procedure, Hazardous materials transportation, Packaging and containers, Penalties, Reporting and recordkeeping requirements.

49 CFR Part 171

Exports, Hazardous materials transportation, Hazardous waste, Imports, Incorporation by reference, Reporting and recordkeeping requirements.

49 CFR Part 172

Education, Hazardous materials transportation, Hazardous waste, Incorporation by reference, Labeling, Markings, Packaging and containers,

Reporting and recordkeeping requirements.

49 CFR Part 173

Hazardous materials transportation, Incorporation by reference, Packaging and containers, Radioactive materials, Reporting and recordkeeping requirements.

In consideration of the foregoing, PHMSA proposes to amend 49 CFR chapter I as follows:

PART 107—HAZARDOUS MATERIALS PROGRAM PROCEDURES

■ 1. The authority citation for part 107 continues to read as follows:

Authority: 49 U.S.C. 5151–5128, 44701; Pub. L. 101–410 Section 4; Pub. L. 104–121 Sections 212–213; Pub. L. 104–134 Section 31001; Pub. L. 114–74 Section 701 (28 U.S.C. 2461 note); 49 CFR 1.81 and 1.97; 33 U.S.C. 1321.

■ 2. In § 107.402, revise paragraph (d) to read as follows:

§ 107.402 Application for designation as a certification agency.

* * * * *

(d) *Fireworks Certification Agency.* Prior to reviewing, and certifying Division 1.4G consumer fireworks (UN0336) for compliance with the APA 87–1A standard, excluding appendices II through VI, or Division 1.3G display fireworks (UN0335) for compliance with the 87–1B standard, or 1.4G entertainment industry and technical pyrotechnics (UN0101 or UN0431) for compliance with the 87–1C standard, as appropriate (IBR, see § 171.7 of this chapter) as specified in part 173 of this chapter, a person must apply to, and be approved by, the Associate Administrator to act as a Fireworks Certification Agency.

(1) *Fireworks Certification Agency applicant requirements.* The Fireworks Certification Agency applicant must—

(i) Be a U.S. resident, or for a non-U.S. resident, have a designated U.S. agent representative as specified in § 105.40 of this subchapter;

(ii) Employ personnel with work experience in manufacturing or testing of fireworks or explosives; or a combination of work experience in manufacturing or testing of fireworks or explosives and a degree in the physical sciences or engineering from an accredited university;

(iii) Have the ability to:

(A) Review design drawings, and applications to certify that they are in accordance with the APA Standard 87–1; and

(B) Verify that the applicant has certified the thermal stability test procedures and results.

¹² 65 FR 67249 (Nov. 9, 2000).

¹³ 77 FR 26413 (May 4, 2012).

¹⁴ 86 FR 26633 (May 17, 2021).

(iv) Must be independent of and not owned by any consumer fireworks manufacturer, distributor, import or export company, or proprietorship.

(2) *Fireworks Certification Agency application submittal requirements.* In addition to the requirements of paragraphs (b) and (d)(1) of this section, the Fireworks Certification Agency application must include—

(i) Name, address, and country of each facility where Division 1.3G or 1.4G fireworks applications are reviewed and certified;

(ii) Which component of the APA Standard 87–1, A, B or C under which they want to be approved to certify fireworks.

(iii) A detailed description of the qualifications of each individual the applicant proposes to employ to review, and certify that the requirements specified by part 173 of this chapter and the APA Standard 87–1 have been met;

(iv) Written operating procedures to be used by the Fireworks Certification Agency to review and certify that a Division 1.3G or 1.4G fireworks

application meets the requirements specified in the APA Standard 87–1;

(v) Name, address, and principal business activity of each person having any direct or indirect interest in the applicant greater than three percent and any direct or indirect ownership interest in each subsidiary or division of the applicant; and

(vi) A statement that the applicant will perform its functions independent of the manufacturers, transporters, importers, and owners of the fireworks.

PART 171—GENERAL INFORMATION, REGULATIONS, AND DEFINITIONS

■ 3. The authority citation for part 171 continues to read as follows:

Authority: 49 U.S.C. 5101–5128, 44701; Pub. L. 101–410 section 4; Pub. L. 104–134, section 31001; Pub. L. 114–74 section 701 (28 U.S.C. 2461 note); 49 CFR 1.81 and 1.97.

■ 4. In § 171.8, revise the definition for “FC number” to read as follows:

§ 171.8 Definitions and abbreviations.

* * * * *

FC number means a number preceded by the prefix “FC”, assigned by a Fireworks Certification Agency to a firework device that has been certified under the provisions of § 173.65 of this subchapter.

* * * * *

PART 172—HAZARDOUS MATERIALS TABLE, SPECIAL PROVISIONS, HAZARDOUS MATERIALS COMMUNICATIONS, EMERGENCY RESPONSE INFORMATION, TRAINING REQUIREMENTS, AND SECURITY PLANS

■ 5. The authority citation for part 172 continues to read as follows:

Authority: 49 U.S.C. 5101–5128, 44701; 49 CFR 1.81, 1.96, and 1.97.

■ 6. In § 172.101, the Hazardous Materials Table is amended by revising entries under “[REVISE]” in the appropriate alphabetical sequence to read as follows:

§ 172.101 Hazardous Materials Table

Symbols	(1)	(2)	Hazardous materials descriptions and proper shipping names	Hazard class or division	Identification Nos.	PG	Label codes	Special provisions (§ 172.102)	(8) Packaging (§ 173.***)			(9) Quantity limitations (see §§ 173.27 and 175.75)		(10) Vessel stowage	
									Exceptions	Non-bulk	Bulk	Passenger aircraft/rail	Cargo aircraft only	Location	Other
				*		*		*		*		*	*		
			1.3G	UN0430			1.3G	200	None	62	Forbidden	03	25		
			1.4G	UN0431			1.4G	200, 381	None	62	75kg	02	25		
					*			*		*		*	*		
			1.3G	UN0335			1.3G	108, 200	None	62	Forbidden	03	25		
			*		*			*		*		*	*		

* * * * *

■ 7. In § 172.102, revise paragraph (c)(1) special provision 200 to read as follows:

§ 172.102 Special provisions.

* * * * *

(c) * * *

(1) * * *

200 Fireworks may be certified for transportation by a DOT-approved Fireworks Certification Agency in accordance with the provisions of § 173.65 of this subchapter.

* * * * *

■ 8. In § 172.320, revise paragraph (b)(2) to read as follows:

§ 172.320 Explosive hazardous materials.

* * * * *

(b) * * *

(2) For fireworks reviewed by a Fireworks Certification Agency approved in accordance with 49 CFR part 107 subpart E and certified in accordance with § 173.65, with the FC number assigned by a DOT-approved Fireworks Certification Agency.

* * * * *

PART 173—SHIPPERS—GENERAL REQUIREMENTS FOR SHIPMENTS AND PACKAGINGS

■ 9. The authority citation for part 173 continues to read as follows:

Authority: 49 U.S.C. 5101–5128, 44701; 49 CFR 1.81, 1.96, and 1.97.

■ 10. In § 173.64, revise paragraph (a) introductory text to read as follows:

§ 173.64 Exceptions for Division 1.3 and 1.4 fireworks.

(a) Notwithstanding the requirements of § 173.56(b), Division 1.3 and 1.4 fireworks (see § 173.65 for provisions applicable to Fireworks Certification Agencies) may be classed and approved by the Associate Administrator without prior examination and offered for transportation if the following conditions are met:

* * * * *

■ 11. Revise § 173.65 including the section name to read as follows:

§ 173.65 Exceptions for Division 1.3G or 1.4G fireworks certification by a Fireworks Certification Agency.

(a) Notwithstanding the requirements of §§ 173.56(b), 173.56(f), 173.56(i), and 173.64, Division 1.3G or 1.4G fireworks may be offered for transportation provided the following conditions are met:

(1) The fireworks are manufactured in accordance with the applicable requirements in APA 87–1A, APA 87–1B, or APA 87–1C, as appropriate (IBR, see § 171.7 of this subchapter);

(2) The device must pass a thermal stability test. The test must be performed by maintaining the device, or a representative prototype of the device, at a temperature of 75 °C (167 °F) for 48 consecutive hours. When a device contains more than one component, those components that could be in physical contact with each other in the finished device must be placed in contact with each other during the thermal stability test;

(3) The manufacturer of the firework applies in writing to a DOT-approved Fireworks Certification Agency, and is notified in writing by the DOT-approved Fireworks Certification Agency that the firework has been:

(i) Certified that it complies with APA 87–1A, APA 87–1B, or APA 87–1C, as appropriate, and meets the requirements of this section; and

(ii) Assigned an FC number.

(4) The manufacturer's application must be complete and include:

(i) Detailed diagram of the device;

(ii) Complete list of the chemical compositions, formulations and quantities used in the device;

(iii) Results of the thermal stability test; and

(iv) Signed certification declaring that the device for which certification is requested conforms to the APA 87–1A, APA 87–1B, or APA 87–1C, as appropriate, that the descriptions and technical information contained in the application are complete and accurate, and that no duplicate applications have been submitted to PHMSA. If the application is denied, the Fireworks Certification Agency must notify the manufacturer in writing of the reasons for the denial. As detailed in the DOT approval issued to the Fireworks Certification Agency, following the issuance of a denial from a Fireworks Certification Agency, a manufacturer may seek reconsideration from the Fireworks Certification Agency, or may appeal the decision of the Fireworks Certification Agency to the PHMSA Administrator.

(b) *Recordkeeping requirements.* Following the certification of each firework as permitted by paragraph (a) of this section, the manufacturer and importer must maintain a paper record or an electronic image of the certificate, demonstrating compliance with this section. Each record must clearly provide the unique identifier assigned to the firework device and the Fireworks Certification Agency that certified the device. The record must be accessible at or through its principal place of business and be made available, upon request, to an authorized official of a Federal, State, or local government

agency at a reasonable time and location. Copies of certification records must be maintained by each importer, manufacturer, or a foreign manufacturer's U.S. agent, for five (5) years after the device is imported. The certification record must be made available to a representative of PHMSA upon request.

* * * * *

Issued in Washington, DC, on June 26, 2025, under the authority delegated in 49 CFR 1.97.

Benjamin D. Kochman,

Acting Administrator.

49 CFR Part 171

[Docket No. PHMSA–2025–0089 (HM–268A)]

RIN 2137–AG03

Hazardous Materials: Reducing Burdens on Domestic Aerosol Shippers

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), Department of Transportation (DOT).

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This NPRM proposes to update the definition of an aerosol to eliminate unnecessary regulatory burdens and maintain consistency with current international transportation standards.

DATES: Comments must be received on or before September 2, 2025.

ADDRESSES: You may submit comments identified by the Docket Number PHMSA–2025–0089 using any of the following methods:

E-Gov Web: <https://www.regulations.gov>. This site allows the public to enter comments on any **Federal Register** notice issued by any agency. Follow the online instructions for submitting comments.

Mail: Docket Management System: U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building Ground Floor, Room W12–140, Washington, DC 20590–0001.

Hand Delivery: U.S. DOT Docket Management System: West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Fax: 1-202-493-2251.

Instructions: Please include the docket number PHMSA-2025-0089 at the beginning of your comments. If you submit your comments by mail, submit two copies. If you wish to receive confirmation that PHMSA received your comments, include a self-addressed stamped postcard. Internet users may submit comments at <https://www.regulations.gov>.

Note: Comments are posted without changes or edits to <https://www.regulations.gov>, including any personal information provided. There is a privacy statement published on <https://www.regulations.gov>.

Privacy Act: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to <https://www.regulations.gov>, as described in the system of records notice (DOT/ALL-14 FDMS), which can be reviewed at <https://www.dot.gov/privacy>.

Confidential Business Information: Confidential Business Information (CBI) is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA, 5 U.S.C. 552), CBI is exempt from public disclosure. It is important that you clearly designate the comments submitted as CBI if: your comments responsive to this document contain commercial or financial information that is customarily treated as private; you actually treat such information as private; and your comment is relevant or responsive to this notice. You may ask PHMSA to provide confidential treatment to information you give to the agency by taking the following steps: (1) mark each page of the original document submission containing CBI as "Confidential"; (2) send PHMSA, along with the original document, a second copy of the original document with the CBI deleted; and (3) explain why the information that you are submitting is CBI. Submissions containing CBI should be sent to Steven Andrews, Standards and Rulemaking Division, Pipeline and Hazardous Materials Safety Administration (PHMSA), 2nd Floor, 1200 New Jersey Avenue SE, Washington, DC 20590-0001, or by email at steven.andrews@dot.gov. Any materials PHMSA receives that is not specifically designated as CBI will be placed in the public docket.

Docket: For access to the docket to read background documents or comments received, go to <http://>

www.regulations.gov. Follow the online instructions for accessing the docket. Alternatively, you may review the documents in person at the street address listed above.

FOR FURTHER INFORMATION CONTACT:

Steven Andrews, Transportation Regulations Specialist, 1200 New Jersey Avenue SE, Washington, DC 20590, 202-366-8553, steven.andrews@dot.gov.

SUPPLEMENTARY INFORMATION:

I. General Discussion

PHMSA proposes to revise the definition of an "aerosol" in 49 CFR 171.8, "Definitions," to eliminate unnecessary regulatory burdens and maintain consistency with current international transportation standards. Historically, the Research and Special Programs Administration (RSPA)—the predecessor agency to the Pipeline and Hazardous Materials Safety Administration (PHMSA)—differentiated between a compressed gas as the primary product in a container and a gas used solely as an aerosol propellant.¹ However, after decades of transportation outside the United States under the international regulations' definition, PHMSA has preliminarily determined that this distinction is unnecessary.

The Hazardous Materials Regulations (HMR) currently define an aerosol in 49 CFR 171.8 as "an article consisting of any non-refillable receptacle containing a gas compressed, liquefied or dissolved under pressure, the sole purpose of which is to expel a nonpoisonous (other than a Division 6.1 Packing Group III material) liquid, paste, or powder and fitted with a self-closing release device allowing the contents to be ejected by the gas." On September 28, 2017, PHMSA received a petition for rulemaking² concerning that definition from the Consumer Specialty Products Association (CSPA), Council on Safe Transportation of Hazardous Articles, Inc. (COSTHA), National Aerosol Association (NAA) and American Coatings Association (ACA) (collectively, Joint Petitioners). In that petition, the Joint Petitioners asked PHMSA to revise the HMR's definition of an aerosol to align with the definitions found in the United Nations Recommendations on the Transport of Dangerous Goods—Model Regulations (UNMR), the International Maritime Dangerous Goods (IMDG) Code, the International Civil Aviation Organization Technical Instructions on the Safe Transport of Dangerous Goods by Air (ICAO TI), and the Regulations

governing European Road Transport (ADR). The Joint Petitioners noted that the HMR's definition for aerosol is inconsistent with its international counterpart, which does not include the limitation for gas to be used to expel a liquid, paste, or powder. Without harmonization, this results in pure gases being shipped as fully regulated compressed gases under the HMR. The exclusion of pure gases from the aerosol definition can significantly impact their regulation under the HMR, including requirements for packaging (DOT-specification cylinder versus DOT-2P or 2Q inner receptacle), hazard communication, and classification. Currently, PHMSA has special permits issued that allow the transportation of pure gases that are provided regulatory relief similar to shipments of aerosols meeting the international definition. Three examples of such special permits are DOT-SP 10232, DOT-SP 11516, and DOT-SP 10704. These special permits have all been in place for thirty years or more and have no reported safety incidents. On April 2, 2019, PHMSA responded to the Joint Petitioners by stating that the proposed revision merited further consideration.

Lack of harmonization between the HMR and international standards creates significant challenges for industry stakeholders engaged in global commerce, leading to confusion, increased compliance costs, and logistical inefficiencies, particularly for companies that manufacture, package, or transport hazardous materials across borders. Lack of harmonization also impedes trade, delays shipments, and reduces the competitiveness of U.S. businesses in the global marketplace—all of which can increase prices for U.S. consumers. Inconsistencies between the HMR and international definitions of aerosol are no different, and PHMSA is not aware of any transportation-related safety concerns which justify that inconsistency. Therefore, PHMSA is proposing to revise the definition of an aerosol in § 171.8 to align with the international definition and no longer require that an aerosol be designed for the sole purpose of expelling a liquid, paste or powder.

II. Regulatory Analysis and Notices

A. Legal Authority

This proposed rule is published under the authority of the Secretary of Transportation set forth in the Federal Hazardous Materials Transportation Laws (49 U.S.C. 5101 *et seq.*) and delegated to the PHMSA Administrator pursuant to 49 CFR 1.97.

¹ 56 FR 55417 (Oct. 28, 1991).

² P-1707 (PHMSA-2017-0131).

B. Executive Order 12866; Regulatory Planning and Review

Executive Order (E.O.) 12866 (“Regulatory Planning and Review”),³ as implemented by DOT Order 2100.6B (“Policies and Procedures for Rulemaking”), requires agencies to regulate in the “most cost-effective manner,” to make a “reasoned determination that the benefits of the intended regulation justify its costs,” and to develop regulations that “impose the least burden on society.” DOT Order 2100.6B specifies that regulations should generally “not be issued unless their benefits are expected to exceed their costs.” In arriving at those conclusions, E.O. 12866 requires that agencies should consider “both quantifiable measures . . . and qualitative measures of costs and benefits that are difficult to quantify” and “maximize net benefits . . . unless a statute requires another regulatory approach.” E.O. 12866 also requires that “agencies should assess all costs and benefits of available regulatory alternatives, including the alternative of not regulating.” DOT Order 2100.6B directs that PHMSA and other Operating Administrations must generally choose the “least costly regulatory alternative that achieves the relevant objectives” unless required by law or compelling safety need.

E.O. 12866 and DOT Order 2100.6B also require that PHMSA submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) within the Executive Office of the President’s Office of Management and Budget (OMB) for review. This proposed rule is a not significant regulatory action pursuant to E.O. 12866; it also has not designated this rule as a “major rule” as defined by the Congressional Review Act (5 U.S.C. 801 *et seq.*).

PHMSA has complied with the requirements in E.O. 12866 as implemented by DOT Order 2100.6B and preliminarily determined that this proposed rule will result in cost savings by reducing regulatory burdens and regulatory uncertainty for manufacturers and shippers of aerosols. PHMSA expects that cost savings will focus on those related to the reduction in burden for new special permit applications (e.g., new entrants to the market) and renewals for current special permit holders, as well as cost savings from the ability to transition to a single system of marks, labels, and documentation for domestic and international transport. PHMSA expects those cost savings will

result in reduced costs for U.S. consumers to whom those entities generally transfer a portion of their compliance costs.

The change to align the HMR definition of aerosols with international standards (including the UN Model Regulations, IMDG Code, ICAO Technical Instructions, and ADR) is not expected to impose any new direct costs on U.S. aerosol manufacturers, shippers, or federal regulatory agencies. The revision will expand regulatory flexibility by permitting the classification of gas-only aerosols without necessitating the presence of a liquid, paste, or powder. As a result, there are no new compliance, implementation, or oversight burdens anticipated.

The change offers multiple sources of cost savings and regulatory relief. The current U.S. definition excludes gas-only aerosols from qualifying for limited quantity exceptions, requiring their treatment as fully regulated hazardous materials. Aligning with international standards would eliminate added costs for qualifying products, streamlining logistics and reducing compliance burdens, such as, preparation of shipping papers, payment of hazmat transportation surcharges, investment in extensive employee training, additional requirements for storage and documentation. In addition, companies currently operating under special permits to ship gas-only aerosols incur labor and administrative costs related to marking packages, using specific packaging, maintaining, and renewing permits every two to four years, providing permit-specific training to relevant staff. PHMSA has issued dozens of special permits in different forms that allow for the transportation of pure gases in a manner equivalent to using the international definition of an aerosol. Examples of operational controls under these special permits include relaxation of the packaging requirements to allow transportation DOT-2P, 2Q, or similar inner receptacles, and elimination of shipping papers, and placarding requirements. Elimination of the special permit requirement would produce direct labor cost savings and reduce administrative overhead for both the private sector and PHMSA. Harmonization with international definitions would simplify cross-border trade by eliminating inconsistencies in classification and labeling. U.S. companies currently face trade friction when exporting aerosols that qualify under international definitions but not under U.S. rules. By adopting the broader international standard, U.S. manufacturers and

marketers would gain improved access to the global aerosol market. This change would enhance the international competitiveness of U.S. aerosol products, enabling companies to increase market share and reduce barriers to export. The regulatory change is broadly expected to increase efficiency in transportation and logistics, lower product costs for businesses and potentially for consumers, and foster economic activity by reducing barriers to entry.

In summary, PHMSA requests feedback from stakeholders on: (1) the overall economic impact of the proposed HMR revisions; (2) the overall expected impact on the transportation of aerosol products and their prices, and (3) the anticipated market impact of the proposed revisions. PHMSA also welcomes any comments from stakeholders on anticipated specific economic impacts of the proposed rule.

C. Executive Orders 14192 and 14219

This proposed rule, if finalized as proposed, is expected to be an E.O. 14192 deregulatory action.⁴ PHMSA seeks data that would be helpful to generate an estimate of the cost savings from this rule. PHMSA’s initial estimates are that the total costs of the rule on the regulated community will be less than zero. Nor does this proposed rule does implicate any of the factors identified in section 2(a) of E.O. 14219 indicative of a regulation that is “unlawful . . . [or] that undermine[s] the national interest.”⁵

D. Energy-Related Executive Orders 13211, 14154, and 14156

The President has declared in E.O. 14156 (“Declaring a National Energy Emergency”) a national emergency to address the United States’s inadequate energy development production, transportation, refining, and generation capacity. Similarly, E.O. 14154 (“Unleashing American Energy”) ⁷ asserts a Federal policy to unleash American energy by ensuing access to abundant supplies of reliable, affordable energy from (inter alia) the removal of “undue burden[s]” on the identification, development, or use of domestic energy resources such as PHMSA-jurisdictional affected entities. PHMSA preliminarily finds this proposed rule is consistent with each of E.O. 14156 and E.O. 14154 because it will not impose any burden

³ 58 FR 51735 (Oct. 4, 1993).

on the transportation of energy or energy-related products.

However, this proposed rule is not a “significant energy action” under E.O. 13211 (“Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use”),⁸ which requires Federal agencies to prepare a Statement of Energy Effects for any “significant energy action.” Because this proposed rule is not a significant action under E.O. 12866, it will not have a significant adverse effect on supply, distribution, or energy use; and OIRA has therefore not designated this proposed rule as a significant energy action.

E. Executive Order 13132: Federalism

PHMSA analyzed this proposed rule in accordance with the principles and criteria contained in E.O. 13132 (“Federalism”) ⁹ and the Presidential Memorandum (“Preemption”) published in the **Federal Register** on May 22, 2009.¹⁰ E.O. 13132 requires agencies to assure meaningful and timely input by State and local officials in the development of regulatory policies that may have “substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government.” The Federal Hazardous Materials Transportation Laws contain an express preemption provision at 49 U.S.C. 5125(b) that preempts state, local, and tribal requirements on certain covered subjects, unless the non-federal requirements are “substantively the same” as the federal requirements, including the following:

- (1) The designation, description, and classification of hazardous material;
- (2) The packing, repacking, handling, labeling, marking, and placarding of hazardous material;
- (3) The preparation, execution, and use of shipping documents related to hazardous material and requirements related to the number, contents, and placement of those documents;
- (4) The written notification, recording, and reporting of the unintentional release in transportation of hazardous material; and
- (5) The design, manufacture, fabrication, inspection, marking, maintenance, recondition, repair, or testing of a packaging or container represented, marked, certified, or sold

as qualified for use in transporting hazardous material in commerce.

This proposed rule addresses covered subject items in paragraph I above and would preempt state, local, and Tribal requirements not meeting the “substantively the same” standard. While the proposed rule may (when finalized) operate to preempt some State requirements, it would not impose any regulation that has substantial direct effects on the States, the relationship between the National Government and the States, or the distribution of power and responsibilities among the various levels of government. The preemptive effect of the regulatory amendments in this proposed rule is limited to the minimum level necessary to achieve the objectives of the Federal Hazardous Materials Transportation Laws. Therefore, the consultation and funding requirements of E.O. 13132 do not apply.

F. Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires Federal agencies to conduct an Initial Regulatory Flexibility Analysis (IRFA) for a proposed rule subject to notice-and-comment rulemaking under the APA unless the agency head certifies that the proposed rule in the rulemaking will not have a significant economic impact on a substantial number of small entities. E.O. 13272 (“Proper Consideration of Small Entities in Agency Rulemaking”) ¹¹ obliges agencies to establish procedures promoting compliance with the Regulatory Flexibility Act. DOT posts its implementing guidance on a dedicated web page.¹² This proposed rule was developed in accordance with E.O. 13272 and DOT implementing guidance to ensure compliance with the Regulatory Flexibility Act. The proposed rule is expected to reduce burdens. Therefore, PHMSA certifies the proposed rule does not have a significant impact on a substantial number of small entities.

G. Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act (UMRA, 2 U.S.C. 1501 *et seq.*) requires agencies to assess the effects of Federal regulatory actions on State, local, and Tribal governments, and the private sector. For any proposed or direct final rule that includes a Federal mandate that may result in the expenditure by

state, local, and Tribal governments, in the aggregate of \$100 million or more (in 1996 dollars) in any given year, the agency must prepare, amongst other things, a written statement that qualitatively and quantitatively assesses the costs and benefits of the Federal mandate.

This proposed rule does not impose unfunded mandates under UMRA because it does not result in costs of \$100 million or more (in 1996 dollars) per year for either State, local, or Tribal governments, or to the private sector.

H. National Environmental Policy Act

The National Environmental Policy Act (NEPA, 42 U.S.C. 4321 *et seq.*) requires that Federal agencies assess and consider the impact of major Federal actions on the human and natural environment.

PHMSA analyzed this proposed rule in accordance with NEPA and has preliminarily determined that the rulemaking will not adversely affect safety and therefore will not significantly affect the quality of the human and natural environment. The public is invited to comment on the impact of the proposed action.

I. Executive Order 13175

PHMSA analyzed this proposed rule according to the principles and criteria in E.O. 13175 (“Consultation and Coordination with Indian Tribal Governments”) ¹³ and DOT Order 5301.1A (“Department of Transportation Tribal Consultation Policies and Procedures”). E.O. 13175 requires agencies to assure meaningful and timely input from Tribal government representatives in the development of rules that significantly or uniquely affect Tribal communities by imposing “substantial direct compliance costs” or “substantial direct effects” on such communities or the relationship or distribution of power between the Federal government and Tribes.

PHMSA assessed the impact of the proposed rule and determined that it will not significantly or uniquely affect Tribal communities or Indian Tribal governments. The rulemaking’s regulatory amendments have a broad, national scope; therefore, this proposed rule will not significantly or uniquely affect Tribal communities, much less impose substantial compliance costs on Native American Tribal governments or mandate Tribal action. For these reasons, PHMSA has concluded that the funding and consultation requirements of E.O. 13175 and DOT Order 5301.1A do not apply.

¹¹ 67 FR 53461 (Aug. 16, 2002).

¹² DOT, “Rulemaking Requirements Related to Small Entities,” <https://www.transportation.gov/regulations/rulemaking-requirements-concerning-small-entities> (last accessed Sept 3, 2024).

¹³ 65 FR 67249 (Nov. 9, 2000).

⁸ 66 FR 28355 (May 22, 2001).

⁹ 64 FR 43255 (Aug. 10, 1999).

¹⁰ 74 FR 24693 (May 22, 2009).

J. Paperwork Reduction Act

The Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*) and its implementing regulations at 5 CFR 1320.8(d) requires that PHMSA provide interested members of the public and affected agencies with an opportunity to comment on information collection and recordkeeping requests. This rulemaking will not create, amend, or rescind any existing information collections. There is potential for a slight reduction in the number of shipping papers required under OMB Control Number 2137–0034, “Hazardous Materials Shipping Papers & Emergency Response Information,” due to aerosols being shipped as limited quantities. However, this reduction is expected to be minimal and difficult to quantify in relation to the overall shipping paper burden.

K. Executive Order 13609 and International Trade Analysis

E.O. 13609 (“Promoting International Regulatory Cooperation”)¹⁴ requires agencies consider whether the impacts associated with significant variations between domestic and international regulatory approaches are unnecessary or may impair the ability of American business to export and compete internationally. In meeting shared challenges involving health, safety, labor, security, environmental, and other issues, international regulatory cooperation can identify approaches that are at least as protective as those that are or would be adopted in the absence of such cooperation. International regulatory cooperation can also reduce, eliminate, or prevent unnecessary differences in regulatory requirements.

Similarly, the Trade Agreements Act of 1979 (Pub. L. 96–39), as amended by the Uruguay Round Agreements Act (Pub. L. 103–465), prohibits Federal agencies from establishing any standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the United States. For purposes of these requirements, Federal agencies may participate in the establishment of international standards, so long as the standards have a legitimate domestic objective, such as providing for safety, and do not operate to exclude imports that meet this objective. The statute also requires consideration of international standards and, where appropriate, that they be the basis for U.S. standards.

PHMSA engages with international standards setting bodies to protect the

safety of the American public. PHMSA has assessed the effects of the proposed rule and has determined that its regulatory amendments will not cause unnecessary obstacles to foreign trade.

L. Cybersecurity and Executive Order 14028

E.O. 14028 (“Improving the Nation’s Cybersecurity”)¹⁵ directed the Federal government to improve its efforts to identify, deter, and respond to “persistent and increasingly sophisticated malicious cyber campaigns.” PHMSA has considered the effects of the proposed rule and has determined that its regulatory amendments would not materially affect the cybersecurity risk profile for affected entities.

List of Subjects in 49 CFR Part 171

Exports, Hazardous materials transportation, Hazardous waste, Imports, Incorporation by reference, Reporting and recordkeeping requirements.

In consideration of the foregoing, PHMSA proposes to amend 49 CFR chapter I as follows:

PART 171—GENERAL INFORMATION, REGULATIONS, AND DEFINITIONS

- 1. The authority citation for part 171 continues to read as follows:

Authority: 49 U.S.C. 5101–5128, 44701; Pub. L. 101–410 section 4; Pub. L. 104–134, section 31001; Pub. L. 114–74 section 701 (28 U.S.C. 2461 note); 49 CFR 1.81 and 1.97.

- 2. In § 171.8, revise the definition of “Aerosol” to read as follows:

§ 171.8 Definitions.

* * * * *

Aerosol means an article consisting of a non-refillable receptacle containing a gas (compressed, liquefied, or dissolved under pressure), with or without a nonpoisonous (other than a Division 6.1 Packing Group III material) liquid, paste, or powder, and fitted with a self-closing release device allowing the contents to be ejected as a foam, paste, or powder or in a liquid state or in a gaseous state.

* * * * *

Issued in Washington, DC, on June 26, 2025, under the authority delegated in 49 CFR 1.97.

Benjamin D. Kochman,
Acting Administrator.

[Docket No. PHMSA–2025–0093 (HM–268E)]

RIN 2137–AG07

Hazardous Materials: Remove Redundant List of U.S. EPA CERCLA Hazardous Substances

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), Department of Transportation (DOT).

ACTION: Notice of Proposed Rulemaking (NPRM).

SUMMARY: This NPRM proposes to revise the Hazardous Materials Regulations (HMR) to remove redundant pages contained in an Appendix that repeats references already listed in U.S. Environmental Protection Agency (EPA) regulations.

DATES: Comments must be received on or before September 2, 2025.

ADDRESSES: You may submit comments identified by the Docket Number PHMSA–2025–0093 using any of the following methods:

E-Gov Web: <https://www.regulations.gov>. This site allows the public to enter comments on any **Federal Register** notice issued by any agency. Follow the online instructions for submitting comments.

Mail: Docket Management System: U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building Ground Floor, Room W12–140, Washington, DC 20590–0001.

Hand Delivery: U.S. DOT Docket Management System: West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Fax: 1–202–493–2251.

Instructions: Please include the docket number PHMSA–2025–0093 at the beginning of your comments. If you submit your comments by mail, submit two copies. If you wish to receive confirmation that PHMSA received your comments, include a self-addressed stamped postcard. Internet users may submit comments at <https://www.regulations.gov>.

Note: Comments are posted without changes or edits to <https://www.regulations.gov>, including any personal information provided. There is a privacy statement published on <https://www.regulations.gov>.

Privacy Act: In accordance with 5 U.S.C. 553(c), DOT solicits comments

¹⁴ 77 FR 26413 (May 4, 2012).

¹⁵ 86 FR 26633 (May 17, 2021).

from the public to inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to <https://www.regulations.gov>, as described in the system of records notice (DOT/ALL-14 FDMS), which can be reviewed at <https://www.dot.gov/privacy>.

Confidential Business Information: Confidential Business Information (CBI) is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA, 5 U.S.C. 552), CBI is exempt from public disclosure. It is important that you clearly designate the comments submitted as CBI if: your comments responsive to this document contain commercial or financial information that is customarily treated as private; you actually treat such information as private; and your comment is relevant or responsive to this notice. You may ask PHMSA to provide confidential treatment to information you give to the agency by taking the following steps: (1) mark each page of the original document submission containing CBI as “Confidential”; (2) send PHMSA, along with the original document, a second copy of the original document with the CBI deleted; and (3) explain why the information that you are submitting is CBI. Submissions containing CBI should be sent to Yul B. Baker Jr., Office of Hazardous Materials Safety, Pipeline and Hazardous Materials Safety Administration (PHMSA), 2nd Floor, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, or by email at yul.baker@dot.gov. Any materials PHMSA receives that is not specifically designated as CBI will be placed in the public docket.

Docket: For access to the docket to read background documents or comments received, go to <http://www.regulations.gov>. Follow the online instructions for accessing the docket. Alternatively, you may review the documents in person at the street address listed above.

FOR FURTHER INFORMATION CONTACT: Yul B. Baker Jr., Transportation Regulations Specialist, 1200 New Jersey Avenue SE, Washington, DC 20590, 202–366–8553, yul.baker@dot.gov.

SUPPLEMENTARY INFORMATION:

I. General Discussion

To eliminate redundant and unnecessary requirements in the hazardous materials regulations (HMR; 49 CFR parts 171–180), PHMSA is proposing to remove Appendix A to § 172.101—List of Hazardous

Substances and Reportable Quantities and insert a reference to the Environmental Protection Agency’s (EPA) list of hazardous substances and reportable quantities in the definitions of “hazardous substance” and “reportable quantity” (*see*, 40 CFR 302.4). PHMSA is also proposing a conforming revision to requirements for empty packagings to remove reference to the now deleted Appendix A. Finally, PHMSA is proposing an editorial change to rename Appendix B to § 172.101—List of Marine Pollutants to Appendix A and to revise the definition of “marine pollutant” to refer to Appendix A instead of Appendix B based on these proposed changes. PHMSA does not expect that these proposed revisions will have any adverse impact on safety.

The Comprehensive Environmental Response, Compensation, and Liability Act, (CERCLA; 42 U.S.C. 9601 *et seq.*) provides that “each hazardous substance which is listed or designated as provided in section 9601(14) . . . shall . . . be listed and regulated as a hazardous material under chapter 51 of title 49.” 42 U.S.C. 9656. EPA codified the list of hazardous substances at 40 CFR 302.4 and periodically updates the list to add, remove or revise entries. Even though EPA’s list of “hazardous substances” is effectively incorporated into the HMR via the definitions that apply to the transportation of “hazardous materials” in § 171.8, PHMSA nevertheless publishes a separate list of hazardous substances in Appendix A to § 172.101—List of Hazardous Substances and Reportable Quantities.

The proposed revisions to the HMR in this NPRM will still satisfy the intent of the CERCLA statute and improve clarity while also improving efficiency. Under the current regulations, PHMSA must publish a rulemaking periodically to update the list as a companion action to EPA rulemakings that make changes to the 40 CFR 302.4 list. There is often a time lag between when EPA updates its list through a rulemaking and when PHMSA issues a corresponding rulemaking. During this delay, stakeholders have expressed confusion whether a material that is listed by EPA is regulated by PHMSA as a hazardous material. PHMSA also receives similar inquiries when reportable quantities for certain materials are adjusted. Removing the separate list of hazardous substances in the HMR and referencing EPA’s list of hazardous substances at 40 CFR 302.4 will provide more regulatory certainty. When a hazardous substance is listed, removed, or the applicable RQ adjusted by EPA, the material is either subject to

the HMR as hazardous material, no longer subject to the HMR as hazardous material, or the conditions for applicability have been revised, respectively. PHMSA does not expect that these proposed revisions will have any adverse impact on safety.

II. Regulatory Analysis and Notices

A. Legal Authority

This proposed rule is published under the authority of the Secretary of Transportation set forth in the Federal Hazardous Materials Transportation laws (49 U.S.C. 5101 *et seq.*) and delegated to the PHMSA Administrator pursuant to 49 CFR 1.97.

B. Executive Order 12866, Regulatory Planning and Review

Executive Order (E.O.) 12866 (“Regulatory Planning and Review”),¹ as implemented by DOT Order 2100.6B (“Policies and Procedures for Rulemaking”), requires agencies to regulate in the “most cost-effective manner,” to make a “reasoned determination that the benefits of the intended regulation justify its costs,” and to develop regulations that “impose the least burden on society.” DOT Order 2100.6B specifies that regulations should generally “not be issued unless their benefits are expected to exceed their costs.” In arriving at those conclusions, E.O. 12866 requires that agencies should consider “both quantifiable measures . . . and qualitative measures of costs and benefits that are difficult to quantify” and “maximize net benefits . . . unless a statute requires another regulatory approach.” E.O. 12866 also requires that “agencies should assess all costs and benefits of available regulatory alternatives, including the alternative of not regulating.” DOT Order 2100.6B directs that PHMSA and other Operating Administrations must generally choose the “least costly regulatory alternative that achieves the relevant objectives” unless required by law or compelling safety need.

E.O. 12866 and DOT Order 2100.6B also require that PHMSA submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) within the Executive Office of the President’s Office of Management and Budget (OMB) for review. This proposed rule is a not significant regulatory action pursuant to E.O. 12866; it also has not designated this rule as a “major rule” as defined by the Congressional Review Act (5 U.S.C. 801 *et seq.*).

¹ 58 FR 51735 (Oct. 4, 1993).

PHMSA has complied with the requirements in E.O. 12866 as implemented by DOT Order 2100.6B and made a preliminary determination that this proposed rule would result in cost savings to the government by streamlining regulations and eliminating redundancy. The proposed rule would also benefit the regulated public by clarifying applicability and reducing confusion.

C. Executive Orders 14192 and 14219

This proposed rule, if finalized as proposed, is expected to be an E.O. 14192 deregulatory action.² PHMSA seeks data that would be helpful to generate an estimate of the cost savings from this rule. PHMSA's initial estimates are that the total costs of the rule on the regulated community will be less than zero. Nor does this proposed rule does implicate any of the factors identified in section 2(a) of E.O. 14219 indicative of a regulation that is "unlawful . . . [or] that undermine[s] the national interest."³

D. Energy-Related Executive Orders 14211, 14154, and 14156

The President has declared in E.O. 14156 ("Declaring a National Energy Emergency")⁴ a national emergency to address the United States's inadequate energy development production, transportation, refining, and generation capacity. Similarly, E.O. 14154 ("Unleashing American Energy")⁵ asserts a Federal policy to unleash American energy by ensuring access to abundant supplies of reliable, affordable energy from (inter alia) the removal of "undue burden[s]" on the identification, development, or use of domestic energy resources. PHMSA preliminarily finds this proposed rule is consistent with each of E.O. 14156 and E.O. 14154. The proposed regulatory amendments merely reference U.S. EPA regulations to reduce the size of the HMR and do not impact energy transportation, development, or use.

This proposed rule is not a "significant energy action" under E.O. 13211 ("Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use"),⁶ which requires Federal agencies to prepare a Statement of Energy Effects for any "significant energy action." Because this proposed rule is not a significant action under E.O. 12866, it will not have a significant adverse effect on supply,

distribution, or energy use; and OIRA has therefore not designated this proposed rule as a significant energy action. Therefore, the consultation and funding requirements of E.O. 13132 do not apply.

E. Executive Order 13132: Federalism

PHMSA analyzed this proposed rule in accordance with the principles and criteria contained in E.O. 13132 ("Federalism")⁷ and the Presidential Memorandum ("Preemption") published in the **Federal Register** on May 22, 2009.⁸ E.O. 13132 requires agencies to assure meaningful and timely input by State and local officials in the development of regulatory policies that may have "substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government." The Federal Hazardous Materials Transportation Laws contain an express preemption provision at 49 U.S.C. 5125(b) that preempts state, local, and tribal requirements on certain covered subjects, unless the non-federal requirements are "substantively the same" as the federal requirements, including the following:

- (1) The designation, description, and classification of hazardous material;
- (2) The packing, repacking, handling, labeling, marking, and placarding of hazardous material;
- (3) The preparation, execution, and use of shipping documents related to hazardous material and requirements related to the number, contents, and placement of those documents;
- (4) The written notification, recording, and reporting of the unintentional release in transportation of hazardous material; and
- (5) The design, manufacture, fabrication, inspection, marking, maintenance, recondition, repair, or testing of a packaging or container represented, marked, certified, or sold as qualified for use in transporting hazardous material in commerce.

This proposed rule addresses covered subject items (1) above and would preempt state, local, and Tribal requirements not meeting the "substantively the same" standard. While the proposed rule may operate to preempt some State requirements, it would not impose any regulation that has substantial direct effects on the States, the relationship between the National Government and the States, or

the distribution of power and responsibilities among the various levels of government. The preemptive effect of the regulatory amendments in this proposed rule is limited to the minimum level necessary to achieve the objectives of the Federal Hazardous Materials Transportation Laws. Therefore, the consultation and funding requirements of E.O. 13132 do not apply.

F. Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires Federal agencies to conduct an Initial Regulatory Flexibility Analysis (IRFA) for a proposed rule subject to notice-and-comment rulemaking under the APA unless the agency head certifies that the proposed rule in the rulemaking will not have a significant economic impact on a substantial number of small entities. E.O. 13272 ("Proper Consideration of Small Entities in Agency Rulemaking")⁹ obliges agencies to establish procedures promoting compliance with the Regulatory Flexibility Act. DOT posts its implementing guidance on a dedicated web page.¹⁰ This proposed rule was developed in accordance with E.O. 13272 and DOT implementing guidance to ensure compliance with the Regulatory Flexibility Act. The proposed rule is expected to reduce burdens. Therefore, PHMSA certifies the proposed rule does not have a significant impact on a substantial number of small entities.

G. Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act (UMRA, 2 U.S.C. 1501 *et seq.*) requires agencies to assess the effects of Federal regulatory actions on State, local, and Tribal governments, and the private sector. For any proposed rule that includes a Federal mandate that may result in the expenditure by state, local, and Tribal governments, in the aggregate of \$100 million or more (in 1996 dollars) in any given year, the agency must prepare, amongst other things, a written statement that qualitatively and quantitatively assesses the costs and benefits of the Federal mandate.

This proposed rule does not impose unfunded mandates under UMRA because it does not result in costs of \$100 million or more (in 1996 dollars) per year for either State, local, or Tribal governments, or to the private sector.

³ 90 FR 10583 (Feb. 19, 2025).

⁴ 90 FR 8353 (Jan. 29, 2025).

⁵ 90 FR 8353 (Jan. 29, 2025).

⁶ 66 FR 28355 (May 22, 2001).

⁷ 64 FR 43255 (Aug. 10, 1999).

⁸ 74 FR 24693 (May 22, 2009).

⁹ 67 FR 53461 (Aug. 16, 2002).

¹⁰ DOT, "Rulemaking Requirements Related to Small Entities," <https://www.transportation.gov/regulations/rulemaking-requirements-concerning-small-entities> (last accessed Sept 3, 2024).

H. National Environmental Policy Act

The National Environmental Policy Act (NEPA, 42 U.S.C. 4321 *et seq.*) requires that Federal agencies assess and consider the impact of major Federal actions on the human and natural environment.

PHMSA analyzed this proposed rule in accordance with NEPA and has preliminarily determined that the rulemaking does not adversely affect safety and, therefore, will not significantly affect the quality of the human and natural environment. The public is invited to comment on the impact of the proposed action.

I. Executive Order 13175

PHMSA analyzed this proposed rule according to the principles and criteria in E.O. 13175 (“Consultation and Coordination with Indian Tribal Governments”) ¹¹ and DOT Order 5301.1A (“Department of Transportation Tribal Consultation Policies and Procedures”). E.O. 13175 requires agencies to assure meaningful and timely input from Tribal government representatives in the development of rules that significantly or uniquely affect Tribal communities by imposing “substantial direct compliance costs” or “substantial direct effects” on such communities or the relationship or distribution of power between the Federal government and Tribes.

PHMSA assessed the impact of the proposed rule and determined that it does not significantly or uniquely affect Tribal communities or Indian Tribal governments. The rulemaking’s regulatory amendments have a broad, national scope; therefore, this proposed rule does not significantly or uniquely affect Tribal communities, much less impose substantial compliance costs on Native American Tribal governments or mandate Tribal action. For these reasons, PHMSA has concluded that the funding and consultation requirements of E.O. 13175 and DOT Order 5301.1A do not apply.

J. Paperwork Reduction Act

The Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*) and its implementing regulations at 5 CFR 1320.8(d) requires that PHMSA provide interested members of the public and affected agencies with an opportunity to comment on information collection and recordkeeping requests. This proposed rule does not create, amend, or rescind any existing information collections.

K. Executive Order 13609 and International Trade Analysis

E.O. 13609 (“Promoting International Regulatory Cooperation”) ¹² requires agencies consider whether the impacts associated with significant variations between domestic and international regulatory approaches are unnecessary or may impair the ability of American business to export and compete internationally. In meeting shared challenges involving health, safety, labor, security, environmental, and other issues, international regulatory cooperation can identify approaches that are at least as protective as those that are or would be adopted in the absence of such cooperation. International regulatory cooperation can also reduce, eliminate, or prevent unnecessary differences in regulatory requirements.

Similarly, the Trade Agreements Act of 1979 (Pub. L. 96–39), as amended by the Uruguay Round Agreements Act (Pub. L. 103–465), prohibits Federal agencies from establishing any standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the United States. For purposes of these requirements, Federal agencies may participate in the establishment of international standards, so long as the standards have a legitimate domestic objective, such as providing for safety, and do not operate to exclude imports that meet this objective. The statute also requires consideration of international standards and, where appropriate, that they be the basis for U.S. standards.

PHMSA engages with international standards setting bodies to protect the safety of the American public. PHMSA has assessed the effects of this proposed rule and has determined that its regulatory amendments do not cause unnecessary obstacles to foreign trade.

L. Cybersecurity and Executive Order 14028

E.O. 14028 (“Improving the Nation’s Cybersecurity”) ¹³ directed the Federal government to improve its efforts to identify, deter, and respond to “persistent and increasingly sophisticated malicious cyber campaigns.” PHMSA has considered the effects of this proposed rule and has determined that its regulatory amendments would not materially affect the cybersecurity risk profile for affected entities.

List of Subjects*49 CFR Part 171*

Definitions, Exports, Hazardous materials transportation, Hazardous waste, Imports, Incorporation by reference, Reporting and recordkeeping requirements.

49 CFR Part 172

Hazardous materials transportation, Hazardous waste, Labeling, Markings, Packaging and containers, Reporting and recordkeeping requirements.

49 CFR Part 173

Hazardous materials transportation, Incorporation by reference, Packaging and containers, Radioactive materials, Reporting and recordkeeping requirements.

In consideration of the foregoing, PHMSA proposes to amend 49 CFR Chapter I as follows:

PART 171—GENERAL INFORMATION, REGULATIONS, AND DEFINITIONS

■ 1. The authority citation for part 171 continues to read as follows:

Authority: 49 U.S.C. 5101–5128, 44701; Pub. L. 101–410 section 4; Pub. L. 104–134, section 31001; Pub. L. 114–74 section 701 (28 U.S.C. 2461 note); 49 CFR 1.81 and 1.97.

■ 2. In § 171.8, revise the definitions for “hazardous substance,” “marine pollutant,” and “reportable quantity” in alphabetic order to read as follows:

§ 171.8 Definitions and abbreviations.

* * * * *

Hazardous substance for the purposes of this subchapter, means a material, including its mixtures and solutions, that—

(1) Is listed in 40 CFR 302.4;

(2) Is in a quantity, in one package, which equals or exceeds the reportable quantity (RQ) listed in the 40 CFR 302.4; and

(3) When in a mixture or solution—

(i) For radionuclides, the following requirements shall be used in determining if a package contains an RQ of a hazardous substance: (a) if the identity and quantity (in curies or terabecquerels) of each radionuclide in a mixture or solution is known, the ratio between the quantity per package (in curies or terabecquerels) and the RQ for the radionuclide must be determined for each radionuclide. A package contains an RQ of a hazardous substance when the sum of the ratios for the radionuclides in the mixture or solution is equal to or greater than one; (b) if the identity of each radionuclide in a mixture or solution is known but the quantity per package (in curies or

¹¹ 65 FR 67249 (Nov. 9, 2000).

¹² 77 FR 26413 (May 4, 2012).

¹³ 86 FR 26633 (May 17, 2021).

terabecquerels) of one or more of the radionuclides is unknown, an RQ of a hazardous substance is present in a package when the total quantity (in curies or terabecquerels) of the mixture or solution is equal to or greater than the lowest RQ of any individual radionuclide in the mixture or solution;

and (c) if the identity of one or more radionuclides in a mixture or solution is unknown (or if the identity of a radionuclide by itself is unknown), an RQ of a hazardous substance is present when the total quantity (in curies or terabecquerels) in a package is equal to or greater than either one curie or the

lowest RQ of any known individual radionuclide in the mixture or solution, whichever is lower.

(ii) For other than radionuclides, is in a concentration by weight which equals or exceeds the concentration corresponding to the RQ of the material, as shown in the following table:

	RQ pounds (kilograms)	Concentration by weight	
		Percent	PPM
5,000 (2,270)		10	100,000
1,000 (454)		2	20,000
100 (45.4)		0.2	2,000
10 (4.54)		0.02	200
1 (0.454)		0.002	20

The term does not include petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance in 40 CFR 302.4, and the term does not include natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).

* * * * *

Marine pollutant means a material which is listed in Appendix A to § 172.101 of this subchapter (also see § 171.4) and, when in a solution or mixture of one or more marine pollutants, is packaged in a concentration which equals or exceeds:

(1) Ten percent by weight of the solution or mixture for materials listed in the appendix; or

(2) One percent by weight of the solution or mixture for materials that are identified as severe marine pollutants in the appendix.

* * * * *

Reportable quantity (RQ) for the purposes of this subchapter, means the final RQ quantity specified for any material identified in 40 CFR 302.4.

* * * * *

PART 172—HAZARDOUS MATERIALS TABLE, SPECIAL PROVISIONS, HAZARDOUS MATERIALS COMMUNICATIONS, EMERGENCY RESPONSE INFORMATION, AND TRAINING REQUIREMENTS

■ 3. The authority citation for part 172 continues to read as follows:

Authority: 49 U.S.C. 5101–5128, 44701; 49 CFR 1.81, 1.96 and 1.97.

§ 172.101 [Amended]

■ 4. Amend § 172.101 to:

■ a. Delete current “Appendix A to § 172.101—List of Hazardous Substances and Reportable Quantities” including Table 1 to Appendix A—

Hazardous Substances Other Than Radionuclides and Table 2 to Appendix A—Radionuclides; and

■ b. Revise “Appendix B to § 172.101—List of Marine Pollutants” by renaming it “Appendix A to § 172.101—List of Marine Pollutants”.

PART 173—SHIPPERS—GENERAL REQUIREMENTS FOR SHIPMENTS AND PACKAGINGS

■ 5. The authority citation for part 173 continues to read as follows:

Authority: 49 U.S.C. 5101–5128, 44701; 49 CFR 1.81, 1.96 and 1.97.

■ 6. In § 173.29, revise paragraph (h) to read as follows:

§ 173.29 Empty packagings.

* * * * *

(h) A package that contains a residue of a hazardous substance, Class 9, that does not meet the definition of another hazard class and is not a hazardous waste or marine pollutant, may remain marked, labeled and, if applicable, placarded in the same manner as when it contained a greater quantity of the material even though it no longer meets the definition in § 171.8 of this subchapter for a hazardous substance.

Issued in Washington, DC, on June 26, 2025, under the authority delegated in 49 CFR 1.97.

Benjamin D. Kochman,

Acting Administrator.

Pipeline and Hazardous Materials Safety Administration

49 CFR Parts 171 and 173

[Docket No. PHMSA–2025–0101 (HM–268M)]

RIN 2137–AG15

Hazardous Materials: Adoption of Department of Transportation Special Permit 21287

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), Department of Transportation (DOT).

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This NPRM proposes to adopt a special permit into the hazardous materials regulations to streamline the transportation of small refrigerating machines that contain limited quantities of certain flammable gases, including common household appliances such as refrigerators, window-mounted air-conditioning units, and dehumidifiers.

DATES: Comments must be received on or before September 2, 2025.

ADDRESSES: You may submit comments identified by the Docket Number PHMSA–2025–0101 using any of the following methods:

E-Gov Web: <https://www.regulations.gov>. This site allows the public to enter comments on any **Federal Register** notice issued by any agency. Follow the online instructions for submitting comments.

Mail: Docket Management System: U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building Ground Floor, Room W12–140, Washington, DC 20590–0001.

Hand Delivery: U.S. DOT Docket Management System: West Building Ground Floor, Room W12–140, 1200

New Jersey Avenue SE, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Fax: 1–202–493–2251.

Instructions: Please include the docket number PHMSA–2025–0101 at the beginning of your comments. If you submit your comments by mail, submit two copies. If you wish to receive confirmation that PHMSA received your comments, include a self-addressed stamped postcard. Internet users may submit comments at <https://www.regulations.gov>.

Note: Comments are posted without changes or edits to <https://www.regulations.gov>, including any personal information provided. There is a privacy statement published on <https://www.regulations.gov>.

Privacy Act: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to <https://www.regulations.gov>, as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at <https://www.dot.gov/privacy>.

Confidential Business Information: Confidential Business Information (CBI) is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA, 5 U.S.C. 552), CBI is exempt from public disclosure. It is important that you clearly designate the comments submitted as CBI if: your comments responsive to this document contain commercial or financial information that is customarily treated as private; you actually treat such information as private; and your comment is relevant or responsive to this notice. You may ask PHMSA to provide confidential treatment to information you give to the agency by taking the following steps: (1) mark each page of the original document submission containing CBI as “Confidential”; (2) send PHMSA, along with the original document, a second copy of the original document with the CBI deleted; and (3) explain why the information that you are submitting is CBI. Submissions containing CBI should be sent to Ryan Larson, Standards and Rulemaking Division, Pipeline and Hazardous Materials Safety Administration (PHMSA), 2nd Floor, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, or by email at ryan.larson@dot.gov. Any materials PHMSA receives that is not specifically designated as CBI will be placed in the public docket.

Docket: For access to the docket to read background documents or comments received, go to <http://www.regulations.gov>. Follow the online instructions for accessing the docket. Alternatively, you may review the documents in person at the street address listed above.

Ryan Larson, Transportation Regulations Specialist, 1200 New Jersey Avenue SE, Washington, DC 20590, 202–366–8553, ryan.larson@dot.gov.

SUPPLEMENTARY INFORMATION:

I. General Discussion

PHMSA is proposing to revise certain provisions in Part 173 of Chapter I of Title 49 of the Code of Federal Regulations (CFR). Specifically, PHMSA is proposing to revise § 173.307(a)(4) to provide an exception from the HMR for transportation of common household refrigerating machines that contain small amounts of certain flammable gases.

Due to the statutory requirements in the American Innovation and Manufacturing Act (AIM),¹ signed into law in December 2020, manufacturers are required to transition from higher Global Warming Potential (GWP) refrigerants, such as American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE) Group A1 gasses, currently classified as nonflammable gases (Division 2.2), to more environmentally friendly refrigerants with lower GWP. A majority of these lower GWP refrigerants are flammable, but fall within the lower flammability category or may only propagate flame front at temperatures > 23 C. All of the low GWP gases (refrigerants) described in this notice fall within GHS Category 1B and therefore are also ASHRAE Class A2L listed refrigerants.

Currently, § 173.307(a)(4) allows for 12kg or less of Division 2.1 (Flammable) gases to be transported by land or vessel, but not air. Adopting this special permit into the Hazardous Materials Regulations (HMR; Parts 171–180) adds a provision to allow for the transportation of 20kg of low flammability gases by land, while still prohibiting their transportation by air or vessel. This proposed amendment allows retailers that routinely and safely ship modern household appliances (such as refrigerators, window-mounted air-conditioning units, and dehumidifiers) by land more flexibility and avoids the undue regulatory burden of obtaining a special permit. PHMSA

does not expect the proposed revisions to have any adverse impact on safety.

II. Regulatory Analysis and Notices

A. Legal Authority

This proposed rule is published under the authority of the Secretary of Transportation set forth in the Federal Hazardous Materials Transportation laws (49 U.S.C. 5101 *et seq.*) and delegated to the PHMSA Administrator pursuant to 49 CFR 1.97.

B. Executive Orders 12866; Regulatory Planning and Review

Executive Order (E.O.) 12866 (“Regulatory Planning and Review”),² as implemented by DOT Order 2100.6B (“Policies and Procedures for Rulemaking”), requires agencies to regulate in the “most cost-effective manner,” to make a “reasoned determination that the benefits of the intended regulation justify its costs,” and to develop regulations that “impose the least burden on society.” DOT Order 2100.6B specifies that regulations should generally “not be issued unless their benefits are expected to exceed their costs.” In arriving at those conclusions, E.O. 12866 requires that agencies should consider “both quantifiable measures . . . and qualitative measures of costs and benefits that are difficult to quantify” and “maximize net benefits . . . unless a statute requires another regulatory approach.” E.O. 12866 also requires that “agencies should assess all costs and benefits of available regulatory alternatives, including the alternative of not regulating.” DOT Order 2100.6B directs that PHMSA and other Operating Administrations must generally choose the “least costly regulatory alternative that achieves the relevant objectives” unless required by law or compelling safety need.

E.O. 12866 and DOT Order 2100.6B also require that PHMSA submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) within the Executive Office of the President’s Office of Management and Budget (OMB) for review. This proposed rule is a not significant regulatory action pursuant to E.O. 12866; it also has not designated this rule as a “major rule” as defined by the Congressional Review Act (5 U.S.C. 801 *et seq.*).

PHMSA has complied with E.O. 12866 as implemented by DOT Order 2100.6B and made a preliminary determination that this proposed rule would result in cost savings by reducing

¹ Public Law 116–260, Division S, Sec. 103.

² 58 FR 51735 (Oct. 4, 1993).

regulatory burdens and regulatory uncertainty for shippers of refrigerating machines by allowing for their transportation without the need for a special permit. Those cost savings may also result in reduced costs for the public to whom those entities generally transfer a portion of their compliance costs. In addition, the proposed rule would produce cost savings to the Federal government, hence taxpayers, due to the reduction of special permit applications that would otherwise need to be processed by PHMSA personnel.

C. Executive Orders 14192 and 14219

This proposed rule, if finalized as proposed, is expected to be an E.O. 14192 deregulatory action.³ PHMSA seeks data that would be helpful to generate an estimate of the cost savings from this rule. PHMSA's initial estimates are that the total costs of the rule on the regulated community would be less than zero. Nor does this proposed rule does implicate any of the factors identified in section 2(a) of E.O. 14219 indicative of a regulation that is "unlawful . . . [or] that undermine[s] the national interest."⁴

D. Energy-Related Executive Orders 13211, 14154, and 14156

The President has declared in E.O. 14156 ("Declaring a National Energy Emergency")⁵ a national emergency to address the United States's inadequate energy development production, transportation, refining, and generation capacity. Similarly, E.O. 14154 ("Unleashing American Energy")⁶ asserts a Federal policy to unleash American energy by ensuring access to abundant supplies of reliable, affordable energy from (inter alia) the removal of "undue burden[s]" on the identification, development, or use of domestic energy resources such as PHMSA-jurisdictional hazardous materials shippers and carrier. PHMSA preliminarily finds this proposed rule is consistent with each of E.O. 14156 and E.O. 14154 because it would not impose any burden on the transportation of energy or energy-related products.

However, this proposed rule is not a "significant energy action" under E.O. 13211 ("Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use"),⁷ which requires Federal agencies to prepare a Statement of Energy Effects for any "significant energy action." Because

this proposed rule is not a significant action under E.O. 12866, it would not have a significant adverse effect on supply, distribution, or energy use; and OIRA has therefore not designated this proposed rule as a significant energy action.

E. Executive Order 13132: Federalism

PHMSA analyzed this proposed rule in accordance with the principles and criteria contained in E.O. 13132 ("Federalism")⁸ and the Presidential Memorandum ("Preemption") published in the **Federal Register** on May 22, 2009.⁹ E.O. 13132 requires agencies to assure meaningful and timely input by State and local officials in the development of regulatory policies that may have "substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government." The Federal Hazardous Materials Transportation laws contain an express preemption provision at 49 U.S.C. 5125(b) that preempts state, local, and tribal requirements on certain covered subjects, unless the non-federal requirements are "substantively the same" as the federal requirements, including the following:

- (1) The designation, description, and classification of hazardous material;
- (2) The packing, repacking, handling, labeling, marking, and placarding of hazardous material;
- (3) The preparation, execution, and use of shipping documents related to hazardous material and requirements related to the number, contents, and placement of those documents;
- (4) The written notification, recording, and reporting of the unintentional release in transportation of hazardous material; and
- (5) The design, manufacture, fabrication, inspection, marking, maintenance, recondition, repair, or testing of a packaging or container represented, marked, certified, or sold as qualified for use in transporting hazardous material in commerce.

This proposed rule addresses covered subject items listed in paragraph I above and would preempt state, local, and Tribal requirements not meeting the "substantively the same" standard. While the proposed rule may operate to preempt some State requirements, it would not impose any regulation that has substantial direct effects on the States, the relationship between the

National Government and the States, or the distribution of power and responsibilities among the various levels of government. The preemptive effect of the regulatory amendments in this proposed rule is limited to the minimum level necessary to achieve the objectives of the Federal Hazardous Materials Transportation Laws. Therefore, the consultation and funding requirements of E.O. 13132 do not apply.

F. Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires Federal agencies to conduct an Initial Regulatory Flexibility Analysis (IRFA) for a proposed rule subject to notice-and-comment rulemaking under the APA unless the agency head certifies that the proposed rule in the rulemaking would not have a significant economic impact on a substantial number of small entities. E.O. 13272 ("Proper Consideration of Small Entities in Agency Rulemaking")¹⁰ obliges agencies to establish procedures promoting compliance with the Regulatory Flexibility Act. DOT posts its implementing guidance on a dedicated web page.¹¹ This proposed rule was developed in accordance with E.O. 13272 and DOT implementing guidance to ensure compliance with the Regulatory Flexibility Act. The proposed rule is expected to reduce burdens. Therefore, PHMSA certifies the proposed rule does not have a significant impact on a substantial number of small entities.

G. Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act (UMRA, 2 U.S.C. 1501 *et seq.*) requires agencies to assess the effects of Federal regulatory actions on State, local, and Tribal governments, and the private sector. For any proposed or direct final rule that includes a Federal mandate that may result in the expenditure by state, local, and Tribal governments, in the aggregate of \$100 million or more (in 1996 dollars) in any given year, the agency must prepare, amongst other things, a written statement that qualitatively and quantitatively assesses the costs and benefits of the Federal mandate.

This proposed rule does not impose unfunded mandates under UMRA because it does not result in costs of \$100 million or more (in 1996 dollars)

³ 90 FR 9065 (Jan. 31, 2025).

⁴ 90 FR 10583 (Feb. 19, 2025).

⁵ 90 FR 8353 (Jan. 29, 2025).

⁶ 90 FR 8353 (Jan. 29, 2025).

⁷ 66 FR 28355 (May 22, 2001).

⁸ 64 FR 43255 (Aug. 10, 1999).

⁹ 74 FR 24693 (May 22, 2009).

¹⁰ 67 FR 53461 (Aug. 16, 2002).

¹¹ DOT, "Rulemaking Requirements Related to Small Entities," <https://www.transportation.gov/regulations/rulemaking-requirements-concerning-small-entities> (last accessed Sept 3, 2024).

per year for either State, local, or Tribal governments, or to the private sector.

H. National Environmental Policy Act

The National Environmental Policy Act (NEPA, 42 U.S.C. 4321 *et seq.*) requires that Federal agencies assess and consider the impact of major Federal actions on the human and natural environment. PHMSA analyzed this proposed rule in accordance with NEPA and has preliminarily determined that the rulemaking would not adversely affect safety and therefore would not significantly affect the quality of the human and natural environment. The public is invited to comment on the impact of the proposed action.

I. Executive Order 13175

PHMSA analyzed this proposed rule according to the principles and criteria in E.O. 13175 (“Consultation and Coordination with Indian Tribal Governments”) ¹² and DOT Order 5301.1A (“Department of Transportation Tribal Consultation Policies and Procedures”). E.O. 13175 requires agencies to assure meaningful and timely input from Tribal government representatives in the development of rules that significantly or uniquely affect Tribal communities by imposing “substantial direct compliance costs” or “substantial direct effects” on such communities or the relationship or distribution of power between the Federal government and Tribes.

PHMSA assessed the impact of the proposed rule and determined that it would not significantly or uniquely affect Tribal communities or Indian Tribal governments. The rulemaking’s regulatory amendments have a broad, national scope; therefore, this proposed rule would not significantly or uniquely affect Tribal communities, much less impose substantial compliance costs on Native American Tribal governments or mandate Tribal action. For these reasons, PHMSA has concluded that the funding and consultation requirements of E.O. 13175 and DOT Order 5301.1A do not apply.

J. Paperwork Reduction Act

The Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*) and its implementing regulations at 5 CFR 1320.8(d) requires that PHMSA provide interested members of the public and affected agencies with an opportunity to comment on information collection and recordkeeping requests. This rulemaking will not create, amend, or rescind any existing information collections. However, This rulemaking

eliminates the need for persons to renew a special permit, resulting in a decrease in paperwork burden for special permit holders. PHMSA estimates the reduction in information collection burden as follows:

OMB Control No. 2137-0051:
Rulemaking, Special Permits, and
Preemption Requirements.
*Decrease in Annual Number of
Respondents:* 12.

Decrease in Annual Responses: 12.

Decrease in Annual Burden Hours:
17.

Decrease in Annual Burden Cost: \$0.

PHMSA specifically requests comments on the information collection and recordkeeping burdens associated with developing, implementing, and maintaining these requirements for approval under this NPRM. Address written comments to the Dockets Unit as identified in the **ADDRESSES** section of this NPRM. PHMSA must receive comments regarding information collection burdens prior to the close of the comment period identified in the **DATES** section of this NPRM.

Notwithstanding any other provision of law, no person is required to respond to a collection of information unless such collection displays a valid Office of Management and Budget (OMB) control number.

Please direct your requests for a copy of this information collection to Steven Andrews, Office of Hazardous Materials Standards (PHH-12), Pipeline and Hazardous Materials Safety Administration, 1200 New Jersey Avenue SE, 2nd Floor, Washington, DC 20590-0001.

K. Executive Order 13609 and International Trade Analysis

E.O. 13609 (“Promoting International Regulatory Cooperation”) ¹³ requires agencies consider whether the impacts associated with significant variations between domestic and international regulatory approaches are unnecessary or may impair the ability of American business to export and compete internationally. In meeting shared challenges involving health, safety, labor, security, environmental, and other issues, international regulatory cooperation can identify approaches that are at least as protective as those that are or would be adopted in the absence of such cooperation. International regulatory cooperation can also reduce, eliminate, or prevent unnecessary differences in regulatory requirements.

Similarly, the Trade Agreements Act of 1979 (Pub. L. 96-39), as amended by

the Uruguay Round Agreements Act (Pub. L. 103-465), prohibits Federal agencies from establishing any standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the United States. For purposes of these requirements, Federal agencies may participate in the establishment of international standards, so long as the standards have a legitimate domestic objective, such as providing for safety, and do not operate to exclude imports that meet this objective. The statute also requires consideration of international standards and, where appropriate, that they be the basis for U.S. standards.

PHMSA engages with international standards setting bodies to protect the safety of the American public. PHMSA has assessed the effects of the proposed rule and has determined that its regulatory amendments will not cause unnecessary obstacles to foreign trade.

L. Cybersecurity and Executive Order 14028

E.O. 14028 (“Improving the Nation’s Cybersecurity”) ¹⁴ directed the Federal government to improve its efforts to identify, deter, and respond to “persistent and increasingly sophisticated malicious cyber campaigns.” PHMSA has considered the effects of the proposed rule and has determined that its regulatory amendments would not materially affect the cybersecurity risk profile for affected entities.

List of Subjects

49 CFR Part 171

Definitions and abbreviations, Exports, Hazardous materials transportation, Hazardous waste, Imports, Incorporation by reference, Reporting and recordkeeping requirements.

49 CFR Part 173

Hazardous materials transportation, Packaging and containers, Reporting and recordkeeping requirements, Training.

For the reasons set forth above, PHMSA proposes to amend 49 CFR part 171 and 173 as follows:

PART 171—GENERAL INFORMATION, REGULATIONS, AND DEFINITION

■ 1. The authority citation for part 171 continues to read as follows:

Submissions containing CBI should be sent to Ryan Larson, Standards and Rulemaking Division, Pipeline and Hazardous Materials Safety Administration (PHMSA), 2nd Floor, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, or by email at ryan.larson@dot.gov. Any materials PHMSA receives that is not specifically designated as CBI will be placed in the public docket.

Docket: For access to the docket to read background documents or comments received, go to <http://www.regulations.gov>. Follow the online instructions for accessing the docket. Alternatively, you may review the documents in person at the street address listed above.

FOR FURTHER INFORMATION CONTACT:

Ryan Larson, Transportation Regulations Specialist, 1200 New Jersey Avenue SE, Washington, DC 20590, 202–366–8553, ryan.larson@dot.gov.

SUPPLEMENTARY INFORMATION:

I. General Discussion

PHMSA is proposing to revise § 173.306 to provide an exception from the Hazardous Materials Regulations (HMR; Parts 171–180) for certain specification packaging requirements for large refrigerating machines containing certain flammable gases. The American Innovation and Manufacturing Act (AIM),¹ signed into law in December 2020, required manufacturers to transition from higher Global Warming Potential (GWP) refrigerants, such as American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE) Group A1 gasses, currently classified as Division 2.2 non-flammable gases, to more environmentally friendly refrigerants with lower GWP. A majority of these

¹ Public Law 116–260, Division S, Sec. 103.

lower GWP refrigerants are flammable, but fall within the lower flammability category or may only propagate flame front at temperatures >23°C. All of the low GWP liquefied gases (refrigerants) described in this notice fall within GHS Category 1B and therefore ASHRAE Class 2L.

Currently, § 173.306(e)(1) and (2) provide an exception for refrigerating machines containing Group A1 refrigerant, as classified in ANSI/ASHRAE Standard 15, or not more than 50 pounds of refrigerant other than Group A1, from the specification packaging requirements of the HMR. Adopting DOT-SP 21379 into the HMR would expand the existing 5,000 lb. limit for Group A1 refrigerant, as classified in ANSI/ASHRAE Standard 15, to 5,000 lb. for low flammability gases meeting the criteria of the United Nations Globally Harmonized System (GHS) of Classification and Labelling of Chemicals (Seventh Revised Edition) Category 1B, or the equivalent found in American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE) A2L Standard 34. Additional transport conditions such as vehicle type and markings are proposed for transporting refrigerating machines containing flammable gases. PHMSA does not expect the proposed revisions to have any adverse impact on safety.

II. Regulatory Analysis and Notices

A. Legal Authority

This proposed rule is published under the authority of the Secretary of Transportation set forth in the Federal Hazardous Materials Transportation laws (49 U.S.C. 5101 *et seq.*) and delegated to the PHMSA Administrator pursuant to 49 CFR 1.97.

B. Executive Orders 12866; Regulatory Planning and Review

Executive Order (E.O.) 12866 (“Regulatory Planning and Review”),² as implemented by DOT Order 2100.6B (“Policies and Procedures for Rulemaking”), requires agencies to regulate in the “most cost-effective manner,” to make a “reasoned determination that the benefits of the intended regulation justify its costs,” and to develop regulations that “impose the least burden on society.” DOT Order 2100.6B specifies that regulations should generally “not be issued unless their benefits are expected to exceed their costs.” In arriving at those conclusions, E.O. 12866 requires that agencies should consider “both quantifiable measures . . . and

qualitative measures of costs and benefits that are difficult to quantify” and “maximize net benefits . . . unless a statute requires another regulatory approach.” E.O. 12866 also requires that “agencies should assess all costs and benefits of available regulatory alternatives, including the alternative of not regulating.” DOT Order 2100.6B directs that PHMSA and other Operating Administrations must generally choose the “least costly regulatory alternative that achieves the relevant objectives” unless required by law or compelling safety need.

E.O. 12866 and DOT Order 2100.6B also require that PHMSA submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) within the Executive Office of the President’s Office of Management and Budget (OMB) for review. This proposed rule is a not significant regulatory action pursuant to E.O. 12866; it also has not designated this rule as a “major rule” as defined by the Congressional Review Act (5 U.S.C. 801 *et seq.*).

PHMSA has complied with the requirements in E.O. 12866 as implemented by DOT Order 2100.6B and made a preliminary determination that this proposed rule would result in cost savings by reducing regulatory burdens and regulatory uncertainty for shippers of refrigerating machines by allowing for their transportation without the need for a special permit. PHMSA expects those cost savings would also result in reduced costs for the public to whom those entities generally transfer a portion of their compliance costs.

C. Executive Orders 14192 and 14219

This proposed rule, if finalized as proposed, is expected to be an E.O. 14192 deregulatory action.³ PHMSA seeks data that would be helpful to generate an estimate of the cost savings from this rule. PHMSA’s initial estimates are that the total costs of the rule on the regulated community would be less than zero. Nor does this proposed rule does implicate any of the factors identified in section 2(a) of E.O. 14219 indicative of a regulation that is “unlawful . . . [or] that undermine[s] the national interest.”⁴

D. Energy-Related Executive Orders 13211, 14154, and 14156

The President has declared in E.O. 14156 (“Declaring a National Energy Emergency”)⁵ a national emergency to address the United States’s inadequate

energy development production, transportation, refining, and generation capacity. Similarly, E.O. 14154 (“Unleashing American Energy”)⁶ asserts a Federal policy to unleash American energy by ensuring access to abundant supplies of reliable, affordable energy from (inter alia) the removal of “undue burden[s]” on the identification, development, or use of domestic energy resources such as PHMSA-jurisdictional hazardous materials shippers and carrier. PHMSA preliminarily finds this proposed rule is consistent with each of E.O. 14156 and E.O. 14154 because it would not hinder or unduly burden the transportation or production of energy or energy-related products.

However, this proposed rule is not a “significant energy action” under E.O. 13211 (“Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use”),⁷ which requires Federal agencies to prepare a Statement of Energy Effects for any “significant energy action.” Because this proposed rule is not a significant action under E.O. 12866, it would not have a significant adverse effect on supply, distribution, or energy use; and OIRA has therefore not designated this proposed rule as a significant energy action.

E. Executive Order 13132: Federalism

PHMSA analyzed this proposed rule in accordance with the principles and criteria contained in E.O. 13132 (“Federalism”)⁸ and the Presidential Memorandum (“Preemption”) published in the **Federal Register** on May 22, 2009.⁹ E.O. 13132 requires agencies to assure meaningful and timely input by State and local officials in the development of regulatory policies that may have “substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government.” The Federal Hazardous Materials Transportation laws contain an express preemption provision at 49 U.S.C. 5125(b) that preempts state, local, and tribal requirements on certain covered subjects, unless the non-federal requirements are “substantively the same” as the federal requirements, including the following:

(1) The designation, description, and classification of hazardous material;

⁶ 90 FR 8353 (Jan. 29, 2025).

⁷ 66 FR 28355 (May 22, 2001).

⁸ 64 FR 43255 (Aug. 10, 1999).

⁹ 74 FR 24693 (May 22, 2009).

² 58 FR 51735 (Oct. 4, 1993).

³ 90 FR 9065 (Jan. 31, 2025).

⁴ 90 FR 10583 (Feb. 19, 2025).

⁵ 90 FR 8353 (Jan. 29, 2025).

(2) The packing, repacking, handling, labeling, marking, and placarding of hazardous material;

(3) The preparation, execution, and use of shipping documents related to hazardous material and requirements related to the number, contents, and placement of those documents;

(4) The written notification, recording, and reporting of the unintentional release in transportation of hazardous material; and

(5) The design, manufacture, fabrication, inspection, marking, maintenance, recondition, repair, or testing of a packaging or container represented, marked, certified, or sold as qualified for use in transporting hazardous material in commerce.

This proposed rule addresses covered subject items listed in paragraph 1 above and would preempt state, local, and Tribal requirements not meeting the “substantively the same” standard. While the proposed rule may operate to preempt some State requirements, it would not impose any regulation that has substantial direct effects on the States, the relationship between the National Government and the States, or the distribution of power and responsibilities among the various levels of government. The preemptive effect of the regulatory amendments in this proposed rule is limited to the minimum level necessary to achieve the objectives of the Federal Hazardous Materials Transportation Laws. Therefore, the consultation and funding requirements of E.O. 13132 do not apply.

F. Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires Federal agencies to conduct an Initial Regulatory Flexibility Analysis (IRFA) for a proposed rule subject to notice-and-comment rulemaking under the APA unless the agency head certifies that the proposed rule in the rulemaking would not have a significant economic impact on a substantial number of small entities. E.O. 13272 (“Proper Consideration of Small Entities in Agency Rulemaking”)¹⁰ obliges agencies to establish procedures promoting compliance with the Regulatory Flexibility Act. DOT posts its implementing guidance on a dedicated web page.¹¹ This proposed rule was developed in accordance with E.O. 13272 and DOT implementing guidance to ensure compliance with the

Regulatory Flexibility Act. The proposed rule is expected to reduce burdens. Therefore, PHMSA certifies the proposed rule does not have a significant impact on a substantial number of small entities.

G. Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act (UMRA, 2 U.S.C. 1501 *et seq.*) requires agencies to assess the effects of Federal regulatory actions on State, local, and Tribal governments, and the private sector. For any proposed or direct final rule that includes a Federal mandate that may result in the expenditure by state, local, and Tribal governments, in the aggregate of \$100 million or more (in 1996 dollars) in any given year, the agency must prepare, amongst other things, a written statement that qualitatively and quantitatively assesses the costs and benefits of the Federal mandate.

This proposed rule does not impose unfunded mandates under UMRA because it does not result in costs of \$100 million or more (in 1996 dollars) per year for either State, local, or Tribal governments, or to the private sector.

H. National Environmental Policy Act

The National Environmental Policy Act (NEPA, 42 U.S.C. 4321 *et seq.*) requires that Federal agencies assess and consider the impact of major Federal actions on the human and natural environment.

PHMSA analyzed this proposed rule in accordance with NEPA and has preliminarily determined that the rulemaking would not adversely affect safety and therefore would not significantly affect the quality of the human and natural environment. The public is invited to comment on the impact of the proposed action.

I. Executive Order 13175

PHMSA analyzed this proposed rule according to the principles and criteria in E.O. 13175 (“Consultation and Coordination with Indian Tribal Governments”)¹² and DOT Order 5301.1A (“Department of Transportation Tribal Consultation Policies and Procedures”). E.O. 13175 requires agencies to assure meaningful and timely input from Tribal government representatives in the development of rules that significantly or uniquely affect Tribal communities by imposing “substantial direct compliance costs” or “substantial direct effects” on such communities or the relationship or

distribution of power between the Federal government and Tribes.

PHMSA assessed the impact of the proposed rule and determined that it would not significantly or uniquely affect Tribal communities or Indian Tribal governments. The rulemaking’s regulatory amendments have a broad, national scope; therefore, this proposed rule would not significantly or uniquely affect Tribal communities, much less impose substantial compliance costs on Native American Tribal governments or mandate Tribal action. For these reasons, PHMSA has concluded that the funding and consultation requirements of E.O. 13175 and DOT Order 5301.1A do not apply.

J. Paperwork Reduction Act

The Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*) and its implementing regulations at 5 CFR 1320.8(d) requires that PHMSA provide interested members of the public and affected agencies with an opportunity to comment on information collection and recordkeeping requests. This rulemaking would not create, amend, or rescind any existing information collections. However, this rulemaking eliminates the need for persons to renew a special permit, resulting in a decrease in paperwork burden for special permit holders. PHMSA estimates the reduction in information collection burden as follows:

OMB Control No. 2137–0051:

Rulemaking, Special Permits, and Preemption Requirements.

Decrease in Annual Number of Respondents: 10.

Decrease in Annual Responses: 10.

Decrease in Annual Burden Hours: 14.

Decrease in Annual Burden Cost: \$0.

PHMSA specifically requests comments on the information collection and recordkeeping burdens associated with developing, implementing, and maintaining these requirements for approval under this NPRM. Address written comments to the Dockets Unit as identified in the **ADDRESSES** section of this NPRM. PHMSA must receive comments regarding information collection burdens prior to the close of the comment period identified in the **DATES** section of this NPRM. Notwithstanding any other provision of law, no person is required to respond to a collection of information unless such collection displays a valid Office of Management and Budget (OMB) control number.

Please direct your requests for a copy of this information collection to Steven Andrews, Office of Hazardous Materials Standards (PHH–12), Pipeline and

Hazardous Materials Safety Administration, 1200 New Jersey Avenue SE, 2nd Floor, Washington, DC 20590–0001.

K. Executive Order 13609 and International Trade Analysis

E.O. 13609 (“Promoting International Regulatory Cooperation”)¹³ requires agencies consider whether the impacts associated with significant variations between domestic and international regulatory approaches are unnecessary or may impair the ability of American business to export and compete internationally. In meeting shared challenges involving health, safety, labor, security, environmental, and other issues, international regulatory cooperation can identify approaches that are at least as protective as those that are or would be adopted in the absence of such cooperation. International regulatory cooperation can also reduce, eliminate, or prevent unnecessary differences in regulatory requirements.

Similarly, the Trade Agreements Act of 1979 (Pub. L. 96–39), as amended by the Uruguay Round Agreements Act (Pub. L. 103–465), prohibits Federal agencies from establishing any standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the United States. For purposes of these requirements, Federal agencies may participate in the establishment of international standards, so long as the standards have a legitimate domestic objective, such as providing for safety, and do not operate to exclude imports that meet this objective. The statute also requires consideration of international standards and, where appropriate, that they be the basis for U.S. standards.

PHMSA engages with international standards setting bodies to protect the safety of the American public. PHMSA has assessed the effects of the proposed rule and has determined that its regulatory amendments would not cause unnecessary obstacles to foreign trade.

L. Cybersecurity and Executive Order 14028

E.O. 14028 (“Improving the Nation’s Cybersecurity”)¹⁴ directed the Federal government to improve its efforts to identify, deter, and respond to “persistent and increasingly sophisticated malicious cyber campaigns.” PHMSA has considered the effects of the proposed rule and has determined that its regulatory amendments would not materially affect

the cybersecurity risk profile for affected entities.

List of Subjects

49 CFR Part 171

Definitions and abbreviations, Exports, Hazardous materials transportation, Hazardous waste, Imports, Incorporation by reference, Reporting and recordkeeping requirements.

49 CFR Part 173

Hazardous materials transportation, Packaging and containers, Reporting and recordkeeping requirements, Training.

For the reasons set forth above, PHMSA proposes to amend 49 CFR Chapter I as follows:

PART 171—GENERAL INFORMATION, REGULATIONS, AND DEFINITION

- 1. The authority citation for part 171 continues to read as follows:

Authority: 49 U.S.C. 5101–5128, 44701; Pub. L. 101–410 section 4; Pub. L. 104–134, section 31001; Pub. L. 114–74 section 4 (28 U.S.C. 2461 note; 49 CFR 1.81 and 1.97.

- 2. In § 171.7, add paragraph (d)(8) to read as follows:

§ 171.7 Reference material.

* * * * *

(d) * * *

(8) ANSI/ASHRAE 34–2019, Designation and Safety Classification of Refrigerants, 2019, into §§ 173.306; 173.307.

* * * * *

PART 173—SHIPPERS—GENERAL REQUIREMENTS FOR SHIPMENTS AND PACKAGINGS

- 3. The authority citation for part 173 continues to read as follows:

Authority: 49 U.S.C. 5101–5128, 44701; 49 CFR 1.81, 1.96 and 1.97.

- 4. In 173.306:

■ a. Revise paragraphs (e)(1)(i) and (ii);

■ b. Add paragraph (e)(1)(ix);

■ c. Revise paragraph (e)(2)(i) introductory text; and

■ d. Add paragraphs (e)(3) and (e)(4)

To read as follows:

§ 173.306 Limited quantities of compressed gases.

* * * * *

(e) * * *

(1)(i) Each pressure vessel may not contain more than 5,000 pounds of Group A1 refrigerant as classified in ANSI/ASHRAE Standard 15, more than 5,000 pounds of GHS Category 1B or equivalent ASHRAE A2L refrigerant, or

not more than 50 pounds of refrigerant other than those specified above.

(ii) Machines or components having two or more charged vessels may not contain an aggregate of more than 2,000 pounds of Group I refrigerant; an aggregate of more than 2,000 pounds of GHS Category 1B or equivalent ASHRAE A2L Standard 34–2019 refrigerant (IBR, see § 171.7 of this subchapter); or more than 100 pounds of refrigerant other than those specified above.

* * * * *

(ix) Each new (unused) refrigerating machine or component thereof containing a Division 2.1 gas must be transported:

(A) On a motor vehicle utilizing an open flat-bed trailer;

(B) On an open flat-bed rail car; or

(C) In a well-ventilated closed transport vehicle (such as a trailer or rail car).

* * * * *

(2) *Used refrigerating machines*—(i) *Packaging.* Reconditioned (used) refrigerating machines (UN2857, Div. 2.2 or UN3358, Div. 2.1) may be excepted from the marking requirements of § 172.302(c) of this subchapter and transported by motor vehicle when they conform to the requirements prescribed in paragraph (e)(1) of this section, are secured or permanently attached to the motor vehicle, and are:

* * * * *

(3) Each refrigerating machine or component thereof containing a Division 2.1 gas must be marked on each side and each end with the identification number marking in accordance with the requirements of § 172.302 of this subchapter.

(4) For a refrigerating machine or component thereof containing a Division 2.1 gas contained in or on a transport vehicle or rail car, if the identification number marking on the refrigerating machine or component thereof in accordance with § 172.302(a) of this subchapter is not visible, the transport vehicle or rail car must be marked as required by § 172.332 of this subchapter on each side and each end with the identification number.

* * * * *

Issued in Washington, DC, on June 26, 2025, under the authority delegated in 49 CFR 1.97.

[Docket No. PHMSA–2025–0099 (HM–268K)]

RIN 2137–AG13

Hazardous Materials: Removing Burdensome Rail Reporting Requirements

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), Department of Transportation (DOT).

ACTION: Notice of Proposed Rulemaking (NPRM).

SUMMARY: PHMSA proposes to remove or replace various rail transportation requirements that are either obsolete, overly burdensome, or conflict with other requirements in the Hazardous Materials Regulations (HMR).

DATES: Comments must be received on or before September 2, 2025.

ADDRESSES: You may submit comments identified by the Docket Number PHMSA–2025–0099 using any of the following methods:

E-Gov Web: <https://www.regulations.gov>. This site allows the public to enter comments on any **Federal Register** notice issued by any agency. Follow the online instructions for submitting comments.

Mail: Docket Management System: U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building Ground Floor, Room W12–140, Washington, DC 20590–0001.

Hand Delivery: U.S. DOT Docket Management System: West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Fax: 1–202–493–2251.

Instructions: Please include the docket number PHMSA–2025–0099 at the beginning of your comments. If you submit your comments by mail, submit two copies. If you wish to receive confirmation that PHMSA received your comments, include a self-addressed stamped postcard. Internet users may submit comments at <https://www.regulations.gov>.

Note: Comments are posted without changes or edits to <https://www.regulations.gov>, including any personal information provided. There is a privacy statement published on <https://www.regulations.gov>.

Privacy Act: In accordance with 5 U.S.C. 553(c), DOT solicits comments

from the public to inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to <https://www.regulations.gov>, as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at <https://www.dot.gov/privacy>.

Confidential Business Information: Confidential Business Information (CBI) is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA, 5 U.S.C. 552), CBI is exempt from public disclosure. It is important that you clearly designate the comments submitted as CBI if: your comments responsive to this document contain commercial or financial information that is customarily treated as private; you actually treat such information as private; and your comment is relevant or responsive to this notice. You may ask PHMSA to provide confidential treatment to information you give to the agency by taking the following steps: (1) mark each page of the original document submission containing CBI as “Confidential”; (2) send PHMSA, along with the original document, a second copy of the original document with the CBI deleted; and (3) explain why the information that you are submitting is CBI. Submissions containing CBI should be sent to Alexander Wolcott, Standards and Rulemaking Division, Pipeline and Hazardous Materials Safety Administration (PHMSA), 2nd Floor, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, or by email at alexander.wolcott@dot.gov. Any materials PHMSA receives that is not specifically designated as CBI will be placed in the public docket.

Docket: For access to the docket to read background documents or comments received, go to <http://www.regulations.gov>. Follow the online instructions for accessing the docket. Alternatively, you may review the documents in person at the street address listed above.

FOR FURTHER INFORMATION CONTACT: Alexander Wolcott, Transportation Regulations Specialist, 1200 New Jersey Avenue SE, Washington, DC 20590, 202–366–8553, alexander.wolcott@dot.gov.

SUPPLEMENTARY INFORMATION:**I. General Discussion**

PHMSA is proposing several changes to Part 171, General Information, Regulations, and Definitions, and Part 174, Carriage by Rail of Chapter I of Title 49 of the Code of Federal

Regulations (CFR). These proposed changes would remove or replace various rail requirements that are either obsolete, overly burdensome, or conflict with other requirements in the HMR. PHMSA does not expect that these proposed revisions would have any adverse impact on safety.

Section 171.7 contains a list of the various documents PHMSA has incorporated by reference into the HMR. Section 171.7 also includes a table displaying materials that are not incorporated by reference. PHMSA is proposing to remove several publications from the table issued by the Association of American Railroad's (AAR) Bureau of Explosives (BOE), including the Intermodal Loading Guide for Products in Closed Trailers and Containers, Pamphlet 6, Pamphlet 6A, Pamphlet 6C, and the Emergency Handling of Hazardous Materials in Surface Transportation. Many of these publications have not been updated in decades and are no longer relevant to the nation's modern supply chain. PHMSA is proposing to remove these obsolete publications from the table and to make other conforming changes to §§ 174.55, 174.101, 174.112, 174.115, and 174.290 to remove subsequent references to the same publications.

Section 174.20(a) authorizes a rail carrier to impose local or carrier restrictions for hazardous materials when acceptance, transportation, or delivery is unusually hazardous. Section 174.20(b) also requires a carrier to report these restrictions to the AAR BOE. The removal of these reporting requirements was initiated by an AAR proposal at the June 2016, Railroad Safety Advisory Committee (RSAC) meeting as their recommendation was that the reporting requirement to the AAR's BOE was no longer necessary. The final decision to remove and reserve this section was approved by consensus vote at the May 25, 2017, RSAC meeting and offered to PHMSA and Federal Railroad Administration (FRA) for consideration. Therefore, PHMSA understands these reports to be outdated requirements, but nonetheless welcomes input from stakeholders on their current use, if any. PHMSA expects removing this section would not adversely impact safety because rail carriers would still be able to make a determination that local conditions make the acceptance, transportation, or delivery of hazardous materials unusually hazardous. This would maintain the current level of safety by retaining the railroad's discretion to restrict the movement of hazardous materials when a rail line is unsafe due to weather, track damage, or other

reasons that would make the transportation of hazardous materials unusually hazardous while reducing reporting burdens.

Section 174.67 prescribes the requirements for tank car transloading. PHMSA is proposing to remove certain outdated and unnecessary requirements from § 174.67, including removing the references to dirt and cinders in paragraph (b), amending paragraph (d) to provide flexibility in protecting open tank cars during transloading, and removing paragraph (n) because it is redundant to § 174.57. PHMSA expects that these changes would not have any adverse impact on safety as transloading has become significantly less common since the adoption of § 174.67 and the risks that these requirements were meant to mitigate have significantly diminished due to technological advances in the rail industry over the last 50 years.

II. Regulatory Analysis and Notices

A. Legal Authority

This proposed rule is published under the authority of the Secretary of Transportation set forth in the Federal Hazardous Materials Transportation Laws (49 U.S.C. 5101 *et seq.*) and delegated to the PHMSA Administrator pursuant to 49 CFR 1.97.

B. Executive Orders 12866; Regulatory Planning and Review

Executive Order (E.O.) 12866 (“Regulatory Planning and Review”),¹ as implemented by DOT Order 2100.6B (“Policies and Procedures for Rulemaking”), requires agencies to regulate in the “most cost-effective manner,” to make a “reasoned determination that the benefits of the intended regulation justify its costs,” and to develop regulations that “impose the least burden on society.” DOT Order 2100.6B specifies that regulations should generally “not be issued unless their benefits are expected to exceed their costs.” In arriving at those conclusions, E.O. 12866 requires that agencies should consider “both quantifiable measures . . . and qualitative measures of costs and benefits that are difficult to quantify” and “maximize net benefits . . . unless a statute requires another regulatory approach.” E.O. 12866 also requires that “agencies should assess all costs and benefits of available regulatory alternatives, including the alternative of not regulating.” DOT Order 2100.6B directs that PHMSA and other Operating Administrations must generally choose

the “least costly regulatory alternative that achieves the relevant objectives” unless required by law or compelling safety need.

E.O. 12866 and DOT Order 2100.6B also require that PHMSA submit “significant regulatory actions” to the Office of Information and Regulatory Affairs (OIRA) within the Executive Office of the President’s Office of Management and Budget (OMB) for review. This NPRM is a not significant regulatory action pursuant to E.O. 12866; it also has not designated this rule as a “major rule” as defined by the Congressional Review Act (5 U.S.C. 801 *et seq.*).

PHMSA has complied with the requirements in E.O. 12866 as implemented by DOT Order 2100.6B and made a preliminary determination that this NPRM would result in cost savings by reducing regulatory burdens and regulatory uncertainty for the railroad industry by removing unnecessary reporting requirements. PHMSA expects those cost savings would also result in reduced costs for the public to whom those entities generally transfer a portion of their compliance costs.

C. Executive Orders 14192 and 14219

This proposed rule, if finalized as proposed, is expected to be an E.O. 14192 deregulatory action.² PHMSA seeks data that would be helpful to generate an estimate of the cost savings from this rule. PHMSA’s initial estimates are that the total costs of the rule on the regulated community would be less than zero. Nor does this proposed rule does implicate any of the factors identified in section 2(a) of E.O. 14219 indicative of a regulation that is “unlawful . . . [or] that undermine[s] the national interest.”³

D. Energy-Related Executive Orders 13211, 14154, and 14156

The President has declared in E.O. 14156 (“Declaring a National Energy Emergency”) ⁴ a national emergency to address the United States’s inadequate energy development, production, transportation, refining, and generation capacity. Similarly, E.O. 14154 (“Unleashing American Energy”) ⁵ asserts a Federal policy to unleash American energy by ensuring access to abundant supplies of reliable, affordable energy from (inter alia) the removal of “undue burden[s]” on the identification, development, or use of domestic energy

resources. PHMSA preliminary finds this proposed rule is consistent with each of E.O. 14156 and E.O. 14154. The proposed rule would give railroads relief by reducing reporting costs and modernizing safety requirements to remove outdated, inefficient methods. PHMSA therefore expects the regulatory amendments in this proposed rule would in turn improve railroads’ ability to provide abundant, reliable, affordable energy products in response to residential, commercial, and industrial demand.

However, this proposed rule is not a “significant energy action” under E.O. 13211 (“Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use”),⁶ which requires Federal agencies to prepare a Statement of Energy Effects for any “significant energy action.” This proposed rule is not a significant action under E.O. 12866, and moreover, it would not have a significant adverse effect on supply, distribution, or energy use. OIRA has therefore not designated this proposed rule as a significant energy action.

E. Executive Order 13132: Federalism

PHMSA analyzed this proposed rule in accordance with the principles and criteria contained in E.O. 13132 (“Federalism”) ⁷ and the Presidential Memorandum (“Preemption”) published in the **Federal Register** on May 22, 2009.⁸ E.O. 13132 requires agencies to assure meaningful and timely input by State and local officials in the development of regulatory policies that may have “substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government.” The Federal Hazardous Materials Transportation laws contain an express preemption provision at 49 U.S.C. 5125(b) that preempts state, local, and tribal requirements on certain covered subjects, unless the non-federal requirements are “substantively the same” as the federal requirements, including the following:

- (1) The designation, description, and classification of hazardous material;
- (2) The packing, repacking, handling, labeling, marking, and placarding of hazardous material;
- (3) The preparation, execution, and use of shipping documents related to hazardous material and requirements
