Abstract of Patent Application

Systems and methods disclosed herein provide training an artificial

neural network (ANN) on buffered input and output samples of an original component within a system such that the ANN is configured to produce a degenerate component, the degenerate component configured to generate the same outputs as the original component; comparing the outputs from the original component to outputs of the degenerative component during actual component operation; and in the event of a failure of the original comment, replacing the original component with the degenerate component.

The Department of the Air Force may grant the prospective license unless a timely objection is received that sufficiently shows the grant of the license would be inconsistent with the Bayh-Dole Act or implementing regulations. A competing application for a patent license agreement, completed in compliance with 37 CFR 404.8 and received by the Air Force within the period for timely objections, will be treated as an objection and may be considered as an alternative to the proposed license.
